Section V.B.8.e.(8): Quality Performance Category CMS Web Interface Collection Type (See Table 101)	(CY 2022 Performance Period/2024 MIPS Payment Year) Addition of information collection due to the policy to extend the CMS Web Interface measures as a collection type/submission type. (CY 2023 Performance Period/2025 MIPS Payment Year) Removal of information collection due to the policy to sunset the CMS Web Interface measures as a collection type/submission type.	(CY 2022 Performance Period/2024 MIPS Payment Year) Increase in number of respondents (+114) due to policy to extend the CMS Web Interface measures as a collection type/submission type.
Section V.B.8.e.(10): Registration for CMS Web Interface (See Table 103)	(CY 2022 Performance Period/2024 MIPS Payment Year) Addition of information collection due to the policy to extend the CMS Web Interface measures as a collection type/submission type. (CY 2023 Performance Period/2025 MIPS Payment Year) Removal of information collection due to the policy to sunset the CMS Web Interface measures as a collection type/submission type.	(CY 2022 Performance Period/2024 MIPS Payment Year) Increase in number of respondents (+90) due to policy to extend the CMS Web Interface measures as a collection type/submission type.
Section V.B.8.g.(2): Reweighting Applications for Promoting Interoperability and Other Performance Categories (See Table 107)	Decrease in the number of respondents due to the policy to allow automatic reweighting of the Promoting Interoperability performance category for small practices	None

Quality Payment Program Table	Changes in burden due to CY 2022 Final Rule policies	Adjustments in burden from continued CY 2021 PFS Final Rule policies due to revised methods or updated data
Section V.B.8.g.(3): Promoting Interoperability Performance Category Data Submission (See Table 112)	(CY 2022 Performance Period/2024 MIPS Payment Year) Increase in per response burden (+0.02 hours) due to the policy for annual assessment SAFER Guides requirement (CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Increase in number of respondents (+20) due to the implementation of subgroup reporting for MVPs and APP.	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year and updated QP projections for the CY 2022 performance period/2024 MIPS payment year.
Section V.B.8.i: Improvement Activities Submission (See Table 117)	(CY 2023 Performance Period/2025 MIPS Payment Year) Increase in number of respondents (+20) due to the implementation of subgroup reporting for MVPs and APP.	Increase in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year
Section V.B.8.j: Nomination of Improvement Activities (See Table 119)	Increase in per response burden (+1.4 hours) due to the revised criteria for nomination of improvement activities	None.
Section V.B.8.m: Partial QP Election (See Table 121)	None	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year.
Section V.B.8.n.(1): Other Payer Advanced APM Identification: Other Payer Initiated Process (See Table 123)	None.	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year.
Section V.B.8.o: Voluntary Participants to Elect to Opt Out of Performance Data Display on Physician Compare (See Table 127)	None.	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year.

C. Summary of Annual Burden Estimates for Changes

TABLE 133: Annual Requirements and Burden Estimates

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost (\$/hr)	Total Cost (\$)
§§ 414.802 and 414.806 (Requiring Certain Manufacturers to Report Drug Pricing Information for Part B) *	0938- 0921	740	2,960	13	38,480	38.86	1,495,333
§ 423.160(a) (Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan) *	0938- 1396	100	100	0.1667	16.67	210.44	3,508
Part 403 (Open Payments Provisions included in the CY 2022 PFS)	0938- 1237	2,398	2,398	Varies	1,263	Varies	64,561
§§ 414.1325 and 414.1335, 414.1360, 414.1375, 414.1380, 414.1395, 414.1400, 414.1430, and 414.1440 (Quality Payment Program) **	0938- 1314	121,140	-7,027	Varies	-45,599	Varies	-3,047,869
TOTAL		123,138	1,739	varies	-22,647.33	varies	-\$4,752,038

*The finalized requirements and burden will be submitted to OMB using the standard PRA process.

**Averages the CY 2021, CY 2022, and CY 2023 MIPS performance period burden changes over the 3-year 2023, 2024, and 2025 MIPS payment years.

BILLING CODE 4120-01-C

VI. Regulatory Impact Analysis

A. Statement of Need

In this final rule, we are finalizing payment and policy changes under the Medicare PFS and required statutory changes under the Consolidated Appropriations Act, 2021 and sections 2003 and 2005 of the SUPPORT for Patients and Communities Act of 2018. We also are finalizing changes to payment policy and other related policies for Medicare Part B. In addition, this final rule will make modest revisions to certain Medicare provider and supplier enrollment regulatory provisions and add already existing provider and supplier requirements pertaining to prepayment and post-payment review activities.

This final rule is necessary to make policy changes under Medicare FFS and to address various provider and supplier enrollment issues. Therefore, we included a detailed Regulatory Impact Analysis (RIA) to assess all costs and benefits of available regulatory alternatives and explain the selection of these regulatory approaches that we believe adhere to statutory requirements and, to the extent feasible, maximize net benefits

B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). An RIA must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimated, as discussed in this section, that the PFS provisions included in this final rule will redistribute more than \$100 million

in 1 year. Therefore, we estimate that this rulemaking is “economically significant” as measured by the \$100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA’s website at <http://www.sba.gov/content/table-small-business-size-standards> (refer to the 620000 series)). Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities.

The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this final rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, the PFS pays for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2021, that threshold is approximately \$158 million. This final rule will impose no

mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this final rule does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this final rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this final rule, we discussed a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and to implement provisions of the statute. We provide information for each of the policy changes in the relevant sections of this final rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this final rule. The relevant sections of this final rule contain a description of significant alternatives if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve BN.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2021 with payment rates for CY 2022 using CY 2020 Medicare utilization. The payment impacts described in this final rule reflect averages by specialty based on

Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services he or she furnishes. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical laboratory services that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The PFS update adjustment factor for CY 2022, as specified in section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments. In addition, section 101 of Division N of the CAA provided a 3.75 percent increase in PFS payment amounts for services furnished on or after January 1, 2021, and before January 1, 2022 and required that the increase shall not be taken into account in determining PFS payment rates for subsequent years. The expiration of this 3.75 percent increase in payment amounts will result in the CY 2022 conversion factor being calculated as though the 3.75 percent increase for the CY 2021 conversion factor had never been applied.

To calculate the CY 2022 PFS conversion factor (CF), we took the CY 2021 conversion factor without the 1-year 3.75 percent increase provided by the CAA and multiplied it by the BN adjustment required as described in the preceding paragraphs. We estimate the CY 2022 PFS CF to be 33.5983 which reflects the BN adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.75 percent increase for services furnished in CY 2021, as provided in the CAA. We estimate the CY 2022 anesthesia CF to be 20.9343 which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE 134: Calculation of the CY 2022 PFS Conversion Factor

CY 2021 Conversion Factor		34.8931
Conversion Factor without CY 2021 Consolidated Appropriations Act Provision		33.6319
Statutory Update Factor	0.00 percent (1.0000)	
CY 2022 RVU Budget Neutrality Adjustment	-0.10 percent (0.9990)	
CY 2022 Conversion Factor		33.5983

TABLE 135: Calculation of the CY 2022 Anesthesia Conversion Factor

CY 2021 National Average Anesthesia Conversion Factor		21.5600
Conversion Factor without CY 2021 Consolidated Appropriations Act Provision		20.7807
Statutory Update Factor	0.00 percent (1.0000)	
CY 2022 RVU Budget Neutrality Adjustment	-0.10 percent (0.9990)	
CY 2022 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.84 percent (1.0084)	
CY 2022 Conversion Factor		20.9343

Table 136 shows the payment impact of the policies contained in this final rule on PFS services. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 136 (CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 136.

- *Column A (Specialty)*: Identifies the specialty for which data are shown.
- *Column B (Allowed Charges)*: The aggregate estimated PFS allowed charges for the specialty based on CY 2020 utilization and CY 2021 rates. That

is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- *Column C (Impact of Work RVU Changes)*: This column shows the estimated CY 2022 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.
- *Column D (Impact of PE RVU Changes)*: This column shows the

estimated CY 2022 impact on total allowed charges of the changes in the PE RVUs.

- *Column E (Impact of MP RVU Changes)*: This column shows the estimated CY 2022 impact on total allowed charges of the changes in the MP RVUs.
- *Column F (Combined Impact)*: This column shows the estimated CY 2022 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

BILLING CODE 4120-01-C

2. CY 2021 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including diagnostic testing facilities, portable x-ray, podiatry, hand surgery, and geriatrics, reflect increases relative to other physician specialties. These increases can be attributed largely to the update to clinical labor pricing as the services that these specialties furnish involve a higher proportion of clinical labor cost that is reflected in their PE RVUs. These increases are also due to increases in value for particular services after considering the recommendations from the American Medical Association (AMA)'s Relative Value Scale Update Committee (RUC), and CMS review and increased payments resulting from updates to supply and equipment pricing.

The estimated impacts for several specialties, including interventional radiology, vascular surgery, radiation oncology, and cardiology, reflect decreases in payments relative to payment to other physician specialties which are largely the result of the redistributive effects of the clinical labor pricing update. The services furnished by these specialties involve proportionally higher supply or equipment item costs, and therefore are affected negatively by the updates to clinical labor pricing. Since PE is budget neutralized within itself, increased pricing for clinical labor holds a corresponding relative decrease for other components of PE such as supplies and equipment. These decreases are also due to the revaluation of individual procedures based on reviews by the AMA RUC and CMS, as well as decreases resulting from the

continued phase-in implementation of the previously finalized updates to supply and equipment pricing. The estimated impacts also reflect decreases due to continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS. As a result, the estimated 2 percent decrease for CY 2021 is only applicable to approximately 17 percent of the Medicare payment to these entities.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 136), including comments received in response to the valuations. We remind stakeholders that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 136 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2020 utilization data, Total RVUs change between -1 percent and 1 percent for more than 90 percent of practitioners, representing more than 81 percent of the changes in Total RVUs for all practitioners, with variation by specialty. Many specialties, such as chiropractic, clinical social

worker, family practice, internal medicine and emergency medicine, exhibit little variation in changes in total RVUs per practitioner. For these specialties, more than 90 percent of these practitioners will experience a change in Total RVUs between -1 percent and 1 percent. Other specialties exhibit more variation in changes in total RVUs per practitioner. For example, for diagnostic testing facilities, 39 percent of IDTFs will experience a 2 percent or more decrease in Total RVUs, but these suppliers represent only 33 percent of Total RVUs for this specialty. Meanwhile, one percent of IDTFs will experience 10 percent or more increases in Total RVUs and these suppliers account for 33 percent of Total RVUs for this specialty. We also note the code level RVU changes are available in the Addendum B public use file that we make available with each rule.

Many commenters requested that CMS maintain the 3.75 percent increase in PFS payment amounts that was specified under section 101 of the CAA for services furnished during CY 2021. We remind commenters that this increase was provided through a time-limited amendment to the statute, which CMS does not have legal authority to alter. The expiration of this 3.75 percent increase in payment amounts will result in the CY 2022 conversion factor being calculated as though the 3.75 percent increase for the CY 2021 conversion factor had never been applied. Several commenters requested clarification regarding whether the specialty impacts displayed in Table 136 reflected the expiration of the 3.75 percent CAA provision for CY 2022. We can clarify for the commenters that the specialty impacts displayed in Table 136 reflect changes that take place within the pool of total RVUs. The specialty impacts table therefore includes any changes in spending which result from finalized policies within BN (such as the revaluation of E/M codes in CY 2021 or the clinical labor

pricing update in CY 2022) but does not include any changes in spending which result from finalized policies outside of BN. The expiration of the 3.75 percent CAA provision for CY 2022 is a statutory change that takes place outside of BN, and therefore, is not captured in the specialty impacts displayed in Table 136.

b. Impact

Column F of Table 136 displays the estimated CY 2022 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under “downloads” on the CY 2022 PFS final rule website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

D. Effect of Changes Related to Telehealth Services

Before the PHE for COVID-19, approximately 15,000 FFS Medicare beneficiaries received a Medicare telemedicine service each week. According to a report prepared by the Assistant Secretary for Planning and Evaluation (ASPE),²⁶⁷ in the last week of April 2020, nearly 1.7 million beneficiaries received telehealth services. By April 2020, nearly half of all Medicare primary care visits were telehealth encounters, a level consistent with health care encounters more broadly. There are approximately 271 services currently included on the list of Medicare telehealth services, including more than 165 that were added on a temporary basis during the PHE for COVID-19 (including service categories such as emergency department visits, initial inpatient and nursing facility visits, and discharge day management services) that are covered through the end of the PHE. Preliminary data show that between mid-March and mid-October 2020, over 24.5 million out of 63 million Medicare beneficiaries and enrollees have received a Medicare telemedicine service during the PHE. It

is important to note that preliminary data reflect that the largest increases in services furnished via telehealth communications systems, by beneficiary access/volume, were for services that were already on the Medicare telehealth services list before the PHE.

As discussed in section II.D. of this final rule, we are finalizing our proposal to amend the regulatory definition of interactive telecommunications system for purposes of Medicare telehealth services to include audio-only communication technology under certain circumstances for mental health services furnished to established patients in their homes. We anticipate that this policy will increase utilization of Medicare telehealth mental health services relative to utilization that will occur without the change. The estimated cost impact on overall Medicare services is unclear, though these changes will largely maintain current policies and access to the specific mental health services that are available to beneficiaries during the PHE. By requiring that a modifier be appended to the claim to identify that the service was furnished via audio-only communication technology, we will be able to closely monitor utilization and address any potential concerns regarding overutilization through future rulemaking.

Comment: Commenters were very supportive of our proposal to allow for mental health services to be furnished using audio-only communications technology. A few commenters, while supportive of the use of audio-only communications technology during the PHE, urged CMS to further study and evaluate the safety and effectiveness of the audio-only modality for various levels of care and treatments to determine appropriateness of continuing payment after the PHE expires. Commenters supported the proposal to create a service-level modifier to identify mental health telehealth visits “furnished to a beneficiary in their home using audio-only communications technology.”

Response: We are finalizing creation of a service-level modifier that would identify mental health telehealth services furnished to a beneficiary in their home using audio-only communications technology. We anticipate that our policy of allowing mental health services to be furnished using audio-only communications technology this will have a positive impact on access to care for mental health services and contribute to overall health equity.

Section 123 of the CAA removed the geographic and site of service

restrictions for telehealth services furnished for the purpose of diagnosis, evaluation, or treatment of a mental health disorder, and required as a condition of payment for these telehealth services furnished in the patient’s home that a physician or practitioner furnish an in-person, non-telehealth service to a beneficiary within 6 months prior to the first time the physician or practitioner furnishes a telehealth service to the beneficiary, and thereafter, at intervals as specified by the Secretary. Section 125 of the CAA created a new Medicare provider type—the rural emergency hospital, effective beginning in CY 2023—and added rural emergency hospitals to the list of eligible telehealth originating sites at section 1834(m)(4)(C)(ii) of the Act. As discussed in section II.D. of this final rule, we will require, as a condition of payment for a telehealth service described in section 1834(m)(7) of the Act, that the billing physician or practitioner must have furnished an in-person, non-telehealth service to the beneficiary within the 6-month period before the date of service of a telehealth service as specified in section 1834(m)(7)(B)(i) of the Act, and proposed in this final rule that an in-person, non-telehealth service to the beneficiary must occur at 12-month intervals for subsequent care, with the possibility for exceptions that must be documented by the practitioner in the medical record.

We solicited comment on whether the required in-person, non-telehealth service could also be furnished by another physician or practitioner of the same specialty and same subspecialty within the same group as the physician or practitioner who furnishes the telehealth service, and we are finalizing a policy to allow this. Given that the removal of the geographic and site of service restrictions for telehealth will expand the availability of mental health services, we anticipate that utilization of these mental health services will be comparable to observed utilization for mental health services during the COVID-19 PHE.

We received public comments on whether the required in-person, non-telehealth service could also be furnished by another physician or practitioner of the same specialty and same subspecialty within the same group as the physician or practitioner who furnishes the telehealth service. The following is a summary of the comments we received and our responses.

Comment: Many commenters agreed with the alternative policy we considered to allow the required in-

²⁶⁷ Medicare Beneficiary Use of Telehealth Visits: Early Data from the Start of the Covid-19 Pandemic ([hhs.gov](https://www.hhs.gov)).

person, non-telehealth service to be furnished by another physician or practitioner of the same specialty and subspecialty in the same group as the practitioner who furnishes the mental health telehealth services to the beneficiary if the practitioner who furnishes the telehealth services is unavailable.

Response: We are adopting the alternative policy discussed in the proposed rule to allow a clinician's colleague in the same subspecialty in the same group to furnish the in-person, non-telehealth service to the beneficiary if the original practitioner is unavailable. This is also consistent with longstanding policy, which defines an established patient as an individual who receives professional services from the physician/NPP or another physician of the same specialty and subspecialty who belongs to the same group within the previous 3 years, for purposes of billing for E/M services. While the language in the CAA states that the physician or practitioner furnishing the in-person, non-telehealth service must be the same person as the practitioner furnishing the telehealth service, we believe this policy would be consistent with statutory requirements, because we have historically treated the billing practitioner and other practitioners of the same specialty or subspecialty in the same group as if they were the same individual.

After consideration of public comments, we are finalizing our alternative policy that a practitioner in the same subspecialty and the same group may furnish the in-person, non-telehealth service to the same beneficiary, if the original practitioner is unavailable.

With regard to our policy to retain all services added to the Medicare telehealth services list on a Category 3 basis until the end of CY 2023, we believe the establishment of this certain end date will provide clarity to the stakeholder community but will have a negligible impact on PFS expenditures. For example, services that have already been added to the permanent telehealth services list are furnished via telehealth, on average, less than 0.1 percent of the time they are reported. Further, although data is still being collected, in our initial review of the data, we have not noticed an increase in the overall utilization trend for these services suggesting that practitioners may be furnishing these services via telehealth as replacement for in person encounters. The statutory conditions on payment for Medicare telehealth services under section 1834(m) of the Act, such as the originating site requirements related to

geographic location and site of service, have limited increases in telehealth service utilization outside of the PHE for COVID-19; however, we believe there is value in allowing physicians to furnish services added to the Medicare telehealth services list on a Category 3 basis, and for patients to receive broader access to this care through telehealth, through the end of CY 2023 in order to ease the transition from the PHE. Additionally, for services added to the Medicare telehealth list on a Category 3 basis, outside of the circumstances of the PHE for COVID-19, all of the statutory restrictions under section 1834(m) of the Act will also apply to these services; therefore, we do not anticipate any significant increase in utilization.

E. Effect of Changes Related to Services Furnished in Whole or in Part by PTAs and OTAs

As discussed in section II.H.1., we are finalizing proposed revisions to the current *de minimis* policy for services furnished in whole or in part by PTAs/OTAs that we finalized in CY 2020 PFS final rule (84 FR 62702 through 62708) under which the CQ or CO modifier applies when the PTA or OTA furnished more than 10 percent of a service or a 15-minute unit of service. Beginning January 1, 2022, CMS will apply a 15 percent reduction to the payment amount for a physical or occupational therapy service when the CQ/CO modifier is applied to the service. Our revision to the *de minimis* policy will allow the PT/OT to bill without the CQ/CO modifier for the final 15-minute unit (in a multi-unit billing scenario) when the PT/OT meets the billing threshold of 8 minutes, which is when the minutes are greater than the midpoint (7.5 minutes) of the 15-minute unit, regardless of any minutes provided by the PTA/OTA for that final unit.

Under the policy we are finalizing, the PT/OT services will not be discounted as the result of any “left-over” minutes provided by the PTA/OTA when the therapist provides enough minutes on his or her own to meet the billing threshold amount. In these scenarios, the PTA's/OTA's minutes are considered immaterial for the purposes of billing. For example, if the PT/OT provided 23 minutes of a 15-minute service and the PTA/OTA provided another 20 minutes of the same service—three units of service can be billed for the 43 total minutes (38 minutes through 52 minutes). Here, one full 15-minute unit of service is billed without the CQ/CO modifier for the PT/OT service with 8 minutes remaining, and one full unit of service is billed

with the CQ/CO modifier for the service provided by the PTA/OTA with 5 minutes remaining. Under the policy, the third unit is billed without the CQ/CO modifier because the 8 minutes provided by the PT/OT meets the billing threshold amount. However, under our current *de minimis* policy, the 5 minutes provided by the PTA/OTA is more than 10 percent (it is 38 percent of the total service—PTA/OTA minutes divided by the total of PTA/OTA + PT/OT minutes: 5 divided by 13 = 38 percent) meaning the CQ/CO modifier is applied to the third and final unit of service.

Under our current *de minimis* policy, under which the CQ/CO modifier is applied whenever the PTA/OTA provides more than 10 percent of a service whether or not the PT/OT furnishes enough of the service to bill for it without the portion furnished by the PTA/OTA, stakeholders have expressed concern that the PT/OT has a financial incentive not to have the PTA/OTA provide any additional minutes, regardless of the individual patient's needs, when those minutes of service lead to a reduced payment for a unit of a service. There may be a cost implication to this policy as fewer billing scenarios may result in application of the CQ/CO modifiers and consequent payment reduction. However, we believe that basing our policy on a “midpoint rule” in which the PT/OT provides enough minutes on their own (8 or more minutes) to bill for the final unit of a billing scenario could eliminate the PT's/OT's financial incentive to not provide appropriate therapy to an individual patient when it is furnished by the PTA/OTA. On the other hand, if we were to continue with our *de minimis* standard to apply to all billing scenarios for PTA/OTA services that exceed the 10 percent standard, we are uncertain how to gauge the overall costs of this policy because of the possible altered PT/OT behavioral change that is due to the financial incentives built into that policy as discussed above.

F. Other Provisions of the Regulation

1. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.A. of this final rule, we make multiple provisions related to RHCs and FQHCs. In terms of estimated impacts to the Medicare program, Payment for Attending Physician Services Furnished by RHCs or FQHCs to Hospice Patients as required by section 132 of the CAA, 2021 and Concurrent Billing for CCM and

Transitional Care Management TCM Services for RHCs and FQHCs will have negligible impact to Medicare spending.

Section 130 requires that all independent RHCs are now subject to the per-visit limit (which is also referred to as “cap”) and phases in an increase in the statutory payment cap over an 8-year period. The cap in CY 2021, for services furnished after March 31, is set at \$100 per visit, then at \$126 per visit in 2022; at \$139 per visit in 2023; at \$152 per visit in 2024; at \$152 per visit in 2025; at \$165 per visit in 2026; at \$178 per visit in 2027; and at \$190 per visit in 2028. Beyond 2028, the limit is updated by the applicable Medicare Economic Index (MEI).

This provision also controls the annual rate of growth in payments to certain provider-based RHCs whose payments are currently higher than the payment limit. Each year, but for services provided after March 31 in 2021, the payment limit shall be set at

the greater of: (1) The RHC per visit amount from the prior year, increased by the percentage increase in the applicable MEI; and (2) the cap limits applicable to each year as described above. In order to be eligible for this “grandfathering” policy, the RHC must have been based in a hospital with fewer than 50 beds and enrolled in Medicare as of December 31, 2019.

Section 2 of Public Law 117–7, enacted on April 14, 2021, made technical corrections to section 130. First, for an RHC that is hospital-based and whose parent hospital has fewer than 50 beds, the date by which the RHC must be Medicare-certified, in order to be grandfathered, was changed from December 31, 2019 to December 31, 2020. Next, a clinic that is owned by a hospital with fewer than 50 beds and that submitted certain applications (received by Medicare) for certification as a Medicare RHC prior to the end of

2020 can be grandfathered, and its clinic-specific cap is to be set based on its 2021 cost per visit. Lastly, a grandfathered RHC must continue to be owned by a hospital with fewer than 50 beds; if the parent hospital exceeds 50 beds, the RHC will lose its grandfathered status.

Table 137 are the FY estimates (in millions) for the impact of section 130, which improves payments to RHCs. These providers are currently paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services, and qualified preventive health services furnished on the same day (with some exceptions). The AIR is subject to a payment limit, except for certain provider-based RHCs that have an exception to the payment limit. The RHC payment limit per visit for CY 2021 is \$87.52, which is 1.4 percent higher than the CY 2020 payment limit of \$86.31.

TABLE 137: Fiscal Year Estimates for the Impact of Section 130 of the CAA

Medicare (Part B)	2021	2022	2023	2024	2025	2026	2026	2028	2029	2030	2031	2022-26	2022-31
Part B benefits	10	180	160	230	310	390	490	580	640	700	750	1,270	4,430
Premium offset	–	-40	-40	-60	-80	-100	-120	-140	-160	-170	-190	-320	-1,100
Net Part B	10	140	120	170	230	290	370	440	480	530	560	950	3,330

In section III.B. of this final rule, we discuss that we proposed to revise the regulatory requirement that an RHC or FQHC mental health visit must be a face-to-face (that is, in person) encounter between an RHC or FQHC patient and an RHC or FQHC practitioner to also include encounters furnished through interactive, real-time telecommunications technology, but only when furnishing services for the purposes of diagnosis, evaluation, or treatment of a mental health disorder.

According to our analysis of Medicare Part B claims data for services furnished via Medicare telehealth under the PFS during the PHE, use of telehealth for many professional services spiked in utilization around April 2020 and diminished over time, but not to pre-pandemic levels. In contrast, Medicare claims data suggests that for mental health services both permanently and temporarily added to the Medicare Telehealth list, subsequent to April 2020, the trend is toward maintaining a steady state of usage over time. Given the expanded availability of mental health services at RHCs and FQHCs, we do anticipate that this policy will increase spending; however, we are not certain of the magnitude of this increase, since it is not clear at this time

how or whether trends related to utilization of communication technology during the PHE will continue after such a time that the PHE were to end. While the estimated cost impact of this provision is unclear, the requirement that a modifier be appended to the claim to identify that the service was furnished via audio-only communication technology will allow us to closely monitor utilization and address any potential concerns regarding overutilization through future rulemaking.

2. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802 and 414.806)

This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of the CAA (for the purposes of this section of this final rule, hereinafter is referred to as “section 401”). These new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

As described in section III.D.1. of this final rule, in considering whether to exclude repackagers from the reporting requirements at section 1847A(f)(2) of the Act, we conducted two analyses to

estimate: (1) The proportion of repackaged products in our existing ASP data; (2) the number of new ASP submissions we can expect as a result of the new reporting requirements under section 401; and (3) the proportion of those (new) submissions that involve repackaged products.

Additionally, while we believe it will impact reporting volume and payment limits under section 1847A of the Act for many billing and payment codes, we are unable to estimate the magnitude of these effects for the following reasons. We estimate: (1) 361 non-reporting manufacturers (of either single source or multiple source drugs) will now be required to report ASP data under section 1847A(f)(2) of the Act; and (2) 6114 products payable under Part B that these non-reporting manufacturers sell. However, we do not know which Healthcare Common Procedure Coding System (HCPCS) code payment limits will be impacted by these 6114 products, nor do we know the sales volume of these 6114 products. Because this information is used to calculate volume-weighted ASP payment limits, we are unable to quantitatively estimate the economic impacts of this provision (that is, the likely costs or savings) on beneficiaries, the government, and other

stakeholders. (We note that the economic impacts on manufacturers, as a result of the information collection requirements of this provision is discussed in section V. of this final rule.)

For single source drugs, these changes may result in lower payment limits because, typically, the WAC-based pricing is higher than ASP plus 6 percent. This then translates to cost savings for both the government and beneficiaries, who will pay coinsurance on a lesser amount. However, for the reason stated previously, we are unable to predict the magnitude of this effect.

Similarly, payment limits for multiple source drugs could increase or decrease, and we are unable to predict the direction or magnitude of specific or aggregate effects at this time.

We do not anticipate that this provision of this final rule will necessitate the revision of existing Medicaid Drug Rebate Agreements.

We welcomed comment on (1) the likely costs or savings to beneficiaries, the government, and other stakeholders and (2) other related impacts of this provision.

We received public comments on the likely costs or savings to beneficiaries, the government, and other stakeholders, and other related impacts of this provision. The following is a summary of the comments we received and our responses.

Comment: One commenter suggested that CMS exclude repackagers from the proposed ASP reporting requirements. They stated that requiring all repackagers to report would likely be duplicative and increase the burden on all parties without providing tangible benefit. They recommend repackagers who already report ASP data continue to do so, but that CMS not require repackagers, as a group, to be subject to the reporting requirements at this time.

Response: We are not persuaded that repackagers should be excluded at this time. In order to maintain consistency and integrity of the ASP data for those manufacturers with and without Medicaid drug rebate agreements, and for operational reasons, we do not believe it is appropriate to exclude repackagers from the ASP reporting requirements. If warranted, we could revisit this in future rulemaking.

Comment: One commenter concluded that CMS' analysis and proposal not to exclude repackagers without a rebate agreement from reporting ASP data is reasonable. The commenter stated given that repackagers with a rebate agreement are required to report ASP data, it is reasonable not to exclude repackagers without a rebate agreement from the

requirements of section 401. They added that having ASP data from repackagers with and without rebate agreements could also permit future analysis of the effect of repackagers' ASP submissions on Medicare Part B payment rates.

Response: We agree it is reasonable not to exclude repackagers without a Medicaid drug rebate agreement and thank the commenter for their feedback.

After consideration of public comments, we are finalizing as proposed.

3. Determination of ASP for Certain Self-Administered Drug Products

a. Anticipated Effects

This provision implements new statutory requirements under section 1847A(g) of the Act, as amended by section 405 of the CAA 2021, (for the purposes of this section of this final rule, hereinafter is referred to as "section 405"). As identified by the OIG studies discussed in section III.D.2. of this final rule, the CMS payment-limit determination under section 1847A of the Act includes all versions of a product marketed under a single FDA approval, and consistent with section 1847A(b)(5) of the Act, the payment-limit determination does not exclude products based on packaging. Thus, the volume-weighted, average-ASP determination can include self-administered versions that may lead to increased program and beneficiary costs because of distorted ASP-based payment limits. In particular, the OIG studies identified two billing and payment codes that included self-administered NDCs. The OIG study determined that as a result of the inclusion of these NDCs in the calculation of the ASP payment limit, Medicare payment amounts remained inflated in 2017 and 2018, causing the program and its beneficiaries to pay an additional \$497 million during this period. Since 2014, current payment methodology has resulted in an additional \$173 million in Medicare beneficiary coinsurance for these two NDCs. (See OIG's July 2020 report titled, "Loophole in Drug Payment Rule Continues To Cost Medicare and Beneficiaries Hundreds of Millions of Dollars," available at <https://oig.hhs.gov/oei/reports/OEI-BL-20-00100.asp>.)

Implementation of the regulatory changes has the potential to result in decreased payment limits for identified billing and payment codes that could, in turn, substantially reduce Medicare and beneficiary expenditures, as described in the OIG study. Since section 1847A(g)(3) of the Act requires CMS to

implement the required payment changes beginning on July 1, 2021, these potential savings may be observed within the year.

By adding sections 1847A(g)(1) and (2) of the Act, section 405 also directs the OIG to conduct future studies with same or similar methodologies to those in the July 2020 report and directs CMS to apply the lesser of payment methodology to the applicable billing and payment codes. This has the potential to result in additional savings to the program and beneficiaries if additional products are identified by these periodic OIG studies.

b. Expected Benefits

Codifying the provisions set forth by section 405 will permit to CMS to apply the lesser of payment methodology at section 1847(g)(2) of the Act to billing and payment codes identified by future OIG studies (described in section III.D.2. of this final rule). This provision addresses distorted payment limits for these products and may result in payment amounts that are better aligned with versions of these products that are payable under Part B (for example, versions that are usually not self-administered). Although we are unable to quantify the total magnitude of the potential savings, these changes have the potential to substantially reduce program expenditures and beneficiary coinsurance.

4. Appropriate Use Criteria

Section 1834(q)(2) of the Act, as added by section 218(b) of the Protecting Access to Medicare Act (PAMA), established a program to promote the use of appropriate use criteria (AUC) for applicable imaging services furnished in an applicable setting.

In the CY 2019 PFS final rule (83 FR 59452), we performed an RIA for this program. In this final rule, we are finalizing our proposal to begin the payment penalty phase of the program on the later of January 1, 2023 or the January 1 of the year after the year in which the PHE for COVID-19 ends. Because, under our provisions, the payment penalty phase will be further delayed, we are updating the estimates for incremental changes from the RIA from the CY 2019 PFS final rule. Since we did not propose new policy requirements nor do we have sufficient reason to change any of the assumptions made in the RIA finalized in the CY 2019 PFS (83 FR 60034 through 60044), we are only updating the analysis to reflect 2019 Medicare claims data (updated from 2014). We identify four incremental changes from the CY 2019

PFS final rule estimates due to updated claims data: (1) Impact of required AUC consultations by ordering professionals; (2) impact to Medicare beneficiaries; (3) process efficiencies to potentially offset the estimated burden on Medicare beneficiaries; and (4) impact on transmitting orders for advanced diagnostic imaging services. Each of these incremental changes results in a lower estimate.

a. Impact of Required AUC Consultations by Ordering Professionals

As discussed in detail in the CY 2019 PFS final rule (83 FR 60035 through 60037), the annual impact estimate of consultations by ordering professionals was \$70,001,700. In our estimates, we calculated the burden for auxiliary personnel to consult AUC under the direction of an ordering professional and the burden for ordering professionals to perform the consultation directly. We estimated that 90 percent of consultations will be performed by a medical assistant (occupation code 31–9092) and 10 percent of consultations will be performed by a general practitioner (occupation code 29–1062). We estimated that 43,181,818, 2-minute consultations occur annually.

Using 2019 Medicare claims data as our basis for the analysis, we proposed to change the methodology used to determine the volume of consultations and proposed to use more granular data that will reduce potential double-counting of advanced diagnostic imaging services. For example, an imaging service furnished in an outpatient hospital department could have two claims associated with that service. There could be a claim from the facility and a claim from the physician that interprets that imaging service. In the CY 2019 RIA (83 FR 60034 through 60044) we were concerned that the estimate of 43,181,818 consultations may be an overestimate because it took into account total claims. For this CY 2022 RIA, we proposed to change the method of counting the total number of advanced diagnostic imaging services that will be furnished under the AUC program which will correspond to the total number of consultations.

Using the Integrated Data Repository we identified Medicare claims using the following parameters: (1) 2019 date of service; (2) claim lines containing one of the procedure codes identified in CR10481 and CR11268 at <https://www.cms.gov/Regulations-and-Guidance/Downloads/Transmittals/2018Downloads/R2040OTN.pdf> and <https://www.cms.gov/files/document/r2404otn.pdf>, respectively; and (3)

claims types of outpatient or practitioner. Claims were then separated based on the setting in which the imaging service was furnished and further by claim type. Using only services billed on the professional claim type, the total number of claim lines containing one of the identified procedure codes was included to total 30,359,901 advanced diagnostic imaging services estimated to be subject to the AUC program. By using this combination, we believe we can reduce the risk of double-counting services to obtain a more accurate estimate of total number of diagnostic imaging services subject to the AUC program. Therefore, this analysis will use the estimate of 30,359,901 AUC consultations.

Using the May 2020 BLS mean hourly wages, we update our estimates for a medical assistant (occupation code 31–9092) with mean hourly wage of \$17.75 and 100 percent fringe benefits for 90 percent of consultations (910,797 hours) to be \$30,511,701 (910,797 hours × \$33.50/hour). The occupation for general practitioner is no longer listed on the BLS so, instead, we update our estimate using the occupation code for general internal medicine physician (29–1216) with mean hourly wage of \$101.42 and 100 percent fringe benefits for 10 percent of consultations (101,200 hours) to be \$20,527,408 (101,200 hours × \$202.84/hour). The updated total annual estimated impact of consultations is \$51,039,109, for an incremental change (reduction) of \$18,962,591.

b. Impact to Medicare Beneficiaries

In the CY 2019 PFS final rule, we estimated that the additional 2-minute consultation would impact the Medicare beneficiary when their advanced diagnostic imaging service is ordered by the ordering professional by introducing additional time to their office visit. For this update, we used the updated number of consultations calculated above from claims data, as well as the May 2020 BLS mean hourly wage. To estimate this annual cost, we multiplied the annual burden of 1,011,997 hours by the BLS occupation code that represents all occupations in the BLS (00–0000) as mean hourly wage plus 100 percent fringe (\$54.14/hr) for a total estimate of \$54,789,518 per year for an incremental change (reduction) of \$13,211,482. We also estimated that, over time, process efficiencies may be implemented. We assumed that 50 percent of practices implemented an improvement process that streamlined AUC consultation so Medicare beneficiaries spent the same amount of time in the physician's office regardless of whether an advanced

diagnostic imaging service was ordered. The updated estimate that such an improvement process could offset the estimated burden on Medicare beneficiaries by \$27,394,759 annually for an incremental change (reduction) of \$6,605,741.

c. Impact on Transmitting Orders for Advanced Diagnostic Imaging Services

In the CY 2019 PFS final rule, we estimated that including AUC consultation information on the order for an advanced diagnostic imaging service to the furnishing professional or facility is estimated as the additional 5 minutes spent by a medical secretary (occupation code 43–6013). To update this estimate, we use the May 2020 mean hourly wage of \$18.75 plus 100 percent fringe benefits to transmit the order for the advanced diagnostic imaging service. In aggregate, we assumed in the CY 2019 PFS final rule that 40,000,000 advanced diagnostic imaging services are ordered annually. We proposed to update that number to match the total number of AUC consultations proposed earlier in this RIA to 30,359,901, so the updated total annual burden to communicate additional information in the order is estimated as \$94,495,192 (\$18.75/hr × 2 × 0.083 hr × 30,359,901 orders) for an incremental change (reduction) of \$20,044,808.

d. Impact on Furnishing Professionals and Facilities

As described in the CY 2019 PFS final rule, we identified an estimated 174,064 furnishing professionals (comprising radiologists, ASCs, IDTFs and hospitals) and assumed that every identified furnishing professional will choose to update their processes for the purposes of the AUC program in the same way by purchasing an automated solution to report AUC consultation information which was estimated to cost \$10,000 for each furnishing professional. We update this cost to account for inflation and therefore the updated estimated cost is \$10,636.07 (\$10,000 adjusted for inflation to 2021 dollars) for a total estimated one-time update cost of \$1,851,356,888.48 (174,064 × \$10,636.07).

e. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

As described in the CY 2019 PFS final rule, we assumed that there may be some savings to the Medicare program due to the AUC program requirements and potential decreases in inappropriate utilization of advanced diagnostic imaging services. This assumption was based on literature describing prior

experiences with clinical decision support in a pilot project conducted in Minnesota, a retrospective cohort study on evidence-based clinical decision support for lumbar MRI, brain MR and sinus CT and local implementation of clinical decision support, and we

estimated that savings may account for \$700,000,000 savings per year.

f. Summary of Delay-Attributable Changes and Discounted Rates

Table 138 summarizes the substantive changes from the CY 2019 PFS final rule to the CY 2022 PFS final rule impact

estimates. The effect of a 3-year delay is approximated by applying 3 years' worth of discounting at 7 percent or 3 percent discount rates (Circular A-4, https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/assets/regulatory_matters_pdf/a-4.pdf).

TABLE 138: AUC Program Related Activities with Changes in Impact Estimates Resulting from a 3-Year Delay

AUC Program Related Activity	CY 2022 PFS Rule Impact Estimate	Change from CY 2019 PFS Final Rule (as a function of the discount rate)
Impact of required AUC consultations by ordering professional	\$51,039,109	- \$4.3 million (3%) - \$9.4 million (7%)
Impact to Medicare beneficiaries	\$54,789,518	- \$4.6 million (3%) - \$10.1 million (7%)
Impact on transmitting orders for advanced diagnostic imaging services	\$94,495,192	- \$8.0 million (3%) - \$17.4 million (7%)
AUC automated solution	\$1,851,356,888	- \$157.1 million (3%) - \$340.1 million (7%)
Medicare program impacts associated with advanced diagnostic imaging services	\$700,000,000	- \$59.4 million (3%) - \$128.6 million (7%)
Total Change Attributable to a 3-Year Delay		- \$174.1 million (costs, 3%) - \$376.9 million (costs, 7%) - \$59.4 million (transfers, 3%) - \$128.6 million (transfers, 7%)

5. Removal of Selected National Coverage Determinations (NCDs)

We proposed to remove two older NCDs that no longer contain clinically pertinent and current information or that involve items or services that are used infrequently by beneficiaries. Generally, proactively removing obsolete or unnecessary NCDs removes barriers to innovation and reduces burden for stakeholders and CMS. The two NCDs fall into two impact categories. First, eliminating an NCD for items and services that were previously covered means that the item or service will no longer be automatically covered by Medicare. Instead, the coverage determinations for those items and services will be made by Medicare Administrative Contractors (MACs). Second, if the previous national coverage determination barred coverage for an item or service under title XVIII, MACs will now be able to cover the item or service if the MAC determines that such action is appropriate under the statute. We believe that allowing local contractor flexibility in these cases better serves the needs of the Medicare program and its beneficiaries since we believe the future utilization for items and services within these policies will

be limited, each affecting less than one percent of the Medicare FFS population.

For the one NCD where NCD removal changes coverage from limited national coverage to MAC discretion, claims data from 2019 shows that less than one percent of the Medicare population is affected. Specifically, NCD 180.2 Enteral and Parenteral Nutrition Therapy provided coverage with limitations. Where in 2019 CMS paid 1,643,739 Medicare FFS claims for 83,551 unique beneficiaries totaling CMS payments of \$356,228,606. While we have claims data available for 2020, the data shows a decrease in claims, unique beneficiaries and total amount paid by CMS. We believe this may be due in part to the COVID-19 pandemic; however, we do not have any information to be able to say that conclusively. The change could be due to other factors not examined here. We estimate there will be *de minimis* change to 2022 payments, compared to 2019 or 2020 because, as discussed in section III.F. of the final rule, local contractors have finalized two LCDs, effective for dates of service on or after September 5, 2021 that will continue to provide parenteral and enteral nutrition coverage for Medicare beneficiaries,

after removal of NCD 180.2. Therefore, we believe that removing this NCD will not result in significant changes to payments.

For the one non-covered NCD to be eliminated, Positron Emission Tomography (PET) Scans under NCD 220.6, we did not expect to find historical claims data for the non-oncologic uses of PET at issue. We broadly noncover non-oncologic indications of PET, in other words, we required that every non-oncologic indication for PET must have its own NCD in order to receive coverage. Because this NCD provides for noncoverage on non-oncologic indications, we do not have accurate claims data to estimate total impact. However, based on the service, we expect future claims to affect less than one percent of Medicare FFS beneficiaries. As discussed in section III.F. of this final rule, the NCD allows coverage for diagnostic PET imaging for oncologic uses not already determined by an NCD, to be made at the discretion of local MACs. We believe that extending local contractor discretion for non-oncologic indications of PET provides an immediate avenue to potential coverage in appropriate

candidates and provides a framework that better serves the needs of the Medicare program and its beneficiaries. For clarity, we did not propose to change any other subsections of 220.6. Thus, the NCDs listed at 220.6.1 through 220.6.20 will not be changed by this provision.

6. Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation

As discussed in section III.H., Pulmonary Rehabilitation (PR), Cardiac Rehabilitation (CR) and Intensive Cardiac Rehabilitation (ICR), of this final rule, we proposed largely conforming changes throughout §§ 410.47 (PR) and 410.49 (CR/ICR). These changes are intended to ensure consistency and accuracy in terminology, definitions and requirements where appropriate across PR and CR/ICR conditions of coverage. Specific to PR, we proposed to remove the requirement for direct physician-patient contact related to the periodic review of the patient's treatment plan because such interaction within the PR program is not necessary for all patients and can be specified, as needed, in individualized treatment plans (ITPs). We also proposed to add coverage of PR for beneficiaries who were hospitalized with a COVID-19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge. After considering public comments and additional clinical evidence, we are finalizing the revisions to improve consistency and accuracy across PR and CR/ICR conditions of coverage as proposed. We are also finalizing the removal of the PR requirement for direct physician-patient contact. We are expanding upon our proposal to cover PR for beneficiaries who were hospitalized with a COVID-19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge. We are removing the proposed hospitalization requirement and finalizing coverage of PR for beneficiaries who have had confirmed or suspected COVID-19 and experience persistent symptoms that include respiratory dysfunction for at least 4 weeks. We did not receive public comments on the proposed impact so we use the same methodology in estimating the impact of the final expansion of coverage for PR below.

In assessing the impact of these provisions, we note that the expansion of PR coverage may increase utilization. Based on the low utilization rate discussed below, we do not believe the

other revisions will significantly impact utilization and the Medicare program.

To estimate the potential increase from the expansion of coverage for PR, we searched the literature for articles that evaluated the utilization rate of PR for the currently eligible diagnosis of chronic obstructive pulmonary disease (COPD) in order to determine the historical utilization trends of this service.

Nishi et al. (2016) investigated the number of Medicare beneficiaries with COPD who received PR from January 1, 2003 to December 31, 2012. Their results included both individuals who had experienced hospitalizations for COPD and those who were outpatients only. The number of unique patients with COPD who initially participated in PR during the study period was 2.6 percent in 2003 (before conditions of coverage at § 410.47 were established) and 2.88 percent in 2012 (after conditions of coverage at § 410.47 were established).²⁶⁸ In 2019, Spitzer, et al. published an article based on Medicare claims data from 2012, finding that 2.7 percent of eligible Medicare beneficiaries received PR within 12 months of hospitalization with COPD.²⁶⁹ Using claims data from FFS Medicare beneficiaries hospitalized for COPD in 2014, Lindenauer et al. (2020) reported that only 3 percent initiated PR within 1 year of their hospital discharge.²⁷⁰ Taken together, this data informs us that utilization of PR in the Medicare population is very low, and that the majority of patients who avail themselves of this service do so, post hospitalization.

There are limitations to applying this data to identify the utilization rate of PR to the conditions of coverage specified at § 410.47. Most notably, some of these studies included patients whose services were billed with non-PR respiratory therapy codes (G0237, G0238 and G0239), instead of only patients whose services were billed with the PR code (G0424). But the authors

also limited patient inclusion to those with a principal or secondary COPD diagnosis, so we believe this suggests that 3 percent is an upper bound for the utilization of PR currently in Medicare beneficiaries. Given that participation in PR has remained steady for many years, we do not expect this pattern to change. As such, for the purposes of this analysis, we assume that 3 percent of eligible beneficiaries under the expansion of coverage (beneficiaries who have had confirmed or suspected COVID-19 and experience persistent symptoms that include respiratory dysfunction for at least 4 weeks) will participate in PR.

To identify the eligible beneficiaries under our provision, we first identify the number of beneficiaries who had COVID-19 using the Preliminary Medicare COVID-19 Data Snapshot.²⁷¹ At the time of writing, the Snapshot included data from January 1, 2020 to July 24, 2021, and identified 4,656,553 total COVID-19 cases for Medicare beneficiaries. Using Medicare FFS data from February 24, 2020 to September 27, 2020 as compared to the same time frame in 2015 through 2019, Tarazi et al. (2021) found that the COVID-19 related mortality rate, defined as death within 60 days of COVID-19 diagnosis, was 17.5 percent.²⁷² To calculate the number of beneficiaries that survive COVID-19 to be eligible for PR under our coverage expansion, we reduced 4,656,553 by 17.5 percent (814,897) to 3,841,656 beneficiaries. A paper published by the Tony Blair Institute for Global Change²⁷³ states that the Covid Symptom Study led by King's College London indicated that about 10 percent of survey participants reported symptoms (including shortness of breath and other symptoms like fatigue, headache and loss of smell) beyond a four-week recovery period. Using this information, we estimate that the patient population we are expanding PR coverage to, those who have had confirmed or suspected COVID-19 and experience persistent symptoms that include respiratory dysfunction for at least 4 weeks, to be 384,166 beneficiaries ($3,841,656 \times 0.10$). Based on our assumption of utilization above, 3 percent, for the newly covered patient population, we estimate 11,525

beneficiaries will receive PR (384,166 × 0.03).

Medicare covers PR for a maximum of 72 sessions. Using 2018 and 2019 Medicare claims data from the Chronic Conditions Data Warehouse (CCW), beneficiaries on average completed 14 sessions of PR. If we assume patients eligible based on our expansion of coverage will participate, on average, in the same number of sessions, we estimate the expansion of coverage will increase PR utilization by 161,350 sessions annually (11,525 beneficiaries × 14 average sessions completed per beneficiary).

Claims for PR are submitted using CPT code G0424. Our analysis of Medicare claims data indicates that 97.54 percent of PR sessions are billed under the Hospital OPPS at \$55.66 (national average price) for an estimated total of \$8,759,815 (161,350 PR sessions × 0.9754 × \$55.66). The remaining 2.46 percent of PR sessions are billed under the PFS, with 2.12 percent of PR sessions furnished in a physician's office which has a national average price of \$30.36 and 0.34 percent billed by a physician when PR was furnished in a HOPD which has a national average price of \$13.96. Taken together, the estimated total for this remaining 2.46 percent of PR sessions is \$111,508 ((161,350 PR sessions × 0.0212 × \$30.36) + (161,350 PR sessions × 0.0034 × \$13.96)). We estimate the total added cost to the Medicare program of this expansion of coverage to be \$8,871,323 (\$8,759,815 + \$111,508) annually during and immediately following the PHE for COVID-19. The impact of our final rule increases the final estimate by \$6,709,876 which reflects the larger patient population that will be eligible for PR. Removing the proposed hospitalization requirement increased the number of eligible beneficiaries by 290,555. As COVID-19 cases decline, we expect the annual impact to decrease because eligible patient populations will likely decrease; however, we are unable to estimate the longer term impact of our provisions due to the unpredictable nature of the PHE and the lack of long term data on COVID-19.

7. Medical Nutrition Therapy

As discussed in section III.I., Medical Nutrition Therapy (MNT), of this final rule, we proposed to remove the restriction that patients only be referred to MNT by the treating physician and update the glomerular filtration rate (GFR) eligibility for patients with chronic kidney disease. We do not anticipate any significant increase in utilization of MNT services resulting from our revisions. Despite various

policy changes that could have improved use, such as increasing payment via adding work RVUs to MNT codes in 2006, approving MNT for telehealth coverage in 2005 and including registered dietitians (RDs) and nutrition professionals as telehealth distant site providers, and waiving out-of-pocket costs to beneficiaries, MNT participation remains under 2 percent of eligible beneficiaries. Based on an analysis of Medicare claims data from 2018, 2019, 2020, we identify the utilization rate of MNT services among eligible beneficiaries to be between 1.5 and 1.8 percent.

Although MNT is covered by many State Medicaid programs and private insurers, use is low in the US.²⁷⁴ The Academy of Nutrition and Dietetics recognizes that research specific to the underuse of MNT services is scant.²⁷⁷ Anecdotal reports and related research on diabetes self-management training point to a multitude of reasons why utilization of the MNT services benefit have remained low. These potential barriers include lack of awareness of MNT by patients and clinicians, inconsistent coverage for MNT services by non-Medicare payers, patient travel and time issues to receive the services and lack of availability of services from RDs who may perceive the process of Medicare enrollment/insurance credentialing and billing as being burdensome and complex.²⁷⁸ Of about 100,000 RDs in the US, only 1,589 submitted Medicare FFS MNT claims in 2017. One study revealed that less than half of RDs providing MNT services in an ambulatory care setting indicated they were not Medicare providers due to reasons such as perceived low reimbursement rates, not providing MNT to Medicare eligible patients, not knowing how to become a Medicare provider, and providing MNT to

Medicare patients for diagnoses not covered by Medicare.²⁷⁹

Our revisions may increase beneficiary access to the MNT benefit and reduce primary care physician burden since we proposed that referrals can come from other physicians and not only from the physician treating the patient for their diabetes or kidney disease; although, as discussed above, we do not expect the changes to make a significant impact on the Medicare program. We do not anticipate increased administrative burden as documentation in the medical record of any referred service is already a part of discharge planning in the hospital setting. The changes to the GFR requirements are to conform our regulation to updated clinical standards and also do not pose a significant change.

8. Medicare Shared Savings Program

a. Modifications to the Shared Savings Program Quality Reporting Requirements Under the APP and the Quality Performance Standard

In section IV.A.3.d.(1)(d) of this final rule, we are extending the use of the CMS Web Interface as a collection type for the Quality Payment Program for performance years 2022, 2023, and 2024 for Shared Savings Program ACOs reporting under the APP. In section III.J.1.c. of this final rule, we are finalizing that in order for ACOs to meet the quality reporting requirements under the Shared Savings Program for performance year 2022 and subsequent performance years, ACOs must meet the following requirements:

For performance years 2022, 2023, and 2024: An ACO must report on either:

(a) The ten CMS Web Interface measures and administer a CAHPS for MIPS survey and CMS will calculate the two claims-based measures included under the APP, or

(b) The three eCQMs/MIPS CQMs and administer a CAHPS for MIPS survey and CMS will calculate the two claims-based measures included under the APP.

If an ACO chooses to report the three eCQMs/MIPS CQMs, its performance on all three eCQMs/MIPS CQMs will be used for purposes of MIPS scoring under the APP. If an ACO decides to report both the ten CMS Web Interface measures and the three eCQMs/MIPS CQMs, it will receive the higher of the

two quality scores for purposes of the MIPS Quality performance category. For performance year 2025 and subsequent years: The ACO must report the three eQMs/MIPS CQMs and administer a CAHPS for MIPS survey and CMS will calculate the two claims-based measures included under the APP.

Absent the related provision analyzed below to reduce the quality performance standard for PY 2023 to the 30th percentile MIPS Quality performance category score, the changes to the quality reporting requirements, including the accommodation to continue the availability of the CMS Web Interface as a reporting mechanism under the APP will likely provide an easier path for a meaningful subset of ACOs that would otherwise have faced difficulty meeting the quality performance threshold previously established in rulemaking for PY 2023. However, we estimate that nearly all such ACOs would already have met the lower 30th percentile performance standard in PY 2023 without the additional reporting flexibility. Of the relatively few, remaining ACOs that we estimate would have failed to meet the lower 30th percentile performance standard without the additional reporting flexibility, we estimate that about half (on average) will meet the quality performance standard as a result of the quality reporting flexibility adopted in this final rule, and thereby further increase shared savings payments to ACOs by about \$20 million in PY 2023.

In section III.J.1.d. of this final rule, we are finalizing, with modifications, the proposal to freeze the quality performance standard at the 30th percentile across all MIPS Quality performance category scores for performance year 2023, and to establish incentives to encourage ACOs to begin the transition to eQCM/MIPS CQM reporting in performance year 2022 and performance year 2023. The quality performance standard will increase to the 40th percentile across all MIPS Quality performance category scores for performance years 2024 and subsequent performance years. The quality performance standard is the minimum performance level ACOs must achieve in order to share in any savings earned, avoid maximum shared losses under certain payment tracks, and avoid quality-related compliance actions.

We are finalizing that, with the exception of an ACO in the first performance year of its first agreement period, an ACO will meet the quality performance standard under the Shared Savings Program by reporting quality data via the APP established under

§ 414.1367 according the method of submission established by CMS and for:

- Performance years 2022 and 2023:
 - ++ Achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or
 - ++ If the ACO reports the three eQMs/MIPS CQMs, meeting the data completeness requirement at § 414.1340 and the case minimum requirement at § 414.1380 for all three measures, and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least 1 of the 4 outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least 1 of the 5 remaining measures in the APP measure set. Consequently, the ACO would be required to meet the performance benchmark on either 2 outcome measures (one measure at the 10th percentile and the other at the 30th percentile), or 1 outcome measure at the 10th percentile and any other measure in the APP measure set at the 30th percentile.

If the ACO (1) does not report any of the 10 CMS Web Interface measures or any of the three eQMs/MIPS CQMs and (2) does not administer a CAHPS for MIPS survey, the ACO would not meet the quality performance standard.

- Performance year 2024 and subsequent performance years:

Achieving a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

If the ACO (1) does not report any of the 10 CMS Web Interface measures or any of the three eQMs/MIPS CQMs and (2) does not administer a CAHPS for MIPS survey, the ACO would not meet the quality performance standard.

Our analysis of quality performance data reported by ACOs for performance years starting during 2019 indicates that about 20 percent of ACOs would have failed a quality performance standard defined as the 40th percentile across all MIPS Quality performance category scores. There is significant uncertainty whether PY 2023 will play out similarly to the baseline data. The fraction of ACOs that would ultimately fail to meet a higher standard in PY 2023 could change significantly if the universe of MIPS Quality performance category scores improves relative to ACOs' quality performance scores, or

alternatively if ACOs, particularly ACOs at risk of failing, respond to the increased quality performance standard by boosting their performance. Utilizing a Monte Carlo approach, assuming that the simulated poor performing ACOs have a 50 percent chance of improving their quality performance beyond the 40th percentile, if CMS kept the quality performance standard at the 40th percentile, then the cost of reducing to the 30th percentile in 2023 will be \$190 million (range \$10 million to \$370 million). There is a wide range because slight changes in quality scoring at the low end of the distribution could render the 40th percentile more or less of an effective point of discrimination among ACOs earning shared savings.

b. Modifications to Other Shared Savings Program Requirements

We do not anticipate a material aggregate impact for the other changes we are finalizing as proposed related to the Shared Savings Program, specifically: Revisions to the definition of primary care services used in the Shared Savings Program's beneficiary assignment methodology (section III.J.2. of this final rule); revisions to the repayment mechanism arrangement policy, including changes to the calculation and recalculation of repayment mechanism amounts (section III.J.3. of this final rule); revision of the requirements concerning disclosure of prior participation in the Shared Savings Program by the ACO, ACO participants, and ACO providers/suppliers, and revisions to Shared Savings Program requirements to reduce the frequency and circumstances under which ACOs submit sample ACO participant agreements and executed ACO participant agreements to CMS (section III.J.4. of this final rule); and revisions to the beneficiary notification requirement as it applies to ACOs under prospective assignment and ACOs under preliminary prospective assignment with retrospective reconciliation (section III.J.5. of this final rule).

However, as we note in section III.J.3. of this final rule, lower required repayment mechanism amounts could reduce costs for ACOs in fees charged by financial institutions for letters of credit and by insurance companies for surety bonds. We estimate that such relief, in total for all participating ACOs, could be worth \$2 to \$4 million annually under the approach we are finalizing (assuming a reduction of approximately \$196 million in repayment mechanism amounts, in aggregate).

We also note that the revisions we are finalizing to the definition of primary care services used in the assignment methodology may have differing effects on a subset of participating ACOs, for example, by leading a beneficiary to be assigned to a competing ACO, for a small subset of beneficiaries. We do not anticipate such ACO-level changes will result in a net impact on program spending overall.

9. Medicare Ground Ambulance Data Collection System

In section III.K. of this final rule, we finalized our proposed changes to the Medicare Ground Ambulance Data Collection System including the proposed change to the data collection period and data reporting period for selected ground ambulance organizations in year 3, proposed revisions to the timeline for when the payment reduction for failure to report will begin and when the data will be publicly available, and proposed revisions to the Medicare Ground Ambulance Data Collection Instrument.

We stated in the proposed rule that while we believed that these changes and clarifications will be well received by the ground ambulance stakeholders, we did not believe that these changes will have any substantive impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. We also noted in the proposed rule that the overall length of the Medicare Ground Ambulance Data Collection Instrument would be the same as previously finalized (84 FR 62888) with these changes. Additionally, some of the instructions which we proposed to add were intended to improve clarity and may therefore reduce the time the ground ambulance organizations spend addressing the questions. We did not receive any public comments on our estimated impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. As we discussed in section III.K of this final rule, we are finalizing our proposed changes to the Medicare Ground Ambulance Data Collection System.

10. Medicare Diabetes Prevention Program Expanded Model

a. Effects of Provisions Relating to the Medicare Diabetes Prevention Program Expanded Model

(1) Effects on Beneficiaries

We proposed to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) Allow CMS to remove the ongoing

maintenance phase (months 13–24) of the MDPP set of services for those beneficiaries who started their first core session on or after January 1, 2022; (2) update the performance payments for the MDPP set of services in the core and core maintenance performance periods; and (3) waive the Medicare provider enrollment application fee for all organizations enrolling as MDPP suppliers on a prospective basis. These changes will have a positive impact on beneficiaries' health by increasing the capacity of MDPP eligible organizations to enroll in Medicare as MDPP suppliers and increasing access to the MDPP set of services for beneficiaries. Eligible beneficiaries receive these services as preventive services, which require no copays or cost sharing. These changes address MDPP supplier and beneficiary needs based upon all available monitoring and evaluation data. The changes are also responsive respond to stakeholder comments.

(2) Effects on the Market

Currently, more than 1,000 organizations nationally are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes Prevention Recognition Program (DPRP) status. However, only 27 percent of eligible organizations are participating in MDPP. We anticipate that the removal of the second year of the MDPP set of services will make MDPP attractive and feasible to more MDPP eligible organizations. Not only does a 12-month MDPP services period align with that of the CDC's National DPP and the DPP model test, our data show that only 10 percent of enrolled MDPP participants continue with the Ongoing Maintenance phase sessions (Year 2), and the majority are reaching their weight loss milestone within the first 6 months of the set of MDPP services. Stakeholders report that the second year of MDPP, or the ongoing maintenance phase, is cost prohibitive due to the costs to retain beneficiaries in year 2 of the expanded model as well as the costs to deliver an additional year of the expanded model that is not supported by the CDC National DPP curriculum. The CDC's National DPP curriculum supports a 1-year program and suppliers have found it difficult to extrapolate the curriculum to a second year. Additionally, MDPP suppliers commented that they have an increasingly difficult time making the business case for MDPP given the costs associated with the ongoing maintenance phase and the low performance payments associated with the second year. Given the low volume of participants continuing in the second

year of MDPP, delivering the MDPP ongoing maintenance period creates an undue burden to MDPP suppliers. The cost to offer and deliver the sessions to a small cohort of individuals outweigh the maximum payments available from Medicare.

Stakeholders have consistently commented that CMS should shorten the MDPP expanded model to 1 year, with payment levels at least equivalent to the levels provided in the DPP model test. For example, during the DPP model test, suppliers were paid an average of \$462 per beneficiary for the 1-year model test. The second year has made delivering MDPP both financially unattractive and unsustainable for many of the current and eligible MDPP suppliers. Suppliers have reported that it is very difficult to engage and retain beneficiaries in a second year, and the reimbursement levels for a second year are inadequate to cover supplier costs. We proposed to shorten the MDPP service period to 1 year and increase the performance payments in the first year. These changes respond to stakeholder feedback and may alleviate some of the difficulty retaining MDPP participants during the core maintenance phase of the expanded model.

(3) Burden Related to Information Collection Requirements—No impact

(a) Supplier Standards

MDPP suppliers may encounter the Medicare enrollment fee during the following Medicare provider enrollment transactions: initial enrollment; revalidation (every 5 years for MDPP); or the addition of a new practice location. The provider/supplier enrollment fee for Calendar Year 2021 is \$599. Although MDPP suppliers may submit a written request to CMS for a hardship exception to the application fee in accordance with § 424.514, many will not qualify and the hardship application process will simply add more burden on the organization. We have heard from the CDC as well as other stakeholders that the enrollment fee is a potential barrier to eligible MDPP suppliers who will not otherwise enroll in Medicare except for MDPP. Approximately 39 percent of our current suppliers are non-traditional suppliers that serve their local communities and play a critical role in enrolling more diverse, equitable, and inclusive cohorts of Medicare beneficiaries to MDPP. These non-traditional suppliers include, but are not limited to YMCAs, county health departments, community health centers, and non-profit organizations that focus on health education, and otherwise will neither enroll nor be able

to enroll as a Medicare supplier at all if it were not for MDPP. They often serve as trusted sources of health information for their communities. However, they also represent a large number of eligible organizations who have not enrolled in Medicare as MDPP suppliers. We anticipate that waiving the enrollment fee on a prospective basis along with the other programmatic adjustments are likely to result in more MDPP suppliers, increased beneficiary access to MDPP services, and an ongoing reduction of the incidence of diabetes in eligible Medicare beneficiaries, in both urban and rural communities.

In April 2020, CMS waived all provider enrollment application fees as part of the COVID–19 Emergency Declaration Blanket Waivers for Health Care Providers. As a result, we saw an increase in MDPP supplier enrollment. We believe that granting a waiver of the fee for MDPP suppliers to extend beyond the COVID–19 Emergency Declaration Blanket Waiver, along with the other change to MDPP, may stimulate MDPP supplier enrollment and enhance the MDPP evaluation. We proposed waiving the Medicare provider enrollment fee beyond COVID–19 Emergency Declaration Blanket Waivers for Health Care Providers because the enrollment fee creates a potential barrier to MDPP supplier enrollment, beneficiary access to the program, and subsequently, our ability to evaluate MDPP. Specifically, we proposed, to waive the enrollment fee as described in section 1866(j)(2)(C)(i) and (ii) of the Act during the MDPP expanded model test phase.

(b) Payment for MDPP Services

Our regulations at § 414.84 specify the payments MDPP suppliers may be

eligible to receive, payments for furnishing MDPP services, and meeting performance targets related to beneficiary weight loss and/or attendance. MDPP suppliers are paid by CMS by submitting claims for MDPP beneficiaries using claim form CMS–1500 (<https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS1500.pdf>). As a condition for payment, claims submitted by MDPP suppliers must be for services furnished to eligible beneficiaries in accordance with § 414.84(b) and (c). We have streamlined the performance payments so that they are easier to understand and suppliers receive larger payments for participants reaching attendance and weight loss performance-based milestones. For example, the attendance-based performance payments are based on a standardized per-session rate, paid after the 1st, 4th, and 9th sessions attended during the core sessions interval, and after attending the two (2) sessions during each of the core maintenance intervals. We have redistributed all the Year 2 ongoing maintenance sessions phase performance payments to certain core and core maintenance session performance payments in Year 1. As finalized, the maximum payment of \$705 over a 1-year service period is \$1 more than the current maximum payment of \$704 under the original 2-year payment structure. We believe eliminating the second year and its associated payments while increasing the first-year payments will result in a more financially sustainable expanded model.

Increasing the first year MDPP payment amounts should not negatively affect a supplier's performance (for

example, participants' weight loss). As finalized, we increased the per session payments to \$35, with suppliers receiving \$53 more per beneficiary who attends the 4th core session compared to current payments and \$27 more than proposed. We increased the attendance-based payments in response to stakeholder comments and maintained the 5 percent weight loss payments. Although some of the largest payments to suppliers are still driven by weight loss achievement, the maximum payment for attendance only is finalized at \$455 compared to \$338 proposed and \$205 current. Further, in order to maintain CDC Diabetes Prevention Recognition Program (DPRP) recognition status, which is required to be an MDPP supplier, certain levels of performance metrics (for example, weight loss) must be satisfied. There is no evidence that eliminating the second-year maintenance sessions, shortening the MDPP services period to 1 year, will have any negative effects on performance of the expanded model.

(4) Effects on the Medicare Program

(a) Estimated 10-Year Impact of MDPP

Table 140 shows an updated estimate (in millions) for the impact on Medicare spending of two changes to the Medicare Diabetes Prevention Program (MDPP) to be implemented in 2022, with corrected assumptions:

- Waiving the Medicare enrollment fee for all new MDPP suppliers; and
- Shortening the MDPP services period to 1 year and shifting all of the Ongoing Maintenance reimbursement amounts to year one.

TABLE 140: Estimated 10-Year Impact of MDPP on Medicare Spending for CYs 2022 through 2031

Year	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	Total
Impact on Medicare Spending	\$0.3	\$0.2	\$0.2	\$0.1	-\$0.0	-\$0.1	-\$0.2	-\$0.3	-\$0.3	-\$0.4	-\$0.6

These estimates by the CMS Office of the Actuary do not consider waiving the Medicare enrollment fee as a direct cost and assume there will be an additional 500 beneficiaries per year participating in MDPP. The average payment for an MDPP participant will increase by \$150. While the maximum payment available to an MDPP supplier is only slightly greater than the maximum payment

available under the original 2-year payment structure, the second year set of MDPP services have historically been far less utilized than the first year set of services. Therefore, eliminating the second-year payments has a minimal negative effect to the assumed costs of the expanded model. In the most recent year prior to the PHE, 747 Medicare FFS beneficiaries entered MDPP. Increasing

the first-year payment amounts to suppliers and waiving the Medicare enrollment fee should increase access to MDPP, resulting in more utilization of the MDPP set of services. Starting in 2022, we can assume that 750 beneficiaries will have entered the expanded model each year without including the finalized changes. After including these changes, we will now

assume 1,250 beneficiaries will enter the expanded model each year. This assumption has a high level of uncertainty and we revisit it in the Sensitivity Analysis section.

Increasing the first year MDPP payment amounts should not negatively affect a supplier's performance (for example, participants' weight loss). Almost all of the increases to the payment amounts are applied after the 4th core session. Even though most of the payment increases are not tied to

weight loss achievement, in order to maintain CDC Diabetes Prevention Recognition Program recognition status, which is required to be an MDPP supplier, certain levels of performance metrics (for example, weight loss) must be satisfied.

There is no evidence that eliminating the second-year maintenance sessions, shortening the MDPP services period to one year, will have any negative effects on performance of the expanded model.

(b) Sensitivity Analysis

Since the cost to suppliers for delivering the MDPP set of services is generally unknown, how utilization of the expanded model will be affected by the changes is highly uncertain. Table 141 shows the 10-year impact estimates (in millions) for different levels of additional beneficiary participation as a result of the changes:

TABLE 141: 10 Year Impact Estimates

Additional Beneficiaries Per Year	10-year Estimated Impact
0	\$0.5
250	\$0.3
500 (assumption used in best estimate)	-\$0.6
1,000	-\$2.3

Finally, higher projected savings are associated with increases in beneficiary participation, while no additional beneficiaries will result in an estimated cost.

The financial impacts we provided for the previously proposed payment schedule changes included errors that

impacted our estimates: additional costs resulting from payment increases were not applied to the baseline participants; the count of 1,742 participants used to estimate future baseline participation included Medicare Advantage beneficiaries, which should have been

excluded; and since there were only 747 new FFS participants in the most recent year prior to the start of the PHE, our best estimate would have assumed 250 additional FFS participants per year resulting from the previously proposed changes.

TABLE 142: Estimated 10-Year Impact of Previously Proposed MDPP Payment Schedule Changes on Medicare Spending for CYs 2022 through 2031, Corrected

Year	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	Total
Impact on Medicare Spending (previous)	\$0.2	\$0.2	\$0.1	\$0.0	-\$0.1	-\$0.2	-\$0.2	-\$0.3	-\$0.3	-\$0.4	-\$0.9
Impact on Medicare Spending (corrected)	\$0.2	\$0.1	\$0.1	\$0.0	\$0.0	-\$0.1	-\$0.1	-\$0.1	-\$0.2	-\$0.2	-\$0.2

b. Alternatives Considered

No alternatives were considered. The 2-year MDPP service period has depressed interest in MDPP among would-be MDPP suppliers. These actions address stakeholder comments on the barriers to MDPP expanded model success. If we do not take action, we will not be able to scale MDPP as intended, impacting Medicare beneficiary access to this expanded model. Reducing the MDPP from a 24- to a 12-month services period, increasing the year 1 performance payments, and waiving the Medicare provider enrollment application fee not only better aligns the expanded model with the evidence that helped certify the DPP model test initially, but it will

encourage eligible organizations to enroll as MDPP suppliers.

c. Impact on Beneficiaries

This change will have a positive impact on eligible MDPP beneficiaries, as it better aligns with the CDC's National DPP, giving both the participants and the coaches similar messaging regarding this expanded model, regardless of payer. MDPP suppliers often offer the MDPP set of services to mixed cohorts, or classes with participants who are not eligible for MDPP, but who are enrolled in a National DPP cohort. Since MDPP generally follows the CDC's National DPP and aligns its expanded model with the CDC's DPRP Standards, it is confusing to participants, coaches, and

staff when talking about a 2-year set of services to its eligible Medicare participants when the non-Medicare participants have a 1-year program. Finally, reducing the MDPP service period from 2 years to 1 year allows more cohorts to start and finish MDPP during the expanded model initial period of performance, which is expected to end in March 2023.

d. Estimating Regulatory Familiarization Costs

Given that we tried to align this rule as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rule impacts only enrolled MDPP suppliers and eligible beneficiaries who

have started the MDPP expanded model or are interested in MDPP.

11. Vaccine Administration Services

In section II.J.1. of this final rule, we are finalizing that effective January 1, 2022, CMS will pay \$30 per dose for the administration of the influenza, pneumococcal and hepatitis B virus vaccines. In addition, CMS will maintain the current payment rate of \$40 per dose for the administration of the COVID-19 vaccines through the end of the calendar year in which the ongoing PHE ends. Effective January 1 of the year following the year in which the PHE ends, the payment rate for COVID-19 vaccine administration will be set at a rate to align with the payment rate for the administration of other Part B preventive vaccines.

We estimate that the policy to increase the administration cost for influenza/pneumococcal/HBV vaccine services to \$30 in 2022 will increase Medicare spending by roughly \$250 million in CY 2022. This estimate doesn't reflect the impact of induced utilization of the vaccine, or any offsetting savings resulting from averted hospitalizations for those who would now get the vaccine. This policy may

encourage more health care providers to offer these services or encourage those that already offer these services to proactively identify and vaccinate more beneficiaries compared to what they might under the lower rates, which would result in further additional vaccine costs. However, if more beneficiaries were vaccinated then Medicare costs associated with the treatment of influenza, pneumonia, and hepatitis B could be reduced. In order to offset the costs associated with this policy roughly 10–11K influenza-related hospitalizations would have to be averted.

12. Medicare Provider and Supplier Enrollment Changes—Provider Enrollment

As explained in section III.N. of this final rule, we proposed changes to three of our existing revocation reasons:

- We proposed to expand § 424.535(a)(2) to permit revocation based on the OIG exclusion of administrative or management services personnel furnishing services payable by a Federal health care program, such as a billing specialist, accountant, or human resources specialist.

- We proposed to expand § 424.535(a)(13) to permit revocation of a physician's or other eligible professional's enrollment if he or she surrenders his/her Drug Enforcement Administration (DEA) certificate of registration in response to an order to show cause.

- We proposed to revise the factors in § 424.535(a)(8)(ii) (which permits revocation based on a pattern or practice of submitting non-compliant claims) to better enable CMS to target shorter periods of non-compliant billing.

We believe that all three of these changes will result in an increase in the number of revocations that CMS imposes. However, we believe this number will be rather small. We currently impose only a limited number of revocations under §§ 424.535(a)(2), (a)(13), and (a)(8)(ii). Accordingly, since our expansion of these three revocation reasons will be fairly modest, we do not foresee more than a very slight increase in revocations.

Table 143 outlines the number of revocations we estimate will ensue under our revocation expansions. These numbers only account for additional revocations stemming from our changes:

TABLE 143: Additional Revocations

Revocation Reason	Number
§ 424.535(a)(2)	5
§ 424.535(a)(13)	5
§ 424.535(a)(8)(ii)	5
Total	15

Internal CMS data indicates that the average provider/supplier that will be affected by these regulatory expansions receives roughly \$50,000 in Medicare payments each year. (We used a similar \$50,000 annual payment estimate for our provider enrollment provisions in the CY 2020 PFS final rule) (84 FR 62568)). Providers/suppliers revoked under our revocation expansions will thus not receive these payments. Hence, multiplying our \$50,000 estimate by the revocation totals in Table 143 results in a projected transfer from these providers/suppliers to the Federal Government of \$750,000 (\$50,000 × 15 revocations).

We did not receive public comments on these estimates and are therefore finalizing them as proposed.

13. Provider/Supplier Medical Review Requirements—Prepayment and Post-Payment Reviews

In section III.N.2. of this final rule, we proposed to: (1) Define key terms including “additional documentation,” “additional documentation request,” “post-payment medical review,” and “prepayment medical review;” (2) codify contractors' authority to request additional documentation for prepayment and post-payment review within established timeframes; (3) codify timeframes for response to requests for documentation; and (4) codify result of a failure to comply with prepayment or post-payment documentation request(s) by a provider or supplier, specifically denial of payment. We do not believe these provisions involve any additional impact or burden on providers, suppliers, or States; however, we

welcomed feedback from stakeholders regarding the potential costs of these provisions.

The regulations will incorporate already established key terms and definitions as well as processing requirements pertaining to prepayment and post-payment medical review into regulation. Placing this information in regulation will improve provider and supplier understanding of the medical review process and their responsibilities in complying with our review contractor's requests. Further, the regulations represent no change to medical review requirements. As such, we did not anticipate any change in the number of prepayment medical reviews, post-payment medical reviews or the number of additional documentation requests made by contractors.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

14. Effect of Modifications to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As discussed in section III.O of this final rule, we are finalizing our proposal to allow OTPs to continue to furnish the therapy and counseling portions of the weekly bundles, as well as any additional counseling or therapy that is billed using the add-on code, using audio-only telephone calls rather than via two-way interactive audio-video communication technology in cases where audio/video communication is not available to the beneficiary after the conclusion of the PHE for COVID-19, provided all other applicable requirements are met. We believe this change will facilitate broader access to these services for beneficiaries. We are also finalizing our proposal to require that when these services are furnished using audio-only technology, practitioners certify that they had the capacity to furnish the services using two-way audio/video communication technology, but instead, used audio-only technology because audio/video communication technology was not available to the beneficiary.

We believe the Part B cost impact of these final policies will be minimal, since payment for therapy and counseling is included in the bundled payment regardless of the modality used to deliver it and we do not expect that this provision will increase the frequency at which medically necessary counseling and therapy services are billed using the counseling and therapy add-on code (HCPCS code G2080).

Additionally, as discussed in section III.O. of this final rule, the FDA recently announced the approval of a new, higher dose naloxone hydrochloride nasal spray product used to treat opioid overdose and that the newly approved product delivers 8mg of naloxone. In the CY 2021 PFS final rule (85 FR 84683 through 84685), we finalized payment for HCPCS code G2215 (Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure). HCPCS code G2215 was priced based on an assumption of a typical case in which the beneficiary will be provided with a box of two 4mg nasal spray products. At the time of drafting the proposed rule, we did not yet have any available pricing information for this newly approved product. However, in order to be able to make payment to OTPs under Medicare for this product, we proposed to create a new G-code describing a take-home

supply of this higher dose naloxone hydrochloride nasal spray product. After considering the comments received, we are finalizing our proposal to establish a new code for a higher-dose of naloxone hydrochloride nasal spray. We will price this code as proposed; the drug component is based on the methodology at § 410.67(d)(2)(i) and the amount of the non-drug component of the code is based on the CY 2020 Medicare payment rate for CPT code 96161, as updated by the MEI. Based on utilization of the existing naloxone codes under the OTP benefit, we believe that the cost impact of finalizing this new code will be minimal.

15. Physician Self-Referral Update

The physician self-referral law provisions are discussed in section III.P. of this final rule.

As discussed in section III.P.2. of this final rule, we are amending the provisions of § 411.354(c)(2) identifying unbroken chains of financial relationships that constitute “indirect compensation arrangements” to ensure that a longstanding prohibition on certain per unit of service-based compensation formulas for determining charges for the rental of office space and equipment remains within the ambit of the law. This provision, which was inadvertently omitted when the definition of “indirect compensation arrangement” was revised in the December 2, 2020 final rule entitled “Modernizing and Clarifying the Physician Self-Referral Regulations” (85 FR 77492), is necessary to protect against potential abuses such as overutilization and anti-competitive behavior. We believe that most parties have continued to comply with the regulatory provisions on per unit of service-based compensation formulas for the rental (or lease) of office space and equipment as they have done since the requirements became effective on October 1, 2009. We are also adding provisions to assist stakeholders in identifying the individual unit to be analyzed under the provisions of § 411.354(c)(2)(ii)(A)(2)(i) through (iv). We believe that the clarity provided by these provisions will facilitate compliance without adding burden.

As discussed in section III.P.3. of this final rule, we are finalizing our proposal to permit the use of the exception for preventive screening tests and vaccines at § 411.355(h) for COVID-19 vaccines during such period as the vaccines are not subject to CMS-mandated frequency limits, provided that all other requirements of the exception are satisfied. We believe that this provision will ensure that the physician self-

referral law will not impede the availability of critically important COVID-19 vaccines for Medicare and other patients.

As discussed in section III.P.4. of this final rule, we are finalizing our proposal to publish the Code List for Certain Designated Health Services (Code List) solely on the CMS website. Commencing after the publication of the January 1, 2022 Code List in this final rule, the Code List will be updated annually and published on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes. No less than 30 consecutive calendar days prior to the effective date of a Code List update, we will provide advance notice of the updated Code List on the CMS website. We will also provide for a 30-day public comment period for each update using www.regulations.gov, and publish instructions for submitting comments on the CMS website. We will address all public comments that we receive through this process on the CMS website. Finally, we are revising the definition of “List of CPT/HCPCS Codes” at § 411.351 by updating the URL that indicates where the Code List is published on the CMS website. We believe that these provisions will facilitate compliance with the physician self-referral law and allow easier access to the most up-to-date Code List.

16. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD Plan (section 2003 of the SUPPORT Act)

In addition to the cost reflected in the Collection of Information section of this final rule, we expect that there will be an additional burden for CMS to award and work with a CMS contractor to develop a process for reviewing the PDE data to assess prescriber compliance with the regulatory provision and review and process prescriber attestations. Based on similar contracts, and conversations with the industry, in the CY 2022 PFS proposed rule, we estimated the costs of (A) development of operational strategy for the new program, (B) reviewing PDE data, and (C) prescriber case work. We solicited stakeholder feedback on our estimate and all our assumptions.

(A) Development of policy: We estimated that it would take our contractor a week of work, 40 hours, to develop the strategy for how the contractor will process the prescriber attestations. We estimated that it would take an operations manager and compliance officer working together at a combined hourly wage of \$193.60/hr

(\$120.90/hr + \$72.70/hr) a full 40-hour work week to operationalize this aspect of it. Therefore, we estimated the aggregate cost to be \$7,744 (40hr * \$193.60/hr).

(B) Since systems already exist to collect the appropriate PDE data, in our proposed rule, we stated that our contractor would only have to review the data for compliance with the EPCS mandate. Therefore, we estimated that it would take 2 computer systems analysts each working at \$95.22/hr, a week and a half of work, 60 hours. Therefore, the aggregate cost would be \$5,713.20 (60 hr * \$95.22/hr).

(C) We estimated that it would take 4 administrative support workers each working at \$36.82/hr, 60 hours to generate the letters and disseminate them to the appropriate prescriber, which means that it would cost our contractor \$2,209.20/year (60 hr * \$36.82/hr) in administrative support costs. We estimated that it would be the full-time job of a customer service representative working at \$37.02/hr to field prescriber inquiries about the disseminated letters. Thus, we estimated that our contractor would spend \$77,001.60 (\$37.02/hr * 40 * 52) on the salary of the customer service representative for this task.

The aggregate impact for our contractor is 200 hours at a cost of \$92,668. We solicited comment on the accuracy of this burden estimate and on any measures that CMS can take to decrease the impact of this provision, while maintaining its utility and implementing the statutory mandate. We did not receive public comments on the burden estimates for this provision, and therefore, we are finalizing as proposed.

17. Open Payments

a. Payment Context Field for Teaching Hospitals

This provision is for a mandatory freeform text context field. We have created this provision at the request of stakeholders, particularly after conversations with teaching hospitals. The teaching hospitals confirmed that the majority of their disputes arise because of a lack of information within the record and an inability to associate the payment to the correct area within their large organization, not the inaccuracy of the record itself. The benefit of this field is to give better context to the records attributed to teaching hospitals and thereby reduce the number of disputes. For this reason, we also believe it will increase goodwill between the program's stakeholders. The cost is that reporting entities will

need to collect an additional piece of information, which will increase burden. We do not believe this burden will be great because the volume of reported teaching hospital payments is much lower than the volume of physician covered recipient payments. In addition, we have created flexibility with this field so that the reporting entity can choose which piece of information is most appropriate and can be something that they already collect, such as a check number or name of the department in the hospital.

b. Optional Annual Recertification

The optional annual recertification is at the request of reporting entities and will increase the availability of communication to CMS. The burden associated with this action is low because it will be a low-effort process only completed by the entities who choose to do so.

c. Defining a Physician-Owned Distributorship

Since the program began in 2013, we have heard feedback that physician-owned distributorship (PODs) should be better represented in the data because the conflict of interest potentially created by PODs is at the heart of the program. We created this new definition due to the lack of an existing POD definition that would be appropriate for the program's needs. Although this is a new definition, it will only be a subset of the existing definitions of applicable manufacturer and applicable group purchasing organization. "Applicable manufacturer—POD" and "Group purchasing organization—POD" are already "business type" choices when registering in the Open Payments system. Therefore, this definition will not alter existing regulations beyond requiring PODs to identify themselves as such.

d. Disallowing Record Deletion Without Reason

We believe there is not currently language to prevent an applicable manufacturer or applicable group purchasing organization from submitting and attesting to records, then deleting the records to prevent publication. This action would be contrary to the spirit of transparency of the program. To help ensure compliance with this requirement, we are also adding a new field that will allow entities to communicate the reason for the deletion to CMS. Since the entities will have attested to the accuracy and completeness of these records, we believe it is appropriate to confirm the reason for the deletion. We have not

perceived the behavior of inappropriate deletions within the data and do not believe it will increase burden beyond the additional field when deleting a record. We are preemptively closing a potential loophole.

e. Disallow Publication Delays of General Payments

The statute requires that delays are "made pursuant to product research or development agreements and clinical investigations" (1128G(c)(1)(E) of the Act). A small number of general payments are delayed annually, which we are unable to verify meet this requirement. Research payments contain the appropriate fields to ensure that the statutory provisions are being met. We do not believe that it will be a burden for the small number of general payments to either be reported as research payments or not delayed.

f. Short-Term Loans

Short-term loans are not required to be reported, but they must be shorter than 91 days to meet the exception. This provision does not create burden because it only clarifies that those 90 days must be the cumulative total for a year, which is already outlined in subregulatory guidance. We do not anticipate that this will change reporting behavior but want to explain the exception more clearly within the text of the final rule.

g. Remove General Ownership Records

Ownership records have special rules for reporting outlined in the statute (section 1128G(a)(2) of the Act), which are not included in the format for general records. However, there is currently a general record for reporting ownership and investment interest (Nature of Payment = 11). We anticipate a small burden for the approximately 92 reporting entities who have previously used the general nature of payment category in order to fill out the different fields in the ownership record. This burden will allow the records to meet statutory mandates.

h. Updated Contact Information

Open Payments conducts regular compliance-related outreaches to reporting entities when it encounters data that may not meet program requirements. We have found that the two contacts provided by applicable manufacturers and group purchasing organizations often become obsolete, especially if a company has not updated its contact information during the recertification process. It is crucial for the integrity of the data that we have the ability to contact entities in the case of

irregularities. Additionally, we believe that ensuring informal communications from CMS will reduce burden since it may prevent more formal compliance actions if the entity is unresponsive due to outdated contact information. However, we do not believe this is an issue for the majority of reporting entities, nor do we believe that keeping the contact information updated will create a large burden.

