benchmark amounts, ranging from –0.02 percent to –1.5 percent under these simulations of alternate benchmarking policies. We noted that additional analysis would be needed to consider the impact of such policies on a broader set of ACOs participating in the Shared Savings Program, including ACOs that did not participate in a 6-month performance year from July 1, 2019, through December 31, 2019. We solicited comment on this estimated range of impacts on ACO benchmark values, and on the potential mixed effects on ACOs that could result from modifications to the benchmarking methodology.

In the CY 2022 PFS proposed rule (86 FR 39293), we explained our belief that in considering alternative benchmarking methodologies to address ACOs' penetration in their regional service areas it would be important to consider what would constitute heavy penetration by an ACO in its regional service area, and the extent to which market penetration should be considered in benchmark calculations. Based on preliminary analysis of data for CY 2019 using performance year 2021 ACO Participant Lists for all ACOs participating in the program as of January 1, 2021, the median ACO regional market share was approximately 16.2 percent, with a minimum of 0.9 percent and a maximum of 59.2 percent. Further, 90 percent of ACOs had a regional market share of less than 37.8 percent, and 80 percent of ACOs had a regional market share of less than 29.3 percent. Accordingly, we solicited comment on what would constitute heavy penetration in the ACO's regional service area and how removing the ACO's assigned beneficiaries from regional calculations, dependent on the level of penetration, could either increase or decrease the ACO's benchmark. We also solicited comment on approaches that could strike a balance between adjusting program policies to address impacts on the potentially few ACOs that are heavily penetrated in their regional service area while maintaining stability for most ACOs that have relatively low penetration in their regional service area.

The following is a summary of the public comments we received and our response.

Comment: Some commenters addressed the question of how to remove an ACO's assigned beneficiaries from the reference population used in calculating factors based on regional FFS expenditures. A few commenters directly addressed the formula CMS

presented in the CY 2022 PFS proposed rule, appearing to support the potential approach for performing this exclusion. Some commenters indicated CMS' mathematical approach was "directionally correct", relatively simple, and works well in nearly every case while using data that CMS already produces. One commenter appreciated the transparency of the approach laid out by CMS but sought further clarification on whether the time period for measuring the ACO's market share would be the same period used to calculate expenditures.

Several commenters addressed CMS' analyses simulating the effect of removing an ACO's assigned beneficiaries from regional expenditure calculations on ACO benchmarks. A few commenters noted that CMS showed a range of results, both positive and negative, but did not state how many ACOs would benefit versus be harmed. By their own analysis, a commenter found that nearly 80 percent of ACOs would benefit and that there was no consistent pattern among ACOs that would benefit versus those that would be harmed. Another commenter expressed their belief that CMS' analysis made it clear that the current benchmarking methodology could be made more fair. A commenter remarked that CMS' simulations found that removing each ACO's assigned beneficiaries would slightly increase the average benchmark, even for ACOs with low market share or those in urban areas. This commenter surmised that the ACOs that saw negative effects were likely to be historically high-spending ACOs. Another commenter responding to CMS' simulation results recommended that CMS set a cap on the adjustment to the benchmark for ACOs that would be harmed.

Some commenters addressed the issue of how to identify the population of Medicare FFS beneficiaries to remove from the assignable population used to determine regional FFS expenditures. Several commenters generally supported excluding ACO assigned beneficiaries from the regional reference population but did not clarify whether they preferred to see only an ACO's own beneficiaries removed or all ACO assigned beneficiaries. Suggestions from other commenters included removing all of a respective region's ACO-assigned beneficiaries, or beneficiaries attributed to all Medicare ACO initiatives, including the Global and Professional Direct Contracting Model. However, commenters acknowledged the possibility that the remaining beneficiary population could be too small, which, as a commenter indicated,

could lead to significant variability in the regional component of the benchmark.

Some commenters responded directly to CMS' request for comment on what would constitute heavy penetration by an ACO in its regional service area, and the extent to which market penetration should be considered in benchmark calculations. A commenter recommended that CMS set the high penetration mark at 30 percent, but did not provide specific suggestions for how this penetration level might be incorporated into the Shared Savings Program's benchmarking methodology. Some commenters discussed using 50 percent market share as a threshold in certain benchmark calculations. MedPAC noted that CMS found relatively few Shared Savings Program ACOs with high market share, which was consistent with its own analyses and believed that this relatively small number of ACOs with high market penetration is not enough to warrant a change in policy of this magnitude. MedPAC also noted that the current blended national-regional trend factor reasonably attempts to address high ACO market shares and recommended that, like the existing blend, any changes in policy should attempt to avoid imposing a market share threshold or "cliff."

Response: We will take these comments into consideration as we contemplate additional refinements to the Shared Savings Program's benchmarking methodologies and will propose any specific policy changes, if deemed appropriate, in future notice and comment rulemaking.

(3) Unintended Consequences of Removing ACO Assigned Beneficiaries From Regional Calculations, and Identifying Other Needed Modifications

In the CY 2022 PFS proposed rule (86 FR 39293 and 39294), we solicited comment on the following considerations, and other possible unintended consequences that could result from removing an individual ACO's assigned beneficiaries from regional calculations.

- Would this approach create incentives for ACOs to have assigned beneficiaries who are healthier than the remaining comparison population that is the basis for benchmark factors based on regional FFS expenditures (so as to yield a higher benchmark), which could lead ACOs to seek out healthier beneficiaries and avoid at-risk or higher-cost beneficiaries?

++ Would this approach incent the formation of large ACOs within a particular market to obtain the most

competitive benchmarks resulting in market consolidation, and discourage participation by relatively smaller ACOs, thus increasing costs for the Medicare Trust Funds if CMS pays larger amounts of shared savings to ACOs that have consolidated to take advantage of the ability to attract more low-cost beneficiaries in their region?

++ Would a change in the regional benchmarking methodology encourage ACOs to avoid at-risk or higher-cost beneficiaries and potentially exacerbate inequities in access to health care?

- We solicited comment on the potential for negative impacts on ACOs that serve larger proportions of medically complex beneficiaries, such as ACOs whose assigned beneficiary populations include larger proportions of beneficiaries who are medically complex and cared for in ambulatory or home-based settings or who reside in long term care facilities, resulting from an approach that removes the ACO's assigned beneficiaries from the assignable beneficiary population used to determine regional FFS expenditures. Would such an approach yield a benchmark so low that such ACOs have little incentive to participate in the Shared Savings Program?

- Would removing an individual ACO's assigned beneficiaries result in regional FFS expenditures based on very small populations, thus introducing significant variability into regional FFS expenditure trends used in benchmark calculations?

Additionally, we solicited comment on whether removal of an ACO's assigned beneficiaries from regional FFS expenditure calculations would bring about a need to remove ACO assigned beneficiaries from other Shared Savings Program financial calculations based on a broader Medicare population, including factors based on national FFS expenditures, which are used in calculating blended national and regional expenditure trend and update factors, truncation points used in calculating benchmark and performance year expenditures, and the 5 percent cap on the regional adjustment.

The following is a summary of the public comments we received and our response.

Comment: Commenters offered differing perspectives on the potential unintended consequences that could result from an approach that would remove ACO assigned beneficiaries from the regional FFS expenditure calculations including the following:

- Several commenters expressed the belief that removing ACO assigned beneficiaries from regional FFS expenditure calculations would

penalize ACOs serving medically complex, high cost patients in a region. A commenter noted that this approach could result in such ACOs leaving the Shared Savings Program or could be a deterrent to entry for future ACOs. Another commenter suggested that ACOs would be incentivized to avoid growth and expansion of services into high risk, high cost, high need areas, regardless of whether they are rural or urban, citing evidence for this phenomenon published in *Health Affairs*.¹³⁶

- Several commenters expressed concern that the policy would create increased incentives for patient selection or “cherry picking”. Another commenter disagreed, stating they did not believe that removing an ACO’s assigned beneficiaries would create any of the unintended consequences CMS has contemplated, including cherry-picking healthier beneficiaries. Several other commenters also believed the likelihood of ACOs avoiding high-risk patients if ACO assigned beneficiaries are removed from the regional reference population is quite low and is outweighed by their concerns about the other effects of the existing policy. Commenters noted various safeguards or guardrails, such as provider choice among patients and risk adjustment, are already built into the framework of the Shared Savings Program to help to prevent ACOs from purposefully avoiding certain populations.

- One commenter expressed concerns about potential market consolidation effects, while a few other commenters explained that while there has been increased consolidation in recent years across the healthcare industry, there is not strong evidence showing ACOs are driving this change. A few other commenters also expressed the belief that a change in policy regarding the calculation of regional expenditures would not lead to provider consolidation, but would increase participation in ACOs in rural markets, expanding access to coordinated care and encouraging alternative payment model participation across the country.

- MedPAC expressed concern that the population used to determine regional FFS expenditures would become less comparable with the ACO’s assigned population as the ACO’s regional market share increases, even after risk adjustment, citing evidence from a 2009 evaluation of the Physician Group

Practice (PGP) demonstration¹³⁷ (a predecessor to the Shared Savings Program). Several other commenters believed that concerns about small reference populations resulting from removing ACO-assigned beneficiaries is an issue for a minority of ACOs, such as those serving dual eligible Medicare and Medicaid beneficiaries, and other high-risk beneficiary groups. The commenters suggested that, in these cases, CMS should consider expanding the regional service area to include assignable beneficiaries in adjoining counties or increasing the number of years included in the calculation of regional expenditures to improve the stability of the regional adjustment. Another commenter acknowledged that there are concerns about extreme differences between the ACO population and non-ACO population that risk adjustment does not handle well, but that these considerations affect only a small fraction of ACOs and can be addressed by expanding the definition of the region to include contiguous counties.

Response: We will take these comments into consideration as we contemplate additional refinements to the Shared Savings Program’s benchmarking methodologies and will propose any specific policy changes, if deemed appropriate, in future notice and comment rulemaking.

(4) Alternative Approaches to Determining Regional FFS Expenditures and Alternative Benchmarking Methodologies

In the CY 2022 PFS proposed rule (86 FR 39294), we solicited comment on using other approaches to calculating benchmarks under the Shared Savings Program. In particular, we solicited comment on alternatives to determining regional FFS expenditures that would reduce the influence of an ACO’s assigned beneficiaries on regional expenditure calculations, such as basing these expenditures on a larger geographic area, including using State-level data, Core-Based Statistical Area (CBSA)-level data, or a combination of data for these larger geographic areas and county-level data (such as blended county/State regional expenditures). We also solicited comment on alternative benchmarking methodologies that may incorporate data sources other than Medicare FFS expenditure trends, such as by incorporating factors based on

Medicare Advantage rates, or other published trends.

We also solicited comment on considerations related to the potential use of our authority under section 1899(i)(3) of the Act to implement suggested modifications to the benchmarking methodology, in particular alternative approaches to updating the historical benchmark or other alternative benchmarking methodologies that diverge from the requirements of section 1899(d)(1)(B)(ii) of the Act, since to do so we must determine that the alternative payment methodology will improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures.

The following is a summary of the public comments we received and our response.

Comment: Commenters suggested a number of alternative approaches for addressing the impact of an ACO’s own performance on its benchmark or countering the potentially adverse effects of removing the ACO’s assigned beneficiaries from regional expenditure calculations including:

- Several commenters suggested that CMS should expand the definition of regional service area in cases where ACO market penetration is high, with some of those commenters suggesting this would mitigate concerns about the reference population being too small after removing the ACO’s assigned beneficiaries. Some commenters specifically called for using a threshold of 50 percent market penetration in such an approach. For example, a commenter recommended expanding the ACO’s regional service area to include all contiguous counties when an ACO’s assigned beneficiary population in a county exceeds 50 percent, with allowances for alternate thresholds to be used in certain special cases, such as: When the ACO’s regional service area includes very small counties to expand the ACO’s regional service area to include the contiguous counties; when an ACO represents more than 50 percent of a combined statistical area, to use national inflation in place of regional inflation; or when there are significant risk score differences between assigned and non-assigned beneficiaries, to consider using a lower threshold for expanding the ACO’s regional service area to include contiguous counties, such as a threshold of at least 30 percent or higher, instead of 50 percent.

- One commenter, concerned about the potential for “cherry-picking”, suggested using geographic units smaller than counties to define an

¹³⁶ Citing Markovitz AA, et al. Risk Adjustment In Medicare ACO Program Deters Coding Increases But May Lead ACOs To Drop High-Risk Beneficiaries. *Health Affairs*. February 2019. Available at <https://www.healthaffairs.org/doi/10.1377/hlthaff.2018.05407>.

¹³⁷ Citing Secretary of Health and Human Services, Report to Congress, Physician Group Practice Demonstration Evaluation Report. 2009. Available at <https://innovation.cms.gov/files/reports/pgp-rtc-sept.pdf>.

ACO's regional service area as these geographic units may be more socio-economically homogenous; alternatively, the commenter suggested maintaining a county-level definition of region, but adjusting the benchmarking process to adequately account for beneficiary social, functional, and clinical risk factors and to provide an upward financial adjustment for ACOs serving these higher cost populations. Along a similar vein, several commenters encouraged CMS to explore further ways to stratify benchmarks based on patient risk factors, such as to set separate benchmarks for certain high-cost patients.

- MedPAC suggested modifications to both the national and regional components of the blended national-regional trend factors. MedPAC also suggested that CMS alter the calculation of regional spending in the trend factor by extending the ACO's regional service area to a larger market area (for example, CBSAs, health service areas, or hospital referral regions) in lieu of excluding ACO assigned beneficiaries from regional expenditure calculations. Based on its own analysis, MedPAC concluded that expanding an ACO's regional service area would help to reduce an ACO's influence on its regional benchmark calculation without explicitly favoring certain categories of ACOs (for example, historically low-spending ACOs). MedPAC also suggested that the national portion of the blended national-regional trend factor could be standardized for average wages or adjusted to reflect local wage and geographic practice indices.

- Some commenters suggesting removal of ACO assigned beneficiaries from the regional reference population also suggested that CMS use a regional-only trend rather than a national trend or a blended national-regional trend in establishing and updating the ACO's benchmark. These commenters explained that the use of a blended trend factor often over-emphasizes the national trend component for high market share ACOs and that this is especially problematic during the COVID-19 pandemic because the national trend does not reflect important local market dynamics that vary across the country. Specifically, these commenters noted that in 2020 regional spending decreased by 10 percent or more in some markets, while remaining relatively "flat" in other markets. These commenters concluded that ACOs in COVID-19 "hot spots" likely have higher costs than the overall nation, and therefore, using the national trend as part of the benchmarking methodology is detrimental and unfair to these ACOs

as it does not reflect the pandemic's effect on costs in their regions. Another commenter generally suggested that CMS adjust blended national-regional growth rates to account for ACOs in COVID-19 "hot spots", but did not provide details describing such an approach.

- Several commenters suggested that CMS consider approaches being used in Innovation Center models. Several commenters suggested CMS use an approach under the Shared Savings Program similar to the approach used in the Direct Contracting Model to adjust benchmarks based on regional FFS expenditures. For example, MedPAC specifically suggested that ACOs selecting prospective assignment be offered a trend factor that is set prospectively prior to the start of the performance year and developed utilizing the local and national estimates in the rate book developed for the Direct Contracting model. In its comments, MedPAC underscored that any changes that CMS considers making to the benchmarking methodology should enhance incentives for care improvement and avoid penalizing ACOs with assigned beneficiary populations that are more complex and costly than the ACO's regional average. Several commenters suggested that CMS establish additional benchmark options based on patient population and clinical need, especially for complex patient populations, referring to the approaches used under the Primary Care First Seriously Ill Population model and Direct Contracting model High Needs track.

- One commenter suggested that CMS take the following approach to incentivize participation and retention among ACOs, regardless of their initial efficiency relative to their region: (1) Continue to have ACOs move to increased (50 percent to 100 percent) regional weighting over time; (2) For ACOs more efficient (lower spending) than their region, apply only positive regional adjustments; (3) For ACOs less efficient (higher spending) than their region, allow for purely historical benchmarks until the ACO moves below the regional average.

- Several commenters expressed concerns about use of 2020 and 2021 data in establishing ACO historical benchmarks because of the impact of the COVID-19 PHE on expenditures. One commenter suggested that CMS waive the requirement in § 425.601 that the benchmark is established or reset using data from the three most recent years prior to the start of the agreement period, and instead utilize data from 2017, 2018 and 2019 to establish or reset

benchmarks for agreement periods that begin on January 1, 2022. This commenter suggested that CMS could alternatively offer ACOs with agreement periods beginning January 1, 2022, the option to choose use of benchmark year data either from 2019, 2020 and 2021 or from 2017, 2018 and 2019. Another commenter suggested CMS adjust how performance years 2020 and 2021 will be weighted in the calculation of financial benchmarks for future agreement periods.

Response: We will take these comments into consideration as we contemplate additional refinements to the Shared Savings Program's benchmarking methodologies and will propose any specific policy changes, if deemed appropriate, in future notice and comment rulemaking.

For reference, as noted in the CY 2022 PFS proposed rule (86 FR 39294), for each calendar year, CMS releases two public use files (PUFs): (1) County-level Aggregate Expenditure and Risk Score Data on Assignable Beneficiaries PUF, and (2) Number of ACO Assigned Beneficiaries by County PUF. These files are available online at https://www.cms.gov/Research-Statistics-Data-and-Systems/Downloadable-Public-Use-Files/SSPACO/SSP_Benchmark. Stakeholders may find this data helpful to inform their further consideration of these issues.

c. Comments on the Shared Savings Program's Risk Adjustment Methodology

In the CY 2022 PFS proposed rule (86 FR 39294 and 39295), we discussed stakeholders' concerns about the methodology for risk adjusting the ACO's historical benchmark each performance year during its agreement period, and we sought comment on approaches to potentially address these concerns, and some related considerations. The following is a summary of the comment solicitations, the comments we received and our response.

As described in the CY 2022 PFS proposed rule, we take into account changes in severity and case mix of the ACO's assigned beneficiary population when establishing the benchmark and also in adjusting the benchmark each performance year. In accordance with § 425.601(a)(3), in establishing the benchmark, we adjust expenditures for changes in severity and case mix using prospective HCC risk scores. Under § 425.601(a)(10), we further adjust the ACO's historical benchmark at the time of reconciliation for a performance year to account for changes in severity and case mix for the ACO's assigned

beneficiary population between BY3 and the performance year (refer to § 425.601(a)(10); § 425.605(a)(1), (a)(2); § 425.610(a)(2), (a)(3)). In making this risk adjustment, we make separate adjustments for the population of assigned beneficiaries in each Medicare enrollment type used in the Shared Savings Program (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). We use CMS–HCC prospective risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries, subject to a cap of positive 3 percent for the agreement period. This cap is the maximum increase in risk scores allowed for each agreement period, such that any positive adjustments between BY3 and any performance year in the agreement period cannot be larger than 3 percent. That is, the risk ratios (ratio of performance year risk score to the BY3 risk score) applied to historical benchmark expenditures to capture changes in health status between BY3 and the performance year will never be higher than 1.030 for any performance year over the course of the agreement period. This cap is applied separately for the population of beneficiaries in each Medicare enrollment type.¹³⁸

ACOs and other stakeholders have expressed concerns that the program's methodology for capping any increase in the risk adjustment to the historical benchmark, such that any positive adjustment between benchmark year 3 and any performance year in the agreement period cannot be larger than 3 percent, does not account for risk score growth in the ACO's regional service area, and thereby penalizes ACOs.^{139 140} In earlier rulemaking, commenters indicated that the 3 percent cap on risk score increases is especially problematic for ACOs whose regional service area includes a population of beneficiaries whose risk scores rise more than the cap. A commenter encouraged CMS to adopt a policy of applying a cap on risk score growth after

accounting for regional increase in risk scores (85 FR 84784).

In the CY 2022 PFS proposed rule, we solicited comment on the following issues related to the risk adjustment methodology—

- Approaches, generally, to improving the risk adjustment methodology for the Shared Savings Program, and specifically for ACOs with medically-complex, high-cost beneficiaries.

- Approaches to risk adjustment that would balance the need for accurate and complete coding, while protecting against incentivizing coding intensity initiatives by ACO participants and ACO providers/suppliers (which may be even more problematic for ACOs with high penetration in their region) that increase risk score growth above the existing 3 percent cap.

- Alternate approaches that would increase the cap on an ACO's risk score growth in relation to risk score growth in the ACO's regional service area, such as:

++ Allowing the ACO risk score growth cap to increase by a percentage of the difference between the current 3 percent cap and risk score growth in the ACO's regional service area. In this alternate approach, the percentage applied would be equal to 1 minus the ACO's regional market share. This approach would raise the existing cap while limiting the ability for ACOs with high penetration in their region to increase their cap by engaging in coding intensity initiatives that raise the regional risk score.

++ Setting the ACO risk score growth cap at some level between the existing 3 percent risk score cap and the regional risk score growth, which would account for a portion of the regional risk score growth that exceeds the current cap.

- The potential interactions between policies to remove assigned beneficiaries from the assignable beneficiary population used to calculate regional FFS expenditures and growth rates (as described elsewhere in this section of this final rule), and policies addressing regional risk score growth.

Comment: Several commenters responding to the comment solicitation on the Shared Savings Program's risk adjustment methodology explained that risk adjustment is an important aspect of setting fair ACO benchmarks and evaluating expenditures during the performance year. The commenters noted that accurate risk adjustment should remove or minimize differences in health and other risk factors that impact performance but are outside the ACO's control.

MedPAC indicated that the existing risk adjustment approach may be effective in balancing a number of considerations. MedPAC expects that changes in an ACO's population health status would be accounted for by the CMS–HCC model, and the current 3 percent potential increase to benchmarks—in addition to being susceptible to rewarding ACOs for coding—would likely cover anomalies when ACO populations have deteriorating health status. Another commenter expressed the belief that, while not perfect, the CMS–HCC model used in the Shared Savings Program is known to providers and does a decent job of capturing the risk of Medicare FFS beneficiaries.

Many commenters remain concerned about the existing risk adjustment methodology under which there is a 3 percent cap on positive adjustments resulting from risk score increases over the ACO's 5-year agreement period, and many of these commenters also expressed concern about the absence of a cap (or floor) on negative adjustments to account for risk score decreases. Several commenters believe the current approach is unfair to ACOs and inadequate, indicating that risk adjustment caps may be somewhat reasonable in the early years of a 5-year agreement period, but not in the later years of the agreement period. One commenter noted that freezing risk scores over 5 years could create a constant struggle against a population's outdated risk score (calculated several years earlier) for which ACOs are at financial risk. The commenter also explained that CMS has already recognized the necessity of shorter-term caps on risk and price adjustments, referring to the Bundled Payments for Care Improvement initiative (trend factor variation capped on a quarter-over-quarter basis) and the Next Generation ACO model (risk scores capped at 3 percent over 2 years). Some commenters referred to an analysis by CMS described in earlier rulemaking which indicated that 32 percent of ACOs would have a risk ratio greater than 1.03 for the aged/dual eligible enrollment type over 5 years. According to some of these commenters, this analysis demonstrates that the current 3 percent cap is not appropriately set as it limits risk score growth for more than just outliers. With respect to a cap on risk score decreases, a few commenters noted that CMS had previously been hesitant to introduce such a cap out of concern about creating a gaming opportunity for ACOs. It appears that these commenters may have been

¹³⁸ Refer to the December 2018 final rule (83 FR 68007 through 68013), section on "Risk Adjustment Methodology for Adjusting Historical Benchmark Each Performance Year". ¹³⁹ 85 FR 84783 through 84785.

¹⁴⁰ Alledade, "Opportunities for 2022 Improvements to MSSP ACOs in the Physician Fee Schedule" (June 2021), provided as a document during E.O. 12866 Meeting (CMS–1751), available at <https://mobile.reginfo.gov/public/do/viewEO12866Meeting?viewRule=false&rin=0938-AU42&meetingId=49323&acronym=0938-HHS/CMS>.

referring to the discussion in the December 2018 final rule (83 FR 68010 and 68011), in which CMS explained that it shared the concerns raised by some commenters that capping risk score decreases would encourage favorable risk selection, such that ACOs might seek to attract low-cost beneficiaries or avoid high-cost beneficiaries in order to lower their performance year expenditures without any corresponding adjustment to their benchmark due to the cap on negative risk adjustments. These commenters believed that CMS has other tools for monitoring for potential gaming, such as continuing to monitor voluntary alignment, but they did not explain how such monitoring would address CMS' concerns about capping risk score decreases.

Some commenters raised particular concerns about the current risk adjustment policy in light of the PHE for COVID-19. Several commenters raised concerns regarding the application of a 3 percent cap on risk score increases over the ACO's 5-year agreement period and the lack of a floor for risk score decreases given the widespread and unparalleled effects of the PHE for COVID-19. A few commenters indicated their expectation that most ACOs' risk scores for 2021 will be extremely low as providers were unable to capture many beneficiaries' HCCs due to reduced patient volume in 2020. They explained that if in-person patient volume resumes in 2021, 2022, and beyond, ACOs will likely have a significant increase in risk scores simply because patients are once again receiving care in physicians' offices. One commenter suggested that beneficiaries may also have worse health status due to delayed diagnosis and delay in seeking care, providing the example of hospitals noting significant increases in case mix index (CMI) for hospitalized patients related to these delays. Several commenters suggested that more ACOs will be subject to the existing 3 percent cap under these circumstances. One commenter noted that the current risk adjustment methodology could penalize ACOs for patients' need to stay in the safety of their homes during the pandemic. Another commenter indicated that ACOs could be forced to exit the Shared Savings Program as a result.

Many commenters also remained concerned that the current policy places a cap on the ACO's risk score growth but does not restrict regional risk score growth. Commenters noted that this penalizes ACOs in markets where a region's risk score growth exceeds the cap. To illustrate this, some commenters gave the example of a case where both

the ACO's risk score and the regional risk score grow by 6 percent. In this circumstance, the benchmark would be reduced by 3 percent, despite the fact that the ACO's risk score growth matched that of the region. Several commenters provided examples based on 2020 data, noting that the average risk ratio for counties above 1.03 was 1.042 in the aged/non-dual eligible population and was 1.055 in the dual eligible population, indicating a larger negative impact for this more vulnerable population. One commenter suggested that higher risk score growth at the county level is due to underlying population changes and once a county diverges from the national average it will continue in that direction without reversion to the mean. As a result, the commenter suggested that the problem of these negative impacts would continue unless CMS modifies the risk adjustment methodology using the approach described in the CY 2022 PFS proposed rule, which would allow the ACO risk score growth cap to increase by a percentage of the difference between the current 3 percent cap and risk score growth in the ACO's regional service area. Another commenter suggested that by including a cap on the ACO's risk score, but not on risk score growth for the region, CMS is creating new incentives that run counter to the original purpose of CMS-HCC risk adjustment, which the commenter believed is to level the playing field and remove disincentives for treating high cost patients. Several commenters indicated that the increased variation in risk scores introduced by the COVID-19 pandemic has further demonstrated the impact of the 3 percent cap on risk score growth in reducing ACO benchmarks, when risk score growth in the ACO's region exceeds the ACO's risk score growth. MedPAC did not appear to support aligning ACO and regional risk score growth out of concern that this would effectively reward ACOs for greater coding intensity in their region, particularly for those with higher market share.

Several commenters suggested that the existing policy is also driving inequity and may disadvantage ACOs that serve more vulnerable populations or beneficiaries with complex medical needs. Some commenters explained that beneficiaries who are in the disabled and the aged/dual eligible Medicare enrollment types are, in most combinations, more than twice as likely to have risk score growth above the cap as those who are in the aged/non-dual eligible category. Some commenters indicated that due to a variety of factors,

such as sample size and volatility, the rates at which Medicare enrollment types are subject to the 3 percent cap on risk score growth are often significantly different. A commenter explained that there can also be significant risk score volatility when the high-risk patient population is small. As a result of these factors, some commenters explained that the current approach may disadvantage ACOs that serve more vulnerable populations (such as ACOs composed of community health centers), or ACOs that serve a disproportionate number of dual eligible patients needing complex services (such as ACOs based around an academic medical center). A commenter stated that there currently exists a disincentive for ACOs to take on certain vulnerable populations, such as beneficiaries with ESRD or who need SNF-level care. However, another commenter noted that the current model has some protections for ACOs that experience a disproportionate increase in the medical complexity of their population, highlighting that the current risk adjustment method makes separate adjustments for assigned beneficiaries in each enrollment type, which allows ACOs to increase the proportion of their ESRD, dual eligible, and disabled populations without being affected by the 3 percent cap.

Commenters seemed to offer differing perspectives on CMS' concerns about creating incentives for coding initiatives including:

- MedPAC expressed support for CMS' considerable caution in this area, noting that population-based models can be highly susceptible to coding incentives and that the Shared Savings Program does not include a retrospective coding adjustment to offset these incentives. MedPAC recommended that CMS should address the underlying incentives for coding intensity and the accuracy of risk adjustment before considering any policy that would increase the risk score growth cap.

- One commenter that was supportive of the approach CMS described in the CY 2022 PFS proposed rule, under which an ACO's risk score growth cap would be allowed to increase by a percentage of the difference between the current 3 percent cap and risk score growth in the ACO's regional service area, believed this approach would continue to insulate CMS from coding intensity.

- One commenter stated that capping positive risk score growth at 3 percent over the 5-year agreement period, while intended to limit incentives for coding intensity, has the effect of harming

ACOs that provide care and services to beneficiaries with complex medical needs, and suggested that this approach does not adequately account for changes in beneficiaries' disease burden over time. Another commenter stated that CMS should abolish the policy of capping year-over-year risk-score growth, as CMS does not want ACOs to "cherry pick" patients or avoid providing care to high-risk, high-cost beneficiaries. The commenter explained its belief that by encouraging ACOs to properly code the risk of their beneficiary population, CMS would help to ensure ACOs will have necessary resources to invest in infrastructure and serve higher-risk patients more effectively.

- A few commenters explained that the current methodology of normalizing risk adjustment in a region can penalize ACOs that have been coding accurately and whose beneficiaries maintain the same health status over the course of the ACO's agreement period. Under this scenario, an ACO could see a decrease in its risk score if others in its region increase their coding intensity. The commenters indicated that this issue is further exacerbated for ACOs that include a large number of specialists, since they have fewer opportunities to increase their risk score, but did not explain why they believed this to be the case.

Commenters suggested a variety of alternative approaches to risk adjusting historical benchmarks each performance year during the ACO's agreement period, including the suggestions summarized below.

Response: We will take these comments into consideration as we contemplate additional refinements to the Shared Savings Program's benchmarking methodologies and will propose any specific policy changes, if deemed appropriate, in future notice and comment rulemaking.

Comment: Commenters also offered suggestions related to the following issues:

Suggestions for capping positive/negative risk score adjustments included the following:

- Many commenters suggested that CMS increase the cap on risk score growth during an ACO's 5-year agreement period to no less than 5 percent and implement a floor of no greater than negative 5 percent for risk score decreases. A commenter requested that CMS consider applying a cap on risk score growth of 10 percent over 5 years.

- Several commenters suggested that CMS should consider temporarily removing or increasing the 3 percent

cap following an anomalous year, such as 2020, during which risk scores were impacted by the COVID-19 pandemic.

- A commenter suggested that CMS implement a floor on the risk score, adjust for the effects of COVID-19, and apply a cap on risk score increases, if any, that is the same for all Medicare populations, including Medicare Advantage.

- Some commenters encouraged CMS to cap the aggregate risk ratio across Medicare enrollment types. They indicated that this would be more fair because the rates at which Medicare enrollment types are subject to the 3 percent cap on risk score growth are often significantly different, due to a variety of factors, such as sample size and volatility.

- A commenter recommended that, at a minimum, CMS should increase the cap on risk score growth for high-risk populations (specifically, ESRD, aged/dual eligible and disabled), to ensure vulnerable beneficiaries are better served by Shared Savings Program ACOs.

Suggestions for addressing differences in risk score growth between the ACO and the ACO's regional service area included the following:

- A few commenters noted their support for modifying the risk adjustment methodology to enable the risk score growth cap to increase by a percentage of the difference between the current 3 percent cap and risk score growth in the ACO's regional service area, with a commenter explicitly citing the approach described in the proposed rule in which the percentage applied to the difference would equal 1 minus the ACO's market share. The commenter, who believes this change should be applied retroactively to at least performance year 2021, explained that removing an ACO's assigned beneficiaries from its regional trend would simplify the equation because an ACO could no longer impact its regional risk score.

- Some commenters suggested more generally that CMS align the use of a risk adjustment cap for the ACO and its region by applying a consistent capping policy to both. Some commenters also called for this approach to be applied retroactively beginning with performance year 2021. A number of the commenters who supported aligning ACO and regional risk score growth caps also called for increasing the cap on positive risk score adjustments and applying a cap on negative risk score adjustments.

Other suggestions related to Shared Savings Program risk adjustment included the following:

- MedPAC recommended that CMS use 2 years of diagnostic data for risk adjustment as permitted under the 21st Century Cures Act, which they believe would improve the accuracy of coefficients estimated with FFS data and reduce year-to-year variation in beneficiary risk scores, along with reducing the administrative burden for ACO participants related to HCC documentation. MedPAC further suggested that CMS should only consider changes to the 3 percent cap after making this suggested change and after observing the effect of the phase-in from 2020 to 2022 of the Alternative Payment Condition Count (APCC) CMS-HCC risk adjustment model, which they noted was designed to improve the accuracy of risk adjustment for high-spending beneficiaries.

- Several commenters suggested that CMS adopt a single (standardized) approach for measuring the health status of a population across Medicare Advantage and Medicare ACO initiatives. Some commenters suggested, for example, that CMS recalibrate the risk adjustment methodology across all Medicare programs and models by updating the HCC Model to use ICD-10 codes to improve accuracy, refining HCC diagnoses, and incorporating social determinants of health. Several commenters suggested that, at a minimum, CMS should align the risk adjustment methodology used in the Shared Savings Program's ENHANCED track with Medicare Advantage. Another commenter suggested that CMS examine the risk adjustment methodology in general and analyze how fairly it is applied within both Medicare Advantage and traditional Medicare.

- Several commenters encouraged CMS to consider including social risk factors in the risk adjustment models used for ACO benchmarking. A commenter suggested this could be an incentive for ACOs to improve social risk and demographic data collection. Another commenter suggested that including factors related to a patient's background (for example, sociodemographic status, language, and post-discharge support structure) in the risk-adjustment methodology could reduce barriers to more robust participation by safety net hospitals.

- A few commenters encouraged CMS to examine coding patterns on a local/regional level and to employ a more "veracious" approach to calculating coding intensity adjustment factors that considers the increasing prevalence of chronic disease in a region, noting that the current Shared Savings Program risk adjustment methodology attributes all

growth in risk scores beyond demographic risk entirely to coding intensity when populations may instead be increasingly chronically ill or have a different burden of illness between the baseline population and the attributed population.

- A commenter encouraged CMS to explore ways to implement the Innovation Center's concurrent HCC risk adjustment model in the Shared Savings Program, explaining that such models are better able to predict costs for populations with high disease burden or who are otherwise seriously ill, as they can better capture a rapid deterioration in health in the current year, such as through the occurrence of acute episodes that are difficult to predict or prevent (for example, heart attacks).

- Several commenters suggested that CMS avoid establishing a risk adjustment methodology that creates adverse incentives for practices to select or avoid certain beneficiaries based on their health risk status. A commenter detailed a combination of policies to achieve this, including some that related to ACO and regional risk score caps. Specifically, the commenter recommended: Establishing a risk adjustment cap that accounts for the size of the ACO's assigned beneficiary population (in recognition of the fact that a smaller assigned beneficiary population will be more volatile in terms of utilization and costs and may not be comparable risk-wise to other ACOs in the region); considering an ACO's assigned beneficiary population break-down across dual eligible and non-dual eligible beneficiaries when calculating the cap; capping the reference population risk score in the same way that the ACO population risk score is capped prior to normalizing; considering the proportion of vulnerable populations a given ACO serves; and looking to the Innovation Center's risk adjustment methodologies, and applying promising practices as appropriate in the Shared Savings Program.

- A commenter suggested that CMS consider applying a frailty adjustment in the Shared Savings Program risk adjustment methodology such as is used in the PACE program.

- A commenter suggested that CMS consider excluding unforeseeably expensive Part B drugs from Shared Savings Program benchmark and performance year expenditure calculations, or otherwise accommodating these costs. The commenter explained that pharmaceuticals represent an area of rapid technological improvement that has increasingly been accompanied by

extremely high acquisition costs. As a result, the commenter believed that these products create cost imbalances between benchmark and performance periods that are not sufficiently addressed through risk adjustment.

Response: We will take these comments into consideration as we contemplate additional refinements to the Shared Savings Program's benchmarking methodologies and will propose any specific policy changes, if deemed appropriate, in future notice and comment rulemaking.

K. Medicare Ground Ambulance Data Collection System

1. Background on Ambulance Services

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. Since April 1, 2002, payment for ambulance services has been made under the ambulance fee schedule (AFS), which the Secretary established under section 1834(l) of the Act. Payment for an ambulance service is made at the lesser of the actual billed amount or the AFS amount, which consists of a base rate for the level of service, a separate payment for mileage to the nearest appropriate facility, a geographic adjustment factor (GAF), and other applicable adjustment factors as set forth at section 1834(l) of the Act and § 414.610 of the regulations. In accordance with section 1834(l)(3) of the Act and § 414.610(f), the AFS rates are adjusted annually based on an inflation factor. The AFS also incorporates two permanent add-on payments and three temporary add-on payments to the base rate and/or mileage rate. The two permanent add-on payments at § 414.610(c)(5)(i) are: (1) A 50 percent increase in the standard mileage rate for ground ambulance transports that originate in rural areas where the travel distance is between 1 and 17 miles; and (2) a 50 percent increase to both the base and mileage rate for rural air ambulance transports. The three temporary add-on payments at sections 1834(l)(12)(A) and (13)(A) of the Act and § 414.610 are: (1) A 3 percent increase to the base and mileage rate for ground ambulance transports that originate in rural areas; (2) a 2 percent increase to the base and mileage rate for ground ambulance transports that originate in urban areas; and (3) a 22.6 percent increase in the base rate for ground ambulance transports that originate in "super rural" areas. Section 50203(a)(1) and (2) of the Bipartisan

Budget Act (BBA) of 2018 (Pub. L. 115–123, February 9, 2018) includes an extension of the temporary add-on payments through December 31, 2022.

Our regulations relating to coverage of and payment for ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H.

2. Statutory Requirements for the Ground Ambulance Providers and Suppliers To Submit Cost and Other Information

Section 50203(b) of the BBA of 2018 added paragraph (17) to section 1834(l) of the Act, which requires ground ambulance providers of services and suppliers to submit cost and other information. Specifically, section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. Section 1834(l)(17)(B)(i) of the Act requires the Secretary to specify the data collection system by December 31, 2019, and to identify the ground ambulance providers and suppliers that would be required to submit information under the data collection system. Section 1834(l)(17)(D) of the Act requires that beginning January 1, 2022, the Secretary apply a 10 percent payment reduction to payments made under section 1834(l) of the Act for the applicable period to a ground ambulance provider or supplier that is required to submit information under the data collection system and does not sufficiently submit such information. The term "applicable period" is defined under section 1834(l)(17)(D)(ii) of the Act to mean, for a ground ambulance provider or supplier, a year specified by the Secretary not more than 2 years after the end of the period for which the Secretary has made a determination that the ground ambulance provider or supplier has failed to sufficiently submit information under the data collection system. Section 1834(l)(17)(F) of the Act requires that no later than March 15, 2023 and as determined necessary by MedPAC, MedPAC must submit a report to Congress on the information submitted by the ground ambulance providers and suppliers through the data collection system on the adequacy of payments for ground ambulance services and geographic variations in the cost of furnishing such services.

In the CY 2020 PFS final rule (84 FR 62864 through 62897), we implemented section 1834(l)(17) of the Act and codified regulations governing data

reporting by ground ambulance providers and suppliers (referred collectively as “ground ambulance organizations”) at §§ 414.601, 414.605, 414.610(c)(9), and 414.626. In the CY 2020 PFS final rule (84 FR 62863 through 629897), we finalized a data collection system that collects detailed information on ground ambulance provider and supplier characteristics including service areas, service volume, costs, and revenue through a data collection instrument, commonly referred to as the Medicare Ground Ambulance Data Collection Instrument, via a web-based system. This instrument includes the specific questions that will be asked of ground ambulance organizations about the total service volume, costs, and revenue associated with a provider or supplier’s entire ground ambulance organization in such

a way that MedPAC could use to calculate an average cost per ground ambulance transport. In the CY 2022 PFS proposed rule (86 FR 39295), we referred the reader to our CY 2020 PFS final rule (84 FR 62863 through 62897) for more specifics on the establishment of the Medicare Ground Ambulance Data Collection System.

3. Revisions to the Medicare Ground Ambulance Data Collection Instrument

As described in the CY 2020 PFS final rule (84 FR 62867), the Medicare Ground Ambulance Data Collection Instrument uses screening questions and skip patterns so that it is applicable to all ground ambulance organizations regardless of their size, scope of operations and services offered, and structure. We stated that we believe this approach is easier to navigate and less time consuming to complete than a cost

report template or instrument and that it minimizes respondent burden by directing ground ambulance organizations to only view and respond to questions that apply to their specific type of organization, all while still collecting the information required in sections 1834(l)(17)(A) of the Act.

The CY 2020 PFS final rule provided a detailed overview of the elements of the data collection instrument, including questions to collect information on costs, revenues, utilization (which CMS defines for the purposes of the data collection instrument as service volume and service mix), as well as the characteristics of ground ambulance organizations. Table 38 includes a high-level summary of the 13 sections of the Medicare Ground Ambulance Data Collection Instrument.

TABLE 38: Components for the Data Collection Instrument

Component (Data Collection Instrument Section)	Broad Description
General Survey Instructions (1)	Information on background and motivation for data collection, instructions for navigating the instrument, and links for questions and other resources.
Ground Ambulance Organization Characteristics (2-4)	Information regarding the identity of the organization and respondent(s), service area, ownership, response time, and other characteristics; broad questions about offered services to serve as screening questions.
Utilization: Ground Ambulance Service Volume (5) and Service Mix (6)	Number of responses and transports, level of services reported by HCPCS code.
Costs (7-12)	Information on all costs partially or entirely related to ground ambulance services.
• Staffing and Labor Costs (7)	Hours and costs associated with EMTs, administrative staff, and facilities staff; separate reporting of volunteer staff and associated costs.
• Facilities Costs (8)	Number of facilities; annual cost of ownership, insurance, maintenance, and utilities.
• Vehicle Costs (9)	Number of ground ambulances; number of other vehicles used in ground ambulance responses; annual cost of ownership; total fuel, maintenance, and insurance costs.
• Equipment & Supply Costs (10)	Capital medical and non-medical equipment; medical and non-medical supplies and other equipment.
• Other Costs (11)	All other costs not reported elsewhere.
• Total Cost (12)	Total costs for the ground ambulance organization included as a way to cross-check costs reported in the data collection instrument.
Revenue (13)	Revenue from health insurers (including Medicare); revenue from all other sources including communities served.

We continue to receive ad hoc questions and feedback related to the Medicare Ground Ambulance Data Collection System and the Medicare Ground Ambulance Data Collection Instrument via three primary channels. First, we receive email and other communication from ground ambulance organizations via the CMS Ambulance Data Collection email inbox

(AmbulanceDataCollection@cms.hhs.gov) and through other channels (for example, inquiries sent by organizations to Medicare Administrative Contractors (MACs) and then forwarded to CMS). These emails and other communications often include questions seeking clarification of instrument questions and their applicability to specific ground

ambulance organization scenarios and context. We continue to update a Medicare Ground Ambulance Data Collection System Frequently Asked Questions (FAQ) document with answers to commonly asked questions. This document is available on the CMS website at <https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>. Through review of

questions and feedback, we have identified some instances where a clarification to the instrument language itself will likely be more useful and less burdensome to respondents than having to respond with reference to the FAQ document. Second, our contractor also asked a small number of ground ambulance organizations to complete and provide feedback on a paper version of the Medicare Ground Ambulance Data Collection Instrument. This feedback was helpful to identify some additional opportunities for clarification. Third, we continue to identify opportunities to clarify instructions and correct a small number of typos as we work to develop the web-based, programmed version of the Medicare Ground Ambulance Data Collection Instrument.

Based on information that we received via the three sources described above, in the CY 2022 PFS proposed rule (86 FR 39296), we proposed the following changes and clarifications to the Medicare Ground Ambulance Data Collection Instrument. The changes and clarifications aim to reduce burden on respondents, improve data quality, or both.

We received public comments on our overall changes and clarifications to the Medicare Ground Ambulance Data Collection System. The following is a summary of the comments we received and our responses.

Comment: Some commenters noted their general support for our proposed modifications to the Medicare Ground Ambulance Data Collection System. A commenter stated that its member organizations are appreciative of CMS' previous solicitation of stakeholder feedback in the development of the survey tool. A commenter supported CMS efforts to provide and update the Frequently Asked Questions (FAQ) for the Medicare Ground Ambulance Data Collection document and ongoing efforts to create clarity around this system. However, this commenter stated that the process is still complex and cumbersome and may prevent compliance from ground ambulance organizations. A commenter supported the agency collecting information on ground ambulance cost, revenue, utilization and other information, however, the commenter reminded CMS that this data is for purposes of assessing the adequacy of Medicare payments for ground ambulance services and that any data collected that are not directly for this purpose would be improper and not add value to this purpose and intent.

Response: We appreciate the overall support for the changes and

clarifications to the Medicare Ground Ambulance Data Collection System. The data collected through the Medicare Ground Ambulance Data Collection System will provide us with the necessary information needed to determine the adequacy of Medicare payment rates for ground ambulance services and geographic variations in the costs of furnishing such services, as well as the data MedPAC needs to prepare its statutorily-required report to Congress. We have attempted to limit the complexity and administrative burden of the Medicare Ground Ambulance Data Collection System as much as possible while ensuring that the collected data satisfy these statutory requirements.

a. Change to the Shared Services Questions in Section 2 (Organizational Characteristics)

One component of the data collection instrument is ground ambulance organization characteristics, which is information regarding the identity of the organization and respondent(s) service area, ownership, response time, and other characteristics (84 FR 62871 through 62875). One characteristic on which we sought information is organization type, including whether costs are shared with fire or police response or health care delivery operations (84 FR 62871). The instrument contains a number of questions that are relevant to the issue of shared costs.

Section 2, Question 7 asks "Which category best describes your ground ambulance operation?" and allows respondents to select one of the following options:

(a) Fire department-based; (b) Police or other public safety department-based (including all-hazards public safety organizations); (c) Government stand-alone emergency medical services (EMS) agency; (d) Hospital or other Medicare provider of services (such as skilled nursing facility); (e) Independent/proprietary organization primarily providing EMS services; (f) Independent/proprietary organization primarily providing non-emergency services; or (g) Other (please specify).

Section 2, Question 8 subsequently requests respondents answering a, b, or d to Question 7 to "confirm that your ground ambulance operation shares operational costs, such as building space or personnel, with these other operations." Section 2, Question 9 asks "Does your ground ambulance operation share any operational costs, such as building space or personnel, with one of the following," offering respondents the following options: (a) A fire department

(not presented if the response to Section 2, Question 7 is "a"); (b) A police or other public safety department (not presented if the response to Section 2, Question 7 is "b"); (c) A hospital or other Medicare provider of services (such as a skilled nursing facility) (not presented if the response to Section 2, Question 7 is "d"); (d) Another healthcare organization (excluding hospitals, skilled nursing facilities, or other Medicare provider of services); (e) Another healthcare organization (excluding hospitals, skilled nursing facilities, or other Medicare provider of services); (f) Other (specify).

Collectively, the purpose of these three questions is to collect information on whether a portion of organizations' costs and revenues may be related to services or operations other than providing ground ambulance services. When this occurs, ground ambulance organizations are presented with additional instructions specifying how they should report costs and revenues associated with providing ground ambulance services rather than these other services or operations.

Based on feedback from ground ambulance organizations, we believe the specific wording of Section 2, Question 9 may be confusing. The question asks respondents whether they share operational costs with "one of the following," implying respondents are limited to a single response, even though in some cases respondents may wish to select multiple responses. Furthermore, ground ambulance organizations may have difficulty interpreting the phrase "share any operational costs." We received questions from some ground ambulance organizations asking whether renting space from a fire department qualified as a "shared operational cost." The intent of the question was to ask about shared ownership and accounting, not renting facility space, sharing a physical space with a separate organization, or similar business and logistical arrangements.

In the CY PFS 2022 proposed rule (86 FR 39297), we proposed to revise Section 2, Question 9, to read, "Does your organization provide any of the following services or operations (select all that apply)?" retaining the current response options. This proposed change clarifies that the intent of Section 2, Question 9 is to collect information on services or operations provided by the sampled organization. We solicited comments on our proposal regarding reporting shared services.

We did not receive public comments on this proposal. Therefore, we are finalizing our proposal to revise Section

2, Question 9 to read, “Does your organization provide any of the following services or operations (select all that apply)?” retaining the current response options.

b. Change to Average Trip Time Question

We stated that the area served by ambulance organizations is an important characteristic and finalized a policy to collect information on the geographic area served by each ambulance organization in Section 3 of the data collection instrument (84 FR 62875). We included questions related to average trip time in primary and secondary service areas (questions 3 and 6 of Section 3) that were important to understand how geographic distance between the ground ambulance organization’s facilities and patients affects costs (84 FR 62873).

Section 3 (Service Area), Questions 3 and 6 in the instrument ask ground ambulance organizations to report their “average trip time” using a set of categorical time ranges (for example, 30–60 minutes). These questions define average trip time as “the time the ambulance leaves the station to when that ambulance is available to take another call.” Based on feedback from ground ambulance organizations, we believe this definition may be confusing in cases where an ambulance responds to a call from a location other than the station (for example, while en route to another call, from a standby event, or from a hospital). Based on the literal wording of the question, it is not clear whether and if so, how ground ambulance organizations should report trip times for responses not originating at a station when responding to this question, leading to potentially missing or biased data.

In the CY 2022 PFS proposed rule (86 FR 39297), we proposed that this question be revised to ask for “average time on task” defined as “from the time an ambulance begins its response to the time when the ambulance is available to respond to another call (that is, time on task)” to better capture interfacility transfers and situations when an ambulance is already out and responds from a site other than the central station. We believe this change in the wording of the question will be clearer to respondents and will result in higher-quality reported data. We solicited comments on our proposal to change the definition of the average trip time.

We received public comments on our proposal to revise the average trip time question. The following is a summary of the comments we received and our responses.

Comment: A commenter indicated that time on task could be difficult to calculate for many organizations. The commenter provided an example where an ambulance transports a patient to the hospital and while returning to the station, the ambulance crew is assigned to another call. In this example, the crew may not have completed the patient care report for the first call, so accurately documenting time on task will prove to be difficult.

Response: We recognize that not all ground ambulance organization may track time on task as proposed. However, we heard from some ground ambulance organizations that the initial question wording requesting for “average trip time” would be problematic for other reasons. Specifically, our initial definition of “average trip time” only applied to situations where the ambulance left from a station. We believe that this change will provide ground ambulance organizations with greater flexibility to report information regarding the active time for their ambulance crews.

After consideration of public comments, we are finalizing our proposed revision to the average trip time question to request for “average time on task” defined as “from the time an ambulance begins its response to the time when the ambulance is available to respond to another call (that is, time on task)” to better capture interfacility transfers and situations when an ambulance is already out and responds from a site other than the central station.

c. Change to Secondary Service Area Instructions

In Section 3, Question 4 instructions define the secondary service area for an organization as “outside [its] primary service area, but one where [it] regularly provide[s] services through mutual or auto-aid arrangements. The instruction directs organizations to “not include areas where [they] provide services only under exceptional circumstances.” We were notified that some ground ambulance organizations are unsure how to report areas where they (a) did have mutual or auto-aid arrangements in place, which aligns with the definition of secondary service area in the instructions, but where (b) they responded to calls only very rarely, for example once a year, which could be considered an “exceptional circumstance” and ignored for reporting per the instruction.

Although the instructions leave the determination of whether an organization has a secondary service area at the discretion of the sampled ground ambulance organization, we

believe that some organizations may benefit from a rule of thumb or example to help assess whether they should or should not report a ZIP code as being part of their secondary service area. In the CY 2022 PFS proposed rule (86 FR 39297), we proposed to add the following text to the Section 3, Question 4 instructions: “Some, but not all, ground ambulance organizations regularly provide service outside of their primary service area, for example through mutual or auto-aid agreements with nearby municipalities. If this applies to your organization, please report areas that are outside your primary service area but where you regularly provide services as part of your secondary service area. You do not need to report areas where you provide services very rarely or only under exceptional circumstances (for example, when participating in coordinated national or State responses to disasters or mass casualty events). Use your judgment as to whether your organization regularly serves a secondary service area. For example, you may choose to consider ZIP codes outside your primary service area but where you had 5 or more responses during the data collection period as part of your secondary service area if you believe these transports have a significant impact on your organization’s costs.” Even with this added text, ground ambulance organizations could still determine whether they do or do not have a secondary service area for the purposes of reporting in the Medicare Ground Ambulance Data Collection System. We solicited comments on our proposal to revise the secondary service area instructions.

We received a public comment on our proposal to revise the secondary service area instructions. The following is a summary of the comment we received and our response.

Comment: A commenter supported our proposed change to the instructions in this section of the Medicare Ground Ambulance Data Collection Instrument. This commenter stated that many of their primary service areas do not follow strict county boundary lines or ZIP code designations so the commenter requested that CMS provide additional language to clarify how ambulance organizations designate primary service areas when the service area is based on the needs of the population.

Response: We appreciate the commenter’s support for the proposed change. In the instrument, we define primary service area as the set of ZIP codes in which the ground ambulance organization is exclusively or primarily

responsible for providing service at one or more levels (that is, Basic Life Support (BLS) or Advanced Life Support (ALS)) and in which it is highly likely that the majority of the organization's transport pickups occur. We appreciate the commenter's point that ground ambulance organizations' approaches to determining their primary service area may differ. While not all primary service areas will align cleanly with ZIP code boundaries, we chose to select a single, uniform, ZIP code-based approach for ground ambulance organizations to report service areas in order to minimize burden and ensure the collected information is useful for analysis as noted in the CY 2020 PFS final rule (84 FR 62874). We will continue to provide education and give opportunities to organizations to ask questions regarding the Medicare Ground Ambulance Data Collection Instrument, including the instructions for reporting service areas.

After consideration of public comments, we are finalizing our change to the secondary service area instructions as proposed.

d. Change to the 90th Percentile Emergency Response Time

Section 4 (Emergency Response Time), Question 3 asks ground ambulance organizations to report the 90th percentile emergency response time, which the question defines as the time separating the quickest 90 percent of responses from the longest 10 percent of responses. The intent of the question was to collect information to help CMS understand the difference between average response times and atypical "outlier" response time. In the CY 2020 PFS proposed rule (84 FR 40688), we proposed to include a question on average response time. As we noted in the CY 2020 PFS final rule (84 FR 62873), several commenters to the CY 2020 PFS proposed rule recommended requesting ground ambulance organizations to provide 90th percentile response time rather than or in addition to the average response time. The commenters believed 90th percentile response time is a more accurate indicator of ambulance services capabilities and quality. The commenters stated that the average time has too wide a range for error, since roughly half of responses are quicker/slower than average. The commenters further stated that using average response time also tends to flatten the data, which means the fastest and slowest organizations did not stand out as much. In response to these comments (84 FR 62874), we finalized an additional question to the instrument

requesting ground ambulance organizations responding to emergency calls for service to report their 90th percentile response time.

Based on feedback from ground ambulance organizations that we have received on this question since we finalized the instrument, we believe most ground ambulance organizations will find it challenging to interpret this question and report the requested information. Several ground ambulance organizations have indicated that they would misinterpret this question, describing a shorter 90th percentile emergency response time compared to average response time, which, while mathematically possible, is not the intent as we were interested in characterizing outlier emergency responses with unusually long response times.

Thus, in the CY PFS 2022 proposed rule (86 FR 39298), we proposed to revise the question to state: "what is your best estimate of the share of responses (enter percentage) that take more than twice as long as the average response time as reported in the prior question?" We believe this will be an easier question for ground ambulance organizations to understand. The goal of this question is to help CMS understand whether the organization has some response times that are much longer than its typical response time. Although the question language will be different, the reported information will still help CMS understand the extent to which a small number of emergency responses may be substantially longer than the average response for each organization. We solicited comments on our proposal to revise the question to ask respondents to report the share of responses with more than twice the average response time instead of their 90th percentile emergency response time.

We did not receive public comments on this proposal, and therefore, we are finalizing our proposal to revise the question to state: "what is your best estimate of the share of responses (enter percentage) that take more than twice as long as the average response time as reported in the prior question?"

e. Change To Reporting Paid Ambulance Transports

In the CY 2020 PFS final rule (84 FR 62876 through 62877), we established a series of questions in the data collection instrument to collect data on the volume and the mix of services, including paid ground ambulance transports, that is, ground ambulance transports where the ambulance provider or supplier was paid for a billed amount in part or in full. The general instructions for Section

5 (Ground Ambulance Service Volume) note: "A paid ground ambulance transport refers to a ground ambulance transport for which your organization has been paid in full or in part by a payer and/or patient only. Depending on how your organization collects data, you may report (a) the number of transports furnished during the data collection period that were also paid during the data collection period, or (b) the number of transports paid during the data collection period even if some transports occurred prior to the data collection period." Furthermore, Section 5, Question 7 asks respondents, "what was the total number of paid ground ambulance transports in calendar year 202X [or fill fiscal year as appropriate], across all payer types and regardless of the level of service or geography? (Enter number)."

Based on questions and feedback from ground ambulance organizations that we have received since we finalized the instrument, we believe respondents may have different interpretations of this question, which could lead to inconsistent reported data, including the reported total ground ambulance transports during the data collection period (Section 5, Question 6). The intent of this question was to capture the reported number of ground ambulance transports during the data collection period, provided such transports were paid by the time the information was prepared for reporting to CMS. We did not intend for organizations to report the total number of ground ambulance transports for which they received the payment itself during the data collection period.

We recognize that there is a temporal disconnect between when services are provided and when initial and final payment may be received. In order to standardize the information that is reported by all ground ambulance organizations, and to align the reported information on the number of responses and transports during the data collection period with information reported on the number of paid transports, we proposed in the CY 2022 PFS proposed rule (86 FR 39298) to clarify Section 5, Question 7 to ask "Of the ground ambulance transports your organization provided in calendar year 202X [or fill fiscal year as appropriate], how many were paid (either in part or in full) across all payer types and regardless of the level of service or geography by the time you are reporting data to CMS?"

We recognize that the "runout period," that is, the time from when services are provided to the time when data is being analyzed, will be short and

variable across organizations, particularly for transports towards the end of organizations' data collection periods. Despite this limitation, we believe this approach is preferable to alternatives where (a) respondents have variable interpretations of Section 5, Question 7 and (b) where respondents are asked to report the number of transports for which payment was received during the data collection period, even if the transports for which payment was received happened prior to the data collection period. In the latter case, the number of paid ground ambulance transports could not be directly compared to the number of total ground ambulance transports reported in Section 5, Question 6.

We also proposed to revise the general instructions in Section 5 to delete the following text as it will no longer be relevant: "Depending on how your organization collects data, you may report (a) the number of transports furnished during the data collection period that were also paid during the data collection period, or (b) the number of transports paid during the data collection period even if some transports occurred prior to the data collection period"

We solicited comments on our proposal to revise reporting paid ground ambulance transports.

We received a public comment on our proposal to revise reporting paid ground ambulance transports. The following is a summary of the comment we received and our response.

Comment: A commenter supported our proposed change in the instructions for reporting paid ambulance transports but requested clarification on whether the "transports provided" during the period refers to the date of service or another period.

Response: Our proposal specifies that the transports in question must have been furnished (that is, with dates of service) during the data collection period and paid at least through the end of the data collection period and potentially through the date on which the ground ambulance organization reports the required information via the Medicare Ground Ambulance Data Collection System.

After consideration of public comments, we are finalizing our revised instructions in Section 5 of the instrument as proposed.

f. Change to Questions Related to Labor Hours

Section 7 (Labor Costs) of the data collection instrument asks respondents to report compensation and hours worked for ground ambulance staff. The

instrument currently requests respondents to report, separately for each staff category: Total compensation, total hours worked inclusive of all responsibilities, and total hours worked unrelated to either ground ambulance or public safety responsibilities. The rationale for requesting total compensation and hours, even if these include compensation and hours for activities other than those related to ground ambulance services, was to preserve the ability to compare compensation between organizations and to external benchmarks such as Bureau of Labor Statistics data. The last item, total hours worked unrelated to either ground ambulance or public safety responsibilities, can be subtracted from overall total hours worked related to ground ambulance and public safety responsibilities combined, and further allocation could separate ground ambulance time and compensation from public safety time and compensation for fire and other public safety-based ground ambulance organizations.

Based on questions received by ground ambulance organizations since we finalized the instrument and feedback through testing on Section 7 questions, we learned that some ground ambulance organizations may misinterpret the Section 7 questions. Specifically, we believe some organizations may assume the question is requesting for hours "related" rather than "unrelated" to ground ambulance or public safety responsibilities given the focus of the data collection effort, despite instructions to the contrary. Relatedly, we were notified that some organizations were confused that the Section 7 questions did not provide an opportunity to report total hours worked related to ground ambulance responsibilities, which they assumed was an unintentional omission from the instrument.

In the CY 2022 PFS proposed rule (86 FR 39299), we proposed to change the instructions in Section 7 to request respondents to report hours worked on different activities in such a way that the sum of hours worked across different activities equals total hours worked annually. We believe this approach will be easier for respondents to understand and estimate, resulting in less burden for respondents and higher quality reported information.

For stand-alone ground ambulance organizations, we proposed to request respondents to report each of the following per staff category: (a.) Total annual compensation; (b.) Total hours worked annually; (c.) Total hours worked annually related to ground ambulance operations; and (d.) Total

hours worked annually related to all other responsibilities. With this change, the instructions in Section 7 will note that "total hours worked annually related to ground ambulance operations" plus "total hours worked annually related to all other responsibilities" should equal "total hours worked annually."

For fire department or other public safety-based ground ambulance organizations, we proposed to request respondents to report each of the following per staff category: (a.) Total annual compensation; (b.) Total hours worked annually; (c.) Total hours worked annually related to ground ambulance operations; (d.) Total hours worked annually related to fire, police, or other public safety operations; and (e.) Total hours worked annually related to all other responsibilities. The Section 7 instructions will note that the sum of total hours worked related to ground ambulance operations; fire, police, or other public safety operations; and all other responsibilities should equal total hours worked annually. We solicited comments on our proposal to revise the labor hours.

We did not receive public comments on this proposal, and therefore, we are finalizing the revised questions and instructions in Section 7 of the Medicare Ground Ambulance Data Collection Instrument as proposed.

g. Change to Instructions Related to Facility, Vehicle, and Equipment Certain Expenses

In the CY 2020 PFS final rule (84 FR 62882 through 62886), we finalized policies to collect cost information related to facilities, vehicles, and other equipment, consumables and supplies. The purpose of Sections 8 (Facilities Costs), 9 (Vehicles Costs), and 10 (Equipment, Consumable, and Supply Costs) in the instrument is to collect total expenses during the data collection period related to facilities, vehicles, and equipment and supplies, respectively. Based on feedback from ground ambulance organizations that we have received since we finalized the instrument, we are concerned that some respondents, particularly those that do not currently depreciate facilities, vehicles, and/or equipment for accounting purposes, may not be sure where to report some components of total expenses in these categories. Although we believe most ground ambulance organizations depreciate facilities, vehicles, and capital medical equipment, we were notified that some ground ambulance organizations do not depreciate these items in their regular accounting practices. Upon a review of

the instrument, we found that the instructions and opportunities to report costs for organizations using a cash basis for accounting were inconsistent across Sections 8, 9, and 10 of the instrument. In some instances, ground ambulance organizations are requested to report annual depreciation expenses only, without a clear question related to expenses should the organization not regularly depreciate a certain category of asset. In other cases, there are questions requesting respondents to report annual expenses other than annual depreciation expenses, but the instructions provide incomplete guidance on what expenses are in scope.

We considered several factors when developing our proposals to address these inconsistencies. Overall, the purpose of the questions in Sections 8, 9, and 10 is to collect comprehensive information on total expenses related to facilities, vehicles, and equipment and supplies during the organizations' data collection periods. We believe the primary purpose of changes and clarifications to questions in this section should be to ensure all expenses are reported from both organizations that do and do not depreciate facilities, vehicles, and equipment for accounting purposes. We understand that allowing organizations flexibility to report cost information using their current accounting approach will reduce burden. The instructions to the instrument currently state: "In general, you will be able to report information collected under your organization's current accounting practices. We understand that some ground ambulance organizations use accrual-basis accounting while others use cash-basis accounting." We continue to believe this is the correct approach, and that alternatives will impose considerable additional burden on ground ambulance organizations.

We considered several broad alternatives on how to report facility, vehicle, and equipment expenses in Sections 8, 9, and 10. One option is to require all organizations to calculate and report depreciation for facilities, vehicles, and equipment using a standardized approach. Although this will increase burden for respondents, potentially significantly for organizations that do not currently calculate depreciation, it will result in the most standardized information being submitted to CMS and the fewest changes to the layout of the instrument. Another option will be to retain the current structure of the instrument but provide more detailed instructions on how organizations that do and do not depreciate facilities, vehicles, and

equipment should report information. A third option is to add new screening questions to the instrument asking individually whether the organization depreciates facilities, vehicles, and equipment. The responses to these screening questions could be used to tailor the instructions, table headings, and question text later in the instrument to avoid confusion.

After considering these options, in the CY PFS 2022 proposed rule (86 FR 39300), we proposed to add screening questions to the instrument asking individually whether the organization depreciates facilities, vehicles, and equipment. We believe this will not substantively affect response burden for organizations and may in some cases reduce burden by clarifying what and how information on expenses must be reported in Sections 8, 9, and 10.

There are two specific places in Sections 8 and 9 in the instrument where we believe the instructions on how to report annual expenses may not be clear. First, Section 8.2, Question 1 asks respondents to report annual expenses for each facility that they report as being related to their ground ambulance operation in Section 8.1, Question 3. Section 8.2, Question 1 is a table with columns for "annual lease or rental costs," "annual depreciation expenses," and "annual mortgage, bond interest, and other costs of ownership." Although the instructions note "do not report depreciation if your organization does not capitalize facilities for accounting purposes," it is not immediately clear where organizations that do not capitalize facilities should report expenses if the facility is owned outright (for example, in cases where a facility is acquired during the data collection period).

Second, Section 9.1, Question 5 and Section 9.2, Question 5 are tables where respondents report costs associated with individual vehicles. Both tables currently ask, "What was the annual depreciation expense for this vehicle?" Although the instructions note "for owned vehicles, do not report depreciation if your organization accounts for vehicles on a cash basis," the instructions do not indicate where expenses for vehicles purchased during the data collection period should be reported by organizations that do not capitalize vehicles for accounting purposes.

We considered several options to clarify the instructions in Sections 8 and 9 specifically. One option is to preserve current table structures and item numbers in both sections while providing additional written instructions. We believe that although

this will minimize disruption to the layout of the instrument, it will also do the least to address potential confusion around these questions. Another option is to add new columns in Sections 8 and 9 for facilities and vehicles purchased outright during the data collection period for organizations that do not depreciate these expenses. We proposed to add an additional column for clarity, but noted that if the screening questions are added as described above not all columns will appear for all respondents, particularly given our proposal to add screening questions related to reporting expenses in Sections 8 and 9.

We also believe there are specific instructions in Section 10 that may not be clear. Section 10.1, Question 1 and Section 10.2, Question 1 request respondents to report "annual depreciation expenses" for medical and non-medical capital equipment, respectively. The Section 10 instructions note "do not report depreciation if your organization uses a cash basis for accounting" and that "for capital expenditures, medical and non-medical equipment, most organizations will amortize costs over the life of the good" but do not specify that organizations that do not depreciate medical or non-medical equipment should skip these questions and report expenses for equipment acquired during the data collection period in Section 10.1, Question 3, and Section 10.2, Question 3 instead.

We considered several options to clarify the instructions in Section 10 specifically. One option is to clarify in the instructions that organizations that do not depreciate medical or non-medical equipment should skip Section 10.1, Question 1 and Section 10.2, Question 1 and report expenses for equipment acquired during the data collection period in Section 10.1, Question 3, and Section 10.2, Question 3 instead. Although this will involve the least change to the instrument, we will lose the ability to distinguish between expenses for the kinds of equipment that most ground ambulance organizations depreciate for organizations reporting in this way. Another option is to change the instructions for Section 10.1, Question 1 and Section 10.2, Question 1 to refer to broad types of equipment that are typically considered capital medical and non-medical equipment, and then request respondents to report relevant annual expenses for qualifying equipment in these questions, regardless of whether the expenses are annual depreciation expenses or purchase costs (for organizations not calculating depreciation). We proposed to request

organizations that do not depreciate equipment to report expenses associated with purchasing equipment in Section 10.1, Question 1 and Section 10.2, Question 1. This option will preserve our and MedPAC's ability to separately analyze these expenses. We solicited comment on these alternatives to address instructions related to facility, vehicle, and equipment expenses.

We did not receive public comments on our proposed changes to the instructions related to facility, vehicle, and equipment certain expenses in Sections 8, 9, and 10 of the instrument, and therefore, we are finalizing these changes as proposed.

h. Changes to Questions Related to National Provider Identifier's (NPIs) Under Broader Parent Organizations

Some ground ambulance NPIs are part of broader parent organization companies that own and/or operate multiple ground ambulance NPIs. Section 2, Question 2 asks, "Did your organization use more than one NPI to bill Medicare for ground ambulance services during the data collection period?" Based on feedback from ground ambulance organizations that we have received since we finalized the instrument, we were notified that the use of "organization" in this question is potentially confusing because it is not clear whether the term applies to the organization sampled to report information to the Medicare Ground Ambulance Data Collection System (which, by definition, is an individual NPI) or to a broader "parent organization." In the CY 2022 PFS proposed rule (86 FR 39300), we proposed clarifying the question to ask "Is this NPI part of a larger 'parent organization' that owns or operates multiple NPIs billing for ground ambulance services?" We also proposed to clarify the wording of the follow-up instruction for organizations that answer "yes" to this question. The follow-up instruction currently reads, "You are being asked to complete this instrument and enter data only for the following NPI: [pre-populate number]." Because very large parent organizations may have several NPIs sampled and a single or small number of staff collecting and reporting data for multiple NPIs, we proposed to revise the text to read, "You are being asked to complete this instrument and enter data separately for each sampled NPI. The following questions refer only to the following NPI: [pre-populate number]."

The instrument requests these organizations to report an allocated share of parent organization expenses at the end of most sections of the

instrument. For example, Question 3 in Section 7.2 on paid administration, facilities, and medical director staff costs asks, "Please report the allocated portion of administrative labor costs incurred at the level of the parent organization/central office of this NPI based on your organization's approach for allocating costs to specific NPIs. (Enter dollar amount.)"

There are four sections in the instrument that lack similar questions: Section 7.1 (Paid EMT/Response Staff Compensation and Hours Worked), Section 7.3 (Volunteer Labor), Section 9.1 (Ground Ambulance Vehicle Costs), and Section 10.1 (Medical Equipment/Supplies). Without these questions, total reported costs may be biased downward for NPIs that are part of broader parent organizations. We proposed to add questions like the one reproduced above to the end of these four sections for completeness. The text will be the same as the above except for replacing "EMT/response staff labor costs," "costs associated with volunteer labor," "ground ambulance vehicle costs," and "medical equipment and supply costs" for "administrative labor costs" in the respective sections.

Relatedly, for completeness, we proposed to clarify in the instructions for Section 12 (Total Cost), Question 1, that organizations part of broader parent organizations should include an allocated portion of parent organization (or "central office") costs when reporting their total costs in this question. We solicited comments on our proposal to address questions related to NPIs under broader parent organizations.

We did not receive public comments on our proposed changes to questions related to NPIs under broader parent organizations, and therefore, we are finalizing these changes as proposed.

i. Other Clarifications to the Medicare Ground Ambulance Data Collection Instrument

In the CY 2022 PFS proposed rule, (86 FR 39301), we proposed the following 11 additional clarifications and updates to the instrument.

i. Replacing all first-person language (for example, "we") with third-person language (for example, "CMS") throughout the instrument for editorial consistency.

ii. Section 2, Question 17: There is a typo where this question referred to itself rather than, as is implied by the ordering and framing of the question, the prior item. The question currently asks, "other than what was reported in item 17 . . .," when it should read,

"other than what was reported in item 16 . . .".

iii. Section 3, Question 2: This question currently asks, "are you the primary emergency ambulance provider . . .," using "provider" more colloquially than elsewhere in the instrument where the same word is sometimes used to differentiate between Medicare providers of service and Medicare suppliers. We proposed to reword this question to read, "are you the primary emergency ambulance organization . . ."

iv. Section 4, Questions 1 and 2 Clarification: The question currently defines response time as "the time from when the call comes in to when the ambulance or another EMS response vehicle arrives on the scene." We proposed clarifying this definition to say "the time from when the call comes in to dispatch to when the ambulance or another EMS response vehicle arrives on the scene." Relatedly, for Section 4, Question 2, we proposed adding a second answer option for this question that reads, "From the time our organization receives a call from dispatch to the time the ambulance or other EMS vehicle is at the scene." Respondents would still have the option to write-in their own response in Section 4, Question 2, if neither of the pre-programmed options apply to their organization.

v. Section 5, Question 3a. Clarification: This question requests respondents to report the percentage of ground ambulance responses that involve a non-transporting agency and the percentage of ground ambulance transports in which the non-transporting agency continues to provide medical care in the ambulance during a transport. Based on feedback from ground ambulance organizations that we have received since we finalized the instrument, we believe many organizations do not currently track this data and will not easily be able to begin tracking it. We proposed clarifying this question to note that estimated percentages are acceptable, as they are in response to certain other questions in the instrument (where noted). We specifically proposed to edit Section 5 question 3a. to read: "What is your best estimate of the percentage of total ground ambulance responses that involved a non-transporting agency? (Enter percentage)"

vi. Section 7.1 Instruction Clarification: We proposed clarifying "You will report on these staff in a different section" to "You will report on these staff in a later section" to make it clear that the opportunity to report on

these staff follows the current instruction.

vii. Sections 7.1 and 7.2 Instruction Clarification: We proposed to add “employer payroll taxes” as an additional example of a component contributing to total compensation, without altering any of the definitions or other instructions in these sections.

viii. Section 7.2, Question 3 Clarification: We proposed adding a clarification warning for respondents not to consider labor that was reported elsewhere when responding to this question.

ix. Section 7.3, Question 4 Clarification: We proposed adding a clarification that medical director volunteer hours do not contribute to this response and a reminder that they are reported separately below (Section 7.3, Question 5).

x. Section 10 Instructions: We proposed to correct a typo in the instructions where the instrument describes “operation expenses” rather than “operating expenses” as intended.

xi. Section 13, Question 3 Clarification: Based on the instructions for this question, organizations may report revenue from specific payers that include patient cost-sharing amounts. To ensure patient cost-sharing is not reported twice, we recommended clarifying the item in the chart that currently reads, “Patient self-pay (amount patients pay for deductibles, coinsurance, etc.) to read, “Patient self-pay (cash payment and the amount patients paid for deductibles, coinsurance, and other cost-sharing only if not reported in a row above.)” We solicited comments on these clarifications and updates to the instrument.

We received public comments on these clarifications and updates to the instrument. The following is a summary of the comments we received and our responses.

Comment: Some commenters supported our proposed clarification to Section 5, Question 3a regarding reporting the percentage of ground ambulance responses that involve a non-transporting agency. A commenter expressed their appreciation for a policy that can promote simplicity and efficiency of data collection and reporting. A commenter supported the clarification and noted that information on joint responses is difficult to track and collect.

Response: We appreciate the commenters’ support.

Comment: A commenter supported our proposed clarification for Section 5, Question 3a, but recommended that CMS maintain strict expectations for

respondents to provide accurate estimates in this response, noting a common scenario in which a ground ambulance provider or supplier utilizes an ALS provider or supplier from a non-transport agency to continue caring for the patient during transportation. According to the commenter, this common scenario forces the non-transport agency to assume the labor and equipment costs associated with the ALS provider or supplier while an ALS level 1 reimbursement is paid to the ground ambulance provider or supplier that provided the medically necessary ground ambulance transport. The commenter stated that this information is crucial in demonstrating the need for CMS to provide reimbursement to all agencies involved in caring for Medicare beneficiaries. The commenter suggested that CMS make these responses publicly accessible in addition to all other data reported in a timely fashion.

Response: While we appreciate the importance of joint responses in determining expenses for all contributing ground ambulance organizations and other services, the Medicare Ground Ambulance Data Collection Instrument currently does not collect detailed information on the number of services with joint responses of different types. Instead, our approach is to question broadly whether the ground ambulance organization collecting and reporting data participates in joint responses and, if so, which general types of labor and other inputs are involved.

Comment: A commenter supported our proposed clarifications to Section 13, Question 3 on reporting revenue, stating that this is a helpful clarification for reporting organizations to distinguish between patient self-pay types.

Response: We appreciate the commenter’s support.

After consideration of public comments, we are finalizing all the clarifications as proposed.

4. Collection and Reporting of Information Under the Data Collection System

In the CY 2020 PFS final rule (84 FR 62893), we finalized our sampling proposals to implement a 25 percent stratified sample in each of the first 4 years of data collection and codified the representative sample approach at § 414.626(c). CMS’ sampling approach is designed to result in representative samples of ground ambulance organizations in terms of key characteristics including provider versus supplier status, service area population density, volume of

transports, and ownership category. The selected ground ambulance organizations for year 1 and year 2 have already been listed on the CMS website at <https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>.

In the CY 2020 PFS final rule (84 FR 62894), we finalized the data collection period as a continuous 12-month period of time, which is either the calendar year aligning with the data collection year, or the organization’s annual accounting period that begins during the data collection year when an organization has an annual accounting period (such as a fiscal year) that differs from the calendar year and the organization elects to collect and report data over this period rather than the calendar year. We also finalized our proposal to require organizations to report data during a 5-month data reporting period starting immediately following the end of the data collection period. The data collection and reporting requirements for selected ground ambulance organizations were codified at § 414.626(b).

As part of the Medicare Ground Ambulance Data Collection System, sampled ground ambulance organizations will report information to CMS using a web-based version of a data collection instrument that is posted on the CMS website at <https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>. We are currently developing the Medicare Ground Ambulance Data Collection System and stated in the CY 2020 PFS final rule (84 FR 62867) that the web-based survey would be available before the start of the first data reporting period to allow time for users to register, receive their secure login information, and receive training from CMS on how to use the system.

Due to the COVID-19 public health emergency (PHE), we issued two blanket waivers (May 5, 2020 and November 25, 2020) to delay the data collection and data reporting periods under the Medicare Ground Ambulance Data Collection System. The first waiver delayed the data collection period and data reporting period for selected year 1 ground ambulance organizations and the second waiver delayed the data collection periods and data reporting periods for selected year 1 and year 2 ground ambulance organizations.

This revised modification has been issued on page 32 in the following document: <https://www.cms.gov/files/document/summary-covid-19-emergency-declaration-waivers.pdf>. Specifically, we modified the data collection period and data reporting

period, as defined at § 414.626(a), for ground ambulance organizations (as defined at § 414.605) that were selected by CMS under § 414.626(c) to collect data beginning between January 1, 2020 and December 31, 2020 (year 1) and for ground ambulance organizations that were selected to collect data beginning between January 1, 2021 and December 31, 2021 (year 2) for purposes of complying with the data reporting requirements described at § 414.626.

Under this modification, these ground ambulance organizations will select a new continuous 12-month data collection period (organizations may choose a collection period aligning with the calendar year or the organization's fiscal year) that begins between January 1, 2022 and December 31, 2022, to collect data necessary to complete the Medicare Ground Ambulance Data Collection Instrument during their selected data collection period, and submit a completed Medicare Ground Ambulance Data Collection Instrument during the data reporting period that corresponds to their selected data collection period. We modified this data collection and reporting period to increase flexibilities for ground ambulance organizations that would otherwise be required to collect data in 2020–2021 so that they can focus on their operations and patient care during the COVID–19 PHE. We stated, when the blanket waiver was granted, in the COVID–19 Frequently Asked Questions (FAQs) on Medicare Fee-for-Service (FFS) Billing document (page 63 of this document: <https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf>) that CMS will not allow an option to continue with their current data collection period because the data collected in 2020 and 2021 during the PHE may not be reflective of typical costs and revenues associated with providing ground ambulance services.

As a result of the COVID–19 delay, ground ambulance organizations selected in year 1, 2, and 3 will have the same data collection periods beginning between January 1, 2022 and December 31, 2022 and will have the same data reporting periods beginning between January 1, 2023 and December 31, 2023. In the CY 2020 PFS final rule (84 FR 62893), we finalized our sampling proposals to implement a 25 percent stratified sample in each of the 4 years of data collection. Prior to the delay, we anticipated approximately equal shares of ground ambulance organizations will collect and report data in 4 consecutive periods. However, as a result of the delays, there will now be approximately 75 percent of the ground ambulance organizations that will have data

collection periods that start in the same year and subsequently will have data reporting periods starting in the same year. Later, a final 25 percent sample of ground ambulance organizations in year 4 will collect and report data.

When finalizing our policies in regard to ground ambulance collection and reporting of data, we did not intend to have approximately 75 percent of ground ambulance organizations collect and report data at the same time. To provide MedPAC with the data needed for analysis, acknowledging that due to the COVID–19 delay there will be a delay in CMS providing that data, we believe that we should revise the data collection period and data reporting period for selected ground ambulance organizations in year 3.

Accordingly, in the CY 2022 PFS proposed rule (86 FR 39302), we proposed to revise the data collection period beginning between January 1, 2022 and December 31, 2022 and data reporting period beginning between January 1, 2023 and December 31, 2023 for selected ground ambulance organizations in year 3. Under this proposal, there will be a new data collection period beginning between January 1, 2023 and December 31, 2023 and a new reporting period beginning between January 1, 2024 and December 31, 2024 for selected ground ambulance organizations in year 3. With this proposal, we plan to do the sample in 2022 for selected ground ambulance organizations in year 3 rather than the current plan in 2021. The main advantage of delaying the year 3 sample is that the selected organizations would be more representative of the organizations actually collecting beginning in 2023 and reporting beginning in 2024. The longer the delay between sampling and the data collection and data reporting, the more changes in the industry (for example, NPIs ceasing ground ambulance or all operations). This timeline will align with the data collection period and data reporting period requirements for selected ground ambulance organizations in year 4. As a result, there will be approximately 50 percent of ground ambulance organizations selected in year 1 and 2 with data reporting periods beginning between January 1, 2023 and December 31, 2023 and approximately 50 percent of ground ambulance organizations selected in year 3 and 4 with data reporting periods beginning between January 1, 2024 and December 31, 2024.

Due to the delay caused by the PHE for COVID–19, we examined the possibility of extending the data reporting to encompass 4 years as

planned instead of 2 years. We concluded that it will not be feasible to extend the data reporting period over 4 years. Extending the data reporting to encompass 4 years will further delay MedPAC receiving the data required to analyze for its report to Congress, which is required to be submitted by March 15, 2023. The sampling for year 1 and year 2 selected ground ambulance organizations has already been completed and the lists for the selected ground ambulance organizations in year 1 and year 2 are posted on the CMS website.

With this proposal, more data will be collected in 2023 as there will hopefully be more distance from the peak of the COVID–19 pandemic. Thus, it is our hope that 2023 will be even more reflective of a typical year of costs for ground ambulance organizations than 2022. As the course of the pandemic continues to evolve, we believe that our proposal provides a potential for more even distribution of data over 2 years for comparison by MedPAC. We solicited comments on our proposal to revise the data collection period and data reporting period for ground ambulance organizations selected in year 3.

We received public comments on our proposal to revise the data collection period and data reporting period for ground ambulance organizations selected in year 3. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposed changes to the data collection period and data reporting periods for selected ground ambulance organizations in year 3. A commenter stated that the proposal to align the timeline for selected ground ambulance organizations in Years 1 and 2, and Years 3 and 4 is an appropriate response to the disruption that the pandemic caused with respect to the ground ambulance data collection and recognizes CMS' efforts to prevent further delays. This commenter stated that the proposed adjusted timeframe will provide their organization enough time to build up the appropriate collection tools and processes, and will allow for a smooth transition for submitting the required data.

A commenter supported the data collection timeline as proposed and stated that it is important that assessments of the adequacy of ground ambulance payments not be based on data that reflects anomalous, temporary trends in utilization and costs caused by a global pandemic. The commenter stated that to the extent that these anomalous trends might still be occurring in 2022, the commenter

concur with CMS' caution about using 2022 data because it could bias analyses of the geographic variation in costs and the adequacy of Medicare's ground ambulance payments.

A commenter supported the proposal and stated that while their organization appreciated the need to delay the data collection process due to the PHE for COVID-19, the commenter is concerned that further delays will prevent MedPAC from having the data needed to produce their report to Congress.

A commenter supported the delays to the ground ambulance data collection because their members were on the frontlines of responding to the pandemic, however, the commenter does not support collapsing the Congressionally mandated 4 years of data collection into 2 years. The commenter stated that the proposed timeline is problematic given that CMS did not beta test the Medicare Ground Ambulance Data Collection System and according to the commenter, the first year of the data collection is likely to be fraught with confusion and errors, despite CMS and its contractor's best efforts to address as many questions as possible before the data collection is fielded. This commenter recommended a 4-year timeline: Data collection period in 2022 and data reporting period in 2023 for selected ground ambulance organizations already selected in year 1; data collection period in 2023 and data reporting period in 2024 for selected ground ambulance organizations already selected in year 2, data collection period in 2024 and data reporting period in 2025 for selected ground ambulance organizations in year 3 and data collection period in 2025 and data reporting period in 2026 for selected ground ambulance organizations in year 4. The commenter suggested a 12-month data reporting period rather than a 5-month data reporting period that begins the day after the last day of the ground ambulance organization's data collection period. This commenter noted that MedPAC may not have time to complete their analysis and report on either the proposed timeline or the commenter's recommended timeline. However, the commenter stated that its approach would allow for timing that mirrors what the authorizing statute requires and it also would meet CMS stated goal that the data collected be "more reflective of a typical year of costs for ground ambulance organizations" than data collected during the turbulent of the pandemic, which continues to rage during this fourth surge with the Delta variant.

Response: We appreciate the feedback on our proposed changes to the data

collection period and data reporting period for selected ground ambulance organizations in year 3. As several commenters noted, we are keenly aware of the tension between the need to begin collecting data and the challenges and threats to generalizability of collecting data through the ongoing pandemic and PHE. Our proposal attempts to strike a balance between these two considerations. Under our proposal, information will be collected from fewer organizations during data collection periods starting in 2022, and from more organizations during data collection periods starting in 2023. Delaying data collection and reporting for more ground ambulance organizations, or stretching the data collection period and data reporting period over a 4-year period, will result in a longer delay before information is collected from all ground ambulance organizations. We are therefore not accepting the commenter's recommended 4-year timeline. We plan to conduct beta testing on the Medicare Ground Ambulance Data Collection System prior to data reporting in the system.

After consideration of public comments, we are finalizing our proposal for a new data collection period beginning between January 1, 2023 and December 31, 2023 and a new data reporting period beginning between January 1, 2024 and December 31, 2024 for selected ground ambulance organizations in year 3. With this proposal, we plan to do the sample in 2022 for selected ground ambulance organizations in year 3 rather than the current plan in 2021.

5. Change to the Notification Process for Selected Ground Ambulance Organizations Required to Report

In the CY 2020 PFS final rule, we codified our notification process at § 414.626(c)(3) and (b)(1). We stated at § 414.626(c)(3) that CMS will notify an eligible ground ambulance organization that it has been selected to report data for a year at least 30 days prior to the beginning of the calendar year in which the ground ambulance organization must begin to collect data by posting a list of selected organizations on the CMS web page and providing written notification to each selected ground ambulance organization via email or U.S. mail.

The Medicare Administrative Contractor (MAC) is responsible for providing written notifications to the selected ground ambulance organizations in their service area. We codified their role at § 414.626(b)(1) which states that within 30 days of the date we notify a ground ambulance

organization that it has been selected to report data under this section, the ground ambulance must select a data collection period that corresponds with its annual accounting period and provide the start date of that data collection period to the ground ambulance organization's Medicare Administrative Contractor.

In the CY 2022 PFS proposed rule (86 FR 39303), we proposed to make a technical revision to § 414.626(b)(1) to state that the selected ground ambulance organization provide the start date of the data collection period to CMS or its contractor instead of the Medicare Administrator Contractor. This change will provide CMS with flexibility to have the MACs or other contracted entities provide written notifications and collect information from the selected ground ambulance organizations. If we find the response rate is low, having the flexibility to contract with other entities that could employ additional outreach resources may be useful. This revision will not preclude CMS from including the MACs in the notification process. We also proposed to correct a typographical error at § 414.626(b)(1), which currently states "a ground ambulance must select a data collection period" to read "a ground ambulance organization must select a data collection period." We solicited comments on our technical revisions to the citation at § 414.626(b)(1).

We did not receive public comments on this proposal, and therefore, we are finalizing it as proposed.

6. Payment Reduction for Failure to Report

Section 1834(l)(17)(D)(i) of the Act requires that beginning January 1, 2022, subject to clause (ii), the Secretary reduce the payments made to a ground ambulance organizations under section 1834(l)(17) of the Act for the applicable period by 10 percent if the ground ambulance organization is required to submit data under the data collection system with respect to a data collection period under the data collection period and does not sufficiently submit such data.

We stated in the CY 2020 PFS final rule (84 FR 62895) that we would make a determination that the ground ambulance organization is subject to the 10 percent payment reduction no later than the date that is 3 months following the date that the ground ambulance organization's data reporting period ends. In this final rule, we provided examples of when the determination will be made based on calendar year and fiscal year data collection period

beginning in 2020. Due to the delay caused by the PHE for COVID-19, we did not receive data collected in 2020. We will begin to follow this timeline to make a determination that the ground ambulance organization is subject to the 10 percent payment reduction when data collected in 2022 is required to be reported in 2023 for selected ground ambulance organizations in year 1 and year 2.

For example, if a selected ground ambulance organization's data collection period is based on a calendar year, that is, January 1, 2022 through December 31, 2022, we will allow a ground ambulance organization 5 months to report the data collected during the data collection period. For this example, the data reporting period for this organization is January 1, 2023 to May 31, 2023. We will make a determination that the ground ambulance organization is subject to the 10 percent payment reduction no later than August 31, 2023. With this timeframe, we will apply the 10 percent reduction in payments, if applicable (no hardship exemption or informal review is granted), for ambulance services provided between January 1, 2024 and December 31, 2024.

As another example, if a selected ground ambulance organization's data collection period is based on a fiscal year, that is, October 1, 2022 through September 30, 2023, we will allow a ground ambulance organization 5 months to report the data collected during the data collection period. For this example, the data reporting period for this organization is October 1, 2023 to February 28, 2024, we will make a determination that the ground ambulance organization is subject to the 10 percent payment reduction no later than June 1, 2024. With this timeframe, we will apply the 10 percent reduction in payments, if applicable (no hardship exemption or informal review is granted), for ambulance services provided between January 1, 2025 and December 31, 2025.

Comment: A commenter supported aligning the timelines for the application of penalties for not reporting data with our new timelines for data collection and reporting.

Response: We appreciate the commenter's support.

7. Public Availability of Data

We stated in the CY 2020 PFS final rule (84 FR 62897), the data will be made available to the public through posting on our website at least every 2 years and we will post the summary results by the last quarter of 2022. We codified the public availability at

§ 414.626(f), which states: (f) Public availability of data. Beginning in 2022, and at least once every 2 years thereafter, we will post on its website data that it collected under this section, including but not limited to summary statistics and ground ambulance organization characteristics.

Due to the COVID-19 delay, in the CY 2022 PFS proposed rule (86 FR 39303), we proposed to revise § 414.626(f) to state that we will make the data collected under § 414.626 publicly available beginning in 2024. We solicited comments on our proposal to revise the timeline when the public availability of data will begin.

We received a public comment on our proposal to revise the timeline when the public availability of data will begin. The following is a summary of the comment we received and our response.

Comment: A commenter stated that it would provide greater transparency if CMS were to release data annually rather than waiting until 2024 for the first release. The commenter stated that this would be similar to cost reporting data or other data files released for other healthcare entities that are also released annually and that it would be important for the public to have access to the data that will be used by MedPAC for their analysis.

Response: In the CY 2020 PFS final rule (84 FR 62897), we finalized our proposals for public availability of the data including to post on our website a report that includes summary statistics, respondent characteristics, and other relevant results in the aggregate so that individual ground ambulance organizations are not identifiable. The data above will be made available to the public through posting on our website at least every 2 years. We do not plan on releasing information collected via the Medicare Ground Ambulance Data Collection Instrument in precisely the same way that cost reporting data is released but intend to post as much data as possible, including summary statistics describing the data reported by subgroups of respondents, while protecting the confidentiality of the respondents.

After consideration of public comments, we are finalizing the proposal as proposed.

L. Medicare Diabetes Prevention Program (MDPP)

The Medicare Diabetes Prevention Program (MDPP) expanded model is a structured intervention that aims to prevent or delay onset of type 2 diabetes among eligible Medicare beneficiaries diagnosed with pre-diabetes. The MDPP expanded model is an expansion of

duration and scope of the Diabetes Prevention Program (DPP) model test, which was initially tested through a Round One Health Care Innovation Award. MDPP services are furnished in community and health care settings by organizations that enroll in Medicare as MDPP suppliers, a new supplier type, even if they have an existing Medicare enrollment as another supplier type. MDPP services furnished under the MDPP expanded model are covered as an additional preventive service with no cost-sharing under Medicare. Eligible organizations seeking to furnish MDPP services began enrolling in Medicare as MDPP suppliers on January 1, 2018, and began furnishing MDPP services on April 1, 2018.

We proposed to amend our regulation at § 410.79 to preclude the provision of ongoing maintenance sessions unless the MDPP beneficiary has started his or her first core session on or before December 31, 2021. In addition, we proposed to amend § 414.84(b) and (c) to update the amount of the performance payments for the core sessions and core maintenance sessions and ongoing maintenance sessions (where applicable) to be consistent with our proposal. We proposed that this change apply to all MDPP beneficiaries starting the MDPP set of services on or after January 1, 2022. Additionally, we proposed to amend § 424.205(b) to add a provision to waive the provider enrollment Medicare application fee for all organizations enrolling in Medicare as MDPP suppliers that submit an application on or after January 1, 2022. Finally, we proposed to make a conforming amendment to § 424.502 to remove a reference to the CMS-20134 from the definition of "institutional provider." (In accordance with § 424.514, institutional providers generally must pay the enrollment application fee.)

We do not anticipate that the changes will impact our ability to complete an evaluation of the MDPP expanded model, but the evaluation will consider the changes we finalize. The evaluation will continue to use beneficiary-level Diabetes Prevention Recognition Program (DPRP) encounter data and program data furnished by the Centers for Disease Control and Prevention (CDC) in combination with Medicare claims data to analyze the long-term utilization of services by beneficiaries who have received the MDPP set of services. We will use these data as planned to assess whether the MDPP expanded model is expected to improve the quality of care without increasing spending, reduce spending without

reducing the quality of care, or improve the quality of care and reduce spending.

While we acknowledge that additional changes will likely be needed in the future to improve access to MDPP, we anticipate that the programmatic adjustments finalized in this rule are likely to result in more MDPP suppliers, increased beneficiary access to MDPP services, and an ongoing reduction of the incidence of diabetes in eligible Medicare beneficiaries, in both urban and rural communities. We believe that the three changes that we are finalizing in this rule will make MDPP more attractive to potential suppliers by addressing consistent stakeholder comments about MDPP underpayment and the length of the MDPP service period, as well as more manageable for MDPP beneficiaries by reducing their commitment to MDPP to 1 year. We anticipate that removing the Medicare enrollment fee for suppliers, providing larger payments up front to suppliers, and paying more for attendance-only achievements will result in more organizations enrolling as MDPP suppliers and MDPP suppliers will be able to more consistently implement sustainable programs which will increase the availability of the MDPP set of services to more beneficiaries. Stakeholders have suggested that a payment structure that provides higher payments later in the set of services and places too much emphasis on weight-loss requirements disincentivizes MDPP suppliers from providing services to underserved populations who may be less successful at achieving the weight-loss goals. We believe that by providing larger payments up front and paying more for attendance-only achievements we will remove the potential disincentives and improve accessibility to underserved populations who may face barriers to weight-loss. We anticipate that these changes will increase beneficiary access to MDPP services in rural areas and it may have a positive impact on more equitable access to the service.

1. Changes to § 410.79(b), (c), and (e)

We proposed to amend certain MDPP expanded model policies previously finalized in the CY 2017 PFS final rule (81 FR 80459 through 80475 and 80552 through 80558), the CY 2018 PFS final rule (82 FR 34157 through 34158), and the CY 2021 PFS final rule 85 FR 50074). Previous rules established policies related to the set of MDPP services, beneficiary eligibility criteria, reimbursement structure, and supplier enrollment requirements and compliance standards.

MDPP has experienced challenges recruiting suppliers to participate in the expanded model, which has limited beneficiary access to the preventive services offered under the expanded model. Existing and prospective suppliers have reported that the length of the set of MDPP services and the payment timing and amounts have made implementation and operation of MDPP burdensome and has hindered participation. Currently, MDPP suppliers are required to offer up to 2 years of MDPP services to eligible MDPP beneficiaries. The MDPP set of services, as defined in § 410.79(b), consists of at least 16 sessions offered during the core sessions phase (Months 1–6), monthly maintenance sessions offered during the core maintenance sessions phase (Months 7–12) (collectively the “core sessions phase”), and additional monthly sessions offered during the ongoing maintenance sessions phase (Months 13–24) for eligible beneficiaries. To be eligible for the ongoing maintenance sessions phase, a beneficiary must meet the minimum weight-loss requirement (5 percent weight loss from baseline), as defined in § 410.79(b), and maintain the minimum weight-loss requirement on a quarterly basis to continue to receive MDPP services in subsequent quarters. The ongoing maintenance sessions delivered in year 2 are a unique feature of MDPP. Both the CMS-funded Health Care Innovation Award (HCIA) to the Young Men’s Christians Association (YMCA) of the USA (Y–USA), referred to as the DPP model test hereafter, and the CDC’s National Diabetes Prevention Program (National DPP) was/are 12 months in length.

We included the ongoing maintenance sessions phase in the MDPP set of services to support participants in solidifying the behavioral changes that resulted in weight loss during the first 12 months. In the CY 2017 PFS proposed rule, we proposed adding the ongoing maintenance sessions phase to follow the completion of the 12-month core sessions phase if the beneficiary achieved and maintained the required minimum weight loss of 5 percent from the baseline weight. That proposed rule did not place a limit on the number of ongoing maintenance session phases an eligible beneficiary could attend. In response to stakeholder comments, we modified the proposed policy to limit access to up to 2 years of ongoing maintenance sessions after the 12-month core sessions phase. In the CY 2018 PFS, we again modified the policy to limit access to ongoing maintenance

sessions to 1 year after the 12-month core sessions phase as long as MDPP beneficiaries maintained the 5 percent weight loss.

Despite limiting the ongoing maintenance sessions phase to 1 year, we have heard that the MDPP suppliers find the implementation, operation, and costs of the ongoing maintenance sessions phase burdensome. We anticipate that the changes we proposed will improve the uptake of organizations enrolling in Medicare to become MDPP suppliers, thus enabling more beneficiaries to access the MDPP set of services. Collectively, this will improve CMS ability to evaluate the MDPP expanded model as more suppliers and beneficiaries participate in the expanded model test. Currently, more than 1,000 organizations nationally are eligible to become MDPP suppliers based on their preliminary or full CDC DPRP status. However, only 27 percent of eligible organizations are participating in MDPP. Based on an analysis of National Health and Nutrition Examination Survey (NHANES) data, an estimated 16.4 million people are eligible for MDPP;¹⁴¹ to date, over 3,600 beneficiaries are participating in the MDPP set of services. We anticipate that the removal of the second year of the MDPP set of services on a prospective basis will make MDPP attractive to more MDPP eligible organizations and beneficiaries.

The requirement to offer a second year of the MDPP set of services has also caused confusion among MDPP suppliers because it is inconsistent with the CDC National DPP requirements and curriculum. Because there is no defined curriculum for the ongoing maintenance sessions phase, MDPP suppliers repeat parts of the curriculum they previously used during the core sessions phase per CDC guidance and their updated 2021 DPRP Standards¹⁴². We have heard anecdotally, through written inquiries and questions asked by MDPP suppliers during MDPP educational events, that MDPP suppliers struggle with discerning the appropriate timing of determining whether a beneficiary has met and/or maintained the 5 percent minimum weight-loss requirement necessary for continued eligibility for and during the ongoing maintenance sessions phase. To be eligible to

¹⁴¹ Lee AK, Warren B, Liu C, Foti K Selvin E (2019) Number and Characteristics of US Adults Meeting Prediabetes Criteria for Diabetes Prevention Programs: NHANES 2007–2016, *J Gen Intern Med* 34(8):1400–2. <https://link.springer.com/content/pdf/10.1007/s11606-019-04915-w.pdf>.

¹⁴² CDC DPRP Standards (March 1, 2021) <https://nationaldppcsc.cdc.gov/article/DPRP-Standards-and-Operating-Procedures>.

continue to the ongoing maintenance phase of MDPP, beneficiaries must lose and/or maintain a 5 percent weight loss from baseline. MDPP suppliers are responsible for determining if a MDPP beneficiary has met and/or maintained the 5 percent weight loss from baseline during the applicable session and phase. A supplier must submit a claim to the Medicare Administrative Contractor (MAC) for the 5 percent weight loss achievement for each beneficiary, otherwise, all subsequent ongoing maintenance session claims may be rejected by the MAC. Suppliers have 12 months from the date of service to submit claims, if they delay the claim submission for the 5 percent weight loss performance goal, this may impact a supplier's ability to get paid for the ongoing maintenance sessions. For example, if a beneficiary achieves the 5 percent weight loss goal during the first 6 months of MDPP, or during the core services period, and they do not submit the claim for the 5 percent weight loss goal until after the ongoing maintenance interval has started, the supplier risks having their claim for the ongoing maintenance interval rejected. Furthermore, in this scenario, the supplier will need to submit a claim for the second core maintenance session interval with a 5 percent weight loss for the beneficiary to continue with ongoing maintenance sessions. MDPP monitoring data suggest that 82 percent of MDPP beneficiaries for whom we have claims for the 5 percent weight loss goal achievement reach that goal in the first 6 months of the expanded model. However, our monitoring data show claims for MDPP ongoing maintenance sessions for only 10 percent of MDPP beneficiaries and that beneficiary attendance sharply drops after the first quarter of the initial core session. Collectively, these data suggest that suppliers may not be incentivized to retain MDPP beneficiaries after they attend the 9th core session in the set of MDPP services, which MDPP beneficiaries likely reach during the first quarter of the expanded model, or after the MDPP beneficiary has achieved the 5 percent weight loss milestone.

Existing MDPP suppliers report frustration with the requirements associated with the ongoing maintenance phase and we believe that the additional burden and cost of providing the ongoing maintenance sessions is a deterrent to prospective MDPP suppliers. Organizations have communicated to CMS their difficulties in keeping MDPP beneficiaries engaged in the expanded model. For an example, suppliers are reimbursed after they

successfully submit claims for beneficiary attendance, after the 1st, 4th, and 9th core sessions during the first 6 months of the MDPP set of services, and then if beneficiaries attend 2 monthly sessions per quarter thereafter. MDPP eligible organizations have cited beneficiary acquisition and retention as a leading barrier to their MDPP supplier enrollment. Stakeholders and suppliers have commented that the payment levels for a second year are inadequate to cover supplier costs given the low volume of beneficiaries who participate in the ongoing maintenance phase and drive up the per-beneficiary costs for the supplier. Stakeholders comment that sessions have the same fixed costs, yet there are a diminishing number of MDPP beneficiaries eligible to participate. As previously noted, our FFS claims-based monitoring data show that only approximately 10 percent of MDPP beneficiaries continue with the ongoing maintenance sessions phase and the majority of MDPP beneficiaries achieve the 5 percent weight loss milestone within the first 6 months of the MDPP set of services. Given our data, stakeholder comments, the lack of the ongoing maintenance year alignment with the CDC's National DPP and the DPP model test, the ongoing maintenance phase is not sufficiently beneficial to continue requiring and may be causing harm to the expanded model's overall goals.

As such, we proposed to amend our regulations to preclude coverage of ongoing maintenance sessions unless the MDPP beneficiary has started his or her first core session on or before December 31, 2021. Specifically, we proposed to amend § 410.79(c)(1)(ii) to provide that an MDPP beneficiary is eligible for the first ongoing maintenance session interval only if the beneficiary started his or her first core session on or before December 31, 2021. As finalized, this change will effectively make the MDPP timeframe consistent with the National DPP for MDPP service periods that begin on or after January 1, 2022. In addition, as finalized, we believe that this policy will reduce the administrative burden and costs associated with the ongoing maintenance sessions phase to MDPP suppliers with minimal impact to beneficiaries given their historically low participation rate in the second year of MDPP. This proposed change is consistent with the authority in section 1115A(c) of the Act, and we anticipate this change will improve our ability to evaluate the expanded model test due to an anticipated increase in supplier enrollment, which will increase

beneficiary access to the expanded model.

In conjunction with the proposed change to remove the ongoing maintenance sessions phase from the MDPP services period, we proposed to redistribute a portion of the ongoing maintenance sessions phase performance payments to certain core and core maintenance session performance payments to address stakeholder concerns that the current MDPP payment structure does not cover reasonable costs of MDPP suppliers to deliver the MDPP set of services. For example, the proposed attendance-based performance payments are based on a standardized per-session rate, paid after the 1st, 4th, and 9th sessions attended during the core sessions intervals, and after attending the two (2) sessions during each of the core maintenance intervals. Based on the comments we received, we are modifying this proposal to redistribute all the ongoing maintenance sessions phase performance payments to certain core and core maintenance session performance payments in the final rule consistent with Table 39. We proposed to increase performance payments for MDPP beneficiary achievement of the 5 percent weight loss goal, as well as continued attendance during each core maintenance interval. Based on comments we received, we will maintain the current 2021 performance payment amount for achievement of the 5 percent weight loss goal, increase the payment amounts to the attendance only goals to incentivize attendance, and increase the total maximum payment to \$705.

Our Office of the Actuary estimated that the average payment for an MDPP supplier will increase by \$100 with the elimination of the second year of MDPP. While the maximum payment available to an MDPP supplier will decrease when compared to the maximum payment under the original 2-year payment structure, the second year of the MDPP set of services have historically been far less utilized than first year set of services. Therefore, it is anticipated that eliminating the second year of payments will have minimal negative impact on the expanded model's costs. Table 39 shows the current 2021 non-cumulative performance payments, the proposed performance payments, and the finalized performance payment amounts for those MDPP beneficiaries who will start their first core service on or after January 1, 2022. We did not propose to change the payment rates for ongoing maintenance sessions in cases where a beneficiary remains eligible for them

(that is, because they started receiving the MDPP set of services on or before December 31, 2021 and achieved the

minimum required weight loss); rather, we proposed to maintain those payment

rates until such time as ongoing maintenance sessions are phased out.

TABLE 39: MDPP Payment Structure

Payment Description	Current	Proposed	Final
Core Sessions (Months 1-6)			
Attend 1 Core Session or Bridge Payment	\$26	\$26	\$35
Attend 4 Core Sessions	\$52	\$78	\$105
Attend 9 Core Sessions	\$95	\$130	\$175
Core Maintenance (CM) Sessions (Months 7-12)			
Attend 2 Core Maintenance Sessions (No 5% WL) in CM Interval 1 (Months 7-9)	\$15	\$52	\$75
Attend 2 Core Maintenance Sessions (5% WL) in CM Interval 1 (Months 7-9)	\$63	\$106	\$93
Attend 2 Core Maintenance Sessions (No 5% WL) in CM Interval 2 (Months 10-12)	\$15	\$52	\$75
Attend 2 Core Maintenance Sessions (5% WL) in CM Interval 2 (Months 10-12)	\$63	\$106	\$93
5% WL Achieved from baseline weight	\$169	\$189	\$169
9% WL Achieved from baseline weight	\$26	\$26	\$35
Ongoing Maintenance Sessions (Months 13-24)			
Attend 2 Ongoing Maintenance (OM) Sessions in OM Interval 1 (Months 13-15)	\$52		
Attend 2 Ongoing Maintenance Sessions in OM Interval 2 (Months 16-18)	\$52		
Attend 2 Ongoing Maintenance Sessions in OM Interval 3 (Months 19-21)	\$53		
Attend 2 Ongoing Maintenance Sessions in OM Interval 4 (Months 22-24)	\$53		
Subtotal Maximum Payment – Attendance Only	\$203	\$338	\$455
Total Maximum Payment*	\$704	\$661	\$705

Our data from the DPP model test showed beneficiaries who finished at least nine (9) sessions of the model were considered “completers” and had better weight loss and lower Medicare spending than non-completers (those who attended fewer than 9 sessions). The DPP model test showed that beneficiaries who attend nine or more sessions will, on average, experience a 6.24 percentage point increase in weight loss compared to beneficiaries attending fewer than nine sessions. Currently, our payment structure does not pay for per session attendance, and stakeholders have commented that the expanded model, in its current state, is creating inequities in access to MDPP among eligible beneficiaries because suppliers cannot invest in the costs to retain beneficiaries who may have access barriers related to transportation or distance of the MDPP location from their home. We anticipate the changes to the payment structure, which will pay a total of \$81 more per beneficiary who attends at least 9 sessions and \$55 more per core maintenance interval than what is currently paid, will encourage existing suppliers to retain MDPP beneficiaries given the one-year commitment versus two for the MDPP set of services. Continuous beneficiary attendance is critical to reaching key outcomes such as 5 percent weight loss

and reduced Medicare spending. Additionally, we expect more eligible organizations will enroll as MDPP suppliers due to our eliminating the ongoing maintenance period, thereby increasing the number of locations beneficiaries may access the MDPP set of services. We expect the changes to the MDPP payment structure will not affect MDPP’s qualification for expansion. We will use the CDC DPRP and MDPP claims data as planned to assess whether the MDPP expanded model is expected to improve the quality of care without increasing spending, reduce spending without reducing the quality of care, or improve the quality of care and reduce spending. We anticipate that these programmatic adjustments are likely to result in more MDPP suppliers, increased beneficiary access to MDPP services and an ongoing reduction of the incidence of diabetes in eligible Medicare beneficiaries, in both urban and rural communities.

In our regulatory impact analysis, the CMS Office of the Actuary updated its estimates that these changes will reduce Medicare spending over 10 years, with potential savings starting in 2027. There is no evidence that eliminating the second-year maintenance sessions, shortening the MDPP services period to 1 year, will have any negative effects on

performance of the MDPP expanded model.

Increasing the first-year payment amounts to suppliers and waiving the Medicare enrollment fee (as discussed below) should increase access to MDPP, resulting in more utilization of the MDPP set of services.

We proposed a change to our emergency policy at § 410.79(e)(3)(v)(C) to account for the elimination of ongoing maintenance sessions for MDPP beneficiaries who start the set of MDPP services on or after January 1, 2022. Under this proposal, only beneficiaries who start the MDPP set of services between January 1, 2021, and December 31, 2021 and who are in the second year of the set of MDPP services as of the start of an applicable 1135 waiver event may either resume or restart the ongoing maintenance session interval in which they were participating at the start of the applicable 1135 waiver event if they elect not to continue with MDPP services virtually during the applicable 1135 waiver event. MDPP beneficiaries who are eligible to participate in MDPP ongoing maintenance phase sessions between January 1, 2021 and December 31, 2021 and who elected not to participate virtually during the COVID-19 PHE, will have the option to resume or restart the ongoing maintenance

session interval in accordance with § 410.79(c)(3).

As noted above, we proposed to remove the ongoing maintenance sessions phase for all MDPP

beneficiaries who start MDPP set of services on or after January 1, 2022. MDPP beneficiaries who start the MDPP set of services on or before December 31, 2021 will be able to continue with the

ongoing maintenance phase if they meet the eligibility requirements described in § 410.79(c)(3). Table 40 summarizes our proposal for the MDPP services period based on beneficiary start date.

TABLE 40: Summary of the MDPP Services Period Based on Beneficiary Start Date

Beneficiary MDPP Status	MDPP Services Period
<p>Beneficiary starts MDPP set of services on or before December 31, 2021</p>	<p><u>Core Services Period</u>, which is the first 12 months of the MDPP services period, and consists of: (A) At least 16 core sessions offered at least one week apart during months 1 through 6 of the MDPP services period; and (B) Two 3-month core maintenance session intervals offered during months 7 through 12 of the MDPP services period.</p> <p><u>Ongoing Maintenance Services Period</u>, consists of up to four 3-month ongoing maintenance session intervals offered during months 13 through 24 of the MDPP services period.</p>
<p>Beneficiary starts MDPP set of services on or after January 1, 2022</p>	<p><u>Core Services Period</u>, which is the first 12 months of the MDPP services period, and consists of: (A) At least 16 core sessions offered at least one week apart during months 1 through 6 of the MDPP services period; and (B) Two 3-month core maintenance session intervals offered during months 7 through 12 of the MDPP services period.</p>

Additionally, we proposed to remove the second duplicate paragraph (c)(3)(ii) given that the electronic CFR contains two paragraphs (c)(3)(ii), both containing the exact same language.

We proposed to amend our regulation at § 410.79(b), (c), and (e). We solicited comments on these proposals and ways to simplify the policies.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Overall, commenters were very supportive of the proposed changes, including the removal of the second year. Most commenters agreed that this change aligns with the CDC 2021 Standards and Operating Procedures for the National DPP and increases the ability of eligible organizations to offer the MDPP set of services to and retain participants. Commenters generally supported the removal of the second year as it allows eligible organizations to phase out Ongoing Maintenance sessions and align with the current CDC Recognition Program Standards and Operating Procedures. Other commenters indicated that participants are more likely to complete the MDPP set of services if it is only 1 year vs 2 years.

We received several comments requesting that we keep the option of a second year given that some Medicaid and commercial plans offer a second

year and may not require a 5 percent weight loss.

Response: We appreciate the interest in keeping the second year as optional; however, we believe that it would be overly burdensome and confusing to suppliers, beneficiaries, and the Medicare Administrative Contractors (MACs) to have some beneficiaries enrolled in MDPP on or after January 1, 2022 continue with a second year. Permitting beneficiaries to participate in a second year would create additional confusion regarding beneficiary eligibility and the claims process. Although Medicaid and some commercial plans might offer a second year, the current utilization rate of the second year of MDPP set of services reveals that it is no longer necessary to the efficacy of the expanded model. We are finalizing this policy as proposed.

Comment: Commenters stated that their understanding of this proposed change is that participants who are eligible to participate in MDPP ongoing maintenance (Months 13–24) between January 1, 2021 and December 31, 2021, but who elect not to participate virtually during the PHE, will have the option to resume or restart the ongoing maintenance session interval, even with the removal of this phase for beneficiaries beginning on or after January 1, 2022. The commenters requested clarifying language be added to the final rule if this understanding is

correct, including whether there is a timeframe for these beneficiaries to restart MDPP following the PHE.

Response: We appreciated comments and support of the proposed rule provisions. Yes, beneficiaries who are eligible to participate in MDPP ongoing maintenance phase sessions between January 1, 2021 and December 31, 2021 but who elect not to participate virtually during the PHE, will have the option to resume or restart the ongoing maintenance session interval in accordance with § 410.79(e)(3)(v)(C). We added clarifying language to this final rule. We are not imposing a requirement for MDPP beneficiaries to restart the MDPP set of services following the end of the current PHE, nor are we establishing a deadline for when such beneficiaries must restart at this time because we do not believe that it is necessary due to the uncertainty of the PHE end date.

Comment: Commenters encouraged CMS to go further and allow all current MDPP suppliers to stop offering ongoing maintenance sessions on January 1, 2022. For a period, MDPP suppliers may be delivering three interventions simultaneously: MDPP based on the 2022 changes, MDPP based on the prior iteration of the expanded model, and the National DPP, which would impose a substantial operational burden to program teams. As further rationale for this request, several MDPP suppliers

have shared that participants indicate they do not believe they need the second year.

Response: We recognize that offering ongoing maintenance sessions to certain MDPP beneficiaries after January 1, 2022 may be temporarily burdensome. However, we believe that it is important to permit all eligible beneficiaries who have attended their first core session prior to January 1, 2022 the opportunity to participate in the full MDPP set of services as they existed at the time in which the beneficiary initiated the service. Otherwise, the scope of the set of services would change, perhaps abruptly, while the MDPP beneficiary is already receiving the set of services. Keep in mind that while MDPP suppliers are required to offer ongoing maintenance sessions after January 1, 2022 to eligible MDPP beneficiaries who elect to continue with those services in accordance with the provisions of this final rule, MDPP beneficiaries are not required to participate in ongoing maintenance sessions. We are finalizing this policy as proposed.

Comment: Many commenters requested that flexibilities to provide a virtual option continue after the current PHE. Commenters noted that permitting a virtual option outside the PHE may address harder to reach populations, thereby increasing access to the expanded model (especially for rural and lower income beneficiaries with transportation needs) and ensuring a more equitable approach to accessing the expanded model. One commenter suggested that CMS change the payment structure to adopt new technologies for one-on-one virtual fitness coaching.

Several commenters suggested CMS make additional adjustments to align with CDC's DPRP standards. In particular, commenters recommended that CMS update the MDPP beneficiary eligibility requirements related to gestational diabetes and A1c levels. Commenters noted that the narrower eligibility criteria for MDPP may limit participation in the expanded model and cause confusion. In addition, we received many comments recommending that CMS consider removing or modifying the once per lifetime limitation. The commenters requested that CMS waive the once per lifetime requirement to allow for multiple attempts at weight loss. Also, several commenters expressed concern over the high-risk designation requirements for organizations enrolling in Medicare as MDPP suppliers. Commenters suggested that the designation is overly burdensome on businesses that do not have the capacity, profit, or bandwidth to address

the extra requirements. One commenter requested that certified health providers such as Registered Dietitians and Dietetics Technicians be the sole providers or provide the service with lay coaches to ensure correct nutrition information is relayed to beneficiaries. One commenter requested that CMS streamline the requirements for information collection for MDPP coaches. Several commenters expressed concern regarding the burden to become a supplier, particularly for those entities that serve historically underserved populations such as American Indians/Alaskan Natives (AI/AN). Commenters noted that the time it takes to become a CDC-recognized supplier can take 3 years, and then it can take another year to become an MDPP supplier after that. Finally, one commenter requested that CMS waive the requirement for tribes to become recognized by CDC before they can become MDPP suppliers.

Response: We appreciate the commenters' support and interest in MDPP. These suggested changes are outside the scope of this final rule. The provisions we are finalizing in this rule are only to waive the Medicare enrollment fee for MDPP suppliers as of January 1, 2021, prospectively remove the ongoing maintenance phase of the MDPP set of services, and update the MDPP payment amounts.

After consideration of public comments, we are finalizing § 410.79 (c) and (e) as proposed.

2. Changes to § 414.84(b) and (c)

We proposed to amend § 414.84(b) and (c) to update the amount of the performance payments for the core sessions, core maintenance sessions and ongoing maintenance sessions (where applicable) to be consistent with our proposal. We proposed that this change apply to all MDPP beneficiaries starting the MDPP set of services on or after January 1, 2022.

For those MDPP beneficiaries who started the first core session on or before December 31, 2021, we proposed that MDPP suppliers continue to submit claims for the ongoing maintenance sessions attended using the existing ongoing maintenance HCPCS G-codes, G9891, G9892, G9893, G9894, and G9895 when submitting claims for those MDPP beneficiaries who attended ongoing maintenance sessions.

We proposed to amend our regulation at § 414.84(b) and (c). We solicited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Overall, commenters were supportive of our proposal to redistribute some of the ongoing maintenance performance payment to the core and core maintenance session performance payments. However, many commenters recommended CMS to make further changes to the proposed payment structure and amounts. Many commenters recommended that CMS redistribute all, not just a portion, of the ongoing maintenance sessions phase performance payments to certain core and core maintenance session performance payments. The commenters noted that redistributing all the ongoing maintenance sessions phase performance payments would address ongoing concerns of MDPP suppliers of underpayment due to the current payment structure and help support long term sustainability of MDPP services. Several commenters stated that the proposed payment structure remains insufficient to cover the costs of MDPP and there is a large gap between costs and payment, especially when serving beneficiaries from diverse and low-income populations. These commenters suggested CMS to consider increasing the proposed payment rates to fully cover costs, including for serving diverse and low-income participants. One commenter expressed concern that the proposed total maximum payment amount in the restructured 1-year set of services is less than that available under the 2-year set of services. This commenter suggested that CMS ensure the finalized maximum payment is equal to the current 2021 payment amounts.

Response: We agree with the commenters that redistributing all the ongoing maintenance session phase performance payments to certain core and core maintenance sessions will address some concerns of MDPP supplier underpayment and help support long term sustainability of MDPP services. After reviewing all of the comments received regarding the redistribution of the ongoing maintenance session phase performance payment amounts and the concerns about the inadequacy of the proposed payment amounts, we have determined that distributing the current total maximum payment amount will make MDPP more attractive to suppliers and increase beneficiary participation. We acknowledge that the final payment structure may remain insufficient to cover the costs of MDPP for some suppliers, but hope that increasing the maximum per beneficiary attendance-based payments by \$253 may help address some of costs associated with

serving diverse and low-income participants. Stakeholders have told CMS that diverse and low-income beneficiaries have more barriers to weight loss, are less likely to achieve the 5 percent weight loss achieved performance goal, and require more effort from the MDPP suppliers. As such, by establishing payments with a heavy reliance on weight loss achieved, CMS is disincentivizing MDPP suppliers who serve diverse and low-income populations because the MDPP suppliers are receiving lower overall average per-beneficiary payments. We believe that shifting some of the payment amounts to the attendance only performance goals will increase the overall average per-beneficiary payment, thereby addressing some of the costs associated with serving diverse and low-income populations.

We are modifying the proposed § 414.84(b) and (c) to redistribute all the ongoing maintenance sessions phase performance payments to certain core and core maintenance session performance payments in the final rule. Based on this modification, the total maximum payment will increase from the proposed \$661 to \$705. The \$705 payment amount is \$1 more than the current maximum payment of \$704 under the original 2-year payment structure. Table 39 illustrates the updates to the payment amount redistribution and total maximum payment. We believe that this modification, along with the removal of Year 2 from the MDPP set of services and the removal of the Medicare enrollment fee we are finalizing will help address some of the payment inadequacy comments we have received since MDPP was originally implemented.

Comment: In addition to recommending that CMS redistribute all the ongoing maintenance performance payments, many commenters suggested that CMS make further changes to the proposed payment structure. Specifically, commenters recommended that we increase the amount of the performance payments available at the beginning of the MDPP set of services. Commenters stressed that staff time and programming expenses are highest during recruitment and enrollment (before core session 1) and during the first few weeks of the services (between core sessions 1 and 4). One commenter, commented that the reimbursement structure needs to recognize the upfront costs to delivering the MDPP set of services. The commenter stated that payment levels should adequately cover the costs of core and maintenance sessions. The commenter stated that

most organizations still see average cost of MDPP delivery in the \$450—\$600 range per participant. The commenter calculated that, while the commenter received \$462.78 per beneficiary during the Y-USA model test, MDPP suppliers receive currently receive an average of \$262.40 per MDPP participant based on 2020 fee schedule and would receive \$342.56 per participant based on proposed 2022 fee schedule. Several commenters requested that CMS align the total payment amount with the original model.

The commenter encouraged CMS to further adjust the performance payment structure to pay more in the first 6 months of service delivery to ensure suppliers' up-front costs of serving a Medicare population (especially for organizations unused to health care administration costs) are covered sufficiently. This commenter stated that the current fee schedule does not account for any opportunity loss from recruitment efforts that do not convert to participation. Lastly, the commenter noted that the model's success relied on the power of community-based organizations delivering a low-cost program effectively, but these organizations are not in a position with capital on hand to wait for their first outcomes-based payments. Other commenters suggested that the payment structure should also reflect the services required by MDPP suppliers and their coaches to engage and build relationships with MDPP participants. Commenters stated that CMS should redistribute a portion of the payments, at least \$100.00, to core session 1 to compensate organizations for successful recruitment and enrollment efforts and redistribute a portion of the payments, at least \$100.00 each, to core sessions 4 and 9 to compensate organizations for successful retention efforts.

Response: We agree that the current MDPP payment structure may not match the upfront costs to MDPP suppliers to deliver the MDPP set of services. In response to these comments, we are modifying proposed § 414.84(b) and (c) to adjust the MDPP payment structure to increase the performance payments available at the beginning of the MDPP set of services. These changes to the payment structure will pay a total of \$81 more per MDPP beneficiary who attends at least 9 sessions during the core sessions phase than proposed (\$315 as finalized versus \$234 as proposed) and \$142 more per beneficiary who attends at least 9 sessions during the core sessions phase than the current 2021 payment rates (\$315 as finalized versus \$173 current 2021 payment rates).

As finalized, MDPP suppliers will receive a subtotal maximum payment for attendance only of \$455. The proposed subtotal maximum payment for attendance only was \$338 as proposed and \$203 currently, the final payment structure will result in an increase of the subtotal maximum payment for attendance only of \$117 and \$252 respectively. As finalized, MDPP suppliers will receive a total maximum payment of \$705. The proposed total maximum payment was \$661 as proposed and \$704 currently, the final payment structure will result in an increase of the total maximum payment of \$41 and \$1 respectively. We believe these adjustments will increase the average payment to MDPP suppliers within the estimated average cost of MDPP delivery in the \$450—\$600 range per beneficiary provided by a commenter and will align the average per beneficiary payment with the estimated per beneficiary payment amount associated with the original model.

As finalized, both core sessions 4 and 9 are over \$100 (\$105 and \$175 respectively). While we increased the payment amount for the first core session from \$26 to \$35, we do not agree that CMS should increase the payment amount for the first core session further. First, continuous beneficiary attendance is critical to reaching key outcomes such as 5 percent weight loss and reduced Medicare spending. Our data from the DPP model test showed beneficiaries who finished at least nine (9) sessions of the model were considered "completers" and had better weight loss and lower Medicare spending than non-completers (those who attended fewer than 9 sessions). The DPP model test showed that beneficiaries who attend nine or more sessions will, on average, experience a 6.24 percentage point increase in weight loss compared to beneficiaries attending fewer than nine sessions. Second, increasing the payment amount for the first core session substantially may place the agency at a higher risk of fraud and abuse. A higher first core session payment may entice bad actors to enroll beneficiaries for the sole purpose of collecting the payment for the first core session with no intention of providing the remaining MDPP set of services. Not only does this create a risk to the agency, but it may create a risk for beneficiaries who may not be able to access the full MDPP set of services once they have attended the first session and no other services are offered. As such, we are finalizing the rule with the payment amounts listed in Table 39.

Comment: Commenters encouraged CMS to reduce the emphasis on performance payments for weight-loss achievement and increase the performance payments for attendance-only achievements so that the payment methodology provides a stronger financial incentive for attendance. One commenter recommended that CMS refrain from increasing the payment for the 5 percent weight loss achievement to \$179.00; rather, CMS should maintain the current (2021) payment for the achievement of 5 percent weight loss (\$169.00) and increase the payments for attendance of the core maintenance sessions from \$52.00 to \$62.00. Several commenters stated that the proposed increase of the payment to \$179.00 for 5 percent weight loss could have the unintended consequence of encouraging organizations to pursue ongoing participation by those who have already achieved 5 percent weight loss over those that have not yet achieved the 5 percent weight loss during the 9 core maintenance sessions. Commenters stressed that there should be an adequate financial incentive for suppliers to promote attendance amongst individuals who do not achieve 5 percent weight loss in the first 6 months. One commenter opined that session attendance payments at a level that covers operating costs only when a participant achieves 5 percent weight loss, even for early sessions, establishes incentives for unrealistic, quick, weight loss that is not aligned with the design of DPP, or evidence-based diabetes prevention. The commenter suggested that reimbursement for session attendance should be increased, and set to encourage organizations to achieve consistent session attendance from participants.

Response: We agree with the commenters recommendations that we should reduce the emphasis on performance payments for weight-loss achievement and increase the performance payments for attendance-only achievements so that the payment methodology provides a stronger financial incentive for attendance. As several commenters pointed out, placing too much emphasis on the weight-loss achieved goal could incentivize MDPP suppliers to seek out beneficiaries who are more likely to lose weight instead of focusing on the attendance of all eligible participants. While MDPP is a performance-based expanded model, we want to emphasize the importance of attending MDPP sessions along with the 5 percent weight loss goal. We are modifying the proposed § 414.84(b) and (c) to adjust the MDPP payment

structure to place more emphasis on beneficiary attendance consistent with Table 39. We agree that we should not increase the payment for the 5 percent weight loss achievement from \$169 to \$179.00. As we stated before, MDPP is a performance-based expanded model. The goal of the expanded model is for beneficiaries to lose 5 percent of their weight from baseline during their participation. As such, achievement of this goal will still result in a higher reimbursement amount. However, we want to also emphasize the importance of attending MDPP sessions, therefore, we are shifting a larger portion of the Year 2 reimbursement amount to the attendance-goals to place additional emphasis on the importance of session attendance during the MDPP set of services. As finalized, we will maintain the current 2021 payment for the achievement of 5 percent weight loss of \$169.00 and increase the payments for attendance of the core maintenance sessions to from \$52.00 to \$75.00. As finalized, MDPP suppliers will receive a subtotal maximum payment for attendance Only of \$455. The proposed subtotal maximum payment for attendance only was \$338 as proposed and \$203 currently, the final payment structure will result in an increase of the subtotal maximum payment for attendance only of \$117 and \$252 respectively. We believe that these changes will provide more financial incentive for suppliers to promote consistent attendance from participants regardless of weight loss achievement. We are finalizing the rule with the payment amounts listed in Table 39.

Comment: Other commenters suggested that CMS remove performance-based payments entirely and simply pay MDPP suppliers for delivering MDPP services. One commenter stated that continuing payments to MDPP suppliers contingent on the beneficiary achieving a weight loss goal, attending a specific number of sessions, or any other performance goal is not consistent with the DPP model test or other preventive health programs, such as smoking cessation and obesity interventions, which do not base payments on the beneficiary achieving an outcome. One commenter opined that they would like to see MDPP suppliers receive payments for their efforts put into the long journey to preventing diabetes, not just for the attainment of the goal. One commenter encouraged CMS to provide organizations with an adequate revenue stream for MDPP delivery when beneficiaries attend sessions, even if beneficiaries do not achieve 5 percent

weight loss during the first nine sessions. This commenter noted that the complex payment methodology runs counter to CMS' goal of Burden Reduction, Patients Over Paperwork, and increases the operating costs of both Medicare suppliers and the MACs.

Response: While we agree with commenters that the MDPP payment structure does not align with preventive service benefits that are paid on a fee-for-service basis, we disagree with the recommendations to align MDPP payments with that of other FFS prevention programs such as smoking cessation and obesity counseling. During the DPP model test, the Y-USA included attendance and weight loss as performance-based milestones. For an example, they tracked the number of participants who attended the 1st, 4th, and 9th core sessions and the number of participants who achieved the 5 percent and 9 percent weight loss goals. When OACT certified the DPP Model test in 2016, they based their payment structure assumptions on that of the DPP model test, and included performance-based payments for beneficiary achievement of attendance and weight loss milestones. MDPP is an expanded model, and it is different from the DPP model test in that it established a performance-based payment structure that is designed to incentivize MDPP suppliers to deliver a service that will result in weight loss and ultimately savings to CMS.

In addition, while we do not agree that the payment structure runs counter to the CMS goals of Burden Reduction and Patients Over Paperwork, or that it increases the operating costs of both Medicare suppliers and the MACs, we recognize that the current level of complexity may cause barriers in enrollment and payments. We believe that the changes we are finalizing in this rule will simplify the payment structure and increase the overall payments received by MDPP suppliers. We are finalizing the rule with the payment amounts listed in Table 39.

Comment: One commenter noted that the total proposed performance payment per beneficiary without the 5 percent weight loss is \$338 compared to \$661 for those that achieve and maintain weight loss. This commenter stated that the reduced reimbursement for beneficiaries who do not meet the 5 percent weight loss is unacceptable and is not cost beneficial for Tribal Health Programs to participate. This commenter stated that American Indians/Alaskan Natives (AI/AN) have the highest risk of Type II diabetes and face challenges on lack of quality medical care, lack of access to healthy

food, and lack of access to safe or adequate places for physical activity. They included data by the University of Kansas Medical Center on the success rate of AI/AN in diabetes weight loss programs that found that only 36 percent of AI/AN lost weight and among those who lost weight, 76 percent lost an average of 2.98 percent body weight and only 6 participants, out of 72, lost 7 percent or more of their body weight. If this sample study reflects AI/AN communities, the success rate for a Tribal member to achieve and maintain 5 percent weight loss is less than 10 percent. The commenter recommended that CMS use other health outcome measures such as reductions in blood sugar levels and hypertension risk, lower BMI levels, increased intake of healthy foods, increased rate of physical activity, or risk reduction factors for performance payments instead of weight loss.

Response: We acknowledge the evidence presented by the commenter that certain populations show improvements in health outcomes with participation in weight loss programs even though they do not achieve the 5 percent weight loss milestone. However, we did not propose to use other health outcome measures such as reductions in blood sugar levels, hypertension risk, or lower BMI levels instead of the 5 percent weight loss performance-based milestone, and we decline to adopt such changes at this time. As finalized, MDPP suppliers will receive a subtotal maximum payment for attendance only of \$455, compared to the subtotal maximum payment for attendance only of \$338 as proposed and \$203 currently. The final payment structure will result in an increase of the subtotal maximum payment for attendance only of \$117 and \$252 respectively. We believe that these changes will provide more financial incentive for suppliers to promote consistent attendance from participants regardless of weight loss achievement.

The changes we proposed to the rule and the modifications we are finalizing in this rule are in direct response to those concerns. By reducing the emphasis on the weight-loss achievement goals and increasing the attendance-payment amounts, we believe that we will adequately incentivize MDPP suppliers to deliver MDPP services even when weight-loss has not occurred.

Comment: One commenter suggested that MDPP's lack of flexibility, such as risk-adjusted payments to serve patient populations that may face transportation and other barriers to attendance and/or who the evidence has shown may be

less likely to achieve the 5 percent weight loss threshold contributes to increased health inequities and lack of opportunities for Medicare beneficiaries to participate.

Response: We agree that many eligible beneficiaries face challenges that impact their ability to lose weight and achieve the 5 percent weight-loss goal. However, we believe that risk-adjusted payments would be too complicated to add to the expanded model at this time. In addition, we do not currently have a sufficiently large cohort nor enough data to accurately risk adjust the payments.

Finally, we believe that reducing the MDPP set of services to 1 year, shifting all of the Year 2 reimbursement amounts, and placing more emphasis on the attendance only goal payments will provide more financial incentive for suppliers to promote consistent attendance from participants regardless of weight loss achievement and increase access to beneficiaries who are less likely to achieve the 5 percent weight loss threshold and with the potential to increase health equity for Medicare beneficiaries.

We will consider this recommendation for future rulemaking.

Comment: One commenter recommended that CMS increase payment for session attendance regardless of weight loss outcomes with a bonus when an attendee attends 4 sessions within 6 weeks and 9 sessions within 12 weeks.

Response: We are modifying the proposed regulation text at § 414.84(b) and (c) to adjust the MDPP payment structure to place more emphasis on beneficiary attendance consistent with Table 39. We are not considering adding any bonus payments at this time because we believe that these changes will provide more financial incentive for suppliers to promote consistent attendance from participants regardless of weight loss achievement. We are finalizing the rule with the payment amounts listed in Table 39.

Comment: One commenter recommended that CMS establish incremental weight loss outcome payments, paying for achievement of 4 percent weight loss and 5 percent weight loss. The commenter noted that adding the 4 percent weight loss outcome payment would align MDPP with the current National DPP standards which include a 4 percent outcome, based on evidence of diabetes prevention.

Response: We appreciate the commenters' support and interest in MDPP. We did not propose to adjust the 5 percent weight loss achievement goal and we decline to do so now because

incremental weight loss measurements would overly complicate the payment structure and make it more difficult to evaluate for the MDPP expanded model. We will continue to evaluate MDPP's alignment with the CDC's DPRP and make updates as necessary and feasible.

Comment: One commenter recommended that CMS eliminate the 9 percent weight loss outcome payment.

Response: We appreciate the commenters' interest in MDPP. We did not propose to eliminate the 9 percent weight loss achievement goal and we decline to do so now. The 9 percent weight loss goal was an outcome measure in the original DPP model test, and we believe it is important to retain the 9 percent weight loss goal as an outcome of the MDPP expanded model test.

Comment: One commenter recommended that CMS establish an additional performance payment for each beneficiary who achieved the 5 percent weight-loss goal and then maintained the 5 percent weight-loss at the twelfth month of attendance.

Response: We did not propose to add any new performance payments to the performance structure and we decline to do so now because adding additional payments would create more confusion for MDPP suppliers regarding claims submission. In addition, we believe that the finalized payment amounts already provides a higher payment amount for MDPP beneficiaries who maintain weight loss throughout the end of the twelfth month. The payment amount for the final performance goal "Attend 2 Core Maintenance Sessions" during months 10–12 provides a higher payment amount \$70 versus \$93 for beneficiaries who have maintained the 5 percent weight-loss.

Comment: One commenter recommended that CMS consider prospective bundled payments for a certain number of initial core sessions.

Response: We will consider this recommendation for future rulemaking.

After consideration of the comments received, we are finalizing our proposals with the following modifications:

- Redistribute all the ongoing maintenance sessions phase performance payments to certain core and core maintenance session performance payments consistent with Table 39, and
- Maintain the current 2021 performance payment amount for achievement of the 5 percent weight loss goal, increase the payment amounts to the attendance only goals to incentivize attendance, and increase the total maximum payment to \$705.

3. Changes to § 424.205(b)

Medicare requires all organizations that deliver MDPP services to enroll separately in Medicare as a MDPP supplier and pay an enrollment application fee. This places a unique burden on MDPP suppliers. Approximately 39 percent of these entities are non-traditional suppliers that serve their local communities to increase diversity, equity, and inclusion of their services, including but not limited to YMCAs, county health departments, community health centers, and non-profit organizations that focus on health education that otherwise would neither enroll nor be able to enroll as a Medicare supplier. Indeed, they are often very different from most other Medicare providers and suppliers in terms of business model and financial wherewithal, and they frequently furnish non-health care services to the community. In this vein, they cannot be considered in the same light as, for example, hospitals, SNFs, ambulance suppliers, or other organizations specifically and exclusively designed for the provision of health care services.

The provider/supplier enrollment fee for CY 2021 is \$599. Although MDPP suppliers may submit a written request to CMS for a hardship exception to the application fee in accordance with § 424.514, many will not qualify. We have heard from stakeholders that the enrollment application fee factors into an organization's decision to participate in MDPP. Organizations must submit the provider enrollment fee during the initial start-up phase of their expanded model implementation. This is when costs are likely the highest for organizations and the timing of the first CMS reimbursement is farthest away. MDPP suppliers would need to provide a first core session to at least 24 beneficiaries to simply recoup the Medicare provider enrollment fee. For many potential MDPP suppliers, the provider enrollment application fee, when combined with the additional MDPP requirements, such as the claims processing requirements, result in an organization declining to invest in enrolling as an MDPP supplier.

On April 9, 2020, CMS, through the COVID-19 Emergency Declaration Blanket Waivers for Health Care Providers, waived all provider enrollment application fees. We saw an immediate increase in MDPP supplier enrollment in Q2 2020, the quarter the blanket waivers were announced, but MDPP supplier enrollment slowed thereafter, likely due to the impact of the pandemic and many CDC National DPP organizations pausing their

delivery of DPP. We believe that granting a waiver of the fee for MDPP suppliers to extend beyond the COVID-19 Emergency Declaration Blanket Waiver may increase MDPP supplier enrollment, which will ultimately improve beneficiary access to the expanded model and our ability to evaluate the outcome of the MDPP because increasing the number of MDPP suppliers may provide for a more robust evaluation of the expanded model. Given our prior discussion of the unique character of MDPP suppliers in comparison to more traditional provider and supplier types, we believe this policy change is warranted.

In an effort to minimize the impact of this potential barrier and allow for a more robust expanded model evaluation, we proposed to utilize CMS' waiver authority under section 1115A(d)(1) of the Act to waive the provider enrollment Medicare application fee (described in sections 1866(j)(2)(C)(i) and (ii) of the Act) for all organizations that submit an application to enroll in Medicare as an MDPP supplier on or after January 1, 2022. We proposed to amend our regulation at § 424.205 (b) to reflect this waiver.

We solicited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters were unanimous in their support of CMS' proposal to waive the Medicare enrollment fee for MDPP suppliers as of January 1, 2021 indicating the fee is cost prohibitive for many potential suppliers. Several commenters suggested that this change will advance CMS' health equity agenda and increase access to MDPP services for beneficiaries. Several commenters pointed to the idea that this change may be helpful to local community-based suppliers and will encourage more organizations to apply as MDPP suppliers. Other commenters highlighted that this change will increase access to tribal health programs, improve the program's ability to reach diverse and underserved communities, and entice community-based organizations (CBOs) and FQHCs to enroll as MDPP suppliers. One commenter indicated that removing the fee, along with the proposal to also modify the performance payment structure CMS, could demonstrate significant strides to making the delivery of the MDPP set of services financially viable for organizations.

One commenter expressed concern that there are other hurdles a MDPP

supplier faces when enrolling to be a supplier but did not provide details on these concerns. Another commenter indicated that additional changes to supplier enrollment, qualifying criteria, performance outcomes, and payment structure are necessary to incentivize more eligible organizations to enroll.

Response: We appreciate the comments and support of the proposed rule provisions. We agree that this change has the potential to improve access to MDPP and increase MDPP supplier enrollment. We acknowledged that there are additional hurdles faced by organizations enrolling as MDPP suppliers. Within this final rule, we have addressed changes to other areas of concern. In addition to waiving the provider enrollment Medicare application fee, we modified the proposed policy to preclude the provision of ongoing maintenance sessions unless the MDPP beneficiary has started his or her first core session on or before December 31, 2021. We will continue to explore ways to reduce other hurdles in the future.

Comment: One commenter expressed concern related to requirements and timeline for MDPP suppliers to submit data in order to obtain recognition by the CDC. The commenter indicated the collection of data is not applicable to their communities when there is no support for funding for their already under-served health care community.

Response: The CDC DPRP recognition requirements are outside of the scope of this rule. The provisions we are finalizing in this rule are only to waive the Medicare enrollment fee for MDPP suppliers as of January 1, 2021 and update the MDPP payment structure and payment amounts.

After consideration of public comments, we are finalizing as proposed.

4. Changes to § 424.502

We proposed to make a conforming amendment to § 424.502 to remove the reference to the CMS-20134 from the definition of "institutional provider." The CY 2018 PFS final rule, which established the application fee for MDPP suppliers, amended the definition of "institutional provider" in section § 424.502 to state that MDPP suppliers that complete the CMS-20134 enrollment application are "institutional provider[s]". Thus, the application fee described in section § 424.514 applies to organizations enrolling in Medicare as MDPP suppliers. We proposed to reverse this policy by amending § 424.502 to remove the reference to the CMS-20134 thereby removing MDPP suppliers from the list

of institutional providers required to pay the Medicare enrollment fee under § 424.514. As proposed, § 424.514 will no longer be applicable to organizations enrolling in Medicare as an MDPPI supplier.

We solicited comments on this proposal.

We did not receive public comments on this provision, and we are finalizing as proposed.

M. Clinical Laboratory Fee Schedule: Laboratory Specimen Collection Fee and Travel Allowance for Clinical Diagnostic Laboratory Tests and Use of Electronic Travel Logs

1. Background on Laboratory Specimen Collection Fees for COVID-19

In the CY 2022 PFS proposed rule (86 FR 39309), we stated that we continue to believe that the laboratory specimen collection fees for COVID-19 CDLTs established in the context of and for the duration of the PHE for the COVID-19 pandemic should conclude at the termination of the PHE, as originally announced in the March 2020 COVID-19 IFC (85 FR 19258). Specifically, we stated that we believe that these increased payments for specimen collection specifically for COVID-19 tests would no longer be warranted beyond the end of the PHE. The two new level II HCPCS codes established to identify specimen collection for COVID-19 testing specifically are: Code G2023 (*specimen collection for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]), any specimen source*); and code G2024 (*specimen collection for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]), from an individual in a SNF or by a laboratory on behalf of a HHA, any specimen source*), for independent laboratories to use when billing Medicare for the nominal specimen collection fee for COVID-19 testing for the duration of the PHE for COVID-19.

As discussed in the CY 2022 PFS proposed rule, the increased fees were intended to address additional resources needed specifically during the PHE for the COVID-19 pandemic, particularly for the collecting of specimens using nasopharyngeal and oropharyngeal swabs or collection of sputum, which required a trained laboratory professional and additional precautions to minimize exposure risks in handling specimens that are suspected or confirmed for COVID-19. We stated that we expect that the termination of the PHE will occur when there is a reduced risk of COVID-19, which will mean the

increase of supplies, personal protective equipment (PPE), and heightened sterilization and safety protocols for laboratory specimen collection and handling will be at a more manageable level. Likewise, we stated that we expect the potential ongoing spread of COVID-19 likely will diminish after the PHE ends, which will mean that advanced safety precautions, extensive PPE, and specialized training for laboratory specimen collection likely will no longer be required to the same extent as during the PHE. Because we anticipated that the PHE will end when there is a reduced risk of COVID-19 and not before such circumstances exist, we maintained that the laboratory specimen collection fees for COVID-19 CDLTs established in the context of and for the duration of the PHE for the COVID-19 pandemic should conclude at the termination of the PHE (86 FR 39310).

2. Specimen Collection Fee and Travel Allowance for Clinical Diagnostic Laboratory Tests

In the CY 2022 PFS proposed rule (86 FR 39310), we requested broad comments on our policies for specimen collection fees and the travel allowance for consideration for possible updates to policies in the future through notice and comment rulemaking. We requested comments regarding the nominal specimen collection fees for trained personnel to collect specimens from homebound patients and inpatients (not in a hospital), how specimen collection practices may have changed as a result of, or from insight gained during, the PHE for COVID-19, what additional resources might be needed for specimen collection for COVID-19 CDLTs and other tests after the PHE ends, as well as comments related to the calculation of costs for transportation and personnel expenses for trained personnel to collect specimens from such patients.

The following is a summary of the public comments we received related to the specimen collection fee and changes in practice associated with the PHE for COVID-19 and our responses.

Comment: Several commenters expressed appreciation that CMS recognized the need for additional resources required for specimen collection during the PHE and also for the expansion of access to laboratory testing in the home for Medicare beneficiaries. One commenter expressed support for CMS' decision to end the increased payment amounts for specimen collection at the termination of the PHE, stating that many laboratories realized financial profits during the PHE and suggested that those profits will continue to provide

incentive to perform COVID-19 testing even after the termination of the PHE.

Conversely, several commenters stated that instead of ending increased payments for specimen collection, CMS should instead expand and permanently authorize the specimen collection payment under HCPCS codes G2023 and G2024 and allow the usage of these codes for all CDLTs in order to compensate for the supplies, equipment, and sterilization protocols required for safe and uncontaminated specimen collection and handling in the suspected presence of SARS-CoV-2. Commenters stated that an increased payment for the specimen collection of all CDLTs is necessary to compensate for the supplies, equipment, and sterilization protocols required for safe specimen collection and handling, not just in cases with suspected presence of SARS-CoV-2. Several commenters requested that CMS permanently allow the usage of G2023 to report specimen collection for all sites of service where specimens are collected by clinical laboratories and not exclusively for homebound patients, suggesting that extending the payment of specimen to additional settings would improve patient access to laboratory testing. One commenter suggested that any site where clinical laboratory personnel collect specimens should be permitted to bill Medicare for G2023, including on-site collection at clinical laboratories, pharmacies billing as clinical laboratories, drive through testing locations, and urgent care clinics.

Several commenters stated that the COVID-19 pandemic has permanently altered the public health paradigm, which the commenters stated necessitates permanent and resource-intensive infection control measures that merit higher specimen collection fees to account for such costs as heightened safety precautions, the need for PPE, and special training for specimen collection beyond the immediate PHE. The commenters stated that the novel coronavirus is transmitted through the air, widely circulating variants (for example, beta, delta) will continue to spread, more variants are likely to continue to emerge, and the duration of the vaccine protective immunity is unknown. For these reasons, the commenters stated that additional PPE and safety procedures and training necessary for safe specimen collection will be necessary indefinitely. Several commenters also stated that herd immunity has not yet been achieved and may still be years away; therefore, ongoing special training and protective measures, including PPE,

which require additional costs and supplies, will remain necessary. One commenter also stated that even if the overall testing volume for the novel coronavirus decreases, additional resources on a per test basis will remain the same. One commenter stated that laboratory tests that provide self-collection kits still require professionals for processing of the specimens, who in turn need appropriate infection control resources for that activity.

Several commenters described the types of costs incurred and supplies needed for specimen collection, specifically:

- PPE including N-95 or higher respiratory or masks; face shields; goggles; gloves; isolation gowns;
- Specimen collection supplies including swabs; collection kits;
- Disinfecting and sterilization equipment including cleaning supplies; sanitizers; sterile gauze and bandages; biohazardous material disposal receptacles and bags;
- Laboratory training and expertise for staff, including employee time used for existing and new clinical laboratory technicians or health care professionals to train on proper specimen collection and handling techniques; and
- Additional staffing costs, including employee time for existing and additional new clinical laboratory technicians or health care professionals required to follow safe and accurate specimen collection procedures, enforce safe distancing requirements and fulfill administrative requirements such as logging information into infection control tracking databases at the institutional, local, State and/or Federal level.

Several commenters stated that other Federal agencies have both recommended and mandated enhanced protective measures, including the Centers for Disease Control and Prevention (CDC) and Occupational Safety and Health Administration (OSHA), respectively, in suspected COVID-19 cases. Commenters also suggested that the laboratory specimen collection fee should be updated annually to reflect inflation and the growth in costs.

Response: We appreciate the comments regarding the nominal specimen collection fees for the collection of specimens for COVID-19 clinical diagnostic laboratory testing. We acknowledge that the types of resources utilized and supplies needed for specimen collection have been influenced by the PHE for COVID-19. We plan to take this feedback into consideration for possible future rulemaking or guidance.

The following is a summary of the public comments we received related to the methodology for calculating the travel allowance for laboratory specimen collection and our responses.

Comment: Several commenters described their concerns with the current travel allowance policy, stating that the current system requires the individual tracking of miles and paperwork documenting those miles, and the calculation of billable charges. Commenters stated that this system creates inconsistencies across facilities providing specimen collection services and creates confusion and burden for health care providers and Medicare Administrative Contractors (MACs).

Several commenters requested that CMS simplify the travel allowance by creating a single per-encounter flat-rate payment for travel to be updated annually by the Consumer Price Index for All Urban Consumers (CPI-U), which the commenters stated would eliminate the need for the current system which they describe as cumbersome and inefficient since it requires tracking individual miles traveled in paper or electronic logs. Commenters suggested that the single per-encounter flat-rate payment rate be calculated using total aggregate payments made for the travel allowance in 2018, divided by the number of patient encounters, and then reduced by a percentage in support of a separate rural add-on payment and updated annually to reflect inflation and the growth in costs.

Commenters also stated that a single per-encounter flat-rate payment to reimburse the travel allowance would simplify personnel and transportation expenses, eliminating the individual tracking of miles and paper documenting those miles, as well as the calculation of billable charges. The commenters stated that the flat-rate approach would also provide greater consistency across facilities served and reduce the burden on health care providers and MACs, and therefore, further support continued patient access to these laboratory services. Several commenters also stated that the travel allowance is prone to billing inconsistencies, so simplifying the calculation of the travel allowance would increase the overall understanding of the policy among stakeholders, decrease the instances of health care providers inadvertently overbilling for mileage, and reduce program integrity concerns, creating clarity for all parties involved.

Several commenters also requested that CMS create a rural add-on payment to supplement the single per-encounter

flat-rate payment for travel, which the commenters stated would account for additional resources required to provide specimen collection in distant and remote areas and ensure that beneficiaries residing in rural areas can continue receiving specimen collection services.

Several commenters also suggested that if CMS does not adopt a flat rate approach, CMS should consider modifying the existing travel allowance payment structure. Commenters recommended that salary and travel costs used to determine the travel allowance be updated to account for increased labor and fuel costs and adequately cover the costs associated with transportation and personnel expenses for trained personnel to travel to the location to collect the sample. Commenters also suggested that mileage calculations begin at an eligible laboratory or patient locations and end when the trained personnel no longer have the specimen in their possession. Several commenters also recommended that business requirements outlined in the annual Medicare travel allowance change request be updated to require the contractor to search their files to adjust claims already paid at the prior year travel allowance rather than require action by health care providers, instructing contractors to review claims and reprocess at the updated rates.

Response: We appreciate the comments regarding the travel allowance for CDLTs. We plan to take this feedback into consideration for possible future rulemaking or guidance.

3. Medicare Clinical Laboratory Fee Schedule: Electronic Travel Logs

In the CY 2022 PFS proposed rule (86 FR 39310 through 39311), we stated that we are making permanent the option for laboratories to maintain electronic logs of miles traveled for the purposes of covering the transportation and personnel expenses for trained personnel to travel to the location of an individual to collect a specimen sample. This option for laboratories to maintain electronic logs is not limited to COVID-19 specimen collection and applies to specimen collection for any CDLT. We will provide guidance in future instructions via forthcoming Change Requests and other materials such as MLN Matters® Articles. Laboratories will need to be able to produce electronic logs in a form and manner that can be shared with MACs, and should continue to consult with their local MACs regarding the format and process for ongoing submission of this information.

N. Medicare Provider and Supplier Enrollment

1. Enrollment Process

a. General Discussion

Section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers in the Medicare program. The overarching purpose of the enrollment process is to help confirm that providers and suppliers seeking to bill Medicare for services and items furnished to Medicare beneficiaries meet all Federal and State requirements to do so. The process is, to an extent, a “gatekeeper” that prevents unqualified and potentially fraudulent individuals and entities from being able to enter and inappropriately bill Medicare. Since 2006, we have taken steps via rulemaking to outline our enrollment procedures. These regulations are generally incorporated in 42 CFR part 424, subpart P (currently §§ 424.500 through 424.570 and hereafter occasionally referenced as subpart P). They address, among other things, requirements that providers and suppliers must meet to obtain and maintain Medicare billing privileges.

As outlined in § 424.510, one such requirement is that the provider or supplier must complete, sign, and submit to its assigned Medicare Administrative Contractor (MAC) the appropriate enrollment form, typically the Form CMS–855 (OMB Control No. 0938–0685). The Form CMS–855, which can be submitted via paper or electronically through the Internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09–70–0532, PECOS), collects important information about the provider or supplier. Such data includes, but is not limited to, general identifying information (for example, legal business name), licensure and/or certification data, and practice locations. After receiving the provider’s or supplier’s initial enrollment application, CMS or the MAC reviews and confirms the information thereon and determines whether the provider or supplier meets all applicable Medicare requirements.

We believe the Medicare provider enrollment screening process has greatly assisted CMS in executing its responsibility to prevent Medicare fraud, waste, and abuse. As previously mentioned, over the years we have issued various final rules pertaining to provider enrollment. These rules were intended not only to clarify or strengthen certain components of the enrollment process but also to enable us

to take further action against providers and suppliers: (1) Engaging (or potentially engaging) in fraudulent or abusive behavior; (2) presenting a risk of harm to Medicare beneficiaries or the Medicare Trust Funds; or (3) that are otherwise unqualified to furnish Medicare services or items. Consistent with this, and as discussed further in this section III.N. of this final rule, we proposed several changes to our existing provider enrollment regulations.

b. Legal Authorities

There are two principal categories of legal authorities for our provider enrollment provisions. First, section 1866(j) of the Act furnishes specific authority regarding the enrollment process for providers and suppliers. Second, sections 1102 and 1871 of the Act provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

2. Provisions

a. Expansion of Authority To Deny or Revoke Based on Office of Inspector General (OIG) Exclusion

Under §§ 424.530(a)(2) and 424.535(a)(2), respectively, CMS denies or revokes a provider’s or supplier’s enrollment if the provider or supplier, or any owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care personnel of the provider or supplier is excluded by the OIG. We proposed several changes related to these authorities.

First, we proposed to expand the categories of parties within the purview of these denial and revocation provisions to include excluded administrative or management services personnel who furnish services payable by a Federal health care program, such as a billing specialist, accountant, or human resources specialist. This change would align with existing OIG guidance stating that providers and suppliers may not employ excluded persons to provide management or administrative services that are payable by a Federal health care program.¹⁴³

Second, existing § 424.530(a)(2) references “other health care personnel furnishing Medicare reimbursable services who is required to be reported on the enrollment application.” To conform to our change described in the previous paragraph, we proposed to replace this language with “other health care or administrative or management services personnel furnishing services

payable by a Federal health care program.” We also proposed to include this language within § 424.535(a)(2) so that the latter aligns with § 424.530(a)(2).

Third, § 424.535(e) states that if the revocation was due to adverse activity (sanction, exclusion, or felony) against an owner, managing employee, authorized or delegated official, medical director, supervising physician, or other personnel of the provider or supplier furnishing Medicare reimbursable services, the revocation may be reversed if the provider or supplier terminates (and submits proof that it has terminated) its business relationship with that individual within 30 days of the revocation notification. For the reasons already outlined, we proposed to replace the language in § 424.535(e) concerning other personnel furnishing Medicare reimbursable services with “other health care or administrative or management services personnel furnishing services payable by a Federal health care program.”

We received several public comments on these proposals. The following is a summary of them and our responses.

Comment: Several commenters expressed concern that providers and suppliers (in their efforts to follow OIG compliance guidelines) may miss instances where a person they are reviewing against the OIG exclusion list has a name that does not exactly match that indicated on the OIG list as an excluded party, yet the two parties are in fact the same; this could mean that such person might avoid detection. The commenters suggested an exception to the application of expanded §§ 424.530(a)(2) and 424.535(a)(2) if the provider or supplier demonstrated a good-faith effort to identify potentially excluded parties among their employees or other personnel.

Response: We respectfully disagree with the commenters’ recommended good-faith exception. It is ultimately the provider’s or supplier’s responsibility to ensure that the parties addressed in §§ 424.530(a)(2) and 424.535(a)(2) are not excluded by the OIG. While we recognize that this task may take more time with respect to a particular party if, for instance, the name-match issue to which the commenter refers arises, this does not and should not negate the provider’s or supplier’s responsibilities in this regard. The central principle associated with §§ 424.530(a)(2) and 424.535(a)(2) involves the provider’s or supplier’s need to avoid relationships with OIG-excluded parties, not the level of effort the provider or supplier undertook to confirm that no such relationships exist.

¹⁴³ <https://oig.hhs.gov/exclusions/files/sab-05092013.pdf>.

Comment: One commenter maintained that our proposal could increase provider burden, particularly for smaller practices. The commenter stated that some providers and suppliers hire third-party organizations to submit claims and perform other functions on their behalf; as part of these contracts, the third-party performs OIG exclusion searches on the persons who will be undertaking these activities. The commenter stated that our proposal would require providers and suppliers to update such contracts to ensure that the provider or supplier is held harmless should the third-party fail to adequately conduct these searches. The commenter recommended that CMS mitigate the administrative burden and other impacts of this proposal.

Response: Consistent with our response to the previous commenters, we believe that the provider or supplier bears primary responsibility for ensuring adherence to Federal regulations irrespective of whether it delegates any compliance verification activities to a third-party. As for impact reduction, we emphasize that the only parties to which our expansion of §§ 424.530(a)(2) and 424.535(a)(2) would apply are those engaged in administrative or managerial services that are payable by a Federal health care program; if the service does not fall within this latter category concerning Federal reimbursement, the expansion is inapplicable. Moreover, we believe that: (i) Many providers and suppliers already review such parties against the OIG exclusion list; and (ii) many of these parties also fall within one of the other categories addressed in §§ 424.530(a)(2) and 424.535(a)(2) (for example, managing employees), meaning that they are already covered under these two regulatory provisions. Given the foregoing, we do not foresee an increase in the overall administrative effect of §§ 424.530(a)(2) and 424.535(a)(2) on the provider community.

After consideration of these public comments, we are finalizing our revisions to §§ 424.530(a)(2) and 424.535(a)(2) as proposed.

b. Deny or Revoke Enrollment for Surrender of Drug Enforcement Administration (DEA) Certificate of Registration in Response to Show Cause Order

We have existing authority under § 424.530(a)(11)(i) to deny a physician's or other eligible professional's enrollment if his or her DEA certificate of registration to dispense a controlled substance is currently suspended or revoked; a concomitant authority to

revoke enrollment in this circumstance is outlined in § 424.535(a)(13)(i). We proposed to expand these authorities to include situations where the physician or other eligible professional surrenders his or her DEA certificate in response to an order to show cause.

We have encountered situations where a physician or other eligible professional who has engaged in improper prescribing or other DEA-monitored activities relinquishes his or her DEA certificate pending a DEA show cause order so as to avoid a likely suspension or revocation of his or her DEA certificate or other similar circumstance. We believe these scenarios are no less serious from the standpoints of program integrity and beneficiary safety than a DEA certificate suspension or revocation. Hence, we believe this change is warranted.

We received several public comments on these proposals. The following is a summary of them and our responses.

Comment: Several commenters supported our proposal to expand §§ 424.530(a)(11)(i) and 424.535(a)(13)(i). However, they urged that: (1) CMS carefully consider the facts of each situation before taking action; and (2) appeals processes be available for individuals denied or revoked under these provisions. One commenter stated that there could be reasons a physician surrendered his or her DEA certificate prior to a show cause order that may not merit denial or revocation. The commenter wanted CMS to ensure that innocent physicians are not revoked, since this could affect patient care.

Response: We appreciate the commenters' support. We would closely examine the facts of cases involving expanded §§ 424.530(a)(11)(i) and 424.535(a)(13)(i) to determine whether a denial or revocation is warranted; should either of these latter actions ensue, the provider or supplier could appeal the matter under 42 CFR part 498.

After consideration of these public comments, we are finalizing our revisions to §§ 424.530(a)(11)(i) and 424.535(a)(13)(i) as proposed.

c. Creation of Specific Rebuttal Rights for Deactivations

As outlined in § 424.540, deactivation means that the provider's or supplier's billing privileges are stopped (but not revoked or terminated). Deactivation is intended to protect the provider or supplier from the misuse of its billing number and to safeguard the Trust Funds from unnecessary overpayments. Under existing regulations, a provider's or supplier's billing privileges may be

deactivated if the provider or supplier: (1) Does not submit any Medicare claims for 12 consecutive calendar months; (2) fails to report certain changes in its enrollment information within required timeframes; or (3) fails to fully and accurately comply with a CMS revalidation request within 90 days.¹⁴⁴

Since a deactivated provider's or supplier's billing privileges are stopped, § 424.545(b) permits the affected provider or supplier to file a rebuttal in accordance with 42 CFR 405.374 (which allows rebuttals for Medicare payment suspensions). While we have outlined deactivation rebuttal procedures in subregulatory guidance, these procedures are not reflected in regulation. Consequently, we proposed to revise 42 CFR part 424, subpart P to describe the deactivation rebuttal process in detail, a process that would generally mirror our existing subregulatory procedures on the topic.

The specific changes we proposed were as follows:

- At § 424.545(b), we proposed to change the language that reads "in accordance with § 405.374 of this chapter" to "in accordance with § 424.546." Instead of continuing to reference § 405.374, we proposed to create a new § 424.546 to address the deactivation rebuttal process.

- At new § 424.546(a)(1), we proposed that if a provider or supplier receives written notice from CMS or its contractor that the provider's or supplier's billing privileges are to be or have been deactivated under § 424.540, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to CMS.

- At new § 424.546(a)(2), we proposed that CMS may, at its discretion, extend the 15-day time-period referenced in § 424.546(a)(1).

- At new § 424.546(b)(1) through (4), we proposed that any rebuttal must: (1) Be in writing; (2) specify the facts or issues about which the provider or supplier disagrees with the deactivation's imposition and/or effective date, as well as the reasons for disagreement; (3) submit all

¹⁴⁴ We proposed additional grounds for deactivation in the CMS proposed rule titled, "Medicare and Medicaid Programs; CY 2022 Home Health Prospective Payment System Rate Update; Home Health Value-Based Purchasing Model Requirements and Model Expansion; Home Health Quality Reporting Requirements; Home Infusion Therapy Services Requirements; Survey and Enforcement Requirements for Hospice Programs; Medicare Provider Enrollment Requirements; Inpatient Rehabilitation Facility Quality Reporting Program Requirements; and Long-term Care Hospital Quality Reporting Program Requirements" (CMS-1747-P).

documentation the provider or supplier wants CMS to consider in its review of the deactivation; and (4) be submitted in the form of a letter that is signed and dated by the individual supplier (if the latter is enrolled as an individual physician or NPP), the authorized official or delegated official (as those terms are defined in § 424.502), or a legal representative (as defined in 42 CFR 498.10). Concerning paragraph (b)(4), if the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier; this statement will be sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

- At new § 424.546(c), we proposed that the provider's or supplier's failure to submit a rebuttal that is both timely under paragraph (a) and fully compliant with all of the requirements of paragraph (b) constitutes a waiver of all rebuttal rights under this section and § 424.545(b).

- At new § 424.546(d), we proposed that upon receipt of a timely and compliant deactivation rebuttal, CMS reviews the latter to determine whether the imposition of the deactivation and/or the designated effective date are correct.

- At new § 424.546(e), we proposed that nothing in § 424.546 or § 424.545(b) will require CMS to delay the imposition of a deactivation pending the completion of the CMS review described in paragraph (d).

- At new § 424.546(f), and consistent with both current subregulatory policy concerning deactivation rebuttals, as well as payment suspension rebuttal regulations at § 405.375(c), a determination made under § 424.546 will not be an initial determination under § 498.3(b) and, therefore, will not be appealable.

We received several public comments on these proposals. The following is a summary of them and our responses.

Comment: Although supporting our proposal to address deactivation rebuttal rights in regulation, several commenters suggested modifications. First, some commenters recommended that a deactivated provider or supplier have 30 days from its receipt of the deactivation notice to submit its rebuttal. One commenter stated that this would account for situations where mail

is delayed or the deactivation notice was sent to the wrong location. Second, a good cause exception should exist for untimely or less-than-fully compliant rebuttals; an example would be when the provider or supplier could not access all the documentation it needed to support its rebuttal. Third, CMS should have to make its determination regarding the rebuttal submission within 15 days of receiving it. Disagreeing that CMS' decision is not an initial determination (as proposed § 424.546(f) states), the commenter believed that a 15-day response time for CMS was warranted or, in lieu of this, CMS should afford formal appeal rights; otherwise, CMS would have no incentive to quickly review a rebuttal submission.

Response: We respectfully disagree with these recommendations and assertions for several reasons. First, we believe our proposed 15-day timeframe is sufficient for the provider or supplier to prepare and submit a detailed rebuttal. Indeed, this has been our experience with payment suspensions under § 405.372, for which the affected provider or supplier has 15 days from the date of the payment suspension notice to submit a rebuttal under § 405.374. Second, it is the deactivated provider's or supplier's responsibility to ensure that its rebuttal is timely and complete. Requiring CMS to grant good cause exceptions (above and beyond the discretionary timeliness extension that CMS may provide under proposed § 424.546(a)(2)) could lead providers and suppliers to conclude that a fully compliant rebuttal is unnecessary because an exemption will typically be furnished. Third, we believe that deactivated providers and suppliers would want CMS to give the most thorough and detailed consideration of their rebuttal submission; this is our desire as well. To afford us this ability, therefore, we do not believe our timeframe for review should be so restricted. Fourth, we maintain our long-held position that a deactivation should neither constitute an initial determination nor entail appeal rights under 42 CFR part 498. This is because, unlike with a revocation, a deactivated provider or supplier remains enrolled in Medicare and does not lose their billing privileges. Therefore, we believe that a rebuttal (as opposed to 42 CFR part 489 appeal rights) is a proper and proportionate mechanism for the deactivated provider or supplier to contest the action.

Comment: A commenter suggested that CMS give a deactivated provider or supplier 20 days (rather than 15) from the date it received the deactivation

notice to submit its rebuttal. In a similar context, another commenter suggested that the timeframe be 15 days from the date of receipt of the deactivation notice instead of 15 days from the date of the notice itself; this presumes a 5-day timeframe for the notice to reach the provider or supplier via mail.

Response: For reasons already stated, we believe that 15 days from the date of the notice is an adequate rebuttal timeframe.

Comment: A commenter encouraged CMS to implement a system for correspondence (such as deactivation notices) to be sent and received electronically. The commenter stated that they believe this would lead to cost savings and more efficient communication.

Response: We appreciate and will consider this suggestion with respect to provider enrollment correspondence, for we constantly seek to improve the enrollment process and alleviate burden for all stakeholders.

After consideration of these public comments, we are finalizing our aforementioned deactivation rebuttal provisions as proposed.

d. Modernizing Enrollment Policies for Emerging Technologies in Independent Diagnostic Testing Facilities

Section 410.33(a) states that CMS pays for diagnostic procedures under the PFS only when performed by the suppliers listed in that section. Among these supplier types are independent diagnostic testing facilities (IDTFs). An IDTF may be a fixed location, a mobile entity, or an individual NPP. It is independent of a physician's office or hospital, although the IDTF regulations outlined in § 410.33(a) also apply when an IDTF furnishes diagnostic procedures in a physician's office.

Section 410.33 as a whole contains provisions with which IDTFs must comply in order to enroll in (and maintain enrollment in) Medicare, such as requirements for nonphysician personnel (§ 410.33(c)). In addition, § 410.33(g) contains various compliance standards that IDTFs must meet. We established these standards to help ensure the quality and safety of IDTF diagnostic testing and to strengthen our ability to verify the IDTF's adherence to enrollment requirements.

IDTFs generally perform diagnostic tests on beneficiaries in, for instance, a health care facility, physician's office, or mobile setting. The IDTF standards at § 410.33(g) (as well as other provisions at § 410.33) were, in fact, designed for traditional IDTF suppliers that engage in direct or in-person beneficiary interaction, treatment, and/or testing.

Yet some health care entities have developed or utilize diagnostic tests that do not require such interaction. That is, certain IDTFs perform diagnostic services via computer modeling and analytics, or other forms of testing not involving direct beneficiary interaction. The service is often conducted by a technician who undertakes a computer analysis offsite or at another location at which the patient is not present. The physician then reviews the image to determine the appropriate course of action. In short, these entities generally, though not exclusively, have two overriding characteristics. First, the tests they perform do not involve direct patient interaction, meaning that the test is conducted away from the patient's physical presence and is non-invasive. Second, the test involves off-site computer modeling and analytics.

Despite the comparatively new and innovative forms of testing these entities undertake, they can still qualify as IDTFs (notwithstanding the offsite and indirect nature of the test) so long as they meet the applicable requirements of § 410.33. The dilemma is that these entities often cannot meet certain IDTF requirements, and thus cannot enroll in Medicare, strictly because of the test's indirect nature. In other words, the types of tests at issue do not fall within the category of those to which several of our standards in § 410.33 were intended to apply (specifically, to in-person procedures). To account for such technological advances in diagnostic testing, we believe that revisions to § 410.33 are necessary. To this end, we proposed that IDTFs that have no beneficiary interaction, treatment, or testing whatsoever at their practice location will be either partially or wholly exempt from the following requirements in § 410.33 (hereafter occasionally referenced as "exempted" IDTFs).