18. Updates to the Quality Payment Program

In section IV.A. of this final rule, we include our finalized policies for the Quality Payment Program. In this section, we first present the overall and incremental impacts to the number of expected QPs and associated APM Incentive Payments. In the following sections, we estimate the overall and incremental impacts to the total MIPS eligible population and the payment impacts by practice size for the CY 2022 performance period/2024 MIPS payment year based on various finalized policies, including policies to modify MIPS eligibility, the MIPS final score and the performance threshold and additional performance threshold as discussed in sections IV.A.3.a., IV.A.3.d., IV.A.3.e., and IV.A.3.f. of this final rule.

For the MIPS payment adjustment, we ran two RIA models: A baseline and a final policies model. The aim of the baseline model is to model the status of our population of clinicians for the CY 2022 performance period/2024 MIPS payment year if this final rule does not take effect. It therefore reflects previously finalized policies for the CY 2022 performance period/2024 MIPS payment year. Select examples of the baseline policies scheduled to start in the CY 2022 performance period/2024 MIPS payment year include the removal of the Web Interface as a collection type and the change in the performance category weights. There was no defined performance threshold or additional performance threshold, so our baseline model assumed the performance threshold and additional performance threshold used for the previous period (CY 2021 performance period/2023 MIPS payment year).

The aim of the final policies model is to estimate the incremental effect of the final policies for the CY 2022 performance period/2024 MIPS payment year on MIPS eligibility, MIPS final scores, and payment adjustments. In other words, by comparing the difference between our baseline model and our final policies model we can estimate the incremental impact of finalizing the policies contained in this

final rule. Select examples of the finalized policies include, the inclusion of new MIPS eligible clinician types, the inclusion of the Web Interface as a collection type, the change in performance threshold and additional performance threshold, and the changes to the complex patient bonus. Refer to section VI.F.18.e.(2) of this final rule for the detailed methods on how we integrated the policies into the baseline and final policies models.

a. Assessing Use of 2020 Data for Estimating Future MIPS Performance

In the 2022 PFS proposed rule (86 FR 39546), we stated that the RIA used the 2019 MIPS performance period data because the data for the 2020 MIPS performance period were not available in time to incorporate into the proposed rule model. We noted we would evaluate whether it is appropriate to use the 2020 performance period data to predict performance in CY 2022 for the final rule and whether adjustments would need to be made if CY 2020 performance period data are used. We have already acknowledged some data from the CY 2020 performance period is not usable. For example, we have stated that based on our analysis of the 2020 performance period data, we could not reliably calculate scores for the cost measures that would adequately capture and reflect the performance of MIPS eligible clinicians. As a result, we reweighted the cost performance category for all MIPS eligible clinicians for the CY 2020 MIPS performance period.²⁸⁰ Additionally, in section IV.A.3.f.(2) of this final rule, we noted we have final score data for the CY 2020 performance period/2022 MIPS payment year available to use in our assessment of whether to use the mean or median for the performance threshold, but the data for the CY 2020 performance period/2022 MIPS payment year may be subject to change as a result of the targeted review process. However, we have also indicated that for certain purposes 2020 performance period data could be beneficial too. As discussed in section IV.A.3.e.(1)(c)(ii) of this final rule, we believe 2020 performance period data is appropriate to use for historic benchmarks in part because it is the most recent available dataset and it reflects a performance period in which clinicians were facing the PHE.

To evaluate whether the 2020 MIPS performance period data is appropriate to use to predict future performance, we considered whether the extreme and

uncontrollable circumstances policy impacted submissions and data, and whether the COVID-19 PHE impacted services provided (for example, quality measures, the number of MIPS eligible clinicians, claims). For the 2020 performance year, we applied the MIPS automatic extreme and uncontrollable circumstances policy to all individual MIPS eligible clinicians and allowed for extreme and uncontrollable applications due to the COVID-19 PHE (<https://qpp.cms.gov/resources/covid19?py=2020>). Due to these extreme and uncontrollable circumstances policies, not all clinicians or groups may have submitted data for the 2020 MIPS performance period.

When we evaluated whether the 2020 MIPS performance period data is appropriate to use to estimate 2022 MIPS performance period performance for MIPS eligible clinicians, we compared the 2020 MIPS performance period data to the 2019 MIPS performance period data on key metrics. Overall, we observed a decrease in the number of MIPS eligible clinicians at the individual level who exceed the low-volume threshold. We also observed a decline in data submitted by individual and group. Finally, when examining actual scores and payment information for the 2020 performance period/2022 MIPS payment year compared to the 2019 performance period/2021 MIPS payment year, we found an increase in the number of MIPS eligible clinicians receiving a neutral score. However, our initial findings suggest the extreme and uncontrollable circumstances policy combined with the COVID-19 PHE limit the data needed to simulate future MIPS eligible population and associated performance. Therefore, this RIA uses the 2019 MIPS performance period submissions which were used for the CY 2021 PFS final rule RIA (85 FR 85011 through 85023) and CY 2022 PFS proposed rule RIA (86 FR 39545 through 39556). We note that the findings are specific for purposes of estimating future performance for the entire population of MIPS eligible clinicians.

b. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

For payment years 2019 through 2024, through the Medicare Option, eligible clinicians with a sufficient percentage of Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs in the applicable QP performance period for a year. These QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of

²⁸⁰ <https://qpp.cms.gov/mips/cost?py=2020>. Last accessed October 20, 2021.

their estimated aggregate paid amounts for Medicare covered professional services furnished during the calendar year immediately preceding the payment year. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs but meet a lower threshold to become Partial QPs for the year may elect to report to MIPS and, if they elect to report, will then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status and does not meet any other exemption category, the eligible clinician will be subject to MIPS, will report to MIPS, and will receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, the update to the PFS CF for services that are furnished by clinicians who achieve QP status for a year is 0.75 percent, while the update to the PFS CF for services that are furnished by clinicians who do not achieve QP status for a year is 0.25 percent. In addition, MIPS eligible clinicians will receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B PFS services in a payment year based on performance during a prior performance period. Although the statute establishes overall payment rate and procedure parameters until 2026 and beyond, this impact analysis covers only the 2024 MIPS payment year of the Quality Payment Program.

Overall, we estimate that for the 2022 QP Performance Period between 225,000 and 290,000 eligible clinicians will become QPs. Therefore, they will be excluded them from MIPS and will qualify for the lump sum APM incentive payment in Payment Year 2024 based on 5 percent of their Part B paid amounts for covered professional services in the preceding year. These paid amounts for QPs are estimated to be between approximately \$12,000 million and \$15,000 million in total for the 2022 performance year. The analysis

for this final rule used the 2020 third snapshot participation file. We based APM Incentive Payment Amounts on paid amounts with service dates of January 1, through September 30, 2020. We multiplied the calculated amounts by 1.5 to approximate payment amounts for the full calendar year. We estimate that the total lump sum APM Incentive Payments will be approximately \$600–750 million for the 2024 Quality Payment Program payment year.

In section VI.F.18.a. of this final rule, we projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2022 QP Performance Period as well as some Advanced APMs anticipated to be operational during the 2022 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that will attain QP status through the All-Payer Combination Option. We note that the Kidney Care Choices Model and the Radiation Oncology model have been included in our analysis as we anticipate that the model will be Advanced APMs in 2022. Additionally, we anticipate that the Maryland Primary Care Program will not be an Advanced APMs in 2022. The following APMs are expected to be Advanced APMs for the 2022 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- Global and Professional Direct Contracting Model;
- Kidney Care Choices Model (Kidney Care First; Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program);
- Medicare Shared Savings Program (Basic Track Level E, and the ENHANCED Track);
- Oncology Care Model (Two-Sided Risk Arrangements);
- Primary Care First (PCF) Model;
- Radiation Oncology model; and,
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (see 81 FR 77444 through 77445 for information on the APM Participant Lists and QP determinations) on the 2020 third snapshot participation file to estimate the number of QPs, total Part B paid amounts for covered professional

services, and the aggregate total of APM Incentive Payments for the 2022 QP Performance Period. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 50 percent of their Part B covered professional services or at least 35 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

c. Impact for the CY 2021 Performance Period/2023 MIPS Payment Year

In section IV.A.3.e.(2)(a)(ii) of this final rule, we finalize our proposal to double the complex patient bonus, and to increase its cap to 10 points for the CY 2021 Performance Period/2023 MIPS Payment Year. We expect this policy to result in an increase of 3 points in the median bonus thus increasing MIPS final scores at the median by 3 points. We do not know the effects of the PHE for COVID–19 and its effect on MIPS performance in 2021, so we did not recreate the analysis and payment distributions with the updated bonus for the CY 2021 performance period/2023 MIPS payment year (85 FR 85012 through 85019). The increase in complex patient bonus points will result in smaller payment adjustments for three reasons. First, the resulting increase in final scores will reduce the budget neutral pool. Second, the increase in complex patient bonus points will increase the number of clinicians with scores above the performance threshold or additional performance threshold, meaning more clinicians will share in the budget neutral pool and additional \$500 million for exceptional performance and potentially lower the scaling factor that is applied to the MIPS payment adjustment and additional payment adjustment. Third, the average scores of those receiving a positive or additional adjustment will be higher, which means the adjustment rates for clinicians that have scores above the performance threshold or additional performance threshold will be lower.

d. Estimated Number of Clinicians Eligible for MIPS Eligibility for the CY 2022 Performance Period/2024 MIPS Payment Year

(1) Methodology To Assess MIPS Eligibility

(a) Clinicians Included in the Model Prior To Applying the Low-Volume Threshold Exclusion

To estimate the number of MIPS eligible clinicians for the CY 2022 performance period/2024 MIPS payment year and the effect of the final

policies in this final rule, we ran two models as described in section VI.F.18., a baseline model and final policies model.

For the baseline and final policies models, we used the same eligibility files and approach described in the CY 2021 PFS final rule (85 FR 85013) which resulted in the inclusion of 1.6 million clinicians who had PFS claims from October 1, 2018 to September 30, 2019, as well as additional clinicians associated with a group who had at least one PFS claim from October 1, 2019, through December 31, 2019. We used the same exclusion criteria to exclude clinicians from our MIPS eligibility assessment as described in the CY 2021 PFS final rule RIA (85 FR 85013) with the following model updates:

(1) In both the baseline and final policies models, we excluded practitioners in Next Generation ACOs because the Next Generation ACO model ends in the CY 2021 MIPS performance period.

(2) In both the baseline and final policies models, to determine which clinicians in the initial population of 1.6 million should be excluded as QPs, we used Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. We elected to use this data source because the APM participant list for the 2019 final snapshot can reliably be used for RIA projections. From this data, we calculated the QP and Partial QP determinations as described in section of IV.A.4.c.(1)(b) of this final rule for the 2022 QP performance period for both models.

(3) In the final policies model, we included in our estimated MIPS eligible population for the CY 2022 performance period/2024 MIPS payment year clinical social workers and CNMs as finalized in section IV.A.3.a.(1) of this final rule.

(4) In the final policies model, we are integrating the provision that starting with the CY 2022 MIPS performance period/2024 MIPS payment year, small practices, excluding virtual groups, must submit data as a group in any

performance category to indicate that they wish to be scored as a group for Medicare Part B claims. This affects eligibility because previously a single Medicare Part B claims submission, without any other submission, started a group score. Once a group score is created, a clinician who was individually excluded from MIPS for being under the low-volume threshold, may now be eligible if the group exceeds the low-volume threshold. This policy is described at section IV.A.3.a.(3) of this rule.

(b) Assumptions Related To Applying the Low-Volume Threshold Exclusion

The low-volume threshold policy may be applied at the individual (TIN/NPI) or group (TIN) levels based on how data are submitted including under the APM Entity level if the clinician is part of an APM Entity in a MIPS APM (hereafter, a MIPS APM Entity) that elects to submit to MIPS. A clinician or group that exceeds at least one but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby getting measured on performance and receiving a MIPS payment adjustment.

For the final policies model, we describe below the estimated MIPS eligibility status and the associated PFS allowed charges of clinicians in the initial population of 1.6 million clinicians. We present in section VI.F.18.d.(1)(c) the incremental impact of the final policies from the baseline model for the CY 2022 performance period/2024 MIPS payment year on the MIPS eligible clinician population and their associated PFS allowed charges. We applied the same assumptions presented in the CY 2021 PFS final rule RIA to apply the low-volume threshold and to understand whether clinicians participate as a group, virtual group, APM entity, or as individuals (85 FR 85013 through 85016), except for three modifications. We assumed only individuals or APM TINs that exceeded the low-volume threshold will receive an APM Performance Pathway (APP)

score consistent with the policy as finalized in the CY 2021 PFS final rule (85 FR 84897).²⁸¹ We assumed APM TINs that qualified for opt-in and submitted data as a TIN will also be eligible. Finally, we did not consider clinicians in groups as MIPS eligible clinicians nor start a group score for clinicians in small practices with only Medicare Part B claims submissions to reflect the policy finalized at section IV.A.3.a.(3) of this rule.

Table 144 summarizes our eligibility estimates for the final policies model. We identify approximately 212,000 clinicians²⁸² as having “required eligibility” in Table 144. These clinicians will be MIPS eligible because they exceed the low volume threshold as individuals and are not otherwise excluded. These clinicians may ultimately choose to participate in MIPS as an individual, group, virtual group or APM entity or to not participate. Regardless of how they participate they will be considered MIPS eligible. We estimate approximately 595,000 additional MIPS eligible clinicians will be eligible as “group eligibility” in Table 144. These clinicians belong to an APM entity, group or virtual group that meets the low-volume threshold and submits to MIPS. If they were not associated with the group submission, these clinicians would not be eligible for MIPS. Finally, we estimate about 3,000 clinicians will be eligible through “opt-in eligibility” through the “opt-in” policy for a total MIPS eligible clinician population of approximately 810,000. This leads to an associated \$67 billion allowed PFS charges estimated to be included in the CY 2022 performance period/2024 MIPS payment year.

BILLING CODE 4120–01–P

²⁸¹ Under the policy, APM TINs must submit data, but as that was not a requirement for 2019 Shared Savings Program participants, we assumed all TINs that exceed the low-volume threshold would submit data.

²⁸² The count of 212,000 MIPS eligible clinicians for required eligibility is rounded and includes those who participated in MIPS (approximately 186,000 MIPS eligible clinicians), as well as those who did not participate (approximately 26,000 MIPS eligible clinicians).

TABLE 144: Description of MIPS Eligibility Status for CY 2022 Performance Period/2024 MIPS Payment Year Using the CY 2022 PFS Final Rule Assumptions**

Eligibility Status	Predicted Participation Status in MIPS Among Clinicians*	CY 2022 PFS Final Rule estimates	
		Number of Clinicians	PFS allowed charges (\$ in mil)***
Required eligibility (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria) Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria and submit as a group)	Participate in MIPS	185,684	\$45,201
	Do not participate in MIPS	26,087	\$6,117
	Submit data as a group	594,567	\$15,194
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS and submit data)	Elect to opt-in and submit data	3,255	\$77
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		809,593*	\$66,589
Not MIPS Eligible			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Do not opt-in; or Do not submit as a group	411,837	\$10,529
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	100,501	\$565
Excluded for other reasons (Non-eligible clinician type, newly enrolled, QP)	Not applicable	303,873	\$14,951
Total Number of Clinicians Not MIPS Eligible		816,211	\$26,045
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,625,804	\$92,634

* Estimated MIPS Eligible Population

** This table does not include clinicians impacted by the automatic extreme and uncontrollable policy.

(approximately 6,000 clinicians and \$531 million in PFS allowed charges). It also excludes CPC+, NextGen and submitters with one or more categories identified as being suppressed as a result of bad data.

*** Allowed charges estimated using 2019 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

Furthermore, we estimate there will be approximately 412,000 clinicians as "Potentially MIPS eligible" in Table 144. These clinicians are not MIPS eligible but could be if their practice decides to participate or they elect to opt-in. These clinicians will be included as MIPS eligible in the unlikely scenario in which all group practices elect to submit data as a group, or clinicians in

a group that does not submit are eligible to opt-into MIPS individually and choose to do so. This assumption is important because it quantifies the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate the MIPS eligible clinician population could be as high as 1.2 million clinicians. Finally, we estimate approximately 101,000

clinicians will not be MIPS eligible because they and their group are below the low-volume threshold on all three criteria and another approximately 304,000 will not be MIPS eligible because they are categorically excluded regardless of volume or submission activity.

Eligibility among many clinicians is contingent on submission to MIPS as a

group, virtual group or election to opt-in, therefore we will not know the number of MIPS eligible clinicians who submit until the submission period for the 2022 MIPS performance period is closed. For this final policies model analysis, we use the estimated population of 809,593 MIPS eligible clinicians described above.

(c) Estimated Impact of the Final Policies on MIPS Eligibility and PFS Allowed Charges

We illustrate in Table 145 how the final policies to add clinical social workers and CNMs as MIPS eligible

clinician types and the policy to require small practices to submit data as a group for a group quality performance category score as finalized in sections IV.A.3.a.(1) and IV.A.3.a.(3) of this final rule affects the estimated number of MIPS eligible clinicians. The amended regulation text that we finalized in section IV.A.3.a.(2) of this final rule does not make modify how we assess eligibility in MIPS in our final policies model.

The first row in Table 145 presents the estimates from the RIA baseline model with the number of individuals that will be MIPS eligible clinicians for the 2022 performance period/2024 MIPS

payment year if this rule does not take effect. The second row presents estimates from the RIA final policies model with the incremental impact of adding the two new MIPS eligible clinician types on the number of MIPS eligible clinicians for the CY 2022 performance period/2024 MIPS payment year. As shown in Table 145, the final policies lead to a small increase in the number of MIPS eligible clinicians (1.1 percent increase) and a minimal increase in the PFS allowed charges (0.1 percent increase) for the CY 2022 performance period/2024 MIPS payment year.

TABLE 145: Effect of Eligibility Changes on the Expected Number of Clinicians and the Allowed Paid Amount in the CY 2022 Performance Period/2024 MIPS Payment Year

Policy changes	Estimated cumulative effect of policy change on number of clinicians	Estimated number of clinicians impacted by policy change	% Change /from Baseline in number of MIPS eligible clinicians	Estimated Cumulative PFS Allowed Charges (mil)	% Change in PFS Allowed Charges from Baseline
Baseline policies model: If the CY 2022 PFS final rule did not exist.	801,013	N/A	N/A	66,503	N/A
Final policies model: After applying policies finalized in the CY 2022 PFS final rule.	809,593	8,580	1.1%	\$66,589	0.1%

BILLING CODE 4120-01-C

e. Estimated Impacts on Payments to MIPS Eligible Clinicians for the CY 2022 Performance Period/2024 MIPS Payment Year

(1) Summary of Approach

In sections IV.A.3.d., IV.A.3.e. and IV.A.3.f. of this final rule, we present several provisions which impact the measures and activities that impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VI.F.18.e.(2). of this RIA as we describe our methodology to estimate MIPS payments for the CY 2022 performance period/2024 MIPS payment year. We then present the impact of the overall final policies on the CY 2022 performance period/2024 MIPS payment year and then compare select metrics to the baseline model, which only incorporates previously finalized policies for the CY 2022 performance period/2024 MIPS payment year. By comparing the baseline model to the final policies model, we can estimate the incremental impact of this rule's policies to the CY 2022 performance period/2024 MIPS payment year.

The payment impact for a MIPS eligible clinician is based on the clinician's final score, and MIPS eligible clinicians can participate as an individual, group, virtual group, or APM Entity in the four MIPS performance categories: Quality, cost, improvement activities, and Promoting Interoperability. As discussed in section VI.F.18. of this final rule, we generally used data submitted for the 2019 performance period. For the cost performance category, we used the same data as the CY 2020 PFS final rule (84 FR 63169), which is primarily testing data for the cost measures.

The estimated payment impacts presented in this final rule are averages by practice size weighted by Medicare utilization. The payment impact for a MIPS eligible clinician will vary from the average and will depend on the measure submissions, scores and their performance.

(2) Methodology To Assess Impact

To estimate participation in MIPS for the CY 2022 performance period/2024 MIPS payment year for this final rule, we generally used 2019 MIPS performance period data for both the baseline and final policies models. Our

baseline and final policies scoring models included the 801,013 and 809,593 estimated MIPS eligible clinicians, respectively, as described in section VI.F.18.d.(1) of this RIA.

To estimate the impact of MIPS policies on MIPS eligible clinicians, we generally used the 2019 MIPS performance period submissions data, including data submitted for the quality, improvement activities, and Promoting Interoperability performance categories. We supplemented this information with 2019 data available for CAHPS for MIPS and CAHPS for ACOs, testing data for the revised total per capita cost measure and Medicare Spending Per Beneficiary (MSPB) clinician measures which were finalized in the CY 2020 PFS final rule (84 FR 62969 through 62977), testing data for the new episode cost measures, administrative claims data for the new quality performance category measures, and other data sets.²⁸³ We calculated a hypothetical final score for the 2022 performance period/2024 MIPS

²⁸³ Data submitted to MIPS for the 2018 MIPS performance period data was used for the improvement score for the quality performance category. We also incorporated some additional data sources when available to represent more current data.

payment year for the baseline and final policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, Promoting Interoperability, and improvement activities performance categories, where each are described in detail in the following subsections.

(a) Methodology To Estimate the Quality Performance Category Score

We estimated the quality performance category score using a methodology like the one described in the CY 2021 PFS final rule (85 FR 85016 through 85017) for baseline and final policy RIA models for the CY 2022 performance period/2024 MIPS payment year.

For the baseline policies RIA model, which does not reflect the final policies for CY 2022 performance period/2024 MIPS payment year from this final rule, we made the following modifications to reflect the previously finalized policies for the CY 2022 performance period/2024 MIPS payment year for the quality performance category:

- As previously finalized in the CY 2021 PFS final rule (85 FR 84870 and 85 FR 84843), we removed the Web Interface as a collection type in MIPS and through the APP for the CY 2022 performance period/2024 MIPS payment year. Although the Web Interface is to be reinstated for groups for the CY 2022 performance period/2024 MIPS payment year and ACOs for CY 2022 performance period/2024 MIPS payment year through CY 2024 performance period/2026 MIPS payment year as discussed in sections IV.A.3.d.(1)(d) and IV.A.3.c.(2)(a), respectively, the baseline model is attempting to capture the CY 2022 performance period/2024 MIPS payment year as if this provision did not exist. Therefore, the baseline model does not incorporate the Web Interface as a collection type for groups and ACOs. To estimate a quality performance category score for clinicians in groups who previously used the Web Interface as a collection type in 2019, we assumed these groups will use the other two other collection types (MIPS CQMs and eCQMs) available in the 2022 performance period/2024 MIPS payment year. We then applied the same methodology described in the CY 2021 PFS proposed rule when the removal of Web Interface as a collection type was previously proposed (85 FR 50387 through 50388) using 2019 MIPS submissions data. To estimate a quality performance category score for ACOs, we used the same methodology described in the CY 2021 PFS proposed rule when the Web

Interface was not included in the APP (85 FR 50388).

- We used the published 2021 MIPS historical quality benchmarks file to identify measures subject to the topped out scoring cap that was finalized (82 FR 53721 through 53727).²⁸⁴

For the final policies model, we made the following modifications to the baseline model to reflect the new final policies for the 2022 performance period/2024 MIPS payment year for the quality performance category:

- As discussed in section IV.A.3.d.(1)(e) of this final rule, we finalized one new administrative claims measure for those for whom it is applicable: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions. To implement this policy in our final policies RIA model for the CY 2022 performance period/2024 MIPS payment year, we used testing data for this new administrative claims measure.

- As discussed in section IV.A.3.d.(1)(c) of this final rule, we are finalizing our proposals with modification to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years for QCDR measures, MIPS CQMs, or eCQMs. This is not a change from our baseline model assumptions.

- As discussed in section IV.A.3.d.(1)(e) of this final rule, we are finalizing our proposal to establish measure substantive change criteria. We did not make modifications to the final policies model for this policy. We scored measures using the benchmarks described below.

- In section IV.A.3.d.(1)(g) of this final rule, we are finalizing several changes to the CAHPS for MIPS survey. We did not incorporate these changes into our model due to the lack of data.

- In Appendix 1 of this final rule, we added 4 new quality measures, removed 13 measures, and finalized 87 substantially modified measures. Consistent with prior rules, (83 FR 50053), our RIA estimates assume that clinicians who reported Medicare Part B claims, eCQM, MIPS CQM and QCDR measures that are removed would find alternate measures; therefore, we assign points to the measures that and included them in our scoring model.

- As discussed in section IV.A.3.e.(1)(c)(ii) of this final rule, we did not finalize our proposal to use

performance period benchmarks for the CY 2022 performance period in accordance with § 414.1380(b)(1)(ii) as opposed to a historical benchmark. For the final policies model, we utilized the most recent benchmark file: the 2021 MIPS performance period historic benchmarks.²⁸⁵ However, the 2019 performance data we are using to estimate future performance includes data on measures that do not have a benchmark in the 2021 MIPS benchmark file (either because the measure was removed or because there were significant changes). If a benchmark was not available in the 2021 MIPS performance period historic benchmark file, then we supplemented the 2021 MIPS benchmark file with the benchmarks used for the CY 2019 performance period/2021 MIPS payment year.

- As discussed in section IV.A.3.e.(1)(c)(iii)(A) of this final rule, we are delaying our proposal to remove the 3-point floor for each measure that can be reliably scored against the benchmark and score the measure from 1 to 10 points until the CY 2023 performance period/2025 MIPS payment year. Similarly, we are delaying our proposal in section IV.A.3.e.(1)(c)(iii)(B) of this final rule to remove the special scoring policy of scoring 3 points for class 2 measures, except for clinicians in small practices until the CY 2023 performance period/2025 MIPS payment year. Therefore, our RIA for the CY 2022 performance period/2024 MIPS payment year re-established the 3-point floor for class 1 measures and 3 points for class 2 measures.

- As discussed in section IV.A.3.e.(1)(c)(iii)(B), we are finalizing our proposed policies for scoring new measures with modifications. For measures in their first two performance periods that meet data completeness and can be reliably scored against a benchmark (class 4a measures), we will assign a floor of 7 points for measures in their first year and a floor of 5 points for measures in their second year. For new measures in their first two performance periods that meet data completeness, but cannot be reliably scored against a benchmark because they lack a benchmark or do not meet case minimum in the program (class 4b measures), we will assign 7 points for measures in their first year and 5 points for measures in their second year. We incorporated these scoring changes into our final policies model. Because we are using 2019 MIPS performance period

²⁸⁴ Data downloaded on April 9, 2021 from <https://qpp.cms.gov/resources/resource-library>.

²⁸⁵ Data downloaded on September 1, 2021 from <https://qpp.cms.gov/resources/resource-library>.

data, we assume that measures new to MIPS in 2019 are in their first year and measures new to MIPS in 2018 are in their second year.

- As discussed in sections IV.A.3.e.(1)(c)(vii) and IV.A.3.e.(1)(c)(viii) of this final rule, we finalized our proposal to remove measure bonus points for reporting high priority measures and for submitting with end-to-end electronic reporting beginning in the 2022 MIPS performance period. We incorporated these scoring changes into our final rule model for all MIPS collection types.

- As discussed in section IV.A.3.d.(1)(d), we are extending the Web Interface measures for the CY 2022 performance period/2024 MIPS payment year for groups and virtual groups using the existing 10 CMS Web Interface measures. To estimate the impact of this policy, we used the same methodology described in the CY 2021 PFS final rule (85 FR 85016 through 85017) using 2019 MIPS submissions data.

- Finally, we will extend the CMS Web Interface as a means of reporting quality under the APM Performance Pathway for Shared Savings Program ACOs for the 2022 performance period/2024 MIPS payment year through the 2024 performance period/2026 MIPS payment years as described in section IV.A.3.c.(2)(a) of this final rule. Under the provision, Web Interface reporting will work in the same manner as for performance year 2021, where ACOs will have the option of reporting either the CMS Web Interface, the APP eCQM/MIPS CQM measure set, or both. To estimate the impact of this policy, we used the same methodology described in the CY 2021 PFS final rule RIA (85 FR 85016 through 85017) when Web Interface was retained for the APP.

(b) Methodology To Estimate the Cost Performance Category Score

We estimated the cost performance category score using a similar methodology described in the CY 2020 PFS final rule (84 FR 63169) with the modifications to the baseline and the final policies RIA model described in this section.

In the baseline model, we refined our methodology for developing benchmarks to better reflect the previously finalized policy in CY 2017 Quality Payment Program final rule (81 FR 77308 through 77309). We did not estimate cost improvement scoring that starts in the 2022 performance period/2024 MIPS payment year as previously finalized at § 414.1380(a)(1)(ii) and in the CY 2019 PFS final rule (83 FR 58956) since we did not have sufficient

data to conduct improvement scoring, which requires 2 years of cost data to model.

In the final policies model, we modified the baseline model to incorporate the provision to add five new episode-based cost performance category measures in the CY 2022 performance period/2024 MIPS payment year as described in section IV.A.3.d.(2) of this final rule, by using claims data from January 1, 2019 to December 31, 2019. Cost measures were scored if the clinicians or groups met or exceeded the case volume: 10 episodes for Melanoma Resection to align with the reporting case minimum for procedural cost measures currently in use in MIPS, 20 episodes for Sepsis to align with the reporting case minimum for acute inpatient condition cost measures currently in use in MIPS, 20 episodes for Diabetes and Asthma/COPD as used in field testing for these chronic measures, and 20 episodes for Colon Resection. These new cost episode-based measures were calculated for both the TIN/NPI and the TIN.

(c) Methodology To Estimate the Facility-Based Measurement Scoring

For the baseline model, we estimated the facility-based score using the scoring policies finalized in the CY 2018 Quality Payment Program final rule (82 FR 53763) and the methodology described in the CY 2020 PFS final rule (84 FR 63169). For the final policies model, we used the methodology for the CY 2022 performance period/2024 MIPS payment year as discussed in section IV.A.3.e.(2)(b)(v)(B) of this final rule. We proposed at § 414.1380(e)(vi) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission. Therefore, if a MIPS eligible clinician or a group is eligible for facility-based measurement, but they participate in MIPS as an individual or group, we used the higher final score between the facility-based scoring and MIPS submission-based scoring.

(d) Methodology To Estimate the Promoting Interoperability Performance Category Score

For the baseline model, we used the CY 2019 MIPS Promoting Interoperability performance period data submissions to estimate CY 2022 MIPS performance for the Promoting Interoperability performance category. We made the following two

modifications to the 2019 performance period scoring to reflect the previously finalized policy changes between the CY 2019 and CY 2021 performance periods: (1) We doubled the bonus points for clinicians who submitted the PDMP measure as described in section IV.A.3.d.(4)(c)(i) of this final rule; and (2) we did not incorporate the Verify Opioid Treatment Agreement measure data, a measure that was finalized in the CY 2019 performance period (83 FR 59807) but removed in the CY 2020 performance period (84 FR 62994). We retained the PDMP bonus for the baseline model for continuity between the CY 2021 and 2022 performance periods and for consistency since bonuses for the quality performance category were retained for the baseline as well. Because we lacked data on who would adopt the finalized Health Information Exchange bi-directional exchange measure for the CY 2021 performance period we only used past reporting on the two existing Health Information Exchange Objective measures to estimate CY 2022 Promoting Interoperability performance.

For the final policies model, we considered the following policy provisions as potential modifications to the baseline model:

- In section IV.A.3.d.(4)(c)(i) of this final rule, we finalized our proposal for the PDMP measure to remain optional and at 10 points. Modifications were not made to reflect this policy in the final policies model since the baseline model already incorporated this policy.

- In section IV.A.3.d.(4)(c)(ii) of this final rule, we did not finalize our proposed modifications to the Provide Patients Electronic Access to Their Health Information measure. For this model, we did not make any modifications and continued to use the Provide Patients Electronic Access to Their Health Information measure that was submitted for the 2019 MIPS performance period.

- In section IV.A.3.d.(4)(c)(iii) of this final rule, we finalized to require two of the measures associated with the Public Health and Clinical Data Exchange Objective, beginning with the CY 2022 performance period: Immunization Registry Reporting; and Electronic Case Reporting. We also finalized in section IV.A.3.d.(4)(c)(iii) of this final rule to retain the Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures, and to make them optional and available for bonus points beginning with the CY 2022 performance period/2024 MIPS payment year. We did not model these policy changes because the Promoting

Interoperability data we used for this analysis is based on the CY 2019 performance period when a clinician was only required to report two of the possible 5 measures for the Public Health and Clinical Data Exchange Objective. We believe incorporating this policy might artificially lower scores for the Public Health and Clinical Data Exchange Objective because there was no requirement to specifically report the Immunization Registry Reporting and Electronic Case Reporting measures in 2019.

- In section IV.A.3.d.(4)(d) of this final rule, we finalized the additional requirement that eligible clinicians must attest to conducting an annual assessment of the High Priority Guide of the SAFER Guides beginning with the 2022 performance period. This policy was not implemented in the final policies model as it does not affect eligibility or payment. We included this policy in our burden calculations in section V.B.8.g.(3) of this rule.

- In section IV.A.3.d.(4)(g) of this final rule, we finalized changes to the attestation statements for information blocking. We did not include this policy in our model due to lack of information.

- In section IV.A.3.d.(4)(h)(i) of this final rule, we finalized beginning with the CY 2022 performance period/2024 MIPS payment year, we will no longer require an application for clinicians and small practices seeking to qualify for the small practice hardship exception and reweighting. We will assign a weight of zero only in the event a small practice did not submit any data for any of the measures specified for the Promoting Interoperability performance category. This policy was implemented in the final policies model.

- In section IV.A.3.d.(4)(h)(ii) and IV.A.3.d.(4)(h)(iii) of this final rule, we finalized our proposal to continue the existing policy to reweight the Promoting Interoperability performance category for NPs, PAs, CRNAs, CNSs, physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals for the CY 2022 performance period/2024 MIPS payment year. The baseline model already incorporated this policy.

- In section IV.A.3.d.(4)(h)(iv), we finalized that we will apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to clinical social workers. This policy was implemented in the final policies model.

(e) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline model, we modeled the improvement activities performance category score based on CY 2019 performance period data and APM participation identified in section VI.F.18.d.(1) of this final rule. For clinicians and groups not participating in a MIPS APM, we used the CY 2019 submissions improvement activities score. We did not model the policy finalized for the CY 2020 performance period (84 FR 62980) to require a minimum threshold of 50 percent of clinicians in a group to complete an improvement activity for the group to receive credit since we did not have data to determine the proportion of clinicians in a group that completed the improvement activity. We continued to apply the methodology described in the CY 2020 PFS final rule (84 FR 63170) to assign an improvement activities performance category score. For the APM participants identified in section VI.F.18.d.(1) of this final rule, we assigned an improvement activity performance category score of 100 percent.

For the final policies model, we did not make modifications to the baseline model for the improvement activities changes finalized in section IV.A.3.d.(3) of this final rule. The final policies are (1) revise group reporting requirements for the 50 percent threshold to address subgroups; (2) revise the timeframe for improvement activities nominated during a PHE; (3) revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (4) suspend activities that raise possible safety concerns or become obsolete from the program when this occurrence happens outside of the rulemaking process; (5) add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously adopted improvement activities; (6) revise the “Drug Cost Transparency to include requirements for use of real-time benefit tools” improvement activity; and (7) add the COVID–19 “Clinical Data Reporting with or without Clinical Trial” improvement activity. For policy 1, we lacked data to model the impact on improvement activities performance category. Policies 2 and 3 are related to the call for improvement activities which does not affect the improvement activities performance category scores. Policies 4 through 7 address changes to specific improvement activities or the improvement activity inventory. We

anticipate most clinicians performing improvement activities will continue to identify and report similar improvement activities from the inventory in future years. Please see section VI.F.18.g.(2)(f) of this final rule for additional details on the impact of these policy changes.

(f) Methodology To Estimate the Complex Patient Bonus Points

In section IV.A.3.e.(2)(a)(iii)(B) of this final rule, we will continue to apply the complex patient bonus, with updates, for the CY 2022 performance period/2024 MIPS payment year. For the baseline model, we used the complex patient bonus information calculated for the 2019 performance period data for the CY 2022 performance period/2024 MIPS payment year, as was previously done in the CY 2021 PFS final rule (85 FR 85017).

For the final policies model, we calculated the complex patient bonus using the calculation in section IV.A.3.e.(2)(a)(iii)(B) of this final rule for the CY 2022 performance period/2024 payment year. We finalized updates to the complex patient bonus for the CY 2022 performance period/2024 MIPS payment year and future MIPS performance periods/payment years to account for social and medical complexity, while still using our current established indicators of dual proportion and HCC risk scores, respectively. Consistent with the policy for the 2022 performance period, our final policies RIA model calculated and applied the separate risk indicator complex patient bonus components methodology with a single overall cap.

(g) Methodology To Estimate the Final Score

We did not make changes for how we calculated the MIPS final score. Our baseline and final policies models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For the baseline model, we applied the performance category weights and redistribution weights finalized in the CY 2021 PFS final rule (85 FR 84913 through 84916).

For the final policies model, we modified the redistribution policy for small practices as described in section IV.A.3.e.(2)(b)(iii)(A) of this final rule.

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For

MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to section IV.A.3.e.(2)(b)(ii) of this final rule.

(h) Methodology To Estimate the MIPS Payment Adjustment

For the baseline model, we applied the hierarchy as finalized in the CY 2021 PFS final rule (85 FR 84917 through 84919) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. For the final policies model, we applied the scoring hierarchy finalized in section IV.A.3.f.(5) of this final rule. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, minimum and maximum adjustment percentages, and additional payment adjustment for exceptional performance (§ 414.1405).

For the baseline model, we applied the performance threshold and additional performance thresholds finalized for the CY 2021 performance period/2023 payment year (85 FR 84923), of 60 and 85, respectively. For the final policies model, we used the performance threshold of 75 points in section IV.A.3.f.(2) and the additional performance threshold of 89 points in section IV.A.3.f.(3). We used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the paid amount for covered professional services furnished by the MIPS eligible clinician. As discussed in the CY 2021 PFS final rule RIA (85 FR 85013), we adjusted the paid amount of non-engaged clinicians to equal their proportion of paid amount prior to the PHE for COVID–19 for the baseline and final policies models.

(3) Impact of Payments by Practice Size

As we shift from previous MIPS transition policies by removing bonuses from the quality performance category and increasing the performance threshold and the additional performance threshold, we observe large changes between the baseline model and final policies model.

First, we observe an increase in the funds available for redistribution due to the increase in clinicians with final scores below the performance threshold. The baseline model estimates \$428 million will be redistributed through BN and that \$500 million will be distributed to MIPS eligible clinicians

for exceptional performance. The mean and median final scores for the baseline model are 78.13 and 82.59, respectively. Our final policies model estimates that \$603 million will be redistributed through BN. For clinicians who meet or exceed the additional performance threshold, an additional \$360 million was estimated to be distributed. The mean and median final scores for the final policies model are 75.21 and 79.59, respectively.

In the final policies model, the estimated bonus for exceptional performance is less than the \$500 million of available funding because the maximum additional payment adjustment for clinicians with exceptional performance reached 10 percent. As finalized in the 2017 QPP final rule (81 FR 77339 through 77340), we stated the maximum additional payment adjustment would be 10 percent, which is established by the statute, and that it would be multiplied by a scaling factor that cannot exceed 1.0. We reached the maximum additional payment adjustment allowed of 10 percent because the additional performance threshold is higher, and fewer clinicians performed above this higher additional performance threshold while a greater percentage of clinicians performed below the additional performance threshold. As a result, fewer clinicians are estimated to share the funds available through the additional bonus for exceptional performance.

Second, we observe an increase in the maximum positive payment adjustment. The baseline model estimates the maximum positive MIPS payment adjustment based on the budget neutral pool at 1.5 percent and the maximum positive MIPS additional payment adjustment for exceptional performance at 5.1 percent, for a combined maximum payment adjustment of 6.6 percent. The final policies model estimates the maximum MIPS positive payment adjustment based on the budget neutral pool is 4.4 percent and the maximum positive additional MIPS payment adjustment for exceptional performance bonus at 10.0 percent for a combined maximum payment adjustment of 14.4 percent.

Finally, we see narrower differences in performance across practice sizes due to the shift from MIPS transition policies. Table 146 shows the overall impact of the payment adjustments by practice size and based on whether clinicians are expected to submit data to MIPS for the final policies model. In Table 147, we present the overall impact of the baseline and the final policies models among clinicians who submit

data to assess the incremental impact of the final policies. The overall proportion of clinicians receiving a positive or neutral payment adjustment decreases from 91.7 percent to 66.8 percent with the implementation of the final policies that shift away from MIPS transition policies. In addition, we no longer observe a disproportionate number of clinicians in small practices receiving a negative payment adjustment when implementing the final policies.

For the CY 2022 performance period/2024 payment year, we have policies targeted towards small practices including special scoring policies to minimize burden and facilitate small practice participation in MIPS or APMs, which we describe in section VI.F.18.g.(2)(e) of this final rule. The intention of the final policies is to provide a more equitable participation process and reduce the disparity in performance between clinicians in large and small practices. These findings and final policies reflect movement away from the transition policies implemented during the early years of MIPS and how MIPS has shifted its focus to value rather than primarily on engagement. However, non-engagement by not submitting data to MIPS among clinicians in small practices is still a concern. Among those who we estimate will not submit data to MIPS, 86 percent are in small practices (22,475 out of 26,180 clinicians who do not submit data). We intend to continue working with stakeholders to improve engagement in MIPS among clinicians in small practices.

We want to highlight we are using 2019 MIPS performance period submissions data to simulate a 2022 MIPS performance period final score, and it is likely that there will be changes that we cannot account for at this time, including services and payments disrupted by the PHE for COVID–19 or clinicians changing behavior in response to the performance thresholds increased for the CY 2022 performance period/2024 MIPS payment year to avoid a negative payment adjustment. It should also be noted that the estimated number of clinicians who do not submit data to MIPS may be an overestimate of non-engagement in MIPS for the CY 2022 performance period/2024 MIPS payment year. This is because the PHE for COVID–19 may have resulted in fewer clinicians submitting data to MIPS or more clinicians electing to apply for the extreme and uncontrollable circumstances policies due to the PHE for COVID–19 for the 2019 MIPS performance period. Therefore, engagement levels in MIPS

for the CY 2022 performance period/2024 MIPS payment year may differ from these reported estimates. We also note this participation data is generally based off participation for the 2019 performance period, which is associated with the CY 2019 performance period/2021 MIPS payment year and had a performance threshold of 30 points, and that participation may change for the CY 2022 performance period/2024 MIPS

payment year when the performance threshold is 75 points.