Section 410.33(c) requires all nonphysician personnel the IDTF uses to perform diagnostic tests to demonstrate the basic qualifications to perform these tests as evidenced by State licensure or State certification; the IDTF must maintain documentation available for review that these requirements are met. In the absence of a State licensing board, the technician must be certified by an appropriate national credentialing body. However, the aforementioned indirect tests and the performing personnel frequently do not require State licensure or State/national credentialing, meaning that § 410.33(c) becomes a difficult requirement for such IDTFs to meet. Indeed, § 410.33(c) has typically been applied to the qualifications needed to

perform in-person tests in traditional IDTF settings; that is, the staff at exempted IDTFs often will instead be primarily trained in the test's particular software and computer analytics (or other non-beneficiary-based services)). Extending § 410.33(c)'s purview to indirect tests reduces the number of personnel who can perform them, thus hindering beneficiary access to such services and potentially preventing the enrollment of otherwise qualified IDTFs.

Accordingly, we proposed to divide current § 410.33(c) into two paragraphs. New paragraph (c)(1) would contain the existing requirements of § 410.33(c), with an exception for exempted IDTF personnel in new paragraph (c)(2). We proposed in the latter paragraph that, for services that do not require direct or in-person beneficiary interaction, treatment, or testing, any nonphysician personnel performing the test must meet all applicable State licensure requirements for doing so; if such State licensure requirements exist, the IDTF must maintain documentation available for review that these requirements have been met.

While we believed that personnel performing the tests described in paragraph (c)(2) should meet whatever State requirements exist for those services, paragraph (c)(2) did not include any reference to national credentialing bodies. Further, we recognized that, in some instances, States may have no requirements for technicians involved in the particular type of computer analytics involved in the Medicare-covered service.

We also proposed that the following IDTF certification standards in § 410.33(g) would not apply to exempted IDTFs:

- The IDTF must have a comprehensive liability insurance policy of at least \$300,000 per location that covers both the place of business and all customers and employees of the IDTF (§ 410.33(g)(6)).
- The IDTF must answer, document, and maintain documentation of a beneficiary's written clinical complaint at the physical site of the IDTF (§ 410.33(g)(8)).
- The IDTF must openly post the standards outlined in § 410.33(g) for review by patients and the public (§ 410.33(g)(9)).

Concerning § 410.33(g)(8), exempted IDTFs would not be furnishing direct services to beneficiaries that could result in a beneficiary's written clinical complaint. Thus, we believe this standard should be inapplicable to exempted IDTFs, and we proposed to revise paragraph (g)(8) in this vein. We

proposed a similar approach with § 410.33(g)(9); neither beneficiaries whose tests are sent to the exempted IDTF nor the public in general would visit its physical location, therefore negating the need for a posting of standards. As for § 410.33(g)(6), the liability policy addressed therein was designed for IDTFs that provide services to beneficiaries in a facility or mobile unit and, thus, could have issues concerning medical negligence and/or malpractice. We recognized, however, that the performance of a particular test by an exempted IDTF could raise questions of possible liability. Therefore, we solicited public comment on the types of situations where this could arise, as well as on the following issues: (1) Whether exempted IDTFs should indeed be required to maintain a \$300,000 liability policy; (2) whether a liability amount of less than \$300,000 is warranted for these IDTFs and, if so, what that amount should be (for example, \$50,000 or \$100,000 or \$200,000); and (3) whether no liability policy should be required for exempted IDTFs. (We also solicited comment on whether we should still apply the IDTF standards in § 410.33(g)(6) and (8) to exempted IDTFs.)

We received several public comments on these proposals. The following is a summary of them and our responses thereto:

Comment: Several commenters supported our proposed IDTF supplier standard exemptions.

Response: We appreciate the commenters' support.

Comment: Several commenters asked CMS to clarify that the proposed exemptions apply when there is no direct or in-person beneficiary interaction, treatment, or testing at the place of the delivery of the service—that is, at the IDTF. One commenter explained that when an IDTF performs or administers an entire diagnostic test at, for example, the beneficiary's location, the beneficiary's location is the place of service; however, when one or more aspects of the test are performed at the IDTF, the IDTF is the place of service. To avoid any confusion as to the exemptions' applicability, the commenter suggested regulatory text stating that our exemptions would apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing at the place of service as defined in § 410.33(e)(2).

Response: We do not believe the recommended change is necessary. The current standards in § 410.33(g) have always applied to the IDTF itself irrespective of the place of service under

§ 410.33(e)(2). Indeed, § 410.33(e)(2) deals mostly with claim submission requirements and is largely immaterial to the question of whether the IDTF meets the § 410.33(g) standards. We believe that the regulatory wording of our exemptions is clear as to the scope of the latter's applicability and that no need exists for a reference therein to § 410.33(e)(2).

Comment: Several commenters suggested that CMS retain the liability insurance requirement for exempted IDTFs. One commenter stated that malpractice liability could occur with these IDTFs as it does with IDTFs that perform in-person testing; if the exempted IDTF's malpractice risk is low, the insurance should not be expensive.

Response: We maintain our position that liability insurance would be largely inapplicable to IDTFs performing indirect, non-in-person testing. Nevertheless, we intend to closely monitor the implementation of our § 410.33 exemptions, including that pertaining to § 410.33(g)(6). Should we determine that modifications to our exemptions are necessary based on, for instance, program integrity or quality assurance concerns, future rulemaking will be considered.

Comment: Several commenters recommended that CMS not finalize its proposed IDTF nonphysician personnel exemption regarding national credentialing and instead outline credentialing requirements (State and/or Federal) for these individuals. The commenters stated that they do not believe that, in the absence of applicable State licensure requirements, such personnel should be permitted to operate without meeting any qualifications; they maintained that staff performing any test (with or without direct beneficiary interaction) should be qualified to do so. The commenters also stated that they believe these persons should have national certification from a national accrediting body if no State licensure requirements exist. Some commenters suggested that if CMS does not establish formal national credentialing requirements for such personnel, the exempted IDTFs could at least be required to submit evidence that their nonphysician staff have some type of national certification.

Response: We believe that our proposed exemption language in § 410.33(c)(2) is appropriate. Our understanding is that there are very few, if any, national health care certifications applicable to the technicians who will be performing indirect tests with no beneficiary interaction; many of these individuals are instead trained in non-

health care related computer analytical fields. To require them to be nationally credentialed by a national health care accrediting body would, in many cases, prohibit them from performing IDTF tests. This result would be inconsistent with the general aim of our exemptions, which is to prevent unnecessary and insurmountable barriers to the enrollment of these types of IDTFs. As with the aforementioned liability insurance exemption, however, we will maintain oversight of the enforcement of § 410.33(g)(2) and, if necessary, consider modifications in future rulemaking.

Comment: Though supportive of our IDTF proposals, a commenter urged CMS to continually examine how Medicare enrollment and other applicable regulations can be modified to allow for greater use of innovative technologies.

Response: We agree with this comment and will consistently review our enrollment regulations and policies to, as warranted, account for emerging health care innovations.

Comment: Several commenters recommended that CMS not finalize its exemption regarding the posting of IDTF standards at the IDTF's place of business; at a minimum, exempted IDTFs should have to post the standards online for review by IDTF personnel and beneficiaries. One commenter explained that even if patients are not on-site at the IDTF, they should have access to, and understand, the standards required of exempted IDTFs and their technicians.

Response: We respectfully disagree that the above-referenced exemption should not be finalized. As previously indicated, the IDTF standards in § 410.33(g) were originally intended for traditional IDTFs engaging in direct or in-person beneficiary interaction, treatment, and/or testing at the IDTF site. This was especially true concerning § 410.33(g)(9), the core aim of which is to ensure that beneficiaries visiting the facility can actually view the standards while on site. Given that exempted IDTFs neither test nor treat patients at its location, such entities simply do not fall within the scope of facilities to which § 410.33(g)(9) was always meant to apply. However, should we later determine that modifications to this exemption are warranted, we will consider future rulemaking.

Comment: Several commenters stated that CMS should, for several reasons, create an additional exemption concerning § 410.33(g)(15)(i), which prohibits a fixed-based IDTF (excluding hospital-based IDTFs) from sharing its practice location with another Medicare provider or supplier. First, the

commenters stated that the space-sharing prohibition (like other IDTF standards) is primarily directed towards IDTFs that treat patients on-site and is largely immaterial to indirect testing situations. Commenters also maintained that the prohibition is designed to prevent improper referral arrangements and kickbacks but that IDTFs with no on-site beneficiary interaction often simply seek to share administrative resources, which does not fall within the scope of the aforementioned inappropriate activities; the risk these IDTFs therefore pose in a space-sharing situation is comparatively small. In addition, the space-sharing prohibition currently does not apply to IDTFs that are mobile, a scenario the commenters believed is somewhat akin to off-site, indirect testing. Finally, the commenters stated that enforcing the space-sharing prohibition against exempted IDTFs could limit beneficiary access to care.

If a complete exception from this standard is unfeasible, the commenters requested that CMS at least elucidate the scope of the standard's application to exempted IDTFs that seek to share administrative and non-clinical operations with another remote provider or supplier, where neither entity provides on-site patient services.

Response: We believe the space-sharing prohibition should still apply to exempted IDTFs. The overall concept behind this prohibition is that each IDTF must independently meet all IDTF requirements on its own merits, rather than in unison with another IDTF or Medicare provider or supplier. Even with the beneficiary off-site, having two exempted IDTFs at the same location could lead to confusion as to which IDTF performed the test, which personnel were used, etc. Given the program integrity concerns (which remain) that led to the establishment of our IDTF standards many years ago, we believe that the potential intermingling of IDTF resources via space-sharing should be avoided, regardless of whether beneficiaries are actually seen at the IDTF site. Moreover, and at least for purposes of the space-sharing exemption, mobile IDTFs are not analogous to exempted IDTFs. This is because it is, by and large, physically impossible for two mobile IDTF units to share the same space.

Any clarification regarding the scope of the space-sharing exemption's applicability to the sharing of exempted IDTF resources would, as needed, be addressed in future rulemaking or guidance.

Comment: Several commenters recommended that CMS limit and modify its proposed exemption from

§ 410.33(g)(8). First, they maintained that complaints could be maintained at a single location (which need not be on-site), though they must be made available to CMS upon request. In addition, the exempted IDTF should be able to require beneficiaries to submit clinical complaints in writing via a specified submission form or process (such as a comment “box”), provided the IDTF informs beneficiaries of this requirement. The commenters stated that these two revisions would reduce the administrative burden on exempted IDTFs while ensuring that they can still properly address beneficiary complaints.

Response: For reasons similar to those stated previously in this section not to finalize our proposed exemption to § 410.33(g)(9), we do not believe modifications to our proposed § 410.33(g)(8) exemption are needed. The original and continued purpose of § 410.33(g)(8) is to make certain that beneficiaries receiving direct, in-person tests can register clinical complaints. It was never intended to apply to situations where testing is distant and indirect, and we believe our § 410.33(g)(8) exemption falls within the original intent of § 410.33(g)(8). However, should we determine in the future that revisions to this exemption might be required, rulemaking will be contemplated.

Comment: One commenter requested that CMS clarify the use of the language “licensure or certification by the appropriate State health or education department” currently in § 410.33(c), a paragraph we proposed to redesignate as § 410.33(c)(1) though without any change in its content or meaning. Specifically, the commenter stated this provision should clarify that a technician who receives certification (related to services furnished in the IDTF) from an educational program at a school overseen by the State’s education department satisfies the requirements of existing § 410.33(c), irrespective of any national certifications. The commenter maintained that such an interpretation is consistent with CMS’ general policy concerning IDTF technician requirements and would better explain the types of State requirements that must be met. The commenter also urged CMS to confirm that an IDTF can use the aforementioned State certification in lieu of national credentialing to demonstrate § 410.33(c) compliance.

Response: We believe that the commenter is seeking clarification of the policies in existing § 410.33(c) rather than our proposed exemption in § 410.33(c)(2). Since, aside from the aforementioned redesignation, we did

not propose any change to current § 410.33(c) or the policy therein, we believe this comment is outside the scope of this final rule.

Comment: A commenter stated that proposed § 410.33(c)(2) does not include the language in current § 410.33(c) concerning certifications from an educational program at a school overseen by the State’s education department. The commenter asked CMS to explain this omission and/or more thoroughly identify the types of State qualifications (for example, certifications) by which exempted IDTF nonphysician personnel can demonstrate compliance with Federal and State requirements.

Response: Existing § 410.33(c)’s reference to State education program certifications was not included in proposed § 410.33(c)(2) because we do not believe such certifications, which frequently focus on direct patient testing, would generally apply to the off-site, computer analytics-oriented testing that exempted IDTFs perform. As stated in proposed § 410.33(c)(2), IDTF personnel must meet State licensure requirements for the tests being performed, assuming such requirements exist; nothing in proposed § 410.33(c)(2) permits education to be used in lieu of licensure.

Comment: One commenter requested that CMS clarify the applicable State licensure laws for nonphysician personnel at exempted IDTFs; specifically, the commenter asked whether the laws of the State in which the beneficiary is located or the State of the IDTF’s practice location are governing.

Response: The applicable State law in the commenter’s scenario is the State in which the IDTF’s practice location (as reported on the Form CMS–855) is located.

After consideration of these public comments, we are finalizing our aforementioned IDTF provisions as proposed.

e. Revisions at § 424.535(a)(8)

Under § 424.535(a)(8)(ii), CMS may revoke a provider’s or supplier’s enrollment if CMS determines that the provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements. In determining whether a revocation is appropriate under § 424.535(a)(8)(ii), CMS considers, as appropriate and applicable, the factors outlined in § 424.535(a)(8)(ii)(A) through (F); respectively, these are:

(A) The percentage of submitted claims that were denied.

(B) The reason(s) for the claim denials.

(C) Whether the provider or supplier has any history of final adverse actions and the nature of any such actions.

(D) The length of time over which the pattern has continued.

(E) How long the provider or supplier has been enrolled in Medicare.

(F) Any other information regarding the provider or supplier’s specific circumstances that CMS deems relevant to its determination.

We have recently encountered situations where providers and suppliers have engaged in periods of non-compliant billing that, though comparatively brief, have or could have harmed the Medicare program. While we have attempted revocation action per § 424.535(a)(8)(ii) against such providers and suppliers, the current wording of some of the factors in paragraphs (a)(8)(ii)(A) through (F) have hampered our ability to do so. To increase our flexibility to address periods of abusive billing irrespective of their duration, we proposed to revise § 424.535(a)(8)(ii)(A) through (F) as follows:

- In paragraph (a)(8)(ii)(A), we proposed revisions to focus on the percentage of denials within subsets of the provider’s or supplier’s claim submissions rather than across the entire universe of their claim submissions. Specifically, we would consider the percentage of submitted claims that were denied during the timeframe under consideration. We believe existing paragraph (a)(8)(ii)(A) inhibits our capacity to target brief periods involving a significant percentage of denied claims; this is because this factor has been interpreted to require said percentage to be weighed against claim denials over the entire period of the provider’s or supplier’s enrollment. Proposed revised paragraph (a)(8)(ii)(A) would better enable CMS to address these non-compliant periods by restricting the scope of denial percentages to a shorter duration.

- For reasons similar to our revision of § 424.535(a)(8)(ii)(A), we proposed to remove § 424.535(a)(8)(ii)(D) altogether. As already indicated, short but very intense periods of improper billing can endanger the Medicare program no less than a longer pattern of non-compliant yet merely moderate-volume billing. Yet the “length of time” standard in paragraph (a)(8)(ii)(D) often deters us from taking action under paragraph (a)(8)(ii) to address these shorter timeframes. Given this, we believed that eliminating paragraph (a)(8)(ii)(D) would strengthen our program integrity efforts.

- We also proposed to remove § 424.535(a)(8)(ii)(E), which addresses the length of the provider's or supplier's enrollment. We believed the enrollment length should have no bearing on whether paragraph (a)(8)(ii) can be applied, for the main issue is the behavior itself and not the period of enrollment.

- We proposed to remove § 424.535(a)(8)(ii)(B) as well. Notwithstanding our original inclusion of this factor in paragraph (a)(8)(ii), the overall purpose of paragraph (a)(8)(ii) has always been to deter non-compliant billing, regardless of the reason for it. Even if a period of erroneous claim submissions reflected no nefarious intent by the provider, the latter still failed to comply with Medicare billing requirements and thus presented a risk to the Medicare program. For this reason, we do not view the claim denial reason as particularly germane to the question of whether paragraph (a)(8)(ii) should apply in a particular case.

- In addition, we proposed to add new paragraph (a)(8)(ii)(C) by which we would consider the type of billing non-compliance and the precise facts surrounding said non-compliance (to the extent this can be determined). We believed this paragraph would provide slightly more specificity than the broader, catch-all factor at § 424.535(a)(8)(ii)(F) (which we will nonetheless retain). It would also allow us to more narrowly tailor our review to the unique facts of the case, thus also strengthening our ability to consider any aggravating or mitigating circumstances.

In summary, we proposed that paragraph (a)(8)(ii) would include the following factors, respectively designated as paragraphs (A) through (D):

- The percentage of submitted claims that were denied during the period under consideration.

- Whether the provider or supplier has any history of final adverse actions and the nature of any such actions.

- The type of billing non-compliance and the specific facts surrounding said non-compliance (to the extent this can be determined).

- Any other information regarding the provider or supplier's specific circumstances that CMS deems relevant to its determination.

We received several public comments on this proposal. The following is a summary of them and our responses thereto:

Comment: Several commenters expressed concern about our proposal. They stated that the proposed revision and/or removal of factors in § 424.535(a)(8)(ii) gives CMS unfettered

discretion to target any short period of non-compliant billing without having to consider the provider's/supplier's behavior during its period of enrollment. The commenters stressed that brief periods of erroneous claims can occur for many reasons (for example, technological, system, or inadvertent mistakes, or changes in CMS or MAC procedures) without any ill intent by the provider or supplier; in some cases, the provider or supplier may be unaware that such errors even occurred. Revocation in such situations, the commenters stated, is far too severe a penalty, and our proposal in general could impose significant burdens on providers and suppliers.

Response: While we appreciate the commenters' concerns, we must emphasize several things. First, our revocation authority under § 424.535(a)(8)(ii) is strictly discretionary and not mandatory. In every potential § 424.535(a)(8)(ii) revocation case, we carefully weigh the facts and circumstances of the situation, conscientiously consider the regulatory factors (as appropriate and applicable), and only take revocation action when it is genuinely warranted. We have never applied § 424.535(a)(8)(ii) as a matter of course, and this will not change under our revisions thereto. Second, and on the other hand, providers and suppliers have a responsibility to always submit correct claims. Simply because a period of repeated non-compliant billing was comparatively short does not remove this responsibility; even such brief periods involve the provider or supplier having failed to comply with Medicare billing requirements. Third, we have an obligation to protect the Medicare program and the Trust Funds. As we explained in section III.N of the proposed rule, we have encountered instances where short timeframes of non-compliant billing have led to significant Trust Fund dollars being improperly paid. We must have the authority to address such situations, and we believe our proposal helps facilitate this.

Comment: One commenter stated that in potential § 424.535(a)(8)(ii) revocation cases, CMS should consider the provider's or supplier's overall history of billing compliance during its entire period of enrollment, rather than its billing compliance over a very short period.

Response: We respectfully disagree. Requiring an analysis of the provider's or supplier's complete Medicare billing history (which could extend for many years) could hamper our attempts to address shorter but significant periods of non-compliant billing within that

larger period. In several potential § 424.535(a)(8)(ii) situations, we could not undertake action because, in effect, the provider's or supplier's length of enrollment (a criterion not altogether different from the entire period of billing during enrollment) overrode any shorter billing aberrations. We believe this problem must be remedied via revised § 424.535(a)(8)(ii).

Comment: One commenter supported our new factor under which CMS would consider the type of billing non-compliance and the specific facts of non-compliance. However, the commenter stated that this factor appears inconsistent with our proposed removal of § 424.535(a)(8)(ii)(B), which addresses the reason(s) for the claim denials. The commenter recommended that both the current version of § 424.535(a)(8)(ii)(B) and the aforementioned new factor be included in § 424.535(a)(8)(ii), stating that the claim denial reason is extremely relevant to whether any abusive conduct was involved. Several other commenters also urged the retention of § 424.535(a)(8)(ii)(B) for this same reason.

Response: We do not believe this new factor contradicts our removal of § 424.535(a)(8)(ii)(B). The former is merely intended to give CMS additional ability to consider all of the surrounding circumstances of the case, which may, but only at CMS' discretion, include the bases for the claim denials. By the same token, the core consideration is the incorrect claim submission itself rather than the reason it occurred. Even if a series of non-compliant claims did not involve any deceit by the provider or supplier, the fact remains that the latter did not adhere to Medicare claim submission requirements. To require us to consider the reason(s) for the claim denial would, in our view, at least partially alleviate the provider or supplier of its responsibility to always remain compliant with our billing policies. We believe such a result is inconsistent with the need to protect the Trust Funds.

Comment: One commenter noted that the billing pattern's length should remain a factor in § 424.535(a)(8)(ii) determinations.

Response: We respectfully disagree. Similar to our aforementioned position concerning the provider's or supplier's overall billing history, we believe that retaining § 424.535(a)(8)(ii)(D) would continue to hinder us from effectively dealing with the very periods of brief but significant billing non-compliance to which our proposal was aimed. Again, even brief timeframes of aberrant billing can result in sizable improper

payments. We note further that our removal of some of § 424.535(a)(8)(ii)'s more specific factors (such as claim denial reasons and the period of enrollment) is designed to give us greater flexibility to address the wide variety of factual scenarios that can arise (and have arisen) in § 424.535(a)(8)(ii) cases. We have found in some instances that the greater the specificity of a particular factor, the more can it constrain our ability to act. It was with this in mind that we proposed the more wide-ranging factor in revised § 424.535(a)(8)(ii)(C).

Comment: Consistent with other comments concerning this proposal, several commenters urged CMS not to finalize our changes to § 424.535(a)(8)(ii). At a minimum, some commenters recommended that before revoking a provider or supplier under revised § 424.535(a)(8)(ii), CMS should: (1) Give the provider or supplier an opportunity to correct such errors; or (2) otherwise provide advanced notice of CMS' concerns. Failure to do so, they stated, could negatively affect patient care if a revocation is prematurely issued.

Response: We appreciate all of the concerns the commenters have expressed regarding our proposed revisions to § 424.535(a)(8)(ii). Nonetheless, and for the reasons already identified, we intend to finalize them as proposed and without the commenters' suggested corrective or waiting period. If the provider or supplier is submitting non-compliant claims, it is the provider's or supplier's responsibility to remedy the matter on its own initiative; respectfully, it is not CMS' obligation to delay a crucial program integrity measure, such as a revocation, to enable the provider or supplier to execute steps that should have been taken previously.

Should the provider or supplier disagree with its § 424.535(a)(8)(ii) revocation, it may exercise its appeal rights under 42 CFR part 498.

After consideration of these public comments, we are finalizing our revisions to § 424.535(a)(8)(ii) as proposed.

f. Miscellaneous Comments

We also received the following comments that did not directly pertain to our proposed regulatory revisions.

Comment: We received several comments regarding the Medicare Diabetes Prevention Program (MDPP) enrollment process. Some commenters recommended that MDPP suppliers be subject to limited-risk level screening under § 424.518 instead of the high-risk level screening currently applicable to MDPP suppliers. Another commenter

urged CMS to make the provider enrollment application process less lengthy and arduous for MDPP suppliers. One commenter recommended that CMS either eliminate or modify the requirement that MDPP suppliers report the social security numbers of their board members in section 6 of the Form CMS–20134 enrollment application. Still another commenter suggested that CMS streamline the collection of MDPP enrollment information so that it need only be reported once. These commenters noted that the foregoing initiatives could reduce MDPP supplier cost and burden while spurring MDPP enrollment.

Response: We appreciate these suggestions but believe they are outside the scope of this rule.

Comment: One commenter stated that they supported the policy in § 424.535(e) that permits reversal of a provider's or supplier's revocation if the provider or supplier terminates within 30 days its business relationship with the party that engaged in the adverse activity that led to the revocation. However, the commenter asked CMS to clarify how this impacts the provider's or supplier's claims during the 30-day period.

Response: We appreciate this comment but stress that we did not propose to alter § 424.535(e) other than to expand the parties to which it could apply (that is, to the additional parties addressed in proposed §§ 424.530(a)(2) and 424.535(a)(2)). That is, the general “30-day revocation reversal” policy, which has existed for many years, is not changing with this rule. Accordingly, we believe that the stakeholder's comment concerning the claim aspects of said policy is outside the scope of this rule.

Comment: A commenter stated that opioid treatment programs (OTPs) should not have to undergo high-risk level screening under § 424.518(a). The commenter maintained that such intense screening (1) is unwarranted given that OTPs are already subject to strict Federal and State oversight requirements and (2) has proven overly burdensome for OTPs.

Response: We appreciate this comment but believe it is outside the scope of this rule.

Comment: Concerning the reference to the PECOS system of records notice (SORN) in section III.N of the proposed rule, a commenter stated that this SORN includes identifiers/systems that CMS no longer uses (such as the Unique Provider Identification Number). The commenter stated that CMS should accordingly update the PECOS SORN.

Response: This comment is outside the scope of this rule.

Comment: A commenter stated that the OMB Control Number reference for the Form CMS–855 in section III.N of the proposed rule (specifically, OMB No. 0938–0635) should have included every control number associated with the form.

Response: The reference to the Form CMS–855 in the proposed rule was a brief and generic one. We elected to simply include the OMB Control Number associated with most of the Form CMS–855 variations rather than exhaustively list them all.

2. Provider/Supplier Medical Review Requirements

a. Background

CMS identifies improper payments in the Medicare FFS program through a variety of program integrity-related activities, and we use a network of contractors to carry out program integrity initiatives, including Recovery Audit contractors (RACs), the Supplemental Medical Review Contractor (SMRC), Unified Program Integrity Contractors (UPICs), Medicare Administrative Contractors (MACs), and the Comprehensive Error Rate Testing (CERT) contractor. We are purposely excluding Quality Improvement Organizations (QIOs) from this discussion and the following proposals since QIOs are governed by separate and distinct statutory and regulatory requirements. For information about the QIOs, see sections 1151–1163 of the Act and 42 CFR parts 475–480.

Both UPICs and MACs perform prepayment medical review, while the RACs, SMRC, UPICs, MACs, and CERT all perform post-payment medical reviews. Both prepayment medical reviews and post-payment medical reviews are used by our contractors to determine, among other things, whether items or services are reasonable and necessary under section 1862(a)(1) of the Act. In carrying out these reviews, each contractor requests additional documentation from providers and suppliers, which the contractors then assess to either support the payment of claims or conversely, deny (in full or in part) claims thereby protecting the Medicare Trust Funds against improper payments. Our contractors may also carry out follow-up prepayment or post-payment reviews on the same providers or suppliers to ensure improper payments are not continuing.

Our contractors are authorized to request additional documentation through multiple statutory authorities, including sections 1815(a), 1833(e) and

1862(a)(1)(A) of the Act. Sections 1815(a) and 1833(e) of the Act provide that no payments shall be made to any provider or supplier unless it has furnished such information as the Secretary may request in order to determine the amounts due such provider for the period with respect to which the amounts are being paid or any prior period. Under section 1862(a)(1)(A) of the Act, payment must generally be limited to those items and services that are reasonable and necessary.

b. Regulations Governing Prepayment and Post-Payment Medical Review

Despite the statutory authority authorizing our contractors' activities, we do not have regulatory provisions governing certain medical review activities, specifically prepayment and post-payment medical reviews. In this final rule, we are codifying key terms and definitions associated with these two review types; finalizing contractors' authority to request additional documentation within established timeframes; and finalizing provisions detailing a provider's or supplier's responsibility to comply with requests for additional documentation, including the impact should a provider or supplier fail to comply with a request. These provisions are based on existing operational practices used by our contractors. Adding these provisions in regulation will enhance provider and supplier understanding of our review processes, as well as, improve consistency among our contractors.

c. Key Terms and Definitions

To ensure consistency across prepayment and post-payment reviews and establish clear requirements, we proposed the following key terms and their definitions to § 405.902: "Additional documentation" means any information requested by a contractor when conducting a prepayment review or post-payment review; "Additional Documentation Request (ADR)" means a contractor's initial documentation request in reviewing claims selected for prepayment review or post-payment review; "Post-payment medical review (or post-payment review)" means a review that occurs after payment is made on the selected claim to determine whether the initial determination for payment was appropriate; and "Prepayment medical review (or prepayment review)" means a review that occurs before an initial determination for payment is made on the selected claim to determine whether payment should be made. These definitions are consistent with

longstanding manual language and common use of these terms by our contractors.

We did not receive any public comments on this specific section and have decided to finalize as proposed.

d. Prepayment and Post-Payment Medical Review

We proposed to add new § 405.903 that outlines the prepayment medical review provisions.

- At paragraph (a), we proposed to codify our contractors' authority to conduct prepayment medical review on selected claims in order to determine whether and how much payment should be made.

- At paragraph (b), we proposed language detailing our contractors' authority to request additional documentation while conducting a prepayment review.

- At paragraph (b)(1), we proposed language stating that a provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor's request except as stated in paragraphs (b)(2) and (c).

- At paragraph (b)(2), we proposed language stating that a contractor may accept documentation received after 45 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.

- At paragraph (c), we proposed language detailing a UPIC's authority to provide 30 calendar days to a provider or supplier submitting additional documentation and that a UPIC may accept documentation received after 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

These provisions reflect longstanding requirements MACs and UPICs have used in conducting prepayment reviews. The different time-periods within which additional documentation must be received is based on unique processing requirements for each contractor. Although both conduct prepayment reviews, the UPICs work directly with law enforcement and focus on potentially fraudulent providers or suppliers. Thus, the different timeframes for receiving additional documentation is necessary to account for the distinction and enables each type of contractor to appropriately balance

their need for documentation in completing reviews with the potential burden on providers and suppliers should reviews take longer than is warranted. Efforts to limit the burden placed on providers and suppliers as much as possible is also warranted so that patient care is not unnecessarily impacted.

Additionally, both MACs and UPICs historically have had the authority to accept documentation received after the initial timeframe has expired based on good cause, such as natural disasters, interruptions in business practices, or other extenuating circumstances. These circumstances are best determined on a case-by-case basis by the MAC or UPIC, and the language at paragraphs (b)(2) and (c), respectively, convey the MAC and UPIC authority to determine that good cause exists to warrant accepting documentation received after the initial timeframe given.

- At paragraph (d), we proposed that a contractor's prepayment review will result in an initial determination under § 405.920. Again, this has been the longstanding approach to the results of prepayment reviews.

We also proposed similar provisions at new § 405.929 regarding post-payment medical reviews.

- At paragraph (a), we proposed language outlining our contractors' authority to select claims and conduct post-payment medical reviews.

- At paragraph (b), we proposed language that specifies our contractors' authority to request additional documentation.

- At paragraph (b)(1), we proposed that a contractor will give a provider or supplier 45 calendar days to submit additional documentation in response to a request, except as stated in paragraphs (b)(2) and (c).

- At paragraphs (b)(2) and (c), we proposed that a contractor may accept documentation received after 30 days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.

- At paragraph (c), we proposed language that specifies the UPIC's authority to provide 30 calendar days when requesting additional documentation and that a UPIC may accept documentation received after 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

- At paragraph (d), we proposed that when conducting a post-payment review, a contractor's review will result in either no change or a revised determination under § 405.984.

As with prepayment reviews, these provisions reflect longstanding requirements UPICs and MACs, RACs, the CERT contractor, and SMRC have used in conducting post-payment reviews. While the MACs, RACs, CERT contractor, and SMRC have relatively comparable medical review processes, the UPICs are somewhat different given their close working relationship with law enforcement and focus on potentially fraudulent providers or suppliers. Thus, the different timeframes for receiving additional documentation is necessary to account for the distinction and enables each contractor to appropriately balance their need for documentation in completing reviews with the potential burden on providers and suppliers should reviews take longer than may be expected. Efforts to limit the burden placed on providers and suppliers as much as possible is also warranted so that patient care is not unnecessarily impacted.

Given that for post-payment reviews the claims have already been paid, all the contractors have historically had the authority to accept documentation received after the initial timeframe has expired based on good cause. As with prepayment reviews, this may include situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the specific contractor deems good cause in accepting the document after 30 or 45 calendar days. These circumstances are best determined on a case-by-case basis, and the language at paragraphs (b)(2) and (c) convey the authority to determine that good cause exists to warrant accepting documentation received after 30 or 45 calendar days.

We also proposed to add new § 405.930 to clearly outline our contractors' authority to deny a claim should a provider or supplier fail to convey the additional documentation in response to a request. The language clarifies that the contractor must give the provider or supplier notice and time to respond to the additional documentation request. Contractors have authority to require additional documentation through multiple statutory provisions, including sections 1815(a), 1833(e) and 1862(a)(1)(A) of the Act. While our contractors maintain discretion to provide additional time to a provider or supplier in responding to an additional documentation request, our contractors also have the authority

to deny additional time and the associated claim(s) when the additional documentation is not received within the requested timeframe.

We also proposed to revise the section heading of § 405.986(a) to read, "Establishing good cause for reopening." This revision clarifies the distinction made between the process for establishing good cause to reopen an initial determination made on a claim, and the good cause factors that may be applied in accepting documentation submitted after the applicable timeframes in §§ 405.903 and 405.929. In establishing criteria to determine whether to accept late documentation in response to an ADR, we adopted the criteria set forth in §§ 405.903 and 405.929, and we did not utilize the good cause criteria for reopening an initial determination on a claim in § 405.986. We believe this change will add further clarification to the substantive text to reflect that the section only applies to reopenings of initial determinations on a claim.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: All commenters supported our proposals, acknowledging our need to conduct oversight activities to protect the Medicare program.

Response: We thank the commenters for their support.

Comment: One commenter suggested that CMS provide additional flexibility to providers who cannot meet ADR deadlines due to the challenges of collecting the necessary information from other providers.

Response: We appreciate the commenter's suggestion; however, the timeframes reflect longstanding practices, providing what we believe to be adequate time for providers and suppliers to respond. Further, we have provided exceptions where there is good cause to accept documentation after applicable timeframes.

Comment: Several commenters suggested that CMS attempt to minimize the burden of these reviews, including contractors coordinating with referring and treating clinicians to gather orders, images, and other documentation.

Response: We thank the commenters for their suggestion and seek to reduce burden on providers when we can. However, these comments are outside the scope of this rule and we may consider these suggestions in future rulemaking.

After consideration of the public comments, we are finalizing our proposal without modification.

O. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

1. Background

Section 2005 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities (SUPPORT) Act established a new Medicare Part B benefit category for OUD treatment services furnished by OTPs during an episode of care beginning on or after January 1, 2020. In the CY 2020 PFS final rule (84 FR 62630 through 62677 and 84 FR 62919 through 62926), we implemented Medicare coverage and provider enrollment requirements and established a methodology for determining the bundled payments for episodes of care for the treatment of OUD furnished by OTPs. We established new codes for and finalized bundled payments for weekly episodes of care that include methadone, oral buprenorphine, implantable buprenorphine, injectable buprenorphine or naltrexone, and non-drug episodes of care, as well as add-on codes for intake and periodic assessments, take-home dosages for methadone and oral buprenorphine, and additional counseling. In the CY 2021 PFS final rule (85 FR 84683 through 84688), we adopted new add-on codes for take home supplies of nasal naloxone and injectable naloxone. We are continuing to monitor Medicare enrollment by OTPs and utilization of the new benefit to ensure that Medicare beneficiaries have appropriate access to care, as well as monitoring for fraud, waste, and abuse. For CY 2022, we proposed several refinements to the regulations governing Medicare coverage and payment for OUD treatment services furnished by OTPs.

2. Annual Updates

In the CY 2020 PFS final rule (84 FR 62667), we finalized a policy under which the payment for the drug component of episodes of care will be updated annually using the most recent data available from the applicable pricing mechanism at the time of ratesetting for the applicable calendar year. The payment for the non-drug component of the bundled payment for OUD treatment services will be updated annually based upon the Medicare Economic Index (MEI) (84 FR 62668 and 62669). The CY 2022 MEI update is 2.1 percent based on data through the 2nd quarter of 2021 and reflects published historical Bureau of Labor Statistics estimates of multifactor productivity (MFP) data through 2020. The current

payment rates, as finalized in the CY 2021 PFS final rule, both with and without locality adjustments, can be found on the CMS OTP website under Billing and Payment at <https://www.cms.gov/files/document/otp-billing-and-payment-fact-sheet.pdf>. The list of the payment rates for OUD treatment services furnished by OTPs, with the annual update applied for CY 2022, will be made available at the time of publication of this final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Opioid-Treatment-Program>. Additionally, please see the “Opioid Treatment Programs: CY 2022 Methadone Payment Exception” interim final rule with comment period published elsewhere in this **Federal Register** related to the CY 2022 payment rate for methadone under the Medicare OTP benefit.

3. Refinements to Regulations Governing Medicare Payment to OTPs

In the CY 2021 PFS final rule (85 FR 84684 through 84685), we extended the definition of OUD treatment services to include short acting opioid antagonist medications for the emergency treatment of known or suspected opioid overdose, such as naloxone, and overdose education furnished in conjunction with opioid antagonist medication. We also established an adjustment to the weekly bundled payments when the OTP furnishes take-home supplies of these medications at § 410.67(d)(4)(i)(E). This adjustment includes both a drug component and a non-drug component for overdose education. The payment for the drug component of the adjustment will be determined using the methodology in § 410.67(d)(2)(i), and will be updated annually using the most recent data available at the time of ratesetting. The amount of the non-drug component of the adjustment, which includes overdose education, will be determined based on the CY 2020 Medicare payment rate for CPT code 96161; however, we did not explicitly address either geographic adjustments or annual updates to this payment rate.

In the CY 2020 PFS final rule (84 FR 62666 through 62667), we finalized the application of a geographic adjustment to the non-drug component of the OTP bundled payments, as well as the add-on payment adjustments for non-drug services, using the Geographic Adjustment Factor (GAF). We explained that unlike the national pricing of drugs, the costs for the services included in the non-drug component of the OTP bundled payments for OUD treatment services are not constant across all

geographic localities. For example, OTPs’ costs for rent or employee wages could vary significantly across different localities and could potentially result in disparate costs for the services included in the non-drug component of OUD treatment services; therefore, we stated we believed it would be appropriate to apply a geographic locality adjustment to the non-drug component of the bundled payments. We also specifically stated our belief that the same logic regarding the differential costs for the non-drug services included in the bundled payments would apply and should be recognized for add-on payment adjustments for non-drug services. This geographic adjustment is codified in the regulations at § 410.67(d)(4)(ii).

Additionally, in the CY 2020 PFS final rule we finalized an annual update to the non-drug component of the bundled payment for an episode of care based upon the MEI (84 FR 62668 through 62669). We noted that we believed the same logic regarding the potential for changes in the costs of the services included in the non-drug component of the bundled payment rates also applied to the add-on payment adjustments for non-drug services. This annual update is codified in the regulations at § 410.67(d)(4)(iii).

In the CY 2022 PFS proposed rule (86 FR 39317 through 39318), we explained that when we adopted the adjustment to the weekly bundled payments for take-home supplies of opioid antagonist medications in the CY 2021 PFS final rule, we did not specifically address either geographic adjustments or annual updates to the non-drug component of this adjustment and did not update the provisions governing the geographic adjustment and annual update in order to reference the new adjustment.

Because the adjustment for take-home supplies of opioid antagonist medications includes a non-drug component, we stated that we believe the same considerations regarding varying costs based on geographic locality and the need for annual updates apply. Accordingly, we proposed to revise the regulation at § 410.67(d)(4)(ii) to include the adjustment for take-home supplies of opioid antagonist medications in the list of items for which the non-drug component will be geographically adjusted using the GAF. We also proposed to revise the regulation at § 410.67(d)(4)(iii) to include the adjustment for take-home supplies of opioid antagonist medications in the list of items that will be updated annually using the MEI.

In addition, we stated that in the CY 2021 PFS final rule (85 FR 84688) we

had explained that, consistent with § 410.67(d)(5), any payment to an OTP for naloxone would be duplicative if a claim for the same medication is separately paid under Medicare Part B or Part D for the same beneficiary on the same date of service, and that we would recoup any duplicative payment made to an OTP for naloxone. However, the regulation on duplicative payments at § 410.67(d)(5) does not specifically reference payments for medications that are furnished as part of an adjustment to the bundled payment. Accordingly, we also proposed to revise § 410.67(d)(5) to state explicitly that payments for medications that are delivered, administered or dispensed to a beneficiary as part of an adjustment to the bundled payment are considered a duplicative payment if a claim for delivery, administration or dispensing of the same medication(s) for the same beneficiary on the same date of service was also separately paid under Medicare Part B or Part D. We stated that consistent with the policies finalized in the CY 2020 PFS final rule (84 FR 62663 through 62664) regarding duplicative payments for medications dispensed as part of the weekly bundle, we believe that it is appropriate to also ensure that Medicare payments for drugs provided as an add-on to the bundled payment rate are not duplicative. We noted that this proposed revision would apply not only to duplicative payments for take-home supplies of naloxone, but also to duplicative payments for additional take-home supplies of other medications that are made under § 410.67(d)(4)(i)(D).

We solicited public comments on these proposed changes.

The following is a summary of the comments we received and our responses.

Comment: Commenters supported making these proposed changes to the OTP regulations. A few commenters noted that applying the geographic adjustment to the non-drug component of the add-on payments for take-home supplies of opioid antagonist medications will help OTPs to maintain financial viability, and therefore, ensure continued access to OUD treatment services for beneficiaries.

Response: We appreciate commenters’ support for these changes.

After consideration of the public comments, we are finalizing our proposal to revise the regulation text at § 410.67(d)(4)(ii) and (iii) as proposed to codify the application of the annual updates and locality adjustments to the non-drug component of the codes describing add-on payments for opioid antagonist medications (naloxone) that

were new for CY 2021. In addition, we are finalizing our proposal to revise the regulation text at § 410.67(d)(5) as proposed to make clear that the prohibition on duplicative payments applies to drugs provided as part of an add-on payment, as well as the bundled payment.

4. OTP Coding and Payment for New Nasal Naloxone Product

In the CY 2022 PFS proposed rule (86 FR 39318), we discussed that FDA had recently announced the approval of a new, higher dose naloxone hydrochloride nasal spray product used to treat opioid overdose and that the newly approved product delivers 8mg of naloxone.¹⁴⁵ We stated that in the CY 2021 PFS final rule (85 FR 84683 through 84685), we finalized payment for HCPCS code G2215 (*Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure*). HCPCS code G2215 was priced based on an assumption of a typical case in which the beneficiary would be provided with a box of two 4mg nasal spray products. We explained that at the time of drafting the proposed rule, we did not yet have any available pricing information for this newly approved product. However, in order to be able to make payment to OTPs under Medicare for this product, we proposed to create a new G-code describing a take-home supply of this higher dose naloxone hydrochloride nasal spray product.

We stated that under this proposal, we would price this new add-on code based on the established methodology under the OTP benefit for determining the adjustment for take-home supplies of opioid antagonist medications at § 410.67(d)(4)(i)(E). This adjustment includes both a drug component and a non-drug component. The amount of the drug component of the adjustment would be determined using the methodology for pricing the drug component of an episode of care at § 410.67(d)(2)(i). Accordingly, consistent with the approach used to price the drug component of HCPCS code G2215, we would apply the payment methodology set forth in section 1847A of the Act to determine the payment for the new naloxone hydrochloride nasal spray product, except that payment amounts that are determined based on ASP or wholesale acquisition cost (WAC) would not

include any add-on percentages (85 FR 84685). As stated in the CY 2021 PFS final rule (85 FR 84685), we believe using ASP provides a transparent and public benchmark for manufacturers' actual pricing as it reflects the manufacturers' actual sales prices to all purchasers (with limited exceptions as noted in section 1847A(c)(2) of the Act) and is the only pricing methodology that includes off-invoice rebates and discounts as described in section 1847A(c)(3) of the Act. Therefore, we believe ASP to be the most market-based approach to set drug prices. Additionally, we proposed to price the drug component of the code based on an assumption of a typical dosage for a take-home supply of this new product to be a box of two 8mg nasal sprays. Consistent with the methodology established in § 410.67(d)(4)(i)(E), the amount of the non-drug component of the code would be determined based on the CY 2020 Medicare payment rate for CPT code 96161. In addition, payment for the add-on code would be limited to once every 30 days except when a further take-home supply of the medication is medically reasonable and necessary.

We solicited public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to create a new G-code describing a take-home supply of the new higher dose naloxone hydrochloride nasal spray product and recommended we finalize this proposal. One commenter noted that while they believe there is a potential for up-coding or overutilization of the higher strength naloxone, they believe that the benefits of adopting the proposed new add-on code for this new product outweigh the risks since the widespread availability of naloxone and other medications that can rapidly reverse an opioid overdose, along with education on its proper use, will save lives. Some commenters noted that drug overdose death rates reached an all-time high in 2020. These commenters stated that because many patients are experiencing overdoses from illicitly manufactured fentanyl, it is important that patients with OUD have access to the new, more potent overdose reversal drug. A few commenters expressed concern about the proposal to price the higher dose naloxone product using the ASP without the 6 percent add-on, noting that the payment for Part B drugs outside of the OTP benefit includes a 6 percent add-on to account for overhead costs, administrative expenses, or additional mark-ups accrued in

traditional drug distribution channels and recommended CMS include a factor for overhead/administrative costs in its drug pricing methodology for take-home supplies of naloxone furnished by OTPs.

Response: After considering the comments received, we are finalizing our proposal to establish a new code for a higher dose of naloxone hydrochloride nasal spray. We acknowledge the commenter's concern about potential for upcoding, but we agree that the benefits of adopting the new add-on code outweigh the risks because naloxone is a life-saving drug. In light of the comments regarding the increase in overdoses from illicitly manufactured fentanyl, which can require a more potent overdose reversal drug, we believe it is especially important to ensure that this new, higher-dose naloxone nasal spray is available to beneficiaries receiving OUD treatment services from OTPs. The new code is G1028 (*Take-home supply of nasal naloxone; 2-pack of 8mg per 0.1 mL nasal spray (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.*)

Additionally, we are updating the code descriptor for existing HCPCS code G2215 to reflect the dosage included in that code in order to distinguish it from the higher dosage in this new nasal naloxone code. The new code descriptor for HCPCS code G2215 will be *Take-home supply of nasal naloxone; 2-pack of 4mg per 0.1 mL nasal spray (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.*

With regard to the commenters' concerns about the proposal to price the higher dose naloxone product using the ASP or WAC without any add-on percentages, as we discussed in the CY 2021 PFS final rule (85 FR 84685), we believe this approach is most consistent with the approach we adopted in the CY 2020 PFS final rule for pricing the drug component of an episode of care that includes implantable or injectable medications. In addition, for the reasons discussed in the CY 2020 PFS final rule (84 FR 62652 and 62653), we continue to believe that limiting the payment amount to 100 percent of the volume-weighted ASP for a HCPCS code, when ASP is available, instead of 106 percent of the volume-weighted ASP for a HCPCS code will incentivize the use of the most clinically appropriate drug for a given patient. Similarly, as discussed in the CY 2021 PFS final rule (85 FR 84685), we continue to believe that 100 percent of WAC is a closer estimate of

¹⁴⁵ <https://www.fda.gov/news-events/press-announcements/fda-approves-higher-dosage-naloxone-nasal-spray-treat-opioid-overdose>.

the actual acquisition cost for OTPs compared to WAC with an add-on percentage because, as defined in section 1847A(c)(6)(B) of the Act, WAC does not include prompt pay discounts, rebates or reductions in price.

Accordingly, we will price HCPCS code G1028 as proposed; the payment rate for the drug component of the code will be based on the methodology at § 410.67(d)(2)(i) and the amount of the non-drug component of the code will be determined based on the CY 2020 Medicare payment rate for CPT code 96161 as provided in § 410.67(d)(4)(i)(E). We note that we have WAC pricing information available for this higher-dose naloxone nasal spray. For CY 2022, consistent with § 410.67(d)(2)(i)(A), the drug component of the new code will be priced at \$125 for a 2-pack of the 8mg spray, which is 100 percent of the WAC.

Comment: One commenter expressed support for our proposal to geographically adjust the payment for the non-drug component of the codes for take-home supplies of naloxone, but stated that this payment should be updated by the hospital market basket update, not the MEI.

Response: We thank the commenter for this feedback. We believe we should be consistent in applying the same geographic adjustment to the codes describing take-home supplies of naloxone that is applied to adjust the non-drug component of other codes under the OTP benefit. Therefore, we are finalizing our proposal that the non-drug component of the new naloxone code will be updated annually based on the MEI.

5. Out of Scope Comments

Comment: We received one comment that stated that as of July 28, 2021, the Drug Enforcement Administration (DEA) had published a final rule allowing OTPs to add mobile methadone units to their existing registration. The commenter requested that CMS specify that Medicare coverage for opioid use disorder by OTPs extend to services that are provided through mobile units.

Response: We thank the commenter for this comment and note that this comment is outside of the scope of this final rule, as we did not make any proposals involving mobile vans for CY 2022. We may consider addressing this issue in the future rulemaking.

Comment: One commenter stated that CMS should create a 17 percent rural add-on payment to be applied to the non-drug component of the codes for OTP services when services are furnished in low-population density

areas where it is difficult to find doctors, nurses, and counselors to treat patients with OUD. The commenter noted that CMS could encourage expansion of access to OUD treatment services by providing add-on payments in areas that do not currently have an OTP provider.

Response: We note that this comment is outside of the scope of this final rule, as we did not make any proposals related to a rural add-on code. We may consider addressing this issue in future rulemaking.

4. Counseling and Therapy Furnished Via Audio-Only Telephone

In the CY 2020 PFS final rule (84 FR 62645 and 62646), we finalized allowing the use of two-way interactive audio/video communication technology, as clinically appropriate, to furnish the counseling and therapy portions of the weekly bundle of services and additional counseling or therapy services furnished by OTPs. Due to the PHE for COVID-19, in the interim final rule with comment period (IFC) entitled “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency,” which appeared in the April 6, 2020 **Federal Register** (85 FR 19230) (hereinafter referred to as the “March 31, 2020 COVID-19 IFC”), we revised § 410.67(b)(3) and (4) to allow the therapy and counseling portions of the weekly bundles, and any additional counseling or therapy, to be furnished using audio-only telephone calls rather than via two-way interactive audio/video communication technology for the duration of the PHE for COVID-19. Under the policy adopted in the March 31, 2020 COVID-19 IFC, counseling and therapy can be furnished using audio-only telephone calls only where two-way audio/video communications technology is not available to the beneficiary, and provided all other applicable requirements are met. In the March 31, 2020 COVID-19 IFC, we stated that we believed this change was necessary to ensure that beneficiaries with opioid use disorders would be able to continue to receive these important services during the PHE during which the public has been instructed to practice self-isolation or social distancing, and because interactive audio/video communication technology may not be available to all beneficiaries.

As we discussed in the CY 2022 PFS proposed rule (86 FR 39318 through 39319), we have continued to evaluate whether this flexibility will be needed after the end of the PHE. According to MedPAC’s March 2021 Report to the Congress, allowing audio-only

interaction for certain telehealth services can improve beneficiary choice and equity in access to care for beneficiaries who do not have access to the technology for a video telehealth visit.¹⁴⁶ Additionally, OTPs and organizations representing OTPs have encouraged us to reconsider our position on coverage of audio-only services following the conclusion of the PHE for COVID-19 and have suggested that CMS consider permanently allowing OTPs to furnish certain OUD treatment services using audio-only telephone calls. Stakeholders have commented that allowing OTPs to furnish services via audio-only interactions facilitates broader access to services, particularly for vulnerable populations, and ensures providers have flexibility to deliver care to beneficiaries as efficiently and seamlessly as possible. Given the sensitivity of OUD treatment services, they noted that this is an area in which more flexibility will promote not only access but also effective and sustained treatment for beneficiaries in need of care. Some stakeholders have noted that the use of communication technology has reduced stress and stigma for those who require OUD treatment services and the allowance of audio-only services has greatly expanded access for beneficiaries who may not be able to use interactive video. One stakeholder stated that allowing use of audio-only communication to continue after the PHE for COVID-19 would be essential in addressing disparities in healthcare, especially for dually eligible beneficiaries who do not have access to audio-visual communication technology.

In the CY 2022 PFS proposed rule (86 FR 39319) we stated that after further consideration of the public comments and other stakeholder feedback, we were persuaded that using audio-only telephone calls to furnish therapy and counseling in cases where two-way audio/video communication technology is not available to the beneficiary after the end of the PHE for the COVID-19 pandemic would facilitate broader access to services. Therefore, we proposed to allow OTPs to continue to furnish the therapy and counseling portions of the weekly bundles, as well as any additional counseling or therapy that is billed under the add-on code, using audio-only telephone calls rather than via two-way interactive audio/video communication technology following the end of the PHE for COVID-19 in cases where audio/video

¹⁴⁶ http://medpac.gov/docs/default-source/reports/mar21_medpac_report_ch14_sec.pdf?sfvrsn=0.

communication technology is not available to the beneficiary, provided all other applicable requirements are met. Accordingly, we proposed to revise the regulations at § 410.67(b)(3) and (4) to allow OTPs to furnish therapy and counseling using audio-only telephone calls rather than via two-way interactive audio/video communication technology after the conclusion of the PHE for COVID-19 in cases where audio/video communication is not available to the beneficiary, provided all other applicable requirements are met. We noted that we interpret the requirement that audio/video technology is “not available to the beneficiary” to include circumstances in which the beneficiary is not capable of or has not consented to the use of devices that permit a two-way, audio/video interaction because in each of these instances audio/video communication technology is not able to be used in furnishing services to the beneficiary.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: We received many public comments that expressed support for our proposal to allow OTPs to furnish therapy and counseling using audio-only telephone calls rather than via two-way interactive audio/video communication technology after the conclusion of the PHE for COVID-19, noting that this change would ensure continued access to care for beneficiaries receiving treatment at OTPs. Some commenters stated that audio-only services have helped to advance health equity and have been a vital linkage to care for many patients during the PHE and that these services have been especially beneficial for patients in rural areas who may not have access to reliable internet service, which limits their ability to access two-way, audio-video communications technology. One commenter agreed that CMS should permanently extend the ability to provide counseling via audio-only telehealth, but only for patients who are compliant with their treatment plan.

Response: After consideration of the public comments, we are finalizing our proposal to revise the regulations at § 410.67(b)(3) and (4) to allow OTPs to furnish individual and group therapy and substance use counseling using audio-only telephone calls rather than two-way interactive audio/video communication technology after the conclusion of the PHE for COVID-19 in cases where audio/video communication is not available to the beneficiary, provided all other

applicable requirements are met. As we explained in the proposed rule, we interpret the requirement that audio/video technology is “not available to the beneficiary” to include circumstances in which the beneficiary is not capable of or has not consented to the use of devices that permit a two-way, audio/video interaction because in each of these instances audio/video communication technology is not able to be used in furnishing services to the beneficiary.

Regarding the suggestion that CMS should only permanently extend the ability to provide counseling via audio-only telehealth for patients who are compliant with their treatment plan, we defer to the judgment of treating clinicians to determine when audio-only or audio/video counseling or therapy are appropriate and whether there are certain circumstances, such as when patients are considered to be high risk, when in-person services are needed.

Additionally, in the CY 2022 PFS proposed rule (86 FR 39319), we proposed that after the conclusion of the PHE for COVID-19, when two-way interactive audio/video communication technology is used to furnish additional counseling and therapy services billed under the add-on code, OTPs would be required to append modifier 95 (Synchronous Telemedicine Service Rendered via Real-Time Interactive Audio and Video Telecommunications System) to the claim. We did not propose to require the use of this modifier when counseling and therapy services included in the weekly bundle are furnished using two-way interactive audio/video communication technology. We recognized that it may be difficult to determine which modifier to use in cases where multiple services within the bundle are furnished using different modalities; therefore, we limited our proposal regarding the use of modifier 95 to claim lines for the counseling and therapy add-on code (HCPCS code G2080).

We also proposed that, following the conclusion of the PHE for COVID-19, when counseling or therapy services are furnished using audio-only telephone calls, either as part of a weekly bundle or billed using the counseling and therapy add-on code (HCPCS code G2080), OTPs would be required to document in the beneficiary’s medical record that the counseling or therapy was furnished via audio-only telephone call and the rationale for doing so. In addition, we proposed the use of a new service-level modifier to be appended to claims submitted for the counseling and therapy add-on code (HCPCS code

G2080) when services are furnished via an audio-only interaction, which would serve to certify that the practitioner had the capacity to furnish the services using two-way, audio/video communication technology, but instead, used audio-only technology because audio/video communication technology was not available to the beneficiary. We explained that the use of this modifier would allow CMS to track utilization of this flexibility in the claims data and evaluate that data as we consider ongoing refinements to the OTP benefit in the future. To avoid placing additional burden on OTPs during the PHE for COVID-19, we proposed that these new requirements would take effect on January 1, 2022, but would apply only for services furnished after the conclusion of the PHE for COVID-19. Accordingly, if the PHE for COVID-19 extends into 2022, OTPs that furnish counseling and therapy services using either two-way audio/video technology or audio-only telephone calls would not be required to use the applicable modifier or to comply with the new documentation requirements until after the end of the PHE.

Accordingly, we proposed to revise § 410.67(d) to add a new paragraph (6) to state that when substance use counseling under paragraph (b)(3) of this section or therapy services under paragraph (b)(4) of this section are furnished using audio-only telephone calls after the end of the PHE, as defined in 42 CFR 400.200, the practitioner must document in the beneficiary’s medical record that the services were furnished using audio-only technology and the rationale for doing so. For purposes of the add-on code for additional counseling and therapy services, the practitioner would also be required to certify, in a form and manner specified by CMS, that they had the capacity to furnish the services using two-way, audio/video communication technology, but used audio-only technology because the beneficiary did not have access to two-way audio/video communication technology. We explained that under these proposals we would defer to clinician judgment in determining whether in-person counseling or therapy, rather than the use of audio-only telephone calls, would be most appropriate in certain circumstances, such as for patients who are considered to be high risk. Additionally, we solicited comment on whether we should put any additional or alternative conditions in place to promote program integrity, minimize patient safety concerns, and ensure that beneficiaries

have access to the most appropriate form of care.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters recommended that the agency not require additional documentation in the medical record to support the use of audio-only services, especially if this is the only way the patient can receive care, stating that additional documentation is duplicative and unnecessary. A few commenters supported the use of an audio-only claims coding modifier that could be used to track utilization and conduct effectiveness research for audio-visual vs. audio-only services, noting that evaluation of audio-only services would also be beneficial to demonstrate quality and efficacy for SUD treatment programs.

Response: After consideration of the public comments, we are finalizing our proposal that a new service-level modifier be appended to claims submitted for the counseling and therapy add-on code (HCPCS code G2080) when services are furnished via an audio-only interaction. Consistent with policies finalized for other audio-only services furnished by physicians and certain NPPs in section II.D of this final rule, the use of this modifier will serve to certify that the practitioner had the capacity to furnish the services using two-way, audio/video communication technology, but instead, used audio-only technology because audio/video communication technology was not available to the beneficiary. Additionally, we are finalizing our proposal that after the conclusion of the PHE for COVID-19, when two-way interactive audio/video communication technology is used to furnish additional counseling and therapy services billed under the counseling and therapy add-on code (HCPCS code G2080), OTPs will be required to append modifier 95 (Synchronous Telemedicine Service Rendered via Real-Time Interactive Audio and Video Telecommunications System) to the claim. The use of these modifiers will allow us to track utilization of these flexibilities in the claims data and to evaluate that data as we consider future refinements to the OTP benefit.

However, we are persuaded by the comments stating that the proposed requirement that OTPs document the use of audio-only services in the beneficiary's medical record would be duplicative because the new service-level modifier for services furnished via an audio-only interaction will also

identify when a service was furnished via audio-only communication. Therefore, we are not finalizing the proposal to require additional documentation in the medical record to support the use of audio-only services.

Accordingly, we are finalizing our proposal to revise § 410.67 to add a new paragraph (d)(6) with modifications. As revised, the new paragraph (d)(6) will require that for purposes of the adjustment to the bundled payment for additional counseling or therapy services under § 410.67(d)(4)(i)(A), after the end of the PHE for COVID-19, as defined in § 400.200, when services are furnished using audio-only technology the practitioner must certify, in a form and manner specified by CMS, that they had the capacity to furnish the services using two-way, audio/video communication technology but used audio-only technology because audio/video communication technology was not available to the beneficiary.

P. Physician Self-Referral Updates

1. The Physician Self-Referral Statute and Regulations

Section 1877 of the Act, also known as the physician self-referral law: (1) Prohibits a physician from making referrals for certain designated health services payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship, unless an exception applies; and (2) prohibits the entity from filing claims with Medicare (or billing another individual, entity, or third party payer) for those referred services. A financial relationship is an ownership or investment interest in the entity or a compensation arrangement with the entity. The statute establishes a number of specific exceptions and grants the Secretary of the Department of Health and Human Services (the Secretary) the authority to create regulatory exceptions for financial relationships that do not pose a risk of program or patient abuse. Section 1903(s) of the Act extends aspects of the physician self-referral prohibitions to Medicaid. For additional information about section 1903(s) of the Act; see 66 FR 857 through 858.

The following discussion provides a chronology of our more significant and comprehensive rulemakings; it is not an exhaustive list of all rulemakings related to the physician self-referral law. After the passage of section 1877 of the Act, we proposed rulemakings in 1992 (related only to referrals for clinical laboratory services) (57 FR 8588) (the 1992 proposed rule) and 1998 (addressing referrals for all designated

health services) (63 FR 1659) (the 1998 proposed rule). We finalized the proposals from the 1992 proposed rule in 1995 (60 FR 41914) (the 1995 final rule), and issued final rules following the 1998 proposed rule in three stages. The first final rulemaking (Phase I) was a final rule with comment period published in the January 4, 2001 **Federal Register** (66 FR 856). The second final rulemaking (Phase II) was an interim final rule with comment period (69 FR 16054) published in the March 26, 2004 **Federal Register**. Due to a printing error, a portion of the Phase II preamble was omitted from the March 26, 2004 **Federal Register** publication. That portion of the preamble, which addressed reporting requirements and sanctions, was published in the April 6, 2004 **Federal Register** (69 FR 17933). The third final rulemaking (Phase III) was a final rule published in the September 5, 2007 **Federal Register** (72 FR 51012).

In addition to Phase I, Phase II, and Phase III, we issued final regulations on August 19, 2008 in the Fiscal Year (FY) 2009 Inpatient Prospective Payment System final rule with comment period (73 FR 48434) (the FY 2009 IPPS final rule). That rulemaking made various revisions to the physician self-referral regulations, including: (1) Revisions to the “stand in the shoes” provisions; (2) establishment of provisions regarding the period of disallowance and temporary noncompliance with signature requirements; (3) prohibitions on per unit of service (often referred to as “per-click”) and percentage-based compensation formulas for determining the rental charges for office space and equipment lease arrangements; and (4) expansion of the definition of “entity.”

After passage of the Patient Protection and Affordable Care Act of 2010 (Pub. L. 111–148) (Affordable Care Act), we issued final regulations on November 29, 2010 in the CY 2011 PFS final rule with comment period that codified a disclosure requirement established by the Affordable Care Act for the in-office ancillary services exception (75 FR 73443). We also issued final regulations on November 24, 2010 in the CY 2011 OPFS final rule with comment period (75 FR 71800), on November 30, 2011 in the CY 2012 OPFS final rule with comment period (76 FR 74122), and on November 10, 2014 in the CY 2015 OPFS final rule with comment period (79 FR 66987) that established or revised certain regulatory provisions concerning physician-owned hospitals to codify and interpret the Affordable Care Act's revisions to section 1877 of the Act.

On November 16, 2015, in the CY 2016 PFS final rule, we issued regulations to reduce burden and facilitate compliance (80 FR 71300 through 71341). In that rulemaking, we established two new exceptions, clarified certain provisions of the physician self-referral regulations, updated regulations to reflect changes in terminology, and revised definitions related to physician-owned hospitals. The new exception at § 411.357(y) for timeshare arrangements included a limitation on certain per unit of service and percentage-based compensation formulas. On November 15, 2016, in the CY 2017 PFS final rule, we again finalized requirements that the rental charges for the lease of office space or equipment are not determined using a formula based on per unit of service rental charges, to the extent that such charges reflect services provided to patients referred by the lessor to the lessee (81 FR 80534). The requirements are identical to those in effect since October 1, 2009, and are included in the exceptions for the rental of office space at § 411.357(a)(5)(ii)(B), the rental of equipment at § 411.357(b)(4)(ii)(B), fair market value compensation at § 411.357(l)(3)(ii), and indirect compensation arrangements at § 411.357(p)(1)(ii)(B). The terms “rental” and “lease” both refer to an arrangement under which dominion and control of the rented or leased property is transferred from the lessor to the lessee. In this final rule, we generally use the term “lease” for consistency.

In the December 2, 2020 **Federal Register**, we published a final rule entitled “Modernizing and Clarifying the Physician Self-Referral Regulations” (the “MCR final rule”) (85 FR 77492) that established three new exceptions to the physician self-referral law applicable to compensation arrangements that qualify as “value-based arrangements,” established exceptions for limited remuneration to a physician and the donation of cybersecurity technology and services, and revised or clarified several existing exceptions. The MCR final rule also provided guidance and updated or established regulations related to the fundamental terminology used in many provisions of the physician self-referral law. Most notably, we defined the term “commercially reasonable” in regulation, established an objective test for evaluating whether compensation varies with the volume or value of referrals or other business generated between the parties, and revised the definitions of “fair market value” and “general market value.” The MCR final

rule also revised the definition of “indirect compensation arrangement.”

2. Indirect Compensation Arrangements (§ 411.354(c)(2))

a. Summary of Proposals

We proposed to revise and renumber the regulation at § 411.354(c)(2) that sets forth the conditions for the existence of an indirect compensation arrangement. First, we proposed to revise and renumber § 411.354(c)(2)(ii), which identifies when aggregate compensation to a physician results in an indirect compensation arrangement (if the other conditions of § 411.354(c)(2) are met), to more precisely address the concerns and effectuate the policies that we articulated in the MCR final rule. Specifically, we proposed to revise the regulation to include as a potential indirect compensation arrangement any unbroken chain of financial relationships in which the compensation arrangement closest to the physician (or immediate family member of the physician) involves compensation for anything other than services that he or she personally performs. This would have included arrangements for the lease of office space or equipment that meet the other conditions of the regulation at § 411.354(c)(2), which would be subject to, among other requirements, the prohibition on percentage-based and unit-based (often referred to as “per-click”) compensation formulas at § 411.357(p)(1)(ii) in the exception for indirect compensation arrangements (or subject to the requirements of another applicable exception). Second, after receiving inquiries from stakeholders requesting clarification on the term “unit” in § 411.354(c)(2)(ii)(A) following the publication of the MCR final rule, we proposed to define the term “unit” for purposes of applying the regulation. We also proposed to define “services that are personally performed” for purposes of applying proposed § 411.354(c)(2)(ii)(A)(4).

b. Definition of “Indirect Compensation Arrangement”

Although section 1877(h)(1) of the Act defines the term “compensation arrangement” as including both direct and indirect compensation, the statute does not define the term “indirect compensation arrangement.” In Phase I, relying on the Secretary’s authority under section 1877(b)(4) of the Act, we set forth in regulation the conditions under which an indirect compensation arrangement exists and a corresponding exception for such arrangements (66 FR 684 through 687). In Phase II, we revised the regulation at § 411.354(c)(2)(ii) to distinguish the

language identifying when an indirect compensation arrangement exists from the language of the exception for indirect compensation arrangements at § 411.357(p) (69 FR 16069). Most recently, in the MCR final rule, we further revised the regulation at § 411.354(c)(2) that identifies when an indirect compensation arrangement exists (85 FR 77544 through 77546).

Prior to the MCR final rule, an unbroken chain of financial relationships between a referring physician (or a member of his or her immediate family) and the entity furnishing designated health services established an “indirect compensation arrangement” if all the elements of § 411.354(c)(2), as then in effect, existed. The indirect compensation arrangement must satisfy the requirements of an applicable exception in order to avoid the referral and billing prohibitions of the physician self-referral law. (In the alternative, the parties could use an exception at § 411.355 to except the physician’s referrals on a service-by-service basis.) This two-step process, which first identified the universe of unbroken chains of financial relationships that might be of concern and then excepted from the physician self-referral law’s prohibitions those unbroken chains of financial relationships that did not pose a risk of program or patient abuse, was developed to closely correspond to the statutory treatment of compensation arrangements directly between an entity and a referring physician (or an immediate family member of the referring physician) (69 FR 16059). When analyzing compliance with the requirement that compensation does not take into account the volume or value of a physician’s referrals or the other business generated by the physician for the entity, which is included in the exception for indirect compensation arrangements at § 411.357(p) and certain exceptions for direct compensation arrangements, special rules on unit-based compensation at § 411.354(d)(2) and (3) that deemed certain compensation not to take into account the volume or value of the physician’s referrals or the other business generated by the physician could be applied.

As noted above, in the MCR final rule, we established an objective test for evaluating whether compensation varies with the volume or value of referrals or other business generated between the parties and responded to commenters that questioned whether compensation to a physician would run afoul of the objective tests under specified circumstances (85 FR 77539 through 77547). Inquiring about proposed

modifications to § 411.354(c)(2)(ii) that we did not ultimately finalize, one commenter presented the example of a physician who performs surgeries at a hospital and receives a fixed amount per personally-performed RVU that is consistent with the fair market value of the physician's services (85 FR 77544). In developing our response to the commenter (and other commenters), we revisited the regulatory construct for determining which unbroken chains of financial relationships between entities and physicians (or immediate family members of physicians) establish indirect compensation arrangements and how to determine if they pose a risk of program or patient abuse (85 FR 77545).

With the underlying goal of reducing unnecessary burden on providers and suppliers, we stated that we do not see a need to treat compensation arrangements that may qualify as "indirect compensation arrangements" in the exact same way that the statute treats direct compensation arrangements when that construct creates unnecessary burden on the regulated industry (85 FR 77545 through 77546). We stated that it is possible to simplify the analysis of whether an unbroken chain of financial relationships presents a risk of patient or program abuse or poses program integrity concerns (85 FR 77546), and finalized revisions to § 411.354(c)(2) intended to achieve the same result as the two-step Phase I regulatory construct in protecting against program or patient abuse while reducing unnecessary burden on the regulated industry (85 FR 77546). The revised (now current) regulation at § 411.354(c)(2)(ii) effectively incorporates and applies the conditions of the special rules on unit-based compensation at § 411.354(d)(2) and (3) at the definitional level when determining whether there exists an indirect compensation arrangement that implicates the physician self-referral law.

Under the regulation finalized in the MCR final rule, an unbroken chain of financial relationships between an entity and a physician is considered an indirect compensation arrangement if the physician (or immediate family member of the physician) receives aggregate compensation from the person or entity in the chain with which the physician (or immediate family member) has a direct financial relationship that varies with the volume or value of referrals or other business generated by the physician for the entity furnishing the designated health services, and any of the following are true: (1) The individual unit of

compensation received by the physician (or immediate family member) is not fair market value for items or services actually provided; (2) the individual unit of compensation received by the physician (or immediate family member) is calculated using a formula that includes the physician's referrals to the entity furnishing designated health services as a variable, resulting in an increase or decrease in the physician's (or immediate family member's) compensation that positively correlates with the number or value of the physician's referrals to the entity; or (3) the individual unit of compensation received by the physician (or immediate family member) is calculated using a formula that includes other business generated by the physician for the entity furnishing designated health services as a variable, resulting in an increase or decrease in the physician's (or immediate family member's) compensation that positively correlates with the physician's generation of other business for the entity. In addition, the entity must have actual knowledge of, or act in reckless disregard or deliberate ignorance of, the fact that the referring physician (or immediate family member) receives aggregate compensation that varies with the volume or value of referrals or other business generated by the referring physician for the entity. Under the regulation, unless all the elements of § 411.354(c)(2)(i), (ii), and (iii) exist, an unbroken chain of financial relationships between an entity furnishing designated health services and a physician (or immediate family member of a physician) is not considered an indirect compensation arrangement.

As explained previously, the changes to the regulations that identify indirect compensation arrangements of concern under the physician self-referral law occurred in response to comments and inquiries primarily in the context of compensation paid to physicians for their personally performed services (85 FR 77539 through 77547). The revisions to § 411.354(c)(2)(i) through (iii) were intended to more precisely identify arrangements that pose a risk of overutilization, patient steering, and other abusive conduct at an earlier stage of the analysis (85 FR 77546). However, in streamlining the former two-step process for analyzing unbroken chains of financial relationships, we inadvertently omitted a longstanding and important program integrity requirement that previously always applied when determining satisfaction of the requirements of the exception at

§ 411.357(p) for indirect compensation arrangements. Specifically, we inadvertently excluded from the definition of "indirect compensation arrangement" a subset of unbroken chains including compensation arrangements that we have long identified as presenting significant program integrity concerns: Certain arrangements involving unit of service-based payment for the rental or lease of office space or equipment. (See 73 FR 48713 through 48721; 81 FR 80524 through 80534; and 85 FR 77605 through 77608.)

We have repeatedly stated our view that unit of service-based compensation formulas in arrangements for the lease of space and equipment are inherently susceptible to abuse because the physician lessor has an incentive to profit from referring a higher volume of patients to the lessee. Beginning with the 1998 proposed rule, we stated that unit of service-based payments for patients who are referred for the service by the lessor physician were not consistent with the requirement that compensation not reflect the volume or value of a physician's referrals or other business generated (63 FR 1714). In Phase I, we revisited the issue, reviewed the legislative history, and concluded that, as long as the per-unit payment reflected fair market value in arms' length bargaining and did not vary over the course of the arrangement, unit of service-based payments could qualify for the protection of an exception, provided that the other requirements of the applicable exception are met. (66 FR 876). We noted that such arrangements might run afoul of the anti-kickback statute and stated our intent to continue to monitor such arrangements for potential abuse (66 FR 878).

Subsequently, in the 2009 IPPS final rule, based on our observations of program integrity concerns and comments in support of prohibiting unit of service-based compensation formulas in office space and equipment leases, we finalized revisions to the exceptions for the rental of office space at § 411.357(a), the rental of equipment at § 411.357(b), fair market value compensation at § 411.357(l), and indirect compensation arrangements at § 411.357(p). The revised exceptions required that, to the extent that such arrangements related to the lease of office space or equipment, the rental charges may not be determined using a formula based on: (1) A percentage of the revenue raised, earned, billed, collected, or otherwise attributable to the service performed or business generated in the office space; or (2) unit of service-based rental charges, to the

extent that such charges reflect services provided to patients referred by the lessor to the lessee (73 FR 48713 through 48714). Commenters largely supported the change. A significant number of commenters reported their own experiences of situations in which unit of service-based compensation arrangements resulted in patients being referred for medically unnecessary treatment. Some hospitals reported being effectively compelled to lease equipment from physician groups (73 FR 48715). In the 2016 PFS final rule, we included similar restrictions on percentage-based and unit of service-based compensation formulas in the new exception at § 411.357(y) for timeshare arrangements. In support of that limitation, we again cited concerns that unit of service-based compensation formulas in arrangements involving the use of premises or equipment could lead to overutilization and patient steering (80 FR 71331 through 71332).

We most recently addressed the issue of unit of service-based compensation formulas in depth in the 2017 PFS proposed and final rules. In those rules, at the direction of the D.C. Circuit Court in *Council for Urological Interests v. Burwell*, 790 F.3d 212 (DC Cir. 2015), we explained our rationale for the restrictions as they apply to arrangements for the lease of office space or equipment or for the use of premises or equipment, again identifying overutilization and patient steering as the primary program integrity concerns supporting our conclusion that such compensation provisions present a significant program risk (81 FR 46452 through 46453 and 80528 through 80534). We reiterated that unit of service-based compensation formulas, in particular in arrangements for the lease of equipment:

- Create an incentive for overutilization of imaging services (as described by MedPAC in its comments to our proposal in the CY 2008 PFS proposed rule), as well as other services, including therapeutic services;
- Create an incentive for physicians to narrow their choice of treatment options to those for which they will realize a profit, even where the best course of action may be no treatment;
- Influence physicians to refer to the lessee instead of referring to another entity that utilizes the same or different (and perhaps more efficacious) technology to treat the patient's condition;
- Result in physicians steering patients to equipment they own, even if it means having the patient travel to a non-convenient site for services using the leased equipment; and

- Increase costs to the Medicare program when referring physicians pressure hospitals to use their leasing company despite not being the low cost provider.

We also identified two advisory opinions issued by OIG in which OIG voiced concerns about unit of service-based compensation arrangements and indicated that such arrangements are disfavored under the anti-kickback statute (81 FR 80528). Commenters again were largely supportive of the proposal, which merely re-proposed the then-existing prohibitions on such compensation formulas in arrangements for the lease or use of office space or equipment (81 FR 80528 through 80529).

As discussed in prior rulemakings, our policies regarding unit of service-based compensation formulas relate to both the lease of office space or equipment—where dominion and control over the office space (the subject of the statutory exception at section 1877(e)(1)(A) of the Act and the regulatory exception at § 411.357(a)) or equipment is transferred from the lessor to the lessee—and to arrangements for the use of premises (which may or may not be office space) or equipment—where the grantee is granted a right to use the premises or equipment but dominion and control over the premises or equipment is not transferred from the grantor to the grantee. Our position on the inherent risks presented by unit of service-based compensation formulas in the context of the lease of office space or equipment and the use of premises or equipment has not changed since the CY 2016 and 2017 PFS final rules. This fact is evident elsewhere in the MCR final rule. For example, the rule finalized changes to the exception for fair market value items and services at § 411.357(l), making it applicable to the lease of office space (85 FR 77606). With this change, we also revised the exception to state that the previously-established restrictions at § 411.357(l)(3)(i) and (ii) applicable to fair market value equipment leases also apply to leases of office space. We reiterated our longstanding concerns with unit of service-based compensation formulas for leases of office space and equipment, described the history of such concerns, and stated, in response to a comment supporting the inclusion of the restriction, that it was “a necessary safeguard” for the reasons articulated in our prior rulemakings (85 FR 77607). We included similar restrictions on compensation for the lease of office space or equipment and the use of premises or equipment in the newly-finalized exception for limited

remuneration to a physician at § 411.357(z), citing the same concerns (85 FR 77624).

We continue to believe that arrangements involving unit of service-based compensation for the lease of office space or equipment or for the use of premises or equipment, whether direct or indirect, may pose a significant risk of program abuse, and proposed revisions to § 411.354(c)(2)(ii) to ensure that prohibitions on certain unit of service-based compensation formulas for the lease of office space or equipment or for the use of premises or equipment applies to all compensation arrangements that include them. Under proposed § 411.354(c)(2)(ii), an unbroken chain of financial relationships in which the compensation arrangement closest to the physician (or immediate family member) is an arrangement for the lease of office space or equipment or an arrangement for the use of premises or equipment would be an indirect compensation arrangement if all other conditions of § 411.354(c)(2)(i) through (iii) are met. If the parties to the compensation arrangement elect to use the exception at § 411.357(p) instead of another applicable exception, if any, the compensation for the lease of office space or equipment may not be determined using a formula based on per-unit of service rental charges to the extent that such charges reflect services provided to patients referred by the lessee to the lessor. Moreover, § 411.357(p)(1)(i) requires that compensation received by a physician (or immediate family member)—including compensation for the lease of office space or equipment or for the use of premises or equipment—is not determined in any manner that takes into account the volume or value of referrals or other business generated by the physician for the entity furnishing designated health services.

As we stated in the proposed rule and continue to believe, arrangements involving compensation to a physician for items or the services of others where the physician's referral of designated health services to an entity or other business generated by the physician for an entity may contribute to the compensation received by the physician are distinguishable from arrangements that solely involve compensation for a physician's personally performed services. Program integrity concerns arise when payment for items or services provided as the result of a physician's referrals or the other business the physician generates, rather than the physician's own labor, is included in the calculation of

compensation. As discussed previously, the MCR final rule policy that identifies indirect compensation arrangements of concern under the physician self-referral law in a single-step process was focused on reducing unnecessary burden related to the analysis of unbroken chains of financial relationships that do not pose a risk of program or patient abuse, and was developed in the context of compensation paid to physicians for their personally performed services. However, the current regulations, as finalized in the MCR final rule, are not limited to indirect compensation arrangements under which a physician (or immediate family member) is paid solely for services that he or she personally performs, which, as a general matter, do not raise significant program integrity concerns, provided that the compensation is consistent with fair market value for the personally performed services.

If finalized, proposed § 411.354(c)(2)(ii) would have required a two-step analysis of any unbroken chain of financial relationships in which the compensation paid under the arrangement closest to the physician (or immediate family member) is for anything other than services personally performed by the physician (or immediate family member), including arrangements for the lease of office space or equipment or for the use of premises or equipment. Specifically, we proposed to revise the condition at § 411.354(c)(2)(ii)(A) to consider an unbroken chain of financial relationships between a physician and an entity that meets the other conditions of § 411.354(c)(2)(i) through (iii) to be an indirect compensation arrangement for purposes of the physician self-referral law if the unit of compensation received by the physician (or immediate family member) is payment for anything other than services personally performed by the physician (or immediate family member). We stated that the application of the proposed revision to all unbroken chains of financial relationships in which the compensation paid under the arrangement closest to the physician (or immediate family member) is for anything other than services personally performed by the physician (or immediate family member) was intended to better align with our view regarding the reduced risk of program or patient abuse where compensation is for personally performed services.

We also proposed slight revisions to the language of § 411.354(c)(2)(ii)(A)(2) and (3) to clarify that these conditions relate to the formula for calculating the amount of compensation per unit. The

condition at proposed § 411.354(c)(ii)(A) stated that the referring physician (or immediate family member) receives aggregate compensation from the person or entity in the chain with which the physician (or immediate family member) has a direct financial relationship that varies with the volume or value of referrals or other business generated by the referring physician for the entity furnishing the designated health services and the individual unit of compensation received by the physician (or immediate family member): (1) Is not fair market value for items or services actually provided; (2) Is calculated using a formula that includes the physician's referrals to the entity furnishing designated health services as a variable, resulting in an increase or decrease in the amount of compensation that positively correlates with the number or value of the physician's referrals to the entity; (3) Is calculated using a formula that includes other business generated by the physician for the entity furnishing designated health services as a variable, resulting in an increase or decrease in the amount of compensation per unit that positively correlates with the physician's generation of other business for the entity; or (4) Is payment for anything other than services personally performed by the physician (or immediate family member). For purposes of proposed § 411.354(c)(2)(ii)(A)(4), services that are performed by any person other than the physician (or immediate family member), including, but not limited to, the referring physician's (or immediate family member's) employees, independent contractors, group practice members, or persons supervised by the physician (or the immediate family member) would not be personally performed by the physician. We proposed to codify this policy at § 411.354(c)(2)(ii)(B)(3). We are finalizing our proposal to ensure that the prohibition on certain unit of service-based compensation formulas for the lease of office space or equipment or for the use of premises or equipment applies to all compensation arrangements that include them. We are not finalizing our proposal regarding payment for anything other than services personally performed by the physician (or immediate family member) or our proposal to codify our interpretation of services that are personally performed by a physician (or immediate family member).

c. Definition of "unit" for Purposes of Applying § 411.354(c)(ii)(A)

As explained above, under current § 411.354(c)(2)—which was finalized in the MCR final rule—the determination of whether an indirect compensation arrangement exists requires the evaluation of the individual unit of compensation that the physician (or immediate family member) receives. If the individual unit of compensation does not meet any of the conditions at current § 411.354(c)(2)(ii)(A)(1) through (3), the unbroken chain of financial relationships does not constitute an indirect compensation arrangement. Following the publication of the MCR final rule, we received inquiries from stakeholders regarding how the provisions of § 411.354(c)(2)(ii)(A) should be applied in situations where compensation does not appear to be unit-based or is calculated using two or more different units or types of units. We proposed revisions to § 411.354(c)(2)(ii)(B) to clarify how to identify the unit to analyze against the conditions of current § 411.354(c)(2)(ii)(A)(1) through (3), as well as proposed § 411.354(c)(2)(ii)(A)(4).

As a preliminary matter, it is our position that all compensation essentially is unit-based compensation. The underlying unit may be a discrete item, a unit of service, a unit of time, or a unit that results from combining different types of units into a single unit used to calculate the compensation. The identification of purely time-based or service-based units is straightforward. With respect to compensation that is entirely paid per hour, per day, per month, per year, or per similar period of time, the individual unit of compensation is the smallest unit of time for which the compensation is paid. For example, where a physician is paid \$150 per hour for his or her medical director services, the unit is an hour. Similarly, where a physician is paid \$350,000 per year for his or her full-time professional services, the unit is a year. With respect to compensation that is entirely paid per service, such as a work relative value unit (wRVU) or the provision of a training seminar, the unit is the individual service. For example, where a physician is paid \$30 per wRVU that he or she personally performs, the unit is a wRVU. Similarly, where a physician is paid \$1000 to provide a training session on infection control measures for an organization's employees, the unit is a training session. Compensation formulas that incorporate a percentage of a variable are also unit-based. For example, if a physician is

paid 50 percent of the amount collected for the professional services that he or she performs in a calendar year, the unit is a calendar year. If a physician is paid 95 percent of the Medicare PFS amount for a particular service that he or she personally performs, the unit is the service.

We are aware that compensation arrangements may include different units of compensation paid to a physician. According to stakeholders inquiring about the application of § 411.354(c)(2)(ii)(A), a physician employed by a physician organization may receive an annual salary for his or her full-time professional services furnished to patients of the physician organization plus a productivity bonus for each wRVU that he or she personally performs. The stakeholders inquired how to identify the unit that results from combining different types of units into a single unit used to calculate the physician's compensation. In such instances, we consider the unit of compensation to be time-based and reflect the aggregate compensation paid to the physician during the period of time applicable to the payment; that is, the period of time during which compensation is paid (for example, per month or per year) or over the entire term of the arrangement. It is our understanding that fair market valuations generally follow this construct, determining the fair market value of various types of compensation for a physician's personally performed services, such as fixed salary payments and productivity or bonus compensation, by assessing the physician's compensation in the aggregate over a period of time. Further, a service-based unit of compensation is easily converted to a time-based unit by incorporating the period of time applicable to the payment for the services (for example, \$30 per wRVU per month), while the reverse is not true. It is for these reasons that we believe that "hybrid" compensation—that is, compensation that has both a time-based unit component and a service-based unit component—is appropriately analyzed by converting it to compensation for a unit of time for purposes of applying § 411.354(c)(2)(ii).

To illustrate, assume that an employment arrangement between a physician and a physician organization specifies compensation of \$200,000 per calendar year for the physician's full-time professional services plus a productivity bonus of \$10 for each wRVU that he or she personally performs, and that the physician is paid on a monthly basis. The unit of compensation is a month, and the

formula for determining the compensation per month is $(\$200,000 \div 12 \text{ months}) + (\$10 \times \text{the number of wRVUs personally performed during the month})$. (In the alternative, the parties could analyze the arrangement under § 411.354(c)(2)(ii)(A) using a calendar year as the unit of compensation.) However, if the employment arrangement specified productivity bonus compensation of \$10 per wRVU only for those personally performed wRVUs above a predetermined target, the unit is the period of time for which the target is applicable. To illustrate, instead of \$10 for each wRVU that the physician personally performs, assume that the physician receives \$10 for the wRVUs that he or she personally performs in excess of 4,000 wRVUs per calendar year. The unit of compensation is a calendar year, and the formula for determining the compensation per year is $\$200,000 + \$10 \times (\text{actual number of wRVUs personally performed during the calendar year} - 4,000)$.

We note that a compensation arrangement may also involve multiple units of the same type. For example, a physician employed by a physician organization may receive a salary of \$200,000 per year for his or her full-time professional services plus \$150 per hour for his or her personally performed medical director services or \$500 per month for each of the physician organization's NPPs that he or she supervises. Or, a physician may receive compensation for services based on a fee schedule; for example, \$50 for service A, \$75 for service B, and \$100 for service C. In circumstances where more than one unit of the same type is used to calculate the physician's compensation, each unit must be analyzed under § 411.354(c)(2)(ii)(A)(1) through (4) to determine whether the conditions for an indirect compensation arrangement exist.

To facilitate compliance with the physician self-referral law as it applies to indirect compensation arrangements, we proposed a new regulation at § 411.354(c)(2)(ii)(B)(2) that expressly identifies the unit to consider for purposes of applying the regulation at § 411.354(c)(2)(ii)(A) and determining the existence of an indirect compensation arrangement that must satisfy the requirements of an applicable exception. Under proposed § 411.354(c)(2)(ii)(B)(2), for purposes of applying § 411.354(c)(2)(ii)(A), the individual unit was specified as: (1) Time, where the compensation paid to the physician (or immediate family member) is based solely on the period of time during which the services are provided; (2) service, where the

compensation paid to the physician (or immediate family member) is based solely on the service provided; and (3) time, where the compensation paid to the physician (or immediate family member) is not based solely on the period of time during which a service is provided or based solely on the service provided. We are finalizing our proposal to clarify the unit for purposes of determining the existence of an indirect compensation arrangement with the modifications as described in our response to comments below.

We solicited comment on the proposals discussed above and whether additional guidance is needed with respect to the determination of whether an indirect compensation arrangement exists. We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters acknowledged the longstanding CMS policy that compensation for the lease of office space or equipment or for the use of premises or equipment may not be determined using a formula based on per-unit of service (or "per-click") rental charges or "use" fees to the extent that such charges reflect services provided to patients referred by the lessor to the lessee or by the party granting permission to use the premises or equipment (often referred to as the "licensor") to the party to which the permission is granted (often referred to as the "licensee"), respectively. These commenters supported finalizing our proposal to retain the policy with respect to indirect compensation arrangements, with several noting that our failure to revise the regulations at § 411.354(c)(2) in the MCR final rule to include the prohibition on per-click payments for the lease of office space or equipment must surely have been an oversight given that the agency: (1) Made no express statement that it was abandoning its policy with respect to unbroken chains of financial relationships where the compensation arrangement closest to a physician (or immediate family member of a physician) is for the lease of office space or equipment; and (2) retained the policy with respect to arrangements for the lease of office space or equipment that are directly (or are deemed to be directly) between an entity and a physician (or immediate family member of a physician). Several commenters asserted that the policy is necessary to protect against the program integrity concerns that underly the policy, but others asserted that per-click payments for the lease of equipment do not pose a risk to the Medicare program or its

beneficiaries and, therefore, the policy is unnecessary. A few commenters expressed concern with the burden of learning how to apply new regulations, some of whom supported a prohibition on per-click payments for the lease of office space and equipment, and some of whom opposed such a prohibition.

Response: As we stated in the proposed rule, in the MCR final rule, we inadvertently omitted the important program integrity requirement related to per-click payments for the lease of office space and equipment or for the use of premises or equipment when revising our regulations at § 411.354(c)(2) in order to identify arrangements that pose a risk of overutilization, patient steering, and other abusive conduct at an earlier state of the analysis (86 FR 29322). As the commenters correctly noted, this was in no way an abandonment of our longstanding policy with respect to unbroken chains of financial relationships where the compensation arrangement closest to a physician (or immediate family member of a physician) is for the lease of office space or equipment, nor was it an express indication that unbroken chains of financial relationships where the compensation arrangement closest to a physician (or immediate family member of a physician) is for the use of premises or equipment pose no risk of program or patient abuse. We are finalizing our proposal to address the inadvertent omission of arrangements involving unit of service-based payment for the lease of office space or equipment or for the use of premises or equipment from those unbroken chains of financial relationships that constitute indirect compensation arrangements under § 411.354(c)(2). However, as explained in the responses to comments below, we are finalizing revisions to address this omission in a more precise and targeted manner.

With respect to commenters' concerns about the potential burden of learning how to apply new regulations, we note that, for all unbroken chains of financial relationships where the compensation arrangement closest to a physician (or immediate family member of a physician) is for the lease of office space or equipment or for the use of premises or equipment, the analysis under the physician self-referral law will revert to the two-step analysis in place since our Phase I regulations were finalized in 2004. Once a determination is made that an indirect compensation arrangement exists, the requirements of an applicable exception must be satisfied. If the parties to the indirect compensation arrangement rely on the exception for indirect compensation arrangements at

§ 411.357(p), the compensation for each unit of office space, equipment, or premises may not be determined in any manner that takes into account the volume or value of the physician's referrals to or other business generated for the entity. The special rules at § 411.354(d)(5) and (6) regarding when compensation takes into account the volume or value of a physician's referrals to or other business generated for an entity were finalized in the MCR final rule (85 FR 77535 through 77547). A compensation formula under which a physician (or immediate family member) receives a lease payment or a "use" fee—either as the direct lessor or licensor or through an ownership interest in a lessor or licensor—each time the office space, equipment, or premises is used to provide a service to a patient referred by the physician to the lessee or licensee would not satisfy this requirement, because the formula used to determine the compensation would include the physician's referrals to and other business generated for the entity as a variable, resulting in an increase in the physician's (or immediate family member's) compensation that positively correlates with the number or value of the physician's referrals to and other business generated for the entity. In addition, the exception for indirect compensation arrangements expressly requires that the compensation for the lease of office space or equipment may not be determined using a formula based on: (1) A percentage of the revenue raised, earned, billed, collected, or otherwise attributable to the services performed or business generated in the office space or to the services performed on or business generated through the use of the equipment; or (2) per-unit of service rental charges, to the extent that such charges reflect services provided to patients referred by the lessor to the lessee. This requirement has been in place since October 1, 2009, and therefore, it is not a "new" policy or analysis that will result in burden to parties designing or reviewing their indirect compensation arrangements for compliance with the physician self-referral law.

Comment: Although the vast majority of commenters that addressed our proposal to revise the conditions under which an indirect compensation arrangement exists supported a prohibition on per-click payments for the lease of office space or equipment and the use of premises or equipment, many of these commenters asserted that our proposed revisions to § 411.354(c)(2), if finalized, would be overbroad in application. Specifically,

commenters objected to proposed § 411.354(c)(2)(ii)(A)(4), which would have treated any unbroken chain of financial relationships in which the physician (or immediate family member) receives aggregate compensation that varies with the volume or value of referrals or other business generated by the physician for the entity as an indirect compensation arrangement that must satisfy the requirements of an applicable exception if the individual unit of compensation is payment for anything other than services personally performed by the physician (or immediate family member). All of these commenters urged CMS to take a more targeted approach to its policy concerns in this final rule.

Some commenters noted that, if finalized, the regulations would prohibit all arrangements for services furnished "under arrangement" to a hospital or other entity—which are typically purchased on a per-service basis—where the entire service is not performed personally by the physician who receives the unit-based compensation, including service arrangements that historically did not constitute indirect compensation arrangements or, if they did, satisfied the requirements of the exception for indirect compensation arrangements at § 411.357(p). Commenters explained that, as generally structured, in an arrangement involving services furnished "under arrangement" to a hospital (or other entity), a physician (or immediate family member) receives per-unit compensation for a complete service when the physician generated the referral of designated health services or generated other business billed by the entity (and when he or she did not). One of the commenters further explained that, under the current regulations at § 411.354(c)(2), such arrangements would not constitute indirect compensation arrangements, provided that the amount of compensation that the physician (or immediate family member) receives per individual unit of service is fair market value and does not positively correlate with the number or value of the physician's referrals to or other business generated for the entity. Further, according to this commenter, under the regulations as they existed prior to the MCR final rule, although such unbroken chains of financial relationships constituted indirect compensation arrangements, the special rules at § 411.354(d)(2) and (3) could be applied, and properly structured per-service payments were not considered to take into account the volume or value of the physician's referrals or other

business generated by the physician in violation of § 411.357(p)(1)(i). The commenter asserted that, if CMS finalizes this proposal, because § 411.354(d)(2) and (3) are no longer applicable to an analysis of whether compensation takes into account the volume or value of referrals or other business generated (the “volume or value standards”), compensation under the typical “under arrangements” service arrangement would violate the volume or value standards at § 411.357(p)(1)(i).

Other commenters highlighted that the application of the proposal to certain lithotripsy services would conflict with longstanding CMS policy related to unit-based compensation for such services when furnished as a full package of services (as opposed to a lease of equipment and a technician). One commenter posited that, given that CMS focused on ensuring the continuation of the prohibition on per-click payments for the lease of office space or equipment and the use of premises or equipment as support for the proposal, the broad application of the regulations, if finalized, must be an inadvertent oversight or mistake.

Response: Our proposal to revise § 411.354(c)(2) was intended to support policies finalized in the MCR final rule that were made in the context of assessing the risk of program and patient abuse associated with services personally performed by a physician. However, we agree that the regulation at proposed § 411.354(c)(2)(ii)(A)(4) would have resulted in unintended limitations on unbroken chains of financial relationships that historically constituted indirect compensation arrangements but satisfied all requirements of an applicable exception and, therefore, were not considered to pose a risk of program or patient abuse. The commenters are correct that, under the MCR final rule, certain unbroken chains of financial relationships no longer constitute indirect compensation arrangements and, thus, are outside the reach of the physician self-referral law. Our proposal to revise § 411.354(c)(2) was not based on a new review of these unbroken chains and a determination that they now pose a risk of program or patient abuse that had not historically existed. As noted in this section III.P., our proposal was intended to reinstate the prohibition on certain per-click compensation formulas in arrangements for the lease of office space or equipment that was inadvertently omitted in the MCR final rule changes and to ensure the application of this policy to arrangements for the use of premises and equipment. Accordingly,

we are persuaded that a narrow, more targeted approach is appropriate. Under final § 411.354(c)(2)(ii)(A)(2)(iv), an indirect compensation arrangement exists if the amount of compensation that the physician (or immediate family member) receives per individual unit is payment for the lease of office space or equipment or for the use of premises or equipment, and all other conditions at § 411.354(c)(2) exist. As explained in the CY 2016 PFS final rule, an arrangement is for the lease of office space or equipment where dominion and control over the office space or equipment is transferred from the lessor to the lessee (80 FR 71325). In addition, an arrangement that grants a party permission to use the grantor’s premises and equipment is a “use” or “license” arrangement. In contrast, an arrangement for the provision and purchase of a complete service (or a package of services) that includes all the personnel, supplies, office (or other) space, and equipment necessary to provide the service (or the package of services) but does not transfer dominion and control over the office space or equipment from the provider of the service—for example, a service provided “under arrangements” to a hospital that is performed entirely by a physician’s practice or a joint venture in which the physician is a partner—is not an arrangement for the lease of office space or equipment, nor is it a “use” arrangement where the licensee uses the premises and equipment to perform services. This is true even though office space or equipment are necessary components of the complete service (or package of services) (see 81 FR 80534).

Comment: Several commenters requested clarification regarding when a service is considered to be personally performed by a physician (or immediate family member) as described at proposed § 411.354(c)(2)(ii)(B)(3), which states that services that are personally performed by a physician (or immediate family member) do not include services that are performed by any person other than the physician (or immediate family member), including, but not limited to, the physician’s (or immediate family member’s) employees, independent contractors, group practice members, or persons supervised by the physician (or the immediate family member). One commenter expressed appreciation for the proposed codification of CMS’ policy, noting that the guidance would be helpful in properly allocating productivity credit to physicians in certain settings. Some commenters, in virtually identical statements, suggested that we should consider services to be

personally performed by a physician, regardless of who actually furnishes them, as long as they are billed using a billing number assigned to the physician, including services furnished by another individual but billed as services “incident to” the physician’s service. Many of these commenters urged CMS not to confirm its interpretation of when services are personally performed by a physician (or immediate family member) for purposes of the physician self-referral law, arguing that proposed § 411.354(c)(2)(ii)(B)(3) is inconsistent with Medicare claim submission rules that allow a physician to bill for the services of employees or contractors that are furnished incident to the physician’s professional services. Another commenter suggested that, if CMS finalizes a narrower approach to the analysis of unbroken chains of financial relationships involving the lease or use of office space, equipment, or premises, there would be no need to clarify what it means to personally perform a service for purposes of the physician self-referral law.

Response: As discussed in the response to other comments, we are not finalizing the policy at § 411.354(c)(2)(ii)(A)(4). Therefore, we need not and are not finalizing the regulation at proposed § 411.354(c)(2)(ii)(B)(3). However, it appears that commenters discussing incident to billing may be conflating Medicare billing conventions with physician self-referral policy, and we believe that clarification is warranted. For purposes of the physician self-referral law, as stated in the definition of “referral” at § 411.351, a designated health service is not personally performed by the referring physician if it is performed or provided by any other person, including, but not limited to, the referring physician’s employees, independent contractors, or group practice members. This includes designated health services furnished incident to the referring physician’s professional services. (See 66 FR 871 through 872 and 69 FR 16063.) To be clear, it is our longstanding policy that, for purposes of the physician self-referral law, an item or service is not personally performed by a physician if it is performed or provided by any other person, including, but not limited to, the referring physician’s employees, independent contractors, or group practice members.

Comment: One commenter requested confirmation whether compensation under certain arrangements would impermissibly take into account the volume or value of referrals or other

business generated if the arrangements qualify as “indirect compensation arrangements” under our proposal to treat any unbroken chain of financial relationships in which the physician (or immediate family member) receives aggregate compensation that varies with the volume or value of referrals or other business generated by the physician for the entity as an indirect compensation arrangement that must satisfy the requirements of an applicable exception if the individual unit of compensation is payment for anything other than services personally performed by the physician (or immediate family member). The commenter presented three distinct, but similar, scenarios. In all three scenarios, a hospital has an arrangement with a physician organization for the provision of the personal services of the physicians in the physician organization. There are no employed or independent contractor physicians in the physician organization. The commenter stated that the compensation under the arrangement is a fair market value, fixed dollar amount per wRVU personally performed by the physicians or NPPs.

In the first scenario presented by the commenter, the arrangement with the physician organization also covers the provision of the personal services of the NPPs in the physician organization. The hospital pays the physician organization directly for each wRVU performed by the NPPs (as well as the physicians) in the physician organization. The commenter stated that the NPPs only perform services that they order in the exercise of their independent clinical judgment. Patients are not referred to the NPPs by the physicians in the physician organization. The commenter asserted that the services of the NPPs in this scenario do not result from “referrals” by the physicians in the physician organization and are not “other business generated” by such physicians.

In the second and third scenarios presented by the commenter, the hospital also enters into an arrangement directly with each of the NPPs for their personally performed services, some of which are provided to patients referred to the NPPs by the physicians in the physician organization. The commenter stated that the compensation under each of these arrangements is a fair market value, fixed dollar amount per wRVU personally performed by the NPP. The hospital accepts reassignment of each physician’s and NPP’s right to bill and receive payment from Medicare and other payors. In the first of these scenarios, the physicians in the physician organization refer to the NPPs

all the services that the NPPs then personally perform. The physician organization enters into a payment-to-bank arrangement with each NPP under which the hospital’s direct payment to the NPP is deposited into a bank account belonging to the NPP and then, under a revocable agreement between the NPP and the bank, is swept into a bank account belonging to the physician organization. In the second of these scenarios, the physicians in the physician organization refer to the NPPs all the services that the NPPs then personally perform. However, the hospital makes payment directly to the physician organization as “agent” for the NPPs. According to the commenter, the physician organization receives payment from the hospital on behalf of the NPPs, but not in its own right, for the services personally performed by the NPPs.

Response: In all the scenarios presented by the commenter, the physicians would stand in the shoes of the physician organization under the regulations at § 411.354(c)(1)(ii); therefore, the physicians would be deemed to have the same compensation arrangements with the hospital (and on the same terms) as the physician organization. In the scenarios presented by the commenter, each physician would be deemed to directly receive payment from the hospital for services that the physician personally performs, as well as for services that are performed by someone other than that physician (either another physician in the physician organization or an NPP in the physician organization). Such compensation arrangements would implicate the physician self-referral law; however, there would not be an unbroken chain of two or more financial relationships between the hospital and each physician, and the condition set forth at § 411.354(c)(2)(i) would not be met. As a result, there would not be an indirect compensation arrangement between the hospital and any of the physicians in the physician organization. Even if the physicians did not stand in the shoes of the physician organization, as described previously, we are not finalizing our proposal to treat all unbroken chains of financial relationships in which the physician (or immediate family member) receives aggregate compensation that varies with the volume or value of referrals or other business generated by the physician for the entity as an indirect compensation if the individual unit of compensation is payment for anything other than services personally performed by the physician (or immediate family

member). We note that the commenter’s inquiry relates to and is within the scope of our proposal to include as indirect compensation arrangements certain unbroken chains of financial relationships where the individual unit of compensation is payment for anything other than services personally performed by the physician (or immediate family member). However, because we are not finalizing that proposal, the commenter’s inquiry, on its face, is moot. An analysis of the application of the regulations at § 411.354(d)(5) to the scenarios presented by the commenter is outside the scope of this rulemaking.

Comment: A few commenters stated that, following the MCR final rule, some stakeholders have been uncertain how to identify the individual unit of compensation to which the provisions of current § 411.354(c)(2)(ii)(A)(1) through (3) apply. These and other commenters generally supported finalizing the regulation at proposed § 411.354(c)(2)(ii)(B)(2), which specifies the individual units of compensation to which to apply the regulations that determine when an indirect compensation arrangement exists.

Response: As we explained in the proposed rule, it is our position that all compensation essentially is unit-based compensation. The underlying unit may be a discrete item, a unit of service, a unit of time, or a unit that results from combining different types of units into a single unit used to calculate the compensation. At final § 411.354(c)(2)(ii)(B), we are finalizing with revisions our proposal to specify the individual units of compensation to which to apply the regulations that determine when an indirect compensation arrangement exists. The revisions are intended to further clarify and simplify the application of the regulations at § 411.354(c)(2) that establish the conditions under which an indirect compensation arrangement exists. Specifically, under final § 411.354(c)(2)(ii)(B), the individual unit of compensation is the item, where the physician (or immediate family member) is compensated solely per item provided; the service, where the physician (or immediate family member) is compensated solely per service provided, including arrangements where the “service” provided by the physician (or immediate family member) includes both items and services, such as “under arrangement” service arrangements where both items and services are included in the complete service (or package of services) provided to the purchaser; and time, in all other

circumstances, including arrangements where the physician (or immediate family member) receives compensation for each item provided or unit of service performed (or both) in addition to compensation for each unit of time worked. The final regulations effectuate our policy, as stated in the proposed rule, that “hybrid” compensation—that is compensation that is comprised of payments for both time-based units and service-based or item-based units (or both)—is appropriately analyzed by converting it to compensation for a unit of time. In other words, the compensation paid to the physician (or immediate family member) must be totaled over a period of time, which period would be considered the individual “unit” of compensation for purposes of applying § 411.354(c)(2)(ii). (See 86 FR 39323 through 39324.)

Comment: One commenter claimed that there is confusion in the industry regarding the interpretation and application of the provisions at § 411.354(c)(2)(ii)(A)(2) and (3), as finalized in the MCR final rule and as proposed for modification in the CY 2022 PFS proposed rule. The commenter interpreted § 411.354(c)(2)(ii)(A)(2) and (3) to be a test of whether the amount of compensation *per individual unit* increases or decreases in a manner that positively correlates with referrals or other business generated by a physician. To illustrate, the commenter offered the example of a tiered compensation structure for physician compensation. In the commenter’s example, the physician is paid a rate of \$15 for the first 100 units of service provided and \$20 per unit of service thereafter. The commenter concluded that this compensation structure would meet the conditions for the existence of an indirect compensation arrangement under § 411.354(c)(2)(ii)(A)(2) and (3), because the amount of compensation per individual unit of service could increase from \$15 to \$20 as the number of referrals or amount of other business generated increases. The commenter asserted that, in contrast, many stakeholders incorrectly believe that the conditions at § 411.354(c)(2)(ii)(A)(2) and (3) are met if the physician’s (or immediate family member’s) *aggregate compensation* increases or decreases in a manner that positively correlates with referrals or other business generated by the physician, even if the amount of compensation *per individual unit* remains constant. The commenter requested that CMS confirm that § 411.354(c)(2)(ii)(A)(2) and (3) address variations in the unit of compensation

itself, not variation in the aggregate compensation received by the physician (or immediate family member).

Response: The commenter is correct that the focus of § 411.354(c)(2)(ii)(A)(2) and (3), as finalized in the MCR final rule and proposed for modification in the CY 2022 PFS proposed rule, is variation in the amount of compensation per individual unit itself, not the *aggregate compensation* received by the physician (or immediate family member). To avoid possible stakeholder confusion, in this final rule we are revising and renumbering the provisions in § 411.354(c)(2)(ii)(A) to explicitly distinguish between the conditions that must be met for aggregate compensation, on the one hand, and the conditions that must be met for the *individual unit* of compensation, on the other, in order for an indirect compensation arrangement to exist. We are making corresponding clarifying changes to § 411.354(c)(2)(ii)(C).

Under final § 411.354(c)(2)(ii)(A)(1), for an indirect compensation arrangement to exist, the referring physician (or immediate family member) must receive *aggregate compensation* from the person or entity in the chain with which the physician (or immediate family member) has a direct financial relationship that varies with the volume or value of referrals or other business generated by the referring physician for the entity furnishing the designated health services. When a physician is paid on a per unit of service or time basis, the physician’s *aggregate compensation* will increase as the physician performs more services or completes more units of time. And, where the services performed by the physician correlate to designated health services referred or other business generated by the physician for the entity, the aggregate compensation received by the physician varies with the volume or value of referrals or other business generated by the physician for the entity. Under these circumstances, the condition at final § 411.354(c)(2)(ii)(A)(1) is met.

In addition to the test for aggregate compensation, one of the conditions in § 411.354(c)(2)(ii)(A)(2) for the *individual unit* of compensation received by the physician (or immediate family member) must also be met for an indirect compensation arrangement to exist. Final § 411.354(c)(2)(ii)(A)(2)(ii) and (iii) pertain to variability in the amount of compensation per individual unit relating to the volume or value of a physician’s referrals or other business generated, respectively. In response to the comment requesting clarification of

the application of these provisions, we are revising and renumbering the conditions that relate to the individual unit of compensation in § 411.354(c)(2)(ii)(A)(2) to clarify the application of these conditions generally and to illustrate how the regulations will apply in the case of tiered compensation as described by the commenter.

To illustrate, assume that the conditions for an indirect compensation arrangement between a physician and a hospital at §§ 411.354(c)(2)(i), 411.354(c)(2)(ii)(A)(1), and 411.354(c)(2)(iii) are met. In order for an indirect compensation arrangement to exist, one of the conditions for the *individual unit* of compensation in § 411.354(c)(2)(ii)(A)(2) must also be met. In the commenter’s example of tiered compensation, the individual unit of compensation received by the physician could increase from \$15 to \$20 per unit if the physician provides over 100 units of service to the entity. We assume for purposes of this example that the physician’s services are typically correlated with designated health services or other business generated for the hospital, and further that both \$15 and \$20 per unit of service are within the range of fair market value for the services actually provided. Because the amount of compensation per individual unit of service could increase from \$15 to \$20 as the number or value of the physician’s referrals to the entity increase or the amount or value of the other business generated by the physician for the entity increases, the conditions for an indirect compensation arrangement at final § 411.354(c)(2)(ii)(A)(2)(ii) and (iii) are met. Therefore, the unbroken chain of financial relationships between the physician and the hospital would constitute an indirect compensation arrangement under § 411.354(c)(2). Importantly, at this step in the analysis, it does not matter if the physician is being paid for his or her personally performed services or if the tiered compensation formula does not include designated health services or other business generated as a variable. Although these are important factors in determining compliance with certain exceptions, including the exception for indirect compensation arrangements at § 411.357(p), the analysis under final § 411.354(c)(2)(ii)(A)(2)(ii) and (iii) focuses solely on whether the individual unit of compensation could increase as referrals or other business generated increase (or could decrease as referrals or other business generated decrease). Lastly, even if the physician

never performed the required number of services to trigger the increase from \$15 to \$20 per service, because the amount of compensation per individual unit of service *could* increase under the tiered compensation formula, the conditions for an indirect compensation arrangement at final § 411.354(c)(2)(ii)(A)(2)(ii) and (iii) are met in this illustration.

In general, we believe that tiered compensation models warrant additional scrutiny under the physician self-referral law when structured in a way that the amount of compensation per individual unit could increase as the number or value of the physician's referrals or the amount or value of other business generated by the physician increases. We are equally concerned with tiered compensation models where the amount of compensation per individual unit could decrease as the number or value of the physician's referrals decreases or the amount or value of other business generated by the physician decreases (for example, an arrangement under which a physician is paid \$35 per wRVU if the physician furnishes 500 wRVUs during the month, but only \$30 per wRVU if the physician does not reach the targeted 500 wRVUs). We have modified the conditions for the existence of an indirect compensation arrangement at § 411.354(c)(2) to ensure that an unbroken chain of financial relationships involving a tiered compensation structure under the compensation arrangement closest to the physician (or immediate family member) is considered an indirect compensation arrangement. When these conditions are met, the compensation arrangement or the individual referrals of designated health services must satisfy the requirements of an applicable exception to the physician self-referral law. If the compensation arrangement to which the physician is a direct (or deemed direct) party is not a value-based arrangement and the entity is not an MCO or IPO, the only available exception in § 411.357 is the exception for indirect compensation arrangements at § 411.357(p). Among other things, the exception at § 411.357(p) requires that the arrangement is set out in writing, thus ensuring greater transparency, and that the aggregate compensation received by the physician (or immediate family member) is fair market value for items and services actually provided. In addition, the exception requires that the compensation received by the physician (or immediate family member) is not determined in any manner that takes into account the volume or value of referrals or other business generated by

the physician. The special rules at § 411.354(d)(5) and (6) are applied for purposes of determining satisfaction of this requirement. In applying the special rules at § 411.354(d)(5) and (6) to tiered compensation under an indirect compensation arrangement, the focus of the analysis is the formula used in determining the amount of compensation that the physician (or immediate family member) receives per individual unit—that is, per item, per service, or per unit of time. Provided that the formula used to calculate the amount of compensation to the physician (or immediate family member) per individual unit (that is, the amount of compensation per item, per service, or per unit of time) does not include as a variable the physician's referrals to or other business generated for the entity with which the physician (or immediate family member) has the indirect compensation arrangement, the compensation received by the physician (or immediate family member) would not be determined in a manner that takes into account the volume or value of referrals or other business generated by the physician for the entity. We note that the application of § 411.354(d)(5) and (6) with respect to tiered compensation arrangements is the same for both direct compensation arrangements and indirect compensation arrangements.

Comment: A few commenters urged CMS to delay the effective date of any revisions to the regulations addressing when an indirect compensation arrangement exists. These commenters asserted that affected parties would need time to identify and revise existing arrangements that would again implicate the physician self-referral law, but would not satisfy the requirements of an applicable exception to the law. Other commenters urged CMS not to delay the effective date of any final regulations that correct the inadvertent omission of the prohibition on per-click payments for the lease of office space or equipment and the use of premises or equipment in indirect compensation arrangements due to the important program integrity concerns at issue. These commenters also urged CMS not to “grandfather” any arrangements that were entered into after the effective date of the MCR final rule, noting that parties that entered into arrangements involving per-click payments for the lease of office space or equipment (or for the use of premises or equipment) after the effective date of the MCR final rule did so with full knowledge of CMS’ longstanding concerns regarding such arrangements.

Response: We decline to delay the effective date of the regulations we are finalizing in this final rule, nor are we “grandfathering” arrangements involving per-click payments for the lease of office space or equipment or for the use of premises or equipment that were entered into after the effective date of the MCR final rule. We expect that the number of affected lease arrangements that will again implicate the physician self-referral law is limited, and parties to such arrangements have over a decade of experience in applying the requirement at § 411.357(p)(1)(ii) that prohibits compensation for the lease of office space or equipment that is determined using a formula based on per-unit of service rental charges, to the extent such charges reflect services provided to patients referred by the lessor to the lessee. We remind stakeholders that this requirement applies to all services, whether or not they are designated health services, that are provided to patients referred by the lessor to the lessee. The term “referral” has its general meaning and not the meaning set forth at § 411.351. For a more detailed explanation of this requirement, we refer readers to the FY 2009 IPPS final rule (73 FR 48713 through 48721) and the CY 2017 PFS final rule (81 FR 80524 through 80534). We also expect that the number of affected unbroken chains of financial relationships that involve arrangements for the use of premises or equipment that will again implicate the physician self-referral law is similarly limited.

3. Exception for Preventive Screening Tests, Immunizations, and Vaccines (§ 411.355(h))

As a general matter, vaccines fall within the definition of “outpatient prescription drugs” at § 411.351, and therefore, are considered designated health services for purposes of the physician self-referral law. Because the Federal Government purchased the initial supply of COVID-19 vaccines, Medicare does not make payment for COVID-19 vaccines at this time,¹⁴⁷ and COVID-19 vaccines do not fall within the definition of “designated health services” at § 411.351. However, should COVID-19 vaccines become payable by Medicare, unless the requirements of an applicable exception to the physician self-referral law are satisfied, the physician self-referral law’s prohibitions under section 1877(a)(1) of the Act and § 411.353(a) and (b) will apply to the

¹⁴⁷ See <https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/covid-19-vaccines-and-mono-clonal-antibodies>.

referral and billing of COVID-19 vaccines.

In Phase I, using the Secretary's authority at section 1877(b)(4) of the Act to create additional exceptions that do not pose a risk of program or patient abuse, we finalized an exception at § 411.355(h) that excludes from the physician self-referral law's referral and billing prohibitions certain preventive screening tests, immunizations, and vaccines covered under Medicare (66 FR 939). As finalized in Phase I, in addition to requirements related to compliance with the Federal anti-kickback statute and Federal and State laws and regulations related to billing and claims submission, the exception at § 411.355(h) required that the preventive screening test, immunization, or vaccine is subject to CMS-mandated frequency limits, reimbursed by Medicare based on a fee schedule, and listed on the CMS website and in annual PFS Updates. In Phase II, in recognition that some of the vaccines eligible for the exception may be paid by Medicare using different reimbursement methods, we removed the requirement that the preventive screening test, immunization, or vaccine is reimbursed based on a fee schedule (69 FR 16116). In the MCR final rule, as part of a broader effort to decouple the physician self-referral law from the Federal anti-kickback statute and Federal and State laws or regulations governing billing or claims submission, we removed the requirement at former § 411.355(h)(2) that the arrangement does not violate the Federal anti-kickback statute, as well as the requirement at former § 411.355(h)(3) that the arrangement does not violate any Federal or State law or regulation governing billing or claims submission (85 FR 77567).

Services to which the exception at § 411.355(h) is applicable remain designated health services for purposes of the physician self-referral law; however, referrals may be made and claims submitted for such services if all requirements of the exception are satisfied (69 FR 16100). In the CY 2021 PFS final rule, we added COVID-19 vaccines to the list of immunization and vaccine codes to which the exception at § 411.355(h) is applicable (85 FR 84954 through 85955). We did so to ensure that the physician self-referral law will not impede the availability of COVID-19 vaccines for Medicare and other patients if they become payable by Medicare (85 FR 84955).

Under current § 411.355(h)(1), a preventive screening test, immunization, or vaccine must be subject to CMS-mandated frequency

limits, among other requirements. Frequency limits determine the maximum number of times that Medicare will pay for a service for a particular beneficiary during an established period, often a calendar year or 12-month period. CMS-mandated frequency limits also serve to minimize the risk of program or patient abuse due to a physician's financial self-interest, because Medicare will not pay for additional services referred and furnished in excess of the frequency limitation. In Phase I, we stated our belief that, under the terms of the exception at § 411.355(h) as finalized in Phase I—which included the requirement that the service is subject to CMS-mandated frequency limits—the risk of abuse is extremely low. We also stated that the exclusion of certain preventive screening tests, immunizations, and vaccines from the reach of the physician self-referral law is consistent with the statutory language and structure and the expressed Congressional intent to provide preventive care to Medicare beneficiaries (66 FR 939).

The United States continues to respond to the outbreak of COVID-19 caused by the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). At this time, we have not mandated frequency limits for the COVID-19 vaccines identified on the List of CPT/HCPCS Codes (Code List) to which the exception at § 411.355(h) is applicable and we are uncertain whether or, if so, when CMS may mandate frequency limits for COVID-19 vaccines. Thus, although COVID-19 vaccines are identified on the Code List as codes to which the exception at § 411.355(h) is applicable, they could not satisfy the requirement at current § 411.355(h)(1) that the preventive screening test, immunization, or vaccine is subject to CMS-mandated frequency limits. We are concerned that the current absence of CMS-mandated frequency limits on the available COVID-19 vaccines could impede the availability of critically important COVID-19 vaccines for Medicare and other patients, as physician referrals for COVID-19 vaccines would be prohibited unless another exception to the physician self-referral law is applicable and all its requirements are satisfied. Therefore, we proposed to permit the use of the exception at § 411.355(h) for COVID-19 vaccines even when they are not subject to CMS-mandated frequency limits, provided that all other requirements of the exception are satisfied. Specifically, we proposed to revise and renumber the regulation at § 411.355(h). We are

finalizing the regulation as proposed. Revised § 411.355(h)(1) includes the conditions that must be met to avoid the physician self-referral law's referral and billing prohibitions. The requirement at current § 411.355(h)(4) that the preventive screening test or vaccine is listed on the Code List as a code to which the exception at § 411.355(h) is available will be renumbered as § 411.355(h)(1)(i); the requirement at current § 411.355(h)(4) that the preventive screening test or vaccine is covered by Medicare will be renumbered as § 411.355(h)(1)(ii); and the requirement at current § 411.355(h)(1) that the preventive screening test or vaccine is subject to a CMS-mandated frequency limit will be renumbered as § 411.355(h)(1)(iii). As finalized, § 411.355(h)(2) states that the requirement at § 411.355(h)(1)(iii) does not apply to a COVID-19 vaccine code during such period that the vaccine is not subject to a CMS-mandated frequency limit. In light of the impact of the COVID-19 pandemic on the United States and the vital need to protect beneficiaries (and others) from the SARS-CoV-2 virus, we do not believe that making the exception at § 411.355(h) available for COVID-19 vaccines to which no CMS-mandated frequency limits apply poses a risk of program or patient abuse.

We solicited comment on our approach to this exception and its applicability to COVID-19 vaccines, including whether we should limit relief from the requirement at § 411.355(h)(1)(iii) to the period during which the current PHE is in effect, until such time as CMS-mandated frequency limits apply for COVID-19 vaccines, or some other period of time. Based on the comments, we are finalizing our proposal to permit the use of the exception at § 411.355(h) for COVID-19 vaccines during such period as the vaccines are not subject to CMS-mandated frequency limits, provided that all other requirements of the exception are satisfied. As finalized, the availability of § 411.355(h)(1)(iii) for COVID-19 vaccines is not limited to the period during which the current PHE is in effect.

We note that, as explained in section II.J. of this final rule, monoclonal antibody products used to treat COVID-19 are currently covered and paid for under the COVID-19 vaccine benefit in section 1861(s)(10) of the Act. Thus, under final § 411.355(h)(2), the requirement pertaining to CMS-mandated frequency limits at final § 411.355(h)(1)(iii) does not apply to monoclonal antibody products used to treat COVID-19 during such period as

the products are paid for under the COVID-19 vaccine benefit in section 1861(s)(10) of the Act and are not subject to a CMS-mandated frequency limit.

We also alternatively proposed to remove the CMS-mandated frequency limit requirement for all vaccines. We solicited comment on whether it would then be necessary to include alternative program integrity requirements in the exception at § 411.355(h) if we were to do so. We stated that we were interested in comments regarding whether physicians are likely to order vaccines more frequently than recommended by the Department and any other organization the Department identifies as an authority on this matter. Based on our review of the comments related to this alternative proposal, we are not finalizing the alternative proposal.

Finally, for clarity and consistency, we proposed to revise the terminology used in the exception at § 411.355(h). Specifically, we proposed to remove the terms “immunization” and “immunizations” throughout § 411.355(h) and the headers used in the Code List. In the proposed rule, we noted that the Centers for Disease Control and Prevention (CDC) defines immunization as a process by which a person becomes protected against a disease through vaccination. The term “immunization” is often used interchangeably with vaccination or inoculation. The CDC defines the term “vaccine” as a product that stimulates a person’s immune system to produce immunity to a specific disease, protecting the person from that disease.¹⁴⁸ All the codes currently on the Code List to which the exception at § 411.355(h) is applicable have a descriptor containing “vaccine” or a derivative of “vaccine.”

Vaccines fall within the definition of “outpatient prescription drugs” at § 411.351, and therefore, are considered designated health services for purposes of the physician self-referral law. As defined by the CDC, an immunization is not an item or service that is a “designated health service” (as defined at § 411.351) to which the physician self-referral law applies. We believe that “vaccine” is the appropriate term to use in § 411.355(h) and in the headers in the Code List. Although we are not aware that including both terms in § 411.355(h) and the Code List has caused stakeholder confusion to date, we proposed to improve the accuracy of the terminology at this time to prevent any possible confusion in the future. We

are finalizing our proposal to remove the terms “immunization” and “immunizations” throughout § 411.355(h) and the headers used in the Code List. The revisions to the title and text of § 411.355(h) that we are finalizing in this final rule do not affect whether a code is a designated health service for purposes of the physician self-referral law.

We received the following public comments regarding our proposals, and our responses follow.

Comment: Several commenters supported our proposal to permit the use of the exception at § 411.355(h) for COVID-19 vaccines during such period as the vaccines are not subject to CMS-mandated frequency limits, provided that all other requirements of the exception are satisfied. No commenters opposed the proposal. Commenters noted that removing the CMS-mandated frequency requirement for COVID-19 vaccines would reduce barriers to vaccine delivery and ensure that the physician self-referral law will not impede vaccine availability for beneficiaries. According to one commenter, if finalized, the proposal would allow physicians to make referrals for vaccines without fear of violating the physician self-referral law and would likely increase access to vaccines. Another commenter highlighted the continuing impact of the COVID-19 PHE on practices, physicians, and patients. The commenter noted that ensuring life-saving vaccines are available to Medicare beneficiaries is critical, particularly as new virus variants emerge and booster vaccinations are potentially required for many patients. Several commenters opposed limiting the suspension of the requirement for a frequency mandate to the period of the PHE. Commenters generally agreed with CMS that the proposal, if finalized, would not pose a risk of program or patient abuse.

Response: In light of the impact of the COVID-19 pandemic on the United States and the vital need to protect Medicare beneficiaries (and others) from the SARS-CoV-2 virus, we remain concerned that the current absence of CMS-mandated frequency limits on COVID-19 vaccines could inadvertently impede the availability of the vaccines due to the application of the physician self-referral law’s referral and billing prohibitions. Therefore, we are finalizing our proposal to permit the use of the exception at § 411.355(h) for COVID-19 vaccines during such period as the vaccines are not subject to CMS-mandated frequency limits, provided that all other requirements of the

exception are satisfied. We agree with the commenters that finalizing this proposal does not pose a risk of program or patient abuse. We also agree that we should permit the use of the exception at § 411.355(h) for COVID-19 vaccines until such time as CMS-mandated frequency limits apply for COVID-19 vaccines, without regard to the PHE timeframe, to ensure that we do not impede the continuing availability of COVID-19 vaccines.

Comment: Several commenters supported our alternative proposal to remove the CMS-mandated frequency limit requirement for all vaccines. One commenter maintained that this proposal, if finalized, would reduce barriers to vaccine delivery. Several commenters contended that finalizing this proposal would not necessitate including alternative program integrity requirements in the exception at § 411.355(h). Several commenters asserted that physicians are unlikely to order vaccines more frequently than recommended by the CDC’s Advisory Committee on Immunization Practices (ACIP), especially given Medicare’s current payment rates for non-COVID-19 vaccines and their administration. Another commenter explained that, because vaccines are generally administered at discrete intervals, based on age or medical indications, vaccines do not present the same program integrity concerns as other outpatient drugs and can even reduce health care costs by preventing more serious diseases.

Response: We are not persuaded to remove the CMS-mandated frequency limit requirement for all vaccines at this time. In particular, we are concerned about potential harm to patients from receiving unnecessary or duplicative vaccinations. There are only a limited number of requirements under the exception at § 411.355(h), and we are concerned that, in the absence of alternative requirements, an open-ended exception permitting the furnishing of all vaccines, even if the vaccines are not subject to CMS-mandated frequency limits, may pose a risk of program or patient abuse.

Comment: Several commenters supported our proposal to remove the terms “immunization” and “immunizations” throughout § 411.355(h) and the headers used in the Code List. No commenters opposed the proposal.

Response: After consideration of the comments, we continue to believe that “vaccine” is the appropriate term to use in § 411.355(h) and in the headers in the Code List. Therefore, we are finalizing our proposal to remove the terms

¹⁴⁸ <https://www.cdc.gov/vaccines/vac-gen/imz-basics.htm>.

“immunization” and “immunizations” throughout § 411.355(h) and the headers used in the Code List. We reiterate that the final revisions to § 411.355(h) do not affect whether a code is a designated health service for purposes of the physician self-referral law.

4. List of CPT/HCPCS Codes (§ 411.351)

As described in section III.P.1. of this final rule, unless an exception applies and all its requirements are satisfied, the physician self-referral law prohibits a physician from making a referral for the furnishing of certain designated health services if the physician has a financial relationship with the entity to which the referral is made. Recognizing that providing precise definitions of which designated health services implicate the physician self-referral law would facilitate compliance with the law, in the Phase I final rule, we determined to define certain designated health services by publishing specific lists of CPT and HCPCS codes that physicians and providers most commonly associate with a given designated health service (66 FR 922). This list of CPT and HCPCS codes defines the entire scope of the designated health services category for purposes of the physician self-referral law and is controlling vis-à-vis the definition of the category at § 411.351, which contains a general explanation of the principles used to select the codes.

In Phase I, we stated that, because HCPCS Level I and II codes change and can quickly become out-of-date, we would not include the list of CPT and HCPCS codes that are designated health services in the text of our regulations (66 FR 923). We also stated that the definitions of specific services in our regulations would cross-refer to a comprehensive table that would appear initially in the **Federal Register** along with Phase I and thereafter in an addendum to the annual final rule concerning payment policies under the PFS rule. We defined at § 411.351 the term “List of CPT/HCPCS Codes Used to Describe Certain Designated Health Services Under the Physician Referral Provisions (Section 1877 of the Social Security Act)” to mean the list of certain designated health services under section 1877 of the Act initially posted on the CMS website and updated annually thereafter in an addendum to the PFS final rule and on the CMS website. In the Phase II interim final rule, we revised the term to “List of CPT/HCPCS Codes” and its definition to “the list of CPT and HCPCS codes that identifies those items and services that are designated health services under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of

the Act.” The Phase II definition also stated that the list is updated annually, as published in the **Federal Register**, and is posted on the CMS website at <http://www.cms.gov/medlearn/refphys.asp>. Other than including an updated URL for the location of the list on the CMS website, the current definition of “List of CPT/HCPCS Codes” is identical to the Phase II definition. The CMS website currently identifies this list as the Code List for Certain Designated Health Services (the Code List).¹⁴⁹

As we discussed in the proposed rule, coding changes have become more frequent since we initially began publishing the Code List. In an effort to more closely align with the frequency of the coding changes, we proposed to update the Code List more frequently than annually. Specifically, we proposed to update the Code List each calendar quarter, and provide public notification in advance of Code List updates. We stated that, if finalized, advance notification would be posted on the CMS website on March 1, June 1, September 1, and December 1 of each year, with corresponding Code List updates effective on April 1, July 1, October 1, and January 1, respectively. We also proposed a 30-day public comment period following the posting of each advance notification of the upcoming quarterly Code List update. We stated in the proposed rule that we would provide information on our website regarding the process for submitting public comments through www.regulations.gov and address all public comments on the Code List on the CMS website. We stated that we anticipate that most comments would be addressed within 90 calendar days of the effective date of the Code List update to which they pertain; however, we indicated that a longer timeframe might be necessary to address complex comments or those that require coordination with external parties. We also stated that this new process and schedule would begin with the update effective April 1, 2022. Based on the comments, we are not finalizing our proposal to update the Code List more frequently. The Code List that is effective January 1, 2022 is included in this final rule and will continue to be updated on an annual basis as described below.

In addition, we proposed to publish the Code List solely on the CMS website (commencing after the publication of the January 1, 2022 Code List in this final rule). In the proposed rule, we

stated that we believe that publication via the CMS website would facilitate compliance with the physician self-referral law and allow ready access to the most up-to-date Code List. We proposed corresponding revisions to the definition of “List of CPT/HCPCS Codes” at § 411.351 and to update the URL that indicates where the Code List is published on the CMS website. We are finalizing our proposal to publish the Code List solely on the CMS website (commencing after the publication of the January 1, 2022 Code List in this final rule). We are finalizing the definition of “List of CPT/HCPCS Codes” at § 411.351 to mean the list of CPT and HCPCS codes that identifies those items and services that are designated health services under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of the Act. It is updated annually and posted on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.

We received the following comments regarding our proposals and our responses follow:

Comment: Some commenters, including a representative of a large number of stakeholders, expressed concern that more frequent Code List updates would impose a significant burden on the industry and increase its risk of noncompliance with the physician self-referral law. These commenters urged CMS to continue to update the Code List on an annual basis only. By way of example, one commenter stated that quarterly adjustments to the Code List would create confusion and add another level of administrative burden to physician self-referral law compliance efforts. This commenter was concerned that certain compensation arrangements with physicians could inadvertently fall out of compliance with the physician self-referral law with more frequent changes to the Code List. Another commenter stated that more frequent Code List updates would require more frequent review and modification of arrangements with physicians in order to ensure compliance with the physician self-referral law. The commenter further stated that publishing more frequent Code List updates would require more resources to review and comply with the physician self-referral law. In contrast, several commenters generally supported our proposal to update the Code List more frequently, but did not articulate the rationale for their support.

Response: Our proposal to update the Code List quarterly was intended to

¹⁴⁹ https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.

benefit stakeholders by providing updates to the Code List at intervals that align more closely with the current coding cycles. We are persuaded by the commenters that the increased administrative and compliance burden outweighs the benefit of more frequent updates and are not finalizing our proposal to update the Code List quarterly. We will continue to update the Code List on an annual basis.

Comment: All the commenters that addressed our proposal to publish the Code List solely on the CMS website supported website-only publishing.

Response: After consideration of the comments, we are finalizing our proposal to publish the Code List solely on the CMS website. We continue to believe that publishing the Code List on the CMS website will facilitate compliance with the physician self-referral law and provide easier access to the most up-to-date Code List.

Commencing after the publication of the January 1, 2022 Code List in this final rule, the Code List will be updated annually and published on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.

Comment: Several commenters stated that a 30-day advance notice and comment period for Code List updates is sufficient.

Response: We agree that 30 days advance notice is sufficient prior to the publication of the annual Code List updates. Beginning with the Code List that is effective January 1, 2023, no less than 30 consecutive calendar days prior to the effective date of a Code List update, we will provide advance notice of the updated Code List on the CMS website. We will also provide for a 30-day public comment period for each update using www.regulations.gov, and publish instructions for submitting comments on the CMS website. We will address all public comments that we receive through this process on the CMS website. We anticipate that most comments will be addressed within 90 calendar days of the effective date of the Code List update to which they pertain; however, a longer timeframe may be necessary to address complex comments or those that require coordination with external parties.

5. Annual Update to the List of CPT/HCPCS Codes

a. General

As described in section III.P.1. of this final rule, unless an exception applies and its requirements are satisfied, the physician self-referral law prohibits a physician from making a referral for the

furnishing of certain designated health services if the physician has a financial relationship with the entity to which the referral is made. Section 1877(h)(6) of the Act and § 411.351 of our regulations specify that the following items and services are designated health services:

- Clinical laboratory services.
- Physical therapy, occupational therapy, and outpatient speech-language pathology services.
- Radiology and certain other imaging services.
- Radiation therapy services and supplies.
- Durable medical equipment and supplies.
- Parenteral and enteral nutrients, equipment, and supplies.
- Prosthetics, orthotics, and prosthetic devices and supplies.
- Home health services.
- Outpatient prescription drugs.
- Inpatient and outpatient hospital services.

b. Annual Update to the Code List

i. Background

In § 411.351, we specify that the entire scope of four categories of designated health services is defined in a list of CPT/HCPCS codes (the Code List), which is updated annually to account for changes in the most recent CPT and HCPCS Level II publications. The categories defined and updated in this manner are:

- Clinical laboratory services.
- Physical therapy, occupational therapy, and outpatient speech-language pathology services.
- Radiology and certain other imaging services.
- Radiation therapy services and supplies.

The Code List also identifies those items and services that may qualify for either of the following two exceptions to the physician self-referral prohibitions:

- EPO and other dialysis-related drugs (§ 411.355(g)).
- Preventive screening tests, immunizations, and vaccines (§ 411.355(h)).

The definition of “designated health services” at § 411.351 excludes services for which payment is made by Medicare as part of a composite rate (unless the services are specifically included in the statutory or regulatory lists of items and services that are designated health services and are themselves payable through a composite rate, such as home health and inpatient and outpatient hospital services). Effective January 1, 2011, EPO and dialysis-related drugs furnished in or by an ESRD facility (except drugs for which there are no

injectable equivalents or other forms of administration), have been reimbursed under a composite rate known as the ESRD prospective payment system (ESRD PPS) (75 FR 49030). Accordingly, EPO and any dialysis-related drugs that are paid for under ESRD PPS are not designated health services and are not listed among the drugs that could qualify for the exception at § 411.355(g) for EPO and other dialysis-related drugs furnished by an ESRD facility.

ESRD-related oral-only drugs, which are drugs or biologicals with no injectable equivalents or other forms of administration other than an oral form, were scheduled to be paid under ESRD PPS beginning January 1, 2014 (75 FR 49044). However, there have been several delays of the implementation of payment of these drugs under ESRD PPS. On December 19, 2014, section 204 of the Stephen Beck, Jr., Achieving a Better Life Experience Act of 2014 (ABLE) (Pub. L. 113–295) was enacted and delayed the inclusion of these oral-only drugs under the ESRD PPS until 2025. Until that time, such drugs furnished in or by an ESRD facility are not paid as part of a composite rate and, thus, are designated health services.

As previously stated, because the Federal Government purchased the initial supply of COVID–19 vaccines, Medicare does not make payment for COVID–19 vaccines at this time, and COVID–19 vaccines do not fall within the definition of “designated health service” at § 411.351. However, should COVID–19 vaccines become payable by Medicare, unless the requirements of an applicable exception to the physician self-referral law are satisfied, the physician self-referral law’s prohibitions under section 1877(a)(1) of the Act and § 411.353(a) and (b) will apply to the referral and billing of COVID–19 vaccines.

In the CY 2021 PFS final rule, we added COVID–19 vaccines to the list of immunization and vaccine codes to which the exception at § 411.355(h) is applicable (85 FR 84954 through 85955). We did so to ensure that the physician self-referral law will not impede the availability of COVID–19 vaccines for Medicare and other patients if they become payable by Medicare (85 FR 84955). We also included language in the CY 2021 Code List to ensure that any COVID–19 vaccine to which a CPT or HCPCS code applied prior to the publication of the CY 2022 Code List would qualify for the exception at § 411.355(h). Specifically, we stated that the physician self-referral prohibitions do not apply to CPT code 90749 (unlisted vaccine/toxoid) when it is used to identify a COVID–19 vaccine or

to any future CPT or HCPCS code designated for a COVID–19 vaccine. We continue to include this language in the CY 2022 Code List. The inclusion of CPT code 90749 on the Code List is not intended and should not be considered to direct or approve the use of CPT code 90749 for the identification and billing of any COVID–19 vaccine.

As stated in section II.J. of this final rule, monoclonal antibody products used to treat COVID–19 are currently covered and paid for under the COVID–19 vaccine benefit in section 1861(s)(10) of the Act. We make a separate payment for the products (when not given to the provider or supplier for free by the government) and for the service to administer them. As “vaccines,” the products are designated health services for purposes of the physician self-referral law. Monoclonal antibody products covered and paid under the COVID–19 vaccine benefit in section 1861(s)(10) of the Act are included in the January 1, 2021 list of codes that are eligible for the exception at § 411.355(h) as “any future CPT or HCPCS code designated for a COVID–19 vaccine.” Accordingly, the physician self-referral prohibitions do not apply to them, provided that all requirements of the

exception at § 411.355(h) are satisfied. Effective January 1, 2022, we are including in the list of codes that are eligible for the exception at § 411.355(h) the existing specific HCPCS codes for monoclonal antibody products that are covered and paid under the COVID–19 vaccine benefit in section 1861(s)(10) of the Act. The general descriptor on the Code List will apply to any future CPT or HCPCS codes for monoclonal antibody products that are covered and paid for under the COVID–19 vaccine benefit in section 1861(s)(10) of the Act. For more information regarding monoclonal antibodies, please refer to our website at <https://www.cms.gov/medicare/covid-19/monoclonal-antibody-covid-19-infusion>.

Since the PHE for COVID–19 is still ongoing, we remind readers that tests for COVID–19 identified in the Code List fall within the “clinical laboratory services” category of designated health services.

The Code List was last updated in Tables 58 and 59 of the CY 2021 PFS final rule (85 FR 84956 through 84957).

ii. Response to Comments

We received no comments relating to the Code List that became effective January 1, 2021.

iii. Revisions Effective for CY 2022

The updated, comprehensive Code List effective January 1, 2022, is available on our website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.

Additions and deletions to the Code List conform it to the most recent publications of CPT and HCPCS Level II and to changes in Medicare coverage policy and payment status.

Tables 41 and 42 identify the additions and deletions, respectively, to the comprehensive Code List that become effective January 1, 2022. Tables 41 and 42 also identify the additions and deletions to the list of codes used to identify the items and services that may qualify for the exception in § 411.355(g) (regarding dialysis-related outpatient prescription drugs furnished in or by an ESRD facility) and in § 411.355(h) (regarding preventive screening tests, immunizations, and vaccines).

BILLING CODE 4120-01-C

Q. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan

1. SUPPORT Act Requirements

Section 2003 of the SUPPORT Act generally mandates that the prescribing of a Schedule II, III, IV, or V controlled substance under Medicare Part D be done electronically in accordance with an electronic prescription drug program beginning January 1, 2021, subject to exceptions, which the Secretary may specify. Section 2003 of the SUPPORT Act requires that the Secretary use rulemaking to specify circumstances and processes by which the Secretary may waive the Electronic Prescribing for Controlled Substances (EPCS) requirement, and provides the Secretary with authority to enforce and specify appropriate penalties for non-compliance with EPCS. The SUPPORT Act specifies some circumstances under which the Secretary may waive the electronic prescribing requirement with respect to controlled substances that are covered Part D drugs and permits HHS to develop other appropriate exceptions. Since the statute states that the Secretary shall, through rulemaking, specify circumstances and processes by which the Secretary “may waive” the EPCS requirement, we consider the list of circumstances to be illustrative. The circumstances that are listed in the

statute under which the Secretary may waive the EPCS requirement are at section 1860D-4(e)(7) of the Act, as added by section 2003 of the SUPPORT Act, and include:

- A prescription issued when the practitioner and dispensing pharmacy are the same entity;
- A prescription issued that cannot be transmitted electronically under the most recently implemented version of the National Council for Prescription Drug Programs (NCPDP) SCRIPT standard, which is the SCRIPT 2017071 standard;
- A prescription issued by a practitioner who received a waiver or a renewal thereof for a period of time as determined by the Secretary, not to exceed 1 year, from the requirement to use electronic prescribing due to demonstrated economic hardship, technological limitations that are not reasonably within the control of the practitioner, or other exceptional circumstance demonstrated by the practitioner;
- A prescription issued by a practitioner under circumstances in which, notwithstanding the practitioner’s ability to submit a prescription electronically as required by this subsection, such practitioner reasonably determines that it would be impractical for the individual involved to obtain substances prescribed by electronic prescription in a timely manner, and such delay would

adversely impact the individual’s medical condition involved;

- A prescription issued by a practitioner prescribing a drug under a research protocol;
- A prescription issued by a practitioner for a drug for which the FDA requires a prescription to contain elements that are not able to be included in electronic prescribing, such as a drug with risk evaluation and mitigation strategies that include elements to assure safe use;
- A prescription issued by a practitioner—
 - ++ For an individual who receives hospice care under title XVIII of the Act; and
 - ++ That is not covered under the hospice benefit under title XVIII of the Act; and
 - A prescription issued by a practitioner for an individual who is—
 - ++ A resident of a nursing facility (as defined in section 1919(a) of the Act); and
 - ++ Dually eligible for benefits under title XVIII and title XIX of the Act.

2. Previous Regulatory Action

To begin the process of implementing section 2003 of the SUPPORT Act, in August 2020, we released a Request for Information entitled “Medicare Program: Electronic Prescribing of Controlled Substances; Request for Information (RFI)” (85 FR 47151) (hereinafter referred to as the August 2020 RFI). In August 2020, we released the CY 2021 PFS proposed rule (85 FR

50074) (hereinafter referred to as the CY 2021 PFS proposed rule), which proposed that Part D prescribers be required to use the NCPDP SCRIPT 2017071 standard for EPCS prescription transmissions. We proposed that this mandate would not become effective until January 1, 2022.

We received a combined total of 155 timely comments in response to the August 2020 RFI and the CY 2021 PFS proposed rule. Most commenters supported implementing EPCS and use of the NCPDP SCRIPT 2017071 standard. Comments were mixed as to when compliance actions for EPCS should begin. Some commenters requested that CMS adhere to the January 1, 2021 date specified in the SUPPORT Act because of the many safety benefits associated with EPCS articulated in the proposed rule. Some prescriber groups supported the proposed January 1, 2022 date, while others requested even more time for implementation. To balance the needs of prescribers who wanted more time to implement EPCS and commenters who wanted adherence to the January 1, 2021 date, we finalized this provision with an effective date of January 1, 2021 and a compliance date of January 1, 2022 in the CY 2021 Physician Fee Schedule final rule (85 FR 84472) (hereinafter referred to as the CY 2021 PFS final rule). Due to the consensus among commenters that the NCPDP SCRIPT 2017071 standard was the best choice for EPCS, we required in the CY 2021 PFS final rule that Part D prescribers use this standard.

3. Current EPCS Environment

A variety of Part D medications are classified as controlled substances by the Drug Enforcement Administration (DEA). Among these are medications used for the treatment of acute and chronic pain, (for example, hydrocodone, fentanyl, codeine, methadone), and stimulant medications (for example, Adderall®, Ritalin®). *Buprenorphine* (for example, Suboxone®) is one of only three drugs approved by the FDA to treat opioid use disorders (OUD) including in outpatient settings, and is a Schedule III drug. Benzodiazepines and sedative-hypnotics (including Xanax®, Valium®, Ativan®, Restoril®, Midazolam®, and Halcion®) are used for sleep, agitation, and seizure disorders. Anabolic steroids (for example, Depo-testosterone®) are used to treat impotence, delayed puberty, hormonal imbalance, and inoperable breast cancers.

As discussed in the CY 2021 PFS proposed and final rules, we noted that electronic prescribing of controlled

substances provides multiple advantages over the traditional processing of paper prescriptions. These advantages include, but are not limited to, improved workflow efficiencies; deterring and detecting prescription fraud and irregularities by requiring an extra layer of identity proofing, two-factor authentication and digital signature processes; enhanced patient safety through patient identity checks, safety alerts, medication menus, electronic history files, and medication recommendations that lower the risk of errors and potentially harmful interactions; and providing more timely and accurate data than paper prescriptions by avoiding data entry errors and pharmacy calls to a prescriber to clarify written instructions. By allowing for the direct transmission of prescriptions for controlled substances between prescribers and pharmacies or facilities, EPCS may also reduce the burden on prescribers who need to coordinate and manage paper prescriptions among staff, patients, facilities, other care sites, and pharmacies. EPCS can also assure prescribers' identity more easily and may permit a single workflow for prescribing both controlled and non-controlled drugs, improving the overall prescribing process.

From the patient standpoint, EPCS may reduce the logistical burden on patients and caregivers who may otherwise be required to make multiple trips between prescribers and pharmacies to transport paper prescriptions when filling time-sensitive prescriptions, while in pain, or otherwise in need of medical treatment with controlled substances. EPCS can lessen the time needed to obtain prescriptions by minimizing trips to the prescriber to pick up paper prescriptions for refills and minimize transportation costs to and from the prescriber's office. EPCS's identity and security requirements assure prescribers, patients, and pharmacies that prescriptions are processed as intended. In addition to helping with the reduction in fraud previously described, EPCS minimizes the likelihood that prescriptions have been tampered with, since electronic prescriptions are securely transmitted directly to the pharmacy from health information technology, which minimizes the likelihood of exposure to patients or other third parties. During the PHE for COVID-19, EPCS also helps parties maintain social distancing.

It is due to these advantages, coupled with the SUPPORT Act's EPCS mandate, that we encourage all prescribers to conduct EPCS as soon as

is feasible for them. We believe that although EPCS is ultimately more efficient, implementing EPCS does take additional time and resources. Prescribers must follow DEA guidance for EPCS, which is summarized at <https://deaddiversion.usdoj.gov/ecommerce/rx/>. Prescribers must first ensure that their current e-prescribing software can support EPCS and meet DEA requirements pursuant to 21 CFR part 1311. Further, DEA also requires prescribers to have their identities verified prior to being issued the authentication credentials needed to sign and issue electronic controlled substance prescriptions. For individual prescribers, identity proofing (that is, verification that the prescriber is who he or she claims to be) is conducted by a credential service provider (CSP) or certification authority (CA). Institutional practitioners, as defined under 21 CFR 1300.01, have the option of conducting in-house identity proofing of the practitioners authorized to use the institution's e-prescribing software. Alternatively, institutional practitioners may require their practitioners to undergo identity proofing by a CSP or CA. Once their identities have been confirmed, prescribers may be issued their authentication credentials. The authentication credentials must be two-factor, meaning that prescribers must be required to supply two factors to confirm both their identity and their authorization to access the e-prescribing software. The factors may be something the prescriber knows (such as a password or PIN), something the prescriber has (such as a smartcard or token), or a biometric (such as a fingerprint). For institutional practitioners, the authentication credentials may be issued by an entity within the institution that is separate from the entity that conducted identity proofing, if identity proofing was conducted in-house. Otherwise, authentication credentials are issued by a CSP or CA. Once a prescriber has received his or her two-factor authentication credentials, the prescriber must be granted access to sign and issue electronic controlled substance prescriptions using the e-prescribing software. This step is completed by certain individuals specifically designated to manage the e-prescribing software's logical access controls. Prior to granting a prescriber access, the individuals managing logical access controls must verify that the prescriber's State authorization to practice and, where applicable, State authorization to prescribe controlled substances, are valid. Additionally, for

individual prescribers (those prescribers not prescribing under an institutional practitioner's DEA registration), the individuals managing logical access controls must verify that the prescriber's DEA registration is valid. This step is required even if the prescriber is already prescribing controlled substances on paper. After being granted access, prescribers may sign and issue electronic prescriptions for controlled substances using their two-factor authentication credentials. The EPCS application must require two-factor authentication for each transaction. Software and workflow training are available for each step of the process. When writing prescriptions, the prescriber may wish to talk with the patients and/or caregivers about electronic prescribing, so there is awareness of the general mechanics of how the prescription(s) will be conveyed to the pharmacy.

We recognize that section 2003(c) of the SUPPORT Act tasked the Department of Justice (DOJ) with updating the requirements for the biometric component of multifactor authentication. As shown on the Spring 2021 Unified Agenda,¹⁵⁰ rulemaking to address this mandate is currently in progress. After reviewing comments on the August 2020 RFI and CY 2021 PFS proposed rule and talking with industry stakeholders, we recognize that commenters believe that an update to the DOJ requirements should allow prescribers to start conducting EPCS with greater ease.

The comments also stated that prescribers have felt strained by the COVID-19 pandemic. Prescribers reported feeling financially strained, worried about their own health and the health of their employees, and concerned about having to make rapid changes during a time when they are continuing to cope with the effects of the COVID-19 pandemic on their practices and their patients. Despite the strain that has been experienced by prescribers, we have noted an increase in EPCS during this PHE. Based on data from the first quarter of CY 2021, EPCS increased to 70 percent of all prescription drug events (PDEs) for controlled substances as compared to 38 percent in CY 2019.¹⁵¹ We believe that social distancing is likely to be at least partly responsible for the increase in EPCS during this PHE for COVID-19. With the use of electronic prescribing, one potential prescriber-patient

interaction in which COVID-19 could be transmitted is eliminated, and any necessary prescriptions can be electronically transmitted to the pharmacy without the prescriber and patient having to see each other in-person and risk transmitting COVID-19. Some insurers, including Part D plans, have been permitting medication refills, including for controlled substances, earlier than usual or for a more extended period of time than is allowed. Pharmacies that were not doing so before the pandemic have been delivering medications, or delivering them at no charge, and communities and individuals have worked together to design ways for beneficiaries to continue to receive access to prescribed medications in tandem with government and private sector flexibilities during the PHE. We believe that these additional flexibilities may have encouraged prescribers to more broadly use EPCS, since it prevented them from having their prescription transmissions automatically denied. The reason for this is that EPCS transaction sets can pull certain pieces of required information for use in their transactions, which prevent the transactions from hitting system edits that would have previously prevented these practices.

4. Timeframe for EPCS Adoption

Section 2003 of the SUPPORT Act mandates that EPCS for Part D controlled substances begin on January 1, 2021. Due to this statutory mandate coupled with the aforementioned advantages provided by EPCS, we encourage all prescribers to adopt EPCS as soon as is feasible for them. However, as stated in our CY 2021 PFS final rule, we recognize that although EPCS is ultimately more efficient, implementing EPCS takes additional time and resources. It is for this reason that, in our CY 2021 PFS final rule, we finalized a policy stating that CMS would not take compliance actions before January 1, 2022.

In developing this policy, we considered responses from commenters encouraging earlier adoption of EPCS, due to its benefits for social distancing, improved patient safety and workflow efficiencies, fraud deterrence, adherence management, and reduced burdens. We agreed with commenters that EPCS has many benefits, which is why we specified an effective date of January 1, 2021 in our regulations, and a compliance date of January 1, 2022.

Since finalizing the CY 2021 PFS final rule, we have received additional prescriber feedback indicating concern with having to implement EPCS rapidly. We have also learned more about the

degree to which prescribers have been adversely affected by the COVID-19 pandemic, and that the PHE and the widespread effects of the pandemic may last longer than we had anticipated last year. We want to ensure that our actions do not have unintended consequences, such as the abrupt discontinuation of prescribers' ability to prescribe Part D controlled substances to vulnerable populations, including Part D beneficiaries who need pain treatment or who have substance use disorders (SUDs). In addition, once DOJ has had the opportunity to implement updates to EPCS requirements, such updates will allow prescribers to start conducting EPCS more rapidly and easily. It is for these reasons that in the CY 2022 PFS proposed rule (86 FR 39104) (hereinafter referred to as the CY 2022 PFS proposed rule), we proposed to revise § 423.160(a)(5) to change the date of initial EPCS compliance actions from January 1, 2022 to January 1, 2023. We welcomed comments on this proposal, including whether commenters believe that we should maintain the January 1, 2022 date of initial EPCS compliance actions, given the benefits of EPCS, and the feasibility for prescribers to adopt EPCS for Part D prescriptions by January 1, 2023.

The following is a summary of the comments we received and our responses.

Comment: The majority of commenters supported our proposal to delay the start of compliance actions to no earlier than January 1, 2023, rather than January 1, 2022, which is the date that we had finalized in the CY 2021 PFS final rule. In supporting this recommendation, commenters cited the devastating impact that the PHE has had on their practices, stating that the influx of patients, departure of staff, and depletion of financial resources would make it difficult for providers to implement EPCS by January 1, 2022. A few commenters that process or receive electronic prescriptions opposed our proposal to delay the start of compliance actions until January 1, 2023, citing the aforementioned benefits that EPCS has on social distancing and the workflow efficiencies gained from EPCS.

Response: We thank commenters for supporting our proposal to change the earliest date of compliance actions to January 1, 2023. In addition, we appreciate the commenters for confirming our understanding of the benefits of EPCS. We recognize the benefits of EPCS, and it is for this reason that we encourage prescribers to conduct EPCS as soon as possible. In our CY 2021 PFS final rule, we named

¹⁵⁰ <https://www.reginfo.gov/public/do/AgendaMain>.

¹⁵¹ Based on Prescription Drug Event data processed through April 6, 2021.

the standard for prescribers to use when conducting EPCS for Part D controlled substances in order to facilitate adoption of EPCS. However, for the reasons stated in the CY 2022 PFS proposed rule, we continue to believe that delaying the start of compliance actions until on or after January 1, 2023 is appropriate.

After consideration of the comments received, we are finalizing our proposal to extend the date of compliance actions to no earlier than January 1, 2023.

For Part D controlled substance prescriptions written for beneficiaries in long-term care (LTC) facilities, we proposed to extend the date on or after which we will pursue compliance actions from January 1, 2022 to January 1, 2025. The intent of this proposed extension was to strike a balance between being responsive to stakeholder concerns surrounding the increased implementation barriers faced by LTC facilities, due to the unique challenges faced by LTC facilities, while at the same time helping ensure that these facilities eventually implement EPCS, due to its aforementioned benefits.

We acknowledged that, in addition to the current challenge of having to manage care for vulnerable residents during the current COVID-19 pandemic, prescribers who work in LTC facilities or who provide care to residents in LTC facilities face technological barriers that other prescribers do not face. One such barrier is that the NCPDP SCRIPT 2017071 standard lacks appropriate guidance for LTC facilities. We understand that this is because early versions of the NCPDP SCRIPT Standard, such as NCPDP SCRIPT Standard versions 5.0 and 8.1, did not support the workflows in the LTC setting that require prescribers to issue a prescription for a patient to a non-prescriber (such as a nursing facility) that in turn forwards the prescription to a dispenser (LTC pharmacy). We nevertheless adopted the NCPDP SCRIPT 2017071 standard in the CY 2021 PFS final rule [85 FR 84807] because it is the most commonly used standard for Part D e-prescribing, and we sought to minimize disruption and provider burden when implementing this statutory mandate. However, we understand that NCPDP is in the process of creating a new version of the SCRIPT standard that would be better suited for use by prescribers serving LTC facilities, which will allow willing partners to enable three-way communication between the prescriber, LTC facility, and pharmacy to bridge any outstanding gaps that impede adoption of the NCPDP SCRIPT 2017071 standard in the LTC setting.

We understand that some LTC settings/services in rural communities do not have sufficient capabilities to support the NCPDP SCRIPT 2017071 standard. This concern is exacerbated by the fact that based on stakeholder feedback and information in several reports,¹⁵² we believe LTC settings often include practitioners and staff serving large numbers of residents across multiple nursing homes. This unique set of circumstances means that some practitioners who primarily practice in suburban or urban areas may have to travel to see residents in rural facilities where there is limited broadband, making EPCS transmission set-ups difficult across LTC facilities. However, we believe that as broadband access increases and the impact of the PHE decreases, prescribers serving beneficiaries in LTCs should be able to more easily conduct EPCS.

As a result, we proposed to revise § 423.160(a)(5) to clarify that the earliest date of compliance actions against prescribers writing prescriptions for Part D beneficiaries in an LTC facility will be January 1, 2025. We did not propose a specific LTC waiver or exception to the EPCS requirement, and we did not anticipate extending the earliest date of compliance actions beyond January 1, 2025. We solicited comments on the benefits, burdens, and challenges of this approach.

We received public comments on the benefits, burdens, and challenges of this approach. The following is a summary of the comments we received and our responses.

Comment: Several commenters suggested that we exempt prescribers writing Part D controlled substance prescriptions for beneficiaries in LTCs from having to conduct EPCS until after version 2022011 of the NCPDP SCRIPT standard has been named, since this standard will contain the necessary three-way communication to facilitate the needs of the LTC community, whereas the current standard lacks such guidance.

Response: We thank commenters for their insights into upcoming versions of the NCPDP SCRIPT standard. However, we are finalizing as proposed that the earliest date of compliance actions against prescribers writing Part D controlled substance prescriptions for beneficiaries in LTCs to be no earlier than January 1, 2025 to allow adequate time for EPCS to be adopted across the

industry. We note that this extension of the earliest date for compliance actions is only applicable to the prescriptions written by prescribers for beneficiaries in LTC facilities, since the additional challenges for LTC do not apply when these prescribers are prescribing for beneficiaries who are not in LTC. As we stated in the proposed rule and earlier in this final rule, the intent of extending the date of compliance actions for prescriptions written for beneficiaries in LTC is to strike a balance between being responsive to stakeholder concerns surrounding the increased implementation barriers faced by LTC facilities, while at the same time helping ensure that these facilities eventually implement EPCS, due to its aforementioned benefits. The increased implementation barriers only present themselves when prescribers are writing prescriptions for beneficiaries in LTC, which is why we had only intended for the LTC extension to apply when prescribers are writing prescriptions for beneficiaries in LTC. In this final rule, we have clarified and refined the language at § 423.160(a)(5) to reflect our intent.

As previously stated, EPCS has numerous advantages over manual prescribing, including deterring and detecting prescription fraud and irregularities by requiring an extra layer of identity proofing, two-factor authentication and digital signature processes; and enhanced patient safety through patient identity checks, safety alerts, medication menus, electronic history files, and medication recommendations that lower the risk of errors and potentially harmful interactions. Given the benefits of EPCS, we decline to further delay taking compliance actions to enforce the EPCS requirements for Part D controlled substance prescriptions written for beneficiaries in LTCs beyond the date by which we believe prescribers in this setting can meet the requirement. Furthermore, we are not persuaded that we should further delay commencing compliance actions to await publication of the NCPDP SCRIPT 2022011 standard. Although we acknowledge that three-way communication is not as seamless in the 2017071 version of the standard as it may be in upcoming versions, it is still possible with some modifications to EPCS, and therefore, we do not believe it would be appropriate to adopt a further delay on this basis. However, we have decided to finalize the extension of compliance actions for prescribers writing prescriptions for beneficiaries in LTC to allow those prescribers the additional

¹⁵² Waters, Rob. The Big Idea Behind a New Model of Small Nursing Homes. Health Affairs. 2021 Mar; 378–383; Levy et al. Physician Practices in Nursing Homes: Final Report. Office of the Assistant Secretary for Planning and Evaluation (ASPE). 2006 Apr; 10–22.

time necessary to make the additional changes necessary to conduct EPCS using the NCPDP SCRIPT 2017071 standard. We also note that CMS does not intend to begin compliance actions for these prescriptions until on or after January 1, 2025. This protracted timeline for commencing compliance actions allows CMS additional time to examine how the industry adopts the new standard for beneficiaries in LTC, and determine the type of compliance actions that would be most appropriate.

Comment: One commenter sought clarification as to whether medication transactions covered under the Part A benefit would be subject to compliance actions starting January 1, 2023 or 2025.

Response: As stated in the CY 2022 PFS proposed rule, this EPCS mandate is only for transactions covered under Part D of the benefit. This mandate implements section 2003 of the SUPPORT Act, which is limited to Part D transactions. It is for this reason that we have not extended this mandate to other parts of the Medicare benefit, such as the Part A benefit.

After consideration of public comments, we are finalizing our proposal at § 423.160(b)(5) to extend the date that we will begin compliance actions based on prescriptions written for a beneficiary in a long-term care facility until January 1, 2025. In order to implement this provision, we will be excluding long term care prescriptions from our counting of compliance actions to help ensure that prescribers writing prescriptions for beneficiaries in these facilities do not have these prescriptions counted against them for purposes of the compliance threshold and the number of prescriptions written per prescriber for purposes of determining who is classified as a small prescriber under § 423.165(a)(5)(ii).

5. Compliance Threshold

The EPCS requirement applies to all controlled substance prescriptions for Part D drugs under a Part D plan, unless an exception to the requirement applies. In order to implement this mandate effectively, we seek to implement it in a manner that balances the mandate with helping ensure that prescribers are not overly burdened, and are able to issue prescriptions for their patients during the rare occurrences when EPCS is not feasible, such as:

- When it would be impractical for the patient to obtain medication(s) prescribed by electronic prescription in a timely manner and such delay would adversely impact the patient's medical condition,
- When the NCPDP standard does not support transmitting the prescription,

- When the prescriber is unable to meet DEA requirements for identity proofing for reasons beyond their control;

- Where EPCS is not available due to temporary technological failure.

Based on our review of PDE data, the NCPDP standard, and our conversations with Part D stakeholders, we believe that there are very few scenarios under which a prescription could not be transmitted using the NCPDP standard.

We note that section 1860D–4(e)(7)(B)(vi) of the Act provides that the Secretary may grant an exception for a prescription issued for a drug for which the FDA requires a prescription to contain elements that cannot be included in electronic prescribing. However, after reviewing the NCPDP standard implementation guide, we do not believe that there are any such prescriptions under the current standard. The statute gives as an example a drug with risk evaluation and mitigation strategies that include elements to assure safe use (ETASU). Based on our review of the current NCPDP standard, all opioid analgesics intended for outpatient use have a risk evaluation and mitigation strategy with ETASU, and as a result, would fall into the exception if there were one, which would frustrate the purpose of this statute.¹⁵³ As a result, we declined to propose to adopt this suggested exception. However, we solicited comment on this decision.

We also stated that there were other reasons that could make EPCS not feasible for prescribers who currently conduct EPCS, such as the aforementioned cases of temporary technological failures or cases where it would be impractical for the patient to obtain medication(s) prescribed by electronic prescription in a timely manner and such delay would adversely impact the patient's medical condition. However, we did not propose a specific exception for these cases, since based on our stakeholder feedback and review of PDE data, we believe that EPCS is not feasible in no more than an estimated 30 percent of instances due to circumstances such as the ones described previously. We believe that Part D prescribers should be able to conduct EPCS on 70 percent of their Part D controlled-substance prescriptions without being overly burdened or burdening patients. Under section 1860D–4(e)(7)(D) of the Act, we have authority to specify appropriate penalties for non-compliance with the EPCS requirement. It follows, then, that

we similarly have the authority to specify a threshold for when we would penalize non-compliance. For this reason, we proposed that in order for prescribers to be considered compliant with the EPCS mandate, they must prescribe at least 70 percent of their Part D controlled substance prescriptions electronically.

Specifically, we proposed to revise § 423.160(a)(5) to specify that 70 percent of all prescribing under Part D for Schedule II, III, IV, and V controlled substances be done electronically per calendar year, excluding from that calculation any prescriptions issued while a prescriber falls within an exception or a waiver. We intend to conduct this calculation by examining PDE data at the end of the calendar year and dividing the number of Part D controlled substances that the prescriber e-prescribed by the total number of Part D controlled substance prescriptions that the prescriber prescribed. We solicited comment on this method and the proposal to make 70 percent the compliance threshold for adherence to the EPCS mandate, and what circumstances would make EPCS not feasible.

We received public comments on this method and the proposal to make 70 percent the compliance threshold for adherence to the EPCS mandate, and what circumstances will make EPCS not feasible. The following is a summary of the comments we received and our responses.

Comment: Most commenters supported our proposal to make 70 percent the compliance threshold for adherence to the EPCS mandate stating that it strikes the appropriate balance between implementing the statute and helping ensure that such implementation does not overwhelm prescribers. Two commenters suggested that we lower our compliance threshold to 50 percent for the first year to avoid overwhelming prescribers.

Response: We agree with the commenters that a compliance threshold of 70 percent is a suitable balance to help ensure that this mandate is implemented while not overwhelming prescribers. Although we understand that a compliance threshold of 50 percent would place less of a burden on prescribers, we believe a compliance threshold in which only a simple majority of a prescriber's prescriptions must be transmitted electronically would not be sufficient to fulfill the statutory mandate.

¹⁵³ National Council for Prescription Drug Programs, "Implementation Guide" January 2020.

After reviewing the PDE data,¹⁵⁴ we did not find a substantial number of prescribers that transmitted between 50 to 70 percent of their Part D controlled substance prescriptions electronically, which leads us to believe that lowering the compliance threshold would not alleviate much of a burden for prescribers. After consideration of public comments, we are finalizing this provision as proposed, which would require prescribers to prescribe at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically, except in cases where an exception or waiver applies. We note that, as previously stated, prescriptions for beneficiaries in LTC would be excluded from the calculation of the compliance threshold until the January 1, 2025 compliance threshold calculation is made, which would be using data beginning in January 1, 2024. As we explained in the CY 2022 PFS proposed rule, we will determine compliance with the EPCS requirement by examining PDE data at the end of the calendar year (86 FR 39330), which is why we will begin considering data for Part D prescriptions written for beneficiaries in LTC on January 1, 2024 and continuing through December 31, 2024 for compliance actions that we take on or after January 1, 2025.

6. Classes of Exceptions

a. Prescriptions Issued When the Prescriber and Dispensing Pharmacy are Same Entity

Section 2003 of the SUPPORT Act requires that we specify circumstances by which we may waive the EPCS requirement, and the statute lists several possible circumstances to consider. We listed and sought comment on these circumstances in the August 2020 RFI. The first of these circumstances, which is listed at section 1860D–4(e)(7)(B)(i) of the Act, is when the practitioner issuing the prescription and dispensing pharmacy are the same entity.

All August 2020 RFI commenters who commented on this exception supported it, stating that such an exception would promote patient safety, workflow efficiency, and health IT performance. Several commenters noted that requiring EPCS in this circumstance may create an unwarranted artificial workflow structure. We believe that this may be because the EPCS transactions conducted within an organization are commonly handled by a single database that exists within the organization, and should we not grant this exemption,

these entities would be required to reconfigure their own processes, rather than leverage their own integrated databases. Were we to implement a requirement to use the NCPDP SCRIPT 2017071 standard within this closed system, this requirement could increase costs and the rate of performance errors, such as data corruption and patient matching errors, which we understand often happens when an entity is forced to split a unified database into a transaction system that relays information to and from the same entity. We solicited comment on this assumption. However, we did not receive any comments on the assumption.

Therefore, we proposed to adopt at § 423.160(a)(5)(i) the EPCS exception listed in section 1860D–4(e)(7)(B)(i) of the Act, for prescriptions issued where the prescriber and dispensing pharmacy are the same entity. We solicited comment on this proposal.

Comment: All commenters who commented on this proposal supported it.

Response: We thank the commenters for their support. We are finalizing this proposal as proposed.

b. Cases Where Prescribers Issue Only a Small Number of Part D Prescriptions

As we develop regulations to implement section 2003 of the SUPPORT Act, we seek to help ensure that Part D prescribers, including small prescribers, are not overly burdened by our regulation. Based on the comments received from the August 2020 RFI and the stakeholder feedback that we received about EPCS in general, we believe it is appropriate to specify an exception to the EPCS requirement in cases where a prescriber issues a very low volume of controlled substance prescriptions for Part D drugs. For prescribers of very few Part D controlled substance prescriptions, the cost of installing EPCS equipment and software may be unduly burdensome relative to its benefit in terms of improving the security of prescriptions for controlled substances. As noted above, we do not want to disincentivize prescribers from prescribing controlled substances to Part D beneficiaries altogether, especially those who have few beneficiaries who need them.

After reviewing the current PDE data and the costs associated with implementing EPCS, we proposed to exempt prescribers who prescribe 100 or fewer Part D controlled substance prescriptions per year. Based on our stakeholder feedback, we understand that EHR companies provide the initial electronic prescribing set-up free of

charge, provided the prescribers transmit a minimum number of transactions per year. We estimate that this amount is, on average, 100 Part D controlled substance transactions. In order to do EPCS, prescribers will have to have the capability to e-prescribe more broadly. It is for this reason that we weighed the cost of e-prescribing set-up in general, even though we do not intend to include non-part D prescriptions of controlled or non-controlled substances in our calculation of whether or not prescribers meet the threshold of 100 Part D controlled substance prescriptions per year. Since, based on our conversations with stakeholders, the cost of EPCS transactions is less than the cost of transmitting certain transactions manually, we believe that the initial investment to install EPCS equipment and software is likely justified once prescribers transmit more than 100 Part D controlled substance prescriptions per year. We solicited comment on this assumption and the cost of third-party applications required to conduct EPCS. However, we did not receive any comments on these assumptions.

In order to implement this exception using the data that we have available, we proposed that this exception be given to individual prescribers, regardless of the size of the group practice that they belong to. We also believe that this exception will protect these small prescribers, should they change their place of employment or if their place of employment does not offer support for implementing EPCS.