Finally, the combined impact of negative and positive adjustments and the additional positive adjustments for exceptional performance as a percent of paid amount among those that do not submit data to MIPS on average was negative 8.5 percent. It was not the maximum negative payment adjustment of 9 percent because some MIPS eligible clinicians that do not submit data to MIPS can still receive a MIPS final score

that is greater than $\frac{1}{4}$ of the performance threshold (and avoid the maximum negative adjustment as stipulated by section 1848(q)(6)(A)(iv)(II) of the Act²⁸⁶) if they have sufficient claims volume to measure performance for cost measures or quality administrative claim measure, which utilizes administrative claims data and does not require separate data submission to MIPS.

NOTE: Results of this model may change significantly if more clinicians apply for the application-based extreme and uncontrollable circumstances policy exception in CY 2021 because of the PHE for COVID-19.

*Practice size is the total number of TIN/NPIs in a TIN.

** 2019 data used to estimate CY 2022 performance period/2024 MIPS payment year payment adjustments. Payments estimated using 2019 dollars trended to 2024.

***The percentage represents the total adjustments after taking all the positive adjustments and subtracting the negative adjustments for all MIPS eligible clinicians in the same respective practice size.

****Includes facility-based clinicians cost and quality data are submitted through hospital programs.

²⁸⁶ Section 1848(q)(6)(A)(iv)(II) of the Act stipulates that MIPS eligible professionals with MIPS final scores that are equal to or greater than

0, but not greater than $\frac{1}{4}$ of the performance threshold, receive a negative payment adjustment factor that is equal to the negative of the applicable

percent which is 9 percent for the CY 2022 performance period/2024 MIPS payment year.

f. Estimated Impacts on Payments to MIPS Eligible Clinicians for the CY 2023 Performance Period/2025 MIPS Payment Year

We proposed for the CY 2023 MIPS Performance Period to begin transitioning to MIPS Value Pathways (MVPs) and introduce subgroup reporting in the CY 2023 MIPS performance period/2025 payment year. As described in section IV.A.3.b.(2)(c) of this final rule, the first step in the transition plan for MVPs and subgroup reporting is to be voluntary, where eventually MVPs and subgroups will become required. Additionally, subgroups, if applicable, will have the option to report an APP. Since MVP and subgroup reporting will only begin in the CY 2023 performance period/2025 MIPS payment year, we do not have the data to report who will select MVPs and who will report through subgroups in the first year and how these clinicians will score. As discussed in section IV.A.3.b.(5) of this final rule, for MVP scoring policies, we evaluated all traditional MIPS scoring policies and maintained those that are required

under section 1848(q)(2) of the Act such as requirements to measure achievement and improvement of the quality and cost of care. We noted MVPs offer incentives in terms of requiring fewer measures and activities tied to a specialty or medical condition which can offer clinicians a more cohesive experience and that we would continue to evaluating additional incentives that align with our scoring policies and the goals of MVPs in future rulemaking. For this RIAs, we assume clinicians who elect to use MVPs and subgroups for reporting to MIPS will perform similarly to how they performed through traditional MIPS because the scoring policies are similar. We will revisit this assumption in future rulemaking as needed. As discussed in section V.B.8.e.(7)(a) of this final rule, for the purposes of estimating burden associated with the provision to implement MVP and subgroup reporting, we assume that 10 percent of MIPS eligible clinicians in the CY 2022 performance period/2024 MIPS payment year will report as MVP participants in the CY 2023 performance period/2025 MIPS payment year. In

addition, we assume that there will be 20 subgroup reporters in the CY 2023 performance period/2025 MIPS payment year. We anticipate a per respondent reduction of 3 hours and \$412 dollars per CQM/QCQR quality submission, 3 hours and \$336 per eCQM quality submission, and 5 hours and \$717 per claims quality submission. Overall, we estimate a net reduction in burden of \$7,463,145 in the quality performance category ICRs due to the introduction of MVP and subgroup reporting in the CY 2023 performance period/2025 MIPS payment year. We refer readers to section V.B.8.e.(7)(a)(iii) of this final rule for further discussion of our burden associated with MVPs and subgroups including the number of respondents.

g. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting the payment adjustments, we proposed several policies that have an impact on burden in the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years. In section V.B.8 of

<p>this final rule, we outline estimates of the costs of data collection that includes both the effect of policy updates and adjustments due to the use of updated data sources. For each provision included in this regulation which impacts our estimate of collection burden, the incremental burden for each is summarized in Table 148. We also provide additional burden discussions that we are not able to quantify.</p>	<p>As discussed in the section V.B.8 of this final rule, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no currently approved estimate. To provide the reader a better sense of the differences in burden between our CY 2022 and CY 2023 performance period/2024 and 2025 MIPS payment year estimates due to changes in policy, we are presenting our CY 2023 performance period/2025 MIPS</p>	<p>payment year estimates in Table 148 in comparison to the CY 2022 performance period/2024 MIPS payment year estimate found in the CY 2021 PFS final rule. In Table 148, we are only including our CY 2023 performance period/2025 MIPS payment year estimates for the ICRs where our estimate is different from our CY 2022 performance period/2024 MIPS payment year estimate.</p>
--	--	---

TABLE 148: Incremental Burden from Associated Final Policies

Burden Description and associated finalized proposals	Burden Hours	Burden Dollars
Total burden associated with the provision to continue the policies and ICRs set forth in the CY 2021 PFS final rule into the CY 2022 and 2023 MIPS performance periods (as discussed in section V.B.8.p.)	1,468,566	\$148,078,846
Burden change due to policy to continue the CMS Web Interface measures as a collection type/submission type for CY 2022	+7,030	+\$669,433
Burden change due to policy to sunset the CMS Web Interface measures as a collection type/submission type for CY 2023*	0	0
Burden change due to policy to continue CMS Web Interface group registration for CY 2022	+23	+2,190
Burden change due to policy to continue CMS Web Interface group registration for CY 2023	0	0
Burden change due to the policy to require QCDRs to submit participation plans for the CY 2022 self-nomination period, if necessary	+30	+\$2,857
Burden change due to the policy to require qualified registries to submit participation plans for the CY 2022 self-nomination period., if necessary	+57	+\$5,428
Burden change due to the revised criteria for nomination of improvement activities: increase of criteria from 1 to 8 including addition of 2 new criteria for nomination of improvement activities beginning with the CY 2022 Annual Call for MIPS Improvement Activities	+43	+\$6,492
Burden change due to automatic reweighting of the Promoting Interoperability performance category for small practices	-3,474	-\$330,747
Burden change due to SAFER guides attestation requirement for the Promoting Interoperability performance category for CY 2022	+1,033	+\$98,362
Burden change due to the new ICR for capturing MVP registration requirement for clinicians participating in MVPs reporting beginning with the CY 2023 MIPS performance period*	+3,229	+\$307,465
Burden change due to the new ICR for capturing subgroup registration requirement for clinicians choosing to participate as subgroups for reporting the MVP or the APP beginning with the CY 2023 MIPS performance period*	+10	+\$952
Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to MVP Quality Submissions beginning with the CY 2023 MIPS performance period*	-40,115	-\$4,036,981
Burden change for Quality Data Submission by Clinicians: CQM/QCDR Collection Type ICR for capturing reduced number of quality submissions due to MVP Quality Submissions beginning with the CY 2023 MIPS performance period*	-46,742	-\$4,748,523
Burden change for Quality Data Submission by Clinicians: eCQM Collection Type ICR for capturing reduced number of quality submissions due to MVP Quality Submissions beginning with the CY 2023 MIPS performance period*	-38,398	-\$3,934,272
Burden change due to new ICR for capturing the reduced reporting requirements for the quality performance category of MVPs beginning with the CY 2023 MIPS performance period *	+83,673	+\$8,564,736
Total change in burden due to policy for CY 2022	+3,805	+\$358,395
Total change in burden due to policy for CY 2023, in comparison to CY 2022 estimate from CY 2021 PFS Final	-41,591	-4,159,851

Burden Description and associated finalized proposals	Burden Hours	Burden Dollars
Rule		
Total burden set forth in the CY 2022 PFS final rule for CY 2022	1,428,391	\$144,014,757
Total burden set forth in the CY 2022 PFS final rule for CY 2023	1,383,049	\$139,501,770

* The total change in burden due to this policy includes a decrease in burden due to elimination of the “Quality Data Submission: CMS Web Interface collection type” ICR beginning with the CY 2023 MIPS performance period and “Group Registration for CMS Web Interface” ICR beginning with the CY 2023 MIPS performance period as well as an increase in burden for the “Quality Data Submission: MIPS CQM and QCDR collection type” and “Quality Data Submission: eCQM collection type” ICRs beginning with the CY 2023 MIPS performance period for respondents who previously submitted via the CMS Web Interface submitting data via an alternate collection type. Burden will decrease in the “Quality Data Submission: MIPS CQM and QCDR collection type,” “Quality Data Submission: eCQM collection type,” and “Quality Data Submission: Claims collection type” ICRs beginning with the CY 2023 MIPS performance period due to respondents who previously submitted MIPS through those collection types submitting data with reduced Quality submission requirements as an MVP participant. Total change in burden also includes the increase in submission burden due to the introduction of the “MVP Quality Submission,” “MVP registration,” and “Subgroup registration” ICRs beginning with the CY 2023 MIPS performance period. See section V.B.8 of this final rule.

BILLING CODE 4120-01-C

(2) Additional Impacts to Clinicians

(a) Web Interface

As discussed in section IV.A.3.d.(1)(d) of this final rule, we finalized the proposal to continue the use of the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians for the CY 2022 performance period/2024 MIPS payment year. We are also sunsetting the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians starting with the CY 2023 performance period/2025 MIPS payment year. As discussed in section IV.A.3.c.(2)(a), we are also extending the CMS Web Interface as a means of reporting quality under the APP for Shared Savings Program ACOs for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2025 MIPS payment year.

We refer readers to sections V.B.8.e.(8) and V.B.8.e.(10) of this final rule for our discussion on the estimated burden associated with the extension of the CMS Web Interface collection type in CY 2022 performance period/2024 MIPS payment year and the sunset of the CMS Web Interface collection type in the CY 2023 performance period/2025 MIPS payment year (for those not using the APP). Additionally, we assume that the impacts associated with the sunset of CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians will remain the same

as our discussion in the CY 2021 PFS final rule (85 FR 85020 through 85021).

(b) Administrative Claims Measure

As discussed in section IV.A.3.d.(1)(e), we are adding one new administrative claims measures beginning in the CY 2022 performance period/2024 MIPS payment year and for future performance periods: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions. We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure that clinicians, groups, and organizations may choose to monitor. However, because these costs can vary significantly due to organizational size, number of administrative claims measures being reported, volume of clinicians reporting each measure, and the specific methods employed to improve performance, we are unable to provide an estimate of the financial impact each clinician, group, or organization may experience. In summary, we are acknowledging that while there are no data submission requirements per § 414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.

(c) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.3.d.(3)(c)(ii) of this final rule, we finalized the proposals to remove 7

previously adopted improvement activities, modify 15 existing improvement activities, and adopt 5 new improvement activities. We refer readers to Appendix 2 of this final rule for further details. We do not believe these changes to the inventory will impact time or financial burden on stakeholders because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. We do not expect these changes to the inventory to affect our currently approved information collection burden estimates in terms of neither the number of estimated respondents nor the burden per response. We anticipate most clinicians performing improvement activities, to comply with existing MIPS policies, will continue to perform the same activities under the policies in this final rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the CY 2022 performance period/2024 MIPS payment year.

(d) Stakeholders Nominating Improvement Activities

In section IV.A.3.d.(3)(c)(i)(B) of this rule, we finalized these proposals: (1) To revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (2) changes to the timeline for improvement activities nomination during a PHE; and (3) to suspend

activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process.

Regarding the provision to clarify the timeline for an improvement activity nominated during the PHE, we believe this provision will not affect our currently approved burden estimates since we believe that the number of nominations will not change, but it would make an activity available for reporting to clinicians in the same performance year it was intended to be implemented. In section IV.A.3.d.(3)(c)(i)(B)(aa) of this rule, we finalized the proposal that in order to implement a new improvement activity for a PHE during the same year as the nomination, the nomination will need to be received no later than January 5th of the nomination year to be included in a rule for notice-and-comment rulemaking during that fiscal or calendar year, a necessary precursor to implementation if it were to be finalized. As described in section V.B.8.j of this rule, we expect additional nominations may be received as a result of this provision, but we do not have any data with which to estimate what the additional number may be. As a result, we did not make any revisions to our currently approved burden estimate.

Regarding the provision to suspend activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process, we do not anticipate additional burden for stakeholders because of the provision described above as the policy does not change requirements for the nomination of improvement activities.

As described in section IV.A.3.d.(3)(c)(i)(B) of this rule, due to the provisions to add two new criteria and to increase the number of criteria stakeholders are required to meet when submitting an activity provision from a minimum of 1 to all 8 criteria, which includes the two new criteria, we proposed to revise our estimated annual information collection burden for nomination of improvement activities to 136 hours (31 nominations \times 4.4 hr/nomination) at a cost of \$20,355 (31 \times [(2.8 hr \times \$114.24/hr) + (1.6 hr \times \$210.44/hr)]).

(e) Impact on Small Practices

As described in section VI.F.18.e.(3) of this final rule RIA, we found 85 percent of clinicians who did not submit data to MIPS were in small practices. However, the estimated number of MIPS eligible clinicians who

do not submit data, including those in small practices, may be smaller in the CY 2022 performance period/2024 MIPS payment year since the submission window for the 2019 performance period was impacted by the start of the PHE for COVID-19. CMS is committed to identifying flexibilities and options to help clinicians in small practices participate meaningfully and successfully in MIPS. Specifically, CMS finalized several policies to support clinicians in small practices once they engage with MIPS in the quality, improvement activities and Promoting Interoperability performance categories for the CY 2022 performance period/2024 MIPS payment year. Based on our RIA model findings described in section VI.F.18.e.(3) of this final rule, the final policies for the CY 2022 performance period/2024 payment year led to clinicians in small practices no longer disproportionately receiving negative payment adjustments compared to clinicians in larger sized practices. Therefore, the combination of the special scoring policies for clinicians in small practices is expected to positively affect this group of clinicians and will hopefully encourage and improve future engagement in MIPS among clinicians in small practices.

(f) Impact on Third Party Intermediaries

In section IV.A.3.h. of this rule, we finalized multiple changes to the third-party intermediary regulations at § 414.1400. Specifically, we finalized: (1) Reorganization and consolidation of § 414.1400 generally; (2) an expansion of the general participation requirements of third-party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS; (3) a requirement that, beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. Health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data; (4) to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year; (5) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year) through the 2020 performance period/2022 MIPS

payment year, to submit a participation plan as part of their self-nomination for CY 2023; (6) a requirement that, beginning with the 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval; (7) a requirement that, beginning with the CY 2023 performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and may not change the plan once approved, without the prior approval of the agency; and (8) to add a rejection criterion to state that a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. Additionally, to provide further clarification of our current policy (84 FR 63070 through 63073), we finalized the proposal to state that if a QCDR measure owner is not approved during a given self-nomination period, any associated QCDR measures with that QCDR would also not be approved.

With regard to the reorganization and consolidation of § 414.1400 generally, we do not anticipate this to require any additional effort for affected entities as the provision is to allow CMS to reorganize the existing information.

For the requirements related to expanding the general participation requirements of third-party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS, we did not propose to revise our burden estimates as this requirement is not different from how third-party intermediaries currently submit data for the quality, improvement activities and Promoting Interoperability performance categories in MIPS on behalf of individual eligible clinicians and groups.

As previously discussed in section IV.A.3.h.(2)(b)(ii) of this rule, we finalized the proposal to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. During the MVP Town Hall held in January 2021 (85 FR 74729), we heard from third-party intermediaries that they are confident that they can make the necessary updates to allow for subgroup reporting, if they have enough time. A few vendors suggested that we add

subgroup reporting to the existing CEHRT requirements. Given our provision described in section IV.A.3.b.(2)(d) of this rule to delay the implementation of subgroup reporting option to the CY 2023 performance period/2025 MIPS payment year, we assume that the delay will give these entities adequate time to make the necessary updates. We assume that there will be no additional burden that third-party intermediaries will incur to implement the subgroup reporting option. We anticipate that there may be administrative burden associated with changes in workflows to their existing systems for submission of subgroup data for the CY 2023 performance period/2025 MIPS payment year. However, given that each of these entities and their information technology systems are unique, we are unable to quantify the burden for these entities to capture and submit data on behalf of clinicians who may choose to participate as subgroups.

We do not anticipate a significant impact to QCDRs and qualified registries resulting from the finalized provision to require QCDRs and qualified registries to conduct an annual data validation audit and if one or more deficiencies or data errors are identified also conduct targeted audits. First, we are not revising our burden estimates because the finalized data validation requirements are like existing expectations which we have already accounted for the associated burden as stated in the CY 2017 Quality Payment Program final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999). Second, we believe that the requirements for conduct of the data validation audits are aligned with methods and procedures which stakeholders currently utilize.

As discussed in section IV.A.3.h.(3)(a)(i) of this rule, due to the provision to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year) through the CY 2020 performance period/2022 MIPS payment year to submit a participation plan as part of their self-nomination for CY 2023 performance period/2025 MIPS payment year, we refer readers to section V.B.8.c.(2) of this rule for details on the adjusted burden.

As discussed in section V.B.8.c.(2) of this rule, we are not adjusting our burden estimates due to the provision related to two new rejection criteria for QCDR measures.

(g) Assumptions & Limitations

We note several limitations to our estimates of clinicians' MIPS eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the CY 2022 performance year/2024 MIPS payment year. Due to the PHE for COVID-19, we are aware that there may be changes in health care delivery and billing patterns that will impact results for the CY 2022 performance year/2024 MIPS payment year that we are not able to model with our historic data sources. The scoring model results presented in this final rule assume that CY 2019 Quality Payment Program data submissions and performance are representative of CY 2022 Quality Payment Program data submissions and performance. The estimated performance for the CY 2022 performance year/2024 MIPS payment year using CY 2019 Quality Payment Program data may be underestimated because the performance threshold to avoid a negative payment adjustment for the 2019 MIPS performance period/2021 MIPS payment year was significantly lower (30 out of 100 points) than the performance threshold for the 2022 performance year/2024 payment year (75 out of 100). We anticipate clinicians may participate more robustly by submitting more performance categories to meet the higher performance threshold to avoid a negative payment adjustment.

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in in the CY 2019 Quality Payment Program and submitted data would continue to elect to opt-in in the CY 2022 performance year/2024 MIPS payment year. It is difficult to predict, based on 2019 data, whether clinicians will elect to opt-in to participate in MIPS with the CY 2022 performance year/2024 payment year finalized policies.

In addition to the limitations described throughout the methodology sections, there are additional limitations to our estimates including: (1) To the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 144; and (2) due to updates in measure specifications and new measures, our cost performance is modeled using test data that does not always overlap with CY 2019 so we may not be capturing performance for clinicians or groups that change practices or TINs between when the testing data and the 2019 performance period. Due to the

limitations described, there is considerable uncertainty around our estimates that is difficult to quantify.

G. Alternatives Considered

This final rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this final rule, we presented the estimated impact on total allowed charges by specialty.

1. Alternatives Considered for Utilization Data in PFS Ratesetting

As discussed earlier in this section II.C.1 (Changes in Relative Value Unit (RVU) Impacts), our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2021 with payment rates for CY 2022 using CY 2020 Medicare utilization. As an alternative to using CY 2020 data, we considered using CY 2019 utilization data for the purposes of determining the CY 2022 RVUs, as well as in determining the CY 2022 BN adjustment and conversion factor. We considered using CY 2019 data due to the PHE for COVID-19, which has impacted the delivery of health care services over the past 18 months. Increases in remote delivery of services to reduce risk of exposure to both practitioner and patients, as well as postponement of elective procedures have resulted in a change to service utilization patterns across Medicare FFS payment systems. Specific to the PFS, overall service utilization decreased by approximately 20 percent in CY 2020 compared to CY 2019, which caused us to question whether CY 2020 data is the best available data to use for CY 2022 ratesetting.

In order to determine if lower overall utilization in CY 2020 would result in differential impacts on specialties and practitioners, we modeled the PFS ratesetting process using CY 2019 utilization data. We found that the use of CY 2020 as opposed to CY 2019 data in establishing payment rates had relatively little differential impacts on payment, despite the approximately 20 percent decrease in overall service utilization. Table 149 illustrates specialty-specific impacts for the proposed rule using CY 2019 data.

BILLING CODE 4120-01-P

TABLE 149: CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty using CY 2019 Claims for the Proposed Rule

(A) Specialty	(B) Allowed Charges (mil)	(C) Impact of Work RVU Changes	(D) Impact of PE RVU Changes	(E) Impact of MP RVU Changes	(F) Combined Impact

Total	\$100,377	0%	0%	0%	0%

BILLING CODE 4120-01-C

The majority of specialties experienced shifts of less than a percent when we used CY 2019 data, as opposed to CY 2020 data, as displayed in Table 136, as the basis for setting rates. Several specialties shifted by approximately one percent. We did not detect a pattern of specialties that were notably affected by the choice of claims data, either positively or negatively. While Pediatrics shifted from a 1 percent impact when we used CY 2020 claims data to a 5-payment impact when we used CY 2019 claims data, this shift is likely due to the smaller amount of allowed charges associated with the Pediatrics specialty.

We analyzed the percentage change in total RVUs per practitioner. Using CY 2019 utilization data, Total RVUs change between -1 percent and 1 percent for 53 percent of practitioners, representing more than 48 percent of the changes in Total RVUs for all practitioners, similar to the results we found when using CY 2020 claims that we discussed in section II.C.1. Variations by specialty were also similar to the results we found using CY 2020 claims and are contained in the public use file that describes the percentage change in total RVUs per practitioner.

Similar to the process described in section II.C.1. of this final rule, we used CY 2019 claims data to estimate the CY 2021 PFS CF to be 33.6184 which reflects a BN adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, which we estimated to be -0.04 using CY 2019 data, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.75 percent fee schedule payment increase for CY 2021 provided by the CAA. The anesthesia CF, which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments, would shift by a similar magnitude as the PFS CF. Thus, the estimated PFS CF and anesthesia CF using CY 2019 data is slightly higher

compared to using claims data for CY 2020 with an estimated difference of 0.0336 (a little less than three and half cents). We note that the BN adjustment will be recalculated for the CY 2022 PFS final rule and the use of CY 2019 claims may or may not be higher than the use of CY 2020 claims based on which policies are ultimately finalized.

Comment: We received few comments on our Alternatives Considered for Utilization Data in PFS Ratesetting. One commenter stated that they supported the use of the alternate CY 2019 claims data because it resulted in a slight improvement (approximately 1 percent) in the impact of changes in RVUs for their specialty. A different commenter stated that practice patterns in CY 2020 were atypical as a result of the COVID-19 pandemic and they believed that the use of 2019 claims data would be likely to more closely approximate overall PFS service utilization and costs in 2022.

Response: We continued to believe that the use of CY 2020 as opposed to CY 2019 data in establishing payment rates had relatively little differential impacts on payment, despite the approximately 20 percent decrease in overall service utilization. We found that the use of CY 2020 as opposed to CY 2019 data in establishing payment rates had little differential impact on payment at the specialty, service categories, and individual services levels. We also did not detect a pattern of specialties who were notably affected by the choice of claims data, either positively or negatively. We received few comments on this alternative considered which we believe indicates support for our use of CY 2020 claims data from the majority of commenters.

After consideration of the comments, we are finalizing our continued use of CY 2020 claims data instead of the potential alternative to use CY 2019 claims data for the purposes of determining the CY 2022 RVUs as well as in determining the CY 2022 BN adjustment and conversion factor.

2. Alternatives Considered for Split (or Shared) Visits

In section II.F of this final rule, we codify our current policy allowing billing of certain “split” or “shared” E/M visits by a physician, when the visit is performed in part by both a physician and an NPP, who are in the same group and the physician performs a substantive portion of the visit. We will codify in our regulations a definition of a split (or shared) visit as an E/M visit in the facility setting that is performed in part by both a physician and NPP who are in the same group, in accordance with applicable laws and regulations, such that the E/M visit could be billed by either the physician or the NPP if it were furnished independently by only one of them in the facility setting (rather than as a split (or shared) visit). The physician or NPP who performs the substantive portion of the split (or shared) visit will bill for the visit. We are also finalizing our proposed definition of substantive portion as more than half of the total time spent by the physician and NPP.

We considered several alternative approaches. First, we considered the option of disallowing split (or shared) visit billing beginning in CY 2022. Under this alternative, in settings where payment for “incident to” services is prohibited, physicians and NPPs would only be able to bill for visits they furnish in their entirety under their own NPI. Such a policy would be administratively simple, and reduce the likelihood of paying significantly more than the actual resource costs incurred. When physicians and practitioners furnish services in facility settings, they do not ordinarily incur the cost of clinical staff or other PE costs involved in furnishing the services. When the physician bills for an E/M visit, in accordance with section 1833(a)(1)(N) of the Act, the Medicare Part B payment is equal to 80 percent of the payment basis under the PFS which, under section 1848(a)(1) of the Act, is the lesser of the actual charge or the full fee schedule

amount for the service. In contrast, if the NPP bills for it, in accordance with section 1833(a)(1)(O) of the Act, the Medicare Part B payment is equal to 80 percent of the lesser of the actual charge or 85 percent of the fee schedule rate. Because of this payment differential and the lower resource costs associated with E/M visits performed partly by a physician and partly by an NPP, it could be argued that the physician should not be able to bill for such a visit and be paid at the higher fee schedule amount. Our proposal was informed by our belief that longstanding clinical practice relies substantially upon shared visits between physicians and NPPs in facility settings. To avoid the potential disruption in this common medical practice approach, we did not propose to disallow billing for split (or shared) visits.

Comment: We received public comments confirming that it would be disruptive of current practice patterns to disallow split (or shared) visit billing. We did not receive public data indicating specifically how often split (or shared) visits occur.

Response: After consideration of the public comments, we are finalizing a policy to continue allowing billing of split (or shared) visits under specified conditions. We will require a modifier on claims for these types of visits, as proposed, to help inform future policy in this area.

We also considered several alternatives for how to define the substantive portion of a split (or shared) visit. We considered defining “substantive portion” as any face-to-face portion of the split (or shared) visit, consistent with our current definition. We did not believe it would be appropriate to consider just any portion of the visit—with or without direct patient contact—as a substantive portion. For instance, we did not believe it would be appropriate to consider a brief or trivial interaction, with or without direct patient contact, such as where the physician merely “pokes their head” into the room, to be a substantive portion of the visit. We did not believe it would be appropriate to permit a physician to bill for a visit if they do not substantially participate in the visit, given that physicians are paid under the PFS at a higher rate than NPPs. Therefore, we proposed to define “substantive portion” as more than half of the total time spent by the physician or NPP.

Another alternative we considered, but did not propose, was to utilize the medical decision making (MDM) to define substantive portion. We did not propose this approach because MDM is

not easily attributed to a single physician or NPP when the work is shared, because MDM is not necessarily quantifiable and can depend on patient characteristics. We believed that time is a more precise factor than MDM to use as a basis for deciding which practitioner performs the substantive portion of the visit. We believed that using the time spent by each practitioner furnishing the split (or shared) visit would provide a more precise metric than potentially finding a way to parse MDM between the physician and the NPP.

We also considered defining substantive portion as performance of the history and/or physical exam, which are key components of certain E/M visits. Given recent changes in the CPT E/M Guidelines, history and physical exam are no longer necessarily included in all E/M visits, because for office/outpatient E/M visits, the visit level can now be selected based on either MDM or time, and history and exam are performed only as medically appropriate. Also, the CPT Editorial Panel is considering removing history and physical exam as key visit components for institutional visits, similar to the changes already made for office/outpatient E/M visits. Accordingly, defining “substantive portion” as any key component including history or exam did not seem to be a viable approach.

Lastly, we considered not defining substantive portion and instead leaving determinations regarding the substantive portion to MAC and/or medical review discretion. However, this approach would impose a significant burden on MACs to assess individual cases and could lead to too much regional variation in payment. We solicited public comment to help inform what we consider to be the “substantive portion” of a split (or shared) visit in institutional settings and assist us in consideration of our definition of “substantive portion”.

We received public comments to help inform what we consider to be the “substantive portion” of a split (or shared) visit in institutional settings and assist us in consideration of our definition of “substantive portion.” We refer readers to section II.F. of this final rule with comment period for a complete discussion of the public comments on this topic and our responses, summarized below.

Comment: The commenters agreed that the individual who performs the substantive portion should bill for the visit. Approximately half of the commenters supported our proposal, believing that it was appropriate and

would provide a clear rule. However, approximately half of the public comments recommended alternative definitions of substantive portion, including:

- A lower percentage of time (25 to 30 percent of the total time) (several comments).
- MDM (several comments).
- Some portion of MDM (several comments).
- Choice of MDM or time, for example, based on whichever is used to select visit level (several comments).
- One of the three key components of history, exam, or MDM, at least until the AMA completes changes for E/M visit coding and the CPT E/M Guidelines that the commenters expect for 2023 (several comments).
- Some combination of the above, for example, more than half of the MDM or more than half of total time (several comments).
- Working with the CPT Editorial Panel to develop a policy (several comments).

These commenters were concerned about a perceived devaluation of the medical decision-making portion of visits, disruptions to current practice patterns, and administrative burdens associated with timing each of the practitioner’s contribution to the visit.

Response: Regarding recommendations to consider the substantive portion to be a lower percentage of time, having reviewed our current policy, we do not believe that the higher physician payment rate under the PFS should be made when a physician performs less than half of the visit, such as a quarter or a third of the total time or less than half of the MDM. We do not think that MDM is necessarily the most critical or central component of E/M visits, and it is not the only service component being paid for. PFS payment rates incorporate and assume a certain amount of physician time per visit, reflected in the assigned RVUs and reflected annually in our physician time files. PFS payment rates reflect the typical amount of time spent on visits, and the Act requires us to reflect both time and intensity of work (physician and practitioner) in our payment rates. We do not believe this in any way devalues the unique education, training, experience, or expertise of physicians, but rather that both time and expertise are important and included in payment under the PFS. We continue to believe that MDM cannot be readily attributed to only the physician or the NPP, or definitively divided between them.

We believe the commenters overestimate the administrative burden

of tracking and attributing time, given the advent of EHRs and new E/M visit coding structures. However, we understand that an adjustment period may be needed to establish systems to track and attribute time for split (or shared) visits, especially since the coding for E/M visits in many facility settings will not use MDM or time to distinguish visit levels until 2023. Therefore, we are finalizing our definition of substantive portion for split (or shared) visits as proposed (more than half of the total time spent by the physician and NPP performing the split (or shared) visit) beginning January 1, 2023. However, we are modifying our proposed policy for one transitional year. For CY 2022, except for critical care visits, the substantive portion will be defined as one of the three key components (history, exam, or MDM), or more than half of the total time spent by the physician and NPP performing the split (or shared) visit). In other words, for CY 2022, the practitioner who spends more than half of the total time, or performs the history, exam, or MDM can be considered to have performed the substantive portion and can bill for the split (or shared) E/M visit. We wish to be clear that practitioners can still use MDM to select visit level for the E/M split (or shared) visit, as proposed. We also are clarifying that when one of the three key components is used as the substantive portion in CY 2022, the practitioner who bills the visit must perform that component in its entirety in order to bill (see section II.F.1.c.1. of this final rule for a more detailed discussion).

For visits that are already timed (that is, critical care services), the choice to use more than half of the total time, or performance of the history, exam, or MDM will not apply. For critical care visits, starting in CY 2022, the substantive portion will be more than half of the total time, as proposed. We will continue to review and consider any future changes by the AMA/CPT Editorial Panel to the CPT E/M Guidelines for split (or shared) visits. We also intend to monitor the claims data for split (or shared) visits, to better understand how frequently practitioners use or rely upon this billing construct.

We considered disallowing split (or shared) billing in critical care, SNF and nursing facility (NF) visits, as well as new patient and initial patient visits. We require certain SNF/NF visits to be provided entirely by a physician, but we believed we should allow split (or shared) visit billing for other visits that can be split (or shared) in these settings. (We refer readers to our Conditions of Participation in 42 CFR 483.30 for

information regarding the SNF/NF visits that are required to be performed in their entirety by a physician. That regulation requires that certain SNF/NF visits must be furnished directly and solely by a physician). However, we believed current clinical practice generally allows sharing of critical care visits by appropriately trained and qualified practitioners, and we solicited comment on this belief and this alternative considered. We proposed to allow split (or shared) visit billing in critical care because we believe the practice of medicine has evolved towards a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by clinicians in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued current policy may no longer be as relevant. We understand that there have been changes in the practice of medicine over the past several years, some facilitated by the advent of EHRs and other systems, toward a more team-based approach to care. There has also been an increase in alternative payment models that employ a more team-based approach to care.

Comment: We received many comments on our proposals for allowed settings of care, all in support of those proposals.

Response: We thank the commenters for their support. After consideration of the public comments, we are finalizing as proposed.

We proposed to allow split (or shared) visits for both new and established patients as well as initial and subsequent visits. After conducting an internal review, including consulting our medical officers, we believed that the practice of medicine has evolved toward a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by practitioners in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued the manual instructions may no longer be as relevant. We understand that there have been changes in the practice of medicine over the past several years, some facilitated by the advent of EHRs and other systems, toward a more team-based approach to care. There has also been an increase in alternative payment models that employ a more team-based approach to care. In considering and reevaluating our policy, we saw no reason to preclude the physician or NPP from billing for split (or shared) visits

for a new patient, in addition to an established patient, or for initial and subsequent split (or shared) visits. Therefore, we proposed to permit the physician or NPP to bill for split (or shared) visits for both new and established patients, as well as for initial and subsequent visits. We believed this approach is also consistent with the CPT E/M Guidelines for split (or shared) visits, which does not exclude these types of visits from being billed when furnished as split (or shared) services.

Comment: We received many comments on this proposal, all in support of it.

Response: We thank the commenters for their support. After consideration of public comments, we are finalizing as proposed.

3. Alternatives Considered for Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802, 414.806)

This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of the CAA (for the purposes of this section of this final rule, hereinafter is referred to as “section 401”). These new requirements will improve the accuracy of reported prices and limit the use of WAC-based pricing.

As discussed in section III.D.1. of this final rule, section 1847A(c)(6)(A) of the Act incorporates the definition of manufacturer at section 1927(k)(5) of the Act, but permits the Secretary to exempt repackagers from the definition of manufacturer, as determined appropriate, for purposes of section 1847A(f)(2) of the Act.

We considered whether to implement the flexibility afforded by the statute. However, implementing the flexibility afforded by the statute could potentially lead to a gap in the ASP reporting requirements, meaning that ASPs could be distorted to the extent that certain sales are carved out of the reporting requirement through the use of repackagers.

As discussed previously in this RIA, we are unable to quantitatively estimate the impacts of this provision. We welcomed comments on our approach, and on the alternative relative to: (1) The likely costs or savings (to manufacturers, beneficiaries, the government, and other stakeholders); and (2) any other related impacts of this provision.

4. Alternatives Considered for the MDPP Expanded Model Emergency Policy

For the MDPP Expanded Model Emergency Policy, no alternatives were considered. The 2-year MDPP service period has depressed interest in MDPP among would-be MDPP suppliers. These actions address stakeholder comments on the barriers to MDPP expanded model success. If we do not take action, we will not be able to scale MDPP as intended, impacting Medicare beneficiary access to this program. Reducing the MDPP from a 24- to a 12-month services period, increasing the year 1 performance payments, and waiving the Medicare provider enrollment application fee not only better aligns the model with the evidence that helped certify the DPP model test initially, but it will encourage eligible organizations to enroll as MDPP suppliers.

5. Alternatives Considered for the Quality Payment Program

We view the performance threshold as a critical factor affecting the distribution of payment adjustments in the Quality Payment Program. We ran a separate final policies RIA model based on the actual mean for the CY 2019 performance period/2021 MIPS payment year with a performance threshold of 86 and an additional performance threshold of 92 points, which are potential values that may be used for the CY 2022 performance period/2024 MIPS payment year. The model with a performance threshold of 86 and additional performance threshold of 92 has the same mean and median final score as our policies RIA model since the performance threshold does not change the final score. We estimate that \$ 907 million will be redistributed through BN. For clinicians who meet or exceed the additional performance threshold, an additional \$241 million was distributed. The maximum positive payment adjustment will be 18.2 percent prior to the maximum additional payment adjustment and 28.2 percent after considering the MIPS maximum positive payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 74.0 percent of MIPS eligible clinicians will receive a negative payment adjustment among those that submit data.

We report the findings for the baseline model which describes the impact for the CY 2022 performance period/2024 MIPS payment year if this regulation did not exist. The baseline model has a final score mean of 78.13 and median of

82.59. We estimate that \$428 million will be redistributed through BN. There will be a maximum payment adjustment of 6.6 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 8.3 percent of MIPS eligible clinicians will receive a negative payment adjustment among those that submit data.

H. Impact on Beneficiaries

We do not believe these provisions will have a negative impact on beneficiaries given overall PFS BN.

1. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802, 414.806)

Section 1927(b)(3)(A)(iii) of the Act requires manufacturers with a Medicaid drug rebate agreement to report ASP data consistent with the information required for such reporting at section 1847A of the Act. Some manufacturers without Medicaid drug rebate agreements voluntarily submit ASP data for their single source drugs or biologicals that are payable under Part B, however other manufacturers without Medicaid drug rebate agreements do not voluntarily submit such data. Without manufacturer reported ASP data, CMS cannot calculate the ASP payment limit, and consequently, payment is typically based on Wholesale Acquisition Cost (WAC).

Consistent with section 1847A(c)(3) of the Act and our regulations at § 414.804(a)(2), the ASP is net of price concessions. However, consistent with the definition of WAC at section 1847A(c)(6)(B) of the Act, the WAC is not net of price concessions and is thus nearly always, and sometimes significantly, higher than ASP. Drugs with payment allowances based on WAC may have greater “spreads” between acquisition costs and payment than drugs for which there is an ASP-based payment allowance, which, in turn, may: (1) Incent the use of the drug based on its spread rather than on purely clinical considerations; (2) result in increased payments under Medicare Part B; and (3) result in increased beneficiary cost sharing. This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021. These new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

For single source drugs, these changes may result in lower payment limits because, typically, the WAC plus 3 percent is higher than ASP plus 6

percent. This then translates to cost savings for both the government and beneficiaries, who will pay coinsurance on a lesser amount. However, for the reason stated earlier in this RIA (see section VI.G.4. of this final rule), we are unable to predict the magnitude of this effect.

Similarly, payment limits for multiple source drugs could increase or decrease, and we are unable to predict the direction or magnitude of specific or aggregate effects at this time.

2. Determination of ASP for Certain Self-Administered Drug Products

Although we are unable to quantify the total magnitude of the potential savings, these changes have the potential to substantially reduce program expenditures and beneficiary coinsurance. The OIG’s July 2020 report (discussed in section III.D.2. of this final rule) determined that the inclusion of self-administered versions of certolizumab and abatacept in their respective volume-weighted, average ASPs, alone, has resulted in \$173 million in additional Medicare beneficiary coinsurance between 2014 and 2018.

The regulatory changes have the potential to result in decreased payment limits for identified billing and payment codes and could, in turn, substantially reduce beneficiary coinsurance. Since section 405 of Division CC, Title IV of the CAA, 2021 directs CMS to implement the statutory changes at section 1847A(g)(3) of the Act beginning on July 1, 2021, these potential savings may be observed within the year.

3. Medicare Diabetes Prevention Program Expanded Model Emergency Policy

This change will have a positive impact on eligible MDPP beneficiaries, as it better aligns with the CDC’s National DPP, giving both the participants and the coaches similar messaging around this program, regardless of payer. MDPP suppliers often offer the MDPP set of services to mixed cohorts, or classes with participants who are not eligible for MDPP, but who are enrolled in a National DPP cohort. Since MDPP generally follows the CDC’s National DPP and aligns its program with the CDC’s DPRP Standards, it is confusing to participants, coaches, and staff when talking about a 2-year program to its eligible Medicare participants when the non-Medicare participants have a 1-year program. Finally, reducing the MDPP service period from 2 years to one (1) year allows more cohorts to start and finish MDPP during the expanded

model initial period of performance, which ends in March 2023.

4. Quality Payment Program

There are several changes in this rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, will lead to more meaningful and relevant data being available to beneficiaries on the type and scope of care provided by clinicians on the compare tool. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate this will improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new measures include patient-reported outcome-based measures, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall

disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcome-based measures are factors frequently of interest to patients when making decisions about treatment.

K. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year's rule will be the number of reviewers of last year's rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters will review this year's rule in detail, and it is also possible that some reviewers will choose not to comment on the rule. For these reasons we thought that the number of commenters will be a fair estimate of the number of reviewers of last year's rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections

of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$114.24 per hour, including overhead and fringe benefits https://www.bls.gov/oes/current/oes_nat.htm. Assuming an average reading speed, we estimate that it will take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is \$913.92 (8.0 hours × \$114.24). Therefore, we estimated that the total cost of reviewing this regulation is \$32,380,186 (\$885.92 × 35,430 reviewers on this year's proposed rule).

J. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Tables 150 and 151 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2021 to CY 2022 based on the FY 2022 President's Budget baseline.

TABLE 150: Accounting Statement: Classification of Estimated Expenditures

CATEGORY	TRANSFERS
CY 2022 Annualized Monetized Transfers	Estimated increase in expenditures of \$2.7 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 151: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings

CATEGORY	TRANSFER
CY 2022 Annualized Monetized Transfers of beneficiary cost coinsurance.	-\$0.7 billion
From Whom to Whom?	Beneficiaries to Federal Government.

K. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions

of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on October 28, 2021.

List of Subjects

42 CFR Part 403

Grant programs—health, Health insurance, Hospitals, Intergovernmental relations, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health insurance, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 403—SPECIAL PROGRAMS AND PROJECTS

■ 1. The authority citation for part 403 continues to read as follows:

Authority: 42 U.S.C. 1302, and 1395hh.

■ 2. In § 403.902—

■ a. Amend the definition of “Ownership or investment interest” by adding paragraphs (3)(vi) and (vii);

■ b. Add a definition for “Physician-owned distributorship” in alphabetical order; and

■ c. Revise the definition of “Short term medical supply or device loan”.

The additions and revision read as follows:

§ 403.902 Definitions.

* * * * *

Ownership or investment interest

* * *

(3) * * *

(vi) A titular ownership or investment interest that excludes the ability or right to receive the financial benefits of ownership or investment, including, but not limited to, the distribution of profits, dividends, proceeds of sale, or similar returns on investment; or

(vii) An interest in an entity that arises from an employee stock ownership plan (ESOP) that is qualified under section 401(a) of the Internal Revenue Code of 1986.

* * * * *

Physician-owned distributorship, for the purposes of determining the existence of a reportable ownership or investment interest under this subpart, means an entity that:

(1) Meets the definition of an applicable manufacturer or applicable group purchasing organization as defined in this section, and

(2) Meets at least one of the following two conditions:

(i) Has a minimum of 5 percent direct or indirect ownership or investment interest in the applicable manufacturer or applicable group purchasing organization held by a physician or a physician's immediate family member, or

(ii) A physician or a physician's immediate family member receives compensation from the applicable manufacturer or group purchasing organization in the form of a commission, return on investment, profit sharing, profit distribution, or other remuneration directly or indirectly derived from the sale or distribution of devices by the applicable manufacturer or group purchasing organization in which the physician or physician's immediate family member has ownership.

(3) This physician owned distributor definition does not apply for purposes of any other laws or regulations, including, but not limited to, section 1877 of the Act, the regulations at 42 CFR part 411, subpart J, section 1128B of the Act, or the regulations at 42 CFR 1001.952.

* * * * *

Short term medical supply or device loan means the loan of a covered device or a device under development, or the provision of a limited quantity of

medical supplies for a short-term trial period, not to exceed a loan period of 90 cumulative days per calendar year or a quantity of 90 cumulative days of average daily use per calendar year, to permit evaluation of the device or medical supply by the covered recipient.

* * * * *

■ 3. Amend § 403.904 by adding paragraph (a)(3) to read as follows:

§ 403.904 Reports of payments or other transfers of value to covered recipients.

(a) * * *

(3) An applicable manufacturer or applicable group purchasing organization that has reported payments or transfers of value under the scope of this section may not remove, delete, or alter any record/(s) unless an error is discovered in the information that had been furnished, or the record is otherwise believed to meet exceptions for reporting.

* * * * *

■ 4. Amend § 403.908 by revising paragraph (c)(3) and adding paragraph (c)(4) to read as follows:

§ 403.908 Procedures for electronic submission of reports.

* * * * *

(c) * * *

(3) During registration, applicable manufacturers and applicable group purchasing organizations must name two points of contact with appropriate contact information. These points of contact must be updated for 2 years following record submission.

(4) An applicable manufacturer or applicable group purchasing organization that meets the definition of physician-owned distributorship as defined in § 403.902 must identify its status as a physician-owned distributorship when registering or recertifying.

* * * * *

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 5. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b-12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 6. Amend § 405.902 by adding definitions for “Additional documentation”, “Additional documentation request (ADR)”, “Post-payment medical review”, and “Prepayment medical review” in alphabetical order to read as follows:

§ 405.902 Definitions.

* * * * *

Additional documentation means any information requested by a contractor when conducting a prepayment review or post-payment review.

Additional documentation request (ADR) means a contractor's initial documentation request in reviewing claims selected for prepayment review or post-payment review.

* * * * *

Post-payment medical review (or post-payment review) means a review that occurs after payment is made on the selected claim to determine whether the initial determination for payment was appropriate.

Prepayment medical review (or prepayment review) means a review that occurs before an initial determination for payment is made on the selected claim to determine whether payment should be made.

* * * * *

■ 7. Add § 405.903 to read as follows:

§ 405.903 Prepayment review.

(a) A contractor may select a claim(s) for prepayment review.

(b) In conducting a prepayment review, a contractor may issue additional documentation requests to a provider or supplier.

(1) A provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor's request, except as stated in paragraph (b)(2) and (c) of this section.

(2) A contractor may accept documentation received after 45-calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.

(c) A provider or supplier will be provided 30 calendar days to submit additional documentation in response to a UPIC's request for additional documentation. A UPIC may accept documentation received after the 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

(d) A contractor's prepayment review will result in an initial determination under § 405.920.

■ 8. Add §§ 405.929 and 405.930 under the undesignated center heading "Initial Determinations" in subpart I to read as follows:

§ 405.929 Post-payment review.

(a) A contractor may select a claim(s) for post-payment review, which is conducted under the reopening authority in § 405.980.

(b) In conducting a post-payment review, a contractor may issue an additional documentation request to a provider or supplier.

(1) A provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor's request, except as stated in paragraph (b)(2) and (c) of this section.

(2) A contractor may accept documentation received after 45 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.

(c) A provider or supplier will be provided 30 calendar days to submit additional documentation in response to a UPIC's request for additional documentation. A UPIC may accept documentation received after 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

(d) The outcome of a contractor's review will result in either no change to the initial determination or a revised determination under § 405.984.

§ 405.930 Failure to respond to additional documentation request.

If a contractor gives a provider or supplier notice and time to respond to an additional documentation request and the provider or supplier does not provide the additional documentation in a timely manner, the contractor has authority to deny the claim.

■ 9. Amend § 405.986 by revising the paragraph (a) subject heading to read as follows:

§ 405.986 Good cause for reopening.

(a) *Establishing good cause for reopening.* * * *

* * * * *

■ 10. Amend § 405.2411 by—

■ a. Revising paragraph (b)(2);

■ b. Redesignating paragraph (b)(3) as (b)(4); and

■ c. Adding a new paragraph (b)(3).

The revision and addition read as follows:

§ 405.2411 Scope of benefits.

* * * * *

(b) * * *

(2) Covered when furnished during a Part A stay in a skilled nursing facility only when provided by a physician, nurse practitioner, physician assistant, certified nurse midwife or clinical psychologist employed or under contract with the RHC or FQHC at the time the services are furnished;

(3) Inclusive of hospice attending physician services, and are covered when furnished during a patient's hospice election only when provided by an RHC/FQHC physician, nurse practitioner, or physician assistant designated by the patient as his or her attending physician and employed or under contract with the RHC or FQHC at the time the services are furnished; and

* * * * *

■ 11. Amend § 405.2446 by revising paragraph (c) to read as follows:

§ 405.2446 Scope of services.

* * * * *

(c) FQHC services are covered when provided in outpatient settings only, including a patient's place of residence, which may be a skilled nursing facility or a nursing facility, other institution used as a patient's home, or are hospice attending physician services furnished during a hospice election.

* * * * *

■ 12. Amend § 405.2462—

■ a. By revising paragraphs (a) and (b);

■ b. By redesignating paragraphs (c) through (g) as paragraphs (e) through (i), respectively;

■ c. By adding new paragraphs (c) and (d); and

■ d. In newly redesignated paragraph (e) introductory text, by removing the reference "paragraph (d)" and adding in its place "paragraph (f)".

The revisions and additions read as follows:

§ 405.2462 Payment for RHC and FQHC services.

(a) *Payment to independent RHCs that are authorized to bill under the reasonable cost system.* (1) RHCs that are authorized to bill under the reasonable cost system are paid on the basis of an all-inclusive rate, subject to a payment limit per visit determined in paragraph (b) of this section, for each beneficiary visit for covered services. This rate is determined by the Medicare Administration Contractor (MAC), in accordance with this subpart and general instructions issued by CMS.

(2) The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(b) *RHC payment limit per visit.* (1) In establishing limits on payment for rural health clinic services provided by rural health clinics the limit for services provided prior to April 1, 2021:

(i) In 1988, after March 31, at \$46 per visit; and

(ii) In a subsequent year (before April 1, 2021), at the limit established for the previous year increased by the percentage increase in the Medicare Economic Index (MEI) (as defined in section 1842(i)(3) of the Act) applicable to primary care services (as defined in section 1842(i)(4) of the Act) furnished as of the first day of that year.

(2) In establishing limits on payment for rural health services furnished on or after April 1, 2021, by rural health clinics or any rural health clinic that is enrolled on or after January 1, 2021 under section 1866(j) of the Act), the limit for services provided:

(i) In 2021, after March 31, at \$100 per visit;

(ii) In 2022, at \$113 per visit;

(iii) In 2023, at \$126 per visit;

(iv) In 2024, at \$139 per visit;

(v) In 2025, at \$152 per visit;

(vi) In 2026, at \$165 per visit;

(vii) In 2027, at \$178 per visit; and

(viii) In 2028, at \$190 per visit.

(ix) In a subsequent year, at the limit established for the previous year increased by the percentage increase in MEI applicable to primary care services furnished as of the first day of such year.

(3) In establishing limits on payment for rural health services furnished on or after April 1, 2021, by provider-based rural health clinics as described in section (c)(4) of this part, the limit for services provided:

(i) In 2021, after March 31, at an amount equal to the greater of:

(A) For rural health clinics that had an all-inclusive rate established for services furnished in 2020—

(1) The all-inclusive rate applicable to the rural health clinic for services furnished in 2020, increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of 2021, or

(2) The payment limit per visit applicable in paragraph (b)(2) of this section.

(B) For rural health clinics that did not have an all-inclusive rate established for services furnished in 2020—

(1) The all-inclusive rate applicable to the rural health clinic for services furnished in 2021, or

(2) The payment limit per visit applicable in paragraph (b)(2) of this section.

(ii) In a subsequent year, at an amount equal to the greater of:

(A) The amount established under paragraph (b)(3)(i)(A) or (B) of this section, as applicable for the previous year, increased by the percentage increase in MEI applicable to primary care services furnished as of the first day of such subsequent year, or

(B) The payment limit per visit applicable under paragraph (b)(2) of this section for such subsequent year.

(c) *Payment to provider-based RHCs that are authorized to bill under the reasonable cost system.* (1) An RHC that is authorized to bill under the reasonable cost system is paid in accordance with parts 405 and 413 of this subchapter, as applicable, if the RHC is—

(i) An integral and subordinate part of a hospital, skilled nursing facility or home health agency participating in Medicare (that is, a provider of services); and

(ii) Operated with other departments of the provider under common licensure, governance and professional supervision.

(2) An RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-inclusive rate, subject to a payment limit per visit, described in paragraphs (b)(1) and (2) of this section, for each beneficiary visit for covered services when in a hospital with greater than 50 beds as determined in § 412.105(b) of this subchapter. This all-inclusive rate is determined by the MAC, in accordance with this subpart and general instructions issued by CMS. The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(3) Prior to April 1, 2021, an RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-inclusive rate and is not subject to a payment limit per visit described in paragraphs (b)(1) and (2) of this section for each beneficiary visit for covered services when in a hospital with less than 50 beds as determined in § 412.105(b) of this subchapter. This all-inclusive rate is determined by the MAC, in accordance with this subpart and general instructions issued by CMS. The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(4) On or after April 1, 2021, an RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-inclusive rate, subject to a payment limit per visit, described in paragraph (b)(3) of this section, for each beneficiary visit for covered services when it meets the specified qualifications in paragraph (d) of this section. This all-inclusive rate is determined by the MAC, in accordance

with this subpart and general instructions issued by CMS. The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(d) *Specified qualifications.* A provider-based rural health clinic must meet the following qualifications to have a payment limit per visit established in accordance with paragraph (b)(3) of this section.

(1) As of December 31, 2020, was in a hospital with less than 50 beds (as determined in § 412.105(b) of this subchapter) and after December 31, 2020, in a hospital that continues to have less than 50 beds (not taking into account any increase in the number of beds pursuant to a waiver during the COVID-19 Public Health Emergency (PHE)); and one of the following circumstances:

(i) As of December 31, 2020, was enrolled under section 1866(j) of the Act (including temporary enrollment during the COVID-19 PHE); or

(ii) Submitted an application for enrollment under section 1866(j) of the Act (or a request for temporary enrollment during the COVID-19 PHE) that was received not later than December 31, 2020.

(2) [Reserved]

* * * * *

■ 13. Amend § 405.2463 by revising paragraphs (a)(1)(i) introductory text and (b)(3) introductory text to read as follows:

§ 405.2463 What constitutes a visit.

(a) * * *

(1) * * *

(i) Face-to-face encounter (or, for mental health disorders only, an encounter that meets the requirements under paragraph (b)(3) of this section) between an RHC patient and one of the following:

* * * * *

(b) * * *

(3) *Visit—Mental health.* A mental health visit is a face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder, including an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary

is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record, between an RHC or FQHC patient and one of the following:

* * * * *

- 14. Amend § 405.2466 by revising paragraph (b)(1)(iv) to read as follows:

§ 405.2466 Annual reconciliation.

* * * * *

(b) * * *

(1) * * *

(iv) For RHCs and FQHCs, payment for pneumococcal, influenza, and COVID-19 vaccine and their administration is 100 percent of Medicare reasonable cost.

* * * * *

- 15. Amend § 405.2469 by revising paragraph (d) to read as follows:

§ 405.2469 FQHC supplemental payments.

* * * * *

(d) *Per visit supplemental payment.* A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in § 405.2463. Additionally, there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

- 16. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

- 17. Amend § 410.33 by—

■ a. Revising paragraphs (c) and (g)(6)(i) and (ii);

■ b. Redesignating paragraphs (g)(8)(i) through (iii) as paragraphs (g)(8)(i)(A) through (C), respectively; and

■ c. Adding paragraphs (g)(8)(i)

introductory text and (g)(8)(ii); and

■ d. Revising paragraph (g)(9).

The revisions and additions read as follows:

§ 410.33 Independent diagnostic testing facility.

* * * * *

(c) *Nonphysician personnel.* (1) Except as otherwise stated in paragraph (c)(2) of this section, any nonphysician personnel used by the IDTF to perform tests must demonstrate the basic qualifications to perform the tests in question and have training and proficiency as evidenced by licensure or certification by the appropriate State health or education department. In the absence of a State licensing board, the technician must be certified by an appropriate national credentialing body. The IDTF must maintain documentation available for review that these requirements are met.

(2) For services that do not require direct or in-person beneficiary interaction, treatment, or testing, any nonphysician personnel used by the IDTF to perform the tests must meet all applicable State licensure requirements for doing so. If there are any applicable State licensure requirements, the IDTF must maintain documentation available for review that these requirements are met.

* * * * *

(g) * * *

(6) * * *

(i) Except as otherwise stated in paragraph (g)(6)(ii) of this section, have a comprehensive liability insurance policy of at least \$300,000 per location that covers both the place of business and all customers and employees of the IDTF. The policy must be carried by a nonrelative-owned company. Failure to maintain required insurance at all times will result in revocation of the IDTF's billing privileges retroactive to the date the insurance lapsed. IDTF suppliers are responsible for providing the contact information for the issuing insurance agent and the underwriter. In addition, the IDTF must—

(A) Ensure that the insurance policy must remain in force at all times and provide coverage of at least \$300,000 per incident; and

(B) Notify the CMS designated contractor in writing of any policy changes or cancellations.

(ii) Paragraph (g)(6)(i) of this section does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.

* * * * *

(8) * * *

(i) Except as otherwise stated in paragraph (g)(8)(ii) of this section, answer, document, and maintain documentation of a beneficiary's written clinical complaint at the physical site of the IDTF. (For mobile IDTFs, this documentation would be stored at their home office.) This includes, but is not limited to, the following:

* * * * *

(ii) Paragraph (g)(8)(i) of this section does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.

(9) Openly post these standards for review by patients and the public. (This requirement does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.)

* * * * *

- 18. Amend § 410.37 by adding paragraph (j) to read as follows:

§ 410.37 Colorectal cancer screening tests: Conditions for and limitations on coverage.

* * * * *

(j) *Expansion of coverage of colorectal cancer screening tests.* Effective January 1, 2022, colorectal cancer screening tests include a planned screening flexible sigmoidoscopy or screening colonoscopy that involves the removal of tissue or other matter or other procedure furnished in connection with, as a result of, and in the same clinical encounter as the screening test.

- 19. Amend § 410.47—

■ a. In paragraph (a), by revising the definitions of “Individualized treatment plan”, “Medical director”, “Outcomes assessment”, “Physician prescribed exercise”, “Psychosocial assessment”, and “Supervising physician”;

■ b. By revising paragraphs (b) through (e);

■ c. By removing paragraph (f); and

■ d. By redesignating paragraph (g) as paragraph (f).

The revisions read as follows:

§ 410.47 Pulmonary rehabilitation program: Conditions of coverage.

(a) * * *

Individualized treatment plan means a written plan tailored to each individual patient that includes all of the following:

- (i) A description of the individual's diagnosis.
- (ii) The type, amount, frequency, and duration of the items and services furnished under the plan.
- (iii) The goals set for the individual under the plan.

Medical director means the physician who oversees the pulmonary rehabilitation program at a particular site.

Outcomes assessment means an evaluation of progress as it relates to the individual's rehabilitation which includes the following:

- (i) Evaluations, based on patient-centered outcomes, which must be measured by the physician or program staff at the beginning and end of the program. Evaluations measured by program staff must be considered by the physician in developing and/or reviewing individualized treatment plans.

- (ii) Objective clinical measures of exercise performance and self-reported measures of shortness of breath and behavior.

* * * * *

Physician-prescribed exercise means aerobic exercise combined with other types of exercise (such as conditioning, breathing retraining, step, and strengthening) as determined to be appropriate for individual patients by a physician.

Psychosocial assessment means an evaluation of an individual's mental and emotional functioning as it relates to the individual's rehabilitation or respiratory condition which includes an assessment of those aspects of an individual's family and home situation that affects the individual's rehabilitation treatment, and psychosocial evaluation of the individual's response to and rate of progress under the treatment plan.

* * * * *

Supervising physician means a physician that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished to individuals under pulmonary rehabilitation programs.

(b) *General rule*—(1) *Covered conditions*. Medicare Part B covers pulmonary rehabilitation for beneficiaries:

- (i) With moderate to very severe COPD (defined as GOLD classification

II, III and IV), when referred by the physician treating the chronic respiratory disease;

- (ii) Who have had confirmed or suspected COVID-19 and experience persistent symptoms that include respiratory dysfunction for at least four weeks;

(iii) Additional medical indications for coverage for pulmonary rehabilitation may be established through a national coverage determination (NCD).

(2) *Components*. Pulmonary rehabilitation must include all of the following:

- (i) Physician-prescribed exercise during each pulmonary rehabilitation session.

(ii) Education or training that is closely and clearly related to the individual's care and treatment which is tailored to the individual's needs and assists in achievement of goals toward independence in activities of daily living, adaptation to limitations and improved quality of life. Education must include information on respiratory problem management and, if appropriate, brief smoking cessation counseling.

- (iii) Psychosocial assessment.

- (iv) Outcomes assessment.

(v) An individualized treatment plan detailing how components are utilized for each patient. The individualized treatment plan must be established, reviewed, and signed by a physician every 30 days.

(3) *Settings*. (i) Medicare Part B pays for pulmonary rehabilitation in the following settings:

- (A) A physician's office.
- (B) A hospital outpatient setting.

(ii) All settings must have the following:

(A) A physician immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the program. This provision is satisfied if the physician meets the requirements for direct supervision for physician office services, at § 410.26 of this subpart; and for hospital outpatient services at § 410.27 of this subpart.

(B) The necessary cardio-pulmonary, emergency, diagnostic, and therapeutic life-saving equipment accepted by the medical community as medically necessary (for example, oxygen, cardiopulmonary resuscitation equipment, and defibrillator) to treat chronic respiratory disease.

(c) *Medical director standards*. The physician responsible for a pulmonary rehabilitation program is identified as the medical director. The medical

director, in consultation with staff, is involved in directing the progress of individuals in the program and must possess all of the following:

- (1) Expertise in the management of individuals with respiratory pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the pulmonary rehabilitation program is offered.

(d) *Supervising physician standards*. Physicians acting as the supervising physician must possess all of the following:

- (1) Expertise in the management of individuals with respiratory pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the pulmonary rehabilitation program is offered.

(e) *Limitations on coverage*: The number of pulmonary rehabilitation sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare Administrative Contractor.

* * * * *

■ 20. Amend § 410.49—

■ a. In paragraph (a), by revising the definition of “Medical director”, revising paragraph (i) in the definition of “Outcomes assessment”, and revising the definition of “Physician-prescribed exercise”; and

■ b. By revising paragraphs (b)(1) introductory text, (b)(2) introductory text, (b)(2)(ii), (b)(3)(i) introductory text, (d) introductory text, (e) introductory text, and (f).

The revisions read as follows:

§ 410.49 Cardiac rehabilitation program and intensive cardiac rehabilitation program: Conditions of coverage.

(a) * * *

Medical director means the physician who oversees the cardiac rehabilitation or intensive cardiac rehabilitation program at a particular site.

Outcomes assessment * * *

(i) Evaluations, based on patient-centered outcomes, which must be measured by the physician or program staff at the beginning and end of the program. Evaluations measured by program staff must be considered by the physician in developing and/or reviewing individualized treatment plans.

* * * * *

Physician-prescribed exercise means aerobic exercise combined with other types of exercise (such as strengthening and stretching) as determined to be appropriate for individual patients by a physician.

* * *

(b) * * *

(1) *Covered conditions.* Medicare Part B covers cardiac rehabilitation and intensive cardiac rehabilitation for beneficiaries who have experienced one or more of the following:

* * *

(2) *Components.* Cardiac rehabilitation and intensive cardiac rehabilitation must include all of the following:

* * *

(ii) Cardiac risk factor modification, including education, counseling, and behavioral intervention, tailored to the individual's needs.

* * *

(3) * * *

(i) Medicare Part B pays for cardiac rehabilitation and intensive cardiac rehabilitation in the following settings:

* * *

(d) *Medical director standards.* The physician responsible for a cardiac rehabilitation program or intensive cardiac rehabilitation program is identified as the medical director. The medical director, in consultation with staff, is involved in directing the progress of individuals in the program and must possess all of the following:

* * *

(e) *Supervising physician standards.* Physicians acting as the supervising physician must possess all of the following:

* * *

(f) *Limitations on coverage—(1) Cardiac rehabilitation.* The number of cardiac rehabilitation sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare Administrative Contractor.

(2) *Intensive cardiac rehabilitation.* Intensive cardiac rehabilitation sessions are limited to 72 1-hour sessions (as defined in section 1848(b)(5) of the Act), up to 6 sessions per day, over a period of up to 18 weeks.

■ 21. Amend § 410.59 by revising paragraph (a)(4)(iii)(B) and adding paragraphs (a)(4)(iv) and (v) to read as follows:

§ 410.59 Outpatient occupational therapy services: Conditions.

(a) * * *

(4) * * *

(iii) * * *

(B) Except as provided in paragraph (a)(4)(iv) of this section, furnishes a portion of a service, or in the case of a 15-minute (or other time interval) timed code, a portion of a unit of service separately from the part furnished by the occupational therapist such that the minutes for that portion of a service (or unit of a service) furnished by the occupational therapist assistant exceed 10 percent of the total minutes for that service (or unit of a service).

(iv) Paragraph (a)(4)(iii)(B) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day when the occupational therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the occupational therapy assistant.

(v) Where there are two remaining 15-minute units to bill of the same service, and the occupational therapist and occupational therapy assistant each provided between 9 and 14 minutes of the service with a total time of at least 23 minutes and no more than 28 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the occupational therapy assistant and one unit is billed without the prescribed modifier for the service provided by the occupational therapist.

* * *

■ 22. Amend § 410.60 by revising paragraph (a)(4)(iii)(B) and adding paragraphs (a)(4)(iv) and (v) to read as follows:

§ 410.60 Outpatient physical therapy services: Conditions.

(a) * * *

(4) * * *

(iii) * * *

(B) Except as provided in paragraph (a)(4)(iv) of this section, furnishes a portion of a service, or in the case of a 15-minute (or other time interval) timed code, a portion of a unit of service separately from the part furnished by the physical therapist such that the minutes for that portion of a service (or unit of a service) furnished by the physical therapist assistant exceed 10 percent of the total minutes for that service (or unit of a service).

(iv) Paragraph (a)(4)(iii)(B) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day, when the physical

therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the physical therapist assistant.

(v) Where there are two remaining 15-minute units to bill of the same service, and the physical therapist and physical therapist assistant each provided between 9 and 14 minutes of the service with a total time of at least 23 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the physical therapist assistant and one unit is billed without the prescribed modifier for the service provided by the physical therapist.

* * *

■ 23. Amend § 410.67—

■ a. In paragraph (b), by revising paragraphs (3) and (4) in the definition of “Opioid use disorder treatment service”;

■ b. By revising paragraphs (d)(4)(ii) and (iii) and (d)(5); and

■ c. By adding paragraph (d)(6).

The revisions and addition read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

* * *

(b) * * *

Opioid use disorder treatment service

(3) Substance use counseling by a professional to the extent authorized under State law to furnish such services including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the counseling services may be furnished using audio-only telephone calls if all other applicable requirements are met.

(4) Individual and group therapy with a physician or psychologist (or other mental health professional to the extent authorized under State law), including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the therapy

services may be furnished using audio-only telephone calls if all other applicable requirements are met.

* * * * *

(d) * * *

(4) * * *

(ii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be geographically adjusted using the Geographic Adjustment Factor described in § 414.26 of this subchapter.

(iii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be updated annually using the Medicare Economic Index described in § 405.504(d) of this subchapter.

(5) Payment for medications delivered, administered or dispensed to a beneficiary as part of the bundled payment or an adjustment to the bundled payment under paragraph (d)(4)(i) of this section is considered a duplicative payment if a claim for delivery, administration or dispensing of the same medications for the same beneficiary on the same date of service was also separately paid under Medicare Part B or Part D. CMS will recoup the duplicative payment made to the opioid treatment program.

(6) For purposes of the adjustment to the bundled payment under paragraph (d)(4)(i)(A) of this section, after the end of the Public Health Emergency as defined in § 400.200 of this chapter, when services are furnished using audio-only technology the practitioner must certify, in a form and manner specified by CMS, that they had the capacity to furnish the services using two-way, audio/video communication technology, but used audio-only technology because audio/video communication technology was not available to the beneficiary.

* * * * *

■ 24. Add § 410.72 to read as follows:

§ 410.72 Registered dietitians' and nutrition professionals' services.

(a) *Definition: Registered dietitians and nutrition professionals.* Meet the qualifications at § 410.134.

(b) *Covered registered dietitian and nutrition professional services.* Medicare Part B covers:

(1) *Coverage condition.* Medical nutrition therapy (MNT) services as defined at § 410.130 under the conditions of coverage at § 410.132.

(2) *Other services.* Registered dietitians and nutrition professionals may also provide diabetes self-management (DSMT) services if they are or represent an accredited DSMT entity and have an order from a physician or qualified nonphysician practitioner who is treating the patient's diabetic condition.

(3) *Limits on MNT and DSMT.* (i) DSMT and MNT cannot be furnished to a patient on the same date of service, and

(ii) MNT and DSMT services cannot be furnished incident to the professional services of a physician or nonphysician practitioner service.

(c) *Limitations.* The following services are not registered dietitian or nutrition professional services for purposes of billing Medicare Part B:

(1) Services furnished by a registered dietitian or nutrition professional to an inpatient of a Medicare-participating hospital.

(2) Services furnished by a registered dietitian or nutrition professional to an inpatient of a Medicare-participating SNF.

(3) Services furnished by a registered dietitian or nutrition professional to a patient in a Medicare-participating ESRD facility in accordance with the limitation on coverage of MNT service listed at § 410.132(b)(1).

(d) *Professional services.* Registered dietitians and nutrition professionals can be paid for professional services only when the services have been directly performed by them.

(e) *Telehealth services.* MNT and DSMT services may be provided as telehealth services (meeting the requirements in § 410.78) when registered dietitians or nutrition professionals act as distant site practitioners.

(f) *Restrictions.* The services of a registered dietitian or nutrition professional are provided on an assignment-related basis, and a registered dietitian or nutrition professional may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made payment for a service in excess of these limits, the registered dietitian or nutrition professional must refund the full amount of the impermissible charge to the beneficiary.

■ 25. Amend § 410.74 by revising paragraphs (a)(2)(v) and (d)(2) to read as follows:

§ 410.74 Physician assistants' services.

(a) * * *

(2) * * *

(v) Prior to January 1, 2022, furnishes services that are billed by the employer of a physician assistant; and

* * * * *

(d) * * *

(2) The services of a physician assistant are provided on an assignment-related basis, and the physician assistant may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made payment for a service in excess of these limits, the physician assistant must refund the full amount of the impermissible charge to the beneficiary.

* * * * *

■ 26. Amend § 410.75 by revising paragraph (e)(2) to read as follows:

§ 410.75 Nurse practitioners' services.

* * * * *

(e) * * *

(2) The services of a nurse practitioner are provided on an assignment-related basis, and the nurse practitioner may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made payment for a service in excess of these limits, the nurse practitioner must refund the full amount of the impermissible charge to the beneficiary.

* * * * *

■ 27. Amend § 410.76 by revising paragraph (e)(2) to read as follows:

§ 410.76 Clinical nurse specialists' services.

* * * * *

(e) * * *

(2) The services of a clinical nurse specialist are provided on an assignment-related basis, and the clinical nurse specialist may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made payment for a service in excess of these limits, the clinical nurse specialist must refund the full amount of the impermissible charge to the beneficiary.

* * * * *

■ 28. Amend § 410.77 by revising paragraph (d)(2) to read as follows:

§ 410.77 Certified nurse-midwives' services: Qualifications and conditions.

* * * * *

(d) * * *

(2) The services of a certified nurse-midwife are provided on an assignment-related basis, and the certified nurse-midwife may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made

payment for a service in excess of these limits, the certified nurse-midwife must refund the full amount of the impermissible charge to the beneficiary.

* * * * *

■ 29. Amend 410.78 by revising paragraph (a)(3) and adding paragraphs (b)(3)(xiii) and (xiv) and (b)(4)(iv)(D) to read as follows:

§ 410.78 Telehealth services.

(a) * * *

(3) *Interactive telecommunications system* means, except as otherwise provided in this paragraph, multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. For services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder to a patient in their home, interactive telecommunications may include two-way, real-time audio-only communication technology if the distant site physician or practitioner is technically capable to use an interactive telecommunications system as defined in the previous sentence, but the patient is not capable of, or does not consent to, the use of video technology. A modifier designated by CMS must be appended to the claim for services described in this paragraph to verify that these conditions have been met.

* * * * *

(b) * * *

(3) * * *

(xiii) A rural emergency hospital (as defined in section 1861(kk)(2) of the Act), for services furnished on or after January 1, 2023.

(xiv) The home of a beneficiary for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder for services furnished on or after the first day after the end of the PHE as defined in our regulation at § 400.200 except as otherwise provided in this paragraph. Payment will not be made for a telehealth service furnished under this paragraph unless the following conditions are met:

(A) The physician or practitioner has furnished an item or service in-person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months prior to the initial telehealth service;

(B) The physician or practitioner has furnished an item or service in-person, without the use of telehealth, at least once within 12 months of each

subsequent telehealth service described in this paragraph, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens associated with an in-person service outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reason(s) for this decision in the patient's medical record.

(C) The requirements of paragraphs (b)(3)(xiv)(A) and (B) may be met by another physician or practitioner of the same specialty and subspecialty in the same group as the physician or practitioner who furnishes the telehealth service, if the physician or practitioner who furnishes the telehealth service described under this paragraph is not available.

(4) * * *

(iv) * * *

(D) Services furnished on or after the first day after the end of the PHE as defined in our regulation at § 400.200 for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder. Payment will not be made for a telehealth service furnished under this paragraph unless the physician or practitioner has furnished an item or service in person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months prior to the initial telehealth service and within 6 months of any subsequent telehealth service.

* * * * *

■ 30. Amend § 410.79 by revising paragraphs (c)(1)(ii) and (e)(3)(v)(C) to read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

(c) * * *

(1) * * *

(ii) An MDPP beneficiary is eligible for the first ongoing maintenance session interval only if the beneficiary:

(A) Starts his or her first core session on or before December 31, 2021;

(B) Attends at least one in-person core maintenance session during the final core maintenance session interval; and

(C) Achieves or maintains the required minimum weight loss at a minimum of one in-person core maintenance session during the final core maintenance session interval.

* * * * *

(e) * * *

(3) * * *

(v) * * *

(C) Beneficiaries who began the set of MDPP services between January 1, 2021 and December 31, 2021 and who are in the second year of the set of MDPP services as of the start of an applicable 1135 waiver event, whose in-person sessions are suspended due to the applicable 1135 waiver event, and who elect not to continue with MDPP services virtually can elect to attend ongoing maintenance sessions; and may restart the ongoing maintenance session interval in which they were participating at the start of the applicable 1135 waiver event or may resume with the most recent attendance session of record.

* * * * *

■ 31. Amend § 410.105 by revising paragraph (d)(3)(ii) and adding paragraphs (d)(3)(iii) and (iv) to read as follows:

§ 410.105 Requirements for coverage of CORF services.

* * * * *

(d) * * *

(3) * * *

(ii) Except as provided in paragraph (d)(3)(iii) of this section, furnishes a portion of a service, or in the case of a 15-minute (or other time interval) timed code, a portion of a unit of service, separately from the part furnished by the physical or occupational therapist such that the minutes for that portion of a service (or unit of a service) exceed 10 percent of the total time for that service (or unit of a service).

(iii) Paragraph (d)(3)(ii) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day when the physical or occupational therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the physical therapist assistant or occupational therapy assistant.

(iv) Where there are two remaining 15-minute units to bill of the same service and the physical therapist and the physical therapist assistant or the occupational therapist and the occupational therapy assistant, as applicable, each provided between 9 and 14 minutes, with a total time of at least 23 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the physical therapist assistant or occupational therapy assistant and one unit is billed without the prescribed modifier for the service provided by the

physical therapist or occupational therapist.

■ 32. Amend § 410.130 by revising the definition of “Chronic renal insufficiency” and removing the definition of “Treating physician”.

The revision reads as follows:

§ 410.130 Definitions.

* * * * *

Chronic renal insufficiency means the stage of renal disease associated with a reduction in renal function not severe enough to require dialysis or transplantation (glomerular filtration rate [GFR] 15–59 ml/min/1.73m²).

* * * * *

■ 33. Amend § 410.132 by revising paragraphs (a), (b)(5), and (c) to read as follows:

§ 410.132 Medical nutrition therapy.

(a) *Conditions for coverage of MNT* services. Medicare Part B pays for MNT services provided by a registered dietitian or nutrition professional as defined in § 410.134 when the beneficiary is referred for the service by a physician.

(b) * * *

(5) An exception to the maximum number of hours in paragraphs (b)(2), (3), and (4) of this section may be made when a physician determines that there is a change of diagnosis, medical condition, or treatment regimen related to diabetes or renal disease that requires a change in MNT during an episode of care.

(c) *Referrals*. Referral may only be made by a physician when the beneficiary has been diagnosed with diabetes or renal disease as defined in this subpart with documentation noted by a referring physician in the beneficiary’s medical record.

■ 34. Amend § 410.150 by revising paragraph (b)(15) to read as follows:

§ 410.150 To whom payment is made.

* * * * *

(b) * * *

(15)(i) Prior to January 1, 2022, to the qualified employer of a physician assistant for professional services furnished by the physician assistant and for services and supplies provided incident to his or her services. Payment is made to the employer of a physician assistant regardless of whether the physician assistant furnishes services under a W–2, employer–employee employment relationship, or whether the physician assistant is an independent contractor who receives a 1099 reflecting the relationship. Both types of relationships must conform to the appropriate guidelines provided by

the Internal Revenue Service. A qualified employer is not a group of physician assistants that incorporate to bill for their services. Payment is made only if no facility or other provider charges or is paid any amount for services furnished by a physician assistant.

(ii) Effective on or after January 1, 2022, payment is made to a physician assistant for professional services furnished by a physician assistant in all settings in both rural and nonrural areas and for services and supplies furnished incident to those services. Payment is made only if no facility or other provider charges, or is paid, any amount for the furnishing of professional services of the physician assistant.

* * * * *

■ 35. Amend § 410.152 by revising paragraphs (l) introductory text and (l)(5) to read as follows:

§ 410.152 Amounts of payment.

* * * * *

(l) *Amount of payment*: Preventive services. Except as provided otherwise in this paragraph, Medicare Part B pays 100 percent of the Medicare payment amount established under the applicable payment methodology for the service furnished by a provider or supplier for the following preventive services:

* * * * *

(5) Colorectal cancer screening tests (excluding barium enemas).

(i) For the colorectal cancer screening tests described in § 410.37(j), Medicare Part B pays at the specified percentage as follows:

(A) 80 percent for CY 2022.

(B) 85 percent for CY 2023 through 2026.

(C) 90 percent for 2027 through 2029.

(D) 100 percent beginning January 1, 2030.

(ii) [Reserved]

* * * * *

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 36. The authority citation for part 411 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn.

■ 37. Amend § 411.351 by revising the definition of “List of CPT/HCPCS Codes” to read as follows:

§ 411.351 Definitions.

* * * * *

List of CPT/HCPCS Codes means the list of CPT and HCPCS codes that identifies those items and services that

are DHS under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of the Act. It is updated annually and posted on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.

* * * * *

■ 38. Amend § 411.354 by revising paragraphs (c)(2)(ii)(A) through (C) to read as follows:

§ 411.354 Financial relationship, compensation, and ownership or investment interest.

* * * * *

(c) * * *

(2) * * *

(ii) * * *

(A)(1) The referring physician (or immediate family member) receives aggregate compensation from the person or entity in the chain with which the physician (or immediate family member) has a direct financial relationship that varies with the volume or value of referrals or other business generated by the referring physician for the entity furnishing the DHS; and

(2) The amount of compensation that the physician (or immediate family member) receives per individual unit—

(i) Is not fair market value for items or services actually provided;

(ii) Could increase as the number or value of the physician’s referrals to the entity furnishing DHS increases, or could decrease as the number or value of the physician’s referrals to the entity decreases;

(iii) Could increase as the amount or value of the other business generated by the physician for the entity furnishing DHS increases, or could decrease as the amount or value of the other business generated by the physician for the entity furnishing DHS decreases; or

(iv) Is payment for the lease of office space or equipment or for the use of premises or equipment.

(B) For purposes of applying paragraph (c)(2)(ii)(A)(2) of this section, the individual unit is:

(1) Item, if the physician (or immediately family member) is compensated solely per item provided.

(2) Service, if the physician (or immediate family member) is compensated solely per service provided, which includes arrangements where the “service” provided includes both items and services.

(3) Time, if the conditions of paragraph (c)(2)(ii)(B)(1) or (2) of this section are not met.

(C) If the financial relationship between the physician (or immediate family member) and the person or entity

in the chain with which the referring physician (or immediate family member) has a direct financial relationship is an ownership or investment interest, the nonownership or noninvestment interest closest to the referring physician (or immediate family member) is used to determine whether the aggregate compensation varies with the volume or value of referrals or other business generated by the referring physician for the entity furnishing the DHS and whether the amount of compensation that the physician (or immediate family member) receives per individual unit meets the conditions in paragraph (c)(2)(ii)(A)(2) of this section. (For example, if a referring physician has an ownership interest in company A, which owns company B, which has a compensation arrangement with company C, which has a compensation arrangement with entity D that furnishes DHS, we would look to the aggregate compensation between company B and company C for purposes of this paragraph (c)(2)(ii).)

* * * * *

■ 39. Amend § 411.355 by revising paragraph (h) to read as follows:

§ 411.355 General exceptions to the referral prohibition related to both ownership/investment and compensation.

* * * * *

(h) *Preventive screening tests and vaccines.* (1) Preventive screening tests and vaccines that meet the following conditions:

(i) The preventive screening test or vaccine is listed on the List of CPT/ HCPCS Codes as a code to which the exception in this paragraph is applicable.

(ii) The preventive screening test or vaccine is covered by Medicare.

(iii) The preventive screening test or vaccine is subject to a CMS-mandated frequency limit.

(2) During such period as the vaccine is not subject to a CMS-mandated frequency limit, paragraph (h)(1)(iii) of this section does not apply to a COVID-19 vaccine identified on the List of CPT/ HCPCS Codes as a code to which the exception in this paragraph is applicable.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 40. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(l).

■ 41. Amend § 414.64 by revising paragraph (a) to read as follows:

§ 414.64 Payment for medical nutrition therapy.

(a) *Payment under the physician fee schedule.* Medicare payment for medical nutrition therapy is made under the physician fee schedule in accordance with subpart B of this part. Payment to nonphysician professionals, as specified in paragraph (b) of this section, is 80 percent (or 100 percent if such services are recommended with a grade of A or B by the United States Preventive Services Task Force for any indication or population and are appropriate for the individual) of the lesser of the actual charges or 85 percent of the physician fee schedule amount.

* * * * *

■ 42. Amend § 414.84—

■ a. By revising paragraphs (b)(1)(i);

■ b. In paragraph (b)(1)(ii), by removing the reference “CY 2018” and adding in its place the reference “CY 2022”;

■ c. By revising paragraph (b)(2)(i);

■ d. In paragraph (b)(2)(ii), by removing the reference “CY 2018” and adding in its place the reference “CY 2022”;

■ e. By revising paragraph (b)(3)(i);

■ f. In paragraph (b)(3)(ii), by removing the reference “CY 2018” and adding in its place the reference “CY 2022”;

■ g. By revising paragraph (b)(4)(i)(A);

■ h. In paragraph (b)(4)(i)(B), by removing the reference “CY 2018” and adding in its place the reference “CY 2022”;

■ i. By revising paragraph (b)(4)(ii)(A);

■ h. In paragraph (b)(4)(ii)(B), by removing the reference “CY 2018” and adding in its place the reference “CY 2022”; and

■ j. By revising paragraphs (b)(5),

(b)(6)(i), (b)(7)(i) and (ii), and (c).

The revisions read as follows:

§ 414.84 Payment for MDPP Services.

* * * * *

(b) * * *

(1) * * *

(i) For a first core session furnished January 1, 2022, through December 31, 2022 the amount is \$35.

* * * * *

(2) * * *

(i) For the fourth core session furnished January 1, 2022, through December 31, 2022 the amount is \$105.

* * * * *

(3) * * *

(i) For the ninth core session furnished January 1, 2022, through December 31, 2022 the amount is \$175.

* * * * *

(4) * * *

(i) * * *

(A) For a second core maintenance session January 1, 2022, through December 31, 2022 the amount is \$93.

* * * * *

(ii) * * *

(A) For a second core maintenance session January 1, 2022, through December 31, 2022 the amount is \$75.

* * * * *

(5) *Performance Goal 5: Attends two ongoing maintenance sessions and maintains the required minimum weight loss during an ongoing maintenance session interval.* For an MDPP beneficiary who attends his or her first core session on or before December 31, 2021, CMS makes a performance payment to an MDPP supplier if an MDPP beneficiary attends two ongoing maintenance sessions during an ongoing maintenance session interval, achieves attendance at that second ongoing maintenance session upon attendance at an ongoing maintenance session furnished by that supplier, and achieves or maintains the required minimum weight loss as measured in-person during an ongoing maintenance session furnished during the applicable ongoing maintenance session interval. CMS makes this performance payment to an MDPP supplier only once per MDPP beneficiary per ongoing maintenance session interval. The amount of this performance payment is determined as follows:

(i) For a second ongoing maintenance session furnished in interval 1 (months 13–15 of the MDPP services period), January 1, 2022, through December 31, 2022, the amount is \$52.

(ii) For a second ongoing maintenance session furnished in interval 2 (months 16–18 of the MDPP services period), January 1, 2022, through December 31, 2022, the amount is \$52.