Based on our examination of PDE data and conversations with stakeholders, we believe that prescribers working under most research protocols will fall under the proposed exception for small prescribers. However, we solicited comment on this assumption. We did not receive any comments on it.

Although we did not propose to adopt the suggested exception listed in section 1860D–4(e)(7)(B)(v) of the Act, which describes an exception for prescribers working under a research protocol, we believe that in most cases prescribers who will fall within this category will be included in the exception for small prescribers or in the exception for cases where the prescriber and dispenser are the same entity. We did not propose to specifically create an exception for prescribers working under a research protocol in the regulations, since we believe that so few prescribers will fall outside of these other exceptions. We believe an exception for prescribers working under a research protocol who do not otherwise meet these exceptions is unnecessary because we believe that

¹⁵⁴ Based on Prescription Drug Event data processed through September 27, 2021.

EHR companies will set up the appropriate EHR equipment, provided around 100 Part D controlled substance prescriptions are transmitted per year.

We proposed to implement this proposal by examining PDE claims as of December 31 of the prior year to determine which prescribers fall within this exception. Prescribers can ascertain whether they meet this exception by looking at how many prescriptions for Part D controlled substances they conducted the prior year or by contacting the CMS contractor responsible for administering the compliance portion of this mandate. CMS and its contractor will be using PDE data from the prior year to determine whether the prescriber qualifies for the exception based on the number of Part D controlled substance claims the prescriber had issued the previous year. CMS will use the previous year's data to determine whether or not the prescriber falls under this exception for the year-in-question. We do not see a compelling reason to exempt prescribers conducting a research protocol on that basis alone.

Based on our conversations with Prescription Drug Plans (PDPs), MA-PD plans, and other organizations with which prescribers are affiliated, we are aware that some are willing to donate the technology and services necessary for prescribers to adopt EPCS. Based on those conversations, we believe that they are more willing to donate these technology and services to prescribers who are working under a research protocol, than to prescribers not working under such a protocol. However, we solicited comment on such an assumption, but we did not receive any comments. We did receive one comment on our decision to not propose an exception for those working under a research protocol. The following is a summary of the comment we received and our response.

Comment: A commenter urged CMS to consider an exception for those working under a research protocol to allow for cases where a research protocol may transmit more than 100 Part D controlled substance prescriptions per year.

Response: We have considered granting an exception to those working under a research protocol. However, we were unable to find a compelling reason to grant such an exception. Further, we reviewed PDE data to determine how many transactions would fall outside of our class of exceptions for cases involving a research protocol, and were

unable to find any.¹⁵⁵ For the reasons stated above and in the proposed rule, we decline to adopt a specific exception for those engaging in a research protocol.

We proposed to amend § 423.160(a)(5) by adding § 423.160(a)(5)(ii), which creates an exception for prescribers who issue 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using PDE claims data as of December 31st of the preceding year, so that these prescribers will not be required to meet the EPCS requirement. We solicited comment on this proposal, including regarding the maximum number of Part D controlled substance prescriptions a prescriber can issue to be still considered a small prescriber and, so, to fall within this exception.

The following is a summary of the comments we received and our responses.

Comment: All commenters who commented on our proposal to grant an exception for prescribers who issue 100 or fewer Part D controlled substance prescriptions supported the proposal.

Response: We thank commenters for their support of this proposal. After consideration of public comments, we are finalizing this proposal as proposed.

c. Cases of Recognized Emergencies and Extraordinary Circumstances

Section 1860D–4(e)(7)(B)(iii) of the Act, as added by section 2003 of the SUPPORT Act, lists an exception for consideration by the Secretary for cases of exceptional circumstance demonstrated by the prescriber. As stated in our proposal regarding the EPCS compliance threshold, we seek to help ensure that prescribers are able to issue prescriptions for their patients during the rare occurrences when EPCS is not feasible. We believe that the exception listed in the statute, which includes economic hardship, technological limitations that are not reasonably within the control of the prescriber, and other exceptional circumstances, includes prescribers who are overwhelmed due to having to treat patients during a pandemic or a natural disaster such as a hurricane, flood, or earthquake. It is our goal not to penalize prescribers for such circumstances, and we do not want to unduly increase their burden during difficult situations that impact them, and their patients. We solicited comment on what other extraordinary circumstances may prevent prescribers from being able to conduct EPCS.

In order to help ensure that these extraordinary circumstances are accounted for, we proposed two exceptions to the EPCS requirement. The first proposed exception, at § 423.160(a)(5)(iii), is for prescribers who are prescribing during a recognized emergency, such as a natural disaster, a pandemic, or a similar situation where there is an environmental hazard. We want to help ensure that the EPCS mandate does not interfere with necessary care for patients, especially during natural disasters or pandemics. As a result, we proposed to exempt prescribers who are issuing prescriptions in areas that are affected by such circumstances. To qualify for this exception, this circumstance will have to arise from an emergency or disaster declared by a Federal, State, or local government entity. We proposed to determine whether a prescriber qualifies for this exception based on whether the prescriber's NCPDP database address is located in the geographic area of an emergency or disaster declared by a Federal, State or local government entity. Since, as stated in the CY 2022 PFS proposed rule, we had intended this exception to avoid unduly burdening prescribers during difficult situations, CMS would like to clarify that this exception would be applicable only if the dispensing date of the medication occurs during the time period that the declared disaster is occurring.

The second proposed exception, at § 423.160(a)(5)(iv), is for prescribers who request and receive from CMS a waiver, which we proposed to grant to prescribers who are facing extraordinary circumstances that prevent them from electronically prescribing a controlled substance to a Part D beneficiary, but who are not in an emergency or disaster area. We would define “extraordinary circumstance” for purposes of this exception to mean a situation, other than an emergency or disaster, outside of the control of a prescriber that prevents the prescriber from electronically prescribing a controlled substance to a Part D beneficiary. An example of such a circumstance would be if a prescriber was in a service area that lacks broadband access or EPCS providers refuse to install systems for the prescriber. The prescriber would have to be able to submit evidence of such an extraordinary circumstance to CMS.

For purposes of the exception at § 423.160(a)(5)(iii), prior to imposing any compliance actions on a prescriber, we proposed to ascertain whether there is an emergency or disaster declared by a Federal, State, or local government

¹⁵⁵ Based on Prescription Drug Event data processed through September 27, 2021.

entity for the geographic area associated with the prescriber's address in the NCPDP database.

For purposes of the exception at § 423.160(a)(5)(iv), we proposed that prescribers would be excepted from the EPCS requirements if they request and receive a waiver from CMS. We intend that prescribers will be able to submit a request for a waiver to inform CMS of any extraordinary circumstances that they may be facing and that will prevent the prescriber from conducting EPCS. This waiver could be for any circumstance outside of the prescriber's control and would not require an official declaration by a Federal, State, or local government. To meet the standard for a waiver, prescribers must provide documentation showing the existence of a circumstance beyond their control and that such a circumstance prevents them from conducting EPCS. Section 1860D–4(e)(7)(B)(iii) of the Act, as added by section 2003 of the SUPPORT Act, refers to a waiver or a renewal thereof for a period of time as determined by the Secretary, not to exceed one year, which suggests a timeframe not to exceed one year, but to be determined by the Secretary.

To implement our proposals for exceptions for exceptional circumstances or disasters, we proposed to amend § 423.160(a)(5) by adding paragraphs (a)(5)(iii) and (iv). Section 423.160(a)(5)(iii) would specify an exception for prescribers in the geographic service area of an emergency or disaster declared by a Federal, State or local government entity. We proposed at section 423.160(a)(5)(iv) that prescribers would be exempt from the EPCS requirements if they have received a CMS-approved waiver certifying that the prescriber is unable to conduct EPCS due to circumstances beyond the prescriber's control. We proposed that in order to receive a CMS-approved waiver, the prescriber will have to submit an attestation using a form, which will be made available on a CMS-supported website, so that prescribers will be able to request a waiver via an online portal.

The following minimum set of information will be required on the attestation:

- Prescriber's first and last name;
- Prescriber's National Provider Identification (NPI);
- Prescriber's taxpayer identification number (TIN) or TIN associated with his or medical practice, when applicable;
- Prescriber's contact information, email address, telephone number, and mailing address; and

- A description of the extraordinary circumstance necessitating a waiver and how it affects the prescriber.

Following receipt of the attestation, we will: (1) Provide a written acknowledgement of receipt of the request using the contact information submitted via the portal; and (2) provide a decision formally granting or denying the waiver using the contact information submitted via the portal. Under the policy, the prescriber will submit their attestation about the circumstance and receive a waiver, if warranted, based on such an attestation. After consideration of public comments, we are finalizing the waiver process as proposed.

The following is a summary of the comments we received on the waiver process and our responses.

Comment: One commenter suggested that we allow a process for waiver requests to be submitted via fax or over the phone, in case a prescriber does not have access to a computer, due to the extraordinary circumstance necessitating such a waiver.

Response: We agree that prescribers should have the ability to submit an attestation using a medium other than a computer. We will make available on the CMS-supported website information to permit prescribers to request a waiver via phone, in addition to via the portal.

Comment: Several commenters mentioned circumstances, such as cybersecurity attacks and technological failures, which may prevent prescribers from conducting EPCS. They stated that these circumstances should be eligible for a CMS waiver.

Response: We agree that these events could be considered circumstances that would prevent prescribers from being able to conduct EPCS. We believe that in most cases, these events should not preclude a prescriber from meeting the 70 percent compliance threshold required by the regulation, and in some cases, prescribers may fall under an exception. However, should prescribers experience these events, we urge prescribers to submit an attestation detailing such an event. As described in subsequent paragraphs, should prescribers be unable to prescribe electronically, prescribers are able to submit an attestation of such. Should a waiver be granted, it would be for a term of up to one year.

Comment: One commenter suggested that we include a waiver for any time certain doctors prescribe *buprenorphine*, since there are certain pharmacies that do not have much *buprenorphine* available to them. The commenter noted that this makes conducting EPCS difficult, since physicians are then required to re-route

their electronic prescriptions when the pharmacy runs out of the prescription, which creates an administrative burden for prescribers.

Response: Although CMS understands that this could create an additional burden for prescribers, CMS is not aware of, nor does the commenter explain, why this would not be an issue in cases where prescriptions are not transmitted electronically. However, CMS did seek to more fully examine this concern and reviewed PDE data to determine how often *buprenorphine* is prescribed in Part D.¹⁵⁶ After reviewing this information, we discovered that *buprenorphine* prescriptions make up less than 2 percent of all Part D Schedule II, III, IV, and V prescriptions. It is for this reason that prescribers who experience difficulties electronically prescribing *buprenorphine* should still be able to meet the compliance threshold that allows prescribers to be considered fully compliant with EPCS if they electronically prescribe 70 percent or more of their Part D prescriptions. As a result, we do not believe that an exception for this purpose is necessary. However, should a prescriber find that *buprenorphine* unavailability prevents the prescriber from utilizing EPCS, we encourage the prescriber to submit an attestation form about such events to request a waiver due to circumstances beyond the prescriber's control, which we will consider. In addition, we will continue to monitor PDE data for trends, including whether certain prescriptions are more frequently prescribed using paper prescriptions. If CMS finds that this is the case, we can take action, such as granting exceptions, to help ensure that EPCS is not becoming overly burdensome for these prescriptions.

d. Individuals in Hospice and Nursing Facilities

Section 2003 of the SUPPORT Act, in adding section 1860D–4(e)(7)(B)(vii) to the Act, tasked the Secretary to consider whether prescriptions for individuals under the Part D benefit for an individual enrolled in the Medicare Part A hospice benefit should be exempt from the EPCS requirement. After considering this issue, we believe that an exception for a prescription made for an individual enrolled in hospice would be inappropriate for several reasons. First, when electing hospice, patients have chosen to move from a curative model of care to a holistic palliative model of care. Regulations at 42 CFR 418.202(f) stipulate that the Medicare hospice benefit covers only drugs and

¹⁵⁶ Based on Prescription Drug Event data processed through September 27, 2021.

biologicals used primarily for the relief of pain and symptom control for the terminal illness and related conditions. Under section 1860D–2(e)(2)(B) of the Act, a drug is excluded from Part D coverage if payment for such drug, as prescribed and dispensed for the beneficiary, is available under Medicare Part A or Part B. Thus, in cases where, with respect to a beneficiary, the hospice benefit covers a drug or biological used primarily for the relief of pain or symptom control for the terminal illness or related conditions, such drug is excluded from Part D coverage under section 1860D–2(e)(2)(B) of the Act. The HHS OIG worked with CMS and the National Hospice and Palliative Care Organization (NHPCO) to identify four common categories of prescription drugs that are typically used to treat symptoms often experienced during the end of life, regardless of an individual's terminal diagnosis.¹⁵⁷ The OIG has found that these categories of drugs should generally be paid under the hospice benefit.¹⁵⁸ Thus, there may be very few instances in which a controlled substance prescribed for a Part D enrollee who has elected hospice could be covered under Part D. We believe an exception that will apply only in these rare instances could be confusing and burdensome for prescribers who furnish care to some Part D beneficiaries who are enrolled in hospice and for some who are not because to qualify for the exception they will have to determine when a particular enrollee has elected hospice. Further, a beneficiary is free to elect the hospice benefit and cancel that election as they choose, which will make it difficult for a prescriber to be sure at any point in time whether a beneficiary is, or is not, currently enrolled in hospice, and therefore, whether a paper prescription is permitted. We note that we did not propose for the EPCS requirement to apply to any prescriptions for Part A or Part B controlled substances in any event.

Further, were CMS to provide an exception for prescriptions for Part D-covered controlled substances for hospice enrollees, it would pose an operational challenge to accurately match prescription data records with hospice enrollment data where the patient's hospice status can be fluid. It would be operationally challenging to ensure that paper prescriptions were

only issued for beneficiaries enrolled in hospice (which would be permitted), and not for patients not enrolled in hospice (where EPCS will be required). We believed the cost of this potentially confusing and laborious analysis for the small number of prescriptions dispensed for beneficiaries enrolled in hospice but covered under Part D exceeds the benefit creating the exception would provide to prescribers.

Therefore, we did not propose an exemption for prescribers issuing prescriptions for individuals enrolled in hospice. However, we solicited comment on this decision. We did not receive public comments on this provision. As proposed, we are not creating an exemption for prescribers issuing prescriptions for individuals enrolled in hospice.

Section 1860D–4(e)(7)(B)(viii) of the Act suggests an exemption for prescribers issuing prescriptions for individuals who are residents of a nursing facility and eligible for Medicare and Medicaid benefits. We sought stakeholder feedback on this exemption in our August 2020 RFI and discussed it with our Federal partners at the DEA, and have been informed that there are situations where nursing facilities experience or are at risk of drug diversion. This stakeholder feedback did not inform us of any compelling reasons to include an exemption for prescribers issuing prescriptions for individuals who are residents of a nursing facility and eligible for Medicare and Medicaid benefits. We have also seen the severe impact that the COVID–19 pandemic has had on nursing facility residents, who are at high risk for infection, serious illness, and death from COVID–19, as well as other infectious diseases including *Clostridium difficile* and the seasonal flu. It is for these reasons that we did not propose an exemption for prescribers issuing prescriptions for individuals who are residents of a nursing facility and eligible for Medicare and Medicaid benefits. We solicited comment on this issue, but we did not receive public comments on this provision. As proposed, we are not creating an exemption for prescribers issuing prescriptions for individuals who are residents of a nursing facility and eligible for Medicare and Medicaid benefits.

7. Fraud and Abuse Laws

We are aware that PDPs, MA–PD plans, or other organizations with which prescribers are affiliated may wish to assist prescribers with satisfying the mandate for electronic prescribing of controlled substances for a covered Part

D drug by providing technology and services necessary to effectuate the electronic prescribing of such drugs. Such assistance may implicate the payment and fraud and abuse laws that govern the financial relationships in the health care industry. Specifically, the donation of free or below-fair market value electronic prescribing technology or services to a practitioner (or any other person) may implicate the physician self-referral law and the Federal anti-kickback statute. However, there is an exception to the physician self-referral law's prohibition and a corresponding safe harbor under the Federal anti-kickback statute that will permit certain donations in the form of items or services (not including cash or cash equivalents) necessary and used solely to receive and transmit electronic prescription information if all requirements of the applicable exception or safe harbor are satisfied. In addition, other exceptions to the physician self-referral law and safe harbors under the Federal anti-kickback statute may apply.

Section III.P.1. of this final rule provides a general discussion of the application of, prohibitions of, and exceptions to the physician self-referral law. For information specific to the exception for donations of electronic prescribing items and services, we refer readers to our August 8, 2006 final rule entitled “Physicians’ Referrals to Health Care Entities With Which They Have Financial Relationships; Exceptions for Certain Electronic Prescribing and Electronic Health Records Arrangements” (71 FR 45140) and found at <https://www.govinfo.gov/content/pkg/FR-2006-08-08/pdf/06-6667.pdf>, and the regulations interpreting the physician self-referral law, including additional exceptions to its prohibitions, which are found in 42 CFR part 411, subpart J. Information regarding the Federal anti-kickback statute and its applicable safe harbors can be found at www.oig.hhs.gov.

We received several comments regarding the fraud and abuse laws, which we have summarized below.

Comment: Some commenters asked CMS to examine the regulations that set forth exceptions to the physician self-referral law and safe harbors under the Federal anti-kickback statute to determine whether revisions are necessary to permit PDPs, MA–PD plans, and other organizations to donate technology and services necessary for prescribers to adopt EPCS.

Response: We did not propose to revise the existing physician self-referral law exception for electronic prescribing items and services at 42 CFR 411.357(v)

¹⁵⁷ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/2014-PartD-Hospice-Guidance-Revised-Memo.pdf>.

¹⁵⁸ <https://oig.hhs.gov/oei/reports/oei-02-16-00570.pdf>.

or any other exceptions to the physician self-referral law that may apply to donations of technology and services that parties may believe are necessary for prescribers to adopt EPCS. Any revisions to our regulations would occur only through notice and comment rulemaking. Stakeholders requesting revision of regulations issued by the HHS Office of Inspector General (OIG) should contact OIG.

8. Penalties

Section 1860D–4(e)(7)(D) of the Act gives the Secretary the authority to enforce and specify appropriate penalties for non-compliance with the EPCS requirement. We sought stakeholder feedback on whether CMS should impose penalties and if so, what those penalties should be. We have also examined State EPCS requirements and their accompanying penalties. However, because these requirements have only been recently implemented and most States do not have penalties for failing to adopt EPCS, we have not been able to evaluate what type of penalties have been effective for State mandates.

In implementing the EPCS requirement, we seek to help ensure that we do not place too much of a burden on prescribers, as we do not want this requirement to have an unintended consequence of incentivizing prescribers to stop prescribing controlled substances to Part D beneficiaries, as appropriate, should they not have EPCS set-up. We also need sufficient time to gather more stakeholder feedback on the most effective and most appropriate type of penalties.

Therefore, we proposed that with respect to compliance from January 1, 2023 through December 31, 2023, CMS compliance actions will consist of sending letters to prescribers that we believe are violating the EPCS requirement during that period of time. These letters will consist of a notification to prescribers that they are violating the EPCS requirement, information about how they can come into compliance, the benefits of EPCS, an information solicitation as to why they are not conducting EPCS, and a link to the CMS portal to request a waiver. We will re-evaluate whether further compliance actions will be necessary and what those compliance actions will be in future rulemaking. We solicited comment on this proposal, including what type of compliance action may be appropriate after the initial period described above, including whether any penalties should be phased in over time.

We received public comments on this proposal, which we have summarized below, along with our responses to them.

Comment: Most commenters supported our proposal to limit compliance actions in the first year to sending letters to prescribers, rather than imposing a penalty on the prescribers. These commenters encouraged the use of these letters in order to avoid overly burdening prescribers during the PHE. However, some commenters suggested that we impose penalties on prescribers who do not conduct EPCS, since these commenters stated that it will hasten EPCS implementation.

Response: We agree that sending letters to prescribers, rather than imposing penalties, may avoid overly burdening prescribers who cannot meet the EPCS mandate in 2023. We will consider adopting penalties in future rulemaking. As previously noted, our intent is to avoid overly burdening prescribers, especially during this critical time during the PHE. In addition, we would like to further examine other EPCS programs and the effects that these penalties have had on EPCS in their States before imposing penalties on prescribers.

After consideration of public comments, we will finalize our proposal to limit the 2023 compliance actions to a compliance letter.

R. Open Payments

1. Background

a. Open Payments Policies

The Open Payments program is a statutorily-mandated program that promotes transparency by providing information to the public about the financial relationships between the pharmaceutical and medical device industry, and certain types of health care providers. Section 1128G of the Act requires manufacturers of covered drugs, devices, biologicals, or medical supplies (referred to as “applicable manufacturers”), as well as applicable group purchasing organizations (GPOs), to annually submit information for the preceding calendar year about certain payments or other transfers of value made to “covered recipients,” currently defined as physicians, teaching hospitals, PAs, NPs, CNSs, certified registered nurse anesthetists (CRNAs), anesthesiologist assistants (AAs), and certified nurse-midwives (CNMs).

Payments or other transfers of value that must be reported include, but are not limited to, such things as research-related payments, honoraria, gifts, travel expenses, meals, grants, and other

compensation. The type of information required to be reported includes, but is not limited to, the date and amount of the payment or other transfer of value, identifying information about the covered recipient, and details about products associated with the transaction. When a payment or other transfer of value is related to marketing, education, or research specific to a covered drug, device, biological or medical supply, the name of that covered drug, device, biological or medical supply also must be reported. The estimated burden of these reporting requirements, as outlined under OMB control number 0938–1237, is approximately 1.9 million hours over the course of 1 year.

Section 1128G of the Act establishes certain minimum dollar thresholds for required reporting of individual and aggregate payments or transfers of value. To determine if multiple small individual payments or other transfers of value made to a covered recipient exceed the *de minimis* reporting threshold, applicable manufacturers and applicable GPOs must aggregate all individual payments made across all payment categories within a given reporting year. The statutory threshold established in 2013 was \$10 for individual payments and \$100 for aggregated payments, and this amount has increased with the consumer price index each year. For CY 2021, the annual reporting thresholds for individual payments or other transfers of value is \$11.04 and the aggregate amount is \$110.40.

The Open Payments program yields information for the general public about providers, as well as information that researchers may use to look into potential correlations between financial relationships and provider behaviors. Between August 2013 and the June 2020 publication, more than 76 million records have been disclosed under the Open Payments program, enabling significant transparency into applicable exchanges of value. We have been committed to stakeholder engagement in an effort to limit the burden in the Open Payments program reporting processes and improve clarity for the public. Additional background about the program and guidance, including frequently asked questions, regarding how the program works and what type of information is required to be reported is available at www.cms.gov/OpenPayments.

In the February 8, 2013 **Federal Register** (78 FR 9458), we published regulations implementing section 1128G of the Act and establishing the Open Payments program. Section 1128G of the

Act requires applicable manufacturers and applicable GPOs to submit information annually about certain payments or other transfers of value made to covered recipients during the course of the preceding calendar year. Additionally, section 1128G of the Act defines covered drugs, devices, biologicals, or medical supplies as those covered under Medicare, a State plan under Medicaid, or the Children's Health Insurance Program (CHIP) (or a waiver of either such State plan), and requires applicable manufacturers and applicable GPOs to disclose any ownership or investment interests in such entities held by physicians or physicians' immediate family members, as well as information on any payments or other transfers of value provided to such physician owners or investors. Under section 1128G(e)(10)(A) of the Act, the term "payment or other transfer of value" refers to a transfer of anything of value, though some exclusions apply.

In the CY 2015 PFS final rule with comment period (79 FR 67548), we amended the regulations by standardizing reporting in the Open Payments program. Specifically, we: (1) Deleted the definition of "covered device"; (2) removed the special rules for payments or other transfers of value related to continuing education programs; (3) clarified the marketed name reporting requirements for devices and medical supplies; and (4) required stock, stock options, and any other ownership interests to be reported as distinct forms of payment.

In the CY 2017 PFS proposed rule (81 FR 46395), we solicited information from the public on a wide variety of topics regarding the Open Payments program. Since the implementation of the program and changes made in the CY 2015 PFS final rule with comment period, various commenters have provided us feedback. Consequently, we identified areas in the rule that might benefit from revision and solicited public comments to inform future rulemaking. We sought comment on whether the payment categories listed at 42 CFR 403.904(e)(2) are adequately inclusive to facilitate reporting of all payments or transfers of value, as well as ways to streamline or make the reporting process more efficient while facilitating our role in oversight, compliance, and enforcement, along with posing other program-specific questions. A summary of the comments we received was published in the CY 2017 PFS final rule (81 FR 80428 through 80429).

On October 24, 2018, the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for

Patients and Communities Act (SUPPORT Act) (Pub. L. 115–271) was signed into law. Section 6111 of the SUPPORT Act amended the definition of "covered recipient" under section 1128G(e)(6) of the Act with respect to information required to be submitted on or after January 1, 2022, to include PAs, NPs, CNSs, CRNAs, and CNMs, in addition to the previously listed covered recipients of physicians and teaching hospitals. In the CY 2020 PFS final rule, we codified the Open Payments provisions of the SUPPORT Act and addressed public comments received from the CY 2017 PFS proposed rule by simplifying the process for reporting data by adjusting the Nature of Payment categories, and standardized data on reported covered drugs, devices, biologicals, or medical supplies.

In the CY 2022 PFS proposed rule, we proposed to clarify existing Open Payments requirements, as well as add provisions that program stakeholders have requested and that we agree would improve the quality of the data. We proposed the following revisions effective for data collection beginning in CY 2023 and reporting in CY 2024: (1) Adding a mandatory payment context field for records to teaching hospitals; (2) adding the option to recertify annually even when no records are being reported; (3) disallowing record deletions without a substantiated reason; (4) updating the definition of ownership and investment interest; (5) adding a definition for a physician-owned distributorship as a subset of applicable manufacturers and group purchasing organizations, for the purposes of Open Payments program reporting only, which definition would not apply for purposes of any other laws or regulations, including, but not limited to, section 1128B of the Act (the Federal anti-kickback statute), the regulations at 42 CFR 1001.952, and materials interpreting the anti-kickback statute, such as Special Fraud Alerts; and section 1877 of the Act and the regulations at 42 CFR part 411, subpart J (collectively, the physician self-referral law); (6) requiring reporting entities to update their contact information; (7) disallowing publications delays for general payment records; (8) clarifying the exception for short-term loans applies for 90 total days in a calendar year, regardless of whether the 90 days were consecutive; and (9) removing the option to submit and attest to general payment records with an "Ownership" Nature of Payment category. We noted that we believed these changes would increase the usability of the data, address concerns we have heard from

stakeholders, and we believe our proposed implementation timeline allows reporting entities adequate time to prepare for changes to their data collection and reporting procedures.

We received public comments on our proposals that would be effective for data collection beginning in CY 2023 and reporting in CY 2024. We received 11 comments on the Open Payments proposals. Commenters generally submitted neutral or supportive comments with a few suggestions, which are individually outlined in section c below. We thank the commenters and after consideration of public comments, we are finalizing as proposed.

b. Legal Authority

Four legal authorities from the statute ground our provisions:

- Sections 1102 and 1871 of the Act, which provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.
- Section 1861 of the Act, which defines providers and suppliers.
- Section 1128G of the Act, as amended by section 6111 of the SUPPORT Act, which requires applicable manufacturers of drugs, devices, biologicals, or medical supplies covered under Medicare or a State plan under Medicaid or CHIP to report annually to the Secretary certain payments or other transfers of value to physicians and teaching hospitals, and to PAs, NPs, CNSs, CRNAs, and CNMs for information required to be submitted under section 1128G of the Act on or after January 1, 2022.

c. Provisions of the Regulations

(1) Payment Context Field for Teaching Hospitals

We have received feedback from teaching hospitals during informal interviews that Open Payments submissions do not contain sufficient information to identify reported payments or transfers of value in their own records. This means that teaching hospitals are unable to verify records during the review and dispute process and must dispute the record in order to obtain additional information, which causes additional and unnecessary work for both teaching hospitals and reporting entities.

To reduce the burden created by disputes for both reporting entities and teaching hospitals, we proposed a mandatory context field for payments or transfers of value attributed to teaching hospitals, which would contain information to better identify the

payment as deemed appropriate by the applicable manufacturer or GPO. Examples of data that the reporting entity may choose to include are: the check number or electronic wire number for the payment; related department of the hospital; or other pieces of relevant information.

We received public comments on our proposal for a teaching hospital context field. The following is a summary of the comments we received and our responses.

Comment: We received several comments on this proposal, which were evenly split in support and opposition. Commenters who agreed expressed support for our belief that the proposal would enhance communication between reporting entities and teaching hospitals in a proactive way, thereby reducing the need for disputes. One commenter suggested that additional inputs may include whether education was involved and which services were provided, and that CMS should expand the list of suggestions to avoid limiting reporting entities' inputs. Commenters who disagreed with the proposal stated that the field would increase burden without decreasing disputes, and the lack of standardization would be problematic since reporting entities would not have direction on what to input and teaching hospitals might not understand the additional context.

Response: We believe that the additional field will be a minimal burden on reporting entities, but that the new field will give needed context to the payments based on feedback from both reporting entities and teaching hospitals. The integrity of the data is our highest priority, and this additional information will help ensure accuracy. We also believe that the flexibility regarding the field's contents will be much easier for reporting entities than specifying a mandatory piece of information. We hope to continue to minimize dispute-related issues, and we consider this new field to be a positive step to address both reporting entities' and covered recipients' communication concerns. Therefore, we are finalizing this provision as proposed.

(2) Optional Annual Recertification

Over the course of the program, several entities have provided feedback that they would like the ability to attest that they have no reportable records for a particular year. At this time, an entity that does not have reportable payments or transfers of value does not need to recertify in Open Payments, but it also does not have a way to communicate to CMS that it believes it is still compliant even though it has not reported.

We proposed to make it optional for an entity that does not have reportable payments or transfers of value for the program year to recertify its registration in Open Payments and attest that it does not have any records to submit, which would give peace of mind to reporting entities that are appropriately not reporting records. We believe this optional recertification for entities without reportable transactions will be a low burden to reporting entities, but will be invaluable to ensuring the integrity of the data. We proposed adding the following language to an option for entities that are recertifying without submitting records:

"1. I attest that I am a Chief Executive Officer, Chief Financial Officer, Chief Compliance Officer, or other Officer equivalent authorized representative for the reporting applicable manufacturer or applicable group purchasing organization with the authority to attest to the information submitted in the Open Payments system.

2. I attest that, to the best of my knowledge, belief, and ability, my organization does not have any reportable payments or transfers of value or ownership and investment interest to report for the current program year.

3. If I become aware of any information that my entity is required to report, I will submit this information to CMS as required per 42 CFR 403.908(h)(1), which states that "if an applicable manufacturer or applicable group purchasing organization discovers an error or omission in its annual report, it must submit corrected information to CMS immediately upon confirmation of the error or omission."

We received public comments on optional recertification for entities without reporting requirements. The following is a summary of the comments we received and our responses.

Comment: We received two comments on this proposal, both of which were generally supportive although one included questions on how the new attestation would function. The commenter expressed concerns that the attestation would lead to additional consequences if later reportable records were discovered, and inquired as to whether CMS would add a notification functionality so that when the Submitter enters that the entity did not have any reportable records, the Attester would be notified.

Response: We clarify that this optional activity is for the purpose of communication to the Open Payments program for the benefit of reporting entities, and is not intended as a method of penalization. We will continue to

carefully evaluate instances of potential non-compliance, including weighing mitigating and aggravating factors, as our regulations currently require. Furthermore, this attestation will not prevent reporting entities from submitting later-discovered records. We will further consider the system's functionality specific to the various roles, such as Submitter and Attester, but do not believe the detail of this functionality is relevant to rulemaking. Therefore, we are finalizing as proposed.

(3) Defining a Physician-Owned Distributorship

The preamble to the 2013 Open Payments final rule (78 FR 9458) discusses physician-owned distributorships (PODs), as a subset of group purchasing organizations (GPOs), but does not provide a specific definition for this type of entity. Reporting entities currently have the ability to self-identify as a POD when registering with Open Payments, but due to the lack of a definition of the term "physician-owned distributorship" or "POD," this designation is not required. We believe that the disclosure of an entity's status as a POD is essential to the transparency that is central to the program, and will also help clear up confusion about whether PODs are required to report. Accordingly, we proposed to include the definition of a POD as set out at § 403.902 as a subset of either an applicable manufacturer or applicable GPO.

We also proposed to include language at § 403.908(c)(4) to require PODs to self-identify when registering or recertifying.

Furthermore, to better align the Open Payments program with the updated definition of ownership and investment interest at § 411.354(b)(3) (see 85 FR 77587), we included the exceptions for titular ownership and employee stock ownership programs (ESOPs) that are qualified under IRS regulations for consistency in application.

In addition, we emphasized that:

- The proposed definition of a physician-owned distributorship does not apply for purposes of any other laws or regulations, including, but not limited to, section 1877 of the Act, the regulations at 42 CFR part 411, subpart J, section 1128B of the Act, or the regulations at 42 CFR 1001.952.

- "Ownership or investment interest" is defined at § 403.902 of the Open Payments regulations and would not include publicly traded securities or mutual funds.

- To be considered a physician owner(s), the owner would have to hold

at least one active professional license to practice as a physician issued by a U.S. State or territory.

- If a company with common ownership reports in a consolidated report with the POD, the reporting company would only be required to register as a POD if it meets the 5 percent ownership requirement when ownership of all entities in the report is calculated.

- The POD would be required to report ownership and investment interest as required by existing Open Payments requirements. Ownership or investment interest is defined at § 403.902 to include, but is not limited to: stocks, stock option(s) (other than those received as compensation, until they are exercised); partnership shares, both limited and non-limited; limited liability company memberships; loans, bonds, or other financial instruments that are secured with an entity's property or revenue or a portion of that property or revenue. This definition explicitly excepts titular ownership and ESOPs that are qualified under IRS regulations.

- The POD would be required to identify as a POD whether or not the physician has a controlling interest in the reporting entity (for example, a silent partner whose only role is to provide capital and is not involved in the company's operations would still meet requirements for reporting).

- Five percent interest would be calculated as 5 percent of the total dollar value in USD of all ownership in the POD as of December 31, or the latest date that the ownership was held, as of the calendar year proceeding the Program Year. For example, if reporting ownership in a POD for Program Year 2022, the ownership will be calculated as of December 31, 2022, or the latest date in the calendar year that the physician held the ownership or investment interest.

- Indirect ownership interest would also have to be reported as required by § 403.902. Indirect ownership is often the result of the use of holding companies and parent/subsidiary relationships.

- Any entity meeting this definition would be required to identify itself as a POD when submitting and attesting to its records. For example, if an applicable manufacturer meets the definition of a POD, it may not choose to identify itself simply as an "Applicable Manufacturer" but will have to choose its business type as "Applicable Manufacturer—Physician Owned Distributorship."

- We believed that this proposed definition should not increase industry

burden because it is a subset of existing definitions, but should clarify confusion about PODs being outside of reporting requirements.

We received public comments on the requirement that physician-owned distributorships (PODs) self-identify when registering or recertifying.

The following is a summary of the comments we received and our responses.

Comment: We received several comments on this proposal, all of which expressed general support for the creation of a POD definition, although some provided suggestions on additional details to include. Two commenters noted that they believed that the proposed definition was not narrow enough to address concerns around PODs. One commenter suggested that CMS update the language to clarify that a POD may sell to a single entity, such as a hospital.

Response: Many commenters' suggestions fell outside CMS' bounds of rulemaking authority, as statutory language limits the changes we may make to the program definitions. We do not believe we need to specify that the definition may include PODs that have a single customer as long as the definition does not exclude these entities. We therefore finalize the definition as proposed.

(4) Disallowing Record Deletion Without Reason

While we have not seen evidence of the following conduct, we believe that our existing regulations might allow entities to be compliant by reporting and attesting to records, then deleting those records so that they are never publicly available. We proposed to prevent reporting followed by deletion by adding language at § 403.904(a)(3) that will state that an entity that has reported payments or transfers of value under the scope of this rule may not remove, delete, or alter the records in the Open Payments system unless it discovers an error in the information furnished, or the record is otherwise believed to meet existing exceptions for reporting that were previously unknown.

An example of a properly deleted record would be the deletion of ownership records that were reported for a publicly traded company, since publicly traded companies are not required to report ownership and investment interest. We will add a dialogue box in the system for reporting entities to provide a reason for record deletion. We noted that deletions will continue to undergo additional scrutiny to ensure the integrity of the data.

We received public comments on the requirement that a reporting entity provide a reason when deleting a record. The following is a summary of the comments we received and our responses.

Comment: Some commenters were supportive of our proposal, while others were skeptical. These commenters mostly submitted system suggestions that would reduce burden, including: creating pre-filled options for deletion reasons instead of a free form text box; creating a threshold at which the reason for deletion would be required; and having the reason automatically populate as "dispute" if the deletion was on a disputed record.

Response: We clarify that while we have not seen evidence of reporting entities reporting and deleting records to avoid publication, we believe our proposed language is nonetheless important to ensure such conduct is proscribed. Furthermore, CMS and reporting entities both currently bear an administrative burden—created when CMS needs documentation to confirm that a deletion is legitimate since attestation had previously been made as to the record's timeliness, completeness, and accuracy—when records are deleted without context. With proper reporting methodologies in place, deletions should be relatively rare and burden should be minimal, especially with respect to undisputed records. We believe that the proposed requirement will afford a needed layer of integrity to the data and we finalize it as proposed. However, we appreciate the feedback on logistical options and will take them into consideration as much as possible as we implement this requirement so as to minimize burden.

(5) Disallow Publication Delays of General Payments

Delayed publication is permitted for Open Payments records based on concerns that the information provided in the record details may reveal proprietary information about an entity's research activities. According to § 403.910, only payments that are made in connection with the following are allowed to be delayed from publication: (1) Research or development of a new drug, device, biological, or medical supply, or a new application of an existing drug, device, biological, or medical supply; or (2) Clinical investigations regarding a new drug, device, biological, or medical supply. As of December 26, 2020, there were 20,930 general records with a value of \$26.4M that were delayed from publication for at least one Program Year, and based on the information

provided in the current format required for the submission of general records, we are unable to verify these records' connection with research or clinical investigations. Therefore, we proposed to eliminate the ability to delay general payments from publication and only permit publication delay of research payments, whose formatting does require the appropriate information to be provided, the details of which are specified at § 403.904(f).

Reporting entities may hesitate to include records that are currently being delayed as general payments because they are associated with a research study, but are not directly outlined in that research agreement. For example, a company may pay for an airline ticket for a physician to conduct research that is associated with a research agreement, but that travel was not explicitly outlined in that agreement. However, we do not believe that the current requirements for a research payment would exclude these types of payments from being reported as research payments, as long as they are made in connection with, and subject to, a research agreement.

We received public comments on the removal of the ability to delay general payments. The following is a summary of the comments we received and our responses.

Comment: Commenters were supportive or neutral. One commenter asked CMS to clarify whether payments associated with research but not explicitly outlined in the written agreement should be reported as research payments instead of general payments.

Response: We believe that our proposal is clear that as long as a payment is made in connection with a written research agreement, it may be reported as a research payment even if it was not explicit in that agreement. We finalize this proposal as it was proposed, and we will update our guidance, including FAQs, to be aligned with this final rule.

(6) Short-Term Loans

The 2013 Open Payments final rule makes a reporting exception for short-term equipment loans. A short-term medical supply or device loan means the loan of a covered device or a device under development, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 days or a quantity of 90 days of average daily use, to permit evaluation of the device or medical supply by the covered recipient. The Open Payments regulations also clarify that for a single

product, the total number of days for the loan should not exceed 90 days for the entire year, regardless of whether the 90 days are consecutive. We believe that this aligns with the intention to limit the loan period to 90 days and not allow a new loan to start at the end of the previous loan period, thus avoiding the reporting requirements. We proposed to clarify this by stating that short-term medical supply or device loan means the loan of a covered device or a device under development, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 cumulative days per calendar year or a quantity of 90 cumulative days of average daily use per calendar year, to permit evaluation of the device or medical supply by the covered recipient.

We received one public comment on the proposal to clarify the definition of a short-term loan. The following is a summary of the comment we received and our responses.

Comment: One commenter requested that this proposal be withdrawn on the basis that this behavior is not occurring and could impact the product evaluation process.

Response: This proposal is merely a clarification of the existing regulatory requirement, and we are finalizing it as proposed.

(7) Remove General Ownership Records

We currently have two ways for an entity to report ownership: entities may submit an ownership record; or a general record with a Nature of Payment category of "Ownership." We proposed to remove the "Ownership" Nature of Payment category. The statute requires special rules for the reporting of ownership interest, including dollar amount invested and value of interest, which is not captured by the general payment with the Nature of Payment category of "Ownership." Furthermore, this would create a cleaner and more consistent data set.

We received one public comment on the proposal to remove the ability to submit general ownership records.

Comment: One commenter supported this proposal.

Response: We will finalize as proposed.

(8) Updated Contact Information

When sending communications to entities, the Open Payments program often finds that their contact information is outdated, especially if the entity has not recertified recently. To ensure data integrity, including in instances where we might discern irregularities or potential

noncompliance, it is important that the Open Payments program be able to contact reporting entities. We proposed to require that a company that has had reportable payments or transfers of value within the past 2 calendar years keep current its contact information within the Open Payments system. For example, if an applicable manufacturer or group purchasing organization had reported records in Program Years 2018 and 2022, but did not have records for Program Years 2019, 2020, or 2021, it would be required to keep updated contact information in the system during Program Years 2019 and 2020. The applicable manufacturer or group purchasing organization would not have to update its contact information for Program Year 2021. In Program Year 2022, since it once again had reportable records, it would be required to recertify and update its contact information as usual. We proposed to include this requirement at § 403.908(c)(3).

We received public comments on the requirement for reporting entities to keep their contact information updated. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported the proposal. One commenter expressed concern that the contact field would not be able to be updated in the event that a company goes out of business.

Response: We acknowledge that the requirement to keep contact information updated, along with any other requirements, will be impossible to enforce if, for example, a company goes out of business. We will finalize as proposed.

IV. Summary of the Quality Payment Program Proposed Provisions, Analysis of and Responses to Public Comments, and Provisions of the Final Rule

A. CY 2022 Updates to the Quality Payment Program

1. Executive Summary a. Overview

This section of the final rule sets forth changes to the Quality Payment Program starting January 1, 2022, except as otherwise noted for specific provisions. The CY 2022 performance period/2024 MIPS payment year of the Quality Payment Program continues to build on the first few years of implementation of the Quality Payment Program to focus more on our measurement efforts, refine how clinicians will be able to participate in a more meaningful way and encourage participation in

Advanced Alternative Payment Models (APMs).

Authorized by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015), the Quality Payment Program is an incentive program that includes two participation tracks, the Merit-based Incentive Payment System (MIPS) and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. The weights of those four performance categories are specified in statute. For CY 2022, those weights are as follows: 30 percent for the quality performance category, 30 percent for the cost performance category, 15 percent for the improvement activities performance category, and 25 percent for the Promoting Interoperability performance category. If an eligible clinician participates in an Advanced APM and achieves Qualifying APM Participant (QP) status, they are excluded from the MIPS reporting requirements and payment adjustment. Those that are qualifying APM participants (QPs) for the year receive a 5 percent lump sum incentive payment during the corresponding payment year through CY 2024, or a differential payment update under the PFS for payment years beginning in 2026.

Participation in the Quality Payment Program slightly rose in the fourth year with 99.9999 percent comparing with 99.8989 percent in the third year. We saw 99.9999 percent of MIPS eligible clinicians participate in MIPS in 2020: 933,549 MIPS eligible clinicians received a payment adjustment and 933,547 MIPS eligible clinicians participated by reporting at least one measure or activity. This was a slight increase from our 2019 participation rates where 954,670 MIPS eligible clinicians received a payment adjustment and 954,573 MIPS eligible clinicians participated by reporting at least one measure or activity. Therefore, participation in MIPS did not meaningfully change in 2020 as compared to 2019. We did see a slight decrease in the number of MIPS eligible clinicians receiving a payment adjustment with 933,549 MIPS eligible clinicians in 2020 compared to 954,670 in 2019. In addition, 90.6 percent of MIPS eligible clinicians received a positive payment adjustment for 2022 based on CY 2020 performance period/2022 MIPS payment year results. Please note that results for the CY 2020 performance period/2022 MIPS payment year are subject to change as a

result of the targeted review process which began on August 2, 2021 and will conclude on November 29, 2021 at 8:00 p.m., eastern standard time. For more information on the targeted review process for 2020 please see our announcement from September 27th at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1631/2020%20Scoring%20Updates_EUC%20Reweighting%20Requests%20Extension_Listserv.pdf.

Regarding performance in Advanced APMs, for the 2020 QP Performance Period, 237,315 eligible clinicians earned Qualifying APM Participant (QP) status while another 10,609 eligible clinicians earned partial QP status.¹⁵⁹ We note that due to the Public Health Emergency (PHE) for COVID–19, 192,344 (or about 20.60 percent of 933,549) MIPS eligible clinicians received reweighting for CY 2020 performance period/2022 MIPS payment year of one or more MIPS performance categories due to our MIPS extreme and uncontrollable circumstances policy.

We plan to continue developing Quality Payment Program policies that more effectively reward high-quality of care for patients and increase opportunities for Advanced APM participation. We are moving forward with MIPS Value Pathways (MVPs) as MVPs allow for a more cohesive participation experience by connecting activities and measures from the 4 MIPS performance categories that are relevant to a specialty, medical condition, or a particular population. The MVPs will include the Promoting Interoperability performance category as a foundational element and incorporate population health claims-based measures, as feasible, along with relevant measures and activities for the quality, cost, and improvement activities performance categories. To provide clinicians and third party intermediaries with sufficient time to prepare for a shift to this new participation framework, in this rule, we proposed to begin transitioning to MVPs in the CY 2023 performance period/2025 MIPS payment year.

As we make long-term improvements, evolve MIPS policies, and plan to implement MVPs in the future, we remain committed to our program goals. We are aligning with broader CMS initiatives, such as the CMS Quality Measure Action Plan ([https://www.cms.gov/files/document/2021-cms-](https://www.cms.gov/files/document/2021-cms-quality-conference-cms-quality-measurement-action-plan-march-2021.pdf)

[quality-conference-cms-quality-measurement-action-plan-march-2021.pdf](https://www.cms.gov/files/document/2021-cms-quality-conference-cms-quality-measurement-action-plan-march-2021.pdf)), to unify strategic efforts to adopt measures most critical to providing high quality care and accelerate strategic improvements for quality programs and measures. The vision for the CMS Quality Measure Action Plan is to use impactful quality measures to improve health outcomes and deliver value by empowering patients to make informed care decisions while reducing burden to clinicians. This plan supports CMS' work to identify activities for transformation of quality measurement and value-based programs and recognizes the need to modernize the current quality ecosystem of measurement and programs. Additionally, it will encourage further reductions to the burden of quality measure reporting and address the current lack of alignment. These efforts will also support identifying activities that are driving better patient outcomes at lower costs. The planned implementation of MVPs aligns with many of the objectives and goals the CMS Quality Measure Action Plan will strive to achieve.

Through the proposals we describe below, we intend to transform and simplify the MIPS program through MVPs, promote the use of connected measures and activities, reward clinicians for providing high value care, and help all clinicians improve care and engage patients. We also intend to gather information from stakeholders to help guide efforts to advance health equity throughout CMS quality programs.

b. Summary of Major Provisions

(1) Major MIPS Provisions

The MIPS program aims to drive value through the collection, assessment, and public reporting of data that informs and rewards the delivery of high-value care. Within MIPS we intend to pay for health care services in a way that drives value by linking performance on cost, quality, and the patient's experience of care.

We have heard from clinicians that MIPS requirements are confusing, burdensome, and that it is difficult to choose measures from the several hundred MIPS and QCDR quality measures that are meaningful to their practices and have a direct benefit to patients. We have also heard concerns from stakeholders that MIPS does not allow for sufficient differentiation of performance across practices due in part to clinician quality measure selection bias. These aspects detract from the

¹⁵⁹ QPP Participation in 2019: Results at-a-Glance released 10/27/2020 at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1190/QPP%202019%20Participation%20Results%20Infographic.pdf>.

program's ability to effectively measure and compare performance, provide meaningful feedback, and incentivize quality. MVPs are intended to lead to a simplified MIPS clinician experience, improve value, reduce burden, and better inform patient choice in selecting clinicians. We noted that the MVP framework will connect measures and activities across the 4 MIPS performance categories, incorporate a set of administrative claims-based quality measures that focus on population health, provide data and feedback to clinicians, and enhance information provided to patients. We intend to focus the future of MIPS on MVP development and implementation.

Additionally, we have heard from patients, clinicians, and other stakeholders that they would like more comprehensive and granular reporting from the MIPS program. To that end, we proposed to establish voluntary subgroup reporting to help provide patients and clinicians information that is clinically meaningful at a more granular level.

We issued a request for information (RFI) to address the Advancing to Digital Quality Measurement and the Use of Fast Healthcare Interoperability Resources (FHIR) in Physician Quality Programs; please refer to section IV.A.1.c. of this rule for more information. We also issued an RFI to address Closing the Health Equity Gap in CMS Clinician Quality Programs as discussed in section IV.A.1.d. of this rule.

(a) Basis and Scope

At § 414.1300, we previously codified the basis and scope of the MIPS and APMs. In order to support the continued application of voluntary reporters, we proposed to revise the basis and scope at § 414.1300(a)(2) to remove reference to section 1848(a) of the Act—Payment for Physicians' Services Based on Fee Schedule and instead redesignate the text at § 414.1300(a)(3) to § 414.1300(a)(2) to state section 1848(k) of the Act—Quality Reporting System. At § 414.1400(a)(3), we also proposed to add new language to state section 1848(m) of the Act—Incentive Payments for Quality Reporting.

We did not receive public comments on this proposal, and therefore, we are finalizing it as proposed.

(b) MIPS Value Pathways and APM Performance Pathway

We recognize that the transition to MVPs will take time and we will continue to evaluate the readiness of clinicians in making this transition, while balancing our strong interest in

improving measurement and making MIPS more focused on value.

As discussed in section IV.A.3.b. of this final rule, for MIPS Value Pathways (MVPs) we are finalizing our proposals:

- To define who can report MVPs, through the term MVP Participant.
- A delay to the CY 2023 performance period/2025 MIPS payment year: MVP implementation and subgroup reporting timelines. After considering public comments, we are finalizing the proposal with a modification such that multispecialty groups will be required to form subgroups in order to report MVPs beginning in the CY 2026 performance period/2028 MIPS payment year, instead of the CY 2025 performance period/2027 MIPS payment year as proposed.

- An introductory set of 7 MVPs to be available beginning with the CY 2023 performance period/2025 MIPS payment year.

- MVP reporting requirements that account for the four MIPS performance categories.

- During the CY 2023, CY 2024 and CY 2025 performance periods/2025, 2026 and 2027 MIPS payment years, voluntary subgroup reporting within MIPS limited to reporting through MVPs or the APP. For the MIPS program, eligibility, special status determination, and QP determination will continue to be determined at the group level for subgroup participants. Subgroup performance will be assessed at the subgroup level for three performance categories (the quality, cost, and improvement activities performance categories) and will be assessed at the group level for one performance category (the Promoting Interoperability performance category). Additionally, subgroups will continue to be included in group level reporting but will receive scores separate from their affiliated group.

- MVP scoring policies closely align with those used in traditional MIPS, with few exceptions.

- MVP scoring policies including policies for scoring administrative claims measures, including population health measures, scoring only the cost measures specified in the MVP, assigning 20 points for each medium-weighted and 40 points for each high-weighted improvement activity specified in the MVP, scoring subgroups on their affiliated group's data for the Promoting Interoperability performance category, reweighting performance categories for subgroups in certain circumstances, and requirements that the quality performance category be scored with few exceptions for reweighting. While we are finalizing

these policies as proposed, we may consider additional incentives to report MVPs in future rulemaking.

- To provide comparative feedback within performance feedback, comparing the performance of like clinicians who report on the same MVP.

We also discuss in section IV.A.3.b. of this final rule, future considerations and goals of the MIPS program:

- We requested comment on the timeline to sunset traditional MIPS in the future, and to eventually make MVP reporting mandatory. Note: we are referring to the established MIPS participation options collectively as traditional MIPS (85 FR 84844).

- Through the MVP development work, gradually implement MVPs for all specialties and subspecialties that participate in the program.

As discussed in section IV.A.3.c. of this final rule, for the APM Performance Pathway, to create stability within the APP, we did not propose any major changes to the APP.

(c) Other MIPS and APM Policies

We are finalizing our proposals for the following provisions for MIPS beginning with the CY 2022 performance period/2024 MIPS payment year:

- As discussed in section IV.A.3.d. of this final rule, for the MIPS Performance Measures and Activities, we are finalizing our proposals and finalizing with modification our proposals regarding the data completeness threshold for the CY 2023 performance period/2025 MIPS payment year and the quality measure set for the CY 2023 performance period/2025 MIPS payment year:

++ In section IV.A.3.d.(1) of this final rule, for the quality performance category, to maintain the data completeness criteria threshold at 70 percent for the CY 2021 and 2022 performance periods/2023 and 2024 MIPS payment years; maintain the data completeness criteria threshold at 70 percent for the CY 2023 performance period/2025 MIPS payment year; extend the availability of the CMS Web Interface as a collection and submission type for the CY 2022 performance period/2024 MIPS payment year; establish a set of 200 MIPS quality measures; and solicited public comments through a request for information (RFI) regarding the draft COVID-19 Vaccination by Clinicians measure specifications.

++ In section IV.A.3.d.(2) of this final rule, for the cost performance category, to establish 5 new episode-based cost measures for implementation into MIPS, which adds to the 2 global or population-based measures and 18

episode-based measures. Additionally, we are finalizing a process for stakeholders to develop cost measures, outside the current measure development process where all cost measures are developed by CMS' measure development contractor.

In section IV.A.3.e.(2) of this final rule, in regard to calculating the final score, we are finalizing our proposal on formulas for the complex patient bonus with two separate components (one for medical complexity and one for social complexity) and an overall cap of 10 bonus points. Lastly, we are finalizing our proposal on updating the formulas for the bonuses to base them on standardized scores and to reward those who fall in higher quintiles and not reward those who fall below a cut-off point.

- As discussed in section IV.A.3.f. of this final rule, beginning with year 6 of MIPS (2024 MIPS payment year), the performance threshold must be either the mean or median of the final scores for all MIPS eligible clinicians for a prior period. We are finalizing our proposal to establish the performance threshold using the mean and the CY 2017 performance period/2019 MIPS payment year data, which will result in a performance threshold of 75 points. In addition, for the CY 2022 performance period/2024 MIPS payment year, the additional performance threshold must be set at either (1) the 25th percentile of the range of possible final scores above the performance threshold, or (2) the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to a prior period. We note that under section 1848(q)(6)(C) of the Act, the additional MIPS payment adjustment factors for exceptional performance are available through the CY 2022 performance period/2024 MIPS payment year, making this the last year of the additional performance threshold and the associated additional MIPS payment adjustment factors for exceptional performance. We are also finalizing our proposal to establish an additional performance threshold of 89 points. This is the 25th percentile of actual final scores from the CY 2017 performance period/2019 MIPS payment year at or above 75 points.

- As discussed in section IV.A.3.h. of this final rule, for Third Party Intermediaries, we are finalizing our proposals to modify third party intermediary requirements, remedial actions and termination policies. Specifically, beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs, qualified registries, and health IT vendors must

support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. QCDRs, qualified registries, and, health IT vendors may also support the APP. We also are finalizing our proposal to require QCDRs, qualified registries, health IT vendors, and CMS-approved survey vendors to support subgroup reporting beginning with the CY 2023 performance period/2025 MIPS payment year. Although we did not address any changes to the QCDR measure testing requirement at § 414.1400(b)(3)(v)(C)(1) in the CY 2022 PFS proposed rule, based on public comments received on our proposals, we are considering proposing in next year's rulemaking to further delay this requirement for traditional MIPS until the CY 2024 performance period/2026 MIPS payment year, instead of the CY 2023 performance period/2025 MIPS payment year as previously finalized.

- As discussed in section IV.A.3.i. of this final rule, for Public Reporting on Compare Tools hosted by the U.S. Department of Health and Human Services (Compare Tools), we are finalizing our proposal to publicly report clinician affiliations to certain types of facilities (for example, LTCHs, IRFs, etc.). We also solicited comments through a RFI to inform the ways in which utilization data may be useful to patients and caregivers for their health care decisions. In order to give MIPS eligible clinicians time to familiarize themselves with MVPs and subgroup reporting, we are finalizing our proposal to delay public reporting of new improvement activities and Promoting Interoperability measures and attestations reported via MVPs by 1 year, and begin publicly reporting subgroup-level performance information in PY 2024, on the compare tool hosted by the U.S. Department of Health and Human Services. We also are finalizing our proposal to create a separate subgroup workflow that would allow subgroup performance information to be publicly reported in an online location that can be navigated to and from an individual clinician or group profile page. This also aligns with the historical approach to report performance information at the level that it is submitted.

- As discussed in sections IV.A.4.b. and IV.A.4.c. of this rule, we are finalizing our proposal on a change to the APM Incentive Payment payment hierarchy to include at each level payment to one or more TINs associated with the QP during the payment year.

c. Advancing to Digital Quality Measurement and the Use of Fast Healthcare Interoperability Resources (FHIR) in Physician Quality Programs—Request for Information

We aim to move fully to digital quality measurement in CMS quality reporting and value-based purchasing programs by 2025. As also detailed in the FY 2022 Hospital Inpatient PPS proposed rule (86 FR 25549 through 25554), as part of this modernization of our quality measurement enterprise, we are issuing this request for information (RFI). The purpose of this RFI is to gather broad public input solely for planning purposes for our transition to digital quality measurement. Any updates to specific program requirements related to providing data for quality measurement and reporting provisions would be addressed through future rulemaking, as necessary. This RFI contains five parts:

- *Background.* This part provides information on our quality measurement programs and our goal to move fully to digital quality measurement by 2025. This part also provides a summary of recent HHS policy developments that are advancing interoperability and could support our move towards full digital quality measurement.

- *Definition of Digital Quality Measures (dQMs).* This part provides a potential definition for dQMs. Specific requests for input are included in the section.

- *Use of Fast Healthcare Interoperability Resources (FHIR®) for current electronic clinical quality measures (eCQMs).* This part provides information on current activities underway to align CMS eCQMs with the FHIR standard and support quality measurement via application programming interfaces (APIs), and contrasts this approach to current eCQM standards and practice.

- *Changes Under Consideration to Advance Digital Quality Measurement: Actions in Four Areas to Transition to Digital Quality Measures by 2025.* This part introduces four possible steps that would enable transformation of CMS' quality measurement enterprise to be fully digital by 2025. Specific requests for input are included in the section.

- *Solicitation of Comments.* This part lists all requests for input included in the sections of this RFI.

(1) Background

As required by law, we implement quality measurement and value-based purchasing programs across a broad range of inpatient acute care, outpatient, and post-acute care (PAC) settings

consistent with our mission to improve the quality of health care for Americans through measurement, transparency, and increasingly, value-based purchasing. These quality programs are foundational for incentivizing value-based care, contributing to improvements in health care, enhancing patient outcomes, and informing consumer choice. In October 2020, we launched the CMS Quality Measure Action Plan.¹⁶⁰ One key goal of the plan is to improve the efficiency of quality measures by a transition to digital measures and use of advanced data analytics. Our objective is to use data and information as essential aspects of a healthy, robust healthcare infrastructure to allow for payment and management of accountable, value-based care and development of learning health organizations.¹⁶¹ Consistent with the CMS Quality Measure Action Plan, we aim to move fully to digital quality measurement by 2025. We acknowledge providers within the various care and practice settings covered by our quality programs may be at different stages of readiness, and therefore, the timeline for achieving full digital quality measurement across our quality reporting programs may vary.

We also continue to evolve the Medicare Promoting Interoperability Program's focus on the use of certified electronic health record (EHR) technology, from an initial focus on electronic data capture to enhancing information exchange and expanding quality measurement (83 FR 41634). However, reporting data for quality measurement via EHRs remains burdensome, and our current approach to quality measurement does not readily incorporate emerging data sources such as patient-reported outcomes (PRO) and patient-generated health data (PGHD).¹⁶² There is a need to streamline our approach to data collection, calculation, and reporting to fully leverage clinical and patient-centered information for measurement, improvement, and learning.

Additionally, advancements in technical standards and associated regulatory initiatives to improve interoperability of healthcare data are creating an opportunity to significantly improve our quality measurement

systems. In May 2020, we finalized interoperability requirements in the CMS Interoperability and Patient Access final rule (85 FR 25510) to support beneficiary access to data held by certain payers. At the same time, the Office of the National Coordinator for Health Information Technology (ONC) finalized policies in the ONC 21st Century Cures Act final rule (85 FR 25642) to advance the interoperability of health information technology (IT) as defined in section 4003 of the Cures Act, including the "complete access, exchange, and use of all electronically accessible health information." Closely working with ONC, we collaboratively identified Health Level 7 (HL7®) FHIR Release 4.0.1 as the standard to support Application Programming Interface (API) policies in both rules. ONC, on behalf of HHS, adopted the HL7 FHIR Release 4.0.1 for APIs and related implementation specifications at 45 CFR 170.215. We believe the FHIR standard has the potential to be a more efficient and modular standard to enable APIs. We also believe this standard enables collaboration and information sharing, which is essential for delivering high-quality care and better outcomes at a lower cost. By aligning technology requirements for payers, health care providers, and health IT developers HHS can advance an interoperable health IT infrastructure that ensures providers and patients have access to health data when and where it is needed.

In the ONC 21st Century Cures Act final rule, ONC adopted a "Standardized API for Patient and Population Services" certification criterion for health IT that requires the use of FHIR Release 4 and several implementation specifications. Health IT certified to this criterion will offer single patient and multiple patient services that can be accessed by third party applications (85 FR 25742).¹⁶³ The ONC 21st Century Cures Act final rule also requires health IT developers to update their certified health IT to support the United States Core Data for Interoperability (USCDI) standard.¹⁶⁴ The scope of patient data identified in the USCDI and the data standards that support this data set are expected to evolve over time, starting with data specified in Version 1 of the USCDI. In November 2020, ONC issued an interim final rule with comment period extending the date when health IT

developers must make technology meeting updated certification criteria available under the ONC Health IT Certification Program until December 31, 2022 (85 FR 70064).¹⁶⁵

The CMS Interoperability and Patient Access final rule (85 FR 25510) and program policies build on the ONC 21st Century Cures Act final rule (85 FR 25642). The CMS Interoperability and Patient Access final rule and policies require certain payers (for example, Medicare Advantage organizations, Medicaid and CHIP FFS programs, Medicaid managed care plans, CHIP managed care entities, and issuers of certain Qualified Health Plan [QHP] on the Federally-facilitated Exchanges [FHEs]) to implement and maintain a standards-based Patient Access API using HL7 FHIR Release 4.0.1 to make available certain data to their enrollees and beneficiaries (called "patients" in the CMS interoperability rule). These certain data include data concerning claims and encounters, with the intent to ensure access to their own health care information through third-party software applications. The rule also established new Conditions of Participation for Medicare and Medicaid participating hospitals and critical access hospitals (CAHs), requiring them to send electronic notifications to another healthcare facility or community provider or practitioner when a patient is admitted, discharged, or transferred if the hospital or CAH utilizes an electronic medical records system or other electronic administrative system which is conformant with the content exchange standard at 45 CFR 170.205(d)(2) (85 FR 25603). In the CY 2021 PFS final rule (85 FR 84472), we finalized a policy to align the certified EHR technology required for use in the Promoting Interoperability Programs and the MIPS Promoting Interoperability performance category with the updates to health IT certification criteria finalized in the ONC 21st Century Cures Act final rule. Under this policy, MIPS eligible clinicians, and eligible hospitals and CAHs participating in the Promoting Interoperability Programs, must use technology meeting the updated certification criteria for performance and reporting periods beginning in 2023 (85 FR 84825).

The use of APIs can also reduce longstanding barriers to quality measurement. Currently, health IT

¹⁶⁰ <https://www.cms.gov/files/document/2021-cms-quality-conference-cms-quality-measurement-action-plan-march-2021.pdf>.

¹⁶¹ CMS Quality Measure Action Plan: <https://www.cms.gov/files/document/2021-cms-quality-conference-cms-quality-measurement-action-plan-march-2021.pdf>.

¹⁶³ Application Programming Interfaces (API) Resource Guide, Version 1.0. Available at https://www.healthit.gov/sites/default/files/page/2020-11/API-Resource-Guide_v1_0.pdf.

¹⁶⁴ <https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi>.

¹⁶⁵ Information Blocking and the ONC Health IT Certification Program: Extension of Compliance Dates and Timeframes in Response to the Covid-19 Public Health Emergency. Available at <https://www.govinfo.gov/content/pkg/FR-2020-11-04/pdf/2020-24376.pdf>.

developers are required to implement individual measure specifications within their health IT products. The health IT developer must also accommodate how that product connects with the unique variety of systems within a specific care setting.¹⁶⁶ This may be further complicated by systems that integrate a wide range of data schemas. This process is burdensome and costly, and it is difficult to reliably obtain high quality data across systems. As health IT developers map their health IT data to the FHIR standard and related implementation specifications, APIs can enable these structured data to be easily accessible for quality measurement or other use cases, such as care coordination, clinical decision support, and supporting patient access.

We believe the emerging data standardization and interoperability enabled by APIs will support the transition to full digital quality measurement by 2025, and are committed to exploring and seeking input on potential solutions for the transition to digital quality measurement as described in this RFI.

(2) Definition of Digital Quality Measures

In this section we seek to refine the definition of digital quality measures (dQMs) to further operationalize our objective¹⁶⁷ of fully transitioning to dQMs by 2025. We previously noted dQMs use “sources of health information that are captured and can be transmitted electronically and via interoperable systems.” (85 FR 84845) In this RFI, we solicited input on future elaboration that would define a dQM as a software that processes digital data to produce a measure score or measure scores. Data sources for dQMs may include administrative systems, electronically submitted clinical assessment data, case management systems, EHRs, instruments (for example, medical devices and wearable devices), patient portals or applications (for example, for collection of patient-generated health data), health information exchanges (HIEs) or registries, and other sources. We also

note that dQMs are intended to improve the patient experience including quality of care, improve the health of populations, and/or reduce costs.

We discuss one potential approach to developing dQM software in section IV.A.1.c of this final rule. In this section, we solicited comments on the potential definition of dQMs in this RFI.

We also solicited feedback on how leveraging advances in technology (for example, FHIR APIs) to access and electronically transmit interoperable data for dQMs could reinforce other activities to support quality measurement and improvement (for example, the aggregation of data across multiple data sources, rapid-cycle feedback, and alignment of programmatic requirements).

The transition to dQMs relies on advances in data standardization and interoperability. As providers and payers work to implement the required advances in interoperability over the next several years, we will continue to support reporting of eQMs through CMS quality reporting programs and through the Promoting Interoperability programs.¹⁶⁸ These fully digital measures continue to be important drivers of interoperability advancement and learning. As discussed in the next section, CMS is currently re-specifying and testing these measures to use FHIR rather than the currently adopted Quality Data Model (QDM) in anticipation of the wider use of FHIR standards. CMS intends to apply significant components of the output of this work, such as the re-specified measure logic and the learning done through measure testing with FHIR APIs, to define and build future dQMs that take advantage of the expansion of standardized, interoperable data.

(3) Use of FHIR for Current eQMs

Since we adopted eQMs in our hospital and clinician quality programs, we have heard from stakeholders about the technological challenges, burden, and related costs of reporting eQM data. The CMS eQM Strategy Project engaged with stakeholders through site visits and listening sessions with health systems and provider organizations to learn about their experiences. This stakeholder feedback identified recommendations to improve processes related to alignment; development; implementation and reporting; certification; and communication, education, and outreach. Over the past 2 years, we have focused on opportunities to streamline and

modernize quality data collection and reporting processes, such as exploring FHIR® (<http://hl7.org/fhir>) as a framework for measure structure and data submission for quality reporting programs, specifically for eQMs. FHIR is a free and open source standards framework (in both commercial and government settings) created by Health Level Seven International (HL7®) that establishes a common language and process for all health information technology. FHIR allows systems to communicate and information to be shared seamlessly, with a lower burden for hospitals, providers, clinicians, vendors, and quality measurement stakeholders. Specifically, for quality reporting, FHIR enables representing the data in eQMs, as well as provides a structure for eQMs and reporting, using FHIR as the standard for all. Whereas today, multiple standards being used to report eQMs is challenging and burdensome.

We are working to convert current eQMs to the FHIR standard. We are currently testing the exchange of data elements represented in FHIR to CMS through ongoing HL7 Connectathons and integrated system testing by using and refining implementation guides. Submitting data through FHIR APIs has the potential to improve data exchange by providing consistent security, performance, scalability, and structure to all users. In addition, development of FHIR APIs could decrease provider burden by automating more of the measure data collection process. We continue to explore and expand potential applications of the FHIR standard and testing with eQM use cases, and we are considering a transition to FHIR-based quality reporting with the use of the FHIR standard for eQMs in quality and value-based reporting programs. As we move to an all-dQM format for quality programs, we are depending on testing results and community readiness to improve interoperability, reduce burden, and facilitate better patient care. We will continue to consider how to leverage the interoperability advantages offered by the FHIR standards and API-based data submission, including digital quality measurement.

(4) Changes Under Consideration To Advance Digital Quality Measurement: Potential Actions in Four Areas To Transition to Digital Quality Measures by 2025

Building on the advances in interoperability and learning from testing of FHIR-converted eQMs, we aim to move fully to dQMs, originating from sources of health information that

¹⁶⁶ The Office of the National Coordinator for Health Information Technology, Strategy on Reducing Regulatory and Administrative Burden Relating to the Use of Health IT and EHRs, Final Report (Feb. 2020). Available at https://www.healthit.gov/sites/default/files/page/2020-02/BurdenReport_0.pdf.

¹⁶⁷ Centers for Medicare and Medicaid Services. 2021 CMS Quality Conference: CMS Quality Measurement Action Plan. 2021. <https://www.cms.gov/files/document/2021-cms-quality-conference-cms-quality-measurement-action-plan-march-2021.pdf>.

¹⁶⁸ eCQI Resource Center, <https://ecqi.healthit.gov/>.

are captured and can be transmitted electronically via interoperable systems, by 2025.

To enable this transformation, we are considering further modernization of the quality measurement enterprise in four major ways: (1) Leverage and advance standards for digital data and obtain all EHR data required for quality measures via provider FHIR-based APIs; (2) redesign our quality measures to be self-contained tools; (3) better support data aggregation; and (4) work to align measure requirements across our reporting programs, other Federal programs and agencies, and the private sector where appropriate.

These changes would enable us to collect and utilize more timely, actionable, and standardized data from diverse sources and care settings to improve the scope and quality of data used in quality reporting and payment programs, reduce quality reporting burden, and make results available to stakeholders in a rapid-cycle fashion. Data collection and reporting efforts would become more efficient, supported by advances in interoperability and data standardization. Aggregation of data from multiple sources would allow assessments of costs and outcomes to be measured across multiple care settings for an individual patient or clinical conditions. We believe that aggregating data for measurement can incorporate a more holistic assessment of an individual's health and health care and produce the rich set of data needed to enable patients and caregivers to make informed decisions by combining data from multiple sources (for example, patient reported data, EHR data, and claims data) for measurement.

Perhaps most importantly, these steps would help us deliver on the full promise of quality measurement and drive us toward a learning health system that transforms healthcare quality, safety, and coordination and effectively measures and achieves value-based care. The shift from a static to a learning health system hinges on the interoperability of healthcare data, and the use of standardized data. dQMs would leverage this interoperability to deliver on the promise of a learning health system wherein standards-based data sharing and analysis, rapid-cycle feedback, and quality measurement and incentives are aligned for continuous improvement in patient-centered care. Similarly, standardized, interoperable data used for measurement can also be used for other use cases, such as clinical decision support, care coordination and care decision support, which impacts health care and care quality.

We solicited comments on four potential future actions that would enable transformation to a fully digital quality measurement enterprise by 2025.

(a) Leveraging and Advancing Standards for Digital Data and Obtaining All EHR Data Required for Quality Measures via Provider FHIR-Based APIs

We are considering targeting the data required for our quality measures that utilize EHR data to be data retrieved via FHIR-based APIs based on standardized, interoperable data. Utilizing standardized data for EHR-based measurement (based on FHIR and associated implementation guides) and aligning where possible with interoperability requirements can eliminate the data collection burden providers currently experience with required chart-abstracted quality measures and reduce the burden of reporting digital quality measure results. We can fully leverage this advance to adapt eQMs and expand to other dQMs through the adoption of interoperable standards across other digital data sources. We are considering methods and approaches to leverage the interoperability data requirements for APIs in certified health IT set by the ONC 21st Century Cures Act final rule to support modernization of CMS quality measure reporting. As discussed previously, these requirements will be included in certified technology in future years (85 FR 84825) including availability of data included in the USCDI via standards-based APIs, and CMS will require clinicians and hospitals participating in MIPS and the Promoting Interoperability Programs, respectively, to transition to use of certified technology updated consistent with the 2015 Cures Edition Update (85 FR 84825).

Digital data used for measurement could also expand beyond data captured in traditional clinical settings, administrative claims data, and EHRs. Many important data sources are not currently captured digitally, such as survey and PGHD. We intend to work to innovate and broaden the digital data used across the quality measurement enterprise beyond the clinical EHR and administrative claims. Agreed upon standards for these data, and associated implementation guides will be important for interoperability and quality measurement. We will consider developing clear guidelines and requirements for these digital data that align with interoperability requirements, for example, requirements for expressing data in standards, exposing data via standards-based APIs,

and incentivizing technologies that innovate data capture and interoperability.

High quality data are also essential for reliable and valid measurement. Hence, in implementing the shift to collect all clinical EHR data via FHIR-based APIs, we would support efforts to strengthen and test the quality of the data obtained through FHIR-based APIs for quality measurement. We currently conduct audits of electronic data submitted to the Hospital IQR Program with functions including checks for data completeness and data accuracy, confirmation of proper data formatting, alignment with standards, and appropriate data cleaning (82 FR 38398 through 38402). These functions would continue and be applied to dQMs and further expanded to automate the manual validation of the data compared to the original data source (for example, the medical record) where possible. Analytic advancements such as natural language processing, big data analytics, and artificial intelligence, can support this evolution. These techniques can be applied to validating observed patterns in data and inferences or conclusions drawn from associations, as data are received, to ensure high quality data are used for measurement.

We solicited feedback on the goal of aligning data needed for quality measurement with interoperability requirements and the strengths and limitations of this approach. We also solicited feedback on the importance of and approaches to supporting inclusion of PGHD and other currently non-standardized data. We also welcome comment on approaches for testing data quality and validity.

(b) Redesigning Quality Measures To Be Self-Contained Tools

We are considering approaches for including quality measures that take advantage of standardized data and interoperability requirements that have expanded flexibility and functionality compared to CMS' current eQMs. We are considering defining and developing dQM software as end-to-end measure calculation solutions that retrieve data from primarily FHIR-based resources maintained by providers, payers, CMS, and others; calculate measure score(s), and produce reports. In general, we believe to optimize the use of standardized and interoperable data, the software solution for dQMs should do the following:

- Have the flexibility to support calculation of single or multiple quality measure(s).
- Perform three functions—

++ Obtain data via automated queries from a broad set of digital data sources (initially from EHRs, and in the future from claims, PRO, and PGHD);

++ Calculate the measure score according to measure logic; and

++ Generate measure score report(s).

- Be compatible with any data source systems that implement standard interoperability requirements.

- Exist separately from digital data source(s) and respect the limitations of the functionality of those data sources.

- Be tested and updated independently of the data source systems.

- Operate in accordance with health information protection requirements under applicable laws and comply with governance functions for health information exchange.

- Have the flexibility to be deployed by individual health systems, health IT vendors, data aggregators, and health plans; and/or run by CMS depending on the program and measure needs and specifications.

- Be designed to enable easy installation for supplemental uses by medical professionals and other non-technical end-users, such as local calculation of quality measure scores or quality improvement.

- Have the flexibility to employ current and evolving advanced analytic approaches such as natural language processing.

- Be designed to support pro-competitive practices for development, maintenance, and implementation, as well as diffusion of quality measurement and related quality improvement and clinical tools through, for example, the use of open-source core architecture.

We solicited comments on these suggested functionalities and other additional functionalities that quality measure tools should ideally have particularly in the context of the possible expanding availability of standardized and interoperable data (for example, standardized EHR data available via FHIR-based APIs).

We are also interested whether and how this more open, agile strategy may facilitate broader engagement in quality measure development, the use of tools developed for measurement for local quality improvement, and/or the application of quality tools for related purposes such as public health or research.

(c) Building a Pathway to Data Aggregation in Support of Quality Measurement

Using multiple sources of collected data to inform measurement would

reduce data fragmentation (or, different pieces of data regarding a single patient stored in many different places).

Additionally, we are considering expanding and establishing policies and processes for data aggregation and measure calculation by third-party aggregators that include, but are not limited to, HIEs and clinical registries. Health IT vendors that meet the requirements of a Qualified Clinical Data Registries (QCDRs) and qualified registries that report quality measures for eligible clinicians in the MIPS program are potential examples¹⁶⁹ at section IV.A.3.g. of this final rule and can also support measure reporting.

We solicited feedback on aggregation of data from multiple sources to inform measurement and potential policy considerations. We also solicited feedback on the role data intermediaries can and should play in CMS quality measure reporting in collaboration with providers, and how we can best facilitate and enable aggregation.

(d) Potential Future Alignment of Measures Across Reporting Programs, Federal and State Agencies, and the Private Sector

We are committed to using policy levers and working with stakeholders to solve the issue of interoperable data exchange and to transition to full digital quality measurement. We are considering the future potential development and multi-staged implementation of a common portfolio of dQMs across our regulated programs, agencies, and private payers. This common portfolio would require alignment of: (1) Measure concepts and specifications including narrative statements, measure logic, and value sets; and (2) the individual data elements used to build these measure specifications and calculate the measure logic. Further, the required data elements would be limited to standardized, interoperable data elements to the fullest extent possible; hence, part of the alignment strategy will be the consideration and advancement of data standards and implementation guides for key data elements. We would coordinate closely with quality measure developers, Federal and State agencies, and private payers to develop and to maintain a cohesive dQM portfolio that meets our programmatic requirements and that

fully aligns across Federal and State agencies and payers to the extent possible.

We intend for this coordination to be ongoing and allow for continuous refinement to ensure quality measures remain aligned with evolving healthcare practices and priorities (for example, PROs, disparities, and care coordination), and track with the transformation of data collection, alignment with health IT module updates including capabilities and standards adopted by ONC (for example, standards to enable APIs). It would focus on the quality domains of safety, timeliness, efficiency, effectiveness, equitability, and patient-centeredness. It would leverage several existing Federal and public-private efforts including our Meaningful Measures 2.0 Framework; the Federal Electronic Health Record Modernization (Department of Defense and Veterans Affairs [DoD/VA]); the Agency for Healthcare Research and Quality's Clinical Decision Support Initiative; the Centers for Disease Control and Prevention's Adapting Clinical Guidelines for the Digital Age initiative; Core Quality Measure Collaborative, which convenes stakeholders from America's Health Insurance Plans (AHIP), CMS, National Quality Forum (NQF), provider organizations, private payers, and consumers and develops consensus on quality measures for provider specialties; and the NQF-convened Measure Applications Partnership (MAP), which recommends measures for use in public payment and reporting programs. We would coordinate with HL7's ongoing work to advance FHIR resources in critical areas to support patient care and measurement such as social determinants of health. Through this coordination, we would identify which existing measures could be used or evolved to be used as dQMs, in recognition of current healthcare practice and priorities.

This multi-stakeholder, joint Federal, State, and industry effort, made possible and enabled by the pending advances towards true interoperability, would yield a significantly improved quality measurement enterprise. The success of the dQM portfolio would be enhanced by the degree to which the measures achieve our programmatic requirements for measures, as well as the requirements of other agencies and payers.

We solicited feedback on initial priority areas for the dQM portfolio given evolving interoperability requirements (for example, measurement areas, measure requirements, tools, and data standards).

¹⁶⁹ Calendar Year (CY) 2021 Physician Fee Schedule Final Rule: Finalized (New and Updated) Qualified Clinical Data Registry (QCDR) and Qualified Registry Policies, <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1362/QCDR%20and%20QR%20Updates%202021%20Final%20Rule%20Fact%20Sheet.pdf>.

We also seek to identify opportunities to collaborate with other Federal agencies, States, and the private sector to adopt standards and technology-driven solutions to address our quality measurement priorities across sectors.

(5) Solicitation of Comments

As noted previously, we solicited input on the future development of the following:

(a) Definition of Digital Quality Measures

We solicited feedback on the following as described in section IV.A.1.c. of this final rule:

- Do you have feedback on the dQM definition?
- Does this approach to defining and deploying dQMs to interface with FHIR-based APIs seem promising? We also welcome more specific comments on the attributes or functions to support such an approach of deploying dQMs.

(b) Use of FHIR for Current eQMs

We solicited feedback on the following as described in section IV.A.1.c. of this final rule:

- Do you agree that a transition to FHIR-based quality reporting can reduce burden on health IT vendors and providers? Please explain if you do not agree.
- Would access to near real-time quality measure scores benefit your practice? How so?
- What parts of the current CMS QRDA IGs cause the most burden (please explain the primary drivers of burden)?
- In what ways could a CMS FHIR Reporting IG be crafted to reduce burden on providers and vendors?

(c) Changes Under Consideration To Advance Digital Quality Measurement

Actions in Four Areas to Transition to Digital Quality Measures by 2025.

- We solicited feedback on the following as described in section IV.A.1.c. of this final rule:
 - ++ Do you agree with the goal of aligning data needed for quality measurement with interoperability requirements? What are the strengths and limitations of this approach? Are there specific FHIR Implementation Guides suggested for consideration?
 - ++ How important is a data standardization approach that also supports inclusion of PGHD and other currently non-standardized data?
 - ++ What are possible approaches for testing data quality and validity?
 - We solicited feedback on the following as described in section IV.A.1.c. of this final rule:

++ What functionalities, described in section (4)(b) or others, should quality measure tools ideally have in the context of the pending availability of standardized and interoperable data (for example, standardized EHR data available via FHIR-based APIs)?

++ How would this more open, agile strategy for end-to-end measure calculation facilitate broader engagement in quality measure development, the use of tools developed for measurement for local quality improvement, and/or the application of quality tools for related purposes such as public health or research?

• We solicited feedback on the following as described in section IV.A.1.c. of this final rule:

++ What are key policy considerations for aggregation of data from multiple sources being used to inform measurement?

++ What role can or should data aggregators play in CMS quality measure reporting in collaboration with providers? How can CMS best facilitate and enable aggregation?

• We solicited feedback on the following as described in section IV.A.1.c. of this final rule:

++ What are initial priority areas for the dQM portfolio given evolving interoperability requirements (for example, measurement areas, measure requirements, tools)?

++ We also seek to identify opportunities to collaborate with other Federal agencies, States, and the private sector to adopt standards and technology-driven solutions to address our quality measurement priorities and across sectors.

Commenters should consider provisions in the CMS Interoperability and Patient Access final rule (85 FR 25510), CMS CY 2021 PFS final rule (85 FR 84472), and the ONC 21st Century Cures Act final rule (85 FR 25642).

We plan to continue working with other agencies and stakeholders to coordinate and to inform any potential transition to dQMs by 2025. While we will not be responding to specific comments submitted in response to this Request for Information in the CY 2022 PFS final rule, we will actively consider all input as we develop future regulatory proposals or future subregulatory policy guidance. Any updates to specific program requirements related to quality measurement and reporting provisions may be addressed through separate and future notice-and-comment rulemaking, as necessary.

We thank commenters for the feedback received through this request for information. We may consider this

information to inform future rulemaking.

d. Closing the Health Equity Gap in CMS Clinician Quality Programs—Request for Information (RFI)

Persistent inequities in health care outcomes exist in the United States, including among Medicare patients.¹⁷⁰ In recognition of persistent health disparities and the importance of closing the health equity gap, we request information on revising several related CMS programs to make reporting of health disparities based on social risk factors and race and ethnicity more comprehensive and actionable for hospitals, providers, and patients. The following is part of an ongoing effort across CMS to evaluate appropriate initiatives to reduce health disparities. Feedback will be used to inform the creation of a future, comprehensive, RFI focused on closing the health equity gap in CMS programs and policies (86 FR 25554 through 25556).

Belonging to a racial or ethnic minority group; living with a disability; being a member of the lesbian, gay, bisexual, transgender, and queer (LGBTQ+) community; living in a rural area; or being near or below the poverty level, is often associated with worse health outcomes.^{171 172 173 174 175 176 177 178} Such disparities in health outcomes are the result of number of factors, but importantly for CMS programs, although not the sole determinant, poor access and provision of lower quality health care contribute to health disparities. For instance, numerous studies have shown

¹⁷⁸ Poteat TC, Reisner SL, Miller M, Wirtz AL. COVID–19 Vulnerability of Transgender Women With and Without HIV Infection in the Eastern and Southern U.S. Preprint. medRxiv. 2020;2020.07.21.20159327. Published 2020 Jul 24. doi:10.1101/2020.07.21.20159327.

among Medicare beneficiaries, racial and ethnic minority individuals often receive lower quality of care, report lower experiences of care, and experience more frequent hospital readmissions and procedural complications.^{179 180 181 182 183 184}

We are committed to achieving equity in health care outcomes for Medicare beneficiaries by supporting providers in quality improvement activities to reduce health inequities, enabling them to make more informed decisions, and promoting provider accountability for health care disparities.¹⁸⁵ For the purposes of this rule, we are using a definition of equity established in Executive Order 13985, issued on January 25, 2021, as “the consistent and systematic fair, just, and impartial treatment of all individuals, including individuals who belong to underserved communities who have been denied such treatment, such as Black, Latino, and Indigenous and Native American persons, Asian Americans and Pacific Islanders and other persons of color; members of religious minorities; lesbian, gay, bisexual, transgender, and queer (LGBTQ+) persons; persons with disabilities; persons who live in rural areas; and persons otherwise adversely affected by persistent poverty or inequality.”¹⁸⁶ We note this definition was recently established and provides a useful, common definition for equity across different areas of government,

although numerous other definitions of equity exist.

Our ongoing commitment to closing the equity gap in CMS quality programs is demonstrated by a portfolio of programs aimed at making information on the quality of health care providers and services, including disparities, more transparent to consumers and providers. The CMS Equity Plan for Improving Quality in Medicare outlines a path to equity which aims to support Quality Improvement Network Quality Improvement Organizations (QIN-QIOs); Federal, State, local, and tribal organizations; providers; researchers; policymakers; beneficiaries and their families; and other stakeholders in activities to achieve health equity.¹⁸⁷ The CMS Equity Plan for Improving Quality in Medicare focuses on three core priority areas which inform our policies and programs: (1) Increasing understanding and awareness of health disparities; (2) developing and disseminating solutions to achieve health equity; and (3) implementing sustainable actions to achieve health equity.¹⁸⁸ The CMS Quality Strategy¹⁸⁹ and Meaningful Measures Framework¹⁹⁰ also include elimination of racial and ethnic disparities as central principles. Our efforts aimed at closing the health equity gap to date have included providing transparency of health disparities, supporting providers with evidence-informed solutions to achieve health equity, and reporting to providers on gaps in quality as follows:

- *The CMS Mapping Medicare Disparities Tool* which is an interactive map which identifies areas of disparities and is a starting point to understand and investigate geographic, racial and ethnic differences in health outcomes for Medicare patients.¹⁹¹
- *The Racial, Ethnic, and Gender Disparities in Health Care in Medicare*

Advantage Stratified Report, which highlights racial and ethnic differences in health care experiences and clinical care, compares quality of care for women and men, and looks at racial and ethnic differences in quality of care among women and men separately for Medicare Advantage plans.¹⁹²

- *The Rural-Urban Disparities in Health Care in Medicare Report* which details rural-urban differences in health care experiences and clinical care.¹⁹³

- *The Standardized Patient Assessment Data Elements* for certain post-acute care Quality Reporting Programs, which now includes data reporting for race and ethnicity and preferred language, in addition to screening questions for social needs (84 FR 42536 through 42588)

- *The CMS Innovation Center's Accountable Health Communities Model* which includes standardized collection of health-related social needs data.

- *The Guide to Reducing Disparities* which provides an overview of key issues related to disparities in readmissions and reviews set of activities which can help hospital leaders reduce readmissions in diverse populations.¹⁹⁴

- *The CMS Disparity Methods* which provide hospital-level confidential results stratified by dual eligibility for condition-specific readmission measures currently included in the Hospital Readmissions Reduction Program (see 84 FR 42496 through 42500 for a discussion of using stratified data in additional measures).

These programs are informed by reports by the National Academies of Science, Engineering and Medicine (NASEM)¹⁹⁵ and the Office of the Assistant Secretary for Planning and Evaluation (ASPE)¹⁹⁶ which have examined the influence of social risk factors on several of our quality programs. In this RFI, we discuss

initiatives specific to further bridging the health equity gap within the MIPS track of the Quality Payment Program.

In Appendix 2: Improvement Activities of this final rule, we discussed an improvement activity titled “create and implement an anti-racism plan”. This improvement activity acknowledges it is insufficient to gather and analyze data by race, and document disparities by different population groups. Rather, it emphasizes systemic racism is the root cause for differences in health outcomes between socially defined racial groups. Further, we also proposed to modify five existing improvement activities to address health equity. We note that some improvement activities within our current Inventory already aim to improve equity. We believe further modifying them can more explicitly link the activity to health equity without changing the core activity. In other cases, our proposals to modify an activity fundamentally shifts the activity to focus on health equity specifically.

Additionally, in the CY 2022 PFS proposed rule (86 FR 39439 through 39446), we proposed to update the complex patient bonus formula. We specifically refer to ASPE’s second report, Social Risk and Performance in Medicare’s Value-Based Purchasing Programs, which was publicly-released in May 2020.¹⁹⁷ The second report builds on the analyses included in the initial report and provides additional insight for addressing risk factors in MIPS and other value-based payment programs. More specifically, the report has a 3-pronged strategy approach to: Measure and report quality; set high, fair quality standards; and reward and support better outcomes for beneficiaries with social risk. As a part of this 3-pronged strategy, the report supports use of the complex patient bonus in MIPS, explaining that it is well supported because this policy gives additional points to clinicians with a higher share of medically and socially complex patients and does not lower the standard of care. Hence, although, ASPE’s reports to Congress support the use of a complex patient bonus at the final score level, we respond to other findings reported in other literature studies by identifying ways to make the complex patient bonus more targeted for clinicians caring for high risk and complex patients and to mitigate differences in resources that affect MIPS scores. Hence, the proposed formula is

based on standardized scores and to reward only those clinicians who fall in higher quintiles in order to focus the bonus on those serving a higher proportion of more complex and vulnerable patients.

Lastly, we acknowledge that small practices within the MIPS program often face challenges in many ways. More specifically, as noted in section IV.A.3.e.(2) of this final rule, the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). In response to the feedback on the potential burden on small practices, we have established special policies available for small practices including the small practice bonus and special scoring policies. For example, in the CY 2018 QPP final rule (82 FR 53682 through 53683), we established a significant hardship exception for small practices for the Promoting Interoperability performance category. To further alleviate the burden on small practices and reduce this disparity between large and small practices, we proposed in section IV.A.3.d.(4) to automatically redistribute the Promoting Interoperability performance category weight for any small practice that does not submit data for the performance category, and in section IV.A.3.e.(2), we proposed different redistribution weights for small practices.

We are committed to advancing health equity by improving data collection to better measure and analyze disparities across programs and policies.¹⁹⁸ We have been considering, among other things, expanding our efforts to provide stratified data for additional social risk factors and measures, optimizing the ease-of-use of the results, enhancing public transparency of equity results, and building towards provider accountability for health equity. We solicited public comments on two potential future expansions of the CMS Disparity Methods, including: (1) Future potential stratification of quality measure results by race and ethnicity, and (2) improving demographic data collection.

(1) Future Potential Stratification of Quality Measure Results by Race and Ethnicity

The Administration’s *Executive Order on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government* directs agencies to assess potential barriers that underserved communities and individuals may face to enrollment in and access to benefits and services in Federal programs. As summarized previously, studies have shown that among Medicare beneficiaries, racial and ethnic minority persons often experience worse health outcomes, including more frequent hospital readmissions and procedural complications. We are considering expanding the disparity methods to include stratification of the condition/procedure-specific readmission measures by race and ethnicity. The 1997 Office of Management and Budget (OMB) Revisions to the Standards for the Collection of Federal Data on Race and Ethnicity, outlines the racial and ethnic categories which may potentially be used for reporting the disparity methods, which we note are intended to be considered as social and cultural, and not biological or genetic.¹⁹⁹ The 1997 OMB Standard lists five minimum categories of race: (1) American Indian or Alaska Native; (2) Asian; (3) Black or African American; (4) Native Hawaiian or Other Pacific Islander; (5) and White. In the OMB standards, Hispanic or Latino is the only ethnicity category included, and since race and ethnicity are two separate and distinct concepts, persons who report themselves as Hispanic or Latino can be of any race.²⁰⁰ Another example, the “Race & Ethnicity—CDC” code system in PHIN Vocabulary Access and Distribution System (VADS)²⁰¹ permits a much more granular structured recording of a patient’s race and ethnicity with its inclusion of over 900 concepts for race and ethnicity. The recording and exchange of patient race and ethnicity at such a granular level can facilitate the accurate identification and analysis of health disparities based on race and ethnicity. Further, the “Race & Ethnicity—CDC” code system has a hierarchy that rolls up to the OMB

minimum categories for race and ethnicity and, thus, supports aggregation and reporting using the OMB standard. ONC includes both the CDC and OMB standards in its criterion for certified health IT products.²⁰² For race and ethnicity, a certified health IT product must be able to express both detailed races and ethnicities using *any* of the 900 plus concepts in the “Race & Ethnicity—CDC” code system in the Public Health Information Network (PHIN) Vocabulary Access and Distribution Systems (VADS), as well as aggregate each one of a patient’s races and ethnicities to the categories in the OMB standard for race and ethnicity. This approach can reduce burden on providers recording demographics using certified products.

Self-reported race and ethnicity data are the gold standard for classifying an individual according to race or ethnicity. However, CMS currently does not consistently collect self-reported race and ethnicity for the Medicare program, but instead gets the data from the Social Security Administration (SSA) and the data accuracy and comprehensiveness have proven challenging despite capabilities in the marketplace via certified health IT products. Historical inaccuracies in Federal data systems and limited collection classifications have also contributed to the limited quality of race and ethnicity information in our administrative data systems.²⁰³ In recent decades, to address these data quality issues, we have undertaken numerous initiatives, including updating data taxonomies and conducting direct mailings to some beneficiaries to enable more comprehensive racial and ethnic identification.²⁰⁴ ²⁰⁵ Despite those efforts, studies reveal varying data accuracy in identification of racial and ethnic groups in Medicare administrative data, with higher sensitivity for correctly identifying white and Black individuals, and lower sensitivity for correctly identifying individuals of Hispanic ethnicity or of

Asian/Pacific Islander (API) and American Indian/Alaskan Native race.²⁰⁶ Incorrectly classified race or ethnicity may result in overestimation or underestimation in the quality of care received by certain groups of beneficiaries.

We continue to work with public and private partners to better collect and leverage data on social risk to improve our understanding of how these factors can be better measured in order to close the health equity gap. Among other things, we have developed an Inventory of Resources for Standardized Demographic and Language Data Collection²⁰⁷ and supported collection of specialized International Classification of Disease, 10th Edition, Clinical Modification (ICD–10–CM) codes for describing the socioeconomic, cultural, and environmental determinants of health, and sponsored several initiatives to statistically estimate race and ethnicity information when it is absent.²⁰⁸ The Office of the National Coordinator for Health Information Technology (ONC) included social, psychological, and behavioral standards in the 2015 Edition health information technology certification criteria (2015 Edition), providing interoperability standards (LOINC [Logical Observation Identifiers Names and Codes] and SNOMED CT [Systematized Nomenclature of Medicine—Clinical Terms]) for financial strain, education, social connection and isolation, and others. Additional stakeholder efforts underway to expand capabilities to capture additional social determinants of health data elements include the Gravity Project to identify and harmonize social risk factor data for interoperable electronic health information exchange for EHR fields, as well as proposals to expand the ICD–10 (International Classification of Diseases, Tenth Revision) z-codes, the

alphanumeric codes used worldwide to represent diagnoses.²⁰⁹

While development of sustainable and consistent programs to collect data on social determinants of health can be considerable undertakings, we recognize that another method to identify better race and ethnicity data is needed in the short term to address the need for reporting on health equity. In working with our contractors, two algorithms have been developed to *indirectly estimate* the race and ethnicity of Medicare beneficiaries (as described further in the next section). We believe that using indirect estimation can help to overcome the current limitations of demographic information and enable timelier reporting of equity results until longer term collaborations to improve demographic data quality across the health care sector materialize. The use of indirect estimated race and ethnicity for conducting stratified reporting does not place any additional collection or reporting burdens on hospitals as these data are derived using existing administrative and census-linked data.

Indirect estimation relies on a statistical imputation method for inferring a missing variable or improving an imperfect administrative variable using a related set of information that is more readily available.²¹⁰ Indirectly estimated data are most commonly used at the population level (such as the hospital or health plan-level) where aggregated results form a more accurate description of the population than existing, imperfect data sets. These methods often estimate race and ethnicity using a combination of other data sources which are predictive of self-identified race and ethnicity, such as language preference, information about race and ethnicity in our administrative records, first and last names matched to validated lists of names correlated to specific national origin groups, and the racial and ethnic composition of the surrounding neighborhood. Indirect estimation has been used in other settings to support population-based equity measurement when self-identified data are not available.²¹¹

As described earlier, we previously supported the development of two such methods of indirect estimation of race

and ethnicity among Medicare beneficiaries. One indirect estimation approach developed by our contractor uses Medicare administrative data, first name and surname matching, derived from the U.S. Census and other sources, with beneficiary language preference, State of residence, and the source of the race and ethnicity code in Medicare administrative data to reclassify some beneficiaries as Hispanic or API.²¹² In recent years, we have also worked with another contractor to develop a new approach, the Medicare Bayesian Improved Surname Geocoding (MBISG), which combines Medicare administrative data, first and surname matching, geocoded residential address linked to the 2010 U.S. Census, and uses both Bayesian updating and multinomial logistic regression to estimate the probability of belonging to each of six racial/ethnic groups.²¹³

The MBISG model is currently used to conduct the national, contract-level, stratified reporting of Medicare Part C and D performance data for Medicare Advantage Plans by race and ethnicity.²¹⁴ Validation testing reveals concordance of 0.88–0.95 between indirectly estimated and self-report among individuals who identify as White, Black, Hispanic and API for the MBISG version 2.0 and concordance of 0.96–0.99 for these same groups for MBISG version 2.1.^{215 216} The algorithms

under consideration are considerably less accurate for individuals who self-identify as American Indian/Alaskan Native or multiracial.²¹⁷ Indirect estimation can be a statistically reliable approach for calculating population-level equity results for groups of individuals (such as the hospital-level) and is not intended, nor being considered, as an approach for inferring the race and ethnicity of an individual.

However, despite the high degree of statistical accuracy of the indirect estimation algorithms under consideration, there remains the small risk of unintentionally introducing measurement bias. For example, if the indirect estimation is not as accurate in correctly estimating race and ethnicity in certain geographies or populations it could lead to some bias in the method results. Such bias might result in slight overestimation or underestimation of the quality of care received by a given group. We believe this amount of bias is considerably less than would be expected if stratified reporting was conducted using the race and ethnicity currently contained in our administrative data. Indirect estimation of race and ethnicity is envisioned as an intermediate step, filling the pressing need for more accurate demographic information for the purposes of exploring inequities in service delivery, while allowing newer approaches, as described in the next section, for improving demographic data collection to progress. We are interested in learning more about, and solicited comments about, the potential benefits and challenges associated with measuring hospital equity using an imputation algorithm to enhance existing administrative data quality for race and ethnicity until self-reported information is sufficiently available.

(2) Improving Demographic Data Collection

Currently self-reported race and ethnicity data are the gold standard for classifying an individual according to race or ethnicity. The CMS Quality Strategy outlines our commitment to strengthening infrastructure and data systems by ensuring that standardized

demographic information is collected to identify disparities in health care delivery outcomes.²¹⁸ Collection and sharing of a standardized set of social, psychological, and behavioral data by clinicians, including race and ethnicity, using electronic data definitions which permit nationwide, interoperable health information exchange, can significantly enhance the accuracy and robustness of our equity reporting.²¹⁹ This could potentially include expansion to additional social factors, such as language preference and disability status, where accuracy of administrative data is currently limited. We are mindful that additional resources, including data collection and staff training may be necessary to ensure that conditions are created whereby all patients are comfortable answering all demographic questions, and that individual preferences for non-response are maintained.

We note that clinicians participating in the Medicare Promoting Interoperability Program must use certified EHR technology (CEHRT) that has been certified to the 2015 Edition of health IT certification criteria. As noted previously, the certification criterion for Demographics under the 2015 Edition (at 45 CFR 170.315(a)(5)) supports collection of data using both the OMB standards for collecting data on race and ethnicity, as well as the more granular “Race & Ethnicity—CDC” standard. In the 2020 ONC 21st Century Cures Act final rule, ONC also adopted a new framework for the core data set which certified health IT products must exchange, called the United States Core Data for Interoperability (USCDI) (85 FR 25669). The USCDI incorporates the demographic data and associated code sets finalized for the 2015 Edition certification criteria.

As noted previously, ONC also finalized a certification criterion in the 2015 Edition which supports a certified health IT products ability to collect social, psychological, and behavioral data (at 45 CFR 170.315(a)(15)). However, this functionality is not included as part of the certified EHR technology required by the Promoting Interoperability performance category. While the technical functionality exists to achieve the gold standard of data

²¹⁹ The Office of the National Coordinator for Health Information Technology. United States Core Data for Interoperability Draft Version 2. 2021. <https://www.healthit.gov/isa/sites/isa/files/2021-01/Draft-USCDI-Version-2-January-2021-Final.pdf>.

collection, we understand challenges and barriers exist in using the technologies with these capabilities.

We are interested in learning about, and solicited comments on, current data collection practices by hospitals to capture demographic data elements (such as race, ethnicity, sex, sexual orientation and gender identity (SOGI), language preference, tribal membership, and disability status). Further, we are interested in potential challenges facing clinicians with collecting a minimum set of demographic data elements in alignment with national data collection standards (such as the standards finalized by the Affordable Care Act ²²⁰) and standards for interoperable exchange (such as the United States Core Data for Interoperability incorporated into certified health IT products as part of the 2015 Edition of health IT certification criteria ²²¹). Advancing data interoperability through collection of a minimum set of demographic data collection, and incorporation of this demographic information into quality measure specifications, has the potential for improving the robustness of the disparity method results, potentially permitting reporting using more accurate, self-reported, information, such as race and ethnicity, and expanding reporting to additional dimensions of equity, including stratified reporting by disability status.

Therefore, based on our current and newly proposed policies, we solicited comments on other efforts we can take within the MIPS program to further bridge the equity gap. We plan to continue working with ASPE, clinicians, the public, and other key stakeholders on this important issue to identify policy solutions to achieve the goals of attaining health equity for all patients and minimizing unintended consequences. We look forward to receiving feedback on these topics and note for readers that responses to the RFI will not directly impact payment decisions. We also note our intention for additional RFI or rulemaking on this topic in the future. While we will not be responding to specific comments submitted in response to this Request for Information in the CY 2022 PFS final rule, we will actively consider all input as we develop future regulatory proposals or future subregulatory policy guidance.

We thank commenters for the feedback received through this request

for information. We may consider this information to inform future rulemaking.

2. Definitions

At § 414.1305, we proposed definitions of the following terms:

- Collection type (revision).
- Meaningful EHR user for MIPS (revision).
- MIPS determination period (revision).
- MIPS eligible clinician (revision).
- Multispecialty group (addition).
- MVP Participant (addition).
- Population health measure (addition).
- QCDR measure (addition).
- Single specialty group (addition).
- Special status (addition).
- Subgroup (addition).
- Submission type (revision).

These terms and definitions are discussed in detail in the relevant sections of this final rule.

3. MIPS Program Details

a. MIPS Eligibility

(1) MIPS Eligible Clinician Definition

In the CY 2017 Quality Payment Program final rule (81 FR77040 through 77041), we defined a MIPS eligible clinician at § 414.1305, as identified by a unique billing TIN and NPI combination used to assess performance, as any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act), a PA, NP, and CNS (as such terms are defined in section 1861(aa)(5) of the Act), a CRNA (as defined in section 1861(bb)(2) of the Act), and a group that includes such clinicians. We established at § 414.1310(b) and (c) that the following are excluded from this definition per the statutory exclusions defined in section 1848(q)(1)(C)(ii) and (v) of the Act: (1) QPs; (2) Partial QPs who choose not to report on applicable measures and activities that are required to be reported under MIPS for any given performance period in a year; (3) low-volume threshold eligible clinicians; and (4) new Medicare-enrolled eligible clinicians. In accordance with sections 1848(q)(1)(A) and (q)(1)(C)(vi) of the Act, we established at § 414.1310(b)(2) that eligible clinicians (as defined at § 414.1305) who are not MIPS eligible clinicians have the option to voluntarily report measures and activities for MIPS. Additionally, we established at § 414.1310(d) that in no case will a MIPS payment adjustment apply to the items and services furnished during a year by eligible clinicians who are not MIPS eligible clinicians, as described in

§ 414.1310(b) and (c), including those who voluntarily report on applicable measures and activities specified under MIPS. In this final rule, we are finalizing our proposal to amend § 414.1305 to revise the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to include certified nurse midwives (CNMs) (as defined in section 1861(gg)(2) of the Act) and clinical social workers (as defined in section 1861(hh)(1) of the Act).

Section 1848(q)(1)(C)(i)(II) of the Act provides the Secretary with discretion, beginning with the 2021 MIPS payment year, to specify additional eligible clinicians (as defined in section 1848(k)(3)(B) of the Act) as MIPS eligible clinicians. Such clinicians may include physical therapists, occupational therapists, or qualified speech-language pathologists; qualified audiologists (as defined in section 1861(ll)(3)(B) of the Act); CNMs (as defined in section 1861(gg)(2) of the Act); clinical social workers (as defined in section 1861(hh)(1) of the Act); clinical psychologists (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietitians or nutrition professionals. Therefore, in the CY 2019 PFS proposed rule (83 FR 35883 through 35884), we proposed to amend § 414.1305 to revise the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to mean any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a PA, NP, and CNS (as such terms are defined in section 1861(aa)(5) of the Act); a CRNA (as defined in section 1861(bb)(2) of the Act); beginning with the 2021 MIPS payment year, a physical therapist, occupational therapist, clinical social worker (as defined in section 1861(hh)(1) of the Act), and clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act). In addition, we solicited comments on specifying qualified speech-language pathologists, qualified audiologists, CNMs, and registered dietitians or nutrition professionals as MIPS eligible clinicians beginning with the 2021 MIPS payment year.

After consideration of comments we received, we finalized to revise our proposal in the CY 2019 PFS final rule (83 FR 59722 through 59727) and amend § 414.1305 to revise the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess

²²⁰ https://minorityhealth.hhs.gov/assets/pdf/checked/1/Fact_Sheet_Section_4302.pdf.

²²¹ <https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi>.

performance, to mean any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a PA, NP, and CNS (as such terms are defined in section 1861(aa)(5) of the Act); a CRNA (as defined in section 1861(bb)(2) of the Act); beginning with the 2021 MIPS payment year, a physical therapist, occupational therapist, qualified speech-language pathologist; qualified audiologist (as defined in section 1861(ll)(3)(B) of the Act); clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietitian or nutrition professional; and a group that includes such clinicians.

In the CY 2022 PFS proposed rule (86 FR 39349 through 39350), we proposed to amend § 414.1305 to revise the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to include CNMs (as defined in section 1861(gg)(2) of the Act) and clinical social workers (as defined in section 1861(hh)(1) of the Act). The new definition would mean any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a PA, NP, and CNS (as such terms are defined in section 1861(aa)(5) of the Act); a CRNA (as defined in section 1861(bb)(2) of the Act); beginning with the 2021 through 2023 MIPS payment years, a physical therapist, occupational therapist, qualified speech-language pathologist; qualified audiologist (as defined in section 1861(ll)(3)(B) of the Act); clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietitian or nutrition professional; beginning with the 2024 MIPS payment year, CNMs (as defined in section 1861(gg)(2) of the Act); clinical social workers (as defined in section 1861(hh)(1) of the Act); and a group that includes such clinicians.

In order to assess whether these additional eligible clinicians (CNMs and clinical social workers) could successfully participate in MIPS, we evaluated whether there would be sufficient measures and activities applicable and available for each of the additional eligible clinician types. We finalized in the CY 2018 Quality Payment Program final rule (82 FR 53780) that having sufficient measures for the quality performance category means having sufficient measures applicable and available such that we can calculate a quality performance category percent score for the MIPS eligible clinician because at least one quality measure is applicable and

available to the clinician. For the improvement activities performance category, we believe that all MIPS eligible clinicians have sufficient activities applicable and available, as they are broadly applicable. We focused our analysis on the quality and improvement activities performance categories because these performance categories require submission of data. For the Promoting Interoperability performance category, we do not believe that clinical social workers would have sufficient measures applicable and available to them. We refer readers to section IV.A.3.d.(4)(h)(iv) of this final rule, where we discuss our proposed policy to automatically assign a zero percent weighting for the Promoting Interoperability performance category for the clinical social workers. However, we stated in the proposed rule (86 FR 39426) that for the CNMs we do believe they would have sufficient Promoting Interoperability measures applicable and available to them as many of them have participated in the Medicaid EHR Incentive Program and have experience with the adoption or use of CEHRT. Therefore, the CNMs score would not be reweighted automatically for the Promoting Interoperability performance category. However, under § 414.1380(c)(2)(i)(C)(2), if a clinician believes they were subject to extreme and uncontrollable circumstances that caused their CEHRT to be unavailable, they may apply for a hardship exception for the Promoting Interoperability performance category. We did not focus as part of our analysis on the cost performance category because we are only able to assess cost performance for a subset of eligible clinicians—specifically, those who are currently eligible as a result of not meeting any of the current exclusion criteria. We do not believe there are cost measures that would apply to the care that clinical social workers or CNMs tend to provide. The current set of episode-based measures in the cost performance category focuses on a range of acute inpatient medical conditions and procedures, and the two population-based cost measures assess inpatient and primary care. Therefore, we anticipate the cost category would be reweighted in accordance with § 414.1380(c)(2) for the majority of these clinician types. The impact of the cost performance category for these additional eligible clinicians would continue to be considered but is currently not a decisive factor for successful participation in MIPS. From our analysis, we found that improvement activities would generally

be applicable and available for each of the additional eligible clinician types. For the quality performance category, we found that the additional eligible clinician types would have sufficient MIPS quality measures applicable and available. Since the CY 2019 PFS final rule, we have increased the quality measures that we believe are applicable to clinical social workers to 15 quality measures, which includes 2 outcome measures and 8 high priority measures. In the CY 2021 PFS final rule (85 FR 85069 through 85071), we finalized a Clinical Social Worker Specialty Measure Set. For CNM, we believe there are 7 quality measures which includes 2 outcome measures and 5 high priority measures available for reporting in the CY 2022 performance period. In Appendix 1, Table Group BA of this final rule, we are adopting a Certified Nurse-Midwives Specialty Set. In addition, we received correspondence from the clinical social workers national associations requesting to be included in MIPS. Finally, amending the definition of a MIPS eligible clinician to include clinical social workers and CNMs would align with § 414.1305 definition of an eligible clinician utilized by MIPS APMs for eligibility determinations.

We solicited comments on our proposal.

We received public comments on MIPS eligibility. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported including clinical social workers as MIPS eligible clinicians beginning January 1, 2022. One commenter stated their belief that clinical social workers should be regarded as core members of the clinical care team and becoming MIPS eligible clinicians promotes shared responsibility among the entire care team. Another commenter stated their belief that clinical social workers are an important part of the oncology care team. Another commenter referenced that there should be clear guidelines on how clinical social workers will be able to work with physicians on care coordination efforts and navigate interoperability issues. A few commenters stated their support of adding CNMs as MIPS eligible clinicians as of the CY 2022 performance period. One commenter suggested working with the NQF to determine social work and CNM metrics.

Response: We will work to develop educational materials for clinical social workers to help them successfully participate in MIPS. While we believe

that there are sufficient quality measures for clinical social workers and CNMs, we plan to continue to work with NQF to determine if additional measures are appropriate and to make sure that these measures evolve over time.

Comment: One commenter did not support adding CNMs as a MIPS eligible clinician type as they believe that CNMs provide a majority of obstetrics related services and may not qualify for the low-volume threshold due to limited services they would provide to Medicare populations. Another commenter did not support adding clinical social workers as MIPS eligible clinician type because, as they stated, they believe that there is limited relevance in the categories of MIPS for clinical social workers. A few commenters suggested deferring the MIPS eligibility of clinical social workers by one additional year due to concerns related to the PHE and further burden.

Response: Clinicians and practices must exceed the low-volume threshold to be eligible for MIPS; therefore, if a CNM is below the threshold, they would not be required to participate in MIPS. As for clinical social workers, we did find that there are sufficient measures and activities that would be applicable and available for them (86 FR 39350). We also did receive a comment from the clinical social workers national association requesting that clinical social workers be included in MIPS. In regards to the concerns about the PHE, we note that we have a number of flexibilities in place for MIPS eligible clinicians that are impacted by the COVID-19 pandemic, and refer readers to our COVID-19 resources on our website at <https://qpp.cms.gov/resources/covid19>.

Comment: One commenter suggested recognition of pharmacists' care contributions as they stated under MIPS there is no mechanism for attributing pharmacists' contributions to achieving metrics, and further suggested that a significant number of measures are related to or impacted by medications and would benefit from appropriate medication use and pharmacist-provided services.

Response: We agree that pharmacists are an important component of the health care system but are unable to include them in MIPS since pharmacists are not included in the definition of a MIPS eligible clinician at section 1848(q)(1)(C) of the Act.

Comment: One commenter supported the expansion of MIPS eligible clinician types as it will facilitate the program's growth as quality and performance

measurement become an increasingly valuable piece of information in evaluating provider networks offered by health plans. The commenter added that when this information is made available to consumers, it will aid in the identification of high-performing providers using a consistent and evidence-based standard.

Response: We thank the commenter for their support of our proposal and will continue to post performance data on Compare Tools.

After consideration of public comments, we are finalizing our proposal to amend § 414.1305 to modify the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to mean any of following (excluding those identified at § 414.1310(b)): For the 2019 and 2020 MIPS payment years, a physician (as defined in section 1861(r) of the Act); a PA, NP, and CNS (as such terms are defined in section 1861(aa)(5) of the Act); a CRNA (as defined in section 1861(bb)(2) of the Act); for the 2021 through 2023 MIPS payment years, a physical therapist, occupational therapist, qualified speech-language pathologist; qualified audiologist (as defined in section 1861(ll)(3)(B) of the Act); clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietitian or nutrition professional; for the 2024 MIPS payment year and future years, a CNMs (as defined in section 1861(gg)(2) of the Act); clinical social workers (as defined in section 1861(hh)(1) of the Act); and a group that includes such clinicians.

(2) MIPS Performance Period

In the CY 2019 PFS final rule (83 FR 59745 through 59747) we finalized to amend § 414.1320(d)(1) that for purposes of the 2022 MIPS payment year and future years, the performance period for the quality and cost performance categories will be the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year. In addition, we finalized at § 414.1320(d)(2) that for purposes of the 2022 MIPS payment year and future years, the performance period for the improvement activities performance category will be a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

In the CY 2021 PFS final rule (85 FR 84873), we finalized the performance period for the quality and cost

performance categories at § 414.1320(d)(1) as follows: Beginning with the 2023 MIPS payment year, the performance period for the quality and cost performance categories is the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year, except as otherwise specified for administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1). However, the quality, cost, and improvement activities performance period for the 2022 MIPS payment year, formerly at § 414.1320(d), was inadvertently deleted, and the amended language regarding administrative claims measures was not expressly retroactive. We recognize that the application of this policy for the 2020 MIPS performance period would be retroactive. To the extent that the application of this policy for the 2020 MIPS performance period will be retroactive, section 1871(e)(1)(A)(ii) of the Act provides for retroactive application of a substantive change to an existing policy when the Secretary determines that failure to apply the policy change retroactively will be contrary to the public interest. We believe that failure to reinstate the inadvertently deleted language retroactively will be contrary to the public interest because the performance period establishes the timespan for the collection of performance data, assessment of performance, and computation of the MIPS payment adjustment, to which clinicians have already committed valuable time and resources. In addition, many of the MIPS policies such as the MIPS determination period and the low-volume threshold determinations utilize the performance period as an integral part of the policy, without which we will be unable to operate the MIPS program as required by statute. Therefore, we solicited comments on our technical amendment to reinstate the inadvertently deleted language, with a modification to state "For purposes of . . ." rather than "Beginning with . . .". The proposed text stated, for purposes of the 2022 MIPS payment year, the performance period for: (1) The quality and cost performance categories is the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year; and (2) The improvement activities performance categories is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year (86 FR 39350 through

39351). Lastly, we proposed to redesignate current § 414.1320(d) through (g) to § 414.1320(e) through (h), respectively.

We did not receive public comments on these proposals, and we are finalizing them as proposed: For purposes of the 2022 MIPS payment year, the performance period for: (1) The quality and cost performance categories is the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year; and (2) The improvement activities performance category is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. We are redesignating current § 414.1320(d) through (g) to § 414.1320(e) through (h), respectively.

(3) Modifications to Small Practice Groups Reporting Medicare Part B Claims Measures

In the CY 2019 PFS final rule (83 FR 59753), we established that beginning with the 2019 performance period, Medicare Part B Claims will be an available collection type and submission type for the quality performance category for small practices reporting as individuals or a group. We also stated that in circumstances where only Medicare Part B claims were submitted, that we intended on calculating the quality performance category for the practice as both a group and as individuals and apply the quality performance category score that is the greater of the two. We considered requiring an election for assessment as a group but believed this would be unduly burdensome on small practices (83 FR 59752).

Although we stated we would take the highest of the individual or group score for MIPS eligible clinicians in small practices, we now recognize that this policy has had an unintended impact for clinicians in a small practice who did not submit Medicare Part B quality claims and would not otherwise be eligible for MIPS. Once we receive a Medicare Part B submission, both an individual score and a group score is created. Once a group score is created, a clinician who was individually excluded from MIPS for being under the low-volume threshold, may now be eligible if the group exceeds the low-volume threshold. These clinicians will receive the MIPS final score based on the Medicare Part B submissions, even if the group did not intend to report to MIPS as a group. While we still perform an analysis to only provide to the clinicians the highest final score

available, clinicians who are only MIPS eligible by the act of exceeding the low volume threshold as a group are receiving final scores that are unintended. This issue will continue to be further exacerbated as the performance threshold continues to increase, so does the likelihood that a final score from the quality performance category alone (or quality and cost as cost does not have submission requirements) could be below the performance threshold for a group. We therefore now believe it is important for the group to clearly signal its intention to report to MIPS as a group before we expand potential eligibility to other members of the group.

We have existing policies under MIPS that require clinicians to indicate to us when to utilize a group submission. For example, in the CY 2019 PFS final rule (83 FR 59862), we stated that submission of data on improvement activities or Promoting Interoperability measures will indicate that the clinicians in that group wanted to be scored as a group for the purposes of facility-based measurement. Therefore, we believe a similar policy would be appropriate for small practices to indicate they wish to submit Medicare Part B claims for a group quality performance category score. We proposed that starting with the CY 2022 MIPS performance period/2024 MIPS payment year, small practices, excluding those participating in MIPS as part of a virtual group, must submit data as a group in any performance category to indicate that they wish to be scored as a group for Medicare Part B claims (86 FR 39351). This means a group will need to submit data as a group to the improvement activities, Promoting Interoperability performance categories, or to the quality performance category via another submission mechanism as a group (for example, a group that submits MIPS CQMs in addition to Medicare Part B claims data). Once the group submits data to MIPS as a group, we will consider any available Medicare Part B claims measure submissions in calculating their quality performance category score.

We believe using the choice to submit data as a group will indicate the group's intention to participate and be measured as a group. The proposal would preserve and respect the choices made by clinicians and groups by not inadvertently expanding eligibility unwittingly to other clinicians. We note that this proposal will not apply to small practices participating in MIPS as part of a virtual group, because clinicians signal their intent to be

scored as a virtual group through the virtual group election process.

We received public comments on our proposal for modifications to small practice groups reporting Medicare Part B claims measures. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to have small practices to submit data as a group in any performance category starting in the CY 2022 performance period to indicate that they wish to be scored as a group for Medicare Part B claims. One commenter suggested that we apply this policy retroactively to the 2020 and 2021 performance periods.

Response: We appreciate the support for this proposal. Unfortunately, we are not able to apply this policy retroactively because we did not propose to do so. Further we believe that if applied retroactively, it would harm certain MIPS eligible clinicians by reducing their payment adjustments.

Comment: One commenter questioned the intersection of the proposed policy requiring small practice groups reporting on Medicare Part B claims measures to report for the improvement activities or promoting interoperability performance category as a group to be assessed as a group, and the policy that deals with circumstances where a clinician has more than one final score. This commenter encouraged CMS to retain the policy that allows clinicians to receive the better of the two results (scoring as an individual or a group) for their final score. This commenter noted that small practices who submit measures via Medicare Part B claims have significant challenges predicting their final MIPS scores while those using registries are able to analyze their data before submission and predict a final score.

Response: We thank the commenter for their support. We note that the final score hierarchy still provides the MIPS eligible clinician with their highest final score, with a few exceptions. More details on this policy is available in section IV.A.3.f. of this final rule.

After consideration of public comments, we are finalizing this policy as proposed. Specifically, starting with the CY 2022 MIPS performance period/2024 MIPS payment year, small practices, excluding those participating in MIPS as part of a virtual group, must submit data as a group in any performance category to indicate that they wish to be scored as a group for Medicare Part B claims.

b. Transforming MIPS: MIPS Value Pathways

(1) Overview

We are moving to MIPS Value Pathways (MVPs) to improve value, reduce burden, inform patient choice in selecting clinicians, and reduce barriers to facilitate movement into APMs (84 FR 40732 through 40734 and 85 FR 84844 through 84845). We intend to promote high value care by paying for health care services by linking performance on cost, quality, and the patient's experience of care. The MVP framework will move MIPS forward on the path to value by connecting the MIPS performance categories, better informing and empowering patients to make decisions about their healthcare, and by helping clinicians to achieve better outcomes using robust and accessible healthcare data and interoperability.

Stakeholders have supported the MVP framework and our MVP guiding principles, which aim to reduce complexity and burden, move towards more meaningful measurement, capture the patient voice, and move to higher value care (84 FR 62946 and 85 FR 84845). We believe MVP reporting will reduce selection burden with choosing MIPS quality measures and improvement activities to submit; reduce reporting burden by requiring submission of fewer MIPS quality measures than the traditional MIPS participation method; and further align across performance categories the measures and activities identified by specialists and patients as being meaningful and relevant. We believe MVPs developed in coordination with stakeholders with an established process in which clinician and patient perspectives are incorporated (85 FR 84850) can result in more meaningful performance data, reduced complexity of the MIPS program, and lowered clinician burden to participate.

MVPs will make MIPS more meaningful by allowing a more cohesive participation experience; by standardizing performance measurement of a specialty, medical condition, or episode of care; and by reducing the siloed nature of the traditional MIPS participation experience. We intend for MVPs to drive value and help clinicians and practices prepare to take on and manage financial risk, as in Advanced APMs, as they build out their quality infrastructure components (measurement tracking, performance improvement processes, interoperability and data information systems) that align with the MIPS performance categories

and gain experience with cost measurement (84 FR 40733). Performance measure reporting for specific populations, such as in MVPs, encourages practices to build an infrastructure with capabilities to compile and analyze population health data, a critical capability in assuming and managing risk. The experience with MVPs, in which there is aligned measurement of quality (of care and experience of care) and cost, continuous improvement/innovation within the practice, and efficient management and transfers of information will help clinicians deliver higher value care and remove barriers to APM participation. Combining linked performance measures and activities with more standardization of measures in MVPs will produce data that can better assist patients in comparing clinician performance and selecting clinicians from which to seek care. As more clinicians have applicable MVPs, the performance data available to patients will expand, and in the future, information for specialists in multispecialty groups will become more available on our Compare Tools, enabling patients to make more informed choices for their care.

We continue our efforts to improve the healthcare of Medicare patients by allowing clinicians to focus on providing care for their patients and report on measures and activities that best reflect their care. As we finalize our initial MVP implementation policies in this final rule, we continue to consider critical factors that will contribute to and demonstrate MVP success and the desired characteristics of the future overall MVP portfolio. We look forward to continuing to work with stakeholders to improve the program and implement the vision of MVPs.

(2) MVP Framework and Implementation Considerations

In the CY 2022 PFS proposed rule (86 FR 39352 through 39355), we requested public comments regarding several issues involving the overall implementation of MVPs and how we can most effectively meet our MVP goals, which include driving value and care improvements. We outlined in the CY 2022 PFS proposed rule several MVP framework and implementation considerations, as well as limitations and challenges we are working with stakeholders to address. As discussed in previous rules (CY 2020 PFS proposed and CY 2021 PFS final rules (84 FR 40732 through 40734, 85 FR 50279 and 85 FR 84844 through 84845 respectively)), our MVP framework calls for linking the MIPS quality, cost, and

improvement activities performance categories with a foundation of the Promoting Interoperability and population health claims-based measures. We noted that we are considering how to best implement an MVP portfolio that balances our MVP goals for transformative change and our five MVP guiding principles (85 FR 84845) within current capabilities. We noted there are constraints related to the ability to implement significant program changes including statutory restrictions on the structure of MIPS, and limitations of the current quality and cost measure inventories.

(a) MVP Framework Request for Comments

Stakeholders have largely supported our MVP goals, but a few commenters continue to voice concerns regarding whether our goals to drive value, reduce burden, and derive comparative data can be achieved via the MVP framework (85 FR 84845 through 84847). We noted in the CY 2022 PFS proposed rule that the statutory requirements at section 1848 of the Act may constrain our ability to adopt certain changes (86 FR 39353). These requirements include but are not limited to: The use of four MIPS performance categories (quality, cost, improvement activities and Promoting Interoperability); setting the performance threshold; the call for measures and annual quality measure selection process; and the prescribed performance category weights. Conversely, the statute does provide limited flexibilities in some other areas, so we are interested in exploring any existing MIPS flexibilities that will assist us in implementing MVPs. As we begin MVP implementation, a portfolio of MVPs will be developed with a focus on our end goals while adhering to statutory requirements.

We requested comments on more innovative approaches to help achieve our desired MVP results that we should consider as we build our MVP portfolio (86 FR 39353 through 39354). MVPs aim to improve value, reduce burden, help patients compare clinician performance to inform patient choice in selecting clinicians, and reduce barriers to movement into APMs. We received several comments with feedback on MVP portfolio concepts, overall types of MVPs the portfolio should include, quality and cost measure considerations for meeting MVP objectives, and approaches to measuring and driving value. While we are not summarizing and responding to the comments we received in this final rule, we thank the commenters for their responses and may take them into account as we develop

future policies for the MVPs. We also are interested in continuing to engage with stakeholders on additional ways to drive value, engage the patient perspective, stimulate practice improvement processes, and reduce burden in the MIPS program, through our MVP framework. For example, in the context of MVPs, we are interested in solutions that drive care improvements, measure value through meaningful performance measurement, and reduce burden across all 4 MIPS categories. We are considering how measure development approaches and technology, such as Fast Healthcare Interoperability Resources (FHIR) and dQMs, can help us meet our MVP objectives and improve health equity. We intend to continue a dialogue with stakeholders on these important MVP topics and may consider convening public forums, webinars, and office hours or using additional opportunities such as the pre-rulemaking process to further understand what is important to clinicians, patients, and stakeholders and obtain further input as we develop our MVP portfolio.

Our approach to developing the portfolio of MVPs must balance objectives for having MVPs available for the diverse range of MIPS eligible clinicians, the variety of health conditions affecting Medicare patients, and the patient's needs for relevant, meaningful information. While the proposals finalized in this final rule demonstrate important progress toward realizing the MVP guiding principles (86 FR 39354), challenges remain for CMS in developing an overall portfolio of MVPs that achieves our vision for MVPs. As we finalize our first set of MVPs and begin to implement our guiding principles, we continue to strive to fully implement MVPs and an overall MVP portfolio to drive value, obtain comparative performance data, and elevate the patient voice while reducing clinician burden.

We thank commenters for their responses to our above-referenced requests for comment in the proposed rule. We may consider these responses to inform future rulemaking.

(b) MVP Participant

(i) MVP Participant Definition

As we look ahead to implementing MVPs, we believe it is important to clearly define who can participate in MIPS through MVPs. We believe that defining MVP participation will help stakeholders better understand how our policies affect them, as well as provide clarity and simplicity for readers.

At § 414.1305 we have previously finalized definitions for a MIPS eligible clinician, group, and APM Entity. While we did not propose to change these definitions, and are using these existing terms, we sought to clarify who can participate in MVPs. We proposed a new opportunity for clinicians to participate in MVPs, as a subgroup. We refer readers to section IV.A.3.b.(3)(b)(ii) of this final rule, where we discuss our proposal to define a subgroup. In addition, we believe it would be helpful to distinguish the types of groups that participate in MIPS, and how they could participate in MVPs. Therefore, we refer readers to section IV.A.3.b.(3)(b) of this final rule, where we discuss our proposals to define single specialty group, multispecialty group, and special status, to provide further clarity for stakeholders as they seek to understand how they can participate in MVPs.

In keeping with MVPs broader aim of cohesive participation, at § 414.1305 we proposed the term MVP Participant to mean: An individual MIPS eligible clinician, multispecialty group, single specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2025 MIPS performance period/2027 MIPS payment year and future years, MVP Participant means an individual MIPS eligible clinician, single specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. The proposed definition of MVP Participant accounts for the gradual transition to requiring multispecialty groups to form subgroups if they want to report MVPs. We believe this is important because multispecialty groups report on the same set of measures, which may not be relevant or meaningful to all specialists that participate within the multispecialty group, to make improvements in the care they provide to patients. We refer readers to section IV.A.3.b.(2)(c) of this final rule for discussion of subgroup implementation, including requiring multispecialty groups forming subgroups to report MVPs. We recognize that in some limited instances, there are specific policy proposals that are more narrow or expansive than the term MVP Participant allows for. In those cases, we will continue to clarify which specific participants a given policy applies to, rather than using the new term. For example, if we have policies regarding what is required during subgroup registration, as discussed below, we would specify that these policies would be specific to subgroups rather than use

the term MVP Participants. In another example, as discussed in section IV.A.3.b.(4)(d)(vi) of this final rule, we proposed Promoting Interoperability performance category scoring policies that apply to individual MIPS eligible clinicians, groups, and APM Entities, but do not apply to subgroups. In this example, we would clarify that the policy applies to MVP Participants, except subgroups. In addition, if we determine a given policy proposal is applicable to groups, regardless of whether they are single specialty or multispecialty, we may simply refer to them as groups. We believe stakeholders would welcome the simplicity that using the term MVP Participant would provide. It is an important step forward for the program that would promote clarity and consistency of policy drafting and compliance by stakeholders. We solicited public comment on the proposal.

The following is a summary of the comments we received on the MVP participant definition and our responses.

Comment: One commenter supported the proposed MVP participant definition, specifically supporting the inclusion of multispecialty groups to participate as subgroups. Several commenters supported the proposal to implement voluntary subgroup reporting in the CY 2023 performance period. The commenters expressed their appreciation for 2 years of voluntary subgroup reporting for multispecialty groups and believed that subgroup reporting encourages representation of specialists within a group and allows clinicians to report measures meaningful to their practice as part of a multispecialty group. One commenter expressed their opinion that subgroup reporting is essential for clinicians in multispecialty groups and believed that under the current group reporting option, specialists in multispecialty groups are unable to use MIPS performance feedback to improve patient care since the reported measure set chosen by the group does not reflect the care provided by the specialists. Another commenter appreciated CMS for tackling the operational and implementation hurdles to implement subgroup reporting.

Response: We thank the commenters for their support. To clarify, as described at § 414.1305, the proposed MVP participant definition would not allow for multispecialty group reporting indefinitely. As described in section IV.A.3.b.(2)(c)(ii) of this final rule, the finalized policy requires, multispecialty groups to form subgroups in order to

report MVPs, beginning with the CY 2026 performance period.

Comment: Several commenters did not support the proposed definition of an MVP participant, specifically the proposed exclusion of multispecialty practices from being able to report an MVP at the group level beginning in the CY 2025 performance period due to the burden associated with having to form subgroups given the limited timing in which they have to prepare for subgroup reporting, particularly during the PHE. They noted that requiring these groups to report by subgroups will increase burden and diminish the effectiveness of subgroup reporting.

Response: We disagree. While we understand the increased reporting burden to multispecialty practices related to forming and reporting as subgroups, we believe that subgroup reporting would lead to clinicians in a multispecialty group reporting on measures and activities that are meaningful to their practice. We understand that requiring multispecialty groups to report by subgroups will increase burden, but believe the benefits of requiring multispecialty groups to report through subgroups justify the burden and will not diminish the effectiveness of subgroup reporting. The data submitted by multispecialty groups for quality reporting is not always directly attributable to every clinician within that multispecialty group. For example, we do not believe a nephrologist in a multispecialty group can make meaningful improvements in the care they provide based on the primary care measure data that is submitted on behalf of their multispecialty group. It is difficult to ascertain whether specialists can make improvements in the care they provide, leading to improved patient outcomes, when the data submitted does not directly represent the care they provide. Therefore, we believe there is value in pursuing subgroup reporting, particularly for multispecialty groups and that the MVP participant definition should effectuate this transition. As described in the CY 2022 PFS proposed rule (86 FR 39357), the intent of the subgroup reporting proposals is to move away from large multispecialty groups reporting on the same set of measures, which may not be relevant or meaningful to all specialists that participate within a multispecialty group. Data submitted at the subgroup level would provide increased data granularity that patients and caregivers could use in making data-driven decisions regarding the involvement of specialists in their care. In addition, we believe that transitioning multispecialty

groups to subgroup reporting will address some of the inherent gaming risks that are apparent when we have multi-specialty groups report on measures that are not necessarily representative of the care provided by all clinicians within the group, where clinicians in a group may rely on the performance of other clinicians (of a different specialty) within the group to meet quality reporting requirements. While our intent is to solve for the potential gaming risks associated with group reporting through our subgroup policies, we do continue to support clinicians who practice leveraging the team-based care model and plan to address team-based care through future rulemaking. We understand that multispecialty groups may need additional time to prepare for this transition and transitioning during the PHE is difficult, for those that are not prepared to make a transition during the PHE, they can continue to report traditional MIPS. However, we do encourage multispecialty practices to adopt subgroup reporting practices as early as feasible, to allow clinicians sufficient time to orient themselves to MVP policies and reporting ahead of the eventual sunset of traditional MIPS.

Comment: One commenter recommended CMS should explore options to allow multispecialty groups to report the same MVP instead of requiring them to form subgroups to report an MVP.

Response: We disagree. The intent of the subgroup reporting is to move away from large multispecialty groups reporting on measures that are not relevant or meaningful to the specialists that participate within a multispecialty group. From the MIPS perspective, we believe there is more value from a quality improvement standpoint or opportunity to improve patient outcomes through subgroup reporting than through multispecialty group reporting. We do acknowledge there may be circumstances where more than one subgroup within a multispecialty group could select and report on the same MVP, if the MVP is relevant and applicable to the clinicians within the subgroups. While our intent is to have more meaningful reporting and solve for the potential gaming risks associated with group reporting through our subgroup policies, we do continue to support clinicians who practice leveraging the team-based care model and plan to address team-based care through future rulemaking.

Comment: One commenter suggested that CMS work with stakeholders to understand the issues and barriers to subgroup reporting before making them

mandatory. The commenter also does not believe there will be sufficient MVPs available by 2025 to accommodate multispecialty groups.

Response: We have continued to solicit stakeholder feedback on the MVP framework, including subgroup reporting for the past few years. In the CY 2020 PFS final rule (84 FR 62946 through 62948) we solicited public comments on the MVP framework. We have held several listening sessions, through the CMS Quality Conference related to the MVP framework and subgroup reporting. In addition, on January 7th, 2021 we held a MVP Town Hall in which we also listened to stakeholder feedback on our MVP vision at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1290/MIPS%20Value%20Pathways%20Town%20Hall%20Slide%20Deck.pdf>. We continue to be open to understanding stakeholders' points of view with regards to MVPs and subgroup reporting. We believe our policy proposals already include enough flexibility to allow multispecialty groups to determine when they are prepared to transition to MVP reporting, and ultimately subgroup reporting. We acknowledge that it is unlikely that we will have MVPs available for all clinicians who participate in MIPS by the CY 2025 performance period. As we continue to expand the portfolio of MVPs available over the next few years, clinicians within a multispecialty group that do not have a relevant MVP for reporting could continue to report through traditional MIPS. We plan to time any future proposal to sunset traditional MIPS with the implementation of an appropriate portfolio of MVPs that are relevant to specialists that participate in the MIPS program.

We understand that stakeholders such as multispecialty groups, healthcare organizations, and vendors are rightfully prioritizing the care of patients during the PHE, which may impact the timing of when they can prepare for and implement subgroup reporting. Since it is unclear as to when the COVID-19 PHE may ultimately end, we believe it is sufficient to delay mandatory subgroup by 1 year. The additional year serves as a buffer to allow multispecialty groups, healthcare organizations, and vendors time to plan and prepare to transition to subgroup reporting. This is in addition to the proposed 2-year period in which subgroup reporting would be voluntary, giving multispecialty groups 3 years in total to transition to subgroup reporting. We intend on continuing to monitor the PHE, and would address the mandatory

subgroup reporting timeline through future rulemaking if we believe additional delay is needed—depending on the status of the PHE and other relevant circumstances at the time. Therefore, after consideration of public comments, we believe it is appropriate to delay the requirement for multispecialty groups to form subgroups in order to report MVPs by 1 year. We

are finalizing the definition of MVP participant with modification at § 414.1305 to mean: an individual MIPS eligible clinician, multispecialty group, single specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2026 MIPS performance period/2028 MIPS payment year and future years,

MVP Participant means an individual MIPS eligible clinician, single specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. Table 43 serves to summarize which MVP Participants can report an MVP in the future:

TABLE 43: Who Can Report MVPs

Who Can Report MVPs	
CY 2023- CY 2025 MIPS Performance Period	Individual MIPS eligible clinicians, single specialty groups, multispecialty groups*, subgroups, and APM Entities.
CY 2026 MIPS Performance Period, and Future Years	Individual MIPS eligible clinicians, single specialty groups, subgroups*, and APM Entities.

*Multispecialty Groups will be required to report as subgroups in order to report MVPs beginning with the CY 2026 MIPS performance period/2028 MIPS payment year.

(ii) Opt-In Participants, Voluntary Participants, and Virtual Groups

As discussed in the CY 2022 PFS proposed rule (86 FR 39355), we proposed that for the implementation of MVPs, certain clinicians would not be able to participate. These include, voluntary reporters, opt-in eligible clinicians, and virtual groups, who would have their participation in MVPs delayed. We refer readers to section IV.A.3.b.(3)(c)(iv) of this final rule for discussion of the participation rates of opt-in and voluntary participants.

The following is a summary of the comments we received on our proposal to exclude opt-in participants, voluntary participants and virtual groups from the MVP participant definition and our responses.

Comment: A few commenters did not support the exclusion of opt-in participants, voluntary participants, and virtual groups from the definition of MVP participants. They believed that allowing these clinicians to participate in MVP reporting would help them prepare for the potential sunset of traditional MIPS and would allow voluntary reporters to gain experience with MVP reporting. One commenter shared their belief that excluding these clinicians could potentially hinder the development and refinement of MVPs.

Response: We understand the need for opt-in participants, voluntary participants, and virtual groups to prepare for the potential sunset of traditional MIPS by experiencing and orienting themselves to MVP policies and reporting; however, we disagree with the commenters that these clinician types should not be excluded

from the definition of an MVP participant for the time being. As described in section IV.A.3.b.(3)(c)(iv) of this final rule, based on historical data, a significantly low number of clinicians have utilized the opt-in, voluntary, and virtual group participation options in MIPS. We believe there are several considerations, such as implementation burden for stakeholders and CMS, value of MVP reporting for these clinicians versus burden, scoring policies, etc. that must be addressed prior to allowing clinicians in these categories to participate in reporting MVPs. Additionally, we believe we need to consider the downstream impacts of including these clinicians when considering the intersection of subgroups and virtual groups. As described at § 414.1305 of this final rule, a subgroup is defined as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, subgroup identifier, and each eligible clinician’s NPI and will not be applicable for clinicians in a virtual group because a virtual group is a combination of two or more TINs, resulting in exclusion of clinicians in virtual groups from participating as subgroups for reporting MVPs. Additionally, we acknowledge the potential for multispecialty virtual groups and the issue of whether they would need to be required to form subgroups in order to report MVPs, similar to multispecialty groups. Overall, there are several factors that need to be planned for before we consider the inclusion of these clinician types. We do intend on revisiting this policy through future rulemaking and

prior to the beginning of MVP reporting. We request stakeholder feedback on how to mitigate these implementation issues to expand the MVP participant definition to include these clinician types. Lastly, we disagree that excluding these clinician types could potentially hinder the development and refinement of MVPs. We do not believe there is a mutually exclusive relationship between the MVP development and maintenance processes and the exclusion of opt-ins, voluntary participants, or virtual groups. MVPs are developed around specific clinical conditions, specialties, procedures, or episodes of care and are not developed exclusively for these clinician types.

After consideration of public comments, we are finalizing this policy as proposed.

(d) MVP and Subgroup Implementation Timeline

(i) MVP Implementation Timeline

Since the finalization of the MIPS Value Pathways framework through the CY 2020 PFS final rule (84 FR 62946 through 62949), stakeholders have provided feedback on our implementation timeline through multiple methods, including public comment through rulemaking, meetings, and the MVP Town Hall that held in January 2021. Associated resources related to the MVP Town Hall are available for stakeholder review through the Quality Payment Program Resource Library are available at <https://qpp.cms.gov/resources/webinars>.

Through the MVP Town Hall, we have heard stakeholders encourage MVPs be implemented through a

gradual process that provides MVP participants and third-party intermediaries with time to adapt to the changes in policy, requirements, and programming updates that would need to occur in technological systems. Therefore, we believe it is appropriate to delay the implementation and availability of the MVPs, as described in Appendix 3: MVP Inventory of this final rule, until the 2023 performance period/2025 MIPS payment year, of the MIPS program. We proposed at § 414.1365(a)(1), that for the 2023 MIPS performance period/2025 MIPS payment year, and future years, we use MVPs included in the MIPS final inventory of MVPs established by CMS through rulemaking to assess performance for the quality, cost, improvement activities, and Promoting Interoperability performance categories. Based on the discussion above, we proposed for the CY 2023 MIPS performance period/2025 MIPS payment year, MVP reporting is voluntary.

In addition to proposing a timeline in which MVPs would be first available, we also believe it is important to be

transparent with the agency's current vision and solicited public comments on the timing of how long MVP reporting should be voluntary, the transition to mandatory MVP reporting, and the timing for when we should sunset traditional MIPS. While we have heard from stakeholders their request for us to maintain both reporting methods, traditional MIPS and MIPS Value Pathways, we believe it is not a feasible option long term, because of the operational burden, complexity, and costs associated with simultaneously maintaining both versions of the program.

We have also heard from stakeholders (through the MVP Town Hall and from Health Affairs²²²) the importance in continuing this shift to value through MVPs, and doing so by providing as much transparency as possible. In order to foster transparency with our thinking, we solicited public comments on a transition timeline, and are planning to provide stakeholders with information to make informed decisions about their eventual transition to MVP reporting. We believe it is critical to establish a timeline for the awareness of all

stakeholders (such as MVP participants, third-party intermediaries, and health systems) so they can plan their work accordingly to coincide with this timeline.

As such, we outline a timeline in which MVP implementation could occur. As stated above, we proposed at § 414.1365(a) that the first year MVP reporting be available is the CY 2023 MIPS performance period/2025 MIPS payment year. Through the remainder of the timeline outlined in Table 44, we seek to lay out our beliefs for the future of the MIPS program, for purposes of transparency, and solicited public comments. We believe moving forward with voluntary MVP reporting in the initial years would provide MVP participants sufficient time to prepare for mandatory MVP reporting. Therefore, as outlined below, we considered MVP reporting would be voluntary for the CY 2023 through the CY 2027 MIPS performance periods/2025 through the 2029 MIPS payment years. Furthermore, we plan for potential future mandatory MVP reporting to coincide with the sunset of traditional MIPS.

TABLE 44: MVP Implementation Timeline

MVP Implementation Timeline	
<i>Proposed:</i>	
CY 2023 MIPS Performance Period	As proposed at § 414.1365 (a), an initial set of MVPs are available for reporting; MVP reporting is <i>voluntary</i> .
<i>Request for Comment for Future Consideration:</i>	
CY 2024- CY 2027 MIPS Performance Periods	The existing MVP portfolio would be gradually updated to include newly developed MVPs that are available for reporting. MVP reporting is <i>voluntary</i> .
End of CY 2027 MIPS Performance Period and Corresponding Data Submission Period	Considered sunset of traditional MIPS.
CY 2028 MIPS Performance Period, and Future Years	Considered <i>mandatory</i> MVP reporting.

As previously described, maintaining both traditional MIPS and MVPs is not a feasible long-term approach for the agency. As such, we are thinking of sunseting traditional MIPS by the end of the CY 2027 performance period/2029 MIPS payment year. We like to note that we did not propose the timeframe in which MVP reporting would no longer be voluntary (by the end of the CY 2027 performance period/2029 MIPS payment year), and the future sunset of traditional MIPS at this

time; any proposal to sunset traditional MIPS would be made in future rulemaking. Our discussion of the MVP implementation timeline is an effort to be transparent with our long-term vision of the MIPS program.

We solicited public comments on this incremental timeline to transition to mandatory MVP reporting, including the timing of the sunset of traditional MIPS. Specifically, are there concerns with this timeline? Is there an alternative timeline we should consider

and why? In addition, what factors should CMS monitor to determine stakeholder's readiness to sunset traditional MIPS and transition to MVPs? We understand that some clinicians who participate in MIPS practice in highly specialized clinical areas and subspecialties, where they may believe there is not an MVP applicable to their highly specialized practice. Therefore, we also solicited comments on what should happen in instances where highly specialized

²²² "Medicare Should Transform MIPS, Not Scrap It," Health Affairs Blog, March 2, 2021. DOI: 10.1377/hblog20210226.949893.

clinicians cannot identify an applicable and relevant MVP.

The following is a summary of the comments we received on the MVP implementation timeline and our responses.

Comment: Several commenters supported a gradual transition to and implementation of MVPs. One commenter supported the proposal to introduce MVPs and a subgroup reporting option in 2023. The commenter appreciated CMS identifying innovative approaches to measuring value through MVPs, and supported CMS in soliciting stakeholder recommendations on changes to established MVPs for patient-facing and non-patient facing specialties, through the MVP maintenance process.

Response: We thank the commenters for their support.

Comment: One commenter voiced their appreciation of the delay to implement MVPs until 2023 and suggests CMS to finalize this policy as proposed. The commenter commended CMS for developing the MVP framework to create a more cohesive MIPS program and believes it will facilitate more meaningful comparison of care by allowing providers to report on fewer, more relevant measures.

Response: We thank the commenter for their support.

Comment: Several commenters supported CMS' move to MVPs including the proposal to offer MVPs as an optional reporting pathway beginning in the 2023 performance period. The commenters commended CMS for listening to stakeholders during the creation of the MVP process, and introducing the MVP framework as an optional reporting method initially and not a mandatory reporting method.

Response: We thank the commenters for their support.

Comment: Some commenters voiced support for MVPs but suggested that CMS consider delaying the implementation of the MVPs until 2024 or later after the end of the PHE. A few commenters stated that initial voluntary reporting would allow clinicians and groups to familiarize with the structure and scoring of MVPs, evaluate the proposed MVPs and adopt and prepare for reporting an MVP.

Response: We disagree with the commenters that there is a need to further delay the implementation of MVPs. While we certainly understand the need to consider the impact to clinicians and organizations during the PHE, we have built in some flexibilities into our policy proposals. The delayed implementation of the proposed MVPs to the CY 2023 performance period/CY

2025 MIPS payment year, as described in section IV.A.3.b.(2)(c)(i), is intended to provide organizations, clinicians, and third-party intermediaries with additional time to prepare for MVP reporting. In addition, we have also proposed flexibility to allow for voluntary reporting of MVPs at the onset of implementation. This flexibility allows organizations and clinicians to determine whether they are ready to make the transition to MVP reporting or continue to report traditional MIPS, considering their resources that are dedicated to caring for patients during the PHE. Since we did not propose a definitive timeframe to which MVP participants must transition to MVP reporting or to sunset traditional MIPS, we believe our proposed policies include sufficient flexibilities for organizations and clinicians. In addition, we agree with commenters who state that the initial voluntary reporting would provide MVP participants time to familiarize themselves with MVP policies and prepare to adopt and report MVPs that are relevant to their practice.

Comment: One commenter recommended that CMS wait to implement MVPs until a FHIR-based approach to quality measurement can be deployed. The commenter stated this will aid in the transition to MVPs by lowering the cost of multiple program transitions and potentially lower the cost of reporting.

Response: We disagree with the commenter that we should wait to implement MVPs until a FHIR-based approach to quality measurement is deployed. We understand the value in pursuing FHIR to reduce reporting burden and potentially lowering costs, however, we believe it is important to continue to take gradual steps, through the implementation of MVPs, to transform the MIPS program to one of value—where clinicians are able to report on measures and activities relevant to their practice, utilize the results to make improvements in the care provided, and continue to keep our work patient centric. The MVP framework was established prior to the efforts to implement FHIR for quality measurement began. The use of a FHIR-based approach to quality measurement reporting will require additional system development, testing, and notice and comment rulemaking before it is ready to be implemented.

After consideration of public comments, we are finalizing these policies as proposed. We did not propose the remainder of the MVP implementation timeline, and sought public comment on our thinking. We

received several comments regarding the future of the MIPS program and the sunset of traditional MIPS. We thank the commenters for their feedback that may be taken into consideration for future rulemaking.

(ii) Subgroup Implementation Timeline

In the CY 2021 PFS final rule (85 FR 84845), we signaled our intent to implement subgroup reporting by finalizing modifications to the MVP guiding principles. We refer readers to section IV.A.3.b.(3) of this final rule for detailed discussion of subgroup proposals; and to section IV.A.3.b.(3)(b) of this final rule and § 414.1305 for the definitions of groups, multispecialty groups, single specialty groups, and subgroups.

From our understanding, groups may be made up of a single specialty or of multiple specialties. We do not believe that single specialty groups, should be required to form subgroups in order to report MVPs. In this scenario, we believe that a single specialty group would be able to report on the same set of relevant and applicable measures for all clinicians within the group, and would be able to ascertain results that may lead to improvements in the patient care provided. Therefore, for now, we do not anticipate the need to require single specialty groups to form subgroups in order to report an MVP.

The intent of the subgroup reporting proposals is to move away from large multispecialty groups reporting on the same set of measures, which may not be relevant or meaningful to all specialists that participate within a multispecialty group. In addition, we have heard from stakeholders over the past few years that large multispecialty groups tend to submit data that is not necessarily representative of all the clinicians that make up that group. For example, a group from a large hospital system, may include various specialties such as primary care, oncology, surgery, anesthesia, and radiology that submit data to CMS on primary care quality measures. We are concerned that these type of group submissions do not accurately reflect the performance of all clinicians within the group, and does not provide all clinicians with results that leads to quality improvement in the care provided. In addition, we do not believe that the other specialties within the group can make data-driven improvements in the quality of patient care provided, when only primary care measure data is submitted to CMS; and the results of that data submission is only relevant to the primary care clinicians. From the patient and caregiver perspective, only receiving

information on primary care measures when searching for a specialist is not helpful. Data submitted at the subgroup level will provide increased data granularity that patients and caregivers could use in making data-driven decisions regarding the involvement of specialists in their care. In addition, we believe that transitioning multispecialty groups to subgroup reporting will address some of the inherent gaming risks that are apparent when we have multi-specialty groups report on measures that are not necessarily representative of the care provided by all clinicians within the group, where clinicians in a group may rely on the performance of other clinicians (of a different specialty) within the group to meet quality reporting requirements. We anticipated that multispecialty groups will need some time to familiarize and prepare themselves for subgroup reporting.

We refer readers to section IV.A.3.b.(2)(b)(i) of this final rule, where we discuss the finalized MVP Participant definition as modified based on public comment. Pursuant to the finalized MVP Participant definition, multispecialty groups and single specialty groups may report as groups or choose to form subgroups to report

MVPs for the CY 2023 through the CY 2025 performance period/2025 through the 2027 MIPS payment years. In addition, beginning with the CY 2026 MIPS performance period/2028 MIPS payment year, multispecialty groups would no longer be able to report MVPs. This will mean that if a multispecialty group would like to report MVPs, beginning with the CY 2026 MIPS performance period/2028 MIPS payment year, they could only do so if they form subgroups. We believe this span of time will give multispecialty groups time to familiarize themselves and prepare for subgroup reporting. We encourage multispecialty groups to monitor the implementation of MVPs to determine when to adopt subgroup reporting and transition to MVPs. We encourage groups to adopt MVP and subgroup reporting as early as possible to provide some time to work through any inadvertent operational issues they may encounter as MVP participants prepare for the future of the MIPS program. While we understand that groups may choose between MVP reporting and continuing to participate through traditional MIPS, we highly encourage groups to submit via subgroups if applicable in the first few years of MVP reporting. We believe

early adoption of MVPs and subgroup reporting is important for stakeholders, as this will allow clinicians to acclimate to MVP reporting in the event we sunset traditional MIPS in the future.

We understand that some clinicians practice utilizing a team-based care approach, through a multispecialty group. We believe that MVP reporting can continue to foster the utilization of team-based care through subgroup reporting. As such, we describe in section IV.A.3.b.(4)(b)(i)(A) of this final rule, that MVPs may be developed to reflect the team-based care approach used during an episode of care.

In addition, we believe that the delayed implementation of subgroups to the CY 2023 MIPS performance period/2025 MIPS payment year provides third party intermediaries with sufficient time to adapt to the changes in policy, requirements, and programming updates that would need to occur in technological systems to support subgroup reporting. We encourage the early adoption of subgroup reporting to allow groups to gain experience with the future state of the program.

A finalized timeline to implement subgroup reporting is outlined in Table 45.

TABLE 45: Subgroup Implementation Timeline for MVP Reporting

Subgroup Implementation Timeline*	
CY 2023 through CY 2025 MIPS Performance Period/2025 through 2027 MIPS payment years	Groups may voluntarily form subgroups to report MVPs.
CY 2026 MIPS Performance Period/2028 MIPS payment year, and Future Years	Multispecialty groups will be required to form subgroups in order to report MVPs.

* As discussed above, we did not propose that MVP reporting is mandatory. We have outlined and solicited public comments on our future timeline.

As we continue to expand the portfolio of MVPs available over the next few years, MIPS eligible clinicians, groups, and APM entities that do not have a relevant MVP for reporting could continue to report through traditional MIPS. We plan to time the sunset of traditional MIPS with the implementation of an appropriate portfolio of MVPs that are relevant to specialists that participate in the MIPS program. Until that time, there may be instances where some clinicians in a multispecialty group may have a relevant MVP available for reporting, while other clinicians within that same multispecialty group may not. In this scenario, the clinicians within the multispecialty group that have an MVP available may form a subgroup to report the MVP, while the group continues to

report traditional MIPS. We refer readers to section IV.A.3.b.(3) of this final rule for additional discussion of subgroup proposals.

We believe there is a need for multispecialty groups to transition to subgroup reporting in order to align with the goals of MVP reporting. That is, to provide more direct attribution of quality measure data and results to all clinicians that participate in the program rather than relying on quality reporting results that can only be attributed to a few clinicians within the group. This direct attribution will lead to more valuable, meaningful, and actionable results that contribute to patient care and improvement. We refer readers to sections IV.A.3.b.(3) and IV.A.3.b.(4)(d) of this final rule for

discussion of the finalized subgroup and MVP reporting requirements.

(e) Subgroups Reporting the APM Performance Pathway (APP)

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we finalized the availability of the APM Performance Pathway beginning with the CY 2021 performance period. Specifically, we finalized that individual MIPS eligible clinicians who are participants in MIPS APMs may report through the APP at the individual level (85 FR 84860). Furthermore, we finalized that groups and APM Entities may report through the APP on behalf of constituent MIPS eligible clinicians (85 FR 84860). Because we already identify the MIPS eligible clinicians who are MIPS APM participants based on Participation Lists

for each APM, it is unnecessary to require MIPS APM participants to register as subgroups for purposes of reporting the APP. We use Participation Lists to identify each individual APM participant for purposes of MIPS APM participation, as well as application of the Improvement Activities credit for APM participants; beginning with performance year 2023, we will use Participation Lists to identify the MIPS eligible clinicians within a group TIN that should be included in the subgroup of APM participants for purposes of reporting the APP.

(f) Catalyst for Reporting MVPs

(i) Background

Through the MIPS Value Pathways framework, finalized in the CY 2020 PFS final rule (84 FR 62946 through 62949), stakeholders provided feedback, specifically questioning what incentives would MVP Participants have to report on MVPs, when they have the choice to report traditional MIPS instead. We have heard these questions raised through multiple methods, including public comment through rulemaking, meetings, and the MVP Town Hall that was held in January 2021. Through rulemaking, we have proposed MVP policies that we believe act as catalysts to encourage MVP Participants to transition to MVP reporting. This includes reduced reporting requirements, as described in section IV.A.3.b.(4)(d) of this final rule, allowing MVP Participants to report on a smaller, more cohesive subset of measures and activities that are relevant to a given clinical topic, condition, procedure, or episode of care. In addition, as described in section IV.A.3.b.(5)(d)(ii) of this final rule, we are finalizing our proposal to provide MVP Participants who report on MVPs with enhanced performance feedback that allows for meaningful comparison to similar clinicians and provides more useful information to make improvements in the care provided.

Additionally, we understand that clinicians have other requirements that must be met to maintain their licensure and as appropriate board certification status. In many instances, clinicians must comply with Continuing Medical Education (CME) requirements and/or Maintenance of Certification (MOC) requirements. We believe that any alignment between what clinicians must do to maintain their licensures/board certifications and reporting MVPs would be beneficial by reducing burden in terms of the various requirements clinicians must comply with. Therefore, in some cases, it seems possible that

offering CME credit or credit towards MOC could be connected with MVPs. We encourage accrediting organizations such as specialty societies, to work with MVP submitters and consider whether CME credit or credit towards MOC could be offered for reporting MVPs. We believe by allowing clinicians to receive CME credit for MVP reporting, there is potential for there to be a reduction in the administrative burden clinicians face when trying to balance meeting CMS program requirements with the requirements of medical licensing or certification.

The incentives for clinicians to report on MVPs in lieu of traditional MIPS may encourage early adoption of MVPs and allows those clinicians to gain experience with the future state of the program. We believe that creating incentives to report MVPs may help MVP participants familiarize themselves with MVP reporting requirements, particularly in cases where clinicians identify an available MVP as relevant to their practice. Through public comment stakeholders have expressed their desire for additional incentives for clinicians to choose to report MVPs over traditional MIPS. We refer readers to section IV.A.3.b.(5) of this final rule where we discuss considerations of additional incentives through future rulemaking.

(ii) Public Reporting of MVP Data

We have heard from stakeholders who expressed hesitancy to partake in the initial transition to MVP reporting citing concerns with what results may be publicly reported. We refer readers to section IV.A.3.i.(1) of this final rule for discussion of our public reporting proposals related to MVP data and subgroup reporting.

(3) Subgroup Composition

(a) Overview

In the CY 2022 PFS proposed rule (86 FR 39355 through 39358), we proposed to establish subgroup reporting as an option for MVP Participants and for those individuals and entities who choose to report the APP. Additionally, we proposed: (1) Definitions for subgroup, single specialty group, multispecialty group, and special status; (2) subgroup eligibility requirements; and (3) application of low-volume threshold and special status designations for subgroups (86 FR 39360 through 39363). We refer readers to section IV.A.3.b.(4) of this final rule, for details on our finalized policies regarding: (1) Subgroup reporting requirements; (2) subgroup election process; and (3) subgroup identification.

In section IV.A.3.b.(5) of this final rule, we detail our finalized policies on subgroup scoring.

We refer readers to the CY 2022 PFS proposed rule (86 FR 39359) for information on the background of subgroup reporting and discussion of our proposed policies.

(b) Definitions of a Single Specialty Group, Multispecialty Group, Subgroup, and Special Status

A group is currently defined at § 414.1305 as a single TIN with two or more eligible clinicians (including at least one MIPS eligible clinician), as identified by their individual NPI, who have reassigned their billing rights to the TIN. As discussed in section IV.A.3.b.(3)(b)(iii) of this final rule, we proposed to use certain characteristics of the group to determine eligibility and special status of the clinicians in the subgroup. To provide clarity, we proposed definitions for single specialty groups, multispecialty groups, subgroups, and special status.

(i) Single Specialty and Multispecialty Groups Definitions

We proposed to add to § 414.1305 to include that a single specialty group is a group as defined at § 414.1305 that consists of one specialty type as identified by eligible clinicians in the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) (<https://pecos.cms.hhs.gov/>). In the proposed rule (86 FR 39360), we shared our belief that using clinician specialty information from PECOS would allow us to align data sources and create greater consistency within the program given that PECOS specialty information is publicly reported on Care Tools.²²³

We also proposed to add to § 414.1305 to include that a multispecialty group is a group as defined at § 414.1305 that consists of two or more specialty types as identified by eligible clinicians in the Medicare Provider Enrollment, Chain, and Ownership System (PECOS). As discussed in section IV.A.3.b.(2)(c)(ii) of this final rule, beginning in the CY 2026 performance period/2028 MIPS payment year, multispecialty groups will be required to form subgroups to report MVPs.

Additionally, we refer readers to the CY 2022 PFS proposed rule (86 FR 39360), where we discussed the subgroup reporting options for clinicians involved in care across multiple specialties or who may have more than one PECOS specialty

²²³ <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/About-Physician-Compare-An-Overview>.

designation. At this time, we do not have limitations on which specialty will be considered the primary specialty. However, we will be taking stakeholder feedback into consideration as we craft policies for limiting subgroup composition in the future.

We received public comments on the proposed definitions for single specialty and multispecialty groups. The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed concerns about the use of the PECOS clinician specialty designation to determine the composition of a group or a subgroup. A few commenters shared their concern that PECOS primary specialty designations in many instances do not align with the scope of care provided by a clinician and specifically do not represent the care provided by clinicians in subspecialties. A few commenters recommended that CMS determine specialty by analyzing claims data, specifically specialty taxonomy codes, because they believed that taxonomy codes offer a deeper level of specificity than PECOS specialty codes which could make it clearer which specialties would want to report on a given MVP. One commenter specifically shared their belief that using PECOS to determine clinician specialty may result in the exclusion of NPs, PAs, and other clinician types due to the designation options within PECOS.

Response: As articulated in the CY 2022 PFS proposed rule (86 FR 39365 through 39366), we recognize there are advantages and disadvantages with using PECOS to make specialty determinations. We thank the commenters for sharing their concerns about the use of PECOS clinician specialty designations to determine the composition of a group or subgroup. We recognize that specialty codes on claims data may offer additional information regarding the primary specialty of clinicians in a subgroup. We currently utilize both PECOS and claims data in the Quality Payment Program. For example, we use claims data for determining clinician eligibility for the MIPS program and use PECOS for identifying specialty information on the Compare Tools for doctors and clinicians. Given that PECOS specialty information is also publicly reported on Compare Tools, its use would advance our desire to maintain consistency across the program. Additionally, we agree with the commenter on the importance of ensuring that NPs, PAs, and other clinician types are not excluded from MVP reporting due to their primary designation within

PECOS. Therefore, we are finalizing the proposed definitions of single specialty group and multispecialty group with modifications as described in more detail below. We believe that it is critical for CMS to continue to explore the most appropriate data sources and options which can be used to determine whether a group is single specialty or multispecialty, as well as across the MIPS program (for example, when making eligibility determinations, for public reporting).

Comment: One commenter recommended that CMS define a multispecialty group as a group that consists of five or more specialty types as identified by eligible clinicians in PECOS because they believe requiring single specialties to form individual subgroups would be exorbitantly burdensome for large, multispecialty practices which they believe would have to form 50 or more subgroups.

Response: We thank the commenter for their feedback. As discussed in the proposed rule (86 FR 39365 through 39366), we solicited comments on the criteria for defining mandatory subgroup reporting and if a subgroup should be limited to a single specialty. As discussed in section IV.A.3.b.(2)(c)(ii) of this final rule, beginning in the CY 2026 performance period/2028 MIPS payment year, multispecialty groups will be required to form subgroups to report MVPs. To clarify, we did not propose to require any criteria for the composition of subgroups at this time, including limiting subgroup reporting to a single specialty; however, we will be taking public comments into consideration as future subgroup proposals are created. We agree with the commenter that we would not want to create a scenario where a practice would have to create a subgroup for every specialty and subspecialty. As we move from traditional MIPS to MVP reporting, we currently believe defining a multispecialty group as two or more specialties offers simplicity for stakeholders to understand their status.

After consideration of public comments, we are finalizing our proposal to define single specialty groups and multispecialty groups, with modifications. Specifically, we are removing the reference to the use of PECOS within the definitions for single specialty and multispecialty groups at § 414.1305 to allow CMS to explore the data sources and options that can be used across the program, including for identifying primary specialty designations. Given the feedback from commenters, as well as the fact that we utilize both PECOS and claims data in

the Quality Payment Program, we do not believe that it is appropriate to specify PECOS as the sole data source for determining specialty information of groups at this time. We recognize that the attribution of a specialty is complex, and we want to avoid unintended consequences that may arise from the use of one data source over another data source when making such attributions.

We also recognize there are different ways for a clinician to identify their specialty and that this results in different information available to CMS (for example, different specialty information available under PECOS and claims data). We believe we need additional time to explore the potential data sources (for example, PECOS and claims) and options that can be used across the program, including for identifying primary specialty designations. Analyzing existing data sources, such as PECOS or claims data, as well as other options will help us ensure we have accurate data on eligible clinicians. We intend to assess available data and systems to ensure that the data is recent and accurately reflects the scope of care provided by clinicians.

Therefore, we are finalizing at § 414.1305 that a single specialty group consists of one specialty type. We are finalizing at § 414.1305 that a multispecialty group consists of two or more specialty types. We encourage stakeholders to provide feedback on their experience with CMS use of separate data sources for MIPS eligibility determination (claims data) and public reporting on Care Compare (PECOS data). Additionally, we request stakeholder feedback on alternate data sources that CMS could consider in addition to the existing data sources (claims data and PECOS) utilized in MIPS.

(ii) Subgroup Definition

We proposed to define a subgroup at § 414.1305 as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician's NPI. Groups would identify their affiliated subgroups, and those subgroups would submit data on the MVPs which are clinically meaningful to MIPS eligible clinicians within a subgroup or their patients. We proposed at § 414.1318(b) to state that except as provided under § 414.1317(b), each MIPS eligible clinician in the subgroup receives a final score based on the subgroup's combined performance assessment. Additionally, we proposed to amend § 414.1310(e)(1) to state that except as provided under

§§ 414.1315(a)(2), 414.1317(b), 414.1318(b), and 414.1370(f)(2) each MIPS eligible clinician in the group receives a final score based on the group's combined performance assessment. With the inclusion of the exception provided under § 414.1318(b), this would allow for an exception for subgroups to receive a final score based on the subgroup's combined performance.

As discussed in the CY 2022 PFS proposed rule (86 FR 39361), it is possible that more than one final score could be associated with a TIN/NPI for a performance period, and in those situations and as finalized in section IV.A.3.f.(5) of this final rule, we will apply a final score hierarchy for purposes of determining the MIPS payment adjustment for that TIN/NPI. As finalized in section IV.A.3.b.(2)(c)(ii) of this final rule, beginning with the CY 2026 performance period/2028 MIPS payment year, multispecialty groups will be required to form subgroups for reporting MVPs. We believe this will offer clinicians the opportunity to participate in MIPS more meaningfully and will allow patients to have more granular and meaningful information when selecting an eligible clinician. Additionally, we refer readers to the CY 2022 PFS proposed rule for discussion around balancing increased data granularity with team-based care and measuring performance at the subgroup level (86 FR 39361).

As discussed in section IV.A.3.b.(4)(d)(vi) of this final rule, MIPS eligible clinicians in groups who do not have an MVP relevant to their practice would participate in traditional MIPS through group reporting or as an individual. If their group reports through traditional MIPS or an MVP, the clinicians could receive their group's score, if their group submits data. If the group chooses not to report, a MIPS eligible clinician can report as an individual and receive their individual score. While subgroup reporting of MVPs would be voluntary for multispecialty groups until the CY 2026 performance period/2028 MIPS payment year, these groups will continue to report to MIPS for the eligible clinicians (as identified by NPI) under their TIN, including clinicians reporting through subgroups, which is discussed in section IV.A.3.b.(4)(d) of this final rule.

We received public comments on the proposed definition for subgroups. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported our proposal for the implementation of subgroup reporting.

The commenters shared their belief that the subgroup data would allow for better choice of care by patients and provide additional information for clinicians to improve quality of care provided. One commenter believes subgroup reporting would be crucial to MVPs as it would facilitate meaningful participation for specialists within multispecialty groups, especially clinicians in group practices who are part of episode-based care.

Response: We agree collecting subgroup-level data would allow for better choice of care by patients and provide additional information to clinicians to improve the quality of care they provide. We also believe this policy will allow specialists to participate in the MIPS program more meaningfully.

Comment: A few commenters expressed concern that subgroup reporting may undermine the efficiencies and advantages of the group practice model, specifically detracting from team-based care.

Response: We agree there are tradeoffs that must be considered in the development and implementation of subgroup reporting policies. In addition, we believe transitioning multispecialty groups to subgroup reporting will address some of the inherent gaming risks that are apparent when we have multi-specialty groups report on measures which are not necessarily representative of the care provided by all clinicians within the group, where clinicians in a group may rely on the performance of other clinicians (of a different specialty) within the group to meet quality reporting requirements. While we intend subgroup reporting to be meaningful and relevant to the scope of care provided by the clinicians in the subgroup and allow patients to obtain clinician information at a more granular level, we continue to support clinicians who practice medicine leveraging the team-based care model and plan to address team-based care through future rulemaking. We believe clinicians would be able to participate in the MIPS program more meaningfully if they report measures which are aligned with their scope of care—where specialists directly contribute to the measures and activities they report on. We also encourage the continuation of team-based care and do not intend to prohibit or limit team-based care through the MVP and subgroup policies. Therefore, as discussed in section IV.A.3.i.(1) of this final rule, we believe clinician participation in subgroups would provide meaningful performance feedback for clinicians and also allow

patients to choose clinicians relevant to their clinical condition or care needs.

We also agree with commenters that there are many advantages of group practice, and it is critical that team-based care must be accounted for in both subgroup and MVP reporting. Therefore, as finalized in section IV.A.3.b.(2)(c)(ii) of this final rule, we are delaying the implementation of mandatory subgroup reporting of MVPs from CY 2025 performance period/2027 MIPS payment year to CY 2026 performance period/2028 MIPS payment year. We believe the additional time will allow us to craft subgroup reporting policies which will help increase the data available to patients for choosing clinicians, increase the meaningfulness of QPP, and support team-based care.

Comment: One commenter requested that CMS clarify what it means by stating that groups will continue to report to MIPS for their eligible clinicians in their group, including the eligible clinicians who report to MIPS through subgroups.