(iii) For a second ongoing maintenance session furnished in interval 3 (months 19–21 of the MDPP services period), January 1, 2022, through December 31, 2022, the amount is \$53.

(iv) For a second ongoing maintenance session furnished in interval 4 (months 22–24 of the MDPP services period), January 1, 2022, through December 31, 2022 the amount is \$53.

(v) For a second ongoing maintenance session furnished during a subsequent year. The performance payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

(6) * * *

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2022, through December 31, 2022, the amount is \$169.

* * * * *

(7) * * *

(i) For a core session or core maintenance session, as applicable,

furnished January 1, 2022, through December 31, 2022, the amount is \$35.

(ii) For a core session or core maintenance session, as applicable, furnished during a calendar year subsequent to CY 2018. The performance payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

(c) *Bridge payment.* CMS makes a bridge payment to an MDPP supplier only for a core session or core maintenance session furnished to an MDPP beneficiary who has previously received MDPP services from a different MDPP supplier. An MDPP supplier that has previously been paid either a bridge payment or a performance payment for an MDPP beneficiary is not eligible to be paid a bridge payment for that beneficiary. A bridge payment is made only on an assignment-related basis in accordance with § 424.55 of this subchapter, and MDPP suppliers must accept the Medicare allowed charge as payment in full and may not bill or collect from the beneficiary any amount. CMS will make a bridge payment only to an MDPP supplier that complies with all applicable enrollment and program requirements, and only for MDPP services furnished by an eligible coach, on or after his or her coach eligibility start date and, if applicable, before his or her coach eligibility end date. As a condition of payment, the MDPP supplier must report the NPI of the coach who furnished the session on the claim for the MDPP session. The amount of the bridge payment is determined as follows:

(1) For core session or core maintenance session, as applicable, furnished January 1, 2022, through December 31, 2022, the amount is \$35.

(2) For core session and core maintenance session, as applicable, furnished during a calendar year subsequent to CY 2022. The bridge payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

* * * * *

■ 43. Amend § 414.626 by revising paragraphs (b)(1) and (f) to read as follows:

§ 414.626 Data reporting by ground ambulance organizations.

* * * * *

(b) * * *

(1) Within 30 days of the date that CMS notifies a ground ambulance organization under paragraph (c)(3) of this section that it has selected the ground ambulance organization to report data under this section, the ground ambulance organization must select a data collection period that

corresponds with its annual accounting period and provide the start date of that data collection period to CMS or its contractor.

* * * * *

(f) *Public availability of data.*

Beginning in 2024, and at least once every 2 years thereafter, CMS will post on its website data that it collected under this section, including but not limited to summary statistics and ground ambulance organization characteristics.

* * * * *

■ 44. Amend § 414.802 by revising the definition of “Drug” to read as follows:

§ 414.802 Definitions.

* * * * *

Drug means a drug or a biological, and for purposes of applying section 1847A(f) of the Act, includes an item, service, supply, or product that is payable under Medicare Part B as a drug or biological.

* * * * *

■ 45. Section 414.806 is revised to read as follows:

§ 414.806 Penalties associated with misrepresentation and the failure to submit timely and accurate ASP data.

(a) *Misrepresentation.* Section 1847A(d)(4)(A) of the Act specifies the penalties associated with misrepresentations in the reporting of the manufacturer's average sales price for a drug as defined at § 414.802.

(b) *Failure to provide timely information or the submission of false information.* (1) For a manufacturer that has entered into and has in effect a rebate agreement under section 1927 of the Act, section 1927(b)(3)(C) of the Act specifies the penalties associated with a manufacturer's failure to submit timely information or the submission of false information.

(2) For a manufacturer that has not entered into and does not have in effect a rebate agreement under section 1927 of the Act, sections 1847A(d)(4)(B) and (C) of the Act specify the penalties associated with a manufacturer's failure to submit timely information or the submission of false information.

■ 46. Amend § 414.904 by adding paragraph (d)(4) to read as follows:

§ 414.904 Average sales price as the basis for payment.

* * * * *

(d) * * *

(4) *Payment adjustment for certain drugs for which there is a self-administered version—(i) In general.* Except as provided in paragraphs (d)(4)(ii) and (iii) of this section, if the

Inspector General identifies a drug or biological product in a study described in section 1847A(g)(1) of the Act, the Secretary must apply the payment limit for the applicable billing and payment code as specified in paragraph (d)(4)(iv) of this section, beginning with the first day of the second quarter after such study is publicly available. The methodology described in this paragraph will be recalculated each quarter thereafter, except when conditions described in paragraph (d)(4)(ii) are met.

(ii) *Exception.* The adjustment described in paragraph (d)(4)(i) of this section does not apply to the payment limit for a billing and payment code for a quarter if, at the time that ASP calculations are finalized for such quarter, the drug in the dosage form described by the billing and payment code is included by the FDA on the drug shortage list in effect under section 506E of the Federal Food, Drug, and Cosmetic Act.

(iii) *Special rule for certain billing and payment codes.* Effective July 1, 2021, for a billing and payment code described under section 1847A(g)(3) of the Act, the payment limit for the applicable billing and payment code must be determined as described in paragraph (d)(4)(iv) of this section, and the exception specified at paragraph (d)(4)(ii) of this section does not apply.

(iv) *Lesser-of methodology.* For purposes of this section, the payment limit is the lesser of:

(A) The payment limit determined under section 1847A of the Act for such billing and payment code if each National Drug Code for such product so identified under section 1847A(g)(1) of the Act were excluded from such determination; and

(B) The payment limit otherwise determined under section 1847A of the Act for such billing and payment code without application of section 1847A(g) of the Act.

(v) *NDC changes.* For an Inspector General-identified National Drug Code, as described under section 1847A(g)(1) or (3) of the Act, for which the manufacturer has redesignated the National Drug Code (without changes to the dosage form), the application of the lesser-of methodology described in this paragraph must use manufacturer-reported ASP data associated with the redesignated National Drug Code in the same manner as the one originally identified by the Inspector General.

* * * * *

■ 47. Amend § 414.1300 by revising paragraphs (a)(2) and (3) to read as follows:

§ 414.1300 Basis and scope.

(a) * * *

(2) Section 1848(k)—Quality Reporting System.

(3) Section 1848(m)—Incentive Payments for Quality Reporting.

* * * * *

■ 48. Amend § 414.1305—

■ a. By revising the definitions of “Collection type” and “Meaningful EHR user for MIPS”;

■ b. In the definition of “MIPS determination period”, by revising paragraph (2);

■ c. In the definition of “MIPS eligible clinician”, by revising the introductory text, paragraph (2) introductory text, and adding paragraph (3);

■ d. By adding the definitions of “Multispecialty group”, “MVP participant”, “Population health measure”, “QCDR measure”, “Single specialty group”, “Special status” and “Subgroup” in alphabetical order; and

■ e. By revising the definition of “Submission type”.

The revisions and additions read as follows:

§ 414.1305 Definitions.

* * * * *

Collection type means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS survey; and administrative claims measures.

(1) For the CY 2021 through CY 2024 performance periods/2023 through 2026 MIPS payment years, collection types include CMS Web Interface measures for APM Entities reporting through the APM Performance Pathway in accordance with § 414.1367.

(2) [Reserved]

* * * * *

Meaningful EHR user for MIPS means a MIPS eligible clinician who possesses CEHRT, uses the functionality of CEHRT, reports on applicable objectives and measures specified for the Promoting Interoperability performance category for a performance period in the form and manner specified by CMS, does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, and engages in activities related to supporting

providers with the performance of CEHRT.

* * * * *

MIPS determination period means:

* * *

(2) Subject to § 414.1310(b)(1)(iii), an individual eligible clinician, group, or APM Entity group that is identified as not exceeding the low-volume threshold or as having special status, as applicable, during the first segment of the MIPS determination period will be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. An individual eligible clinician, group, or APM Entity group for which the unique billing TIN and NPI combination is established during the second segment of the MIPS determination period will be assessed based solely on the results of such segment.

MIPS eligible clinician as identified by a unique billing TIN and NPI combination used to assess performance, means any of the following (except as excluded under § 414.1310(b)):

* * * * *

(2) For the 2021 through 2023 MIPS payment years:

* * * * *

(3) For the 2024 MIPS payment year and future years:

(i) A clinician described in paragraph (2) of this definition;

(ii) A clinical social worker (as defined in section 1861(hh)(1) of the Act);

(iii) A certified nurse midwife (as defined in section 1861(gg)(2) of the Act); and

(vii) A group that includes such clinicians.

* * * * *

Multispecialty group means a group that consists of two or more specialty types.

MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2026 performance period/2028 MIPS payment year and future years, MVP Participant means an individual MIPS eligible clinician, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

* * * * *

Population health measure means a quality measure that indicates the quality of a population or cohort's overall health and well-being, such as

access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services.

* * * * *

QCDR measure means a quality measure that is submitted by a QCDR and approved by CMS under § 414.1400. QCDR measures consist of:

(1) Measures that are not included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year; and

(2) Measures that are included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year, but have undergone substantive changes, as determined by CMS.

* * * * *

Single specialty group means a group that consists of one specialty type.

* * * * *

Special status means that a MIPS eligible clinician:

(1) Meets the definition of an ASC-based MIPS eligible clinician, facility-based MIPS eligible clinician, hospital-based MIPS eligible clinician, non-patient facing MIPS eligible clinician, or is in a small practice; or

(2) Is located in an HPSA or rural area.

Subgroup means a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, subgroup identifier, and each eligible clinician's NPI.

Submission type means the mechanism by which the submitter type submits data to CMS, including, but not limited to:

(1) Direct;

(2) Log in and upload;

(3) Log in and attest;

(4) Medicare Part B claims; and

(5) CMS Web Interface (except as provided in paragraph (5)(i) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years).

(i) For the CY 2021 through CY 2024 performance periods/2023 through 2026 MIPS payment years, submission types include the CMS Web Interface for APM Entities reporting through the APM Performance Pathway in accordance with § 414.1367.

(ii) [Reserved]

* * * * *

■ 49. Amend § 414.1310 by revising paragraph (e)(1) to read as follows:

§ 414.1310 Applicability.

* * * * *

(e) * * *

(1) Except as provided under §§ 414.1315(a)(2), 414.1317(b), 414.1318(b), and 414.1370(f)(2) each MIPS eligible clinician in the group receives a final score based on the group's combined performance assessment.

* * * * *

■ 50. Amend § 414.1317 by revising paragraph (b)(2) to read as follows:

§ 414.1317 APM Entity groups.

* * * * *

(b) * * *

(2) *Performance category weights.* The cost performance category weight is zero percent of the final score for an APM Entity. The performance category reweighting scenarios under § 414.1380(c)(2) apply to an APM Entity.

* * * * *

■ 51. Section 414.1318 is added to subpart O to read as follows:

§ 414.1318 Subgroups.

(a) *Eligibility and special status*—(1) *General.* Except as provided under paragraph (a)(2) of this section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for subgroups are determined at the group level in accordance with §§ 414.1305 and 414.1310.

(2) *Exclusions.* An individual eligible clinician or group that elects to participate in MIPS as a MIPS eligible clinician in accordance with § 414.1310(b)(1)(iii)(A) or (b)(2) is not eligible to participate in a subgroup.

(b) *Final score.* Except as provided under § 414.1317(b), each MIPS eligible clinician in the subgroup receives a final score based on the subgroup's combined performance assessment.

(c) *Subgroup reporting requirements.* For individual eligible clinicians to participate in MIPS as a subgroup, all of the following requirements must be met:

(1) Individual eligible clinicians that elect to participate in MIPS as a subgroup must aggregate their quality and improvement activities performance data across the subgroup's identifier.

(2) Individual eligible clinicians that elect to participate in MIPS as a subgroup will have their performance assessed at the subgroup level across all the MIPS performance categories based on an MVP in accordance with § 414.1365 and on the APM Performance Pathway in accordance with § 414.1367, as applicable. Subgroups that are MVP Participants must adhere to an election process described in § 414.1365(b).

■ 52. Amend § 414.1320 by—

■ a. Redesignating paragraphs (d) through (g) as paragraphs (e) through (h), respectively; and

■ b. Adding a new paragraph (d).

The addition reads as follows:

§ 414.1320 MIPS performance period.

* * * * *

(d) For purposes of the CY 2020 performance period/2022 MIPS payment year, the performance period for:

(1) The quality and cost performance categories are the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year.

(2) The improvement activities performance categories are a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

* * * * *

■ 53. Amend § 414.1325 by revising paragraph (c)(1) to read follows:

§ 414.1325 Data submission requirements.

* * * * *

(c) * * *

(1) For the quality performance category, the direct; login and upload; Medicare Part B claims (beginning with the CY 2019 MIPS performance period/2021 MIPS payment year, for small practices only); and CMS Web Interface (for groups consisting of 25 or more eligible clinicians, a third party intermediary submitting on behalf of a group) submission type.

* * * * *

■ 54. Amend § 414.1340 revising paragraphs (a)(3) and (b)(3) to read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

(a) * * *

(3) At least 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2022, 2023, 2024, and 2025.

* * * * *

(b) * * *

(3) At least 70 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment years 2022, 2023, 2024, and 2025.

* * * * *

■ 55. Amend § 414.1350 by revising paragraph (c)(4) and adding paragraph (c)(6) to read as follows:

§ 414.1350 Cost performance category.

* * * * *

(c) * * *

(4) For the procedural episode-based measures specified beginning with the CY 2019 performance period/2021 MIPS payment year, the case minimum is 10, unless otherwise specified for individual measures. Beginning with the CY 2022 performance period/2024 MIPS payment year, the case minimum for Colon and Rectal Resection procedural episode-based measure is 20 episodes.

* * * * *

(6) For the chronic condition episode-based measures specified beginning with the CY 2022 performance period/2024 MIPS payment year, the case minimum is 20.

* * * * *

■ 56. Amend § 414.1360 by revising paragraph (a)(2) to read as follows:

§ 414.1360 Data submission criteria for the improvement activities performance category.

(a) * * *

(2) *Groups and virtual groups.*

Beginning with the 2022 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group's TIN or virtual group's TINs or that are part of the subgroup, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance year.

* * * * *

■ 57. Section 414.1365 is added to subpart O to read as follows:

§ 414.1365 MIPS Value Pathways.

(a) *General.* (1) Beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, CMS uses MVPs included in the MIPS final inventory of MVPs established by CMS through rulemaking to assess performance for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

(2) [Reserved]

(b) *MVP/Subgroup registration.* (1) To report an MVP, an MVP Participant must register for the MVP, and if applicable, as a subgroup during a period that begins on April 1 and ends on November 30 of the applicable CY performance period or a later date specified by CMS. To report the CAHPS for MIPS survey associated with an MVP, a group, subgroup or APM Entity must complete their registration by June 30 of such performance period or a later date specified by CMS.

(2) At the time of registration, the MVP Participant must submit the following information, as applicable:

(i) Each MVP Participant must select an MVP, 1 population health measure included in the MVP, and any outcomes-based administrative claims measure on which the MVP Participant intends to be scored.

(ii) Each subgroup must submit a list of each TIN/NPI associated with the subgroup and a plain language name for the subgroup.

(c) *MVP reporting requirements*—(1) Quality. Except as provided in paragraph (c)(1)(i) of this section, an MVP Participant must select and report, if applicable, 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure), included in the MVP, excluding the population health measure required under paragraph (c)(4)(ii) of this section.

(i) Paragraph (c)(1) introductory text of this section does not apply to a small practice that reports on an MVP that includes fewer than 4 Medicare Part B claims measures, provided that the small practice reports each such measure that is applicable.

(ii) [Reserved]

(2) *Cost*. An MVP Participant is scored on the cost measures included in the MVP that they select and report.

(3) *Improvement activities*. An MVP Participant who reports an MVP, must report one of the following:

(i) Two medium-weighted improvement activities;

(ii) One high-weighted improvement activity;

(iii) Participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

(4) *Foundational layer*—(i) Promoting interoperability. An MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described at § 414.1375(b).

(A) For the CY 2023 and 2024 performance periods/2025 and 2026 MIPS payment years, an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category.

(B) [Reserved]

(ii) *Population health measures*. Each MVP Participant is scored on 1 population health measure in accordance with paragraph (d)(1) of this section.

(d) *MVP scoring*—(1) General. An MVP Participant that is not an APM Entity is scored on measures and

activities included in the MVP in accordance with paragraphs (d)(1) through (3) of this section. An MVP Participant that is an APM Entity is scored on measures and activities included in the MVP in accordance with § 414.1317(b).

(2) *Performance standards*. Unless otherwise indicated in this paragraph (d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP.

(3) *Performance categories*. An MVP Participant is scored under MIPS in four performance categories.

(i) *Quality performance category*. Except as provided in paragraphs (d)(3)(i)(A)(1) and (d)(3)(i)(B) of this section, the quality performance category score for MVP Participants is calculated in accordance with § 414.1380(b)(1) based on measures included in the MVP.

(A) *Population health measures*. Except as provided in paragraph (d)(3)(i)(A)(1) of this section, each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP participant's total measure achievement points and total available measure achievement points.

(1) Subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points.

(2) [Reserved]

(B) *Outcomes-based administrative claims measures*. MVP Participants receive zero measure achievement points for each selected outcomes-based administrative claims measure that does not have a benchmark or meet the case minimum requirement.

(ii) *Cost performance category*. The cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report.

(iii) *Improvement activities performance category*. The improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. MVP Participants will receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is

submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

(iv) *Promoting interoperability performance category*. The Promoting Interoperability performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(4), except as provided in paragraph (d)(3)(iv)(A) of this section.

(A) If a subgroup does not submit its affiliated group's data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

(B) [Reserved]

(e) *Final score calculation*. The final score is calculated for an MVP Participant using the methodology at § 414.1380(c), unless otherwise indicated in this paragraph (e).

(1) *MVP performance category weights*. For an MVP Participant that is not an APM Entity, the final score is calculated using the performance category weights described at § 414.1380(c)(1). For an MVP Participant that is an APM Entity, the final score is calculated using the performance category weights described at § 414.1317(b).

(2) *Reweighting MVP performance categories*—(i) General reweighting. For an MVP Participant that is not an APM Entity, in accordance with paragraph (e)(2)(iii) of this section, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in the circumstances described at § 414.1380(c)(2)(i)(A)(2) through (9) and § 414.1380(c)(2)(i)(C). For an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

(ii) *Subgroups*. For an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. In addition, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the following circumstances independent of the affiliated group:

(A) A subgroup may submit an application to CMS demonstrating that it was subject to extreme and uncontrollable circumstances and receive reweighting in accordance with § 414.1380(c)(2)(i)(A)(6) and (c)(2)(i)(C)(2). In the event that a

subgroup submits data for a performance category, the scoring weight described at § 414.1380(c)(1) would be applied and its weight would not be redistributed.

(B) A subgroup will receive reweighting if CMS determines, based on information known to the agency prior to the beginning of the relevant MIPS payment year, that data for the subgroup are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the subgroup and its agents, in accordance with § 414.1380(c)(2)(i)(A)(9) and (c)(2)(i)(C)(10).

(iii) *Reweighting scenarios.* For an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in accordance with § 414.1380(c)(2)(ii). For an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

(3) *Facility-based scoring.* If an MVP Participant, that is not an APM Entity, is eligible for facility-based scoring, a facility-based score also will be calculated in accordance with § 414.1380(e).

(4) *Complex patient bonus.* A complex patient bonus will be added to the final score for an MVP Participant in accordance with § 414.1380(c)(3).

■ 58. Amend § 414.1375—

- a. By revising paragraph (b)(2)(ii);
- b. By revising the paragraph (b)(3) subject heading;
- c. By revising paragraph (b)(3)(ii) introductory text; and
- c. Adding paragraph (b)(3)(iii).

The revisions and addition read as follows:

§ 414.1375 Promoting Interoperability (PI) performance category.

(b) * * *

(2) * * *

(ii) Beginning with the 2021 MIPS payment year:

(A) Report that the MIPS eligible clinician completed the actions included in the Security Risk Analysis measure during the year in which the performance period occurs;

(B) For each required measure, as applicable, report the numerator (of at least one) and denominator, or yes/no statement, or an exclusion for each measure that includes an option for an exclusion; and

(C) Beginning with the 2024 MIPS payment year, report that the MIPS eligible clinician completed the actions included in the SAFER Guides measure during the year in which the performance period occurs.

(3) *Engaging in activities related to supporting providers with the performance of CEHRT; support for health information exchange and the prevention of information blocking; actions to limit or restrict the compatibility or interoperability of CEHRT.* * * *

* * * * *

(ii) *Support for health information exchange and the prevention of information blocking.* For the 2019, 2020, 2021, 2022, and 2023 MIPS payment years, the MIPS eligible clinician must attest to CMS that he or she—

* * * * *

(iii) *Actions to limit or restrict the compatibility or interoperability of CEHRT.* Beginning with the 2024 MIPS payment year, the MIPS eligible clinician must attest to CMS that he or she—

(A) Did not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology.

(B) [Reserved]

■ 59. Amend § 414.1380 by—

- a. Revising paragraphs (b)(1)(i) introductory text and (b)(1)(i)(A)(1);
- b. Adding paragraphs (b)(1)(i)(A)(3) and (b)(1)(i)(C);
- c. Revising paragraphs (b)(1)(iii), (b)(1)(v)(A) introductory text, and (b)(1)(v)(B) introductory text;
- d. Adding paragraph (b)(1)(v)(B)(1)(iii);
- e. Revising paragraphs (b)(1)(vi)(C) introductory text, (b)(1)(vi)(C)(4), (b)(1)(vi)(E), (b)(1)(vii) introductory text, (b)(1)(vii)(A), (b)(2)(iii) introductory text, and (b)(2)(v) introductory text;
- f. Adding paragraphs (b)(2)(v)(A) and (B);
- g. Revising paragraph (b)(4)(ii) introductory text and (b)(4)(ii)(C);
- h. Revising the table in paragraph (c) introductory text;
- i. Revising paragraph (c)(2)(i)(A)(4);
- j. Removing and reserving paragraph (c)(2)(i)(A)(5);
- k. Revising paragraphs (c)(2)(i)(C)(9), (c)(2)(ii)(A), and (c)(2)(ii)(F);
- l. Adding paragraph (c)(2)(ii)(G); and
- m. Revising paragraphs (c)(3) and (e)(6)(iv) through (vi).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(i) *Measure achievement points.* For the CY 2017 through 2021 performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340 and for each administrative claims-based measure that has a benchmark at paragraph (b)(1)(ii) of this section and meets the case minimum requirement at paragraph (b)(1)(iii) of this section. Except as provided under paragraph (b)(1)(i)(C) of this section, beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive between 1 and 10 measure achievement points (including partial points) for each such measure. The number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points. Beginning with the CY 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

(A) * * *

(1) Except as provided in paragraphs (b)(1)(i)(A)(2) and (3) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement. Beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians other than small practices receive 0 measure achievement points

for each such measure, and small practices receive 3 measure achievement points for each such measure.

* * * * *

(3) Beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive 7 measure achievement points for each submitted measure in its first year in MIPS and 5 measure achievement points for each submitted measure in its second year in MIPS that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement.

* * * * *

(C) *New measures.* Beginning with the CY 2023 performance period/2025 MIPS payment year, for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340, a MIPS eligible clinician receives between 7 and 10 measure achievement points (including partial points) for each such measure in its first year in MIPS and between 5 and 10 measure achievement points for each such measure in its second year in MIPS.

* * * * *

(iii) *Minimum case requirements.* Except as otherwise specified in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

(v) * * *

(A) *High priority measures.* Subject to paragraph (b)(1)(v)(A)(1) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure and 1 measure bonus point for each other high priority measure. Beginning with the 2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures.

* * * * *

(B) *End-to-end electronic reporting.* Subject to paragraph (b)(1)(v)(B)(1) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 1 measure bonus point for each measure (except claims-based measures) submitted with end-to-end electronic reporting for a quality measure under

certain criteria determined by the Secretary.

(1) * * *

(iii) Beginning in the 2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus for submitting using end-to-end electronic reporting.

* * * * *

(vi) * * *

(C) The improvement percent score is assessed at the performance category level for the quality performance category and included in the calculation of the quality performance category score as described in paragraph (b)(1)(vii) of this section.

* * * * *

(4) Beginning with the CY 2018 performance period/2020 MIPS payment year, we will assume a quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

* * * * *

(E) For the purpose of improvement scoring methodology, the term “improvement percent score” means the score that represents improvement for the purposes of calculating the quality performance category score as described in paragraph (b)(1)(vii) of this section.

* * * * *

(vii) *Quality performance category score.* A MIPS eligible clinician’s quality performance category score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) of this section. The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) of this section is added to that result. The quality performance category score cannot exceed 100 percentage points.

(A) For each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician’s total measure achievement points and total available measure achievement points. For purposes of this paragraph (b)(1)(vii)(A), “significant changes or errors” means changes to or errors in a measure that are outside the control of the clinician

and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes or inclusion of inactive or inaccurate codes, or changes to clinical guidelines or measure specifications. CMS will publish on the CMS website a list of all measures scored under this paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than the data submission deadline at § 414.1325(e)(1).

* * * * *

(2) * * *

(iii) The cost performance category score is the sum of the following, not to exceed 100 percent:

* * * * *

(v) A cost performance category score is not calculated if a MIPS eligible clinician or group is not attributed any cost measures for the performance period because the clinician or group has not met the minimum case volume specified by CMS for any of the cost measures or a benchmark has not been created for any of the cost measures that would otherwise be attributed to the clinician or group.

(A) Beginning with the 2024 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes during the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician’s or group’s cost performance category score. For purposes of this paragraph (b)(2)(v)(A), “significant changes” are changes external to the care provided, and that CMS determines may lead to misleading or inaccurate results. Significant changes include, but are not limited to, rapid or unprecedented changes to service utilization, and will be empirically assessed by CMS to determine the extent to which the changes impact the calculation of a cost measure score that reflects clinician performance.

(B) [Reserved]

* * * * *

(4) * * *

(ii) Beginning with the 2019 performance period/2021 MIPS payment year, a MIPS eligible clinician’s Promoting Interoperability performance category score equals the sum of the scores for each of the required measures and any applicable bonus scores, not to exceed 100 points.

* * * * *

(C) Each optional measure is worth five or ten bonus points, as specified by CMS.

(c) * * *

* * * * *

TABLE 1 TO PARAGRAPH (c) INTRODUCTORY TEXT

For the 2019 MIPS payment year:

Final score = [(quality performance category score × quality performance category weight) + (cost performance category score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)], not to exceed 100 points.

For the 2020 MIPS payment year:

Final score = [(quality performance category score × quality performance category weight) + (cost performance category score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)] × 100 + [the complex patient bonus + the small practice bonus], not to exceed 100 points.

Beginning with the 2021 MIPS payment year:

Final score = [(quality performance category score × quality performance category weight) + (cost performance category score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)] × 100 + the complex patient bonus, not to exceed 100 points.

* * * * *

(2) * * *

(i) * * *

(A) * * *

(4) For the Promoting Interoperability performance category: (i) For the 2021 through 2024 MIPS payment years, the MIPS eligible clinician is a physical therapist, occupational therapist, clinical psychologist, qualified audiologist, qualified speech-language pathologist, or a registered dietitian or nutrition professional. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(ii) For the 2019 through 2024 MIPS payment years, the MIPS eligible

clinician is a nurse practitioner, physician assistant, clinical nurse specialist, or certified registered nurse anesthetist. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(iii) For the 2024 MIPS payment year, the MIPS eligible clinician is a clinical social worker. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

* * * * *

(C) * * *

(9) For the 2020 MIPS payment year through the 2023 MIPS payment year the MIPS eligible clinician demonstrates through an application submitted to CMS that they are in a small practice as defined in § 414.1305, and overwhelming barriers prevent them from complying with the requirements for the Promoting Interoperability performance category. Beginning with the 2024 MIPS payment year the MIPS eligible clinician is in a small practice as defined in § 414.1305.

* * * * *

(ii) * * *

(A) For the 2019 MIPS payment year:

TABLE 2 TO PARAGRAPH (c)(2)(ii)(A)

Performance category (%)	Weighting for the 2019 MIPS payment year (%)	Reweight scenario if no promoting interoperability performance category score (%)	Reweight scenario if no quality performance category score (%)	Reweight scenario if no improvement activities performance category score (%)
Quality	60	85	0	75
Cost	0	0	0	0
Improvement Activities	15	15	50	0
Promoting Interoperability	25	0	50	25

* * * * *

(F) Except as provided in paragraph (c)(2)(ii)(G) of this section, beginning with the 2024 MIPS payment year:

TABLE 7 TO PARAGRAPH (c)(2)(ii)(F)

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting interoperability (%)
No Reweighting Needed:				
Scores for all four performance categories	30	30	15	25
No Cost	55	0	15	30

TABLE 7 TO PARAGRAPH (c)(2)(ii)(F)—Continued

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting interoperability (%)
No Promoting Interoperability	55	30	15	0
No Quality	0	30	15	55
No Improvement Activities	45	30	0	25
No Cost and no Promoting Interoperability	85	0	15	0
No Cost and no Quality	0	0	15	85
No Cost and no Improvement Activities	70	0	0	30
No Promoting Interoperability and no Quality	0	50	50	0
No Promoting Interoperability and no Improvement Activities	70	30	0	0
No Quality and no Improvement Activities	0	30	0	70

(G) For small practices beginning with the 2024 MIPS payment year:

TABLE 8 TO PARAGRAPH (c)(2)(ii)(G)

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting interoperability (%)
No Reweighting Needed:				
Scores for all four performance categories	30	30	15	25
No Cost	55	0	15	30
No Promoting Interoperability	40	30	30	0
No Quality	0	30	15	55
No Improvement Activities	45	30	0	25
No Cost and no Promoting Interoperability	50	0	50	0
No Cost and no Quality	0	0	15	85
No Cost and no Improvement Activities	70	0	0	30
No Promoting Interoperability and no Quality	0	50	50	0
No Promoting Interoperability and no Improvement Activities	70	30	0	0
No Quality and no Improvement Activities	0	30	0	70

* * * * *

(3) *Complex patient bonus.* For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, provided that a MIPS eligible clinician, group, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as stated in paragraphs (c)(3)(i) through (iv) of this section. Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii) of this section.

(i) For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, for MIPS eligible clinicians and groups, the complex patient bonus is calculated as

follows: [The average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group] + [the dual eligible ratio × 5].

(ii) For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, for APM Entities and virtual groups, the complex patient bonus is calculated as follows: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM Entity or virtual group, respectively] + [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM Entity or virtual group, respectively, × 5].

(iii) For the 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, the complex patient bonus cannot exceed 5.0 except as provided in paragraph (c)(3)(iv) of this section.

(iv) For the 2022 and 2023 MIPS payment years and associated performance periods, the complex patient bonus is calculated pursuant to paragraphs (c)(3)(i) and (ii) of this section, and the resulting numerical value is then multiplied by 2.0. The complex patient bonus cannot exceed 10.0.

(v) Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM Entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. To determine the median for the respective risk indicator (HCC and dual proportion), risk indicators associated with the final score assigned to a clinician from the most recent prior performance period, for all those who have submitted data for at least one MIPS performance category or are facility-based, are used.

(vi) Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific

risk indicators: Medical complex patient bonus component = $1.5 + 4 \times$ associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component = $1.5 + 4 \times$ associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

(vii) Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for APM Entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = $1.5 + 4 \times$ the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM Entity or virtual group, respectively; social complex patient bonus component = $1.5 + 4 \times$ the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM Entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

(viii) Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

* * * * *

(e) * * *

(6) * * *

(iv) *Quality.* The quality performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified

year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS quality performance category score for those MIPS-eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. A clinician or group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS quality performance category.

(v) *Cost.* The cost performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS cost performance category score for those MIPS eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. A clinician or group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS cost performance category.

(A) *Other cost measures.* MIPS eligible clinicians who are scored under facility-based measurement are not scored on cost measures described in paragraph (b)(2) of this section.

(B) [Reserved]

(vi) *Use of score from facility-based measurement.* The MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology described in paragraph (e)(6) of this section unless:

(A) For the CY 2019 MIPS performance period/2021 MIPS payment year, through the CY 2021 MIPS performance period/2023 MIPS payment year, a clinician or group receives a higher combined MIPS quality and cost performance category score through another MIPS submission.

(B) Beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, a clinician or group receives a higher MIPS final score through another MIPS submission.

■ 60. Amend § 414.1395 by revising paragraph (c) to read as follows:

§ 414.1395 Public reporting.

* * * * *

(c) *New measures and activities.* (1) CMS does not publicly report any data on new quality or cost measure for the first 2 years in which it is in the program, after which CMS evaluates the measure to determine whether it is suitable for public reporting under paragraph (b) of this section.

(2) CMS does not publicly report any MVP data on new improvement activity or Promoting Interoperability measure, objective, or activity included in an MVP for the first year in which it is included in the MVP.

* * * * *

■ 61. Revise § 414.1400 to read as follows:

§ 414.1400 Third party intermediaries.

(a) *General.* (1) MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity by any of the following third party intermediaries:

- (i) QCDR;
- (ii) Qualified registry;
- (iii) Health IT vendor; or
- (iv) CMS-approved survey vendor.

(2) Third party intermediary approval criteria—

(i) To be approved as a third party intermediary, an entity must agree to meet the applicable requirements of this section, including, but not limited to, the following:

(A) A third party intermediary's principle place of business and retention of any data must be based in the U.S.

(B) If the data is derived from CEHRT, a QCDR, qualified registry, or health IT vendor must be able to indicate its data source.

(C) All data must be submitted in the form and manner specified by CMS.

(D) If the clinician chooses to opt-in in accordance with § 414.1310, the third party intermediary must be able to transmit that decision to CMS.

(E) The third party intermediary must provide services throughout the entire performance period and applicable data submission period.

(F) Prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM Entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved a transition plan.

(ii) The determination of whether to approve an entity as a third party intermediary for a MIPS payment year may take into account:

(A) Whether the entity failed to comply with the requirements of this section for any prior MIPS payment year for which it was approved as third party intermediary; and

(B) Whether the entity provided inaccurate information regarding the

requirements of this subpart to any eligible clinician.

(iii) Beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner, and at the times, specified by CMS.

(3) All data submitted to CMS by a third party intermediary on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must be certified by the third party intermediary as true, accurate, and complete to the best of its knowledge. Such certification must be made in a form and manner and at such time as specified by CMS.

(b) *Additional requirements for QCDRs and qualified registries*—(1) General. (i) Beginning with the CY 2021 performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories:

(A) Quality, except:

(1) The CAHPS for MIPS survey; and

(2) For qualified registries, QCDR measures;

(B) Improvement activities; and

(C) Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless the third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4)(i) through (iii) or (c)(2)(i)(C)(1) through (7) or (c)(2)(i)(C)(9).

(ii) Beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP.

(2) *Self-nomination*. For the CY 2018 and 2019 performance periods/2020 and 2021 MIPS payment years, entities seeking to qualify as a QCDR or qualified registry must self-nominate September 1 until November 1 of the CY preceding the applicable performance period. For the CY 2020 performance period/2022 MIPS payment year and future years, entities seeking to qualify as a QCDR or qualified registry must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking to qualify as a QCDR or qualified registry for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review

process. For the CY 2019 performance period/2021 MIPS payment year and future years, existing QCDRs and qualified registries that are in good standing may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period.

(3) *Conditions for approval*. (i) Beginning with the CY 2020 performance period/2022 MIPS payment year, the QCDR or qualified registry must have at least 25 participants by January 1 of the year prior to the applicable performance period.

(ii) If an entity seeking to qualify as a QCDR or qualified registry uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period.

(iii) Beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR or qualified registry. Exceptions to this requirement may occur if the QCDR or qualified registry submits notification to CMS within the performance period promptly within the month of realization of the impending deficiency and provides sufficient rationale as to why they do not believe they would be able to meet this requirement (for example, if the QCDR does not receive the data from their clinician until the end of the performance period).

(iv) Beginning with the CY 2023 performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination for CMS' approval and may not change the plan once approved without the prior approval of the agency.

(v) Beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct annual data validation audits in accordance with this paragraph (b)(3)(v).

(A) The QCDR or qualified registry must conduct data validation for the payment year prior to submitting any

data for that payment year to CMS for purposes of the MIPS program.

(B) The QCDR or qualified registry must conduct data validation on data for each performance category for which it will submit data, including if applicable the Quality, Improvement Activities, and Promoting Interoperability performance categories.

(C) The QCDR or qualified registry must conduct data validation on data for each submitter type for which it will submit data, including MIPS eligible clinicians, groups, virtual groups, subgroups, APM entities, voluntary participants, and opt-in participants, if applicable.

(D) The QCDR or qualified registry must use clinical documentation (provided by the clinicians they are submitting data for) to validate that the action or outcome measured actually occurred or was performed.

(E) The QCDR or qualified registry must conduct each data validation audit using a sampling methodology that meets the following requirements:

(1) Uses a sample size of at least 3 percent of the TIN/NPIs for which the QCDR or qualified registry will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the QCDR or qualified registry must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the QCDR or qualified registry may use a sample size of 50 TIN/NPIs.

(2) Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.

(F) Each QCDR or qualified registry data validation audit must include the following:

(1) Verification of the eligibility status of each eligible clinician, group, virtual group, subgroup, opt-in participant, and voluntary participant.

(2) Verification of the accuracy of TINs and NPIs.

(3) Calculation of reporting and performance rates.

(4) Verification that only the MIPS quality measures and QCDR measures, as applicable, that are relevant to the performance period will be used for MIPS submission.

(G) In a form and manner and by a deadline specified by CMS, the QCDR or qualified registry must report the results of each data validation audit, including the overall data deficiencies or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or

error, and, how and when each deficiency or data error type was corrected.

(1) QCDRs and qualified registries must conduct validation on the data they intend to submit for the MIPS performance period and provide the results of the executed data validation plan by May 31st of the year following the performance period.

(2) [Reserved]

(vi) Beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with this paragraph (b)(3)(vi).

(A) If a data validation audit under paragraph (b)(3)(v) of this section identifies one or more deficiency or data error, the QCDR or qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

(B) The QCDR or qualified registry must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the submission of data for that MIPS payment year.

(C) The QCDR or qualified registry must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraph (b)(3)(iv)(E) of this section. The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

(D) In a form and manner and by a deadline specified by CMS, the QCDR or qualified registry must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected.

(vii) For the CY 2023 performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the 2019 through 2023 MIPS payment years must submit a participation plan for CMS' approval. The participation plan must include the QCDR and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(viii) Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not

submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. This participation plan must include the QCDR's and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(4) *QCDR measures for the quality performance category—(i) QCDR measure self-nomination requirements.* For the CY 2018 performance period/2020 MIPS payment year and future years, at the time of self-nomination an entity seeking to become a QCDR must submit the following information for any measure it intends to submit for the payment year.

(A) For MIPS quality measures, the entity must submit specifications including the MIPS measure IDs and specialty-specific measure sets, as applicable.

(B) For QCDR measures, the entity must submit for CMS-approval measure specifications including: Name/title of measures, NQF number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS approval of any QCDR measure specifications, the entity must publicly post the measure specifications for that QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

(ii) *QCDR measure submission requirements.* A QCDR must include the CMS-assigned QCDR measure ID when submitting data on any QCDR measure to CMS.

(iii) *QCDR measure approval criteria.* (A) QCDR measure requirements for approval are:

(1) QCDR measures that are beyond the measure concept phase of development.

(2) QCDR measures that address significant variation in performance.

(3) Beginning with the CY 2022 performance period/2024 MIPS payment year, all QCDR measures must meet face validity. To be approved for the CY 2023 performance period/2025 MIPS payment year, all QCDR measures must meet face validity for the initial MIPS payment year for which it is approved. For subsequent years after being initially approved, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting

the QCDR measure at the time of self-nomination.

(i) To be included in an MVP for the CY 2022 performance period/2024 MIPS payment year and future years, a QCDR measure must be fully tested.

(ii) [Reserved]

(4) Beginning with the CY 2022 performance period/2023 MIPS payment year, QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period.

(5) Beginning with the CY 2020 performance period/2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures or MIPS quality measures in order to be considered for the program in subsequent years. If such areas of duplication are not addressed, CMS may reject the duplicative QCDR measure.

(B) QCDR measure considerations for approval include, but are not limited to:

(1) Measures that are outcome-based rather than clinical process measures.

(2) Measures that address patient safety and adverse events.

(3) Measures that identify appropriate use of diagnosis and therapeutics.

(4) Measures that address the domain of care coordination.

() Measures that address the domain for patient and caregiver experience.

(6) Measures that address efficiency, cost, and resource use.

(7) Beginning with the CY 2021 performance period/2023 MIPS payment year -

(i) That QCDRs link their QCDR measures as feasible to at least one cost measure, improvement activity, or an MVP at the time of self-nomination.

(ii) In cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, CMS would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements and considerations.

(8) Beginning with the CY 2020 performance period/2022 MIPS payment year CMS may consider the extent to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS. If CMS determines that a QCDR measure is not available to MIPS eligible clinicians, groups, and virtual groups reporting through other QCDRs, CMS may not approve the measure.

(9) Greater consideration is given to measures for which QCDRs:

(i) Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and

(ii) Utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint in the CMS Measures Management System to identify measurement gaps prior to measure development.

(10) Beginning with the CY 2020 performance period/2022 MIPS payment year, CMS places greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not, may not continue to be approved.

(i) Beginning with the CY 2020 performance period/2022 MIPS payment year, in instances where a QCDR believes the low-reported QCDR measure that did not meet benchmarking thresholds is still important and relevant to a specialist's practice, that the QCDR may develop and submit a QCDR measure participation plan for our consideration. This QCDR measure participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

(ii) [Reserved]

(C) Beginning with the CY 2021 performance period/2023 MIPS payment year, QCDR measures may be approved for 2 years, at CMS discretion by attaining approval status by meeting QCDR measure considerations and requirements. Upon annual review, CMS may revoke a QCDR measure's second year approval, if the QCDR measure is found to be: Topped out; duplicative of a more robust measure; reflects an outdated clinical guideline; or if the QCDR self-nominating the QCDR measure is no longer in good standing.

(iv) *QCDR measure rejection criteria.* Beginning with the CY 2020 performance period/2022 MIPS payment year, QCDR measure rejection considerations include, but are not limited to:

(A) QCDR measures that are duplicative or identical to other QCDR measures or MIPS quality measures that are currently in the program.

(B) QCDR measures that are duplicative or identical to MIPS quality measures that have been removed from MIPS through rulemaking.

(C) QCDR measures that are duplicative or identical to quality

measures used under the legacy Physician Quality Reporting System (PQRS) program, which have been retired.

(D) QCDR measures that meet the topped out definition as described at § 414.1305.

(E) QCDR measures that are process-based, with consideration to whether the removal of the process measure impacts the number of measures available for a specific specialty.

(F) Whether the QCDR measure has potential unintended consequences to a patient's care.

(G) Considerations and evaluation of the measure's performance data, to determine whether performance variance exists.

(H) QCDR measures that split a single clinical practice or action into several QCDR measures.

(I) QCDR measures that are "checkbox" with no actionable quality action.

(J) QCDR measures that do not meet the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years.