Response: In section IV.A.3.b.(2)(c)(ii) of this final rule, we finalized the proposal that beginning with the CY 2026 performance period/2028 MIPS payment year, multispecialty groups will only be able to participate in MVP reporting as subgroups. We anticipate there would not be an applicable MVP for all clinicians by the CY 2026 performance period/2028 MIPS payment year. Therefore, those clinicians who do not have a relevant MVP available for reporting would continue to report through traditional MIPS. As we transition to mandatory subgroup reporting, including a State where subgroups may report the Promoting Interoperability measures at the subgroup level, we recognize there will be duplicative reporting during this time to ensure no clinicians are left behind and policies are achievable. Therefore, during the initial years of subgroup reporting, the affiliated group will continue to include subgroup reporters in their traditional MIPS submission across all four performance categories. We refer readers to § 414.1310(e) and the CY 2018 Quality Payment Program final rule (82 FR 53592 through 53593) for a description of our previously established policies regarding group reporting.

After consideration of public comments, we are finalizing these proposals as proposed.

(iii) Special Status Definition

In the CY 2018 Quality Payment Program final rule, we finalized definitions for special status

determinations for ambulatory surgical center (ASC)-based MIPS eligible clinicians, facility-based MIPS eligible clinicians, Health Professional Shortage Areas (HPSA), hospital-based MIPS eligible clinicians, non-patient facing MIPS eligible clinicians, rural area, or small practice status and codified at § 414.1305 definitions for each (82 FR 53479 through 53586). We often refer informally to these as “special status”; however, we have not previously defined what “special status” means. Therefore, we proposed to add to § 414.1305 and define that special status means that a MIPS eligible clinician: (1) Meets the definition of an ASC-based MIPS eligible clinician, facility-based MIPS eligible clinician, hospital-based MIPS eligible clinician, non-patient facing MIPS eligible clinician, or is in a small practice; or (2) is located in an HSPA or rural area. We believe that defining special status will help clinicians better understand the application of subgroup policies.

Comment: One commenter supported the proposed definition of special status because they believe that clinicians who provide their services in ASCs should not be penalized for lack of access to health information technology. They also shared their belief that this aligns with Congressional intent under Section 16003 of the 21st Century Cures Act.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing the proposal as proposed.

(c) Subgroup Eligibility

As described in section IV.A.3.b.(2)(c)(ii) of this final rule, we proposed voluntary subgroup reporting for clinicians beginning with the CY 2023 performance period/2025 MIPS payment year and to define subgroup as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician's NPI. During the initial years of MVP implementation, we recognize that there may be an inadequate number of MVPs available for clinicians to participate as subgroups. In the proposed rule, we proposed: (1) Application of a low-volume threshold; (2) application of special status designation; and (3) subgroup inclusions and exclusions (86 FR 39361). Additionally, we solicited comments on subgroup composition and limitations.

(i) Application of Low-Volume Threshold

We considered whether a low-volume threshold for clinicians participating in subgroup reporting should be calculated at the group or subgroup level. In consideration of stakeholder feedback and to minimize changes in eligibility determination for clinicians, we believe it would be optimal to determine the low-volume threshold for clinicians participating in a subgroup at the group level. As we implement subgroup reporting and as clinicians and groups familiarize themselves with this new participation option, we believe we should limit the complexity of the program to the extent that is feasible.

At § 414.1305, one of the ways we determine MIPS eligibility is by defining how the low-volume threshold is applied to individual clinicians and groups. We determine eligibility for MIPS during two different eligibility periods, which include an assessment of: (1) Those who have allowed charges for covered professional services less than or equal to \$90,000; (2) those who provide covered professional services to 200 or fewer Part B-enrolled individuals; and (3) those who provide 200 or fewer covered professional services to Part B-enrolled individuals (83 FR 59735) provided by the clinician and group during that time-period. Therefore, we proposed at § 414.1318(a)(1) that except as provided under § 414.1318(a)(2), for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for subgroups are determined at the group level as provided under §§ 414.1305 and 414.1310.

We solicited public comments on this proposal. As MVPs continue to evolve, we anticipate increased opportunities for clinician participation in subgroups, and we also solicited feedback from stakeholders if we should reevaluate, in the future, MIPS eligibility for clinician participation in subgroups at the subgroup level.

The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposal of applying a group's low-volume threshold determination to clinicians in subgroups. One commenter believes finalizing the low-volume threshold determination at the group level for subgroup participants would generally rule out the possibility that multispecialty groups would then exclude clinicians from the program.

Response: We agree with the commenters that assessing the low-volume threshold at the group level would ensure many clinicians are continued to be eligible clinicians in the program.

Comment: One commenter shared their concern that some clinicians may not meet the low-volume threshold by themselves under a scenario where each specialty is required to form and report through subgroup reporting. The commenter shared their belief that MVP reporting for clinicians in small subgroups may not be beneficial for such clinicians and their patients due to inadequate patient outcomes volumes, and therefore, these clinicians should be excluded from MVP reporting. They recommended that CMS instead apply the low-volume threshold at the subgroup level because they believe this would help alleviate burden in large, multispecialty practices and ensure that the subgroup data that patients receive is a valid representation of the care provided.

Response: We understand the commenter's first concern to be that applying the low-volume threshold at the subgroup level would exclude some clinicians who would otherwise be eligible to participate in MIPS. We acknowledge the commenter's concern that subgroup reporting would be burdensome and may not be beneficial due to insufficient patient volume. We agree with the commenter that subgroup reporting may be burdensome, however, we believe that subgroup reporting will provide information about the clinicians at a more granular level to patients, enabling informed decision making for their care needs. We believe that the benefits of providing patients with more information about clinicians outweighs the detriments of the increased reporting burden. We also believe that through subgroup reporting, clinicians will receive performance feedback relevant to the care provided, making the MIPS program more meaningful to both clinicians and patients. To further clarify, we proposed to continue low-volume threshold determinations at the group level, which we believe helps simplify our subgroup policies, limiting confusion around participation status in MIPS. We believe if we determined the low-volume threshold at the subgroup level that this could have unintended consequences such as excluding clinicians from participating in MIPS. We believe by participating in MIPS, clinicians are incentivized to provide higher quality care at a lower cost, which benefits patients. Additionally, we believe assessing the low-volume threshold at the subgroup level could

create loopholes whereby clinicians do not report. This could limit a patient's access to more granular clinician data and could have adverse effects on their care, which is contrary to the goals of MVPs and subgroup reporting. Additionally, as finalized in section IV.A.3.b.(5)(b)(i) of this final rule, for MVP measures to be scored, case minimums are applied and can be reweighted. We believe we will have to find ways for smaller subgroups to meet case minimum on certain quality measures and look forward to working with stakeholders over the coming rulemaking cycles on this issue. We refer readers to this section for more details and discussion of this policy.

After consideration of public comments, we are finalizing this policy as proposed.

(ii) Application of Special Status Designation

Groups in MIPS could have their data submission requirements and scoring affected by special statuses outside of their underlying eligibility for MIPS. Each of these special statuses, described in section IV.A.3.b.(3)(b)(iii) of this final rule, are determined at the time of eligibility determinations.

We proposed at § 414.1318(a)(1) for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status, as defined at § 414.1305, for subgroups is determined at the group level as provided under § 414.1310. We believe it is necessary to explain how special status determinations would work in the context of subgroup reporting. For example, a large, multispecialty group may include subgroups of clinicians that meet the requirements for small practice status, or non-patient facing status, or facility-based status. While we are certain some existing groups could have subgroups that could be eligible at the subgroup level for special status designation as described in section IV.A.3.b.(3)(b)(iii) of this final rule, we do not believe that this determination should be made at the subgroup level at this time. We want to deter construction of subgroups that would inappropriately create special status exemptions, such as subgroups of 15 or fewer clinicians in a large group. Overall, we believe this should help limit the complexity of the program as we implement this new participation option.

We refer readers to the CY 2022 PFS proposed rule for discussion of our plan to not establish limits, at this time, on the number of subgroups that a clinician can be part of (86 FR 39362). We will monitor the ways in which clinicians form subgroups and will revisit this

issue in future rulemaking if we discover that clinician participation in multiple subgroups is not what we intended.

The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposal to apply a group's special status designation to clinicians in subgroups because they believe it would continue the traditional MIPS exemption policies and offer simplicity for multispecialty statuses, so they are not tracking special status determinations for each subgroup.

Response: We thank the commenters for their support.

Comment: A few commenters requested CMS clarify what special status designation means for healthcare systems, hospitals, and practices which include clinicians with different types of special status designations (hospital-based, non-patient facing, small practice, etc.) under the same TIN.

Response: In the CY 2018 Quality Payment Program final rule (82 FR 53579 through 53586), we finalized definitions for special status determinations for ASC-based MIPS eligible clinicians, facility-based MIPS eligible clinicians, HPSA, hospital-based MIPS eligible clinicians, non-patient facing MIPS eligible clinicians, rural area, or small practice status and codified at § 414.1305 definitions for each. We did not propose a change to how these determinations are made in traditional MIPS or under MVPs. We clarify that our proposal described above would extend these special status designations to subgroup participants so practices would not have to keep track of these designations at a subgroup level. To further clarify our intent, we interpret the commenters' reference to "healthcare systems" to mean an organization or entity consisting of a group of affiliated hospitals or practices. We note that special status designations are not applicable to healthcare systems and are assigned by CMS to MIPS eligible clinicians at the individual or group level (available via the NPI lookup on qpp.cms.gov). Additionally, we note that all the special statuses could apply at the individual or group level, which we believe helps account for different types of eligible clinicians who provide health care under the same practice.

Comment: One commenter did not support the proposal for special status designation to be assessed at the group level for subgroup participants because they believed participation in MVPs may be more difficult for some clinicians if there are no relevant

measures or activities available in an MVP.

Response: We believe the commenter misinterpreted the proposed policy for the application of special status designation and may have confused it with our MVP reporting policies regarding the availability and applicability of measures and activities under MVPs, described under section IV.A.3.b.(4) of this final rule.

After consideration of public comments, we are finalizing this policy as proposed.

(iii) Subgroup Composition Limitations

In the CY 2022 PFS proposed rule, we did not propose to require any criteria for the composition of subgroups at this time (86 FR 39362). However, we solicited comments on criteria that we could consider in the future, such as in the CY 2023 PFS rulemaking cycle. We received many comments, and we thank commenters for their feedback. We will take these comments into consideration for future rulemaking.

(iv) Subgroup Inclusions and Exclusions

(A) Subgroup Eligibility—Participants in MIPS APMs

We refer readers to the CY 2022 PFS proposed rule (86 FR 39362 through 39363), where we discuss subgroup reporting eligibility for MIPS APM participants, including how clinicians in APM Entities cannot form a subgroup across multiple TINs at this time. We thank the commenters who provided public comment on potential considerations for allowing APM Entities to form subgroups across multiple TINs and will take this feedback into consideration in future rulemaking.

(B) Subgroup Exclusions—Opt-In Eligible Clinicians and Voluntary Participants

Based on historical data, a significantly low number of clinicians have utilized the following participation options in MIPS: Virtual groups; opt-in eligible clinicians; and voluntary reporters. For example, if the number of opt-in eligible clinicians remains the same as estimated in the CY 2021 PFS final rule (85 FR 85015), we anticipate that an estimated 0.3 percent of the total number of MIPS eligible clinicians would fit into this category. We believe that there are several operational considerations, such as implementation burden for stakeholders and CMS, value of subgroup reporting for these clinicians versus burden, scoring policies, etc. that must be addressed prior to allowing clinicians in these categories to participate as subgroups

for reporting MVPs. Additionally, we believe that the definition of a subgroup consisting of one TIN, as in section IV.A.3.b.(3)(b)(ii) of this rule, would not be applicable for clinicians in a virtual group because a virtual group is a combination of two or more TINs, resulting in exclusion of clinicians in virtual groups from participating as subgroups for reporting MVPs.

Therefore, beginning in the CY 2023 performance period/2025 MIPS payment year, we proposed at § 414.1318(a)(2) that an individual clinician or group electing to participate in MIPS as an eligible clinician in accordance with § 414.1310(b)(1)(iii)(A) or § 414.1310(b)(2) is not eligible to participate as a subgroup. As we consider transitioning to MVPs and retiring traditional MIPS, we will revisit subgroup eligibility for opt-in eligible clinicians, voluntary participants and clinicians in virtual groups in future years. We also solicited feedback from stakeholders on whether clinicians in these categories should be allowed to form subgroups in future years, and if there are additional criteria that should be established.

The following is a summary of the comments we received and our responses.

Comment: One commenter did not support our proposal to exclude opt-in eligible clinicians, virtual groups, and voluntary reporters from subgroup reporting in the CY 2023 performance period/2025 MIPS payment year because they believe allowing these clinician types would help them prepare for the potential sunset of traditional MIPS.

Response: We acknowledge that we will continue to take these types of clinicians into consideration as we continue to build out our subgroup policies in future rulemaking. Additionally, based on historical data, opt-in clinicians, voluntary reporters, and virtual groups make up less than 5 percent of the total number of MIPS eligible clinicians. We believe excluding these clinicians from subgroup reporting would allow CMS to streamline MVP reporting and focus on MVP development for a majority of the clinicians, while reducing burden and complexity for these clinicians during the initial years of MVP implementation. However, as MVP implementation continues, we will reassess if these exclusions should be continued.

After consideration of public comments, we are finalizing this policy as proposed.

(d) Subgroup Examples

In Appendix 3: MVP Inventory of this final rule, we are finalizing seven MVPs for implementation in the CY 2023 performance period/2025 MIPS payment year. We have provided examples below to show how eligible clinicians could choose to participate as subgroups for reporting MVPs if these MVPs are finalized. These examples are not intended to be exhaustive of the eligible clinician types that could participate as subgroup.

Example 1: A group is composed of all anesthesiologists. In this example, all the clinicians in the group have the same primary specialty designation, which is an example for a single-specialty group. We would not anticipate that they would wish to form

subgroups but could report the *Patient Safety and Support of Positive Experiences with Anesthesia* MVP as a group.

Example 2: Table 46 illustrates an example of subgroup reporting for a group consisting of anesthesiologists, orthopedic surgeons, and CRNAs. In this example, the group could form a total of three subgroups. The anesthesiologists and CRNAs could form either one or two subgroups for reporting the proposed *Patient Safety and Support of Positive Experiences with Anesthesia* MVP as described in Table G: Proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP Beginning with the CY 2023 performance period/2025 MIPS payment year of Appendix 3: MVP Inventory of this final rule. We believe the measures and activities included in this MVP would be most applicable to clinicians who provide anesthesia services to patients within the surgical setting, are considered anesthesiologists, or are other qualified anesthesia professionals. For instance, the anesthesiologists and the CRNAs could form separate subgroups for reporting on applicable measures and activities in the MVP. Alternatively, the CRNAs and the anesthesiologists could report on the applicable measures and activities in the MVP as one subgroup if this aligns better with how the subgroup would practice and they all report the same measures and activities. The orthopedic surgeons in the group could then form a separate subgroup to report the applicable measures and activities in the proposed *Improving Care for Lower Extremity Joint Repair* MVP.

BILLING CODE 4120-01-P

TABLE 46: Example to Demonstrate Subgroup Participation

Subgroup Example	Measures and Activities in the MVP
Subgroup #1 (Anesthesiologists): <i>Patient Safety and Support of Positive Experiences with Anesthesia</i>	<i>Quality Performance Category</i> Q477: Multimodal Pain Management (MIPS CQMs Specifications) AQI48: Patient-Reported Experience with Anesthesia (QCDR) AQI69: Intraoperative Antibiotic Redosing (QCDR) AQI70: Prevention of Arterial Line-related Bloodstream Infections (QCDR) <i>Improvement Activities Performance Category</i> IA_BE_22: Improved practices that engage patients pre-visit (Medium) IA_BMH_2: Tobacco use (Medium) <i>Cost Performance Category</i> Medicare Spending Per Beneficiary (MSPB) Clinician
Subgroup #2 (Certified Registered Nurse Anesthetists): <i>Patient Safety and Support of Positive Experiences with Anesthesia</i>	<i>Quality Performance Category</i> Q404: Anesthesiology Smoking Abstinence (MIPS CQMs Specifications) Q424: Perioperative Temperature Management (MIPS CQMs Specifications) Q430: Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy (MIPS CQMs Specifications) Q463: Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics) (MIPS CQMs Specifications) <i>Improvement Activities Performance Category</i> IA_BE_22: Improved practices that engage patients pre-visit (Medium) IA_BMH_2: Tobacco use (Medium) <i>Cost Performance Category</i> Medicare Spending Per Beneficiary (MSPB) Clinician
Subgroup #3 (Orthopedic Surgeons): <i>Improving Care for Lower Extremity Joint Repair</i>	<i>Quality Performance Category</i> Q350: Total Knee Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy (MIPS CQMs Specifications) Q351: Total Knee Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation (MIPS CQMs Specifications) Q376: Functional Status Assessment for Total Hip Replacement (eCQM Specifications) Q470: Functional Status After Primary Total Knee Replacement (MIPS CQMs Specification) <i>Improvement Activities Performance Category</i> (~) IA_CC_9: Implementation of practices/processes for developing regular individual care plans (Medium) IA_CC_13: Practice improvements for bilateral exchange of patient information (Medium) <i>Cost Performance Category</i> Elective Primary Hip Arthroplasty Knee Arthroplasty
<u>Foundational Layer</u> <i>Population Health Measures</i> Q479: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Program (MIPS) Eligible Clinician Groups (Administrative Claims) <i>Promoting Interoperability (PI) Performance Category</i> The subgroup submits the affiliated group's Promoting Interoperability performance category data	

BILLING CODE 4120-01-C

The following is a summary of the comments we received and our responses.

Comment: One commenter disagreed with the subgroup reporting example detailed in Table 33 of the proposed rule, which illustrated how different clinicians could form subgroups and

report on the same proposed MVP, Patient Safety and Support of Positive Experiences with Anesthesia. The commenter believes that CMS described how anesthesiologists and nurse anesthetists could report different anesthesia measures and that QCDR measures do not apply to nurse

anesthetists. This commenter shared that both the physician anesthesiologist and the nurse anesthetist can, in most cases, report the same quality measures and that there are entities who report QCDR measures to MIPS for their nurse anesthetist clients.

Response: In the illustrative subgroup example under Table 33 of the proposed rule, we provided an example of how different subgroups could report a given MVP. We appreciate the commenter for sharing that CRNAs and anesthesiologists can mostly report the same quality measures and QCDR measures. We believe that the commenter misunderstood our interpretation of subgroup reporting for CRNAs and anesthesiologists in the example. As described in the proposed rule (86 FR 39363), we note the example was not intended to be exhaustive of the measures and activities reported by CRNAs and anesthesiologists. We further clarify that the example was an illustration of the different ways we anticipate the CRNAs and anesthesiologists could report together on the same MVP. We acknowledge that in many cases, CRNAs and anesthesiologists can and do report the same measures, including QCDR measures.

(e) Third-Party Intermediaries for Subgroup Reporting

As described in section IV.A.3.h.(2)(b) of this final rule, we are finalizing at § 414.1400(a)(1) for third-party intermediaries to implement MVPs and subgroup reporting options for MIPS eligible clinicians starting with the CY 2023 performance period/2025 MIPS payment year. Since subgroups will be implemented concurrently with MVPs, we believe that it is important that all third-party intermediaries support subgroup reporting in order for clinicians to meaningfully report MVPs. We refer readers to section IV.A.3.h.(2)(b) of this final rule for additional details on requirements for third-party intermediaries supporting MVPs and subgroups.

(f) Public Reporting of Subgroup Performance Information

As described in section IV.A.3.i.(1) of this final rule, we are finalizing to delay public reporting of subgroup performance information by an additional year. This policy would result in the public reporting of subgroup performance information beginning with the CY 2024 performance period/2026 MIPS payment year and each performance period/MIPS payment year thereafter. We refer readers to section IV.A.3.i.(1) of this final rule for additional details on the finalized policies related to public reporting of subgroup performance information on the compare tool.

(g) Future Vision of Subgroups

In the CY 2022 PFS proposed rule (86 FR 39365 through 39366), we described our vision for the future of subgroup reporting and requested public comment on several policy issues we will consider for future rulemaking. We solicited feedback on: (1) Our vision for data granularity; (2) how subgroup group reporting could function if traditional MIPS is retired; (3) considerations for limiting subgroup reporting to a single specialty; and (4) a request for information on the future vision of subgroup reporting.

To emphasize the main points of our request for comment, under our vision for data granularity, we shared our belief that additional data granularity will help clinicians and patients in making informed health care decisions. Furthermore, additional data granularity would allow CMS to have additional information that we can use to assess gaps in health equity.

In considering how sunseting traditional MIPS will impact subgroup reporting, since we are finalizing the MVP participant timeline proposal as described in section IV.A.3.b.(2)(c)(ii) of this rule, multispecialty groups would have to report more than 1 MVP beginning in the CY 2026 performance period/2028 MIPS payment year. We reiterate our belief that in order to meet the goals of MVPs, provide enhanced performance feedback to clinicians, and ensure more granular information is publicly available for patients, multispecialty groups must form subgroups to report MVPs. Additionally, we do not believe there will be an MVP that will be applicable to all types of clinicians within multispecialty groups. However, as we work to implement MVPs, we anticipate we will create additional policies to set the rules for how all clinicians will be able to meaningfully participate in the program if traditional MIPS is no longer available.

In considering limitations to subgroup reporting, and specifically, limiting subgroup reporting to a single specialty, we restate our belief that without establishing limitations to subgroup composition prior to implementation, we will not meet the desired programmatic goals of MVPs. We believe in many ways this would replicate our concerns with the current state in traditional MIPS. We considered limiting subgroups to a single specialty, setting a threshold for clinician specialty composition to allow some degree of flexibility under a subgroup, establishing specialty families that would be allowed to form subgroups,

and limiting MVP reporting to approved specialties and clinician types rather than placing limits to the subgroup composition itself. As MVPs are implemented, we will consider establishing criteria for how subgroups can be formed for eligible clinicians, group practices, and third-party intermediaries time to make system and workflow updates.

Additionally, we reiterate our belief that team-based care is an essential element to providing high-quality care to patients and acknowledge some of the subgroup policies could be construed to create competition within groups. It is not our intention to create competition, rather, we believe as MVPs continue to be created and evolve, we will include MVPs that are focused on team-based care for some specialties.

We received many comments for our consideration on the vision for data granularity, impact of the sunseting of traditional MIPS for subgroup reporters, limiting subgroup composition to a single specialty, and future vision of subgroup reporting. We thank commenters for their feedback and will take these comments into consideration in future rulemaking.

(4) MVP Requirements

(a) Overview

In the CY 2020 PFS final rule (84 FR 62948), we finalized at § 414.1305 that MIPS Value Pathway means a subset of measures and activities established through rulemaking. We describe our vision for MVPs to connect the four performance categories while using a foundational layer of population health claims-based measures and interoperability, on which to build, quality, cost, and improvement activity linkages. In the CY 2021 PFS final rule (85 FR 84849 through 84859), we finalized a set of MVP development criteria and a process to receive MVP candidates from stakeholders. In the CY 2022 PFS proposed rule (86 FR 39367 through 39377), we proposed to establish additional MVP related policies to support the implementation and availability of MVPs. In this section, we discuss our proposed: (1) Refinements to the MVP development criteria; (2) a maintenance process for established MVPs; (3) MVP reporting requirements; and (4) the MVP registration process.

(b) MVP Development and Maintenance

(i) MVP Development Criteria

(A) General MVP Structure

As discussed in the CY 2022 PFS proposed rule (86 FR 39367), from the time the CY 2021 PFS final rule

published, we have solicited feedback from several stakeholders who have submitted MVP candidates for CMS consideration utilizing the MVP candidate solicitation process (85 FR 84854 through 84856). Through this feedback, we have understood that the quality and patient improvement priorities of specialists may differ based on the way they practice. There are clinicians who practice utilizing a team-based approach, involving several clinicians of different specialties working together and for that reason, find quality reporting that reflects that approach more meaningful. Team-based health care is defined by the National Academy of Medicine as “the provision of health services to individuals, families, and/or their communities by at least two health providers who work collaboratively with patients and their caregivers—to the extent preferred by each patient—to accomplish shared goals within and across settings to achieve coordinated, high-quality care.”²²⁴ Other clinicians may be specialized in a manner where they focus on a limited number of procedures.

For these reasons, we believe there are various ways to approach MVP development, and the method utilized would be dependent on the topic measured by the MVP. One method is to construct MVPs in a manner that is broad, for example, addressing cancer care comprehensively versus the creation of MVPs for each unique diagnosis of cancer care. Another method is to construct MVPs in a more granular manner, for example, addressing a specific procedure, such as hip and knee arthroplasty. A third approach is to structure MVPs in a manner that reflects the team-based healthcare model. This approach considers the patient’s care from a holistic perspective, involving various clinicians as needed. One such example is around surgical care, which involves several clinician types, such as surgeons and anesthesiologists. We believe this approach captures the patient experience and outcomes in a manner that is meaningful, that would result in patient improvement. In the CY 2021 PFS final rule (85 FR 84850), we finalized MVP development criteria that accounts for the development of MVPs collaboratively by multiple specialties for this reason. We believe that the team-based healthcare model has an

impact to patient outcomes and encourage the use of this approach, as feasible, when developing MVPs.

As described in the CY 2022 PFS proposed rule (86 FR 39370) and in section IV.A.3.b.(4)(b)(ii) of this final rule, we discuss a proposed maintenance process for MVPs. In instances where an MVP is initially implemented, for example, to address a specific procedure, and there is opportunity to evolve the MVP over time to reflect the team-based healthcare model, we would strongly encourage and work towards that transition.

However, we do understand there is not a “one size fits all” MVP structure that is suitable for all specialties and believe the use of one of the structure methodologies is appropriate for MVP development.

(B) Selection of Measures and Improvement Activities Within an MVP

As described above, in the CY 2021 PFS final rule (85 FR 84849 through 84850), we established a set of criteria for use in the development and selection of MVPs. Specifically, we had finalized that we were not prescriptive on the number of quality measures that are included in an MVP (85 FR 84850). In the CY 2022 PFS proposed rule (86 FR 39370 through 39372), we proposed reporting requirements for MVPs, and discussed the allowance of clinician choice in selecting which quality measures and improvement activities to report, as described in detail below in section IV.A.3.b.(4)(d) of this final rule. We believe that it is important to provide clarity in our expectations of the number of quality measures and improvement activities that are available for an MVP Participant to choose.

As discussed in the CY 2022 PFS proposed rule (86 FR 39367 through 39368), an MVP should include a sufficient number of quality measures and improvement activities to allow MVP Participants to select measures and report them to meet the reporting requirements outlined in sections IV.A.3.b.(4)(d)(ii) and IV.A.3.b.(4)(d)(iv) of this final rule. To the extent feasible, MVPs should include a maximum of 10 quality measures and 10 improvement activities, to offer MVP Participants some choice without being overwhelming. However, we understand that the total number of measures and activities available in an MVP would depend on the MVP structure. For example, as described in Appendix 3: MVP Inventory of the proposed rule (86 FR 39892 through 39895), we proposed the Optimizing Chronic Disease Management MVP that includes 9

quality measures and 12 improvement activities. Chronic disease can broadly encompass several conditions; therefore, we have selected measures and improvement activities that are closely aligned to the topic and offer clinicians some choice. We refer readers to Appendix 3: MVP Inventory for discussion of our proposed MVPs.

(aa) Requirement of Outcomes or High Priority Measures

As described in the CY 2022 PFS proposed rule (86 FR 39370 through 39371), we proposed MVP quality reporting requirements, that are similar to the requirements of traditional MIPS under § 414.1335. We discuss a proposal to require the reporting of one outcome measure or high priority measure (if an outcome measure is not available). Accordingly, we believe it is important to modify the previously finalized MVP development criteria (85 FR 84849 through 84859), where we describe the criteria for including quality measures in an MVP. We believe we need to update the criteria to ensure MVPs are developed in a manner that accounts for this proposed quality reporting requirement.

(AA) Outcomes Measures Requirement

In the CY 2022 PFS proposed rule (86 FR 39370 through 39371), we proposed that beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, MVPs must include at least one outcome measure that is relevant to the MVP topic, so MVP Participants are measured on outcomes that are meaningful to the care they provide. In addition, beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, each MVP that is applicable to more than one clinician specialty should include at least one outcome measure that is relevant to each clinician specialty included. This is important since MVPs are proposed to be constructed in a manner that may include one or more clinician specialties, as described above in section IV.A.3.b.(4)(b)(i)(A) of this final rule, and there should be outcome measures included in the MVP that are relevant to each clinician specialty.

We anticipate over the next few years, there may be opportunities where outcomes-based measures are developed and can be reported utilizing the administrative claims collection type. For example, in the CY 2021 PFS final rule (85 FR 85049 through 85051), we finalized the *Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive*

²²⁴ Mitchell, P., M. Wynia, R. Golden, B. McNeill, S. Okun, C.E. Webb, V. Rohrbach, and I. Von Kohorn. 2012. Core principles & values of effective team-based health care. NAM Perspectives. Discussion Paper, National Academy of Medicine, Washington, DC. <https://doi.org/10.31478/201210c>.

Payment Systems (MIPS) outcome-based administrative claims measure. We proposed to allow the inclusion of outcomes-based administrative claims measures within the quality component of an MVP. We believe these measures can be used to meet the outcome measure requirement discussed under the MVP reporting requirements in section IV.A.3.b.(4)(d)(ii) of this final rule. We solicited comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the requirement for MVPs to include at least one outcome measure.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing our policies as proposed.

(BB) Exception When None Are Available

As described in the CY 2021 PFS final rule (85 FR 84850), we are aware that not all specialties and subspecialties may have outcome measures currently available to them in the MIPS program. We are aware of this measurement gap, and believe it is appropriate to allow for the use of high priority measures when outcome measures are not available.

In the CY 2022 PFS proposed rule (86 FR 39368), we proposed that beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, in instances when outcome measures are not available, each MVP must include at least one high priority measure that is relevant to the MVP topic, so MVP Participants are measured on high priority measures that are meaningful to the care they provide. In addition, beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, each MVP must include at least one high priority measure that is relevant to each clinician specialty included. This is important since MVPs are proposed to be constructed in a manner that may include one or several clinician specialties, as described above in section IV.A.3.b.(4)(b)(i)(A) of this final rule. As previously established at § 414.1305, we define high priority measures to include outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measures.

We continue to encourage stakeholders to utilize our established pre-rulemaking processes, such as the Call for Measures: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient->

Assessment-Instruments/QualityMeasures/Pre-Rulemaking, to develop outcome measures relevant to their specialty if outcome measures currently do not exist and for eventual inclusion in an MVP. We encourage, to the extent feasible, the inclusion of several outcome and/or high priority measures, if available and relevant to the MVP topic. The inclusion of several measures would allow clinicians to have some choice in selecting the most relevant outcome or high priority measure that is meaningful to their specific practice. We solicited comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the requirement for MVPs to include a high-priority measure if an outcome measure is not available.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing our policies as proposed.

(bb) Encouragement To Include Patient-Centered Measures

In the CY 2021 PFS final rule (85 FR 84850), we finalized MVP development criteria that takes into consideration the patient voice. Specifically, we finalized MVP development and selection criteria that considers the inclusion of (to the extent feasible), patient-reported outcome measures, patient experience measures, and/or patient satisfaction measures. Through interactions with stakeholders and presentations, we have referred to these measures as patient-centered measures.

As described in the CY 2022 PFS proposed rule (86 FR 39368), we did not propose any revisions to our previously finalized policy, however, we believe it is important that we rely on a consistent understanding of patient-centered measures. Health Affairs²²⁵ stated the following with respect to such measures, “Measures should be patient-centered and incorporate new approaches to assessing patient health status and patient experience. Such measures include assessment of clinical outcomes, patient-reported outcome measures, as well as new approaches to evaluation of patient experience.”

We acknowledge that our existing portfolio of patient reported outcome measures is limited and may not be applicable to all specialties and

subspecialties. We continue to encourage stakeholders to utilize our established pre-rulemaking processes, such as the Call for Measures, described in the CY 2020 PFS final rule (84 FR 62953 through 62955) to develop patient reported outcome measures relevant to their specialty. In addition, we encourage measure stewards of new and existing quality measures in MIPS to consider updating their measures to include the patient centered approach through the measure maintenance cycle or the development of new measures.

We solicited and received public comments on whether there are other aspects of patient measurement that should be considered as a part of the patient-centered measures definition. We thank commenters for the feedback received through this request for information. We may consider this information to inform future rulemaking.

(cc) Requirements for QCDR Measures Considered for an MVP

In the CY 2021 PFS final rule (85 FR 84857 through 84859), we finalized that QCDR measures that were approved in the previous year may be considered for inclusion within an MVP. In addition, we finalized at § 414.1400(b)(3)(v)(C)(4) that QCDR measures should be fully tested at the clinician level prior to the QCDR measure being included in an MVP. We refer readers to the CY 2021 PFS final rule (85 FR 84857 through 84859) for the specific policies that were previously finalized. In the CY 2022 PFS proposed rule (86 FR 39368 through 39369), we clarified when we would expect a QCDR to prove that their QCDR measure is fully tested before it is implemented within an MVP. QCDRs must self-nominate as a QCDR and submit QCDR measures for CMS consideration within the 60-day self-nomination period that begins on July 1st of the calendar year prior to the applicable performance period and ending on September 1 of the same year. In order to determine whether a QCDR measure may be finalized within an MVP, we will need to receive QCDR measure testing data for review by the end of the self-nomination period, that is no later than September 1 of the year prior to the applicable performance period. We encourage, as feasible, that QCDRs share testing data for their fully tested QCDR measures at the time of MVP candidate submission which may be prior to the September 1st deadline. If a QCDR is unable to submit testing data to demonstrate that their QCDR measure is fully tested at the clinician level by end of the self-nomination period (September 1st) or does not

²²⁵ Higgins, A., D. Safran, N. Fiore, E. Murphy, M. McClellan. 2019. Pathway To Patient-Centered Measurement For Accountability. Health Affairs Blog, Health Affairs. <https://www.healthaffairs.org/doi/10.1377/hblog20190910.733376/full/>.

otherwise meet our requirements, we will not finalize the inclusion of the QCDR measure within an MVP.

(C) Foundational Layer

In the CY 2020 PFS final rule (84 FR 62947 through 62948), we establish that the implementation of a foundational population health core measure set using administrative claims-based quality measures that can be broadly applied to communities or populations can result in MVPs that provide more uniformity in how the program measures population health, reduce clinician reporting burden, focuses on important public health priorities, and increases the value of MIPS performance data. In addition, we discuss our beliefs that interoperability is also a foundational element that would apply to all clinicians, regardless of MVP, for whom the Promoting Interoperability performance category is required. Furthermore, we also discuss the importance of the integration of population health measures and Promoting Interoperability measures into MVPs, as they provide a degree of standardization across all clinician types and promotes an infrastructure on which to assess and improve value-based care.

(aa) Population Health Measure

In the CY 2021 PFS final rule, we discuss the inclusion of population health measures calculated from administrative claims-based data as a part of the foundational layer of MVPs, in an effort to improve patient outcomes, reduce reporting burden and costs, and better align with clinician quality improvement efforts. We refer readers to the CY 2021 PFS final rule (85 FR 84856 through 84857) where we discuss population health. In the CY 2022 PFS proposed rule (86 FR 39369), we proposed: (1) To define the term population health measure; and (2) update the population health measure inventory.

(AA) Proposed Definition

In the 2020 CMS Quality Measure Development Plan- 2020 Population Health Environmental Scan and Gap Analysis Report (<https://www.cms.gov/files/zip/2020-mdp-population-health-e-scan.zip>), we conducted an environmental scan to identify gaps in population health measurement within MIPS, specifically for use in the foundational layer of MVPs. Through this environmental scan and gap analysis, we have settled on a definition of “population health measure”. In addition, as described in the “Roadmap for Promoting Health Equity and

Eliminating Disparities”: <https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86046>, developed by the National Quality Forum, health equity continues to be a priority for the agency, we believe it is important to include the measurement of health disparities when measuring population health.

In the CY 2022 PFS proposed rule (86 FR 39369), we proposed to codify this at § 414.1305, such that a population health measure means a quality measure that indicates the quality of a population or cohort’s overall health and well-being, such as, access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services. We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters recommended that additional information be provided in the definition to clarify the intended use and attribution approaches to ensure transparency as to CMS’ intent for population health measures. One commenter expressed concern for the size of the population or cohort in the proposed definition for population health measures.

Response: The proposed definition of population health was not intended to be comprehensive, and intentionally is flexible. With regards to the attribution, and the size of the population or cohort, we believe these areas may vary depending on the clinical topic of measurement. Standardization of the attribution does not take into consideration the various specialties that participate in MIPS and instances where certain specialties should not be attributed to a population health measure. Furthermore, standardization of a cohort or population size may lead to certain population health conditions being excluded from measurement because the cohort size is not sufficient. We do not believe it is appropriate to limit population health measurement this way. To account for instances where MVP participants may not be attributed to a certain population health measure or when MVP participants may not treat enough patients to meet the population or cohort size within the measure, we have proposed scoring rules for population health measures accordingly. We refer readers to the CY 2022 PFS proposed rule (86 FR 39378 through 39379) and section IV.A.3.b.(5)(b)(i)(B) of this final rule for

discussion of the population health scoring rules.

Comment: Several commenters expressed concerns with the population health measures proposed for MVPs, because commenters believe that the measures are too broad and are outside of the control of the clinician. One commenter expressed the belief that the inclusion of population health measures in the foundational layer is essentially creating an entire new MIPS category which is outside the intent of the MACRA legislation. Another commenter believes that population health measures move the MVP away from incorporating the patient’s voice, measuring clinical conditions and outcomes, and generating real-time feedback.

Response: The population health measures capture outcomes important to patients (that is, hospitalizations for acute illness) and thus provide meaningful information to clinicians so they can improve their practice. Although administrative claims measures use outcomes that are not directly reported by patients, they measure clinical outcomes that are central to patient well-being since avoidance of acute hospitalization is an important goal of care. They can thus generate feedback to help improve care. We anticipate sharing measure scores with clinicians scored on the measure, in addition to tying reimbursement payment adjustments to these scores, will encourage clinicians to improve care quality and patient outcomes. Each measure is fully tested to ensure that it reflects the quality of care provided by clinicians held accountable for care of their assigned patients.

We disagree with commenters that the inclusion of population health measures in the foundational layer is essentially creating an entire new MIPS category. The population health measures are still considered quality measures, and as described in section IV.A.3.b.(5)(b)(i)(B) of this final rule, are scored and incorporated into the quality score. Therefore, their use does not create a new performance category, rather, the foundational layer of MVPs was created to ensure that important areas of measurement would be reflected within all MVPs.

We also disagree that population health measures move the MVP away from incorporating the patient voice, measuring clinical conditions and outcomes, and generating real time feedback. We believe MVPs can be multi-faceted in covering these important areas, and believe there is importance in measuring the health of communities through population health

in addition to the value in including the patient voice. In addition, MVPs are expected to be developed to cover clinical conditions that are important to the specialties that participate in the program and would include outcome measures to the extent available. Furthermore, as discussed in the CY 2022 PFS proposed rule (86 FR 39383), we proposed to provide enhanced performance feedback to MVP participants within the annual performance feedback that is currently provided through traditional MIPS. We do not believe that reporting on population health measures will impede our ability to provide enhanced performance feedback to MVP participants. At this time, we are not able to provide real time or performance period feedback, as there are complexities that need to be mitigated.

Comment: Several commenters do not support the use of administrative claims-based measures in any of the MVPs. They are concerned that many of the existing administrative claims-based measures have not been tested at the physician level and are based on a retrospective analysis of claims and do not provide granular enough information for physicians to make improvements in practice. Overall, they do not believe that administrative claims-based measures will be appropriate in all MVPs. One commenter believes that the measures should focus on the domain of care that is most relevant to the care the physician provides. One commenter requested confirmation that each measure has a high level of reliability and is fully tested to ensure that the measure can appropriately be assigned to specific physicians or groups. Another commenter recommends the administrative claims-based measures be voluntary.

Response: We disagree. The administrative claims-based measures in MIPS have been tested and have been put forth through the Measures Application Partnership (MAP) process through the National Quality Forum. Each measure is fully tested at the clinician level to ensure that it reflects the quality of care provided by clinicians held accountable for care of their assigned patients. While there may be instances where administrative claims-based measures include a lookback period, many in MIPS are based on performance period dates, that is January 1 through December 31. We refer readers to the CY 2021 PFS final rule (85 FR 85045) and the CY 2022 PFS proposed rule (86 FR 3600 through 39602) for discussion of the data collection periods for these measures.

We believe administrative claims measures capture information related to outcomes that is important to patients (that is, hospitalizations for acute illness) and thus provide meaningful information to clinicians so they can improve their practice. Although administrative claims measures use outcomes that are not directly reported by patients, they measure clinical outcomes that are central to patient well-being since avoidance of acute hospitalization is an important goal of care. They can thus generate feedback to help improve care.

Overall, we believe administrative-claims based measures, such as the population health measures should be included as a facet of MVP measurement, across all MVPs. The clinical topics covered in the population health measures are applicable to most clinicians. However, as described in the CY 2022 PFS proposed rule (86 FR 39378), we are aware there may be instances where the population health measures cannot be calculated, and had proposed to adopt our scoring policies used in traditional MIPS for MVPs, we would exclude the measure from the total achievement points and the total available points if the administrative claims measure does not have a benchmark or meet the case minimum requirement in accordance with § 414.1380(b)(1)(i)(A)(2)(ii).

We also proposed at § 414.1365(d)(3)(i)(A) that except as provided in paragraph (d)(3)(i)(A)(1) each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP participant's total measure achievement points and total available measure achievement points. The population health measures in the MIPS program are fully tested, with a reliability of 0.4 with a minimum attributed case size of 20. We consider these measures to be of moderate reliability and believe the reliability thresholds for these measures are sufficient for these measures to be included as quality measures within the MIPS program. In the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77171), we identified reliability levels between 0.4 to 0.7 as moderate and reliability levels above 0.7 as high. We aim to measure quality performance for as many clinicians as possible, and limiting measures to reliability of 0.7 would result in fewer individual clinicians with quality performance category measures. In addition, a 0.4 reliability threshold ensures moderate reliability for most MIPS eligible clinicians or group

practices that are being measured on quality.

We disagree with the commenter who recommended that administrative-claims based measures, such as the population health measures, be voluntary. Population health measurement has been purposefully included in the foundational layer of all MVPs to be broadly applied to communities or populations and provide more uniformity in how the program measures population health, reduces clinician reporting burden, and focus on important public health priorities.

After consideration of public comments, we are finalizing our policy as proposed.

(BB) Population Health Measures Inventory

In the CY 2022 PFS proposed rule (86 FR 39369) we discussed the population health measure inventory, and the expansion of the number of population health measures available in the foundational layer of MVPs. We also discussed and encouraged stakeholders to pursue population health measure development. As discussed in Appendix 1: MIPS Quality Measures of this final rule, we proposed to include the *Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions* in the MIPS program. As discussed in Appendix 3: MVP Inventory, this measure was proposed for inclusion as an additional population health measure for MVP reporters to choose from as part of the Foundational Layer. We refer readers to Appendix 3: MVP Inventory for the comments received on the specific population health measures and our responses.

(bb) Promoting Interoperability

In the CY 2021 PFS final rule (85 FR 84849 through 84850), as a part of the MVP development criteria, we had finalized that MVPs must include the full set of Promoting Interoperability measures. Any updates made to the set of Promoting Interoperability measures through traditional MIPS will apply to the MVPs. Therefore, we refer readers to section IV.A.3.d.(4) of this final rule where we discuss Promoting Interoperability performance category policies.

(D) Health Equity Measures in MVPs—Request for Information (RFI)

In the CY 2022 PFS proposed rule (86 FR 39369) we requested information regarding the incorporation of health equity measures in MVPs. We thank

commenters for the feedback received through this request for information. We may consider this information to inform future rulemaking.

(ii) Maintenance Process for MVPs

As described in the CY 2022 PFS proposed rule (86 FR 39370), we believe it is important that we implement a maintenance process for established MVPs. Independent of the implementation of MVPs; the individual measures typically undergo annual updates and maintenance for several reasons. These updates may include technical coding updates, changes to clinical guidelines, or modifications to various aspects of the measure specification (such as the numerator or denominator). It will be important that we monitor when changes are made to individual measures to ensure that the updated measure is relevant and should be maintained within the MVP.

Therefore, beginning with the CY 2023 MIPS performance period/2024 MIPS payment year, we proposed an annual maintenance process for finalized MVPs. In order to ensure that various stakeholder perspectives are also considered, we proposed a solicitation process to solicit stakeholder recommendations for potential updates to established MVPs. Under this proposal, beginning in January of the year prior to the performance period, stakeholders could submit their recommendations to revise established MVPs. We would accept stakeholder input on a rolling basis. Any changes to MVPs will be addressed through future notice and comment rulemaking, for example, suggesting the addition or removal of a quality measure or improvement activity. If changes are made to existing individual measures and activities, they would be made under the traditional MIPS performance category policies and criteria for measures and activities and those changes would be reflected within the MVP. We would be unable to communicate with a stakeholder about whether or not their recommendations are accepted ahead of rulemaking, and we would ultimately decide whether updates to the established MVPs should be made. Additional logistical information, such as where to submit recommendations would be provided through the QPP resource library and listserv messaging, prior to the opening of the solicitation process. We stated in the proposed rule that we would consult with the stakeholders who originally nominated the MVP about any publicly recommended changes to that MVP. To be clear, the annual maintenance process for finalized MVPs would be

separate from the new MVP candidate solicitation process that was described in the CY 2021 PFS final rule (85 FR 84854 through 84856). We solicited comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters believe that it would be beneficial to have all relevant specialties and clinician types provide feedback on any MVP changes, because commenters believe it would generate more buy in and foster collaboration. A few commenters expressed concern for our process to only consult with stakeholders who submitted the MVP regarding changes to the MVP and suggested soliciting recommendations from major contributory stakeholders. Another commenter believes that involving multiple stakeholders in the maintenance of MVPs would make the process more transparent and nimbler to ensure that MVP owners do not unnecessarily prevent appropriate modifications of the MVP from taking place.

Response: We agree that it would be beneficial to have all relevant specialties and clinician types provide feedback on potential changes to established MVPs. To clarify, as discussed in the CY 2022 PFS proposed rule (86 FR 39370), we intend to solicit recommendations for potential changes to established MVPs from all interested parties through an MVP maintenance process, and not just from those stakeholders that submitted the MVP through the initial development process. In addition, the initial implementation of an MVP and any potential changes to an established MVP (for example, the addition or removal of measures) would need to be proposed and finalized in future notice-and-comment rulemaking which enables all interested parties to voice their opinions through the public comment process on any proposed changes to an MVP. We are also open to exploring additional options as to how we can better engage with a broader cohort of stakeholders on MVP maintenance. We would make the determination as to which MVP updates will be proposed and finalized and which will not.

Comment: A few commenters urged CMS to align the MVP maintenance process with timelines for MIPS and QCDR measure updates to minimize the burden on MVP developers.

Response: The timeline for MVP maintenance will coincide with our MIPS rulemaking timelines. As described in the CY 2022 PFS proposed rule (86 FR 39370), any changes to

MVPs would be addressed through future notice and comment rulemaking. Unfortunately, we are not able to align with the QCDR self-nomination timeline (July 1st to September 1st) as it does not align with the rulemaking timeline. However, as described in the CY 2022 PFS proposed rule (86 FR 39368 through 39869) we are mindful of the QCDR self-nomination timeline when considering the inclusion of new QCDR measures in existing MVPs. In order to determine whether a QCDR measure may be finalized within an MVP, we will need to receive QCDR measure testing data for review by the end of the self-nomination period, that is no later than September 1st of the year prior to the applicable performance period. If a QCDR is unable to submit testing data to demonstrate that their QCDR measure is fully tested at the clinician level by the end of the self-nomination period or does not otherwise meet our requirements, we will not finalize the inclusion of the QCDR measure within an MVP.

After consideration of public comments, we are finalizing our policies as proposed.

(c) Establishing a Portfolio of MVPs

In the CY 2022 PFS proposed rule (86 FR 39879 through 39907), we proposed seven MVPs on the following topics: Rheumatology, Stroke Care, Ischemic Heart Disease, Chronic Disease Management, Emergency Medicine, Lower Extremity Joint Repair, and Anesthesia. We refer readers to Appendix 3: MVP Inventory of this final rule for a full description of each MVP, proposal rationales, summary of public comments and our responses. We anticipate that the portfolio of MVPs will continue to grow over the next few years. Through the review of data received through MIPS reporting for the 2019 performance period, we have identified the ten specialties who have the most participants in the MIPS program. These specialties include primary care, emergency medicine, diagnostic radiology, anesthesiology, cardiology, obstetrics and gynecology, orthopedic surgery, psychiatry, general surgery, and ophthalmology.

We believe it is important to develop MVPs that address these specialties, amongst the other specialties that participate in the program. We are, however, aware of the limited availability of relevant cost measures for all specialties and subspecialties. We refer readers to the CY 2022 PFS proposed rule (86 FR 39402 through 39405) and section IV.A.3.d.(2)(c) of this final rule, for discussion of the proposed cost measure development by external

stakeholders process, where we discuss a potential strategy to mitigate the issue of a limited inventory of cost measures that will potentially remove barriers for MVP implementation.

To support MVP development efforts over the next few years, and to ensure we build out a comprehensive MVP portfolio, we intend to identify additional MVP priority areas for development and include those within our guidance materials for the MVP candidate submission process: <https://qpp.cms.gov/mips/mips-value-pathways/submit-candidate>.

(d) MVP Reporting Requirements

(i) Overview

We have reviewed the existing reporting requirements under traditional MIPS and believe that by changing the reporting requirements for MVPs, we would reduce reporting burden. We believe MVP reporting would allow for measurement that is more meaningful by requiring clinicians to report on measures and activities that comprehensively reflect an episode of care or clinical condition. We have heard from stakeholders the importance of having a choice when reporting. In this section, we discuss our proposals for MVP reporting requirements and subgroup reporting limitations for the Quality performance category; Cost performance category; Improvement Activities performance category; and the foundational layer-, which consists of the Promoting Interoperability performance category, and the population health measures.

(ii) Quality Reporting Requirements in MVPs

As described in the CY 2022 PFS proposed rule (86 FR 39370), since MVPs would include cohesive and complementary subsets of measures and activities that are relevant and to a given specialty, we believe that MVP Participants would report on measures that provide more meaningful and actionable results. MVP Participants would have the opportunity to select from a subset of measures within an MVP. Furthermore, as discussed above, we believe it is important to continue to require the reporting of outcome and high priority measures in MIPS. Therefore, at § 414.1365(c)(1), we proposed that except as provided in paragraph § 414.1365(c)(1)(i), an MVP Participant must select and report, if applicable, 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure, included in the MVP, excluding the population health

measure required under paragraph (c)(4)(ii). We discuss in section IV.A.3.b.(4)(b)(i)(B) of this final rule, that there may be instances where MVPs are developed to include outcomes-based administrative claims measures within the quality component of an MVP, where those measures are not considered to be population-health based. In such instances, we believe it would be appropriate to allow MVP Participants to select to be calculated on the outcomes-based administrative claims measure, at the time of MVP registration, and to allow that measure to meet the outcome measure requirement of MVP quality reporting.

In addition, we have concerns about the ability of small practices to report all required measures in the MVP quality performance category when they select Medicare Part B claims measures as a collection type. In cases when an MVP includes fewer than 4 Medicare Part B claims measures, an MVP Participant in a small practice would need to report an additional collection type which would add reporting burden. We are concerned that small practices do not have the same resources to meet the quality reporting requirement of 4 measures if the MVP does not include 4 Medicare Part B claims measures. We want to establish policy that does not penalize a small practice for submitting an MVP. Therefore, we proposed at § 414.1365(c)(1)(i) that paragraph § 414.1365(c)(1), does not apply to a small practice that reports on an MVP that includes fewer than 4 Medicare Part B claims measures, provided that the small practice reports each such measure that is applicable. We solicited comments on these proposals and refer readers to section IV.A.3.b.(5)(b)(i) of this final rule for details on the MVP quality scoring proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported a reduction in the number of quality measures within the MVP reporting option as compared with traditional MIPS because commenters believe that this would lead to a reduced burden for clinicians.

Response: We thank the commenters for their support.

Comment: One commenter supports the use of administrative claims measures to meet outcome-based measure requirements.

Response: We thank the commenter for their support.

Comment: One commenter urged CMS to develop MVPs that can be reported using only one collection type in order to reduce burden and maximize

the number of MIPS eligible clinicians that can report MVPs.

Response: We disagree. We believe that limiting the number of collection types that are available for reporting an MVP would not be beneficial. If we were to only utilize one collection type in the reporting, fewer clinicians may be able to report the MVP if they are not using the collection type reflected in the MVP. Since MVPs include a focused selection of quality measures, MVP participants may select four measures to report on utilizing the collection types in which the measure is available, one of the four measures must be an outcome measure, or a high priority measure if an outcome is not available. We currently utilize measures that are implemented through one of the following collection types: MIPS CQMs; eCQMs; Medicare Part B Claims; and QCDR measures. As described above, we have concerns about the ability of small practices to report all required measures in the MVP quality performance category when they select Medicare Part B claims measures as a collection type. In cases when an MVP includes fewer than 4 Medicare Part B claims measures, an MVP Participant in a small practice will need to report an additional collection type which will add reporting burden. We are concerned that small practices do not have the same resources to meet the quality reporting requirement of 4 measures if the MVP does not include 4 Medicare Part B claims measures. We proposed to establish policy that does not penalize a small practice for submitting an MVP. As described in CY 2022 PFS proposed rule (86 FR 39370 through 39371), we proposed at § 414.1365(c)(1)(i) that paragraph (c)(1), does not apply to a small practice that reports on an MVP that includes fewer than 4 Medicare Part B claims measures, provided that the small practice reports each such measure that is applicable.

Comment: One commenter expressed concern that MIPS eligible clinicians will be required to participate in a registry in order to report an MVP because the commenter believes this would be a significant cost burden.

Response: To clarify, MVP participants are not required to participate in a registry in order to report an MVP. All the MVPs are reportable without the use of a third party intermediary, it is to the MVP participant's discretion whether or not they would like to use a registry to report. The only instance where an MVP participant would be required to report through a QCDR however, would be if they'd like to report on a QCDR measure that is available in the MVP. We note

that QCDR measures are only reportable via a QCDR that is approved to support said QCDR measures.

Comment: One commenter recommended CMS ensure that MVPs across specialties are equitable.

Response: We agree with the commenter. We have established MVP development requirements to ensure that all MVPs are developed utilizing the same criteria. In addition, we believe Interoperability and population health are important areas that should apply across all MVPs through the foundational layer. In addition, as described in section IV.A.3.b.(4)(d) of this final rule, all MVP participants are held to the same reporting requirements (with the exception of small practices if they have fewer Part B Claims measures to report on) to support that MVPs amongst MVP participants are fair and equitable.

Comment: A few commenters expressed concern for the lack of choice within the quality performance category under MVPs. One commenter expressed the belief that it should be up to the MIPS eligible clinician to select appropriate measures, rather than having a limited set of measures. One commenter recommends adding as many eQCMs into each MVP as possible since eQCMs have been encouraged and incentivized by CMS in the past. Another commenter urged CMS to allow MIPS eligible clinicians to submit additional outcome or high priority measures and receive bonus points.

Response: We disagree with the commenters who believe there is a lack of choice within the quality performance category under MVPs. A focused selection of quality measures have been curated based on consideration of clinical relevance and feedback from stakeholders. Over the past 5 years of traditional MIPS, as well as in precursor programs such as Physician Quality Reporting System (PQRS), we have found that clinicians, groups, practice administrators tend to select measures they believe they will perform the best on and not necessarily measures that would lead to improvements in the care provided. That has led to many measures that have topped out status, providing little to no value to clinicians, nor leading to improved patient outcomes. While we believe it is important that MVP participants have choice in the measures they report, we believe the level of choice should be narrowed to focus in on measures that are directly and clinically relevant to the topic being measured, and intend on identifying such measures through groupings within MVPs. We agree that eQCMs

should be included in MVPs where feasible, dependent on whether the eQCM is clinically relevant to the topic being measured. We encourage stakeholders to submit more than the required number of outcome or high priority measures if they can. As described in section IV.A.3.b.(5), when MVP participants submit more than the required number of measures, only the highest scored measures will count towards the quality final score. We are currently not offering bonus points for the reporting of additional measures, however as discussed in section IV.A.3.b.(5) of this final rule, we are open to exploring additional incentives to report MVPs through future rulemaking.

After consideration of public comments, we are finalizing our policies as proposed.

(iii) Cost Reporting Requirements in MVPs

As described in the CY 2022 PFS proposed rule (86 FR 39371), as MVPs are implemented and available for reporting, each MVP would only include cost measures that are relevant and applicable to the MVP topic. Therefore, the number of cost measures in a given MVP may vary depending on the clinical topic of the MVP. An MVP may include the episode-based cost measures that are relevant to the topic, total per capita cost measure (TPCC), and/or Medicare Spending Per Beneficiary Clinician (MSPB Clinician) measure. As such, we proposed at § 414.1365(c)(2) that an MVP Participant is scored on the cost measures included in the MVP they select and report. To be clear, MVP Participants would not submit data for the cost measures; they would be calculated by CMS using administrative claims data, as in traditional MIPS. We solicited comments on this proposal. We did not receive any comments and are finalizing the proposal as proposed. In addition, we refer readers to section IV.A.3.b.(5)(b)(ii) of this final rule for details of the MVP cost scoring policies and Appendix 3: MVP Inventory for a summary of the comments we received and our responses related to individual cost measures.

(iv) Improvement Activity Requirements in MVPs

Similar to the quality performance category within MVPs, we also believe the improvement activities performance category should provide clinicians with an opportunity to select from a subset of improvement activities within an MVP that are relevant to the clinical topic being measured. Therefore, in the CY

2022 PFS proposed rule (86 FR 39371), we proposed at § 414.1365(c)(3), that MVP Participant who reports an MVP, must report one of the following: Two medium-weighted improvement activities; one high-weighted improvement activity; or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice as described at (82 FR 53652) and at § 414.1380(b)(3)(ii). We note that these proposed MVP improvement activity requirements are reduced in comparison to what is required in traditional MIPS (82 FR 53652) under which we generally require two high-weighted activities, one high-weighted and two medium-weighted activities, four medium-weighted activities, or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice. We believe reduced reporting requirements are necessary to support adoption of and reduce burden for implementation of MVPs. We solicited comments on this proposal and refer readers to section IV.A.3.b.(5)(b)(iii) of this final rule for proposals related to MVP improvement activities scoring and discussion of why improvement activities are double-weighted under MVP reporting.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported double weighted improvement activities for MVP reporters. One commenter believes that this would allow for a more cohesive participation experience.

Response: We thank the commenters for their support.

Comment: A few commenters requested that CMS provide more flexibility in MVP reporting requirements, including providing automatic credit for the Improvement Activities performance category. One commenter believes that a commitment to improvement is inherent in many of the measures in MIPS.

Response: We disagree that additional flexibilities are needed within the reporting requirements. We do not believe there is value in offering automatic credit for the improvement activities performance category. Improvement activities are meant to have a complimentary relationship to the quality measures and cost measures included in an MVP. We do not believe automatic credit will lead to improved patient outcomes or improvements in the care provided to patients. Lastly, as described in section 1848(q)(2) of the Act, we are required to have four performance categories: Quality,

improvement activities, cost, and promoting interoperability. We believe there are other ways to incentivize clinicians and groups to report MVPs, and refer readers to section IV.A.3.b.(5) of this final rule for further discussion of future considerations of incentives.

After consideration of public comments, we are finalizing our policies as proposed.

(v) Reporting Requirements for the Foundational Layer

(A) Promoting Interoperability

(aa) Reporting Requirements

As described in the CY 2021 PFS final rule (85 FR 84849 through 84853), all MVPs should include the entire set of Promoting Interoperability measures, as a part of the foundational layer. We do not intend to establish different reporting requirements for Promoting Interoperability for MVPs from what is established under traditional MIPS. Therefore, in the CY 2022 PFS proposed rule (86 FR 39371), we proposed at § 414.1365(c)(4)(i) that an MVP Participant, is required to meet the Promoting Interoperability performance category reporting requirements described at § 414.1375(b). We solicited comments on this proposal and refer readers to section IV.A.3.b.(5)(b)(iv) of this final rule for details of the policies for MVP Promoting Interoperability scoring and reweighting.

The following is a summary of the comments we received and our responses.

Comment: Several commenters requested that CMS adopt different requirements for the Promoting Interoperability performance category within MVPs. One commenter urged CMS to use the MVP framework as an opportunity to provide clinicians with flexibility to demonstrate meaningful use in more innovative ways that account for differences in practices. One commenter requested that CMS include a menu of yes/no measures similar to the improvement activities performance category. Another commenter recommended that MVPs support meeting national standards that enable the bidirectional movement of health data across the digital environment through the Promoting Interoperability performance category.

Response: While we did not propose different reporting requirements for the Promoting Interoperability performance category in the first wave of MVPs, we are continuing to refine the composition of MVPs and may incorporate these suggestions in future rulemaking. In addition, we disagree that solely relying on measures that require a “yes/no”

response would be sufficient for the Promoting Interoperability performance category. In the CY 2019 PFS final rule (83 FR 59785 through 59796) we finalized a performance-based scoring methodology for the Promoting Interoperability performance category that recognizes MIPS eligible clinicians who push themselves on measures that are most applicable to how they deliver patient care and increase health information exchange through interoperability. While we do have several yes/no measures in the Promoting Interoperability performance category, we do not believe using only “yes/no” measures would enable us to distinguish varying performance levels among MIPS eligible clinicians.

Comment: One commenter requested that CMS provide flexibilities for certain types of clinicians, such as non-patient facing clinicians, for the Promoting Interoperability performance category in general within MIPS because the commenter believes these clinicians often have difficulties meeting the requirements of the Promoting Interoperability performance category.

Response: Our current policy under § 414.1380(c)(2)(i)(C) is to reweight the Promoting Interoperability performance category for non-patient facing MIPS eligible clinicians as defined under § 414.1305, which includes groups and virtual groups that have more than 75 percent of clinicians as non-patient facing. This policy will apply under MVPs, as discussed in section IV.A.3.b.(5)(c)(i)(B)(aa) of this final rule.

Comment: One commenter suggested that in MVPs, the Promoting Interoperability performance category measures shift to yes/no attestation rather than percentages because some measures may not be applicable to a clinician’s practice or different thresholds may be more appropriate.

Response: We disagree. Beginning with the CY 2019 performance period/ CY 2021 MIPS payment year (83 FR 59785 through 59796) we implemented a performance-based scoring methodology to encourage clinicians to push themselves on measures that are the most applicable to how they deliver care to patients. We believe that having Promoting Interoperability performance category measures that require a numerator/denominator response allows clinicians to differentiate themselves from other clinicians by recognizing higher achievement on these measures. Our goal has been to enable clinicians to focus more on patient care and health data exchange through interoperability.

Many measures have exclusions available for instances where a measure

is not applicable to the clinician’s practice.

After consideration of public comments, we are finalizing our policies as proposed.

(bb) Subgroup Limitations

As described in the CY 2022 PFS proposed rule (86 FR 39371 through 39372), we believe that subgroups should be assessed using subgroup level data to the extent that it is operationally feasible. However, through the MVP Town Hall (85 FR 84846), we heard from stakeholders that some clinicians would need additional time to resolve operational challenges, including challenges related to configuration of EHR systems. Given these operational challenges, as well as other considerations specific to the Promoting Interoperability performance category, we believe that each subgroup should submit their affiliated group’s data for the Promoting Interoperability performance category and receive a score based on that data. We acknowledge that requiring each subgroup to submit their affiliated group’s data could result in duplicative reporting of the same data if their affiliated group also reports as a group for the Promoting Interoperability performance category. However, we believe that this approach is the most appropriate way to address the operational challenges identified by stakeholders and other issues specific to the Promoting Interoperability performance category. For instance, requiring clinicians to report Promoting Interoperability by subgroup may initially disincentivize clinicians from choosing to report MVPs as it may exacerbate the reporting burden and use of resources by a smaller cohort of clinicians. Furthermore, the Promoting Interoperability measures are applicable to many clinician types and are not designed to be specialty specific like the quality measures, therefore, it is unclear whether an advantage of assessing Promoting Interoperability performance on a subgroup of clinicians exists. Other performance categories include specialty specific measures, where assessment of performance at the subgroup level may be more meaningful. Therefore, we proposed at § 414.1365(c)(4)(i)(A) that for the CY 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years, to require an MVP Participant that is a subgroup to submit its affiliated group’s data for the Promoting Interoperability performance category. The submission of the affiliated group’s data will be on the subgroup’s behalf. If the affiliated group chooses to report as

a group for the Promoting Interoperability performance category, the group still will be required to submit its own data separately and in accordance to the reporting rules for groups.

We refer readers to the CY 2022 PFS proposed rule (86 FR 39371 through 39372) for the discussion of subgroup limitations.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the reporting of Promoting Interoperability data for the affiliate group for subgroups.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing the policy as proposed.

(B) Population Health Measures

As described in the CY 2017 Quality Payment Program final rule (81 FR 77130 through 77136) we had received public comment that not all population health measures are applicable or attributable to all specialties. In order to mitigate this concern, we discuss our proposal in the CY 2022 PFS proposed rule (86 FR 39372), at § 414.1365(c)(4)(ii), that an MVP Participant is scored on 1 population health measure in accordance with paragraph § 414.1365(d)(1). To be clear, the population health measure calculation does not contribute to the required reporting of four quality measures, as described at § 414.1365(c)(1) and in section IV.A.3.b.(4)(d)(ii) of this final rule. Since the aforementioned population health measures are administrative claims based, they do not require data submission from clinicians. Therefore, it is important that an election period is established in which MIPS eligible clinicians, groups, subgroups, and APM entities would identify which MVP and population health measure they intend to report. We refer readers to the proposed registration process below and intend to provide additional guidance through subregulatory means.

In crafting our proposal, we also considered the alternative where we would not require MVP participants to select which population health measure to be calculated on. Under this alternative considered, we would require and calculate both population health measures and apply the higher score to the quality score. While we thought this approach would reduce some of the burden associated with requiring this selection at the time of MVP registration, we ultimately decided

to proposed to allow MVP participants to select which population health measure to be calculated on. As discussed above, this selection process is being proposed in an effort to mitigate some of the previously stated concerns stakeholders had with these measures.

We solicited comments on our proposal as discussed above and refer readers to section IV.A.3.b.(5)(b)(i)(B) of this final rule for details on the scoring of population health measures.

We received public comments on the reporting requirements of the population health measures. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the use of cross-cutting, claims-based, population-level measures in the foundational layer of MVPs and recommended that CMS prioritize use of outcome measures with an evidence-based and tested risk adjustment methodology to ensure meaningful comparisons between clinicians and groups.

Response: We thank the commenter for their support and will take their recommendations into consideration.

After consideration of public comments, we are finalizing our policies as proposed.

(vi) Subgroup Reporting

(A) Subgroup Reporting Overview

As discussed in the CY 2022 PFS proposed rule (86 FR 39372 through 39373) and section IV.A.3.b.(3)(a) of this final rule, subgroup reporting would provide an avenue for clinician teams within a larger group to be able to submit MVPs that are clinically relevant to them and would be a first step in allowing more granular clinician information to be made available to patients. To generate more clinically relevant and granular information about clinician performance, we believe that subgroups should be assessed using subgroup level data to the extent that it is operationally feasible. We anticipate more granular data would be available for patients, clinicians, and other stakeholders through a three-pronged approach of mandatory subgroup reporting, broad use of standards-based APIs that leverage the FHIR standard and the creation and use of dQMs as discussed in section IV.A.1.c. of this final rule. We believe that subgroups should report data for the quality and improvement activities performance categories as a subgroup. The cost performance category does not require data submission; however, as described in section IV.A.3.b.(5)(b)(ii) of this final rule, we believe cost data should be assessed at the subgroup level as well.

(B) Subgroup Reporting Limits

As described in section IV.A.3.b.(2)(c)(i) of this final rule, we proposed voluntary reporting of MVPs as a gradual approach to prepare stakeholders through the transition plan for MIPS before eventually requiring reporting through an MVP or the APP. As a part of the transition, we discuss our intention to continue to offer reporting through traditional MIPS at the group level, as discussed in section IV.A.3.b.(2)(c)(i) of this final rule, to allow clinicians and groups additional time to continue reporting in traditional MIPS while we work expand the inventory of MVPs over the next few years.

While we intend to allow for this flexibility through the transition, we believe that groups should only form subgroups if they are reporting through an MVP or the APP and not through traditional MIPS. As such, we proposed at § 414.1318(c)(2) that individual eligible clinicians that elect to participate in MIPS as a subgroup will have their performance assessed at the subgroup level across all of the MIPS performance categories based on an MVP in accordance with § 414.1365, and on the APP in accordance with § 414.1367, as applicable. Subgroups that are MVP Participants must adhere to an election process described in § 414.1365(b). This includes MIPS eligible clinicians who are APM participants that choose to report on an MVP as a subgroup. We believe encouraging the subgroup reporting in MVPs is an important step to help MVP Participants transition to MVP reporting in the future.

As stated in the CY 2021 PFS final rule (85 FR 84846), we envisioned subgroup reporting would be implemented for multispecialty groups reporting MVPs. A subset of a TIN could form a subgroup if they are part of the same TIN, but could not form a subgroup if they are part of different TINs. For example, a group consisting of a single billing TIN that contains a number of participants in the same APM Entity, could form a subgroup to report an MVP or the APP. However, an APM Entity could not select eligible clinicians who are part of different TINs, based on their specialty, and report as a single subgroup. Due to operational and technical issues described above, we do not believe it is feasible to permit MIPS eligible clinicians in multiple TINs to form a subgroup to report MVPs or the APP. We solicited public comment on whether there are strategies we should consider to enable formation of

subgroups comprised of MIPS eligible clinicians from multiple billing TINS to report MVPs or the APP.

We did not receive public comments on this proposal, and are finalizing it as proposed.

(vii) MVP Reporting Requirements Summary

Table 47 summarizes the finalized MVP reporting requirements:

TABLE 47: MVP Reporting Requirements

Quality Performance Category*	Improvement Activities Performance Category*	Cost Performance Category
An MVP Participant selects 4 quality measures, 1 must be an outcome measure (or a high priority measure if an outcome is not available or applicable). <i>As applicable, an administrative claims measure, that is outcome-based, may be selected at the time of MVP registration to meet the outcome measure requirement.</i>	MVP Participant selects: Two medium weighted improvement activities OR One high weighted improvement activity. OR Participates in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at (82 FR 53652) and at § 414.1380(b)(3)(ii)	An MVP Participant, is scored on the cost measures that are included in the MVP that they select and report.
<p><i>Foundational Layer (MVP agnostic)</i></p> <p><u>Population Health Measures*</u></p> <p>An MVP Participant selects 1 population health measure, at the time of MVP registration, to be scored on. The results are added to the quality performance category score.</p> <p><u>Promoting Interoperability (PI) Performance Category</u></p> <p>An MVP Participant is required to meet the Promoting Interoperability performance category requirements at § 414.1375(b).</p>		

*Indicates MVP Participant may select measures and/or improvement activities.

(e) Third Party Intermediaries Reporting MVPs

We believe it is also important to ensure that third party intermediaries have the capabilities to support MVPs. We refer readers to section IV.A.3.h.(2)(b) of this final rule for proposals related to requiring third party intermediaries to support MVP and subgroup reporting.

(f) MVP Participant Registration

As described in our proposals in the CY 2022 PFS proposed rule (86 FR 39373 through 39376), we strive to limit administrative burden and offer as much flexibility as possible. With this principle in mind, we proposed steps that an MVP Participant must take to inform CMS of their participation and submission options, with certain exceptions for when the method of collection requires the information in advance of the performance period or we do not have any discretion (such as in virtual groups). We believe that a registration process will be easiest and the most efficient option for MVP Participants and CMS to accurately capture: (1) MVP selection; (2)

population health measure selection; (3) administrative claim-based quality measure selection; and (4) subgroup participation.

(i) Registration Timeline

(A) General Timeline

We refer readers to the CY 2022 PFS proposed rule (86 FR 39373 through 39374) for discussion of the considerations that went into development of the registration timeline. We proposed at § 414.1365(b)(1), that to report an MVP, an MVP Participant must register for the MVP, and if applicable, as a subgroup during a period that begins on April 1 and ends on November 30 of the applicable CY performance period or a later date specified by CMS. Under this proposal, to report the CAHPS for MIPS survey associated with an MVP, a group, subgroup, or APM entity must complete their registration by June 30 of such performance period or a later date specified by CMS.

We believe the benefits of aligning MVP registration, MVP population health measure selection, and subgroup registration during the performance

period, outweigh the limitations of performance period registration. Through the MVP town hall, we have heard stakeholders indicate that a registration period that is held during the performance period is limiting because it provides clinicians with less time to decide which MVP they would like to report or make changes to their selection. However, we believe that this would encourage clinicians to identify important MVP topics early on in the performance period, in which they can focus their quality improvement efforts on. Also, this would allow us sufficient time to identify clinician participation in subgroups and provide more granular and meaningful subgroup performance feedback to inform quality improvement and patient choice resulting in clinician assessment on more information relevant to their subgroups, such as targeted administrative claims quality measures and cost measures.

In addition, we believe that the proposed registration period would allow more flexibility in the creation of subgroups that represent clinical alignment and to add or remove clinicians from the subgroup, or

otherwise, make changes to their participation status in subgroups, before the end of the registration period.

We solicited public comments on our proposals as discussed above.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the registration timeline for MVPs, including the CAHPS for MIPS registration timeline. One commenter shared their belief that CMS proposed a large enrollment window that should give MVP participants the opportunity to determine the most appropriate MVP for their practice.

Response: We thank the commenters for their support.

Comment: A few commenters recommended that CMS open the MVP registration period on January 1 of the performance period instead in April to allow for more flexibility, especially for MVP participants who would like to register for more than one MVP and be able to assess which MVP may be the most appropriate.

Response: We considered beginning the registration period on January 1st of the performance period, but we believe that doing so would cause stakeholders undue burden considering in January stakeholders may be in the midst of data submission for the prior performance period. We understand that the data submission period may be a busy time for organizations and practices. Therefore, we proposed for the registration period to begin in April, once the data submission period is over. While the registration period will not open until April 1st, MVP participants may start to evaluate and determine which MVP they would like to report much earlier, once the final rule is published. We plan to continue to assess this registration timeline, along with all other MVP policies, and make any necessary changes, as needed through future rulemaking.

We note that, as described in the CY 2022 PFS proposed rule (86 FR 39374), MVP participants may select one MVP at the time of MVP registration, and may not make changes to their registration after the close of the registration period. Through the CY 2022 PFS proposed rule (86 FR 39374), we had solicited public comment on, if MVP participants would be interested in selecting multiple MVPs at the time of registration and the value in this allowance. We will consider any feedback received under consideration for future rulemaking.

Comment: A few commenters did not support the proposed registration timeline of April to November and recommended that CMS allow MVP

participants to register at the time of data submission for the given year they report the MVP. One commenter believed that clinicians and subgroups will need additional flexibility as they shift from traditional MIPS reporting to MVP reporting.

Response: We disagree. We believe MVP participants should register prior to the data submission period in order to give our systems a sufficient amount of time to track the MVP for which participants would be eligible for the purposes of providing enhanced feedback. That is why we proposed the MVP registration window to encompass eight months of the performance period, to allow MVP participants sufficient time to identify and register for an MVP that is relevant to their practice. In addition, On January 7, 2021, we held the MVP Town Hall (85 FR 74729) (<https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1290/MIPS%20Value%20Pathways%20Town%20Hall%20Slide%20Deck.pdf>) in which stakeholders overwhelmingly voiced their preference for an earlier registration period. We believe participants who are ready to transition to MVP reporting will take the time to select a relevant MVP and understand the reporting requirements expected under MVPs before reporting.

Comment: One commenter requested CMS to consider the opportunity for MVP participants to change their registration status and switch from MVP reporting to traditional MIPS after the MVP registration deadline for the 2023 and 2024 MIPS performance periods. The commenter believes that such flexibility may be necessary in instances where a practice discovers that the MVP measures are not supported by its EHR vendor.

Response: We agree. As described in section IV.A.3.b.(5)(c)(i) of this final rule, MVP participants may register for an MVP then decide to report traditional MIPS instead; or may report the MVP and also choose to report measures and activities through traditional MIPS. We have finalized in section IV.A.3.f.(5) of this final rule, a scoring hierarchy that would account for MIPS eligible clinicians and groups reporting both traditional MIPS and an MVP. We believe this flexibility is important while MVP reporting is initially voluntary, to give stakeholders time to adjust their workflows and prepare for an eventual transition to mandatory MVP reporting when traditional MIPS sunsets. We refer readers to section IV.A.3.f.(5) of this final rule for additional discussion of the scoring hierarchy policies.

Comment: One commenter recommended that CMS offer clear guidance on the expectations for MVP participants, specifically requesting targeted communications to the clinicians that qualify for a given MVP and detailed information on how the registration process will work.

Response: We agree. As technically feasible, we intend on providing additional information and resources regarding the registration process after the final rule is published and prior to the beginning of the registration period to allow stakeholders sufficient time to prepare.

After consideration of public comments, we are finalizing our policies as proposed.

(B) Exception for MVP Participants That Want to Report the CAHPS for MIPS Survey Measure

Currently, as finalized in the CY 2017 Quality Payment Program final rule (81 FR 77072), groups that register to administer the CAHPS for MIPS survey measure prior to the registration deadline could cancel their registration or change their CAHPS for MIPS survey selection before the close of registration on June 30th. In the CY 2022 PFS proposed rule (86 FR 39374), we proposed at § 414.1365(b)(1) that in order for an MVP Participant to report the CAHPS for MIPS survey measure associated with an MVP, a group, subgroup, or APM entity will need to register by the same deadline as the CAHPS for MIPS registration, which is June 30 of the applicable 12-month performance period (81 FR 77072).

Under this proposal, clinicians participating in subgroups or groups reporting on the CAHPS for MIPS survey measure within an MVP would be unable to make any changes to their participation in the CAHPS for MIPS survey beginning July 1 of the applicable performance period. We note that clinicians in subgroups who do not intend to report the CAHPS for MIPS measure would still be able to make changes to their participation status in subgroups before the registration period ends on November 30th. We solicited public comments on these proposals.

We did not receive public comments on these proposals and are finalizing them as proposed.

(ii) MVP Participant Registration Requirements

We believe there are certain elements of information that are important to include at the time of MVP registration. Specifically, we proposed at § 414.1365(b)(2)(i) and (ii), that at the time of registration, an MVP Participant

must submit the following information, as applicable: (1) Each MVP Participant must select an MVP, 1 population health measure included in the MVP, and if applicable, any outcomes-based administrative claims measure on which the MVP Participant intends to be scored; (2) Each subgroup must submit a list of each TIN/NPI associated with the subgroup which identifies each individual eligible clinician NPI in the applicable subgroup for the group TIN and a plain language name for the subgroup. The following subsections discuss each of these elements.

(A) MVP Selection

To accurately capture who is participating in MVP reporting, it is important to establish the use of identifiers to identify what is intended to be reported, and by whom. We intend to publish a list of MVPs that have been finalized in rulemaking in the prior year, with identifiers available for a given performance period on the QPP Resource Library, prior to the start of the registration period, along with registration guidance. Therefore, we proposed that the MVP Participants must select a specific MVP, at the time of registration, as described at proposed § 414.1365(b)(2)(i). Under this proposal, MVP Participants would not be able to submit or make changes to the MVPs they select after the close of the registration period, and therefore, would not be allowed to report on an MVP they did not register for. We solicited comments on this proposal.

We did not receive public comments on our proposal, and are finalizing it as proposed. We have solicited public comment on whether MVP participants would be interested in the ability to select multiple MVPs at the time of registration. We thank commenters for the feedback received. We may consider this information to inform future rulemaking.

(B) Population Health Measure Selection

Similarly, we plan to publish a list of the population health measures that have been finalized for a given performance period on the QPP Resource Library. We plan for this to occur prior to the start of the registration period, along with posting registration guidance. As discussed in section IV.A.3.b.(4)(d)(v)(B) of this final rule, we proposed that MVP Participants who report an MVP, must submit one population health measure of their choice from the list of finalized population health measures within the foundational layer of the MVPs. The two proposed and previously finalized

population health measures are both administrative claims based, and do not require physical data submission by clinicians. Therefore, in order for this selection to be tracked, we proposed at § 414.1365(b)(4)(i) that MVP Participants would be required to select this population health measure at the time of registration. Under this proposal, MVP Participants would not be able to submit or make changes to the selected population health measure after the close of the registration period. In addition, MVP Participants would not be able to successfully register to report an MVP if they do not select a population health measure, as the registration would be considered incomplete. We solicited comments on this proposal.

We did not receive public comments on this proposal, and are finalizing it as proposed.

(C) Outcomes-Based Administrative Claims Measure Selection

Within the MIPS quality performance category quality measure portfolio, there are some MIPS quality measures that are outcomes-based and utilize the administrative claims-based collection type. There are instances in which these measures are not identified as population health measures. For example, because the measure related to a specific procedure such as hip and knee arthroplasty we do not define this as population health since it does not necessarily impact the health of a population. While these measures may not be population health measures, they still reflect important clinical concepts and practices that are important to clinicians and lead to improved patient outcomes. Therefore, we believe it is important to not exclude these measures from MVPs. Depending on the MVP topic, these quality measures may be applicable and relevant to the topic being measured. In addition, administrative claims-based measures reduce reporting burden placed on clinicians because CMS calculates these measures utilizing administrative claims data. As such, we proposed at § 414.1365(b)(2)(i) that the MVP Participant must select any outcomes-based administrative claims measures on which the MVP Participant intends to be scored. As discussed in section IV.A.3.b.(4)(d)(ii) in this final rule, we proposed at § 414.1365(c)(1) that an MVP Participant must select and report 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure), included in the MVP. As applicable, an outcomes-based administrative claims measure, may be selected at the time of

MVP registration to meet the outcome measure requirement (excluding the population health measures required under § 414.1365(c)(4)(ii)). We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the inclusion of administrative claims measures but expressed concern about the availability of these measures to anesthesiologists.

Response: We appreciate the commenter's support. We understand that the availability of administrative claims-based measures is currently limited. We will continue to assess the feasibility of developing additional administrative claims-based measures, and can evaluate the feasibility of developing such measures for specialties such as anesthesia.

After consideration of public comments, we are finalizing our policies as proposed.

(D) Subgroup Participants

As part of the registration process, to accurately capture all the clinicians participating in a subgroup, we proposed at § 414.1365(b)(2)(ii) that each subgroup must submit: (1) A list of each TIN/NPI associated with the subgroup, which should identify each individual eligible clinician NPI in the applicable subgroup for the group TIN; and (2) the subgroup's name in a plain language manner.

We believe that the subgroup names would help communicate the specialty, location, or other relevant information which would be displayed on the Compare Tools, helping stakeholders differentiate between subgroups. We plan to provide additional guidance for the template in subregulatory guidance for the nomenclature of subgroups and intend to provide a template and guidance to clinicians and practices on the use of plain language for naming subgroups. For example, a subgroup which consists of oncologists in the Mayberry location of one overall group TIN who chooses to report the Oncology MVP could be called Mayberry Oncology.

Upon successful registration submission, we would assign a unique subgroup identifier. This subgroup identifier would be separate from the individual NPI identifier, the group TIN identifier, and the MVP identifier, discussed in this final rule. We would maintain the same identifier year over year, as applicable. In scenarios where a subgroup's makeup changes, which will be identified at the time of registration, we will issue the subgroup

a new identifier. We believe this identifier is also needed to allow third-party intermediaries to capture and submit performance data for clinicians participating in subgroup reporting as discussed in section IV.A.3.b.(4)(f)(ii)(D) of this final rule.

We solicited public comments on these proposals. Additionally, we solicited feedback on if there are any additional operational considerations or recommendations for the implementation of this policy for future consideration.

The following is a summary of the comments we received and our responses.

Comment: One commenter requested that CMS offer clear and detailed guidance on subgroup registration and reporting requirements. Another

commenter expressed concerns about identifying clinicians in the appropriate subgroup and recommended a process to rectify unintentional mistakes in the subgroup registration process.

Response: We intend on offering clear guidance regarding the registration process, including the process of subgroup registration. As described above in section

IV.A.3.b.(4)(d)(v)(A)(bb) of this final rule, and at § 414.1365(c)(4)(i)(A) that for the CY 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years, an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category. Through the registration process, subgroups may make changes to their elections and

rectify any unintentional mistakes before the close of the registration period. We thank the commenter for their recommendation that we should establish a process to rectify unintentional mistakes, that perhaps are identified after the registration period closes. We will take it into consideration as we plan for the establishment of the registration process.

After consideration of public comments, we are finalizing our policies as proposed.

(iii) Summary of the Overall Registration Process

Table 48 presents a comprehensive perspective of the overall finalized registration timeline:

BILLING CODE 4120-01-P

TABLE 48: Registration Process for MVP and Subgroup Elections Beginning with the CY 2023 MIPS Performance Period

April 1 st of the applicable performance period, or a later date specified by CMS	MVP Participants may begin to register for MVP reporting.
June 30 th of the applicable performance period, or a later date specified by CMS	Groups, subgroups, APM entities, who intend to report the CAHPS for MIPS Survey Measure through an MVP, must submit: <ul style="list-style-type: none"> • MVP selection and population health measure selection • As applicable, select an outcomes-based administrative claims measure that is associated with an MVP. • As applicable, each subgroup must submit a list of each TIN/NPI associated with the subgroup. • As applicable, each subgroup must submit a plain language name for the subgroup. • Separately register through the MIPS registration system by June 30th to participate in the CAHPS for MIPS Survey.
November 30 th of the applicable performance period, or a later date specified by CMS	The registration period closes. New registrations or changes to registration will not be accepted <u>after November 30th</u> . MVP Participants <u>cannot</u> make any changes to registration of: <ul style="list-style-type: none"> • MVP selection • Population health measure selection • As applicable, the selection of an outcomes-based administrative claims measure associated with the MVP • As applicable, the list of each TIN/NPI associated with the subgroup. • As applicable, subgroup participation (including the subgroup's plan language name).

Table 49 presents a crosswalk of the various clinician types, the information

expected at the time of registration, and

a reminder of the finalized MVP reporting requirements.

TABLE 49: How MVP Reporting Will Work

Who Reports	Information Required at the time of MVP Registration	MVP Reporting Requirements
Years 1-3 (2023, 2024, and 2025)		
Individual Clinicians	MVP selection, Population Health Measure selection, and (as applicable) outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1.
Groups	MVP selection, Population Health Measure selection, and (as applicable) administrative-claims based measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1. Members of the group will be required to report on the same measures and activities within an MVP.
Subgroups	MVP selection, Population Health Measure selection, (as applicable) the outcomes-based administrative claims measure selection, and the subgroup participant information described at § 414.1365(b)(2). <i>Subgroups will also receive a subgroup identifier from CMS at the time of registration.</i>	Requirements in table 1. Members of the subgroup will be required to report on the same measures and activities within an MVP.
APM Entities	MVP selection, Population Health Measure selection, and as applicable outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1.
Year 4 and Future Years (2026 and beyond)		
Individual Clinicians	MVP selection, Population Health Measure selection, and (as applicable) outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1.
Single Specialty Groups ⁺	MVP selection, Population Health Measure selection, and (as applicable) outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1. Members of the group will be required to report on the same measures and activities within an MVP.
Subgroups ⁺	MVP selection, Population Health Measure selection, (as applicable) outcomes-based administrative claims measure selection, and the subgroup participant information described at § 414.1365(b)(2). <i>Subgroups will also receive a subgroup identifier from CMS at the time of registration.</i>	Requirements in table 1. Members of the subgroup will be required to report on the same measures and activities within an MVP.
APM Entities	MVP selection, Population Health Measure selection, and as applicable outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1.

⁺ *Multispecialty Groups will be required to form subgroups in order to report an MVP. We refer readers to § 414.1305 for the definitions of MVP Participant and subgroup.*

BILLING CODE 4120-01-C**(5) Scoring MVP Performance****(a) Overview of MVP Scoring**

In the CY 2022 PFS proposed rule (86 FR 39377 and 39378), we described previous feedback we received on the CY 2020 PFS proposed rule and during the MVP Town Hall on January 7, 2021 related to how we should address scoring policies as we transition to MVPs (86 FR 39377). In general, we proposed policies to score MVPs similar to policies established for traditional MIPS, including, without limitation, the methodology to score MVP Participants based on their performance on measures

and activities in the four performance categories; the use of performance standards for each of the performance categories; policies for calculation of achievement and improvement scores; and calculation of the final score. We stated that we aimed to ensure our methodology to convert the scores of measures and activities into a final score balanced the statutory requirements and goals of the program with ease of use, stability, and meaningfulness to MIPS eligible clinicians. We also stated that our proposed scoring methodology would allow for accountability and alignment across the performance categories and minimize burden on

MIPS eligible clinicians. We also noted that we believed these proposed scoring policies would ensure the meaningful evaluation of performance of MVP Participants based on measures and activities in the MVP, and that several of the proposed MVP specific scoring policies would support our identified goal to simplify the program by offering MVPs that link clinically relevant measures and activities, which are meaningful to clinicians, patients, and the program (86 FR 39378).

We proposed at § 414.1365(d)(1) that an MVP Participant that is not an APM Entity is scored on measures and activities included in the MVP in

accordance with paragraphs § 414.1365(d)(1) through § 414.1365(d)(3) (86 FR 39378). We also proposed at § 414.1365(d)(1) that an MVP Participant that is an APM Entity is scored on measures and activities included in the MVP in accordance with § 414.1317(b) (86 FR 39378). Additionally, we proposed at § 414.1365(d)(2) that unless otherwise indicated in § 414.1365(d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP (86 FR 39378). Lastly, we proposed at § 414.1365(d)(3) that an MVP Participant is scored under MIPS in four performance categories (86 FR 39378).

We solicited public comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed the belief that, given the complexity of the program and multiple participation options, alignment of scoring policies with traditional MIPS will be essential to reducing burden on clinicians, especially small practices, as they familiarize themselves with MVPs and prepare for their eventual mandatory participation.

Response: We thank the commenters for their support.

Comment: A few commenters did not support our proposal to align MVP scoring with traditional MIPS. One commenter recommended a wholesale departure from traditional MIPS that offers a true onramp for clinicians to Alternative Payment Models (APMs). Another commenter recommended that CMS should develop a scoring methodology for MVPs that is more team-based, holding teams accountable for patient event rates, Patient Reported Outcomes Measures, and meeting patients' goals and expectations. The commenter supported attestation for quality measures, rather than measuring performance against a benchmark.

Response: We believe it is important, whenever possible, to build on the scoring that is familiar to clinicians to reduce confusion and complexity as we transition into MVPs. We are interested in supporting clinicians in the transition to APMs and believe that MVPs are an important step in gaining experience with submitting and scoring a cohesive set of measures and activities. We evaluated all traditional MIPS scoring policies and maintained those that are required under section 1848(q)(2) of the Act such as requirements to measure achievement and improvement of the quality and cost of care, and those

policies that supported the goals of transitioning to MVPs. We believe that it is appropriate to adopt policies that are different from traditional MIPS policies in cases where different policies support the goals of our transition to MVPs. We have signaled the importance of incorporating the patient voice in MVPs; specifically, in the CY 2021 PFS final rule (85 FR 84850), we finalized MVP development and selection criteria that considers the inclusion of (to the extent feasible), patient-reported outcome measures, patient experience measures, and/or patient satisfaction measures. Furthermore, as measures for patient voice and Patient Reported Outcome Measures are added to MVPs we believe that no special scoring policies are needed. Our inventory of cost measures, which continues to expand, includes episode-based measures that can be used in MVPs when linked with meaningful quality outcome measures and improvement activities. We are required under section 1848(q)(3)(B) of the Act to use performance standards for measures and activities, and we have identified benchmarks to measure achievement of quality and cost measures, rather than relying on attestation. Additionally, when measures are compared to a benchmark, we can provide performance information to patients seeking care, as well as to clinicians to improve care. We are not aware of any scoring policies necessary for certain types of clinicians, including clinicians who are part of team-based risk bearing entities. We believe our MVP scoring policies hold clinicians accountable by scoring them against performance standards using relevant measures for the four performance categories. We look forward to hearing stakeholder feedback on scoring policies to determine if different approaches are needed in the future.

Comment: A few commenters recommended incentives for clinicians to report MVPs, including scoring policies that allow for MVPs to be reported during an informational period without scoring or scoring that will 'hold harmless' or ensure that no negative payment adjustments will be applied for any clinician reporting an MVP.

Response: The MIPS statute requires us to measure performance for purposes of determining a payment adjustment, using data from four performance categories, in a budget neutral manner. We believe that MVPs offer incentives in terms of requiring fewer measures and activities tied to a specialty or medical condition that can offer

clinicians a more cohesive experience. In the CY 2022 PFS proposed rule, we discussed the delay in the implementation timeline to allow for a gradual process that provides MVP participants and third-party intermediaries with time to adapt to the changes in policy, requirements, and programming updates that would need to occur in technological systems (86 FR 39355 through 39356). We believe the delayed timeline should allow clinicians to change clinical workflows and be able to submit and be assessed on MVPs. We do not have discretion to have a "hold harmless" approach for clinicians reporting an MVP, and furthermore do not believe this approach would be appropriate. We do not intend for the MVP reporting option to be a mechanism to avoid a negative payment adjustment; but instead as an approach to improve value, reduce burden, inform patient choice in selecting clinicians, and reduce barriers to facilitate the movement into APMs. We also do not want to introduce bonuses for reporting MVPs or other incentives that may mask performance and artificially inflate final scores. However, we are evaluating additional incentives that align with our scoring policies and the goals of MVPs. We anticipate addressing any incentives through future notice and comment rulemaking.

Comment: Several commenters indicated that scoring policies should break down the silos between the four performance categories and that a single measure or activity should be scored in multiple performance categories. One commenter recommended that if a measure submitted by a QCDR encompasses actions for more than one performance category, scoring policies should provide automatic credit in the quality, Promoting Interoperability, and improvement activities categories. Commenters expressed the belief that this would allow better cohesion within the program, rather than having four separate categories. Commenters also believed that this would serve as an incentive to report an MVP and result in a reduction of reporting burden.

Response: We note that the MIPS statute requires the use of four performance categories (which we refer to as the quality, cost, improvement activities, and Promoting Interoperability performance categories) in determining the composite performance score (which we refer to as the final score). We refer readers to our discussion of the intent of MVPs (85 FR 84844) to make MIPS more meaningful by allowing a more cohesive participation experience by connecting

activities and measures from the four MIPS performance categories relevant to a patient population, standardizing performance measurement of a specialty or a medical condition, and reducing the siloed nature of the traditional MIPS participation experience. We also refer commenters to the CY 2021 PFS final rule, where we finalized MVP development criteria, including a criterion that assesses the extent to which the measures and activities in the MVP link to one another, as well as another criterion that assesses the extent to which improvement activities complement and/or supplement the quality action rather than duplicating it (85 FR 84849 through 84853). We believe that it is important that MVPs include measures and activities from the four performance categories that are complementary, and note that we do currently have improvement activities and measures that include related concepts. However, in addition to being required by statute, we believe each of the four performance categories offers value, and therefore, we do not at this time believe automatic credit for a performance category or assigning points to multiple performance categories for the submission of a single measure or activity would be appropriate. We invite further feedback from stakeholders on how offering multi-category credit will increase the information available to patients and improve patient outcomes. Our goals include providing comparative data to patients and caregivers who are evaluating clinician performance and making choices about their care (86 FR 39353) and we believe this is best achieved through the use of the four performance categories.

We did not receive any comments on proposals to score an MVP Participant that is an APM Entity.

After consideration of public comments, we are finalizing these policies as proposed.

(b) Performance Category Scores

(i) Scoring the Quality Performance Category in MVPs

(A) Scoring Based on Achievement

In the CY 2022 PFS proposed rule (86 FR 39378 through 86 FR 39379), we proposed to maintain scoring policies finalized in traditional MIPS for MVPs to leverage meaningful scoring policies and retain stable scoring for MVP Participants. We refer readers to § 414.1380(b)(1)(i) for details on our policies for scoring performance on quality measures for traditional MIPS (81 FR 77276 through 77307, 82 FR 53694 through 53701, 83 FR 59841

through 59856, 84 FR 63011 through 63019, and 85 FR 84904 through 84906). Our proposed policies for scoring quality in traditional MIPS are described in further detail in the CY 2022 PFS proposed rule (86 FR 39439 through 39437). We refer readers to the CY 2022 PFS proposed rule (86 FR 39432 through 39434) for our proposals to remove the 3-point floor for Class 1 and Class 2 measures for the CY 2022 performance year/2024 MIPS payment year for traditional MIPS, and to provide a score from 5 to 10 points in the first two performance periods a measure is used in MIPS for Class 4 measures (new measures). We proposed to align with these policies as well to maintain consistency between MVPs and traditional MIPS (86 FR 39378).

We proposed at § 414.1365(d)(3)(i) that, except as provided in paragraphs (d)(3)(i)(A)(1) and (B), the quality performance category score for MVP Participants is calculated in accordance with § 414.1380(b)(1) based on measures included in the MVP.

We did not receive any comments on our proposal, and we are finalizing it as proposed.

(B) Population Health Measures

In the CY 2022 PFS proposed rule, we proposed that we would score the selected measure according to § 414.1365(d)(3)(i) (86 FR 39378). Since we proposed to adopt our scoring policies used in traditional MIPS for MVPs, we also proposed that we would exclude the selected measure from the total achievement points and the total available points if the measure does not have a benchmark or meet the case minimum requirement in accordance with § 414.1380(b)(1)(i)(A)(2)(ii) (86 FR 39378). We proposed at § 414.1365(d)(3)(i)(A) that, except as provided in paragraph (d)(3)(i)(A)(1), each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP Participant's total measure achievement points and total available measure achievement points (86 FR 39378).

We also proposed at § 414.1365(d)(3)(i)(A)(1) that subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available (86 FR 39378). We stated that we believed this is appropriate because we believe it is important for subgroups to be scored on population health measures, and we believe that the groups score will be reflective of the subgroup's performance on population health measures. We are

concerned about the ability of subgroups to meet the case minimum for an administrative claims measure and are interested in including population health measures in the subgroup's score for the MVP. Therefore, we also proposed at § 414.1365(d)(3)(i)(A)(1) that, if the subgroup's affiliated group score is not available, each population health measure is excluded from the subgroup's total measure achievement points and total available measure achievement points (86 FR 39378).

In the CY 2022 PFS proposed rule, we also noted our concern about scoring individual clinicians on population health measures (86 FR 39378 through 39379). Because population health measures have measured the quality of a population or cohort's overall health and well-being, we historically have required a minimum reliability standard of 0.4 which for most measures equates to a high case minimum in order to be scored. We believe it will be common that a solo practitioner, or an individual clinician that is part of a group but chooses to be scored as an individual clinician will not be scored on population health measures. In these scenarios, we proposed that each population health measure would be excluded from the subgroup's total measure achievement points and total available measure achievement points in accordance with § 414.1380(b)(1)(i)(A)(2)(ii). Historically, we have not combined performance for the individual clinician with performance from the group, and therefore, have concerns with using the group score for individual clinicians who cannot be scored for population health measures. We understand there may be concerns from stakeholders on scoring individual clinicians on broad population health measures. However, we solicited comment on approaches to scoring individual clinicians on population health measures given the importance of these measures.

We solicited comments on our proposals for scoring population health measures in MVPs. The following is a summary of the comments we received and our response:

Comment: One commenter did not support the use of population health measures for clinicians and stated they should be used as measures for APMs or facility-level quality measurement. The commenter recommended that if population health measures are used that they should not be scored and that the resulting data should be used only to provide clinicians with confidential feedback.

Response: We believe that we should score population health measures, when there is a sufficient case volume and a benchmark, for all MVP Participants, which includes MIPS eligible clinicians, groups, and APM entities (see section IV.A.3.b.(2)(c)(i) of this final rule). In the CY 2020 PFS final rule (84 FR 62947 through 62948), we established the implementation of a foundational population health core measure set that can be broadly applied to communities or populations and can result in MVPs that provide more uniformity in how the program measures population health, reduces clinician burden, focuses on important public health priorities, and increases the value of MIPS performance data. We believe that it is important to score population health measures as part of the foundational layer of the MVP when clinicians submitting an MVP can be scored on the selected population health measure.

Comment: A few commenters recommended that CMS not score individual clinicians on population health measures because individual clinicians may not have the infrastructure and resources required to positively influence population health measure outcomes. One commenter recommended that scoring for population health measures should not be implemented in a way that would penalize MVP Participants' quality performance category scores if the case minimum was not met.

Response: As discussed in section IV.A.3.b.(4)(b)(i)(C)(aa)(AA) of this final rule, we are finalizing our proposal to define a population health measure at § 414.1305 as a quality measure that indicates the quality of a population or cohort's overall health and well-being, such as access to care, clinical outcome, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services. MVPs include a cohesive set of measures and activities, including a foundational layer of population health measures. We believe that clinicians will select an MVP with an understanding that performance on all of the measures and activities will be used to determine a final score. We also believe that MVP Participants that meet the case minimum for the selected population health measure will have the infrastructure and resources to influence the population health measure.

We believe it is appropriate to score all MVP Participants, including individual clinicians, on population health measures using scoring policies for MVPs that align with our finalized policies for traditional MIPS and note

that population health measures will be scored only if there is a benchmark or the case minimum is met. We have proposed that we exclude the selected measure from the total achievement points and total available points if the measure does not meet the case minimum or have a benchmark. We believe this approach to scoring which focuses on performance of measures that meet the standards for case minimum does not penalize MVP Participants, including individual clinicians, who have insufficient case volume to allow measurement.

After consideration of public comments, we are finalizing our policies as proposed.

We did not receive public comments on our proposal that subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available. We are finalizing this policy as proposed.

(C) Outcomes-based Administrative Claims Measures

In the CY 2022 PFS proposed rule (86 FR 39479), we proposed at § 414.1365(d)(3)(i)(B) that MVP Participants receive zero measure achievement points for each selected outcomes-based administrative claims measure that does not have a benchmark or meet the case minimum requirement (86 FR 39379). This aligns with our proposal to score Class 2 measures in traditional MIPS (86 FR 39432). If the clinician selects the outcomes-based administrative claims measure, which can be calculated and submits more than three measures including an additional outcome or high priority measure, scores from the highest four measures including one outcome or high priority measure would be used to determine the quality performance category score. Please see the CY 2022 PFS proposed rule (86 FR 39379 through 39380) for an example of scoring for outcomes-based administrative claims measures under this proposal. We solicited public comments on this proposal.

We did not receive any public comments on this proposal and are finalizing it as proposed.

(D) Scoring for MVP Participants That Do Not Meet the Quality Performance Category Requirements

In the CY 2022 PFS proposed rule (86 FR 39379), we described our rationale for why we do not believe we need a validation process to determine the availability and applicability of measures for MVP Participants because

MVPs will focus on a condition or specialty, and we believe MVPs will be selected and reported because of the MVP applicability to their practice and patients. We refer readers to the CY 2022 PFS proposed rule (86 FR 39380 through 39380) for an example of scoring the quality performance category for an MVP.

(ii) Scoring the Cost Performance Category in MVPs

In the CY 2022 PFS proposed rule (86 FR 39380), we proposed to use the methodology established for traditional MIPS to score the cost performance category for MVPs, including the proposed revisions to that methodology described in the CY 2022 PFS proposed rule (86 FR 39437). We refer readers to § 414.1380(b)(2)(i) through (v) for our previously finalized policies to score the cost performance category for traditional MIPS based on achievement and improvement when the case minimum specified under § 414.1350(c) is met or exceeded and CMS has determined a benchmark. We proposed at § 414.1365(d)(3)(ii) that the cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report. We also noted that we intend to monitor for reporting of MVPs to ensure MVPs reflect the clinical nature of the MVP Participants that report (86 FR 39380). We solicited public comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter voiced concern that multispecialty groups may take advantage of the option to report for the entire group at the subgroup level and select an MVP for which the group does not meet the case minimum for the cost measures to avoid being scored on the cost performance category.

Response: We understand the potential gaming concern voiced by the commenter and will monitor how multispecialty groups report and are scored on MVPs. Although an entire multispecialty group cannot report as a single subgroup, we acknowledge that, initially, multispecialty groups will have the option to either participate in traditional MIPS as a group, to report a specific MVP as a group, or to form subgroups to report MVPs that are more meaningful to their scope of practice. As finalized in section IV.A.3.b.(2)(c)(ii) of this final rule, multispecialty groups will have to form subgroups in order to report an MVP beginning with the CY

2026 performance period/2028 MIPS payment year. We plan to monitor how often the cost performance category is reweighted for MVP participants in order to assess whether it may be possible that large multispecialty groups are reporting MVPs as subgroups in order to avoid being scored on the cost performance category.

After consideration of public comments, we are finalizing at § 414.1365(d)(3)(ii) that the cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report.

(iii) Scoring the Improvement Activities Performance Category in MVPs

Under traditional MIPS, we score improvement activities by assigning each improvement activity a weight, either high-weight or medium-weight, and by assigning 10 points for each medium-weighted improvement activity and 20 points for each high-weighted improvement activity. We refer readers to § 414.1380(b)(3) for details on scoring the improvement activities performance category for traditional MIPS. Additionally, we refer the reader to §§ 414.1317(b)(3) and 414.1380(b)(3)(i), which provide that a MIPS eligible clinician participating in an APM receives a score of at least 50 percent in the improvement activities performance category. As a result, an APM entity that reports an MVP will receive an improvement activities performance category score of at least 50 percent.

In the CY 2022 PFS proposed rule (86 FR 39380), we proposed at § 414.1365(d)(3)(iii) that the improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. We also proposed that MVP Participants would receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Therefore, to receive a score of 40 points, or full credit, an MVP Participant would be required to submit one high-weighted improvement activity or two medium-weighted improvement activities included in the MVP.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposal for scoring improvement activities in MVPs.

Response: We thank the commenter for their support.

Comment: A few commenters did not support the proposal to assign 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity. One commenter believed that different scoring policies for traditional MIPS and MVPs will add complexity to the program.

Response: We acknowledge the commenter's concern about complexity in the program and note that we are still scoring high-weighted and medium-weighted activities and the approach is not unfamiliar to clinicians. We believe the reduced requirements for the improvement activities performance category will incentivize clinicians to report MVPs by reducing burden, since fewer improvement activities are required to receive a full score for the category.

Comment: One commenter recommended that MVP developers identify improvement activities associated with using clinical data relevant to the MVP and recommended a scoring approach for improvement activities, including a graduated scale based on the MVP's potential impact on PROMs or care complications.

Response: We believe that a standardized approach to scoring is needed to provide consistency and to reduce complexity. We also have concerns and believe that a graduated scoring approach would introduce additional and unnecessary complexity to attestation, which would be confusing for clinicians accustomed to being scored by attestation on medium-weighted and high-weighted improvement activities. We believe that it is important, whenever possible, to build on the scoring approach is familiar to clinicians to reduce confusion and complexity as we transition into MVPs. We evaluated all traditional MIPS scoring policies and maintained those that are required by statute. Additionally, we believe that it is appropriate to adopt policies that are different from MIPS policies in cases where different policies support the goals of our transition to MVPs.

Comment: A few commenters recommended that CMS should award automatic credit for the improvement activities performance category, and potentially other performance categories, to reduce burden, simplify

requirements and scoring for MVPs, and potentially serve as an incentive to submit MVPs.

Response: We do not believe it would be appropriate to provide automatic credit for any of the performance categories. Instead, we have finalized our proposal to provide full credit for MVP participants who report one high-weighted or two medium-weighted improvement activities or who participate in a certified or recognized patient-centered medical home or comparable specialty practice (please see section IV.A.3.b.(4)(d)(iv) of this final rule for more details). We are concerned about whether providing automatic credit would further our goals of improving patient outcomes, as this approach limits the data and information available and would reduce the impact of a performance category, all four of which we believe provide value. MVPs are complementary sets of measures and activities that are meaningful to clinicians. We have previously stated our belief in the importance of the clinician experience with MVPs, including through an aligned measurement of quality and cost, continuous improvement/innovation within the practice, and efficient management and transfer of information that will help remove barriers to APM participation (85 FR 84844 and 84845).

We believe each of the four performance categories offers value, and therefore, we do not at this time believe automatic credit for any category would be appropriate. We are concerned and would invite further feedback from stakeholders on how offering multi-category credit will increase the information available to patients and improve patient outcomes. Our goals include providing comparative data to patients and caregivers in evaluating clinician performance and making choices about their care (86 FR 39352 and 39353) and we believe this is best achieved through the use of the four performance categories. The improvement activities performance category is an important component of the MVP. We believe we should use the improvement activities performance category scoring established in traditional MIPS and continue scoring high-weighted and medium-weighted improvement activities that support the linked activities and measures specified within the MVP.

We believe that incentives already exist in MVPs, including reduced reporting requirements, as described in section IV.A.3.b.(4)(d) of this final rule, which allow MVP Participants to report on a smaller, more cohesive subset of

measures and activities that are relevant to a given clinical topic, condition, or episode of care, as well as enhanced performance feedback, as described in section IV.A.3.b.(5)(d) of this final rule.

Comment: One commenter recommended we provide improvement activity credit for clinicians involved in testing QCDR measures that are undergoing testing for inclusion in MVPs.

Response: We appreciate suggestions for improvement activities that might be meaningful for MVP and recommend that the improvement activity be nominated during the Annual Call for Activities.

After consideration of public comments, we are finalizing this proposal as proposed.

(iv) Scoring the Promoting Interoperability Performance Category in MVPs

In the CY 2022 PFS proposed rule (86 FR 39380 through 39381), we proposed to use the scoring methodology established for the Promoting Interoperability performance category in traditional MIPS, as proposed to be revised in of the CY 2022 PFS proposed rule (86 FR 39409 through 39428), for MVP Participants, with the exception that subgroups would be scored based on their affiliated group's Promoting Interoperability performance category data. The Promoting Interoperability performance category is a foundational layer of MVPs that uses limited, connected complementary sets of measures that are meaningful to clinicians. The scoring methodology for the Promoting Interoperability performance category recognizes the importance of promoting adoption and use of CEHRT to support quality improvement, interoperability, and patient engagement and provides an important approach to scoring that we proposed to use for MVPs. Therefore, we proposed at § 414.1365(d)(3)(iv) to calculate the Promoting Interoperability performance category score for an MVP Participant using the methodology at § 414.1380(b)(4), except as provided at § 414.1365(d)(3)(iv)(A).

We solicited public comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed scoring for the Promoting Interoperability performance category and efforts to keep approaches as consistent as possible across MVPs and traditional MIPS.

Response: We thank the commenter for their support.

Comment: A few commenters recommended different scoring flexibilities for the Promoting Interoperability performance category for MVP Participants. Examples recommended include assigning all available points to any clinician who achieves 50 points or more, providing credit to clinicians who demonstrate meaningful use of EHRs in more innovative ways specific to the clinician's group composition, assigning points for infrastructure and experience with health information technology, allowing clinicians to attest to using 2015 Edition CEHRT, and providing full credit for the Promoting Interoperability performance category for PCMH recognition.

Response: As we established in the CY 2021 PFS final rule (85 FR 84849 through 84853), we believe all MVPs should include the entire set of Promoting Interoperability measures, as part of the foundational layer of MVPs. We do not believe that MVPs should introduce complexity through special scoring rules such as assigning full points to any MVP Participant who achieves 50 or more points in the Promoting Interoperability performance category, and that scoring should be based on the methodology established for traditional MIPS. As stated previously (86 FR 39381) we believe that the current scoring methodology recognizes the importance of promoting adoption and use of CEHRT to support quality improvement, interoperability, health information exchange and patient engagement. In regard to reducing the requirements of the Promoting Interoperability performance category to an attestation to the use of 2015 Edition CEHRT or achieving PCMH recognition, we refer readers to our earlier discussion of establishing interoperability as a foundational element of MVPs and the importance of using a uniform set of measures that would apply to all clinicians, regardless of MVP, for whom the Promoting Interoperability performance category is required (84 FR 62948). We believe that merely requiring an attestation regarding the use of 2015 Edition CEHRT would not align with our desire to recognize differences in performance on Promoting Interoperability performance category measures.

After consideration of public comments, we are finalizing at § 414.1365(d)(3)(iv) to calculate the Promoting Interoperability performance category score for an MVP Participant using the methodology at § 414.1380(b)(4), except as provided at § 414.1365(d)(3)(iv)(A).

We proposed at § 414.1365(c)(4)(i)(A) to require subgroups to submit their affiliated group's data for the Promoting Interoperability performance category. We proposed at § 414.1365(d)(3)(iv)(A) that if a subgroup does not submit its affiliated group's data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

We solicited public comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported our proposed scoring for Promoting Interoperability for MVP participants. One commenter recommended that CMS carry over numerous other scoring policies that keep approaches as consistent as possible across MVPs and traditional MIPS as we introduce subgroups.

Response: We thank the commenters for their support. We will continue to review opportunities to align scoring between MVPs and MIPS.

Comment: A few commenters did not support our proposal to require subgroups to submit their affiliated group's Promoting Interoperability data. One commenter indicated that groups may use multiple EHRs, and that if subgroups using a single EHR could report their own Promoting Interoperability performance category data, it would increase flexibilities in subgroup requirements. One commenter voiced concerns that non-patient facing clinicians would need to submit their affiliated group's Promoting Interoperability performance data, rather than have the Promoting Interoperability performance category reweighted. The commenter stated their preference to have the Promoting Interoperability performance category reweighted for non-patient-facing clinicians.

Response: As described in the CY 2022 PFS proposed rule (86 FR 39371), for MVPs, we proposed to require that each subgroup submit their affiliated group's data for the Promoting Interoperability performance category and receive a score based on that data because we heard from stakeholders that some clinicians would need additional time to resolve operational challenges to submit subgroup level data for the Promoting Interoperability performance category. We believe that, until MIPS eligible clinicians are able to resolve these operational challenges, the benefit of requiring subgroups to submit their affiliated group's data outweighs the benefit of any flexibility that can be

afforded from subgroups submitting their own Promoting Interoperability data, such as commenter's concern that groups may use multiple EHRs and subgroups using a single EHR could report their own Promoting Interoperability performance category data. In section IV.A.3.b.(5)(c)(i)(B) of this final rule, we finalized that a subgroup may receive reweighting independent of the affiliated group in certain circumstances, but non-patient facing status is not one of those circumstances. In section IV.A.3.b.(3)(c)(ii) of this final rule, we finalized that we determine special status (such as non-patient facing status) for a subgroup at the group level, not at the subgroup level.

After consideration of public comments, we are finalizing at § 414.1365(c)(4)(i)(A) to require subgroups to submit their affiliated group's data for the Promoting Interoperability performance category and are also finalizing at § 414.1365(d)(3)(iv)(A) that if a subgroup does not submit its affiliated group's data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

(v) Facility-Based Scoring

We believe facility-based MIPS eligible clinicians and groups should have the same opportunities to submit MVPs as other MIPS eligible clinicians and groups. In the CY 2022 PFS proposed rule (86 FR 39381), we proposed at § 414.1365(e)(3) that if an MVP Participant that is not an APM Entity is eligible for facility-based scoring, a facility-based score will also be calculated in accordance with § 414.1380(e). In this case, we would use the highest final score according to our policies at § 414.1380(e)(6)(vi).

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the policy to allow facility-based scoring for MVP Participants, because the policy aligns with traditional MIPS policies and accommodates the complex nature of physicians' contracting and business agreements.

Response: We appreciate the commenters' support.

After consideration of public comments, we are finalizing the policy as proposed.

(c) Calculating the Final Score in MVPs

(i) Final Score Calculation

In the CY 2022 PFS proposed rule (86 FR 39381), we proposed at § 414.1365(e) that the final score is calculated for an MVP Participant using the same scoring methodology at § 414.1380(c) unless otherwise indicated in § 414.1365(e).

We solicited public comment on the proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported our approach to calculate the final score for an MVP Participant who is not an APM entity using the same methodology established for traditional MIPS.

Response: We thank the commenter for their support.

Comment: One commenter voiced concerns that scoring for subgroups might be confusing for some clinicians, in terms of understanding when the subgroup performance is scored versus when the affiliated group performance is scored for population health and Promoting Interoperability measures.

Response: We have tried to use the same scoring methodology established in traditional MIPS where appropriate, with few differences. To ensure that subgroups can be scored on the foundational layers of the MVP, data from the affiliated group will be used for population health and Promoting Interoperability measures. We believe data from the group will be reflective of subgroup performance for the foundational layers of MVPs. The subgroup will be scored on the subgroup data for the cost performance category, improvement activities performance category and the quality performance category (except for the population health measure which will be assessed on the affiliated group data since that is part of the foundational layer). We will continue to provide future communication on how subgroups can participate in MVPs through routine communication channels, including but not limited to issuing emails and notices on the QPP website, qpp.cms.gov.

After consideration of public comments, we are finalizing the proposal as proposed.

(A) General Performance Category Weights

In the CY 2022 PFS proposed rule (86 FR 39381), we proposed at § 414.1365(e)(1) to use the performance category weights established for traditional MIPS and described at § 414.1380(c)(1) to calculate the final score for an MVP Participant that is not

an APM Entity. We also proposed at § 414.1365(e)(1) to use the performance category weights established for APM Entities and described at § 414.1317(b) to calculate the final score for an MVP Participant that is an APM Entity.

We solicited public comments on these proposals and did not receive any.

We are finalizing as proposed at § 414.1365(e)(1) to use the performance category weights established for traditional MIPS and described at § 414.1380(c)(1) to calculate the final score for an MVP Participant that is not an APM Entity. We are also finalizing as proposed at § 414.1365(e)(1) to use the performance category weights established for APM Entities and described at § 414.1317(b) to calculate the final score for an MVP Participant that is an APM Entity.

(B) Flexibility for Weighting Performance Categories

(aa) Reweighting Performance Categories for MVPs

For MVP Participants, we proposed reweighting policies that generally align with our current policies for traditional MIPS with a few minor modifications (86 FR 39381). We proposed at § 414.1365(e)(2)(i) that for an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in the circumstances described at §§ 414.1380(c)(2)(i)(A)(2) through (9), and 414.1380(c)(2)(i)(C). As discussed in the CY 2022 PFS proposed rule, for MVP Participants, we do not believe there will be cases where no measures in the quality performance category are available and applicable and can be scored (86 FR 39381). Therefore, we stated that we do not believe the traditional MIPS policy for reweighting the quality performance category when no quality measures can be scored as specified at § 414.1380(c)(2)(i)(A)(1) should be applicable to MVP Participants. We also proposed at § 414.1365(e)(2)(i) that for an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

We proposed at § 414.1365(e)(2)(ii) that for an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. In addition, we proposed at § 414.1365(e)(2)(ii) that if reweighting is not applied to the affiliated group, the subgroup may receive reweighting

independent of the affiliated group in the following circumstances, for the reasons discussed in the CY 2022 PFS proposed rule (86 FR 39381). We proposed at § 414.1365(e)(2)(ii)(A) that a subgroup may submit an application to CMS demonstrating that it was subject to extreme and uncontrollable circumstances and receive reweighting in accordance with § 414.1380(c)(2)(i)(A)(6) and (c)(2)(i)(C)(2). Under this proposal, we proposed that in the event that a subgroup submits data for a performance category, the scoring weight described at § 414.1380(c)(1) would be applied and its weight would not be redistributed. We also proposed at § 414.1365(e)(2)(ii)(B) that a subgroup would receive reweighting if CMS determines, based on information known to the agency prior to the beginning of the relevant MIPS payment year, that data for the subgroup are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the subgroup and its agents, in accordance with § 414.1380(c)(2)(i)(A)(9) and (c)(2)(i)(C)(10).

We requested public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the use of the reweighting policies established in traditional MIPS for MVPs that are submitted by an MVP Participant that is not an APM Entity, including reweighting of the Promoting Interoperability performance category when applicable. One commenter recommended that CMS evaluate if automatic reweighting of performance categories unnecessarily and unfairly excludes clinicians, such as physical therapists from participating in MVPs.

Response: We believe the reweighting policies allow all MVP Participants that have sufficient measures and activities applicable and available to be scored fairly on their performance. We do not believe that our reweighting policies exclude clinicians from participating in MVPs. Rather, the reweighting policies allow clinicians to receive reweighting if they are impacted by a qualifying extreme and uncontrollable event and do not submit data.

Comment: One commenter supported the reweighting policy to not reweight the quality performance category in MVPs because no quality measures can be scored.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing these

proposals and the regulation text at § 414.1365(e)(2) as proposed.

(C) Redistributing Performance Category Weights

In the CY 2022 PFS proposed rule (39381 through 39382), we proposed to redistribute the performance category weights for MVPs in accordance with the redistribution policies we proposed for traditional MIPS in the CY 2022 PFS proposed rule (86 FR 39448). We proposed at § 414.1365(e)(2)(iii) that for an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in accordance with § 414.1380(c)(2)(ii). We also proposed at § 414.1365(e)(2)(iii) that for an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

We solicited public comments on these proposals.

We did not receive public comments on these proposals. We are finalizing these proposals and the regulation text at § 414.1365(e)(2)(iii) as proposed.

(D) Complex Patient Bonus

We refer the reader to § 414.1380(c)(3) and to the proposed rule (86 FR 39439 through 39446) for our previously established and proposed policies on applying a complex patient bonus. In the CY 2022 PFS proposed rule (86 FR 39382), we proposed at § 414.1365(e)(4) to add a complex patient bonus to the final score for an MVP Participant in accordance with § 414.1380(c)(3).

We solicited public comments on this proposal.

Comment: One commenter supported the use of the traditional MIPS complex patient bonus scoring policies for MVPs.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing as proposed at § 414.1365(e)(4) to add a complex patient bonus to the final score for an MVP Participant in accordance with § 414.1380(c)(3).

We refer readers to the CY 2022 PFS proposed rule (86 FR 39382) for an example of the final score calculation for MVPs.

(d) Enhanced Performance Feedback in MVPs

(i) Background

In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that under section

1848(q)(12)(A)(i) of the Act, on an annual basis, we will provide confidential feedback to MIPS eligible clinicians and groups on their performance. Currently, in traditional MIPS, clinicians are not required to submit data throughout the performance period. Instead, data is submitted through the submission period that follows the performance period, as described at § 414.1325(e). In addition, current performance feedback includes measure-level performance data and scores, activity-level scores, and category comparison.

In the CY 2020 PFS final rule, we indicated a commitment to the transformation of MIPS to allow for streamlined, cohesive reporting through MVPs that would result in enhanced and timely feedback (84 FR 62945). Through previous rulemaking cycles, we have heard from stakeholders that clinicians are interested in receiving feedback reports from CMS throughout the year rather than annually to allow clinicians to review and make improvements where appropriate. Other stakeholders have expressed interest in receiving feedback which includes comparative data to other practices of similar size, location, and specialty. Stakeholders have indicated this is also key to put performance in perspective, particularly if performance evaluation and payment adjustments are contingent on the performance of other clinicians (84 FR 63057 through 63058).

(ii) Enhanced Performance Feedback in MVPs

In the CY 2022 PFS proposed rule, we explained that we considered two options for providing enhanced performance feedback (86 FR 39383). The first option is to provide comparative performance feedback, comparing the performance of like clinicians who report on the same MVP, which provides more granular comparison than is currently available. The second option is to provide performance feedback during the performance period to provide more timely and actionable feedback, but require clinicians to submit earlier. This option may require a significant investment of resources, including both time and money for CMS, third party intermediaries, and clinicians.

Therefore, beginning with the CY 2023 performance period/CY 2025 MIPS payment year, we proposed the first option described—to include comparative performance feedback within the annual performance feedback we provide for MVP Participants, comparing the performance of similar clinicians who report on the same MVP.

The comparative feedback would only be available to those who report on MVPs and will be incorporated into the annual performance feedback that we currently provide in traditional MIPS.

We solicited public comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to provide comparative feedback to clinicians who submit MVPs.

Response: We thank commenters for the support.

Comment: A few commenters had concerns that it is premature to offer feedback to clinicians on performance on MVPs, because MVPs are still under development, clinicians are still gaining experience with the use of population and cost measures and may not benefit from enhanced feedback. Commenters indicated that clinicians also have the burden of transitioning to digital quality measures (dQMs) and will not have resources to receive and understand enhanced performance feedback.

Response: We believe that MVPs provide an opportunity for enhanced feedback for MVP Participants, because MVPs allow for comparison to other MVP Participants who submitted the same MVP. We plan to provide enhanced feedback to MVP Participants beginning with the first performance period the MVP participation option is available (CY 2023 performance period/CY 2025 MIPS payment year). We do not believe it is premature to offer feedback after an MVP is submitted, particularly as the information is provided to the MVP participant only and is not publicly reported. As clinicians begin to adopt MVPs we will provide feedback in as timely a manner as possible and we anticipate that feedback reports will help clinicians become familiar with population health

and cost measure data, as well as the other elements of the MVP. We acknowledge the concern that clinicians will be transitioning to dQMs, and while it is not required that clinicians review and use the feedback on MVPs, we continue to believe that feedback on MVPs will be a valuable source of information regarding performance. The comparative performance data from MVPs on connected measures and activities may help MVP Participants target potential gaps in care related to the MVP and focus needed changes in clinical workflow to address care gaps.

Comment: A few commenters wanted clarification on whether all clinicians that participate in the MVP would be compared to all clinicians who submitted the MVP, or if neurologists who participate in a stroke care MVP would be compared to other neurologists in the MVP.

Response: We will provide comparative feedback on performance of clinicians within a group or subgroup submitting an MVP to all other clinicians who reported the same MVP, which provides more granular comparison than is currently available under traditional MIPS. However, we do not plan to provide comparative feedback that is specialty specific for MVP Participants.

After consideration of public comments, we are finalizing our policy that beginning with the CY 2023 performance period/CY 2025 MIPS payment year, we will include comparative performance feedback within the annual performance feedback we provide for MVP Participants, comparing the performance of similar clinicians who report on the same MVP. The comparative feedback will only be available to those who report on MVPs and will be incorporated into the annual performance feedback that we currently provide in traditional MIPS.

(iii) Request for Information for Future Consideration

As described in the CY 2020 PFS proposed rule (84 FFR 40733 through 40734), stakeholders have requested that they be provided with actionable feedback. To gain a better understanding, we solicited comments from stakeholders to elaborate on what they consider to be “actionable”. Would this include CMS identifying in the annual performance feedback areas of improvement based on how a clinician scores on a measure? Is there unintended burden to stakeholders such as third party intermediaries and EHR vendors associated with receiving “actionable” feedback? For example, this could include financial burden from system changes or operational burden on changes to workflows.

We thank commenters for the feedback received through this request for information. We may consider this information to inform future rulemaking.

b. APM Performance Pathway

(1) Overview

In the CY 2021 PFS final rule (85 FR 84859), we finalized the APM Performance Pathway (APP), which was designed to provide a predictable and consistent MIPS reporting option to reduce reporting burden and encourage continued APM participation. The APP is available for reporting by any submitter type, with the exception of Virtual Groups.

(2) MIPS Performance Category Scoring

(a) Quality Performance Category

In the CY 2021 PFS final rule, we finalized our proposal to use the measures listed in Table 50 for purposes of quality performance category scoring for the APP.

BILLING CODE 4120-01-P

TABLE 50: Measures included in the 2021 Final APM Performance Pathway Measure Set⁺

Measure #	Measure Title	Collection Type	Submitter Type	Meaningful Measure Area
Quality ID#: 321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Patient's Experience
Measure # 479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Admissions & Readmissions
Measure # TBD	Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for ACOs	Administrative Claims	N/A	Admissions & Readmissions
Quality ID#: 001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health
Quality ID#:236	Controlling High Blood Pressure	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 318	Falls: Screening for Future Fall Risk	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventable Healthcare Harm
Quality ID#: 110	Preventive Care and Screening: Influenza Immunization	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	CMS Web Interface*	APM Entity/Third Party Intermediary	Prevention and Treatment of Opioid and Substance Use Disorders
Quality ID#: 113	Colorectal Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 112	Breast Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 438	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 370	Depression Remission at Twelve Months	CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health

⁺ We note that Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID# 438); Depression Remission at Twelve Months (Quality ID# 370), and Preventive Care and Screening: Screening for Depression and Follow-up Plan (Quality ID# 134) do not have benchmarks and are therefore not scored; they are, however, required to be reported in order to complete the Web Interface dataset.

* ACOs will have the option to report via Web Interface for the 2021 MIPS Performance year only.

BILLING CODE 4120-01-C

In the CY 2021 PFS final rule, we finalized the inclusion of the CMS Web Interface as an option for Shared Savings Program ACOs to report quality for the 2021 performance period only, and this quality reporting option would no longer be available beginning with the CY 2022 performance period. However, as we explained in the CY 2022 PFS proposed rule (86 FR 39384), since the CY 2021 PFS final rule, we

have received stakeholder feedback that the transition away from reporting the CMS Web Interface measures to the reporting of eCQMs/MIPS CQMs is more technologically difficult for some ACOs than originally anticipated, particularly under the extraordinary circumstances of the PHE for COVID-19. In light of this feedback, we proposed to extend the CMS Web Interface as a means of reporting quality under the APP for

Shared Savings Program ACOs for performance years 2022 and 2023.

Under this proposal, for performance year 2022, Web Interface reporting would work in the same manner as for performance year 2021, where ACOs would have the option of reporting either the CMS Web Interface, the APP eCQM/MIPS CQM measure set, or both.

In addition, we proposed that for the 2023 performance year, we would score

Web Interface submissions only for ACOs that have also submitted at least one eCQM/MIPS CQM measure from the APP measure set. While we stated in the proposed rule that we understand that there may be barriers to ACOs transitioning away from the CMS Web Interface along the timeline originally contemplated, we further explained that we believe it is important to continue to encourage and incent that transition. By extending the CMS Web Interface for the 2022 and 2023 performance years, as proposed, we would give ACOs additional time to familiarize themselves with the eCQM/MIPS CQM measures and the data aggregation and submission processes. However, we also stated our belief that by proposing to limit the continued use of the CMS Web Interface in the 2023 performance year only to those ACOs that also attempt an eCQM/MIPS CQM submission, we would continue to move these ACOs and their ACO participants towards CMS' goal of more complete and uniform reporting requirements for all MIPS participants.

In the proposed rule, we noted that for both performance year 2022 and performance year 2023, ACOs would continue to have the opportunity to report on both the eCQMs/MIPS CQMs and the CMS Web Interface measures, and to have their MIPS quality performance category score based on the submission that receives a higher score. We stated our belief that these proposed policies would help to encourage ACOs to move towards eCQM/MIPS CQM reporting in a low-risk environment where they will have the opportunity to continue to rely on measures reported through the CMS Web Interface for purposes of quality performance scoring as they become familiar with the eCQM/MIPS CQM submission and scoring process.

We solicited comments on these proposals.

Comment: Many commenters supported our proposal to extend the CMS Web Interface reporting option for Shared Savings Program ACOs during the 2022 and 2023 performance years.

Response: We thank commenters for their support. We agree that given the complexity of the shift from the selective beneficiary sampling method of the CMS Web Interface to the use of all-patient data for reporting eCQM/MIPS CQMs, it is prudent to ensure that ACOs, their ACO participants, and vendors have sufficient time to implement the technology and workflows necessary to make this transition a success.

Comment: Some commenters supported the extension of the use of

the Web Interface for Shared Savings Program ACOs, but believed that requiring reporting on at least one eCQM/MIPS CQM in 2023 as a prerequisite to scoring those Web Interface measures created the same level of burden as fully transitioning to eCQM/MIPS CQMs in that year. They recommended that the proposed requirement that ACOs report a minimum of one eCQM/MIPS CQM in 2023 should not be implemented.

Response: We understand commenters to mean that they believe that the majority of the burden is in developing the technical capabilities to report on these measures, and not in the data collection and reporting itself. Therefore, by including this requirement in performance year 2023, we would be imposing a deadline to have completed the transition to the new reporting framework before stakeholders believe they would be ready.

In light of these concerns, we are not finalizing our proposal to require a single eCQM measure to be reported in 2023 in order to be eligible for Web Interface scoring. Instead, we are finalizing at policy to continue the 2021 policy including use of the CMS Web Interface for Shared Savings Program ACOs into MIPS performance years 2022 and 2023. In addition, in response to comments received on our comment solicitation in the CY 2022 PFS proposed rule (86 FR 39269), we are also extending the use of the CMS Web Interface as a reporting option under the APP into MIPS performance year 2024.

For the CY 2021 MIPS performance period, we limited the use of the Risk-standardized, All-cause Unplanned Admissions for Multiple Chronic Conditions for ACOs (MCC for ACOs) measure to ACOs because, at that time, we were still investigating the question of whether it would be appropriate to include the Risk-standardized, All-cause Unplanned Admissions of Multiple Chronic Conditions for MIPS (MCC for MIPS) measure in the generally applicable MIPS quality measure set. However, in the CY 2022 PFS proposed rule (86 FR 39385), we proposed to add the MCC for MIPS measure into the MIPS quality measure set beginning with the CY 2022 MIPS performance period, as discussed in Appendix 1 of this final rule.

We also proposed to replace the MCC for ACOs measure with the MCC for MIPS measure within the APP beginning with the 2022 MIPS performance period. We explained that this change would continue our transition towards alignment of quality measure data reported by MIPS eligible

clinicians who are not participants in APMs and those who are, as discussed in the CY 2021 PFS final rule (85 FR 84859). We stated our belief that the MCC for MIPS measure is a valuable tool in assessing quality performance, with no additional reporting burden, and is therefore an asset to the APP measure set as well. By replacing the MCC for ACOs measure with the MCC for MIPS measure, we would have the opportunity to capture performance on this measure for additional MIPS eligible clinicians who are not participants in ACO-based APMs.

We also stated our belief that it is important to remove the MCC for ACOs measure from the APP in order to reduce the potential for confusion around performance scores and feedback for MIPS eligible clinicians who might otherwise have been scored on both measures with differing results.

We solicited comments on our proposal to include the measures listed in Table 40 of the proposed rule (86 FR 39386) in the quality measure set for the APP for the 2022 MIPS performance period.

The following is a summary of the comments we received on the proposed APP quality measure set and our responses.

Comment: One commenter noted that it is also important to consider smaller groups and individual MIPS eligible clinicians who may not meet the case minimums or who are unfamiliar with the measures in early years and stressed that flexibility for these providers will be important.

Response: We recognize that smaller groups may not meet case minimums to report on this measure, but reiterate that in such a case, the group would have the measure excluded from its total measure achievement points and total available measure achievement points in accordance with § 414.1367(c)(1)(i), and would not be negatively affected by the inability to score this measure. We also reiterate that APM participants are no longer required to be scored for purposes of MIPS as part of their APM, but may report using any MIPS measures or pathways that would otherwise be available to them. It is our intention that these policies will provide all MIPS eligible clinicians with flexibility to report on the measures that are most relevant to their specific practice.

Comment: A few commenters raised questions about the proposed change from the MCC for ACOs measure to the MCC for MIPS measure. Commenters noted the difference in patient population between the MCC for ACOs measure, which relies on data for

Medicare beneficiaries assigned to the ACO, to the MCC for MIPS measure, which uses all Medicare beneficiary data and requested that CMS reconsider the use of the MCC for MIPS measure in scoring ACOs.

Response: We recognize that there is a difference in the patient population used to calculate the MCC for MIPS measure relative to the patient population for the MCC for ACOs measure. Like all other quality measures

in the MIPS program (with the exception of the CMS Web Interface, claims, and administrative claims measures), the MCC for MIPS is a measure intended to capture reporting on all patients seen by the eligible clinicians being scored. The goal of this transition towards all-beneficiary and all-payer data is to produce a more comprehensive picture of the care being provided by the eligible clinicians participating in ACOs to all Medicare

beneficiaries and patients within their care. This way, beneficiaries will be better positioned to compare performance of various clinicians and empowered to make better choices for their own health care.

Therefore, we are finalizing our proposal to add the MCC for MIPS measure to the APP measure set, and to remove the MCC for ACOs measure.

BILLING CODE 4120-01-P

TABLE 51: Measures included in the 2022-2024 APM Performance Pathway Measure Set⁺

Measure #	Measure Title	Collection Type	Submitter Type	Meaningful Measure Area
Quality ID#: 321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Patient's Experience
Measure # 479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Admissions & Readmissions
Measure # TBD	Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for MIPS	Administrative Claims	N/A	Admissions & Readmissions
Quality ID#: 001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health
Quality ID#:236	Controlling High Blood Pressure	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 318	Falls: Screening for Future Fall Risk	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventable Healthcare Harm
Quality ID#: 110	Preventive Care and Screening: Influenza Immunization	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	CMS Web Interface*	APM Entity/Third Party Intermediary	Prevention and Treatment of Opioid and Substance Use Disorders
Quality ID#: 113	Colorectal Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 112	Breast Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 438	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 370	Depression Remission at Twelve Months	CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health

⁺ We note that Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID# 438); Depression Remission at Twelve Months (Quality ID# 370), and Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID# 226) do not have benchmarks and are therefore not scored for PY 2022; they are, however, required to be reported in order to complete the Web Interface dataset.

* ACOs will have the option to report via Web Interface for the 2022, 2023, & 2024 MIPS performance periods only.

BILLING CODE 4120-01-C**d. MIPS Performance Category Measures and Activities****(1) Quality Performance Category****(a) Background**

We refer readers to §§ 414.1330 through 414.1340 and the CY 2018 Quality Payment Program final rule (82 FR 53626 through 53641) for our previously established policies

regarding the quality performance category.

In the proposed rule, we proposed to:

- Maintain the data completeness criteria threshold of at least 70 percent for CY 2021 and CY 2022 performance periods/2023 and 2024 MIPS payment years, and increase the data completeness criteria threshold to at least 80 percent for the CY 2023

performance period/2025 MIPS payment year.

- Extend the availability of the CMS Web Interface as a collection and submission type for the CY 2022 performance period/2024 MIPS payment year.
- Make changes to the MIPS quality measure set as described in Appendix 1 of this final rule, including addition of new measures, updates to specialty sets,

removal of existing measures, and substantive changes to existing measures.

- Establish criteria for determining whether a measure change is considered substantive starting with the CY 2022 performance period.

- Beginning with the CY 2021 performance period/2023 MIPS payment year CAHPS for MIPS survey, Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs) are required to administer the CAHPS for MIPS Survey and report via the Alternative Payment Model (APM) Performance Pathway (APP). We proposed refinements to our policies for administration of the CAHPS for MIPS survey to align with certain policies that previously applied to the CAHPS for ACOs survey.

(b) Data Submission Criteria

(i) Submission Criteria for Quality Measures Excluding the CMS Web Interface and CAHPS for MIPS

In the CY 2017 Quality Payment Program final rule, we established the submission criteria for quality measures (excluding the CMS Web Interface measures and the CAHPS for MIPS survey measure) at § 414.1335, which requires a MIPS eligible clinician, group, or virtual group that is reporting on Qualified Clinical Data Registry (QCDR) measures, MIPS clinical quality measures (MIPS CQMs), electronic CQMs (eCQMs), or Medicare Part B claims measures to submit data on at least 6 measures, including at least 1 outcome measure (81 FR 77100 through 77114). If an applicable outcome measure is not available, then a MIPS individual eligible clinician, group, or virtual group will report on 1 other high priority measure. If there are fewer than 6 measures that apply to a MIPS eligible clinician, group, or virtual group, then reporting on each applicable measure is required. For MIPS eligible clinicians, groups, and virtual groups that report on a specialty or subspecialty measure set (as designated in the MIPS final list of quality measures established by CMS through rulemaking), they are required to submit data on at least 6 measures within the set, including at least 1 outcome measure. If an applicable outcome measure is not available, then a MIPS individual eligible clinician, group, or virtual group will report on 1 other high priority measure. If a specialty or subspecialty measure set contains fewer than 6 measures or if fewer than 6 measures within the measure set apply to a MIPS eligible clinician, group, or virtual group, then

reporting on each applicable measure is required. In addition to the assessment of performance based on submitted data for at least 6 measures (all measures if there are fewer than 6 measures that are applicable), performance is also assessed on administrative claims measures. CMS automatically evaluates and calculates administrative claims measures for individual MIPS eligible clinicians, groups, and virtual groups if the case minimum requirement of the measure is met.

We noted in the CY 2022 PFS proposed rule that, with each year of program implementation, we continue to assess means for creating a more cohesive and meaningful participation experience in MIPS that improves value and reduces clinician burden. As the program evolves, we want to enable a seamless transition from participation in traditional MIPS to the preliminary onset of voluntary participation in MVPs to the required participation in MVPs. Transitioning from traditional MIPS to MVPs improves the participation experience of MIPS by having the program be more relevant to a clinician's scope of practice and meaningful to patient care. One element that we assessed in preparation for the transition from traditional MIPS to MVPs regards the utilization of outcomes-based administrative claims measures to reduce the reporting burden under MIPS, particularly the allowance of outcome-based administrative claims measures to be applied as the required outcome measure requirement under traditional MIPS (in general, 6 measures, including 1 outcome measure) and MVPs (in general, 4 measures as outlined in section IV.A.3.b.(4)(d)(ii) of this final rule).

In the CY 2022 PFS proposed rule, we noted that since the inception of MIPS under the Quality Payment Program, we established administrative claims measures that are automatically evaluated and calculated for individual MIPS eligible clinicians, groups, and virtual groups if the case minimum requirement of the measure is met (81 FR 77130 through 77136). The reporting burden is reduced for individual MIPS eligible clinicians, groups, and virtual groups when CMS conducts the assessment and calculations of administrative claims measures (81 FR 77134). A subset of the administrative claims measures are outcome-based measures (and in some cases, are also population health measures), which focus on the improvement of patient health outcomes. We want to further reduce the reporting burden by allowing outcome-based measures (not applicable to administrative claims measures that

are considered population health measures) to fulfill the outcome measure requirement as more of such measures are implemented in MIPS, when applicable. For the CY 2022 performance period/2024 MIPS payment year, we proposed the following outcome-based administrative claims measure under MIPS: Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System (see Table Group A of Appendix 1 of this final rule).

In the CY 2022 PFS proposed rule, we proposed at § 414.1365(c)(1) to allow an administrative claims measure that is outcome-based (not applicable to administrative claims measures that are population health measures), if applicable, to be selected at the time of MVP registration as a measure to meet the outcome measure requirement starting with the CY 2023 performance period/2025 MIPS payment year. The outcomes-based administrative claims measure would be applicable and relevant to the specific MVP, and as a result, included as 1 of the measures available within an MVP. If an outcomes-based administrative claims measure was selected during the MVP registration process, the measure will meet the outcome-based measure reporting requirement and count as 1 of the 4 minimum required measures if the MVP Participant meet the case minimum requirement for the administrative claims measure; otherwise, the administrative claims measure would receive a score of zero points and the MVP Participant would not meet the minimum reporting requirement of 4 measures. However, if the MVP Participant selects an outcomes-based administrative claims measure available within the MVP and report on 4 measures, the MVP Participant would meet the minimum reporting requirement of 4 measures if it was determined that the case minimum requirement for the outcomes-based administrative claims measure was not met. We believe that such approach reduces reporting burden and allows for a more cohesive and meaningful participation experience that focuses on measures that are more relevant to a clinician's scope of practice while preventing gaming/misuse of selecting an outcomes-based administrative claims measures to be assessed and scored on for purposes of MVP participation.

As stated in the CY 2022 PFS proposed rule, we analyzed the allowance and utilization of outcome-based administrative claims measures

(not applicable to administrative claims measures that are population health measures) to be applied to fulfill the outcome measure requirement within traditional MIPS, it became apparent that the implementation of such a policy would pose challenges and obstacles. We assessed 3 options. For the first option, we assessed the potential implementation of outcomes-based administrative claims measures to fulfill the outcome requirement utilizing a registration system, similar to the proposal for MVPs. For traditional MIPS, a registration process would require the individual MIPS eligible clinicians, groups, and virtual groups to elect to have an outcomes-based administrative claims measure be calculated and scored to fulfill the outcome measure requirement as part of the 6 minimum required measures. Prior to an individual MIPS eligible clinician, group, or virtual group making such an election via a registration process, it would be imperative for a registration process to only permit an individual MIPS eligible clinician, group, or virtual group to register if eligible (meets case minimum requirement) for an outcome-based administrative claims measure (not applicable to administrative claims measures that are population health measures) to be calculated and scored. Such registration process would need to be able to identify which individual MIPS eligible clinicians, groups, and virtual groups would be eligible for an outcome-based administrative claims measure to fulfill the outcome measure requirement as part of the required minimum of 6 measures, which would prevent the potential for gaming and enable individual MIPS eligible clinicians, groups, and virtual groups to know in advance of the submission period if they would need to report on a minimum of 5 measures instead of a minimum of 6 measures; we believe that this approach would reduce burden.

In addition, for cases in which the case minimum of the outcomes-based administrative claims measure would not be met, and therefore, could not be calculated, we have considered whether the denominator should be reduced and performance assessment and scoring would be based on 5 measures instead of 6 measures (or less measures if, initially, there were fewer than 6 applicable measures or fewer than 6 measures available within a measure set), which would reduce the reporting burden under traditional MIPS. However, we recognize that if our policy—an election process, via a registration system, to have an outcome-based administrative claims measure as

1 of the required minimum of 6 measures—includes an element for a denominator reduction, we believe that our policy would pose the potential risk for gaming. We would want to prevent the potential for gaming—knowingly selecting an outcome-based administrative claims measures during registration that is not applicable to a practice or specialty, which would result in not meeting the case minimum requirement to be calculated and scored on such measure, and thus, having performance assessed on 5 measures instead of 6 measures (or less measures if, initially, there were fewer than 6 applicable measures or fewer than 6 measures available within a measure set).

As we assessed such approach, we believed that there would not be sufficient parameters/safeguards to ensure that only individual MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure calculation would be able to register. We would seek to prevent the potential for gaming by minimizing the number of individual MIPS eligible clinicians, groups, and virtual groups not eligible for an outcome-based administrative claims measure calculation to make such election. However, as we conducted our assessment, we determined that it would not be technically possible to develop a registration system based on applicable outcomes based administrative claims measure data for the applicable performance period to identify if a MIPS eligible clinician, group, or virtual group is eligible for an outcome-based administrative claims measure calculation given that such data would not be readily available until several months after the end of an applicable MIPS performance period. Without having an ability to identify MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure calculation for registration purposes based on data from the applicable performance period in order to prevent gaming, we believed that the implementation of a policy to allow for an outcome-based administrative claims measure to be applied as 1 of the minimum required 6 measures would pose risk to the integrity of the program. For the second option, we assessed the potential for automatically calculating an outcome-based administrative claims measure, if applicable, for individual MIPS eligible clinicians, groups, and virtual groups participating in traditional MIPS. For the

implementation of such a policy, we would use the status quo of requiring the submission of the minimum of 6 measures (or less measures if fewer than 6 measures were applicable or fewer than 6 measures were available within a measure set) (81 FR 77100 through 77114) in addition to automatically calculating an applicable outcome-based administrative claims measure. We would calculate a score for a total of 7 measures (6 required measures and outcome-based administrative claims measure), but performance for the quality performance category would be based on 6 measures with the highest score, which would include an outcome-based measure.

For option 2, we would not be reducing the reporting burden given that the reporting requirements would remain as status quo, but instead of us applying all administrative claims to all MIPS eligible clinicians as an addition to their quality performance category denominator, we would be replacing the outcome measure requirement, with an available outcomes-based administrative claims measure, if it can be applied. Under this approach, we would not be able to objectively decipher the intent of a MIPS eligible clinician, group, or virtual group (without a formal process to signify an election) as to whether or not they would want to have the outcome-based administrative claims measure automatically calculated and applied as 1 of the 6 minimum required measures. To not objectively know the intention of a MIPS eligible clinician, group, or virtual group, the following scenario could arise under option 2. For example, a MIPS eligible clinician, group, or virtual group submitted 5 measures, it is unclear if it was intentional to only submit 5 measures with the expectation that the MIPS eligible clinician, group, or virtual group sought to be evaluated on the outcomes-based administrative claims measure or if the submission of 5 measures was a result of a MIPS eligible clinician, group, or virtual group of not meeting the minimum of 6 required measures and thus, receive zero points for 1 of the 6 required measures.

After assessing the first 2 aforementioned options, we assessed a third option that would address concerns regarding the first 2 options. For option 3, we assessed the utilization of historical data (for example, previous MIPS performance period data) given that applicable performance period data would not be readily available to be included as part of a registration process. The use of historical data for an outcome-based administrative claims measure as the means for eligibility

determinations within a registration system would only permit individual MIPS eligible clinicians, groups, and virtual groups identified as eligible for the calculation of an outcome-based administrative claims measure. Such option would allow an individual MIPS eligible clinician, group, or virtual group to select the application of an outcome-based administrative claims measure during a registration process, which would allow CMS to identify the individual MIPS eligible clinicians, groups, and virtual groups electing to have such measure applied as 1 of the minimum-required 6 measures that meets the outcome-based measure requirement. We believe that historical data would be able to adequately and reliably identify individual MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure calculation, which we anticipate could be available during the applicable MIPS performance period, as technically feasible. We believe that by providing this historical information to individual MIPS eligible clinicians, groups, and virtual groups would provide pertinent information to make a determine if they would be selecting an outcome-based administrative claims measure during a registration process to be applied as 1 of the minimum-required 6 measures. We believe this approach could minimize gaming and individual MIPS eligible clinicians, groups, and virtual groups would know that they would need to select a minimum of 5 (instead of 6) other measures to meet the reporting requirements for the quality performance category. The potential drawback to this option is it would only be available for individual MIPS eligible clinicians, groups, and virtual groups who participated in MIPS for a prior performance period, so not all clinicians would benefit under this option. However, if technically feasible, the utilization of historical data from the outcome-based administrative claims measure would be able to reduce the reporting burden and would align with the similar proposed process for MVPs. Although we did not make a proposal for the implementation of such policy, we requested feedback from stakeholders regarding how the automatic calculation of an outcome-based administrative claims measure and have it applied as 1 of the minimum 6 required measures, particularly the outcome-based measure requirement, and if such option is a policy that would be advantage for them as they participate in traditional MIPS. We actively seek the engagement of our

stakeholders as we assess means for reducing the reporting burden and enhance the experience of participating in traditional MIPS.

Thus, we solicited public comment on the means for being able to implement such a policy. Are there other options that we should consider in determining how to implement such a policy? Are there other ways we would be able to identify which individual MIPS eligible clinicians, groups, and virtual groups are eligible for an outcomes-based administrative measure calculation to ensure that only those that are eligible are able make such an election? Should we consider the use of historical data that would allow the predetermination and identification of MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure? How would we be able to determine if a MIPS eligible clinician, group, or virtual group would like to have an automatic calculation of an outcome-based administrative claims measure conducted on their behalf outside of a registration process? Are there other challenges that we should be aware of as we continue to assess a means for developing and implementing such a policy?

We thank commenters for the feedback received. The information provided may inform future rulemaking.

(c) Data Completeness Criteria

(i) CY 2021 Performance Period (2023 MIPS Payment Year)

In the CY 2020 PFS final rule, we established the data completeness criteria at § 414.1340(a)(3) and (b)(3) for the CY 2020 performance period/2022 MIPS payment year, which determined that MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs, or Medicare Part B claims measures must submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer. In regard to the data completeness criteria established for Medicare Part B claims measures for the CY 2020 performance period/2022 MIPS payment year, we found that the policy established at § 414.1340(b)(3) erroneously reflected the data completeness criteria only applicable to QCDR measures, MIPS CQMs, and eCQMs, which requires data submission to pertain to patients that meet the measure's denominator criteria, regardless of payer (all-payer). It is not possible for Medicare Part B claims data to include all-payer patients; the

submission of data for Medicare Part B claims measures can only account for Medicare Part B patients. Since the implementation of MIPS, the data completeness criteria for Medicare Part B claims measures has pertained to the applicable Medicare Part B patients seen during an applicable MIPS performance period. The issue with the policy established at § 414.1340(b)(3) in the CY 2020 PFS final rule for Medicare Part B claims measures only pertains to the type of patient population for data submission purposes and not the threshold established for data completeness of at least 70 percent. Thus, we proposed to modify the data completeness threshold criteria established at § 414.1340(b)(3) for the CY 2020 performance period/2022 MIPS payment year retroactively, effective January 1, 2020, in accordance with section 1871(e)(1)(A)(ii) of the Act. We believe that failure to apply the change retroactively will be contrary to the public interest because it will require individual eligible clinicians, groups, and virtual groups to meet data completeness criteria (the submission of patient data for all-payers) for Medicare Part B claims measures that is not possible. We believe that it is imperative for individual eligible clinicians, groups, and virtual groups to be certain as to the true criteria used to measure data completeness for Medicare Part B claims measures. For the CY 2021 performance period/2023 MIPS payment year, we proposed to modify the data completeness criteria established at § 414.1340(b)(3) to be as follows: MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment year 2022.

In the CY 2021 PFS proposed and final rules, we inadvertently omitted a proposal that would have otherwise extended our existing policy to determine the data completeness criteria for the CY 2021 performance period/2023 MIPS payment year; we only included a reference to the data completeness criteria of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year as it relates to the scoring policies for class 1 measures as outlined in Table 49 of the CY 2021 PFS proposed and final rules (85 FR 50309 and 85 FR 84906). Thus, in the CY 2022 PFS proposed rule, we proposed to establish the data completeness criteria for the CY 2021 performance period/2023 MIPS

payment year retroactively, effective January 1, 2021, in accordance with section 1871(e)(1)(A)(ii) of the Act (86 FR 39390). We noted our belief that failure to apply the change retroactively will be contrary to the public interest because it could be construed as permitting the submission of incomplete, inaccurate, or otherwise comprised data, which would have a detrimental effect on the performance data used for calculating MIPS payment adjustments and public reporting. For the CY 2021 performance period/2023 MIPS payment year, we proposed at § 414.1340(a)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs will need to submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer; and at § 414.1340(b)(3) to establish the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the CY 2021 performance period to which the measure applies for MIPS payment year 2023.

We stated our belief that it is imperative to establish the data completeness criteria for the CY 2023 MIPS payment year in this final rule and any failure to apply the updated data completeness criteria retroactively would be contrary to the public interest as such omission presents ambiguity and a potential notion for an array of interpretations. We believe that it is in the public interest to retroactively apply the updated data completeness threshold as it would ensure that all MIPS eligible clinicians participating in MIPS for the CY 2021 performance period/2023 MIPS payment year, whether at the individual, group, or virtual group levels, would be aware that there is a definitive data completeness criteria for the CY 2021 performance period and any data submitted for the quality performance category would need to meet the data completeness criteria. We noted that such approach would: Establish the data completeness criteria prior to the timeframe in which data submission will occur (first 3 months of CY 2022), which would enable MIPS eligible clinicians participating in MIPS at the individual, group, or virtual group levels to prepare their data submission

to meet the updated data completeness criteria; and ensure that all data submitted for the quality performance category would meet the same criteria (that is, specific data completeness threshold of at least 70 percent of a MIPS eligible clinician or group's patient population that meets the measure's denominator criteria for QCDR measures, MIPS CQMs, and eCQMs; or specific data completeness threshold of at least 70 percent of the applicable Medicare Part B patients seen during the CY 2021 performance period for Medicare Part B claims measures) versus an unspecified, interpretive data completeness threshold that could result in various threshold ranges and inconsistent reported patient populations such as portion of submitted data be a representative of all patient (all-payer) data while the remaining portion of submitted data be a representative of only Medicare patient data, which would provide data integrity, usability, and reliability to assess the performance of MIPS eligible clinicians at the individual, group, or virtual group level in a manner that is consistent and enable performance data to be comparable to the applicable historical benchmarks that have been established for the various measures.

We solicited public comment on our proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year. We received public comments regarding the proposal. The following is a summary of the public comments received.

Comment: Most commenters supported the proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year.

Response: We appreciate the support from commenters.

Comment: A few commenters did not support the proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year and indicated that it is difficult for some clinicians to meet the data completeness criteria. The commenters recommended that the data completeness threshold be decreased to 60 percent for the CY 2021 performance period/2023 MIPS payment year.

Response: Due to the retroactive effect of our proposal, we believe it would be most appropriate to maintain the 70 percent data completeness criteria that had been adopted for the prior year. Interested parties that reviewed our data completeness standards for prior years

and our statements in the CY 2021 PFS proposed rule and final rule regarding the completeness standard for class 1 measures during the CY 2021 performance period could most reasonably have expected that we would maintain a 70 percent data completeness criteria threshold. We do not agree with commenters that the data completeness criteria threshold for the CY 2021 performance period/2023 MIPS payment year should be decreased to a threshold established for the CY 2019 performance period/2021 MIPS payment year. When the data completeness criteria threshold increased from at least 60 percent to at least 70 percent for the CY 2020 performance period/2022 MIPS payment year (84 FR 62952), it was based on an analysis of data completeness rates from the submission of data from the CY 2017 performance period (84 FR 62951), in which the data analyzed demonstrated that it would be generally feasible for MIPS eligible clinicians and groups to achieve a higher data completeness threshold of at least 70 percent. Absent further analysis, we believe it is most appropriate to maintain the standard of at least 70 percent for the data completeness threshold.

After consideration of the public comments, we are finalizing our proposal as proposed at § 414.1340(a)(3) and 414.1340(b)(3) to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year.

(ii) CY 2022 MIPS Performance Period (2024 MIPS Payment Year)

In the CY 2017 and CY 2018 Quality Payment Program final rules, we note that we would increase the data completeness criteria threshold over time (81 FR 77121 and 82 FR 53632). Starting with the CY 2020 performance period/2022 MIPS payment year, we increased the data completeness criteria from at least 60 percent to at least 70 percent and as noted above, we proposed to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year. We continue to believe that it is important to incrementally increase the data completeness criteria as MIPS eligible clinicians, groups, and virtual groups gain experience with MIPS. However, with the COVID-19 PHE that started during the CY 2020 performance period/2022 MIPS payment year and continued into the CY 2021 performance period/2023 MIPS payment year, we believe that it will be

appropriate to continue to maintain the data completeness criteria of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year as healthcare systems across the country have been overwhelmed and strained by the COVID-19 PHE.

In order to not place further undue burden as MIPS eligible clinicians, groups, and virtual groups navigate through the COVID-19 pandemic, we proposed for the CY 2020 performance period/2022 MIPS payment year:

- At § 414.1340(a)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs will need to submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer, for the CY 2022 performance period/2024 MIPS payment year; and

- At § 414.1340(b)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the CY 2022 performance period to which the measure applies for MIPS payment year 2024.

We solicited public comment on our proposals to maintain the data completeness criteria threshold of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year. We received public comments regarding the proposal. The following is a summary of the public comments received.

Comment: Most commenters supported the proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year.

Response: We appreciate the support from commenters.

Comment: A few commenters did not support the proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year and indicated that it is difficult for some clinicians to meet the data completeness criteria. The commenters recommended that the data completeness threshold be decreased to 60 percent for the CY 2022 performance period/2024 MIPS payment year.

Response: We do not agree with commenters that the data completeness criteria threshold for the CY 2022 performance period/2024 MIPS

payment year should be decreased to a threshold established for the CY 2019 performance period/2021 MIPS payment year. When the data completeness criteria threshold increased from at least 60 percent to at least 70 percent for the CY 2020 performance period/2022 MIPS payment year (84 FR 62952), it was based on an analysis of data completeness rates from the submission of data from the CY 2017 performance period (84 FR 62951), in which the data analyzed demonstrated that it would be generally feasible for MIPS eligible clinicians and groups to achieve a higher data completeness threshold of at least 70 percent. Absent further analysis and further information from the commenters explaining why it would be difficult to meet a data completeness criteria threshold of at least 70 percent, we believe it is most appropriate to maintain the standard of at least 70 percent for the data completeness threshold; we believe that maintaining the current standard provides MIPS eligible clinicians, groups, and virtual groups with additional time to obtain more experience in meeting this standard and prepare for a future incremental increase in the data completeness criteria threshold.

After consideration of the public comments, we are finalizing our proposal as proposed at § 414.1340(a)(3) and (b)(3) to maintain the data completeness criteria threshold of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year.

(iii) CY 2023 Performance Period (2025 MIPS Payment Year)

We believe that the incorporation of higher data completeness thresholds in future years ensure a more accurate assessment of a MIPS eligible clinician's performance on quality measures and avoid any selection bias. We have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients. The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure. The data completeness threshold of less than 100 percent is intended to reduce burden and accommodate operational issues that may arise during data collection during the initial years of the program.

Since the inception of the program, we have provided notice to MIPS eligible clinicians, groups, and virtual groups in order for them to take the necessary steps to prepare for higher

data completeness thresholds in future years. In a similar manner, we are providing advance notice that we intend to increase the data completeness criteria threshold for the CY 2023 performance period/2025 MIPS payment year. We proposed: At § 414.1340(a)(4) to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs, or Medicare Part B claims measures will need to submit data on at least a 80 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer, for the CY 2023 performance period/2025 MIPS payment year; and at § 414.1340(b)(4) to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 80 percent of the applicable Medicare Part B patients seen during the CY 2023 performance period to which the measure applies for MIPS payment year 2025. We believe that MIPS eligible clinicians, groups, and virtual groups will be provided with adequate time to prepare for the data completeness criteria threshold to increase.

We solicited public comment on our proposal to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year. We received public comments regarding the proposal. The following is a summary of the public comments received.

Comment: A few commenters supported the proposal to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year.

Response: We appreciate the support from commenters.

Comment: Most commenters did not support the proposal to increase the data completeness criteria threshold to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year. Some commenters requested that CMS implement a more gradual increase of the data completeness criteria threshold, with one commenter urging CMS to not increase the data completeness threshold above 80 percent. A few commenters expressed concerns that the data completeness criteria threshold should not be increased amidst the COVID-19 PHE or as they prepare to

transition to MVPs and digital quality measures. A few commenters indicated that the increasing of the data completeness criteria threshold would make it more difficult for some MIPS eligible clinicians, groups, and virtual groups to meet the requirement, particularly small and rural practices. One commenter stated that it is difficult for some MIPS eligible clinicians to meet a data completion rate for patient reported outcome-based measures. Another commenter specified that other CMS quality programs have lower data completeness criteria thresholds and requested that the data completeness criteria threshold for MIPS reflect a lower threshold similar to other CMS quality programs.

Response: We acknowledge the concerns expressed from commenters regarding increasing the data completeness criteria threshold amidst the COVID-19 PHE that has healthcare systems across the country overwhelmed and strained, which may have continued implications that expand beyond the CY 2022 performance period/2024 MIPS payment year. Thus, we are not finalizing the proposal to increase the data completeness criteria threshold to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year while individual MIPS eligible clinicians, groups, and virtual groups recover from the unexpected impact of the COVID-19 PHE; instead, we will be maintaining the data completeness criteria threshold of at least 70 percent for the CY 2023 performance period/2025 MIPS payment year.

We also believe that maintaining the data completeness criteria threshold of at least 70 percent for the CY 2023 performance period/2025 MIPS payment year is most responsive to stakeholder concerns regarding an increase to the data completeness criteria threshold amidst the COVID-19 PHE. For the segment of MIPS eligible clinicians, groups, and virtual groups experiencing challenges in meeting the established data completeness criteria threshold of at least 70 percent, we believe that the COVID-19 PHE may have the potential to exacerbate those challenges. Maintaining the data completeness criteria threshold for the CY 2023 performance period/2025 MIPS payment year also would reduce burden and provide additional time for MIPS eligible clinicians, groups, and virtual groups to adopt the final policy changes and recover fiscally from the pandemic, prepare to transition to MVPs, which will be available starting with the CY 2023 performance period/2025 MIPS

payment year. We considered not establishing a data completeness criteria threshold policy for the CY 2023 performance period/2025 MIPS payment year in this final rule, but we believe that it is more beneficial to establish such policy in advance for MIPS eligible clinicians, groups, and virtual groups. In establishing data completeness criteria thresholds in advance of an applicable performance period, we believe it is advantageous to delineate the expectations for MIPS eligible clinicians, groups, and virtual groups in order for them prepare for a transition to higher data completeness criteria threshold when such threshold is increased in the future. We believe that by maintaining the data completeness criteria threshold of at least 70 percent for the CY 2023 performance period/2025 MIPS payment year, the number of MIPS eligible clinicians, groups, and virtual groups able to meet a higher data completeness criteria threshold in future years would increase. We intend to continuously consider feedback from stakeholders as we plan to incrementally increase the data completeness criteria threshold and determine which performance period to increase the data completeness criteria threshold given that the threshold of at least 70 percent will be implemented for 4 years as of the CY 2023 performance period/2025 MIPS payment year.

We recognize that the user experience under MIPS varies across a continuum and there may be some MIPS eligible clinicians, groups, and virtual groups that will experience more challenges than others in meeting the reporting requirements for the quality performance category under MIPS, particularly MIPS eligible clinicians, groups, and virtual groups considered to be small practices for purposes of MIPS (15 or fewer clinicians). We note that, in order to enhance the user experience for such small practices, we established the Medicare Part B Claims collection type. The assessment of performance for such measures is based on Medicare Part B claims data, not all-payer claims data. In addition, to support the participation of small practices in MIPS, we established the small practice bonus, in which 6 measure bonus points are applied to the numerator of the quality performance category for small practices that submit data on at least one quality measure (83 FR 59850). As we evolve the implementation of MIPS, we continue to assess means for reducing burden and improving user experience.

In regard to the comment pertaining to challenges meeting the data completion rate for patient-reported

outcome-based measures, we recognize that the user experience varies across a continuum. We do not believe that data completeness criteria threshold for patient-reported outcome-based measures would pose additional challenges. Such measures narrow the patient population to those that would benefit in capturing the patient voice. For example, many of the patient-reported outcome-based measures capture functional assessments that would allow clinicians to adjust their treatment plan to improve the outcomes. In the instance that the assessments are not completed, data completeness would not be impacted, but rather the performance rate would be impacted.

Lastly, we recognize that other CMS quality programs may have different data completeness criteria thresholds. While the commenter did not specify a CMS quality program or outline specific reporting requirements regarding data completeness that differ from MIPS, we believe that reporting requirements for CMS quality programs such as data completeness criteria, data validation, patient population eligible for a measure, measure specification requirements, case minimum standards, or measure exclusions or exceptions are not directly comparable across CMS quality programs. We believe that it is not accurate to characterize one element of a reporting requirement such as data completeness criteria threshold with an assertion that an overarching reporting burden for a CMS quality program is reduced if a standard differed from the data completeness criteria threshold of at least 70 percent established under MIPS. We note that reporting requirements may not only differ across CMS quality programs, but reporting requirements may differ by measure within a program. Thus, we believe that the reporting requirements such as the data completeness criteria threshold under other CMS quality programs should not be a factor in determining the data completeness threshold for MIPS as reporting requirements for other CMS quality programs are not directly comparable to the reporting requirements established under MIPS.

Furthermore, we believe that it is critical to increase data completeness thresholds over time to more accurately assess a MIPS eligible clinician's performance on quality measures and prevent any selection bias. A data completeness criteria threshold of less than 100 percent reduces burden and accommodates operational issues that may arise during data collection within the initial years of the program. We have previously provided notice to MIPS eligible clinicians in order for them to

take the necessary steps to prepare for higher data completeness criteria thresholds in future years (82 FR 53632, 83 FR 59758, and 84 FR 62951). We want to ensure that an appropriate, yet achievable, data completeness criteria threshold is applied to all eligible clinicians participating in MIPS.

Comment: A few commenters that did not support the increase of the data completeness criteria threshold of at least 80 percent for the CY 2023 performance period/2025 MIPS payment year indicated that some groups, virtual groups, and APM Entities such as ACOs rely on multiple EHR systems or use a combination of EHR systems and registries for submitting data to MIPS and ACOs. One commenter requested that CMS consider an allowance for groups, TINs within virtual groups, and TINs within ACOs using multiple EHR systems to submit data from each EHR to CMS and for CMS to aggregate the data for such groups. The commenter indicated placing this responsibility on such groups increases the cost of such reporting.

Response: We interpret the comments received to address the technological challenges that some groups, virtual groups, and APM Entities such as ACOs experience as they transition from the reporting requirements for the CMS Web Interface to meeting the reporting requirements for eCQMs and/or MIPS CQMs. These challenges include reporting all-payer data in lieu of reporting only Medicare patient data under the CMS Web Interface and meeting higher data completeness criteria.

We recognize that there are technical and operational dynamics that groups, virtual groups, and APM Entities such as ACOs must address, particularly the transition of multiple EHR systems to code and capture all-payer data that meets the data completeness criteria for eCQMs and/or MIPS CQMs. To ease the burden of transitioning to using an alternative collection type and/or submission type, we are extending the 70 percent data completeness criteria threshold, as described above. We refer readers to section IV.A.3.d.(1)(d) of this final rule regarding the proposal to extend the CMS Web Interface.

Comment: A few commenters indicated that there may be special circumstances in which clinicians, groups, and virtual groups participating in MIPS should be able to apply for an exemption regarding the data completeness criteria, such as the transition from one EHR system to another EHR system, which makes it difficult to report 12 months of data and

meet the data completeness requirement.

Response: We recognize that there are certain circumstances when a MIPS eligible clinician, group, virtual group, or APM Entity may be unable to complete reporting to MIPS due to, for example, extreme and uncontrollable circumstances, hardship, or the unavailability or inapplicability of measures due to practice size or other data limitations. Therefore, under the authority provided in section 1848(q)(5)(F) of the Act, it may be necessary to reweight one or more performance categories. We believe our previously established reweighting policies account for an array of circumstances that may impact the ability to meet reporting requirements for one or more performance categories.

After consideration of the public comments, we are not finalizing our proposals at § 414.1340(a)(4) and (b)(4) to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year, but finalizing our proposals with modification at § 414.1340(a)(3) and (b)(3) to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years. Specifically, we are finalizing the following proposals with modification:

- At § 414.1340(a)(3), to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs will need to submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer, for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years; and
- At § 414.1340(b)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the CY 2021, CY 2022, and CY 2023 performance periods to which the measure applies for 2023, 2024, and 2025 MIPS payment years.

(d) Groups and Virtual Groups Reporting via the CMS Web Interface

The CMS Web Interface is a collection type through which a group and virtual group with 25 or more eligible

clinicians may report data on a set of pre-determined quality measures. For the CY 2021 performance period, the total number of CMS Web Interface measures required to complete reporting on is 10 CMS Web Interface measures (83 FR 59756). In the CY 2021 PFS final rule, the CMS Web Interface was removed as an available collection and submission type under MIPS starting with the CY 2022 performance period (85 FR 84870). In addition, starting with the CY 2022 performance period, we revised the terms collection type and submission type to no longer include the CMS Web Interface measures as an available option. It was our belief that the removal of the CMS Web Interface as a collection and submission type would reduce the potential burden experienced by groups and virtual groups during the COVID-19 PHE. Based on the public comments we received on this proposal in the CY 2021 PFS proposed rule, we believed that the 1-year delay to remove the CMS Web Interface as a collection and submission type would provide stakeholders utilizing the CMS Web Interface sufficient time to prepare and transition to an alternative collection and/or submission type starting with the CY 2022 performance period.

We noted in the CY 2022 PFS proposed rule that, following the close of the data submission period for the CY 2020 performance period (March 31, 2021), stakeholders utilizing the CMS Web Interface had contacted CMS to convey their concerns that technological challenges and resource limitations would prevent them from transitioning to an alternative collection and/or submission type by the CY 2022 performance period (86 FR 39391). Also, they emphasized that some practices continued to endure a negative fiscal impact resulting from the COVID-19 pandemic and need additional time to prepare for a transition to an alternative collection and/or submission type. Such CMS Web Interface users indicated that if CMS extended the availability of the CMS Web Interface for an additional year (the CY 2022 performance period), they would have sufficient time to address the technological challenges such as the implementation of processes to aggregate data within one EHR system or across multiple EHR systems to align with the reporting requirements of another collection type (that is, MIPS CQMs or eCQMs), build and integrate new health IT infrastructures and systems, implement workflows, and train staff on new health IT systems.

In the CY 2022 PFS proposed rule, we recognized that an adequate and sufficient timeframe is a critical factor

in the success of a group or virtual group transitioning to an alternative collection and/or submission type, particularly with such a transition occurring amidst the COVID-19 pandemic (86 FR 39391). We noted that, as CMS Web Interface users had begun to transition to a different collection and/or submission type, the timeframe identified by most CMS Web Interface users (starting with the CY 2022 performance period) in response to the proposal in the CY 2021 PFS proposed rule did not provide adequate time for CMS Web Interface users to fully transition to an alternative collection and/or submission type. We noted that we considered the concerns expressed by CMS Web Interface users such as the technological challenges that they needed to overcome, their inability to update systems and workflows in time for the CY 2022 performance period, and the cost they bear to mitigate and respond to the COVID-19 PHE.

Due to such concerns, we noted our belief that it is appropriate to reduce the burden of groups and virtual groups at this time by extending the availability of the CMS Web Interface as a collection and submission type for the CY 2022 performance period. We recognized that, while groups and virtual groups are on a continuum regarding their technological readiness to transition to a different collection type, we believed that the availability of the CMS Web Interface for the CY 2022 performance period would reduce burden by providing additional time, and would enable more groups and virtual groups to successfully transition to another collection type by the start of the CY 2023 performance period. Moreover, we wanted to ensure that groups utilizing the CMS Web Interface were prepared to participate in MIPS as it evolves from traditional MIPS to MVPs. We noted that such groups could begin voluntary participation in an MVP as MVPs become available starting with the CY 2023 performance period.

Thus, we proposed at § 414.1325(c)(1) to remove the CMS Web Interface measures as a collection type/submission type starting with the CY 2023 performance period. Additionally, we proposed at § 414.1305 to modify the definition of the terms collection type and submission type to remove the CMS Web Interface measures as an available option starting with the CY 2022 performance period/2024 MIPS payment year. We proposed to modify the definition of “collection type” to mean a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic

clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years, CMS Web Interface measures; the CAHPS for MIPS Survey; and administrative claims measures. We proposed to modify the definition of “submission type” to mean the mechanism by which the submitter type submits data to CMS, including, but not limited to: Direct; log in and upload; log in and attest; Medicare Part B claims; and for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years, the CMS Web Interface.

For the CY 2022 performance period, the total number of CMS Web Interface measures required to complete reporting on will be 10 CMS Web Interface measures (83 FR 59713 through 79715 and 59756). In Table Group B of Appendix 1 of the CY 2022 PFS proposed rule, we proposed modifications to the CMS Web Interface measures and in Table Group D of Appendix 1 of the CY 2022 PFS proposed rule, we proposed substantive changes to the CMS Web Interface measures. We believe that it is necessary for the CMS Web Interface measures to be updated to reflect applicable substantive changes for the CY 2022 performance period given that the CMS Web Interface measures have remained the same for 3 consecutive (CY 2019, CY 2020, and CY 2021) performance periods.

We solicited public comment on our proposals: to extend the availability of the CMS Web Interface as a submission and collection type for the CY 2022 performance period, which would sunset and remove the collection and submission type under MIPS starting with the CY 2023 performance period; and update the CMS Web Interface measures with substantive changes for the CY 2022 performance period as outlined in Table Group D of Appendix 1 of the CY 2022 PFS proposed rule. The following is a summary of the public comments received regarding the proposal to extend availability of the CMS Web Interface as a collection and submission type for the CY 2022 performance period. For a summary of the comments received pertaining to the proposed substantive changes to the CMS Web Interface measures for the CY 2022 performance period, we refer readers to Table Group D of Appendix 1 of this final rule.

Comment: Most commenters supported the proposal to extend the CMS Web Interface for an additional

year as a collection and submission type and thereby, to allow its use for the CY 2022 performance period. The commenters indicated that the additional year would provide them with the needed time to transition to a different collection and/or submission type.

Response: We appreciate the support from commenters.

Comment: Some commenters supported the eventual sunset of the CMS Web Interface as a collection and submission type, but recommended that CMS extend the availability of the CMS Web Interface by 2 additional years, not one. The commenters indicated that such an extension would provide groups and virtual groups with more time to transition to alternative collection and/or submission types.

A few commenters expressed concern that the sunset of the CMS Web Interface, starting with the CY 2023 performance period, would increase undue burden on groups and virtual groups as it would require them to invest in resources and staffing to prepare their EHR systems to collect and report quality data using a different collection and/or submission type such as eCQMs or MIPS CQMs amidst the COVID-19 pandemic and PHE. The commenters indicated that as groups and virtual groups navigate the COVID-19 pandemic, they are enduring resource and staffing (clinical and non-clinical staff) shortages, which exacerbates the difficulties of preparing to transition to using an alternative collection and/or submission type.

Response: In considering the concerns expressed by CMS Web Interface users such as the technological and staffing challenges that they would need to overcome and the fiscal implications they endure from mitigating and responding to the COVID-19 PHE, we believe that the extended availability of the CMS Web Interface as a collection and submission type for one additional year reduces burden and provides sufficient time for the transition to different collection and/or submission types for the CY 2023 performance period. In assessing a timeframe to transition to a new collection, based on an assumption that a group or virtual group is not prepared to collect and report data using EHR technology, we believe that it would be approximately 18 months for a group or virtual group to prepare and implement EHR technology to report data, which would enable a group or virtual group to use a collection/submission type for reporting on eCQMs or MIPS CQMs. With the extended availability of the CMS Web Interface, groups and virtual

groups would have more than 18 months to prepare and transition to using another collection and/or submission type.

Comment: One commenter did not support the sunset the CMS Web Interface as a collection and submission type. The commenter expressed concerns that the transition to utilizing a different collection and/or submission type would require the reporting of all-payer data, in which data would be pulled from an entire clinical patient population, including safety net clinics serving patients with high social determinants of health. Also, the commenter indicated that assessment of performance based on all-payer data may unfairly lower quality scores for some clinicians.

Response: We recognize that the user experience of meeting reporting requirements for the CMS Web Interface differs from the user experience of meeting reporting requirements using an alternative collection type such as eCQMs and/or MIPS CQMs. We believe that the assessment of performance based on all-payer data (compared to reporting Medicare patient data only under the CMS Web Interface) and data completeness criteria (compared to reporting on a sample of Medicare patients for each CMS Web Interface measure) requirements accurately assess the performance of a group or virtual group and avoid selection bias. We have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients. The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure. We do not believe that the assessment of performance should exclude any segment of a patient population based on social determinants of health, but assess performance based on an accurate reflection of a patient population. In order to further account for the dynamics pertaining to social determinants of health, we are seeking to include health equity. As we implement and enhance the inventory of quality measures under MIPS, health equity is an element we are encouraging for inclusion in measure development and would be an item we assess as part of the submission process for the annual Call for Quality Measures.

Based on the information available to us, we do not believe that the assessment of all-payer data, including patients with varying levels of social determinants of health, will negatively skew performance. With measure being risk adjusted and the way in which

benchmarks are developed, we believe that social determinants of health will not inadvertently skew performance. For each collection type, specific benchmarks are established using historical data when possible, which allows us to account for the differing means of implementation of a measure for each collection type. Historical benchmarks for QCDR measures, MIPS CQMs, eCQMs, and Medicare Part B claims measures are based on historical performance data. As a result, the performance of each MIPS eligible clinician, group, or virtual group will be assessed relative to their actual performance compared to a benchmark that includes all-payer data, when specified in the measure and collection type.

We recognize that some MIPS eligible clinicians, groups, and virtual groups will experience more challenges than others in meeting the reporting requirements for the quality performance category under MIPS, particularly MIPS eligible clinicians, groups, and virtual groups considered to be small practices for purposes of MIPS (15 or fewer clinicians). We note that, in order to enhance the user experience for such small practices, we established the Medicare Part B Claims collection type. The assessment of performance for such measures is based on Medicare Part B claims data, not all-payer claims data. As we evolve the implementation of MIPS, we continue to assess means for reducing burden and improving user experience.

After consideration of the public comments, we are finalizing our proposal to sunset the CMS Web Interface measures as a collection type/submission type. We note that the availability of the CMS Interface as a collection type/submission type differs for groups and virtual groups participating in MIPS than for APM Entities participating in the Shared Savings Program and meeting the APM Performance Pathway reporting requirements. While the availability of the CMS Web Interface as a collection type/submission type for groups and virtual groups participating in MIPS is through the CY 2022 performance period, the availability of the CMS Web Interface for APM Entities (specifically, Shared Savings Program ACOs meeting the APM Performance Pathway reporting requirements only) is through the CY 2024 performance period. In section III.J.1.c. of this final rule, we discuss the final policies regarding the reporting requirements for Shared Savings Program ACOs reporting under the APM Performance Pathway, which include the extended availability of the

CMS Web Interface as a collection type/submission type to the CY 2024 performance period.

In accordance with our finalized policy, we are finalizing conforming amendments to §§ 414.1305 and 414.1325(c)(1). Specifically, we are finalizing § 414.1305 with modification to amend the definition of “collection type” to mean a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS Survey; and administrative claims measures. Paragraph (1) of the amended definition of “collection type” provides that for the CY 2021 through CY 2024 performance periods/2023 through 2026 MIPS payment years, collection types include CMS Web Interface measures for APM Entities reporting through the APM Performance Pathway in accordance with § 414.1367. Similarly, we are finalizing to amend the definition of “submission type” to mean the mechanism by which the submitter type submits data to CMS, including, but not limited to: Direct; log in and upload; log in and attest; Medicare Part B claims; and the CMS Web Interface (except as provided in paragraph (5)(i) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years). Paragraph (5)(i) of the amended definition of “submission type” provides that for the CY 2021 through CY 2024 performance periods/2023 through 2026 MIPS payment years, submission types include the CMS Web Interface for APM Entities reporting through the APM Performance Pathway in accordance with § 414.1367. We note that our conforming amendments refer to APM Entities rather than Shared Savings Program ACOs to maintain consistency with existing regulatory terminology. However, no substantive distinction is intended as no APM Entities other than Shared Savings Program ACOs report via the CMS Web Interface for purposes of the APM Performance Pathway. Finally, we are finalizing § 414.1325(c)(1) with modification to remove the reference to the sunset of the CMS Web Interface measures as a collection type/submission type because § 414.1325(c)(1) is expressly listing data

“submission types” for groups, and our sunset policies are now incorporated into the amended definitions of “collection type” and “submission type”. Accordingly, it is unnecessary to restate them in § 414.1325(c)(1).

(e) Selection of MIPS Quality Measures

Previously finalized MIPS quality measures can be found in the CY 2021 PFS final rule (85 FR 85045 through 85377); CY 2020 PFS final rule (84 FR 63205 through 63513); CY 2019 PFS final rule (83 FR 60097 through 60285); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). Proposed changes to the MIPS quality measure set, as described in Appendix 1 of the CY 2022 PFS proposed rule, include the following: the addition of new measures; updates to specialty sets; removal of existing measures, and substantive changes to existing measures. For the CY 2022 performance period, we proposed a measure set of 195 MIPS quality measures.

The new MIPS quality measures we proposed for inclusion in MIPS for the CY 2022 performance period and future years can be found in Table Group A of Appendix 1 of the CY 2022 PFS proposed rule. For the CY 2022 performance period, we proposed five new MIPS quality measures, which includes 2 administrative claims measures. Also, in Table Group AA of Appendix 1, we outlined 1 potential new MIPS quality measure, the COVID–19 Vaccination by Clinicians measure, which we intended to propose in a future rulemaking cycle. We refer readers to the CY 2022 PFS proposed rule for our request for information pertaining to the COVID–19 Vaccination by Clinicians measure specifications (86 FR 39393 through 39394; and for reference, available in section IV.A.3.d.(1)(f) of this final rule).

In addition to the establishment of new individual MIPS quality measures, we also develop and maintain specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice. Our proposals for modifications to existing specialty sets and new specialty sets were outlined in Table Group B of Appendix 1 of the CY 2022 PFS proposed rule. We noted that specialty sets may include: new measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of

existing MIPS quality measures.

Specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 7, 2021, we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 6 of MIPS under the Quality Payment Program.²²⁶ These recommendations were based on the MIPS quality measures finalized in the CY 2020 PFS final rule and the 2020 Measures Under Consideration List; they recommend to add or remove current MIPS quality measures from existing specialty sets, or to create new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with were proposed in the proposed rule.

In addition to establishing new individual MIPS quality measures and modifying existing specialty sets and new specialty sets as outlined in Tables Group A and Group B of Appendix 1 of the CY 2022 PFS proposed rule, we refer readers to Table Group C of Appendix 1 of the CY 2022 PFS proposed rule for a list of quality measures and rationales for removal. For the CY 2022 performance period, we proposed to remove 19 MIPS quality measures: 1 MIPS quality measure that is duplicative to another current MIPS quality measure; 9 MIPS quality measures that do not align with the Meaningful Measure Initiative; 5 MIPS quality measures that are no longer stewarded or maintained; and 4 MIPS quality measures that are under the topped out lifecycle. We have continuously communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. We noted our belief that our proposal to remove the quality measures outlined in Table Group C of the CY 2022 PFS proposed rule would lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to removing measures should occur through an iterative process that includes an annual review of the quality measures to determine whether they meet our removal criteria.

Lastly, MIPS quality measures with proposed substantive changes can be found in Table Group D of Appendix 1 of the CY 2022 PFS proposed rule. We

proposed substantive changes to 84 MIPS quality measures. On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive. Section 1848(q)(2)(D)(i)(II)(cc) of the Act requires all substantive measure changes to be proposed and identified through notice-and-comment rulemaking. In the CY 2017 Quality Payment Program final rule (81 FR 77137), we determined that substantive changes to measures (that is, measure specifications, measure title, and domain modifications) will be identified during the rulemaking process while maintenance changes that do not substantively change the intent of the measure (that is, updated diagnosis and procedure codes, definitions, and changes to patient population exclusions) will not be included in the rulemaking process.

We did not propose any changes to our current approach of identifying substantive measure changes during the rulemaking process. However, in order to more precisely distinguish between substantive measure changes and non-substantive measure changes, we proposed to consider the following criteria for determining whether a measure change is substantive starting with CY 2022 performance period:

- Whether the change causes the measure to be more stringent;
- Whether the change modifies the collection and/or submission types applicable to the measure;
- Whether the change impacts the clinical action and/or outcome of the measure;
- Whether the change increases the burden of the measure;
- Whether the change modifies the premise and/or objective of the measure;
- Whether the change modifies the scope of the measure (such as patient population eligible for the measure or measurement period); and
- Other relevant criteria as may be identified by CMS on a case-by-case basis.

We noted that any substantive change made to a measure would be proposed and identified through notice-and-comment rulemaking. For a substantive change to a measure, we only intend to propose and identify the substantive change as applicable to the appropriate elements (that is, only include substantive changes if it is applicable to the measure specifications, collection type(s), measure description, measure title, etc.) of the measure through notice-and-comment rulemaking. For example, if there is a substantive change to a

²²⁶ CMS, Quality Payment Program listserv, “CMS is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2022 Program Year of MIPS” (January 7, 2021).

measure in the measure specifications that changes the premise/overarching objective (that is, a screening measure that is changed to include treatment and follow-up) and/or clinical action of the measure, such substantive change would be proposed and identified through notice-and-comment rulemaking. We do not believe that it is necessary to propose or identify through notice-and-comment rulemaking changes to a measure that do not meet any of the above substantive change criteria for measures (for example, a modification to the title or domain that do not change or impact any element of the measure). We generally consider such changes to be non-substantive and would be published in subregulatory guidance. We noted our belief that it is important to provide a clear delineation of substantive changes to be included in a rulemaking process versus our previous approach, which generally included any changes made to measure specifications, measure titles, and domain modifications (81 FR 77137). We found that many changes made to measures based on our previous approach were not substantive in nature and should not be classified as substantive changes. Thus, we believe that establishing the substantive change criteria for measures provides further clarity as to what we consider a substantive change, particularly as it relates to how a change affects and/or impacts a measure. We noted that measures identified as having a substantive change would generally have an update to their applicable benchmark. For measures that meet the data completeness criteria, but do not have a benchmark or meet a case minimum (class 2 measures), we noted that they would be scored in accordance to our proposed scoring policy as outlined in the CY 2022 PFS proposed rule (86 FR 39433 through 39434).

In addition, we intended to align the utilization of terminology across CMS programs when appropriate and applicable for consistency purposes. Since the implementation of MIPS, we have referenced the term patient reported outcome as a type of measure, which is similar, but not exact to a measure type categorization reference in the CMS Blueprint. In order to align the categorization reference of such measure type under MIPS with the CMS Blueprint terminology, we are modifying how the term is referenced as a measure type under MIPS and will reference such measure type as patient-reported outcome-based performance measure (PRO-PM) starting with the CY 2022 performance period. We believe

that such modification does not have any substantive implications, but is merely a minor technical change of semantics that enables the utilization of consistent terminology across CMS programs when referencing such measure type.

We refer readers to Table Groups A through D of Appendix 1 of this final rule for a summary of public comments received regarding the proposed changes to the MIPS quality measure set for the CY 2022 performance period and our final decisions. For the CY 2022 performance period, we are finalizing with modification a measure set of 200 MIPS quality measures, which includes the following:

- Implementation of 4 new MIPS quality measures (includes one administrative claims measure);
- Removal of 13 MIPS quality measures: 1 MIPS quality measure that is duplicative to another current MIPS quality measure; 4 MIPS quality measures that do not align with the Meaningful Measure Initiative; 5 MIPS quality measures that are no longer stewarded or maintained; and 3 MIPS quality measures that are under the topped out lifecycle; and
- Substantive changes to 87 MIPS quality measures.

We solicited public comment on our proposal to establish measure substantive change criteria that would be utilized by CMS to identify such measures. The following is a summary of the public comment received.

Comment: One commenter supported the intent and criteria for determining whether a substantive change has been made to a quality measure and encouraged CMS to consider the definition of a substantive change to include any modification to a measure that impacts performance scores that may likely be due to the changes in the measure construct or coding and not clinician performance.

Response: We appreciate the support from the commenter. However, when we assess whether or not a change to a measure is substantive, the factors we consider assess how the measure is changed. We recognize that a substantive change may affect performance, but we do not believe that an impact to performance scores necessitates for a change to a measure to be classified as substantive. We do not believe that it is appropriate for the determination of whether or not a measure change is substantive to be based on whether performance scores would increase or decrease. Rather, we believe that the determination of whether a measure change is substantive should pertain to elements

of the measure and not to the spectrum of performance on the measure. If a change to a measure is substantive such as causing the measure to be more stringent, we believe that such dynamic reflects a change to an element in the measure. If the performance scores increase or decrease due to changes in a measure, we believe that performance scores reflect how measure requirements are met. As we assess whether or not a change to a measure is substantive, the premise of our assessment and analysis stems from how a measure is changed such as the construct of a measure, coding updates, and if the measure is more stringent or increases burden; the premise of our assessment and analysis does not stem from whether or not the measure substantive change will impact performance because we believe that it is inherent for a measure substantive change to have a potential effect on performance. We assess performance based on whether or not measure requirements for a clinical quality action is met.

After consideration of the public comment, we are finalizing our proposal to establish measure substantive change criteria that will be utilized by CMS to identify such measures. CMS will consider the following criteria for determining whether a measure change is substantive starting with CY 2022 performance period:

- Whether the change causes the measure to be more stringent;
- Whether the change modifies the collection and/or submission types applicable to the measure;
- Whether the change impacts the clinical action and/or outcome of the measure;
- Whether the change increases the burden of the measure;
- Whether the change modifies the premise and/or objective of the measure;
- Whether the change modifies the scope of the measure (such as patient population eligible for the measure or measurement period); and
- Other relevant criteria as may be identified by CMS on a case-by-case basis.

(f) Request for Information Regarding the COVID-19 Vaccination by Clinicians Measure

As of July 7, 2021, the Centers for Disease Control and Prevention (CDC) reported that there are 33,582,352 cases of coronavirus disease 2019 (COVID-19) and 603,656 deaths²²⁷ caused by COVID-19 at the time of publication of

²²⁷ https://covid.cdc.gov/covid-data-tracker/#cases_totalcases.

the CY 2022 PFS proposed rule and subject to change. In 2020, COVID-19 was the third leading cause of death in the United States, exceeded only by cancer and heart disease.²²⁸ Widespread vaccination to prevent COVID-19 will be critically important to stemming the morbidity and mortality caused by this disease. Three vaccines have received the FDA emergency use authorization (EUA) for the prevention of COVID-19 (Pfizer-BioNTech, Moderna, and Janssen) as of July 7, 2021 (86 FR 39393). As noted in the CY 2022 PFS proposed rule, the EUA allows the Pfizer-BioNTech, Moderna, and Janssen COVID-19 vaccines to be distributed in the United States.²²⁹ As of July 7, 2021, 331,651,464 vaccine doses have been administered (86 FR 39393).²³⁰ However, in this final rule, we note that on August 23, 2021, the FDA approved the first COVID-19 vaccine. The vaccine has been known as the Pfizer-BioNTech COVID-19 Vaccine, and will now be marketed as Comirnaty, for the prevention of COVID-19 disease in individuals 16 years of age and older.²³¹

To address this urgent PHE, CMS began the development of the COVID-19 Vaccination by Clinicians measure for MIPS, which would assess the percentage of patients aged 18 years and older seen for a visit during the measurement period who have ever completed or reported having ever completed a COVID-19 vaccination series. The measure would be reported by MIPS eligible clinicians as a MIPS CQM to determine the percentage of patients seen for a visit during the measurement period who have ever completed or reported having ever completed a COVID-19 vaccination series, either from the submitting MIPS eligible clinician or another MIPS eligible clinician. The measure as specified at the time of publication of the CY 2022 PFS proposed rule (see Table Group AA of Appendix 1 of the CY 2022 PFS proposed rule) would allow clinicians to determine a patient's vaccination status and deliver a vaccine dose, if possible and appropriate. The measure is intended to capture whether or not clinicians take an appropriate step to ensure that their patients are

vaccinated. Patients receiving hospice care at any time during the measurement period would be excluded from the patient population of measure. The measure would allow for an exception if the COVID-19 vaccination series was not administered, as documented by a MIPS eligible clinician, due to patient contraindication, or vaccine availability.

Between November of 2020 and January of 2021, we solicited feedback on the measure from measure-specific multi-stakeholder expert workgroups, specifically the Measure Application Partnership (MAP) coordinated through the National Quality Forum.²³² While the MAP agreed that the COVID-19 Vaccination by Clinicians measure could be an important tool to: Support vaccine uptake by collecting valuable information from the field, provide feedback to clinicians, and help identify where to conduct targeted education and outreach to limit the spread of infections, the MAP expressed concerns regarding the following elements of the measure: The patient population that would be assessed to measure performance (the inclusion of assessing patients who received 1 dose of a COVID-19 vaccine versus only assessing patients who received a complete COVID-19 vaccination series), and lack of available evidence and clinical guidance for vaccine administration (the feasibility of implementing the measure given the limited vaccine supply and availability, and the potential inconsistencies and discrepancies derived from the novelty of data collection and reporting for COVID vaccinations). We seek to mitigate such issues by obtaining further information and feedback from additional stakeholders. We intend to utilize the obtained information and feedback to inform measure specification improvements that would be implemented for a future performance period.

We solicited public comment on the draft COVID-19 Vaccination by Clinicians measure specifications, which is available on the Quality Payment Program website in the Resource Library located at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1471/Draft%20COVID-19%20Vaccine%20Specs.pdf>.

Specifically, we solicited feedback on the following questions. Should the measure assess whether or not patients completed a COVID-19 vaccination series to capture provision of effective clinical care and why? Given that there are differences in the age ranges for

patients eligible to receive the various COVID-19 vaccinations (Moderna and Janssen COVID-19 vaccines are authorized for patients ages 18 years and older; Pfizer-BioNTech COVID-19 vaccine is authorized for patients ages 12 and older; and future COVID-19 vaccines may be approved for other age ranges that are implemented after the publication of the CY 2022 PFS proposed rule), is 18 years and older an appropriate initial age threshold for this measure? Given the current COVID-19 PHE and the intent of the measure, should this measure be mandatory for reporting in a future year? If this measure would be mandated as a required measure for reporting purposes under MIPS, what issues or concerns would need to be considered and/or mitigated regarding the implementation of the measure in a future year? What are the potential unintended consequences associated with the potential future implementation of the measure as specified in Table Group AA of Appendix 1 of the CY 2022 PFS proposed rule and applicable measure specifications? What are the feasibility challenges and barriers to implementing the measure? What are the potential options and/or recommendations that we should consider to address and/or mitigate the feasibility challenges and barriers to be experienced during the CY 2022 performance period/2024 MIPS payment year that could be improved upon for the CY 2023 performance period? If this measure would be mandated, how would the collection of the measure data be useful after the CY 2023 performance period/2025 MIPS payment year?

We thank commenters for the feedback that we received. We may consider such information to inform future rulemaking.

(g) Quality Data Submission Criteria (i) CAHPS for MIPS Background

As part of the CY 2021 PFS final rule (85 FR 84718), we finalized a policy requiring Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs) to report quality data via the Alternative Payment Model (APM) Performance Pathway (APP). Beginning with the CY 2021 performance period/2023 MIPS payment year, Shared Savings Program ACOs are required to field the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS survey as part of the APP. We had previously established in the CY 2019 PFS final rule that MIPS quality benchmarks will be based on collection type, from all available sources,

²²⁸ <https://www.scientificamerican.com/article/covid-19-is-now-the-third-leading-cause-of-death-in-the-u-s1/>.

²²⁹ <https://www.fda.gov/emergency-preparedness-and-response/coronavirus-disease-2019-covid-19/pfizer-biontech-covid-19-vaccine>.

²³⁰ <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/index.html>.

²³¹ FDA, News Release, "FDA Approves First COVID-19 Vaccine" (August 23, 2021) located at <https://www.fda.gov/news-events/press-announcements/fda-approves-first-covid-19-vaccine>.

²³² <http://www.qualityforum.org/map/>.

including MIPS eligible clinicians and APM Entities, to the extent feasible, during the applicable baseline or performance period (83 FR 59842). Given that Shared Savings Program ACOs will now be required to field the CAHPS for MIPS survey as part of the APP, we note that beginning with the CY 2022 performance period/2024 MIPS payment year CAHPS for MIPS survey, the CAHPS for MIPS benchmarks will be calculated based on summary survey measure (SSM) scores from MIPS groups and APM entities (including Shared Savings Program ACOs) that fielded the CAHPS for MIPS Survey in the applicable baseline or performance period. Furthermore, the CAHPS for MIPS SSM scores will be adjusted for patient case-mix using a single case-mix adjustment model that incorporates data from both MIPS groups and APM entities (including Shared Savings Program ACOs) that field the CAHPS for MIPS Survey.

Beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, to further support the alignment of CAHPS for MIPS sampling and scoring procedures between Shared Savings Program ACOs and MIPS groups, we proposed in the CY 2022 PFS proposed rule to adopt certain policies that had been part of the CAHPS for ACOs survey administration process, but had not previously been a part of CAHPS for MIPS. These policies fell into 3 broad categories: Sampling, case mix adjustment, and scoring. Policies related to certified survey vendors rendering the CAHPS for MIPS survey for subgroups were discussed in the proposed rule in section IV.A.3.h. (86 FR 39462 through 39463). We solicited comments on the following proposals related to CAHPS for MIPS.

(ii) CAHPS for MIPS Sampling Specifications

The CAHPS for MIPS Survey is administered to a sample of eligible patients for all Shared Savings Program ACOs and for those MIPS groups that elect the measure. Prior to drawing the sample, patients are excluded from the pool of potential survey recipients (called the sampling frame) for a number of reasons, including if they are known to have died or are known to be institutionalized. Currently, patients are considered institutionalized if 100 percent of their primary care charges are associated with an institutionalized setting during the sampling period. Starting in performance year 2018 under the Shared Savings Program, the CAHPS for ACOs survey additionally flagged patients as institutionalized if their *last*

primary care visit during the sampling period was associated with an institutional setting. This change (called the “last primary care visit rule”) was made to better identify and exclude from the sample, patients likely to be institutionalized at the time the survey is fielded, and by extension, to improve response rates on the survey. This was of particular importance for a few Shared Savings Program ACOs for which large portions of their assigned beneficiaries are in nursing homes. Analysis of the CY 2020 performance period/2022 MIPS payment year CAHPS for MIPS sample found that among the 100 MIPS groups that fielded the survey, less than 1 percent of the survey sample would be lost, on average, due to the application of this additional criterion to identify institutionalized patients. Of the groups fielding the survey in the CY 2020 performance period/2022 MIPS payment year, only 1 would have been excluded from participating in the survey as a result of falling below the minimum sampling threshold due to the expanded definition of institutionalization. Given these findings, which suggest a minimal impact on MIPS group sample sizes and eligibility to field the survey, we proposed beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey to add the “last primary care visit rule” as an additional exclusion to sampling for the CAHPS for MIPS survey. We explained that we expected this change would better identify and exclude from the sample those patients likely to be institutionalized at the time the survey is fielded, and by extension, would improve response rates on the survey.

As we explained in the CY 2022 PFS proposed rule, other CMS programs use different CAHPS surveys to gather information on patient experience in a variety of health care settings. The In-Center Hemodialysis (ICH) CAHPS survey is fielded twice per year to patients receiving dialysis treatment at an ICH facility. Previously, patients sampled for the ICH CAHPS survey during the spring implementation were removed from the CAHPS for ACOs sampling frame in an effort to improve response rates to the ICH CAHPS Survey and to avoid burdening patients with multiple surveys. Analyses of the CY 2019 and 2020 performance periods/2021 and 2022 MIPS payment years CAHPS for MIPS sampling frames suggest that implementing ICH CAHPS deduplication in CAHPS for MIPS would have only minor impacts on most MIPS groups. Of the groups fielding the

survey in the CY 2020 performance period/2022 MIPS payment year, only 1 would have been excluded from participating in the survey due to falling below the minimum sampling threshold following ICH CAHPS deduplication (the same group that would have been excluded due to the “last primary care visit rule”, above). For the CY 2019 performance period/2021 MIPS payment year, no participating groups would have been excluded. Therefore, we proposed that, beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, we would remove patients who were sampled for the Spring ICH CAHPS survey from the sampling frames for CAHPS for MIPS. We stated that we expected this change would have only a minor impact on the CAHPS for MIPS sampling frame, but would increase response rates to the ICH CAHPS Survey and would avoid burdening patients with multiple surveys.

We received public comments on the CAHPS for MIPS sampling specifications. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed their support for our proposed updates to the CAHPS for MIPS sampling specifications.

Response: We thank the commenter for their support.

After consideration of the public comments, we are finalizing the change to the CAHPS for MIPS sampling specifications as proposed, and beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, we will remove patients who were sampled for the Spring ICH CAHPS survey from the sampling frames for CAHPS for MIPS.

(iii) CAHPS for MIPS Case-Mix Adjustment Model

Under CAHPS for MIPS, we adjust summary survey measure scores for case-mix to promote meaningful comparison of the performance of MIPS groups despite differences in their patient populations (81 FR 77120). The case-mix adjustment model for CAHPS for MIPS includes the following case-mix adjusters: Age; education; self-reported general health status; self-reported mental health status; proxy response; Medicaid dual eligibility; and eligibility for Medicare’s low-income subsidy. The CAHPS for ACOs Survey included an additional adjuster, Asian language survey, following prior literature that recommended adjustment for Asian language surveys to account

for cultural differences that affect reporting. The CAHPS for MIPS case-mix adjustment model has historically not included this adjustor because no Asian language surveys have been administered. Because Shared Savings Program ACOs are fielding the CAHPS for MIPS survey as of the CY 2021 performance period/2023 MIPS payment year, we proposed beginning with the CY 2022 performance period/2024 MIPS payment year CAHPS for MIPS survey to add use of an Asian language survey as a case-mix adjustor to the CAHPS for MIPS case-mix adjustment model. As we explained in the CY 2022 PFS proposed rule (86 FR 39395), use of an Asian language survey has been shown to be significantly associated with specific response patterns to a number of survey items that contribute to summary survey measures. In particular, Asian language survey respondents are generally less likely to use responses at the extremes of the scales, which tends to result in lower overall scores compared to patients who respond to English-language surveys. Therefore, it is important to retain use of Asian language survey as a case-mix adjustor for Shared Savings Program ACOs, and also appropriate to include it in the case-mix adjustment model for MIPS groups should Asian language surveys be completed for these groups in the future. Analysis of CY 2019 performance period/2021 MIPS payment year CAHPS for MIPS data found that adding the Asian language survey case-mix adjustor and pooling data from MIPS groups and Shared Savings Program ACOs for the purposes of case-mix adjustment had only a minimal impact on mean scores for MIPS groups, with scores increasing slightly as a result.

We received public comments on the CAHPS for MIPS case-mix adjustment model. The following is a summary of the comments we received and our response.

Comment: A few commenters supported the proposal to include the Asian language survey adjustor in the CAHPS for MIPS case-mix adjustment model.

Response: We thank the commenter for their support.

After consideration of the public comments, we are finalizing our proposal to add use of an Asian language survey as a case-mix adjustor to the CAHPS for MIPS case-mix adjustment model beginning with the CY 2022 performance period/2024 MIPS payment year CAHPS for MIPS survey.

(iv) Scoring CAHPS for MIPS Summary Survey Measures

The CAHPS for MIPS survey contains 10 summary survey measures (SSMs). Of these, 8 are benchmarked and scored while the other 2 (Health Status and Functional Status and Access to Specialists) are unscored and included for informational purposes only. The latter 2 measures had previously been scored but were changed to unscored starting with the CY 2018 performance period/2020 MIPS payment year (82 FR 53720). While Health Status and Functional Status was changed to unscored because it assesses underlying characteristics of a group's patient population and is less of a reflection of patient experience of care with the group, the Access to Specialists SSM was changed to unscored due to historically low reliability and response rates. At the same time this change was made (CY 2018 performance period/2020 MIPS payment year), a shorter, streamlined version of the CAHPS for MIPS Survey was implemented (82 FR 53632). Since the implementation of the shortened survey, which included a reduction in the number of survey items that make up the Access to Specialists SSM, response rates and reliability for this SSM have improved dramatically, with over 80 percent of MIPS groups achieving acceptable reliability on this SSM in the CY 2018, 2019, and 2020 performance periods/2020, 2021, and 2022 MIPS payment years, compared to less than 20 percent in the CY 2017 performance period/2019 MIPS payment year. Therefore, because CMS no longer had analytic concerns about scoring the measure, we proposed in the CY 2022 PFS proposed rule that beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, we would once again benchmark and score the Access to Specialists measure, which would mean there would be 9 SSMs included in the CAHPS for MIPS scoring process, with 1 SSM remaining unscored (86 FR 39395). We solicited comments on this proposed change to the CAHPS for MIPS scoring process.

We received public comments on the scoring of the CAHPS for MIPS summary survey measures. The following is a summary of the comments we received and our response.

Comment: A few commenters supported the proposed change to the CAHPS for MIPS scoring process to include the Access to Specialists Summary Survey Measure (SSM).

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing our proposal that beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, we will once again benchmark and score the Access to Specialists measure, which means there will be 9 SSMs included in the CAHPS for MIPS scoring process, with 1 SSM remaining unscored.

(2) Cost Performance Category

(a) Background

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, and CY 2021 PFS final rules (81 FR 77162 through 77177, 82 FR 53641 through 53648, 83 FR 59765 through 59776, 84 FR 62959 through 62979, and 85 FR 84877 through 84881, respectively) for a description of the statutory basis and existing policies pertaining to the cost performance category.

In the CY 2022 PFS proposed rule (86 FR 39395 through 39406), we proposed to add 5 new episode-based measures to the cost performance category beginning with the MIPS CY 2022 performance period/2024 MIPS payment year, and to update the operational list of care episode and patient condition groups and codes. Additionally, we proposed a new process for stakeholders to develop cost measures for MIPS. Finally, we proposed to establish criteria for determining whether a cost measure change is considered substantive starting with the MIPS CY 2022 performance period/2024 MIPS payment year. These proposals are discussed in more detail in the following sections.

(b) Addition of Episode-Based Measures

(i) Background

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. We would continue to evaluate cost measures that are included in MIPS on an ongoing basis and anticipate that measures could be added, modified, or removed through rulemaking as measure development continues. Any substantive changes to a measure would be proposed for adoption in future years through notice and comment rulemaking, following review by the Measure Applications Partnership (MAP). The MAP is a multi-stakeholder partnership that provides guidance to CMS on performance measures for use in Federal health programs—more information is available at <https://>

www.qualityforum.org/Setting_Priorities/Partnership/Measure_Applications_Partnership.aspx. The MAP provides an additional opportunity for an interdisciplinary group of stakeholders to provide feedback on whether they believe the measures under consideration are applicable to clinicians and complement program-specific statutory and regulatory requirements. Through its Measure Selection Criteria, the MAP focuses on selecting high-quality measures that address the National Quality Strategy's (NQS) three aims of better care, healthy people/communities, and affordable care, as well as fill critical measure gaps and increase alignment among programs.

We will take all comments and feedback from both the public comment period and the MAP review process into consideration as part of the ongoing measure evaluation process. Some modifications to measures used in the cost performance category might incorporate changes that would not substantively change the measure. Examples of such non-substantive changes may include updated telehealth service codes, diagnosis or procedure codes or risk adjusters. While we address such changes on a case-by-case basis, we generally believe these types of maintenance changes are distinct from substantive changes to measures that result in what are considered new or different measures. However, as described in section 7 of the Blueprint for the CMS Measures Management System Version 16.0 (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>), if substantive changes to these measures become necessary, we expect to follow the pre-rulemaking process for new measures, including resubmission to the Measures Under Consideration (MUC) list and consideration by the MAP.

In sections IV.A.3.d.(2)(b)(ii) through IV.A.3.d.(2)(b)(iii) of this final rule, we summarize the new measures that will be included in the cost performance category for the MIPS CY 2022 performance period and future performance periods. For the new chronic condition episode-based measures, we provide detail about the measure framework, which lets attributed clinicians or clinician groups know the cost of care that is clinically related to their management of a patient's chronic condition during an episode of care ("episode"). For more information regarding the measure development timeline for the new episode-based measures, we refer

readers to the overview in the CY 2022 PFS proposed rule (86 FR 39396 through 39397).

(ii) New Episode-Based Measures for CY 2022 and Future Performance Periods

In this section of this final rule, we discuss the 5 new episode-based measures, including 2 new chronic condition measures, which we proposed to add for the MIPS CY 2022 and future performance periods. These measures are listed in Table 52. The acute inpatient medical condition and procedural measures are based on the previously established framework for episode-based measures, which we described in detail in the CY 2019 PFS final rule (83 FR 59767 through 59773).

Chronic condition episode-based measures expand on the previously established framework for episode-based measures to address unique factors inherent to the continuous nature of chronic disease care management. In section IV.A.3.d.(2)(b)(iii) of this final rule, we provide detail about the proposed episode definition and attribution methodology for chronic condition episode-based measures. After chronic condition episodes are defined and attributed to a clinician group and, or individual clinician, we include items and services furnished during the episode that are clinically related to the care and management of a patient's chronic condition. Items and services may include treatment and diagnostic services, ancillary items (such as medical nutrition therapy and refining and maintenance of a portable pump for diabetes), services directly related to treatment, and those furnished as a consequence of care. The two chronic condition measures specified in this final rule are calculated using claims data from Medicare Parts A, B, and D. Part D costs are included to account for the full range of treatment options used to manage chronic conditions. As with Part A and B payment standardization, Part D costs are standardized to facilitate meaningful comparisons of resource use within the market-based Medicare Part D program by accounting for non-clinical variation in costs. For more detail, the Part D payment standardization methodology is available at <https://resdac.org/articles/cms-price-payment-standardization-overview>. The Medicare Parts A and B payment standardization methodology is also available at <https://resdac.org/articles/cms-price-payment-standardization-overview>.

Similar to other episode-based measures, chronic condition measures include features intended to ensure a

more accurate comparison of costs across clinicians. First, we stratify the patient population captured by the measure into smaller, clinically similar patient cohorts. For example, the Diabetes measure separates patients with type 1 and type 2 diabetes, and the risk adjustment model is assessed at the level of each stratification to ensure that only patients with similar case mixes are compared to each other. We note that the term "stratification" will be used to describe a portion of a group in relation to the cost performance category and that such term is synonymous with the term "episode sub-group" used in the cost measure specification documents and other documents related to the cost performance category. In general, unless otherwise indicated, the term "episode sub-group" used in the cost measure specification documents and other documents related to the cost performance category has a different meaning than the term "subgroup" that we define under § 414.1305 in this final rule. Second, we standardize episode costs to limit observed differences in costs to those that may result from health care delivery choices. Third, we exclude unique groups of patients from episodes where it may be unreasonable to compare the costs of these patients to the whole cohort. Last, the measures account for patient characteristics that can influence spending and are outside of a clinician's control using risk adjustment. For example, the risk adjustment model is run separately for patients with and without enrollment in a Part D drug plan to account for differences in costs that we might observe between patients enrolled in Part D and those who are not. In addition, the risk adjustment model for chronic condition episode-based measures specified in this rule account for a patient's status as a dual Medicare and Medicaid enrollee. This was based on testing demonstrating that dual status had a notable impact on performance for the two measures. For more information on the chronic condition episode-based measure framework, we refer readers to the Chronic Condition Cost Measure Framework located at <https://www.cms.gov/files/document/chronic-condition-cost-measure-framework-poster.pdf>.

The specifications for all 5 proposed episode-based measures are available at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>. The specifications documents for each measure consist of a methods document

that describes the steps for constructing the measure and a measure codes list file that contains the medical codes used in that methodology. First, the methods document provides details about components of episode-based measures: Identifying patients receiving care, defining an episode-based measure, attributing episodes to clinicians and clinician groups, assigning costs, defining exclusions, risk adjusting, and calculating measure score. For each measure component, the methods document provides detailed methodology describing each logic step involved in constructing the measure.

For the chronic condition episode-based measures, the specifications also include an appendix to the methods document which provides additional detail on particular components of the measure construction framework, including the sub-grouping methodology, episode construction and calculation, and attribution to individual clinicians. Second, the measure codes list contains the codes used in the measure specifications, including the episode triggers, attribution, sub-groups, assigned items and services, exclusions, and risk adjusters.

More information about the 5 proposed episode-based measures is available in the measure justification forms, the national summary data report, and the national summary data report addendum with risk adjustment regression results. These documents are available through the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>).

In the CY 2022 PFS proposed rule (86 FR 39395 through 39406), we solicited public comments on the 5 proposed episode-based measures, which are listed in Table 52.

TABLE 52: Episode-Based Measures Beginning with CY 2022 Performance Period/2024 MIPS Payment Year

Measure Name	Episode Type
Melanoma Resection	Procedural
Colon and Rectal Resection	Procedural
Sepsis	Acute inpatient medical condition
Asthma/Chronic Obstructive Pulmonary Disease (COPD)	Chronic condition
Diabetes	Chronic condition

We summarize and respond to the public comments on the proposed episode-based measures, which are listed in Table 52, after the discussion of the attribution for the new episode-based measures (that is, in section IV.A.3.d.(2)(b)(iii) of this final rule).

(iii) Attribution

In this section of this final rule, we discuss the attribution methodology for the episode-based measures. In the CY 2020 PFS final rule (84 FR 62962), we established at § 414.1350(b)(8) that beginning with the CY 2020 performance period/2022 MIPS payment year, each cost measure is attributed according to the measure specifications for the applicable performance period. For the proposed acute inpatient medical condition and procedural episode-based measures outlined in Table 52, we refer readers to the measure specifications for the attribution methodology, available at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>. For the proposed chronic condition measures, we use a new attribution framework for identifying and confirming a clinician-patient relationship, which we discuss below. For further detail regarding the specific attribution methodology for the proposed Asthma/COPD and Diabetes measures, we refer readers to the measure specifications for each

measure, available at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>.

For chronic condition episode-based measures, we would attribute episodes to the clinician group that renders the services that constitute a trigger event, which is identified by the occurrence of two claims billed in close proximity by the same clinician group. Both claims must have a diagnosis code indicating the chronic disease captured by the measure (for example, type 1 or type 2 diabetes for the Diabetes episode-based measure). In the CY 2022 PFS proposed rule (86 FR 39398), we stated that the first claim must have an E/M code for primary care services and the second claim must have either another E/M code for primary care services or a condition-related HCPCS/CPT code for procedure codes related to the treatment or management of the chronic condition. In this final rule, for the chronic condition episode-based measures (the Asthma/COPD measure and the Diabetes measure referenced in Table 52), we are replacing the term “primary care services” with the term “outpatient services”. We are describing these trigger E/M services as “outpatient” rather than “primary care” in order to more accurately characterize the nature of the specific E/M codes by referencing the setting rather than a nature of care. We believe that the

revised terminology will be more readily understandable. There are no changes to the codes themselves being used in the trigger methodology. We intend to use such revised terminology in the chronic condition episode-based measure specifications, and any other future measures that use the same set of E/M codes, as well as other documents related to the cost performance category starting with the CY 2022 performance period/2024 MIPS payment year. The trigger event opens a year-long attribution window from the date of the initial E/M outpatient service, during which the same clinician group could reasonably be considered responsible for managing the patient’s chronic disease. The initiation of the attribution window at the onset of the trigger event ensures that costs are attributed only after the start of the clinician-patient relationship. We could extend the initial attribution window and the clinician group’s responsibility by another year each time we see additional E/M codes for outpatient services or condition-related HCPCS/CPT codes for procedure codes related to the treatment or management of the chronic condition that indicate an ongoing clinician-patient relationship. Therefore, the resulting total attribution window could span multiple years and vary in length for different patients. Because the total attribution window could span multiple performance periods, we measure it

incrementally and periodically by dividing it into segments of episodes, which we assess in the performance period in which they conclude. Dividing the total attribution window into episodes allows us to assign costs during the time-period in which the clinician group is responsible for the patient's chronic condition care management.

After we identify the attributed clinician group as described in the previous paragraph, we would attribute the episode to individual clinician(s). For individual clinicians, we would attribute episodes to each MIPS eligible clinician within an attributed clinician group that renders at least 30 percent of qualifying services during the episode. Qualifying services include E/M codes for outpatient services or condition-related HCPCS/CPT codes with a relevant chronic condition diagnosis. We would employ two additional checks to confirm the qualifying clinician's role in the ongoing management of the patient's chronic condition. First, we would check to ensure that the qualifying clinician(s) have rendered at least one E/M code for outpatient services or condition-related HCPCS/CPT code with a relevant diagnosis within 1 year prior to or on the episode start date. This ensures that clinicians are not attributed an episode before they have their first encounter with the patient. Second, we would check whether the clinician(s) have written at least 2 condition-related prescriptions on different days to two different patients during the performance period plus a one-year lookback period. The use of these prescription billing patterns would ensure that we are capturing the clinicians actually involved in providing ongoing chronic care management, rather than clinicians who may have only refilled a patient's prescription once, as a courtesy. MIPS eligible clinicians within an attributed clinician group that render at least 30 percent of qualifying services and meet the two additional checks are considered for attribution. The individual clinician's performance is based on all of the episodes attributed to the individual clinician, whereas the clinician group's performance is based on all of the episodes attributed to the clinician group. If a single episode is attributed to multiple clinicians in a single clinician group, the episode is only counted once toward the clinician group's performance. Additional detail for this attribution methodology is available in the measures specifications for the Diabetes and Asthma/COPD

measures located on the MACRA Feedback Page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>.

To illustrate the attribution rules for chronic condition episode-based measures, we provide an example of a clinical scenario where 3 MIPS eligible clinicians (A, B, and C) are part of the same clinician group. A patient with type 2 diabetes presents to the clinician group to receive services related to their condition. Clinician A bills an initial E/M code for outpatient services related to the patient's diabetes (for example, an office/outpatient visit related to the patient's diabetes). During a follow-up appointment two weeks later, Clinician A bills a HCPCS/CPT code for tests related to the patient's diabetes. We consider the occurrence of these two services to constitute a trigger event indicating the start of a clinician-patient relationship. This trigger event opens a 1-year attribution window from the date of the initial E/M service and the clinician group that rendered the trigger event services would be attributed the Diabetes episode. If in this example, there were a total of 10 clinically related services captured during the episode, and Clinician A rendered 5 of those services, Clinician B rendered 2, and Clinician C rendered 3 of those services, then Clinicians A and C would be considered for attribution since they would have rendered at least 30 percent of qualifying services for the patient. Clinician B would not be considered for attribution. Before attributing the episode to Clinicians A and C, we check (i) whether the clinicians billed at least 1 E/M code for outpatient services or condition-related HCPCS/CPT code with a relevant diabetes diagnosis within 1 year prior to or on the episode start date and (ii) whether they wrote 2 diabetes-related prescriptions on different days for 2 different patients during the performance period plus a one-year lookback period. Assuming Clinician A met these two checks and Clinician C did not, then only Clinician A would be attributed this Diabetes episode. This episode would count towards the Diabetes measure's case minimum for Clinician A, but not for Clinicians B or C. At the group reporting level, the episode will be included in the calculation of the clinician group's measure score and would count towards the measure's case minimum for the clinician group.

The MAP considered these new episode-based measures in detail. For a full discussion on the MAP's evaluation of the measures, please see the description in the CY 2022 PFS

proposed rule (86 FR 39399 through 39401).

We received public comments on the 5 new episode-based measures proposed in the CY 2022 PFS proposed rule (86 FR 39395 through 39403), which are listed in Table 52. The following is a summary of the comments we received and our responses.

Comment: Many stakeholders supported our proposal to include the 5 new episode-based measures in the MIPS program starting with MIPS CY 2022 performance period/2024 MIPS payment year. One commenter expressed appreciation for the transparent and efficient measure development process that incorporated input from various stakeholders through several different committees. Another commenter supported the development of episode-based measures as these include only the costs within the reasonable influence of the clinician.

Response: We thank commenters for their support of the measures and the robust measure development process.

Comment: Several commenters stated that there are no episode-based measures applicable to their specialties and also expressed concern that the population-based measures are not well-suited to assess the care provided within their specialty. Commenters highlighted the following specialties as needing cost measures: Occupational therapists, rheumatologists, radiologists, emergency clinicians. Commenters also provided suggestions of potential measure concepts within each respective scope of care. These include breast cancer screening or incidental findings from imaging for diagnostic radiologists, and a measure for clinical screening, diagnostic testing, and stabilization in the emergency department. One commenter believes that additional cost measures are needed for retina specialists, and another commenter requested the development of a low back pain measure to support the Low Back Pain MVP. One commenter urged CMS to develop more episode-based cost measures as rapidly as possible to address gaps in measurement.

Response: We thank commenters for their input and will take these suggestions into consideration during future waves of measure development. One of the criteria that we consider in prioritizing measure development is to address measurement gaps. When identifying measurement gaps, we consider clinical areas where specialties are not captured by the current set of measures. We have started to work on addressing these gaps that the commenters have identified. We note

that while there is no MVP specific to low back pain proposed in the CY 2022 PFS proposed rule, there are measures under development that address the management of low back pain (including the care provided by therapists) and focus on emergency medicine care. We expect the measures to undergo field testing in early 2022 and encourage stakeholders to provide feedback on those measures during that period. Future waves of measure development will also consider measurement gaps and the needs of potential MVPs. We also take into account other factors in measure prioritization, such as the opportunities for improvement and the potential for impact by covering a large share of Medicare cost. Additionally, we disagree that the population-based measures are not well-suited to assess care. As broadly applicable cost measures, the total per capita cost and Medicare Spending Per Beneficiary Clinician measures encourage clinicians to coordinate with other clinicians while treating a patient to improve overall cost performance. We also note that stakeholders can engage in their own cost measure development to submit measures (please see more information on the cost measure development process by stakeholders in section IV.A.3.d.(2)(c) of this final rule. As part of this process, we would publish materials outlining measurement gaps. Stakeholders can find summary of feedback on specific cost measurement gaps in the Wave 4 Public Comment Summary Report (<https://www.cms.gov/files/document/wave-4-public-comment-summary.pdf>) available on the MACRA Feedback page, and in the July 2021 Physician Cost Measures and Patient Relationship Codes TEP Summary Report (<https://www.cms.gov/files/document/physician-cost-measures-and-patient-relationship-codes-pcmp-technical-expert-panel-summary-report.pdf>) available on the CMS' TEP Current Panels website.

Comment: One commenter stated that the current measure development process is structured in a way that requires clinical experts to follow a single framework that does not account for the clinical condition or patient population, so the commenter disagreed that physician cost, quality and value of care can be evaluated using this approach. One commenter appreciated that CMS is introducing MIPS Value Pathways to better align cost and quality measures.

Response: We disagree with the commenter that the framework used to develop episode-based measures does

not take into account the condition or patient population of interest. Episodes span a wide range of clinician-patient relationships, including acute inpatient conditions (for example, pneumonia hospitalization), chronic diseases (for example, diabetes management), and procedures (for example, hip replacement surgery), and the corresponding cost measure frameworks account for the differences in these clinician-patient relationships. Additionally, clinical subcommittees provide detailed input on measure specifications, which often include the components of the measure framework. Currently, there are 5 types of episode groups that serve as the basis for cost measures: (i) Procedural; (ii) acute inpatient medical condition; (iii) chronic conditions; (iv) therapy; and (v) emergency medicine. Please note that the therapy and emergency medicine frameworks are currently in development, and will undergo field testing in early 2022.

Additionally, to account for heterogeneity for patients with different cost profiles, we use various methods, such as episode subgroups (to compare episodes only with other episodes within that same episode subgroup), measure-specific risk adjustors (to predict expected episode cost based on patient or other characteristics that are out of the clinicians' reasonable influence and that may have an effect on episode cost), and episode-level exclusions (to remove episodes due to events or characteristics observed prior to or during the episode). Additionally, episode-based cost measures focus on resource use related to the treatment of a specific condition or procedure, by only including costs related to the condition under evaluation and attribute to multiple clinicians involved in this care, promoting collaborative care.

Finally, we agree with the commenter that to assess value, one needs to determine both quality and costs of care, and we appreciate the commenter acknowledging that CMS is introducing MIPS Value Pathways that would align episode-based measures with related quality measures. We agree with the importance of the MVPs as this alignment between episode-based measures and related quality measures will help further incentivize the transition from FFS to value-based care. As part of the new cost measure development process (please see section IV.A.3.d.(2)(c) of this final rule for more information), we encourage cost measures to be developed in a way that links and aligns cost and quality together to drive value, particularly in

consideration of MVP development, while maintaining CMS priorities and meeting the standards/criteria outlined for cost measure development. The episode-based cost measures provide a nuanced examination of resource use that can be used alongside quality metrics to identify opportunities to improve the value by capturing costs that are clinically related to the care being delivered within a given patient-clinician relationship of care delivered to patients.

Comment: Some commenters stated that the measures should include social risk factors in the risk adjustment model. A commenter suggested that CMS explore alternative risk adjustment methodologies that do not rely on the HCC scores, while another stated that they believed that the risk adjustment model has not been adequately developed by CMS for cost measures.

Response: Each measure's risk adjustment model employs a common starting point of the CMS-HCC model, but the measure-specific expert workgroups considered enhancements to the model through the addition of risk factors specifically adapted for each episode group. The measure development contractor provided empirical analyses stratifying patient (or episode) cohorts of interest to inform the workgroup members' considerations of how particular factors should be accounted for in each measure's risk adjustment model. Workgroup members also considered patient characteristics, factors outside of the influence of the attributed clinicians, or any other measure-specific factors that would help prevent unintended consequences. We will continue to consider incorporating additional data sources in risk adjustment and welcome feedback on potential alternatives.

We consider the inclusion of social risk factors in risk adjustment based on the testing results for each measure. The Asthma/COPD and Diabetes cost measures include a risk adjustor for dual eligibility. This is based on extensive testing during the measure development process where these two chronic condition measures showed a greater impact from social risk factors than other measures. The measure development contractor conducted analyses to assess the impact of the following social risk factors: Income, education, employment, race, sex, and dual-eligibility status. For the Sepsis, Melanoma Resection, and Colon and Rectal Resection measures, the inclusion of social risk factors had minimal impact on the measures. For the two chronic condition measures, dual eligibility had an impact on the

measures; the other social risk factors tested had minimal impact beyond dual eligibility. Based on these results, we believe that it is necessary and appropriate to adjust for dual eligibility for the Asthma/COPD and Diabetes cost measures. Discussion of these results can be found in the measure justification form for the 5 episode-based measure on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). We will continue to monitor the effect of social risk factors on the measures on an ongoing basis.

Comment: Two commenters stated that the attribution method has not been adequately developed by CMS for cost measures, but did not provide additional detail.

Response: We appreciate the concern, and note that the attribution methodology has been developed with extensive stakeholder input to ensure that it captures clinician-patient relationships for the specific type of care being assessed. For instance, the attribution methodology for the Diabetes and Asthma/COPD measures reflects input from a TEP on the overall methodology and from a specific workgroup for each of the measures to determine details such as the list of codes to identify the start of a care relationship for the condition of focus. We encourage stakeholders to review the measure specifications, testing materials, and meeting summaries if there are additional concerns about the development of the attribution methodology for the cost measures.

Comment: One commenter stated that the most appropriate level of attribution for the measures is at the group practice/clinical team level.

Response: Generally, clinicians participating in MIPS can choose whether to report at the individual clinician or clinician group level. Thus, we believe it is important to allow for cost assessment at both levels of reporting, so the cost measures contain both individual clinician and clinician group level attribution methodologies.

Comment: Several commenters agreed with the comments brought up by the MAP (that is, correlations with quality measures, NQF endorsement, impact of upstream/high quality care and downstream costs) for the Diabetes, Asthma/COPD, and Sepsis measures. One commenter indicated that those concerns from the MAP need to be carefully monitored. Another commenter urged CMS to make NQF endorsement mandatory prior to finalizing any measures in the MIPS

program. One commenter expressed concern about the cost measures used in the MIPS cost performance category in general, and asked CMS to not finalize the 5 new episode-based measures at this time. Finally, another commenter requested additional analyses for all cost measures in development that would look into the relationship between the cost and related quality measures. The commenter also stated that the cost measures need to be more actionable, and that CMS did not directly address one of the MAP's concerns for the Asthma/COPD and Diabetes measures on the examples of the connection between upstream medical interventions and downstream costs, as CMS did not provide any supporting data.

Response: We believe we have addressed the concerns raised by the MAP (as discussed in detail at 86 FR 39399 through 39401 of the proposed rule). The MAP's mitigation factors focused largely on testing, the results of which are publicly available in the testing updates document available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). These results directly address the concerns raised by the MAP regarding the relationship between cost and quality metrics, coding variation for the Sepsis measure, and clarifying that the role of cost measures is not to dictate clinical practice but to accurately reflect it. To address the MAP's mitigation point of NQF endorsement, we plan to submit all 5 episode-based measures to a future endorsement cycle; however, NQF endorsement is not required for cost measures to be implemented in the program. We believe that the extensive testing (including national field testing), expert clinician input, feedback from individuals with lived experiences of the conditions in question, the NQF's review through the MAP pre-rulemaking process that focuses on the use of the measure within a program, and numerous opportunities for public comment ensure that the newly developed measures are ready for implementation in MIPS. Given this robust development, testing, and review processes, we do not believe it appropriate to delay implementation for further NQF review.

We consider the importance of care that is assessed by the Diabetes, Asthma/COPD, and Sepsis episode-based measures, the potential for these measures to be impactful given the number of episodes, and the need for

more episode-based measures, and believe that these measures play an important role in expanding the MIPS cost measure inventory and in moving towards the statutory goal of covering 50 percent of Medicare Parts A and B spending. Finally, we thank the commenter for the suggestion to conduct more extensive analyses looking at the relationship between cost and quality measures, including examining the correlations for clinicians with low versus high cost or quality measure scores. Regarding actionability of the measures and providing supporting data to address the MAP's concern about the connection between upstream medical interventions and downstream costs, we would like to clarify that we gathered input from expert clinicians and available literature to outline the opportunities that clinician have to take action and improve their performance on the Asthma/COPD and Diabetes measures. For more information please see the Measure Justification Forms available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). This document cites evidence for the measures' focus based in clinical guidance and current literature.

Comment: A few commenters stated that episode-based cost measures are more appropriate to measure clinician performance on cost than the population-based measures, specifically the total per capita cost measure. Specifically, some commenters have concerns over the attribution methodology for the population-based measures (total per capita cost and Medicare Spending Per Beneficiary Clinician) and the lack of control clinicians have over these measures. One commenter believes that clinicians could be unfairly penalized for successfully improving the utilization of recommended preventive services if total per capita costs are measures in the same year as those services are provided.

Response: We continue to believe that the total per capita cost and Medicare Spending Per Beneficiary Clinician measures provide an important measurement of clinician cost performance (82 FR 53644) and that the measures intent to capture broad, overall care plays a significant role in MIPS to complement the more granular information captured by episode-based measures. By including both episode- and population-based measures in the cost performance category, we are able

to capture more aspects of care and ensure that there is continuity in clinician incentives throughout a patient's care trajectory. Both the total per capita cost and Medicare Spending Per Beneficiary Clinician measures have an important place in cost measurement given that the episode-based measures will only apply to a subset of clinicians at this time. As broadly applicable cost measures, the total per capita cost and Medicare Spending Per Beneficiary Clinician measures encourage clinicians to coordinate with other clinicians while treating a patient to improve overall cost performance. By holding multiple clinicians accountable under the total per capita cost measure, this promotes shared responsibility for a patient's care across primary care and specialties who tend to provide ongoing care. It also includes a specialty adjustment to account for the different scope of care provided by primary care clinicians and specialists. We disagree that the total per capita cost measure would unfairly penalize a clinician for improving the use of preventive services. The total per capita cost measure assesses clinicians' performance for one year following an attribution event, so these longer attribution windows allow the measure to capture the long-term benefits of ongoing primary care management that might not be fully realized within a short period. Using the example from the comment, preventive care services could increase costs when initially provided but could lower costs when measured over a sufficiently long time as downstream costs that usually result from lack of preventive care may be avoided. Additionally, to address stakeholder concerns about clinicians being held accountable for care that is outside their control, the Medicare Spending Per Beneficiary Clinician measure implemented a set of service exclusions. For example, the measure excludes the cost of all hospice services occurring at any time during the episode window. There are also a set of service exclusions specific to each Major Diagnostic Category (MDC) to remove the cost of some unrelated services. The measure also has a revised attribution methodology that involves separate attribution methods for medical and surgical episodes to identify the clinicians who are providing inpatient care. For medical episodes, the measure requires that the TIN bill at least 30 percent of inpatient E&Ms to focus on clinician groups that play a substantial role in inpatient care. For surgical episodes, the measure attribution is based on the clinician billing the

procedure code. This attribution methodology appropriately identifies the clinicians who are providing care and reflects the team-based nature of hospital care. Internal medicine clinicians have the largest share of episodes (46 percent), followed by hospitalists (19 percent).

Comment: One commenter urged CMS to recognize that the episode-based measures used in MIPS are valid only for a certain period of time, when they are developed, and that these measures do not account for the changes in treatments that happen over time.

Response: We disagree with the comment that cost measures are only valid when they are newly developed. All cost measures undergo a measure maintenance process (including annual updates and comprehensive re-evaluation) that ensures that measures continue to meet program goals and priorities. This process balances the need to ensure that cost measures continue to meet the measure intent with the priority of providing certainty to stakeholders of what a cost measure entails by avoiding making unnecessary changes, such as those that are not substantiated by evidence. During annual measure updates, we identify potential updates and assess the nature of these updates to determine the appropriate process for implementing substantive and non-substantive changes. These updates take into consideration any changes in payment policies or clinical practices and treatments based on environmental scans, literature searches, stakeholder feedback, and empirical testing. The comprehensive re-evaluation process occurs on a 3-year cycle that is in line with the NQF endorsement maintenance processes and aligns with the CMS Blueprint for measure development.

Comment: One commenter urged CMS to consider a triggering method under which chronic condition episodes would not be triggered by an inpatient stay, so that costs could be included even when an inpatient stay does not occur.

Response: We appreciate this comment on the newly developed chronic condition framework. To clarify, the chronic condition episode-based measure framework does not require an inpatient stay to identify the start of a clinician-patient relationship. Instead, since chronic condition are by definition ongoing, we require two services specific to the care of the condition to occur within a certain period of time (that is, 180 days). One must be a clinician visit, and the other can be either another visit or a service for the treatment of the condition. For

example, for the Diabetes measure, these codes could be (i) an office/outpatient visit where the clinician group confirms the patient's type 1 diabetes diagnosis, and (ii) a diabetes self-management training for the patient's type 1 diabetes. Please find more information on what codes are used to identify the start or continuation of a clinician-patient relationship in the measure-specific codes list files available on the MACRA Feedback page (<https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>).

Comment: A few commenters opposed the inclusion of Medicare Part D prescription drug costs in the cost measures, as they stated they believe that including those costs would hold attributed physicians accountable for factors that are outside of their control, given that clinicians are not involved in the negotiations of formularies, coverage, and prices. One commenter also opposed the inclusion of Medicare Part B prescription drug costs in the cost measures, noting that inclusion of those costs would penalize physicians for costs over which they have no control.

Response: During the measure development process, our technical expert panel and measure-specific workgroup members recommended the inclusion of Part D costs in measures where Part D prescription drugs are a primary component of care for the relevant condition (for example, the Asthma/COPD, Diabetes, and Sepsis measures). For example, our analyses showed this was the case for the Diabetes measure, with results showing that 71 example of episodes contained Part D services in the episode window and more than 48 percent of episodes including Part D services were billed by an attributed clinician. Furthermore, analyses showed that approximately 62 percent of clinicians observe a change in measure score decile when Part D costs are added to the measure. Similarly, measure-specific workgroups have advised on including Medicare Part B prescription drugs in measures when clinically appropriate.

Importantly, the measures include Part B and Part D costs that have been standardized to remove price variation from non-clinical factors. For Part D costs specifically, by removing this variation, the measures (and the underlying standardization methodology) address concerns expressed by stakeholders during measure field testing that clinicians could be penalized during performance measurement for lacking control or awareness of drug pricing details set by plan and manufacturer negotiations. For

more detail, the Parts A and B payment standardization methodology and the Part D payment standardization methodology are available at <https://resdac.org/articles/cms-price-payment-standardization-overview>.

Comment: One commenter supported the inclusion of the Melanoma Resection measure in the MIPS program, as this measure would provide dermatologists an opportunity to fully participate in the MIPS program.

Response: We thank the commenter for their support.

Comment: A few highlighted the need to ensure that episode-based measures do not penalize clinicians for prescribing new and innovative medicines. Some commenters specifically stated this concern for the Melanoma Resection measure. One stakeholder recommended the removal of Lifileucel, a tumor-infiltrating lymphocyte (TIL) cell therapy from the measure as it could discourage clinicians from using this drug.

Response: Lifileucel is not included in the Melanoma Resection measure. The measure's focus is on resectable melanoma, not for treatment of advanced metastatic disease. For instance, the measure does not include any costs of chemotherapy or immunotherapy services.

More generally, as innovative drugs and treatments become available, we consider them on a case-by-case basis for each measure and whether they are clinically related to the condition in question and whether they are needed to help the measures accurately capture an episode of care. As cost measures include other types of care beyond direct treatment such as downstream complications, they are able to capture improvements that might result from the use of the innovative treatments. As with all other aspects of measure development, we consider unintended consequences and monitor for these through the maintenance processes. Finally, clinician and clinician group performance on cost measures is balanced with their performance on quality measures at the MIPS score level to capture the overall value of care provided to their patients.

Comment: One commenter supported the inclusion of the Sepsis episode-based measure in the MIPS program, as sepsis is an appropriate area of focus given the high impact on the patient population and Medicare costs.

Response: We appreciated the commenter's support for the measure.

Comment: One commenter noted optimism about the Asthma/COPD and Diabetes episode-based measures and

was looking forward to potential endorsement of the measures by NQF.

Response: We intend to submit the episode-based measures for NQF endorsement in a future endorsement cycle.

Comment: One commenter did not support the inclusion of the Asthma/COPD measure, and stated they believe it needed additional testing, and was complex and difficult to use; therefore, the commenter urged CMS to postpone the measure's implementation until 2023. The commenter urged CMS to consider the impact of the U.S. West Coast wildfires that placed additional burden on physicians caring for beneficiaries with asthma and COPD, given that those patients required more intensive resource use.

Response: We believe that the measure is ready for implementation as it has undergone a rigorous development, testing, and review process. The Asthma/COPD measure was developed over a period of 18 months involving over 80 technical experts during 4 in-person and virtual meetings, input from a panel of patients and caregivers, and a national field testing. We continue to welcome feedback on how the field-testing period and the development process can be further refined to increase clinician familiarity with this and other cost measures. We also appreciate the commenter's concerns about the Asthma/COPD measure, particularly the increased burden on caring for patients with asthma and COPD due to the west coast wildfires. Under the regulations at § 414.1380(c)(2)(i)(A), clinicians who are subject to extreme and uncontrollable circumstances may submit an application to reweight the cost performance category. In the CY 2018 PFS final rule (82 FR 53780 through 53781), we define "extreme and uncontrollable circumstance" as "rare (that is highly unlikely to occur in a given year) events entirely outside the control of the clinician and of the facility in which the clinicians practices that cause the MIPS eligible clinician to not be able to collect information that the clinician would submit for a performance category or to submit information that the clinician would submit for a performance category for an extended period of time." Natural disasters, including wildfires, are examples of such rare events. For more information, please reference the CMS QPP web page (<https://qpp.cms.gov/mips/exception-applications#extreme-CircumstancesException-2021>).

After consideration of public comments, we are finalizing the 5

proposed episode-based measures listed in Table 52 as proposed.

(iv) Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve the physician, practitioner, and other stakeholder communities in enhancing the infrastructure for cost measurement, including for purposes of MIPS and APMs. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of an estimated one-half of expenditures under Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from stakeholders, and subsequently, post an operational list of such groups and codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other stakeholders.

In December 2016, we published the Episode-Based Measure Development for the Quality Payment Program (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/Draft-list-of-episode-groups-and-trigger-codes-December-2016.zip>) and solicited input on a draft list of care episode and patient condition groups and codes as required by sections 1848(r)(2)(E) and (F) of the Act. In accordance with section 1848(r)(2)(G) of the Act, in January 2018, we posted an operational list of 8 care episode groups and patient condition groups, which is available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2018-Operational-List-of-Care-Episode-and-Patient-Condition-Codes.zip>. Under section 1848(r)(5)(A)(iii) of the Act, to evaluate the resources used to treat patients with respect to care episode and patient condition groups, the Secretary shall, as the Secretary

determines appropriate, conduct an analysis of resource use with respect to care episode and patient condition groups. In accordance with this section, we used the 8 care episode groups and patient condition groups included in the operational list as the basis for the 8 episode-based measures that were finalized for use in MIPS in the CY 2019 PFS final rule (83 FR 59767 through 59773). In the CY 2020 PFS final rule (84 FR 62968 through 62969), in accordance with section 1848(r)(2)(H) of the Act, we revised the operational list beginning with CY 2020 to include 10 additional care episode and patient condition groups, which served as the basis for the 10 additional episode-based measures that were refined based on extensive stakeholder input and finalized for use in MIPS in that same final rule (84 FR 62979). The operational list as revised in the CY 2020 PFS final rule is available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>.

Under section 1848(r)(2)(H) of the Act, we proposed to revise the operational list beginning with CY 2022 to include 5 new care episode and patient condition groups, based on input from clinician specialty societies and other stakeholders. These 5 care episode and patient condition groups were included in the draft list that we posted in December 2016 and refined based on extensive stakeholder input as described in the CY 2022 PFS proposed rule (86 FR 39396 through 39397). The codes and logic used to define these episode groups are available on our MACRA Feedback Page at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>. These care episode and patient condition groups serve as the basis for the 5 new episode-based measures that we proposed in the CY 2022 PFS proposed rule (86 FR 39397 through 39398) and finalized for the cost performance category in section IV.A.3.d.(2)(b) of this rule. We solicited comments on our proposal to revise the operational list to include these 5 new care episode and patient condition groups.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposal to revise the operational list to add 5 new care episode and patient condition groups that served as the basis for the 5 new episode-based

measure that we proposed for the cost performance category in the CY 2022 PFS proposed rule.

Response: We appreciate the commenter's support for this proposal.

After consideration of public comments, we are finalizing these revisions to the operational list as proposed.

(v) Reliability and Case Minimum

In this section of the rule, we discuss the case minima for the 5 proposed cost measures, weighing up considerations of reliability standards, the tradeoffs between accuracy and reliability, and the implications of increasing case minima on the extent to which the measure can apply to clinicians participating in MIPS. Reliability is a metric that evaluates the extent that variation in a measure comes from clinician performance ("signal") rather than random variation ("noise"). Higher reliability suggests that a measure is effectively capturing differences between the clinician and their peer cohort.

In the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77171), we identified reliability levels between 0.4 to 0.7 as moderate and reliability levels above 0.7 as high. In the CY 2017 Quality Payment Program final rule, we also identified a threshold of 0.4 for mean reliability to be applied for measures in the cost performance category to ensure moderate reliability. This aligned with the reliability threshold applied to measures under the Value Modifier program and previous analyses of reliability.²³³ We appreciate the concerns commenters had raised that this may be too low and as we stated in the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77171), we continue to work on developing measures with the highest level of reliability that is feasible within the MIPS program and have since continued to monitor the overall scientific evidence on reliability. There are many different interpretations of reliability and what these values represent. Studies have pointed to various standards to indicate sufficient, adequate, moderate, or good reliability across healthcare and other disciplines with performance measures and different methods of estimating

reliability.^{234 235 236 237 238 239 240} We also monitor the evaluation and standards applied throughout the measure endorsement processes, and note that the endorsement standards state there is no minimum threshold for reliability.²⁴¹ As such, we believe that the 0.4 threshold for mean reliability continues to be appropriate for moderate reliability.

Under section 1848(r)(5)(A) of the Act, to evaluate the resources used to treat patients (with respect to care episode and patient condition groups), the Secretary shall, as the Secretary determines appropriate, conduct an analysis of resource use (with respect to care episodes and patient condition groups of such patients) using codes reported on claims. Our approach to cost measurement focuses on defining clinically homogenous patient conditions and care episodes. This ensures that these measures accurately compare clinician performance without the results being solely driven by clinical differences across episodes.

²⁴⁰ The Department of Education provides the following thresholds: "Reliability of an outcome measure may be established by meeting the following minimum standards: (a) internal consistency (such as Cronbach's alpha) of 0.50 or higher; (b) temporal stability/test-retest reliability of 0.40 or higher; or (c) inter-rater reliability (such as percentage agreement, correlation, or kappa) of 0.50 or higher." (What Works Clearinghouse (WWC) Standards Handbook v4, p.78).

²⁴¹ The National Quality Forum (NQF) reviews measures on a case-by-case basis, and has endorsed many types of measures with reliability ranging from below 0.1 and above 0.9, accepting multiple varied reliability testing methods. For example, NQF endorsed the Percent of Residents Who Lose Too Much Weight (NQF #0689) facility-level outcome measure, which had a signal-to-noise ratio of 0.078. Alternatively, NQF has also endorsed the Routine Cataract Removal with Intraocular Lens (IOL) Implantation (NQF #3509) episode-based cost measure with a mean reliability score of 0.94 at the individual clinician level and a 10 episode case minimum.

²³³ Mathematica, Inc., "Memorandum: Reporting Period and Reliability of AHRQ, CMS 30-Day and HAC Quality Measures—Revised," http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/hospital-value-based-purchasing/Downloads/HVBP_Measure_Reliability.pdf.

While limiting the measure scope to improve homogeneity improves the accuracy of assessing cost performance, this also reduces the number of episodes per clinician. Fewer episodes per clinician results in lower reliability compared with global population measures. However, episode-based measures balance this concern using selective service assignment; only including the costs of services that are clinically related to the condition or procedure in the measures' cost calculation improves reliability by keeping the "signal" while reducing the "noise."²⁴² Overall, these measures prioritize capturing clinically appropriate, homogeneous care episodes over achieving results on certain testing mechanisms to meet the statutory objective of episode-based resource measurement and create more actionable measures for clinicians. As such, we continue to evaluate cost measures on a broader range of testing, along with the details of measure construction. For this reason, we continue to caution against placing too much emphasis on reliability results in isolation as we noted in the CY 2018 Quality Payment Program proposed rule (82 FR 30050 through 30051).

As we discussed in the CY 2018 Quality Payment Program proposed rule (82 FR 30050 through 30051), while a higher case minimum generally improves measure reliability, these incremental increases must be considered against decreases in the

coverage of the measure. There are several important implications for clinicians and the program. Increasing the case minimum reduces the number of clinicians that can have their performance assessed by that measure. This can limit the applicability of episode-based measures to larger group practices with sufficient case volume, leaving smaller practices and individual practitioners to be assessed only with population-based cost measures. In addition, for measures to have the potential to improve performance, they should apply to as many clinicians as can be reliably measured. Finally, it is important to recall that clinicians receive a cost performance category score which incorporates their scores across all applicable cost measures. Adding more measures that can be used in a category score increases the amount of data used to calculate the category score, which may improve the precision of overall assessment of cost performance. Additional measures also allows us to evaluate clinicians' cost category performance across a broader range of their care practice.

We examined the reliability of the 5 proposed episode-based measures, and Table 53 presents the percentage of TINs and TIN/NPIs that meet the 0.4 reliability threshold and the mean reliability for TINs and TIN/NPIs at our proposed case minimum for each of the episode-based measures. We previously established at § 414.1350(c)(4) a case minimum of 10 episodes for procedural episode-based measures and at § 414.1350(c)(5) a case minimum of 20 episodes for acute inpatient medical condition episode-based measures in the CY 2019 PFS final rule (83 59773 through 59774). For both the proposed

Melanoma Resection procedural measure and the Sepsis acute inpatient medical condition measure, we found that the mean reliability for groups and individual clinicians exceeds 0.4 and that the majority of groups and individual clinicians meet the 0.4 reliability threshold when applying the established case minimum for the respective measure types. For the Colon and Rectal Resection procedural measure, at the established 10-episode case minimum for procedural measures, we found that the mean reliability does not exceed 0.4 for individual clinicians and that the majority of groups and individual clinicians do not meet the 0.4 reliability threshold. However, as displayed in Table 53, when the measure's case minimum is raised to 20 episodes, the mean reliability exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. As such, we proposed to raise the case minimum for the Colon and Rectal Resection procedural measure to 20 episodes, and corresponding revisions to § 414.1350(c)(4). For the chronic condition measures, we proposed at § 414.1350(c)(6), a case minimum of 20 episodes. At a 20-episode case minimum, the mean reliability for both measures exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. We believe that calculating the episode-based measures with these case minimums would accurately and reliably measure the performance of a large number of clinicians and clinician group practices.

²⁴² See for example Sandhu AT, Do R, Lam J, et al. Development of the Elective Outpatient Percutaneous Coronary Intervention Episode-Based Cost Measure. *Circ Cardiovasc Qual Outcomes*. Mar 2021;14:e006461.

TABLE 53: Percent of TINs and TIN/NPIs that Meet 0.4 Reliability Threshold

Measure name (case minimum)	% TINs meeting 0.4 reliability threshold	Mean reliability for TINs	% TIN/NPIs meeting 0.4 reliability threshold	Mean reliability for TIN/NPIs
Asthma/COPD (20 episodes)	88.23%	0.67	81.66%	0.60
Colon and Rectal Resection (20 episodes)	91.57%	0.56	76.10%	0.45
Diabetes (20 episodes)	82.51%	0.61	78.80%	0.57
Melanoma Resection (10 episodes)	100.00%	0.82	100.00%	0.80
Sepsis (20 episodes)	100.00%	0.68	79.89%	0.47

We received public comments on the reliability and case minimums of the proposed episode-based measures. The following is a summary of the comments we received and our responses.

Comment: A few stakeholders commented that CMS' use of 0.4 as the threshold for mean reliability is insufficient. Commenters urged CMS to increase the case minimums for the cost measures, stating that higher reliability with fewer clinicians being measured would be preferable.

Response: We thank the commenters for their feedback. We refer stakeholders to 86 FR 39400–39402 of the proposed rule where we discuss the 0.4 threshold in detail. As noted, we will continue to monitor the scientific evidence on reliability to consider whether the 0.4 threshold should be increased. At this time, we do not believe that there is sufficient evidence to substantiate a change to this threshold. In finding a balance between reliability and cost measures that have the potential to be impactful, we also consider stakeholder feedback about the need for clinicians to be assessed under episode-based cost measures. Since these measures are designed to be specific to a particular type of care, many clinicians would be attributed fewer of these episodes than of episodes for global or population-based cost measures. Using a moderate reliability threshold ensures the reliability of the measures while also guarding against the unintended consequences of excluding clinicians from episode-based cost measures.

After consideration of public comments, we are finalizing the proposal to raise the case minimum for the Colon and Rectal Resection procedural measure to 20 episodes, and

corresponding revisions to § 414.1350(c)(4), as proposed. We are finalizing at § 414.1350(c)(6) a case minimum of 20 episodes for the chronic condition measures, as proposed.

(c) Process for Cost Measure Development by Stakeholders

(i) Background

Since 2017, we have conducted extensive stakeholder engagement to develop episode-based measures that cover a wide range of procedures, conditions, and specialties. This measure development process, as described in the CY 2019 PFS final rule (83 FR 59770), involves the measure development contractor convening hundreds of clinician experts to provide information to prioritize, conceptualize, and specify clinically refined cost measures and conducting national field testing on an 18-month timeline. The process involves engagement activities conducted by the measure development contractor to solicit expert input for measure development, gather feedback from individuals with lived experiences of the conditions in question, and collect stakeholder feedback on draft measure specifications that can inform how the measures can be improved. This approach follows CMS' standardized approach for developing, implementing, and maintaining measures. There are currently 18 episode-based measures in the cost performance category (CY 2020 PFS final rule (84 FR 62979)), and we are adding 5 more as discussed in section IV.A.3.d.(2)(b) of this rule. There are also 2 global or population-based measures, the Medicare Spending per Beneficiary Clinician measure and the total per capita cost measure which

were most recently refined in the CY 2020 PFS final rule (84 FR 62969 through 62977).

Many stakeholders have expressed support for episode-based measurement and for a process that prioritizes clinician involvement (as noted in the CY 2018 QPP final rule (82 FR 53645)). In the CY 2021 PFS final rule (85 FR 84879), we noted that commenters expressed interest in expanding the limited inventory of cost measures available to assess cost performance applicable to specialties. Commenters believed that additional episode-based measures would address gaps in cost performance assessment for various specialties. Expanding the range of procedures, conditions, and specialties would enable more MIPS eligible clinicians from different specialties and sub-specialties to have their cost performance assessed under clinically relevant episode-based measures. An increase in the range of cost measures available in MIPS that can be linked with quality measures and improvement activities in future MVPs would support the assessment of clinician value in providing specific types of care.

A process outside of the current development process that would allow stakeholders to develop cost measures could expand the inventory of episode-based measures. However, this process must ensure that any cost measures developed are consistent with the goals of MIPS, align with CMS priorities, and consistent with the Meaningful Measures Framework (more information about the Meaningful Measures Framework can be found at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/>

MMF/General-info-Sub-Page). Episode-based measures developed by stakeholders that meet the standards and criteria we outline in section IV.A.3.d.(2)(c)(iii) for selecting measures would contribute to the target of an estimated 50 percent of expenditures under Parts A and B, as described in section 1848(r)(2)(D)(i)(I) of the Act.

We proposed to establish a process, beginning in CY 2022, for the development of cost measures by stakeholders that would ensure that the cost performance category has consistency across measures. The sections below outline the proposals for the measure prioritization criteria, standards for measure construction, pre-rulemaking submission process and development support, which altogether comprises our proposed process of cost measure development by stakeholders.

(ii) Measure Prioritization Criteria

As described in the CY 2022 PFS proposed rule (86 FR 39396 through 39397) of this rule, the current process for prioritizing cost measures for development involves the measure development contractor identifying candidate clinical areas and episode groups informed by a TEP, patient and family engagement perspective, and clinician stakeholders. Criteria reflecting TEP input have guided strategic decisions and informed clinical subcommittees' considerations for measure prioritization. These criteria include:

- Clinical coherence of measure concept (to ensure valid comparisons across clinicians).
- Impact and importance to MIPS (including cost coverage, clinician coverage, and patient coverage).
- Opportunity for performance improvement.
- Alignment with quality measures and improvement activities to ensure meaningful assessments of value.

To inform cost measure development by stakeholders, we proposed to apply these criteria to an environmental scan to identify a list of priority areas and suggested measures for development. This would ensure that measures developed by stakeholders align with program needs, while also providing flexibility for stakeholders to apply their own clinical expertise when identifying the most important areas for value improvement within the criteria listed above. Stakeholders who choose to develop cost measures can access the Blueprint for the CMS Measures Management System at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint> and

the Meaningful Measures Framework at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page> for further information.

We solicited public comments on the proposed measure prioritization criteria, as well as priority areas for future episode-based measure development, such as specialties, types of clinical care, or specific conditions or procedures that would support proposed or future MVPs.

The following is a summary of the comments we received and our responses.

Comment: Many commenters were supportive of the proposal to establish a new measure development process by stakeholders. One commenter expressed support for the new process for cost measure development as it would be open to public and would grow the cost measure inventory. Another commenter stated that expanding the range of cost measures through this process could facilitate the transition away from the total per capita cost measure.

Response: We believe that the population-based measures like total per capita cost measure continue to play an important role in MIPS alongside episode-based measures. Its focus on primary care is an area that affects many beneficiaries with potential for cost improvement.

Comment: Another commenter suggested that instead of the proposed method to develop new cost measures, CMS should involve stakeholders to directly edit inclusion, exclusion, and selection criteria for existing measures.

Response: We encourage stakeholders to engage during the 18-month measure development process for new measures under development. As part of measure development, all stakeholders can participate in the national field testing and observe clinical expert workgroup meetings via a listen-only line. Stakeholders are also encouraged to provide feedback about the specifications of current cost measures in MIPS via the QPP Service Center. We would consider these as part of the routine measure maintenance process.

Comment: One commenter was supportive of the current measure development process established by CMS, and stated that while it urged CMS to work with the specialty societies to develop new measures, it was apprehensive of the new process to develop cost measures outside of MVPs. To ensure adequate input from specialty societies, the commenter encouraged CMS to require any measure developer to demonstrate that they have the

correct clinical and methodological input during the measure development process.

Response: We thank the commenter for the feedback. We believe that the measure criteria outlined in the proposed process for cost measure development by stakeholders (86 FR 39403) addresses the need for a measure developer to demonstrate clinical coherence of the measure and to ensure its alignment with quality measures and improvement activities, so that the measure can be incorporated into MVPs. Additionally, for a cost measure to be implemented in MVPs, it needs to go through the notice-and-comment rulemaking process, as well as the MAP's review of the methodological approach and empirical testing results of the measures.

Comment: One commenter urged CMS to consider using other types of measures in the MIPS cost performance category as a proxy for cost. These could include measures for time spent in the ICU, transfusions, ventilator times, or length of stay. Another commenter recommended that cost measures do not just assess when there is waste in the system, but also promote clinically appropriate utilization of health care services, including for clinicians treating significant portions of older adults.

Response: To clarify, cost measures encourage reduction in spending by minimizing waste in the system and incentivizing appropriate level of utilization of healthcare services for patients. Measures used in the cost performance category are intended to be based on care episode and patient condition groups, as outlined in section 1848(r)(2) of the Act. Using other types of measures as a proxy for cost would not align with this direction. In regards to frailty, we continue to explore ways to include indicators of frailty in the episode-based measures, where appropriate. We are also tracking ASPE's research into validating and expanding claims-based algorithms of frailty and functional disability for value-based care and payment (more information on the research is available on the ASPE's website at <https://aspe.hhs.gov/validating-expanding-claims-based-algorithms-frailty-functional-disability-value-based-care-payment>).

Comment: A commenter highlighted the importance of using clinician-led clinical data registries, in addition to the comprehensive Medicare claims data, to support the development of meaningful cost measures.

Response: We have concerns about the feasibility of calculating cost

measures that use clinical registry data as part of their construction and the potential unintended consequences of excluding certain clinicians and beneficiaries if registry data is not available. To ensure that cost measures incorporated into MIPS are meaningful, measures submitted for CMS consideration would be evaluated for potential use against the standards for measure construction and criteria outlined in section IV.A.3.d.(2)(c)(iii) of this rule, such as whether the measure has been tested for reliability and validity.

Comment: A few commenters stated that specialty societies should be involved in the proposed measure development process. One stakeholder suggested that all specialty societies that would benefit from the new measures should be involved in the development process, while another encouraged CMS to partner with specialty societies similar to the current cost measure development approach.

Response: We encourage specialty societies that are interested in cost measure development to coordinate and engage with other societies that may have common expertise in cost measure concepts. This process for cost measure development is separate from CMS' current approach where a cost measure development contractor engages with specialty societies and other stakeholders.

Comment: One commenter requested more information on how CMS intends to use the prioritization criteria outlined in the proposed rule. The commenter also urged CMS to seek input from stakeholders on the measurement gaps in the MIPS cost performance category.

Response: We do not have any additional information on how we intend to use the prioritization criteria beyond what was proposed in the CY 2022 PFS rule (86 FR 39403). Regarding the stakeholder's second comment, we would apply the prioritization criteria to an environmental scan that would inform stakeholders of priority areas and suggested measures for development. This list would provide flexibility for stakeholder to then apply their own clinical expertise when determining the most important areas for measure development based on the measurement gaps identified by CMS. We also encourage stakeholder to reference the Blueprint for the CMS Measures Management System at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint> and the Meaningful Measures Framework at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page> for further guidance.

Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page for further guidance.

(iii) Standards for Measure Construction

Our current rigorous cost measure development process has included a series of standards that ensure measures are effective in assessing clinician cost performance within MIPS. These standards have been developed and vetted over time by a standing TEP and further refined through discussions with clinical subcommittees and clinician expert workgroups convened by the measure development contractor around areas of care and specific measures, respectively. For further detail, we refer readers to our detailed discussion of the measure development process and framework in response to stakeholder comments in the CY 2019 PFS final rule (83 FR 59770). To ensure that cost measures developed by stakeholders meet the same standards applied during the current measure development and testing process, we proposed to apply the following standards when considering stakeholder developed measures:

- Measures must assign services that accurately capture the role of attributed clinicians.
- Measures must have clear, ex ante attribution to clinicians.
- Measures must be based on episode definitions that have clinical face validity and are consistent with practice standards.
- Measures' construction methodology must be readily understandable to clinicians.
- Measures must hold clinicians accountable for only the costs they can reasonably influence.
- Measures must convey clear information on how clinicians can alter their practice to improve measured performance.
- Measures must demonstrate variation to help distinguish quality of care across individual clinicians.
- Measure specifications must allow for consistent calculation and reproducibility using Medicare claims data.

To implement these standards and to meet the methodology requirements of section 1848(r)(5) of the Act, we believe that it is necessary to ensure that measures within the cost performance category are consistent and share the same key features. Specifically, cost measures must be based on a standard set of measure components informed by the standards outlined above. These include: (1) Episode definition based on trigger codes that determine the patient cohort; (2) attribution; (3) service

assignment; (4) exclusions; and (5) risk adjustment.

Regarding item (1) episodes must be defined based on trigger codes for services, which are identifiable on Medicare claims, indicate the occurrence of the episode, and determine the patient cohort. Trigger codes must be based on services, and can incorporate diagnosis and other service information to define an episode. The patient cohort may be stratified into mutually exclusive stratifications (or "episode sub-groups") for meaningful clinical comparison to ensure that measures fairly compare clinicians with similar patient case-mix. Regarding item (2), episodes must be attributed to MIPS eligible clinician groups and clinicians who render the trigger services and are responsible for the patient's care and management. It is important that the attribution methodology allows for the most appropriate clinicians who have a significant role in a patient's care to be attributed and receive actionable feedback on their performance. Regarding item (3), all services that are clinically related to the attributed clinician's role in managing patient care must be included. This includes cases where the clinician can influence the frequency or intensity of services. The measure must include enough services to allow the measure to demonstrate that it captures variation in clinician performance. To address any potential concern around care stinting, the measure must cover a sufficiently long timeframe and broad enough services to capture downstream services. This includes expected follow-up care, rehabilitation, post-acute care (required if inpatient hospitalizations are included) and other support services, as well as complications, readmissions, and other consequences of care. Clinically unrelated services must not be assigned to the measure. Regarding item (4), measures must include applicable exclusions, which can be applied to the patient cohort or the episodes. Certain patients must be excluded for data cleaning or to ensure completeness of data. For example, patients who do not have Medicare as their primary payer or were not continuously enrolled in Medicare Parts A and B and not C must be excluded as we would not be able to observe their complete care. Certain episodes must be excluded to improve episode homogeneity and to remove unique groups of patients from the measure in cases where it may be impractical or unreasonable to compare the costs of caring for these patients to the costs of

caring for the measure cohort as a whole. Regarding item (5), measures must be adjusted for patient risk. Risk adjustment aims to isolate variation in clinician costs to only the costs that clinicians can reasonably influence by accounting for risk factors. The determination of an appropriate risk adjustment approach should be based on empirical testing. A base risk adjustment model must include standard risk adjusters (Hierarchical Condition Category [HCC] codes, interaction variables for certain comorbidities, age, disability status, end-stage renal disease status, recent use of institutional long-term care), as well as additional measure-specific risk factors. Finally, measures must include payment standardized claims data.

We have outlined in section IV.A.3.d.(2)(b)(iii) of this final rule a new methodological framework for assessing the cost of care for chronic conditions. This new chronic condition framework meets all the standards we outline above, and could serve as a basis for chronic condition measures developed by stakeholders that would ensure consistency with other MIPS measures. We proposed to apply the standards for measure construction and measure components outlined above when considering stakeholder-developed measures to ensure that these measures follow the same standards as cost measures currently used in MIPS.

We solicited public comments on our proposed standards for measure construction and measure components, as well as the challenges that stakeholders may encounter in the development of cost measures along with any resources that would assist stakeholders in development.

The following is a summary of the comments we received and our responses.

Comment: One commenter specifically expressed support for the proposed standards for measure construction and measure components.

Response: We thank the commenter for their support.

Comment: One commenter pointed out the lack of flexibility in the approach to develop cost measures, as under the proposed Standards for Measure Construction and the Measure Prioritization Criteria, measure developers would be constrained by the structure and scope of existing cost measures.

Response: We believe that it is important for cost measures to share key common features for consistency within the performance category. These features have been identified through extensive stakeholder input as being

essential for cost measures to accurately reflect care within the reasonable influence of the attributed clinician; this in turn is essential for clinicians to be able to make practice changes for cost improvement. Having consistency across cost measures is important to make it easier for stakeholders to understand how they are being assessed on cost and guards against the risks and unintended consequences that would result from creating different standards for similar types of care. We believe that establishing standards and criteria helps provide clarity for stakeholders before they begin development, and that this approach achieves an appropriate balance between the goal of a coherent cost measure inventory and encouraging innovative ways of assessing clinicians on cost performance.

Comment: One commenter urged CMS to use common episode definitions across MIPS cost measures and information required by price transparency regulations. This would provide consistent information to clinicians and patients.

One commenter requested that episodes use more comprehensive definitions by looking at care from the perspective of the patient, rather than charges under the control of a single clinician. They also emphasized the importance of the team-based nature of care, and stated that shared accountability for care should be encouraged by cost measures.

Response: The episode-based measures include the cost of services furnished by clinicians providing care that is related to the condition or procedure being measured. That is, an episode for a knee arthroplasty procedure could include the cost of the surgery performed by the orthopedic surgeon, anesthesia services provided by an anesthesiologist or CRNA, the cost of walking aids to assist with recovery, and physical therapy services provided by a physical therapist to help regain function. By including these services, the attributed clinician is incentivized to coordinate with these members of the care team in providing care for the patient. In these instances, common episode definitions would not be appropriate because episode-based measures require episodes specific to the condition or procedure. However, the total per capita cost and Medicare Spending Per Beneficiary Clinician measures do address the concern that there should be a more comprehensive definitions of cost; these measures are designed to be a global cost measure where a clinician is responsible for the costs of all services provided to a patient. We therefore believe that there

is an important role for both global or population-based cost measures and episode-based cost measures as they have different yet complementary measure intents. Finally, given that the price transparency regulations are newly implemented, we will continue to assess the potential ways to align cost measures and the price transparency regulations.

Comment: One commenter encouraged CMS to add two standards for cost measure construction: Actionability and alignment of cost and quality. The commenter also stated that field testing must be conducted as part of the measure development process, and encouraged CMS to minimize the number of cost measures that is in development at one time, to ensure stakeholders are able to comprehensively review the measures being developed.

Response: We believe that the standards we would apply when considering stakeholder developed measures ensure that the measures implemented in MIPS would be actionable, by requiring the methodology to be understandable and that the developers convey clear information on how clinicians can improve their performance. In addition, submissions to the MUC list require measure developers to demonstrate a measure's actionability (please see section IV.A.3.d.(2)(c)(iv) for more information on MUC submission criteria). Additionally, one of the measure construction criteria is alignment with quality measures and improvement activities to ensure meaningful assessments of value. We agree that field testing is an important step in assessing newly developed measures and gathering feedback from stakeholders. We have worked to improve our field testing materials and outreach so that stakeholders can more easily understand the measures and provide meaningful feedback. We will take your suggestion to limit the number of cost measures in development at one time into consideration for future measure development cycles.

(iv) Cost Measure Submission to the Measures Under Consideration (MUC) List and Development Support

We proposed that cost measures developed by stakeholders for potential use in MIPS would undergo the pre-rulemaking process described in section 1890A(a) of the Act. More details on the pre-rulemaking process can be found at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rulemaking>. As with the process for the

call for quality measures, we proposed that the submission process for cost measures developed by stakeholders would begin with a Call for Cost Measures, where stakeholders would be invited to submit their candidate cost measures. We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53635 through 53637) for details on the process for quality measure submissions and selection. During the Call for Cost Measures period, we would organize webinars and office hours to provide stakeholders with information about the process and be available to answer questions. We would also provide templates of written materials, such as the measure codes lists for stakeholders to use. At the end of this period, stakeholders would submit their candidate measures for review by completing the required data fields required for submission to the MUC list and if approved, measures would be placed on the final MUC List, which we publicly post on December 1 of every year. Measures submitted to the MUC List must be fully specified and tested for reliability and validity.

Submissions to the MUC list must include all required information and would be reviewed against a set of inclusion criteria identified below to determine whether they should be considered for use in MIPS. The inclusion criteria for cost measures developed by stakeholders are based on the criteria outlined in the MUC List submission template, as well as relevant criteria that the MIPS quality performance category follows as indicated in the CY 2020 PFS final rule (84 FR 62953 through 62954). For purposes of our review, we proposed that stakeholders who wish to submit measures must submit measure specification information, testing results, and related research to address the following inclusion criteria:

- *Applicable*: There is clinical coherence and comparability in clinician treatment; measures ensure alignment with quality indicators.
- *Feasible*: Measures use Medicare claims data; there is a high degree of data completeness and limited frequency of missing data.
- *Scientifically acceptable*: measures are clinically valid assessments of cost performance; testing is available for reliability at different case minima; beta testing and statistical testing are conducted.
- *Not be duplicative of existing measures*: measures assess opportunities and gaps based on CMS priorities and goals; there is an assessment of duplicate measures to see which would be the better measure.

- *Fully developed*: measures are fully developed and ready for implementation at the time of submission.

- *Consistent*: the measure is constructed using a methodology to assess resource use that is consistent with sections 1848(r)(2) through (5) of the Act, consistent with other MIPS cost measures.

- *Fulfill a clinical performance gap*: environmental scans and literature reviews show evidence for measures, performance gaps, and opportunities for improvement; there is evidence for measures' impact and importance to MIPS.

We solicited comments on this proposed approach, and challenges stakeholders may encounter in the development of cost measures.

The following is a summary of the comments we received and our responses.

Comment: One commenter expressed support for holding cost measures to the same review and submission process (that is, the pre-rulemaking process submission) as the quality measures.

Response: We thank the commenter for their support.

Comment: A few commenters expressed concerns that the outlined proposal does not address the obstacles faced by potential measure developers, mostly noting the challenges in obtaining the necessary data. Several other commenters requested that CMS provide greater development support, also around data access. One commenter believed the proposal would not be successful at creating cost measures for MVPs starting in 2025 as the process would be time-consuming and burdensome.

Response: We appreciate the interest in cost measure development. The proposed process for cost measure development by stakeholders is intended to align with the process that has been available to developers of quality measures. The public can access Medicare claims data through the process described on the CMS ResDAC website at <https://resdac.org/research-identifiable-files-rif-requests>. ResDAC's process has multiple safeguards in place to protect the sensitive data that is available for researchers. Stakeholders also have access to the Physician and Other Supplier Public Use Files (Physician and Other Supplier PUFs), which contain information on procedures and services provided to Medicare patients by physicians and other healthcare professionals in a given year.

After consideration of public comments, we are finalizing the process

for cost measure development by stakeholders as proposed.

(d) Substantive Changes Criteria for Cost Measures

On an annual basis, we review the MIPS measures that have been adopted and consider updates to the cost measures. Changes to measures are an important part of the measure maintenance process to ensure that measures are continuing to function as intended, and may be substantive or non-substantive. Section 1848(q)(2)(D)(i)(II)(cc) of the Act requires all substantive changes to quality measures to be proposed and identified through notice-and-comment rulemaking. Although this section of the Act does not establish this requirement for cost measures, we believe that similar considerations should apply to cost measures. As discussed in prior rulemaking, examples of non-substantive changes to cost measures include maintenance changes such as updated diagnosis or procedure codes or changes to existing exclusions to the patient populations or definitions, while substantive changes to a measure are changes that result in what are considered new or different measures (83 FR 59767 and 84 FR 62961). As we evaluate existing cost measures to determine whether such measures need to be updated, we believe that it is important to establish criteria for determining whether a measure change is substantive. Thus, we proposed to establish several criteria for determining whether a cost measure change is substantive starting with the MIPS CY 2022 MIPS performance period/2024 MIPS payment year. The criteria include, but are not limited to, the following:

- Whether the change modifies the premise and/or objective of the measure;
- Whether the change modifies the scope of the measure (such as patient population eligible for the measure or a new category of costs); and
- Whether the change to the measure calculation significantly impacts how a measure is assessed.

Certain changes to a measure may affect multiple elements of a measure, requiring an overall assessment of the measure specifications. The following are some examples of potential substantive and non-substantive changes:

- *Measure objective*: The measure objective refers to what is being assessed; in general, changes to the measure objective would be considered substantive. The question of what is being assessed can generally be thought of as: What type of care is the measure

assessing, who is providing this care, and who is in the patient cohort. Specifically, under this criterion, a change to the measure objective could include updates to the triggering logic, measure exclusions, attribution rules, or other aspects of the specifications. While the effect of such updates may also be relevant while considering whether the change is substantive or not, the effect is secondary to the intention behind changes to the measure. Consider the following example: A hypothetical episode-based measure focuses on major joint repair, and is updated to cover all joint procedures by adding a range of trigger codes. This likely would be a substantive change, as the measure would be evaluating different joints and procedures than the initial measure objective.

- *Types of Costs being Assessed:* In general, new rules about which costs are being captured by a measure would be considered substantive if they change which categories or types of costs are included in a measure, and non-substantive if they merely refine how an existing category is captured. For example, a change to an episode-based measure's service assignment rules which adds a new category of costs (for example, adding Part D costs to a measure that did not previously include any Part D costs) likely would be a substantive change. By contrast, a measure update to reflect new codes for existing types of codes, for instance, where a code is split into sub-codes for greater granularity, likely would be considered non-substantive.

- *Risk Adjustment:* The purpose of risk adjustment is to account for factors outside of the clinician's or clinician group's reasonable influence. In certain cases, it is necessary to make changes to the risk adjustment model and/or individual risk adjusters to ensure that the risk adjustment approach is working as intended. Generally, changes to risk

adjustment variables and the mechanics of the regression would be considered non-substantive if they continue to give effect to the measure's intent. However, some changes to the risk adjustment approach may be substantive, such as changes to the type of risk adjusters used (for example, the addition of non-claims-based variables when the model previously only used claims-based data), or changes to the stratification that modify the interpretation of what the measure score represents.

We note that there are degrees in any evaluation of whether a change is substantive. For instance, there may be important differences in the effect of adding one service or code compared to a suite of services and codes that we would also consider as part of determining whether a change is substantive or not. We believe the proposed substantive change criteria for cost measures would help us to determine whether a change to a cost measure should be made through notice-and-comment rulemaking before it is implemented in MIPS. We solicited public comments on our proposed criteria for determining whether a change to a cost measure is substantive.

The following is a summary of the comments we received and our responses.

Comment: Two commenters agreed with an approach for evaluating substantive changes to cost measures, and one commenter stated that substantive changes (for example, updates to the risk adjustment methodology) must go through the pre-rulemaking and rulemaking processes. The commenter also suggested that a contractor may facilitate this process. Finally, the commenter emphasized that service assignment codes and other measure elements should be reviewed annually.

Response: We appreciate the commenters' support for this proposal. Currently, contractors can facilitate the

process for evaluating substantive changes. All cost measures undergo a measure maintenance process that includes annual updates, and comprehensive re-evaluation to ensure that measures continue to meet program goals and priorities. Annually, CMS reviews measures to identify potential updates and assess the nature of these updates to determine the appropriate process for implementing substantive and non-substantive changes. These updates take into consideration any changes in payment policies or clinical practices, as well as empirical data. The comprehensive re-evaluation process occurs on a 3-year cycle, aligning with the CMS Blueprint for measure development. This process draws upon input from clinician experts to identify any thorough updates that may be required to address stakeholder concerns raised during annual maintenance or to make refinements to the measure set.

Comment: One commenter also encouraged CMS to conduct a year-to-year analysis examining the impacts on performance scores that occurred because of a substantive change versus the actual changes in performance.

Response: We appreciated the commenter's request to conduct an analysis to examine the impacts on performance scores that occurred due to a substantive change versus the actual changes in performance, and note that we do conduct analyses that compare year-to-year changes to cost measures as part of regular monitoring.

After consideration of public comments, we are finalizing the criteria for determining whether a cost measure change is substantive as proposed.

The previously established and finalized measures for the cost performance category for the CY 2022 performance period/2024 MIPS payment year and future periods are summarized in Table 54.

BILLING CODE 4120-01-P

TABLE 54: Summary Table of Cost Measures for the CY 2022 Performance Period/2024 MIPS Payment Year and Future Performance Periods

Measure Topic	Measure Type	Measure Status
Total Per Capita Cost	Population-Based	Currently in use for 2022 Performance Period and Beyond
Medicare Spending Per Beneficiary Clinician	Population-Based	Currently in use for 2022 Performance Period and Beyond
Elective Outpatient Percutaneous Coronary Intervention (PCI)	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Knee Arthroplasty	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Revascularization for Lower Extremity Chronic Critical Limb Ischemia	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Routine Cataract Removal with Intraocular Lens (IOL) Implantation	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Screening/Surveillance Colonoscopy	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Intracranial Hemorrhage or Cerebral Infarction	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
Simple Pneumonia with Hospitalization	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
ST-Elevation Myocardial Infarction (STEMI) with Percutaneous Coronary Intervention (PCI)	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
Acute Kidney Injury Requiring New Inpatient Dialysis	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Elective Primary Hip Arthroplasty	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Femoral or Inguinal Hernia Repair	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Hemodialysis Access Creation	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
Lower Gastrointestinal Hemorrhage (<i>at group level only</i>)	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Lumpectomy, Partial Mastectomy, Simple Mastectomy	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Non-Emergent Coronary Artery Bypass Graft (CABG)	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Renal or Ureteral Stone Surgical Treatment	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Melanoma Resection	Procedural episode-based	Finalized for 2022 Performance Period and Beyond
Colon and Rectal Resection	Procedural episode-based	Finalized for 2022 Performance Period and Beyond
Sepsis	Acute inpatient medical condition episode-based	Finalized for 2022 Performance Period and Beyond
Asthma/Chronic Obstructive Pulmonary Disease (COPD)	Chronic condition episode-based	Finalized for 2022 Performance Period and Beyond
Diabetes	Chronic condition episode-based	Finalized for 2022 Performance Period and Beyond

BILLING CODE 4120-01-C

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 PFS final rule (83 FR 59776 through 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), and the CY 2021 PFS final rule (85 FR 84881 through 84886). We also refer readers to §§ 414.1305 for the definition of improvement activities and attestation, 414.1320 for the performance period, 414.1325 for the data submission requirements, 414.1355 for the improvement activity performance category generally, 414.1360 for data submission criteria, and 414.1380(b)(3) for improvement activities performance category scoring.

We proposed in the CY 2022 PFS proposed rule (86 FR 39405 through 39409) for the CY 2022 performance period and future years: (1) To revise group reporting requirements for the 50 percent threshold to address subgroups; (2) to revise the timeframe for improvement activities nominated during a PHE; (3) to revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (4) to suspend activities that raise possible safety concerns or become obsolete from the program when this occurrence happens outside of the rulemaking process; (5) to add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously adopted improvement activities; (6) to revise the “Drug Cost Transparency to include requirements for use of real-time benefit tools” improvement activity; and (7) to add the COVID-19 “Clinical Data Reporting with or without Clinical Trial” improvement activity.

(b) Group Reporting

In the CY 2020 PFS final rule (84 FR 62981 through 62988), we revised § 414.1360(a)(2) to state that, beginning with the CY 2020 performance period, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs billing under the group’s TIN or virtual group’s TINs, as applicable; and the NPIs must perform the same activity during any

continuous 90-day period within the same performance period.

In the CY 2021 PFS final rule (85 FR 84844 through 84849), we finalized to update the MIPS Value Pathways guiding principle #2 as follows: “2. MVPs should include measures and activities that will result in providing comparative performance data that is valuable to patients and caregivers in evaluating MIPS eligible clinician performance and making choices about their care; MVPs will enhance this comparative performance data as they allow subgroup reporting that comprehensively reflects the services provided by multispecialty groups.”

In the CY 2022 PFS proposed rule (86 FR 39372 through 39373), we proposed the details of subgroup reporting for MVPs, and we refer readers to section IV.A3.b.(2) of this final rule for further details regarding the adoption of such policies. We noted in the proposal that, in order to implement group requirements in relation to subgroup reporting, we must modify our policy regarding group reporting for improvement activities. We stated our belief that a 50 percent threshold is achievable and appropriate because, if a group or virtual group has implemented an improvement activity, the activity should be recognized and adopted throughout much of the practice to improve clinical practice, care delivery, and outcomes (86 FR 39405). Similarly, we stated that it makes sense to allow subgroups to perform and attest to their improvement activities separately and apply the 50 percent threshold within their subgroup. Therefore, we proposed to revise § 414.1360(a)(2) to state that, beginning with the CY 2022 performance period, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group’s TIN or virtual group’s TINs or that are part of the subgroup, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance period.

Over the past year, we have received many inquiries through the Quality Payment Program help desk²⁴³ requesting clarification on how to apply the 50 percent threshold to groups. Many clinicians requested that their groups be allowed to account for the 50

percent threshold by specialty or as subgroups as they have more in common than their groups when considering applicable improvement activities. We note that our proposal is responsive to these stakeholder requests because it provides the ability to attest to improvement activities at the subgroup level, including the ability to compose subgroups by specialty for reporting MVPs.

We received public comment on our proposal to revise § 414.1360(a)(2). The following is a summary of the comment we received and our response.

Comment: One commenter supported the proposal to ensure that subgroups have the same improvement activities reporting requirements as MIPS eligible clinicians in traditional MIPS. The commenter stated that aligning requirements ensures that MIPS eligible clinicians reporting through a subgroup are meaningfully contributing to an improvement activity rather than relying on others in the group to receive credit.

Response: We appreciate the commenter’s support of this proposal.

After consideration of the public comment, we are finalizing this policy as proposed.

(c) Improvement Activities Inventory

(i) Annual Call for Activities

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial improvement activities Inventory (81 FR 77817 through 77830) consisting of approximately 95 activities. We took several steps to ensure the Inventory was inclusive of activities in line with statutory and program requirements. We discussed that we had conducted numerous interviews with highly performing organizations of all sizes, and had conducted an environmental scan to identify existing models, activities, or measures that met all or part of the improvement activities performance category, including the patient-centered medical homes, the Transforming Clinical Practice Initiative (TCPI), CAHPS surveys, and AHRQ’s Patient Safety Organizations. In addition, we reviewed the CY 2016 PFS final rule with comment period (80 FR 70886) and the comments received in response to the MIPS and APMs RFI regarding the improvement activities performance category.

For Year 2, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive improvement activities

²⁴³ The Quality Payment Program help desk tracks, documents, and resolves inquiries submitted by MIPS eligible clinicians and groups. Stakeholders may submit inquiries to the help desk via 1-866-288-8292 (Monday–Friday 8 a.m.–8 p.m. ET) or email QPP@cms.hhs.gov.

Inventory for the Quality Payment Program Year 2 and future years through subregulatory guidance (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf). In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for Year 3 and future years, we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the improvement activities Inventory, including the requirement to submit a nomination form similar to the one we utilized for Year 2 (82 FR 53656 through 53659). In order to submit a request for a new activity or a modification to an existing improvement activity, the stakeholder must submit a nomination form available at www.qpp.cms.gov during the Annual Call for Activities.

(A) Timeframe for the Annual Call for Activities

We refer readers to the CY 2019 PFS final rule (83 FR 59781 through 59782) for our most recent policies with respect to the timeframe for the Annual Call for Activities. We did not propose any changes to this policy for CY 2022. However, we refer readers to section IV.A.3.d(3)(c)(i)(B)(aa) of this final rule where we adopt changes to the timeframe for nominating new improvement activities during a PHE.

(B) Changes for Nominating New Improvement Activities

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77190), the initial improvement activities Inventory was not based on established criteria. Rather, it was compiled via stakeholder input; an environmental scan; MIPS and APMs RFI comments; subsequent working sessions with AHRQ and ONC; and additional communications with CDC, SAMHSA, and HRSA. In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the improvement activities Inventory. We stated that we would use the criteria when selecting measures for inclusion in the program. In the CY 2019 PFS final rule (83 FR 59778 through 59779), we adopted one new criterion and removed a criterion from the improvement activities nomination criteria. We also clarified our considerations in selecting improvement activities. In the CY 2022

PFS proposed rule (86 FR 39405 through 39408), we proposed: (1) Changes to the timeframe for improvement activities nomination during a PHE; (2) two new improvement activities criteria; (3) to increase the required minimum number of criteria that must be met for improvement activities nominations; and (4) to separate required from optional criteria for improvement activities nominations. These proposals are discussed in detail below.

(aa) Changes to the Timeframe for Nominating New Improvement Activities During a PHE

In the CY 2021 PFS final rule (85 FR 84882 through 84883), we finalized an exception to the Annual Call for Activities providing that, during a PHE, stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe. Instead of only accepting nominations and modifications submitted February 1 through July 1 each year, we adopted a policy to accept nominations for the duration of the PHE, as long as the improvement activity is still relevant. No other aspect of the Annual Call for Activities process was affected (for example, criteria for nominating improvement activities, considerations for selection of improvement activities, or weighting policies all still apply). We noted that we continue to believe that it is important for stakeholders to be able to comment on improvement activities. Therefore, any improvement activity related to the PHE considered for inclusion in the Inventory will need to be finalized through rulemaking.

In 2020, we used several IFCs to propose necessary policies due to the PHE for COVID-19, including adding and modifying the COVID-19 Clinical Data Reporting with or without Clinical Trial (IA_ERP_3) for implementation in the same year. However, we want to be clear that we are not limited to implementing policies through IFCs, and those vehicles may not be the most timely or feasible for a particular situation. In a typical year, we use various fiscal and calendar year rules to implement policy (for example, the IPPS, Inpatient Psychiatric Facility Prospective Payment System (IPF PPS), OPFS, etc. rules). In order to best operationalize our policy for improvement activities nominated during a PHE, we proposed to modify our policy such that these nominations should be submitted by January 5 of the year in which the activity is targeted for implementation, unless otherwise specified by CMS, in order to maximize

the chance that a potential improvement activity could be implemented in the same year via the most timely rulemaking vehicle.

We received public comments on our proposal regarding the improvement activities nominations received during a PHE. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported CMS' proposals for nominating new improvement activities during the national PHE for COVID-19.

Response: We appreciate the support of commenters.

After consideration of public comments, we are finalizing this policy as proposed.

(bb) Currently Adopted Criteria

In the CY 2017 Quality Payment Program final rule (81 FR 77190 through 77195), we discussed guidelines for the selection of improvement activities. In the CY 2018 Quality Payment Program final rule (82 FR 53660), we formalized the Annual Call for Activities process for Year 3 and future years and added additional criteria: Stakeholders should apply one or more of the below criteria when submitting nominations for improvement activities. In addition, in the CY 2019 PFS final rule (83 FR 59779) we added a "public health emergency as determined by the Secretary" criterion, and in the CY 2021 PFS final rule (85 FR 84883 through 84884) we added an "Include activities which can be linked to existing and related MIPS quality and cost measures, as applicable and feasible" criterion. The current criteria are listed below.

- Relevance to an existing improvement activities subcategory (or a proposed new subcategory);
- Importance of an activity toward achieving improved beneficiary health outcomes;
- Importance of an activity that could lead to improvement in practice to reduce health care disparities;
- Aligned with patient-centered medical homes;
- Focus on meaningful actions from the person and family's point of view;
- Support the patient's family or personal caregiver;
- Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care);
- Feasible to implement, recognizing importance in minimizing burden, especially for small practices, practices in rural areas, or in areas designated as geographic HPSAs by HRSA;

- Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes;
- Include activities which can be linked to existing and related MIPS quality and cost measures, as applicable and feasible;
- Include a PHE as determined by the Secretary; or
- CMS is able to validate the activity.

(cc) Proposed Two New Criteria

We proposed two new criteria beginning with the CY 2022 Annual Call for Activities MIPS improvement activities: Activities (1) should not duplicate other improvement activities in the Inventory; and (2) should drive improvements that go beyond standard clinical practices. Regarding the first proposed criterion, we believe that there should not be duplicate activities in the Inventory as MIPS eligible clinicians could get double credit for doing the same activity. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77185), while the minimum reporting period for one improvement activity is 90 days, the maximum frequency for which an improvement activity may be reported is once during the 12-month performance period. It is important that stakeholders review the current Inventory to ensure there is not a broader improvement activity that MIPS eligible clinicians could attest to for the same activity. Regarding the second proposed criterion, we believed that improvement activities should drive improvements that go beyond standard clinical practices and should be innovative, to have the potential for significant patient benefit when MIPS eligible clinicians learn and implement the activities.

We received public comments on our proposal regarding the two new criteria for considering new improvement activities. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the addition of these additional criteria stating that they believe the new criteria will ensure high quality improvement activities. Many commenters supported the proposal of two new criteria, agreeing that new improvement activities should not be duplicative.

Response: We appreciate the support of these commenters.

After consideration of public comments, we are finalizing this policy as proposed.

(dd) Minimum Requirement

We have received feedback from stakeholders through the Annual Call

for Activities process and during the CY 2021 PFS rulemaking process that the nomination acceptance process is unclear, stakeholders are frustrated by nominating improvement activities that are not accepted, and our reasoning for not accepting their nominations is not clear.

Our current policy requires that stakeholders apply one or more of the established criteria when submitting a nomination through the Annual Call for Activities process for a new improvement activity (82 FR 53660). Through past Annual Calls for Activities, we have found that many of the nominations that we receive meet the minimum one criterion, but are not appropriate for inclusion in the Inventory for other reasons. We often receive submissions describing practices that are standard and submissions that are too specific to a particular specialty. We believe that when evaluating nominations, we should use multiple factors in deciding on the selection of submitted improvement activities, not all of which can be listed up front. Ultimately, we must rely on our internal processes and expertise in determining whether or not a nominated improvement activity meets the criteria and needs of the program. However, in an effort to increase transparency, we have reevaluated our criteria and believe there are a number of significant criteria that improvement activity proposals should meet to be included in the Inventory. Therefore, beginning with nominations submitted during the 2022 nomination period for the Annual Call for Activities, we proposed to increase the number of criteria stakeholders are required to meet when submitting an activity proposal, from a minimum of one to eight criteria, which include the two newly adopted criteria described in section IV.A.3.d(3)(c)(i)(B)(cc) of this final rule.

We believed that the following eight criteria, six of which are on the current list and two of which were proposed (in *italics*), should be the foundation for all improvement activities:

1. Relevance to an existing improvement activities subcategory (or a proposed new subcategory) (82 FR 53660);
2. Importance of an activity toward achieving improved beneficiary health outcomes (82 FR 53660);
3. Feasible to implement, recognizing importance in minimizing burden, including, to the extent possible, for small practices, practices in rural areas, or practices in areas designated as geographic HPSAs by the Health Resources and Services Administration (HRSA) (82 FR 53660);

4. Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes (82 FR 53660);

5. Can be linked to existing and related MIPS quality, Promoting Interoperability, and cost measures as applicable and feasible (85 FR 84884);

6. CMS is able to validate the activity (82 FR 53660);

7. *Does not duplicate other improvement activities in the Inventory; and*

8. *Should drive improvements that go beyond purely common clinical practices.*

When we previously finalized the first six criteria in prior rulemakings, we did not specifically require activity nominations to meet all the criteria. In crafting this proposal, we noted that we are seeking to minimize improvement activity nominations that do not meet program standards and to increase nominations that will substantively contribute to improved patient care and outcomes.

We also considered whether any of the above proposed required criteria should be optional (see section IV.A.3.d(3)(c)(i)(B)(cc) of this final rule). Ultimately, we proposed that the above criteria should not be optional because we believe these reflect the minimum standard for improvement activities in the Inventory and will help increase transparency in our decisions.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

(ee) Optional Factors

We proposed that the remaining six previously established factors would serve as optional factors beginning with nominations submitted during the 2022 nomination period for the Annual Call for Activities as we believe they may be relevant to certain nominations, but not all. We stated that meeting one or more of the optional factors may increase a nomination's chances of being added to the Inventory. The proposed optional factors were:

1. Alignment with patient-centered medical homes (82 FR 53660);
2. Support for the patient's family or personal caregiver (82 FR 53660);
3. Responds to a PHE as determined by the Secretary (83 FR 59779);
4. Addresses improvements in practice to reduce health care disparities (82 FR 53660);
5. Focus on meaningful actions from the person and family's point of view (82 FR 53660); and
6. Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for

example, primary care, specialty care) (82 FR 53660).

The following is a summary of the comments we received and our responses.

Comment: One commenter requested that CMS clarify what is considered “standard clinical practice.” Another commenter stated that the criteria of driving improvements that go beyond standard clinical practices might be unrealistic. They stated that if there are gaps in standard clinical practice that need improvement, those gaps should be addressed, particularly for members in niche specialties or particularly high risk or vulnerable populations. They believe that the current weighting system for Improvement Activities is sufficient to help MIPS eligible clinicians prioritize high weight activities that go beyond standard clinical practice.

Response: We thank the commenter for their perspective on standard clinical practice. We consider standard clinical practice to be the standard of care: Actions that all clinicians should do all the time as part of their care. Examples include obtaining an informed consent before surgery or counting instruments/suture needles at the end of a surgery to ensure nothing was left in the patient. We believe that improvement activities should drive improvements that go beyond the floor for competent clinical practices and should be innovative, in order to have the potential for significant patient benefit when MIPS eligible clinicians learn and implement the activities.

After consideration of public comments, we are finalizing these policies as proposed.

(C) Improvement Activity Removal

In the CY 2020 PFS final rule (84 FR 62988 through 62990), we finalized the factors for consideration in removing improvement activities from the Inventory. Under this process, we fully examine each activity prior to its removal and commenters have an opportunity to provide their input during notice-and-comment rulemaking.

(aa) Improvement Activity Suspension Policy

We noted that a circumstance came to our attention that required us to examine the specifics of the improvement activities removal of activities policy in relation to the performance period. Following the publication of the CY 2021 PFS proposed rule, we became aware that the underlying program for one of the improvement activities in the Inventory had expired on March 31, 2020.

Therefore, MIPS eligible clinicians could no longer complete the activity from April 1 through December 31, 2020. To avoid any potential confusion or incorrect attestation, we removed this activity in the CY 2021 PFS final rule (85 FR 84885). We stated that this occurrence alerted us to the potential that other activities could become obsolete or be impacted by clinical practice guideline changes that affect the activity and could potentially result in patient harm, and that we may not learn about this information during the rulemaking timeframes. Because changes made in rulemaking do not apply until the following performance period, this timing could affect an improvement activity that needs to be urgently addressed.

As a result, beginning with the CY 2022 performance period, we proposed that in the case of an improvement activity for which there is a reason to believe that the continued inclusion raises possible patient safety concerns or is obsolete, we would promptly suspend the improvement activity and immediately notify MIPS eligible clinicians and the public through the usual communication channels, such as listservs and Web postings. We stated that we would then propose to remove or modify the improvement activity as appropriate in the next rulemaking cycle.

We received public comments on the improvement activity removal outside of the rulemaking cycle. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to suspend and remove improvement activities that the agency believes raise patient safety concerns or are obsolete.

Response: We thank commenters for their support.

Comment: One commenter stated that declaring an activity “obsolete” during the performance period seems inappropriate. There should be adequate review ahead of the start of the performance period to remove any improper activities. Another commenter questioned what would happen if a MIPS eligible clinician selects an improvement activity and begins implementation and later in the year the improvement activity is suspended.

Response: While it is not our preference to remove improvement activities during the performance period, despite our best efforts, we may become aware that an improvement activity is obsolete during the performance period. Therefore, we believe that it is necessary to be able to remove activities during the

performance period—especially in situations where all or part of the improvement activity is not available for MIPS eligible clinicians to utilize. In instances where we do remove an improvement activity during the performance period, the MIPS eligible clinician completed the activity, they will still be able to attest for that activity and will not need to select a different improvement activity.

After consideration of public comments, we are finalizing these policies as proposed.

(ii) Changes to the Improvement Activities Inventory

(A) Background

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would establish improvement activities through notice-and-comment rulemaking. We refer readers to Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), Tables A and B in the Appendix 2 of the CY 2019 PFS final rule (83 FR 60286 through 60303), Tables A, B, and C in the Appendix 2 of the CY 2020 PFS final rule (84 FR 63514 through 63538), and Tables A, B, and C in the Appendix 2 of the CY 2021 PFS final rule (85 FR 85370 through 85377) for our previously finalized improvement activities Inventory. We also refer readers to the Quality Payment Program website under Explore Measures and Activities at <https://qpp.cms.gov/mips/explore-measures?tab=improvementActivities&py=2020> for a complete list of the current improvement activities. In this final rule, we are adding 7 new improvement activities, modifying 15 existing improvement activities, and removing 6 previously adopted improvement activities for the CY 2022 performance period and future years. We refer readers below and to Appendix 2 of this final rule for more details.

(B) Changes to Adopted Improvement Activities

(aa) Changes to the “Drug Cost Transparency To Include Requirements for Use of Real-Time Benefit Tools” Improvement Activity

In the CY 2020 PFS final rule (84 FR 63515), we adopted IA_BE_25, titled “Drug Cost Transparency to include requirements for use of real-time benefit tools” beginning with the 2020 performance year and for subsequent years. This activity description reads as follows:

To receive credit for this improvement activity, MIPS eligible clinicians must attest that their practice provides counseling to patients and/or their caregivers about the costs of drugs and the patients' out-of-pocket costs for the drugs. If appropriate, the MIPS eligible clinician must also explore with their patients the availability of alternative drugs and patients' eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of pharmaceuticals could be a real-time benefit tool (RTBT), which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. (CMS finalized in the Modernizing Part D and Medicare Advantage to Lower Drug Prices and Reduce Out of Pocket Expenses final rule (84 FR 23832, 23883) that beginning January 1, 2021 Medicare Part D plans will be required to implement one or more RTBT(s)).

Thus, this activity allows a RTBT to be one source of information for the pricing of pharmaceuticals, which provides to the prescriber real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary.

The 2021 Consolidated Appropriations Act (H.R. 116–133, Pub. L. 116–260) included section 119 in Division CC entitled “Increasing the use of real-time benefit tools to lower beneficiary costs.” Subsection (c) of section 119 includes a provision called “Inclusion of Use of Real-Time Electronic Information in Shared Decision-Making Under MIPS.” This provision amends section 1848(q)(2)(B)(iii)(IV) of the Act to require that this subcategory shall include as an activity, for performance periods beginning on or after January 1, 2022, the use of a RTBT as described in section 1860D–4(o) of the Act. In addition, the amendment provides that the Secretary may establish this activity as a standalone activity or as a component of another activity.

In accordance with this statutory requirement, we proposed to modify the IA_BE_25 improvement activity such that, beginning with the CY 2022 performance period and for subsequent years, the activity will require the use of an RTBT. As previously finalized, use of an RTBT was optional. We refer readers to Appendix 2 of this final rule for additional details regarding our adoption of this policy, including a summary of the comments received and our responses.

(bb) Changes to the COVID–19 Clinical Data Reporting With or Without Clinical Trial (IA_ERP_3) Improvement Activity

We refer readers to the March 31 IFC for COVID–19 (85 FR 19276 through 19277) and the September 2 COVID–19 IFC (85 FR 54848 through 54851) for a regulatory history of this improvement activity. In the September 2 COVID–19 IFC, we extended the modified COVID–19 Clinical Data Reporting with or without Clinical Trial improvement activity through the CY 2021 performance period due to the continued COVID–19 infections we were experiencing nationwide. We anticipated the need for COVID–19 clinical trials and data collection/sharing through registries to continue through CY 2021 at which time we will reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these types of data are not needed.

We again proposed to extend the COVID–19 Clinical Data Reporting with or without Clinical Trial improvement activity for the CY 2022 performance period and future years due to the continued COVID–19 infections we are experiencing nationwide and the need for further research. We stated that clinicians will continue to treat beneficiaries with COVID–19, and we anticipate the need for COVID–19 clinical trials and data collection/sharing through registries to continue, through CY 2022 and future years. For each year after 2022, we intend to reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these types of data are not needed. We believe that it is important for MIPS eligible clinicians to be able to attest to this improvement activity if it is still pertinent. Further, we believe that participation in this improvement activity is likely to result in improved outcomes by improving the collection of data that MIPS eligible clinicians use for the care of their patients as they monitor and manage COVID–19. We will continue to reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these types of data are not needed and will discontinue the activity through notice-and-comment rulemaking as needed. We also refer readers to Appendix 2 of this final rule for details regarding our adoption of this policy, including a summary of the comments received and our responses.

(4) Promoting Interoperability Performance Category

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record technology (CEHRT) as a performance category under the MIPS. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of the MIPS shall be used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the Promoting Interoperability performance category.

(b) Promoting Interoperability Performance Category Performance Period

As finalized in the CY 2021 PFS final rule at § 414.1320(g)(1) (85 FR 84886), for the 2024 MIPS payment year, and each subsequent MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Thus, for the CY 2024 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within CY 2022, up to and including the full CY 2022 (January 1, 2022 through December 31, 2022). We did not propose any changes to the Promoting Interoperability performance category performance period that we established under § 414.1320(g)(1) (85 FR 84886).

(c) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

(i) Changes to the Query of Prescription Drug Monitoring Program Measure Under the Electronic Prescribing Objective

(A) Measure Background

We have adopted a Query of Prescription Drug Monitoring Program (PDMP) measure under the Electronic Prescribing objective. For background on this measure, we refer readers to the CY 2019 PFS final rule (83 FR 59800 through 59803) and the CY 2020 PFS final rule (84 FR 62992 through 62994). In the CY 2021 PFS final rule (85 FR 84887 through 84888), we finalized that the Query of PDMP measure will remain optional and eligible for 10 bonus points for the CY 2021 performance period/CY 2023 MIPS payment year.

(B) State PDMPs' Progress and Previous Stakeholder Feedback

In the CY 2020 and CY 2021 PFS final rules (84 FR 62992 through 62994 and 85 FR 84887 through 84888), we described the concerns expressed by stakeholders that they believed it was premature for the Promoting Interoperability performance category to require the Query of PDMP measure and score it based on performance. In the CY 2022 PFS proposed rule (86 FR 39410) we discussed our support of efforts to expand the use of PDMPs, describing federally supported activities aimed at developing a more robust and standardized approach to EHR–PDMP integration, and additional discussions on the feedback we have received from health IT vendors and MIPS eligible clinicians thus far. For more detailed information, we refer readers to the CY 2022 PFS proposed rule (86 FR 39410).

(C) Measure Changes

Given current efforts to improve the technical foundation for EHR–PDMP integration, the continued implementation of the SUPPORT for Patients and Communities Act (in particular, its provisions specific to Medicaid providers and qualified PDMPs), our ongoing review of alternative measure approaches, and stakeholder concerns about the current readiness across States for implementation of the existing measure, we believe that at least 1 more year is needed prior to potentially requiring the Query of PDMP measure.

While we appreciate the concerns that stakeholders have shared, we continue to believe that this measure can play an important role in helping to address the opioid crisis. By integrating PDMP data into the health record, health care providers can improve clinical decision making by utilizing this information to identify potential opioid use disorders, inform the development of care plans, and develop effective interventions. Maintaining this as an optional measure with bonus points signals to the MIPS eligible clinician and vendor community that this is an important measure to address a current gap that can help spur development and innovation in order to reduce barriers and challenges.

Therefore, in the CY 2022 PFS proposed rule (86 FR 39409 through 39410), we proposed to maintain the Electronic Prescribing Objective's Query of PDMP measure as optional and worth 10 bonus points for the CY 2022 performance period/CY 2024 MIPS payment year. We received public comments on our proposal, and the

following is a summary of the comments we received.

Comment: All commenters were supportive of our proposal to maintain the Electronic Prescribing Objective's Query of PDMP measure in the CY 2022 MIPS performance period/CY 2024 MIPS payment year as optional and worth 10 bonus points. One commenter shared that PDMP data has the capacity to improve patient care, and could aid in addressing the opioid crisis. A few commenters shared that 10 bonus points provides MIPS eligible clinicians enough incentive for participation.

Response: We acknowledge that the time required for State programs to advance EHR–PDMP integration may vary, and we will continue to collaborate with the Office of the National Coordinator for Health Information Technology (ONC) to develop additional approaches to sharing data with PDMPs. Finalizing this proposal provides at least 1 additional year for States and other stakeholders to make greater progress toward improving interoperability across systems.

Comment: Several commenters supported our proposal, but suggested that this measure should remain optional indefinitely, unless or until all States and EHRs share the same functional capabilities. Some commenters suggested that the measure remain as a “yes/no” attestation, rather than being considered as a numerator/denominator measure in the future.

Response: We thank commenters for sharing their suggestions for the Query of PDMP measure in the future. We believe the Query of PDMP measure will be a useful and informative measure as more State PDMPs and EHR systems are effectively integrated. We refer readers to the CY 2022 PFS proposed rule (86 FR 39410) for an overview of the key efforts aimed towards improving the technical approaches to EHR–PDMP integration, including the implementation of key provisions from the SUPPORT for Patients and Communities Act. We may take commenters' feedback under consideration in future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal to maintain the Query of PDMP measure as optional and worth 10 bonus points for the CY 2022 performance period/2024 MIPS payment year. The maximum total points available for the Electronic Prescribing Objective will remain at 20 points for the CY 2022 performance period/2024 MIPS payment year. Last, we received many public comments in response to our request for comment in

the CY 2022 PFS proposed rule (86 FR 39410 through 39411) regarding the future of the Electronic Prescribing Objective's Query of PDMP measure. We thank commenters for this feedback and may consider this information to inform future rulemaking.

(ii) Changes to the Provide Patients Electronic Access to Their Health Information Measure Under the Provider to Patient Exchange Objective

(A) Background

In the CY 2019 PFS final rule (83 FR 59812 through 59815), we renamed the Patient Electronic Access Objective to the Provider to Patient Exchange Objective, which includes the Provide Patients Electronic Access to Their Health Information measure. For more information about the Provide Patients Electronic Access to Their Health Information measure, we refer readers to the following preamble discussions in prior rulemaking: 84 FR 62995 and 62999 through 63000, 83 FR 59812, 82 FR 53674, 81 FR 77228, 80 FR 62841 through 62851, 77 FR 54007, and 75 FR 44353.

(B) Data Availability Requirement for MIPS eligible clinicians

The Provide Patients Electronic Access to Their Health Information measure requires, for at least one unique patient seen by the MIPS eligible clinician: (1) The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and (2) the MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT (84 FR 62999 through 63000 and 82 FR 53674). In the CY 2022 PFS proposed rule (86 FR 39411 through 39412), we proposed to modify this measure to require MIPS eligible clinicians to ensure that patient health information remains available to the patient (or patient-authorized representative) to access indefinitely and using any application of their choice that is configured to meet the technical specifications of the API in the MIPS eligible clinician's CEHRT. MIPS eligible clinicians would be required to ensure this information remains available indefinitely (that is, not merely for a defined period of time). The proposed requirement would apply beginning with the performance period

in 2022, and would include all patient health information from encounters on or after January 1, 2016.

Currently, the Provide Patients Electronic Access to Their Health Information measure does not specify how long MIPS eligible clinicians are required to make patient data available, or to ensure that patient data remain available to patients in the event that a MIPS eligible clinician switches EHR vendors (81 FR 77228). In an effort to minimize stakeholder burden, we wanted to align the date under our proposal for making information about encounters available, with the date of service start date (January 1, 2016) as finalized in the Patient Access and Interoperability final rule (85 FR 25528), and as proposed for the Promoting Interoperability Program for eligible hospitals and CAHs in the FY 2022 IPPS/LTCH proposed rule (86 FR 25631). As an alternative to our proposal, we considered different encounter start dates, such as encounters on or after January 1, 2012, or encounters on or after January 1, 2019. We believed, however, that a requirement for MIPS eligible clinicians to ensure patient health information remains available indefinitely, as well as an encounter start date of January 1, 2016, would provide the most benefit to patients when accessing their health information as compared to the burden and costs to MIPS eligible clinicians implementing these proposed requirements.

We sought public comment on our proposal to modify the Provide Patients Electronic Access to Their Health Information measure, as well as the alternatives we considered and discussed above, and received the following comments.

Comment: One commenter supported our proposal, stating that the benefit to patients outweighs the burden to MIPS eligible clinicians.

Response: We would like to thank this commenter for their support, and agree that providing patients (or their patient authorized representatives) access to their data is beneficial.

Comment: Many commenters supported the principle that patients should have prompt access to their data with minimal effort, but did not support our proposal as it was proposed. Several commenters stated that the lack of clarity around key terminology was a main concern. Specifically, commenters requested additional clarification on how CMS is defining an “indefinite” timeline, what specific data would be included in “all patient health information,” and how we will address software platform changes and/or

system updates given these terms. Last, many commenters asked that we provide exclusions for this measure to allow exceptions for those unable to meet the measure requirements, as exclusions were not discussed in the proposed rule.

Response: We agree that patients (or their patient authorized representatives) should have access to their data with minimal effort. We appreciate the requests from commenters requesting additional clarification on the terms used in the proposal, including “indefinite” and “all patient health information”. We agree with commenters that we need to more clearly define what an “indefinite” timeline entails, as well as to more clearly define what specific data should be included in “all patient health information.” We agree with commenters that we need to consider defining and allowing for exclusions as well, with the understanding that there are varying limitations between eligible clinicians. We agree that as proposed, this modification needs additional clarification, and for these reasons, we are not finalizing this proposal at this time. In the future, we will be seeking additional feedback from MIPS eligible clinicians, in the event that we decide to propose changes to the measure in future rulemaking.

Regarding software platform changes, we would like to note that the ONC 21st Century Cures Act final rule established a new criterion, “electronic health information export” at 45 CFR 170.315(b)(10), which requires a certified health IT module to electronically export all electronic health information (EHI), as defined in § 171.102, that can be stored at the time of certification by the product of which the health IT module is a part (85 FR 25690 through 25693). A health IT developer of certified health IT products, which, at the time presented for certification electronically stores EHI, must certify such products to this new criterion and make these products available to their customers by December 31, 2023. We believe this certified functionality will further support the capability to seamlessly transfer electronic health information between systems.

Comment: A few commenters shared concerns regarding potential conflict between State laws and our proposed data availability requirement, and also potential conflict between State laws and our proposed requirement to make “all patient health information” available. One example shared by commenters is that different States have different requirements for data retention

(mentioned were 7 and 10 years), as opposed to our proposal for an “indefinite” availability period. Another commenter shared that some States have laws requiring that physicians withhold certain patient health information from being released (specifically, California protected health information laws were shared), where our proposal included “all patient health information,” non-specific of any exclusions. Commenters have requested that CMS continue to work alongside ONC and the Patient Access and Interoperability teams to ensure that we address these discrepancies between State and Federal policy.

Response: We agree with commenters that we need to continue our collaborative efforts with the CMS Patient Access and Interoperability team and ONC as we consider how we might address these issues in future rulemaking. We also agree with commenters that we need to address varying data availability requirements between individual States, potential discrepancies between State and Federal policy, and ensure that we also account for State protected personal health information. For these reasons, we are not finalizing our proposal at this time. Instead, we may hold a listening session in the future where we welcome feedback as we continue to consider potential revisions to this measure amidst the feedback we have received.

Comment: Many commenters did not support our proposal but offered suggestions for CMS to consider. A few commenters suggested that CMS consider setting expectations on a forward-looking basis rather than taking a retrospective approach. Some commenters suggested that CMS consider working more closely with ONC to clearly distinguish between USCDI and the larger set of electronic health information as defined in the ONC Information Blocking rules. Another commenter requested that CMS ensure this policy is aligned with ONC’s requirements for certified health IT. One commenter suggested that CMS allow for a rolling timeframe where 6 years’ worth of data are maintained, but that those years not be fixed.

Response: We agree with the commenters’ suggestions and will continue to collaborate with the CMS Patient Access and Interoperability team and ONC, especially regarding the feedback commenters shared above. We agree with commenters that it is important to distinguish between the data included in the USCDI, which is relevant to the Provide Patients Access to their Health Information measure, and the information included in the

electronic health information definition. We agree with commenters that additional work is essential on this proposal and will not be finalizing it at this time. As mentioned previously, CMS may hold a listening session in the future where we welcome additional feedback as we consider this measure for future rulemaking.

After consideration of the public comments we received, we are not finalizing our proposed modifications to the Provide Patients Electronic Access to Their Health Information measure. We wish to emphasize that CMS and HHS strongly believe that a patient's health information should remain available to the patient (or patient-authorized representative) through the technology currently required to successfully report on the Provide Patient Access to the Health Information measure. We will take commenters' suggestions under consideration and will seek further input as we consider whether to propose changes to the measure in future rulemaking.

(iii) Modifications to the Public Health and Clinical Data Exchange Objective

(A) Background

In the CY 2019 PFS final rule (83 FR 59795, 59815 through 59817), for the Public Health and Clinical Data Exchange Objective, we finalized that a MIPS eligible clinician must submit a yes/no response for two different public health agencies or clinical data registries for any of the five measures associated with the Public Health and Clinical Data Exchange objective (Syndromic Surveillance Reporting; Immunization Registry Reporting; Clinical Data Registry Reporting; Electronic Case Reporting; and Public Health Registry Reporting) to earn 10 points for the objective. Failure to report on two different public health agencies or clinical data registries or submitting a "no" response for a measure will earn a score of zero. If an exclusion is claimed for one measure, but the MIPS eligible clinician submits a "yes" response for another measure, they will earn the 10 points for the objective. If a MIPS eligible clinician claims exclusions for both measures they select to report on, the 10 points will be redistributed to the Provide Patients Electronic Access to Their Health Information measure under the Provider to Patient Exchange objective.

Effective responses to public health events, such as the COVID-19 pandemic, require fast, accurate exchange of data between health care providers and Federal, State, tribal, local, and territorial public health

agencies (PHAs). Health care providers collect these data for patient care and PHAs need them to protect the public, whether to track an outbreak, initiate contact tracing, find gaps in vaccine coverage, or pinpoint the source of a foodborne outbreak.

While our current approach has encouraged health care systems to stand up some of these capabilities, significant gaps remain, and absent stronger incentives it will be difficult to stand up the comprehensive data exchange needed for future public health response. Thus, we believe that a more assertive approach is needed.

(B) Modifications to the Reporting Requirements for the Public Health and Clinical Data Exchange Objective

We proposed in the CY 2022 PFS proposed rule (86 FR 39412 through 39414) to require two of the measures associated with the Public Health and Clinical Data Exchange Objective, beginning with the performance period in CY 2022: Immunization Registry Reporting; and Electronic Case Reporting. Requiring these two measures will put PHAs on better footing for future health threats and a long-term COVID-19 pandemic recovery by strengthening two important public health functions: (1) Vaccine uptake; and (2) case surveillance. Requiring these measures will enable automated case reporting for fast public health response; and local and national visibility on immunization uptake so PHAs can tailor vaccine distribution strategies.

The following is a summary of the comments we received and our responses.

Comment: Many commenters agreed with the proposed modifications to the reporting requirements for the Public Health and Clinical Data Exchange Objective. They stated that the COVID-19 pandemic has underscored the value of consistent and high quality reporting of these public health measures and the proposed requirements would certainly greatly accelerate adoption of reporting for these measures. This regulatory requirement, in concert with the increased capabilities for such reporting, will better position the U.S. to identify and respond to current and future public health challenges. Another commenter agreed with the requirement of the Immunization Registry Reporting measure and the Electronic Case Reporting measure of the Public Health and Clinical Data Exchange objective stating that the recent pandemic has highlighted the need for immediate access to patient data for greater public health. A commenter supported our

proposals stating that requiring those measures is an excellent step toward improving real-time, electronic data exchange from eligible clinicians to public health agencies. This will help ensure that public health and clinical communities collaborate as a unified health system to act quickly and keep our people safe and healthy.

Response: We thank commenters for their support and we appreciate their rationales.

Comment: One commenter agreed with the value of and need for public health data exchange, but added that public health registries and other mechanisms for data exchange have not been universally adopted because they are not integrated into physicians' clinical workflow and CEHRT does not have a user-centered experience for data submission and use of these registries. They added that the problem is not that physicians are unwilling to report to public health registries, but rather that the current process for doing so is overly burdensome and in some cases prohibitively expensive.

Response: We thank the commenter for their feedback, and understand that physicians and other clinicians are eager to report to public health agencies. The ONC Health IT Certification Program ensures that the health care provider's health IT is capable of capturing and reporting data to PHAs. Moreover, we note that the eCR Now application and platform offered by the CDC and other partners is designed so that it operates in the background of the EHR system, using information that is captured in the EHR as part of care delivery, and does not interrupt the clinician's workflow. Automating the generation and transmission of case reports electronically reduces the burden on health care providers to accomplish this reporting requirement. To learn more about ways that eCR Now works, please visit <https://www.cdc.gov/ecr/index.html>. We also remind readers that there are exclusions available for the Immunization Registry Reporting and Electronic Case Reporting measures (83 FR 35929 through 35930).

Comment: Some commenters did not support our proposal and urged CMS to consider allowing practices to attest to their choice of any two of the registries from the objective as the requirements are currently structured. One added that allowing practices to choose any two of the available registries would enable most practices to be able to attest without having to claim an exclusion.

Response: We believe that letting clinicians choose to report any two different public health agencies or clinical data registries for the Public

Health and Clinical Data Exchange objective is no longer effective in our current PHE environment. Further, both immunization reporting and electronic case reporting are both supported with corresponding ONC Certification Criteria (§ 170.315(f)(1) and (f)(5)) that were finalized in 2015. We proposed the modifications to better prepare the healthcare system and public health agencies for future health threats and long-term pandemic recovery by strengthening critical public health functions through the use of CEHRT.

Comment: Many commenters urged CMS to delay implementing the requirement to report on the Immunization Registry Reporting and Electronic Case Reporting measures. One stated that clinicians need at least a year to find, register, and implement reporting to a public health agency without penalty. Therefore, CMS should, at most, announce its intention of implementing this change but delay the implementation until the performance year 2023 to give clinicians adequate time to meet the new requirements.

Response: We do not believe that it is necessary to delay these requirements. We established multiple exclusions for each measure for those MIPS eligible clinicians who may not be able to report on these measures due to the scope of their practice (83 FR 59815). We also established three levels of active engagement which indicate the progress a clinician is making toward sending production data to a public health agency (80 FR 62863 through 62864). We remind readers of option 1, the first level of active engagement—Completed Registration to Submit Data (80 FR 62863 through 62864): The MIPS eligible clinician registered to submit data with the PHA or, where applicable, the clinical data registry (CDR) to which the information is being submitted; registration was completed within 60 days after the start of the MIPS performance period; and the MIPS eligible clinician is awaiting an invitation from the PHA or CDR to begin testing and validation. This option allows MIPS eligible clinicians to meet the measure when the PHA or the CDR has limited resources to initiate the testing and validation process. MIPS eligible clinicians that have registered in previous years do not need to submit an additional registration to meet this requirement for each MIPS performance period.

(aa) Immunization Registry Reporting Measure

Immunizations are considered one of the ten great public health achievements

and have resulted in declines in cases, hospitalizations, deaths, and health care costs associated with vaccine preventable diseases.²⁴⁴ The benefits and value of immunizations are realized when public policy, health systems, and community-based intervention efforts are working in coordination. Ensuring the coordination of these efforts can achieve high immunization coverage is dependent on the availability of timely, accurate, and complete information on vaccinations received by individuals in a population.

Immunization registries (also called immunization information systems, or IIS) are powerful tools that allow collaboration between vaccine providers and public health agencies and enable coordination of population-based interventions. Immunization registries are confidential, population-based, computerized systems that record all vaccination doses administered by participating health care providers for individuals residing within a particular jurisdiction. At the point of clinical care, an immunization registry can provide consolidated immunization histories to assist vaccine providers in determining appropriate patient vaccinations. At the population level, immunization registries provide data on vaccination coverage assessment and program operations and in guiding public health action to improve vaccination rates.

Currently, 50 States, the District of Columbia, eight island territories, and three cities (New York City, Philadelphia, and San Diego) operate an immunization registry. CDC provides technical assistance and nationwide leadership to all State immunization registries to ensure the optimal use of immunization registries for determining vaccination coverage at local, State, and national levels. Immunization registries already have connections in place to capture administered doses in real-time for a substantial portion of the population, a process accelerated over the last 10 years by the Medicare and Medicaid Promoting Interoperability Programs. According to data from the most recent CDC IIS Annual Report (2019) available, immunization registries currently hold demographics and immunization data on 95 percent of children 0–6 years, 82 percent of adolescents, and 60 percent of adults.²⁴⁵ While each State Immunization registry currently coordinates with health care providers and EHR systems to achieve

interoperability and facilitate immunization reporting, varying State reporting policies limit the completeness and timeliness of records in immunization registries and the optimal use of immunization registries for determining vaccination coverage.

We proposed in the CY 2022 PFS proposed rule (86 FR 39412 through 39413) to make the Immunization Registry Reporting a required measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the CY 2022 performance period/CY 2024 MIPS payment year as it is critical for understanding vaccination coverage both at the jurisdiction level and nationwide and identifying where additional vaccination efforts are needed. For more information about the Immunization Registry Reporting measure, we refer readers to the preamble discussion in prior rulemaking at 81 FR 77230. Making standardized reporting to an immunization registry a required measure will provide an immediate benefit by increasing the COVID–19 vaccination records reported to these systems. Making the measure required will also improve the data quality of records in immunization registries and facilitate use of immunization registries for clinical decision support and tracking of vaccine administration and distribution.

We believe that making the Immunization Registry Reporting measure required will increase the reporting of immunization data by health care providers to public health agencies. Making the measure required is also critical for the COVID–19 vaccination response because it will provide a better view of the vaccines administered and distributed at national, State and local levels. This is a function that immunization registries currently provide for all public vaccines, but is particularly important for COVID–19 vaccines. In addition to the COVID–19 vaccination response is the equally important need for routine vaccination coverage to increase. Fear of COVID–19 has caused deferrals of routine vaccinations as patients limit their interactions, including with their family doctors. More complete data in immunization registries as a result of the required measure will also optimize the use of immunization registries to determine who has not been vaccinated, pockets of under vaccination, and identifying where interventions should be focused for routine and emergency response vaccines. Requiring the measure will reduce the regulatory and

²⁴⁴ Ten Great Public Health Achievements—United States, 2001–2010 ([cdc.gov](https://www.cdc.gov)).

²⁴⁵ <https://www.cdc.gov/vaccines/programs/iis/annual-report-iisar/2019-data.html>.

administrative burden health care providers experience when exchanging information with immunization registries.

We did not propose any changes to the description of the measure including any of the exclusions that we established in CY 2019 PFS final rule at 83 FR 59815 through 59817.

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to require the Immunization Registry Reporting measure. One stated that significant strides have been made in immunization reporting throughout the PHE that have enabled those that previously lacked the resources to successfully report on this measure to now do so. Another commenter strongly supported our proposal and stated that immunization reporting plays a critical role in improving vaccination at the point of clinical care, at the population health level, and to help address the health disparities which have only worsened during the pandemic. They stated that requiring the Immunization Registry Reporting measure could: (1) Increase reporting of immunization data into a centralized jurisdiction-based system—thereby increasing patient data completeness and quality in immunization registry reporting, (2) facilitate better inter- and intra-State data sharing between other immunization registry reporting, health systems, and other HIT systems, and (3) improve vaccination uptake and health equity by determining areas of under vaccination.

Response: We thank commenters for their support and we appreciate their rationales.

Comment: A commenter suggested that prior to requiring immunization registry reporting, CMS should ensure there are exclusions available if there is not a State immunization registry available for providers. Additionally, CMS should survey the State immunization registries to determine if there is readiness at the State level to conduct this level of exchange.

Response: The following exclusion has been available to MIPS eligible clinicians since the CY 2019 performance period/CY 2021 MIPS payment year (83 FR 35929): “Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period.” Every State, in addition to the District of Columbia, eight island territories, and three cities (New York City,

Philadelphia, and San Diego), operate an immunization registry. State reporting policies and the capability to receive immunization-related data vary across jurisdictions. CDC provides financial and technical support to improve data exchange within each jurisdiction. CDC publishes the Immunization Information Systems Annual Report (IISAR) which provides an assessment of jurisdictions’ efforts in developing, maintaining, and enhancing IIS activities for a given calendar year. CDC has developed an accompanying dashboard which allows the user to view a jurisdiction’s performance according to 26 domains, including interoperability and clinical-decision making.

After consideration of public comments, we are finalizing our proposal to make the Immunization Registry Reporting a required measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the CY 2022 performance period/CY 2024 MIPS payment year.

(bb) Electronic Case Reporting

Health care providers are required by State law to report certain diseases and conditions, a process called case reporting, which provides PHAs with data on approximately 120 diseases and conditions of public health significance.²⁴⁶ Case reporting is a vital and longstanding tool that PHAs use to prevent the spread of infectious diseases. Case reporting serves as early notification to PHAs for potential outbreaks and includes information that enables PHAs to start contact tracing and other prevention measures. Case reports also include critical clinical information that will not be included in syndromic surveillance or laboratory reporting, and can help to illuminate the impact of comorbidities, treatments, and variable access to care. Information from the case reports can be used to further work on social determinants of health and ensure equal access to preventative care across populations. Electronic case reporting is the automated, real-time, bidirectional exchange of case report information between EHRs and PHAs. Electronic case reporting uses standard codes to trigger the transfer of relevant clinical data to PHAs for case investigation and follow-up. As of March 2021, most States do not require electronic submission of case reports as part of their regulations and case reporting often occurs through outdated

manual methods (for example, fax, email, or phone), which results in delays, underreporting, and incomplete or inaccurate case data. Manual case reporting also imposes burdens on health care providers, taking staff time away from patients to submit case reports and comply with State reporting requirements. Electronic case reporting allows health care providers to fulfill mandated public health reporting requirements without imposing additional burden and disrupting the clinical workflow. This automated data exchange facilitates faster and more efficient disease tracking, case management, and contact tracing. Electronic case reporting provides more timely and complete data than manual reporting, including data on demographics, comorbidities, immunizations, medications, occupation, and other treatments.

Recent efforts by the CDC have sought to significantly improve the effectiveness of electronic case reporting through eCR Now, a strategic initiative that allows for rapid adoption and implementation of electronic case reporting for COVID-19 (<https://www.cdc.gov/coronavirus/2019-ncov/hcp/electronic-case-reporting.html>). As part of this initiative, CDC and its partners have developed an eCR Now FHIR® application (app) to establish electronic case reporting capability in EHR systems. EHR vendors can also implement the eCR functionality within their products to accomplish this reporting. The initiative also supports an electronic case reporting infrastructure that is helping to advance interoperability. This infrastructure supports the transmission of electronic case reports to a shared service platform, and not directly to a PHA, which means that any health care provider that has established an electronic case reporting connection also has a connection with every State PHA, many large local health departments, and some territories. This promotes nationwide interoperability and increases the availability of data for patients who may be traveling or spending time away from their home State. For example, if a patient is a resident of one State but seeks care in another State, this infrastructure will automatically route the case report to both States that would have jurisdiction over this report. This increases inter-jurisdictional reporting, allowing for more seamless case investigation at the national level. The interoperable infrastructure and the use of a standard data format also reduces the variability of case report forms across conditions

²⁴⁶ CSTE State Reportable Condition Assessment page: <https://www.cste.org/page/SRCA>.

and jurisdictions, streamlining reporting forms for EHR vendors and health care providers.

As a result of the CDC effort to scale up eCR for COVID-19, all 50 States, the District of Columbia, Puerto Rico and 13 large local jurisdictions have connected to the shared services platform and are currently receiving electronic case reports, with more than 9,400 healthcare facilities on board and 11.6 million reports for COVID-19 received by PHAs as of October 5, 2021.²⁴⁷ The eCR infrastructure is designed to rapidly scale for PHEs, such as COVID-19, and it is enabled to currently support data transmission for 99 reportable and notifiable conditions. While these are significant advancements, the piecemeal approach of encouraging adoption of these tools by individual health care providers has not been an effective or efficient means to quickly scale this effort nationally as has been needed for the COVID-19 PHE response.

We believe the uneven adoption of electronic case reporting creates a public health vulnerability. We proposed in the CY 2022 PFS proposed rule (86 FR 39413 through 39414) to make the Electronic Case Reporting measure a required measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the performance period in CY 2022. For more information about the Electronic Case Reporting measure, we refer readers to the preamble discussion in prior rulemaking at 81 FR 77229. We believe making this a required measure will accelerate development of electronic case reporting capabilities in EHR systems, reduce health care administrative burden of complying with State-mandated disease reporting requirements, provide regulatory clarity for EHR vendors, and improve the timeliness, completeness, and utility of case report data for PHAs. We believe that requiring the Electronic Case Reporting measure will be feasible and beneficial for MIPS eligible clinicians. This change will encourage EHR vendors to make electronic case reporting available to their customers, which will make adoption of this capability relatively straightforward for MIPS eligible clinicians. To meet the CEHRT definition when reporting on this measure, in our EHR Incentive Program Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (80 FR 62870 through 62885) we established that health care

providers are required to use a health IT module certified to the “Transmission to public health agencies—electronic case reporting” certification criterion at § 170.315(f)(5) that relates to how the health IT uses structured data within an EHR to trigger or indicate the generation of an electronic initial case report.²⁴⁸ They may then transmit the report in the manner specified by the case reporting requirements of the entity to which they are transmitting a report.

We believe that requiring the Electronic Case Reporting measure will not only provide certainty to EHR vendors and facilitate an organized and industry-wide rollout of electronic case reporting capabilities, but will also reduce burden on health care providers to fulfill their public health reporting requirements.

We did not propose any changes to the description of the Electronic Case Reporting measure and the exclusions that we established in the CY 2019 PFS final rule at 83 FR 59815 through 59817 will remain available.

The following is a summary of the comments we received and our responses.

Comment: One commenter reported that their State is not ready for electronic case reporting. The State, EHR vendors and the providers need more time to adopt the functionality required to do electronic case reporting.

Response: All 50 States, DC, Puerto Rico, and several local public health agencies currently receive eCR messages supported under the eCR Now Initiative, which can enable successful completion of electronic case reporting. Based on information from the CDC and their extensive engagement with public health agencies, many public health agencies are in the process of updating their websites to reflect their readiness for public health measurement requirements in the Promoting Interoperability Program, including electronic case reporting.

For a current list of PHA websites that provide their readiness to receive information please see ONC’s Interoperability Standards Advisory (<https://www.healthit.gov/isa/appendix-iv-state-and-local-public-health-readiness-interoperability>). If a PHA does not declare readiness, then the MIPS eligible clinician can claim an exclusion for this measure.

Comment: One commenter stated that if CMS requires clinicians to report to an electronic case reporting registry

then a national, State, and local listing of available case registries to report on would be extremely helpful for organizations/clinicians to reference, ensuring they are meeting the requirements of MIPS.

Response: Electronic case reporting is not submitting to a registry. Rather, electronic case reporting replaces the manual disease reporting by clinicians to State or local public health agencies required under State or local law with the automated, real-time exchange of case report information between EHRs and public health agencies.

Comment: Many commenters stated that their EHRs are not certified for electronic case reporting. A few commenters stated that this measure and the use of the certified capability were not previously required, and clinicians may be unable to adopt a newly certified capability in a timely way prior to the start of their performance period. Commenters stated that requiring the electronic case reporting measure may pose issues for clinicians who do not possess the certified functionality product for this capability and may have difficulty procuring and implementing one by CY 2022. Commenters stated that clinicians often have little control over the CEHRT capabilities available to them especially when they are provided their CEHRT by a larger parent organization.

A commenter urged CMS to not impose reporting obligations on clinicians before the technology can facilitate such reporting. Another commenter stated the proposed reporting requirements for clinicians will burden EHR developers. Specifically, the commenter stated that the time between when the CY 2022 PFS final rule is issued and the start of CY 2022 is insufficient for developers to certify and deploy a solution for electronic case reporting. The commenter stated that not all of their EHR developers’ products are certified to electronic case reporting. The commenter stated that these developers would need to develop, test, certify, and then deploy a certified solution within just a few months. The commenter urged CMS to add an exclusion to the electronic case reporting measure for instances where a clinician’s CEHRT is not certified to electronic case reporting at the beginning of the performance period.

Several commenters recommended that CMS consider adding an exclusion for this measure for instances where the clinician’s CEHRT developer does not yet offer products that are certified for electronic case reporting. One commenter suggested a 1-year, limited

²⁴⁷ Healthcare Facilities in Production for COVID-19 Electronic Case Reporting | CDC.

²⁴⁸ For more information about this certification criterion, please see the Certification Companion Guide at <https://www.healthit.gov/test-method/transmission-public-health-agencies-electronic-case-reporting>.

exclusion could maintain the primary benefits of requiring the electronic case reporting measure while ensuring clinicians do not fail to satisfy the requirements of the Promoting Interoperability performance category if they are not able to meet the electronic case reporting measure.

Response: We have consulted with ONC, and they report that certification to the criterion for electronic case reporting at § 170.315(f)(5) has increased significantly since the publication of the proposed rule, so we do not believe that lack of certification will be an impediment to successfully reporting the Electronic Case Reporting measure. As ONC clarified earlier this year,²⁴⁹ for health IT developers that do not already support electronic case reporting, these capabilities can be certified to the certification criterion for “Transmission to public health agencies—electronic case reporting” at § 170.315(f)(5) by providing their ONC-Authorized Certification Body documentation that sufficiently describes how the health IT module meets the functional requirements of the criterion and/or documentation of electronic case reporting implementation using the eCR Now FHIR application and the ability to meet paragraph (i) of this criterion. Health IT developers are encouraged to visit the 2015 Edition Cures Update Certification Companion Guide page (<https://www.healthit.gov/test-method/transmission-public-health-agencies-electronic-case-reporting>) for more information. With appropriate prioritization, we believe health IT developers can rapidly and successfully implement electronic case reporting capabilities.

While we believe that the adoption of certified technology for electronic case reporting by eligible clinicians is achievable in 2022, and that the active engagement requirements (80 FR 62863 through 80FR 62864) and existing exclusions of the measure (83 FR 59815 through 59817) offer significant flexibilities that can ensure most clinicians will be able to meet the measure or claim an exclusion, we acknowledge the commenters’ concerns about technology and vendor readiness and clinicians potentially not being ready to report the measure due to the functionality not being certified. Rather than delaying or not finalizing the proposal to require the measure, we are establishing a new 1-year exclusion for the Electronic Case Reporting measure only for the CY 2022 performance

period/CY 2024 MIPS payment year: the MIPS eligible clinician uses CEHRT that is not certified to the electronic case reporting certification criterion at § 170.315(f)(5) prior to the start of the performance period they select in CY 2022. By requiring the Electronic Case Reporting measure beginning with the CY 2022 performance period/CY 2024 MIPS payment year, but also adding a new exclusion for the CY 2022 performance period/CY 2024 MIPS payment year only, we will be able to: (1) Ensure health care providers that possess certified functionality adopt and implement this functionality before CY 2023; and (2) signal to EHR developers that they must prioritize adding electronic case reporting to their products to ensure their customers can report on the measure once the exclusion is no longer available.

We believe that the flexibility provided by this additional exclusion should provide ample time for MIPS eligible clinicians to implement electronic case reporting using available options and for health IT developers to ensure that they have successfully completed certification.

Comment: A commenter suggested that prior to requiring the adoption of electronic case reporting, CMS needs to engage with ONC, the CDC and the vendor community to gauge the ability for electronic case reporting to be implemented and utilized by the proposed deadline of CY 2022.

Response: CMS, ONC, and CDC have worked together to evaluate the readiness of the EHR developer community. There are many developers who are working towards implementing electronic case reporting capabilities and making those capabilities available to their clients. According to the Certified Health IT Product List (<https://chpl.healthit.gov/>) 93 products are already certified to the electronic case reporting certification criterion.

In addition, vendors can provide electronic case reporting to their clients using the eCR Now FHIR app which uses a suite of ONC-required standards and backend services that should be invisible to front-line clinicians. As discussed in a recent blog, ONC has provided clarification that EHR vendors who support the eCR Now FHIR app can be certified for electronic case reporting certification criterion by providing their ONC-Authorized Certification Body with appropriate documentation as specified in the technical explanations and clarifications.²⁵⁰

Comment: One commenter suggested that prior to requiring the adoption of electronic case reporting CMS should determine if States are willing to move towards electronic data exchange. Many State agencies continue to mandate manual reporting. If States continue to do this and CMS mandates electronic reporting, physicians will be burdened with the need to report in two different formats.

Response: All 50 States, DC, Puerto Rico, and several local public health agencies currently receive electronic case reporting messages. In addition, based on conversations that CDC has had with public health agencies, there is a limited period of time when public health agencies require clinicians to report by sending data through electronic case reporting and through traditional means (for example, manual reporting). Public health agencies have reported to CDC that they will use this time to make modifications to their data systems, onboard staff who can review the data, establish policies and processes for quality reviews, and ensure that their electronic feeds meet quality standards before they can turn off other forms of data transmission. We understand that this may place additional burden on MIPS eligible clinicians, and we know that many public health agencies are working on accelerating their processes to reduce the amount of time in parallel production. To help States reduce the amount of time that MIPS eligible clinicians need to spend doing dual reporting, CDC has invested heavily in helping public health agencies implement eCR. This funding will help public health agencies develop processes to turn off manual reporting processes and accelerate the quality review of the electronic feeds.

After consideration of public comments, we are finalizing our proposal to require the Electronic Case Reporting measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the CY 2022 performance period/CY 2024 MIPS payment year. We are also establishing an additional one-year exclusion for the Electronic Case Reporting measure for the CY 2022 performance period/CY 2024 MIPS payment year only: The MIPS eligible clinician uses CEHRT that is not certified to the electronic case reporting certification criterion at § 170.315(f)(5) prior to the start of the performance period they select in CY 2022.

(cc) Scoring of the Public Health and Clinical Data Exchange Objective

We proposed in the CY 2022 PFS proposed rule (86 FR 39414) that beginning with the CY 2022 performance period/CY 2024 MIPS payment year, a MIPS eligible clinician will receive 10 points for the Public Health and Clinical Data Exchange objective if they report a “yes” response for each of the following required measures: Immunization Registry Reporting; and Electronic Case Reporting. In the event that a MIPS eligible clinician is able to claim an exclusion for one or more of these required measures, we proposed they will receive 10 points for the objective if they report a “yes” response for one measure and claim an applicable exclusion for which they qualify for the remaining measure. If the MIPS eligible clinician fails to report on any one of the two measures required for this objective or reports a “no” response for one or more of these measures, we proposed that the MIPS eligible clinician will receive a score of zero for the Public Health and Clinical Data Exchange objective, and a total score of zero for the Promoting Interoperability performance category. If a MIPS eligible clinician claims applicable exclusions for which they qualify for both required measures, we proposed to redistribute the points associated with the objective to the Provider to Patient Exchange objective.

We proposed in the CY 2022 PFS proposed rule (86 FR 39414) to retain the Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures, and to make them optional and available for bonus points beginning with the CY 2022 performance period/CY 2024 MIPS payment year. For more information about these measures, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77229) and the EHR Incentive Program Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (80 FR 62818 through 62825). We proposed a MIPS eligible clinician may earn 5 bonus points if they report a “yes” response for either the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure. Reporting on more than one of these optional measures will not yield additional bonus points.

In connection with our proposal to make these measures optional, we proposed to remove the three exclusions that we established in the CY 2019 PFS

final rule at 83 FR 59815 through 59817 for the Public Health Registry Reporting measure, Clinical Data Registry Reporting measure, and the Syndromic Surveillance Reporting measure.

We solicited comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposal to retain the Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures, and to make them optional and available for bonus points beginning with the performance period in CY 2022.

Response: We appreciate commenters’ support for our proposal.

Comment: One commenter stated that syndromic surveillance has played a critical role in evaluating and monitoring many public health events in their State, including the COVID pandemic. We strongly support submission of syndromic surveillance data from providers and believe that providing this as an optional measure in this rule strengthens our ability to maintain the robust system into which both public health and healthcare facilities have already made significant investments.

Response: We appreciate the support for this proposal.

Comment: One commenter stated that surveillance data is used to monitor short-and long-term health trends and to alert health professionals to the important changes in disease trends. Surveillance data also provide the basis for determining public health priorities and for planning and implementing prevention and control programs.

Response: While we considered requiring the Syndromic Surveillance Reporting measure as we had proposed and subsequently finalized it as a required measure for eligible hospitals and critical access hospitals participating in the Medicare Promoting Interoperability Program (86 FR 45472 through 45473), we did not propose it as a required measure for MIPS because majority of data comes from emergency departments and only a small number of MIPS eligible clinicians practice in that setting.

Comment: One commenter requested clarification on how bonus points for reporting an additional registry measure will be awarded when a clinician claims an exclusion for the two measures proposed to be required in 2022.

Response: The five bonus points for reporting an additional registry measure can be earned even if exclusions are claimed for the two required measures.

Comment: One commenter supported the allocation of bonus points for the Clinical Data Registry Reporting measure, the Public Health Registry Reporting measure, and the Syndromic Surveillance Reporting measure. However, the commenter stated that the Promoting Interoperability performance category and these measures should align with congressional intent to incentivize registry reporting. Further registry reporting outside of the proposed required measures should be worth ten or more bonus points to encourage the use of registry reporting.

Response: We disagree. We chose 5 bonus points to create an incentive for clinicians to report an additional measure for the Public Health and Clinical Data Exchange objective. We have allocated 10 points for the two required measures and believe that allocating 5 points for reporting an additional measure aligns with the scoring of the required measures. We are not aware of congressional intent to incentivize registry reporting within the Promoting Interoperability performance category.