(K) QCDR measures with clinician attribution issues, where the quality action is not under the direct control of the reporting clinician.

(L) QCDR measures that focus on rare events or "never events" in the measurement period.

(M) QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period.

(N) If a QCDR measure owner is not approved or is not in good standing, any associated QCDR measures will not be approved.

(c) *Additional requirements for Health IT vendors.* (1) Beginning with the CY 2021 performance period/2023 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:

(i) Health IT vendors that support MVPs must be able to submit data for all of the MIPS performance categories:

(A) Quality, except:

(1) The CAHPS for MIPS survey; and

(2) QCDR measures;

(B) Improvement activities; and

(C) Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:

(1) The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4)(i) through (iii) or (c)(2)(i)(C)(1) through (7) or (c)(2)(i)(C)(9).

(2) [Reserved]

(ii) Health IT vendors that do not support MVPs must be able to submit

data for at least one of the MIPS performance categories described in paragraphs (c)(1)(i) of this section.

(iii) Beginning with the CY 2023 performance period/2025 MIPS payment year, Health IT vendors must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data. Health IT vendors may also support the APP.

(2) [Reserved]

(d) *Additional requirements for CMS-approved survey vendors.* (1) CMS-approved survey vendors may submit data on the CAHPS for MIPS survey for the MIPS quality performance category.

(2) Entities seeking to be a CMS-approved survey vendor for any MIPS performance period must submit a survey vendor application to CMS in a form and manner specified by CMS for each MIPS performance period for which it wishes to transmit such data. The application and any supplemental information requested by CMS must be submitted by deadlines specified by CMS. For an entity to be a CMS-approved survey vendor, it must meet the following criteria:

(3) The entity must have sufficient experience, capability, and capacity to accurately report CAHPS data, including:

(i) At least 3 years of experience administering mixed-mode surveys (that is, surveys that employ multiple modes to collect data), including mail survey administration followed by survey administration via Computer Assisted Telephone Interview (CATI);

(ii) At least 3 years of experience administering surveys to a Medicare population;

(iii) At least 3 years of experience administering CAHPS surveys within the past 5 years;

(iv) Experience administering surveys in English and at least one other language for which a translation of the CAHPS for MIPS survey is available;

(v) Use equipment, software, computer programs, systems, and facilities that can verify addresses and phone numbers of sampled beneficiaries, monitor interviewers, collect data via CATI, electronically administer the survey and schedule callbacks to beneficiaries at varying times of the day and week, track fielded surveys, assign final disposition codes to reflect the outcome of data collection of each sampled case, and track cases from mail surveys through telephone follow-up activities; and

(vi) Employment of a program manager, information systems specialist, call center supervisor and mail center supervisor to administer the survey.

(4) The entity has certified that it has the ability to maintain and transmit quality data in a manner that preserves the security and integrity of the data.

(5) The entity has successfully completed, and has required its subcontractors to successfully complete, vendor training(s) administered by CMS or its contractors.

(6) The entity has submitted a quality assurance plan and other materials relevant to survey administration, as determined by CMS, including cover letters, questionnaires and telephone scripts.

(7) The entity has agreed to participate and cooperate, and has required its subcontractors to participate and cooperate, in all oversight activities related to survey administration conducted by CMS or its contractors.

(8) The entity has sent an interim survey data file to CMS that establishes the entity's ability to accurately report CAHPS data.

(e) *Remedial action and termination of third party intermediaries.* (1) If CMS determines that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, has submitted a false certification under paragraph (a)(3) of this section, or has submitted data that are inaccurate, unusable, or otherwise compromised, CMS may take one or more of the following remedial actions after providing written notice to the third party intermediary:

(i) Require the third party intermediary to submit a corrective action plan (CAP) by a date specified by CMS. The CAP must address the following issues, unless different or additional information is specified by CMS:

(A) The issues that contributed to the non-compliance.

(B) The impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program.

(C) The corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future.

(D) The detailed timeline for achieving compliance with the applicable requirements.

(ii) Publicly disclose the entity's data error rate on the CMS website until the data error rate falls below 3 percent.

(2) CMS may immediately or with advance notice terminate the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible

clinician, group, or virtual group for one or more of the following reasons:

(i) CMS has grounds to impose remedial action;

(ii) CMS has not received a CAP within the specified time-period or the CAP is not accepted by CMS; or

(iii) The third party intermediary fails to correct the deficiencies or data errors by the date specified by CMS.

(3) Contains data inaccuracies affecting the third party intermediary's total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

(4) For purposes of this paragraph (e), CMS may determine that submitted data are inaccurate, unusable, or otherwise compromised, including but not limited to, if the submitted data:

(i) Includes, without limitation, TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies.

(ii) [Reserved]

(f) *Auditing of entities submitting MIPS data.* Any third party intermediary must comply with the following procedures as a condition of its qualification and approval to participate in MIPS as a third party intermediary.

(1) The entity must make available to CMS the contact information of each MIPS eligible clinician or group on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician or group's practice phone number, address, and, if available, email.

(2) The entity must retain all data submitted to CMS for purposes of MIPS for 6 years from the end of the MIPS performance period.

(3) For the purposes of auditing, CMS may request any records or data retained for the purposes of MIPS for up to 6 years from the end of the MIPS performance period.

■ 62. Amend § 414.1405 by adding paragraphs (b)(9), (d)(7), and (g) to read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(9) Pursuant to the methodology established at paragraph (g) of this section, the performance threshold for the 2024 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

* * * * *

(d) * * *

(7) The additional performance threshold for the 2024 MIPS payment year is 89 points.

* * * * *

(g) *Performance threshold methodology.* For each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b) of this section.

■ 63. Amend § 414.1430 by—

■ a. Revising paragraph (a)(1)(iii);

■ b. Adding paragraphs (a)(1)(iv);

■ c. Removing the second occurrence of paragraph (a)(2)(ii);

■ d. Adding paragraphs (a)(2)(iii) and (iv); and

■ e. Revising paragraphs (b)(1)(i)(A) and (B) and (b)(2)(i)(A) and (B).

The revisions and additions read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

(a) * * *

(1) * * *

(iii) 2023 and 2024: 50 percent.

(iv) 2025 and later: 75 percent.

(2) * * *

(iii) 2023 and 2024: 50 percent.

(iv) 2025 and later: 75 percent.

* * * * *

(b) * * *

(1) * * *

(i) * * *

(A) 2021 through 2024: 50 percent.

(B) 2025 and later: 75 percent.

* * * * *

(2) * * *

(i) * * *

(A) 2021 through 2024: 35 percent.

(B) 2025 and later: 50 percent.

* * * * *

■ 64. Amend § 414.1450 by revising paragraph (c) introductory text to read as follows:

§ 414.1450 APM incentive payment.

* * * * *

(c) *APM Incentive Payment recipient.* CMS will pay the APM Incentive Payment amount for a payment year to a solvent TIN or TINs associated with the QP, identified based on Medicare Part B claims submitted for covered professional services during the base period or payment year, according to this section. If no TIN or TINs with which the QP has an association can be identified at a step, CMS will move to the next and successive steps listed in paragraphs (c)(1) through (8) of this section until CMS identifies a TIN or TINs with which the QP is associated, and to which CMS will make the APM

Incentive Payment. If more than one TIN is identified at a step, the payment will be proportionately divided among the TINs according to the relative total paid amounts for Part B covered professional services paid to each TIN for services provided during the base year.

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 65. The authority citation for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 66. Section 415.140 is added to subpart D to read as follows:

§ 415.140 Conditions for payment: Split (or shared) visits.

(a) *Definitions.* For purposes of this section, the following definitions apply:

Facility setting for purposes of this section means institutional settings in which payment for services and supplies furnished incident to a physician or practitioner's professional services is prohibited under § 410.26(b)(1) of this subchapter.

Split (or shared) visit means an evaluation and management (E/M) visit in the facility setting that is performed in part by both a physician and a nonphysician practitioner who are in the same group, in accordance with applicable law and regulations such that the service could be billed by either the physician or nonphysician practitioner if furnished independently by only one of them.

Substantive portion means more than half of the total time spent by the physician and nonphysician practitioner performing the split (or shared) visit, except as otherwise provided in this paragraph. For visits other than critical care visits furnished in calendar year 2022, *substantive portion* means one of the three key components (history, exam or medical decision-making) or more than half of the total time spent by the physician and nonphysician practitioner performing the split (or shared) visit.

(b) *Conditions of payment.* For purposes of this section, the following conditions of payment apply:

(1) *Substantive portion of split (or shared) visit.* In general, payment is made to the physician or nonphysician practitioner who performs the substantive portion of the split (or shared) visit.

(2) *Medical record documentation.* Documentation in the medical record

must identify the physician and nonphysician practitioner who performed the visit. The individual who performed the substantive portion of the visit (and therefore bills for the visit) must sign and date the medical record.

(3) *Claim modifier.* The designated modifier must be included on the claim to identify that the service was a split (or shared) visit.

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

■ 67. The authority citation for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–101 through 1395w–152, and 1395hh.

■ 68. Amend § 423.160 by revising paragraph (a)(5) to read as follows:

§ 423.160 Standards for electronic prescribing.

(a) * * *

(5) Beginning on January 1, 2021, prescribers must, except in the circumstances described in paragraphs (a)(5)(i) through (iv) of this section, conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically using the applicable standards in paragraph (b) of this section. Prescriptions written for a beneficiary in a long-term care facility will not be included in determining compliance until January 1, 2025. Compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a long-term care facility will commence on or after January 1, 2025. Compliance actions against prescribers who do not meet the compliance threshold based on other prescriptions will commence on or after January 1, 2023. Prescribers will be exempt from this requirement in the following situations:

(i) Prescriber and dispensing pharmacy are the same entity.

(ii) Prescriber issues 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using CMS claims data as of December 31st of the preceding year.

(iii) Prescriber has an NCPDP database address in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity.

(iv) Prescriber has received a CMS-approved waiver because the prescriber is unable to conduct electronic prescribing of controlled substances (EPCS) due to circumstances beyond the prescriber's control.

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 69. The authority for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 70. Amend § 424.205 by redesignating paragraphs (b)(5) and (6) as paragraphs (b)(6) and (7), respectively, and adding new paragraph (b)(5).

The addition reads as follows:

§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.

* * * * *

(b) * * *

(5) The Medicare provider enrollment application fee does not apply to all Medicare Diabetes Prevention Program (MDPP) suppliers that submit an enrollment application on or after January 1, 2022.

* * * * *

■ 71. Amend § 424.502 by revising the definition of “Institutional provider” to read as follows:

§ 424.502 Definitions.

* * * * *

Institutional provider means any provider or supplier that submits a paper Medicare enrollment application using the CMS–855A, CMS–855B (not including physician and nonphysician practitioner organizations), CMS–855S, or an associated internet-based PECOS enrollment application.

* * * * *

■ 72. Amend § 424.530 by revising paragraphs (a)(2) introductory text and (a)(11)(i) to read as follows:

§ 424.530 Denial of enrollment in the Medicare program.

(a) * * *

(2) *Provider or supplier conduct.* The provider or supplier, or any owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, of the provider or supplier is—

* * * * *

(11) * * *

(i) A physician or other eligible professional's Drug Enforcement Administration (DEA) Certificate of Registration to dispense a controlled substance is currently suspended or revoked or is surrendered in response to an order to show cause;

* * * * *

■ 73. Amend § 424.535 by revising paragraphs (a)(2) introductory text,

(a)(8)(ii), (a)(13)(i), and (e) to read as follows:

§ 424.535 Revocation of enrollment in the Medicare program.

(a) * * *

(2) *Provider or supplier conduct.* The provider or supplier, or any owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, of the provider or supplier is—

* * * * *

(8) * * *

(ii) CMS determines that the provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements. In making this determination, CMS considers, as appropriate or applicable, the following:

(A) The percentage of submitted claims that were denied during the period under consideration.

(B) Whether the provider or supplier has any history of final adverse actions and the nature of any such actions.

(C) The type of billing non-compliance and the specific facts surrounding said non-compliance (to the extent this can be determined).

(D) Any other information regarding the provider or supplier's specific circumstances that CMS deems relevant to its determination.

* * * * *

(13) * * *

(i) A physician or other eligible professional's Drug Enforcement Administration (DEA) Certificate of Registration to dispense a controlled substance is currently suspended or revoked or is surrendered in response to an order to show cause;

* * * * *

(e) *Reversal of revocation.* If the revocation was due to adverse activity (sanction, exclusion, or felony) against the provider's or supplier's owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, the revocation may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that individual within 30 days of the revocation notification.

* * * * *

§ 424.545 [Amended]

■ 74. Amend § 424.545 in paragraph (b) by removing the reference “§ 405.374”

and adding in its place the reference “§ 424.546”.

■ 75. Add § 424.546 to read as follows:

§ 424.546 Deactivation rebuttals.

(a) *Rebuttal submittal period.* (1) If a provider or supplier receives written notice from CMS or its contractor that the provider's or supplier's billing privileges are to be or have been deactivated under § 424.540, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to CMS as permitted under § 424.545(b).

(2) CMS may, at its discretion, extend the 15-day time-period referenced in paragraph (a)(1) of this section.

(b) *Rebuttal requirements.* A rebuttal submitted pursuant to this section and § 424.545(b) must:

(1) Be in writing.

(2) Specify the facts or issues about which the provider or supplier disagrees with the deactivation's imposition and/or the effective date, and the reasons for disagreement.

(3) Submit all documentation the provider or supplier wants CMS to consider in its review of the deactivation.

(4) Be submitted in the form of a letter that is signed and dated by the individual supplier (if enrolled as an individual physician or nonphysician practitioner), the authorized official or delegated official (as those terms are defined in 42 CFR 424.502), or a legal representative (as defined in 42 CFR 498.10). If the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier; this statement is sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

(c) *Waiver of rebuttal rights.* The provider's or supplier's failure to submit a rebuttal that is both timely under paragraph (a) of this section and fully compliant with all of the requirements of paragraph (b) of this section constitutes a waiver of all rebuttal rights under this section and § 424.545(b).

(d) *CMS review.* Upon receipt of a timely and compliant deactivation rebuttal, CMS reviews the rebuttal to determine whether the imposition of the deactivation and/or the designated effective date are correct.

(e) *Imposition.* Nothing in this section or in § 424.545(b) requires CMS to delay the imposition of a deactivation pending the completion of the review described in paragraph (d) of this section.

(f) *Initial determination.* A determination made under this section is not an initial determination under § 498.3(b) of this chapter and therefore not appealable.

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 76. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 77. Amend § 425.116 by revising paragraph (c) to read as follows:

§ 425.116 Agreements with ACO participants and ACO providers/suppliers.

* * * * *

(c) *Submission of agreements.* The ACO must submit an executed ACO participant agreement for each ACO participant that it requests to add to its list of ACO participants in accordance with § 425.118. The agreements may be submitted in the form and manner set forth in § 425.204(c)(6) or as otherwise specified by CMS.

■ 78. Amend § 425.204 by revising paragraphs (b), (c)(6), (f)(4)(ii)(A) and (B), (f)(4)(iii) introductory text, and (f)(4)(iii)(A) and adding paragraph (f)(4)(v) to read as follows:

§ 425.204 Content of the application.

* * * * *

(b) *Prior participation.* Upon request by CMS during the application cycle, the ACO must submit information regarding prior participation in the Medicare Shared Savings Program by the ACO, its ACO participants, or its ACO providers/suppliers, including such information as may be necessary for CMS to determine whether to approve an ACO's application in accordance with § 425.224(b).

(c) * * *

(6) Upon request by CMS during the application cycle or at any point during an agreement period, the ACO must submit documents demonstrating that its ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities are required to comply with the requirements of the Shared Savings Program. Upon such a request, the evidence to be submitted must include, without limitation, sample or form agreements and, in the case of ACO participant agreements, the first and signature page(s) of each executed ACO participant agreement.

CMS may request all pages of an executed ACO participant agreement to confirm that it conforms to the sample form agreement submitted by the ACO. The ACO must certify that all of its ACO participant agreements comply with the requirements of this part.

* * * * *

- (f) * * *
- (4) * * *
- (ii) * * *

(A) One-half percent of the total per capita Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries, based on expenditures and the number of assigned beneficiaries for the most recent calendar year for which 12 months of data are available.

(B) One percent of the total Medicare Parts A and B fee-for-service revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available, and based on the ACO's number of assigned beneficiaries for the most recent calendar year for which 12 months of data are available.

(iii) CMS recalculates the ACO's repayment mechanism amount for the second and each subsequent performance year in the agreement period in accordance with paragraph (f)(4)(ii) of this section based on the certified ACO participant list for the relevant performance year, except that the number of assigned beneficiaries used in the calculations is the number of beneficiaries assigned to the ACO at the beginning of the relevant performance year under § 425.400(a)(2)(i) (for ACOs under preliminary prospective assignment with retrospective reconciliation) or § 425.400(a)(3)(i) (for ACOs under prospective assignment).

(A) If the recalculated repayment mechanism amount exceeds the existing repayment mechanism amount by at least \$1,000,000, CMS notifies the ACO in writing that the amount of its repayment mechanism must be increased to the recalculated repayment mechanism amount.

* * * * *

(v)(A) An ACO that established a repayment mechanism to support its participation in a two-sided model beginning on July 1, 2019, January 1, 2020, or January 1, 2021, may elect to decrease the amount of its repayment mechanism if the repayment mechanism amount for performance year 2022, as recalculated pursuant to paragraph (f)(4)(iii) of this section, is less than the existing repayment mechanism amount.

(B) CMS will notify the ACO in writing if the ACO may elect to decrease

the amount of its repayment mechanism pursuant to this paragraph (f)(4)(v). The ACO must submit such election, and revised repayment mechanism documentation, in a form and manner and by a deadline specified by CMS. CMS will review the revised repayment mechanism documentation and may reject the election if the repayment mechanism documentation does not comply with the requirements of this paragraph (f).

* * * * *

■ 79. Amend § 425.312 by revising paragraph (a)(2)(ii) and adding paragraph (a)(2)(iii) to read as follows:

§ 425.312 Beneficiary notifications.

- (a) * * *
- (2) * * *

(ii) In the case of an ACO that has selected preliminary prospective assignment with retrospective reconciliation, by the ACO or ACO participant providing each fee-for-service beneficiary with a standardized written notice prior to or at the first primary care visit of the performance year in the form and manner specified by CMS.

(iii) In the case of an ACO that has selected prospective assignment, by the ACO or ACO participant providing each prospectively assigned beneficiary with a standardized written notice prior to or at the first primary care visit of the performance year in the form and manner specified by CMS.

* * * * *

■ 80. Amend § 425.400 by—

■ a. Revising paragraph (c)(1)(v) introductory text;

■ b. Adding paragraph (c)(1)(vi); and

■ c. Revising paragraphs (c)(2)(i) introductory text, (c)(2)(i)(A)(2), and (c)(2)(ii).

The revisions and addition read as follows:

§ 425.400 General.

* * * * *

- (c) * * *
- (1) * * *

(v) For the performance year starting on January 1, 2021:

* * * * *

(vi) For the performance year starting on January 1, 2022, and subsequent performance years as follows:

(A) CPT codes:

(1) 96160 and 96161 (codes for administration of health risk assessment).

(2) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(3) 99304 through 99318 (codes for professional services furnished in a

nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

(4) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(5) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home for claims identified by place of service modifier 12).

(6) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(vi)).

(7) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(8) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(9) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(10) 99439 (code for non-complex chronic care management).

(11) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(12) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(13) 99495 and 99496 (codes for transitional care management services).

(14) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(1) G0402 (code for the Welcome to Medicare visit).

(2) G0438 and G0439 (codes for the annual wellness visits).

(3) G0442 (code for alcohol misuse screening service).

(4) G0443 (code for alcohol misuse counseling service).

(5) G0444 (code for annual depression screening service).

(6) G0463 (code for services furnished in ETA hospitals).

(7) G0506 (code for chronic care management).

(8) G2010 (code for the remote evaluation of patient video/images).

(9) G2012 and G2252 (codes for virtual check-in).

(10) G2058 (code for non-complex chronic care management).

(11) G2064 and G2065 (codes for principal care management services).

(12) G2212 (code for prolonged office or other outpatient visit for the evaluation and management of a patient).

(13) G2214 (code for psychiatric collaborative care model).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(vi)(A) of this section or a HCPCS code specified in paragraph (c)(1)(vi)(B) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

(2)(i) Except as otherwise specified in paragraph (c)(2)(i)(A)(2) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any month(s) during the COVID-19 Public Health Emergency defined in § 400.200 of this chapter, in determining beneficiary assignment, we use the primary care service codes identified in paragraph (c)(1) of this section, and additional primary care service codes as follows:

(A) * * *

(2) 99441, 99442, and 99443 (codes for telephone evaluation and management services). These codes are used in determining beneficiary assignment as specified in paragraphs (c)(2)(i) and (ii) of this section and until they are no longer payable under Medicare fee-for-service payment policies as specified under section 1834(m) of the Act and §§ 410.78 and 414.65 of this subchapter.

* * *

(ii) Except as otherwise specified in paragraph (c)(2)(i)(A)(2) of this section, the additional primary care service codes specified in paragraph (c)(2)(i) of this section are applicable to all months of the assignment window (as defined in § 425.20), when the assignment window includes any month(s) during the COVID-19 Public Health Emergency defined in § 400.200 of this chapter.

■ 81. Amend § 425.512 by—

■ a. Revising paragraphs (a)(2) and (3);

■ b. Redesignating paragraph (a)(4) as paragraph (a)(5);

■ c. Adding a new paragraph (a)(4);

■ d. Revising newly redesignated paragraph (a)(5); and

■ e. Revising paragraphs (b)(2)(i) and (ii) and (b)(3)(i) and (ii).

The revisions and addition read as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(2) For the first performance year of an ACO's first agreement period under the Shared Savings Program. If the ACO reports data via the APP and meets the

data completeness requirement at § 414.1340 of this subchapter and the case minimum requirement at § 414.1380 of this subchapter on the measures specified in this paragraph (a)(2) for the applicable performance year, the ACO will meet the quality performance standard.

(i) For performance years 2022, 2023, and 2024. The ten CMS Web Interface measures or the three eQMs/MIPS CQMs, and the CAHPS for MIPS survey.

(ii) For performance year 2025 and subsequent performance years. The three eQMs/MIPS CQMs and the CAHPS for MIPS survey.

(3) For performance year 2021. (i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this subchapter, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) If an ACO does not report any of the ten CMS Web Interface measures or any of the three eQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(4) For performance years 2022 and 2023. (i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this subchapter according to the method of submission established by CMS and either:

(A) Achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or

(B) If the ACO reports the three eQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter and the case minimum requirement at § 414.1380 of this subchapter for all three eQMs/MIPS CQMs, achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one of the

remaining five measures in the APP measure set.

(ii) If an ACO does not report any of the ten CMS Web Interface measures or any of the three eQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(5) For performance year 2024 and subsequent performance years. (i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this subchapter, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) If an ACO does not report any of the three eQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(b) * * *

(2) * * *

(i) For performance years 2021, 2022, and 2023, the ACO's minimum quality performance score is set to the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2024 and subsequent performance years, the ACO's minimum quality performance score is set to the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(3) * * *

(i) For performance years 2021, 2022, and 2023, CMS will use the higher of the ACO's quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2024 and subsequent performance years, CMS will use the higher of the ACO's quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category

scores, excluding entities/providers

eligible for facility-based scoring, for the
relevant performance year.

Xavier Becerra,
Secretary, Department of Health and Human
Services.

Note: The following appendices will not
appear in the Code of Federal Regulations.

BILLING CODE 4120-01-P

APPENDIX 1: MIPS QUALITY MEASURES

NOTE: Except as otherwise noted in this final rule, previously finalized measures and specialty measure sets will continue to apply for the CY 2022 performance period/2024 MIPS payment year and future years. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table A as follows: NQF # / eCQM NQF #.

TABLE Group A: New Quality Measures Finalized and Not Finalized for the CY 2022 Performance Period/2024 MIPS Payment Year and Future Years

A.1. Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	481
Description:	Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of bladder cancer staging.
Measure Steward:	Oregon Urology
Numerator:	Intravesical Bacillus-Calmette Guerin (BCG) instillation for initial dose or series. BCG is initiated within 6 months of the bladder cancer staging and during the measurement period.
Denominator:	All patients initially diagnosed with T1, Tis or high grade Ta non-muscle invasive bladder cancer and a qualified encounter in the measurement period.
Exclusions:	Denominator Exceptions: Unavailability of BCG Denominator Exclusions: Immunosuppressed patients, includes HIV and immunocompromised state. Immunosuppressive drug therapy. Active Tuberculosis. Mixed histology urothelial cell carcinoma including micropapillary, plasmacytoid, sarcomatoid, adenocarcinoma and squamous disease. Patients who undergo cystectomy, chemotherapy or radiation within 6 months of Bladder Cancer Staging.
Measure Type:	Process
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	eCQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We proposed this measure because it addresses a gap in care for patients diagnosed with bladder cancer. Treatment at this stage (non-muscle invasive) can help prevent invasion into the muscle layer which leads to potential bladder removal and additional chemotherapy and/or radiation treatment. It was reviewed by the 2016 National Quality Forum (NQF) Measure Application Partnership (MAP) with a recommendation to refine to address concerns what populations would be included or excluded from the measure. The measure was updated according to MAP feedback by redefining the eligible patient population and exclusions.</p> <p>The measure steward indicated that bladder cancer is ranked 10th for new cancer cases in 2020 and is the 9th leading cause of cancer death in the United States. There were an estimated 81,400 new cases in 2020 and 17,980 estimated deaths in 2020. Early detection (discovery of cancer in situ or localized to the primary site) is found in 85 percent of the patients, and with these there is a 5-year survival rate of 95.8 percent for in situ and 69.2 percent for localized. National Comprehensive Cancer Network (NCCN) Guidelines for Bladder Cancer (version 6.2020) defines intravesical Bacillus-Calmette-Guerin (BCG) as Category 1 Treatment for Ta - high grade, T1 and Tis non-muscle invasive bladder cancer. Most public data reflect prophylactic or adjuvant use of intravesical therapy with the goal of preventing recurrence or delaying progression to a higher grade or stage. Intravesical BCG has been shown to be an effective prophylaxis to prevent bladder cancer recurrences following transurethral resection of a bladder tumor (TURBT). The NCCN Bladder Cancer Panel Members recommend BCG as the preferred option over Mitomycin C for adjuvant treatment of high-grade lesions (Ta). BCG is also standard therapy for Primary Tis. Most T1 lesions are high risk and are similarly treated with adjuvant intravesical therapy with BCG being a Category 1 recommendation. (NCCN guidelines 6.2020).</p> <p>Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice. Note: Refer to https://ecqi.healthit.gov/ecqm/ep/2022/cms646v2 for information on this measure.</p>
We received no public comments on this new measure; therefore, we are finalizing the <i>Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer</i> measure as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

A.2. Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	482
Description:	Percentage of adult hemodialysis patient-months using a catheter continuously for three months or longer for vascular access attributable to an individual practitioner or group practice.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	The numerator is the number of adult patient-months in the denominator who were on maintenance hemodialysis using a catheter continuously for three months or longer as of the last hemodialysis session of the reporting month.
Denominator:	All patients at least 18 years old as of the first day of the reporting month who are determined to be maintenance hemodialysis patients (in-center and home HD) for the complete reporting month under the care of the same practitioner or group partner.
Exclusions:	Exclusions that are implicit in the denominator definition include: <ul style="list-style-type: none"> • Pediatric patients (<18 years old). • Patients on Peritoneal Dialysis for any portion of the reporting month. • Patient-months where there are more than one MCP provider listed for the month. In addition, patients with a catheter that have limited life expectancy, as defined by the following criteria are excluded: <ul style="list-style-type: none"> • Patients under hospice care in the current reporting month. • Patients with metastatic cancer in the past 12 months. • Patients with end stage liver disease in the past 12 months. • Patients with coma or anoxic brain injury in the past 12 months
Measure Type:	Intermediate Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We proposed this measure because it represents an intermediate outcome for maintenance hemodialysis patients and may incentivize clinicians to evaluate their vascular access with potential to reduce infection, mortality, and hospitalization rates. Long-term catheter use is associated with higher mortality rate than use of an arteriovenous fistula. The measure was evaluated by the MAP and it was conditionally supported pending NQF endorsement. While we agreed with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. The measure steward indicated, per their analysis of Consolidated Renal Operations in a Web enabled Network (CROWNWeb) data from January 2016 - December 2016, that the physician-level mean percentage of patient-months with a long-term catheter was 9.7 percent (SD=9.0 percent). Distribution: Min=0 percent, 1st quartile=4.5 percent, median=8.3 percent, 3rd quartile=12.7 percent, Max=100 percent. Reliability testing included 7,921 – 8,508 clinicians per month with moderate inter-unit reliability of 0.602 indicating that 60.2 percent of the variation in the annual long-term catheter rate can be attributed to between-practitioner differences in performance (signal) and about 39.8 percent to the within-practitioner variation (noise).</p> <p>Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=91911.</p>
<p>Comment: One commenter did not support this new measure and said that it had provided previous comments on this measure that the measure exclusions should be expanded to include patients for whom dialysis is part of palliative care, not only those who are receiving hospice care. The exclusions should also include patients who have had multiple previous unsuccessful attempts to establish permanent vascular access (either through placement of an arteriovenous fistula or arteriovenous graft), among other concerns.</p> <p>Response: We believe this measure is important in addressing patient safety given the increased risk of blood stream infection with use of a central venous catheter, posing significant risks to patient morbidity and mortality. The National Kidney Foundation's Kidney Disease Outcomes Quality Initiative (KDOQI) still considers it reasonable to preferentially utilize AV access over CVC in prevalent HD patients, if possible. Additionally, KDOQI does acknowledge the patients receiving palliative care may be better served by a CVC for shorter-term dialysis, though this measure assesses numerator compliance at three months of continuous use¹ (DOI: https://doi.org/10.1053/j.ajkd.2019.12.001). Additionally, this is a respecified measure that aligns with the measure that is currently being utilized in the End Stage Renal Disease (ESRD) Quality Improvement Program (QIP), which is currently NQF endorsed. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the <i>Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate</i> measure as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>

A.3. Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	483
Description:	The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the clinician or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.
Measure Steward:	The American Board of Family Medicine
Numerator:	The target population is all active patients in a practice during the performance reporting period. A patient is defined as active if the patient has had a documented interaction with the practice within 12 months of their birth month within the measurement period. The PCPCM PROM is the same for all patients, regardless of age. Because the PCPCM PROM applies to all patients and is not particular to a clinical encounter, it is administered once a year to each patient during their birth month. The target population is defined the same, regardless of unit of analysis (clinician, practice, or system). The numerator is the sum of all PCPCM PROM scores for active patients. 1. My practice makes it easy for me to get care. 2. My practice is able to provide most of my care. 3. In caring for me, my doctor considers all the factors that affect my health. 4. My practice coordinates the care I get from multiple places. 5. My doctor or practice knows me as a person. 6. My doctor and I have been through a lot together. 7. My doctor or practice stands up for me. 8. The care I get takes into account knowledge of my family. 9. The care I get in this practice is informed by knowledge of my community. 10. Over time, my practice helps me to stay healthy. 11. Over time, my practice helps me to meet my goals.
Denominator:	The denominator is the total number of complete PCPCM PROM instruments received in the reporting period. A completed PROM instrument is defined as a PROM instrument for which the patient has responded to at least 8 of 11 items. The target population is all active patients in a practice during the performance reporting period. A patient is defined as active if the patient has had a documented interaction with the practice within 12 months of their birth month during the measurement period. The PCPCM PROM is the same for all patients, regardless of age. Because the PCPCM PROM applies to all patients and is not particular to a clinical encounter, it is administered once a year to each patient during their birth month. The target population is defined the same, regardless of unit of analysis (clinician, practice, or system).
Exclusions:	None
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Measure Domain:	Person and Caregiver-centered Experience and Outcomes (section 1848(s)(1)(B)(iv) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	For each MIPS eligible clinician, group, subgroup*, virtual group, and APM Entity, a minimum of 30 PCPCM PROM instruments per clinician are needed for submission of this measure. All valid survey results (as defined in the specification) should be included in the aggregate score. For MIPS eligible groups, subgroups*, virtual groups, and APM Entities with 5 or more clinicians, a minimum of 150 PCPCM PROM instruments per TIN for each site/location associated with the clinicians part of the group, subgroups, virtual groups, and APM Entities are needed for submission of this measure. For TINs with a composition of multiple specialty practices at one site/location, a minimum of 150 PCPCM PROM instruments per specialty practice within a TIN are needed for submission of this measure. If the MIPS eligible group, subgroup*, virtual group, and APM Entity with 5 or more clinicians encompasses multiple sites/locations, each site/location would need to meet the PCPCM PROM instruments requirements as stated. *Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.
Rationale:	We proposed this measure because assessment of patient experience of care is a critical element of quality care and captures the voice of the patient which is an important component of delivering high-value primary care. There are currently a limited number of patient experience measures within the MIPS quality measure set. The original measure was evaluated by the NQF MAP and received conditional support pending NQF endorsement. While we agreed with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. Based on research of the available information presented to the MAP, evidence demonstrates a strong connection between patient experience of care and traditional health care outcomes, such as improved intermediate outcomes, greater adherence to recommended treatment, and reduced use of health care services. This measure addresses the Meaningful Measurement Area of Patient's Experience of Care and the MIPS high-priority category of Outcomes. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650 .
<p>Comment: Commenters supported the addition of the Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) to the MIPS program. The measure brings the patient voice front and center and is a strong, positive move in the measurement of primary care. It is a long-needed advance in the measurement of primary care that is holistic and personal, not assessing a lab test, a fragment of care. The measure assesses patient experience and should be used across the entire health care industry. The measure provides an easy way to capture the patient experience and relationship.</p> <p>Several commenters preferred this new measure over measure Q321: CAHPS for MIPS Clinician/Group Survey, as it captures patient experience in care more effectively and has a lower burden and cost compared to CAHPS.</p>	

Category	Description
	<p>This measure assesses whether the patient's needs, goals, and social systems are being considered when providing care. This measure also aligns with the Vision and Principles of a Quality Measurement Strategy for Primary Care and with the Meaningful Measures Initiative. Commenters believe this new measure addresses an area of care for which there is evidence that improvement results in improved patient outcomes.</p>
	<p>Response: We thank the commenters for supporting the new Patient Reported Outcome Performance Measure (PCPCM PRO-PM) in the MIPS program.</p>
	<p>Comment: One commenter indicated a State agency plans on using this well validated survey tool and encouraged CMS to expand the minimum case requirement as proposed.</p>
	<p>Response: We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p>
	<p>Comment: One commenter was supportive of PRO-PMs that are methodologically sound, and evidence based to assess, promote, and reward patient-centered care, but believes this new measure does not meet those criteria and there is a need to see additional data before it is ready for implementation. The commenter was concerned that this measure was poorly specified and did not have data to show that it would lead to improvements in care or clinical outcomes. The measure includes all patients who have completed the survey without any exclusions or risk adjustment, and this would result in a non-representative sample. Also, while the measure intends to establish a benchmark for good, comprehensive primary care, they noted the evidence that this measure will lead to improved outcomes and is actionable at the level of the individual clinician or group, has not been presented. There are no articles cited to support the actions that can be done to improve the scores on individual items. The vast majority of these interventions are at the system level. While the developer presents quite a bit of information regarding the validity and reliability of the PCPCM instrument, the commenter had a number of concerns regarding the face validity of the instrument. The commenter also expressed concerns on how the measure would work in a clinical practice when there are multiple issues to focus on during a patient visit, and therefore, is not certain the measure would apply to internal medicine.</p>
	<p>Response: During National Quality Forum (NQF) Measure Application Partnership (MAP) review, the measure steward indicated that case mix adjustment is being pursued to determine if it would be useful. There is a rank order difference with age, but it did not disadvantage any group. The measure steward also indicates that the measure has been tested in all types of settings among different age groups and it continues to maintain reliability and validity. The measure is validated in multiple languages and addresses the broad community. We believe assessment of patient experience of care is a critical element of quality care and captures the voice of the patient which is an important component of delivering high-value primary care. There are currently a limited number of patient experience measures within the MIPS quality measure set or for inclusion in MIPS Value Pathways (MVP). The PCPCM PRO is received once a year by active patients during the month of their birth. The measure steward indicates that this process allows the instrument to apply to the primary care experience as a whole and feedback affords the opportunity for continuous quality improvement. They also indicate that the 11 constructs assessed by the PCPCM PRO are widely hypothesized to be associated with better personal and population health, equity, quality, and sustainable health care expenditure. Therefore, we believe this measure is valid for reporting within MIPS. Fielding of the PCPCM PROM for reliability and validation was conducted both digitally and at point of care. The measure steward utilized three methods for reliability testing, and a multistep process for validity testing, which resulted in a fully tested measure. Based on the information submitted by the measure steward for this measure, the reliability and validity of the instrument are sufficient (refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650). In a recently submitted manuscript regarding the score validity and reliability of the PCPCM PROM, among 6 practices, there were significant differences ($p=0.004$) in PCPCM PROM scores with a moderate effect size (at least .5 standard deviation).</p>
	<p>Comment: One commenter opposed inclusion of this measure because the comprehensive set of patient-clinician interaction assessments within the composite measures are too burdensome for physicians and not as meaningful as intended, as stated during ongoing discussions with CMS and a medical society. Another similar commenter supported the development and implementation of PRO-PMs but believes that additional questions and work remain before their widespread use. While the reporting of this measure will be voluntary in MIPS, the commenter believes that additional research and guidance are needed on how PRO-PMs should be integrated into existing programs while minimizing any unintended consequences.</p>
	<p>Response: While we understand the need to reduce clinician reporting burden, we are committed to prioritizing outcome measures that are patient centered and incorporate the patient voice. We are focused on quality measurement to align with what is meaningful to patients and clinicians.</p>
	<p>Comment: One commenter supported the development and implementation of PRO-PMs but believes that additional questions and work remain before their widespread use, such as: the degree to which multiple PRO-PMs could lead to survey fatigue for patients, the potential impact additional PRO-PMs may have on the reporting of well-established measures such as CG-CAHPS, and what level of data collection burden for an individual PRO-PM is acceptable for a hospital or other healthcare providers. While the reporting of this measure will be voluntary in MIPS, the commenter believes that additional research and guidance are needed on how PRO-PMs should be integrated into existing programs while minimizing any unintended consequences.</p>
	<p>Response: While we appreciate the commenter's concerns, as part of the Meaningful Measures Initiative we are committed to prioritizing outcome and patient reported outcome measures and measures that incorporate the patient voice. We believe this empowers patients to make the best-informed decisions about their healthcare. We also believe that by including this patient experience of care measure within the MIPS quality measure set, it provides clinicians with the opportunity to choose patient reported outcome measures that they find meaningful.</p>
	<p>Comment: One commenter recommended that CMS align with the CQMC's input on this measure.</p>
	<p>Response: We continue to make alignment across all programs a priority. While this measure may appear to be similar to the CAHPS Clinician & Group Surveys (CG-CAHPS) included in the CQMC ACO and PCMH / Primary Care Measures set, the measure steward has indicated only one question overlaps. Additionally, the measure steward indicated that CAHPS addresses patient experience, while this measure addresses the relationship with the primary care clinician or practice offering a broader scope and more meaning to both the clinician and the patient. It addresses all areas of primary care, comprehensiveness, community, access, coordination, and behavioral health. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p>
	<p>Comment: One commenter believes this measure was incomplete because it lacks fielding materials that all high-stakes surveys should have, including definitions of key terms for patients (for example, the PCPCM does not define what "my practice" or "my doctor" mean—which are the entities that the PCPCM asks patients to rate). Also, the only type of clinician referenced in the PCPCM is "my doctor," which is likely to confuse patients whose primary care clinician is a nurse practitioner. Additionally, the PCPCM has not undergone case-mix adjustment, which is critical to making valid comparisons between clinicians and practices, and this causes results to be invalid. The commenter learned that the PCPCM responses are statistically significantly associated with patient health status, age, and length of relationship with primary care provider. These findings suggest that these variables (at a minimum) be included developing case-mix adjustment for the PCPCM, before the PCPCM can be included in payment programs.</p>

Category	Description
	<p>Response: There are currently a limited number of patient experience measures within the MIPS quality measure set or for inclusion in MIPS Value Pathways (MVP). This patient-reported outcome-based performance measure addresses the relationship with the primary care clinician or practices offering a broader scope and more meaning to both the clinician and the patient. The measure steward indicated that the 11 constructs assessed by the PCPCM PRO are widely hypothesized to be associated with better personal and population health, equity, quality, and sustainable health care expenditure. It addresses all areas of primary care, comprehensiveness, community, access, coordination, and behavioral health. During the NQF MAP review of the measure, the measure steward indicated that over 10,000 patient comments were utilized in development of the measure. This determined that patients use the term ‘Dr.’ regardless of the type of clinician seen. In addition, the measure steward indicated that case mix adjustment is being pursued to determine if it would be useful. There is a rank order difference with age, but it did not disadvantage any group. The measure steward also indicated that the measure has been tested in all types of settings among different age groups and it continues to maintain reliability and validity. The measure is validated in multiple languages and addresses the broad community. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the <i>Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)</i> measure as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>