After consideration of public comments, we are finalizing our proposals: Beginning with the CY 2022 performance period/CY 2024 MIPS payment year, a MIPS eligible clinician will receive 10 points for the Public Health and Clinical Data Exchange objective if they report a “yes” response for each of the following required measures: Immunization Registry Reporting; and Electronic Case Reporting. In the event that a MIPS eligible clinician is able to claim an exclusion for one or more of these required measures, they will receive 10 points for the objective if they report a “yes” response for one measure and claim an applicable exclusion for which they qualify for the remaining measure. If the MIPS eligible clinician fails to report on any one of the two measures required for this objective or reports a “no” response for one or more of these measures, the MIPS eligible clinician will receive a score of zero for the Public Health and Clinical Data Exchange objective, and a total score of zero for the Promoting Interoperability performance category. If a MIPS eligible clinician claims applicable exclusions for which they qualify for both required measures, we will redistribute the points associated with the objective to the Provider to Patient Exchange objective.

The Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures will be optional and available for bonus points beginning with the CY

2022 performance period/CY 2024 MIPS payment year. A MIPS eligible clinician may earn 5 bonus points if they report a “yes” response for either the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure. We are removing the three exclusions that we established in the CY 2019 PFS final rule at 83 FR 59815 through 59817 for the Public Health Registry Reporting measure, Clinical Data Registry Reporting measure, and the Syndromic Surveillance Reporting measure.

(d) SAFER Guides

(i) Background

ONC developed and released the Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) in 2014, and later updated them in 2016. This series of nine user guides support the ability of health care providers to address EHR safety.²⁵¹ Collectively, the SAFER Guides help health care

organizations at all levels, from small practices to multi-system chains and tertiary care facilities, to conduct self-assessments which optimize the safety and safe use of EHRs in the three areas listed in Table 55. The SAFER Guides were intended to be utilized by EHR users, developers, patient safety organizations, and those who are concerned with optimizing the safe use of health IT. By completing an annual self-assessment using the SAFER Guides, providers can help develop a “culture of safety” within their organizations and ensure they are responsible operators of technology tools, including certified health IT products, which they utilize in the delivery of care. The SAFER Guides are based on the best evidence available at the time of publication, which included a literature review, expert opinion, and field-testing at a wide range of health care organizations, from small ambulatory care practices to large health systems.

In the case of system disruption, failure, natural disaster, the SAFER Guides provide recommended safety practices during planned or unplanned EHR unavailability, where end users are unable to access all or part of their EHR. Also included are back-up procedures to prevent the potential loss of clinical and administrative data, and how to utilize paper charting during such downtime. We believe that conducting an annual self-assessment starting with the High Priority Practices Guide will support consistent safety practices for all EHR users.

The High Priority Practices Guide identifies “high risk” and “high priority” recommended safety practices, intended to optimize the safety and safe use of EHRs.²⁵² This guide broadly discusses EHR safety concerns that are described in greater detail in the subsequent 8 SAFER Guides. The High Priority Practices Guide is considered the first to be completed of the 9 SAFER Guides.

TABLE 55: The SAFER Guides

(ii) New SAFER Guides Measure

We proposed in the CY 2022 PFS proposed rule (86 FR 39414 through 39416), to add a new SAFER Guides measure to the Protect Patient Health Information objective, beginning with the CY 2022 performance period/2024 MIPS payment year. For this measure, we proposed that a MIPS eligible clinician must attest to having conducted an annual self-assessment using the High Priority Practices Guide (available at <https://www.healthit.gov/topic/safety/safer-guides>), at any point during the calendar year in which the performance period occurs, with one “yes/no” attestation accounting for the complete self-assessment using the High Priority Practices Guide. We proposed that this measure will be required, but it would not be scored, and that reporting “yes” or “no” will not affect

the total number of points earned for the Promoting Interoperability performance category. We believe this measure would further enable the electronic exchange of health information to improve the quality of health care, such as promoting care coordination, as described in section 1848(o)(2)(A)(ii) of the Act. We also proposed to add corresponding regulatory text for this measure at § 414.1375(b)(2)(ii)(C).

In order to complete a “self-assessment” using the High Priority Practices Guide, we expect that each MIPS eligible clinician would complete a review and mark the associated checkboxes (fully, partially, or not implemented) of recommended practices included at the beginning of the Guide. Detailed worksheets with the rationales for, and examples of how to implement each recommended practice follow the checklist section of the High

Priority Practices Guide. These worksheets also include likely sources of information where the practice can turn to, in order to complete their assessment of a particular practice, as well as fillable note fields to record follow-up actions.

We understand that every organization faces unique circumstances, and will implement a particular practice differently. As a result, some of the specific examples in the SAFER Guides for recommended practices may not be applicable to every organization. A “self-assessment” does not require an organization to confirm that it has implemented “fully in all areas” each practice described in a particular SAFER guide, nor will an organization be scored on how many of the practices the organization has fully implemented. Rather, the intent is for MIPS eligible clinicians to regularly

²⁵¹ <https://www.healthit.gov/topic/safety/safer-guides>.

²⁵² https://www.healthit.gov/sites/default/files/safer_guides/safer_high_priority_practices.pdf.

assess their progress and status on important facets of patient safety.

The recommended practices in the SAFER Guides are intended to be useful for all EHR users, and we recognize that the individuals responsible for the proposed annual assessment may vary across organizations. An optimal team for completing an annual review of the SAFER Guides might include representation from clinicians (including physicians, nurses, pharmacists, and allied health staff), and the technical staff responsible for implementing and maintaining a practice's EHR, as well as data connections with external partners, such as an HIE.

Regarding the frequency of completing the self-assessment for the High Priority Practices Guide, we proposed that a MIPS eligible clinician must attest to completing their assessment using the High Priority Practices Guide on an annual basis, following an initial completion of the assessment (some clinicians may have already completed an assessment using the SAFER Guides prior to implementation of this requirement). We would expect MIPS eligible clinicians to revisit this assessment to determine whether any changes have occurred for their organization. We believe that requiring MIPS eligible clinicians to periodically review this self-assessment would support a stronger culture of change management within organizations, and would assist organizations in actively understanding and addressing potential safety vulnerabilities, which may significantly impact an organization's safety posture. We recognize that organizations may be at different stages in their progress towards assessing patient safety vulnerabilities, and that MIPS eligible clinicians vary in the resources that they could devote to an annual self-assessment using the High Priority Practices Guide. Gathering this information may be time consuming for some, and others may not have the expertise available on staff to complete all of the requirements. For MIPS eligible clinicians with less experience in these areas, we note that there are a number of resources available, which may be able to assist with completing a self-assessment.

We invited public comments on our proposal to require an annual self-assessment of the High Priority Practices Guide from MIPS eligible clinicians. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to require an

annual self-assessment of the High Priority Practices Guide. Commenters stated that this requirement will encourage program participants to regularly assess their progress on practices that optimize the safety and safe use of EHRs, and others agree that completion of the self-assessment will promote best practices for the safe use and maintenance of health IT by MIPS eligible clinicians.

Response: We agree that given the opportunity to regularly assess progress, the High Priority Practices Guide will help optimize the safety and safe use of EHRs, and allow MIPS eligible clinicians the opportunity to make improvements as necessary over time.

Comment: Several commenters supported our proposal, but have requested clarification and/or suggestions for improvement. A few commenters stated that much of the High Priority Practices Guide represents a one-time configuration or verification steps, which for many MIPS eligible clinicians, would remain unchanged from year to year. One commenter suggested that after the initial review, MIPS eligible clinicians should be able to focus subsequent self-assessments on areas of the High Priority Practices Guide that have changed or require additional focus. Another commenter suggested that CMS and ONC collaborate to ensure that all of the SAFER Guides be updated regularly to ensure the most current guidance is shared with MIPS eligible clinicians. Several commenters requested confirmation that this requirement will not be scored, and that an answer of "yes" and "no" are both acceptable, without affecting their total scores.

Response: As discussed above, the completion of the annual self-assessment would assist organizations in actively understanding and addressing potential safety vulnerabilities regularly. The "self-assessment" does not require an organization to confirm that it has implemented "fully in all areas" each practice, nor will the organization be scored on how many of, or to what degree the organization has implemented these practices. As commenters have mentioned, several components of the High Priority Practices Guide will require an initial assessment that may not change significantly unless the MIPS eligible clinician has made significant system upgrades or has transitioned between systems. Further, we agree that MIPS eligible clinicians should focus their efforts on areas of change or improvement after having completed the initial assessment, as much of the

assessment will remain unchanged. Our larger focus is for MIPS eligible clinicians to regularly assess their progress and status on important facets of patient safety. We would like to thank commenters for their suggestions that CMS and ONC coordinate efforts to regularly assess and update the SAFER Guides and to consider expanding on Education and Outreach efforts. We will continue to collaborate with ONC and take these suggestions under consideration. Last, we do confirm that for CY 2022, both "yes" and "no" are acceptable, an attestation of "no" will not alter final scores, and an attestation of "no" will not affect one's ability to be considered a Meaningful EHR User for MIPS.

Comment: Few commenters did not support our proposal to require an annual self-assessment of the High Priority Practices Guide. One commenter expressed concern that the High Priority Practices Guide does not improve interoperability, but instead creates additional reporting burden on MIPS eligible clinicians. A few commenters have suggested that vendors be required to complete the annual assessments and upon initial implementation of the health IT, rather than placing the additional burden on MIPS eligible clinicians.

Response: With a central focus on patient safety, we disagree that the High Priority Practices Guide does not improve interoperability. We would like to remind commenters that the Protect Patient Health Information objective is essential to all aspects of meaningful use of CEHRT, and ensuring that Patient Health Information is protected and secure is a critical element of effectively using EHRs. Under the Protect Patient Health Information objective, the High Priority Practices Guides measure is one way that we can proactively assess individual readiness. For the commenter who raised concerns about the additional reporting burdens this measure may present, we appreciate this feedback. We would like to reiterate that MIPS eligible clinicians are not being scored on this measure in the 2022 performance year, and that an attestation of "yes" and "no" are both acceptable answers, and that an answer of "no" will not affect the total number of points earned for the Promoting Interoperability performance category. Last, after the initial self-assessment, eligible clinicians could simply confirm that their initial assessment is still accurate, barring vendor and/or system updates that may affect the assessment.

Comment: Several commenters raised concern that CMS did not explicitly establish expectations surrounding

group reporting for this measure. Commenters seek clarification on whether each MIPS eligible clinician within the group is required to attest to having completed an annual self-assessment of the High Priority Practices Guide, or, if existing reporting requirements apply to this measure.

Response: For those who participate in group reporting, the existing group reporting policies apply to this measure. We are not requiring an annual self-assessment of the High Priority Practices Guide from each MIPS eligible clinician within the group.

After consideration of the public comments we have received, we are finalizing our proposal to add the SAFER Guides measure to the Protect Patient Health Information objective beginning with the CY 2022 performance period/CY 2024 MIPS payment year. MIPS eligible clinicians must attest to having conducted an annual self-assessment using the High Priority Practices Guide (available at <https://www.healthit.gov/topic/safety/safer-guides>), at any point during the calendar year in which the performance period occurs, with one “yes/no” attestation statement accounting for the complete self-assessment using the Guide. We are finalizing that in the CY 2022 performance period/CY 2024 MIPS payment year, this measure will be

required, but it will not be scored, and that an attestation of “yes” and “no” would not affect the total number of points earned for the Promoting Interoperability performance category. We are also finalizing our proposal to add corresponding regulatory text to § 414.1375(b)(2)(ii)(C).

(e) Incrementation of the Numerator and Denominator for Promoting Interoperability Performance Category Measures

In the CY 2019 PFS final rule (83 FR 59799), we summarized a comment we received in response to proposals we had made in the CY 2019 PFS proposed rule concerning the measures for the Promoting Interoperability performance category beginning with the performance period in 2019. The commenter indicated that for some measures, MIPS eligible clinicians and group practices should be able to get credit for actions that are taken outside of the 90-day performance period. We responded to the comment by stating that since the inception of the Quality Payment Program, we have limited the ability to increment the numerator and denominator of measures to actions occurring during the performance period chosen, with the exception of the Security Risk Analysis measure, for which the relevant actions may occur

any time during the calendar year. We now understand that our response to this comment may have caused confusion, and we wish to clarify our response. Instead of referring to the inception of the Quality Payment Program, we should have stated that the measures we proposed beginning with the performance period in 2019 would limit the ability to increment the numerator and denominator to actions occurring during the performance period chosen, with the exception of the Security Risk Analysis measure, for which the relevant actions may occur any time during the calendar year. We note an additional exception is the SAFER Guides measure (as discussed in section IV.A.3.d.(4)(d) in this final rule) because the relevant actions may also occur at any time during the calendar year.

(f) Changes to the Scoring Methodology for the 2022 Performance Period

For ease of reference, Table 56 lists the objectives and measures for the Promoting Interoperability performance category for the CY 2022 performance period/CY 2024 MIPS payment year as revised to reflect the policies finalized in this final rule. Table 57 lists the 2015 Edition certification criteria required to meet the objectives and measures.

BILLING CODE 4120-01-P

TABLE 56: Objectives and Measures for the Promoting Interoperability Performance Category in 2022

Objective	Measure	Numerator	Denominator	Exclusion
e-Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is queried for a drug formulary and transmitted electronically using CEHRT.	Number of prescriptions in the denominator generated, queried for a drug formulary, and transmitted electronically using CEHRT.	Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.
e-Prescribing: Generate and transmit permissible prescriptions electronically.	Query of PDMP (bonus): For at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law.	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider (1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.	Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically	Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.

	Safety Assurance Factors for EHR Resilience Guide (SAFER Guide)	None

Table 58 reflects the scoring methodology for the Promoting

Interoperability performance category for the performance period in CY 2022.

TABLE 58: Scoring Methodology for the Performance Period in CY 2022

Objective	Measure	Maximum Points
Electronic Prescribing	e-Prescribing	10 points
	<i>Bonus</i> : Query of PDMP	10 points (<i>bonus</i>)*
Health Information Exchange -OR- Health Information Exchange (alternative)	Support Electronic Referral Loops by Sending Health Information	20 points
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	20 points
Health Information Exchange (alternative)	Health Information Exchange Bi-Directional Exchange	40 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points
Public Health and Clinical Data Exchange	Report the following 2 measures:* <ul style="list-style-type: none"> Immunization Registry Reporting Electronic Case Reporting 	10 Points
	Report on any one of the following measures: <ul style="list-style-type: none"> Public Health Registry Reporting OR Clinical Data Registry Reporting OR Syndromic Surveillance Reporting 	5 points (<i>bonus</i>)*

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored.

* Signifies a proposal finalized in this CY 2022 PFS final rule.

BILLING CODE 4120-01-C

We also refer readers to section IV.A.3.d.(4)(f) of this final rule, where we finalized our proposed changes to the regulatory text for scoring the Promoting Interoperability performance category at § 414.1380(b)(4)(ii).

(g) Actions To Limit or Restrict the Compatibility or Interoperability of CEHRT

(i) Background

Section 106(b)(2) of the Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10) (MACRA) includes the heading “Preventing Blocking The Sharing Of Information.” Section 106(b)(2)(A) amended section 1848(o)(2)(A)(ii) of the Act to require that, to be a meaningful EHR user, a clinician demonstrates (through a process specified by the Secretary, such as the use of an attestation) that the clinician has not knowingly and willfully taken action (such as to disable functionality) to limit or restrict the compatibility or interoperability of the certified EHR technology. To implement these provisions, we established and codified at § 414.1375(b)(3)(ii) attestation requirements for the Promoting Interoperability performance category to support the prevention of information blocking, which consist of three statements containing specific representations about a MIPS eligible clinician’s implementation and use of CEHRT. For further discussion on these requirements, we refer readers to the CY 2017 Quality Payment Program final

rule (81 FR 77028 through 77035). The attestation statements finalized for MIPS eligible clinicians at § 414.1375(b)(3)(ii) are:

- *Statement A*: Did not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology.

- *Statement B*: Implemented technologies, standards, policies, practices, and agreements reasonably calculated to ensure, to the greatest extent practicable and permitted by law, that the certified EHR technology was, at all relevant times: (1) Connected in accordance with applicable law; (2) compliant with all standards applicable to the exchange of information, including the standards, implementation specifications, and certification criteria adopted at 45 CFR part 170; (3) Implemented in a manner that allowed for timely access by patients to their electronic health information; and (4) Implemented in a manner that allowed for the timely, secure, and trusted bi-directional exchange of structured electronic health information with other health care providers (as defined by 42 U.S.C. 300jj(3)), including unaffiliated providers, and with disparate certified EHR technology and health IT vendors.

- *Statement C*: Responded in good faith and in a timely manner to requests to retrieve or exchange electronic health information, including from patients, health care providers (as defined by 42 U.S.C. 300jj(3)), and other persons,

regardless of the requestor’s affiliation or technology vendor.

Section 4004 of the 21st Century Cures Act added section 3022 to the Public Health Service Act (PHSA) (the “PHSA information blocking provision,”), which describes practices by health care providers, health IT developers, and HIEs and networks, that constitute information blocking, and provides for civil monetary penalties and other disincentives for those who engage in information blocking.

In the ONC 21st Century Cures Act final rule published in the May 1, 2020 **Federal Register**, ONC finalized a definition of information blocking and identified reasonable and necessary activities (“exceptions”) that do not constitute information blocking (85 FR 25642). For health care providers (as defined in 42 U.S.C. 300jj), information blocking means a practice that, except as required by law or covered by an exception, is likely to interfere with access, exchange, or use of electronic health information; and if conducted by a health care provider, such provider knows that such practice is unreasonable and is likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information (45 CFR 171.103).

The 21st Century Cures Act provides for civil monetary penalties for any individual or entity that is a developer, network, or exchange that has committed information blocking (see section 3022(b)(2)(A) of the PHSA). Regarding health care providers, the

21st Century Cures Act provides that “Any [health care provider] determined by the [HHS] Inspector General to have committed information blocking shall be referred to the appropriate agency to be subject to appropriate disincentives using authorities under applicable Federal law, as the Secretary sets forth through notice and comment rulemaking” (section 3022(b)(2)(B) of the PHSA).

(ii) Changes to the Attestation Statements

Although there could be some degree of overlap between conduct described in the attestation statements under § 414.1375(b)(3)(ii) and conduct that could be considered information blocking under section 3022 of the PHSA and ONC’s implementing regulations at 45 CFR 171.103, it is important to note these are separate and distinct authorities. For instance, the ONC 21st Century Cures Act final rule finalized a definition for what constitutes information blocking, and exceptions to information blocking that are not reflected in the previously finalized attestation statements under § 414.1375(b)(3)(ii). While we previously stated in the CY 2017 QPP final rule that these attestations statements did not impose “unnecessary or unreasonable requirements” on health care providers (81 FR 77029), after careful review of these attestation statements in light of the information blocking regulations at 45 CFR part 171, we believe that statements B and C are no longer necessary. Thus, beginning with the performance period in CY 2022, we proposed in the CY 2022 PFS proposed rule (86 FR 39423 through 39425) to no longer require statements B and C. We believe that the similarities between practices described under statements B and C, and the practices that could constitute information blocking under section 3022 of the PHSA and ONC’s implementing regulations will create confusion for stakeholders. To this point, the practices that could constitute information blocking under 45 CFR part 171 are much broader than those described in the attestation statements. We discuss specific instances of potential confusion below.

Statement B requires attestation to a series of statements regarding the use of certified technology and a designated manner for implementing certified technology. For instance, attestations to the implementation of technology compliant with the standards for certified health IT at 45 CFR part 170, and use of functionality to support health information exchange with other

health care providers. However, as noted above, the definition of information blocking finalized in the ONC 21st Century Cures Act final rule is not specific to, nor limited to the use of certified technology, which is compliant with certain standards or the use of certain functionality. Under the ONC 21st Century Cures Act final rule, a health care provider may still be determined to have engaged in practices likely to interfere with access, exchange, or use of electronic health information (information blocking) regardless of whether they are using certified technology.

Regarding statement C, we stated in the CY 2017 QPP final rule that “technical, legal, and other practical constraints may prevent a health care provider from responding to some requests to access, exchange, or use electronic health information in a health care provider’s certified EHR technology” (81 FR 77033). Subsequently, in the ONC 21st Century Cures Act final rule, ONC established a set of reasonable and necessary activities that are not considered information blocking when responding to a request for EHI. The reasonable and necessary activities established under the ONC 21st Century Cures Act final rule now provide more specific direction to health care providers when responding to a request for EHI than the general “technical, legal, and other practical constraints,” which we described in the CY 2017 QPP final rule. Accordingly, we believe that continuing to require statement C may introduce confusion for those health care providers who are obligated to comply with the regulations finalized in the ONC 21st Century Cures Act final rule when responding to a request for EHI.

In order to distinguish the attestation required by section 106(b)(2)(A) of MACRA from information blocking under section 3022 of the PHSA, we further proposed in the CY 2022 PFS final rule (86 FR 39423 through 39425) to modify the headings of §§ 414.1375(b)(3) and (b)(3)(ii), add § 414.1375(b)(3)(iii), and modify the definition of “meaningful EHR user for MIPS” under § 414.1305 to specify that the clinician does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, which reflects the language used in section 106(b)(2)(A) of MACRA. In addition, we proposed to no longer require attestation statements B and C beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year and we proposed corresponding regulatory text

amendments at § 414.1375(b)(3)(ii) and (iii). We finalized a similar proposal for the Medicare Promoting Interoperability Program in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45481 through 45482).

We received public comments on our proposal to remove Statements B and C under § 414.1375(b)(3)(ii), beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, and here are our responses.

Comment: All commenters supported our proposal to no longer require Statements B and C under

§ 414.1375(b)(3)(ii). Commenters shared appreciation for our efforts to eliminate duplicative reporting burden, eliminate redundancies, and our efforts towards streamlining our requirements.

Response: We would like to thank commenters for their support.

Comment: One commenter requested that CMS remain involved with the information blocking issue, as challenges will continue to persist. Another commenter shared a similar concern, and further urged that CMS seek public comment prior to introducing any “appropriate disincentives” in the future.

Response: We do consider Information Blocking an important issue, and believe that in finalizing this policy, we are addressing concerns regarding improving clarity and reducing redundancies. We will take the suggestion of seeking public comment prior to introducing any “appropriate disincentives” for future rulemaking.

After consideration of the public comments, we are finalizing our proposal to modify the headings of §§ 414.1375(b)(3) and 414.1375(b)(3)(ii), add § 414.1375(b)(3)(iii), and to modify the definition of “meaningful EHR user for MIPS” under § 414.1305 to specify that the clinician does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, which reflects the language used in section 106(b)(2)(A) of MACRA. In addition, we are finalizing our proposal to no longer require attestation statements B and C beginning with the CY 2022 performance period/CY 2024 MIPS payment year, and we are finalizing our proposed corresponding regulatory text amendments at §§ 414.1375(b)(3)(ii) and (iii).

(h) Additional Considerations

(i) Reweighting the Promoting Interoperability Performance Category for MIPS Eligible Clinicians in Small Practices

We previously established under § 414.1380(c)(2)(i)(C)(9) a significant

hardship exception for MIPS eligible clinicians in small practices as defined in § 414.1305. In the CY 2018 Quality Payment Program final rule (82 FR 53682 through 53683), we established that we will reweight the Promoting Interoperability performance category to zero percent of the MIPS final score for MIPS eligible clinicians who qualify for this hardship exception. We established that a MIPS eligible clinician seeking to qualify for this exception must submit an application to us demonstrating that there are overwhelming barriers that prevent them from complying with the requirements for the Promoting Interoperability performance category, and that the exception is subject to annual renewal. In the CY 2018 Quality Payment Program final rule (82 FR 53579 through 53581), we also established that we will determine the size of small practices by utilizing claims data. This policy was further modified in the CY 2019 PFS final rule (83 FR 59727 through 59730) so that beginning with the CY 2021 MIPS payment year, a small practice is a TIN consisting of 15 or fewer eligible clinicians during the MIPS determination period.

In the CY 2018 Quality Payment Program proposed rule (82 FR 30076), we stated that we believed that special consideration should be available for MIPS eligible clinicians in small practices based on concerns previously identified by commenters, including small practices not being able to afford the upfront investments (including investments in EHR technology), and small practices not adopting EHRs due to the administrative and financial burden. Although some commenters requested that we automatically apply the proposed hardship exception to clinicians in small practices, at the time we disagreed and stated that we believed that many small practices will be able to successfully report for the Promoting Interoperability performance category (82 FR 53683).

We have been monitoring the submission of data for the Promoting Interoperability performance category by small practices and individual clinicians who are part of a small practice, and the numbers remain low despite the no-cost technical assistance we offered small practices through the Small, Underserved, and Rural Support Initiative. Data from CY 2019 revealed that of the 49,278 clinicians in small practices who were scored as an individual for MIPS, 84 percent of them did not submit Promoting Interoperability performance category data and did not apply for a small practice hardship exception application

even though they may have qualified for the exception. Among clinicians who did not qualify for Promoting Interoperability performance category reweighting, only 29 percent of small practices compared to 61 percent of practices with more than 15 clinicians billing under the practice's TIN submitted data for the Promoting Interoperability performance category. Although we had expected many small practices would be able to successfully report data for the Promoting Interoperability performance category, we are concerned to see such low numbers of them either reporting data or applying for the small practice hardship exception, as such inaction would result in a score of zero for this performance category.

We want to support small practices and help them successfully participate in MIPS. As our analysis of the data suggests that successfully participating in the Promoting Interoperability performance category may be particularly challenging for small practices, in the CY 2022 PFS proposed rule (86 FR 39424 through 39425) we proposed a modification of our policy. Beginning with the CY 2022 performance period/CY 2024 MIPS payment year, we proposed to no longer require an application for clinicians and small practices seeking to qualify for the small practice hardship exception and reweighting. We proposed instead to assign a weight of zero percent to the Promoting Interoperability performance category and redistribute its weight to another performance category or categories (as discussed further in section IV.A.3.e. of the proposed rule) in the event no data is submitted for any of the measures for the Promoting Interoperability performance category by or on behalf of a MIPS eligible clinician in a small practice. We proposed that if data is submitted for a MIPS eligible clinician in a small practice, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category will be given the weight prescribed by section 1848(q)(5)(E) of the Act. We proposed the small practice significant hardship exception still will be subject to annual renewal, and we will verify whether a practice meets the definition of a small practice under § 414.1305 on an annual basis. We proposed corresponding revisions to § 414.1380(c)(2)(i)(C)(9).

While we proposed this policy at this time, it is not our intention that this policy be in place for the long term, but rather only for a few years, as we would like to increase participation of small

practices in the Promoting Interoperability performance category. We sought comment on potential options to increase small practice participation in the Promoting Interoperability performance category.

We proposed that in the case of an APM Entity that also meets the definition of a small practice, we will continue applying the Promoting Interoperability performance category reporting and exception requirements at the group level, as described at § 414.1317. However, if the APM Entity is composed of a single TIN which itself meets the definition of a small practice, all TINs within the APM Entity (that is, the single TIN) will be eligible for this exception, and therefore, the Promoting Interoperability performance category will be reweighted for the APM Entity and the performance category reweighting described above will be applied.

We received public comments on the proposal to automatically reweight the Promoting Interoperability performance category for MIPS eligible clinicians in small practices. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposal to automatically reweight the Promoting Interoperability performance category for MIPS eligible clinicians in small practices. Several commenters stated that they believe that it will reduce the administrative burden for small practices. Other commenters suggested that MIPS eligible clinicians in small practices have not applied for the hardship exception because they are not aware of it or because it is a burden to apply. Several commenters stated that small practices have not applied due to resource constraints. One commenter stated that MIPS eligible clinicians in small practices do not apply because they are afraid of being audited.

Response: We thank commenters for their support and agree the proposal may reduce administrative burden for small practices that face overwhelming barriers that prevent them from complying with the requirements for the Promoting Interoperability performance category.

Comment: One commenter applauded CMS' continued flexibility for small practices and believed the availability of hardship exceptions for small practices for the Promoting Interoperability performance category is necessary, but they do not agree with CMS' proposal to automatically reweight the Promoting Interoperability performance category for small practices. This proposal removes an incentive for practices to move towards the adoption of EHRs

which has been CMS' goal for many years. In line with CMS' messaging, their organization has also been pushing their membership towards EHR adoption to comply with MIPS reporting and the increasing requirements to avoid a negative payment adjustment. Because of this, they expressed concerns that this proposal sends the wrong message to practices newly adopting EHRs and practices with EHRs who have been diligently working to meet the requirements of this category. Another commenter did not support the proposal to automatically reweight Promoting Interoperability performance Category for small practices. They believe small practices should have to request reweighting. The Promoting Interoperability performance category has encouraged clinics of all sizes to engage their patients through the use of technology, such as patient portals and use of HIEs, improving access to care. By reweighting Promoting Interoperability performance Category, clinics may disable or neglect these features to the detriment of the patient experience. They suggested that CMS consider reducing the number of measures within the Promoting Interoperability performance category for these smaller clinics, such as 2 or 3 measures, instead of a total reweight of 0 for all the measures.

Response: We understand these concerns and we stated in the CY 2022 PFS proposed rule (86 FR 39425) that it is not our intention for this policy to be in place for the long term. Too many small practices neglect to apply for the small practice hardship exception so we believe that putting this automatic reweighting policy in place in concert with increased outreach will help to reduce administrative burden for small practices. As we intend this policy to be temporary we hope that there will still be an impetus for small practices to strive to adopt CEHRT and report on the Promoting Interoperability performance category. We remind readers that if a small practice submits data for the Promoting Interoperability performance category, the data will be scored and the Promoting Interoperability performance category will not be reweighted. We appreciate the suggestion to reduce reporting requirements for small practices, and this is something that we may consider in future rulemaking.

Comment: One commenter urged CMS to use several methods to communicate in clear and unambiguous language that if the small practice submits data for the Promoting Interoperability performance category that the reweighting will be cancelled. Another commenter requested that CMS

undertake an extensive educational campaign, partnering with specialty societies, to ensure that all small practices and their vendors are aware of this automatic reweighting and the fact that if they report any data for the Promoting Interoperability performance category, they will receive a Promoting Interoperability performance category score and not be reweighted.

Response: We thank commenters for these suggestions. We intend to include this policy in our educational materials and work with specialty societies to help disseminate this information.

We received comments in response to the questions we posed in the CY 2022 PFS proposed rule (86 FR 39425) related to small practice participation in the Promoting Interoperability performance category. We will analyze all of the comments that we received and may use them to inform future rulemaking and outreach initiatives.

After consideration of public comments, we are finalizing our proposal such that beginning with the CY 2022 performance period/CY 2024 MIPS payment year, we will no longer require an application for clinicians and small practices seeking to qualify for the small practice hardship exception and reweighting. We will assign a weight of zero percent to the Promoting Interoperability performance category and redistribute its weight to another performance category or categories (as discussed further in section IV.A.3.e.(2)(b) of this final rule) in the event no data is submitted for any of the measures for the Promoting Interoperability performance category by or on behalf of a MIPS eligible clinician in a small practice. If data is submitted for a MIPS eligible clinician in a small practice, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category will be given the weight prescribed by section 1848(q)(5)(E) of the Act. The small practice significant hardship exception still will be subject to annual renewal, and we will verify whether a practice meets the definition of a small practice under § 414.1305 on an annual basis. We are making corresponding revisions to § 414.1380(c)(2)(i)(C)(9).

(ii) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

We established a policy at § 414.1380(c)(2)(i)(A)(5) for the performance periods in 2017 through 2021 under section 1848(q)(5)(F) of the Act to assign a weight of zero to the

Promoting Interoperability performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the Promoting Interoperability performance category, but if they choose to report, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act.

As in past years, we intend to use data from prior performance periods to further evaluate the participation of NPs, PAs, CRNAs, and CNSs in the Promoting Interoperability performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians. We have analyzed the data submitted for the 2017 performance period for the Promoting Interoperability performance category and have discovered that the vast majority of MIPS eligible clinicians submitted data as part of a group. Although we are pleased that MIPS eligible clinicians utilized the option to submit data as a group, it does limit our ability to analyze data at the individual NPI level. For the 2017 performance period, approximately 4 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs submitted data individually for MIPS, and more than two-thirds of them did not submit data for the Promoting Interoperability performance category. For the 2018 performance period, we reported that of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually, approximately 34 percent submitted data for the Promoting Interoperability performance category. However, after further review and the refinement of our analytics it was revealed that the percentage was not 34 percent but was 24 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs that submitted data individually for the Promoting Interoperability performance category. For the 2019 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually, approximately 30 percent submitted data individually for the Promoting Interoperability performance category, a modest increase from 2018. We continued our reweighting policy in 2020 but have not yet analyzed the data

to determine what proportion of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs that submitted data individually for MIPS also submitted data for the Promoting Interoperability performance category.

We believe that having these clinician types using CEHRT and submitting data for the Promoting Interoperability performance category is important for increased interoperability and data exchange. We are exploring the possibility that these clinician types are able to submit data but are choosing not to due to our current reweighting policies. In the future we may use other factors besides the submission data to determine whether to continue to reweight the Promoting Interoperability performance category for these clinicians. We solicited comments as to whether these clinician types are using CEHRT and are able to submit data on the measures for the Promoting Interoperability performance category.

While we are encouraged by the increasing numbers of NPs, PAs, CRNAs, and CNSs submitting data for the Promoting Interoperability performance category, we believe that the low numbers warrant the continued reweighting of the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the CY 2022 performance period/CY 2024 MIPS payment year. Thus, in the CY 2022 PFS proposed rule (86 FR 39425 through 39426), we proposed to continue the existing policy for the CY 2022 performance period/CY 2024 MIPS payment year and proposed to revise § 414.1380(c)(2)(i)(A)(5), which is being redesignated as § 414.1380(c)(2)(i)(A)(4)(ii), to reflect the proposal.

We did not receive comments on our proposal. We are finalizing our proposal to continue the existing policy to reweight the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the CY 2022 performance period/2024 MIPS payment year and have revised § 414.1380(c)(2)(i)(A)(5), which is being redesignated as § 414.1380(c)(2)(i)(A)(4)(ii). We thank commenters for their responses to our requests for comment and may consider this information to inform future rulemaking.

(iii) Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologists, Qualified Audiologists, Clinical Psychologists, and Registered Dietitians or Nutrition Professionals

In the CY 2020 PFS final rule (84 FR 63003 through 63004), we adopted a policy at § 414.1380(c)(2)(i)(A)(4) to

apply the same policy we adopted for NPs, PAs, CNSs, and CRNAs to other types of MIPS eligible clinicians who are NPPs (physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals) for the performance period in 2020. We stated that because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category. We extended this policy for the performance period in 2021 (85 FR 84895). As these clinicians were first eligible to participate in MIPS in the CY 2020 performance period/CY 2022 MIPS payment year, we have not yet analyzed the data to inform a potential modification to our current policy and do not anticipate a completed analysis being available prior to the release of this final rule. In the CY 2022 PFS proposed rule (86 FR 39426) we proposed to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals for the CY 2022 performance period/2024 MIPS payment year. We proposed to revise § 414.1380(c)(2)(i)(A)(4), which is being redesignated as § 414.1380(c)(2)(i)(A)(4)(i), to reflect this proposal.

We received public comments on the proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologists, Qualified Audiologists, Clinical Psychologists, and Registered Dietitians or Nutrition professionals. The following is a summary of the comments we received and our responses.

Comment: One commenter fully supported reweighting the Promoting Interoperability performance categories for these clinicians. In addition to similar difficulties in data capture as NPs, PAs, etc., many of the measures are not clinically applicable to these specific clinicians. Some would not prescribe medications (nutrition professionals), administer vaccines (immunization registry reporting) and/or reconcile certain clinical data. Although we believe many of these

professionals are an integral part of the patient's care team, we do not believe they should be required to individually report Promoting Interoperability performance category data.

Response: We appreciate the support of the commenter.

Comment: One commenter appreciated CMS extending the reweighting policy for the Promoting Interoperability performance category data for occupational therapy practitioners for CY 2022 performance period/CY 2024 MIPS payment year. Non-physician clinicians are still at a disadvantage because not all Promoting Interoperability performance category data are applicable to their practices. The commenter requested that CMS review measure applicability and adjust measure requirements to allow for NPP reporting if the Promoting Interoperability performance category data is to become a requirement in future years.

Response: As we have stated previously, we will continue to monitor the participation of NPPs in the Promoting Interoperability performance category. We will use this data to inform future policy proposals.

Comment: Commenters requested that CMS confirm that psychologists and certain other non-physician eligible clinicians will continue to have the Promoting Interoperability performance category reweighted to zero given that they never had the opportunity to receive Federal funds to invest in EHRs. It is critical that all psychologists, including those in practices with more than 15 eligible clinicians, continue to have the Promoting Interoperability performance category reweighted to zero unless they choose to report Promoting Interoperability performance category measures or are provided with Federal funding to invest in EHRs.

Response: We proposed (86 FR 39426) and are finalizing our proposal to continue to reweight clinical psychologists for the Promoting Interoperability performance category for the CY 2022 performance period/CY 2024 MIPS payment year.

After consideration of public comments, we are finalizing our proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals for the CY 2022 performance period/2024 MIPS payment year. We are finalizing our revisions at § 414.1380(c)(2)(i)(A)(4),

which is being redesignated as § 414.1380(c)(2)(i)(A)(4)(i).

(iv) Clinical Social Workers and Certified Nurse-Midwives (CNMs)

We proposed at 86 FR 39426 to add clinical social workers and CNMs to the definition of a MIPS eligible clinician. These clinician types were not eligible to participate in the Medicare Promoting Interoperability Program to earn incentive payments for meaningful use of CEHRT or receive reduced Medicare payments for failing to meaningfully use CEHRT. Clinical social workers were not eligible for Medicaid EHR incentive payments and thus may lack experience with the adoption or use of CEHRT. CNMs were eligible for the Medicaid EHR incentive payments, and the majority did earn incentives. For the CY 2022 performance period/CY 2024 MIPS payment year, we proposed in the CY 2022 PFS proposed rule (86 FR 39426) to apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to clinical social workers as we believe that there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to clinical social workers. We will assign a weight of zero only in the event that a clinical social worker does not submit data for any of the measures specified for the Promoting Interoperability performance category. We proposed to add § 414.1380(c)(2)(i)(A)(4)(iii) to reflect this proposal for clinical social workers.

We believe there are sufficient measures applicable and available to CNMs under the Promoting Interoperability performance category because of their experience with the Medicaid Promoting Interoperability Program. Many of them have adopted CEHRT and earned a Medicaid incentive payment, and the measures for the Medicaid Promoting Interoperability Program generally are the same or slightly modified versions of the Promoting Interoperability performance category measures. Thus, we did not propose to apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to CNMs. However, we solicited comments on whether there are in fact sufficient measures applicable and available to CNMs under the Promoting Interoperability performance category, and whether barriers exist that prevent CNMs from complying with the requirements of the Promoting Interoperability performance category and may warrant reweighting.

Like other types of MIPS eligible clinicians, a CNM may be able to qualify for a significant hardship exception from and reweighting of the Promoting Interoperability performance category under the existing policies at § 414.1380(c)(2)(i)(C), depending on their circumstances.

We received public comments on reweighting the Promoting Interoperability performance category for clinical social workers and CNMs. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the reweighting of the Promoting interoperability performance category for clinical social workers and added that they do not prescribe medications or administer vaccines.

Response: We appreciate the support for our proposal and remind readers that if clinical social workers choose to submit data for the Promoting interoperability performance category they will be scored and not reweighted.

Comment: A few commenters expressed their opposition to requiring CNMs to report for the Promoting Interoperability performance category as CMS reweights all other non-physician clinicians eligible under MIPS. They acknowledged CMS' rationale for not applying the same Promoting Interoperability reweighting policy previously adopted for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to CNMs given that they were an eligible professional type under the Medicaid EHR Incentive Program, but stated that NPs were also eligible professional types under that Program and have been reweighted for the Promoting Interoperability performance category since the CY 2017 performance period/CY 2019 MIPS payment year. They requested that CMS also reweight CNMs.

Response: When we established the reweighting policy for NPs, we stated that their low numbers of participation in the Medicaid EHR Incentive Program may have indicated that the EHR Incentive Program measures were not applicable or available to them. (81 FR 77243 through 77244). For CNMs, we believe that there are sufficient measures applicable and available. Many CNMs have adopted CEHRT and earned Medicaid EHR Incentive Program/Medicaid Promoting Interoperability Program payments. Further the measures under these Medicaid Programs are the same or slightly modified versions of those required for the MIPS Promoting Interoperability performance category. We did request comments on whether

barriers exist that prevent CNMs from complying with the requirements of Promoting Interoperability performance category but we did not receive any comments related to barriers.

After consideration of public comments, we are finalizing our proposals as proposed. For the CY 2022 performance period/CY 2024 MIPS payment year, we will apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to clinical social workers as we believe that there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to clinical social workers. We will assign a weight of zero only in the event that a clinical social worker does not submit data for any of the measures specified for the Promoting Interoperability performance category and we are adding § 414.1380(c)(2)(i)(A)(4)(iii) to reflect this policy.

(i) Technical Corrections to the Regulations

In the CY 2019 PFS final rule (83 FR 59798 through 59817), we adopted objectives and measures for the Promoting Interoperability performance category that will apply beginning with the performance period in 2019. The requirement for MIPS eligible clinicians to report on these objectives and measures can be found under § 414.1375(b)(2). In the CY 2021 PFS rulemaking, we inadvertently neglected to update this provision of the regulation text, although our intention was a continuation of the policy we established for the CY 2021 and 2022 MIPS payment years. We proposed a technical correction to § 414.1375(b)(2)(ii) to specify that the reporting requirements apply beginning with the 2021 MIPS payment year. We solicited comments on this proposal.

We did not receive public comments on this proposal, and therefore, we are finalizing as proposed.

(j) Requests for Information (RFI)

The CY 2022 PFS proposed rule contained the following RFIs (86 FR 39427 through 39428):

- Request for Information on Additional Objectives Adopting FHIR®-based API Standards
- Request for Information on a Patient Access Outcomes Measures
- Request for Information on Clinical Notes

We thank commenters for their responses to these requests for information. We may consider this

information to inform future rulemaking.

(5) APM Entity Level Participation for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

In the CY 2021 PFS final rule (85 FR 84896), we finalized our policy to terminate the APM scoring standard effective January 1, 2021, and to retain certain APM Entity group reporting policies that were established and finalized for reporting and scoring under MIPS beginning with the CY 2021 MIPS performance period. Therefore, we redesignated, in part, the regulation that describes APM Entity group determinations, from § 414.1370(e) to § 414.1317, and titled that section “APM Entity Groups.”

(b) APM Entity Level Reporting of Facility-Based Measures

In the CY 2021 PFS final rule (85 FR 84896), we finalized a policy to allow APM Entities to report to traditional MIPS using the same quality measures available to other groups, according to all applicable MIPS quality scoring policies. It has been brought to our attention that we did not make it clear whether APM Entities may be eligible for facility-based scoring. In the CY 2022 PFS proposed rule (86 FR 39429), we clarified that because facility-based measures are not submitted, but rather are collected by CMS using group-level participation scores used for the Hospital Value Based Purchasing Program, it would be impossible for CMS to calculate a score for a facility-based measure that represents the performance of an APM Entity. Therefore, facility-based scoring is not available to APM Entities under MIPS quality scoring rules, as described at § 414.1330. We also noted that participants in APM Entities that are eligible for facility-based scoring at the individual or group level would still be eligible to receive these scores for purposes of individual or group MIPS scoring.

(c) APM Entity Performance Category Weights

In the CY 2021 PFS final rule (85 FR 84896), we finalized a policy to weight the cost performance category at zero percent of the final score for APM Entities in MIPS APMs. We codified the weight of the cost performance category at § 414.1317(b)(2), but we did not discuss in the CY 2021 PFS final rule how the weight that otherwise would have applied to the cost performance category will be redistributed among the other performance categories. In the CY

2022 PFS proposed rule (86 FR 39429), for purposes of clarity, we proposed to add to § 414.1317(b)(2) that the performance category reweighting scenarios under § 414.1380(c)(2) apply to an APM Entity.

We explained that because APM Entities are participating in traditional MIPS and generally are being scored according to traditional MIPS scoring rules at § 414.1380 unless otherwise specified, the performance category reweighting scenarios under § 414.1380(c)(2) are applicable to APM Entities. Using the 2021 MIPS performance period/2023 MIPS payment year as an example, if the cost performance category is the only performance category weighted at zero percent for an APM Entity, the performance category weights would be as follows under § 414.1380(c)(2)(ii)(E): Quality 55 percent, cost zero percent, improvement activities 15 percent, and promoting interoperability 30 percent. If both cost and promoting interoperability are weighted at zero percent, then quality would be 85 percent and improvement activities would be 15 percent. For the remaining reweighting scenarios for the 2021 MIPS performance period/2023 MIPS payment year, we refer readers to Table 6 under § 414.1380(c)(2)(ii)(E). The reweighting scenarios applicable to APM Entities for the 2022 MIPS performance period/2024 MIPS payment year can be found in Table 7 under § 414.1380(c)(2)(ii)(F). We refer readers to section IV.A.3.e.2 of this final rule where we discuss our proposal to apply the reweighting policy finalized for the 2022 MIPS performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(F) to the 2025 MIPS payment year and each subsequent MIPS payment year. In the event we establish additional reweighting scenarios, they would also apply to APM Entities.

We did not receive any comments on this proposal and are finalizing as proposed.

e. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

For the CY 2022 performance period/2024 MIPS payment year, we intend to continue to build on the scoring methodology we finalized for prior years. The scoring methodology allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. We proposed to update many of our scoring policies, focusing on

removing transition policies. Specifically, we proposed to—

- Change certain terminology related to scoring.
 - Amend our scoring flexibility policy to include quality measures with omitted or deactivated codes in the finalized measure specifications.
 - Implement benchmarking and topped out scoring policies that are responsive to potential low reporting rates for the CY 2020 performance period/2022 MIPS payment year due to the national PHE for COVID-19 and establishing a benchmark when measures are suppressed in the baseline period.
 - Amend policies for scoring quality measures based on achievement and measures that do not meet case minimum or have a benchmark and introduce scoring policies for new measures.
 - Amend the minimum case requirement policy.
 - End the high priority and end-to-end reporting bonuses in the quality performance category.
 - Continue improvement scoring in the quality performance category.
 - Implement a scoring flexibility policy for changes that impact cost measures during the performance period.
 - Revise certain provisions of the regulation text for the Promoting Interoperability performance category.
- We did not propose changes to scoring policies for the improvement activities performance category.
- We also maintained our approach to how MIPS eligible clinicians are scored against performance standards for each performance category, receive a final score comprised of their performance category scores, and how the final score is calculated according to the final score methodology. We refer readers to § 414.1380 for policies on scoring.

(b) Terminology Updates

We proposed updates to § 414.1380 in an effort to more clearly and concisely capture previously established policies (86 FR 39429). These proposed updates were not intended to be substantive in nature, but rather to bring more clarity to the regulatory text. We proposed to change the term “performance category percent score” to “performance category score” in §§ 414.1380(b)(1)(vi)(C) and (E) related to improvement scoring, 414.1380(b)(1)(vii) related to scoring the quality performance category score, 414.1380(b)(2)(iii) and (v) related to scoring the cost performance category, 414.1380(c) and (c)(2)(ii)(A) on calculating the final score and final score reweighting, and

414.1380(e)(6)(iv) and (v) related to facility-based scoring. Again, these changes were not intended to change the underlying policies reflected in the regulation text. Initially, the quality and cost performance categories used the term “performance category percent score” because those categories had improvement scoring and have a slightly different approach to calculation than the Promoting Interoperability and improvement activities performance category. However, the terms “performance category percent score” and “performance category score” have been used in the same way. For that reason, we proposed to consolidate our language and use only the latter aforementioned term.

We received public comments on our terminology updates. The following is a summary of those comments.

Comment: One commenter supported the change in terminology.

Response: We thank the commenter for their support.

After consideration of the public comments, we are finalizing this proposal as proposed.

(c) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to § 414.1380(b)(1) for our policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category percent score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913). We proposed in the CY 2022 PFS proposed rule to amend policies finalized in prior years to simplify scoring in MIPS as we transition to MVPs (86 FR 39429 through 39430).

(i) Scoring Flexibility for Changes That Impact Quality Measures During the Performance Period or Prior to Implementation

We refer readers to CY 2018, CY 2019, and CY 2021 Quality Payment Program final rules (82 FR 53714 through 53716, 83 FR 59845 through 59847, and 85 FR 84898 through 84901 respectively) and § 414.1380(b)(1)(vii)(A) for our previously establish scoring flexibilities policy.

In the CY 2018 Quality Payment Program Final rule (82 FR 53714 through 53716), we finalized that, beginning with the 2018 MIPS performance period, we will assess performance on measures considered significantly impacted by ICD–10 coding changes during the performance period based only on the first 9 months of the 12-month performance period. We noted that we believe that 9 months of data is sufficient to assess performance when 12 months of data is not available. We finalized that we would publish a list of measures requiring 9 months of data on the CMS website by October 1st of the performance period if technically feasible, but no later than the beginning of the data submission period (for example, January 2, 2021 for the 2020 performance period) (82 FR 53716). We refer readers to § 414.1380(b)(1)(viii) for more on our policy for scoring flexibility for ICD–10 changes.

In the CY 2019 Quality Payment Program final rule (83 FR 59845 through 59847), we finalized policies beginning with the 2019 performance period/2021 MIPS payment year to reduce the total available measure achievement points from the quality performance category by 10 points for MIPS eligible clinicians for each measure submitted that is significantly impacted by clinical guideline changes or other changes when we believe adherence to the guidelines in the existing measures could result in patient harm or otherwise no longer be comparable to a historic benchmark. We wanted the flexibility to respond to instances in which the clinical evidence and guidelines change and approved measures no longer reflect the most up-to-date clinical evidence and could even result in a practice that is harmful to patients. We finalized expanding the list of reasons that a quality measure may be impacted during the performance period in addition to revising when we will allow scoring of the measure with a performance period truncation (to 9 months of data) or the complete suppression of the measure if 9 months of data are not available.

In the CY 2021 Quality Payment Program final rule, we finalized a consolidation of the CY 2018 and CY 2019 scoring flexibilities policy that allowed, beginning with the 2021 performance period/2023 MIPS payment year, truncation of the performance period or suppression of a quality measure if CMS determines that revised clinical guidelines, measure specifications or codes impact clinician’s ability to submit information on the measure or may lead to

potentially misleading results. Based on the timing of the changes to clinical guidelines, measure specifications or codes, we will assess the measure on 9 months of data, and if 9 consecutive months of data are not available, we will suppress the measure by reducing the total available measure achievement points from the quality performance category by 10 points for each measure submitted that is impacted (85 FR 84898 through 84901).

In previous rules, we noted that we believe that there may be instances when there are changes after the final approval of quality measures including changes to the measure specification, or updates to coding that may lead to misleading results (85 FR 84899). Additionally, we believe that there may be instances in which there is an inadvertent omission of codes, or inclusion of deactivated codes in the measure specifications that do not have the correct status. Typically, codes that are contained within the measure specifications either have a reimbursable status or a non-reimbursable status that still allows processing for purposes of quality reporting programs. We have encountered instances where CMS has been alerted that codes have inadvertently received an inactive status which results in the associated codes not being processed and stored in the National Claims History (NCH) database, and therefore, not available for quality purposes. As the measure specifications are considered technical documents that include several fields such as, but not limited to: The numerator, denominator, measure description, denominator exclusions, clinical guidance statements, and codes relevant to how the measure should be captured. The measure specifications are finalized and published in coordination with the final rule, and prior to the start of the performance period. An inadvertent omission of codes, or inclusion of inactive codes in the measure specifications, may result in misleading results by affecting clinicians who submit the measure. In these instances, implementation errors could lead to misleading performance rates by failure to reflect accurate numerator and/or denominator values for calculation of the measure. These are not changes that occur during the performance period, but errors that would affect the performance period.

It recently came to our attention through Help Desk inquiries that Medicare Administration Carriers (MACs) were rejecting 2021 Part B Claims submissions for Quality Measure ID (QID) 001: Hemoglobin A1c (HbA1c)

Poor Control (>9%) and QID 117 Diabetes: Eye Exam due to an inactive status for certain CPT II codes. The omission of these claims from the total denominator population of the measure could skew scores and lead to misleading results. We believe suppression of the measures is consistent with current § 414.1380(b)(1)(vii)(A). Information on the suppression of the Part B claims collection type of these measures for the 2021 MIPS performance period/2023 MIPS payment year was announced via the QPP listserv on July 1st, 2021. For more information please refer to our website qpp.cms.gov.

We proposed to amend § 414.1380(b)(1)(vii)(A) to clarify our intended policy on instances in which we become aware of changes to the active or payable status of the codes and/or implementation errors included in the measure specifications as finalized that would lead to misleading results. Accordingly, we proposed to revise § 414.1380(b)(1)(vii)(A) to change “significant changes” to “significant changes or errors” and to include the omission of codes or inclusion of inactive or inaccurate codes to provide that for each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician’s total measure achievement points and total available measure achievement points. For purposes of paragraph (b)(1)(vii)(A), “significant changes or errors” means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes, or inclusion of inactive or inaccurate codes; changes to clinical guidelines; or measure specifications. We will publish on the CMS website a list of all measures scored under paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than data submission deadline at § 414.1325(e)(1).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters offered additional suggestions. One commenter suggested that, for each circumstance, CMS work with stakeholders to assess whether it would be appropriate to measure a practice on 9 months of data for a quality measure with a 12-month performance period. One commenter requested a better way to address errors in measures besides suppression and truncation as measure stewards need more flexibility to adjust measures with errors. The commenter noted that if a measure with an error is suppressed immediately and there is no opportunity for the error to be fixed, measure stewards will not be incentivized to put forth corrections to CMS.

Response: We thank the commenters for their comments. The policy to truncate the performance period to 9 months may be used when there are changes in the final quarter of the performance period that are substantial enough to significantly impact the measure. In instances in which measures include significant changes or errors at the time of finalization, we would not have 9 months of appropriate data to assess. When these errors come to CMS’ attention, the agency works with measure stewards to correct the issue. Whether or not the measure can be corrected is contingent upon the timing of discovery of the errors. In instances in which measures can be corrected, we believe that measure stewards are incentivized to correct them in as timely a manner as possible to support their presence and use in the program. We also believe that measure stewards want their measures in MIPS and will work to ensure that their measures are maintained and that errors are corrected. We will continue to work with measure stewards both to ensure measure specifications are correct before finalization, as well as correct any errors that are finalized.

Comment: A few commenters supported the expanded list of reasons that a quality measure may be impacted to include errors included in the measure specifications as finalized as cause to suppress or truncate a measure. One commenter appreciated that the policy will prevent scores from being negatively affected based on changes to measures.

Response: We thank the commenters for their response and their support of the edits to the scoring flexibilities policy.

After consideration of public comments, we are finalizing our proposal as proposed by revising § 414.1380(b)(1)(vii)(A) to change “significant changes” to “significant changes or errors” and to include the

omission of codes or inclusion of inactive or inaccurate codes to provide that for each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician’s total measure achievement points and total available measure achievement points. For purposes of paragraph (b)(1)(vii)(A), “significant changes or errors” means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes, or inclusion of inactive or inaccurate codes; changes to clinical guidelines; or measure specifications.

We will publish on the CMS website a list of all measures scored under paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than data submission deadline at § 414.1325(e)(1).

(ii) Quality Measure Benchmarks

We refer readers to the CY 2017, CY 2018, CY 2019, CY 2020, and CY 2021 Quality Payment Program final rules (81 FR 77277 through 77282, 82 FR 53699 through 53718, 83 FR 59841 through 59842, 84 FR 63014 through 63016, and 85 FR 84901 through 84904) for our previously established benchmarking policies.

In the CY 2017 QPP final rule (81 FR 77277 through 77282), we finalized that we will use performance in the baseline period to set benchmarks for the quality performance category, with the exception of new quality measures, quality measures that lack historical data, or where we do not have comparable data from the baseline period, for which we will set the benchmarks using performance in the performance period. We defined the baseline period to be the 12-month CY, that is, 2 years prior to the performance period for the MIPS payment year. For example, for the CY 2022, the baseline period two performance periods prior will be the CY 2020 performance period (81 FR 77277). Additionally, we further clarified that CMS can establish benchmarks either by the applicable baseline or performance period in the

CY 2019 PFS final rule (83 FR 59842), where we finalized the terminology change amending § 414.1380(b)(1)(ii) to remove the mention of each individual benchmark and instead state that benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

Because of the flexibility provided to MIPS eligible clinicians to allow for no data submission for the 2020 performance period (<https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1198/2020%20MIPS%20Automatic%20EUC%20Fact%20Sheet.pdf>), we may not have as representative of a sample of data as we will have had without the national PHE for COVID-19. Therefore, we want to revisit our benchmarking policy for the 2022 performance period/2024 MIPS payment year similarly to how we revisited the benchmarking policy for the 2021 performance period/2023 MIPS payment year (85 FR 84901 through 84902). We anticipate that we may have a gap in our data due to receiving fewer submissions for CY 2020, which could skew the benchmarking results. We believe this gap in data could result in different distributions of scores from what we normally see; thus, skewing the benchmarks when using CY 2020 data as the baseline for the CY 2022 performance period/2024 MIPS payment year. Additionally, we anticipate that only those not experiencing a hardship will submit data, thus skewing benchmarks much higher than normal. We ultimately, did not finalize this proposal for CY 2021 because analysis of the submitted data from the CY 2019 performance period/2021 payment period showed that it was suitable for use in calculating benchmarks. However, as we know from the events of 2020, we anticipate that the effects of the national PHE for COVID-19 may be more significant for the CY 2020 performance period.

For this reason, we considered two benchmarking options for the CY 2022 performance period/2024 MIPS payment year. We proposed to use performance period benchmarks for the

CY 2022 performance period/2024 MIPS payment year in accordance with § 414.1380(b)(1)(ii). As discussed in the CY 2021 PFS final rule (85 FR 84902), this would mean that benchmarks for the CY 2022 performance period/2024 MIPS payment year are based on the actual data submitted during the CY 2022 performance period. Last year, we received comments supportive of our proposal to use performance period benchmarks citing that the performance period benchmarks will capture any changes in care due to the national PHE for COVID-19 and avoid unfairly penalizing practices for variation in performance compared to data from prior to the national PHE for COVID-19 (85 FR 84902 through 84903). We also received comments that opposed the use of performance period benchmarks, as clinicians would not have advance notice of performance targets. As a result, we also considered and sought feedback as an alternative to performance period benchmarks, utilizing the historic benchmarks from the 2021 MIPS performance period (which are based on submissions for CY 2019 MIPS performance period/2021 MIPS payment year) for the CY 2022 performance period/2024 MIPS payment year. We believed that this option would allow clinicians to continue to receive advance notice for quality performance category measures so that MIPS eligible clinicians can set a clear performance goal for these measures for the CY 2022 performance period/2024 MIPS payment year. However, we remained concerned that utilizing outdated data could also potentially result in distributions of scores used for benchmarks that no longer reflect the standard of care especially as care changes in response to the PHE. Additionally, any new or substantively changed measures in the CY 2022 performance period/2024 MIPS payment year will lack a benchmark, as would measures that were suppressed in the CY 2019 performance period/2021 MIPS payment year alternate baseline period. We noted that we would analyze the CY 2020 performance period data and compare the distribution of the CY 2020 performance period data to that of previous years to

assess if we could in fact use data from the CY 2020 performance period for benchmarks for the CY 2022 performance period/2024 MIPS payment year and if not, we would evaluate the suitability of the alternatives.

Additionally, we proposed to expand the definition of the baseline period. In instances in which a measure is suppressed two performance periods prior in the standard baseline period and cannot be used to calculate a benchmark, we proposed to use the data from three performance periods prior to calculate benchmarks in the event that a performance period benchmark cannot be calculated. This will mean that for the CY 2022 performance period/2024 MIPS payment year, if a measure was suppressed in the 2020 performance period and a performance period benchmark could not be calculated using the 2022 performance period data because it was not reported by 20 different clinicians or groups that met data completeness and case minimum requirements, we would calculate a benchmark from performance period data from CY 2019. If a measure had undergone a substantive change or was also suppressed in the baseline period 3 performance periods prior, we would not use it to calculate benchmarks and the measure will be subject to our scoring policies for class 2 measures. We would not use benchmarks calculated from performance periods that are older than 3 performance periods prior. We believed it is important to continue using the most up-to-date data to drive clinical quality improvement. We believed that this policy will reduce burden to clinicians and allow them to continue to have performance targets in the event that a measure is suppressed.

We solicited public comments on our intent to use performance period benchmarks for the CY 2022 performance period and to expand the baseline period to three performance periods prior for measures that are suppressed two performance periods prior. Table 59 reflects a summary of the benchmarking hierarchy in our proposal.

TABLE 59: Quality Performance Category: Proposed Benchmarking Hierarchy

Policy Hierarchy	Baseline period used to calculate Benchmark	Condition
1	Historical Baseline Period: Two Performance Periods prior to the applicable performance period	A benchmark can be calculated from the historical baseline period defined as two performance periods prior to the applicable performance period.
2	Performance Period Benchmark	A benchmark cannot be calculated from the historical baseline period, but 20 or more clinicians report on a measure and meet or exceed the case minimum of 20 cases during the performance period.
3	Alternate Historical Baseline Period: Three Performance periods prior to the applicable performance period	A measure is suppressed in the historical baseline period two years prior to the applicable performance period and a performance period benchmark cannot be calculated, but a benchmark can be calculated from the alternate historical baseline period defined as three performance periods prior to the applicable performance period can be calculated because the measure had not undergone a substantive change in the time since the data was collected or been suppressed in the baseline period.
4	No baseline: Subject to class 2 scoring policy	A benchmark cannot be calculated from the historical baseline period, the performance period, or the alternate baseline period.

We received public comments to the quality measure benchmarks. The following is a summary of the comments we received and our responses.

Comment: Many commenters requested that CMS undertake more analysis on the impact of the use of 2019, 2020 and 2021 data on setting benchmarks and risk adjustment models before moving forward with its proposed policy to use 2022 benchmark data. One commenter supported the plan to apply the same process used for evaluating 2019 performance year data to 2020 performance year data to determine if data are sufficient to establish benchmarks. A few urged CMS to evaluate CY 2021 data to determine if there are data anomalies that will require the avoidance of using that data, as well.

Response: Based on analysis of CY 2020 performance period/2022 MIPS payment year submissions data, we believe there is sufficient data to calculate historical benchmarks and do not believe it is necessary to use either of the proposed alternative approaches. Overall, despite a modest decrease in submission volume, average scores remained consistent to those observed in CY 2019 performance period/2021 MIPS payment year. The analysis showed minimal to no impact for the Part B Claims and MIPS CQM collection types. However, we did see moderate distributional effects in 64 measures. We note that these 64 measures are less commonly reported and the effects seen are not categorically different than the change in the performance distribution that would be observed in any given year, although it is possible that the observed effects may be greater than

they would otherwise be as a result of the COVID–19 PHE.

Ultimately, we believe that the best option available is to use the CY 2020 performance period/2022 MIPS payment year data. These data will provide clinicians with advance notice of performance targets that are more representative samples of performance as a result of the PHE than the use of performance period benchmarks. Additionally, we believe that data from the CY 2020 performance period/2022 MIPS payment year, which is the most recent available dataset, is more appropriate for use than the historical benchmarking data from the CY 2019 performance period/2021 MIPS payment year. We believe that it is important to benchmark performance using data that reflects care provided during the PHE. We also believe that the CY 2020 performance period/2022 MIPS payment year data better represents this care. Data collected during the CY 2019 performance period was largely not affected by the COVID–19 PHE, rather we saw effects during the associated submission period which occurred during the first calendar quarter of 2020 which affected the number of submissions, but would not reflect a performance period in which clinicians were facing the PHE. We note that we could not analyze data from the CY 2021 performance period/2023 MIPS payment year as it is not currently available. This data will be submitted from the close of the performance period through March 31, 2022 (§ 414.1325(e)). For this same reason we could not use this data to set benchmarks for the CY 2022 performance period/2024 payment year.

We are committed to using the most up-to-date representative data available. For that reason, we are not finalizing the proposal to use performance period benchmarks and will calculate benchmarks according to the standard baseline period policy.

Comment: One commenter suggested that CMS exclude CY 2020 data from all future reporting due to COVID–19 and maintain consistency in excluding 2020 reporting year data as was proposed in the 2022 Inpatient Prospective Payment System (IPPS) and Outpatient Prospective Payment System (OPPS) regulations.

Response: We believe the commenter is misunderstanding policies in the IPPS and OPPS regulations. In March 2020, prior to either the CY 2022 OPPS/ASC proposed rule or the FY 2022 IPPS/LTCH PPS proposed rule, we issued an extraordinary circumstance exception (ECE)²⁵³ for a number of Q1 and Q2 2020 requirements in hospital pay-for-reporting and value-based purchasing programs, including the Hospital Inpatient Quality Reporting Program and the Hospital Outpatient Quality Reporting Program.

In the FY 2022 IPPS final rule, we established a measure suppression policy in a number of value-based purchasing programs, including the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program and the Hospital-Acquired Conditions Program. This measure suppression policy allowed for

²⁵³ <https://www.cms.gov/files/document/guidance-memo-exceptions-and-extensions-quality-reporting-and-value-based-purchasing-programs.pdf>.

suppression of measures if we determine that circumstances caused by the COVID-19 PHE have affected those measures (86 FR 45266). Additionally, for the FY 2022 for Hospital VBP program year, because of wide-spread measure suppression, it was finalized that we would not calculate total performance scores nor issue any penalties or incentive payments as awarding negative or positive incentive payment adjustment percentages using TPSs calculated using the current scoring methodology would not provide a representative score of a hospital's overall performance in providing quality of care during a pandemic (86 FR 45276). We did not propose any additional policies related to suppression or exclusions in the CY 2022 OPPS/ASC proposed rule as the comment suggested. We do not believe it will be necessary to exclude CY 2020 performance period data from MIPS. As stated above, our analysis supports the use of CY 2020 performance period/2022 MIPS payment year data to calculate quality measure benchmarks.

Comment: Many commenters supported the use of performance period benchmarks. These commenters stated that such benchmarks would be more representative of the care provided during the COVID-19 pandemic and would be "more appropriate" than using historical benchmarks. Many commenters agreed with CMS' concern that 2020 performance data may not be a representative sample of historic data and benchmarks for 2022 will be more accurate and reliable. To support the use of performance period benchmarks, one commenter encouraged CMS to release the 2021 performance year benchmarks as soon as possible in 2022. One clinician supported providing 2019 historic benchmarks to give clinicians a target while the performance period benchmarks are used for scoring.

Response: We agree that performance period benchmarks would provide the most up-to-date data to calculate benchmarks; however, we also believe there is significant value in the advance notice of performance targets. Participants may have difficulty meeting relevant performance targets if they lack advance notice of the target as they may not be able to determine the appropriate level of resources necessary to achieve the performance target. Participant concerns regarding this issue may be particularly acute where performance may result in a payment adjustment. We thank the commenters for their suggestions, but we believe that it is most appropriate to continue to rely on historical benchmarks for the CY 2022 performance period/2024 MIPS

payment year. We will continue to monitor the impact of the national PHE on performance benchmarks. We note that the CY 2019 performance period/2021 MIPS payment year benchmarks are currently available in the resource library on the QPP website (<https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip>). The historical benchmarks based on CY 2020 performance period/2022 MIPS payment year will be available prior to the CY 2022 performance period. The CY 2023 historical benchmarks which are calculated from CY 2021 performance period/2023 MIPS payment year data will be available spring/summer of CY 2022 at the earliest.

Comment: Many commenters did not support the use of performance period benchmarks because clinicians would not know the benchmarks ahead of time and performance period benchmarks would prevent meaningful assessment in advance of the performance year and would hinder the ability to select measures that will maximize scoring in advance of the year. One commenter stated that advanced notice of targets is essential to ensure fair and meaningful incentives for high quality, efficient health care. One commenter noted that as payment consequences associated with MIPS scores increase, it becomes more important to provide clinicians with adequate information to enable appropriate selection of measures. One commenter stated that any value gained by using performance period benchmarks is outweighed by the negative impact on clinicians as they would not have benchmarks available for comparison and performance improvement.

Response: As noted above, we agree that the use of performance period benchmarks would not allow clinicians the opportunity to fully prepare for the respective performance period. We will not finalize the use of performance period benchmarks for the CY 2022 performance period/2024 MIPS payment year. We believe the use of data from the CY 2020 performance period/2022 MIPS payment year will be representative of performance and allow clinicians advanced notice of performance targets to aid in measure selection and help clinicians to work towards improvement on quality measures.

Comment: Many commenters supported using CY 2019 performance period/2021 MIPS payment year data to create quality benchmarks since clinicians appreciate notice on which measures will have benchmarks and the

CY 2019 performance period/2021 MIPS payment year data would allow clinicians time to review and compare data to drive improvement based on the known benchmark. A few commenters noted that, to maintain consistency and predictability of MIPS performance through the pandemic, CMS should use CY 2019 performance period/2021 MIPS Payment year historic data as benchmarks. One commenter supported the use of CY 2019 performance period/2021 MIPS payment year historic benchmarks as EHRs and registries track performance in real time relative to the benchmark as the only way for clinicians to determine if there are deviations in their quality performance which can occasionally indicate real clinical issues, such as complication rates, that need to be addressed. One commenter stated that for measures with substantive changes since CY 2019, CMS should use the CY 2022 performance year/2024 MIPS payment year data, that is, use a performance period benchmark, to determine the score, but the general use of CY 2019 quality measure data for benchmarks would allow clinicians to have some ability to know what they are being benchmarked against. One commenter suggested that CMS should provide clinicians with historic benchmarks using CY 2019 performance period/2021 MIPS payment year data and calculate historic and performance period benchmarks and use the more favorable to score.

Response: We agree that the opportunity to review and compare data helps to drive improvement against the known benchmark and enables clinicians track performance in real time to respond to any clinical issues that the data indicates. These benefits provide value to clinicians and support their meaningful participation in the program. This is ultimately the reason our existing policy establishes the preference to use historical benchmarks. In this instance, we believe that the use of CY 2020 performance period/2022 MIPS payment year to calculate benchmarks better balances issues that arise from using historical data than the use of CY 2019 performance period/2022 MIPS payment year data. Ultimately, as stated in a previous response, we believe that it is most appropriate to base a benchmark on the more up-to-date historical data and on the historical data that is most representative of the current standard of care.

We agree with the commenters' suggestion that measures suppressed in the CY 2019 performance period/2021 payment year should use performance

period data for benchmarking and will apply this approach to measures suppressed in the CY 2020 performance period/2022 MIPS payment year, as this is our current approach. Historical benchmarks from the CY 2019 performance period/2021 MIPS payment year are currently available in the resource library in the QPP website.

Comment: A few commenters did not support expanding the definition of the baseline period to calculate a benchmark because the underlying data would be too retrospective and not reflective of current performance and that this approach would not address the concerns of using a representative sample of historic data since many of the baseline periods would include data from 2019, 2020, and 2021 data—all of which are impacted by the COVID-19 pandemic. One commenter encouraged CMS to avoid the use of these data for benchmarking purposes.

Response: We believe there is value in the advance notice for quality measures, but agree that extending the baseline period would be too retrospective and fails to reflect current performance that could come as a result in advances in care. For this reason, we are not finalizing the proposal to add an alternate historical baseline period defined as three performance periods prior.

Comment: A few commenters supported the proposal to add an alternate baseline period of three performance periods prior for measures that are suppressed two performance periods prior. One commenter suggested that it would be better to use the Alternate Historical Baseline Period at level 2 in the proposed benchmarking hierarchy and set the Performance Period Benchmark as level 3 since CMS has expressed concern that alternate historical benchmarks could become too outdated to accurately reflect the current standard of care. Moving the Alternate Historical Baseline to level 2 within the proposed benchmarking hierarchy would allow CMS to give providers advanced notice using historical benchmarks, while still having the discretion to use concurrent performance period benchmarks if determined that the standard of care has changed too significantly to use the alternate historical data.

Response: We thank commenters for their support, but will not be finalizing this proposal for the reasons cited in the previous response. Our proposal was to allow for scoring of measures that had been suppressed in the baseline period two performance periods prior when a performance period benchmark could not be calculated. For the reasons stated

above, we prefer to use the most-up-to-date historical data that is available in the program and believe using an alternate baseline period of three performance periods prior may be too retrospective. We will continue to use our use of performance period benchmarks for measures that lack a benchmark in the baseline period.

After consideration of public comments, we are not finalizing our proposal to use performance period benchmarks in the CY 2022 performance period/2024 MIPS payment year or a historic benchmark calculated from CY 2019 performance period data. Instead, we will calculate benchmarks from the CY 2020 performance period/2022 MIPS payment year data as is our standard policy according to § 414.1380(b)(1)(ii). Any measures suppressed in the CY 2020 performance period/2022 MIPS payment year will have a performance period benchmark calculated for scoring purposes. Additionally, we are not finalizing our proposal to define an alternative baseline period for benchmarking defined as three performance periods priors for measures suppressed in the baseline period two performance period prior.

(iii) Assigning Quality Measure Achievement Points

We refer readers to § 414.1380(b)(1)(i) for more details on our current policies for scoring performance on quality measures (81 FR 77276 through 77307, 82 FR 53694 through 53701, 83 FR 59841 through 59856, 84 FR 63011 through 63019, and 85 FR 84906 through 84907).

(A) Scoring Measures Based on Achievement

We previously established at § 414.1380(b)(1)(i) a global 3-point floor for each scored quality measure, as well as each administrative claims measure. MIPS eligible clinicians receive between 3 and 10 measure achievement points for each submitted measure that can be reliably scored against a benchmark, which requires meeting the case minimum and data completeness requirements. In the CY 2017 Quality Payment Program final rule (81 FR 77282), we established that measures with a benchmark based on the performance period (rather than on the baseline period) will continue to receive between 3 and 10 measure achievement points for performance periods after the first transition year. For measures with benchmarks based on the baseline period, we stated that we will revisit the 3-point floor in future years. For the 2021 performance period/2023 MIPS

payment year, we maintained the application of the 3-point floor for each measure that can be reliably scored against a benchmark.

For the 2022 performance period/2024 MIPS payment year, we proposed to remove 3-point floor for each measure that can be reliably scored against the benchmark and score the measure from 1 to 10 points. As we move towards the MVP framework discussed the CY 2021 PFS final rule (85 FR 84904), we are moving towards a simplified scoring standard in which we can score quality measures from 1 to 10 for measures in MVPs and as such will amend the MIPS program to begin promoting this alignment. As a result, we previously discussed that we would wait until there is further policy development under the MVP framework before removing the 3-point floor (85 FR 84904). However, with the delay in the implementation of MVPs, we will begin the transition to MVPs by removing policies established on the transition years of MIPS. We have signaled through rulemaking for several years that we would revisit policies established during the transition years of the program from the legacy programs to MIPS. As the legacy programs have been sunsetted for many years now, we believe that it is appropriate to transition the MIPS program to its mature state. Additionally, we believe that transitioning MIPS to its mature state will serve as a transition period to allow clinicians to adjust to the simplified scoring standard that we will be using in MVPs.

Accordingly, we proposed to revise § 414.1380(b)(1)(i) to add beginning the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians would receive between 1 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340 (86 FR 39432).

We solicited public comments on our proposal to remove the 3-point floor for each measure that can be reliably scored against a benchmark for the 2022 performance period/2024 MIPS payment year.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: One commenter did not support the removal of the three-point

floor and noted that it would likely be an additional challenge for practices that are already struggling with the pandemic. Another commenter suggested that the proposal to remove the 3-point floor should be delayed and should be implemented as part of the CY 2023 rulemaking process as the pandemic has shifted clinician focus off of the mechanics of MIPS and very few clinicians may be ready for such a significant change during the CY 2022 performance period.

Response: We agree that the national PHE for COVID-19 has affected the health care sector in unprecedented ways and has understandably shifted clinician focus off of participation in MIPS. We agree that delaying the implementation of the removal of the 3-point scoring floor until the CY 2023 performance period/2025 MIPS payment year would recognize this hardship and would avoid harshly penalizing clinicians for any changes in performance that may be observed during this time. CMS does remain committed to the removal of transition policies and moving towards a simplified scoring standard in MVPs.

Comment: A few commenters opposed the removal of the scoring floor along with the higher performance threshold. The commenters requested that CMS account for the challenges that will result from an increased performance threshold and retain the scoring floor instead of removing many of the possibilities of avoiding a negative payment adjustment.

Response: We agree that removing the scoring floors and raising the performance threshold at this time, particularly with the ongoing PHE, could present challenges to clinicians. However, we do not want to continue masking true performance on quality measures. As discussed in section IV.A.3.f.(2) of this final rule, beginning with the CY 2022 performance period/2024 MIPS payment year, section 1848(q)(6)(D)(i) of the Act requires the performance threshold to be the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. Accordingly, we proposed to use a performance threshold of 75 points which was the mean final score from CY 2017 performance period/2019 MIPS payment year (86 FR 39454). As this represents an increase of about 15 points from the previous year's performance threshold, we understand clinicians' concern. For this reason, we are delaying the removal of the 3-point scoring floor for measures that can be reliably scored against a benchmark

until the CY 2023 performance period/2025 MIPS payment year. We believe this will allow clinicians some leniency as we they adjust to a higher performance threshold and continue to face the PHE.

Comment: One commenter stated that CMS should assess scoring 1–10 points before removing the 3-point floor. The commenter encouraged CMS to review how frequently eligible clinicians have performance rates that place them below the 3-point floor, particularly clinicians in small and rural practices.

Response: We thank the commenter for their suggestion and will perform these analytics. To further assist MIPS eligible clinicians in the transition of removing the 3-point scoring floor, we will begin providing information on deciles below 3 in our forthcoming benchmark file, as technically feasible before the removal of the 3-point floor in 2023.

Comment: One commenter stated that the methodology to estimate the quality performance category score and the transition from old scoring policies to new are too complicated as clinicians need to understand how their scores are calculated and which measures to select to optimize performance.

Response: We believe that removing the 3-point scoring floor and scoring measures that can reliably be scored against a benchmark from 1–10 will make scoring simpler. The 3-point scoring floor was established when the performance threshold was 3 points during the transition year of the MIPS in order to avoid penalizing clinicians at the start of the program (81 FR 77287). As the performance threshold has since changed and clinicians have more familiarity with reporting through MIPS, this policy is no longer relevant. In order to move towards complete and meaningful scoring, scores will be evenly distributed across a range from 1 to 10. This allows CMS to more accurately distinguish performance amongst clinicians. We believe that the changes in quality measure comparison will also provide great benefits to clinicians by reducing score inflation in the quality performance category and by enabling payment adjustments that reflect meaningful distinctions in quality of care. We currently provide a tool on the QPP website for clinicians to explore measures and activities to aid in measure and activity selection (<https://qpp.cms.gov/mips/explore-measures>). We offer this tool and provide clinicians with performance targets (historical benchmarks) before the start of the performance period in order promote transparency in scoring and support clinicians in making decisions to

support fair and meaningful participation in program.

After consideration of public comments, we are not finalizing the policy to remove the 3-point scoring floor as proposed. We are finalizing the removal of the 3-point scoring floor for measures that can be reliably scored against a benchmark to be implemented in CY 2023 and revise § 414.1380(b)(1)(i) to add beginning the 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians will receive between 1 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340. We believe that delaying the implementation of this policy allows clinicians to acclimate to other changes in the program such as the increase of the performance threshold and the removal of the scoring bonuses in the quality performance category. Additionally, we believe this policy provides some flexibility to clinicians in response to the national PHE.

(B) Scoring Measures That Do Not Meet Case Minimum, Data Completeness, and Benchmark Requirements

We refer readers to § 414.1380(b)(1)(i)(A) and (B) for more on our current scoring policies for a measure that is submitted but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data completeness requirement (84 FR 63012).

In the 2017 QPP final rule (81 FR 77288) and the 2018 QPP final rule (82 FR 53727), we identified “classes of measures” which were intended to characterize measures for the ease of discussion. Class 1 measures are measures that can be scored based on performance because they have a benchmark, meet the case minimum and data completeness requirements. Class 2 measures are measures that cannot be scored based on performance because they do not have a benchmark or do not meet the case minimum which is generally 20 cases. Class 3 measures are measures that do not meet the data completeness requirement. We also noted that policies for Class 2 and Class 3 measures will not apply to measures submitted with the CMS Web Interface or administrative claims-based measures.

In the CY 2022 PFS proposed rule, we proposed to modify how we score these measures within MIPS, as we considered policies for transitioning to MVPs (86 FR 89433). For class 2 measures, for the 2022 performance period/2024 MIPS payment year, we proposed to remove special scoring policies for measures that meet the data completeness requirement but do not have a benchmark, due to fewer than 20 individual clinicians or groups adequately reporting the measure, or meet the case minimum requirement except in the case of small practices, for which we will maintain the 3-point floor. Practices of other sizes would receive zero points.

We noted that, as we move to MVPs, we are seeking to simplify scoring by removing transition policies. To encourage complete and meaningful reporting, we cannot continue to award measure achievement points for measures that cannot be reliably scored against a benchmark. In a quality measurement program such as MIPS, we noted that it is imperative that we can reliably measure performance on clinical quality measures to achieve the goals of the program and incentivize clinicians that are providing the high-quality care. However, we remained concerned that it may be harder for smaller practices to reach case minimums, and as such, we are maintaining the 3-point floor policy for small practices. We believed that measure selection that is better reflective of the care most commonly provided in a practice would increase the value of the program by allowing us to score for achievement in clinical quality and subsequently drive changes in performance on clinical quality measures.

Measure benchmarks are posted in advance of the MIPS performance period and can be used to drive clinician measure selection. While not all measures relevant to a clinician's practice may have a historic benchmark posted, clinicians have the option to make informed decisions about their participation in the MIPS program. Additionally, we believe that while clinicians do not have control over the case volume and mix that their practices treat, under normal circumstances, they can anticipate which measures would be most reflective of the care generally provided by said practices. Scoring 3 points for class 2 measures was established as a policy during the transition years of the program, when the performance threshold was 3 points and scoring 3 points for quality will help clinicians transitioning to the program without receiving scores for

poor performance. The intent of the policy was to provide time for clinicians to acclimate to the scoring standard before being held fully accountable for their participation in the program (81 FR 77287). As we believe we have provided sufficient time for clinicians to acclimate to our reporting requirements and scoring practices, we believe that we can hold clinicians accountable for their meaningful participation in the program.

We remain concerned about that case minimums and the availability of a benchmark are in some instances out of the control of the clinician, but we believe that clinician choice of measure allows us to move forward with the removal of transition scoring policies. We note that we also have policies in place to account for the calculation of a performance period benchmark if a historical benchmark is unavailable. Simulations of the effects of this policy show minimal effects of removing the 3-point floor as described above, with only a 0.4 point-decrease in median quality performance category score and 0.2 point-decrease in mean performance quality performance category score when compared to a baseline score that maintains the previously finalized class 2 measure scoring policy (86 FR 39433). We noted that we considered other approaches to address this issue such as a denominator reduction for class 2 measures; however, we remained concerned over the potential for gaming under this approach, such as where a clinician only selects class 2 measures resulting in their quality performance category score being reweighted.

We did not want this policy to discourage the reporting of new measures in the program because they may lack a benchmark or fail to meet the case minimum requirement. For this reason, we proposed a 5-point floor for new measures in the program for all collection types for their first 2 years in the program, as well as a new class for these measures. Measures in either their first or second performance period in the program would be classified as class 4 measures. Measures that can be reliably scored against a benchmark because they meet data completeness requirement can have a performance period benchmark calculated, and meet case minimum requirements would be considered class 4a and scored from 5 to 10 measure achievement points. In the event that a measure cannot be reliably scored against a benchmark because it lacks a benchmark or does not meet case minimum, but meets the data completeness requirement, it would be considered class 4b and receive a score of 5. Measures that

cannot be scored because they do not meet the data completeness requirement would remain subject to the class 3 measure policy and receive a score of zero for clinicians other than small practices, while small practices will continue to receive three points.

We noted our belief that a 5-point floor for new measures would allow us to introduce new, applicable measures into the program, by reducing the burden to clinicians in selecting them. We also noted our belief that this policy was responsive to stakeholder concerns that new measures run the risk of lacking enough data to have a benchmark and clinicians earning only 3 points according to the current policy on measures that cannot be reliably scored against a benchmark. We believed that the possibility of earning 5 points for a measure that lacks a benchmark will not unfairly penalize clinicians who report on new measures. Additionally, clinicians have the possibility of earning up to 10 points with the lowest possible score of 5. The 5-point floor would only be in place for a measure's first 2 years in the program to ease their transition, and will be scored in accordance with policies for standard class 1, 2, and 3 measures thereafter, to maintain a simplified scoring methodology. In the CY 2017 Quality Payment Program final rule, we received comments of support on our proposal to provide a scoring floor for new measures citing that a scoring floor for new measures would encourage clinicians to report new measures and prevent gaming. Commenters were also supportive of other approaches to reducing the burden of reporting new measures such as reducing the weight of new measures in the performance category score (81 FR 77281).

Accordingly, we proposed to revise § 414.1380(b)(1)(i)(A)(1) to provide that except as provided in paragraph (b)(1)(i)(A)(2) and (3) of this section, for the 2017 through 2021 CY performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement. Beginning within the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians other than small practices receive zero measure achievement points for each such submitted measures and small practices receive three measure achievement points.

We also proposed to add the policy for new measures at § 414.1380(b)(1)(i)(C)(1) to provide that beginning with the CY 2022

performance period/2024 MIPS payment year, MIPS eligible clinicians receive between 5 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340. We also proposed to add a policy at § 414.1380(b)(1)(i)(C)(2) to provide that for purposes of this section “new measures” means a quality measure this is in its first 2 years in the program.

We solicited public comments on our proposal to modify the special scoring policies for measures that meet the data completeness requirement but do not have a benchmark or meet the case minimum requirement for the MIPS 2024 payment year and to introduce a 5-point scoring floor for new measures in for their first 2 years in the program. Table 60 reflects a summary of our proposed policies.

We received public comments on the scoring measures that do not meet case minimum, data completeness, and benchmark requirements. The following is a summary of the comments we received and our responses.

Comment: Many commenters did not support the removal of the 3-point floor for Class 2 measures, especially while the COVID-19 pandemic is ongoing. A few commenters stated that there are often changes to quality measure specifications or calculations and as such a benchmark cannot be established for these measures and there are groups of all sizes that cannot make the case minimum for certain measures and that no such groups should receive zero points. One commenter noted that this scoring policy would disincentivize the use of these measures as the measures would then never accrue enough data for a benchmark, and clinicians would hesitate to use them—creating a self-perpetuating cycle. One commenter noted that with a measure score of zero points, and even with the 3-point floor, there is no incentive for groups to branch out and implement workflows to capture data for specialty specific measures if no benchmarks are set. One commenter suggested that instead of scoring zero points for measures with no benchmarks, CMS should provide credit to clinicians who take the time to report on more focused measures and contribute to the building of performance benchmarks. A few commenters noted that measures without benchmarks for multiple years will never get enough data for a

benchmark if they are scored at zero points. One commenter noted that this could be harmful to QCDRs as measures do not always have a benchmark because it is submitted by a limited group of specialists. One commenter stated that finalizing this policy could lead to important measures being overlooked because of the lack of a benchmark. One commenter recommended maintaining the 3-point scoring policy for measures that were introduced during PY 2020 because of the impacts of the extreme and uncontrollable circumstances policies on reporting. A few commenters stated the CMS should not make any significant changes to scoring policies during the COVID-19 PHE. One commenter stated that CMS needs to address the lack of sufficient, relevant measures before further reducing scoring for measures not meeting the case minimum or benchmark criteria.

Response: We understand that our current and proposed class 2 measure policy presents risk in reporting measures, including measures that have undergone substantive changes and had their benchmarks reset, that may not have a benchmark calculated, or in instances in which a clinician or group cannot meet the case minimum requirements. We cannot, however, provide scores for measures for which we cannot reliably distinguish meaningful differences in performance nor can we continue to award points for reporting as MIPS moves out of its transition phase. To support meaningful participation in MIPS, we provide clinicians with benchmarks in advance, as well as other tools to support measure selection (<https://qpp.cms.gov/mips/explore-measures>). We believe that there is little to no value in maintaining underreported measures for which we cannot establish benchmarks, and therefore, we cannot score.

As described in section IV.A.3.h.(1)(d)(iii) of this final rule, QCDR measures that do not meet case minimums or cannot have a benchmark calculated after their first two performance periods in the program must submit a participation plan or run the risk of being removed from the program as established in § 414.400(b)(4)(i)(B)(10)(i). We proposed the new measure policy to reduce the risk associated with reporting new measures that may not receive a benchmark. However, we recognize that there are important areas that require measurement such as specialty specific measures that may be currently underreported. We believe that the new measure policy can help to incentivize reporting of more applicable measures

over those that are historically underreported. We will monitor the effect that these policies have on the reporting of specialty specific measures and continue to explore alternative scoring solutions to solve for this problem such as MVPs. Ultimately, we are delaying implementation of the removal of the 3-point floor policy until CY 2023 in order to be responsive to clinician concerns about reporting through MIPS during the COVID-19 PHE. We believe this delay in implementation takes a phased approach to simplifying scoring as we transition to MVPs.

Comment: Many commenters supported maintaining a 3-point floor when scoring small practice clinicians on quality measures. One commenter supported this proposal as small practices face a greater administrative burden when reporting for MIPS and they support any effort to lessen this burden on those practices in particular.

Response: As noted above in section IV.A.3 e.(1)(c)(iii)(A) of this final rule, we have decided to maintain the 3-point scoring floor for practices of all sizes until the CY 2023 performance period/ 2025 MIPS payment year in response to concerns about the PHE, a higher performance threshold, and the removal of quality performance category bonuses. We believe this phased approach to simplifying scoring as we transition to MVPs by delaying the removal of the scoring floor policies while finalizing our proposals to remove the high priority and end-to-end electronic bonuses will provide flexibility during the COVID-19 PHE. We appreciate the commenters support to maintain the scoring floor for small practices.

Comment: One commenter did not support removing the 3 points for many practices while keeping the 3 points for small practices and stated that there should not be a difference in the size of practices for point allocation. One commenter noted that if a measure now does not have a benchmark, a clinician would not get any benefit from submitting a measure without a benchmark compared to the 3 points provided previously. A few commenters mentioned that measure reporting rates are not necessarily an indication of a low value measure, particularly for highly specialized procedures or patient populations and these trends may instead be a result of program policies that disincentivize the uptake of these measures.

Response: We believe it is important to support small practices so that they may meaningfully engage in MIPS. We did not want to penalize smaller

practices that may find it harder to reach case minimums. Additionally, we believe that maintaining the 3-point floor on class 2 measures for small practices would offset some of the additional challenges to reporting that small practices face, that practices of other size do not. We understand that removing the 3-point floor makes reporting measures that do not have a benchmark riskier for clinicians, we however, do not want to continue offering points for reporting. We want to award points for high performance and demonstrated improvements in clinical care. We will continue to assess our policies and find ways to encourage the uptake of high value, but underutilized measures that do not involve offering points for reporting.

Comment: Many commenters supported and appreciated the proposed 5-point floor for Class 4 measures in their first 2 years of the program as it will allow for greater utilization of innovative measures that show evidence of driving improvements in care and encourage the use of newly developed measures. One commenter recommended that CMS indicate and communicate which measures will be considered Class 4 measures so clinicians can plan appropriately. One commenter suggested that CMS expand this policy to existing measures that may add additional collection types. One commenter noted that this policy will incentivize the use of QCDR measures and increase the robust nature of the measures.

Response: We agree that providing a scoring floor for new measures will incentivize greater utilization of innovative, newly developed measures; QCDR measures; and increase the robust nature of the measures. We will not apply this policy to measures that have existed as a MIPS measure but are being introduced for a new collection type. For example, if a measure is currently available as a MIPS CQM and it becomes newly available as an eCQM, that would not be considered “new” under this policy. Those changes are considered substantive changes, but not new measures as they usually will share the same measure ID. CMS will communicate which measures will be considered class 4 from Appendix 1 and resources that will be available in the resource library on the QPP website.

Comment: Several commenters requested CMS raise the floor for reporting on new measures to 7 points, instead of the proposed 5 to ensure that this incentive will be sufficient to encourage practices to take the risk of using these measures, which will then allow for greater understanding of their

evidence base, the ability to ensure patient-centeredness, and actionability. A few commenters note that a higher incentive will encourage clinicians to take on the risk of reporting on a new measure and investing in new protocols and workflow, which often require IT and practice redesign costs. A few commenters requested that the measures be considered new for 3 years, instead of the proposed 2 years. One commenter suggested higher point floors for measures that are high priority or outcome measures. A few commenters requested that the measures be considered new for 3 years. A few additional commenters requested that CMS expand the new measures proposal to 4 years, instead of the proposed 2 years, as this would prevent “premature” removal of meaningful measures from the program and would recognize the valuable practice resources that are necessary to begin using new measures.

Response: We agree that a higher 7-point floor would be a greater incentive for clinicians to invest in new protocols and workflow in order to support reporting on new measures. Additionally, we believe that introducing a 7-point floor for new measures could be effective in incentivizing the reporting of new measures over topped out measures though we had not previously considered the connection between these two policies previously. However, 7-points is a high score and we do not want to introduce new sources of scoring inflation or gaming into the program. For this reason, we believe a phased scoring floor policy would be an appropriate solution. This approach would introduce a 7-point scoring floor for new measures across all collection types in their first year in the program, then dropping the scoring floor to 5-points for measures in their second year in the program. After their first 2 performance periods in the program, measures would be subject to our standard class 1 and 2 measure policies. We believe this approach incentivizes early adoption of new measures, while limiting the duration of potential scoring inflation and gaming. Additionally, we believe that the eventual mandatory reporting of MVPs would reduce the impact of scoring inflation and gaming in MIPS. We will monitor these measures to assure that they are having the intended effect and not being used to game the program. Policies related to QCDR measures in MIPS at § 414.1400(b)(3)(iv)(f) discuss a period of two performance periods after which measures may be reassessed. We

proposed a two-performance period timeframe in which measures will be considered class 4 measures in alignment with this previously establish policy related to QCDR measures. We will also monitor the application of this policy to assure that the 2-performance period new measure period is adequate. If analytics supports a longer new measure period, we may revisit this topic in later rulemaking.

Comment: A few commenters requested clarification on the logistics of the policy and if it applies to QCDR measures and if this methodology only applies to measures in their lifecycle going forward or if it would be applied to measures finalized starting in 2021. Another commenter suggested that CMS apply this policy retroactively for measures introduced in CY 2020 and CY 2021.

Response: The modified Class 4 measure policy would apply a 7-point scoring floor to new measures in their first performance period in the program across all collection types including QCDRs and a 5-point scoring floor to measures in their second year, thereafter being subject to scoring policies for Class 1 and 2 measures. We believe this policy should begin effective the CY 2022 performance period/2024 MIPS payment year, meaning measures new to the program in CY 2022 will receive a 7-point scoring floor. We do not believe there is a benefit in applying this policy retroactively to CY 2020 or CY 2021 performance periods/2022 or 2023 MIPS payment year as a retroactive policy would inflate scores without providing the corresponding incentive for clinicians to adopt new measures. Additionally, measures in their second year in the CY 2022 performance period/2024 MIPS payment year, will receive a 5-point scoring floor.

Comment: One commenter opposed the creation of Class 4 measures as practices are already incentivized to submit data for measures that are relevant to their practice, and therefore, quickly establish benchmarks for a measure.

Response: We have heard from stakeholders that the possibility that new measures or Class 4 may not be reliably scored is a deterrent from reporting such measures. We believe that it is important to provide incentives to report new measures that so that there is less risk in reporting these new measures.

Comment: One commenter suggested that CMS suppress new measures to account for high performance threshold.

Response: We will not suppress new measures. We seek to encourage the reporting of new high-quality measures

in the program and have delayed the removal of the class 2 measure policy to 2023 in order to provide flexibilities in response to the PHE, higher performance threshold, and removal of the high priority and end-to-end-electronic reporting quality performance category bonuses.

After consideration of public comments, we are finalizing our proposed policies with modification. We will delay the removal of the 3-point floor for all practice sizes until CY 2023, maintaining it only for small practices thereafter and revise

§ 414.1380(b)(1)(i)(A)(1) to provide that except as provided in paragraph (b)(1)(i)(A)(2) and (3) of this section, for the 2017 through 2022 CY performance periods/2019 through 2024 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but

does not have a benchmark or meet the case minimum requirement. Beginning within the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians other than small practices receive 0 measure achievement points for each such submitted measures and small practices receive 3 measure achievement points.

Additionally, we are modifying our proposal regarding new measures at § 414.1380(b)(1)(i)(C) to provide that, beginning with the CY 2023 performance period/2025 MIPS payment year, for each measure in required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340, MIPS eligible clinicians receive between 7 and 10

measure achievement points (including partial points) for such each measure in its first year in MIPS and between 5 and 10 measure achievement points for each such measure in its second year in MIPS. In adopting this final policy with modification, we have consolidated paragraphs (b)(1)(i)(C)(1) and (2) into a single paragraph (b)(1)(i)(C).

We are also finalizing our policy at § 414.1380(b)(1)(i)(A)(3) to provide that, beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive 7 measure achievement points for each submitted measure in its first year in MIPS and 5 measure achievement points for each submitted measure in its second year in MIPS that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement.

BILLING CODE 4120-01-P

TABLE 60: Quality Performance Category: Finalized Scoring Policies for the CY 2022 MIPS Performance Period*

Measure type	Description	Current Scoring Policy for CY 2021	Scoring Policy for CY 2022
Class 1	Measures that can be scored based on performance. Measures that are submitted or calculated that meet all the following criteria: (1) Has a benchmark; (2) Meets case minimum; and (3) Meets the data completeness standard (generally 70 percent for 2022.)**	3-10 measure achievement points based on performance compared to the benchmark	No Change
Class 2	Measures that are submitted and meet data completeness, but do not have either of the following: (1) A benchmark; and (2) Meets case minimum.	3 points	No change
Class 3	Measures that are submitted, but do not meet data completeness threshold, even if they have a measure benchmark and/or meet the case minimum.	MIPS eligible clinicians other than small practices will receive zero points for this measure. Small practices will continue to receive 3 points.	No change
New Measures: Class 4	Measures that are in their first two performance periods in the MIPS program that meet the data completeness requirement, but (1) May lack a benchmark (2) May not meet case minimum	No Policy	(a) For measures that can be reliably scored against a benchmark: 7-10 measure achievement points for measures in their first year 5-10 measure achievement points for measures in their second year (b) For measures that cannot be reliably scored against a benchmark because they lack a benchmark or do not meet case minimum: 7 points in their first year. 5 points in their second year

*The Class 2 and 3 measure scoring policies are not applicable to Web Interface and administrative claims-based measures.

**We refer readers to § 414.1335(a)(3) for our policy on data completeness.

BILLING CODE 4120-01-C

(iv) Scoring for MIPS Eligible Clinicians That Do Not Meet Quality Performance Category Criteria

In the CY 2018 Quality Payment Program final rule (82 FR 53732), we finalized that, beginning with the 2019 performance period/2021 MIPS payment year, we will validate the availability and applicability of quality measures only with respect to the collection type that a MIPS eligible clinician utilizes for the quality performance category for a performance period, and only if a MIPS eligible clinician collects via claims only, MIPS CQMs only, or a combination of MIPS CQMs and claims collection types. We

will not apply the validation process to any data collection type that the MIPS eligible clinician does not utilize for the quality performance category for the performance period. We sought comment on how to modify the validation process for the 2019 performance period/2021 MIPS payment year when clinicians may submit measures collected via multiple collection types.

In the CY 2019 PFS final rule (83 FR 59847), we finalized a proposal to modify our validation process to provide that it only applies to MIPS CQMs and the claims collection type, regardless of the submitter type chosen. For example, this policy will not apply

to eCQMs even if they are submitted by a registry. We noted that a MIPS eligible clinician may not have available and applicable quality measures. If we are unable to score the quality performance category, then we may reweight the clinician's score according to the reweighting policies.

In this year's rule, we proposed to modify our validation process to provide that it only applies to MIPS CQMs or the Part B claims collection type, but it will not apply in instances when a MIPS eligible clinician submits for both collection types. Currently, very few reporters report for a combination of Part B claims and MIPS CQMs. In CY 2020, of submissions with less than 6

measures, only 0.08 percent of individual submissions and 0.3 percent of group submissions included a combination of Part B claims and other submission types. In CY 2019, of submissions with less than 6 measures, only 0.094 percent of individual submissions and 0.07 percent of group submissions included a combination of Part B claims and other submission types. We see that reporting using both collection types is an option very few clinicians have chosen to utilize, and consequently believe that the associated costs for validation of a combination of the both the Part B claims based and MIPS CQM collection types is too great in these instances. To align with this reality that very few clinicians submit data in this manner, we proposed to update our policy.

We invited public comments to modify our validation process to provide that it only applies to MIPS CQMs or the claims collection type and not a combination of the two.

We did not receive public comments on this provision, and therefore, are finalizing as proposed.

(v) Assigning Measure Achievement Points for Topped Out Measures

We refer readers to § 414.1380(b)(1)(iv) for our previously finalized policies regarding the identification of topped out measures and § 414.1380(b)(1)(iv)(B) for our finalized policies regarding the scoring of topped out measures. Under § 414.1380(b)(1)(iv), we identify topped out measures in the benchmarks published for each Quality Payment Program year. Under § 414.1380(b)(1)(iv)(B), beginning with the 2021 MIPS payment year, measure benchmarks (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years will receive a maximum of 7 measure achievement points beginning in the second year the measure is identified as topped out (82 FR 53726 through 53727).

We noted in the CY 2021 PFS proposed rule (85 FR 50307) that we intended to use performance period benchmarks for the 2021 performance period/2021 MIPS payment year, which would mean we will not be able to publish measures that are topped out prior to the 2021 MIPS performance period. As discussed in that proposed rule (85 FR 50309), this also means we would not be able to identify those that have been topped-out for 2 or more consecutive years for purposes of the topped out scoring of 7 measure achievement points. As we were intending to use performance period

benchmarks again for the 2022 performance period/2024 MIPS payment year, these problems would occur again. We believed it is still important to retain a topped-out scoring cap of 7 measure achievement points so that clinicians have incentives to pick alternate measures that are not topped out. We also believed that if a measure were not topped out in the 2022 performance period benchmark, then it should have the ability to achieve up to 10 measure achievement points.

In the CY 2022 PFS proposed rule, we proposed to use performance period benchmarks again and subsequently needed to adjust the topped-out measure lifecycle to account for this. Therefore, we proposed as an exception to the general rule at

§ 414.1380(b)(1)(iv)(B) at paragraph (b)(1)(iv)(B)(1) that, for the CY 2022 MIPS performance period/2024 MIPS payment year, MIPS eligible clinicians would receive no more than 7 measure achievement points for each measure (except for measures in the CMS Web Interface) for which the applicable benchmark were identified as topped out for 2 or more consecutive years based on the historical benchmarks published for the CY 2021 MIPS performance period and continues to be identified as topped out based on the performance period benchmarks published for the CY 2022 MIPS performance period/2024 MIPS payment year.

We believe these two criteria collectively would provide clinicians the information to know prior to the CY 2022 performance period/2024 MIPS payment year which measures would have the topped-out scoring applied but will also account for the scenario where a measure is no longer topped out. We would not limit the number of measure achievement points for measures that have not been topped out for at least 2 years as published in the 2021 MIPS performance period/2023 MIPS payment year historical benchmarks.

We invited public comments on our proposal to apply the 7-measures achievement point cap to measures that meet the two criteria.

We received public comments on the assigning measure achievement points for topped out measures. The following is a summary of the comments we received and our responses.

Comment: One commenter noted that clinicians want to know which measures are topped out before the performance period begins.

Response: We will continue to provide notice of topped out measures according to our standard policy. We are not finalizing our proposal to use

performance period benchmarks, and therefore, will communicate topped out measures before the performance period begins as is customary.

Comment: One commenter supported the policy to provide clinicians with additional information to determine which measures are topped out prior to the performance period and noted that the policy will ensure that clinicians can select meaningful measures and earn maximum points on quality measures due to the extraordinary circumstances of the COVID-19 pandemic

Response: We appreciate the commenters for their support for this policy based on the intended use of the performance period benchmarks, but note that as we are not finalizing the use of performance period benchmarks as discussed in section IV.A.3.e.(1)(c)(ii) of this final rule. We are not finalizing this proposal.

Comment: A few commenters requested that the 7-point scoring cap on topped out measures be waived for specific measure sets that only have topped out measures from which to select. One commenter requested that the topped-out scoring cap be suspended as topped out performance may not be accurate due to shifting program requirements and COVID-19 related disruptions in care.

Response: As MIPS is a performance-based program, we do not believe that MIPS eligible clinicians electing to report topped out measures should be able to receive the same maximum score as other measures that demonstrate variation in performance and room for improvement. Therefore, we continue to believe it necessary to maintain the 7-point cap for measures identified as topped out, including those belonging to measure sets. Additionally, please refer to qpp.cms.gov/about/covid19 our national PHE for COVID-19 response and flexibilities provided within QPP.

After consideration of public comments, we are not finalizing our proposal to revise paragraph (b)(1)(iv)(B)(1). We will instead continue our policy that the 7-point cap will be applied to measures (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years, beginning in the second year the measure is identified to be topped out.

(vi) Minimum Case Requirements

We refer readers to § 414.1380(b)(1)(iii) for our previous finalized policies regarding case minimum requirements for the quality performance category, which establishes the case minimum requirement

threshold at 20 cases for quality measures, with the exception of administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1). As more measures are introduced under MIPS, there may be measures, similar to the administrative claims-based measures, that warrant a different case minimum requirement from the other quality measures. In Table Group A of Appendix 1 of the proposed rule, we proposed to add the following quality measure starting with the 2022 MIPS performance period: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM), which uses a comprehensive and parsimonious set of 11 patient-reported items to assess the broad scope of primary care (86 FR 39435 and 39436).

In order to achieve the appropriate reliability of the measure—the survey results (adequate number of surveys to provide an accurate representation of the MIPS eligible clinician, group, subgroup, virtual group, and APM Entity), for each MIPS eligible clinician, group, subgroup, virtual group, and APM Entity, a minimum of 30 PCPCM PROM instruments per clinician are needed for submission of this measure. For MIPS eligible groups, subgroups, virtual groups, and APM Entities with 5 or more clinicians, a minimum of 150 PCPCM PROM instruments per TIN for each site/location associated with the clinicians' part of the group, subgroups, virtual groups, and APM Entities are needed for submission of this measure. For TINs with a composition of multiple specialty practices at one site/location, a minimum of 150 PCPCM PROM instruments per specialty practice within a TIN are needed for submission of this measure. If the MIPS eligible group, subgroup, virtual group, and APM Entity with 5 or more clinicians encompasses multiple sites/locations, each site/location will need to meet the PCPCM PROM instruments requirements as noted above. To allow for the reliable implementation of PCPCM PRO-PM under MIPS, such measure requires a case minimum that exceeds 20 cases. With more measures being introduced under MIPS that warrant differing case minimum requirements (other than administrative claims-based measures), we proposed to modify our minimum case requirements policy to broaden the type of measures (to not only include administrative claims-based measures) that would have an exception to the minimum case requirement threshold of 20 cases and to provide a measure-specific case

minimum requirement for measures identified and determined on a case-by-case basis by CMS. For each measure with a measure-specific case minimum, the minimum case requirement is specified in the annual list of MIPS measures. Specifically, we proposed to amend § 414.1380(b)(1)(iii) to reflect that, except as otherwise specified in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

We invited public comment on our proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported including flexibility to enable larger case minimum requirements on a measure-by-measure basis to ensure measures are reliable and valid, as adequate reliability may not always be achieved using a case minimum of 20 patients.

Response: We are committed to assure reliable and valid quality measurement under the MIPS program and will assess our measures and policy to assure we are meeting this goal.

Comment: A few commenters stated that CMS must ensure that the data produced yields scores that accurately and consistently represent the quality of care provided by an individual clinician and practice and believed that the current average reliability threshold of 0.4 is too low and the minimum sample size should be increased to a higher number to produce a minimum reliability threshold of sufficient magnitude (0.7). One commenter cautioned that having too many case minimum requirements will add to the complexity and burden and a few commenters asked CMS to monitor whether there are increasing numbers of existing measures requiring measure specific case minimums and the impact on burden.

Response: We will continue to review measures to ensure they meet the reliability threshold of 0.4 as previously established (81 FR 77287). We believe that measures with a reliability of 0.4 with a minimum attributed case size of 20 meet the standards for being included as quality measures within the MIPS program. We aim to measure quality performance for as many clinicians as possible, and limiting measures to reliability of 0.7 would result in fewer individual clinicians with quality performance category measures. In addition, a 0.4 reliability threshold ensures moderate reliability for most MIPS eligible clinicians or group practices that are being measured on quality. We acknowledge that inclusion of too many case minimum

requirements may add complexity. However, we believe that the benefit to the program from adding measures that require additional case minimum standards for effective implementation justifies the burden created by the additional complexity. We will continue to listen to stakeholder feedback and monitor the effects of this policy on burden.

After consideration of public comments, we are finalizing our amendment at § 414.1380(b)(1)(iii) to reflect that, except as otherwise specified in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

(vii) Incentives to Report High-Priority Measures

We refer readers to current § 414.1380(b)(1)(v)(A) for our previously finalized policies regarding incentives to report high priority measures. In the CY 2017 Quality Payment Program final rule (81 FR 77293), we established the scoring policies for high priority measure bonus points to encourage the selection of additional high-priority and outcome measures that impact beneficiaries and were closely aligned to our measurement goals. In the CY 2019 PFS final rule (83 FR 59850), we discontinued awarding measure bonus points to CMS Web Interface reporters for reporting high priority measures since CMS Web Interface reporters have no choice in measures.

We stated in the CY 2019 PFS proposed and final rules (83 FR 35950 and 59851) that as part of our move towards fully implementing high value measures, we believe that bonus points for high priority measures for all collection types may no longer be needed. We noted in the CY 2019 PFS final rule (83 FR 59851) that measure bonus points were created as transition policies which were not meant to continue through the life of the program. We believe with the finalized framework for transforming MIPS through MVPs (84 FR 62948), we will find ways in the future to emphasize high priority measures without needing to incentivize with bonus points.

In the CY 2022 PFS proposed rule, we proposed to end the high-priority measure bonus points. As we move to MVPs we are simplifying our scoring by ending transition policies that were established in the initial years of the program. We have signaled for many years now that this policy was temporary and would be removed from the program. As we transition to a new State, we anticipate that there will no longer be a need to incentivize high-

priority measures by usage of bonus points in MIPS and MVPs as we increase the share of high-priority measures in the program.

We proposed to end measure points for reporting high priority measures beginning the 2022 performance period/2024 MIPS payment year. Accordingly, we proposed to revise § 414.1380(b)(1)(v)(A) to provide that for the 2017 through 2021 performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure and 1 measure bonus point for each other high priority measure. Beginning with the 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus points.

We invited public comments on our proposal to end measure bonus points for reporting high priority measures beginning the 2022 performance period/2024 MIPS payment year.

The following is a summary of the comments we received and our responses.

Comment: Several commenters asked to delay the removal of the high-priority bonus by at least one year, until the CY 2023 performance period, due to the COVID-19 pandemic impacts and since the performance threshold is also increasing this year. Many commenters suggested keeping the bonus in place until final MVP measure sets are available as this would be less disruptive to eligible clinicians with few quality performance measures and who depend on bonus points to successfully participate in the MIPS program. One commenter noted that the pandemic took clinician focus off of the mechanics of MIPS and few clinicians will be prepared for the removal of the high priority bonus. One commenter suggested that a delay in removal of the bonus would ensure a less disruptive transition to a higher performance threshold. Another commenter suggested that CMS do a phased-out removal of these bonuses in consideration of the performance threshold.

Response: We agree that the national PHE of COVID-19 has resulted in a reduced focus by clinicians from the mechanics of MIPS to providing effective care in response to the PHE. We also understand that clinicians are worried about their performance in the program as a result of the proposal to

increase the performance threshold. We remain committed to addressing stakeholder feedback, while working towards the goals of the program.

As previously noted in section IV.A.3.e.(1)(c)(iii). of this final rule, we have decided to delay the removal of the 3-point floor until the CY 2023 performance period/2025 MIPS payment year, but will move forward with the removal of the bonuses in the quality performance category. We believe that this provides a phased approach to removing the transition policies to which clinicians have become accustomed, while also moving towards the program goal of reducing sources of scoring inflation and being able to score based on meaningful distinctions in performance on quality measures. We will not maintain bonuses until MVP measures set are available. MVP measure sets are in development and will be introduced overtime. We are aiming to simplify MIPS scoring ahead of MVPs so as to develop scoring s provide incentives to report MVPs as discussed in section IV.A.3.b.(5)(a) of this final rule. We cannot continue to support reporting strategies that rely on bonus points awarded for reporting. We note that we have signaled for years that the measure bonus and scoring floor policies were intended to support the transition to MIPS and would be removed (86 FR 39436). In order to be responsive to the challenges of the COVID-19 PHE, we are maintaining the policies related to the scoring floors, but will continue through future rulemaking to remove these transition policies and the scoring inflation they introduce.

Comment: Many commenters opposed the removal of the high-priority bonus. A few commenters noted that the bonus serves as an incentive to report important measures, recognizes clinicians for their efforts to meet CMS' priorities, and provides clinicians extra help in meeting the increased performance threshold. One commenter stated that the bonus helps make up for what is lost based on limited measure selection if a clinician only has topped out measures from which to choose. One commenter noted that small practices are reliant on the bonus points and are otherwise not able to have scores that reflect the quality care small practices provide. One commenter requested the bonuses remain in place for small practices given the continued inequities between small and large practices and to help level the playing field and to encourage continued small practice participation. A few commenters noted that given the impacts of the COVID-19 pandemic the bonuses should remain in place to

provide additional assistance. One commenter noted that as the program gets harder, clinicians need more assistance in achieving the threshold to avoid a penalty.

Response: We understand that receiving bonus points for submitting high-priority measures has eased clinicians' participation in the program and supported their adoption of high priority measures. That was the intent of offering bonus points at the start of the program (81 FR 77292). Now that it has been several years, we believe clinicians should be familiar with the areas that CMS considers high priority and familiar with reporting them. Ultimately, these bonuses have fulfilled their purpose and a high proportion of clinicians and groups report on high-priority measures. CMS wishes to measure performance on clinical quality measures and some types of bonus points can mask performance, and therefore, we want to use them judiciously such as to provide a scoring floor for new measures and incentivize reporting in MVPs. As the program transitions to MVPs, we will focus on providing incentives to report through MVPs. Reporting strategies that solely use bonus points for reporting to offset lower performance or topped out measure selection are not compatible with the intent of a performance-based program. We understand that with the removal of the quality performance category level bonus points and increase in the performance threshold, clinicians are concerned about receiving negative payments. We ultimately believe these scoring changes will enable fairer scoring that will benefit many clinicians, including those in small practices. Additionally, we believe the impact of this policy is partially mitigated by the maintenance of small practice bonus points within the quality performance category, as well as the Complex Patient Bonus for all MIPS eligible clinicians. To ease the transition to the new policies and to be responsive to hardships caused by the COVID-19 PHE, we are maintaining the 3-point scoring floor until CY 2023, but we are removing the high priority measure bonus points. We believe this decision will lead to fairer and simpler scoring that clinicians will ultimately benefit from.

Comment: One commenter requested feedback reports that include detailed information about which and how many bonus points were earned as a result of high priority measures.

Response: We currently provide information about the total number of bonus points added to the quality performance category score as part of

the final feedback reports that are available to all MIPS eligible clinicians.

Comment: One commenter suggested CMS finalize greater accommodations for small practices, such as applying a separate small practice bonus to the MIPS final score rather than limit the small practice bonus to the quality performance category or increasing the size of the existing small practice bonus. Commenters also recommended that CMS allow small practices to continue to receive bonus points for reporting high priority measures or reporting measures using end-to-end electronic reporting.

Response: We are committed to ensuring the small practices are able to fairly participate in MIPS. As the commenter noted, we currently offer measure bonus points for small practices at quality performance category score level (83 FR 59847). For the reasons stated in the CY 2019 PFS final rule, we believe a small practice bonus specific to the quality performance category is preferable for the CY 2019 performance period/2021 MIPS payment year and future years (83 FR 59847). Data analytics suggest that the removal of the high priority and end-to-end electronic reporting measure bonus points for all practices would help small practices by reducing scoring inflation at the quality performance category level by reducing the over-utilization of these measure bonus points by larger practices that have the resources to report additional measures. A greater proportion of larger practices receive high priority measure bonus points and reach the measure bonus point cap when compared with practices of all other sizes and solo and small practitioners utilize these points and reach the measure bonus point cap the least. We will continue to monitor the performance of small practices in MIPS and make the appropriate interventions, as well as develop MVPs to facilitate the meaningful participation of small practices in MVPs which may include increasing the size of the existing small practice bonus.

Comment: One commenter noted that without the high priority bonus, clinicians may opt to submit data for fewer measures leading to smaller datasets for benchmarking and public reporting. The commenter requested that CMS add a new opportunity for clinicians to earn points to encourage such reporting, such as higher bonuses for performance improvement or incentives for reporting extra measures.

Response: We understand that clinicians may submit data for fewer measures as a result of this policy and that this may affect datasets available for

benchmarking and public reporting, but do not believe these changes will be significant. We will monitor the effect that this has on benchmarking however, we will not be instituting new bonuses in MIPS. As we move to MVPs we are moving to simplify scoring in MIPS and focus on incentives for reporting through MVPs.

After consideration of public comments, we are finalizing our proposal as proposed.

(viii) Incentives To Use CEHRT To Support Quality Performance Category Submissions

Section 1848(q)(5)(B)(ii)(I) of the Act requires the Secretary to encourage MIPS eligible clinicians to report on applicable quality measures through the use of CEHRT and qualified clinical data registries. Section 1848(q)(5)(B)(ii)(II) of the Act requires that the Secretary shall treat such clinicians as satisfying the clinical quality measures reporting requirement described in section 1848(o)(2)(A)(iii) of the Act if they report such measures through the use of such EHR technology for a given performance period. In the CY 2017 Quality Payment Program final rule (81 FR 77297), we established the measure bonus point and bonus cap for using CEHRT for end-to-end electronic reporting. We refer readers to § 414.1380(b)(1)(v)(B) for our previously finalized policies regarding measure bonus points for end-to-end electronic reporting. We believe that with the framework for transforming MIPS through MVPs discussed in the CY 2020 PFS proposed rule (84 FR 40739) and the CY 2021 PFS proposed rule (85 FR 50279 through 50285), we will find ways to encourage the use of CEHRT for reporting quality measures without needing to incentivize the use of CEHRT for end-to-end electronic reporting with bonus points. In the CY 2018 Quality Payment Program final rule (82 FR 53636), we encouraged stakeholders to consider electronically specifying their quality measures as eQMs, to encourage clinicians and groups to move towards the utilization of electronic reporting. As noted in the CY 2019 PFS final rule (83 FR 59851), bonus points were created as transition policies which were not meant to continue through the life of the program.

In the CY 2022 PFS proposed rule, we proposed to end measure bonus points for end-to-end electronic reporting. We noted that as we move to MVPs we are simplifying scoring by removing many of the transition policies that we established in the early years of the program. We believe it is imperative to

remove transition policies in order to develop a stronger MVP program and promote alignment between MIPS and MVPs. As stated in previous rulemaking, we are working to develop ways to encourage the use of CEHRT for electronic reporting without offering measure bonus points. Measure bonus points introduce scoring inflation into the program and preclude our ability to accurately compare clinicians' clinical quality. As the program works to focus on the quality of care provided to beneficiaries, we intend to score for performance on measures and not for reporting. Additionally, we believed that we can fulfill the statutory requirement at sections 1848(q)(5)(B)(ii)(I) of the Act to encourage the usage of CEHRT, through other means. As a program and across the Department of Health and Human Services, we are working towards the goal of all measures within MIPS being digital by 2025 through a movement towards the inclusion of more digital quality measures (dQMs), emphasizing approaches to electronic data sharing that utilize the FHIR standard. As part of these approaches we intended to further leverage the use of electronic reporting from CEHRT for all quality measurement completed in the MIPS program including measurement and reporting facilitated by third party intermediaries such as QCDRs and plan to further address this issue through rulemaking in future years. We are also giving preference to dQMs including eQMs in our annual call for measures. More information on dQMs and the FHIR standard is available in section IV.A.1.c. of this final rule, information on the call for measures and CMS measurement needs and priorities is available at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1313/2021%20Call%20for%20Measures%20and%20Activities%20Toolkit.zip>, and <https://www.cms.gov/files/document/cms-measurement-priorities-and-needs.pdf>, respectively. Furthermore, over the past few years, we have reduced the availability and limited who can submit data for the Medicare Part B claims collection type to only small practices. We note that the Medicare Part B claims collection type is not an electronic means of submission. We solicited comments on other methods that we could use to encourage the use of CEHRT for electronic reporting (86 FR 39436 and 39437).

Accordingly, we proposed at § 414.1380(b)(1)(v)(B) that for the 2017 through 2021 performance period/2019 through 2023 MIPS payment years,

MIPS eligible clinicians would receive 1 measure bonus point for each measure (except claims-based measures) submitted with end-to-end electronic reporting for a quality measure under certain criteria determined by the Secretary. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus points for submitting using end-to-end electronic reporting.

We invited public comments on our proposal to end measure bonus points for end-to-end electronic reporting beginning in the 2022 performance period/2024 MIPS payment year. The following is a summary of the comments we received and our responses.

Comment: Many commenters opposed the removal of the end-to-end reporting bonus as electronic reporting remains a priority for CMS; bonus points provide an incentive to report through end-to-end reporting, which is often costly; and bonus points help the clinicians reach the increasing performance threshold. A few commenters noted that practices should be awarded for going above and beyond in their quality reporting. A few commenters opposed the removal of these bonus achievement points considering the COVID-19 PHE, MVP reporting beginning in performance year 2023, and the move to digital quality measurement by 2025. Many commenters believed that an incentive is still required to encourage the use of CEHRT for electronic reporting. One commenter noted that the bonus should be maintained during the transition to dQMs. One commenter stated that many hospitals and some entities are still not providing clinicians with access to medical record information and some EMR vendors are still not in compliance with the ability to provide adequate clinical data. One commenter stated that the bonus furthers the goal of the program and provides more useable real-world data while encouraging clinicians to sign up with QCDRs. One commenter suggested that CMS apply bonus points at the composite score level providing some consistency to providers. One commenter noted that maintaining the bonus would help combat problems obtaining appropriate differentiation among practice performance due to clinical quality measure selection bias. A few commenters expressed concern with the removal of the bonus negatively impacting specialists' scores given that the diminished scoring opportunities are not due to changes in performance. One commenter requested that all electronic measures be eligible for end-

to-end reporting bonus points, even if there is an eCQM equivalent.

Response: As MIPS transitions to MVPs, our priority is to simplify scoring and score for performance rather than for reporting. We believe that the use of CEHRT adds value for clinicians and will work to develop other ways that encourage its use as we move to MVPs and digital quality measurement. We recognize concern about the effects of the PHE and increase in the performance threshold, and therefore, are maintaining our 3-point scoring floor policy to ease clinicians' transition to simplified scoring as we move towards MVPs. We do not believe that using CEHRT for electronic reporting is going above and beyond as the commenter suggests, nor do we believe that reporting via end-to-end electronic reporting still requires awarding bonus points. Rather we believe it is important to facilitate high quality clinical care and the ability to participate in this program meaningfully as such will no longer provide incentives for reporting in MIPS as we transition to MVPs. We understand the commenter's concerns about data blocking and/or hospitals not sharing data with Third Party Intermediaries and will continue to work with partners across HHS to explore ways to address this issue. The end-to-end electronic reporting bonus has been active throughout the last few years of MIPS. While we intended it to encourage some clinicians to transition to an electronic data submission mechanism, our assumption was that the applicable clinicians would have transitioned by now. Additionally, we believe that clinicians who have made the transition to an electronic data submission mechanism likely will not make the decision to revert back to a manual/claims-based option. Furthermore, we do not believe it is necessary or appropriate to apply this bonus at the final score level. As mentioned in the previous section of this final rule, reporting strategies that solely use bonus points for reporting to offset lower performance or topped out measure selection are not compatible with the intent of a performance-based program. We will continue to try and find other solutions to the diminished scoring opportunities for specialists through MVPs.

After consideration of public comments, we are finalizing our proposal as proposed.

(ix) Improvement Scoring for the MIPS Quality Performance Category Score

We refer readers to § 414.1380(b)(1)(vi)(C)(4) for more on our current for the 2020 through 2023

MIPS payment years, which provides for the purpose of improvement scoring that we will assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

In the CY 2022 PFS proposed rule, we proposed to continue our previously established policy for improvement scoring for the 2022 performance period/2024 MIPS payment year and to revise § 414.1380(b)(1)(vi)(C)(4) to remove the phrase "2020 through 2023 MIPS payment years" and adding in its place the phrase "beginning the 2018 performance period/2020 MIPS payment year" to indicate that for each MIPS payment year after 2020, we would assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year. Specifically, for the 2022 performance period/2024 MIPS payment year, we would compare the MIPS eligible clinician's quality performance category achievement percent score for the 2022 performance period/2024 MIPS payment year to an assumed quality performance category achievement percent score of 30 percent if the MIPS eligible clinician earned a quality performance score less than or equal to 30 percent for the 2021 performance period/2023 MIPS payment year.

We did not receive public comments on this proposal, and we are finalizing as proposed.

(d) Cost Performance Category

(i) Scoring Flexibility for Changes That Impact Cost Measures During the Performance Period

We refer readers to § 414.1380(b)(2) for our policies regarding scoring for the cost performance category and to previous rules where these policies were finalized, including the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311), the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752), the CY 2019 PFS final rule (83 FR 59856), and the CY 2021 PFS final rule (85 FR 84877 through 84880). In § 414.1380(b)(2)(v), we finalized that a cost performance category score is not calculated if a MIPS eligible clinician or group is not attributed any cost measures for the performance period because the clinician or group has not met the minimum case volume specified by CMS for any of the cost measures or a

benchmark has not been created for any of the cost measures that would otherwise be attributed to the clinician or group.

We have identified that there is a need for additional flexibility in calculating the scores for cost measures to account for the impact of changing conditions that are beyond the control of MIPS eligible clinicians and groups. This flexibility would allow us to ensure that clinicians are not impacted negatively when performance is affected not due to the care provided, but due to external factors. Thus, beginning with the 2022 MIPS performance period/2024 MIPS payment year, we proposed a policy to provide scoring flexibility in instances where changes during a performance period impede the effective measurement of resource use. We stated that we believe that there may be instances when there are rapid or unprecedented changes to the delivery of healthcare services that are reflected in administrative claims data used to calculate cost measures. In the CY 2022 PFS proposed rule (86 FR 39437), we provided the example of the COVID-19 PHE and referred readers to section IV.A.3.e.(2)(b)(ii)(A) of the proposed rule, where we summarized our assessment of the impact of COVID-19 on the calculation of cost measure scores for the 2020 performance period. In this discussion, we concluded that due to the unique and rapid changes to healthcare in the COVID-19 pandemic, which significantly affected service utilization and the underlying data used to calculate cost measures, we could not reliably calculate scores for the cost measures that adequately capture and reflect clinician performance for 2020. This example demonstrated that the assessment of costs could be impeded by substantial changes to clinical practice and service utilization, and result in misleading or inaccurate results.

We noted (86 FR 39438) that we would determine whether such external changes impede the effective measurement of resource use by considering factors including: The extent and duration of the changes, and the conceptual and empirically tested relationship between the changes and each measure's ability to accurately capture clinician cost performance. Empirical testing could include assessing whether there are rapid or unprecedented changes to patient case volume or case mix, and the extent to which this could lead to misleading or inaccurate results. We noted that substantial changes in service utilization may not impede our ability to accurately calculate a cost measure

score. Consider for example the case of a hypothetical measure that includes the cost of a series of procedures to treat the condition being measured. Due to advances in clinical knowledge, the procedures are declared to no longer be appropriate to treat the condition during a performance period. This would hypothetically lead to rapid and substantial changes in the services captured in the measure in that performance period; however, these changes will not necessarily lead to misleading or inaccurate results as the measure will be appropriately capturing the costs of care for that condition and appropriately reflecting changes in clinician practice. We stated that we would assess this empirically for each measure, as we believe that even widespread external changes to service utilization could have a range of different impacts across measures as they focus on diverse types of care. For example, a hypothetical national shortage of blood products may lead to the suspension of elective surgeries. This may not affect the care patterns for a particular outpatient screening or preventative care procedure, meaning that a hypothetical cost measure focused on that outpatient procedure would still accurately reflect clinician cost performance.

While we can monitor the impact of these changes during the performance period, we noted (86 FR 39438) that there is an inherent delay between the time we can identify trends in administrative claims data and when we can test for potential impact on the cost measures, due to the claims run-out period necessary to ensure that data included in our analyses reflect final claims for all services in episodes. To ensure sufficient case volume, we expected that we would not be able to properly test the full impact of external changes on the cost measures until after the end of the performance period in which the changes occurred. Thus, we would not be able to determine whether a cost measure should be suppressed due to changes in the performance period until after the completion of the performance period. To allow sufficient time for claims data query and investigatory work to test for potential impacts on cost measure calculations, we expected that we would reach a conclusion as to whether a cost measure should be suppressed and notify clinicians affected by the suppression no later than when performance feedback is issued for the performance period. We believed this will not put undue burden on clinicians since cost measures are calculated by CMS using

administrative claims data without any additional data submission by clinicians.

Accordingly, we proposed to add § 414.1380(b)(2)(v)(A) to provide that beginning with the 2024 MIPS payment year, if data used to calculate a score for a cost measure were impacted by significant changes during the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure would be excluded from the MIPS eligible clinician's or group's cost performance category score. We proposed that, for the purposes of this paragraph (b)(2)(v)(A), "significant changes" are changes external to the care provided, and that CMS determines may lead to misleading or inaccurate results. Significant changes include, but are not limited to, rapid or unprecedented changes to service utilization, and will be empirically assessed by CMS to determine the extent to which the changes impact the calculation of a cost measure score that reflects clinician performance.

We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the addition of the policy to suppress a cost measure for a MIPS eligible clinician or group in instances where changes during a performance period impede the effective measurement of resource use. One commenter stated that the unpredictability of the pandemic makes it difficult to understand the impact on cost. The commenter stated that CMS should assess whether clinicians can reasonably be scored on the cost performance category. Another commenter suggested that CMS consider national disasters, such as wildfires and hurricanes, as significant changes warranting measure suppression. One commenter stated that CMS should evaluate scoring variation year-to-year to determine if it can be attributed to changes in performance and investigate whether a measure should be suppressed due to factors outside of the control of the physician.

Response: We recognize the impact that the pandemic has on clinicians and continue to monitor its effects on cost measures to ensure that clinicians' performance is being fairly assessed. In addition, we conduct regular monitoring of cost measures, to assess year-to-year changes in patterns of care and analyze whether certain circumstances or events impact clinicians' performance on

measures. These monitoring efforts can help to inform whether a future event, such as a natural disaster, could warrant measure suppression.

Comment: One commenter urged CMS to delay the application of any new episode-based measures to a TIN's final MIPS score for the first 2 years of applicability. The believe applying these measures without adequate prior information or data on an ongoing basis furthers the burden on clinicians and TIN's.

Response: We disagree with the commenter that delaying the application of new episode-based measures for 2 additional years after their incorporation into the MIPS cost performance category would reduce the burden on clinicians (TIN–NPIs) or clinician groups (TINs). We note that the episode-based measures are claims-based, so there is no submission burden for MIPS eligible clinicians, groups, and virtual groups. Additionally, the measure specifications that describe the steps for constructing the measures and contain the medical codes used in that methodology are publicly available during the measure development and notice-and-comment rulemaking processes. Thus, MIPS eligible clinicians, groups, and virtual groups have the opportunity to understand the measure specifications, including what costs are included in each episode, prior to the implementation of such measures in MIPS.

We further believe that newly developed measures generally would be ready for implementation in MIPS beginning with the performance period following the publication of the final rule in which they are adopted for the cost performance category. The episode-based measures are developed with extensive involvement of clinician experts, including clinicians from the attributed specialties, as well as other clinicians involved in the relevant care continuum for each measure, who make informed recommendations based on empirical data. Throughout the measure development and implementation processes, we work to help clinicians get familiar with the new measures through ample education and outreach activities, and also encourage them to provide feedback on the measure specifications (we refer readers to 86 FR 39396 and 39397 for more information on the development process for new episode-based measures). For example, for the 5 new episode-based measures that we proposed for inclusion in MIPS in the CY 2022 PFS proposed rule, stakeholders had an opportunity to observe all clinical expert workgroup meetings via a listen-only line, as well

as participate in the national field-testing activities on the measures in the summer of 2020. Additionally, the measures were published in the Measures Under Consideration (MUC) list in December 2020, and the measure specifications and testing results were later available for public comments during the NQF's pre-rulemaking process and as part of the CY 2022 PFS proposed rule (86 FR 39397 through 39401). Given that the 5 new episode-based measures are ready for implementation in MIPS and that these measures play an important role in expanding the MIPS cost measure inventory, we believe that a delay in the application of those measures is not appropriate and would only prevent the performance of a MIPS eligible clinician, group, and virtual group from being assessed.

After consideration of public comments received, we are finalizing this policy as proposed.

(e) Promoting Interoperability Performance Category

For our previously established policies regarding scoring the Promoting Interoperability performance category, we refer readers to § 414.1380(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77216 through 77227), the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53670), the CY 2019 PFS final rule (83 FR 59785 through 59796), the CY 2020 PFS final rule (84 FR 63020) and the CY 2021 PFS final rule (85 FR 84893 through 84894). We also refer readers to § 414.1375 and the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), the CY 2019 PFS final rule (83 FR 59785 through 59820), and the CY 2021 PFS final rule (85 FR 84886 through 84895 for our previously established policies regarding the Promoting Interoperability (formerly the advancing care information) performance category generally.

In the CY 2019 PFS final rule, we established a new performance-based scoring methodology for the Promoting Interoperability performance category that applies beginning with the 2019 performance period/2021 MIPS payment year (83 FR 59787 through 59796). The scoring methodology is codified at § 414.1380(b)(4)(ii); however, the regulation text refers only to the 2021 and 2022 MIPS payment years, and does not mention subsequent years. We proposed to revise § 414.1380(b)(4)(ii) for consistency with the previously established policy, by indicating that the methodology applies

beginning with the 2019 MIPS performance period/2021 MIPS payment year and continuing to subsequent years. We proposed to revise § 414.1380(b)(4)(ii) to remove “for the 2021 and 2022 payment years” and add in its place “beginning with the 2019 performance period/2021 MIPS payment year” and remove the word “six” to provide that beginning with the 2019 performance period/2021 MIPS payment year, a MIPS eligible clinician's Promoting Interoperability performance category score equals the sum of the scores for each of the required measures and any applicable bonus scores, not to exceed 100 points.

In addition, for the 2020 performance period/2022 MIPS payment year, each optional measure in the Promoting Interoperability performance category was worth five bonus points (84 FR 63003), and for the 2021 performance period/2023 MIPS payment year, each optional measure was worth ten bonus points (85 FR 84894). In the proposed rule, we proposed that the Query of Prescription Drug Monitoring Program measure would be worth 10 bonus points; we also proposed that submission of a “yes” for the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure would be worth 5 bonus points (86 FR 39438). To reflect these policies, we proposed a change to § 414.1380(b)(4)(ii)(C) to reflect that the optional measures are worth five or ten bonus points, as specified by CMS.

We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposal to revise the language to reflect that optional measures are worth 5 or 10 bonus points.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing our proposal as proposed.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for each MIPS eligible clinician, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, and CY 2021 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785, 83 FR 59868 through 59878, 84 FR 63020 through 63031, 85 FR 84908 through 84917, respectively) on final score calculations, performance category

weights, reweighting the performance categories, and the complex patient bonus.

As described in more detail in the following sections, we:

- Proposed to continue doubling the complex patient bonus for the CY 2021 performance period/2023 MIPS payment year, as was previously finalized with a cap of 10 bonus points for the CY 2020 performance period/2022 MIPS payment year (86 FR 39439 through 39440).

- Proposed to revise the complex patient bonus formula, which currently provides a bonus to all MIPS eligible clinicians, groups, virtual groups, and APM entities who submit data for at least one MIPS performance category, so that beginning with the CY 2022 performance period/2024 MIPS payment year the complex patient bonus better targets clinicians who treat a higher caseload of more complex and high-risk patients (86 FR 39442 through 39446).

- Solicited comments on potential circumstances where we may not be able to reliably calculate a score for any of the cost measures as described under § 414.1380(c)(2)(i)(A)(2). Additionally, we note that we are reweighting the cost performance category for the CY 2020 performance period/2022 MIPS payment year because we have concluded there are not sufficient measures and activities applicable and available for us to score any clinicians on performance due to the national PHE for COVID-19 (86 FR 39446 through 39448).

- Proposed to continue performance category weight redistribution policies finalized for the CY 2022 performance period/2024 MIPS payment year (86 FR 39448).

- Proposed policies for redistributing the weight of the performance categories for small practices (86 FR 39448 through 39449).

- Clarify how our application-based and automatic extreme and uncontrollable circumstances policies intersect (86 FR 39450).

- Proposed a new policy to determine the MIPS final score for clinicians and groups who are eligible for facility-based measurement (86 FR 39450 through 39452).

(a) Complex Patient Bonus

(i) Background

Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our MIPS scoring methodology. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate

and based on an individual's health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS; and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185, October 6, 2014) and, as appropriate, other information, including information collected before completion of such studies and recommendations. In the CY 2018 Quality Payment Program final rule, under the authority in section 1848(q)(1)(G) of the Act, we established at § 414.1380(c)(3) a complex patient bonus of up to 5 points to be added to the final score for the 2020 MIPS payment year (82 FR 53771 through 53776). In subsequent rulemaking, we continued the complex patient bonus at § 414.1380(c)(3) for the 2021, 2022, and 2023 MIPS payment years (83 FR 59870, 84 FR 63023, and 85 FR 84910, respectively). Additionally, we finalized for the 2022 MIPS payment year at § 414.1380(c)(3)(iv) that the complex patient bonus will be calculated under the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value will then be multiplied by 2 (85 FR 84911 through 84913). We refer readers to these final rules for additional details on the background, statutory authority, policy rationale, and previously finalized calculation of the complex patient bonus.

We intended for this bonus to serve as a short-term strategy to address the impact patient complexity may have on MIPS scoring while we continue to work with stakeholders on methods to account for patient risk factors. The overall goal, when considering a bonus for complex patients, is two-fold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. We used the term “patient complexity” to consider a multitude of factors that describe and have an impact on patient health outcomes; such factors include the health status and medical conditions of patients, and social risk factors. We believe as the number and intensity of

these factors increase for a single patient, the patient may require more services, more clinician focus, and more resources to achieve health outcomes similar to those who have fewer factors. In developing the policy for the complex patient bonus, we assessed whether there was a MIPS performance discrepancy by patient complexity using two well-established indicators in the Medicare program: Medical risk as measured through Hierarchical Condition Category (HCC) risk scores, and social risk as measured through the proportion of patients that is dually eligible for Medicare and Medicaid (82 FR 53771 through 53776).

(ii) Complex Patient Bonus for the CY 2021 Performance Period/2023 MIPS Payment Year

In the CY 2022 PFS proposed rule (86 FR 39439 through 39440), we proposed to modify the complex patient bonus for the CY 2021 performance period/2023 MIPS payment year in response to the PHE for COVID-19. In the CY 2020 PFS final rule, we finalized a policy to continue the complex patient bonus for the CY 2020 performance period/2022 MIPS payment year (84 FR 63021 through 63023). However, due to the national PHE for COVID-19 during performance period 2020, we noted in the CY 2021 PFS proposed rule that we need to re-evaluate the previously established policy for the complex patient bonus for the CY 2020 performance period/2022 MIPS payment year (85 FR 50311). We refer readers to the CY 2021 PFS proposed rule (85 FR 50311 through 50313) for further details on how the PHE for COVID-19 impacts care delivery both directly and indirectly. We acknowledged there are direct effects of COVID-19 for those patients who tested positive for SARS-CoV-2 and indirect effects of COVID-19 for other patients whose care was impacted because of the PHE, including increased complexity and barriers such as postponing care, accessing care in a different way (for example, via telecommunications), and disruptions to lab results and medications, which are not accounted for in our existing final score calculations using these complexity indicators.

Considering both these direct and indirect effects, we finalized § 414.1380(c)(3)(iv) (85 FR 84913), under which the complex patient bonus is calculated for the CY 2022 MIPS payment year pursuant to the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value is then multiplied by 2 but cannot exceed 10.0. The doubled numerical value

(subject to the 10-point cap) is added to the final score.

We noted we had made significant progress against COVID–19. While we are encouraged by the progress, we believed that there may be some direct and indirect effects from the PHE that could affect the CY 2021 performance period/2023 MIPS payment year. In particular, through the third quarter of CY 2021, we had high COVID cases in multiple regions.²⁵⁴ Additionally, we cannot quantify the effect of beneficiaries who delayed care because of the PHE and are now seeking care.

Because of the concerns of the direct and indirect effects of the COVID–19 PHE, we proposed to continue doubling the complex patient bonus as described at § 414.1380(c)(3)(iv) for the CY 2023 MIPS payment year, and we proposed corresponding revisions to the regulation text at § 414.1380(c)(3)(iv). The doubled numerical value (subject to the 10-point cap) will be added to the final score. Since the COVID–19 cases and deaths have decreased throughout the year, we considered applying a smaller multiplier (like 1.5 for a cap of up to 7.5 points) or to not apply a multiplier at all. However, we believe doubling the complex patient bonus is appropriate given the continuation of the national PHE for COVID–19 into the 2021 MIPS performance period, the potential direct and indirect effects of COVID–19 on care delivery and care postponement, and additional uncertainties. We solicited comments on this proposal and whether a different multiplier should be applied as we plan to consider the options based on public comment.

We received public comments on the doubling of the complex patient bonus for the CY 2021 performance period/2023 MIPS payment year. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the doubling of the complex patient bonus for CY 2021 performance period/2023 MIPS payment year due to the impacts of the ongoing national PHE for COVID–19. A few commenters suggested that CMS continue to double the complex patient bonus in CY 2022 given the continuation of the national PHE for COVID–19.

Response: We appreciate commenters' support of this proposal. As noted in section IV.A.3.e.(2)(a)(iii)(B) of this final rule, we have revised the formula for CY 2022 performance period/2024 MIPS payment year in efforts to better

acknowledge complex patients treated by MIPS eligible clinicians.

Comment: One commenter opposed CMS' proposal to continue doubling the complex patient bonus for the CY 2021 performance period/2023 MIPS payment year saying that MIPS eligible clinicians have had over a year to adapt to the changes caused by the national PHE for COVID–19.

Response: While we are encouraged by the progress made against COVID–19, we believe that there continues to be direct and indirect effects from the PHE that could affect the CY 2021 performance period/2023 MIPS payment year for reasons stated in the CY 2021 PFS final rule (85 FR 84913).

After consideration of public comments, we are finalizing the proposal to continue doubling the complex patient bonus as described at § 414.1380(c)(3)(iv) for the CY 2021 performance period/2023 MIPS payment year, and the corresponding revisions to the regulation text at § 414.1380(c)(3)(iv). The doubled numerical value (subject to the 10-point cap) will be added to the final score.

(iii) Complex Patient Bonus Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

(A) Complex Patient Bonus Background and Analysis

As discussed in the CY 2021 PFS final rule (85 FR 84908), we intended the complex patient bonus as a short-term solution to address the impact patient complexity may have on MIPS scoring. However, during the development of the CY 2021 PFS final rule, we did not have sufficient information available to develop a long-term solution to account for patient risk factors in MIPS that we could include as a finalized policy for the CY 2021 performance period/2023 MIPS payment year. In the CY 2020 PFS proposed and final rules, we considered whether newly available data from the Quality Payment Program still supported the complex patient bonus at the final score level (84 FR 40793 through 40795). More specifically, within the data analysis, we did not observe a consistent linear relationship for any reporting type or complexity measure, HCC risk score or dual proportion (84 FR 63021 through 63023). However, we only had a few years of data and believed more recent data may bring different results than the findings we explained in detail in the CY 2020 PFS final rule. We refer readers to the CY 2020 PFS final rule for further details on the methodology and findings (84 FR 63021 through 63023).

Further, section 1848(q)(1)(G) of the Act requires us to consider the relevant studies conducted under section 2(d) of the IMPACT Act and, as appropriate, other information, including information collected before completion of such studies and recommendations. We refer readers to section IV.A.3.e.(2)(a)(iii)(A) of the CY 2022 PFS proposed rule (86 FR 39440 through 39441) for discussion on HHS Assistant Secretary for Planning and Evaluation's (ASPE) first report (released in December 2016) and ASPE's second report (released in June 2020). Further, we noted in the CY 2021 PFS final rule (85 FR 84909) that as we continue to review the findings from the report, we intend to consider its recommendations, along with any updated data that would become available, for future rulemaking. In the CY 2021 PFS final rule (85 FR 84909), we also noted we plan to continue working with ASPE, the public, and other key stakeholders on this important issue to identify longer term policy solutions that achieve the goals of attaining health equity for all beneficiaries, and minimizing unintended consequences, and would propose modifications to the complex patient bonus in future rulemaking as appropriate.

Under § 414.1380(c)(3), the complex patient bonus is calculated as follows. For MIPS eligible clinicians and groups: [The average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group] + [the dual eligible ratio × 5]. For APM entities and virtual groups: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively] + [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively, × 5].

For the CY 2022 PFS proposed rule, we explored alternative calculation methodologies to modify the complex patient bonus formula based on several factors including stakeholder feedback, updated data analysis, and implications from ASPE reports to Congress. We also reviewed a series of literature recently published utilizing the 2017 MIPS performance period data. We refer readers to section IV.A.3.e.(2)(a)(iii)(A) of the CY 2022 PFS proposed rule (86

²⁵⁴ <https://www.nytimes.com/interactive/2021/us/covid-cases.html>.

FR 39441) for the detailed discussion on the Johnston KJ, Hockenberry JM et al. article²⁵⁵ which found that the current complex patient bonus formula appears unlikely to mitigate the most regressive effects of MIPS. Further details in section IV.A.3.e.(2)(a)(iii)(A) (86 FR 39441) of the CY 2022 PFS proposed rule also highlighted the two other research studies we considered related to how risk scores, specifically related to HCCs, differ between both rural and urban areas.

While ASPE’s reports to Congress support the use of a complex patient bonus at the final score level, we also acknowledge the findings reported in the published literature by identifying ways to make the complex patient bonus more targeted for clinicians caring for high risk and complex patients and to mitigate differences in resources that affect MIPS scores. Once it became available, we reviewed the 2018 MIPS actual data to see if we could

replicate the findings and identified some structural issues within the current complex patient bonus formula. We refer readers to section IV.A.3.e.(2)(a)(iii)(A) of the CY 2022 PFS proposed rule (86 FR 39441 through 39442) for the details on the updated analysis.

In summary, our updated analyses using actual 2018 MIPS scored data found that clinicians who have a higher share of complex patients have lower final scores, on average, prior to the assignment of the complex patient bonus than other clinicians. Additionally, our analyses showed that there is little evidence of association between the complex patient risk indicators (HCC and dual proportion) and MIPS final scores among the clinicians with a lower share of complex patients. We also noted, based on the above analysis using actual 2018 MIPS scored data for clinicians scored as individuals and groups examined

separately, the median raw final scores for engaged clinicians in the calculated top complex patient bonus quintile were more than 10 points less than the median raw final score of those in the bottom complex patient bonus quintile. Specifically, the median raw final scores for engaged clinicians in the top complex patient bonus quintile were 82.33 for groups and 60.76 for individuals compared to median raw scores of 94.36 for groups and 81.28 for individuals in the lowest quintile. Additionally, when we compared the median raw final scores for engaged clinicians in the calculated middle complex patient bonus quintile to the highest quintile, we still observed a difference in median raw final scores of greater than 10 points for both individuals and groups. Table 61 shows 2018 median MIPS raw final scores for the engaged individuals and groups within the lowest, middle and highest complex patient bonus (CPB) quintiles.

TABLE 61: 2018 Median MIPS Raw Final Scores for Engaged Individuals and Groups by Complex Patient Bonus Quintile

	Lowest CPB Quintile	Middle CPB Quintile	Highest CPB Quintile
Median MIPS Final Score (Individual)	81.28	77.44	60.76
Median MIPS Final Score (Group)	94.36	94.38	82.33

We found while the two risk indicators, dual proportion and HCC risk score, were correlated substantially, each has a different scale. For example, the dual proportion has a natural upper bound of 1 whereas the HCC risk score does not. The distribution of each risk indicator around its mean and median is also different. Given these findings, we have identified areas within the complex patient bonus that can be improved. Most importantly, the complex patient bonus formula used through the CY 2021 performance period/2023 payment year gave bonus points to clinicians not adversely affected by social risk and medical risk of their patients and does not sufficiently account for clinicians who treat patients who are high-risk and/or medically complex.

(B) Updates to the Complex Patient Bonus Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

Based on the ASPE report and our analyses, we proposed to revise the complex patient bonus by—(1) limiting the bonus to clinicians who have a median or higher value for at least one of the two risk indicators (HCC and dual proportion); (2) standardizing the distribution of the two risk indicators so that the policy can target clinicians who have a higher share of socially and/or medically complex patients; and (3) providing one overall complex patient bonus cap at 10 bonus points. To accomplish this, we included five separate proposals to update our complex patient bonus for the CY 2022 performance period/2024 MIPS payment years and future performance periods/MIPS payment years. We note that in section IV.A.3.e.(2)(a)(iii)(B) of

this final rule, we use the term “clinician(s)” to generally refer to those individuals and entities that these proposals apply to, including MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups. First, we proposed to add to § 414.1380(c)(3) that, similar to our current policy, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraph (c)(3)(v) through (c)(3)(viii). Second, we proposed at § 414.1380(c)(3)(v) that beginning with the CY 2022 MIPS performance period/ CY 2024 MIPS payment years, the

²⁵⁵ Johnston KJ, Hockenberry JM et al. (Sept 2020) “Clinicians With High Socially At-Risk Caseloads Received Reduced Merit-Based Incentive Payment

System Scores” HEALTH AFFAIRS 39, NO. 9 (2020): 1504–1512.

Khullar D, Schpero WL, et al. (Sept 2020) “Association between Patient Social Risk and

Physician Performance Scores in the First Year of the Merit-based Incentive Payment System” JAMA. 2020; 324 (10):975–983.

complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. Third, we proposed the revised formulas at § 414.1380(c)(3)(vi). For MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = $1.5 + 4 * \text{associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component} = 1.5 + 4 * \text{associated dual proportion standardized score}$. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation. Fourth, we proposed the revised formulas at § 414.1380(c)(3)(vii). For APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = $1.5 + 4 * \text{the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component} = 1.5 + 4 * \text{the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively}$. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation. Finally, we proposed at § 414.1380(c)(3)(viii) that beginning with the CY 2022 MIPS performance

period/CY 2024 MIPS payment years, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

(aa) Continuing the Requirement To Submit Data and To Use the Same Risk Indicators

Under the first proposal, beginning with the CY 2022 performance period/2024 MIPS payment years, we proposed at § 414.1380(c)(3) to continue the requirement to submit data for at least one MIPS performance category for the applicable performance period for the MIPS payment year for a MIPS eligible clinician, group, subgroup, virtual group or APM entity to receive a complex patient bonus added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii).

As discussed below in section IV.A.3.e.(2)(a)(iii)(B)(cc) of this final rule, the proposals at § 414.1380(c)(3)(vi) and (vii) include complex patient bonus components within the formulas proposed beginning with the CY 2022 performance period/2024 MIPS payment year to account for social and medical risk, while still using our current established risk indicators of dual proportion and HCC risk scores, respectively. We also continue to believe that applying this bonus at the final score is appropriate because caring for complex and vulnerable patients can affect all aspects of a practice and not just specific performance categories.

We requested public comments on the proposal to continue the requirement that a MIPS eligible clinician, group, subgroup, virtual group or APM entity must submit data for at least one MIPS performance category for the applicable performance period for the MIPS payment year to receive a complex patient bonus added to the final score for the MIPS payment year, if applicable.

However, we did not receive public comments on this proposal, and we are finalizing as proposed.

(bb) Cutoff at the Median for Complex Patient Bonus Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

Beginning with the CY 2018 performance period/2020 MIPS payment year, a complex patient bonus was added to the final score for the MIPS payment year for all MIPS eligible clinicians, groups, virtual groups and APM entities if they submitted data for at least one MIPS performance category for the applicable performance period for the MIPS payment year (§ 414.1380(c)(3)). We did not include any requirement that clinicians had to

attain a certain threshold to receive the complex patient bonus. Under the second proposal, we proposed at § 414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment, the complex patient bonus would be limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. This proposal limits the component for social risk to clinicians with a dual proportion value at or above the median dual proportion, and it limits the component for medical risk to clinicians with an HCC score value at or above the median HCC score. Those at or above the median for a risk indicator will get complex bonus points for that risk indicator component. To ensure the points are impactful and provided specifically to clinicians treating higher numbers of medically and socially complex patients, we proposed to provide bonus points beginning at the respective calculated medians.

Both medical and social factors within the newly proposed methodology, discussed in section IV.A.3.e.(2)(a)(iii)(B)(bb) of this final rule, will have separate medians and distributions calculated to provide more transparent bonuses to directly target those clinicians who treat a higher caseload of high-risk and complex patients. Both the dual proportion and the HCC risk indicators attributed to each clinician will be calculated in the same manner as under our current policy (for more information about the current policy, see the CY 2018 Quality Payment Program final rule (82 FR 30135)).

To determine the median for the respective risk indicator (HCC and dual proportion), we proposed to use the risk indicators associated with the final score assigned to a clinician from the prior performance period for all engaged MIPS clinicians, which we stated means those who have submitted data for at least one MIPS performance category or are facility-based. We inadvertently did not include this proposal in regulatory text in the CY 2022 PFS proposed rule (86 FR 39443), but for clarity, we are adding the following text to § 414.1380(c)(3)(v) in this final rule: To determine the median for the respective risk indicator (HCC and dual proportion), risk indicators associated with the final score assigned to a clinician from the most recent prior performance period, for all those who have submitted data for at least one MIPS performance category or are facility-based, are used. For example, the medians from the CY 2021

performance period, calculated using the associated risk indicators from the CY 2021 performance period, would be compared to the CY 2022 MIPS performance period risk indicator values to determine who would be eligible for a CY 2022 performance period/2024 MIPS payment year complex patient bonus. We stated that we would also use this same final score distribution to determine the standardized score discussed in the proposed rule (86 FR 39444). These statistics would be applied to the applicable performance period values of the risk indicators for each clinician to calculate the social and medical risk component scores for the MIPS performance period. We stated that we believe we need a prospective determination of the median, and standardized score from a prior performance period where the final scores are already resolved.

In our proposal, only those clinicians with risk indicator scores at or above the median for either one or both risk indicators will receive complex patient bonus points. Based on this final rule regulatory impact analysis (see section VI.F.18. of this final rule), we estimate 64 percent of clinicians will receive a complex patient bonus because there is not 100 percent overlap in the clinicians that are at or above the median for both risk indicators. Approximately 36.3 percent of engaged clinicians will not receive any complex patient bonus points, as they are below the median for both the HCC risk score and the dual proportion. We believe this number is appropriate as we will be targeting the complex patient bonus points to clinicians treating a higher caseload of highly complex patients.

Additionally, the complex patient bonus points will be more impactful as the difference in awarded bonus points between those with high caseloads of complex patients and those with low caseloads, will be greater. We believe establishing a cutoff point at the median, as opposed to the mean, is appropriate given the median is less impacted by outlier cases since the median is simply the middle value. We considered whether to use the mean, instead of the proposed median, but estimated that will result in about 50 percent of clinicians no longer receiving any complex patient bonus points because outliers could increase the mean.

In the CY 2022 PFS proposed rule (86 FR 39443), we acknowledged that alternate approaches could be used to target the bonus at clinicians with higher caseloads of complex patients. For example, we considered using a

different distribution of risk indicator scores, such as one from an earlier performance period, so clinicians could know their scores in advance, or through using a distribution that includes individual clinician scores and counts group scores, APM Entity scores, virtual group scores, and, starting in the CY 2023 MIPS performance period/2025 MIPS payment year, subgroup scores only once, so the group, APM Entity, virtual group, or subgroup score is not weighted by the number of clinicians in the group, APM Entity, virtual group, or subgroup. We also considered building risk benchmarks based on our current quality measure benchmark methodology (81 FR 77282 and 82 FR 53718) to determine the number of complex patient bonus points. Under that methodology, risk indicator scores higher than the decile in which the median risk factor lies would receive complex patient bonus points and all of the clinicians in the top decile would receive 5 points for each risk indicator. We solicited comments on alternate approaches for calculating the complex patient bonus.

We received public comments on our proposal to limit the complex patient bonus to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median beginning in the CY 2022 MIPS performance period/2024 MIPS payment. The following is a summary of the comments we received and our responses.

Comment: A few commenters support CMS' proposal to set the cutoff at the median for complex patient bonus points.

Response: We thank the commenters for their feedback and support.

Comment: Several commenters opposed CMS' proposal to use the cutoff at the median for the individual risk indicators. A few commenters were concerned that the proposed methodology would disadvantage rural practices. One of the commenters was specifically concerned about rural areas having lower HCC due to coding differences and recommended that CMS utilize the median HCC risk indicator at both the national and regional levels and determine eligibility using the lower of the two scores. A few commenters noted that utilizing the median as a cutoff may introduce a "cliff" in which practices with small differences in risk factor scores could experience very different complex patient bonuses. Other commenters suggested that having the cutoff below the median would result in unintended

consequences and discourage clinicians from treating complex patients.

Several commenters advised that CMS proceed very cautiously before eliminating the bonus for those clinicians who have relatively few complex patients versus those clinicians who have a larger number of such patients. Finally, one commenter suggested that CMS continue the already established complex patient bonus formula and provide complex patient bonus points to all clinicians.

Response: We believe the structure of the formula prevents a major cliff from occurring at the median as those right below the median and those right above median do not experience very different complex patient bonuses. Within the formula, the standardized score is based on the mean, which, at this time, is higher than the median. The additive component of 1.5 allows clinicians with standardized scores between the median and the mean to receive between zero and 1.5 points for each risk indicator, thus slowly increasing the number of bonus points as clinicians' standardized scores increase. For example, if the dual proportion risk indicator median is 0.2 and the dual proportion risk indicator mean is 0.23, a clinician with an associated standardized score of -0.25 (0.25 standard deviations below the mean, but still above the median), the clinician will receive a complex patient bonus equal to $1.5 + 4 * (-0.25)$ which equals 0.5 for the dual proportion component. We note that CMS will continue to monitor the impact of our policy for those clinicians who will no longer receive the complex patient bonus under the revised formula, but at this time, we continue to support targeting the bonus to make the points more impactful. We believe that generating a risk score at a regional or State level may be beneficial, however, there are complexities and technicalities that would need to be addressed such as defining the appropriate region, addressing circumstances when groups or individuals practice across multiple regions or States, and assessing how much of the score is national versus regional. Additionally, our analysis regarding the impact of the revised formula on rural areas showed that while there is no significant difference between rural and non-rural TIN/NPIs at the payment adjustment level, we do see differences in HCC scores that align with the literature findings discussed at section IV.A.3.e.(2)(a)(iii)(A) of the CY 2022 PFS proposed rule (86 FR 33441). As this topic is complex, we will monitor and consider changes in the future, if necessary, based on available data. Further, we disagree having the

cutoff at the median would discourage clinicians from treating complex patients because they have always treated those patients even prior to CMS establishing the complex patient bonus. We continue to believe the goal of the bonus for complex patients is two-fold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. Finally, we do not believe that we should continue to use the previous formula given that the revised formula more precisely targets clinicians caring for high risk and complex patients and better mitigates differences in resources that affect MIPS scores.

After consideration of public comments, we are finalizing at § 414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. To determine the median for the respective risk indicator (HCC and dual proportion), risk indicators associated with the final score assigned to a clinician from the most recent prior performance period, for all those who have submitted data for at least one MIPS performance category or are facility-based, are used.

(cc) Revised Complex Patient Bonus Formulas Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

Under the third proposal, we proposed at § 414.1380(c)(3)(vi) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment, for MIPS eligible clinicians, groups, and subgroups, that the complex patient bonus components would be calculated as follows for the specific risk indicators: Medical complex patient bonus component = $1.5 + 4 * \text{associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup}$; social complex patient bonus component = $1.5 + 4 * \text{associated dual proportion standardized score}$. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and

standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation. For example, we will use the mean and standard deviation from the CY 2021 MIPS performance period and the indicator assigned in the CY 2022 MIPS performance period to determine the clinician's standard score for the CY 2022 performance period/2024 MIPS payment year.

Under the fourth proposal, we also proposed at § 414.1380(c)(3)(vii), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, for APM entities and virtual groups, that the complex patient bonus components would be calculated as follows for the specific risk indicators: Medical complex patient bonus component = $1.5 + 4 * \text{the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively}$; social complex patient bonus component = $1.5 + 4 * \text{the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively}$. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

The mean and standard deviation statistics will be used along with the performance period values of the risk indicators for each clinician to calculate the standardized score used to calculate the social and medical risk component scores for the MIPS payment year. For example, if the raw dual proportion score calculated for a clinician is 0.25, the dual proportion mean (from the prior performance period) is 0.23, and the dual proportion standard deviation (from the prior performance period) is 0.15, the clinician's standardized score will be $(0.25 - 0.23)/0.15 = 0.13$. We believe that the standardized score calculation is appropriate as it is typically used to understand how far the raw risk indicator scores fall from the mean. We noted that those with a mean

score will have a standardized score of zero, and those with a standardized score of 1 are one standard deviation above the mean. Those below the mean will have a negative standardized score. The proposed formulas will also provide bonus points to clinicians who have a negative risk indicator standardized score and fall between the calculated median and mean for the respective risk indicator and to those who fall at or above the mean and thus have a positive risk indicator standardized score. As noted in section IV.A.3.e.(2)(a)(iii)(B)(bb) of the final rule, at § 414.1380(c)(3)(vi) and (vii), the new bonus components will use respective means to calculate standardized scores to then calculate and provide bonus points for clinicians with risk indicators, HCC and dual proportion, at or above the median, to capture medical and social risk, separately. For each of the two component calculations, higher standardized scores above the mean would be associated with more bonus points. For example, a clinician with a standardized score of zero (the mean value) for each risk indicator, HCC and dual proportion, will receive bonus points for each component that is equivalent to the constant, additive factor within the new formula, 1.5. The proposed formulas acknowledged complexity without creating a large cliff between those who are just below the median and those who have a marginally higher caseload of complex patients. The bonus, as proposed, would increase proportionally with the increased number of complex patients a clinician is treating and/or the degree of patient complexity. For example, we did not want to provide those who fall at the mean 1.5 bonus points, and then provide 10 bonus points to those who only have only a slightly higher caseload. Hence, we intended to incorporate a standardized score multiplied by 4 to ensure the score got proportionally higher as complexity increases.

The additive factor of 1.5 ensures that all clinicians at or above the mean for the social complex patient bonus calculation, based on dual proportion, will receive at least 1.5 complex patient bonus points and all clinicians at or above the mean for the medical complex patient bonus calculation, based on HCC risk score, will receive at least 1.5 complex patient bonus points. Further, the additive factor of 1.5 will allow clinicians between the median and mean to still receive complex patient bonus points. For example, if the dual proportion risk indicator median is 0.2

and the dual proportion risk indicator mean is 0.23, a clinician with an associated standardized score of -0.1 (0.1 standard deviations below the mean, but still above the median), the clinician will receive a complex patient bonus equal to $1.5 + 4 * (-0.1)$ which equals 1.1 for the dual proportion component. If the dual proportion risk indicator calculated for a clinician falls below the median, they will receive zero complex patient bonus points for the dual proportion component. Based on the standardized score calculation, if the dual proportion risk indicator calculated for a clinician falls above the mean, they will receive complex patient bonus component points greater than the additive factor of 1.5 for the dual proportion component.

We believe this formula avoids a major complex patient bonus points cliff that could be created by providing the clinicians right *above* the cutoff point significant bonus points compared to the clinicians right *below* the cutoff point (who do not receive any complex patient bonus points). We acknowledge those who fall below the median will no longer receive any complex patient bonus points, per proposal at § 414.1380(c)(3)(v) that for the CY 2022 performance period/2024 MIPS payment years and future MIPS performance periods/MIPS payment years, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median.

We received public comments on our proposal to revise the complex patient bonus formula. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported CMS' proposal to revise the complex patient bonus formula for the CY 2022 performance period/2024 MIPS and future payment years to better account for care delivered to highly complex patients.

Response: We thank the commenters for their support and feedback.

Comment: A few commenters suggested some modifications to revise the proposed formulas. One commenter suggested that the proposed methodology for standardizing the scores for risk indicators is overly sensitive to outliers. Rather, they suggested that CMS standardize risk indicators using the median instead of the mean. The commenter also suggested that we use a more robust measure of variation than the standard deviation. Another commenter suggested that CMS standardize the dual

eligible ratio using the median value in each State, rather than the median or mean at a national level. More specifically, the commenter suggested this given that the dual eligible ratio for a clinician varies depending on the number of Medicaid-eligible beneficiaries attributed to clinician which may be lower if a State has not expanded Medicaid. Finally, another commenter suggested that CMS increase the average HCC score for clinician based on the proportion of patients living in rural areas.

Response: We acknowledge that Medicaid eligibility criteria vary across States, and this could impact the number of dual-eligible patients attributed to a clinician. We also understand that there may be advantages to having an average HCC score for clinicians based on the proportion of patients living in rural areas. More specifically due to the potential coding differences between rural and non-rural areas as noted in the Tyler Malone, Denise Kirk et al. study²⁵⁶ which indicated that Medicare beneficiaries in rural counties have lower average CMS-HCC risk scores compared to urban counties despite previous research suggesting that rural populations are sicker than urban populations. However, it may be misleading to create a median value for a State when a clinician or group may practice in multiple locations across different State lines. More specifically, we note that clinicians providing patient care as part of a clinical team may practice in different locations under the same group (TIN) which would make it difficult for us to assign a State-based dual eligible ratio. Additionally, dually-eligible patients may seek care across State lines, adding to the complexity. We are interested in exploring these suggestions further through future rulemaking but would need to do extensive modeling to rule out unintended consequences, identify appropriate data sources, and assess whether the advantages outweigh the additional complexity. We will continue to evaluate dual proportion to see if any additional modifications are needed. We would also be interested in hearing from stakeholders the best way to resolve these challenges in the future.

Further, the proposed policy standardizes each risk indicator (HCC risk score and dual proportion) using the mean and standard deviation. Specifically, the proposed policy used

the standardized score formula of (risk indicator – mean of risk indicator)/standard deviation of risk indicator. We conducted a preliminary analysis that uses the median instead of the mean and the median absolute deviation (MAD) instead of the standard deviation for each risk indicator (HCC risk score and dual proportion) to create the standardized score. We used Year 5 final RIA data to calculate the values of the median and the MAD. The MAD first takes the absolute difference between a risk indicator value and the median of the risk indicator and then takes the median of the absolute differences. In other words, $MAD = \text{median}(\text{absolute difference}(\text{risk factor} - \text{median of the risk factor}))$ and the standardized score would be calculated using (risk indicator – median of risk indicator)/MAD of risk indicator.

Based on the analysis, we observed that the MAD is smaller than the standard deviation, used in our proposed rule's analysis, for each risk indicator. More specifically, using the median and MAD, the standard score is, on average, more than twice the value when compared to using the mean and standard deviation. Given that the standardized scores would be larger using the median and MAD to standardize, we recalibrated the multiplier as the initial multiplier was 4 but would effectively become 8 or more with the larger standardized scores. Additionally, if we use the median to standardize, clinicians at the risk indicator median would receive, at minimum, the initial constant (1.5 in the proposed formula). Because of these two reasons, when conducting our analysis, the proposed formula for the complex patient bonus (which is currently $1.5 + 4 * \text{standardized score}$) needed to be recalibrated for our analysis to avoid unintended consequences.

We conducted our analysis using the median and the MAD to standardize and we used the formula $0.25 + 2 * \text{standardized score}$ for each risk indicator. We used 0.25 as the additive component to provide those at the median for each risk indicator with a non-zero amount of bonus points that would also not create a cliff. We used 2 as the multiplicative component to provide a bonus that gets proportionally higher as complexity increases while also accounting for the larger size of the standardized score. Using this formula, the number of clinicians receiving complex patient bonus points decreases slightly due to changes in entity type and clinicians would receive slightly fewer complex patient bonus points compared to the proposed formula.

²⁵⁶ UNC Rural Health Research Program, "CMS Hierarchical Condition Category (HCC) 2014 Risk Scores Are Lower for Rural Medicare Beneficiaries than for Urban Beneficiaries," December 2020.

However, the adjusted standardization method using the median and the MAD and associated formula did not have any major impact on the overall distribution and no impact of outliers was detected.

Comment: One commenter supported CMS' proposal to use the current risk indicators including HCC and dual eligibility. A few commenters requested that CMS look at additional risk indicators to account for additional complexities within the complex patient bonus formula. Specifically, a few commenters suggested that CMS consider clinical data to capture comorbidities and alternatives to dual eligibility to capture social risk. A few commenters suggested that CMS consider using other data such as Z-codes and indices (for example, Social Vulnerability Index, Community Needs Index, etc.).

Response: We thank the commenters for their support and suggestions and will take them into consideration as we continue updating the complex patient bonus in future years. We note that, although the ASPE report²⁵⁷ found dual eligibility to be a reliable indicator of social risk, we understand there may be some limitations. However, we are not aware of data sources and/or methodologies to account for other social indicators such as income and education that are readily available for all Medicare beneficiaries that would be more complete indices of a patient's complexity. Further, we continue to believe that average HCC risk scores are a valid proxy for medical complexity that are also used by other CMS programs. Therefore, we have decided to continue to pair the HCC risk score with the proportion of dually eligible patients to create a more complete complex patient indicator than can be captured using HCC risk scores alone. We will evaluate additional, more comprehensive options, such as Z-codes and indices, in future years based on any updated data or additional information, including to better account for social risk factors while minimizing unintended consequences and consider these as we move forward.

After consideration of public comments, we finalize the proposal at § 414.1380(c)(3)(vi) that beginning with the CY 2022 performance period/CY 2024 MIPS payment, for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient

bonus component = $1.5 + 4 * \text{associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component} = 1.5 + 4 * \text{associated dual proportion standardized score}$. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

We also finalize the proposal at § 414.1380(c)(3)(vii), beginning with the CY 2022 performance period/2024 MIPS payment years, for APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = $1.5 + 4 * \text{the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component} = 1.5 + 4 * \text{the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively}$. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

(dd) Cap for the Complex Patient Bonus Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

When we originally established the complex patient bonus policy in the CY 2018 Quality Payment Program final rule (82 FR 53774), we finalized at § 414.1380(c)(3)(iii) that the complex patient bonus cannot exceed 5.0. At that time, our data analysis estimated a decrease in simulated scores of 5.4 points (for individuals who report 6 or

more quality measures) and 4.5 points (for groups) from the top quartile to the bottom quartile for the average patient HCC risk scores and 4.8 points (for individuals who report 6 or more quality measures) and 4.5 points (for groups) from the top quartile to the bottom quartile for the dual proportion. Therefore, we believed a cap for the complex patient bonus of 5 points was supported by the data and was sufficient to compensate for the estimated differences in performance based on HCC risk scores and dual proportion (82 FR 53773). In CY 2019, CY 2020, and CY 2021 PFS final rules, we continued to believe that the 5-point cap was appropriate given that we had not updated our prior analyses (83 FR 58769 through 59870, 84 FR 63021 through 63023, 85 FR 84908 through 84913, respectively). However, based on our updated analyses using actual 2018 MIPS scored data, described above, about 5 percent of clinicians scored as group or individual had a complex patient bonus that would have been more than 5-points had the cap not been in place. The complex patient bonus cap of 5-points (82 FR 53773 through 53776) affects clinicians who are most likely carrying higher caseloads for patient complexity, which is inconsistent with the intent of the policy, and we no longer believe we should maintain the overall cap of 5-points. As discussed in section IV.A.3.e.(2)(a)(iii)(A) of this final rule, our updated analyses using actual 2018 MIPS scored data also found that clinicians with a higher caseload of complex patients have lower final scores, by more than 10 points on average, prior to the assignment of the complex patient bonus than clinicians with lower caseloads of complex patients. We believe, with a cap of 10 bonus points, we are targeting the bonus to address the differences in final scores these clinicians face more appropriately without capping at a larger number, such as 15 or 20 bonus points, which could result in inappropriate score inflation and masking of poor performance. A cap of fewer than 10 bonus points would not address the differences in the observed raw final scores and would not adequately address the need to provide more equity within our scoring system for those clinicians treating higher caseloads of socially and/or medically complex patients. We did consider lower caps, such as 5 or 7 bonus points, or higher caps, such as 20 bonus points, but for the reasons described above, we proposed the cap of 10 bonus points. However, if future analyses and more recent data show differences in raw

²⁵⁷ ASPE, Second Report to Congress on Social Risk and Medicare's Value-Based Purchasing Programs, June 29, 2020. <https://aspe.hhs.gov/pdf-report/second-impact-report-to-congress>.

final scores that differ from our previous findings, we would consider proposing in future rulemaking the use of a cap that aligns with new findings.

As discussed in section IV.A.3.e.(2)(a)(iii)(B)(cc) of this final rule, we proposed the formulas as: Risk indicator complex patient bonus component = $1.5 + 4 * \text{associated risk indicator standardized score}$. The formula, as proposed, has a multiplier of 4. We also considered a multiplier of 2 with a cap of 5 bonus points which results in a lower final score mean and median but does not change the number of clinicians receiving a complex patient bonus when compared to the proposed policy. We do not believe that this alternate approach would produce a bonus impactful enough to overcome the differences seen at the final score level when comparing complex patient bonus quintiles. We solicited feedback on this alternate approach and additional alternate approaches we should consider.

Under the fifth proposal, we proposed at § 414.1380(c)(3)(viii) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0. Based on the proposed formulas at § 414.1380(c)(3)(vi) and (vii), the social complex patient bonus component (using dual proportion standardized score) and the medical complex patient bonus component (using HCC risk score standardized score) will be added together to calculate one overall complex patient bonus. Then, based on the proposal at § 414.1380(c)(3)(viii) the complex patient bonus will then be capped at the 10 points overall.

For example, if a clinician's dual proportion standardized score is 1.5, their complex patient bonus social risk component is $1.5 + 4 * 1.25 = 6.5$. If their HCC risk score standardized score is 0.25, their complex patient bonus medical risk component is $1.5 + 4 * 0.25 = 2.5$. The two complex patient bonus components are then added together to total 9 complex patient bonus points for this clinician. Had the total been above 10 bonus points, the 10-point cap would have applied and the clinician would have received 10 complex patient bonus points added to their final MIPS score.

We solicited feedback on whether we should use the multiplier of 4 and cap of 10 bonus points as proposed, a multiplier of 2 and cap of 5 bonus points as discussed as an alternative, or if we should consider additional options and rationale for the complex patient bonus formula and bonus cap, such as a cap of 7 or 20 bonus points.

We received public comments on the cap for the complex patient bonus. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to place the complex patient bonus cap at 10 points, similarly to how it was capped for the previous 2 years due to the policy to double the previously established 5-point cap in response to the impacts of the national PHE.

Response: We thank the commenters for their support and feedback.

Comment: A few commenters suggested that CMS increase the complex patient bonus cap from 10 points to 20 points. One commenter specifically suggested that CMS scale the formula so that individual clinicians in the upper quintile can receive at least 15 complex patient bonus points.

Response: At this time, we do not believe we need to increase the complex patient bonus cap from 10 points to 20 points or provide at least 15 complex patient bonus points to the upper quintile. We believe, with a cap of 10 bonus points, we are appropriately targeting the bonus to address the differences in final scores these clinicians face without capping at a larger number. Fifteen bonus points would contribute to the final score the same amount of points as the entire Improvement Activities performance category. However, if future analyses and more recent data show differences in raw final scores that differ from our previous findings, we would consider proposing in future rulemaking the use of a cap that aligns with new findings.

After consideration of public comments, we finalize the proposal at § 414.1380(c)(3)(viii) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

In summary, we finalized the five separate proposals for the CY 2022 performance period/2024 MIPS payment year and future MIPS performance periods/MIPS payment years as follows:

- Finalized as proposed at § 414.1380(c)(3), by adding, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii).

- At § 414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we finalized as proposed the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. To determine the median for the respective risk indicator (HCC and dual proportion), risk indicators associated with the final score assigned to a clinician from the most recent prior performance period, for all those who have submitted data for at least one MIPS performance category or are facility-based, are used.

- At § 414.1380(c)(3)(vi), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we finalized as proposed for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = $1.5 + 4 * \text{associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroups; social complex patient bonus component} = 1.5 + 4 * \text{associated dual proportion standardized score}$. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: $(\text{raw risk indicator score} - \text{risk indicator mean}) / \text{risk indicator standard deviation}$.

- At § 414.1380(c)(3)(vii), we finalized as proposed that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = $1.5 + 4 * \text{the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component} = 1.5 + 4 * \text{the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or}$

virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

- At § 414.1380(c)(3)(viii), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we finalized as proposed the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

In addition to the proposals we made, we also considered the alternative of continuing the use of the complex patient bonus formulas, as previously

finalized at § 414.1380(c)(3)(i) and (ii), along with the 5.0 point cap as previously finalized at § 414.1380(c)(3)(iii) for the CY 2022 MIPS performance period/CY 2024 MIPS payment year. We solicited comment on that alternative and have addressed the comments we received above under section (IV.A.3.e.(2)(a)(iii)(B)(bb)) of this final rule.

(b) Final Score Performance Category Weights

(i) General Weights

Section 1848(q)(5)(E)(i) of the Act specifies weights for the performance categories included in the MIPS final score: In general, 30 percent for the quality performance category; 30 percent for the cost performance

category; 25 percent for the Promoting Interoperability performance category; and 15 percent for the improvement activities performance category. For more of the statutory background and descriptions of our current policies, we refer readers to the CY 2017 through CY 2018 Quality Payment Program final rules, and CY 2019 through CY 2021 PFS final rules (81 FR 77320 through 77329, 82 FR 53779 through 53785, 83 FR 59870 through 59878, and 84 FR 62950 through 62959, 85 FR 84898 through 84908, respectively). Table 62 summarizes the weights established in prior rulemaking (85 FR 84913) for each performance category for the CY 2022 performance period/2024 MIPS payment year and each subsequent MIPS payment year.

TABLE 62: Weights by MIPS Performance Category for the CY 2022 Performance Period/2024 and each Subsequent MIPS Payment Year

Performance Category	2024 and Future MIPS Payment Years
Quality	30%
Cost	30%
Improvement Activities	15%
Promoting Interoperability	25%

(ii) Flexibility for Weighting Performance Categories

Under section 1848(q)(5)(F) of the Act, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of zero) for each performance category based on the extent to which the category is applicable to the type of MIPS eligible clinician involved and for each measure and activity with respect to each performance category based on the extent to which the measure or activity is applicable and available to the type of MIPS eligible clinician involved.

Under section 1848(q)(5)(B)(i) of the Act, in the case of a MIPS eligible clinician who fails to report on an applicable measure or activity that is required to be reported by the clinician, the clinician must be treated as achieving the lowest potential score applicable to such measure or activity. In this scenario of failing to report, the MIPS eligible clinician generally would receive a score of zero for the measure or activity, which would contribute to the final score for that MIPS eligible clinician. Under certain circumstances,

however, a MIPS eligible clinician who fails to report could be eligible for an assigned scoring weight of zero percent and a redistribution of the performance category weights. For a description of our existing policies for reweighting performance categories, please refer to § 414.1380(c)(2) and the CY 2021 PFS final rule (85 FR 84914 through 84916).

(A) Reweighting the Cost Performance Category

Under § 414.1380(c)(2)(i)(A), we will assign a different weight to a performance category and redistribute its prescribed weight to another performance category or categories in certain circumstances where we determine there are not sufficient measures and activities applicable and available under section 1848(q)(5)(F) of the Act. For the cost performance category, this includes circumstances where we cannot reliably calculate a score for the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician (see § 414.1380(c)(2)(i)(A)(2)). In the CY 2018 Quality Payment Program final rule (82 FR 53780), for the cost performance category, we noted in the proposed rule we had stated that we continue to believe having sufficient

measures applicable and available means that we can reliably calculate a score for the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician, and that MIPS eligible clinicians who are not attributed enough cases to be reliably measured should not be scored for the cost performance category. We noted (82 FR 53780) we had established a policy in the CY 2017 Quality Payment Program final rule that if a MIPS eligible clinician is not attributed enough cases for a measure (in other words, has not met the required case minimum for the measure), or if a measure does not have a benchmark, then the measure will not be scored for that clinician (81 FR 77323). We stated (82 FR 53780) if we do not score any cost measures for a MIPS eligible clinician in accordance with this policy, then the clinician would not receive a cost performance category percent score. In the CY 2022 PFS proposed rule (86 FR 39446 through 39448), we solicited comments on potential circumstances where we may not be able to reliably calculate a score for any of the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician, and may assign a different

weight to the cost performance category and redistribute its prescribed weight to another performance category or categories. We stated that we are interested in comments on circumstances that could affect all MIPS eligible clinicians, as well as those that could affect a subset of MIPS eligible clinicians or individual MIPS eligible clinicians. We noted the cost performance category reweighting provision at § 414.1380(c)(2)(i)(A)(2) is distinct from the measure suppression policy proposed in section IV.A.3.e.(1)(d)(i) of the proposed rule, as it applies to the performance category as a whole and not on a measure-by-measure basis.

In the CY 2022 PFS proposed rule (86 FR 39447), we discussed our responses to commenters' concerns in the CY 2021 PFS final rule regarding the potential for COVID-19 to impact cost measures and our analyses of whether we could reliably calculate scores for the cost measures for the 2020 performance period. We noted that because we determined we cannot reliably calculate scores for the cost measures that adequately capture and reflect the performance of MIPS eligible clinicians, we announced via email communication (subject: *CMS Reweighting 2020 MIPS Cost Performance Category*) on May 20, 2021, in accordance with § 414.1380(c)(2)(i)(A)(2), we will assign a weight of 0 percent to the cost performance category for the CY 2020 performance period/2022 payment year and redistribute the prescribed weight of 15 percent to another performance category or categories, as established at § 414.1380(c)(2)(ii)(D). We noted as with all measures, we continue to monitor the evolving impact of COVID-19.

We stated in the CY 2022 PFS proposed rule (86 FR 39447) that we recognize there may be additional circumstances where we may not be able to reliably calculate a score for any of the cost measures within the cost performance category that adequately captures and reflects the performance of a MIPS eligible clinician, which could include external factors beyond the control of clinicians. Similar to the Measure Suppression Factors proposed and subsequently finalized in the FY 2022 IPPS/LTCH PPS rulemaking (86 FR 25473, 45301), we stated that such external factors may include significant national shortages or rapid or unprecedented changes in: (1) Healthcare personnel; (2) medical supplies, equipment, or diagnostic tools or materials; or (3) patient case volumes or patient case mix.

We solicited comments on whether these external factors should inform our future decision-making on whether to reweight the cost performance category under § 414.1380(c)(2)(i)(A)(2). We also solicited comments on whether there are other external factors we should consider, or other circumstances in general that could affect our ability to reliably calculate a score for the cost performance category as described under § 414.1380(c)(2)(i)(A)(2). We received public comments on these external factors. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported CMS considering additional external factors in future decision-making on whether to reweight the cost performance category under § 414.1380(c)(2)(i)(A)(2).

Response: We thank the commenters for their support.

Comment: One commenter recommended that CMS specifically consider whether events will impact multiple performance periods and whether medical guidelines (such as the changing COVID-19 vaccination schedule) are being updated. One commenter recommended CMS consider small practices and practices with low volume when determining whether to reweight the cost performance category. A few commenters recommended reweighting decisions be based, in part, on an assessment of whether an external event impacts patterns of care or a clinician's ability to control complications, admissions, and readmissions.

Response: We appreciate the commenters' suggestions for external factors or other circumstances we should consider. We recognize that certain circumstances can affect clinicians and clinician groups across multiple performance periods, and we intend to assess each performance period to determine whether clinicians' performance has been affected by external factors that are not within their control. We also agree about the importance of monitoring potential impacts for small practices and practices with low volume of cases and note that setting a case minimum for a measure helps to ensure that practices have a sufficient case volume to be reliably scored on a measure. We continue to apply the appropriate case minimum for each measure as part of monitoring and testing for the impact of external events. Additionally, to address a stakeholder's comment on the importance of assessing whether external events impact patterns of care or a clinician's ability to control

complications, admissions, and readmissions, we note that as part of our regular monitoring of the cost measures, we run empirical analyses to assess changes in patterns of care and evaluate whether certain circumstances or events impact clinicians' performance on measures. This assessment would help us to determine if these circumstance or events warrant cost performance category reweighting. This monitoring would include empirical analyses to compare cost performance across years. Depending on the specific measure, this may include the cost of complications, admissions, and readmissions.

After consideration of the public comments we received, we intend to consider the following three factors, in addition to any other factors that may be relevant in the future, when we make a determination as to whether we can reliably calculate a score for the cost performance category that adequately captures and reflects the performance of a MIPS eligible clinician, as described under § 414.1380(c)(2)(i)(A)(2): Significant national shortages or rapid or unprecedented changes in: (1) Healthcare personnel; (2) medical supplies, equipment, or diagnostic tools or materials; or (3) patient case volumes or patient case mix. We offer the following examples to illustrate each of these three factors.

- Factor 1: A significant national shortage or rapid or unprecedented change in healthcare personnel could mean that there is a systematic decrease in medical services being provided and similar impacts on data availability.

- Factor 2: A rapid and unprecedented national change in medical supplies, equipment, or diagnostic tools or materials could mean a rapid and systematic change in the way medical care is provided, which might result in distortions to resource use measurement.

- Factor 3: A rapid and unprecedented national change in the number and case mix of patients receiving medical services could mean that the measure cannot be reliably calculated due to systemic decreases in case counts and data available for risk adjustment.

(iii) Redistributing Performance Category Weights

In the CY 2017 through CY 2018 Quality Payment Program final rules, and CY 2019 through CY 2021 PFS final rules (81 FR 77325 through 77329, 82 FR 53783 through 53785, 83 FR 59876 through 59878, 84 FR 63027 through 63031, and 85 FR 84914 through 84916), and at § 414.1380(c)(2)(ii), we established policies for redistributing

the weights of the performance categories in the event that a scoring weight different from the generally applicable weight is assigned to a category or categories.

In CY 2021 PFS final rule, we finalized a policy for redistributing the performance category weights for the CY 2022 performance period/2024 MIPS payment year and noted that we planned to revisit our redistribution policies in future rulemaking and may consider redistributing more weight to the cost performance category after clinicians have more experience with cost being weighted at 30 percent (85 FR 84914). While we still intend to redistribute more weight to the cost performance category in future years, we believe it will be beneficial to establish the redistribution policies for

the CY 2023 performance period/2025 MIPS payment year and future years to provide as much notice as possible to clinicians and other stakeholders. Hence, we proposed to apply the redistribution policy finalized for the CY 2022 performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(F) to the 2025 MIPS payment year and each subsequent MIPS payment year, and we proposed corresponding revisions to § 414.1380(c)(2)(ii)(F). We still plan to revisit our redistribution policies in future rulemaking after clinicians have more experience with cost being weighted at 30 percent and gain more experience with our newly proposed MVPs.

We solicited public comments on this proposal.

We received public comments on the redistribution policy. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported CMS' proposal to continue the redistribution policies for future MIPS performance periods/MIPS payment years.

Response: We thank the commenters for their support and feedback.

After consideration of public comments, we finalize our proposal to apply the redistribution policy finalized for the CY 2022 performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(F) to the 2025 MIPS payment year and each subsequent MIPS payment year, and we finalize the proposed corresponding revisions to § 414.1380(c)(2)(ii)(F).

TABLE 63: Performance Category Redistribution Policies Finalized for the CY 2022 Performance Period/2024 MIPS Payment Year and for Future MIPS Performance Periods/MIPS Payment Years

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	30%	30%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability	55%	30%	15%	0%
-No Quality	0%	30%	15%	55%
-No Improvement Activities	45%	30%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	70%	0%	0%	30%
-No Promoting Interoperability and no Quality	0%	50%	50%	0%
-No Promoting Interoperability and no Improvement Activities	70%	30%	0%	0%
-No Quality and no Improvement Activities	0%	30%	0%	70%

Our finalized redistribution policies for the CY 2025 MIPS payment year and each subsequent MIPS payment year are included in Table 63. We note that not all the redistribution scenarios described in Table 63 will apply to MIPS eligible clinicians in small practices. Please refer to Table 64 for the redistribution policy for small practices.

(A) Redistributing Performance Category Weight for Small Practices

Clinicians and groups who work in small practices are a crucial part of the health care system. The Quality Payment Program provides options designed to make it easier for these clinicians and groups to report on

performance and quality and participate in advanced alternative payment models for incentives. We have heard directly from clinicians in small practices that they face unique challenges related to financial and other resources, environmental factors, and access to health information technology. We heard from many commenters that the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). In response to the feedback on the potential burden on small practices, we have established special policies available for small

practices including the small practice bonus and special scoring policies. For example, in the CY 2018 QPP final rule (82 FR 53682 through 53683), we established a significant hardship exception for small practices for the Promoting Interoperability performance category.

In this section of the rule, we discuss how we would redistribute the Promoting Interoperability performance category weight for small practices. Within the reweighting policy for the CY 2022 performance period/2024 MIPS payment year, the Promoting Interoperability performance category weight is redistributed fully to the quality performance category, unless the

quality performance category is weighted at zero percent. In general, our reweighting policies have emphasized the quality performance category over the improvement activities performance category. We have noted it is important to prioritize performance on measures that show a variation in performance such as quality measures, rather than the activities under the improvement activities performance category, which are based on attestation of completion (85 FR 84914). We believe this helps reduce incentives to not report measures for the quality performance category in circumstances when a clinician may be able to report but chooses not to do so. However, given stakeholder input and recently published literature, we believe there could be other reasons why a small practice would not report quality measures. One recent article²⁵⁸ stated that physicians in larger group practices, multispecialty practices, or participating through alternative payment models had higher MIPS scores, possibly reflecting such practices' greater infrastructure and resources to collect, analyze, and report measures to CMS. We have also heard directly from clinicians in small practices that they face unique challenges related to financial and other resources and access to health information technology. Many commenters have shared their belief that the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). Indeed, 85 percent of clinicians who are not engaged with MIPS (who do not submit data) are clinicians in small practices (85 FR 85018), which we believe may be due to their limited resources. Given infrastructure and resource limitations within small practices, we believe it is appropriate to place more emphasis on a performance category that poses a reduced reporting burden such as the improvement activities performance

category. We proposed that for small practices, as defined at § 414.1305, when the Promoting Interoperability performance category is reweighted, the quality performance category will be weighted at 40 percent, the cost performance category will be weighted at 30 percent, and the improvement activities performance category will be weighted at 30 percent. When both the cost performance category and the Promoting Interoperability performance category are reweighted, the quality performance category will be weighted at 50 percent and the improvement activities performance category will be weighted at 50 percent. We plan to revisit this redistribution policy in future rulemaking and may consider redistributing more weight to the cost performance category after clinicians have more experience with cost being weighted at 30 percent.

We anticipate that our proposal noted in the two rows in Table 64 will greatly assist small practices by providing further flexibilities to help with our goal of increasing engagement across the MIPS program and to be able to meet the MIPS requirements. Beginning with the CY 2022 performance period/2024 MIPS payment year, we proposed at § 414.1380(c)(2)(ii)(G) redistribution policies for small practices, as shown in Table 64.

We solicited public comments on this proposal.

We received public comments on the redistribution of performance category weights for small practices. The following is a summary of the comments we received and our responses.

Comment: Many commenters support CMS' proposal to redistribute the Promoting Interoperability weight in efforts to reduce burden on small practices.

Response: We thank the commenters for their support and feedback.

Comment: A few commenters supported CMS' proposal to redistribute the Promoting Interoperability weight for small practices but provided additional comments. A few commenters suggested that CMS apply this redistribution matrix to all practices particularly given that the performance threshold is increasing. A few

commenters suggested that CMS allow for small practices to choose between reweighting of the quality performance category and improvement activities categories to 50 percent each and the standard reweighting option of quality performance category and improvement activities performance category. Another commenter suggests that CMS score small practices using both redistribution scenarios and apply the higher of the two scores to the final score. Finally, one commenter recommended that CMS distribute the weight more evenly across the MIPS performance categories.

Response: We continue to believe that it is appropriate to redistribute the Promoting Interoperability performance category weight across the quality and improvement activities performance categories as proposed for small practices. More specifically, we believe this is appropriate, given the infrastructure and resource limitations within small practices, to place more emphasis on a performance category that poses a reduced reporting burden such as the improvement activities performance category. We do not believe it necessary to provide small practice clinicians with a choice of which redistribution matrix they would like applied since we believe this would add burden by requiring small practices to inform CMS as how they would like to be scored—contradicting our reasoning for establishing this policy. Given the additional burden and resource limitations known to impact small practices to an extent greater than non-small practice clinicians, we, at this time, continue to believe this policy should remain limited to small practices. We also choose not to take the higher of the two scores for small practices as this may create an unfair advantage across MIPS eligible clinicians and we will continue to monitor this policy to ensure that there are no inadvertent impacts.

After consideration of public comments, we finalize the proposed redistribution policies for small practices at § 414.1380(c)(2)(ii)(G), as shown in Table 64, beginning with the CY 2022 performance period/2024 MIPS payment year.

(iv) MIPS Reweighting Based on Extreme and Uncontrollable Circumstances

(A) MIPS Applications for Reweighting for the CY 2021 Performance Period/2023 MIPS Payment Year Based on Extreme and Uncontrollable Circumstances

We anticipate that the national PHE for COVID-19 will continue through CY 2021. Therefore, we remind clinicians that the application-based extreme and uncontrollable circumstances policy, as described in § 414.1380(c)(2)(i)(A)(6) and (c)(2)(i)(C)(2), will be available for the CY 2021 performance period/2023 MIPS payment year (85 FR 84916 through 84917). Please refer to <https://qpp.cms.gov/about/covid19?py=2021> for details. The application allows clinicians, groups, and virtual groups significantly impacted by the PHE for COVID-19 to request reweighting for any or all MIPS performance categories. Under this policy, if a clinician, group, or virtual group submits a reweighting application and also submits data for a performance category for which an application was submitted, the data submission will override the application, and the clinician, group, or virtual group will be scored on the data submitted.

Additionally, if an application is submitted for one performance category only, and data is submitted for the other 2 performance categories, only the performance category for which the application was submitted will be

reweighted and the other performance categories will be scored. We believe this approach maintains a balance of encouraging participation in the Quality Payment Program while still providing for flexibility in weighting the performance categories for those who have been affected by the national PHE for COVID-19. Please refer to <https://qpp.cms.gov/about/covid19?py=2021> for more information.

(B) MIPS Reweighting Based on Extreme and Uncontrollable Circumstances; Automatic and Application-Based Policies Clarification

Under the application-based extreme and uncontrollable circumstances policy codified at § 414.1380(c)(2)(i)(A)(6) for the quality, cost, and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(2) for the promoting interoperability performance category, clinicians who are subject to extreme and uncontrollable circumstances may submit an application to CMS to request reweighting of a performance category or categories. We also established an automatic extreme and uncontrollable circumstances policy at § 414.1380(c)(2)(i)(A)(8) for the quality, cost, and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(3) for the promoting interoperability performance category, under which we automatically reweight the performance categories for clinicians who are located in an area

affected by extreme and uncontrollable circumstances as identified by us.

Based on stakeholder inquiries, we recognize not all stakeholders understand how individual MIPS eligible clinicians who are eligible for reweighting under the automatic extreme and uncontrollable circumstances policy and who also submit an application for reweighting based on extreme and uncontrollable circumstances are affected by the intersection of these policies. Currently, under both the application-based and automatic extreme and uncontrollable circumstances policies, if a MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS submits data for any of the MIPS performance categories by the applicable submission deadline for the MIPS performance period, they will be scored on each performance category for which they submit data, and the performance category will not be reweighted to zero percent in the final score. Under the automatic extreme and uncontrollable circumstances policy, the other performance categories for which data was not submitted will remain reweighted to zero percent (82 FR 53898, 83 FR 59874). Additionally, as described in the CY 2019 PFS final rule (83 FR 59874), under the automatic extreme and uncontrollable circumstances policy, a MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS will

not be scored on the cost performance category. As we stated in the CY 2019 PFS final rule (83 FR 59874), if a MIPS eligible clinician is located in an affected area, we would assume the clinician does not have sufficient cost measures applicable to him or her and assign a weight of zero percent to that category in the final score, even if we receive administrative claims data that will enable us to calculate the cost measures for that clinician.

The following example is intended to illustrate the intersection of the automatic and application-based extreme and uncontrollable circumstances policies. A MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS and eligible for the automatic extreme and uncontrollable circumstances policy submits an application for reweighting based on extreme and uncontrollable circumstances. The application requests reweighting for the Promoting Interoperability performance category, and the clinician submits data for the quality and improvement activities performance categories. The clinician will be scored on the quality and improvement activities performance categories because they submitted data for those categories; the cost performance category is reweighted to zero percent under the automatic extreme and uncontrollable circumstances policy, as discussed above; and the Promoting Interoperability performance category is also reweighted to zero percent under the automatic extreme and uncontrollable circumstances policy. The application for reweighting was not needed in this example to reweight the Promoting Interoperability performance category.

Please refer to <https://qpp.cms.gov/about/covid19?py=2021> for more information.

(v) Redistributing Performance Category Weights for Facility-Based Measurement

(A) Background

In the CY 2018 Quality Payment Program final rule, we established facility-based measurement under section 1848(q)(2)(C)(ii) of the Act which provides that the Secretary may use measures used for payment systems other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories (82 FR 53752 through 53767). Scoring under facility-based measurement was available for clinicians beginning with the CY 2019 performance period/2021 MIPS payment year. We established facility-based measurement to better align incentives between facilities and the MIPS eligible clinicians who provide services there (82 FR 53753). For more background on facility-based measurement, we refer readers to both the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767) and the CY 2019 PFS final rule (83 FR 59856 through 59867).

(B) Redistribution of Performance Category Weights Under Facility-Based Measurement

In the CY 2019 PFS final rule, we established that clinicians and groups would not need to elect or opt-in to facility-based measurement, but instead we would automatically apply facility-based measurement to MIPS eligible clinicians and groups who are eligible for facility-based measurement and who would benefit by having a higher combined quality and cost performance category score (83 FR 59863). In this same final rule, we finalized policies for redistributing weight among the performance categories for the CY 2019 performance period/2021 MIPS payment year under § 414.1380(c)(2)(ii)(C). Under those redistribution policies, if the cost performance category is reweighted to

zero percent of the final score, its weight is redistributed entirely to the quality performance category, unless the quality performance category is reweighted to zero percent, in which case the quality and cost performance category weights would be redistributed to the improvement activities and Promoting Interoperability performance categories. A clinician or group could have the weight of the cost performance category redistributed because they did not meet the case minimum for any of the measures in the cost performance category. Because facility-based measurement always includes both the quality and cost performance categories, it is possible a clinician or group would be scored on the cost performance category under facility-based measurement but not outside of facility-based measurement. There are two common scenarios for a facility-based clinician or group which could occur in the CY 2019 performance period/2021 MIPS payment year. In the first scenario, a facility-based clinician or group meets the case minimum for at least one cost performance category measure and receives a cost performance category percent score as defined at § 414.1380(b)(2). The respective quality and cost scores will be multiplied by the available points in the quality performance category (45 points) and the available points in the cost performance category (15 points) to determine the combined contribution of the quality performance category and the cost performance category to the final score out of the available 60 points. In the second scenario, a facility-based clinician or group does not meet the case minimum for any cost performance category measure and the cost performance category weight is redistributed to the quality performance category so the quality performance category score alone determines the score out of the available 60 points. Table 65 shows these two scenarios.

TABLE 65: Two Scenarios for a Facility-based Clinician or Group Which Could Occur Under Current Policy

Quality Performance Category Percent Score	Cost Performance Category Percent Score	Combined Quality and Cost Performance Category Scores (out of 60 available points)
75%	50%	$(45 \text{ points} \times 0.75) + (15 \text{ points} \times 0.5) = 41.25$
75%	N/A (no cost measures met case minimum)	$(60 \text{ points} \times 0.75) = 45$

In the CY 2020 PFS final rule, we established a redistribution policy for the CY 2020 performance period/2022 MIPS payment year at § 414.1380(c)(2)(ii)(D), for scenarios when the cost performance category weight is redistributed to the Promoting Interoperability performance category, as well as to the quality performance

category (84 FR 63028). Under this policy, the weights of the combined quality and cost performance categories could be different for a clinician or group under facility-based measurement and outside of facility-based measurement in circumstances in which the clinician or group was not scored on the cost performance category outside of

facility-based measurement but was scored on all other performance categories. Table 66 shows the scenario in which the combined weights of the quality and cost performance categories differ if cost is included, which occurs when the cost performance category is redistributed, and all other categories are scored.

TABLE 66: Scenario in which the Combined Weights of the Quality and Cost Performance Categories Differ if Cost is Included

Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability	Combined Quality and Cost
Scores for all four performance categories	45	15	15	25	60
No cost	55	0	15	30	55

We established similar redistribution policies for CY 2021 performance period/2023 MIPS payment year and CY 2022 performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(E) and (F) in that same rule (84 FR 63029 through 63031), which also described situations where the combined weight of the cost and quality performance categories was not always consistent. For more on the background and proposed policies related to redistribution of performance categories, please see section IV.A.3.e.(2)(b)(iii) of this final rule.

Based on inquiries we received from clinicians who were eligible for facility-based measurement, we believe our policy for determining the combined quality and cost performance category scores via facility-based measurement and outside of facility-based

measurement is not ideal because it could result in a facility-based clinician or group receiving a lower final score than they would otherwise receive outside of facility-based measurement. We considered whether this more complex consideration of the scores and the weights in the performance categories necessitated a reconsideration of an opt-in requirement for facility-based measurement. However, we believe that establishing such a requirement would create administrative burden for clinicians and groups.

Instead of adding an opt-in requirement, we proposed a new policy to determine the MIPS final score for clinicians and groups who are eligible for facility-based measurement. We proposed at § 414.1380(e)(6)(vi)(B) that beginning with the CY 2022

performance period/2024 MIPS payment year, the MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission. Under this proposed policy, we will calculate two final scores for clinicians and groups who are facility-based. One score will be based on the clinician or group's performance and the weights of the performance categories if facility-based measurement did not apply, and the other will be based on the application of facility-based measurement. The example below shows how this proposed policy will apply for a facility-based group that did not meet the case minimum for any of the cost measures but was scored on all other performance categories.

TABLE 67: Application of Policy for a Facility-based Group that Did Not Meet the Case Minimum for any of the Cost Measures but was Scored on All Other Performance Categories

Scenario	Quality Points/available points	Cost points/available points	Improvement Activities points/available points	Promoting Interoperability points/available points	Final Score
Facility-based	26/30	27/30	15/15	20/25	88/100
Not facility-based	52/55	0/0	15/15	24/30	91/100

As a result of this policy, the group in this example will receive a final score on the basis of their performance outside of facility-based measurement because they have obtained a higher final score through the combination of their submitted quality measures,

submitted improvement activities and submitted promoting interoperability measures.

We solicited comments on this proposal.

We received public comments on the redistribution of performance category

weights under facility-based measurement. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported CMS' proposal to take the higher of the two scores when

determining the final score for facility-based eligible clinicians and groups. One commenter suggested that CMS adopt this policy starting from CY 2021 performance period/2023 MIPS payment year.

Response: We thank the commenters for their support and feedback and note that, as mentioned in the 2021 Facility-Based Measurement Quick Start Guide, because the FY 2022 total performance score from the Hospital Value-Based Purchasing Program will be unavailable, we will not be able to calculate MIPS facility-based scores for the CY 2021 MIPS performance period/2023 MIPS payment year.²⁵⁹ Please refer to <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1293/2021%20MIPS%20Facility%20Based%20Quick%20Start%20Guide.pdf> for more information.

After consideration of public comments, we finalize the proposal at § 414.1380(e)(6)(vi)(B) that beginning with the CY 2022 performance period/2024 MIPS payment year, the MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission.

f. MIPS Payment Adjustments

(1) Background

For our previously established policies regarding the final score used to determine MIPS payment adjustments we refer readers to the CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799) and CY 2017 Quality Payment Program final rule (81

FR 77329 through 77343). In the CY 2022 PFS proposed rule (86 FR 39453 through 39458), we proposed: (1) To select the mean as our methodology for calculating the performance threshold; (2) to establish the performance threshold for the 2024 MIPS payment year using 2019 MIPS payment year data; (3) to establish the additional performance threshold for exceptional performance for the 2024 MIPS payment year; and (4) to update the scoring hierarchy to include subgroups. In addition, we are including information about our timing for providing MIPS performance feedback to clinicians for the performance period in 2020.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act included a special rule for the initial 2 years of MIPS, which requires the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be

used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018) amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the 2024 MIPS payment year) to which the MIPS applies.

We have applied these special rules for the past 5 years to provide for a gradual and incremental transition to the year 6 performance threshold. For further information on established performance threshold policies we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program (82 FR 53787 through 53794), CY 2019 PFS final rule (83 FR 59880 through 59883), the CY 2020 PFS final rule (84 FR 63031 through 63037), and the CY 2021 PFS final rule (85 FR 84919 through 84923). We codified the performance thresholds for each of the first 5 years of MIPS at § 414.1405(b)(4), (5), (6), (7), and (8) as presented in Table 68.

²⁵⁹ <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1293/2021%20MIPS%20Facility%20Based%20Quick%20Start%20Guide.pdf>.

TABLE 68: Performance Thresholds for the 2019 MIPS Payment Year through 2023 MIPS Payment Year

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	2022 MIPS Payment Year	2023 MIPS Payment Year
	Year 1	Year 2	Year 3	Year 4	Year 5
Performance Threshold	3 points	15 points	30 points	45 points	60 points
Difference in PT (year n minus (year n-1))	N/A	12 points	15 points	15 points	15 points

In the CY 2020 PFS final rule (84 FR 63031 through 63037) at § 414.1405(b)(7) and (8), we finalized the performance thresholds for the 2022 and 2023 MIPS payment years at 45 and 60 points, respectively, an increase of 15 points each year until the 2024 MIPS payment year, for which we estimated that the performance threshold would be 74.01 points. We believe that this approach effectively provided for a gradual and incremental transition to the performance threshold we had estimated for the 2024 MIPS payment year, as required by the statute.

Beginning with the 2024 MIPS payment year, section 1848(q)(6)(D)(i) of the Act requires the performance threshold to be the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. That section also provides that the Secretary may reassess the selection of the mean or median every 3 years. Thus, we considered whether to use the mean or median as the methodology for determining the performance threshold. We will use this methodology to determine a performance threshold for each of the following 3 years: The 2024 MIPS

payment year, 2025 MIPS payment year, and 2026 MIPS payment year. We would then reassess and establish the methodology (mean or median) that we will use for each of the next 3 years (2027 MIPS payment year, 2028 MIPS payment year, and 2029 MIPS payment year). At the time of drafting of this final rule, we have final score data from the CY 2017 performance period/2019 MIPS payment year through the CY 2020 performance period/2022 MIPS payment year available to use in our assessment of whether to use the mean or median as our methodology for the next 3 years. At this time, however, the targeted review process (see § 414.1385) for the CY 2020 performance period/2022 MIPS payment year has not yet concluded, and the data for the CY 2020 performance period/2022 MIPS payment year may be subject to change as a result of targeted review which began on August 2, 2021, and will conclude on November 29, 2021, at 8:00 p.m., eastern standard time. For more information on the targeted review process, see our announcement sent to our list serve on September 27th, 2021 available at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1631/2020%20Scoring%20Updates_

EUC%20Reweightings%20Requests%20Extension_Listserv.pdf.

We do not believe it would be appropriate to consider mean and median final scores from the CY 2020 performance period/2022 MIPS payment year for purposes of establishing the performance threshold for the 2024 MIPS payment year in this final rule when those scores may be subject to change as a result of the targeted review process. Furthermore, we are not utilizing final scores from the CY 2020 performance period/2022 MIPS payment for the creation of our regulatory impact analysis model. For a detailed discussion of the RIA methodology, including the basis of our decision to not use CY 2020 performance period/2022 MIPS payment year data, please see section VI.F.18.a of this final rule.

From our review of the data available to us, we have identified the mean and median final scores for each of the 2019 through 2021 MIPS payment years, as shown in Table 69. These six values represent the prior year mean and median final scores that we considered for the 2024 MIPS payment year performance threshold.

TABLE 69: Possible Values for the 2024 MIPS Payment Year Performance Threshold

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year
Mean	74.65 Points	87 Points	85.61 Points
Median	89.71 Points	99.63 Points	92.30 Points

As shown in Table 69, using the median final score gives a possible range of performance thresholds from 89.71 points to 99.63 points. Given our performance threshold of 60 points in year 5, these values would result in an increase of 29.71 points to 39.63 points

for year 6. Selecting the median of final scores as our methodology would, at a minimum, nearly double the annual increase in the performance threshold of 15 points that we had from year 2 to year 5 of the program. Section 1848(q)(6)(D)(iv) of the Act required that

we increase the performance threshold for each of the third, fourth, and fifth years of MIPS to ensure a gradual and incremental transition to the performance threshold we estimated with respect to the sixth year of MIPS. In prior rules we estimated the year six

performance threshold to be 74.01 points and used this estimate to determine how to gradually raise the performance threshold (83 FR 59881, 84 FR 63032, 84 FR 40802). Although section 1848(q)(6)(D)(iv) of the Act does not require this approach for the sixth year and subsequent years of MIPS, we believe that it is appropriate to set the performance threshold at a level that is in line with our previous estimates for year 6. We believe that continuing the gradual and incremental increase into year 6 would provide consistency to our stakeholders. After evaluating the possible values shown in Table 69, we believe that using the mean as our methodology would continue this approach.

Using the mean final score as the methodology would yield a possible range of performance thresholds from 74.65 points to 85.61 points (rounded to 75 points and 86 points respectively). Given our performance threshold of 60 points in year 5, these values would result in an increase of 15 points to 26 points for year 6. Given these values and our annual performance threshold increases of 15 points for years 2 to 5 of the program, 75 is the value that is most consistent with the gradual and incremental approach that we have elected to continue. Therefore, we proposed at § 414.1405(g) that for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b). This methodology will be used for MIPS payment years 2024 through 2026 of the program after which we will reassess the methodology for MIPS payment years 2027 through 2029.

In addition to selecting the methodology (mean or median), section 1848(q)(6)(D)(i) of the Act also requires us to specify a prior period from which we will use the final scores for all MIPS eligible clinicians to calculate the mean or median. As shown in Table 69, the mean final scores are 74.65, 87, and 85.61 points for MIPS payment years 2019 through 2021 respectively. In previous rules (83 FR 59881, 84 FR 63032), we used the MIPS payment year 2019 mean final score to estimate a performance threshold of 74.01 points for year 6 of the program. Our data have been updated to reflect completed targeted reviews since the time we made this estimate, and the mean final score for the 2019 MIPS payment year is now 74.65 points (see Table 69). This value would be an increase of almost exactly 15 points from the MIPS payment year 2023 performance threshold of 60 points, which is identical to the

increases of the previous 3 years and consistent with our intention to continue the gradual and incremental approach that has been utilized in prior years. After reviewing the available final score data, we proposed at § 414.1405(b)(9) to use the MIPS payment year 2019 as the prior period and the rounded mean final score of 75 points as the year 6 performance threshold. When we establish the performance threshold for future MIPS payment years in future rulemaking, we will reassess using the mean final score for MIPS payment year 2019 as mean final scores for subsequent years become available.

We solicited comments on these proposals, as well as the alternative methodology of the median that we considered but did not propose. Additionally, we solicited comments on calculating the performance threshold using an alternative year's final scores that we considered but did not propose.

We received public comments on establishing the performance threshold. The following is a summary of the comments we received and our responses.

Comment: One commenter requested that CMS not roll back or reduce the performance threshold from its current value with the transition to MVPs in future years. The commenter believes that the extended phase in of the performance threshold under traditional MIPS was not necessary and had the unintended consequence of clinicians not taking MIPS as seriously as they should have. The commenter also stated that any phase-in does not advance the goals of transitioning to value-based care.

Response: In future years of the program we will evaluate the data available to us and select a performance threshold in accordance with the requirements of the statute. The gradual and incremental increase in the performance threshold gave clinicians time to anticipate the transition to the statutorily mandated methodology for the performance threshold beginning in year six. The CY 2022 performance period/2024 MIPS payment year is the first year of the program where CMS does not have additional flexibilities and must set the performance threshold at the mean or median of a prior year's final scores, thus ending the performance threshold transition period. While we agree with the commenter that further phase in of the performance threshold is not needed, it is possible the performance threshold numerical value for a future year could be lower than the numerical value for the CY 2022 performance period/2024

MIPS payment year, depending on the final score data available.

Comment: One commenter believes that data from the CY 2019 performance period/2021 MIPS payment year is a better basis for creating performance thresholds than the CY 2017 performance period/2019 MIPS payment year. The commenter believes that the entire structure of the program as far as scoring was very different in 2017 and that 2019 offers a more accurate picture compared to 2017.

Response: We understand that the program has undergone modifications since the CY 2017 performance period/2019 MIPS payment year. However, we have previously stated our intent to use a gradual and incremental approach to raising the performance threshold. For reference, the mean and median final scores for CY 2019 performance period/2021 MIPS payment year are 85.61 and 92.30 respectively and would represent an increase in the performance threshold of 25.61 or 32.3 points. We raised the performance threshold 12 points from CY 2017 performance period/2019 MIPS payment year to CY 2018 performance period/2020 MIPS payment year and raised the performance threshold 15 points in each subsequent year. We believe that raising the performance threshold 15 points in CY 2022 performance period/2024 MIPS payment year is consistent with our gradual and incremental approach. We recognize that clinicians are facing ongoing difficulties due to the PHE, and we believe that choosing the lowest performance threshold value available to us would gradually increase the performance threshold while minimizing disruption to clinicians during this emergency.

Comment: Several commenters supported setting the performance threshold at 75 and using the mean from a prior performance period. Some commenters stated the 15-point increase aligns with the gradual increase over the last 4 years. One commenter stated it was an attainable goal. A few commenters stated this meant having a larger budget neutral pool to redistribute funds, but one commenter requested more information about impact to their specialty. One commenter supported that it was the lowest of the possible options.

Response: We thank the commenters for their support for setting the performance threshold for the CY 2022 performance period/2024 MIPS payment year at 75 points, for noting that the 15-point increase is the same magnitude as the change in prior years, and for noting that the performance threshold selected was the lowest of the

possible options. Overall information on prior year's final scores can be found in the corresponding Quality Payment Program Experience Report and specialty specific information can be found in the Public Use File in the QPP resource library (<https://qpp.cms.gov/resources/resource-library>).

Comment: A few commenters expressed concern with the proposed performance threshold, specifically for small practices. A few commenters requested setting a separate performance threshold for small practices at a value such as 60, or setting the performance threshold for other practices higher at 85 points.

Response: We appreciate this feedback from commenters. However, as we previously discussed, the statute requires us to set the performance threshold at the mean or median of a prior period's final scores, and we do not have the statutory authority to establish a separate performance threshold for small practices. We also note that CMS does not have the authority to waive the statutory requirements for setting the performance threshold using our extreme and uncontrollable circumstances policies or section 1135 of the Act. We encourage the commenters to look at our estimates of how our proposed policies will affect the payment adjustments, broken down by practice size, for the MIPS 2024 payment year in our regulatory impact analysis (see section VI.F.18.e of this final rule). As shown in the impact analysis, we project the discrepancy in payment adjustments between large and small practices to shrink as a cumulative result of our policies, including raising the performance threshold.

Comment: Many commenters opposed the proposed performance threshold and recommended that CMS lower the performance threshold. Most of these commenters requested that CMS explore ways to use its authority to adjust the performance threshold beginning with the CY 2022 performance period/2024 MIPS payment year. Commenters specifically requested that CMS consider emergency authorities under the PHE such as the section 1135 waiver authority or its Extreme and Uncontrollable Circumstances policy. Commenters noted the stress of the continuing pandemic on practices; that the proposed performance threshold of 75 points represents a significant increase from the 30 points in 2019 or 45 points for 2020. A few commenters acknowledged that CMS has chosen the lowest value possible (75 points), but the commenters believe that positive

payment adjustments will become more difficult to obtain, especially as the COVID-19 pandemic continues. One commenter expressed concern that clinicians may become frustrated and lose motivation to engage with the MIPS program. Another commenter stated that the steep increases in the performance threshold assumes that practices will not only perform, as well as they did before COVID-19 but that they will be able to perform better than before. Some commenters stated that CMS should establish a transitional policy that recognizes the impact of the COVID-19 PHE. One commenter appreciated the flexibilities that CMS has put in place during the pandemic and urges CMS not to flip a switch in 2022 as if the past 3 years have been business as usual. A few commenters suggested lower performance threshold levels, including 60, 50 and 45. One commenter requested that CMS delay the increase to the performance threshold until the implementation of MVPs.

Response: We understand the commenters concern about the stress the PHE is putting on practices. However, we do not have the authority to set the performance threshold for MIPS payment year 2024 at a value other than the mean or median of the final scores with respect to a prior period, as required by section 1848(q)(6)(D)(i) of the Act. We agree that positive payment adjustments could be more difficult to obtain with a higher performance threshold and are actively working to keep clinicians engaged with the introduction of MVPs which provide a streamlined way for clinicians to participate in the program with a set of measures that are relevant to their practice. We understand that the performance threshold of 75 represents a steep increase from the pre-pandemic performance threshold of 45 points, which was applicable for the CY 2019 performance period/2021 MIPS payment year. For the past 4 years we have finalized increases of 15 points. We increased the performance threshold from 15 to 30 between the CY 2018 and 2019 performance periods/2020 and 2021 MIPS payment years, from 30 to 45 between the CY 2019 and 2020 performance periods/2021 and 2022 MIPS payment years, and from 45 to 60 between the CY 2020 and 2021 performance periods/2022 and 2023 MIPS payment years. We acknowledge the commenter's concern that this increase assumes that clinicians will not only perform, as well as they did before COVID-19 but that they will be able to perform better than before. We note that the proposed increase of 15 points is the

same as the increase in the previous 3 years and was based on a gradual and incremental approach to setting the performance threshold. As discussed previously, we are statutorily required to set the performance threshold for the 2024 MIPS payment year at the mean or median of the final scores with respect to a prior period, and we do not have the flexibility to choose other values. We appreciate the commenter's suggestion to adopt a transitional policy for the performance threshold due to the PHE but reiterate that we do not have the flexibility to do so due to the statutory requirements discussed previously. We also note that CMS does not have the authority to waive the statutory requirements for setting the performance threshold under section 1135 of the Act.

Comment: A few commenters opposed the proposed performance threshold for specialty related or practice related reasons. A few commenters were specifically concerned about groups or specialties that can only be measured on two performance categories. One commenter expressed their opinion that setting the performance threshold at the mean or median of prior final scores of all MIPS eligible clinicians in a prior period was an unfair standard for their specialty because they are limited in their ability to report under the Promoting Interoperability performance category. They stated this limitation gives them fewer opportunities to amass points. Another commenter stated that their group was unable to report Promoting Interoperability performance category measures and would be reweighted in a manner that would increase their cost category weight. A different commenter stated that they have a limited number of quality measures that they can report. As a result, they stated that for groups such as theirs that have limited measures and a high-weighted quality category, CMS now requires 100 percent quality to meet the performance threshold or otherwise they would receive a negative MIPS payment adjustment.

One commenter expressed concern that CRNAs cannot report 6 of the measures in the MIPS Anesthesia Measure set because they do not provide relevant services. The commenter suggested CMS should address how specialties such as anesthesia can meet the performance threshold, perhaps through the use of CAHPS data or by allowing them to report additional Improvement Activities.

Response: We understand that different specialties sometimes face challenges with not being able to report

measures and activities for every performance category. We agree that the final scores of these clinicians may be based on fewer categories than they would be for a clinician reporting all 4 performance categories. However, we remind clinicians that even if their final score is based on fewer than 4 performance categories they still have the ability to score anywhere from 0 to 100 points for their final score, just as a clinician reporting all 4 performance categories would. In this way, we do not believe that a performance threshold of 75 points is disadvantageous to clinicians reporting fewer than 4 performance categories. As stated below, we also encourage clinicians that do not have enough quality measures relevant to their scope of practice to work with their specialty societies to provide recommendations during the specialty measure set solicitation process and to consider reporting a relevant MVP when one becomes available.

We note, for the commenter who stated that not being able to report Promoting Interoperability would cause their group to be reweighted in a manner that would increase their cost category weight, that the cost category weight would only increase if a group was reweighted for the Promoting Interoperability and Quality performance categories. If a group is reweighted for the Promoting Interoperability performance category only, the cost category weight remains at 30 percent. We believe the commenter who stated that they have a limited number of quality measures that they can report is referring to the possibility that if the weight of other performance categories is redistributed to the quality category, a clinician may need to achieve a high score in quality in order to exceed the proposed performance threshold of 75 points. We understand that some clinicians may not have 6 measures in the Quality performance category that are relevant to their practice. To address this, we have our eligible measure applicability policy within the quality performance category to reduce the denominator of required measures for the MIPS CQM and Medicare Part B claims collection types, in the event that a clinician has less than 6 applicable measures to report. In this way, clinicians can be scored on the quality measures that are relevant to their scope of practice. For more information on the eligible measure applicability policy please see the CY 2017 through CY 2019 PFS final rules (81 FR 77290 through 77291, 82 FR 53750 through 53732).

For the commenter's concerns on the specialty measures available, we solicit stakeholder recommendations for new specialty measure sets and revisions to existing specialty sets on an annual basis. We urge stakeholders to work with their specialty societies to provide recommendations during the specialty measure set solicitation process (for more information please see the QPP resource library at <http://www.qpp.cms.gov>). We are also developing MIPS Value Pathways (MVPs) to provide clinicians with a simplified method to report measures that are relevant to their practice and we encourage them to report an MVP when one that is relevant to their scope of practice is available. We thank the commenter for their suggestion to expand the use of CAHPS or to allow clinicians to report additional improvement activities if they cannot report 6 quality measures.

Comment: Many commenters expressed concern that the proposal to increase the performance threshold to 75 points would increase the number of clinicians receiving a negative payment adjustment and decrease the number of clinicians with positive or neutral adjustments. Many commenters also stated their concern that the increase in the performance threshold comes with several proposed policies to remove bonuses and floors for quality measures and proposals to change quality data completeness which may lower the MIPS final score. A few commenters requested that CMS reconsider the reporting and scoring policies, delay the scoring policies, or gradually phase in the scoring changes, especially if CMS finalized the proposed performance threshold. One commenter specifically requested continuing current scoring for an additional year. A few commenters noted the difficulty of achieving the performance threshold now compared to a few years ago because of the scoring changes. A few commenters noted the cost of participating in MIPS versus the potential incentive. One commenter cited a study on the cost to participate in MIPS and expressed concern that clinicians would still get negative MIPS payment adjustment after these costs due to a premature increase in the performance threshold following 3 years of flexibilities due to the COVID-19 PHE.

Response: We acknowledge the commenters concerns regarding the increased burden on clinicians due to the COVID-19 PHE and agree that the statutory formula for determining the performance threshold beginning with the 2024 MIPS payment year could lead to additional clinicians receiving a

negative payment adjustment. The MIPS is a budget neutral program and is designed in the statute to balance the positive payment adjustments of clinicians who score above the performance threshold against the negative payment adjustments of clinicians whose scores are below the performance threshold. We encourage the commenter to look at our estimates of how our proposed policies will affect the payment adjustments for the MIPS 2024 payment year in our regulatory impact analysis (see section VI.F.18.e of this final rule). In light of the continuing burden of the PHE we are making changes to some scoring flexibility proposals including postponing the removal of the 3-point scoring floor on quality measures and keeping the data completeness threshold at 70 percent (see section IV.A.3.e.(1)(c)(iii)(B) of this final rule). We are also introducing some new flexibilities including a 7-point floor for scoring new measures in their first year and a 5-point floor in their second year (see section IV.A.3.e.(1)(c)(iii)(B) of this final rule).

Comment: A few commenters discussed refinements for the performance threshold methodology. One commenter suggested CMS determine what the mean or median of "raw" or "achievement" final performance scores would be and use that figure to set the 2022 threshold. The commenter stated that CMS only uses the base quality measure score, absent any bonus points, to determine improvement scoring in the Quality category. Therefore, the commenter stated that method could be used in setting the performance threshold as well. Another commenter recommended that CMS evaluate balancing the reported data from 2019, 2020, and 2021 to control for self-selection bias since the commenter believed MIPS reporting has been fundamentally voluntary for these performance periods. One commenter asked what the agency's intent is with respect to performance thresholds and quality benchmark data going forward given that CY 2022 performance period/2024 MIPS payment year benchmarks will be based on CY 2022 performance period data while CY 2024 performance period/2026 MIPS payment year benchmarks appear to revert to performance period 2017 data. The commenter noted the performance threshold is based on CY 2017 performance period data while benchmarks are proposed to be based on CY 2022 performance period data.

Response: We appreciate the commenter's suggestion to use a "raw" or "achievement" score to set the performance threshold; we interpret the

suggestion of “raw” or “achievement” scores to mean removing any performance category bonuses, final score bonuses or improvement scoring. We note section 1848(q)(6)(D)(i) of the Act requires us to set the performance threshold using composite performance scores, which we refer to as the final score as defined under § 414.1305 (81 FR 77319 through 77320). We do not believe that the statute allows us to use “raw” or “achievement” scores when setting the performance threshold. We thank the commenter for the suggestion of balancing the scores from 2019, 2020, and 2021 but reiterate that the statute requires us to choose the mean or median from a prior period and does not allow us to balance scores from multiple years.

We refer the commenter to section IV.A.3.e(1)(c)(ii) of this final rule, where we are not finalizing our proposal to use performance period benchmarks and instead we will continue to use historic quality benchmarks for the CY 2022 performance period/2024 MIPS payment year will be based on CY 2020 performance period data. In regards to the comment on using 2017 data for purposes of the CY 2024 performance period/2026 MIPS payment year benchmarks, we note that we have not yet made any proposals on quality benchmarks for the CY 2024 performance period/2026 MIPS payment year.

Comment: One commenter supported the larger size of positive payment adjustments that a higher performance threshold would cause due to a greater quantity of money being redistributed through BN, but requested more information on the impact to specialties and practices. The commenter stated that this information will give societies a stronger argument for their membership as to why clinicians should continue to participate in MIPS.

Response: We encourage the commenter to read our projections of the impact of the Quality Payment Program Finalized policies on payment adjustments for MIPS payment year 2024 in our Regulatory Impact Analysis (see section VI.F.18.e of this final rule). We also note that CMS publishes a Quality Payment Program Experience Report and Public Use File at <https://qpp.cms.gov/resources/resource-library>. A detailed breakdown of a prior year’s scores can be found in the QPP Experience Report and specialty specific information can be found in the Public Use File.

After consideration of public comments, we are finalizing our proposal at § 414.1405(g) that for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b). We are also finalizing our proposal at § 414.1405(b)(9) to use the MIPS payment year 2019 as the prior period and the rounded mean final score of 75 points as the year 6 performance threshold.

(3) Additional Performance Threshold for Exceptional Performance

Section 1848(q)(6)(D)(ii) of the Act requires the Secretary to compute, for each year of the MIPS (beginning with the 2019 MIPS payment year and ending with the 2024 MIPS payment year), an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors for exceptional performance under section 1848(q)(6)(C) of the Act. For each such year, the Secretary shall apply either of the following methods for computing the additional performance threshold: (1) The threshold shall be the score that is equal to the 25th percentile of the range of possible final scores above the

performance threshold determined under section 1848(q)(6)(D)(i) of the Act; or (2) the threshold shall be the score that is equal to the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to the prior period described in section 1848(q)(6)(D)(i) of the Act. Under section 1848(q)(6)(C) of the Act, a MIPS eligible clinician with a final score at or above the additional performance threshold will receive an additional MIPS payment adjustment factor and may share in the \$500 million of funding available for the year under section 1848(q)(6)(F)(iv) of the Act. We note that under section 1848(q)(6)(F)(iv) of the Act, funding is available for additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act only through the 2024 MIPS payment year, which is the sixth year of the MIPS program.

In the CY 2020 PFS final rule (84 FR 63037 through 63040), we used the special rule under section 1848(q)(6)(D)(iii) of the Act to set the additional performance threshold at 85 points for the 2022 and 2023 MIPS payment years. We note that the special rule under section 1848(q)(6)(D)(iii) of the Act applies only to the initial 5 years of MIPS, so we cannot use that rule to establish the additional performance threshold for the 2024 MIPS payment year. As noted above, under section 1848(q)(6)(D)(ii) of the Act, we may set the additional performance threshold at either: (1) The 25th percentile of the range of possible final scores above the performance threshold, or (2) the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to the prior period described in section 1848(q)(6)(D)(i) of the Act.

TABLE 70: Possible Values for the 2024 Payment Year Additional Performance Threshold

	2019 MIPS Payment Year Mean	2019 MIPS Payment Year Median	2020 MIPS Payment Year Mean	2020 MIPS Payment Year Median	2021 MIPS Payment Year Mean	2021 MIPS Payment Year Median
25 th Percentile of Possible Scores	81.26	92.51	90.26	100	89.51	94.01
25 th Percentile of Actual Scores	88.94	94.84	98.33	100.00	91.83	94.70

In the CY 2022 PFS proposed rule (86 FR 39453), for illustrative purposes, we referenced the possible additional performance thresholds shown in Table 70. Note that mean or median refers to

the methodology for calculation of the performance threshold. As can be seen in Table 70, the potential values for the additional performance threshold range from a low of 81.26 to a high of 100.

However, to remain consistent with our gradual and incremental approach, we proposed to use the mean as our methodology for setting the performance threshold during the next 3 years and

we proposed to use the final score data from MIPS payment year 2019. We are finalizing these proposals in section IV.A.3.f.2 of this final rule. The selection of the mean for the methodology and final score data from the 2019 MIPS payment year leaves us with the options in the first column of Table 70 for where we can set the additional performance threshold.

With a performance threshold of 75 points for the 2024 MIPS payment year based on final scores for the 2019 MIPS payment year, the calculation methods in section 1848(q)(6)(D)(ii) of the Act give us two possible options for where we can set the additional performance threshold for MIPS payment year 2024. The first calculation method (described in section 1848(q)(6)(D)(ii)(I) of the Act), using the range of possible final scores above the proposed performance threshold for the 2024 MIPS payment year, yields a value of 81.26 points (the 25th percentile of the range of 75.01 to 100). The calculation is as follows: $75.01 + [(100 - 75.01) * 0.25] = 81.26$. The second calculation method (described in section 1848(q)(6)(D)(ii)(II) of the Act), the 25th percentile of the actual final scores for the 2019 MIPS payment year at or above the proposed performance threshold for the 2024 MIPS payment year, yields a value of 88.94. For the second calculation method, we will apply the 25th percentile calculation of $(n+1)p/100$ to the 2019 MIPS payment year final score data that are at or above 75.

We considered using each of these methods, but we do not believe that it would be appropriate to lower the additional performance threshold to 81.26 points from its present value of 85 points. Maintaining or increasing the additional performance threshold will serve as a greater incentive to clinicians to continue to improve their performance on the MIPS measures and activities and to achieve exceptional performance. We believe that an additional performance threshold of 88.94 points rounded to 89 points is appropriate. This is an increase of 4 points from the prior year, which we believe is a gradual increase. Therefore, using the second calculation method described above, we proposed at § 414.1405(d)(7) to set the additional performance threshold for the 2024 MIPS payment year at 89 points.

We solicited comments on these proposals, as well as the alternative additional performance thresholds listed that we considered but did not propose.

We received public comments on the additional performance threshold for exceptional performance. The following

is a summary of the comments we received and our responses.

Comment: A few commenters expressed concern about the exceptional performance funding under section 1848(q)(6)(F)(iv) of the Act ending after the CY 2022 performance period/2024 MIPS payment year. One commenter believes that eliminating this funding is contradictory to the mission of the Quality Payment Program as it provides an additional incentive for improving performance. A few commenters expressed concerns about the cost of participating in MIPS and that the majority of the MIPS adjustment has been funded from the exceptional performance funding under section 1848(q)(6)(F)(iv) of the Act rather than from negative payment adjustments. Some commenters requested that CMS work with Congress to extend the funding.

Response: We acknowledge the commenters' concern about the exceptional performance funding under section 1848(q)(6)(F)(iv) of the Act ending after the CY 2022 performance period/2024 MIPS payment year. We acknowledge that in previous years the additional performance threshold has funded a large portion of positive MIPS payment adjustments. However, we point the commenter to our Regulatory Impact Analysis (see section VI.F.18.e of this final rule) where we estimate that positive MIPS payment adjustments funded by BN will be much higher than in previous years.

Comment: A few commenters suggested that CMS should consider using the section 1135 waiver authority it has under the PHE or its Extreme and Uncontrollable Circumstances policy to waive the statutory requirement to set the additional performance threshold at either: (1) The 25th percentile of the range of possible final scores above the performance threshold, or (2) the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to the prior period described in section 1848(q)(6)(D)(i) of the Act, and instead keep the additional performance threshold at 85 points in 2022.

Response: We note that CMS does not have the authority to waive the statutory requirements for setting the additional performance threshold using our extreme and uncontrollable circumstances policies or section 1135 of the Act.

Comment: One commenter acknowledged the two statutory options CMS presented for the additional performance threshold (81.26 and 88.94), but urged CMS to use PHE

authorities to maintain the additional performance threshold at 85 points instead of 89 points. The commenter stated that it gives clinicians a final opportunity to qualify for this funding and takes into account the unusual operational and clinical circumstances present during the COVID-19 pandemic.

Response: We agree with the commenter that there have been unusual operational and clinical circumstances for clinicians during the COVID-19 pandemic. However, we are not aware of any PHE authorities available to CMS that would allow us to set the additional performance threshold for the 2024 MIPS payment year at any value other than those resulting from the calculation methods described in section 1848(q)(6)(D)(ii) of the Act.

Comment: A few commenters supported the additional performance threshold. One commenter stated that the increase to the additional performance threshold increases the difficulty but still makes the additional positive payment adjustment an attainable goal.

Response: We thank the commenters for their support.

Comment: A few commenters supported a lower additional performance threshold. Some commenters requested that CMS select the option of 81 points rather than the proposed 89 points to account for loss of score potential due to removal of bonus points in the quality performance category and the increased weight of the cost performance category. One commenter noted that CMS has the latitude to select 81 points as it meets the 25th percentile of possible scores and believes that the lower additional performance threshold will incentivize a greater number of clinicians. The commenter also noted that choosing a lower additional performance threshold will allow CMS to both reward top performers in MIPS and incentivize more of them by setting reasonable thresholds to reward them for their performance. Other commenters requested keeping the additional performance threshold at 85 points.

Response: We established the additional performance threshold at 85 points for the 2022 and 2023 MIPS payment years in the CY 2020 PFS final rule (84 FR 63037 through 63040). We do not believe that it is appropriate to set the additional performance threshold at a lower value (81 points) than it was set at for the CY 2020 performance period/2022 MIPS payment year nor do we have the authority to keep the additional

performance threshold at 85 points as was requested by the commenter. We believe that 89 points is an appropriate value to incentivize the highest performing clinicians, given that the threshold has been 85 points for the past 2 years.

After consideration of public comments, we are finalizing the proposal at § 414.1405(d)(7) to set the additional performance threshold for the 2024 MIPS payment year at 89 points.

(4) Example of Adjustment Factors

Figure A provides an illustrative example of how various final scores will be converted to a MIPS payment adjustment factor and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on our finalized policies for the 2024 MIPS payment year. In Figure A, the performance threshold is set at 75 points. The applicable percentage is 9 percent for the 2024 MIPS payment

year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 9 percent for the 2024 MIPS payment year) and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the performance threshold of 75 points for the 2024 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive the lowest negative applicable percentage (negative 9 percent for the 2024 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the

scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent. If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent.

Only those MIPS eligible clinicians with a final score equal to 75 points (which is the finalized performance threshold) will receive a neutral MIPS payment adjustment. Because the performance threshold is 75 points, we anticipate that more clinicians will receive a positive adjustment than a negative adjustment and that the scaling factor will be less than 1 and the MIPS payment adjustment factor for each MIPS eligible clinician with a final score of 100 points will be less than 9 percent.

BILLING CODE 4120-01-P

Figure A: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold and Additional Performance Threshold for the 2024 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure BN, but cannot be higher than 3.0. MIPS eligible clinicians with a final score of at least 89 points will also receive an additional adjustment factor for exceptional performance. The additional adjustment factor starts at 0.5 percent, cannot exceed 10 percent, and is also multiplied by a scaling factor that is greater than zero and less than or equal to 1. MIPS eligible clinicians at or above the additional performance threshold will receive the amount of the adjustment factor plus the additional adjustment factor. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 71 illustrates the changes in payment adjustment based on the final policies from the CY 2021 PFS final rule

(85 FR 84923 through 84925) for the 2023 MIPS payment year and the final policies for the 2024 MIPS payment

year, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

TABLE 71: Illustration of Point System and Associated Adjustments Comparison between the Finalized 2023 MIPS Payment Year and the 2024 MIPS Payment Year

2023 MIPS Payment Year		2024 MIPS Payment Year	
Final Score Points	MIPS Adjustment	Final Score Points	MIPS Adjustment
0.0-15.0	Negative 9%	0.0-18.75	Negative 9%
15.01-59.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
60.0	0% adjustment	75.0	0% adjustment
60.01-84.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 60.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	75.01-88.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality
85.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 60.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 85.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance	89.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 89.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance

(5) Final Score Hierarchy Used in Payment Adjustment Calculation

In the CY 2021 PFS final rule (85 FR 84917 through 84919), we modified the final score hierarchy that applies when more than one final score is associated

with a TIN/NPI, as displayed in Table 72. Beginning with the CY 2021 performance period/2023 MIPS payment year, if a TIN/NPI has a virtual group final score associated with it, we use the virtual group final score to determine the MIPS payment

adjustment. If a TIN/NPI does not have a virtual group final score associated with it, we use the highest available final score associated with the TIN/NPI to determine the MIPS payment adjustment.

TABLE 72: Hierarchy for Final Score When More than One Final Score Is Associated with a TIN/NPI

Scenario	Final Score Used to Determine Payment Adjustments
TIN/NPI has a virtual group final score, an APM Entity final score, an APP final score, a group final score, and/or an individual final score.	Virtual group final score.
TIN/NPI has an APM Entity final score, an APP final score, a group final score, and/or an individual final score, but is not in a virtual group.	The highest of the available final scores.

In the CY 2022 PFS proposed rule (86 FR 39457), we proposed policies applicable to subgroups, including a definition of a subgroup at § 414.1305 as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, subgroup identifier, and each eligible clinician's NPI. Each clinician in a subgroup would be identifiable by a unique TIN/NPI combination just as in any MIPS group or APM Entity. In

addition, a clinician, group, subgroup, or APM Entity could choose more than one MIPS reporting option for a performance period. A clinician, group, subgroup, or APM Entity could choose to report through MVPs, traditional MIPS, and/or the APP (assuming they are eligible for each of these reporting options) for a performance period. As a result, there could be more than one final score for a clinician, group, subgroup, or APM Entity for a

performance period from MVPs, traditional MIPS, and/or the APP. Therefore, we proposed to update the scoring hierarchy to include subgroups and to specify that the scoring hierarchy would apply with respect to any available final score that is associated with a TIN/NPI from MVPs, traditional MIPS, and/or the APP. The proposed updated scoring hierarchy can be seen in Table 73. We solicited comments on this proposal.

TABLE 73: Proposed Hierarchy for Final Score When More than One Final Score Is Associated with a TIN/NPI

Scenario	Final Score Used to Determine Payment Adjustments
TIN/NPI has a virtual group final score, an APM Entity final score, a group final score, a subgroup final score, and/or an individual final score, from MVPs, traditional MIPS, and/or the APP.	Virtual group final score.
TIN/NPI has an APM Entity final score, a group final score, a subgroup final score, and/or an individual final score, from MVPs, traditional MIPS, and/or the APP. The TIN/NPI is not in a virtual group.	The highest of the available final scores.

BILLING CODE 4120-01-C

We received public comments on the proposed updated scoring hierarchy. The following is a summary of the comments we received and our responses.

Comment: A few commenters requested clarification on the scoring hierarchy. One commenter expressed concerns with the modified hierarchy, citing the complexity of adding subgroups to MIPS and concerns about allowing ACO clinicians to report outside the ACO. The commenter recommended that to reduce complexity, ACO performance should be evaluated at the ACO level for MIPS evaluations. Another commenter noted confusion about how payment adjustments would be calculated and applied for clinicians reporting an MVP as part of a subgroup.

Response: We acknowledge the commenters concern about the complexity of the scoring hierarchy for ACO reporters. However, we disagree with the recommendation that ACOs only be evaluated at the ACO level. CMS is introducing subgroups to collect data at a more granular level that will be more useful for beneficiaries to use to make informed healthcare decisions. Having data at the subgroup level will allow beneficiaries to evaluate performance data, especially performance data about specialists, that is more closely related to the actual clinicians the beneficiaries may see for their medical care. We also note that subgroup scores will not be rolled up to

the ACO level. If a TIN reports as a subgroup, the subgroup score would only be applicable to the NPIs in the subgroup.

Comment: A few commenters supported the proposed scoring hierarchy. Commenters appreciated CMS' intent to select the highest final score achieved for a TIN/NPI across the QPP pathways for individual, group subgroup or APM entity.

Response: We thank the commenter for their support.

Comment: One commenter asked CMS to confirm that a MIPS eligible clinician that participates in MVPs via multiple subgroups would receive the highest final score that can be attributed to their TIN/NPI combination from any reporting option (traditional MIPS, APP reporting, or any MVP subgroup reporting) and participation option (as an individual, group, subgroup, or APM Entity (with the exception of virtual groups)).

Response: The commenter is correct that, with the exception of virtual groups, a MIPS eligible clinician will receive the highest final score that can be attributed to their TIN/NPI combination from the listed reporting options (traditional MIPS, APP, or MVPs) and participation options (individual, group, subgroup, or APM entity).

After consideration of public comments, we are finalizing the proposed updated scoring hierarchy as proposed.

g. Review and Correction of MIPS Final Score

(1) Feedback and Information To Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are at a minimum required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories.

On July 1, 2018, we provided the first performance feedback for the Quality Payment Program. The second performance feedback was provided on July 1, 2019. In the CY 2021 PFS proposed rule (85 FR 50321), we noted that we aim to provide performance feedback on or around July 1 of each year, but due to the PHE and COVID-19, we estimated that we would provide performance feedback for the performance period in 2019 in late July

or early August of 2020. The third performance feedback (for the CY 2019 performance period) was provided on August 5, 2020. In the proposed rule, we noted that similar to the CY 2019 performance period, due to the PHE for COVID-19, we may provide performance feedback for the CY 2020 performance period after July 1, 2021. Although we aim to provide performance feedback on or around July 1 of each year, it is possible that the release date could be later than July 1 depending on the circumstances. We provided performance feedback for the CY 2020 performance period on August 2 and September 27, 2021. We direct readers to *qpp.cms.gov* for more information.

h. Third Party Intermediaries

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID-19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947) for our previously established policies regarding third party intermediaries.

As discussed in the CY 2022 PFS proposed rule (86 FR 39458), we proposed to make several changes: (1) Reorganization and consolidation of § 414.1400 generally; (2) new third party intermediaries general requirements; (3) new requirements specific to both QCDRs and qualified registries; (4) new requirements specific to only QCDRs; and (5) remedial action and termination of third parties.

(1) Reorganization and Consolidation of § 414.1400 Generally

We recognize that many of our policies for third party intermediaries are similar or verbatim, and yet in prior rules, we have described them separately. To minimize the lengthiness and burden of reading our policies, we proposed to consolidate our regulatory text under § 414.1400. To be clear, our proposed updates would not change previously finalized requirements for third party intermediaries, but would bring more clarity and simplicity to the regulatory text. These changes are discussed by topic in more detail below. We also note that in several places at § 414.1400 the regulation text was only updated to reflect both the applicable MIPS performance period/MIPS payment year.

(a) Reorganization for Requirements Related to MIPS Performance Categories That Must Be Supported by Third Party Intermediaries

We previously established in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), further revised in the Quality Payment Program provisions in the CY 2019 and CY 2020 PFS final rules ((83 FR 60088 and 84 FR 63049 through 63052, respectively), and further clarified our requirements for QCDRs, qualified registries, and health IT vendors with regards to submitting data for the purposes of the MIPS program in the Quality Payment Program provisions in the CY 2021 PFS final rule. Our current policy, codified at § 414.1400(a)(2), states that, beginning with the CY 2021 performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories, and Health IT vendors must be able to submit data for at least one of the following MIPS performance categories: Except as provided under paragraph (a)(2)(ii), QCDRs, qualified registries, and health IT vendors must be able to submit data for all of the following MIPS performance categories:

- Quality, except:
 - ++ The CAHPS for MIPS survey; and
 - ++ For qualified registries and Health IT vendors, QCDR measures;
- Improvement activities; and
- Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or (c)(2)(i)(C)(1) through (7) or (c)(2)(i)(C)(9)).
- ++ Health IT vendors that do not support MIPS Value Pathways must be able to submit data for at least one of the MIPS performance categories described in paragraphs (a)(2)(i)(A) through (C) of this section.
- ++ Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or § 414.1380(c)(2)(i)(C)(9)).

In an effort to simplify, we proposed reorganizing the existing language at § 414.1400(a)(2). Specifically, we proposed providing updates to separately identify and provide clarity

to data submission requirements since data requirements vary based on third party intermediary type and to provide clarification to exceptions to Promoting Interoperability for virtual groups and subgroups. We proposed the following updates:

- To revise and redesignate existing paragraph at § 414.1400(a)(2) through (a)(2)(i) to proposed paragraphs § 414.1400(b)(1)(i) and (c)(1) through (c)(1)(i) to state the following:
 - To state at proposed § 414.1400(b)(1)(i), beginning with the CY 2021 performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories:
 - Quality, except:
 - ++ The CAHPS for MIPS survey; and
 - ++ For qualified registries, QCDR measures.
 - Improvement activities; and
 - Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:
 - ++ The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4)(i) through (iii) or (c)(2)(i)(C)(1) through (7) or (c)(2)(i)(C)(9)).
 - To state at proposed § 414.1400(c)(1), beginning with the CY 2021 performance period/2023 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:
 - To state at proposed § 414.1400(c)(1)(i) through (c)(1)(i)(B), health IT vendors that support MVPs must be able to submit data for all of the MIPS performance categories:
 - Quality, except:
 - ++ The CAHPS for MIPS survey; and
 - ++ QCDR measures;
 - Improvement activities; and
 - To revise and redesignate existing paragraph at § 414.1400(a)(2)(iii) to proposed paragraph § 414.1400(c)(1)(i)(C) state, Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:
 - ++ The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4)(i) through (iii) or (c)(2)(i)(C)(1) through (7) or (c)(2)(i)(C)(9)).
 - To revise and redesignate existing paragraph at § 414.1400(a)(2)(ii) to proposed paragraph § 414.1400(c)(1)(ii) to state, health IT vendors that do not support MVPs must be able to submit data for at least one of the MIPS

performance categories described in paragraphs (c)(1)(i) through (iii) of this section.

- We proposed to create a new requirement at § 414.1400(c)(1)(iii) for health IT vendors to support MVPs. For more information on this proposal, please refer to section “proposed new requirement for third party intermediaries to support MVPs and the APP” at section IV.A.3.h.(2)(b)(i) of this final rule.

- To move the current Health IT vendor requirements from paragraphs §§ 414.1400(a)(2)(ii) through (iii) and (d) to a new paragraph applicable to Health IT vendor requirements at § 414.1400(c). This will separately identify and provide clarity to data submission requirements specific to Health IT vendors.

- To move the current CMS-approved survey vendor requirements from paragraphs (a)(3) and (e) to a new paragraph applicable to CMS-approved survey vendor requirements at § 414.1400(d). We proposed to the redesignate paragraph (a)(3) current requirements to paragraph (d)(1) CMS-approved survey vendors may submit data on the CAHPS for MIPS survey for the MIPS quality performance category. For the current requirements at paragraph (e), we proposed to move up those requirements to paragraph (d)(2).

- To redesignate paragraph (a)(4) as paragraph (a)(2).

- To redesignate paragraph (a)(5) as paragraph (a)(3).

We solicited public comments on our proposals.

We did not receive public comments on these proposals, and therefore, we are finalizing them as proposed.

(b) Reorganization for Requirements Related QCDR and Qualified Registries Self-Nomination

We proposed to consolidate and redesignate the existing language at § 414.1400(b)(1) and (c)(1) to proposed § 414.1400(b)(2) to reference both QCDR and qualified registries. We proposed this consolidation to provide clarity and alignment with the aforementioned proposals and consolidate the duplicative criteria of QCDRs and qualified registries. As discussed below, we also proposed to consolidate and redesignate the performance feedback requirements previously at existing § 414.1400(b)(1) and (c)(1) to § 414.1400(b)(3)(iii). We proposed to state at § 414.1400(b)(2), Self-nomination. For the CY 2018 and 2019 performance periods/2020 and 2021 MIPS payment years, entities seeking to qualify as a QCDR or qualified registry must self-nominate September 1 until

November 1 of the CY preceding the applicable performance period. For the CY 2020 performance period/2022 MIPS payment year and future years, entities seeking to qualify as a QCDR or qualified registry must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking to qualify as a QCDR or qualified registry for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review process. For the CY 2019 performance period/2021 MIPS payment year and future years, existing QCDRs and qualified registries that are in good standing may attest that certain aspects of their previous year’s approved self-nomination have not changed and will be used for the applicable performance period.

We also proposed removing the last two sentences of existing § 414.1400(b)(1), which are duplicative with existing § 414.1400(b)(3)(iii). We proposed consolidating this language with existing paragraph (b)(3)(iii). We solicited public comments on our proposals.

The following is a summary of the comments we received and our responses.

Comment: One commenter suggested that we refine the QCDR option under MIPS to streamline the self-nomination process, and to provide better incentives for organizations, including medical associations, to continue to invest in their QCDRs and develop new, meaningful measures for specialists to use for MIPS reporting and other clinical and research purposes.

Response: We thank the commenter for their suggestion. We may consider it for future rulemaking.

Comment: One commenter expressed support for the updates that CMS has made to the QCDR and qualified registry self-nomination process, including the development of the measure submission portal at *QualityPaymentProgram.cms.gov*.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing these policies as proposed.

(c) Reorganization for Requirements Related to QCDR and Qualified Registries Conditions for Approval

We refer readers to existing § 414.1400(b)(2) for QCDR conditions for approval and existing § 414.1400(c)(2) for qualified registries

conditions for approval. In this final rule, we proposed the following in order to better organize, consolidate the duplicative criteria of QCDRs and qualified registries, and refer to both “QCDR and qualified registry” instead of one or the other:

- We proposed to redesignate existing paragraph (b)(2) to proposed paragraph (b)(3) and to revise the paragraph heading as, *Conditions for approval*.

- We also proposed to update the reference to both QCDR and qualified registry in proposed paragraph (b)(3).

- We proposed to revise to include both QCDR and qualified registry and redesignate existing paragraph (b)(2)(i) to proposed paragraph (b)(3)(i).

- We proposed to revise and redesignate existing paragraph (b)(2)(ii) to paragraph (b)(3)(ii). We also proposed to extend our policy for collaboration. For more information on this proposal, please refer to section “collaboration of entities to become a QCDR and proposal to extend policy for collaboration of entities to become a qualified registry” at section IV.A.3.h.(3)(a)(ii) of this final rule.

- As discussed above, we proposed to consolidate and redesignate the performance feedback requirements previously at existing § 414.1400(b)(1) and (c)(1) to § 414.1400(b)(3)(iii). Furthermore, to consolidate similar performance feedback requirements, we also proposed to revise and redesignate existing paragraph (b)(2)(iii) to paragraph (b)(3)(iii) to state, beginning with the CY 2021 performance period/2023 MIPS payment year, require the QCDR or qualified registry must to provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR or qualified registry. Exceptions to this requirement may occur if the QCDR or qualified registry submits notification to CMS within the reporting period promptly within the month of realization of the impending deficiency and provides sufficient rationale as to why they do not believe they would be able to meet this requirement (for example, if the QCDR does not receive the data from their clinician until the end of the performance period).

- We proposed to consolidate and redesignate paragraphs (b)(2)(iv) and (c)(2)(iii) in their entirety, into a new paragraph (b)(3)(v), and to correct a typographical error in which the word “MIPS” was omitted in the first sentence.

- We proposed to consolidate and redesignate paragraphs (b)(2)(v) and (c)(3)(iv), in their entirety, into a new paragraph (b)(3)(vi).

We solicited public comments on our proposals.

We did not receive public comments on these proposals, and therefore, we are finalizing them as proposed.

(d) Reorganization for Requirements Related to QCDR Measures

(i) Reorganization for Requirements Related to QCDR Measures for the Quality Performance Category

We refer readers to existing language at § 414.1400(b)(3) for QCDR measures for the quality performance category. We currently define “QCDR measure” at existing § 414.1400(b)(3). We recognize that the QCDR measure definition is referred to throughout our policies and that it is not specific to § 414.1400(b)(3) or third party intermediaries. Therefore, to provide further clarity and to better align with the current policy, we proposed moving the QCDR measure definition to the definitions section at § 414.1305. We also proposed the following revisions to better organize regulation text at § 414.1400(b)(4) and to update cross-references to correspond to the new section numbers as reflected in this final rule:

- We proposed to redesignate paragraphs (b)(3)(i), (b)(3)(i)(A), and (b)(3)(i)(B) to definitions at § 414.1305.

- We proposed to revise and redesignate existing paragraph (b)(3)(ii) to proposed paragraph (b)(4)(i) to state, for the CY 2018 performance period/2020 MIPS payment year and future years, at the time of self-nomination an entity seeking to become a QCDR must submit the following information for any measure it intends to submit for the payment year:

- ++ For MIPS quality measures, the entity must submit specifications including the MIPS measure IDs and specialty-specific measure sets, as applicable.

- + For QCDR measures, the entity must submit for CMS-approval measure specifications including: Name/title of measures, NQF number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS approval of any QCDR measure specifications, the entity must publicly post the measure specifications for that QCDR measure (including the CMS-assigned QCDR measure ID) and provide

CMS with a link to where this information is posted.

- We also proposed adding a header to state, “QCDR measure self-nomination requirements”. We believe adding a heading will help readers clearly distinguish QCDR measure self-nomination requirements.

- We proposed moving existing paragraph (b)(3)(iii) in its entirety to proposed paragraph (b)(4)(ii) and adding a header to state, “QCDR measure submission requirements”. We believe adding a heading will help readers clearly distinguish QCDR measure submission requirements.

- We proposed moving existing paragraphs (b)(3)(v) through (v)(C)(1) in its entirety, to proposed paragraphs (b)(4)(iii) through (b)(4)(iii)(A)(3).

- We proposed to revise and redesignate existing paragraph at (b)(3)(v)(C)(2) to paragraph (b)(4)(iii)(A)(3)(i) to state, to be included in an MVP for the CY 2022 performance period/2024 MIPS payment year and future years, a QCDR measure must be fully tested.

- We proposed moving existing paragraph (b)(3)(vii) in its entirety, to paragraph (b)(4)(iv).

(ii) Reorganization for Requirements Related to QCDR Measure Approval Criteria

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375) and the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63059), where we finalized existing § 414.1400(b)(3)(v).

At § 414.1400, we proposed to reorganize and make minor updates to the existing requirements at paragraph (b)(3)(v) to proposed paragraph (b)(4)(iii). We proposed to reorganize the existing requirements so that QCDR measure approval at paragraph (b)(3)(v) is discussed before QCDR measure considerations at paragraph (b)(3)(iv). Therefore, we proposed the following revisions:

- To revise and redesignate existing paragraph (b)(3)(v) “QCDR measure requirement for approval include” to proposed paragraph (b)(4)(iii) and add a heading to state, “QCDR measure approval criteria”. We believe adding a heading will help readers clearly distinguish QCDR measure approval criteria. We also proposed to include the following updates:

- ++ Move existing paragraph (b)(3)(v) to proposed revised paragraph (b)(4)(iii)(A) to state, QCDR measure requirements for approval are.

- ++ Move existing paragraph (b)(3)(v)(A) in its entirety to proposed paragraph (b)(4)(iii)(A)(1).

- ++ Move existing paragraph (b)(3)(v)(B) in its entirety to proposed paragraph (b)(4)(iii)(A)(2).

- ++ Revise existing paragraphs (b)(3)(v)(C) and (b)(3)(v)(C)(1) to proposed paragraph (b)(4)(iii)(A)(3) to state, beginning with the CY 2022 performance period/2024 MIPS payment year, all QCDR measures must meet face validity. To be approved for the CY 2023 performance period/2025 MIPS payment year, all QCDR measures must be must meet face validity for the initial MIPS payment year for which it is approved. For subsequent years after being initially approved, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.

- ++ Move existing paragraph (b)(3)(v)(C)(2) in its entirety to proposed paragraph (b)(4)(iii)(A)(3)(i).

- ++ Move existing paragraph (b)(3)(v)(D) in its entirety to proposed paragraph (b)(4)(iii)(A)(4).

- ++ Move existing paragraph (b)(3)(v)(E) in its entirety to proposed paragraph (b)(4)(iii)(A)(5).

We solicited public comment on our proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the measure requirement for face validity testing of measures and stated it should be extended for future years. One commenter noted particular concern for the face validity testing requirement, as the testing process is arduous and funding, staff, and other resources have been significantly reduced due to the PHE for COVID–19. A few commenters suggested that CMS delay the deadline for full QCDR measure testing to 2023 or later due to the impact of COVID–19 on providers and registries. Another commenter suggested that CMS limit the face validity testing requirement, stating that because the COVID–19 extreme and uncontrollable circumstances exception decreased the number of groups reporting to MIPS through QCDRs, the face validity testing requirement should be limited to the first 2 years for which measures are approved or until 2 years after the end of the COVID PHE. Several commenters expressed concerns with QCDR measure testing requirements and pointed to the significant burden of these requirements. One commenter expressed the belief that a barrier to use of QCDR measures is the requirement that they be fully tested, which is

extremely burdensome for QCDR measure owners. Another commenter asked for clarification as to what constitutes acceptable measure testing. Commenters requested that CMS develop a transparent and consistent process for evaluating QCDR testing approaches and results. Commenters noted that failure to ease the QCDR requirements may result in interested parties opting to not participate in the QCDR program.

Response: We note that we did not propose to substantively modify the measure requirement for face validity and testing in the proposed rule, such as to delay these requirements. The existing requirement (85 FR 84939) at § 414.1400(b)(3)(v)(C)(1) states that, for a QCDR measure to be approved for the CY 2022 performance period/2024 MIPS payment year it must meet face validity. To be approved for the CY 2023 performance period/2025 MIPS payment year and for each subsequent year, a QCDR measure must meet face validity for the initial MIPS payment year for which it is approved. Separately, paragraph (b)(3)(v)(C) provides that, beginning with the CY 2022 performance period/2024 MIPS payment year, a QCDR measure must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination. In addition, paragraph (b)(3)(v)(C)(1) requires that, for each subsequent year, for which a QCDR measure is approved, it must be fully tested. We intended our proposed reorganization of these standards at paragraph (b)(4)(B)(iii)(3) to track these existing requirements.

In regards to what constitutes acceptable testing and the burden associated with, and possible delay of such testing, we refer readers to our discussion of this and related issues in past rules (85 FR 27594 through 27595; 85 FR 84940; 85 FR 84926; 85 FR 84936; 84 FR 63066; 84 FR 63065 through 63067; 83 FR 59901 through 59902; 82 FR 53805 through 53806) and guidance documents, including the current CMS Measures Management System Blueprint for additional guidance in measure testing at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>.

Although we did not address any changes to the QCDR measure testing requirement at § 414.1400(b)(3)(v)(C)(1) in the CY 2022 PFS proposed rule, based on public comments received on our proposals, we are considering proposing in next year's rulemaking to further delay this requirement for traditional MIPS until the CY 2024

performance period/2026 MIPS payment year, instead of the CY 2023 performance period/2025 MIPS payment year as previously finalized. We clarify that this delay would not modify the existing requirement at paragraph (b)(3)(v)(C)(2), to be included in an MIPS Value Pathway for the 2024 MIPS payment year and future years, a QCDR measure must be fully tested.

Comment: One commenter suggested that CMS provide more meaningful credit/incentivization for measure testing participation given the difficulty to motivate practices to engage in measure testing. The commenter suggested an improvement activity credit for measure testing given the difficulty to motivate practices to engage in measure testing.

Response: We thank the commenter for their suggestion. We may consider it for future rulemaking. We encourage the commenter to visit the 2021 Improvement Activities Inventory for additional guidance on improvement activities that focus on QCDR participation at <https://qpp-cm-prodcontent.s3.amazonaws.com/uploads/1189/2021%20Improvement%20Activities%20List.zip>.

After consideration of public comments, we are finalizing these policies as proposed.

(iii) Reorganization for Requirements Related to QCDR Measure Considerations for Approval

We refer readers to the Quality Payment Program provisions in the CY 2019 PFS final rule (84 FR 63198 through 63199), where we finalized existing § 414.1400(b)(3)(iv) "QCDR measure considerations for approval." We proposed to reorganize and make minor updates to the language at existing paragraph (b)(3)(iv) to paragraph (b)(4)(iii)(B). We proposed to reorganize the existing requirements so that QCDR measure approval at paragraph (b)(3)(v) is discussed before QCDR measure considerations at paragraph (b)(3)(iv).

We also proposed to redesignate existing paragraph (b)(3)(vi) to paragraph (b)(4)(iii)(C). Specifically, we proposed the following revisions:

- To revise and redesignate existing paragraph (b)(3)(iv) "QCDR measure considerations for approval include" to paragraph (b)(4)(iii)(B) "QCDR measure considerations for approval include, but are not limited to".
- Move existing paragraphs (b)(3)(iv)(A) in its entirety to paragraph (b)(4)(iii)(B)(1).
- Move existing paragraph (b)(3)(iv)(B) in its entirety to paragraph (b)(4)(iii)(B)(2).

- Move existing paragraph (b)(3)(iv)(C) in its entirety to paragraph (b)(4)(iii)(B)(3).

- Move existing paragraph (b)(3)(iv)(D) in its entirety to paragraph (b)(4)(iii)(B)(4).

- Move existing paragraph (b)(3)(iv)(E) in its entirety to paragraph (b)(4)(iii)(B)(5).

- Move existing paragraph (b)(3)(iv)(F) in its entirety to paragraph (b)(4)(iii)(B)(6).

- Move existing paragraph (b)(3)(iv)(G) in its entirety to paragraph (b)(4)(iii)(B)(7).

- Revise and consolidate existing paragraph (b)(3)(iv)(G)(1) to paragraph (b)(4)(iii)(B)(7)(i) to state that QCDR link their QCDR measures as feasible to at least one cost measure, improvement activity, or an MVP at the time of self-nomination.

- Revise and redesignate existing paragraph (b)(3)(iv)(G)(2) to paragraph (b)(4)(iii)(B)(7)(ii) to state that in cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, CMS would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements and considerations.

- Move existing paragraph (b)(3)(iv)(H) in its entirety to paragraph (b)(4)(iii)(B)(8).

- Move existing paragraph (b)(3)(iv)(I) in its entirety to paragraph (b)(4)(iii)(B)(9).

- Revise and redesignate existing paragraph (b)(3)(iv)(J) to paragraph (b)(4)(iii)(B)(10) to state beginning with the CY 2020 performance period/2022 MIPS payment year, CMS places greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not, may not continue to be approved.

- Move existing paragraph (b)(3)(iv)(J)(1) in its entirety to paragraph (b)(4)(iii)(B)(10)(i).

- Move existing paragraph (b)(3)(iv)(J)(2) to paragraph reserve (b)(4)(iii)(B)(10)(ii).

- Move existing paragraph (b)(3)(vi) in its entirety to paragraph (b)(4)(iii)(C).

We solicited public comments on our proposals. The following is a summary of the comments we received and our responses.

Comment: The commenter suggested that we assess whether the limit on the number of QCDR measures available (30 measures) should be revised.

Response: We thank the commenter for their suggestion. We may consider it for future rulemaking.

After consideration of public comments, we are finalizing these policies as proposed.

(iv) QCDR Measure Rejection Criteria

We refer readers to the existing requirements at § 414.1400(b)(3)(vii). We proposed reorganizing existing requirements at paragraph (b)(3)(vii) to proposed paragraph (b)(4)(iv). Therefore, we proposed the following revisions:

- To revise and redesignate existing paragraph (b)(3)(vii) “QCDR measure rejection criteria” to paragraph (b)(4)(iv) and add a heading to state, *QCDR measure rejection criteria*. We believe adding a heading will help readers clearly distinguish measure rejection criteria.

We also proposed to include the following updates:

- To move existing paragraph (b)(3)(vii) to proposed paragraph (b)(4)(iv) to state, *QCDR measure rejection criteria*. Beginning with the CY 2020 performance period/2022 MIPS payment year, QCDR measure rejection considerations include, but are not limited to.

- Move existing paragraphs (b)(3)(vii)(A) through (L) in their entirety to (b)(4)(iv)(A) through (L).

We solicited public comments on our proposals.

We did not receive public comments on these proposals, and therefore, we are finalizing them as proposed.

(e) Reorganization for Requirements Related to Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548), CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), and the CY 2021 PFS final rule (85 FR 84930 through 84937) for previously finalized policies for remedial action and termination of third party intermediaries. With the proposed updates being made at § 414.1400, we proposed to redesignate the following sections:

- We proposed to redesignate current paragraph (f) as paragraph (e) and to update cross-references to correspond to the new section numbers as reflected in this final rule.

- We also proposed to redesignate current paragraph (g) as paragraph (f) and to update cross-references to correspond to the new section numbers as reflected in this final rule.

We solicited public comments on these proposals.

We did not receive public comments on these proposals, and therefore, we are finalizing them as proposed.

(2) Third Party Intermediaries General Requirements

We refer readers to previously established § 414.1400(a) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), and as further revised in the CY 2019 PFS final rule (83 FR 60088), CY 2020 PFS final rule (84 FR 63049 through 63052), CY 2021 PFS final rule (85 FR 84926 through 84947) for our established policy regarding third party intermediaries general requirements.

In the CY 2022 PFS proposed rule, we proposed two changes for third party intermediaries: (1) Third party intermediary submissions for APM Entities; and (2) MIPS performance categories that must be supported by third party intermediaries. We also solicited comment on third party intermediaries that derive data from CEHRT. These proposals and the request for comments are discussed in more detail below.

(a) Third Party Intermediary Submissions for APM Entities

As finalized in the Quality Payment Program provisions in the CY 2021 PFS final rule (85 FR 84895), APM Entities now have the option of reporting to MIPS on behalf of the MIPS eligible clinicians participating in their APM Entity. They have the option of reporting to traditional MIPS or via the APP (85 FR 84859). APM Entities have historically used Third Party Intermediaries for submitting their quality measures to their APMs, rather than to MIPS, however, these third party intermediaries now have the opportunity to submit these data for purposes of MIPS.

In the CY 2022 PFS proposed rule, we proposed to add APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS.

We note that the Promoting Interoperability performance category is scored for APM Entities based on data submitted by the participant MIPS eligible clinicians and groups as described at § 414.1317(b)(1), and therefore, would not be required to be submitted by the third party intermediary on behalf of the APM Entity.

We solicited comments on this proposal.

We did not receive public comments on this proposal, and therefore, we are finalizing it as proposed.

(b) MIPS Performance Categories That Must Be Supported by Third Party Intermediaries

We refer readers to previously established § 414.1400(a)(2) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), and as further revised in the CY 2019 PFS final rule (83 FR 60088), CY 2020 PFS final rule (84 FR 63049 through 63052), CY 2021 PFS final rule (85 FR 84926 through 84947) for our established policy regarding the types of MIPS data that third party intermediaries may submit.

In the CY 2022 PFS proposed rule, we proposed new requirements in alignment with our proposals in sections IV.A.3.b.(2)(c), IV.A.3.b.(4)(e) and IV.A.3.b.(3)(e) of this final rule to adopt MVPs and subgroups.

(i) New Requirement for Third Party Intermediaries To Support MVPs and the APP

As described in the Quality Payment Program provisions finalized in the CY 2021 PFS final rule (85 FR 84849), MVPs should include measures and activities from the quality, cost, improvement activities, and Promoting Interoperability performance categories. As described in section IV.A.3.b.(2)(c)(i) of this final rule, we discussed our proposals related to furthering our transition to MIPS Value Pathways (MVPs). As MVPs are implemented, proposed beginning with the CY 2023 performance period/2025 MIPS payment year, we also proposed the methods in which an MVP participant may report on an MVP or the APP. Since QCDRs, qualified registries, and health IT vendors are required under existing § 414.1400(a)(1) to submit data for quality, improvement activities, and promoting interoperability, we believe they would have the experience needed to support MVP and APP reporting.

Therefore, we proposed to create a new requirement at § 414.1400(b)(1)(ii) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP. Additionally, we proposed to create a new requirement at paragraph § 414.1400(c)(1)(iii) to state that beginning with the CY 2023 performance period/2025 MIPS payment year, Health IT vendors must support MVPs that are applicable to the

MVP participants on whose behalf they submit MIPS data. Health IT vendors may also support the APP.

Based off historical participation, we are aware that some third party intermediaries (QCDRs and qualified registries) support a single specialty or subspecialty, while others support multiple specialties. Therefore, we believe that it is not appropriate to expect that all third party intermediaries are able to support all MVPs that are implemented in the program. Rather, the third party intermediaries should identify and support MVPs that are relevant to the clinicians and groups they support. We do not believe that CMS-approved survey vendors will be able to support MVP reporting, because they are historically limited, in that they only support the CAHPS for MIPS Survey Measure.

As discussed in section IV.A.3.b.(2)(c) of this final rule, MVPs will start with the CY 2023 performance period/2025 MIPS payment year. We believe this delay in implementation will allow third party intermediaries sufficient time for programming and system preparation for MVP reporting success. We solicited comments on our proposals.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported third party intermediaries only reporting on the MVPs that reflect their participant needs but suggested third-party intermediaries be able to choose which MVPs they wish to support. The commenter expressed concerns about MVPs being arbitrarily assigned to third-party intermediaries. One commenter noted that supporting an entire MVP is very different from supporting the inclusion of specific QCDR measures in an MVP and could carry much more burden for the registry and sought clarification of whether CMS will assign specific MVPs to a QCDR or qualified registry.

Response: We thank the commenter for their support. At this time, CMS does not intend on assigning specific MVPs to a third party intermediary. As described in the CY 2022 PFS proposed rule (86 FR 39462), we proposed at § 414.1400(b)(1)(ii) and (c)(1)(iii) that QCDRs, qualified registries, and Health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. We refer readers to Appendix 3 of this final rule, where discuss the MVPs being finalized beginning with the CY 2023 performance period/CY 2025 MIPS payment year, around the clinical topics of stroke care, heart disease,

rheumatology, chronic conditions, emergency medicine, anesthesia, and lower extremity joint repair. QCDRs, qualified registries, and Health IT vendors that support MVP participants, who work in the aforementioned clinical areas will be required to support these MVPs, as applicable. Furthermore, we expect that QCDRs, qualified registries, and Health IT vendors who support MVPs would support all measures and activities, across the quality, PI, and improvement activities performance category that are included in the MVP (cost measures and population health measures are calculated by CMS and do not require data submission by a third party intermediary or a clinician). The expectation that the QCDR and qualified registry support measures and activities across all three performance categories is not new, as these third party intermediaries are currently required to do so. We believe allowing QCDRs to only support specific QCDR measures in an MVP creates undue burden on the MVP Participant who would need to find other means to complete MVP reporting requirements; this may deter clinicians from utilizing a third party intermediary. For the time being, CMS does not intend on assigning specific MVPs to a third party intermediary. It is required for QCDRs, qualified registries, and Health IT vendors to identify (CMS approved) MVPs that are relevant to the clinicians they support and report on those.

Comment: One commenter supported third party intermediaries supporting MVPs but requested clarification on whether a QCDR would be responsible for validating an MVP participant's performance on population health measures and/or providing "enhanced" performance feedback, including performance data comparing the performance of similar clinicians who report on the same MVP.

Response: Third party intermediaries will not be expected to validate the performance on the current population health measures, since they are administrative claims-based and do not require external data submission. The responsibility of identifying the population health measure that should be calculated will fall to the MVP participant to determine at the time of MVP registration. CMS calculates these measures based on administrative claims data. In the CY 2022 PFS proposed rule (86 FR 39383), we describe our proposal to include comparative performance feedback within the annual performance feedback that CMS currently provides under traditional MIPS. While CMS intends to

provide this enhanced feedback through our existing performance feedback processes, QCDRs and qualified registries will still be required to provide clinicians they support with performance feedback as described at § 414.1400(b)(iii) and (c)(ii), regardless of whether the clinician chooses to report through traditional MIPS or an MVP.

Comment: One commenter suggested that CMS mandate that EHR vendors support the quality measures in MVPs, otherwise clinicians would be forced to join multiple registries with the cost exceeding the maximum penalty.

Response: To clarify, health IT vendors (such as EHRs), QCDRs, and qualified registries who support MVPs are required to support all measures and activities available in the MVP across the quality, improvement activities, and promoting interoperability performance categories. The exceptions to this requirement are the cost measures and population health measures, which do not require external data submission to be calculated. In addition, some MVPs may include QCDR measures, which are only reportable through a QCDR. In instances where QCDR measures are included in an MVP, a qualified registry or health IT vendor will be expected to support all other quality measures included within the MVP.

Comment: One commenter expressed concerns about layering another auditing requirement on QCDRs and qualified registries when MVPs are finalized as this could increase regulatory complexity and result in added work and burden without making a significant difference in the quality of data submitted. One commenter requested that CMS add more detail in future requirements for third-party intermediaries to validate data submitted by MVP participants.

Response: We disagree with the commenter. QCDRs and qualified registries are currently required to conduct data validation on data that is submitted to CMS for purposes of the MIPS program, to ensure the data is true, accurate, and complete. We refer readers to section IV.A.3.h.(3)(a)(iii) of this final rule for a detailed discussion of those requirements. The current data validation requirements that are utilized in traditional MIPS, will also be applied to MVP submissions. MVPs are considered a method of reporting under MIPS, but is nonetheless a part of the program. Therefore, the requirements and expectations remain the same—QCDRs and qualified registries must conduct data validation on data submitted to CMS for purposes of the MIPS program, regardless of whether

the data is submitted under traditional MIPS or through an MVP. In the future, data validation information that is covered in the Self-Nomination Toolkit for QCDRs and qualified registries available at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1083/2021%20Self-Nomination%20Toolkit%20for%20QCDRs%20and%20Qualified%20Registries.zip> will also include MVPs.

Comment: One commenter requested clarification on whether QCDRs and qualified registries are required or permitted to support the APP, stating that the preamble states this is a requirement while the regulatory text says that QCDRs and qualified registries may support the APP. The commenter opposed a requirement for QCDRs and qualified registries to support the APP.

Response: In the CY 2021 PFS final rule (85 FR 84859), we discussed that APM Entities have the option of reporting to MIPS on behalf of the MIPS eligible clinicians participating in their APM Entity. Additionally, there is an option of reporting to traditional MIPS or via the APP. Furthermore, in the proposed rule (86 FR 39462), we proposed to add APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all. We want to note that QCDRs and qualified registries would not be required to support the APP, but may do so. If QCDRs and qualified registries would like to support the APP, they would need to meet all of the other requirements of being a QCDR or qualified registry reporting to MIPS (with the exception of PI reporting, which has some exceptions) as described above.

After consideration of public comments, we are finalizing these policies as proposed.

(ii) Requirements for All Third Party Intermediaries To Support Subgroup Reporting

As proposed in section IV.A.3.b.(3) of this final rule, subgroup reporting would allow clinicians in multispecialty practices to participate in MIPS more meaningfully. Since subgroups would be implemented concurrently with MVPs, it is important that third party intermediaries have the capability to support subgroup reporting of MVPs. As described above, we believe QCDRs, qualified registries, and health IT vendors would have the capacity to support MVP and APP reporting.

In the CY 2022 PFS proposed rule, we proposed to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. Therefore, we proposed to revise § 414.1400(a)(1) to state that MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup or APM Entity by any of the following third party intermediaries: QCDR; qualified registry; health IT vendor; or CMS-approved survey vendor. We believe it is imperative for all third party intermediaries to be able to support subgroup reporting as we envision that to be the future of the program.

While the CAHPS for MIPS survey vendors cannot support MVPs or the APP, we believe they can support the reporting of the CAHPS for MIPS measure within an MVP and the APP, if a subgroup decides to report on that measure. Due to the limited experience, CAHPS for MIPS survey vendors have in quality reporting, we do not believe it is feasible for them to support MVP reporting since MVP reporting would require experience with reporting across the performance categories and the use of several collection types for quality reporting. However, there may be instances where the CAHPS for MIPS survey measure may be included in an MVP. For example, in the Optimizing Chronic Conditions Management MVP, as described in Appendix 3: MVP Inventory, of this final rule. In such instances, if groups or subgroups would like to report this measure, they should be able to utilize a CAHPS for MIPS survey vendor to do so. We believe it is important that all third party intermediaries support subgroup reporting in order to support meaningful quality reporting. We understand that there may be a level of burden to third party intermediaries that are required in supporting subgroup reporting by requiring them to support another clinician type. However, we believe that requiring third party intermediaries to support subgroup reporting will allow for clinicians to participate in a manner that is more meaningful. We noted in section IV.A.3.b.(4)(f)(ii)(D) of this final rule, subgroups would have to register through the MVP participant registration process. Third party intermediaries would need to be able to track the subgroup identifiers and support the data submission process accordingly.

We solicited comments on our proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed concern regarding the burden for registries to identify and validate subgroup reporting.

Response: To clarify, as discussed in section IV.A.3.b.(4)(f)(ii)(D) of this final rule, subgroups must self-identify and register through a registration process in order to be considered a subgroup. The subgroup would need to register directly through the MVP registration process, that is done separately and not through a third party intermediary. Therefore, we believe there is no burden to registries to identify the subgroups. As MVP participants such as subgroups enroll to use the services of a registry, the subgroup will share with the registry their CMS-assigned identifier and a list of participants within that subgroup. The registry will need to submit the subgroup identifier information with the subgroup's data at the time of submission. We understand there may be concerns in scenarios in which subgroups inadvertently provide an incorrect subgroup identifier to the registry. We will take that into consideration for future rulemaking, as we determine whether there are additional system safeguards, such as a system rejection of an incorrect identifier can be implemented to limit the occurrence of such issues. With regards to data validation, all QCDRs and qualified registries will continue to be held to the data validation requirements that currently exist, regardless of whether a clinician or group decides to participate in MVP reporting or traditional MIPS reporting. While we understand there is a level of burden associated with data validation, we believe the benefit outweighs the burden to ensure that all data submitted to CMS is true, accurate, and complete.

Comment: One commenter suggested that CMS delay its proposal requiring third party intermediaries to support subgroup reporting to allow more time for registries to implement reporting processes. Several commenters expressed concern that subgroup reporting will impose a large increase in burden on registries, particularly with respect to how registries validate NPIs. A few commenters expressed concern that QCDRs may lack the capacity to support subgroup reporting.

Response: We disagree with the need for further delay. We intentionally proposed MVPs and subgroup reporting with a delayed implementation to account for the time that clinicians, third party intermediaries, and healthcare organizations would need to prepare to operationalize MVP and subgroup reporting. We believe the availability of subgroup reporting

should go hand-in-hand with the implementation of MVPs, and therefore, should be jointly available beginning with the CY 2023 performance period/2025 MIPS payment year. The delayed implementation should provide third party intermediaries sufficient time for system and operation preparations for subgroup reporting. In addition, we do not believe that subgroup reporting will impose a large increase in burden to registries. We refer readers to section IV.A.3.b.(3) of this final rule, for further discussion of validation requirements. Subgroups are derived from their affiliated TINs who would have otherwise reported traditional MIPS through a registry.

After consideration of public comments, we are finalizing this policy as proposed.

(c) Request for Comment on Third Party Intermediaries That Derive Data From CEHRT

For third party intermediaries that will be submitting quality measure data on behalf of MIPS eligible clinicians, we believe that EHR systems will be able to provide measure results for a set of providers that are part of a subgroup where required for subgroup reporting. We note that the existing CEHRT definition for eligible clinicians at § 414.1305 includes the 45 CFR 170.315(c)(4) “Clinical quality measures—filter” as an optional element. This criterion requires health IT to be able to filter CQM results at both patient and aggregate levels. Moreover, a Health IT Module must be able to filter by a single proposed data element (for example, provider type) or a combination of any of the data elements). Historically, the “Clinical quality measures—filter” at 45 CFR 170.315(c)(4) (CQM-filter) criterion has been applicable for certified health IT modules supporting quality measurement for participants in certain APMs.

We believe technology certified to this optional criterion could support subgroup reporting via third party intermediaries that derive data from CEHRT by ensuring that an EHR can produce CQM results filtered for a specific group of provider NPIs that are part of a subgroup. These filtered CQM results could then be shared with a third party intermediary, which provides this data for reporting to CMS. However, we also believe health IT developers are offering non-certified functionality that can effectively support reporting of measure results for a subgroup. As a result, we did not propose any changes at this time to the language in the CEHRT definition for eligible clinicians

regarding the “optional” status of technology certified to the CQM-filter criterion.

We are interested in general feedback from stakeholders on the current capabilities of third party intermediaries that derive data from CEHRT to successfully receive and transmit data to CMS for CQMs based on subgroups; capabilities of EHR systems to support subgroup reporting, including reporting facilitated by third party intermediaries, and whether requiring the adoption of technology certified to the CQM-filter criterion would help to support subgroup reporting; and challenges which entities may face in meeting requirements to report on subgroups when deriving data from CEHRT. We solicited feedback on this topic.

Comment: A few commenters responded to CMS’ request for information regarding CEHRT and third party intermediaries. One commenter urged CMS to establish clear expectations and guidelines to ensure data security and to define roles and responsibilities for data validation and data cleaning. Another commenter recommended that CMS consider making the CQM filter criterion mandatory for CEHRT because, otherwise, organizations would likely be required to contract with qualified registries/QCDRs to submit MIPS data. Another commenter disagreed, stating that as a developer of CEHRT that provides CQM functionality, they do not believe that the CQM-filter criterion is necessary.

Response: We thank commenters for the feedback received through this request for information. We may consider this information to inform future rulemaking.

(3) New Requirements for Both Qualified Clinical Data Registries (QCDRs) and Qualified Registries

(a) Background

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID-19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947) for our previously established policies regarding QCDRs and qualified registries.

In the CY 2022 PFS proposed rule, we proposed several changes for both QCDRs and qualified registries: (1) New requirement for approved QCDRs and

qualified registries that have not submitted performance data; (2) collaboration of entities to become a QCDR and qualified registry; and (3) data validation audit and targeted audit requirements. These proposals are discussed in more detail below.

(i) New Requirement for Approved QCDRs and Qualified Registries That Have Not Submitted Performance Data

We require that both QCDRs and qualified registries must have a minimum of 25 participants signed up by the prior performance period at existing § 414.1400(b)(2) and (c)(2). We refer readers to CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID-19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947). We identified a number of QCDRs and qualified registries that have continued to self-nominate to become a third party intermediary for the MIPS program, but have not submitted clinician, group or virtual group data to CMS. As the MIPS program continues to mature, we wish to reduce the number of vendors that self-nominate to become a qualified vendor, but do not actively participate in the MIPS program. We believe that maintaining these vendors who do not actively participate does not provide a benefit to the MIPS program, rather it creates stakeholder confusion by including these vendors in our qualified postings.

We proposed a two-tiered approach to solve this issue. First, we proposed to create a new requirement at § 414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year) through the CY 2020 performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. Exceptions to this requirement may occur if data is received for the CY 2021 performance period/2023 MIPS payment year. Under this scenario, QCDRs and qualified registries would not need to submit a participation plan for CY 2023 of the self-nomination period. If they do not submit data, their participation plan must be submitted as part of self-nomination for CY 2023 and must be accepted by CMS to continue to be an approved QCDR or qualified registry.

Secondly, we proposed to codify a new requirement at paragraph (b)(3)(viii) to state, beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. For example, for the CY 2024 performance period/2026 MIPS payment year, vendors will be required to have submitted performance data for the CY 2021 and 2022 performance periods/2023 and 2024 MIPS payment years. Under this proposal, the participation plan must explain the QCDR's or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor. We note that this proposed participation plan was modeled off of the current requirement for QCDR measure participation at existing § 414.1400(b)(3)(iv)(j)(1) (redesignated to proposed paragraph (b)(4)(iii)(B)(10)(i)). We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters disagreed with the proposal to require a participation plan for approved QCDRs that did not submit data for 2 years preceding the applicable self-nomination period. One commenter stated that the COVID PHE reduced reporting by eligible clinicians to QCDRs.

Response: While we are sympathetic and acknowledge that the impact the PHE may have had on reduced reporting, we note that we are proposing an incremental approach to assess QCDR data reporting. This includes the first proposal which would apply to any QCDR or qualified registry that has not submitted data to CMS since the inception of MIPS (CY 2017). We believe a QCDR should have been able to report data to CMS for years preceding CY 2021. Specifically, we believe a QCDR should have been able to report data to CMS for CY 2019. If a QCDR was new in CY 2020 and did not submit data to CMS, the QCDR still has CY 2021 to report for clinicians which in turn, satisfies this requirement. Furthermore, the proposal provides QCDRs and qualified registries the opportunity to submit participation plans, which could support the decision

to allow a QCDR or qualified registry to continue their MIPS participation. This plan would outline possible reasons for low/no reporting to CMS and the efforts the QCDR plans to take to further encourage their clinicians to submit data to CMS. Some examples include but are not limited to: A reduction in associated fees, improvement of an EHR interface to reduce data extraction burden, expansion of the numbers/types of measures the QCDR chooses to report, etc. As such, this proposal would not immediately remove a QCDR or qualified registry from participating as a third party intermediary. As discussed above, we want to reduce the number of vendors that self-nominate to become a qualified vendor, but do not actively participate in the MIPS program. We believe that maintaining these vendors who do not actively participate does not provide a benefit to the MIPS program. We note that our goal is to decrease the operational burden on CMS and those vendors who do not submit MIPS data to CMS. CMS would decrease its operational burden by not having to go through the vetting process of these entities or monitor program compliance during the year. Additionally, we believe that we can better utilize the resources used for vendors that do not submit MIPS data elsewhere to improve the MIPS program. Furthermore, vendors who choose not to submit MIPS data to CMS are depriving CMS of data that would benefit the MIPS program. Lastly, vendors who do not submit data will decrease their burden in the long-term by not self-nominating year after year.

Comment: One commenter disagreed with the proposal for QCDRs and qualified registries who do not submit data 2 years preceding the applicable self-nomination period to submit a participation plan at the time of self-nomination. The commenter noted that CMS would also require the participation plan to include moving users over to submit their MIPS data through the qualified registry. The commenter expressed concern that this policy would create significant demand on QCDRs specifically, due to the already cumbersome Eligible Measure Applicability (EMA) process required for qualified registries. The commenter currently uses both the qualified registry and QCDR to collect data, however, the commenter only submits the data to CMS through the QCDR.

Response: We disagree with the commenter's interpretation of this policy. The intention of the participation plan requirement is to explain the QCDR's or qualified registry's detailed plans about how the

vendor intends to encourage clinicians to submit MIPS data to CMS through the third party intermediary on behalf of clinicians or group and to explain why they should still be allowed to participate as a qualified vendor. The participation plan will not require moving users over to submit their MIPS data through the qualified registry and that this policy would create significant demand on QCDRs. We note that during the CY 2019 MIPS performance period, the Eligible Measure Applicability (EMA) process was updated to be applicable to collection types (that is, EMA applies to Part B Claims measures and MIPS clinical quality measures (CQMs) but does not apply to electronic clinical quality measures (eCQMs), QCDR measures, or Web Interface) rather than third party intermediaries. As such, EMA does not apply to QCDRs and qualified registries as an entity, rather it could apply to MIPS CQMs that the QCDR or qualified registry is approved to support. We encourage third party intermediaries to participate as a QCDR if they intend to self-nominate their own QCDR measures or use another QCDR's measures (with permission from the QCDR who owns the measure) or as a qualified registry if they plan to support their clients through the reporting of CQMs or eCQMs only.

After consideration of public comments, we are finalizing these policies as proposed.

(ii) Collaboration of Entities To Become a QCDR and Proposal To Extend Policy for Collaboration of Entities To Become a Qualified Registry

(A) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77377), we finalized to allow collaboration of entities to become a QCDR based on our experience with the qualifying entities wishing to become QCDRs for performance periods. We stated that we believed our previously finalized policy supporting entity collaboration should be continued under MIPS. Therefore, we discussed that an entity that may not meet the criteria of a QCDR solely on its own, but could do so in conjunction with another entity and would be eligible for qualification through collaboration with another entity. Additionally, we finalized at § 414.1400(b)(2)(ii), specifically for QCDRs, that if the entity uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the

responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period.

For example, an entity, such as a specialty society, that needs technical support may partner with an outside entity such as a health IT vendor to qualify as a QCDR. While entities, such as QCDRs, Health IT vendors, and qualified registries, can collaborate with external organizations, those entities could only do so to meet requirements to be a QCDR. We did not explicitly create a policy for entities to collaborate to meet the requirements to be a qualified registry.

(B) Proposal To Extend to Qualified Registries

We believe we should extend the previously finalized policy to apply to entities that wish to collaborate to become a qualified registry as well because extending this policy to qualified registries would also help smaller specialty societies that may not have the resources on their own to become a qualified registry. This will allow those societies to be able to partner with other entities to meet the definition of a qualified registry. Therefore, in the CY 2022 PFS proposed rule, we proposed to revise and redesignate existing paragraph (b)(2)(ii) to new paragraph (b)(3)(ii) to state, if the entity seeking to qualify as a QCDR or qualified registry uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period. For example, an entity, such as a specialty society, that needs technical support may partner with an outside entity such as a health IT vendor to qualify as a qualified registry. We solicited comments on this proposal.

We did not receive public comments on this proposal, and therefore, we are finalizing it as proposed.

(iii) Data Validation Audit and Targeted Audit Requirements

(A) Information Required at the Time of Self-Nomination

In the CY 2017 Quality Payment Program final rule (81 FR 77366 through 77367; 81 FR 77383 through 77384) we discussed our expectation for QCDRs and qualified registries to conduct

validation on the data they intend to submit for the MIPS performance period. We also discussed that the full self-nomination process would require the following: A submission of basic information, a description of the process the QCDR and qualified registry will use for completion of a targeted audit of a subset of data prior to submission, the provision of a data validation plan along with the results of the executed data validation plan by May 31 of the year following the performance period. Additionally, in the Quality Payment Program provisions in the CY 2021 PFS final rule (85 FR 84930 through 84937; 85 FR 84944 through 84947) at existing § 414.1400(b)(2)(iv) and (v), and (c)(2)(iii) and (iv), we finalized the data validation audit requirements as condition for approval. While we did finalize the requirements for the data validation audits as condition for approval, we did not codify the requirements for QCDR and qualified registries to submit data validation plan during self-nomination along with the results of the executed data validation plan by May 31 of the year following the performance period.

In order to provide clarification and to better align with the previously finalized policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we proposed to codify the following revisions. As stated in previous policies (81 FR 77366 through 77367; 81 FR 77383 through 77384), QCDRs and qualified registries are required to submit the results of their data validation plan to CMS by May 31 of the year following the performance period. Therefore, we proposed to codify at § 414.1400(b)(3)(v)(G)(1) to state that QCDRs and qualified registries must conduct validation on the data they intend to submit for the applicable MIPS performance period, and provide the results of the executed data validation plan by May 31st of the year following the performance period.

Furthermore, QCDRs and qualified registries are required to submit their data validation plan explaining their process of data validation submission annually during self-nomination, and it must be approved by CMS for before use. To provide further clarity and to better align with the existing policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we also proposed to codify a new requirement at § 414.1400(b)(3)(iv) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and

may not change the plan once approved, without the prior approval of the agency.

As discussed above we proposed to codify at § 414.1400(b)(3)(iv) to provide further clarity to better align with previous policies. Therefore, we proposed to reorganize at § 414.1400(b)(2)(iv) though (viii) to better align with the above changes. We proposed with the following revisions:

- We proposed to revise and redesignate existing paragraph (b)(2)(iv) to paragraph (b)(3)(v) to state, that beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct annual data validation audits in accordance with this paragraph (b)(3)(v).

- We proposed to revise and redesignate existing paragraph (b)(2)(iv)(A) to paragraph (b)(3)(vi)(A) to state that, if a data validation audit under paragraph (b)(3)(v) identifies one or more deficiency or data error, the QCDR or qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

- We proposed to revise and redesignate existing paragraph (b)(2)(v) to paragraph (b)(3)(vi) to state that beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with this paragraph (b)(3)(vi).

- We proposed to revise and redesignate paragraph (b)(2)(vi) to paragraph (b)(3)(vii), to state for the CY 2023 performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the CY 2017 through 2021 performance periods/2019 through 2023 MIPS payment years must submit a participation plan for CMS' approval. This participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

- We proposed to revise and redesignate existing paragraph (b)(2)(vii) to paragraph (b)(4)(viii) to state that beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval.

The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed concerns about the “overly burdensome” nature and significant cost of the CMS data validation audit requirements for third party intermediaries. One commenter expressed concerns with the randomized auditing resulting in an unintended consequence of increasing burden on small and mid-sized group practices because of the low number of participants reporting via the qualified registry as individuals. One commenter stated that the audit requirements are duplicative, unnecessary, and do not enhance data quality and validity because QCDRs already have rigorous internal data and quality standards. A few commenters stated that clinicians and registries were impacted by the COVID-19 pandemic, specifically that dozens of audits were conducted and QCDRs and qualified registries have encountered practices struggling to collect and report data while a majority of their time and effort has been spent on responding to the COVID-19 pandemic.

Response: While we understand that data validation requires a level of effort, time, and cost by the QCDRs and qualified registries, we disagree that this causes undue burden. While we acknowledge and appreciate the efforts and participation of all group practices of varying sizes including small and mid-sized groups, we believe it is important to hold all practices to the same standards for data validation audits to ensure that all data submitted is true, accurate, and complete. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77366 through 77367; 81 FR 77383 through 77384), we expect that QCDRs and qualified registries would conduct validation on the data they intend on submitting for the MIPS performance period and provide the results of the data validation to CMS in the form of a data validation execution report by May 31st of the year following the performance period. As noted in the CY 2017 PFS final rule (81 FR 77366 through 77367), we believe it is necessary to establish a requirement that QCDRs conduct data validation to ensure they are actively monitoring the data they submit to CMS for purposes of a pay-for-performance program. We also believe it is important for QCDRs to validate the data that they intend to submit to us for purposes of the MIPS program to ensure that the data submitted is true, accurate, and complete (85 FR 84936). We disagree

that audit requirements are duplicative, unnecessary, and do not enhance data quality and validity because QCDRs already have rigorous internal data and quality standards. While we appreciate that many QCDRs already have rigorous internal data and quality standards, we are not asking QCDRs to duplicate work. If QCDRs have their own auditing requirements, they can use the same auditing process or combine the efforts to reduce duplication as long as they meet the data validation requirements specified by the regulation at a minimum (81 FR 77366 through 77367; 81 FR 77383 through 77384). For example, if a QCDR already audits 10 percent of their data prior to submission for all performance categories, this would meet the 3 percent portion of the data validation requirement. Additionally, despite our requirements to have validation audits, each year there are still some QCDRs that submit inaccurate data. As payment adjustments increase, this could adversely affect a practice with respect to their payment because these payment calculations were based on inaccurate data submitted to CMS.

Furthermore, while we do acknowledge that the impact of the PHE for COVID-19 may have affected some providers and registries ability to conduct audits due to practices struggling to collect and report data due to majority of their time and effort being spent on responding to the COVID-19 pandemic, as stated above, we believe it is important to enforce the requirements for data validation audits to ensure all data submitted is true, accurate, and complete. We will continue to assess the implications of the PHE for COVID-19 and will consider whether to make any policy changes in future rulemaking.

Comment: One commenter expressed that NCQA data validation alleviates the burden on health plans having to perform their own audit of data received from an HIE and on providers from having to respond to data requests from health plans. This commenter suggested that CMS leverage NCQA processes for data validation.

Response: We thank the commenter for their suggestion. We may consider it for future rulemaking.

After consideration of public comments, we are finalizing these policies as proposed.

(4) New Requirements Specific to QCDRs

(a) Background

We refer readers to § 414.1400(b), the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the

CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID-19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (84937 through 84944) for where we previously finalized standards and criteria for QCDRs, specifically QCDR measure requirements. In this section, we proposed to update policies related to QCDR measure rejections.

(b) QCDR Measures

(i) QCDR Measure Rejections

(A) New QCDR Measure Rejection Criteria

We refer readers to the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63070 through 63073) at § 414.1400(b)(3)(vii) where we have previously adopted QCDR measure rejection criteria. In the CY 2022 PFS proposed rule, we proposed to add two new criteria: (1) QCDR does not have permission to use a QCDR measure; and (2) QCDR not approved or not in good standing. These are discussed in more detail below in this section.

(aa) QCDR Does Not Have Permission To Use a QCDR Measure

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we discussed that beginning with the 2018 performance period and for future program years, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. We noted that the QCDR measure owner (QCDR vendor) would still own and maintain the QCDR measure, but would allow other QCDRs to utilize their measure with proper notification. We intended for this policy to help reduce the number of QCDR measures that are similar in concept or clinical topic, or duplicative of other QCDR measures that are being approved. Additionally, in the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63070 through 63073) at § 414.1400(b)(3)(vii), we finalized the QCDR measure rejection criteria considerations. We noted that these considerations would help to ensure that QCDR measures are meaningful and measurable. Although we finalized the QCDR measure rejection criteria, we did not codify that QCDRs may seek permission from another QCDR to use an existing measure that is owned by another QCDR. In order to provide further clarity to the existing policies (82 FR 53813 through 53814; 84 FR

63070 through 63073), we proposed to codify a new requirement and add a rejection criterion at § 414.1400(b)(4)(iv)(M) to state, a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to add the rejection criterion that “A QCDR does not have permission to use QCDR measure owned by another QCDR for the applicable performance period” because CMS currently allows QCDRs to seek permission from another QCDR to report on an existing measure that is owned by the other QCDR, and because if a QCDR would like to use an existing QCDR measure that is owned by another QCDR, it must obtain permission from the QCDR measure owner that it can use the measure for the performance period and include proof of such permission in its self-nomination application.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing this policy as proposed.

(bb) QCDR Not Approved or Not in Good Standing

Additionally, if a QCDR measure owner is not approved or is not in good standing, any QCDR measures associated with that QCDR would also not be approved. We believe it is important to have an approved QCDR measure owner for all approved QCDR measures. This would ensure that there is active involvement by the QCDR measure owner so that any potential measure issues can be mitigated during the specified MIPS performance period. For example, any mid-year guideline changes or measure questions would need to be immediately clarified to avoid negative impacts to clinicians such as the inability to construct a benchmark due to an error in the measure specifications. Therefore, we proposed to codify another rejection criterion at § 414.1400(b)(4)(iv)(N) to state that, if a QCDR measure owner is not approved during a given self-nomination period, any associated QCDR measures with that QCDR would also not be approved. We solicited comments on this proposal.

We have received inquiries from stakeholders on what can be done in circumstances when an active QCDR wishes to use an inactive QCDR's measure. We are interested in feedback from stakeholders on what should be

done in such circumstances. For example, what should happen if “QCDR A” is using “QCDR B's” measures in a given performance period and “QCDR B” is terminated mid performance period? Alternatively, what if “QCDR A” is using a measure from “QCDR B” and “QCDR B” decides not to self-nominate for the subsequent performance period? While “QCDR A” could partner with “QCDR B” as described at § 414.1400(b)(3)(ii), are there other policy options we should consider to minimize impact to the MIPS eligible clinician who has selected the QCDR measure for reporting?

We solicited comments on the above circumstances. The following is a summary of the comments we received and our responses.

Comment: A few commenters disagreed with the proposal to add a rejection criterion requiring permission to use an inactive QCDR's measures. One commenter stated that there is no evidence that inactive QCDRs are withholding access to these measures. The commenter noted the ability of QCDRs to license measures allows QCDRs to ensure the appropriate use of their measures and incentivizes organizations to invest in developing new and improved measures. The commenter suggested that CMS should continue its policy that allows active or inactive QCDR measure owners to choose to license their measures only to QCDRs that have the experience and expertise to properly implement a measure in a particular specialty. Therefore, there is no reason to change CMS' current policy under which an active QCDR that wishes to use an inactive QCDR's measure can approach the inactive QCDR and the two QCDRs can negotiate an agreement regarding the transfer of ownership if the active QCDR has the appropriate experience and expertise in QCDR measure development. In the event that such agreement cannot be reached between the two parties, the inactive QCDR can decline to license rights to the QCDR measure. One commenter suggested that CMS require that either there be an agreement between the two QCDRs to transfer ownership of the measure or that the initial QCDR should maintain their measures and license it to other QCDRs.

Response: We thank the commenters for their comments and suggestions. We clarify that if a QCDR measure owner is not approved or is not in good standing, any QCDR measures owned or maintained with that QCDR would also not be approved. We disagree that the proposal to add a rejection criterion requiring permission to use an inactive

QCDR's measures is not supported by evidence that inactive QCDRs are withholding access to these measures. We note that there have been instances where active QCDRs have inquired about using QCDR measures of inactive QCDR measure stewards. We also disagree that this policy is not needed. We believe it is imperative that all QCDR measures in the MIPS program have an active QCDR measure steward to provide ongoing maintenance and updates to QCDR measures. For example, recently, a QCDR who shares their measures with several other QCDRs discovered multiples discrepancies, including risk adjustment calculation issues. If they had not been an active QCDR and performing quality assurance on these QCDR measures, this issue would likely not have been discovered and resolved.

We do agree that the ability of QCDRs to license measures allows QCDRs to ensure the appropriate use of their measures and incentivizes organizations to invest in developing new and improved measures. We also agree that active or inactive QCDR measure owners may choose to license their measures only to QCDRs that have the experience and expertise to properly implement a measure in a particular specialty. Furthermore, this process is consistent with what CMS requires for all other measures available for all clinicians to report in the MIPS program (the non-QCDR measures). That is, every measure in the program needs an active measure steward that agrees to support and maintain the measure. A non-active QCDR cannot be compelled to meet this requirement.

In this context, we interpret the commenter's reference to a “policy under which an active QCDR that wishes to use an inactive QCDR's measure can approach the inactive QCDR and the two QCDRs can negotiate an agreement regarding the transfer of ownership”, to apply to our statements regarding QCDR licensing as discussed in the CY 2018 PFS final rule (82 FR 53813). There we noted that, beginning with the 2018 performance period and for future program years, a QCDR vendor may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. While we thank the commenter for the suggestion to require the transfer of ownership of a measure from an inactive QCDR to an active QCDR or that the inactive QCDR should maintain the measure and license it to active QCDRs, we note that such approaches are beyond the scope of our regulations, which in this case is limited to approval and disapproval criteria for QCDRs and

QCDR measures. We are considering building out additional policies to ensure that all QCDR measures that are used/owned are properly maintained throughout the performance period.

After consideration of public comments, we are finalizing this policy as proposed.

(5) Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548), CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), and the CY 2021 PFS final rule (85 FR 84930 through 84937) for previously finalized policies for remedial action and termination of third party intermediaries.

In the Quality Payment Program provisions in the CY 2019 PFS final rule (83 FR 59908 through 59910), we discussed that the threshold for “inaccurate, unusable or otherwise compromised” may be met if the submitted data includes TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies that affect more than 3 percent of the total number of MIPS eligible clinicians or groups for which data was submitted by the third party intermediary. We proposed to update the existing language at § 414.1400(f)(3)(ii) to broadly explain that it is up to CMS’ discretion on whether third party intermediaries’ inaccuracies may lead to possible remedial action or termination. As discussed earlier, we proposed consolidating and redesignating the existing language at § 414.1400(f) as paragraph (e) and § 414.1400(g) as paragraph (f) to provide clarity and alignment with the aforementioned proposals to consolidate the duplicative criteria of QCDRs and qualified registries. Therefore, we proposed to revise and redesignate existing language at § 414.1400(f)(3)(ii) to paragraph (e)(3) to state, contains data inaccuracies affecting the third party intermediary’s total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

We did not receive public comments on this policy, and therefore, we are finalizing it as proposed.

i. Public Reporting on the Compare Tools Hosted by the U.S. Department of Health & Human Services (HHS)

In the CY 2022 PFS proposed rule, we proposed to amend § 414.1395(c) to add a 1-year delay of publicly reporting new improvement activities and Promoting Interoperability measures and attestations reported via MVP. We also proposed a one-time, 1-year delay to subgroup-level public reporting, such that subgroup-level public reporting will begin with CY 2024 performance information available in 2025, and each year thereafter, on the Compare Tools hosted by the U.S. Department of Health and Human Services (HHS), referred to as “compare tool” throughout this final rule, available at <https://www.medicare.gov/care-compare/> and data.medicare.gov, as technically feasible. We proposed to add facility affiliations, beyond the hospital affiliations currently displayed on individual profile pages. Additional facility affiliations would include: Inpatient rehabilitation facilities (IRFs); long-term care hospitals (LTCHs); skilled nursing facilities (SNFs); inpatient psychiatric facilities (IPFs); home health agencies (HHAs); hospices; and dialysis facilities. Finally, we solicited comments on publicly reporting utilization data on clinician and group profile pages (86 FR 39466 through 39469).

For previous discussions on public reporting, we refer readers to the CY 2016 PFS final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), the CY 2020 PFS final rule (84 FR 63080 through 63083), the CY 2021 PFS final rule (85 FR 84947 through 85 FR 84948) and the Care Compare: Doctors and Clinicians Initiative Page at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Compare-DAC>.

(1) MVP and Subgroup Public Reporting

The introduction of MVPs and subgroup reporting provides for new types of performance information that are available for public reporting, provided they meet the established public reporting standards at

§ 414.1395(b). In consideration of our MVP and subgroup performance information public reporting proposals, we wish to remind readers that all submitted MIPS performance information is available for public reporting (81 FR 77395 through 77397). Additionally, we previously finalized at § 414.1395(c) that, for each program year, CMS does not publicly report any first-year measures for the first 2 years, meaning any measure in its first 2 years of use in the quality and cost performance categories. We also note that MIPS performance category and composite final scores for MIPS eligible clinicians participating in MVPs will continue to be publicly reported as required under section 1848(q)(A)(i)(I) of the Act and finalized at § 414.1395(a)(1)(i).

We believe delaying public reporting of certain MVP and subgroup performance information provides a catalyst to encourage clinician participation in MVPs and subgroups while they familiarize themselves with these options. For this reason, we proposed, for individuals, groups, and subgroups reporting via MVP, to add a 1-year delay for publicly reporting new improvement activities and Promoting Interoperability measures and attestations, as technically feasible. This means that new improvement activities and Promoting Interoperability measures and attestations would be available for public reporting at their inception in traditional MIPS, but we would delay public reporting of new improvement activities and Promoting Interoperability measures and attestations by 1 year after inception for those reporting via MVP. We note that improvement activities and Promoting Interoperability measures and attestations that have already been in MIPS for more than 1 year and become newly available as part of an MVP would be available for public reporting in the first year the MVP is in the program. That is, non-first year improvement activities and Promoting Interoperability measures and attestations that are newly part of an MVP would be available for public reporting in the first year the MVP is in the program (86 FR 39466 through 39467). Table 74 further clarifies when this 1-year delay would apply.

TABLE 74: MVP vs Traditional MIPS: Performance Information Delay Amount

New Improvement Activities and Promoting Interoperability measures and attestations	Delay Amount
Reported via traditional MIPS	No delay; CMS publicly reports new improvement activities and Promoting Interoperability measures and attestations at their inception.
Reported via MVP	CMS does not publicly report the new improvement activities and Promoting Interoperability measures and attestations for the first year.

We recognized that under this proposal, we would be further delaying the release of performance information for improvement activities and Promoting Interoperability measures and attestations reported via MVP. Because of this, as a potential incentive, we also considered whether to delay public reporting of quality and cost measure information reported via MVP by 1 additional year, for a total of 3 years. We solicited comments on our proposal to delay public reporting of new improvement activities and Promoting Interoperability measures and attestations reported via MVP by 1 year, as well as any feedback on alternate approaches we should consider spurring clinicians to report performance data on MVPs while making performance data available for patients on the compare tool. We proposed to amend this MVP public reporting policy at § 414.1395(c)(2) to state CMS does not publicly report any MVP data on new improvement activities or Promoting Interoperability measure, objective, or activity included in an MVP for the first year in which it is included in the MVP. We also proposed to amend § 414.1395(c)(1) to state that CMS does not publicly report any data on new quality or cost measure for the first 2 years in which it is in the program, after which CMS evaluates the measure to determine whether it is suitable for public reporting under § 414.1395(b). Currently, § 414.1395(c) refers to these quality and cost measures as “first year measures”. We proposed to change “first year measures” to “new measures” (86 FR 39467).

The introduction of MVPs and subgroup reporting in MIPS provides for new types of performance information that are available for public reporting, provided they meet the public reporting standards. Currently, we display information on profile pages at the individual clinician and group level, since this is the level of information we provide for and at which patients and caregivers search for on the compare tool. To ensure that patients and caregivers have access to subgroup

performance information, we proposed creating a separate workflow from the established ones for individuals and groups, since we only display information at the level at which it was publicly reported (86 FR 39467). That is, we only publicly report individual-level performance information on individual clinician profile pages and group-level performance information on group profile pages. We do not publicly report group-level performance information on individual profile pages or individual-level information on group profile pages, as doing so would not be truly representative of either the group's or individual's own performance, and we do not want to mislead website users. Instead, we would link from the individual or group profile page to the corresponding subgroup performance information. That is, we proposed to create a subgroup public reporting workflow, in which we would indicate with plain language on an individual profile page that the clinician reports performance information as part of a subgroup or on a group profile page that the group has subgroups for purposes of performance information and then link to that subgroup's performance information. Future user testing would determine how to best display and put in plain language subgroup performance information. Subgroup performance information will also be available on <http://data.medicare.gov/>.

Subgroups represent a new type of reporting for MIPS, that is available for clinicians reporting on MVPs or via the APP. For this reason, we also proposed to delay all subgroup-level public reporting for 1 year, including measures, activities and attestations across the quality, cost, improvement activities, and Promoting Interoperability performance categories in order to encourage clinician participation in subgroups without the risk of displaying subgroup performance information as clinicians familiarize themselves with the option of subgroup reporting. This would only be a one-time delay in public reporting of subgroup-level information. That is, we would not

publicly report any CY 2023 subgroup-level measure, attestation, or activity performance information; this information would be available for public reporting beginning with CY 2024 performance period/2026 MIPS payment year. We would publicly report CY 2024 performance period/2026 MIPS payment year subgroup information and for each performance period thereafter if the information meets our established public reporting standards. Since we are moving toward more granular level performance information, we believe delaying subgroup public reporting by 1 year provides an incentive for subgroup participation and experience. As an alternative, we also considered a 1-year public reporting delay of performance information for all new subgroups each performance year, as technically feasible. For example, subgroups that begin in CY 2023 are not eligible for public reporting until CY 2024, subgroups that begin in CY 2024 are not eligible for public reporting until CY 2025, and so on for each subsequent year. Another alternative we considered was to publicly report all subgroup performance information without delay and provide new subgroups the opportunity to opt-out, during the preview period, of having their performance information publicly reported for their first year. Some subgroups may want to have their performance information publicly reported and having an overall 1-year delay may be a disincentive to subgroup participation. We solicited comments on these considerations. We noted that MIPS performance category and composite final scores for MIPS eligible clinicians participating in MVPs will continue to be publicly reported for those participating in subgroups, as required under section 1848(q)(A)(i)(I) of the Act and finalized at § 414.1395(a)(1)(i), and will not be delayed by 1 year for public reporting.

We also solicited comments on additional factors that we should consider as we look to expand the availability of MVP and subgroup data on the compare tools. For example,

should there be a certain threshold of MVPs available, or clinicians participating in MVPs prior to public reporting? For public reporting of subgroups, are there factors we should consider to make this information usable to the patient but reflective of the subgroups characteristics and composition? Should we test an indicator of MVP participation for compare tool profile pages to see if this is useful information for patients making healthcare decisions? We solicited comments on this proposal and additional ways public reporting may encourage MVP participation.

The following is a summary of the comments we received and our responses.

Comments: Several commenters supported the proposal to delay, by 1 year, the public reporting of new improvement activities and Promoting Interoperability measures attestations reported through MVPs. One commenter requested clarification as to why new Promoting Interoperability measures and attestations would be delayed only for MVP participants. While some commenters supported the delay, they recommended extending the delay beyond 1 year. Two commenters stated a concern that delaying public reporting for MVPs and not traditional MIPS may be confusing for patients. One of the commenters recommended adding a note to profile pages explaining why there may not be performance information. The same commenter also recommended that instead of delaying public reporting for MVPs, CMS should allow MVP participants to opt-out of public reporting for their first year. Another commenter recommended beginning public reporting MVP performance information only once MVP reporting becomes mandatory.

Response: We agree with most commenters that a 1-year delay of new improvement activities and Promoting Interoperability measures and attestations is an appropriate way to incentivize participation in MVPs. We also want to clarify that we proposed this 1-year delay as an incentive because new quality and cost measures already have a delay in public reporting for the first 2 years of use for clinicians in traditional MIPS. This delay is for new improvement activities and Promoting Interoperability measures, objectives, and activities in all MVPs whether they are new or existing MVPs. We appreciate the recommendations to extend the delay beyond 1 year, to allow MVP participants to opt-out of public reporting in their first year, and to only publicly report performance information reported via MVPs once MVP reporting

becomes mandatory. We do believe that a 1-year delay is enough time to allow clinicians to familiarize themselves with MVPs as we do not want to further delay valid performance information that consumers can use to make informed healthcare decisions. It is for this same reason that we do not want to have MVP participants opt-out of public reporting or to delay public reporting of performance information reported via MVPs until MVP reporting becomes mandatory. We also want to clarify that performance information available via MVPs is the same as the performance information available in traditional MIPS and that we are required to publicly report performance information submitted by MIPS eligible clinicians. We do not believe that a delay for MVP participants and not traditional MIPS will be confusing to website users. Under traditional MIPS, we delay public reporting of new quality and cost measures by 2 years, and this has not caused any confusion to date. We also clarify that improvement activities and Promoting Interoperability measures and attestations that are already in traditional MIPS will be available for public reporting without any 1-year delay.

After consideration of public comments, we are finalizing this policy as proposed.

Comment: Several commenters supported the one time, 1-year delay of subgroup public reporting, such that subgroup public reporting will begin with the availability of CY 2024 performance period/2026 MIPS payment year performance information. One commenter recommended extending the delay to 3 years.

Response: We agree that a one-time 1-year delay is enough time for participants to familiarize themselves with this subgroup-level reporting. We also clarify that CY 2023 performance period/2025 MIPS payment year subgroup-level measure, attestation, or activity performance information across all MIPS performance categories would not be available for public reporting. We would begin publicly reporting subgroup-level performance information with CY 2024 performance period/2026 MIPS payment year, which would be available for public reporting in CY 2025. After consideration of the public comments, we are finalizing this policy as proposed.

After consideration of all of the public comments received on MVP and subgroup public reporting, we are finalizing all policies in this section as proposed. We did not receive any public comments on the proposal to create a

separate subgroup workflow, and therefore, are finalizing it as proposed.

(2) Publicly Reporting APM Performance Pathway Information

In the CY 2021 Quality Payment Program final rule, we finalized to establish an APM performance pathway (APP) beginning in the 2021 MIPS performance year. This is an optional MIPS reporting and scoring pathway for MIPS eligible clinicians who participate in MIPS APMs. We also note that since APP participants are MIPS eligible clinicians, their MIPS performance category and composite final scores will be publicly reported as required under section 1848(q)(A)(i)(I) of the Act and finalized at § 414.1395(a)(1)(i).

In the CY 2017 Quality Payment Program final rule, we finalized, as technically feasible, to use ACO profile pages as a guide to publicly reporting more APM data (81 FR 77398). Currently, groups who participate in an ACO have an indicator showing their participation, as well as a link to the ACO profile page with available performance information. User testing has shown that website users find the ACO information meaningful and displayed in a user-friendly way. For this reason, we plan to continue this approach for APM performance information, including that which comes in via the APP, as technically feasible. We also solicited comments on alternative ways to publicly report performance information reporting via APPs and additional considerations to publicly reporting this information (86 FR 39467).

We did not receive public comments on alternative ways to publicly report performance information reported via APPs or any additional considerations to publicly reporting this information.

(3) Facility Affiliations

Compare tool profile pages for clinicians currently provide demographic information, including names, addresses, phone numbers, medical specialties, APM affiliations, Medicare assignment status, board certifications, education and residency, gender, and group and hospital affiliations. User testing consistently shows that Medicare patients and caregivers find value in these types of information. For hospital affiliations, website users have consistently noted the importance of understanding up front the relationships clinicians may have with facilities where they perform services when searching for a clinician. Specifically, patients and caregivers have noted during user testing that hospital affiliation is important to them,

since they may be looking for a clinician to perform a procedure at a hospital or want to know the hospitals a clinician could potentially admit them if needed. Linking from the clinician profile page to their affiliated hospital page has provided a seamless experience for patients and caregivers, as they do not need to separately search for clinicians and hospitals; rather, they can navigate to a hospital profile page directly from the clinician's profile page.

With these user testing findings in mind, and because the Compare Tools include information on a number of other types of facilities beyond hospitals, we believe it would benefit patients and caregivers to also be able to navigate from clinician profile pages to profile pages for other types of facilities such as: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities (86 FR 39468).

Expanding the types of clinician-facility affiliations, beyond hospital affiliation, publicly reported would allow us to provide additional information about clinicians with or without any hospital affiliation but who are affiliated with other types of facilities. User testing with patients and caregivers has shown that facility affiliations not only for hospitals but also for IRFs, LTCHs, SNFs, IPFs, HHAs, hospices, and dialysis facilities would be helpful to their healthcare decision-making. Specifically, we proposed adding affiliations to clinician profile pages for each of the following types of facilities, pending the results of user testing, as applicable and technically feasible: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities. User testing will determine how to best display these affiliations on compare tool clinician profile pages. To determine clinician affiliations to these facilities, we would use claims data the same way we do to display the hospital affiliations currently available on clinician profile pages (77 FR 69165). We build the clinician-hospital affiliations based on observing a clinician practicing at a given hospital caring for at least three different Medicare patients on three different dates of service in the preceding 6 months, as documented in Medicare claims. We would use similar criteria for determining additional facility affiliations. Clinicians can email the Quality Payment Program Service Center at <http://www.QPP@cms.hhs.gov> if they believe their facility affiliations are displayed incorrectly. We solicited comments on the proposal to add affiliations to clinician profile pages for each of the following types of facilities and link to the specific facility's page on

the compare tool: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities. Further, we also solicited comment on whether there should be a limit on the number of procedures done or conditions treated at a given facility to determine clinician-facility affiliations.

The following is a summary of the comments we received and our responses.

Comments: Several commenters supported adding facility affiliations beyond hospital affiliations to clinician profile pages on the compare tools. Specifically, these commenters supported the addition of affiliations for all facilities proposed, including IRFs, LTCHs, SNFs, IPFs, HHAs, hospices, and dialysis facilities. One commenter also recommended including clinicians' role as SNF medical directors on their profile pages. A few commenters noted concern, with two of these commenters opposing the proposal, related to the threshold for determining facility affiliations and how CMS would handle a clinician with multiple affiliations. These commenters believed that the three different Medicare patients on three different dates of service in the preceding 6 months threshold may be too low for determining facility affiliations. One of the commenters recommended CMS conduct user testing to determine how consumers react when a clinician is affiliated with multiple facilities or with a facility that has poor quality ratings. Another commenter requested clarification on how we plan to obtain and verify facility affiliation and noted concern about location and specialty accuracy.

Response: We agree with commenters that adding affiliations to facilities beyond hospitals, on clinician profile pages, will aid patients in making healthcare decisions. We currently do not have a mechanism or source of data for verifying medical director or other healthcare administrative roles in SNFs or other types of care settings. Rather, if the clinician has filed a claim, it is because that clinician is actively treating patients and furnishing healthcare services, even if they also have an administrative role. We would not have information to report for a medical director or other healthcare administrator unless they have filed a claim. We understand the commenters concern and will explore alternative data sources that are found to be reliable. Regarding the concern about a clinician having multiple affiliations, we have user tested clinician profile pages that display multiple facility affiliations and have found that if a clinician has multiple affiliations,

beneficiaries and their caregivers consider it important for them to know when making healthcare decisions. We also want to note that the threshold for determining facility affiliations has been reliable for determining the hospital affiliations that are currently on clinician profile pages, which is why we proposed using this threshold for the additional facility affiliations. We will continue to monitor this process as we expand using our currently methodology to affiliate other settings of care to clinicians. In response to questions regarding how we plan to obtain and verify facility affiliation, we plan to determine additional facility affiliations by using claims data in the same way we determine the hospital affiliations currently on clinician profile pages. This analysis includes reviewing claims for clinicians practicing at a given facility caring for at least three different Medicare patients on three different dates of service in the preceding 6 months, as documented in Medicare claims. Clinicians can email the Quality Payment Program Service Center at <http://www.QPP@cms.hhs.gov> with the correct information if they believe their facility affiliations are displayed incorrectly, as they do today for hospital affiliation. We would then manually edit the affiliation on the website. This manual edit would remain in effect for 6 months only. To ensure a more permanent change, clinicians must update their information in the Medicare Provider Enrollment, Chain, and Ownership System (PECOS). For more information, clinicians can visit the Care Compare: Doctors and Clinicians Initiative Page at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Compare-DAC>. Regarding the accuracy of clinician specialty and location, we note that this information is obtained from the PECOS. We rely on clinicians to ensure that their information in PECOS is up to date to ensure the most accurate information is publicly reported.

After consideration of public comments, we are finalizing this policy as proposed.

(4) Utilization Data Request for Information

Under section 104(e) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), beginning with 2016, the Secretary is required to integrate utilization data information on

Physician Compare.²⁶⁰ To satisfy section 104(e) of the MACRA, we previously implemented a policy to begin to include utilization data in a downloadable format in late 2017 using the most currently available data, and previously finalized that the specific codes to be included will be determined via data analysis and reported at the eligible clinician level (80 FR 71130). We finalized to continue to include utilization data in the downloadable database (81 FR 77398). This information continues to be available today on www.data.cms.gov/provider-data.

To date, we have gathered utilization data for procedures from physician/supplier Medicare Part B non-institutional claims on certain services and procedures and published it in the public use file (PUF) file entitled “Physician and Other Supplier Data.” These data are useful to the healthcare industry, healthcare researchers, and other stakeholders who can accurately interpret these data and use them in meaningful analyses. However, this information is presented in a technical way that is not easily accessible or usable by patients, who do not frequently visit data.cms.gov or understand medical procedure coding. This information also does not provide detail on the specific conditions clinicians treat, though in select cases it may be inferred by the clinicians and researchers reviewing this information.

Section 10331(b)(3) of the Affordable Care Act requires that for public reporting, to the extent practicable, to include processes to assure that the data made available provides a robust and accurate portrayal of a clinician’s performance. In our efforts to continue to provide patients and caregivers with meaningful information to make informed healthcare decisions, we believe utilization data may also have a place on clinician and group profile pages, if presented in a consumer-friendly way. We envision utilization data on patient-facing profile pages providing two main areas of benefit. The first is allowing for more granular clinician searches, so that patients not only find specific types of clinicians but also those clinicians experienced in performing specific types of procedures and/or treating specific conditions. The second is providing categories of utilization data in a more plain language display that is usable to patients and their caregivers. In summary, utilization data could provide information to

Medicare patients and their caregivers on the specific diagnoses clinicians treat and the frequency with which certain services or procedures are performed by a clinician or group and/or which types of clinicians do not provide certain services.

For example, someone with severe arthritis of the knee may want to search for an orthopedic surgeon who specifically does knee replacements. The way the clinician search works currently would only show results for “orthopedic surgeons” generally. That is, the patient would not see which of these clinicians specialize in this procedure, and likely would need to spend time calling clinicians to ascertain more detail. This could similarly be the case for finding a clinician who focuses on treatment of a certain condition. We believe indicating which clinicians focus on certain procedures or conditions would relieve some of this patient burden, as it would yield more specific search results. There are a number of factors that could influence how procedure- and condition-specific information is determined, which is why we solicited comments on this topic in several areas.

For display purposes, we may wish to apply a minimum experience level, such as the number of times a clinician performed a procedure or treated a condition, before a clinician profile is annotated to indicate experience with the condition or procedure. Regarding the methods in which we would identify clinician volume of procedures conducted or treat specific conditions, we would need to set a threshold for making these assertions. We have considered several options. The threshold could be based on the number of times a clinician has performed a procedure or treated a condition within a certain time-period, or the proportion of the clinician’s practice that is represented by the procedure or condition. Alternatively, thresholds may be devised based on ranking clinicians compared to their peers (specialty and geography may be considered when defining peers) in volume of procedures performed or frequency with which they treat each condition.

We note also that these approaches utilize Medicare claims data only. That is, these data would not include procedures performed or conditions treated for patients who have other types of insurance, since this information is not available. We also acknowledge that this utilization data only represents the care provided to Medicare beneficiaries and clinicians offer care to those with other forms of insurance. This disclaimer could be

added to any data that may be publicly reported. We solicited comments on these approaches and whether there are any additional ones we should consider.

Additionally, because the Compare Tools utilize a location-based search, national or local thresholds may be appropriate. For example, clinicians in urban centers may specialize in a small number of procedures that they perform on a weekly basis, while a clinician in a rural area might be the most experienced at a given procedure, but not have comparable volume to the urban clinician who practices a very narrow scope. We solicited comments on these considerations, as well as if there are others.

We also solicited comments on the potential types of utilization data that, if publicly reported, could help Medicare patients and their caregivers make informed healthcare decisions, as well as on technical considerations for presenting a specific affiliation between clinicians and diagnoses and/or procedures. Specifically, we solicited comments on:

- The types of conditions and procedures that would most benefit patients’ clinician searches;
- Important features and considerations for clinician searches by conditions or procedures;
- The lookback period for Medicare claims in order to identify a clinician’s volume of procedures balancing frequency with recent experience (for example, 6 months, 1 year, 2 years);
- Clinician specialties or conditions with special considerations (for example, non-patient facing clinicians);
- The maximum number of conditions treated or procedures performed to display on a given clinician’s profile page; and
- Methods to set a threshold of treatment volume to display that a clinician commonly performs a procedure or treats a condition. For example, the threshold could be: (1) The number of times a clinician treated a condition or performed a procedure; (2) the total scope that a condition or treatment represents in a clinician’s practice; or (3) the clinician’s rank—either overall among all clinicians or among a subset of clinicians—in the number of times that clinician treated a condition or performed a procedure.
- Any other factors or considerations not listed above.

We received public comments on considerations for publicly reporting utilization data. We thank the commenters’ feedback and will take these comments into consideration in future years.

²⁶⁰ Physician Compare is defined at § 414.1305 as Physician Compare internet website of CMS (or a successor website).

4. Overview of the APM Incentive

(a) Overview

Under the Quality Payment Program, eligible clinicians who are Qualifying APM Participants (QPs) for a year are eligible to receive an APM Incentive Payment in the corresponding payment year for payment years 2019 through 2024. In the CY 2017 Quality Payment Program final rule (81 FR 77480 through 77489), we finalized at § 414.1450(d) that this payment is made based on the clinician's QP status in the QP Performance Period that is 2 years prior (for example, the 2021 payment will correspond to the 2019 performance year), and at § 414.1450(b)(1) that the payment is equal to 5 percent of the estimated aggregate payments for covered professional services in the base period (the year between the QP performance and payment years).

We also finalized at § 414.1450(c)(1) (82 FR 31729) that the APM Incentive Payment will go to the TIN associated with the Advanced APM Entity through which an eligible clinician becomes a QP during the QP Performance Period. In 2019, our first year of making APM Incentive Payments, we learned that the amount of time between the QP Performance Period (during which QP status is attained) and the QP payment year (during which APM Incentive Payments are issued) creates challenges to disbursing the payment for some QPs in a routine and efficient manner, for example for QPs who may have changed practices in the interim. Consistent with section 1833(z) of the Act, QP status is determined for, and connected to, an eligible clinician (identified by their NPI) for the QP payment year based on their Advanced APM participation during the QP Performance Period. In the proposed rule, we stated that we do not believe that changes in a QP's practice or TIN in the interim year between the QP determination and the QP payment year should affect a QP's ability to receive the APM Incentive Payment. To address some of the unanticipated challenges we encountered in disbursing the APM Incentive Payments, in the CY 2021 PFS final rule, we finalized a hierarchy, codified at § 414.1450, that, based on our experience and lessons learned in making payments in 2019, provides more ways to identify an appropriate TIN to which we can make the APM Incentive Payment when a QP has experienced changes in their practice or TIN since the performance year in which they attained QP status.

(c) APM Incentive Payment Recipient

In the 2021 PFS final rule (85 FR 84472), we revised our approach to identifying the TIN or TINs to which we make the APM Incentive Payment and established a process that enables QPs to provide CMS with updated enrollment information that could be used to complete the payment in the event our approach does not yield an appropriate TIN or TINs to which to send their APM Incentive Payments. The process for those QPs to update their information, as well as a preliminary list of NPIs to whom it may be applicable, is included in a public notice published annually in the **Federal Register**. We explained in the CY 2021 PFS final rule that the revised approach would involve looking at a QP's relationship with TINs at different, specified periods in time, as well as considering the relationships such TINs have with certain APM Entities and Advanced APMs. We stated that we believe this revised approach enables us to more appropriately identify TINs with which QPs currently have relationships to receive other Medicare payments, and through which the QPs likely would anticipate receiving their APM Incentive Payments. We noted that, when the QP is no longer affiliated with the TIN through which they achieved QP status, this approach will prioritize identifying an alternate TIN with which the QP is affiliated at the time the APM Incentive Payment is made, and to which it is appropriate to make the payment. The approach we adopted also serves to reduce uncertainty for QPs as they anticipate the APM Incentive Payments, as well as potential delays in our ability to make their payments.

To improve and expand the ways we identify the TIN(s) to which we make the APM Incentive Payment for a QP in a timely and efficient manner, we finalized a policy to sequentially apply a decision hierarchy and codified the hierarchy in § 414.1450(c). We apply the hierarchy by beginning at the first step, and if we are unable to identify one or more TINs with which the QP has a current affiliation at this step, we move to the next and successive steps of the hierarchy until we do identify one or more TINs with which the QP is affiliated.

As discussed in the CY 2021 PFS final rule, if we identify more than one TIN at the applicable step in the hierarchy, we divide the APM Incentive Payment proportionally between the QP's TINs based on the relative paid amount for Part B covered professional services that are billed through each of the TINs. We

proposed to clarify that, when we divide the APM Incentive Payment between two or more TINs, we apportion the APM Incentive Payment among TINs based on the share of total payments for covered professional services made to each TIN in the same base year that we use to calculate the APM Incentive Payment for the year. To calculate the APM Incentive Payment, we sum the total estimated aggregate payments for covered professional services for a QP for the base year, which is based on claims submitted for covered professional services, as codified at § 414.1450(b)(1) through (3). We proposed to codify this policy at § 414.1450(c).

In the course of making APM Incentive Payments during CY 2020 PFS final rule, we explored the possibility of expanding our search at each step of the hierarchy at § 414.450(c) to identify potential payee TINs that are associated with the QP during the QP payment year. Based on our findings, we stated we believe expanding our search in this way would enable us to make payments earlier in the calendar year and reduce the number of QP NPIs for whom we cannot identify a payee TIN using our hierarchy, and thus, rely on our public notice to request additional information. Therefore, we proposed to revise the hierarchy at § 414.1450(c) so that, using the criterion described in each step of our current regulation, we would first seek to identify a TIN associated with the QP during the base year, and if no such TIN is identified in the base year, we would then seek to identify a TIN associated with the QP during the payment year. We have found in many instances that there are changes in enrollment information in PECOS for a QP over the span of 2 years between the QP performance period and payment year. By using enrollment information for the QP during the payment year, we are more likely to identify an appropriate TIN to which to make the APM Incentive Payment hierarchy. Under the proposal, applying the steps in the APM Incentive Payment hierarchy, we would make the APM Incentive Payment to one or more solvent TINs associated with the QP, identified by paid Medicare Part B claims for covered professional services and associated PECOS enrollment information during the base period; and if no such TIN is identified, we will make the payment to such TINs associated with the QP during the payment year. We proposed to codify this policy in the regulation at § 414.1450(c).

If no such TIN or TINs can be identified at a particular step, we will

move to the next and successive steps listed in § 414.1450(c)(1) through (8) until we identify one or more solvent TINs with which the QP is associated, and then would make the APM Incentive Payment to any such TIN(s). If more than one TIN is identified at a step based on paid claims during the applicable year either the base year or payment year, as we explain earlier and proposed to codify in the regulation under § 414.1450(c), would divide the APM Incentive Payment proportionately among such TINs according to the relative total paid amounts for Part B covered professional services to each TIN in same the base year we use to calculate the APM Incentive Payment.

We proposed, for each step in the APM Incentive Payment decision hierarchy, we would first search for a payment TIN or TINs associated with the QP during the base period. If no such TIN is found during the base year, we would search for any TIN or TINs that are similarly situated with respect to the criterion at that step in the hierarchy and associated with the QP during the payment year. If such a TIN or TINs are found, we would make the APM Incentive Payment to such TIN or TINs. We will continue at each step in the hierarchy to first attempt to identify the relevant base year TIN or TINs associated with the QP because, as noted in the proposed rule, we believe such TINs are more likely to be associated with the APM Entity through which the QP attained their QP status during the QP performance period. However, if no such TIN is found in the base year, we would proceed at that step to search for a TIN or TINs with which the QP is associated in the payment year.

We explained that we believe this approach creates the greatest opportunity to identify and pay an appropriate TIN as efficiently and early as possible during the payment year. The proposed change would maintain the current hierarchy while adding a sub-step at each level in which we would conduct our search based on more current enrollment information. The proposed change would allow for the identification of an appropriate TIN or TINs at each step by first checking the base year, and then checking the payment year before moving on to the next step in the process. We stated we believe that by maintaining the current hierarchy we would continue to incent Advanced APM participation by prioritizing making payments to TINs affiliated with Advanced APMs, even if they are not in the same Advanced APM Entity through which QP status originally was achieved. For example,

we stated that we anticipate that many eligible clinicians who earned QP status in 2020 through a practice participating in the CPC+ model will join the new Primary Care First (PCF) model in 2022.

In the event the eligible clinician's CPC+ participant TIN is no longer active, our proposed modification to the hierarchy would enable us to pay the APM Incentive Payment to a TIN participating in the PCF model in 2022. We stated that we continue to believe it would be appropriate to first identify the relevant base year TIN or TINs at each step in of the hierarchy because we believe those TINs are more likely to be associated with the APM Entity through which the QP attained their QP status during the QPs performance period. However, if no TIN is found in the base year, we would proceed to identify any TINs associated with the QP in the payment year, and then use the same process for the subsequent steps in the hierarchy until we identify one or more TINs associated with the QP at a particular step for a particular year (base year or payment year). We explained that we believe this approach will be a more efficient and expeditious way to identify a TIN or TINs to which to make the APM Incentive Payment for QPs.

We solicited comments on this proposal to amend our APM Incentive Payment decision hierarchy to include an additional attempt to identify and pay, at each step, one or more solvent TINs associated with the QP during the payment year when no such TIN is identified for the QP in the base year.

We received several comments on this proposal.

Comment: We received many public comments in support of this approach to identifying payee TINs during the payment year.

Response: We thank commenters for their support of this policy.

Comment: We received two public comments advocating that the APM Incentive Payment should be paid directly to the ACO or APM Entity.

Response: We disagree with this comment for several reasons. First, the APM Incentive Payment is not earned by the APM Entity in the way a shared savings payment may be earned by the ACO under the Shared Savings Program. Although QP determinations are in some cases are made at the APM Entity group level, QP status is conferred on an individual eligible clinician. As a result, the individual QP is excluded from the MIPS reporting and payment adjustment requirements, and it is the QP who earns the APM incentive payment. Therefore, the payment is disbursed for the eligible clinician who is a QP to a TIN that is affiliated with the QP, even

in instances where the QP is no longer affiliated with the APM Entity. The payment is designed as an incentive in lieu of the pursuance of a MIPS payment adjustment. CMS makes the APM Incentive Payment to one or more TINs to which the QP has reassigned their billing rights. Thus, the QP and TIN may resolve between themselves the handling of the APM Incentive Payment. Some APM Entities are the same as the Medicare enrolled TIN to which QPs have reassigned their Medicare payment rights, and to which we would make the APM Incentive Payment. Other APM Entities, such as ACOs, are not. For these reasons, we do not make the APM Incentive Payment directly to an ACO, and we do not believe it would be appropriate to do so.

Comment: One commenter suggested that we should allow QPs to individually identify their preferred payee TIN to receive the APM Incentive Payment.

Response: It would not be practically feasible for every QP to individually identify a recipient TIN for the QP incentive payment. Our experience working with PECOS and other voluntary systems, including our annual public notice, indicate that requiring individual eligible clinicians to elect a recipient TIN for the incentive payment could cause significant delays in completing the payments. These delays would be of such duration that CMS would likely miss the statutory deadline of December 31 of the payment year in which we are required to have completed these payments. Further, some QPs might never complete the prerequisite step, which would make it difficult if not impossible to disburse APM Incentive Payments for them. Moreover, eligible clinicians are not without an opportunity to indicate to CMS the TINs with which they have current billing arrangements. In fact, all Medicare enrolled eligible clinicians are required to update their billing information, including reassignments within the PECOS system within a specified timeframe. By ensuring PECOS is updated at all times, eligible clinicians have an opportunity to ensure that if they become QPs for a year, the APM Incentive Payment will be received by a TIN to which they have reassigned their billing rights. We believe it is both appropriate and efficient for clinicians to use the longstanding and required processes that are in place to update their billing information, which enables us to identify one or more appropriate TINs to which to make the APM Incentive Payment. Finally, we have established in regulations a payment decision

hierarchy that specifies how we will identify the TIN or TINs to which we will distribute the APM Incentive Payment. One of the main purposes for establishing this hierarchy and for updating it this year is to provide predictability for eligible clinicians regarding the APM Incentive Payment disbursements.

After consideration of the public comments, we are finalizing our proposed update to the APM Incentive Payment decision hierarchy, and amending our regulation at § 415.1415(c), as proposed.

c. Advanced APMs

1. Qualifying APM Participant Determination

a. General Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy at § 414.1425(b) for Qualifying APM Participant (QP) determinations. For the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the “snapshot dates” (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician included on a Participation List on any one of such dates is included in the APM Entity group even if that eligible clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for the eligible clinicians in an APM entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP snapshot dates. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a snapshot date that we use to determine the APM Entity group and to make QP determinations at the APM Entity group level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List in more than one APM Entity, but do not to achieve QP status based on any APM Entity level determinations, we make

QP determinations at the individual level as described in § 414.1425(c)(4). Likewise, for eligible clinicians on an Affiliated Practitioner list for an Advanced APM we make QP determinations at the individual level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2).

b. QP Thresholds and Partial QP Thresholds

Section 1833(z)(2)(B) of the Act describes the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, has been applicable since payment year 2019. The All-Payer Combination Option, which uses the Medicare Option, as well as an eligible clinician’s participation in Other Payer Advanced APMs, is applicable beginning in the payment year 2021. In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439) we finalized our policy for the Medicare Option as codified at § 414.1430(a) and for the All-Payer Option at § 414.1430(b).

Section 114 of Division CC of the CCA amended section 1833(z)(2)(B) of the Act with regard to payment years 2023 and 2024 (which correspond respectively to performance years 2021 and 2022), by freezing for such years the applicable payment amount and patient count thresholds for an eligible clinician to achieve QP status. Specifically, the CAA amended section 1833(z)(2)(B) of the Act to continue the QP payment amount thresholds that apply in payment years 2021 and 2022 to payment years 2023 and 2024. Additionally, the CAA amended section 1833(z)(2)(D) of the Act to require that, for payment years 2023 and 2024, the Secretary use the same percentage criteria for the QP patient count threshold that are applied in payment year 2022. As such, the Medicare

Option QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will remain at 50 percent for the payment amount method and 35 percent for the patient count method. The CAA also amended section 1848(q)(1)(C)(iii) of the Act to extend through payment year 2024 the Partial QP thresholds that are established for payment years 2021 and 2022. Therefore, the Partial QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will remain at 40 percent for the payment amount method and 25 percent for the patient count method. For performance years beginning with 2023 (corresponding to payment years beginning with 2025) the statute prescribes the QP thresholds for the payment amount method, and the QP thresholds we established for the patient count method at § 414.1430 will take effect. Specifically, for performance years beginning with 2023, the Medicare Option QP thresholds will be 75 percent for the payment amount method and 50 percent for the patient count method. The Partial QP thresholds under the Medicare Option will be 50 percent for the payment amount method and 35 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for performance years 2021 and 2022 (corresponding to payment years 2023 and 2024) will be 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for performance years 2021 and 2022 will be 40 percent for the payment amount method and 25 percent for the patient count method. In order to become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain threshold percentages under the Medicare Option. For performance years 2021 and later (corresponding to payment year 2023 and later), the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option is 25 percent for the payment amount method or 20 percent under the patient count method.

BILLING CODE 4120-01-P

TABLE 75: QP Threshold Score Updates

Medicare Option - Payment Amount Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Payment Amount Threshold	50		50		75	
Partial QP Payment Amount Threshold	40		40		50	
Medicare Option - Patient Count Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	35		35		50	
Partial QP Patient Count Threshold	25		25		35	
All-Payer Combination Option - Payment Amount Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	50	25	50	25	75	25
Partial QP Patient Count Threshold	40	20	40	20	50	20
	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum
All-Payer Combination Option - Patient Count Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	35	20	35	20	50	20
Partial QP Patient Count Threshold	25	10	25	10	35	10
	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum

Although we included proposed amendments to our regulation at § 414.1430(a)(1) and (2) in the CY 2022 PFS proposed rule to reflect the changes made by the CAA to the QP and Partial QP Thresholds under the Medicare Option payment amount method, we inadvertently neglected to discuss those proposed amendments in the preamble. Additionally, we inadvertently did not include proposed regulation text at § 414.1430(a)(3) or (4) to reflect the amendments made by the CAA to the QP and Partial QP thresholds under the Medicare Option patient count method; or to the regulation text at § 414.1430(b) to reflect amendments to the All Payer Option payment amount and patient count QP and Partial QP thresholds. However, we believe it is preferable to revise the regulation text to consistently and accurately reflect the statutory threshold percentages for each year in accordance with the CAA amendments for both the Medicare Option and All Payer Option and for both the payment amount and patient count methods for each of the options. Therefore, we are finalizing the proposed amendments to § 414.1430(a)(1) and (2) and making

amendments to § 414.1430(a)(3) and (4); and § 414.1430(b)(1) through (4) to reflect the applicable statutory threshold percentages as amended by the CAA.

We received four public comments, all in support of the statutory changes to the QP and Partial QP threshold levels. We thank the commenters for their input and will implement the amendments made by the CAA as discussed and revise the regulation at § 414.1430 as proposed.

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a “collection of information” requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of OMB’s implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, PRA section

3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We solicited public comment on each of the required issues under section 3506(c)(2)(A) of the PRA for the following information collection requirements.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ May 2020 National Occupational Employment and Wage Estimates for all salary estimates (http://www.bls.gov/oes/current/oes_nat.htm). In this regard, Table 76 presents the mean hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

TABLE 76: National Occupational Employment and Wage Estimates

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead (\$/hr)	Adjusted hourly wage (\$/hr)
Administrative Support Worker	43-9000	18.41	18.41	36.82
Anesthesiologists	29-1211	130.50	130.50	261.00
Billing and Posting Clerks	43-3021	20.01	20.01	40.02
Bookkeeping, Accounting, and Auditing Clerks	43-3031	21.20	21.20	42.40
Computer System Analysts	15-1211	47.61	47.61	95.22
Family Medicine Physicians	29-1215	103.06	103.06	206.12
General Internal Medicine Physicians	29-1216	101.42	101.42	202.84
Licensed Practical and Licensed Vocational Nurses	29-2061	24.08	24.08	48.16
Medical and Health Services Managers	11-9111	57.12	57.12	114.24
Obstetricians and Gynecologists	29-1218	114.96	114.96	229.92
Office and Administrative Support Workers, All Other	43-9199	18.91	18.91	37.82
Pediatricians, General	29-1221	88.74	88.74	177.48
Physicians, All Other; Ophthalmologists, Except Pediatric	29-1228	105.22	105.22	210.44
Psychiatrists	29-1223	104.38	104.38	208.76
Secretaries and Administrative Assistants	43-6014	19.43	19.43	38.86
Surgeons, Except Ophthalmologists	29-1248	120.99	120.99	241.98

For the CY 2019 and CY 2020 PFS final rules, we used the BLS wage for “Physicians and Surgeons” (occupation code 29–1060) to estimate the cost for Physicians. In BLS’ most recent set of

occupational wage rates (dated May 2020) they have discontinued this occupation in their wage data. As a result, in order to estimate the burden for Physicians, similar to the estimates

in the CY 2021 PFS final rule (85 FR 84958), we are using a rate of \$217.32/hr which is the average of the following BLS occupations and adjusted wage estimates.

TABLE 77: Physician Wage Estimates

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead (\$/hr)	Adjusted hourly wage (\$/hr)
Anesthesiologists	29-1211	130.50	130.50	261.00
Family Medicine Physicians	29-1215	103.06	103.06	206.12
General Internal Medicine Physicians	29-1216	101.42	101.42	202.84
Obstetricians and Gynecologists	29-1218	114.96	114.96	229.92
Pediatricians, General	29-1221	88.74	88.74	177.48
Physicians, All Other; Ophthalmologists, Except Pediatric	29-1228	105.22	105.22	210.44
Psychiatrists	29-1223	104.38	104.38	208.76
Surgeons, Except Ophthalmologists	29-1248	120.99	120.99	241.98
Total				1,738.54
Average Wage (1,738.54/8)				217.32

BILLING CODE 4120–01–C

As indicated, we adjusted BLS’ hourly wage estimates by a factor of 100

percent to obtain the adjusted hourly wage estimate. This is necessarily a rough adjustment, both because fringe

benefits and overhead costs vary significantly from employer to employer, and because methods of

estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

B. Information Collection Requirements (ICRs)

1. ICRs Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802 and 414.806)

The following provisions will be subject to the standard PRA process under OMB control number 0938–0921 (CMS–10110). The standard PRA process includes the publication of 60- and 30-day **Federal Register** notices that will provide the public with opportunities for public review and comment. We expect to publish the 60-day notice shortly after the publication of this final rule.

The new provisions at §§ 414.802 and 414.806 will implement new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021 (for the purposes of this section of this final rule, hereinafter is referred to as “section 401”), which requires manufacturers without a Medicaid drug rebate agreement to report ASP information to CMS for calendar quarters beginning on January 1, 2022, for drugs or biologicals payable under Medicare Part B and described in sections 1842(o)(1)(C), (E), or (G) or 1881(b)(14)(B) of the Act, including items, services, supplies, and products that are payable under Part B as a drug or biological. Specifically, to implement the new reporting requirements for manufacturers without Medicaid drug rebate agreements, we proposed to modify: (1) The definition of drug at § 414.802; and (2) the regulations describing civil money penalties at § 414.806. The new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

For the purposes of section 401’s new reporting requirements, for manufacturers without Medicaid drug rebate agreements, confidentiality requirements appear in section 1847A(f)(2)(D) of the Act which states that the ASP data are confidential and shall not be disclosed by the Secretary in a form which discloses the identity of a specific manufacturer or wholesaler or prices charged for drugs or biologicals by such manufacturer or wholesaler, except—as the Secretary determines to be necessary to carry out section 1847A of the Act (including the determination and implementation of the payment amount), or to carry out

section 1847B of the Act; to permit the Comptroller General of the United States to review the information provided; to permit the Director of the Congressional Budget Office to review the information provided; to permit the MedPAC to review the information provided; and to permit the Medicaid and CHIP Payment and Access Commission to review the information provided.

For manufacturers with Medicaid drug rebate agreements, confidentiality requirements appear in section 1927(b)(3)(D) of the Act which states that the ASP data are confidential and shall not be disclosed by the Secretary in a form which discloses the identity of a specific manufacturer or wholesaler, prices charged for drugs by such manufacturer or wholesaler, except—in relevant part, as the Secretary determines to be necessary to carry out section 1847A of the Act (including the determination of the payment amount), or to carry out section 1847B of the Act, to permit the Comptroller General to review the information provided, to permit the Director of the Congressional Budget Office to review the information provided, and to permit the Executive Director of the Medicare Payment Advisory Commission (MedPAC) and the Executive Director of the Medicaid and CHIP Payment and Access Commission to review the information provided.

The burden associated with these requirements is the time and effort required by manufacturers of drugs and biologicals payable under Medicare Part B to prepare and submit the required ASP data to CMS. We have previously estimated the burden associated with ASP reporting requirements for manufacturers with Medicaid drug rebate agreements. Because section 401 extends the ASP reporting requirements to manufacturers without Medicaid drug rebate agreements, we are updating our burden estimates to account for the additional manufacturers who will now be required to report ASP data to us.

As described in section III.D.1. of this final rule, in considering whether to exclude repackagers from the reporting requirements at section 1847A(f)(2) of the Act, we conducted analyses to estimate: (1) The proportion of repackaged products in our existing ASP data; (2) the number of new ASP submissions we can expect as a result of the new reporting requirements under section 401; and (3) the proportion of those (new) submissions that involve repackaged products.

Based on our existing ASP data, 547 manufacturers (respondents) report ASP

data to us. Of these, 331 respondents have products for which they are required to submit ASP data, and 216 respondents have products for which they currently submit ASP data voluntarily, but will now be required to do so under section 1847A(f)(2) of the Act. ($331 + 216 = 547$)

We also estimate that under the new reporting requirements of section 401, a total of 568 respondents have products for which they will now be required to report ASP data to us. The 568 includes the 216 respondents (above) and 361 respondents who have products (identified by us) for which they will now be required to submit ASP data under section 1847A(f)(2) of the Act and did not previously voluntarily submit these data to us. There were 9 respondents who voluntarily submitted ASP data for some, but not all, of their products identified in our analysis. ($216 + 361 - 9 \text{ overlap} = 568$)

We estimate a total of 740 respondents will report ASP data to us. This includes the 547 respondents who currently submit ASP data to us (voluntarily, or as currently required), and the 361 respondents who have products (identified by us) for which they will now be required to submit ASP data under section 1847A(f)(2) of the Act and did not previously voluntarily submit these data to us. However, there were 168 respondents who currently are required to submit ASP data to us, or who voluntarily submit ASP data to us, for whom we identified additional products that they did not previously submit ASP data, and will now be required to submit ASP data for these additional products under the new reporting requirements of section 401. ($547 + 361 - 168 \text{ overlap} = 740$)

These respondents submit ASP data four times per year for a total of 2,960 submissions ($740 \text{ respondents} \times 4 \text{ submissions/year}$).

Based on our experience with ASP data reporting, we continue to estimate that the time associated with reporting, record keeping, and third-party disclosure for ASP data reporting is 13 hours: 10 hours to review instructions and search existing data resources and 3 hours to gather the data, compile the data, submit via electronic media and upload to the automated system. This estimate includes labor costs for respondents to extract data from their information systems and to compile and submit the ASP data, including signature, to CMS via the internet-based automated system and electronic media. This estimate also includes the cost of the compact disc (CD) and overnight mail service used to report the data,

time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection.

Based on these analyses and assumptions, we estimate an annual burden of 38,480 hours (2,960 submissions/yr × 13 hours per response)

at a cost of \$1,495,332.80 (38,480 hr × \$38.86/hr), rounding to \$1,495,333.

TABLE 78: Annual Requirements and Burden for Requiring Certain Manufacturers to Report Drug Pricing Information for Part B

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost (\$/hr)	Total Cost (\$)
§§ 414.802, 414.806 (Requiring Certain Manufacturers to Report Drug Pricing Information for Part B)	0938-0921	740	2,960	13	38,480	38.86	1,495,333

We solicited comment on the likely costs or savings manufacturers from this provision.

We did not receive public comments on the analyses or the estimates. We are finalizing the definition of the term “drug” at § 414.802 as proposed.

2. ICRs Regarding the Medicare Shared Savings Program (Sections VI.F.8.a. and b.)

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out burden under the authority of the PRA. Please refer to sections VI.F.8.a. and b. of this final rule for a discussion of the impacts associated with this rule’s changes to the Shared Savings Program’s quality reporting requirements, quality performance standard, beneficiary assignment methodology, repayment mechanism requirements, requirements for disclosure of prior participation in the Shared Savings Program by the ACO, ACO participants, and ACO providers/suppliers, requirements for ACOs to submit sample ACO participant agreements and executed ACO participant agreements to CMS, and beneficiary notification requirements.

3. ICRs Regarding the Medicare Ground Ambulance Data Collection System (§ 414.626)

Section 1834(l)(17) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(l)(17)(I) of the Act states that the PRA does not apply to the

collection of information required under section 1834(l)(17) of the Act.

Accordingly, this collection of information section does not set out any burden for the proposed provisions that we are finalizing in this final rule. Please see section VI. of this final rule for a discussion of the estimated impacts.

We received no public comments on the collection of information requirements for the Medicare Ground Ambulance Data Collection System. We are finalizing as proposed.

4. ICRs Regarding the Medicare Diabetes Prevention Program (MDPP) Expanded Model (§§ 410.79, 414.84, 424.205, and 424.502)

In section III.L. of this final rule, we finalize policies necessary to shorten the Medicare Diabetes Prevention Program (MDPP) services period to one (1) year on a prospective basis, amend and update the amount of the performance payments for the Core Sessions and Core Maintenance Sessions, and make changes to eliminate the ongoing maintenance phase for MDPP beneficiaries who start MDPP set of services on or after January 1, 2022. In addition, we are finalizing a provision to waive the provider enrollment Medicare application fee for all organizations enrolling in Medicare as MDPP suppliers during the MDPP expanded model on or after January 1, 2022. We expect the finalized policies will increase the number of eligible organizations willing to enroll as MDPP suppliers. We also anticipate that the shortened service period will make MDPP more marketable to beneficiaries in that their time commitment is reduced and less intimidating with a 12-month vs. 24-month service period. We anticipate the shortened MDPP services period will reduce the recordkeeping burden for suppliers. Section

1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model, from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the provisions. Please see section VI. of this final rule for a discussion of the estimated impacts.

5. ICRs for Prepayment and Post-Payment Definitions, Documentation Request Timeframes, and Payment Denials for Noncompliance With Documentation Requests (§§ 405.902, 405.903, 405.929, and 405.930)

In section III.N.2. of this final rule, we proposed to: (1) Define key terms including “additional documentation,” “additional documentation request,” “post-payment medical review,” and “prepayment medical review;” (2) codify contractors’ authority to request additional documentation for prepayment and post-payment review within established timeframes; (3) codify timeframes for response to requests for documentation; (4) codify result of a failure to comply with prepayment or post-payment documentation request(s) by a provider or supplier, specifically denial of payment.

The codification of contractor authority to request additional documentation for post-payment reviews, associated timeframes, and resulting denials for failure to comply with these requests is not subject to the PRA per 5 CFR 1320.3(h)(9). The request for additional documentation will be on a case-by-case basis using non-standardized follow-up questions.

With regard to the (1) definitions for “additional documentation” and “additional documentation request,” “post-payment medical review,” and “prepayment medical review;” (2) the codification of contractor authority to

request additional documentation for pre-payment reviews; (3) the associated provider and supplier timeframes for providing additional documentation from the pre-payment reviews; and (4) possible denials for failure to comply with these requests, we do not expect that these proposals will affect our information collection burden estimates because these policies do not require providers or suppliers to submit any more documentation to CMS than what is already approved by OMB under control number 0938–0969 (CMS–10417). The regulations simply codify certain requirements by clarifying definitions, timeframes, and results for noncompliance.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

6. ICRs Regarding the Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan (§ 423.160(a))

Pending our finalization of the following provisions, the changes will be subject to the standard PRA process under OMB control number 0938–1396 (CMS–10755) to give stakeholders optimal opportunity to comment on our burden for this provision, given how dynamic the burden for EPCS is. The standard PRA process includes the publication of 60- and 30-day **Federal Register** notices that will provide the public with opportunities for public review and comment. We expect to publish the 60-day notice shortly after the publication of the final rule.

The purpose of this provision is to continue to implement section 2003 of the SUPPORT for Patients and Communities Act, which requires that

the prescribing of a Schedule II, III, IV, or V controlled substance under Medicare Part D be done electronically in accordance with an electronic prescription drug program beginning January 1, 2021, subject to any exceptions, which HHS may specify. We refer readers to the CY 2021 PFS final rule (85 FR 84472) for our previously finalized requirements and burden for the first phase of implementing this statutory mandate, which required prescribers to use the NCPDP SCRIPT 2017071 standard for Electronic Prescription for Controlled Substances (EPCS) prescription transmissions. The purpose of this final rule is to delay the date for CMS to begin taking compliance actions, implement certain exceptions to the mandate, and implement a compliance threshold.

In the CY 2021 PFS final rule, we estimated that the one-time burden to implement this provision would be 828,750 hours (165,750 prescribers * 6 hr) at a cost of \$36,418,590 (994,500 hr * \$36.62/hr). We arrived at the estimate of 165,750 prescribers having to implement EPCS based on taking the 425,000 Part D prescriber practices, and decreasing that amount by 60 percent to account for the 60 percent of prescriber practices that likely already had EPCS in place by January 1, 2021. Based on our current PDE data, we estimate that 70 percent of Part D prescribers already conduct EPCS,²⁶¹ which would leave 30 percent of Part D prescribers that would have to implement EPCS, if we did not propose any exceptions to this mandate. We also proposed that prescribers writing prescriptions for beneficiaries in long term care facilities will have an extension for those prescriptions until

January 1, 2025 along with the following exceptions to the EPCS mandate: (1) For prescriptions issued when the prescriber and dispensing pharmacy are the same entity; (2) cases where prescribers issue only a small number of Part D; (3) cases where a prescriber's NCPDP database address is in a geographic service area of an emergency or disaster declared by a Federal, State or local government entity; and (4) cases where a prescriber has received a CMS-approved waiver. These exceptions will result in fewer prescribers being required to conduct EPCS.

Based on our PDE data, we believe that these exceptions will substantially decrease the number of prescribers having to implement EPCS as a result of this regulation. We have listed the exceptions and the estimated number of prescribers falling under each exception in Table 79.²⁶² We do not anticipate that our proposal to include a compliance threshold of 70 percent will have any material effect on the impact of this provision. The reason for this is that based on our PDE data and conversations with prescribers, we believe that the 30 percent or less of the time that prescribers are not e-prescribing is because they are unable to e-prescribe, so they would have applied for a waiver. Although there are sometimes scenarios where beneficiaries may request that their prescriptions not be transmitted electronically, it appears as though those circumstances are not enough to make a material impact, since beneficiaries often change their views when they are given countervailing reasons that the prescriptions should be transmitted via EPCS.

²⁶¹ This information is based on PDE data pulled on April 6, 2021.

²⁶² This information is based on PDE data pulled on April 6, 2021.

TABLE 79: Number of Affected Prescribers by Exception Type

Exception	Estimated Number of Impacted Prescribers*
Cases where the Practitioner and Dispensing Pharmacy Are the Same Entity	75,927
Prescribers who Prescribe fewer than 100 Part D controlled substance prescriptions per year	470,000
Cases where Prescriber is in a Disaster or Emergency Area	30,964
Cases where Prescriber Applies for a Waiver	100
Individuals in Long Term Care Facilities	5,773
Total Number of Impacted Prescribers	582,764

* This information is based on PDE data pulled on April 6, 2021.

Table 79 gives our estimate of the number of prescribers affected by our exceptions broken down by the type of exception. As shown in Table 79, we estimate that our exceptions will exempt approximately 582,664 prescribers from the EPCS requirement, which constitutes approximately 38 percent of prescribers, since there are an estimated 1,548,221 Part D prescribers²⁶³ (582,664/1,548,221). Since the number of exempted prescribers from this mandate far exceeds the number of prescribers who currently do not e-prescribe controlled substances in Part D, we do not expect that the total number of Part D prescribers who electronically prescribe controlled substances will increase following our implementation of this mandate. As a result, we do not believe there will be a measurable impact to the prescriber community as a whole, once this provision is finalized.

However, for individual prescribers who have to implement this mandate, we expect that the implementation costs will be the same amounts that we finalized in the CY 2021 PFS final rule. Based on the modeling that we have seen, we have found that EHR companies provide the initial set-up of e-prescribing software free of charge, provided the prescribers pay the per transaction cost of \$1.88 mentioned in

the CY 2021 PFS final rule. Based on the comments received on our CY 2021 PFS proposed rule, we understand that implementing EPCS can lead to technological glitches, and then fixing those issues. We understand that the EHR companies remedy the issues free of charge. However, we also understand that such fixes take time away from the medical office staff. We estimate that such fixes would take the staff approximately 1 extra hour from the estimate given in our CY 2020 PFS proposed rule, when averaged across all prescribers. As a result, we have changed our one-time burden estimate of e-prescribing set-up from 5 hours to 6 hours per provider, which means a total of 994,500 hours (165,750 prescribers * 6 hr) at a cost of \$36,617,490 (994,500 hr * \$36.82/hr), since we anticipate that this work will be completed by an Administrative Support Worker. In this regard, the impact of this rule is plus 1 hour per response, plus 165,750 hours (165,750 prescribers * 1 hr/response), and \$6,102,915 (165,750 hr * \$36.82/hr).

We proposed that prescribers have the ability to apply for a waiver from the EPCS requirement, should they be facing circumstances beyond their control that prevent them from e-prescribing, and these circumstances are not the result of a natural disaster or

emergency. Due to the high prevalence of EPCS, the miniscule compliance actions that we proposed for non-compliance, and the number of prescribers that we expect to exempt from the mandate, we only expect to receive about 100 attestations per year. Although we proposed certain fields be in this attestation, these were minimal, and there was no accompanying documentation required. (Note, as outlined in section II.Q. of this final rule, to meet the standard for a waiver, prescribers must provide documentation showing the existence of a circumstance beyond their control and that such a circumstance prevents them from conducting EPCS.) We expect that each attestation will take 10 minutes (0.1667 hr) for a prescriber at \$217.32/hr to complete. In aggregate, CMS estimates an annual burden for filling out attestations of 16.67 hours (100 attestations * 0.1667 hr) at a cost of \$3,622.72 (16.67 hr * \$217.32/hr). In addition, we solicit comment on any other potential information collection implications.

We received no comments on our proposed burden estimates and assumptions, and have finalized our provision as proposed. As a result, we are finalizing our burden estimates and assumptions as proposed.

²⁶³ This information is based on PDE data pulled on April 6, 2021.

TABLE 80: Burden for Electronic Prescribing of Controlled Substances Requirement

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost (\$/hr)	Total Cost (\$)
§ 423.160(a) (Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan)	0938-1396	100	100	0.1667	16.67 hours	217.324	3,622.72

7. ICRs Regarding Open Payments Provisions Included in the CY 2022 PFS (42 CFR Part 403)

The following requirement and burden changes will be submitted to OMB for approval under control number 0938–1237 (CMS–10495). The following estimates burden changes to the Open Payments final rule at §§ 403.900 through 403.914 in this final rule.

a. Payment Context Field for Teaching Hospitals

The mandatory context field is a new requirement for reporting entities submitting and attesting to records that are attributed to teaching hospitals only. The field will be freeform text entry. We estimate that for each applicable manufacturer and applicable group purchasing organization (GPO), the inclusion of this field for collection and reporting activities will average an additional 6 total hours. The applicable instrument for these activities in the current PRA package is the “General-Research-Ownership Submission Data Elements”. At the support staff cost per FTE of \$42.40/hr, this will increase costs by \$254.40 (6 hr × \$42.40/hr) per applicable manufacturer or applicable GPO submitting teaching hospital records. However, because we anticipate fewer disputes due to this field, we believe it will decrease dispute resolution by 2 total hours for support staff at \$42.40/hr respectively, reducing costs by \$84.80 (2 hr × \$42.40/hr) per applicable manufacturer and applicable GPO. This results in a net increase in burden for each applicable manufacturer and applicable GPO submitting teaching hospital records of \$169.60 (\$254.40 – \$84.80). In Program Year (PY) 2019, 794 applicable manufacturers and applicable GPOs submitted at least one teaching hospital record, meaning the increase in burden will be a total of 3,176 hours (4 hours × 794 reporting entities) at a cost of \$42.40/hr or a total of \$134,662.40 (3,176 × \$42.40).

In addition, we estimate this will reduce teaching hospital dispute

resolution estimates by 2 hours per support staff FTE at \$37.82/hr or \$75.64 (2 hr × \$37.82/hr) per teaching hospital with records attributed to them. In PY 2019, 1,202 hospitals had record attributed to them, so for teaching hospitals we estimate a total burden reduction of 2,404 hours at a cost of \$90,919.28 (2,404 × \$75.64).

In aggregate, we estimate an annual burden of 772 hours (3,176 – 2,404) at a cost of \$43,743.12 (\$134,662.40 – \$90,919.28).

b. Optional Annual Recertification

The annual recertification is voluntary for applicable manufacturers or applicable group purchasing organizations. We approximate that 15 percent of applicable manufacturers and group purchasing organizations, or 240 reporting entities (0.15 [1,595 applicable manufacturers and applicable GPOs]) will complete and submit the proposed optional annual recertification. We anticipate that it will be a simple check box form to be included in the AM (Attestation) and GPO (Attestation) Annual IC Requirement and the “Attestation and Assumptions Screen Shots” Instrument in the existing PRA package. We estimate that it will take 0.5 hours at \$42.40/hr for support staff to complete and submit the recertification. In aggregate, we estimate an added annual burden of 120 hours (240 entities × 0.5 hr/response) at a cost of \$5,088 (120 hr × \$42.40/hr).

c. Defining a Physician-Owned Distributorship (42 CFR 403.902)

The new definition is not subject to the PRA since it will not revise, add, or remove any collection of information requirements or burden.

d. Disallowing Record Deletion Without Reason (§ 403.904(a)(3))

This provision clarifies that entities are not permitted to delete records without reason once their timeliness, completeness, and accuracy has been attested to. In order to ensure compliance with this requirement, a

freeform text dialogue box will be added to the system when records are deleted that asks the applicable manufacturer or GPO to input a reason for the deletion. This will be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the “Open Payments User Guide” Instrument in the existing PRA package. We anticipate that this will take an average of 2 hours at \$42.40/hr to input a reason for the deletion. In aggregate, we estimate an added annual burden of 80 hours (40 applicable manufacturers or GPOs deleting records annually × 2 hr/response) at a cost of \$3,392 (80 hr × \$42.40/hr).

e. Disallow Publication Delays of General Payments

A very small number of general payments are delayed from publication by reporting entities every year, and these records will simply either be reported as research records instead, or not delayed at all. Therefore, we anticipate a negligible burden for this provision.

f. Short Term Loans (§ 403.902)

This provision is merely a clarification of an existing requirement in regulation text. The purpose of this language is to clarify that the exemption for short-term loans from reporting requirements only applies for loans of less than 91 cumulative days per calendar year. In other words, multiple short-term loans in a calendar year will still meet reporting requirements if they add up to 91 days or greater. We do not believe this provision will change reporting behavior, and therefore do not anticipate an increase in burden.

g. Remove General Ownership Records

Currently the Open Payments system allows for a reporting entity to submit either a general record with a nature of payment category of ownership, or an ownership and investment interest record. For Program Years 2015–2019, approximately 92 applicable

manufacturers and GPOs reported records with the nature of payment category of ownership. Since reporting these general records as ownership records will require the addition of two additional pieces of information, we anticipate that it will take these 92 entities an additional 3 hours at \$42.40/hr to report the two extra fields. In aggregate, we estimate an added annual burden of 276 hours (92 entities × 3 hr/response) at a cost of \$11,702 (276 hr × \$42.40/hr). This will be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the “Open Payments User Guide” Instrument in the existing PRA package.

h. Updated Contact Information (\$ 403.908(c)(3))

This provision creates a requirement for reporting entities to keep their contact information up to date with CMS. The ability to communicate with a reporting entity is important because CMS may need to contact the entity in the case of perceived issues with the records. Applicable manufacturers and applicable GPOs will only be required to update their contact information if the two contacts provided become obsolete due to a change in the organization. This will also only apply to entities that do not have records to report for 2 years after a program year

in which they reported. Therefore, we anticipate that it will only affect approximately 30 applicable manufacturers and applicable group purchasing organizations. We estimate that it will take 0.5 hours at \$42.40/hr to update the contact information. In aggregate, we estimate an added annual burden of 15 hours (30 entities × 0.5 hr/response) at a cost of \$636 (15 hr × \$42.40/hr). This will be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the “Open Payments User Guide” Instrument in the existing PRA package.

i. Summary

TABLE 81: Open Payments Burden Changes

	Total Increase in Burden	Total Decrease in Burden	Total
Teaching Hospital Contact Field	\$201,993.60	\$158,250.48	\$43,743.12
Optional Annual Recertification	\$5,088.00	\$0.00	\$5,088.00
Defining a Physician Owned Distributorship	\$0.00	\$0.00	\$0.00
Disallowing Record Deletion Without Reason	\$3,392.00	\$0.00	\$3,392.00
Disallow Publication Delays of General Payments	\$0.00	\$0.00	\$0.00
Short Term Loans	\$0.00	\$0.00	\$0.00
Remove General Ownership Records	\$11,702.00	\$0.00	\$11,702.00
Updated Contact Information	\$636.00	\$0.00	\$636.00
			\$64,561.12

8. The Quality Payment Program (QPP) (42 CFR Part 414 and Section IV. of This Final Rule)

The following QPP-specific ICRs reflect this final rule’s policy changes as well as adjustments to the policies that have been finalized in the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), the CY 2019, CY 2020, and CY 2021 PFS final rules (83 FR 59452, 84 FR 62568 and 85 FR 84472, respectively).

a. Background

(1) ICRs Associated With MIPS and Advanced APMs

There is a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The MIPS ICRs consist of: Registration for virtual groups (see section V.B.8.b of this final rule); QCDR self-nomination applications and other requirements (see section V.B.8.c.(2) of

this final rule); qualified registry self-nomination applications and other requirements (see section V.B.8.c.(3) of this final rule); CAHPS survey vendor applications (see section V.B.8.c.(4) of this final rule); Health IT vendors (see section V.B.8.c.(5) of this final rule); Open Authorization credentialing and token request process (see section V.B.8.d of this final rule); Quality Payment Program Identity Management Application Process (see section V.B.8.e.(3) of this final rule); quality performance category data submission by Medicare Part B claims collection type (see section V.B.8.e.(4) of this final rule), QCDR and MIPS CQM collection type (see section V.B.8.e.(5) of this final rule), eCQM collection type (see section V.B.8.e.(6) of this final rule), MVP Quality submission (see section V.B.8.e.(7)(a)(iii) of this final rule), and CMS Web Interface collection type (see section V.B.8.e.(8) of this final rule); CAHPS for MIPS survey beneficiary

participation (see section V.B.8.e.(9) of this final rule); group registration for CMS Web Interface (see section V.B.8.e.(10) of this final rule); group registration for CAHPS for MIPS survey (see section V.B.8.e.(11) of this final rule); MVP registration (see section V.B.8.e.(7)(a)(i) of this final rule); subgroups registration (see section V.B.8.e.(7)(a)(ii) of this final rule); all for quality measures (see section V.B.8.f of this final rule); reweighting applications for Promoting Interoperability and other performance categories (see section V.B.8.g.(2) of this final rule); Promoting Interoperability performance category data submission (see section V.B.8.g.(3) of this final rule); call for Promoting Interoperability measures (see section V.B.8.h of this final rule); improvement activities performance category data submission (see section V.B.8.i of this final rule); nomination of improvement activities (see section V.B.8.j of this final rule); nomination of MVPs (see section

V.B.8.k of this final rule); and opt-out of Physician Compare for voluntary participants (see section V.B.8.o of this final rule).

The ICRs for Advanced APMs consist of: Partial Qualifying APM Participant (QP) election (section V.B.8.m of this final rule); Other Payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes (sections V.B.8.n.(1) and V.B.8.n.(2) of this final rule); and submission of data for QP determinations under the All-Payer Combination Option (section V.B.8.n.(3) of this final rule).

(2) Summary of Quality Payment Program Changes: MIPS

We have included the change in estimated burden for the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years due to the finalized policies and information collections in this final rule. The finalized policies in this rule impact the burden estimates for the CY 2022 and CY 2023 MIPS performance periods/2024 and 2025 MIPS payment years. However, our currently approved burden estimates for the CY 2021 performance period (85 FR 84958 through 84998) approved by OMB on May 28, 2021, included estimated burden due to finalized policies and assumptions for the CY 2021 and CY 2022 performance periods/2023 and 2024 MIPS payment years. The currently approved estimated burden for the package does not include the CY 2023 performance period/2025 MIPS payment year. To understand the burden implications of the policies finalized in this final rule relative to the current package that was approved by OMB on May 28, 2021:

- We have subtracted the burden for the policies and information collections set forth for the CY 2021 performance period/2023 MIPS payment year in the CY 2021 PFS final rule (see Table 128).
- We have revised our burden estimates for the CY 2022 performance period/2024 MIPS payment year due to the finalized policies in this rule and changes for continuing the policies and information collections set forth in the CY 2021 PFS final rule into the CY 2022 performance period/2024 MIPS payment year (see Table 129).
- We are setting forth new burden for the CY 2023 performance period/2025 MIPS payment year (see Table 130), meaning that there will be no currently approved figures for these estimates.

In the CY 2022 PFS proposed rule (86 FR 39479 through 39528), we compared our proposed burden estimates for the CY 2022 and 2023 performance periods/2024 and 2025 MIPS payment years to

the CY 2022 performance period/2024 MIPS payment year in the CY 2021 PFS final rule (85 FR 84994). We believe that using the approach described above for the final rule will help readers easily understand and follow the changes in the estimated burden due to the policies and assumptions in the CY 2022 PFS final rule relative to the currently approved burden.

The following nine MIPS ICRs show changes in burden due to the finalized policies in this rule: (1) QCDR self-nomination applications; (2) Qualified Registry self-nomination applications; (3) Quality performance category data submission by QCDR and MIPS CQM collection type; (4) Quality performance category data submission by eCQM collection type; (5) Group registration for CMS Web Interface; (6) CMS Web Interface submission burden; (7) Reweighting applications for Promoting Interoperability and other performance categories; (8) Promoting Interoperability performance category data submission; and (9) Nomination of improvement activities. In aggregate, we estimate the finalized policies will result in a net increase in burden of 3,805 hours and \$358,305 for the CY 2022 performance period/2024 MIPS payment year. The remaining changes to our currently approved burden estimates are adjustments due to the revised burden assumptions based on the updated data available at the time of publication of this final rule.

We have also added 3 new ICRs (MVP Registration, MVP Quality Submissions, and Subgroups Registration) for the associated burden related to the policies for implementation of MVPs and subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. The MVP and subgroup registration ICRs reflect the burden associated with the MVP and subgroup registration requirements described in section IV.A.3.b(4)(f) of this rule. The MVP quality submission ICR reflects the change in burden associated with the requirements for the quality performance category of MVPs described in section IV.A.3.b(4)(d)(ii) of this rule.

With these new ICRs and the other policy changes discussed for the CY 2022 performance period/2024 MIPS payment year, we estimate the finalized policies will result in a net increase in burden of 1,383,049 hours and \$139,501,770 for the CY 2023 performance period/2025 MIPS payment year. As discussed above, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no

currently approved estimates for comparison.

We are not making any changes or adjustments to the following ICRs: Registration for virtual groups; CAHPS survey vendor applications; Quality Payment Program Identity Management Application Process; group registration for CAHPS for MIPS survey; CAHPS for MIPS survey beneficiary participation; Open Authorization (OAuth) Credentialing and Token Request Process; nomination of MVPs and call for Promoting Interoperability measures. See section V.B.8. of this final rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted by two primary factors. First, we are unable to predict with absolute certainty who will be a QP for the CY 2022 performance period/2024 MIPS payment year. New eligible clinician participants in Advanced APMs who become QPs will be excluded from MIPS reporting requirements and payment adjustments, and as such, are unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity's eligible clinicians may not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict what Partial QPs, who can elect whether to report to MIPS, will do in the CY 2022 performance period/2024 MIPS payment year compared to the CY 2019 performance period/2021 MIPS payment year, and therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data. Additionally, we will continue to update our estimates annually as data becomes available.

In the 2022 PFS proposed rule (86 FR 39480), we discussed a recent JAMA article (Khullar, et al., 2021)²⁶⁴ which included new data on the burden involved in submitting data for the Quality Payment Program. We have chosen not to include this data in our estimates because of the small sample size included (30 TINs, half of which are APM participants, which we do not include in our estimates). In addition, the article did not indicate the time

²⁶⁴ JAMA Health Forum. 2021;2(5):e210527. doi:10.1001/jamahealthforum.2021.527.

spent per activity involved in submissions for MIPS, so we are unable to determine if the totals in the article represent only the activities relevant for regulatory burden or separate the totals for the individual ICRs. We solicited comment on our assumptions for estimating the burden for clinicians submitting data for the Quality Payment Program.

We did not receive public comments regarding our burden estimates for clinicians submitting data in the Quality Payment Program. We are finalizing to not include the data from the above referenced article in our assumptions.

We made updates to our figures to correct a few technical errors that we observed in the CY 2022 PFS proposed rule.

(3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs (identified above under, “ICRs Associated with MIPS and Advanced APMs”), the changes to currently approved burden estimates are adjustments based on updated projections for the CY 2022 performance period/2024 MIPS payment year. We did not implement any changes to the Other Payer Advanced APM identification: Eligible Clinician Initiated Process and submission of Data for QP determinations under the All-Payer Combination Option ICRs.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 82 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. As

shown in the first row of Table 82, MIPS eligible clinicians and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section unless otherwise noted. We want to note that we have included subgroups to Table 82 due to the introduction of subgroups for clinicians choosing to report MVPs or the APP in the CY 2023 performance period/2025 MIPS payment year described in section IV.A.3.b.(2)(d)(ii) of this final rule. Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 82.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. As discussed in section IV.A.3.c. of this final rule, for clinicians in APM Entities, the APM Performance Pathway is available for both ACO and non-ACOs to submit quality data. Due to data limitations and our inability to determine who will use the APM Performance Pathway versus the traditional MIPS submission mechanism for the CY 2022 performance period/2024 MIPS payment year, we assume ACO APM Entities will submit data through the APM Performance Pathway, using the CMS Web Interface option, and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or

group rather than as an entity. We also want to note that as finalized in section IV.A.3.d.(1)(d) of this final rule, we are finalizing to extend the CMS Web Interface as a collection type beyond the CY 2022 performance period/2024 MIPS payment year for clinicians participating in the Shared Savings Program. Per section 1899 of the Act (42 U.S.C. 1395jjj), submissions received from eligible clinicians in ACOs are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 PFS final rule, we described that for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the improvement activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 PFS final rule (82 FR 53841 through 53844).

BILLING CODE 4120-01-P

TABLE 82: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician*

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Promoting Interoperability Performance Category	Improvement Activities Performance Category	Other Data Submitted on Behalf of MIPS Eligible Clinicians
MIPS Eligible Clinicians and Other Eligible Clinicians Voluntarily Submitting MIPS Data, Participating in Shared Savings Program, and other MIPS APMs that use the APM Performance Pathway for model measures (CMS Web Interface will be available to only clinicians in ACOs after the CY 2022 performance period/2024 MIPS payment year.)	As virtual group, group, subgroup, individual clinicians, or APM Entity. ^a	<p>As virtual group, group, subgroup, individual clinicians, or APM Entity.</p> <p>Certain types of MIPS eligible clinicians are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category.</p> <p>Clinicians who submit an application and are approved for significant hardship or other exceptions are also eligible for a zero percent weighting.</p> <p>Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [The burden estimates for this final rule assume group TIN-level reporting].^b</p>	<p>As virtual group, group, subgroup, or individual clinicians.</p> <p>MIPS APMs do not submit information.</p> <p>CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM.^c</p>	<p>Groups electing to use a CMS-approved survey vendor to administer CAHPS must register.</p> <p>Groups electing to submit via CMS Web Interface for the first time must register.</p> <p>MVP participants electing to submit data for the measures and activities in an MVP must register.</p> <p>MIPS APMs electing the APM Performance Pathway. (CMS Web Interface will be available to only clinicians in ACOs after the CY 2022 performance period/2024 MIPS payment year.)</p> <p>APM Entities will make Partial QP election for participating eligible clinicians.</p> <p>Virtual groups must register via email.^d</p>

* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

^a Submissions by the ACO are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. Section 1899 of the Act (42 U.S.C. 1395jjj) states that the Shared Savings Program is not subject to the PRA.

^b Both group TIN and individual clinician Promoting Interoperability data will be accepted. If both group TIN and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. The TIN/NPI scores are then aggregated for purposes of calculating the APM Entity score.

^c The burden estimates for this final rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score. APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent (§ 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

^d Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.

BILLING CODE 4120-01-C

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules, the CY 2019, CY 2020, and CY 2021 PFS final rules, and continued in this final rule create some additional data collection requirements not listed in Table 82. These additional data

collections, some of which are currently approved by OMB under the control numbers 0938-1314 (Quality Payment Program, CMS-10621) and 0938-1222 (CAHPS for MIPS, CMS-10450), are as follows:

Additional ICRs Related to MIPS Third-Party Intermediaries (See Section V.B.8.c)

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and

83 FR 59998 through 60000) (OMB 0938–1314).

- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938–1314).

- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938–1222).

- Open Authorization Credentialing and Token Request Process (New) (OMB 0938–1314) (see section V.B.8.d).

Additional ICRs Related to the Data Submission and the Quality Performance Category (See Section V.B.8.e)

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938–1222).

- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938–1314).

Additional ICRs Related to the Promoting Interoperability Performance Category (See Section V.B.8.g)

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938–1314).

Additional ICRs Related to Call for New MIPS Measures and Activities (See Sections V.B.8.f, V.B.8.h, V.B.8.j, and V.B.8.k)

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938–1314).

- Call for new Promoting Interoperability measures (83 FR 60014 through 60015) (OMB 0938–1314).

- Call for MIPS quality measures (83 FR 60010 through 60011) (OMB 0938–1314).

- Nomination of MVPs (OMB 0938–1314).

Additional ICRs Related to MIPS (See Section V.B.8.o)

- Opt out of performance data display on Physician Compare for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938–1314).

Additional ICRs Related to APMs (See Sections V.B.8.m and V.B.8.n)

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938–1314).

- Other Payer Advanced APM determinations: Payer Initiated Process

(82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938–1314).

- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938–1314).

- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938–1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule is not implementing any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938–1343 (CMS–10652). Consequently, we are not making any changes to the virtual group election process under that control number.

c. ICRs Regarding Third-Party Intermediaries (§ 414.1400)

The finalized requirements and burden associated with this rule's data submission changes related to qualified registries and QCDRs will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In section IV.A.3.h. of this rule, we are finalizing policies related to the third-party intermediary regulations at § 414.1400. Specifically, we are finalizing: (1) Requirement for third-party intermediaries to submit MIPS data for APM Entities; (2) requirement for QCDRs and qualified registries to support MVPs, QCDRs and qualified registries may also support the APP; (3) requirement for all QCDRs and qualified registries to support subgroup reporting; (4) requirements for approved QCDRs and qualified registries that have not submitted performance data; and (5) new QCDR measure rejection criteria. The burden associated with each of these topics is discussed separately below for qualified registries, QCDRs, and survey vendors.

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey

vendor must complete a self-nomination process annually.²⁶⁵ The processes for self-nomination for entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

(2) QCDR Self-Nomination Applications

As described below, in this rule we are adjusting the number of self-nomination applications based on current data (from 82 to 84), change the number of QCDR measures submitted for consideration by each QCDR at the time of self-nomination (from 2 to 12), and adjust the average time required to submit information for each QCDR measure (from 2.5 hours to 0.75 hours).

(a) Self-Nomination Process and Other Requirements

In section IV.A.3.h.(1) of this rule, we are reorganizing and consolidating § 414.1400 generally. We assume that this provision does not change the existing requirements for third-party intermediaries during the self-nomination process. Therefore, we are not revising our burden estimates related to these provisions. We refer readers to § 414.1400 which states that QCDRs interested in submitting MIPS data to us on behalf of a MIPS eligible clinician, group, or virtual group will need to complete a self-nomination process to be considered for approval to do so. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final rule (82 FR 53906 through 53908), CY 2019 PFS final rule (83 FR 59998 through 60000), the CY 2020 PFS final rule (84 FR 63116 through 63121) and the CY 2021 PFS final rule (85 FR 84964 through 84969) for our previously finalized requirements and burden for self-nomination of QCDRs and nomination of QCDR measures.

In section IV.A.3.h.(2)(a) of this rule, we are finalizing to add APM Entities to § 414.1400(a)(1), and expand the general participation requirements of third-party intermediaries, to third-party intermediaries reporting to MIPS on behalf of APM Entities reporting to MIPS in order to align reporting requirements for all participants in

²⁶⁵ As stated in the CY 2019 PFS final rule (83 FR 59998), health IT vendors are not included in the burden estimates for MIPS.

MIPS. We are also finalizing that beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP, and MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. As finalized in the CY 2017 PFS final rule, third-party intermediaries currently support MIPS data submission on behalf of eligible clinicians (81 FR 77016). APM Entities have historically used third party intermediaries for submitting their quality measures to their APMs. Additionally, QCDRs, qualified registries and health IT vendors are required under existing § 414.1400(a)(1) to submit data for the quality, improvement activities, and Promoting Interoperability performance categories in MIPS. Therefore, we anticipate no additional steps being added to the self-nomination process as a result of this provision for third-party intermediaries to submit MIPS data on behalf of APM Entities, and to support measures and activities in MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. For this final rule, we assume that there will be no impact on the time required for QCDRs to complete either the simplified or full self-nomination process because of the above provisions. Additionally, we are finalizing to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. We anticipate that at the time of self-nomination, QCDRs would be using a checkbox to indicate their compliance to the requirement to support data submission for subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. We assume that this will not impact the overall time estimated for QCDRs to submit their information at the time of self-nomination. Therefore, as discussed in the CY 2022 PFS proposed rule (86 FR 84965) we did not make any adjustments in the time required for QCDRs during the simplified or full self-nomination process because of this provision. However, we anticipate that third-party intermediaries will need to make administrative changes to their existing workflows for submission of MVPs and APP data for clinicians participating as subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to section VI.F.18.g(2)(f) of this final rule where we discuss our impact analysis.

In section IV.A.3.h.(3)(a)(iii) of this rule, to provide further clarity and to better align with the existing policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we are finalizing to codify that QCDRs, and qualified registries must conduct validation on the data they intend to submit for the applicable MIPS performance period and provide the results of the executed data validation plan by May 31st of the year following the performance period. Additionally, we are finalizing to codify a new requirement at § 414.1400(b)(3)(iv) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and may not change the plan once approved, without the prior approval of the agency. We anticipate that this provision does not make any changes to the existing data validation requirements for QCDRs and qualified registries. Through this provision, we are codifying the finalized policies related to data validation for QCDRs and qualified registries in previous rules. In the CY 2022 PFS proposed rule (86 FR 39483), we did not revise our burden estimates as a result of the above provision because the associated burden was captured in the CY 2017 PFS final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999) and submitted to OMB for approval under control number 0938-1314 (CMS-10621).

In section IV.A.3.h.(3)(a)(i) of this final rule, we are finalizing new requirements for approved QCDRs and qualified registries that have not submitted performance data. First, we are finalizing to create a new requirement at § 414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year) through the CY 2020 performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. If the QCDRs and qualified registries did not submit data, their participation plan must be submitted as part of self-nomination for the 2023 self-nomination period and must be accepted by CMS to continue to be an approved QCDR or qualified registry. We are also finalizing to codify a new requirement at paragraph § 414.1400(b)(3)(viii) to state that, beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified

registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. Under this provision, the participation plan must explain the QCDR and/or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third-party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor.

Based on our review of the existing list of approved QCDRs that did not submit performance data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year), we estimate that approximately 10 QCDRs will submit participation plans for the CY 2022 and the CY 2023 self-nomination periods. Similar to our assumptions for submission of a Corrective Action Plan (CAP) in the CY 2021 PFS final rule (85 FR 84968), we anticipate that the effort involved in developing a participation plan including the policies specified in this rule and submitting it to CMS is likely to be no more than 3 hours for a computer systems analyst at a rate of \$95.22/hr. For the CY 2022 performance period/2024 MIPS payment year, we estimate an annual burden of 30 hours (3 hr × 10 participation plans) at a cost of \$2,857 (30 hr × \$95.22/hr) for QCDRs that will need to develop and submit a participation plan.

In section IV.A.3.h.(4) of this rule, we are finalizing to codify new requirements that if a QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. Additionally, we are finalizing to codify a new requirement in section IV.A.3.h.(4)(a)(i)(A) of this rule and add a rejection criterion at § 414.1400(b)(4)(iv)(M) to state, a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. It was finalized in the CY 2018 PFS final rule (82 FR 53813) that beginning with the CY 2018 performance period/2020 MIPS payment year, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. Additionally, in the CY 2020 PFS final rule (84 FR 63070 through 63073), we finalized the QCDR measure rejection criteria considerations. Specifically, we stated that all previously approved QCDR measures and new QCDR measures would be reviewed on an annual basis (as a part of the QCDR measure review

process that occurs after the self-nomination period closes on September 1st) to determine whether they are appropriate for the program. In the CY 2020 PFS final rule, we indicated to stakeholders that as information becomes available in future years, we will revisit our assumptions to better reflect the impact of these requirements on QCDRs and the quantity of measures annually (84 FR 63118 through 63119). As discussed in the CY 2019 PFS final rule (83 FR 60000) and CY 2020 PFS final rule (84 FR 63118), we are not accounting for QCDR measure licensing costs as part of our burden estimate.

Based on the number of QCDR measures submitted at the time of self-nomination for the CY 2021 performance period/2023 MIPS payment year, we assume that 82 QCDRs will submit 984 measures for consideration in the CY 2022 performance period/2024 MIPS payment year, approximately 12 measures per QCDR, on average. We anticipate that out of the 984 measures, 820 measures will be existing or borrowed measures, approximately 10 measures submitted per QCDR self-nomination application. The remaining 104 measures will be new measures, approximately 2 measures on average per QCDR.

Using the above assumption that each QCDR submitting measures for approval during the self-nomination process will submit approximately 12 measures (10 existing or borrowed measures + 2 new measures), we estimate an increase of 10 measures from the currently approved estimate of 2 measures per QCDR. The estimated increase in the total number of measures submitted by a QCDR at the time of self-nomination is due to the inclusion of the existing or borrowed QCDR measures in our assumptions. Additionally, we anticipate that less information is needed for a QCDR to submit an existing or borrowed measure for approval, therefore, we estimate that the time needed for a QCDR to submit an existing or borrowed measure is 0.5 hours, independent of the selection of the simplified or full self-nomination process. Consistent with our assumption in the CY 2020 PFS final rule (84 FR 63119), we continue to estimate that each QCDR will require 2 hours to submit a new QCDR measures for approval, independent of the selection of the simplified or full self-nomination process. To account for the difference in the time for submission of new vs existing QCDR measures for approval, we are using the weighted average to estimate the time required for QCDR measure submission at the time of self-nomination. Therefore, we assume that

the weighted average of the time required for each QCDR to submit a new or existing or borrowed measure for approval during the self-nomination process is 0.75 hours $[(2 \text{ new measures} \times 2 \text{ hours}) + (10 \text{ existing or borrowed measures} \times 0.5 \text{ hours})] / \text{total \# of measures (12)}$. Based on the above assumptions, we are finalizing to revise our estimates in the amount of time required for a QCDR to submit measures during the self-nomination process from a total of 2 hours to approximately 0.75 hours, a decrease of 1.75 hours from the currently approved estimated burden per QCDR measure submission.

In the CY 2019 PFS final rule, we estimated that it would take 0.5 hours and 3 hours for a QCDR to submit all the required information during the simplified and full self-nomination process, respectively (83 FR 59999). Based on our experience with the amount of time needed for QCDRs during the 2020 self-nomination period, we assume that the estimated time of 3 hours per QCDR for a full self-nomination process is an overestimate and therefore, are adjusting our estimated time required for the QCDR full-self-nomination process to 2.5 hours, a decrease of 0.5 hours. We are not making any adjustments in the amount of time needed for simplified self-nomination process.

For this final rule, we are adjusting the number of QCDRs that submitted applications for self-nomination from 90 to 84 based on the actual number of applications received during the CY 2021 self-nomination period for the CY 2022 performance period/2024 MIPS payment year, an increase of two applications from the currently approved estimate of 82. This is a decrease of 6 from the estimate of 90 provided in the CY 2022 PFS proposed rule (86 FR 39484). For QCDRs that submit measures as part of their self-nomination process, while simultaneously accounting for the estimated increase in the number of existing or borrowed QCDR measures submitted with the self-nomination application and the decrease in the estimated time for the QCDR full-nomination process, we are finalizing to revise our estimated time for the QCDR self-nomination process to a minimum of 9.5 hours $[0.5 \text{ hours for the simplified self-nomination process} + (12 \text{ measures} \times 0.75 \text{ hr/measure for QCDR measure submission})]$ and a maximum of 11.5 hours $[2.5 \text{ hours for the full self-nomination process} + (12 \text{ measures} \times 0.75 \text{ hr/measure for QCDR measure submission})]$, an increase of 4 hours at a cost of \$ 380.88 $(4 \text{ hr} \times \$95.22/\text{hr})$ and 3.5 hours at a cost of \$333.27 $(3.5 \text{ hr} \times$

\$95.22/hr) from the currently approved burden per respondent estimate in the CY 2021 PFS final rule (85 FR 84965).

Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84967), based on updated data for the number of QCDR applications submitted during the CY 2020 self-nomination period, we are adjusting our estimate that 18 QCDRs will submit targeted audits for the CY 2022 performance period/2024 MIPS payment year, an increase of 1 from the currently approved estimate of 17 targeted audits in the CY 2021 PFS final rule (85 FR 84965). This is a decrease of 2 compared to our estimate of 20 targeted audits in the CY 2022 PFS proposed rule (86 FR 39484). Using the currently approved unchanged burden per respondent estimate, the estimated burden associated with QCDRs completing targeted audits will range from 90 hours $(18 \text{ audits} \times 5 \text{ hr/audit})$ at a cost of \$8,570 $(18 \text{ audits} \times \$476.10/\text{audit})$ for the simplified self-nomination process to 180 hours $(18 \text{ audits} \times 10 \text{ hr/audit})$ at a cost of \$17,140 $(18 \text{ audits} \times \$952.20/\text{audit})$ for the full self-nomination process (see Table 68 for the cost per audit). We assume that this would adjust our burden estimates for targeted audits by +5 hours $(+1 \text{ respondents} \times 5 \text{ hr/audit})$ at a cost of \$476 $(5 \text{ hrs} \times \$95.22/\text{hr})$ and +10 hours $(+1 \text{ respondents} \times 10 \text{ hr/audit})$ at a cost of \$952 $(10 \text{ hrs} \times \$95.22/\text{hr})$ for the simplified and full self-nomination process, respectively. Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit quality measures results and numerator and denominator data on behalf of MIPS eligible clinicians.

As shown in Table 83, we assume that the staff involved in the QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$95.22/hr. Using the change in the number of respondents and the estimated time per respondent for QCDRs that submit measures for approval during the self-nomination process, the annual burden for the simplified and full-self nomination process will range from 798 hours $(84 \text{ QCDRs} \times 9.5 \text{ hr})$ to 966 hours $(84 \text{ QCDRs} \times 11.5 \text{ hr})$ at a cost ranging from \$75,986 $(798 \text{ hr} \times \$95.22/\text{hr})$ and \$91,983 $(966 \text{ hr} \times \$95.22/\text{hr})$, respectively.

As shown in Table 83, combined with our adjusted estimate of annual burden for targeted audits and the burden for submission of participation plans, we are finalizing to revise our estimated

burden for the QCDR self-nomination process, ranging from 918 hours [798 hr (84 QCDRs × 9.5 hr) + 90 hr (18 audits × 5 hr) + 30 hr (10 participation plans × 3 hr)] at a cost of \$87,413 [\$75,986 (798 hr × \$95.22/hr) + \$8,570 (18 audits

× \$476.10/audit) + \$2,857 (30 hr × \$95.22/hr)] for a simplified self-nomination process to 1,176 hours [966 hr (84 QCDRs × 11.5 hr) + 180 hr (18 audits × 10 hr) + 30 hr (10 participation plans × 3 hr)] at a cost of \$111,980

[\$91,983 (966 hr × \$95.22/hr) + \$17,140 (18 audits × \$952.20/audit) + \$2,857 (30 hr × \$95.22/hr)] for the full self-nomination process.

BILLING CODE 4120-01-P

TABLE 83: Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Minimum	Maximum
# of QCDR Simplified Self-Nomination Applications submitted (a)	84	0
# of QCDR Full Self-Nomination Applications submitted (b)	0	84
Total Applications (c)	84	84
Annual Hours Per QCDR for Simplified Process (d)	9.5	0
Annual Hours Per QCDR for Full Process (e)	0	11.5
Total Annual Hours for Self-nomination (f) = (a) * (d) and (b) * (e)	798	966
# of Hours per Completion of Targeted Audit (g)	5	10
Total Annual Hours for Completion of 18 Targeted Audits (h)	90	180
# of Hours per Submission of Participation Plan (i)	3	3
Total Annual Hours for Submission of 10 Participation Plans (j)	30	30
Total Annual Time (Hours) (k) = (f) + (h) + (j)	918	1,176
Cost Per Simplified Process Per QCDR (@ computer systems analyst's labor rate of \$95.22/hr) (l) = (d) * \$95.22/hr	\$904.60	\$904.60
Cost Per Full Process Per QCDR (@ computer systems analyst's labor rate of \$95.22/hr) (m) = (e) * \$95.22/hr	\$1,095.03	\$1,095.03
Cost Per Targeted Audit (@ computer systems analyst's labor rate of \$95.22/hr) (n) = (h) * \$95.22/hr	\$476.10	\$952.20
Cost Per Participation Plan (@ computer systems analyst's labor rate of \$95.22/hr) (o) = (j) * \$95.22/hr	\$285.70	\$285.70
Total Annual Cost (l) = (a) * (l) + (h) * 18 + (o) * 10 (min) and (b) * (l) + (h) * 18 + (o) * 10 (max)	\$87,413	\$111,980

As shown in Table 84, for the CY 2022 performance period/2024 MIPS payment year, independent of the change to our per response time estimate, the estimated increase in 2 respondents from the currently approved 82 respondents to 84 results in an increase of between +19 hours (+2 respondents × 9.5 hrs/respondent for the simplified self-nomination process) and +23 hours (+2 respondents × 11.5 hrs/respondent for the full self-nomination process) at a cost of between +\$1,809 (+2 respondents × \$904.60/respondent for the simplified self-nomination process) and +\$2,190 (+2 respondents × \$1,095.03/respondent for the full self-nomination process) (see Table 83 for the cost per QCDR).

Accounting for the change in time required for the QCDR self-nomination process results in an adjustment of between +328 hours (82 respondents × +4 hr for the simplified self-nomination process or also referred to as minimum burden) at a cost + \$31,232 [82 respondents × \$380.88 (+4 hr × \$95.22/hr/respondent) and +287 hours (82

respondents × 3.5 hr for the full self-nomination process or also referred to as maximum burden) at a cost of and +\$27,328 (82 respondents × \$333.27 (+3.5 hr × \$95.22/hr/respondent). The reason for the increase in minimum burden compared to the maximum burden is due to an increase in the change in the number of hours required for the simplified self-nomination process compared to the increase in the number of hours for the full self-nomination process.

In aggregate, when these impacts are combined with the estimate for targeted audits and participation plans discussed above, the net impact ranges between +382 hours [19 hr (+2 respondents × 9.5 hrs/respondent) + 5 hr (+1 targeted audit × 5 hrs/audit) + 30 hr (10 participation plans × 3 hr/plan) + 328 hr (82 respondents × 4 hr)] at a cost of \$36,374 (\$1,809 + \$476 + \$2,857 + \$31,232) for the simplified self-nomination process (also referred to as minimum burden) and +350 hours [23 hr (+2 respondents × 11.5 hrs/respondent) + 10 hr (+1 targeted audits

× 10 hrs/audit) + 30 hr (10 participation plans × 3 hr/plan) + 287 hr (+82 respondents × 3.5 hr)] at a cost of \$33,328 [\$2,190 (+2 respondents × \$1,095.03/respondent) + \$952 (10 hr × \$95.22/hr) + \$2,857 (30 hr × \$95.22/hr) + \$27,328 (82 respondents × \$333.27/respondent)] for the full self-nomination process (also referred to as maximum burden) for the CY 2022 performance period/2024 MIPS payment year.

As discussed above in this section of the rule, we are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year. Therefore, we estimate the total change in burden for the QCDR self-nomination process would be 918 hours at a cost of \$87,413 for the simplified self-nomination process (also referred to as minimum burden) and 1,176 hours at a cost of \$111,980 for the full self-nomination process (also referred to as maximum burden). For the purposes of calculating estimated change in burden in Tables 128, 129, and 130 of this final rule, we use only the maximum burden estimate.

TABLE 84: Change in Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Minimum Burden	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	536	826	826	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 83, row (c))	918	0	1,176	1,176
Difference (c) = (b) - (a)	+382	-826	+350	+1,176
Total Currently Approved Annual Cost (d)	\$51,038	\$78,652	\$78,652	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 83, row (e))	\$87,413	0	\$111,980	\$111,980
Difference (f) = (e) - (d)	+36,375	-\$78,652	+33,328	+\$111,980

BILLING CODE 4120-01-C**(b) QCDR Measure Requirements**

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we discussed that beginning with the CY 2018 performance period/2020 MIPS payment year and for future program years, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. Additionally, in the CY 2020 Quality Payment Program rule (84 FR 63070 through 63073) we finalized the QCDR measure rejection criteria considerations.

In section IV.A.3.h.(4)(a)(i)(A)(aa) of this rule, we are finalizing to codify a new requirement and add a rejection criterion that a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. Additionally, we are finalizing to codify new requirements that if a QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. The inactive QCDR measure owner has the option to transfer ownership of the QCDR measure to an active QCDR or agree upon terms set forth with the active QCDR allowing co-ownership of the QCDR measure. We refer readers to section IV.A.3.h.(4)(a)(i)(A) of this rule for additional details on the finalized policies for transfer of ownership of QCDR measures. This provision is to codify the existing requirements for the QCDR self-nomination process. We are not adjusting our burden estimates as result of this provision because we assume that this does not change the requirements, or the time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

Additionally, we are finalizing to codify another rejection criterion at § 414.1400(b)(4)(iv)(N) to state that, if a QCDR measure owner is not approved during a given self-nomination period, any associated QCDR measures with that QCDR will also not be approved. We are not revising our burden estimates as a result of the above provision because we assume that there will not be additional requirements for QCDRs to submit at the time of self-nomination. This is part of the measure specification requirements for QCDRs which submit measures for approval during the self-nomination process.

(3) Qualified Registry Self-Nomination Process and Other Requirements

The requirements and burden associated with this rule's data submission changes related to qualified registries will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to § 414.1400 which states that qualified registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-nomination process to be considered for approval to do so. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final rule (82 FR 53906 through 53908), CY 2019 PFS final rule (83 FR 59997 through 59998), CY 2020 PFS final rule (84 FR 63114 through 63116) and the CY 2021 PFS final rule (85 FR 84967 through 85 FR 84969) for our previously finalized requirements and burden for self-nomination of qualified registries.

In section IV.A.3.h.(1) of this rule, we are finalizing reorganization and consolidation of § 414.1400 generally. We assume that this provision does not

change the existing requirements for third-party intermediaries during the self-nomination process. Therefore, we did not revise our burden estimates related to these provisions.

In section IV.A.3.h.(2)(a) of this rule, we are finalizing to add APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third-party intermediaries, to third party intermediaries reporting to MIPS on behalf of APM Entities reporting to MIPS to align reporting requirements for all participants in MIPS. We are also finalizing that beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support APP, and MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. As finalized in the CY 2017 PFS final rule, third-party intermediaries currently support MIPS data submission on behalf of eligible clinicians (81 FR 77016). APM Entities have historically used third party intermediaries for submitting their quality measures to their APMs. Additionally, QCDRs, qualified registries and health IT vendors are required under existing § 414.1400(a)(1) to submit data for the quality, improvement activities, and promoting interoperability performance categories in MIPS. Similar to our discussion for QCDRs above, we anticipate no additional steps being added to the qualified registry self-nomination process as a result of this provision for third-party intermediaries to submit MIPS data on behalf of APM Entities, and to support measures and activities in MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. For this final rule, we assume that there will be no impact on the time required for qualified registries to complete either the simplified or full

self-nomination process because of the above provisions. Additionally, we are finalizing to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. We anticipate that at the time of self-nomination, qualified registries would be using a checkbox to indicate their compliance for the requirement to support data submission for subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. We assume that this would not impact the overall time estimated for qualified registries to submit their information at the time of self-nomination. Therefore, we are not making any adjustments in the time required for qualified registries during the simplified or full self-nomination process because of this provision. However, we anticipate that third-party intermediaries would need to make administrative changes to their existing workflows for submission of MVPs and APP data for clinicians participating as subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to section VI.F.18.g.(2)(f) of this rule where we discuss our impact analysis.

For this final rule, we are adjusting the number of qualified registries that submitted applications for self-nomination from 210 to 147 based on the number of applications received during the CY 2021 self-nomination period for the CY 2022 performance period/2024 MIPS payment year, a decrease of 36 applications from the currently approved estimate of 183. This is also a decrease of 63 from the estimate of 210 provided in the CY 2022 PFS proposed rule (86 FR 39487). Therefore, we are revising our estimates for this information collection related to the qualified registry self-nomination process. We are not making any new adjustments to the estimated burden per respondent as a result of this updated data.

Based on our estimates in the CY 2021 PFS final rule (85 FR 84967) and the updated data received for the number of qualified registries that submitted self-nomination applications, we are adjusting the estimated number of qualified registries that will submit targeted audits for the CY 2022 performance period/2024 MIPS payment year. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84967) and based on the updated data received from the CY 2021 self-nomination period, we are adjusting our estimate that 46 qualified registries will be required to conduct targeted

audits, a decrease of 10 from the currently approved estimate of 56 in the CY 2021 PFS final rule (85 FR 84965). Therefore, we estimate the total impact associated with qualified registries completing targeted audits will range from 230 hours (46 registries \times 5 hours/audit) at a cost of \$21,901 (46 registries \times \$476.10/audit) to 460 hours (46 registries \times 10 hours/audit) at a cost of \$43,801 (46 registries \times \$952.20/audit) for the simplified and full self-nomination process, respectively (see Table 83 for the cost per audit). We assume that this would adjust our burden estimates for targeted audits by – 50 hours (– 10 respondents \times 5 hr/audit) at a cost of – \$4,761 (– 50 hrs \times \$95.22/hr) and + – 100 hours (– 10 respondents \times 10 hr/audit) at a cost of – \$9,522 (– 100 hrs \times \$95.22/hr) for the simplified and full self-nomination process, respectively.

Using our currently approved time per response estimate of 3 hours, the resulting adjustment in burden for QCDRs and qualified registries to submit CAPs is 30 hours (10 respondents \times 3 hrs/respondent) at a cost of \$2,857 (30 hours \times \$95.22/hr).

In section IV.A.3.h.(3)(a)(i) of this final rule, we are finalizing new requirements for approved QCDRs and qualified registries that have not submitted performance data. First, we are finalizing to create a new requirement at paragraph at § 414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year) through the CY 2020 performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. Exceptions to this requirement may occur if data is received for the CY 2021 performance period/2023 MIPS payment year. Under this scenario, QCDRs and qualified registries will not need to submit a participation plan for the CY 2023 self-nomination process. If the QCDRs and qualified registries did not submit data, their participation plan must be submitted as part of self-nomination for the CY 2023 MIPS self-nomination period and must be accepted by CMS to continue to be an approved QCDR or qualified registry. We are also finalizing to codify a new requirement that, beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. Under this provision, the participation

plan must explain the QCDR and/or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third-party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor.

Based on our review of the existing list of approved qualified registries that did not submit performance data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year), we estimate that 19 qualified registries would submit participation plans for the CY 2023 self-nomination period. Similar to our assumptions used for submission of a CAP in the CY 2021 PFS final rule (85 FR 84968), we anticipate that the effort involved in developing a participation plan including the policies specified in this rule and submitting it to CMS is likely to be no more than 3 hours for a computer systems analyst at a rate of \$95.22/hr. For the CY 2023 performance period/2025 MIPS payment year, we estimate an annual burden of 57 hours (3 hr \times 19 participation plans) at a cost of \$5,428 (57 hr \times \$95.22/hr) for qualified registries to develop and submit a participation plan.

As stated above, based on the number of self-nominations received for the CY 2022 performance period/2024 MIPS payment year, we are finalizing to adjust the estimated number of qualified registries that will self-nominate for the CY 2022 self-nomination period to 147, a decrease of 36 from the currently approved estimate of 183 in the CY 2021 PFS final rule (85 FR 84969). In the CY 2019 PFS final rule, we estimated that it would take 3 hours for a qualified registry to submit all the required information during the full self-nomination process (83 FR 59998). Based on our experience with the self-nomination process, we believe that the number of fields needed to be submitted for a qualified registry are fewer than those needed for a QCDR. We assume that our previous assumption of 3 hours is an overestimate. Therefore, we are adjusting the estimated time required for a qualified registry submitting a full-self-nomination process to 2 hours, a decrease of 1 hour.

We assume that the staff involved in the qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$95.22/hr. Using the change in estimated burden per respondent time, associated with the self-nomination process range from a minimum of 0.5 hours to a maximum of 2 hours, we

estimate that the annual burden would range from 74 hours (147 qualified registries \times 0.5 hr) to 294 hours (147 qualified registries \times 2 hr) at a cost ranging from \$7,046 (74 hr \times \$95.22/hr) and \$27,995 (294 hr \times \$95.22/hr), respectively (see Table 85).

Both the minimum and maximum burden shown in Table 85 reflect the adjustments to the number of respondents due to availability of more recent data. Combined with our estimates of burden associated with completing targeted audits and developing and submitting participation plans and corrective action plans, our

total burden estimate ranges from 391 hours [74 hr (147 qualified registries \times 0.5 hr) + 57 hr (+19 participation plans \times 3 hr/plan) + 230 hr (46 targeted audits \times 5 hours/audit) + 30 hr (10 CAPs \times 3 hr) at a cost of \$37,232 [\$7,046 (74 hr \times \$95.22/hr) + \$5,428 (57 hr \times \$95.22/hr) + \$21,901 (46 registries \times \$476.10/audit) + \$2,857 (30 hours \times \$95.22/hr)] to 841 hours [294 hr (147 qualified registries \times 2 hr) + 57 hr (+19 participation plans \times 3 hr/plan) + 460 hr (46 targeted audits \times 10 hours/audit) + 30 hr (10 CAPs \times 3 hr)] at a cost of \$80,081 [\$27,995 (294 hr \times \$95.22/hr) + \$5,428 (57 hr \times \$95.22/hr) + \$43,801 (46

registries \times \$952.20/audit) + \$2,857 (30 hours \times \$95.22/hr) for the simple self-nomination process (see minimum burden in Table 85) and full self-nomination process (see maximum burden in Table 85) respectively.

Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

Cost Per Participation Plan (@ computer systems analyst's labor rate of \$95.22/hr) (n)	\$285.66	\$285.66
Cost per CAP (@ computer systems analyst's labor rate of \$95.22/hr) (o)	\$285.66	\$285.66
Total Annual Cost for min. (p) = (a) * (k) + (m) * 46 + (n) * 19 + (o) * 10 and max. (b) * (l) + (m) * 46 + (n) * 19 + (o) * 10	\$37,232	\$80,081

As shown in Table 86, for the CY 2022 performance period/2024 MIPS payment year, independent of the change to our per response time estimate, the estimated decrease in 36 respondents from the currently approved 183 respondents to 147 results in a change of –18 hours (–36 respondents \times 0.5 hrs/respondent) at a cost of –\$1,714 (–18 hours \times \$95.22/hr) for the simplified self-nomination process and a change of –72 hours (–36 respondents \times 2 hrs/respondent) at a cost of –\$6,856 (–72 hours \times \$95.22/hr). Accounting for the change in time required for the qualified registry self-nomination process results in an adjustment of 0 hours for the simplified self-nomination process and –183 hours (183 respondents \times –1 hours) at a cost of –\$17,425 (–183 hours \times

\$95.22/hr) for the full self-nomination process.

When the above impacts are combined with the estimates for targeted audits, participation plans and corrective action plans discussed above, the net impact ranges between –11 hours [–18 hr (–36 respondents \times 0.5 hrs/respondent) + 0 hr + –50 hr (–10 audits \times 5 hr/audit) + 57 hr (+19 participation plans \times 3 hr/plan) + 0 hr)] at a cost of –\$1,046 [(–\$1,713 (–18 hours \times \$95.22/hr) + \$0 + –\$4,761 (–50 hrs \times \$95.22/hr) + \$5,428 (+57 hr \times \$95.22/hr) + \$0)] for the simplified self-nomination process and –298 hours [(–72 hr (–36 respondents \times 2 hrs/respondent) + –183 hr (183 respondents \times –1 hours) + –100 hr (–10 audits \times 10 hr/audit) + 57 hr (+19 participation plans \times 3 hr) + 0 hr)] at a

cost of –\$28,375 [(–\$6,856 (–72 hours \times \$95.22/hr) – \$17,425 (–183 hours \times \$95.22/hr) – \$9,522 (–100 hrs \times \$95.22/hr) + \$5,428 (+57 hr \times \$95.22/hr) + \$0)] for the full self-nomination process for the CY 2022 performance period/2024 MIPS payment year.

As discussed above in this section of the rule, we are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year. Therefore, we estimate the total change in burden for the qualified registry self-nomination process would be 391 hours at a cost of \$37,232 for the simplified self-nomination process and 841 hours at a cost of \$80,081 for the full self-nomination process. For the purposes of calculating estimated change in burden in Tables 128, 129, and 130 of this final

rule, we use only the maximum burden estimate.

TABLE 86: Change in Estimated Burden for Qualified Registry Self Nomination

Burden and Respondent Descriptions	Minimum Burden	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	401.5	1,139	1,139	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 85, row (c))	391	0	841	841
Difference (c) = (b) - (a)	-11	-1,139	-298	+841
Total Currently Approved Annual Cost (d)	\$38,278	\$108,456	\$108,456	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 85, row (c))	\$37,232	0	\$80,081	\$80,081
Difference (f) = (e) - (d)	-1,046	-\$108,456	-28,375	+\$80,081

BILLING CODE 4120-01-C

We received public comments for our burden estimates related to QCDRs and qualified registries. The following is a summary of the public comments received for the Quality Payment Program ICRs regarding the burden estimates for QCDR and qualified registries.

Comment: One commenter did not agree with CMS burden estimates for audits conducted by QCDRs and qualified registries and shared their belief that the time required for a QCDR was two to three-fold more than CMS estimates. The commenter shared their concern that our estimate does not accurately represent the total amount of time it takes for a QCDR or qualified registry to conduct data audits.

Response: We would like to clarify that our burden estimates provided for the QCDR and qualified registry self-nomination process are not intended to capture the holistic total annual time for a QCDR or a qualified registry to participate in MIPS. Our burden estimate of 9.5 hours to 11.5 hours for the QCDR and 0.5 hours to 2 hours for the qualified registry self-nomination process specifically includes the estimated time it takes for a QCDR or qualified registry to populate and submit a self-nomination form and QCDR measures, if applicable. These burden estimates do not include any time needed to comply with third-party intermediary requirements outside of the self-nomination process. We believe our burden estimate is a reasonable average across all respondents based on our review of the nomination process, the information required to complete the nomination form, and the criteria required to self-nominate as a QCDR or registry.

After consideration of public comments, we are not making any

changes to our estimates of the time required for the QCDR and qualified registry self-nomination process.

(4) Survey Vendor Requirements

In section IV.A.3.h(2)(b)(ii) of this rule, we are finalizing to require CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. Because of this provision, we anticipate no additional steps being added to the requirements for CAHPS for MIPS survey vendors to submit a participation form and assume there would be no impact on the time required for the survey vendors. Therefore, we are not making any adjustments in the time required for CAHPS survey vendors to submit their information because of this provision. The requirements and burden for CAHPS survey vendors to submit data for eligible clinicians are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not making any changes to the CAHPS for MIPS Survey vendor information collection request under that control number.

(5) Health IT Vendors

In section IV.A.3.h(2)(b) of this rule, we are finalizing to create a new requirement at paragraph § 414.1400(c)(1)(iii) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. Health IT vendors may also support the APP. Additionally, we are finalizing to require health IT vendors to support subgroup reporting beginning with the CY 2023 performance period/2025 MIPS

payment year. We do not anticipate any requirement or burden changes as it relates to the support of reporting data. As stated in the CY 2019 PFS final rule (83 FR 59998), health IT vendors are not included in the burden estimates for MIPS.

d. ICR Regarding Open Authorization (OAuth) Credentialing and Token Request Process

This rule is not implementing new or revised collection of information requirements or burden related to the identity management application process. The requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not making any changes to the identity management application process under that control number.

e. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Background

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77502 through 77503), CY 2018 Quality Payment Program final rule (82 FR 53908 through 53912), CY 2019 PFS final rule (83 FR 60000 through 60003), CY 2020 PFS final rule (84 FR 63121 through 63124), and the CY 2021 PFS final rule (85 FR 84970 through 84974) for our previously finalized requirements for data submission for the quality performance category.

Under our current policies, two groups of clinicians must submit quality data under MIPS: Those who submit as MIPS eligible clinicians and those who submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly

enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

(2) Changes and Adjustments to Quality Performance Category Respondents

To determine which QPs should be excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. From this data, we calculated the QP determinations as described in the Qualifying APM Participant (QP) definition at § 414.1305 for the CY 2022 performance period/2024 MIPS payment year. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future CY 2022 performance period/2024 MIPS payment year (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the CY 2019 performance period/2021 MIPS payment year and allowing clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). As in the CY 2021 PFS final rule, we continue to use CY 2019 performance period/2021 MIPS payment year data to estimate the number of respondents in the CY 2022 PFS final rule.

There may be an undercount in submissions due to the PHE for COVID-19, because of the automatic extreme and uncontrollable circumstances policy, and application-based policy that allowed clinicians to elect not to submit during the submission period for the CY 2019 performance period/2021 MIPS payment year that we are using to inform our burden estimates. Despite this limitation, we believe the data from the CY 2019 performance period/2021 MIPS payment year is still the best data source available as it most accurately reflects the impacts of policies finalized in previous rules and trends toward increased group reporting.

In section IV.A.3.d.(1)(d) of this rule, we are finalizing to continue the CMS Web Interface measures as a collection type for the CY 2022 performance period/2024 MIPS payment year. Additionally, we are finalizing to sunset the CMS Web Interface measures as a

collection type/submission type starting with the CY 2023 performance period/2025 MIPS payment year. In the CY 2021 PFS final rule (85 FR 84981), we finalized the sunset of CMS Web Interface as a collection type for the CY 2022 performance period/2024 MIPS payment year. We refer readers to the CY 2021 PFS final rule for discussion on our assumptions for the CY 2022 performance period/2024 MIPS payment year, where we estimated a burden of zero due to our assumption that all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types. Based on the number of groups that submitted quality performance data via the CMS Web Interface in the CY 2019 performance period/2021 MIPS payment year, we are not able to ascertain what alternative collection type(s) the groups would elect. In order to estimate the number of groups that will select each of these collection types, we first clustered the number of groups which submitted data via the CMS Web Interface collection type during the CY 2019 performance period/2021 MIPS payment year by practice size (between 25 and 49 clinicians, between 50 and 99 clinicians, etc.). Then, for each cluster, we allocated these groups to each of the MIPS CQM and QCDR and eCQM collection types based on the percent of TINs that submitted MIPS data via these two collection types. For example, of the 1,629 TINs with a practice size of 25 to 49 clinicians which submitted data for the CY 2019 performance period/2021 MIPS payment year, 1,066 (65 percent) submitted data via the MIPS CQM and QCDR collection type and 563 (35 percent) submitted data via the eCQM collection type. We applied these percentages to the 7 TINs with a practice size of 25 to 49 clinicians which submitted data via the CMS Web Interface collection type for the CY 2019 performance period/2021 MIPS payment year to estimate that 4 (7 TINs \times 0.56) would elect to submit data via the MIPS CQM and QCDR collection type and the remaining 3 (7 TINs \times 0.44) would elect to submit data via the eCQM collection type. In total, beginning with the CY 2023 performance period/2025 MIPS payment year, we estimate that 64 of the 114 groups that submitted data via the CMS Web Interface collection type for the CY 2019 performance period/2021 MIPS payment year will submit quality data via the MIPS CQM and QCDR collection type and 50 groups will now submit quality data via the eCQM collection type. We note that 114 groups

are an increase of 114 from our currently approved estimate of 0 groups in the CY 2022 performance period/2024 MIPS payment year. We also performed this analysis to determine the number of clinicians that will be affected and will need to submit quality data via an alternate collection type beginning with the CY 2023 performance period/2025 MIPS payment year. In total, of the estimated 45,599 individual clinicians affected by this provision, we estimate that 11,432 will submit quality data as part of a group via the MIPS CQM and QCDR collection type and 34,167 will submit quality data as part of a group via the eCQM collection type. These estimates are reflected in Tables 90 and 92 and the associated changes in burden are reflected in Tables 91 and 93. In aggregate, as discussed in section V.B.8.p. of this final rule, we estimate the provision to sunset the CMS Web Interface measures as a collection type/submission type will result in a net decrease in quality performance data reporting burden while acknowledging the additional financial impacts on clinicians as discussed in section VI.F.18.g.(2)(a) of the Regulatory Impact Analysis. We assume that 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional reporting for ACO APM entities, consistent with assumptions used in the CY 2020 and CY 2021 PFS final rules (84 FR 63122 and 85 FR 84972), we include all quality data voluntarily submitted by MIPS APM participants at the individual or TIN-level in our respondent estimates. As stated in section V.B.8.e.(2) of this final rule, we assume non-ACO APM Entities will participate through traditional MIPS and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the CY 2022 performance period/2024 MIPS payment year, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. We elected to use this data source because the overlap with the data submissions for the CY 2019 performance period/2021 MIPS payment year enabled the exclusion of Partial QPs that elected to not participate in MIPS and required fewer assumptions as to who is a QP or not. Based on this information, if we determine that a MIPS eligible clinician will not be scored as a MIPS APM, then their reporting assumption is based on their reporting as a group or individual

for the CY 2019 performance period/2021 MIPS payment year.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The burden is excluded from this collection of information section but is discussed in the regulatory impact analysis section of this final rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.²⁶⁶ Tables 84, 85, and 86 explain our revised estimates of the number of organizations (including groups, virtual groups, and individual MIPS eligible clinicians) submitting data on behalf of clinicians segregated by collection type.

Table 87 provides our estimated counts of clinicians that will submit quality performance category data as MIPS individual clinicians or groups in the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years based on data from the CY 2019 performance period/2021 MIPS payment year.

For the CY 2022 performance period/2024 MIPS payment year, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types, and Web Interface. For the CY 2023 performance period/2025 MIPS payment year, respondents will no longer have the option to submit quality performance category data via the Web Interface. We

estimate the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, eCQMs, and the CMS Web Interface. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintaining consistency with previous rulemaking.

For the CY 2023 performance period/2025 MIPS payment year, we are finalizing in section IV.A.3.b.(2)(c) of this rule that clinicians in MIPS will have the option to submit measures and activities in MVPs. We refer readers to section IV.A.3.b.(4)(d) of this rule for additional details on the reporting requirements for MVPs. For the quality performance category of MVPs, we assume that MVP Participants will choose to report via the Medicare Part B claims, QCDR, MIPS CQMs, and eCQMs collection type. Table 99 of this rule includes the estimated burden for collecting data for the quality performance category of MVPs.

As shown in Table 87, using participation data from the CY 2019 performance period/2021 MIPS payment year, combined with the estimate of QPs for the CY 2022 performance period/2024 MIPS payment year, we estimate a total of 625,703 clinicians will submit quality data as individuals or groups in each of the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years, a decrease of 25,811 clinicians when compared to our estimate of 651,514 clinicians in the CY 2021 PFS final rule (85 FR 84972). For the CY 2022 performance period/2024 payment year, we estimate 28,252 clinicians will submit data as individuals for the Medicare Part B claims collection type; 279,247 clinicians will submit data as

individuals or as part of groups for the MIPS CQM and QCDR collection type; 273,819 clinicians will submit data as individuals or as part of groups via eCQM collection types; and 44,385 clinicians will submit as part of groups via the CMS Web Interface. Compared to the CY 2022 performance period/2024 MIPS payment year burden estimated in the CY 2021 PFS final rule (85 FR 84972), these are decreases from the estimates of 29,273, 295,941, and 326,300 for Medicare Part B claims, MIPS CQM and QCDR, eCQM, and an increase of 44,385 for the CMS Web Interface collection types, respectively. These adjustments are due to the availability of updated data from the CY 2019 performance period/2021 MIPS payment year and the delay in sunseting the CMS Web Interface from the CY 2022 performance period/2024 MIPS payment year to the CY 2023 performance period/2025 MIPS payment year. For the CY 2023 performance period/2025 MIPS payment year, we estimate 25,427 clinicians will submit data as individuals for the Medicare Part B claims collection type; 288,637 clinicians will submit data as individuals or as part of groups for the MIPS CQM and QCDR collection type; 311,326 clinicians will submit data as individuals or as part of groups via the eCQM collection type.

Table 87 provides estimates of the number of clinicians to collect quality measures data via each collection type, regardless of whether they decide to submit as individual clinicians or as part of groups. Because our burden estimates for quality data submission assume that burden is reduced when clinicians elect to submit as part of a group, we also separately estimate the expected number of clinicians to submit as individuals or part of groups.

²⁶⁶ Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.

TABLE 87: Estimated Number of Clinicians Submitting Quality Performance Category Data by Collection Type (as Individual Clinicians or as Part of Groups)

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2022 MIPS performance period (excludes QPs) (a)	28,252	279,247	273,819	44,385	625,703
* Currently approved 2022 MIPS performance period (excludes QPs) (b)	29,273	295,941	326,300	0	651,514
Difference (c) = (a) - (b)	-1,021	-16,694	-52,481	44,385	-25,811
2023 MIPS performance period prior to MVP and Web Interface adjustments (excludes QPs) (d)	28,252	295,941	326,300	0	650,493
Adjustment for Web Interface Sunset (e)	0	24,767	19,618	0	44,385
Adjustment for Shift to MVP (10% reduction) (f) = ((d) + (e)) * -.1	-2,825	-32,071	-34,592	0	-69,488
2023 after adjustments (g) = (d) + (e) + (f)	25,427	288,637	311,326	0	625,390
* Currently approved 2022 MIPS performance period (excludes QPs) (h)	N/A	N/A	N/A	0	N/A
Difference (i) = (g) - (h)	+25,427	+288,637	+311,326	-0	+625,390

*Currently approved by OMB under control number 0938-1314 (CMS-10621) from the CY 2021 PFS final rule.

Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the CY 2019 performance period/2021 MIPS payment year. We captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types.

Table 88 uses methods similar to those described to estimate the number of clinicians that will submit data as individual clinicians via each collection type in the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years. For the CY 2022 performance period/2024 MIPS payment year, we estimate that approximately 28,252 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 40,507 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 40,446 clinicians will submit data as individuals using eCQMs collection type. Based on performance data from the CY 2019 performance period/2021 MIPS payment year, these are decreases of -1,021, -833, and

-1,809 respondents from the currently approved estimates of 29,273, 41,340, and 42,255 for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, respectively.

As shown in Table 88, for the CY 2023 performance period/2025 MIPS payment year, we estimate that approximately 25,427 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 36,456 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 36,401 clinicians will submit data as individuals using eCQMs collection type. As stated above, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no currently approved estimate.

TABLE 88: Estimated Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interfa ce	Total
2022 MIPS Performance Period (excludes QPs) (a)	28,252	40,507	40,446	0	109,205
*Currently approved 2022 MIPS performance period (excludes QPs) (b)	29,273	41,340	42,255	0	112,868
Difference (c) = (a) - (b)	-1,021	-833	-1,809	0	-3,663
2023 MIPS Performance Period (excludes QPs) prior to MVP adjustment (d)	28,252	40,507	40,446	0	109,205
MVP adjustment (10% reduction) (e) = (d)*- 0.1	-2,825	4,051	-4,044	0	-10,920
2023 MIPS Performance Period (excludes QPs) (f) = (d) + (e)	25,427	36,456	36,401	0	98,285
*Currently approved 2022 MIPS performance period (excludes QPs) (g)	N/A	N/A	N/A	0	N/A
Difference (h) = (f) - (g)	+25,427	+36,456	+36,401	0	+98,285

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 88 are not mutually exclusive.

Table 89 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years. We assume that clinicians that submitted quality data as groups in the CY 2019 performance period/2021 MIPS payment year will continue to submit quality data either as groups or virtual groups for the same collection types as

they did as a group or TIN within a virtual group for the CY 2022 and 2023 performance periods/2024 and 2025 MIPS payment years. Specifically, for the CY 2022 performance period/2024 MIPS payment year we estimate that 11,529 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type on behalf of 243,169 clinicians; 8,127 groups and virtual groups will submit for eCQM collection types on behalf of 249,878 eligible clinicians; and 114 groups will submit data via the CMS Web Interface on behalf of 44,385 clinicians. These are decreases of -75 and -93 respondents from the currently approved estimates of 11,604, and 8,220 groups and virtual groups for the MIPS CQM and QCDR and eCQM collection types, and an increase of +114 groups from the currently approved estimates of 0 groups for the CMS Web Interface collection types, respectively.

As shown in Table 89, for the CY 2023 performance period/2025 MIPS payment year we estimate that 10,434 groups and virtual groups will submit

data for the MIPS CQM and QCDR collection type on behalf of 313,038 clinicians and 7,359 groups and virtual groups will submit for eCQM collection types on behalf of 339,109 eligible clinicians. As stated above, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no currently approved estimate. The reason for the difference in estimated number of respondents from the estimates for the CY 2022 performance period/2024 MIPS payment year described above, is due to the sunset of the CMS Web Interface as a collection type and the implementation of MVPs beginning with the CY 2023 performance period/2025 MIPS payment year. As the data does not exist for APM performance pathway or MIPS quality measures for non-ACO APM entities, we assume non-ACO APM Entities will participate through traditional MIPS and base our estimates on submissions received in the CY 2019 performance period/2021 MIPS payment year.

TABLE 89: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type on Behalf of Clinicians

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2022 MIPS performance period (excludes QPs) (a)	0	11,529	8,127	114	19,770
*Currently approved 2022 MIPS performance period (excludes QPs) (b)	0	11,604	8,220	0	19,824

*Currently approved by OMB under control number 0938-1314 (CMS-10621) from the CY 2021 PFS final rule.

The burden associated with the submission of quality performance category data have some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the

capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their EHR implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. For the CY 2023 performance period/2025 MIPS payment year we refer readers to section IV.A.3.b.(4)(d) of the rule for the

changes related to MVP and subgroup reporting requirements. In terms of the quality measures available for clinicians and groups to report for the CY 2022 performance period/2024 MIPS payment year, we are finalizing that the total number of quality measures will be 200. The new MIPS quality measures finalized for inclusion in MIPS for the CY 2022 performance period/2024 MIPS payment year and future years are found in Table Group A of Appendix 1; MIPS quality measures with substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures finalized for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 90, as well as counts of new, removed, and substantively changed measures.

TABLE 90: Summary of Quality Measures Finalized for the CY 2022 Performance Period/2024 MIPS Payment Year

Collection Type	# Measures Finalized as New	# Measures Finalized for Removal*	# Measures Finalized with a Substantive Change*	# Measures Finalized for CY 2022*
Medicare Part B Claims Specifications	0	-13	16	34
MIPS CQMs Specifications	+2	-13	70	174
eCQM Specifications	+1	0	41	48
Survey – CSV	0	0	0	1
CMS Web Interface Measure Specifications	0	0	10	10
Administrative Claims	+1	0	0	3
Total	+4	-13*	+87*	200*

*A measure may be specified under multiple collection types but will only be counted once in the total.

For the CY 2022 performance period/2024 MIPS payment year, we are finalizing a net reduction of 9 quality measures across all collection types compared to the 209 measures finalized for the CY 2021 performance period/2023 MIPS payment year (85 FR 84974). Specifically, as discussed in section IV.A.3.d.(1)(e) of this rule, we are finalizing to add 1 new administrative claims outcome measure, remove 13 quality measures, and make substantive updates to 87 quality measures. We do not anticipate that our provision to remove these measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for 6 measures. For the change in associated burden related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year, we refer readers to Table 99 of this section.

(3) Quality Payment Program Identity Management Application Process

This rule is not implementing any new or revised collection of information requirements or burden related to the identity management application process. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the identity management application process under that control number.

(4) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

This rule is not implementing any new or revised collection of information requirements related to the submission of Medicare Part B claims data for the quality performance category. However,

we are adjusting our currently approved burden estimates based on more recent data. For the change in associated burden related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year, we refer readers to Table 99 of this section.

The following burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77501 through 77504), CY 2018 Quality Payment Program final rule (82 FR 53912), CY 2019 PFS final rule (83 FR 60004 through 60005), CY 2020 PFS final rule (84 FR 63124 through 63126) and the CY 2021 PFS final rule (85 FR 84975 through 84976) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

As noted in Table 88, based on data from the CY 2019 performance period/2021 MIPS payment year, we assume that 28,252 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type. In this rule, we are finalizing to adjust the number of Medicare Part B claims respondents from the currently approved estimate of 29,273 to 28,252 (a decrease of 1,021) based on more recent data and our methodology of accounting only for clinicians in small practices who submitted such claims data in the CY 2019 performance period/2021 MIPS payment year rather than all clinicians who submitted quality data codes to us for the Medicare Part B claims collection type.

As shown in Table 91, consistent with our currently approved per response time figures, we estimate that the burden of quality data submission using

Medicare Part B claims will range from 0.15 hours (9 minutes) for a computer systems analyst at a cost of \$14.28 (0.15 hr × \$95.22/hr) to 7.2 hours for a computer systems analyst at a cost of \$685.58 (7.2 hr × \$95.22/hr). The burden will involve becoming familiar with MIPS quality measure specifications.

Consistent with our currently approved per response time figures, we believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours at \$114.24/hr for a medical and health services manager, 1 hour at \$217.32/hr for a physician, 1 hour at \$48.16/hr for an LPN, 1 hour at \$95.22/hr for a computer systems analyst, and 1 hour at \$40.02/hr for a billing and posting clerk. We are not revising our currently approved per response time estimates.

As shown in Table 91, considering both data submission and start-up requirements for our adjusted number of clinicians, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In this regard the total annual time for the CY 2022 performance period/2024 MIPS payment year ranges from 202,002 hours (7.15 hr × 28,252 clinicians) to 401,178 hours (14.2 hr × 28,252 clinicians). The estimated annual cost (per clinician) ranges from \$758 [(0.15 hr × \$95.22/hr) + (3 hr × \$114.24/hr) + (1 hr × \$95.22/hr) + (1 hr × \$48.16/hr) + (1 hr × \$40.02/hr) + (1 hr × \$217.32/hr)] to a maximum of \$1,429.02 [(7.2 hr × \$95.22/hr) + (3 hr × \$114.24/hr) + (1 hr × \$95.22/hr) + (1 hr × \$48.16/hr) + (1 hr × \$40.02/hr) + (1 hr × \$217.32/hr)]. The total annual cost for the CY 2022 performance period/2024 MIPS payment year ranges from a minimum of \$21,407,105 (28,252 clinicians × \$758)

to a maximum of \$40,372,673 (28,252 clinicians × \$1,429.02).

As shown in Table 91, for purposes of calculating total burden associated with the Claims collection type for the CY 2023 performance period/2025 MIPS payment year only the maximum burden is used. The decrease in the number of annual respondents results in an estimated total annual time of

361,063 hours (14.2 hr × 25,427 clinicians) for the CY 2023 performance period/2025 MIPS payment year. Using the currently approved unchanged estimate for cost per respondent, the total annual cost for the CY 2023 performance period/2025 MIPS payment year is \$36,335,692 (25,427 clinicians × \$1,429.02 per respondent).

Table 91 summarizes our estimated range of total annual burden associated with clinicians submitting quality data via Medicare Part B claims for both the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years.

BILLING CODE 4120-01-P

TABLE 91: Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

	Minimum Burden	Median Burden	Maximum Burden (CY 2022)	Maximum Burden (CY 2023)
# of Clinicians (a)	28,252	28,252	28,252	25,427
Hours Per Clinician to Submit Quality Data (b)	0.15	1.05	7.2	7.2

# of Hours Computer Systems Analyst Review Measure Specifications (d)	1	1	1	1
# of Hours LPN Review Measure Specifications (e)	1	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1	1
# of Hours Physician Review Measure Specifications (g)	1	1	1	1
Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g)	7.15	8.05	14.2	14.2
Total Annual Hours (i) = (a) * (h)	202,002	227,429	401,178	361,063
Cost to Submit Quality Data (@ computer systems analyst's labor rate of \$95.22/hr @ varying times) (j)	\$14.28	\$99.98	\$685.58	\$685.58
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$114.24/hr @ 3 hr) (k)	\$342.72	\$342.72	\$342.72	\$342.72
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$95.22/hr @ 1 hr) (l)	\$95.22	\$95.22	\$95.22	\$95.22
Cost to Review Measure Specifications (@ LPN's labor rate of \$48.16/hr @ 1 hr) (m)	\$48.16	\$48.16	\$48.16	\$48.16
Cost to Review Measure Specifications (@ billing clerk's labor rate of \$40.02/hr @ 1 hr) (n)	\$40.02	\$40.02	\$40.02	\$40.02
Cost to Review Measure Specifications (@ physician's labor rate of \$217.32/hr @ 1 hr) (o)	\$217.32	\$217.32	\$217.32	\$217.32
*Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o)	\$758	\$843	\$1,429.02	\$1,429.02
*Total Annual Cost (q) = (a) * (p)	\$21,407,105	\$23,828,302	\$40,372,673	\$36,335,692

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 91, using the unchanged currently approved hours per respondent, we estimate that the burden per respondent for quality data submission using the Medicare Part B Claims collection type will range from \$758 to \$1,429.02. The decrease in number of respondents from 29,273 to 28,252 results in a total adjustment of between -7,300 hours (-1,021 respondents × 7.15 hr/respondent) at a cost of -\$773,918 (-1,021 respondents

× \$758/respondent) and -14,498 hours (-1,021 respondents × 14.2 hr/respondent) at a cost of -\$1,459,029 (-1,021 respondents × \$1,429.02/respondent). For purposes of calculating total burden associated with this final rule as shown in Tables 125, 126, 127, and 128, only the maximum burden is used.

As shown in Table 92, for purposes of calculating total burden associated the CY 2023 performance period/2025 MIPS

payment year only the maximum burden is used. We are setting forth our CY 2023 performance period/2025 MIPS payment year estimate as new burden, which results in an increase of 361,063 hours (25,427 respondents × 14.2 hr/respondent) at a cost of \$36,355,692 (25,427 respondents × \$1,429/respondent).

TABLE 92: Adjusted Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

BILLING CODE 4120-01-C**(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types**

The following requirement and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77504 through 77505), CY 2018 Quality Payment Program final rule (82 FR 53912 through 53914), CY 2019 PFS final rule (83 FR 60005 through 60006), CY 2020 PFS final rule (84 FR 63127 through 63128), CY 2021 PFS final rule (85 FR 84977 through 84979) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types. For the change in associated burden for quality data submission related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year, we refer readers to Table 99.

As noted in Tables 84, 85, and 86, and based on data from the CY 2019 performance period/2021 MIPS payment year, for the CY 2022 performance period/2024 MIPS payment year, we assume that 279,247 clinicians will submit quality data as individuals or groups using MIPS CQM or QCDR collection types; 52,036 clinicians will submit as individuals and the remaining 279,223 clinicians will submit as members of 11,527 groups and virtual groups. This is an increase of 10,696 individuals and a decrease of 32 groups from the estimates of 41,340 individuals and the 11,559

groups provided in the CY 2021 PFS final rule (85 FR 84977). Given that the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party intermediary to submit the data to us on the clinician's or group's behalf. We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or group to review measure specifications and submit quality data is total of 9 hours at a cost of \$922.76 per response. This consists of 3 hours at \$95.22/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at \$114.24/hr for a medical and health services manager, 1 hour at \$95.22/hr for a computer systems analyst, 1 hour at \$48.16/hr for an LPN, 1 hour at \$40.02/hr for a billing clerk, and 1 hour at \$217.32/hr for a physician to review measure specifications.

Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) at \$95.22/hr for a computer systems analyst at a cost of \$7.90 (0.083 hr × \$95.22/hr). Overall, we estimate 9.083 hr/response (3 hr + 2 hr + 1 hr + 1 hr + 1 hr + 1 hr + 0.083 hr) at a cost of \$922.76/response [(3 hr × \$95.22/hr) + (2 hr × \$114.24/hr) + (1 hr × \$217.32/hr) + (1 hr × \$95.22/hr) + (1 hr × \$48.16/hr) + (1 hr × \$40.02/hr) + (0.083 hr × \$95.22/hr)].

For the CY 2022 performance period/2024 MIPS payment year, in aggregate, we estimate a burden of 472,643 hours [9.083 hr/response × (40,507 clinicians submitting as individuals + 11,527 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians or 52,036 responses)] at a cost of \$48,016,739 (52,036 responses × \$922.76/response).

For the CY 2023 performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 425,902 hours [9.083 hr/response × (36,456 clinicians submitting as individuals + 10,434 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians or 46,890 responses)] at a cost of \$43,268,216 (46,890 responses × \$922.76/response). Based on these assumptions, we have estimated in

Table 93 the burden for these submissions.

BILLING CODE 4120-01-P

TABLE 93: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

	2022 Performance Period	2023 Performance Period

Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@ computer systems analyst's labor rate of \$95.22/hr) (s)	\$7.90	\$7.90
*Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s)	\$922.76	\$922.76
*Total Annual Cost (u) = (c) * (t)	\$48,016,739*	\$43,268,216*

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 94, using the unchanged currently approved hours per respondent burden estimate, the decrease of 913 respondents from 52,944 to 52,036 for the CY 2022 performance period/2024 MIPS

payment year results in a decrease of – 8,247 hours (– 908 respondents × 9.083 hr/respondent) and – \$837,866 (908 respondents × \$922.76/respondent).

We are setting forth new burden estimates for the CY 2023 performance

period/2025 MIPS payment year, which results in an increase of 425,902 hours (46,890 respondents × 9.083 hr/respondent) and \$43,268,216 (46,890 respondents × \$922.76/respondents).

TABLE 94: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

BILLING CODE 4120-01-C

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following requirements and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77505 through 77506), CY 2018 Quality Payment Program final rule (82 FR 53914 through 53915), CY 2019 PFS final rule (83 FR 60006 through 60007), CY 2020 PFS final rule (84 FR 63128 through 63130) and the CY 2021 PFS final rule (85 FR 84979 through 84980) for our previously finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year, we refer readers to Table 99 of this section.

Based on CY 2019 performance period/2021 MIPS payment year data, for the CY 2022 performance period/2024 MIPS payment year, we assume that 322,392 clinicians will elect to use the eCQM collection type; 40,446 clinicians are expected to submit eCQMs as individuals; and 8,127 groups and virtual groups are expected to submit eCQMs on behalf of the

remaining 273,819 clinicians. This is a decrease of 2,109 individuals and 27 groups from the estimates of 42,555 individuals and 8,154 groups provided in the CY 2021 PFS final rule (85 FR 84979). We expect the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at \$95.22/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at \$114.24/hr for a medical and health services manager, 1 hour at \$217.32/hr for a physician, 1 hour at \$95.22/hr for a computer systems analyst, 1 hour at \$48.16/hr for an LPN, and 1 hour at \$40.02/hr for a billing clerk. Overall, we estimate a cost of \$812.76/response [(2 hr × \$95.22/hr) + (2 hr × \$114.24/hr) + (1 hr × \$217.32/hr) + (1 hr × \$95.22/hr) + (1 hr × \$48.16/hr) + (1 hr × \$40.02/hr)].

For the CY 2022 performance period/2024 MIPS payment year, in aggregate, we estimate a burden of 388,584 hours [8 hr × 48,573 (40,446 clinicians + 8,127 groups and virtual groups)] at a cost of \$39,812,374 (48,573 responses × \$819.64/response). For the CY 2023 performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 350,186 hours [8 hr × 43,773 (36,401 clinicians + 7,372 groups and virtual groups)] at a cost of \$35,878,102 (43,773 responses × \$819.64/response). Based on these assumptions, we have estimated in Table 95 the burden for these submissions.

BILLING CODE 4120-01-P

TABLE 95: Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type

Burden and Respondent Descriptions	CY 2022 Performance Period	CY 2023 Performance Period
# of clinicians submitting as individuals (a)	40,446	36,401
# of Groups submitting via EHR on behalf of individual clinicians (b)	8,127	7,372
# of Respondents (groups and clinicians submitting as individuals) (c)=(a)+(b)	48,573	43,773
Hours Per Respondent to Submit MIPS Quality Data File to CMS (d)	2	2
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	2	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1	1
# of Hours LPN Review Measure Specifications (g)	1	1
# of Hours Billing Clerk Review Measure Specifications (h)	1	1
# of Hours Physicians Review Measure Specifications (i)	1	1
Annual Hours Per Respondent (j) = (d) + (e) + (f) + (g) + (h) + (i)	8	8
Total Annual Hours (k) = (c) * (j)	388,584	350,186
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$95.22/hr) (l)	\$190.44	\$190.44
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$114.24/hr) (m)	\$228.48	\$228.48
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$95.22/hr) (n)	\$95.22	\$95.22
Cost to Review Measure Specifications (@ LPN's labor rate of \$48.16/hr) (o)	\$48.16	\$48.16
Cost to Review Measure Specifications (@ clerk's labor rate of \$40.02/hr) (p)	\$40.02	\$40.02
Cost to Review Measure Specifications (@ physician's labor rate of \$217.32/hr) (q)	\$217.32	\$217.32
*Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)	\$819.64	\$819.64
*Total Annual Cost (s) = (c) * (r)	\$39,812,374	\$35,878,102

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 96, using the unchanged currently approved hours per respondent burden estimate, the decrease of 1,902 respondents from 50,475 to 48,573 for the CY 2022

performance period/2024 MIPS payment year results in a total difference of ×15,216 hours at a cost of ×\$1,558,955. For CY 2023 performance period/2025 MIPS payment year, we are

setting forth our estimate as new burden, which represents an increase of 350,184 hours (43,773 respondents × 8 hr/respondent) and \$35,878,102 (43,773 respondents × \$819.64/respondent).

BILLING CODE 4120-01-C**(7) ICRs Regarding Burden for MVP Reporting**

Section IV.A.3.b.(2)(d) of this rule describes provisions related to implementing MVPs beginning with the CY 2023 performance period/2025 MIPS payment year. The MVPs will include the Promoting Interoperability performance category as a foundational element and incorporate population health claims-based measures, as feasible, along with the relevant measures and activities in the quality, cost, and improvement activities performance categories. For the CY 2023 performance period/2025 MIPS payment year, we are finalizing an inventory of seven MVPs included in Appendix 3: MVP Inventory of this rule to assess performance across MVPs for the quality, cost, improvement activities, and Promoting Interoperability performance categories. Additionally, in section IV.A.3.b.(2)(b)(i) of this rule, we are finalizing to use the term “MVP Participant” to refer to clinicians who will choose to participate in MIPS for reporting MVPs.

The following new ICRs reflect the burden associated with the first year of data collection related to the implementation of MVPs and subgroup reporting in the CY 2023 performance period/2025 MIPS payment year as described in section IV.A.3.b.(2)(c) of this rule. The requirements and burden associated with the implementation of MVPs and subgroups will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

While MVP respondents report on all performance categories, we believe that for purposes of data submission, the burden for clinicians submitting information for the Promoting Interoperability and improvement

activities performance categories of MVPs will be consistent with the currently approved estimated burden per respondent for clinicians submitting data for these performance categories in traditional MIPS. We acknowledge that clinicians participating through MVPs will have fewer requirements to meet for the improvement activity performance category as discussed in section IV.A.3.b.(4)(d)(iv) of this final rule. We assume that these requirement changes will not significantly lower the burden for clinicians reporting MVPs. Therefore, we will not add additional ICRs to capture the burden for the Promoting Interoperability and Improvement Activity performance categories. For this rule, we are finalizing to create a separate ICR for estimating the burden associated with data submission for the Quality performance category of MVPs. We considered whether we should have a separate ICR to estimate burden for submission of measures and activities in the Promoting Interoperability performance category of MVPs. Based on our assumption above that the burden for clinicians submitting information for these performance categories of MVPs will be consistent with the currently approved estimated burden per respondent for clinicians submitting data in traditional MIPS, we anticipate that the separate ICRs will not be of value to clinicians.

We solicited comment on our proposal to distinctly estimate burden only for data submission in the Quality performance category of MVPs and whether we should revise the MVP submission ICR to include all the four MIPS performance categories and whether our assumptions on Promoting Interoperability and Improvement Activities should be modified for MVPs.

We did not receive public comments on this provision. We are finalizing as proposed.

(a) Burden for MVP Quality Submission

In section IV.A.3.b.(4)(d)(ii) of this rule, we are finalizing to implement voluntary MVP reporting beginning with the CY 2023 performance period/2025 MIPS payment year. Therefore, clinicians participating in MIPS will have the option to voluntarily submit data using MVPs starting with the CY 2023 performance period/2025 MIPS payment year. While we recognize the implementation of MVPs in MIPS will result in a burden for registration, we also assume that MVP reporting will result in a decline in burden for MVP participants due to the finalized changes in the MVP reporting requirements described in section IV.A.3.b.(4)(d) of this rule. We anticipate that the clinicians choosing to participate in MIPS for reporting MVPs will need to select from a reduced inventory of measures and activities for the quality and improvement activities performance categories. This reduction in burden is described in the quality, improvement activities and Promoting Interoperability performance categories sections below.

For the ICRs related to MVP participants, we used the MIPS submission data from the CY 2019 performance period/2021 MIPS payment year. Based on our review of the inventory of 7 MVPs in Appendix 3: MVP Inventory of this rule and the existing submission trends in MIPS for the measures and activities included in these MVPs, we anticipate that 10 percent of the clinicians who participate in traditional MIPS in the CY 2022 performance period/2024 MIPS payment year will report MVPs in the CY 2023 performance period/2025 MIPS payment year. Given that MVPs are new, voluntary, and represent a

reduction in burden per response, we believe that we should be conservative in estimating the number of clinicians submitting through MVPs during the initial year. Given that MVPs are a new mechanism available for clinicians, we believe that initial participation numbers will be relatively low. In an effort to be conservative in our estimate of burden reduction due to MVP reporting and reflect the anticipate low uptake by clinicians in the first year of MVP availability, we assume that a total of 10 percent of MIPS submitters will become MVP participants in the CY 2023 performance period/2025 MIPS payment year.

As described in section IV.A.3.b.(2)(c)(ii) of this rule, beginning with the CY 2023 performance period/2025 MIPS payment year, we are finalizing voluntary subgroup reporting within MIPS limited to clinicians reporting the MVP or the APP. We recognize the implementation of subgroups for clinicians to participate in MVP and APP reporting in MIPS will result in additional burden. However, we believe that subgroup participation option will allow clinicians in certain specialties and subspecialties to report on measures and activities meaningful to the scope of care provided. We anticipate that public reporting of subgroup performance information will allow patients to identify clinicians in multispecialty groups that are representative of the care specific to their clinical condition. Clinician participation in subgroups is new to MIPS and we do not have any historical participation data to estimate the submission burden for clinicians who will choose to participate as subgroups for reporting the MVP or the APP. We refer readers to section IV.A.3.b.(3) of this final rule for details on the provisions related to subgroup composition.

We anticipate that the subgroup reporting option will increase reporting and allow clinicians in specialties to report on measures and activities meaningful to their practice. Due to the delay in implementation of subgroup reporting in the CY 2023 performance period/2025 MIPS payment year, we anticipate that there is an adequate amount of time for clinicians that historically participate in MIPS to determine if they will be able to participate as subgroups for reporting on the measures and activities in an MVP. However, due to the limited number of MVPs available for clinicians to choose, the additional burden involved in reporting, and also given the voluntary option to participate as subgroups for reporting the MVPs or the APP, we

anticipate that a relatively small number of clinicians will choose to participate as subgroups in the CY 2023 performance period/2025 MIPS payment year. Therefore, we assume there will be 20 subgroups reporters in the CY 2023 performance period/2025 MIPS payment year. We assume that more clinicians will choose to participate as subgroups in future years. We solicited comment on our MVP and subgroup reporting assumptions for the CY 2023 performance period/2025 MIPS payment year.

We received public comments on our MVP and subgroup reporting assumptions for the CY 2023 MIPS performance period/2025 MIPS payment year. The following is a summary of the comments we received and our responses.

Comment: One commenter stated that our estimate that 10 percent of eligible clinicians would report as MVP participants in the first year of implementation is low. The commenter shared their belief that the number of MVP participants would be higher because of the reduced reporting burden associated with MVP reporting.

Response: We thank the commenter for their feedback. We acknowledge the commenter's concern that our assumptions for MVP reporting are low. We agree with the commenter that MVP reporting is associated with a reduction in reporting burden. However, we believe that our estimates are appropriate because there would be a limited number of MVPs available for all clinicians during the CY 2023 performance period/2025 MIPS payment year. We expect that there would be increased participation in MVP reporting as more MVPs become available for clinicians in future years. We plan to revise our estimates for future years as more data becomes available.

After consideration of public comments, we are finalizing our proposed estimate for the number of MIPS eligible clinicians that would participate in MVP reporting during the CY 2023 performance period/2025 MIPS payment year.

(i) Burden for MVP Registration: Individuals, Groups and APM Entities

Beginning with the CY 2023 performance period/2025 MIPS payment year, we are finalizing that clinicians interested in participating in MIPS through MVP reporting would be required to complete an annual registration process described in section IV.A.3.b.(4)(f) of this rule. At the time of registration, MVP participants would need to select a specific MVP, a

population health measure and if administrative claims measures are included in the selected MVP, the MVP participants would also need to choose an applicable administrative claims measure in the MVP. We refer readers to section IV.A.3.b.(4)(f) of this rule for additional details on MVP registration requirements.

Due to the delay in implementation of MVPs to the CY 2023 performance period/2025 MIPS payment year, we anticipate that there is an adequate amount of time for clinicians that historically participate in MIPS to determine if the measures and activities in an MVP are applicable to the scope of care provided. In Table 97, we estimate that the registration process for clinicians choosing to submit MIPS data for the measures and the activities in an MVP would require 0.25 hours of a computer systems analyst's time, similar to the currently approved burden of group registration process for CMS Web Interface finalized in the CY 2021 PFS final rule (85 FR 84983) for the CY 2023 performance period/2025 MIPS payment year. We assume that the staff involved in the MVP registration process will mainly be computer systems analysts or their equivalent, who have an average labor cost of \$95.22/hour.

As discussed above, based on data from the CY 2019 performance period/2021 MIPS payment year, we assume that approximately 10 percent of the clinicians that currently participate in MIPS would submit data for the measures and activities in an MVP. Note that we apply this 10 percent calculation after adding the clinicians who begin submitting through the CQM and eCQM collection types due to the sunset of Web Interface in the CY 2023 performance period/2025 MIPS payment year. For the CY 2023 performance period/2025 MIPS payment year, we assume that a total of 25,798 submissions will be received for the measures and activities included in MVPs. This total includes our estimate of 20 subgroup reporters that would also be reporting MVPs in addition to MVP reporters who currently participate in MIPS. Therefore, we assume that the total number of individual clinicians, groups, subgroups and APM Entities to complete the MVP registration process is 12,917. We estimate that the total cost to clinicians participating as individuals and groups associated with the MVP registration process would be approximately \$307,465. Table 97 includes our burden assumptions related to the MVP registration process for clinicians participating in MIPS for

reporting MVPs as individuals, groups, subgroups, and APM Entities.

**TABLE 97: Total Estimated Burden for MVP Registration
(Individual clinicians, Groups, Subgroups and APM Entities)**

Burden and Respondent Descriptions	CY 2023 Burden Estimate
Estimated # of Individual clinicians, groups, subgroups and APM Entities Registering (a)	12,917
Estimated Total Annual Burden Hours Per Registration (b)	0.25
Estimated Total Annual Burden Hours for MVP Registration (c) = (a) * (b)	3,229*
Estimated Cost Per MVP (@ computer systems analyst's labor rate of \$95.22/hr. (d))	95.22
Estimated Total Annual Burden Cost for MVP Registration (e) = (c) * (d)	\$307,465*

*Due to burden being estimated in fractions of minutes and hours, totals may reflect impact of rounding.

(ii) Burden for Subgroup Registration

We are finalizing the proposal to add a separate ICR to estimate the burden associated with subgroup registration to capture the subgroup registration requirements in section IV.A.3.b.(4)(f)(ii)(D) of this rule. In section IV.A.3.b.(3)(b)(ii) of this rule, we finalized the definition of a subgroup at § 414.1305 as a subset of a group, as identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician's NPI. In addition to the burden for MVP registration process described above, clinicians who choose

to form subgroups for reporting the MVPs or the APP will need to submit a list of each TIN/NPI associated with the subgroup and a plain language name for the subgroup in a manner specified by CMS, described in section IV.A.3.b.(4)(f)(ii)(D) of this rule.

As discussed above, we estimate that clinicians will choose to form 20 subgroups for reporting the measures and activities in MVPs. Additionally, we estimate that clinicians who choose to participate as subgroups for reporting MVPs will require a minimum of 0.5 hours per subgroup respondent to submit the finalized requirements for

subgroup registration. We assume that the staff involved in the subgroup registration process will mainly be computer systems analysts or their equivalent, who have an average labor cost of \$95.22/hr.

We assume that all subgroups would report MVPs, the burden associated with subgroup quality reporting will be included with the MVP quality reporting ICR. The burden associated with subgroup submissions for Promoting Interoperability and improvement activities will be included with those ICRs.

TABLE 98: Total Estimated Burden for Subgroup Registration CY 2023 Performance Period/2025 MIPS Payment Year

Burden and Respondent Descriptions	CY 2023 Burden Estimate
Estimated # of Subgroups Registering(a)	20
Estimated Total Annual Burden Hours Per Subgroup (b)	0.5
Estimated Total Annual Burden Hours for Subgroup Reporting (c) = (a) * (b)	10
Estimated Cost Per Subgroup (@ computer systems analyst's labor rate of \$95.22/hr. (d))	\$95.22
Estimated Total Annual Burden Cost for Subgroup Registration (e) = (a) * (d)	\$952

(iii) Burden for MVP Quality Performance Category Submission

In the CY 2017 PFS final rule (81 FR 77100 through 77114), we established the submission criteria for quality measures (excluding the CMS Web

Interface measures and the CAHPS for MIPS survey measure) at § 414.1335, which requires a MIPS eligible clinician, group, or virtual group that is reporting on Qualified Clinical Data Registry (QCDR) measures, MIPS clinical quality measures (MIPS CQMs),

electronic CQMs (eCQMs), or Medicare Part B claims measures to submit data on at least six measures, including at least one outcome measure. As discussed in section IV.A.3.b.(4)(d)(ii) of this final rule, we finalized the proposal that except as provided in paragraph

§ 414.1365(c)(1)(i), an MVP Participant must select and report 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure, included in the MVP. The decrease in the number of required measures in the quality performance category from 6 to 4 is a two-thirds reduction in the number of measures needed for eligible clinicians to submit data for the quality performance category in MVPs described in Appendix 3: MVP Inventory of this final rule. Therefore, we estimate that the time for submitting the measures in the MVP quality performance category would, on average, take two-thirds of the currently approved burden per respondent for the quality performance category as it does to complete a MIPS quality submission through the CQM, eCQM, and Claims submission types.

As described above in this section of the final rule, we estimate that 10 percent of the clinicians who participated in MIPS for the CY 2019 performance period/2021 MIPS payment year would submit data for the quality performance category of MVPs beginning with the CY 2023 performance period/2025 MIPS payment year. We anticipate that there would be 20 subgroups reporters in the CY 2023 performance period/2025 MIPS payment year. As shown in Table 99, we estimate that approximately 2,825 clinicians would submit data for the MVP quality performance category using the Medicare Part B claims collection type; approximately 5,210 clinicians and 10 subgroups would submit data using MIPS CQM and QCDR collection type; and approximately 4,862 clinicians and 10 subgroups would submit data using

eCQMs collection type. We want to note that we used the same methodologies used in sections V.B.8.e.(4), V.B.8.e.(5) and V.B.8.e.(6) to estimate the quality submission burden for each collection type. As shown in Table 99, for the clinicians and subgroups submitting data for the MVP quality performance category, we estimate a burden of 26,670 hours ($9.44 \text{ hr} \times 2,825 \text{ clinicians}$) at a cost of \$2,691,329 ($2,825 \text{ respondents} \times 952.68/\text{respondent}$) for the Medicare Part B claims collection type, 31,163 hours [$5.97 \text{ hr} \times 5,220 (5,210 + 10)$] at a cost of \$3,211,216 ($5,220 \times 615.18/\text{respondent}$) for the MIPS CQM and QCDR collection type, and 25,822 hours [$5.3 \text{ hr} \times 4,872 (4,862 + 10) \text{ respondents}$] at a cost of \$2,662,191 ($4,872 \times 546.43/\text{respondent}$) for the eCQM collection types.

BILLING CODE 4120-01-C**(8) Quality Data Submission via CMS Web Interface**

The finalized requirements and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

Background

In the CY 2021 PFS final rule, we finalized our policy to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2022 performance period/2024 MIPS payment year. As a result of this provision, for the CY 2022 performance period/2024 MIPS payment year, we estimated a burden of zero due to our assumption that all Web Interface respondents will alternately utilize

either the MIPS CQM and QCDR or eCQM collection types (85 FR 84981).

In section IV.A.3.d.(1)(d) of this rule, we are finalizing to continue the CMS Web Interface measures as a collection type for the CY 2022 performance period/2024 MIPS payment year. Additionally, we are finalizing to sunset the CMS Web Interface measures as a collection type for the CY 2023 performance period/2025 MIPS payment year. For this final rule, we estimate burden for the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years.

For the CY 2022 performance period/2024 MIPS payment year, we assume that 114 groups will submit quality data via the CMS Web Interface based on the number of groups who completed 100

percent of reporting quality data via the Web Interface in the CY 2019 performance period/2021 MIPS payment year. This is an increase of 114 groups from the currently approved number of 0 groups provided in the CY 2021 PFS final rule (85 FR 84981 due to the provision to continue with the CMS Web Interface as a collection type for the CY 2022 performance period/2024 MIPS payment year. We estimate that 44,385 clinicians will submit as part of groups via this method, an increase of 44,385 from our currently approved estimate of 0 clinicians.

The estimated burden associated with the group submission requirements is the time and effort associated with submitting data on a sample of the organization's beneficiaries that is

prepopulated in the CMS Web Interface. Our burden estimate for submission includes the time (61 hours and 40 minutes or 61.67 hours) needed for each group to populate data fields in the web interface with information on approximately 248 eligible assigned Medicare beneficiaries and submit the data (we will partially pre-populate the CMS Web Interface with claims data from their Medicare Part A and B beneficiaries). The patient data either can be manually entered, uploaded into the CMS Web Interface via a standard

file format, which can be populated by CEHRT, or submitted directly. Each group must provide data on 248 eligible assigned Medicare beneficiaries (or all eligible assigned Medicare beneficiaries if the pool of eligible assigned beneficiaries is less than 248) for each measure. In aggregate, we estimate a burden for the CY 2022 performance period/2024 MIPS payment year of 7,030 hours (114 groups × 61.67 hr) at a cost of \$669,433 (114 groups × \$5,872.21/group). For the CY 2023 performance period/2025 MIPS

payment year, we are finalizing to revise our estimated burden to zero due to our assumption that with the finalized policy to sunset the CMS Web Interface as a collection type, all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types. Based on the assumptions discussed in this section, Table 100 summarizes the finalized estimated burden for groups submitting to MIPS via the CMS Web Interface.

TABLE 100: Estimated Burden for Quality Data Submission via the CMS Web Interface

Total Currently Approved Annual Cost (d)	\$651,816	\$0	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (see Table 100, row (e))	0	\$669,433	0
Difference (f) = (e)-(d)	-\$651,816	+\$669,433	0

(9) Beneficiary Responses to CAHPS for MIPS Survey

This rule is not implementing any new or revised collection of information requirements or burden related to the CAHPS for MIPS survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any changes to the CAHPS for MIPS Survey process under that control number.

(10) Group Registration for CMS Web Interface

The finalized requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2021 PFS final rule, we finalized to sunset the CMS Web Interface measures as a collection type/ submission type starting with the CY 2022 performance period/2024 MIPS payment year. As a result, we estimated that there will be zero hours and \$0

burden for group registration for the CMS Web Interface for the CY 2022 performance period/2024 MIPS payment year (85 FR 84984). As discussed in section IV.A.3.d.(1)(d) of this final rule, we are finalizing to continue the CMS Web Interface measures as a collection type for the CY 2022 performance period/2024 MIPS payment year. We are also finalizing to sunset the CMS Web Interface as a collection type starting with the CY 2023 performance period/2025 MIPS payment year.

Groups interested in participating in MIPS using the CMS Web Interface for the first time must complete an online registration process. After first time registration, groups will only need to opt out if they are not going to continue to submit via the CMS Web Interface. In Table 102, we estimate that the registration process for groups under MIPS involves approximately 0.25 hours at \$95.22/hr for a computer systems analyst (or their equivalent) to register the group.

Because we are finalizing to sunset the CMS Web Interface beginning with the CY 2023 performance period/2025 MIPS payment year, it is possible that fewer groups will elect to register to submit quality data for the first time in the performance year prior to the collection type/submission type no longer being available; however, we currently have no data with which to estimate what the associated reduction may be. Consistent with our assumptions in the CY 2021 PFS final

rule (85 FR 84983), we continue to assume that approximately 90 groups will elect to use the CMS Web Interface for the first time during the CY 2022 performance period/2025 MIPS payment year based on the estimated number of new registrations during the CY 2021 performance period/2023 MIPS payment year. As shown in Table 102, we estimate a burden of 23 hours (90 new registrations × 0.25 hr/registration) at a cost of \$2,190 (22.5 hr × \$95.22/hr).

TABLE 102: Estimated Burden for Group Registration for CMS Web Interface

Burden and Respondent Descriptions	Burden Estimate
Number of New Groups Registering for CMS Web Interface (a)	90
Annual Hours Per Group (b)	0.25
Total Annual Hours (c) = (a) * (b)	23
Labor rate for a computer systems analyst (d)	\$95.22/hr
Total Annual Cost (e) = (a) * (d)	\$2,190

As shown in Table 103, the estimated increase in the number of groups registering for the CMS Web Interface collection type to submit the MIPS data and the estimated increase in burden

per respondent results in adjustment to the total time burden of +23 hours (+90 respondents × 0.25 hr/respondent) at a cost of \$2,190 for the CY 2022 performance period/2024 MIPS

payment year. For the CY 2023 performance period/2025 MIPS payment year, our finalized burden estimate is zero hours and \$0.

TABLE 103: Change in Estimated Burden for Group Registrations for the CMS Web Interface

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	22.5	0	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 102, row (c))	0	23	0
Difference (c) = (b) - (a)	-22.5	+23	0
Total Currently Approved Annual Cost (d)	\$2,142	0	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 102, row (e))	0	\$2,190	0
Difference (f) = (e) - (d)	-\$2,142	+\$2,190	0

(11) Group Registration for CAHPS for MIPS Survey

This rule is not implementing any new or revised collection of information requirements or burden related to the group registration for the CAHPS for MIPS Survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any changes to the CAHPS for

MIPS Survey registration process under that control number.

f. ICRs Regarding the Call for MIPS Quality Measures

This rule is not implementing any new or revised collection of information requirements or burden related to the call for MIPS quality measures. However, outside of the rulemaking process we replaced the existing tool for stakeholders beginning with the 2021

Annual Call for Measures. As described below, to account for the updated tool (MERIT), we are finalizing to revise our currently approved burden estimates. The updated tool and revised burden will be submitted to OMB under control number 0938–1314 (CMS–10621).

Beginning with the 2021 Annual Call for Measures, we replaced the customary Office of the National Coordinator (ONC) Issue Tracking System Jira platform that stakeholders

used to submit candidate quality measure specifications and all supporting data files for CMS review with the MUC Entry/Review Information Tool (MERIT). For the ONC Issue Tracking System Jira platform used by stakeholders, the approved estimated time for a practice administrator to identify, propose, and link to a quality measure is 0.9 hours and for a clinician to identify, propose, link to quality measure, and complete the Peer Review Journal Article form is 4.6 hours (0.6 hours to identify, propose, and link to quality measure (84 FR 63132) and 4 hours to complete the Peer Review Journal Article Form (84 FR 63133), with a total estimated time of 5.5 hours per quality measure submission. Based on the stakeholder experience with the updated tool and additional information collected at the time of submission, we estimate that it will add approximately 1.5 hours for the practice administrator at \$114.24/hr and 0.5 hours at \$217.32/hr for a clinician to

identify, propose, and link the quality measure, and reduce approximately 2 hours at \$217.32/hr for a clinician to complete the Peer Review Journal Article Form, resulting in a new estimated time of 2.4 hours for a practice administrator and 3.1 hours for a clinician, and an unchanged total estimated time of 5.5 hours per quality measure submission. In order to account for the implementation of the MERIT tool starting with the 2021 Annual Call for Measures, we are revising the estimated time required for a practice administrator to identify, propose, and link to a quality measure to 2.4 hours (from 0.9 hr) and a clinician to identify, propose, link to quality measure, and complete the Peer Review Journal Article Form to 3.1 hours (from 4.6 hr), resulting in a total estimated time of 5.5 hours per quality measure submission. Based on the number of submissions received during the CY 2020 Call for Quality Measures process, we anticipate receiving the same number of 28

submissions during the CY 2021 Call for Quality Measures process (84 FR 63132).

Although the total estimated time of 5.5 hours for completing a quality measure submission using the MERIT tool (see Table 104) is the same estimated time as the ONC Issue Tracking System Jira platform, we need to account for the changes to the individual components of the estimated time required by a practice administrator and clinician using the MERIT tool. Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84984), we estimate an annual burden of 154 hours (28 submissions \times 5.5 hr/measure). Thus, we are finalizing to adjust our estimated annual burden from \$30,197 (28 submissions \times [(0.9 hr \times \$110.74/hr) + (4.6 hr \times \$212.78/hr)] to \$26,541 (28 measures \times [(2.4 hr \times \$114.24/hr) + (3.1 hr \times \$217.32/hr)]) a difference of –\$4,329 for the CY 2022 performance period/2024 MIPS payment year.

TABLE 104: Estimated Burden for Call for Quality Measures

	Burden estimate
# of New Quality Measures Submitted for Consideration (a)	28
# of Hours per Practice Administrator to Identify, Propose and Link Measure (b)	2.4
# of Hours per Clinician to Identify and Link Measure (c)	1.1
# of Hours per Clinician to Complete Peer Review Article Form (d)	2
Annual Hours Per Response (e) = (b) + (c) + (d)	5.5
Total Annual Hours (f)=(a)*(e)	154
Cost to Identify and Submit Measure (@ practice administrator's labor rate of \$114.24/hr) * 2.4 hr = (g)	\$274.20
Cost to Identify Quality Measure and Complete Peer Review Article Form (@ clinician's labor rate of \$217.32/hr) * 3.1 hr = (h)	\$673.69
Total Annual Cost Per Submitted Measure (i)	\$947.89
Total Annual Cost (j)=(a)(i)	\$26,541

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 105, using our currently approved burden estimates, the redistribution of the estimated time needed for the clinician and practice administrator as discussed above, we

are estimating an adjustment of 0 hours at a cost of –\$4,329 for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023

performance period/2025 MIPS payment year, which results in an increase of \$26,541 (28 measures \times \$947.89/respondent).

TABLE 105: Change in Estimated Burden for Call for Quality Measures

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	154	154	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 104, row (c))	0	154	154
Difference (c) = (b) - (a)	-154	0	+154
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	\$30,870	\$30,870	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 104, row (e))	0	\$26,541	\$26,541
Difference (f) = (e) - (d)	-\$30,870	-\$4,329	+\$26,541

g. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the CY 2022 performance period/2024 MIPS payment year, clinicians and groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, which is not available for the quality performance category, we anticipate that individuals and groups will use the same data submission type for both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. Although this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis, and decisions are expected to be made for the program as a whole.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

The finalized requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53918 through 53919), CY 2019 PFS

final rule (83 FR 60011 through 60012), CY 2020 PFS final rule (84 FR 63134 through 63135), and the CY 2021 PFS final rule (85 FR 84984 through 84985) for our previously finalized requirements and burden for reweighting applications for Promoting Interoperability and other performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an application requesting a zero percent weighting for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785). Respondents who apply for a reweighting of the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting of the Promoting Interoperability performance category on the same online form. We assume that respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

Table 106 summarizes the burden for clinicians to apply for reweighting of the Promoting Interoperability performance category to zero percent due to a significant hardship exception or as a result of a decertification of an EHR. Based on the number of reweighting applications received by March, 2021 for the CY 2020 performance period/2022 MIPS

payment year, we assume 20,192 respondents (eligible clinicians or groups) will submit a request to reweight the Promoting Interoperability performance category to zero percent due to a significant hardship or EHR decertification and an additional 22,635 respondents will submit a request to reweight one or more of the quality, cost, Promoting Interoperability, or improvement activities performance categories due to an extreme or uncontrollable circumstance. For the CY 2022 performance period/2024 MIPS payment year, we estimate that a total of 42,797 reweighting applications will be submitted. This is a decrease of 9,302 respondents compared to our currently approved estimate of 52,099 respondents (85 FR 84984). This decrease is likely due to the provision in section IV.A.3.e.(2)(b)(iv)(A) of this rule to automatically reweight the Promoting Interoperability performance category for small practices who previously had to apply for reweighting. For the CY 2020 performance period/2024 MIPS payment year, 13,894 respondents requested reweighting due to significant hardship for small practices. Similar to the data used to estimate the number of respondents in the CY 2021 PFS final rule, our respondent estimate includes a significant number of applications submitted as a result of a data issue CMS was made aware of and is specific to a single third-party intermediary. While we do not anticipate similar data issues to occur in each performance period, we do believe future similar incidents may occur and are electing to use this data without adjustment to reflect this belief. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84984), our respondent estimate does not include reweighting

applications submitted during the extended period ending November 29, 2021 due to the PHE for COVID-19, as we do not believe it would be an accurate basis of future estimates for reweighting application submissions. We assume that, out of our total respondent count of 42,797 above, we estimate that 22,605 respondents (eligible clinicians or groups) will submit a request for reweighting the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR.

In the CY 2021 PFS final rule (85 FR 84984) we discussed that, beginning with the CY 2019 performance period/2021 MIPS payment year, APM Entities

may submit an extreme and uncontrollable circumstances exception application for all four performance categories and applicable to all MIPS eligible clinicians in the APM Entity group. As discussed in this section of this final rule, due to data limitations and our inability to determine who will use the APP versus the traditional MIPS submission mechanism for the CY 2022 performance period/2024 MIPS payment year, we assume ACO APM Entities will submit data through the APP and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. Therefore, we limited our analysis to ACOs that were eligible for an exception due to extreme and uncontrollable circumstances during the CY 2020 performance period/2022 MIPS

payment year and elected not to report quality data. Based on this data, we estimate that 30 APM Entities will submit an extreme and uncontrollable circumstances exception application for the CY 2022 performance period/2024 MIPS payment year. Combined with our aforementioned estimate of 42,797 eligible clinicians and groups, the total estimated number of respondents for the CY 2022 performance period/2024 MIPS payment year is 42,827.

Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84984–84985), we continue to estimate it will take 0.25 hours for a computer system analyst to complete and submit the application. As shown in Table 106, we estimate an annual burden of 10,707 hours (42,827 applications \times 0.25 hr/application) and \$1,019,521 (10,707 hr \times \$95.22/hr).

TABLE 106: Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

Burden and Respondent Descriptions	Burden Estimate
# of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions or Extreme and Uncontrollable Circumstances (a)	42,797
# APM Entities requesting Extreme and Uncontrollable Circumstances exception (b)	30
Total Applications Submitted (c)	42,827
Hours Per Applicant per Application Submission (d)	0.25
Total Annual Hours (e) = (a) * (c)	10,707
Labor Rate for a computer systems analyst (f)	\$95.22/hr
Total Annual Cost (g) = (e) * (f)	\$1,019,521

As shown in Table 107, using our currently approved burden estimates, the decrease in the estimated number of respondents (from 52,099 to 42,827 respondents) results in an adjustment of minus 2,318 hours (9,272 respondents \times

0.25 hr/respondent) and minus \$220,720 for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an

increase of 10,707 hours (42,827 respondents \times 0.25 hr/respondent) and \$1,019,521 (10,707 hours \times \$95.22/respondents).

TABLE 107: Adjusted Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	13,025	13,025	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 106, row (c))	0	10,707	10,707
Difference (c) = (b) - (a)	-13,025	-2,318	+10,707
Total Currently Approved Annual Cost (d)	\$1,240,241	\$1,240,241	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 106, row (e))	0	\$1,019,521	\$1,019,521
Difference (f) = (e) - (d)	-\$1,240,241	-\$220,720	+\$1,019,521

(3) Submitting Promoting Interoperability Data

The requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77509 through 77511), CY 2018 Quality Payment Program final rule (82 FR 53919 through 53920), CY 2019 PFS final rule (83 FR 60013 through 60014), CY 2020 PFS final rule (84 FR 63135 through 63137), and the CY 2021 PFS final rule (85 FR 84985 through 84987) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category.

In section IV.A.3.d.(4)(d)(ii) of this final rule, we are finalizing the additional requirement that MIPS eligible clinicians must attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides beginning with the CY 2022 performance period/2024 MIPS payment year. Clinicians will complete this attestation by checking a box when they submit their Promoting Interoperability performance category

data. We estimate that this requirement will add an additional minute to the current estimated time it takes to complete the submission of Promoting Interoperability data. In the CY 2022 PFS proposed rule, we assumed no change in estimates as result of the proposal to modify the Provide Patients Electronic Access to Their Health Information measure to require MIPS eligible clinicians to ensure that patient health information remains available to the patient (or patient-authorized representative) to access indefinitely (86 FR 39509). As discussed in section IV. of this final rule, this policy is not being finalized as proposed at this time.

As shown in Table 108, based on data from the CY 2019 performance period/2021 MIPS payment year, we estimate that a total of 51,647 respondents consisting of 40,172 individual MIPS eligible clinicians and 11,475 groups and virtual groups will submit Promoting Interoperability data. Since our CY 2021 PFS final rule estimated 53,636 respondents, this represents a decrease of 1,989 respondents (51,647 respondents – 53,636 active respondents).

We assume that MIPS eligible clinicians previously scored under the

APM scoring standard, as described in the CY 2020 PFS final rule, will continue to submit Promoting Interoperability data (84 FR 63006) in a similar way through the APP. As a result, we do not anticipate any change in burden. Each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA. However, in the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822 through 59823). Burden estimates for this final rule assume group TIN-level reporting as we believe this is the most reasonable assumption for the Shared Savings Program, which requires that ACOs include full TINs as ACO participants.

TABLE 108: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data on Behalf of Clinicians in CY 2022

Burden and Respondent Descriptions	# of Respondents
Number of individual clinicians to submit Promoting Interoperability (a)	40,172
Number of groups to submit Promoting Interoperability (b)	11,475
Total Respondents in CY 2022 performance period (CY 2022 PFS Final Rule) (c) = (a) + (b)	51,647
*Total Respondents in CY 2021 performance period (CY 2021 PFS Final Rule) (d)	53,636
Difference (e) = (c) – (d)	-1,989

As discussed in section IV.A.3.b.(2)(c)(ii) of this final rule, we will be introducing subgroup reporting in CY 2023 performance period/2025 MIPS payment year. As we discussed

above in this section of the final rule, we estimate that there will be 20 subgroup submissions in CY 2023 performance period/2025 MIPS payment year, each of which will have

burden related to the submission of Promoting Interoperability data. We have included this burden in Table 109.

TABLE 109: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data on Behalf of Clinicians in CY 2023

Burden and Respondent Descriptions	# of Respondents
Number of individual clinicians to submit Promoting Interoperability in CY 2023 (a)	40,172
Number of groups to submit Promoting Interoperability in CY 2023 (b)	11,475
# of Subgroups to submit Promoting Interoperability in MVPs during the CY 2023 MIPS performance period (c)	20
Total Respondents in 2023 MIPS performance period (CY 2022 PFS Final Rule) (d) = (a) + (b) + (c)	51,667
*Total Respondents in 2021 MIPS performance period (CY 2021 PFS Final Rule) (e)	0
Difference (f) = (d) – (e)	+51,667

With the inclusion of the additional minute (0.02 hr) to attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides, we are adjusting our estimate of the time required for an individual or group to submit Promoting Interoperability data

from 2.67 hours to 2.69 hours (2.67 hr + 0.02 hr). As shown in Table 110, the total burden estimate for submitting data on the specified Promoting Interoperability objectives and measures is estimated to be 138,930 hours (51,647 respondents × 2.69 incremental hours

for a computer analyst's time above and beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and \$13,228,915 (138,930 hr × \$95.22/hr)).

TABLE 110: Estimated Burden for Promoting Interoperability Performance Category Data Submission in CY 2022

Burden and Respondent Descriptions	Burden Estimate
Number of individual clinicians to submit Promoting Interoperability (a)	40,172
Number of groups to submit Promoting Interoperability (b)	11,475
Total (c) = (a) + (b)	51,647
Total Annual Hours Per Respondent (d)	2.69
Total Annual Hours (e) = (c) * (d)	138,930
Labor rate for a computer systems analyst to submit Promoting Interoperability data (f)	\$95.22/hr
Total Annual Cost (g) = (e) * (f)	\$13,228,915

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 111, with the introduction of subgroup reporting in CY 2023 performance period/2025 MIPS payment year, the total burden for submitting data on the specified

Promoting Interoperability objectives and measures is estimated to be 138,984 hours (51,667 respondents × 2.69 incremental hours for a computer analyst's time above and beyond the

physician, medical and health services manager, and computer system's analyst time required to submit quality data) and \$13,234,078 (138,984 hr × \$95.22/hr)).

TABLE 111: Estimated Burden for Promoting Interoperability Performance Category Data Submission in CY 2023

Burden and Respondent Descriptions	Burden Estimate
Number of individual clinicians to submit Promoting Interoperability (a)	40,172
Number of groups to submit Promoting Interoperability (b)	11,475
Number of subgroups to submit Promoting Interoperability (c)	20
Total (d) = (a) + (b) + (c)	51,667
Total Annual Hours Per Respondent (e)	2.69
Total Annual Hours (f) = (d) * (e)	138,984
Labor rate for a computer systems analyst to submit Promoting Interoperability data (g)	\$95.22/hr
Total Annual Cost (h) = (f) * (g)	\$13,234,078

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

Table 112, using our updated per respondent burden estimate (+0.02 hr/response), the decrease in number of respondents and SAFER guide attestation requirement results in a total adjustment of –4,278 hours at a cost of –\$407,351 for the CY 2022 performance

period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 138,984 hours (51,667 respondents × 2.69 incremental hours for a computer analyst's time above and

beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and \$13,234,078 (138,984 hours × \$95.22/hour).

TABLE 112: Change in Estimated Burden for Promoting Interoperability Performance Category Data Submission

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance period
Total Currently Approved Annual Hours (a)	143,208	143,208	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (see Table 111, row (f))	0	138,930	138,984

Total Currently Approved Annual Cost (d)	\$13,636,266	\$13,636,266	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (see Table 111, row (h))	0	\$13,228,915	\$13,234,078
Difference (f) = (e) - (d)	-\$13,636,226	-\$407,351	+\$13,234,078

h. ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule is not implementing any new or revised collection of information requirements or burden related to the nomination of Promoting Interoperability measures. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the process for nomination of Promoting Interoperability measures under that control number.

i. ICR Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

The finalized requirements and burden will be submitted to OMB for

approval under control number 0938–1314 (CMS–10621). We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77511 through 77512), CY 2018 Quality Payment Program final rule (82 FR 53920 through 53922), CY 2019 PFS final rule (83 FR 60015 through 60017), CY 2020 PFS final rule (84 FR 63138 through 63140) and the CY 2021 PFS final rule (85 FR 84987 through 84989) for our previously finalized requirements and burden for submission of data for the improvement activities performance category.

In section IV.A.3.d.(3) of this rule, we are finalizing to: (1) Revise group reporting requirements for the 50 percent threshold to address subgroups; (2) add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously

adopted improvement activities for the CY 2022 performance period/2024 MIPS payment year and future years; (3) revise the “Drug Cost Transparency to include requirements for use of real-time benefit tools” improvement activity; and (4) add the COVID–19 “Clinical Data Reporting with or without Clinical Trial” improvement activity for CY 2022 performance period/2024 MIPS payment year and future years. Additionally, we are finalizing to adjust our currently approved burden estimates based on more recent data.

Specifically, we are finalizing to revise § 414.1360(a)(2) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, each improvement activity for which groups and virtual

groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group's TIN or virtual group's TINs or that are part of the subgroup, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance year. In section IV.A.3.d.(3)(b) of this rule, we discussed stakeholder requests through the Quality Payment Program help desk to apply the 50 percent threshold to a portion of clinicians in a group. We anticipate that clinicians will find applicable and meaningful activities specific to practice size, specialty, or practice setting. Therefore, we assume that the provision to apply the 50 percent minimum threshold to clinicians who submit for the improvement activity performance category as part of groups, virtual groups, or choose to participate as

subgroups beginning with the CY 2023 performance period/2025 MIPS payment year will not present additional complexity or burden.

We do not believe the changes to the improvement activities inventory will impact time or financial burden on stakeholders because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. Therefore, we are not adjusting the estimated time of 5 minutes (per response) currently approved for improvement activities submission.

As represented in Table 113, based on data from the CY 2019 performance period/2021 MIPS payment year, we estimate that a total of 81,562 respondents consisting of 63,845 individual clinicians and 17,717 groups will submit improvement activities during the CY 2022 performance period/2024 MIPS payment year. Since our currently approved burden sets out 79,927 respondents, this represents an

increase of 1,635 respondents (81,562 respondents – 79,927 active respondents). This is an increase of 1,242 individuals and 393 groups from the estimates of 62,603 individuals and 17,324 groups provided in the CY 2021 PFS final rule (85 FR 50362).

As discussed in sections V.B.8.e. and V.B.8.g.(3) of this final rule regarding our estimate of clinicians and groups submitting data for the quality and Promoting Interoperability performance categories, we are finalizing to update our estimates for the number of clinicians and groups that will submit improvement activities data based on projections of the number of eligible clinicians that were not QPs or participating in an ACO in the CY 2019 performance period/2021 MIPS payment year but will be QPs in the CY 2022 performance period/2024 MIPS payment year, and will therefore not be required to submit improvement activities data.

TABLE 113: Estimated Number of Organizations Submitting Improvement Activities Performance Category Data on Behalf of Clinicians in CY 2022

Burden and Respondent Descriptions	Count
# of clinicians to participate in improvement activities data submission as individuals during the CY 2022 MIPS performance period (a)	63,845
# of Groups to submit improvement activities on behalf of clinicians during the CY 2022 MIPS performance period (b)	17,717
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2022 MIPS performance period (CY 2022 Final Rule) (c) = (a) + (b)	81,562
*Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2020 MIPS performance period (CY 2021 PFS Final Rule) (d)	79,927
Difference (e) = (c) - (d)	+1,635

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

As discussed in section IV.A.3.b.(2)(c)(ii) of this final rule, we are finalizing subgroup reporting in the CY 2023 performance period/2025 MIPS payment year. As we discussed in

section V.B.8.e.(7)(a) of this final rule, we estimate that there will be 20 subgroup reporters in the CY 2023 performance period/2025 MIPS payment year, each of which will have

burden related to the submission of improvement activities. We have included this burden in Table 114.

TABLE 114: Estimated Number of Organizations Submitting Improvement Activities Performance Category Data on Behalf of Clinicians in CY 2023

Burden and Respondent Descriptions	Count
# of clinicians to participate in improvement activities data submission as individuals during the CY 2023 MIPS performance period (a)	63,845
# of Groups to submit improvement activities on behalf of clinicians during the CY 2023 MIPS performance period (b)	17,717
# of Subgroups to submit improvement activities in MVPs during the CY 2023 MIPS performance period (c)	20
Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 MIPS performance period (CY 2022 PFS Final Rule) (d) = (a) + (b) + (c)	81,582
*Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2020 MIPS performance period (CY 2021 PFS Final Rule) (e)	0
Difference (f) = (d) - (e)	+81,582

Consistent with the CY 2021 PFS final rule, we continue to estimate that the per response time required per individual or group is 5 minutes for a computer system analyst to submit by logging in and manually attesting that

certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials (84 FR 63140).

As shown in Table 115, we estimate an annual burden of 6,770 hours (81,562

responses \times 0.083 hr) at a cost of \$644,639 (6,770 hr \times \$95.22/hr) for the CY 2022 performance period/2024 MIPS payment year.

TABLE 115: Estimated Burden for Improvement Activities Submission in CY 2022

Burden and Respondent Descriptions	Burden Estimate
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2022 performance period (a)	81,562
Total Annual Hours Per Respondent (b)	0.083
Total Annual Hours (c) = (a) * (b)	6,770
Labor rate for a computer systems analyst to submit improvement activities (d)	\$95.22/hr
Total Annual Cost (e) = (c) * (d)	\$644,639

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 116, with the introduction of subgroup reporting in the CY 2023 performance period/2025

MIPS payment year, we estimate an annual burden of 6,771 hours (81,582

responses \times 0.083 hr) and \$644,735 (6,771 hr \times \$95.22/hr).

TABLE 116: Estimated Burden for Improvement Activities Submission in CY 2023

Burden and Respondent Descriptions	Burden Estimate
Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 performance period (a)	81,582
Total Annual Hours Per Respondent (b)	0.083
Total Annual Hours (c) = (a) * (b)	6,771
Labor rate for a computer systems analyst to submit improvement activities (d)	\$95.22/hr
Total Annual Cost (e) = (c) * (d)	\$644,735

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 117, using our unchanged currently approved per respondent burden estimate, the increase in the number of respondents results in an adjustment of 109 hours at

a cost of \$10,379 (109 hr × \$95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS

payment year, which results in an increase of 6,771 hours (81,582 responses × 0.083 hr) at a cost of \$644,735 (6,771 hr × \$95.22/hr).

TABLE 117: Change in Estimated Burden for Improvement Activities Submission

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	6,661	6,661	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 116, row (c))	0	6,770	6,771
Difference (c) = (b) - (a)	-6,661	+109	+6,771
Total Currently Approved Annual Cost (d)	\$634,221	\$634,260	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 116, row (e))	0	\$644,639	\$644,735
Difference (f) = (e) - (d)	-\$634,221	+10,379	+\$644,735

j. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

The requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53922), CY 2019 PFS final rule (83 FR 60017 through 60018), CY 2020 PFS final rule (84 FR 63141) and the CY 2021 PFS final rule (85 FR 84989 through 85 FR 84990) for our previously finalized requirements and information collection burden for the nomination of improvement activities.

In section IV.A.3.d.(3)(c)(i)(B) of this rule, we are finalizing: (1) To revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (2) changes to the timeline for improvement activities nomination during a PHE; and (3) to suspend activities that become

obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process.

In section IV.A.3.d.(3)(c)(i)(B)(cc) of this rule, we are finalizing 2 new criteria that beginning with the CY 2022 Annual Call for Activities MIPS improvement activities: (1) Should not duplicate other improvement activities in the Inventory; and (2) should drive improvements that go beyond purely common clinical practices.

Additionally, we are finalizing to increase the number of criteria stakeholders are required to meet when submitting an activity provision from a minimum of 1 to all 8 criteria, which includes the two new provision criteria. We believe that this provision will provide clearer guidance to stakeholders when submitting a nomination for an improvement activity. In the CY 2021 PFS final rule, we estimated that it would require 0.6 hours for a medical

and health services manager or equivalent and 0.4 hours for a physician to link the nominated improvement activity to existing and related cost and quality measures (85 FR 84989). Given that our current approved estimated time per respondent to nominate an improvement activity is 3 hours (1.8 hours for a medical and health services manager or equivalent and 1.2 hours for a physician), we assume that the new requirement to meet all 8 criteria will require approximately 1 hour at \$114.24/hr for a medical and health services manager to identify and submit an activity and 0.4 hours at a rate of \$217.32/hr for a clinician to review each activity. Combined with our currently approved burden estimate, we are finalizing to revise our estimate to 2.8 hours at \$114.24/hr for a medical and health services manager or equivalent and 1.6 hours at \$217.32/hr for a physician to nominate an improvement activity. This represents a change of +1

hours (2.8 hr – 1.8 hr) for a medical and health services manager or equivalent and +0.4 hours (2 hr – 1.6 hr) for a physician and an overall increase of 1.4 hours. We considered whether we should double our estimates for nomination of an improvement activity to 6 hours. Since only 2 of the required 8 criteria are new, we assume that stakeholders are familiar with the existing criteria and will not need additional time to review but will need the additional time to verify and confirm if the considered activity meets all the 8 criteria. We solicited comment on our estimate to revise the time for nomination of an improvement activity to 4.4 hours and if there are additional burden implications that we should consider for above provisions to revise the criteria.

We did not receive public comments on the proposed burden estimates for this information collection. We are finalizing as proposed. The burden estimates have not been updated from the CY 2021 PFS proposed rule (86 FR 39514 through 39516).

In the CY 2021 PFS final rule, we finalized an exception stating that during the PHE, stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe (85 FR 84989). Instead of only accepting nominations and modifications submitted February 1st through July 1 each year, we would accept nominations for the duration of the PHE as long as the improvement activity is still relevant. No other aspects of the Annual Call for Activities process would be affected (for example, criteria for nominating improvement activities, considerations for selection of

improvement activities, or weighting policies would all still apply). In section IV.A.3.d.(3)(c)(i)(B)(aa) of this rule, we are finalizing to clarify that in order to implement a new improvement activity for a PHE during the same year as the nomination, the nomination will need to be received no later than January 5th of the nomination year to be included in a rule for notice-and-comment rulemaking during that fiscal or calendar year, a necessary precursor to implementation if it were to be finalized, as described above.

We believe this provision will not affect our currently approved burden estimates since we assume that the number of nominations will not change, but it will make an activity available for reporting to clinicians in the same performance year it was intended to be implemented. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84989), we expect additional nominations may be received as a result of this change. However, we do not have any data with which to estimate what the additional number may be. As a result, we are not making any changes our currently approved burden estimate.

In section IV.A.3.d.(3)(c)(i)(C)(aa) of this rule, we are finalizing that beginning with the CY 2022 performance period/2024 MIPS payment year, for each improvement activity that is in the Inventory, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline, it will be removed from the program as soon as possible. In the CY 2020 PFS final rule (84 FR 62988 through 62990), we finalized the factors for consideration in removing improvement activities.

Following the publication of the CY 2021 PFS proposed rule, the improvement activities team became aware that clinicians could no longer complete the activity from April 1 through December 31, 2020, because one of the improvement activities in the Inventory had expired on March 31, 2020. We do not anticipate any burden for stakeholders because of the above provision as described, the policy does not change requirements for the nomination of improvement activities. This provision will help avoid stakeholder confusion and ensure the accuracy of the available activities in the Inventory. Therefore, we are not making any changes to our estimated burden due to the above policy.

Additionally, consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84990) we continue to use our currently approved assumption that we will receive 31 nominations of new or modified activities which will be evaluated for the Improvement Activities Under Consideration (IAUC) list for possible inclusion in the CY 2023 Improvement Activities Inventory as we believe this estimate is more realistic than basing our estimate on the number of nominations received during the 2021 Annual Call for Activities.

As shown in Table 118, accounting for the change in burden per respondent estimate due to the provision to require all the 8 criteria for nomination of an improvement activity as described above in this section, we are adjusting our estimated annual information collection burden to 136 hours (31 nominations × 4.4 hr/nomination) at a cost of \$20,695 (31 × [(2.8 hr × \$114.24/hr) + (1.6 hr × \$217.32/hr)]).

TABLE 118: Estimated Burden for Nomination of Improvement Activities

	Burden Estimate
# of Nominations of New Improvement Activities (a)	31
# of Hours Per Medical and Health Services Manager to Identify and Nominate Activity (b)	2.8
# of Hours Per Physician to Identify Activity (c)	1.6
Annual Hours Per Respondent (d)=(b) + (c)	4.4
Total Annual Hours (e) = (a) * (d)	136
Cost to Identify and Submit Activity (@ medical and health services manager's labor rate of \$114.24/hr) (f) = \$114.24/hr * (b)	\$319.87
Cost to Identify Improvement Activity (@ physician's labor rate of \$210.44/hr) (g) = \$217.32/hr * (c)	\$347.71
Total Annual Cost Per Respondent (h)=(f)+(g)	\$667.58
Total Annual Cost (i) = (a) * (h)	\$20,695

As shown in Table 119, using our unchanged estimate of the number of activities nominated, the increase in the burden per nomination results in a change of 43 hours (31 nominations \times 1.4 hr/nomination) at a cost of \$6,492

(31 activities \times [(1 hr \times \$114.24/hr) + (0.4 hr \times \$217.32/hr)]) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS

payment year, which results in an increase of 136 hours (31 nominations \times 4.4 hr) at a cost of \$20,695 (31 \times [(2.8 hr \times \$114.24/hr) + (1.6 hr \times \$217.32/hr)]).

TABLE 119: Change in Estimated Burden for Nomination of Improvement Activities

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	93	93	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 118, row (c))	0	136	136
Difference (c) = (b) - (a)	-93	+43	+136
Total Currently Approved Annual Cost (d)	\$14,203	\$14,203	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 118, row (e))	0	\$20,695	\$20,695
Difference (f) = (e) - (d)	-\$14,203	+\$6,492	+\$20,695

k. Nomination of MVPs

This rule is not implementing any new or revised collection of information requirements or burden related to the nomination of MVPs for inclusion in the Quality Payment Program. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the MVP nomination process under that control number.

l. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are

not required to provide any documentation by CD or hardcopy. Moreover, the policies in this rule do not result in the need to add or revise or delete any claims data fields. Consequently, we are not making any changes to this information collection under that control number.

m. ICRs Regarding Partial QP Elections (§§ 414.1310(b) and 414.1430)

This rule is not implementing any new or revised collection of information requirements related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. However, we are finalizing to adjust our currently approved burden estimates based on updated projections for the CY 2022 performance period/2024 MIPS payment year. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As shown in Table 120, based on our predictive QP analysis for the 2022 QP performance period/2024 MIPS payment year, which accounts for historical response rates in the CY 2020 performance period/2022 MIPS payment year, we are revising our estimate that 150 APM Entities and 100 eligible clinicians (representing approximately 9,000 Partial QPs) will make the election to participate as a Partial QP in MIPS, a total of 250 elections which is a decrease of 50 from the 300 elections that are currently approved by OMB under the aforementioned control number. We continue to estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hr) to make this election. In aggregate, we are revising our estimated annual burden to 63 hours (250 respondents \times 0.25 hr/election) and \$5,999 (63 hr \times \$95.22/hr).

TABLE 120: Estimated Burden for Partial QP Election

Burden and Respondent Description	Burden Estimate
# of respondents making Partial QP election (150 APM Entities, 100 eligible clinicians) (a)	250
Total Hours Per Respondent to Elect to Participate as Partial QP (b)	0.25
Total Annual Hours (c) = (a) * (b)	63
Labor rate for computer systems analyst (d)	\$95.22/hr
Total Annual Cost (e) = (c) * (d)	\$5,999

As shown in Table 121, using our unchanged currently approved per respondent burden estimate (85 FR 84991), the decrease in the number of Partial QP elections results in an adjustment of 12.5 hours (– 50 elections

× 0.25 hr) at a cost of –\$1,191 (– 12.5 hr × \$95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS

payment year, which results in an increase of 63 hours (250 respondents × 0.25 hr/election) at a cost of \$5,999 (63 hr × \$95.22/hr).

TABLE 121: Change in Estimated Burden for Partial QP Election

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	75	75	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 120, row (c))	0	63	63
Difference (c) = (b) - (a)	-75	-12	+63
Total Currently Approved Annual Cost (d)	\$7,142	\$7,142	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 120, row (e))	0	\$5,999	\$5,999
Difference (f) = (e) - (d)	-\$7,142	-\$1,143	+\$5,999

n. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician Initiated Process (§ 414.1445)

The following burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

(1) Payer Initiated Process (§ 414.1445)

This rule is not implementing any new or revised collection of information

requirements related to the Payer-Initiated Process. However, we are adjusting our currently approved burden estimates based on updated projections for the CY 2022 performance period/2024 MIPS payment year.

As shown in Table 122, based on the actual number of requests received in the 2020 QP performance period, we are revising our estimate that for the 2023 QP performance period, 15 payer-initiated requests for Other Payer Advanced APM determinations will be

submitted (6 Medicaid payers, 6 Medicare Advantage Organizations, and 3 remaining other payers), a decrease of 65 from the 80 total requests currently approved by OMB under the aforementioned control number. We continue to estimate it will take 10 hours for a computer system analyst per arrangement submission. We are revising our estimated annual burden to 150 hours (15 submissions × 10 hr/ submission) and \$14,283 (150 hr × \$95.22/hr).

TABLE 122: Estimated Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

	Burden Estimate
# of other payer payment arrangements (3 Medicaid, 3 Medicare Advantage Organizations, 1 remaining other payers) (a)	15
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a) * (b)	150
Labor rate for a computer systems analyst (d)	\$95.22/hr
Total Annual Cost (e) = (c) * (d)	\$14,283

As shown in Table 123, using our unchanged currently approved per respondent burden estimate (85 FR 84992), the decrease in the number of payer-initiated requests from 800 to 150 results in an adjustment of – 650 hours

(– 65 requests × 10 hr) at a cost of –\$61,893 (– 650 hr × \$95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS

payment year, which results in an increase of 150 hours (15 requests × 10 hr) at a cost of \$14,283 (150 hr × \$95.22/hr).

TABLE 123: Estimated Change in Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	800	800	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 122, row (c))	0	150	150
Difference (c) = (b) - (a)	-800	-650	+150
Total Currently Approved Annual Cost (d)	\$76,176	\$76,176	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 122, row (e))	0	\$14,283	\$14,283
Difference (f) = (e) - (d)	-\$76,176	-\$61,893	+\$14,283

(2) Eligible Clinician Initiated Process (§ 414.1445)

This rule is not implementing any new or revised collection of information requirements or burden related to the Eligible-Clinician Initiated Process. As described below, we are adjusting our currently approved burden estimates based on updated projections for the CY 2022 performance period/2024 MIPS

payment year. As mentioned above, the new and adjusted burden will be submitted to OMB for approval.

As shown in Table 124, based on the actual number of requests received in the 2020 QP performance period, we estimate that in CY 2022 for the 2023 QP performance period, 15 Eligible-Clinician Initiated request for Other Payer Advanced APM determinations will be submitted, a decrease of 135

from the 150 total requests currently approved by OMB under the aforementioned control number. We continue to estimate it will take 10 hours for a computer system analyst per arrangement submission. We are adjusting our estimated annual burden to 150 hours (15 submissions × 10 hr/submission) and \$14,283 (150 hr × \$95.22/hr).

TABLE 124: Estimated Burden for Other Payer Advanced APM Identification Determinations: Eligible Clinician Initiated Process

	Burden Estimate
# of other payer payment arrangements from APM Entities and eligible clinicians	15
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a) * (b)	150
Labor rate for a computer systems analyst (d)	\$95.22/hr
Total Annual Cost (e) = (c) * (d)	\$14,283

As shown in Table 125, using our unchanged currently approved per respondent burden estimate (85 FR 84993), the decrease in the number of eligible clinician-initiated requests from 150 to 15 results in an adjustment of

– 1,350 hours (– 135 requests × 10 hr) at a cost of – \$128,547 (– 1,350 hr × \$95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025

MIPS payment year, which results in an increase of 150 hours (15 submissions × 10 hr/submission) at a cost of \$14,283 (150 hr × \$95.22/hr).

TABLE 125: Estimated Change in Burden for Other Payer Advanced APM Identification Determinations: Eligible Clinician Initiated Process

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	1,500	1,500	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 124, row (c))	0	150	150
Difference (c) = (b) - (a)	-1,500	-1,350	+150
Total Currently Approved Annual Cost (d)	\$142,830	\$142,830	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 124, row (e))	0	\$14,283	\$14,283
Difference (f) = (e) - (d)	-\$142,830	-\$128,547	+\$14,283

(3) Submission of Data for QP Determinations Under the All-Payer Combination Option (§ 414.1440)

This rule is not implementing any new or revised collection of information requirements related to the Submission of Data for QP Determinations under the All-Payer Combination Option. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes under that control number.

o. ICRs Regarding Voluntary Participants Election To Opt-Out of Performance Data Display on Physician Compare (§ 414.1395)

This rule is not implementing any new or revised collection of information requirements related to the election by voluntary participants to opt-out of public reporting on Physician Compare. As described below, we are adjusting our currently approved burden estimates based on data from the CY 2019 performance period/2021 MIPS payment year. The adjusted burden will

be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53924 through 53925), CY 2019 PFS final rule (83 FR 60022), CY 2020 PFS final rule (84 FR 63145 through 63146) and the CY 2021 PFS final rule (85 FR 84993) for our previously finalized requirements and burden for voluntary participants to opt-out of public reporting on Physician Compare.

In the CY 2021 PFS final rule (85 FR 84993), we estimated that 10 percent of the clinicians and groups who voluntarily participate in MIPS would opt out of public reporting. Based on the number of opt-out eligible clinicians that chose to opt-out of public reporting in the CY 2019 performance period/2021 MIPS payment year, we are revising our estimates. We anticipate that 0.1 percent of the total clinicians and groups who will voluntarily participate in the CY 2022 performance period/2024 MIPS payment year will also elect not to participate in public

reporting. This results in a total of 38 (0.001 × 37,934 voluntary MIPS participants) clinicians and groups, a decrease of 3,448 from the currently approved estimate of 3,486. Voluntary MIPS participants are clinicians that are not QPs and are expected to be excluded from MIPS after applying the eligibility requirements set out in the CY 2019 PFS final rule but have elected to submit data to MIPS. As discussed in the RIA section of the CY 2019 PFS final rule, we continue to estimate that 33 percent of clinicians that exceed one (1) of the low-volume criteria, but not all three (3), will elect to opt-in to MIPS, become MIPS eligible, and no longer be considered a voluntary reporter (83 FR 60050).

Table 126 shows that for these voluntary participants, we continue to estimate it will take 0.25 hours for a computer system analyst to submit a request to opt-out. In aggregate, we estimate an annual burden of 10 hours (38 requests × 0.25 hr/request) and \$952 (10 hr × \$95.22/hr).

BILLING CODE 4120–01–P

TABLE 126: Estimated Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

	Burden Estimate
# of Voluntary Participants Opting Out of Physician Compare (a)	38
Total Annual Hours Per Opt-out Requester (b)	0.25
Total Annual Hours (c) = (a) * (b)	10
Labor rate for a computer systems analyst (d)	\$95.22/hr
Total Annual Cost (e) = (c) * (d)	\$952

As shown in Table 127, using our unchanged currently approved per respondent burden estimate, the decrease of 3,448 opt outs by voluntary participants results in an adjustment of

– 862 hours (– 3,448 requests × 0.25 hr) at a cost of \$ – 82,079 (– 862 hr × \$95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for

the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 10 hours (38 requests × 0.25 hr/request) at a cost of \$952 (10 hr × \$95.22/hr).

TABLE 127: Estimated Change in Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	872	872	N/A

Difference (c) = (b) - (a)	-872	-862	+10
Total Currently Approved Annual Cost (d)	\$82,984	\$82,984	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 126, row (e))	0	\$952	\$952
Difference (f) = (e) - (d)	-\$82,984	-\$82,032	+\$952

p. Summary of Annual Quality Payment Program Burden Estimates

Table 128 summarizes this final rule's total burden estimates for the Quality Payment Program for the CY 2021, CY 2022 and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years.

As discussed earlier, for this final rule, we are subtracting the currently approved burden for the CY 2021 performance period/2023 MIPS payment year. As shown in table 128, this represents a decrease in burden of 1,479,672 hours and \$144,576,960.

In the CY 2021 PFS final rule, the total estimated burden for the CY 2022 MIPS performance period/2024 MIPS payment year was 1,473,741 hours at a cost of \$144,034,968 (85 FR 84994). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs discussed in this rule compared to the CY 2021 PFS final rule, the total estimated annual burden of continuing policies and information set forth in the CY 2021 PFS final rule into the CY 2022 performance period/2024 MIPS payment year is 1,468,566 hours at a cost of \$148,078,846. These represent a decrease of 5,175 hours and an increase of \$4,043,878. To understand the burden implications of

the policies in this rule, we provide an estimate of the total burden associated with continuing the policies and information collections set forth in the CY 2021 PFS final rule into the CY 2022 performance period/2024 MIPS payment year. This burden estimate of 1,424,586 hours at a cost of \$143,651,994 reflects the availability of more accurate data to account for all potential respondents and submissions across all the performance categories and more accurately reflect the exclusion of QPs from all MIPS performance categories, a decrease of 43,980 hours and \$4,426,813. This burden estimate is lower than the burden approved for information collection related to the CY 2021 PFS final rule due to updated data and assumptions. Our total burden estimate for the CY 2022 performance period/2024 MIPS payment year is 1,428,391 hours and \$144,014,757, which represents a decrease of 40,175 hours and \$4,068,418 from the CY 2021 PFS final rule. The difference of +3,805 hours (43,980 hours – 40,175 hours) and +\$358,395 (\$4,426,813 – \$4,068,418) between this estimate and the total burden shown in Table 128 is the increase in burden associated with impacts of the policies for the CY 2022

performance period/2024 MIPS payment year, which includes the re-introduction of the CMS Web Interface measures as a collection type/submission type.

Table 128 also offers a comparison between the total currently approved estimated burden from the CY 2021 PFS final rule and our estimated burden for the CY 2023 performance period/2025 MIPS payment year. As discussed above, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no currently approved estimate. Our total burden estimate for the CY 2023 MIPS performance period/2025 MIPS payment year is 1,383,049 hours and \$139,501,770.

We have included Table 128 to assist in understanding these differences. Note that the difference between the burden estimates for the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years is entirely due to the policies to introduce MVP and subgroup reporting and sunset the CMS Web Interface measures as a collection type/submission type beginning in the CY 2023 MIPS performance period/2025 MIPS payment year.

TABLE 128: Summary of Burden Estimates and Requirements from the CY 2022 PFS Final Rule

CY 2021 Performance Period/2023 MIPS Payment Year		
Burden Estimate Description	Time (Hours)	Cost
Currently approved burden in CY 2021 PFS Final Rule (a)	1,479,672	\$144,576,960

Table 132 provides the reasons for changes in the estimated burden for information collections in the Quality Payment Program segment of this final

rule. We have divided the reasons for our change in burden into those related to new policies and those related to adjustments in burden from continued

Quality Payment Program Year 5 policies that reflect updated data and revised methods.

**TABLE 132: Reasons for Change in Burden Compared to the Currently Approved
CY 2021 Information Collection Burden**

Quality Payment Program Table	Changes in burden due to CY 2022 Final Rule policies	Adjustments in burden from continued CY 2021 PFS Final Rule policies due to revised methods or updated data
Section V.B.8.c.(2): QCDR Self-Nomination and other Requirements (See Table 84)	<p>Increase in burden due to the policy requiring submission of participation plans, as necessary (3 hours per plan).</p> <p>Increase in burden due to current policies not previously having a burden estimate. (QCDR pre-existing measures)</p>	Increase in number of hours required for simplified and full self-nomination process.
Section V.B.8.c.(3): Qualified Registry Self-Nomination and other Requirements (See Table 86)	Increase in burden due to the policy requiring submission of participation plans, as necessary (3 hours per plan).	Decrease in the estimated number of hours required for full-self nomination process
Section V.B.8.e.(4): Quality Performance Category Medicare Part B Claims Collection Type (See Table 92)	(CY 2023 Performance Period/2025 MIPS Payment Year) Decrease in burden due to estimated 10% of submitters reporting through MVPs. This decrease is offset slightly by the addition of Web Interface submitters due to the sunset of the CMS Web Interface collection type.	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Decrease in number of respondents due to updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year and updated QP projections for the CY 2022 MIPS performance period/2024 MIPS payment year.
Section V.B.8.e.(5): Quality Performance Category QCDR/ MIPS CQM Collection Type (See Table 94)	<p>(CY 2022 Performance Period/2024 MIPS Payment Year) Decrease in the number of respondents due to the policy to extend the CMS Web Interface measures as a collection type/submission type for the CY 2022 performance period/2024 MIPS payment year.</p> <p>(CY 2023 Performance Period/2025 MIPS Payment Year) Increase in the number of respondents due to the policy to sunset the CMS Web Interface measures as a collection type/submission type and decrease in respondents due to MVP implementation.</p>	Decrease in number of respondents due to updated projections from the CY 2022 MIPS performance period/2024 MIPS payment year and updated QP projections for the CY 2022 MIPS performance period/2024 MIPS payment year.

Quality Payment Program Table	Changes in burden due to CY 2022 Final Rule policies	Adjustments in burden from continued CY 2021 PFS Final Rule policies due to revised methods or updated data
Section V.B.8.e.(6): Quality Performance Category eCQM Collection Type (See Table 96)	(CY 2022 Performance Period/2024 MIPS Payment Year) Decrease in the number of respondents due to the policy to extend the CMS Web Interface measures as a collection type/submission type for the CY 2022 performance period/2024 MIPS payment year. (CY 2023 Performance Period/2025 MIPS Payment Year) Increase in number of respondents due to the policy to sunset the CMS Web Interface measures as a collection type/submission type and decrease in respondents due to MVP implementation.	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year and updated QP projections for the CY 2022 performance period/2024 MIPS payment year.
Section V.B.8. e.(7)(a)(i): MVP Registration (See Table 97)	(CY 2023 MIPS Performance Period/2025 MIPS Payment Year) New information collection request	Not applicable