A.4. Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	TBD
Description:	Annual risk-standardized rate of acute, unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with heart failure (HF) or cardiomyopathy.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	<p>The outcome for this measure is the number of acute cardiovascular-related admissions per 100 person-years at risk for admission during the measurement year. Time at risk is calculated as the number of days a patient is alive, from the start of the measurement period or first visit, until heart transplantation, LVAD implantation, or home inotropic therapy; enrollment in hospice; death; or the end of the measurement period.</p> <p>Time not considered at risk and excluded: Days spent in a hospital, SNF, or acute rehabilitation facility; 10 days following discharge from a hospital, SNF, or acute rehabilitation facility; and Time during and after LVAD implantation, home inotropic therapy, or heart transplantation.</p> <p>Acute cardiovascular-related admissions are defined using individual ICD-10-CM codes and the Agency for Healthcare Research and Quality's (AHRQ) Clinical Classification Software (CCS) diagnosis categories, which group clinically similar codes together. AHRQ CCS diagnosis categories used to define outcome: 55: Fluid and electrolyte disorders; 96: Heart valve disorders; 97: Peri-, endo-, and myocarditis; cardiomyopathy (except that caused by tuberculosis or sexually transmitted disease); 98: Essential hypertension; 100: Acute myocardial infarction; 102: Nonspecific chest pain; 104: Other and ill-defined heart disease; 105: Conduction disorders; 106: Cardiac dysrhythmias; 107: Cardiac arrest and ventricular fibrillation; 108: Congestive heart failure; non-hypertensive; 110: Occlusion or stenosis of precerebral arteries; 112: Transient cerebral ischemia; 115: Aortic; peripheral; and visceral artery aneurysms; 116: Aortic and peripheral arterial embolism or thrombosis; 157: Acute and unspecified renal failure; 245: Syncope. Subsets of the following AHRQ CCS diagnosis categories used to define outcome: 99: Hypertension with complications and secondary hypertension; 101: Coronary atherosclerosis and other heart disease; 103: Pulmonary heart disease; 109: Acute cerebrovascular disease; 114: Peripheral and visceral atherosclerosis; 117: Other circulatory disease; 130: Pleurisy; pneumothorax; pulmonary collapse; 131: Respiratory failure; insufficiency; arrest (adult); 133: Other lower respiratory disease; 237: Complication of device; implant or graft.</p> <p>The measure has several outcome exclusions: Planned admissions; Admissions from a skilled nursing facility (SNF) or acute rehab facility; Admissions within 10 days of discharge from a hospital, SNF, or acute rehab; Admissions after patient has entered hospice; Admissions before first visit to provider if no prior year visit; Admissions at time of or following: LVAD implantation, home inotropic therapy, or heart transplant.</p>
Denominator:	<p>The measure includes Medicare FFS beneficiaries ≥ 65 years of age with at least one inpatient principal diagnosis for heart failure/cardiomyopathy, or at least two outpatient or inpatient heart failure/cardiomyopathy diagnoses in any coding position (e.g., primary or secondary position) within the two years prior to the measurement year.</p> <ul style="list-style-type: none"> Beneficiaries must be enrolled full-time in Medicare Part A and B during the year prior to measurement and during the measurement period. Additionally, the cohort excludes: Patients with internalized left ventricular assist devices (LVADs); Patients with heart transplants; Patients on home inotropic therapy; Patients on hospice for any reason; Patients with end-stage renal disease (ESRD) – defined as chronic kidney disease stage 5 or on dialysis. <p>Provider types included for measurement (vetted by TEP and Clinician Committee): Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants; Cardiologists: Cardiologists are covered by the measure because they provide overall coordination of care for patients with HF and manage the conditions that put HF patients at risk for admission due to acute cardiovascular-related conditions.</p> <p>Outcome attribution: We begin by assigning each patient to the clinician most responsible for the patient's care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a PCP, a cardiologist, or can be left unassigned. A patient who is eligible for attribution is assigned to a cardiologist if they have 2 or more visits with a single cardiologist, regardless of how many visits that patient has with a PCP. There are two scenarios where a patient can be assigned to a PCP.</p> <ul style="list-style-type: none"> First, if the patient has seen the PCP at least once but has no visits with a cardiologist, the patient is assigned to the PCP. Second, if the patient has seen the PCP more than 2 or more times and has only one visit with a cardiologist, the patient is assigned to the PCP. If the patient has 1 visit each with a cardiologist and a PCP, the patient is assigned to the cardiologist. If the patient has 1 visit with a cardiologist and no visit with a PCP, the patient is assigned to the cardiologist. Finally, the patient will be unassigned if they had no visits with a PCP or cardiologist. Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN. Patients "follow" their clinician to the TIN designated by the clinician (i.e. they are assigned to their clinician's TIN). Patients unassigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level.
Exclusions:	<p>Numerator Exclusions: The measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of HF patients: Planned admissions (utilizes the adapted planned admission algorithm (PAA) to identify and exclude admissions that are planned); Admissions that likely do not reflect the quality of heart failure management provided by ambulatory clinicians including: Admissions that occur within 10 days of discharge from a hospital, skilled nursing facility, or acute rehabilitation facility ("10-day buffer period"); Admissions that occur while patients are enrolled in Medicare's hospice benefit; Admissions that occur prior to the first visit with the assigned clinician. Admissions on the date or after any of the following: LVAD implantation, home inotropic therapy, or heart transplant (censored at the time of transition to advanced care).</p>

Category	Description
	<p>Denominator Exclusions: The measure excludes:</p> <ol style="list-style-type: none"> 1. Patients without continuous enrollment in Medicare Parts A and B for the duration of the measurement period. 2. Patients who (or until death), were ever in hospice during the year prior to the measurement year or in hospice at the start of the measurement period. 3. Patients who have had no Evaluation & Management (E&M) visits to a MIPS eligible clinician. 4. Patients who have had a heart transplant, been on home inotropic therapy, or who have had a left ventricular assist device (LVAD) placed.
Measure Type:	Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	Administrative Claims
Measure-Specific Case Minimum/Performance Period:	<p>MIPS eligible clinicians, groups, subgroups*, virtual groups, and APM Entities / 21 case minimum / 1 year performance period (January 1st – December 31st)</p> <p>*Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.</p>
Rationale:	<p>We proposed this administrative claims outcome measure as HF is a leading cause of hospitalization in the United States and a major source of disease burden among the elderly population. Approximately 5.7 million adults in the United States have HF, costing the United States \$30.7 billion each year, which includes the cost of health care services, medications for treatment, and missed days of work.¹ The toll on patients is also great, with high rates of hospitalization and mortality; nearly half of people with HF die within 5 years of their diagnosis.² Patients with chronic HF are vulnerable to a range of complications that may put them at risk for hospitalization, including worsening of HF symptoms and destabilization due to other conditions, such as respiratory disease or infection. To expand the list of available reporting options for clinicians, we proposed this HF measure for use in the MIPS program, as it is an administrative claims measure, which has no reporting burden. Another version of this measure specified for Accountable Care Organizations (ACOs), “Risk-standardized Acute Admission Rates for Patients with Heart Failure” (ACO-37, NQF ID 2886) was previously used in the CMS Medicare Shared Savings Program, initially for accountability and currently as an informational measure. We used the ACO-37 measure in the Shared Savings Program ACO quality measure set until 2019 and since 2019 has provided ACOs with their performance on the measure in quarterly claims-based reports for ACOs to use in quality improvement activities.</p> <p>The HF measure was evaluated by the NQF MAP who did not recommend for rulemaking with potential for mitigation citing NQF endorsement and an analysis of the appropriateness of the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. While we agreed with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. While the measure raises concerns that the risk adjustment may not adequately account for advanced heart failure stages, based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice and has provided valuable information for other programs.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.</p>
<p>Comment: One commenter supported this new measure in the MIPS program and its inclusion in proposed MVPs.</p> <p>Response: We thank the commenter for supporting this new measure.</p> <p>Comment: One commenter expressed concern that the denominator for this new measure (as well as new measure A.5) identifies provider types included for measurement. Among these provider types, physician assistants (PAs) are listed as examples of primary care providers. The commenter cautioned CMS to not assign PAs one label of provider type as PAs are generalists who work in both primary care and in specialty care. The commenter expressed concern that if PAs are categorized as one of these or another it would not be an accurate or fair depiction of the PA profession. The commenter requested that CMS be vigilant in its descriptions as to not set a precedent of identifying PAs as only primary care providers or only specialists as to result in future interpretations that may limit a PA’s ability to practice or report on care they are trained and qualified to provide.</p> <p>Response: We appreciate the comment that not all PAs practice as primary care providers. According to the 2020 NCCPA annual report (https://www.nccpa.net/wp-content/uploads/2021/07/Statistical-Profile-of-Certified-PAs-2020.pdf), 24.4 percent of certified PA’s practice in primary care. The measure includes PAs since they are categorized by CMS as MIPS eligible providers and since they may play key roles in the management of patients with heart failure or cardiomyopathy. Non-physician practitioners may practice in primary care or in internal medicine subspecialties, including cardiology. The inclusion of PAs was vetted with the Clinician Committee during measure development, and the Committee favored including PAs for this measure. The Clinician Committee was a contractor-convened committee comprised of clinicians caring for patients in underserved and rural areas and was used to provide feedback during the measure development process on key methodological and clinical decisions.</p> <p>Comment: Commenters opposed finalization of measure A.4: Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System.</p> <p>Key concerns cited by commenters included:</p> <ul style="list-style-type: none"> • Attribution of this measures to individual physicians or small group practices is not appropriate. Given that heart failure management benefits from close management by both the cardiologist and the primary care clinician, multiple attribution to all clinicians meeting the attribution criteria would more effectively promote team-based care and care coordination. • Attribution of the individual provider for complex conditions and complex systems of care, including heart failure patients, is difficult to achieve and does not accurately reflect patient outcomes. • MIPS participants would not know which patients were assigned to them until well after the reporting period ends (i.e., retrospectively), making it impossible for clinicians and practices to implement near real-time interventions. • Attribution issues could potentially produce scores that are invalid and unreliable. • Potential avoidance of patients that more likely to be non-adherent and the possibility of exacerbating disparities in care. • Whether individual providers or even smaller multi-specialty practices could achieve adequate case minimums to fairly apply a population-level measure. 	

Category	Description
	<ul style="list-style-type: none"> • Low reliability minimum sample size and reliability thresholds, and the need for additional risk factors to be evaluated. • More data is needed on socioeconomic stratification and validity issues. • Conceptual language around planned admissions that may involve certain procedures such as revascularization, device implantation and ablation should potentially be carved out and categorized as episodes. • Clarity is needed around the definition of inpatient vs. outpatient providers (e.g., cardiologists). • CMS only submitted face validity testing during the recent NQF review and that should not be considered sufficient. • CMS should consider testing that demonstrates whether this measure attributed to physicians and practices is correlated to other outcome measures such as the hospital wide readmission measure (HWR) or total per capita cost (TPCC) measure. • Dual eligibility should be included in the adjustment since the results demonstrate that it is strongly predictive of an admission. • CMS continues to test social risk factors after assessment of clinical and demographic risk factors, and it is unclear why this multi-step approach is preferable. • All variables that are determined to be predictors that are outside of the control of a group should be included. <p>Response: We agree that attribution is challenging, and no attribution algorithm can anticipate every pattern of care; however, CMS, the measure steward, carefully constructed this algorithm with input from a wide array of stakeholders to address as many scenarios as possible. The measure steward's contractor convened and obtained input from a Technical Expert Panel (TEP) and Clinician Committee. Feedback and guidance from the TEP including clinicians, patient advocate, and quality measure experts, as well as from a Clinician Committee comprised of professional society members and clinicians caring for patients from underserved and rural areas was sought and incorporated throughout the measure development to design an attribution algorithm that is both fair and transparent. We took into consideration that there are instances where patients with heart failure are seeing multiple providers who impact the risk of admission. An underlying premise of the approach to attribution, which was supported by the TEP and the Clinician Committee and aligned with the approach used for the multiple chronic conditions measure, is that ideally there is an individual clinician who is taking responsibility for managing and coordinating the care of a heart failure patient.</p> <p>This is an administrative claims measure and attribution for the measure is determined based upon the pattern of office visits with eligible clinicians, which reflect opportunities to deliver high-quality care, rather than based upon the costs of care. The patient is attributed to the individual clinician first. Then, the patient "follows" the individual clinician to the TIN level assignment. The TIN may be comprised of primary care providers, cardiologists, or it may be a multi-specialty TIN. However, the information about the composition of the TIN is not used for attribution. Non-physician practitioners may practice in primary care or in internal medicine subspecialties, including cardiology. Since the measure uses the pattern of outpatient (ambulatory) office visits to determine attribution, it automatically includes providers who see heart failure patients in these outpatient (ambulatory) settings. The measure uses these practice settings to determine which providers are eligible for the measure.</p> <p>In setting a minimum reliability threshold, CMS needed to balance measure reliability with the statutory requirement to make performance measures applicable to the broadest number of providers. We typically set a minimum reliability threshold of 0.4 in the MIPS program for these reasons. At the minimum reliability threshold of 0.4, the measure includes only 23.9 percent of TINs, but it does include 69.8 percent of clinicians (defined by unique NPI/TINs), 88.9 percent of patients, and 91.3 percent of the outcome. Thus, with this threshold many small-volume TINs are excluded since for them the measure would not be reliable. The NQF Admissions/Readmissions Standing Committee evaluated the measure's reliability and validity and the measure passed on both of these criteria.</p> <p>We test the impact of social risk factors after adjustment for demographic and clinical variables because some of the observed relationships between social risk factors and performance on quality measures may be the result of underlying differences in medical complexity, frailty, disability, and/or functional status. The use of the multi-step process allows us to determine whether the association of social risk factors with measure score is independent, or whether it is driven by these underlying and measurable differences in patient risk. This measure is adjusted for the AHRQ SES Index which captures multiple aspects of social deprivation that can impact patients' health and health outcomes, including poverty and median household income; unemployment; education; and housing value and quality. These factors are deeply rooted in societal disparities, and MIPS providers have little influence on their effect. While dual-eligible beneficiaries are likely to have fewer available health/healthcare supports, and may also have other unmeasured social risk factors (for example, low health literacy), we are not adjusting the model for dual eligibility because: adjusting for dual eligibility can mask disparities in care for dual-eligible beneficiaries, the marginal impact of including dual eligibility is attenuated after accounting for demographic, clinical, and frailty risk factors, as well as the AHRQ SES Index, clinicians may have more ability to mitigate social risk associated with dual eligibility, especially if a dual-eligible beneficiary is living in a non-socially deprived community, and TEP members supported including only the AHRQ SES Index in the model.</p> <p>The measure uses a risk standardized rate of cardiovascular-related unplanned hospital admissions. Planned admissions, even if costly, are not included in the measure outcome. Planned admissions are excluded from the outcome because they are unlikely to reflect the quality of ambulatory care and, as noted, may be beneficial in the long term.</p> <p>The measure has been recommended for endorsement by the NQF's Admissions/Readmissions Standing Committee. Although validity could be further demonstrated by testing correlation with a "gold standard" or with a quality measure focused on a similar quality domain, such a gold standard or closely related measure is not yet available. Although the Hospital Wide Readmission measure is an admission-based measure, it does not assess the quality of care for heart failure patients and is not focused on ambulatory providers. Similarly, the cost measure does not assess the quality of ambulatory care provided to heart failure patients. Therefore, this measure will not be finalized for inclusion as work will continue to address commenters' concerns with potential to propose inclusion of this measure in MIPS in future rulemaking.</p> <p>After consideration of the comments received, we are not finalizing the <i>Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System</i> measure at this time. We plan to continue to consider how to implement condition-specific measures such as this measure under MIPS. As with all its measures, we will conduct routine maintenance and will carefully consider all comments.</p>

A.5. Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions¹

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	484
Description:	Annual risk-standardized rate of acute, unplanned hospital admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with multiple chronic conditions (MCCs).
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	<p>"The outcome for this measure is the number of acute, unplanned hospital admissions per 100 person-years at risk for admission during the measurement period.</p> <p>Time Period The outcome includes inpatient admissions to an acute care hospital during the measurement year.</p> <p>Excluded Admissions This measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of MCC patients:</p> <ol style="list-style-type: none"> 1. Planned hospital admissions. 2. Admissions that occur directly from a skilled nursing facility (SNF) or acute rehabilitation facility. 3. Admissions that occur within a 10-day "buffer period" of time after discharge from a hospital, SNF, or acute rehabilitation facility. 4. Admissions that occur after the patient has entered hospice. 5. Admissions related to complications from procedures or surgeries. 6. Admissions related to accidents or injuries. 7. Admissions that occur prior to the first visit with the assigned clinician or clinician group. <p>To identify planned admissions, the measure adopted an algorithm CORE previously developed for CMS' hospital readmission measures, CMS' Planned Readmission Algorithm Version 4.0. [1,2] In brief, the algorithm uses the procedure codes and principal discharge diagnosis code on each hospital claim to identify planned admissions. A few specific, limited types of care are always considered planned (for example, major organ transplant, rehabilitation, and maintenance chemotherapy). Otherwise, a planned admission is defined as a non-acute admission for a scheduled procedure (for example, total hip replacement or cholecystectomy). Admissions for an acute illness are never considered planned.</p> <p>To identify complications of procedures or surgeries, we use the Agency for Healthcare Research and Quality's (AHRQ's) Clinical Classifications Software (CCS), which clusters diagnoses into clinically meaningful categories using International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) or International Classification of Diseases, Tenth Revision, and Clinical Modification (ICD-10-CM) codes. We exclude the following 23 CCS categories.</p> <ol style="list-style-type: none"> 1. 145: Intestinal obstruction without hernia 2. 237: Complication of device; implant or graft 3. 238: Complications of surgical procedures or medical care 4. 257: Other aftercare <p>b) Accidents or injuries</p> <ol style="list-style-type: none"> 5. 2601 E Codes: Cut/pierce 6. 2602 E Codes: Drowning/submersion 7. 2604 E Codes: Fire/burn 8. 2605 E Codes: Firearm 9. 2606 E Codes: Machinery 10. 2607 E Codes: Motor vehicle traffic (MVT) 11. 2608 E Codes: Pedal cyclist; not MVT 12. 2609 E Codes: Pedestrian; not MVT 13. 2610 E Codes: Transport; not MVT 14. 2611 E Codes: Natural/environment 15. 2612 E Codes: Overexertion 16. 2613 E Codes: Poisoning 17. 2614 E Codes: Struck by; against 18. 2615 E Codes: Suffocation 19. 2616 E Codes: Adverse effects of medical care 20. 2618 E Codes: Other specified and classifiable 21. 2619 E Codes: Other specified; NEC 22. 2620 E Codes: Unspecified 23. 2621 E Codes: Place of occurrence <p>Person-time at risk Persons are considered at risk for hospital admission if they are alive, enrolled in Medicare FFS, and not in the hospital during the measurement period. In addition to time spent in the hospital, we also exclude from at-risk time: (1) time spent in a SNF or acute rehabilitation facility; (2) the time within 10 days following discharge from a hospital, SNF, or acute rehabilitation facility; and (3) time after entering hospice care.</p> <p>Citations 1. Category	Description
Denominator:	<p>"Patients included in the measure (target patient population) The cohort is comprised of patients whose combinations of chronic conditions put them at high risk of admission and whose admission rates could be lowered through better care. This definition reflects NQF's "Multiple Chronic Conditions Measurement Framework," which defines patients with MCCs as people "having two or more concurrent chronic conditions that... act together to significantly increase the complexity of management, and affect functional roles and health outcomes, compromise life expectancy, or hinder self-management." [1]</p> <p>The specific inclusion criteria are as follows.</p> <ul style="list-style-type: none"> • Patient is alive at the start of the measurement period and has two or more of nine chronic disease groups in the year prior to the measurement period. Chronic conditions, except for diabetes, are defined using CMS' Chronic Conditions Data Warehouse (CCW). For diabetes, we used the diabetes cohort definition from the Accountable Care Organization (ACO) diabetes admission measure developed by CORE (v2018a ACO-36) as opposed to the definition used in CCW; CCW includes diagnoses for secondary and drug-induced diabetic conditions that are not the focus of the MIPS MCC admission measure. <ol style="list-style-type: none"> 1. Acute myocardial infarction (AMI), 2. Alzheimer's disease and related disorders or senile dementia, 3. Atrial fibrillation, 4. Chronic kidney disease (CKD), 5. Chronic obstructive pulmonary disease (COPD) or asthma, 6. Depression, 7. Diabetes, 8. Heart failure, and 9. Stroke or transient ischemic attack (TIA). <ul style="list-style-type: none"> • Patient is aged ≥ 65 years at the start of the year prior to the measurement period. • Patient is a Medicare FFS beneficiary with continuous enrollment in Medicare Parts A and B during the year prior to the measurement period. <p>Provider types included for measurement</p> <ul style="list-style-type: none"> • Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants. • Relevant specialists: Specialists covered by the measure are limited to those who provide overall coordination of care for patients with MCCs and who manage the chronic diseases that put the MCC patients in the measure at risk of admission. These specialists were chosen with input from our Technical Expert Panel (TEP) and include cardiologists, pulmonologists, nephrologists, neurologists, endocrinologists, and hematologists/oncologists. <p>Outcome attribution We begin by assigning each patient to the clinician most responsible for the patient's care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a PCP, a relevant specialist, or can be left unassigned.</p> <ul style="list-style-type: none"> • A patient who is eligible for attribution can be assigned to a relevant specialist only if the specialist has been identified as "dominant". A specialist is considered "dominant" if they have two or more visits with the patient, as well as at least two more visits than any primary care provider or other relevant specialist. • There are two scenarios where a patient can be assigned to a PCP. First, the patient must have seen at least one PCP. The patient will then be assigned to the PCP with the highest number of visits if there are no relevant specialists who are considered "dominant". Second, if the patient has had more than one visit with a relevant specialist, no "dominant" specialist has been identified, and has two or more visits with a PCP, they will be assigned to that PCP. • Finally, the patient will be unassigned if they only saw non-relevant specialists, if the patient has not seen a PCP and no "dominant" specialist can be identified, or if the patient has not had more than one visit with any individual PCP. <p>Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN.</p> <ul style="list-style-type: none"> • Patients "follow" their clinician to the TIN designated by the clinician (i.e. they are assigned to their clinician's TIN). Patients unassigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level. <p>Citations 1. National Quality Forum. Multiple Chronic Conditions Measurement Framework. http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=71227. Accessed February 20, 2019."</p>
Exclusions:	<p>Denominator Exclusions: "The cohort excludes the following patients:</p> <ol style="list-style-type: none"> 1) Patients without continuous enrollment in Medicare Part A or B during the measurement period. 2) Patients who were in hospice at any time during the year prior to the measurement year or at the start of the measurement year. 3) Patients who had no Evaluation & Management (E&M) visits to a MIPS-eligible clinician type. 4) Patients assigned to clinician who achieve QP status and therefore do not participate in MIPS. 5) Patients attributed to hematologists and oncologists. 6) Patients not at risk for hospitalization during the measurement year." <p>Note: Exclusions 1-3 are applied prior to attribution, while exclusions 4-6 are applied after the attribution algorithm is run.</p>
Measure Type:	Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	Administrative Claims

Category	Description
Measure-Specific Case Minimum/Performance Period:	<p>MIPS eligible groups, subgroups*, virtual groups, and APM Entities with at least 16 clinicians / 18 case minimum / 1 year performance period (January 1st – December 31st)</p> <p>*Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.</p>
Rationale:	<p>We proposed this risk-standardized hospital admission rate administrative claims outcome measure as patients with MCCs are at high risk for hospital admission, often for potentially preventable causes, such as exacerbation of pulmonary disease. Evidence from several Medicare demonstration projects suggests that care coordination results in decreased hospital admission rates among high-risk patients. In addition, studies have shown that the types of ambulatory care clinicians this measure targets (for example, primary care providers and specialists caring for patients with MCCs) can influence admission rates through team-based and enhanced access to care, found specifically in the patient-centered medical home (PCMH) model of interventions, and broadly through increased primary care supply and continuity of care. To expand the list of available reporting options for clinicians, we proposed the MCC measure for use in the MIPS program, as it is an administrative claims measure, which has no reporting burden.</p> <p>This measure was evaluated by the NQF MAP in 2019, who did not support for rulemaking with potential for mitigation, including applying the measure to clinician groups, not to individual clinicians, a higher reliability threshold (e.g., 0.7; 3), consideration of patient preference and selection as a method of attribution and NQF endorsement. While we agreed with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. This measure has been submitted for endorsement as part of the fall 2020 NQF cycle. The measure developer indicated the measure will be used for clinician group reporting with a mean reliability score for groups of >15 clinicians with at least 18 MCC patients at 0.873. While the developer indicated that the patient attestation is not yet available for testing, based on research of the available information presented at the MAP, we believe the measure is evidence-based and represents an important clinical practice addressing a large Medicare patient population.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=91911.</p>
<p>Comment: One commenter supported this new measure in the MIPS program.</p> <p>Response: We thank the commenter for supporting this new measure.</p> <p>Comment: Several commenters did not support measure A.4: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions.</p> <p>Key concerns cited by commenters included:</p> <ul style="list-style-type: none"> • Less than desirable reliability thresholds and intraclass correlation coefficients for the minimum sample size/case volume • Lack of inclusion of socioeconomic risk factors in the risk adjustment model, the adequacy of the risk adjustment model, and that dual eligibility should be included in the risk adjustment model. • Population health measurement faces numerous challenges, including its concept and definition, reliability and validity, data collection and analysis, and accountability. • CMS should select either this new measure or continue to pursue the individual condition-based measures rather than include both measures in MIPS, and this measure should not be included as a foundational layer to the program and/or a requirement. • Lack of evidence to support attributing this measure to practices as evidenced from the NQF involved multiple partners such as a disease management program, health system, and/or hospital. • Insufficient evidence to apply this measure at the TIN level to support that physicians or practices, in the absence of some coordinated program or payment offset (for example, care management fee), can implement structures or processes that can lead to improved outcomes for these patients. Attribution is also assigned retrospectively. • Concern that PAs, NPs, and other mid-level providers could be attributed this measure, even if they do not practice in the measured specialties (primary care, cardiology, pulmonology, nephrology, neurology, endocrinology, and hematology/oncology). • The minimum sample size and reliability threshold remain too low. • Additional information on the validity of the measure is needed when applied at these levels is needed. • CMS must ensure that data yields accurate scores. • Concern related to unplanned admissions. • Insufficient face validity. <p>Response: We have addressed the concerns raised on this measure with the measure developer.</p> <ul style="list-style-type: none"> • The intent of the MIPS MCC measure is to evaluate performance at the clinician group level so that the group can improve care quality across their practice. We will use the measure for clinician groups of >15 providers with at least 18 MCC patients, aligned with its minimum reliability threshold of 0.4. In setting a minimum reliability threshold, CMS, the measure steward, needed to balance measure reliability with the statutory requirement to make performance measures applicable to the broadest number of providers. However, when the measure is applied to groups of >15 clinicians with at least 18 MCC patients, the mean reliability is 0.873, greatly exceeding this minimum threshold. Beyond care coordination, evidence suggests that greater continuity of care and care comprehensiveness can reduce acute admissions². Hospital admissions which do not reflect the quality of ambulatory care are excluded from the measure outcome (for example, admissions due to accidents or planned admissions). The measure is designed to mitigate concerns about use of retrospective attribution: admissions that occur prior to an initial visit to the clinician are not counted in the outcome and attribution is based on performance year to ensure that providers are not held responsible for patients who do not seek care from them during the measurement year. <p>We have carefully considered adjustment for social risk factors and this measure is adjusted for AHRQ SES Index and specialist density. While dual-eligible beneficiaries are likely to have fewer available health/healthcare supports and may also have other unmeasured social risk factors (for example, low health literacy), we are not adjusting the model for dual eligibility for several reasons: adjusting for dual eligibility can mask disparities in care for dual-eligible beneficiaries; the marginal impact of including dual eligibility is attenuated after accounting for demographic, clinical, and frailty risk factors, and the AHRQ SES Index and specialist density social risk factors; clinicians may have more ability to mitigate social risk associated with dual eligibility.</p>	

Category	Description
	<p>especially if a dual-eligible beneficiary is living in a non-socially deprived community; and TEP members supported including only the AHRQ SES Index and specialist density social risk factors in the model. Finally, this measure was evaluated and endorsed as specified by the NQF.</p> <p>With respect to validity, the measure steward's contractor convened a national Technical Expert Panel (TEP) to seek detailed input from clinicians, patient advocates, and other stakeholders. The TEP guided the development of the attribution algorithm and supported its final version. Administrative data do not allow for the identification of the specialty areas of NPs, PAs, or other non-physician clinicians; these clinicians are included because they play key roles in primary care and specialty practice.</p> <p>Condition-specific measures focus on a narrow cohort, a narrow set of condition-specific outcomes, and a narrow set of providers who primarily manage the patient cohort. In contrast, the MIPS MCC measure is designed to capture a broad set of outcomes reflective of care quality for these complex patients.</p> <p>After consideration of public comments, we are finalizing the <i>Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions</i> measure as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>

TABLE Group AA: COVID-19 Vaccination by Clinicians

In addition to the new quality measures in Table Group A, we solicited comments on one quality measure for potential future inclusion within MIPS. We refer readers to the CY 2022 PFS proposed rule for our request for information pertaining to the COVID-19 Vaccination by Clinicians measure specifications (86 FR 39393 through 39394; and for reference, available in section IV.A.3.d.(1)(f) of this final rule. Please note that we inadvertently referred to the vaccine as “SARS-CoV-2” and not “COVID-19” throughout Table AA.1 in the CY 2022 PFS proposed rule (86 FR 39603). In order to correctly refer to the vaccine in this final rule, we have updated the references to the vaccine to reflect “COVID-19” throughout Table AA.1.

AA.1. COVID Vaccination by Clinicians

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	TBD
Description:	Percentage of patients aged 18 years and older seen for a visit during the measurement period who have received a COVID-19 vaccination dose OR completed a COVID-19 vaccination series.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Patients who have received a COVID-19 vaccination dose OR completed a COVID-19 vaccination series.
Denominator:	All patients aged 18 years and older seen for a visit during the measurement period.
Exclusions:	Patient received hospice services any time during the measurement period. Exceptions: 1. COVID-19 vaccine dose or full COVID-19 vaccination series was not administered, as documented by clinician, due to patient contraindication. 2. COVID-19 vaccine dose or full COVID-19 vaccination series was not administered, as documented by clinician, due to patient refusal. 3. COVID-19 vaccine dose or full COVID-19 vaccination series was not administered, as documented by clinician, due to vaccine being unavailable.
Measure Type:	Process
Measure Domain:	Community/Population Health (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We solicited comment on this measure as it represents a promising effort to advance measurement of vaccination for an evolving pandemic.</p> <p>On December 19, 2020, the Advisory Committee on Immunization Practice (ACIP) made an interim recommendation on the use of the Moderna COVID-19 vaccine for people ages 18 and older. Earlier that month, on December 12, ACIP also granted use of the Pfizer-BioNTech COVID-19 vaccine for people ages 16 and older, as an interim recommendation. The benefits of both vaccines were classified as high certainty (Type 1) based on the Grading of Recommendations, Assessment, Development and Evaluation (GRADE) evidence assessment. On February 28, 2021, ACIP issued an interim recommendation for use of the Janssen COVID-19 vaccine in persons aged ≥18 years for the prevention of COVID-19. The benefit for this single dose vaccine was classified as moderate certainty (Type 2) based on the GRADE evidence assessment. Future versions of the measure will be updated as more evidence and guidelines emerge.</p> <p>This measure would add value to the MIPS quality measure set by providing visibility into an important intervention to limit COVID-19 infections. In addition, collecting information on severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) vaccination coverage and providing feedback to clinicians, will facilitate performance benchmarking and drive quality improvement. Vaccination coverage will reduce transmission of COVID-19 and the associated mortality and morbidity.</p> <p>This measure was reviewed by the NQF MAP, who recommended conditional support for future rulemaking contingent on us bringing the measure back to MAP once the specifications are further refined. We are considering an expedited process for this measure recognizing the importance of a vaccine during a public health emergency and are exploring the inclusion of pediatric hospitals within this COVID-19 vaccination measure. Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical topic.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.</p>
While we are not summarizing or responding to specific comments submitted in response to the Request for Information regarding the draft COVID-19 Vaccination by Clinicians measure specifications in this final rule, we thank commenters for the feedback received. We may consider such information to inform future rulemaking.	

**TABLE Group B: New Specialty Measures Set Finalized for Addition and Modifications to
Previously Finalized Specialty Measures Sets Finalized for the CY 2022 Performance
Period/2024 MIPS Payment Year and Future Years**

We proposed to add one new specialty measures set: Certified Nurse Midwife. This set is finalized to be added based in part on the finalized expanded definition of the MIPS eligible clinician to include certified nurse midwife under section IV.A.3.a of this final rule. Note: Clinical Social Work is also finalized as a MIPS eligible clinician type under section IV.A.3.a of this final rule. See Table B.7 for the finalized changes to the previously finalized Clinical Social Work specialty set.

We proposed to modify the previously finalized specialty measures sets below based upon review of updates made to existing quality measure specifications, proposed the addition of new measures for inclusion in MIPS, and considered the feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D. In the first column, existing measures with substantive changes described in Table Group D are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table Group B as follows: NQF # / eCQM NQF #.

NOTE:

- In the instance a title and/or measure description had a substantive change finalized in Table Group D, the revised title and/or measure description is reflected in the specialty measure sets located in Table Group B.
- Under Table Group B, we respond to comments that are related to new measures that were proposed for addition to measure sets, and measures that were proposed for removal. Any comments received on previously finalized measures are out of scope and not included in this final rule. Commenters who requested additions or removals of quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.
- Measures that were not finalized for removal in this final rule have been added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for their retention is addressed under Table Group C. For some specialty sets, this resulted in the Removal Table being removed in its entirety in this final rule if no measures proposed for removal were finalized for removal. The Removal Tables were removed from the following specialty sets: Cardiology, Emergency Medicine, Gastroenterology, Nephrology, Radiation Oncology, Ophthalmology, Rheumatology, and Urgent Care.

The definition of high priority at §414.1305 includes an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure.

It should be noted that in the 2021 PFS final rule (85 FR 84870), the CMS Web Interface measures as a collection type would have sunset starting with the CY 2022 performance period; however, in section IV.A.3.d.(1)(d) of this final rule, we finalized to extend the availability of the CMS Web Interface measures as a collection type for the CY 2022 performance period (CY 2024 for APM Entities reporting through the APM Performance Pathway) and sunset the CMS Web Interface measures starting with the CY 2023 performance period (CY 2025 for APM Entities reporting through the APM Performance Pathway). Therefore, we proposed to modify the CMS Web Interface Measure Specifications collection type as outlined in the applicable measures within the B tables. In conjunction with soliciting public comments to extend the availability of the CMS Web Interface measures as a collection type, we solicited public comment on the modifications proposed for the CMS Web Interface Measure Specifications collection type given that the CMS Web Interface Measure Specifications collection type has generally remained the same for three consecutive (CY 2019, CY 2020, and CY 2021) performance periods.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.3. Audiology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE AUDIOLOGY SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
After consideration of public comments, we are finalizing the above measure for removal from the <i>Audiology Specialty Measure Set</i> as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.4a. Cardiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Cardiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: <ul style="list-style-type: none"> • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- And • Most recent tobacco status is Tobacco Free -- And • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- And • Statin Use Unless Contraindicated 	Wisconsin Collaborative for Healthcare Quality

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE DERMATOLOGY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A/ N/A	176	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Tuberculosis Screening Prior to First Course Biologic Therapy: If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.	America n College of Rheumat ology	We proposed to include this measure in the Dermatology specialty set as it is clinically relevant to this clinician type. Previous stakeholder feedback resulted in an expanded list of acceptable medications, proposed in Table D.20, which now cover the broader dermatological patient population. With this expansion, and the clinical relevance to this clinician type, we proposed to add to the Dermatology specialty set.

We received no public comments on the measure proposed for addition to this specialty set; therefore, we are finalizing the above measure for addition to the *Dermatology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

B.9. Dermatology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE DERMATOLOGY SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier: Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

After consideration of public comments, we are finalizing the above measure for removal from the *Dermatology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.10. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

Centers for Medicare & Medicaid Services
§	N/A / N/A	475	CMS349v4	eCQM Specifications	Process	Community/Popul ation Health	HIV Screening: Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for HIV.	Centers for Disease Control and Prevention

B.13. Family Medicine

MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A/ N/A	483	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-centered Experience and Outcomes	Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM): The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the provider or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.	The American Board of Family Medicine	We proposed to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. This measure assesses the element of patient experience in care quality within the broad scope of primary care. Capturing the voice of the patient is an important component of delivering high-value primary care which is a focus of family medicine. Therefore, given the expansive purview of this specialty and applicability of this component in improving patient care, we proposed the inclusion of this measure within the Family Medicine specialty set. See Table A.3 for rationale.
<p>Comment: One commenter supported inclusion of the Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) in the Family Medicine set.</p> <p>Response: We thank the commenter for supporting the new Patient Reported Outcome Performance Measure (PCPCM PRO-PM) in the Family Medicine set.</p> <p>After consideration of public comments, we are finalizing the above measure for addition to the <i>Family Medicine Specialty Measure Set</i> as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>									

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE FAMILY MEDICINE SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier: Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0209 / N/A	342	N/A	MIPS CQMs Specifications	Outcome	Person and Caregiver-Centered Experience and Outcomes	Pain Brought Under Control Within 48 Hours: Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.	National Hospice and Palliative Care Organization	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	444	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	Medication Management for People with Asthma: The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

After consideration of public comments, we are finalizing the above measures for removal from the *Family Medicine Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

Large Urology Group Practice Association and Oregon Urology Institute

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GERIATRICS SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GERIATRICS SET

ote: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

QF # / CQM QF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
--------------------------	--------------	----------------	--------------------	-----------------	---	-------------------------------	--------------------	-----------------------

comment: One commenter stated that the removal of measure Q154: Falls: Risk Assessment would have a detrimental impact on the geriatric population. As an alternative or in addition to measure Q154, the commenter requested that CMS include measure Q318, Falls: Screening for Future Fall Risk in the Geriatrics set. Should measure Q318 also become topped out, the commenter believed this would suggest the need to develop a more rigorous measure of falls risk assessment.

response: We agree that falls prevention is an extremely important concept for this patient population and the Geriatric Specialty Set. The removal of measure Q154 does not preclude clinicians in completing these tasks, however, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. The performance for measure Q154 has an extremely high and unvarying performance rate. This does not allow meaningful benchmarks to be established. In addition, prior to rulemaking we solicit feedback from stakeholders with regards to measures that should be added to or removed from existing specialty sets as well as the development of new specialty sets. We encourage the commenter to submit this comment during the Solicitation for Specialty Sets for potential implementation in future years. Lastly, we also encourage the commenter to reach out to measure developers/stewards to develop a more rigorous falls risk assessment measure for submission to the Call for Measures for possible future implementation.

After consideration of public comments, we are finalizing the above measure for removal from the *Geriatrics Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.17. Hospitalists

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

Centers for Medicare & Medicaid Services

B.18. Infectious Disease

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Infectious Disease specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

* §	N/A / N/A	438	CMS347v5	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease: Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period: *All patients who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR *Patients aged >= 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level >= 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • *Patients aged 40-75 years with a diagnosis of diabetes	Centers for Medicare & Medicaid Services
! (Outcome)	N/A / N/A	441	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control): The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all- or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated.	Wisconsin Collaborative for Healthcare Quality
§ ! (Appropriate Use)	N/A / N/A	443	N/A	MIPS CQMs Specifications	Process	Patient Safety	Non-Recommended Cervical Cancer Screening in Adolescent Females: The percentage of adolescent females 16–20 years of age who were screened unnecessarily for cervical cancer.	National Committee for Quality Assurance
! (Opioid)	N/A / N/A	468	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Continuity of Pharmacotherapy for Opioid Use Disorder (OUD): Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment.	University of Southern California

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INTERNAL MEDICINE SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier: Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0209 / N/A	342	N/A	MIPS CQMs Specifications	Outcome	Person and Caregiver-Centered Experience and Outcomes	Pain Brought Under Control Within 48 Hours: Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.	National Hospice and Palliative Care Organization	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	444	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	Medication Management for People with Asthma: The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

After consideration of public comments, we are finalizing the above measures for removal from the *Internal Medicine Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.20. Interventional Radiology**PREVIOUSLY FINALIZED MEASURES IN THE INTERVENTIONAL RADIOLOGY SET**

B.22. Nephrology

MEASURES FINALIZED FOR ADDITION TO THE NEPHROLOGY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A/ N/A	482	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate: Percentage of adult hemodialysis patient-months using a catheter continuously for three months or longer for vascular access attributable to an individual practitioner or group practice.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Nephrology specialty set as it is clinically relevant to this clinician type. Given the high rates that patients with kidney diseases are treated and managed within this specialty, we recommended the inclusion of this measure in the Nephrology specialty set. See Table A.2 for rationale.

Comment: One commenter did not support the inclusion of the new measure: Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate in the Nephrology specialty set. See full comment under Table A.2.

Response: Currently, the Nephrology Specialty Measure Set contains 11 measures allowing clinicians to choose to submit those measures that are meaningful to their scope of care. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. In addition, we encourage the commenter to submit this comment during the Solicitation for Specialty Sets for potential implementation in future years. See full response under Table A.2.

After consideration of public comments, we are finalizing the above measure for addition to the *Nephrology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

B.23. Neurology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE NEUROLOGY SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
After consideration of public comments, we are finalizing the above measure for removal from the <i>Neurology Specialty Measure Set</i> as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.24. Neurosurgical

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.	Oregon Urology Institute

B.27a. Oncology/Hematology**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ONCOLOGY/HEMATOLOGY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	067	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Hematology: Myelodysplastic Syndrome (MDS) and Acute Leukemias: Baseline Cytogenetic Testing Performed on Bone Marrow: Percentage of patients aged 18 years and older with a diagnosis of myelodysplastic syndrome (MDS) or an acute leukemia who had baseline cytogenetic testing performed on bone marrow.	American Society of Hematology	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	070	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Hematology: Chronic Lymphocytic Leukemia (CLL): Baseline Flow Cytometry: Percentage of patients aged 18 years and older, seen within a 12-month reporting period, with a diagnosis of chronic lymphocytic leukemia (CLL) made at any time during or prior to the reporting period who had baseline flow cytometry studies performed and documented in the chart.	American Society of Hematology	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

After consideration of public comments, we are finalizing the above measures for removal from the *Oncology/Hematology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.27b. Radiation Oncology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.27b. Radiation Oncology**PREVIOUSLY FINALIZED MEASURES IN THE RADIATION ONCOLOGY SET**

The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).	Focus on Therapeutic Outcomes, Inc.

B.29. Orthopedic Surgery

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0268 / N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin: Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients): Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
After consideration of public comments, we are finalizing the above measures for removal from the <i>Orthopedic Surgery Specialty Measure Set</i> as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.30. Otolaryngology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

(Appropriate Use)	0657 / N/A	464	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use: Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.	American Academy of Otolaryngology – Head and Neck Surgery Foundation

B.30. Otolaryngology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OTOLARYNGOLOGY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0268 / N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin: Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients): Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

After consideration of public comments, we are finalizing the above measures for removal from the *Otolaryngology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.31. Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.31. Pathology

PREVIOUSLY FINALIZED MEASURES IN THE PATHOLOGY SET								
Indicator	NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
	N/A / N/A	249	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Barrett's Esophagus: Percentage of esophageal biopsy reports that document the presence of Barrett's mucosa that also include a statement about dysplasia.	College of American Pathologists
§	N/A / N/A	250	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Radical Prostatectomy Pathology Reporting: Percentage of radical prostatectomy pathology reports that include the pT category, the pN category, the Gleason score and a statement about margin status.	College of American Pathologists
* ! (Care Coordination)	N/A / N/A	395	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Lung Cancer Reporting (Biopsy/Cytology Specimens): Pathology reports based on lung biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type following the International Association for the Study of Lung Cancer (IASLC) guidance or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.	College of American Pathologists
* ! (Care Coordination)	N/A / N/A	396	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Lung Cancer Reporting (Resection Specimens): Pathology reports based on lung resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.	College of American Pathologists
* ! (Care Coordination)	N/A / N/A	397	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Melanoma Reporting: Pathology reports for primary malignant cutaneous melanoma that include the pT category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors.	College of American Pathologists
! (Care Coordination)	N/A / N/A	440	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician: Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC) and Squamous Cell Carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist.	American Academy of Dermatology

B.32. Pediatrics

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Pediatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

Two rates are submitted: • The percentage of discharges for which the patient received follow-up within 30 days after discharge • The percentage of discharges for which the patient received follow-up within 7 days after discharge.	National Committee for Quality Assurance

PREVIOUSLY FINALIZED MEASURES IN THE PEDIATRICS SET

B.32. Pediatrics

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

After consideration of public comments, we are finalizing the above measure for removal from the *Pediatrics Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix I: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.33. Physical Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

National Committee for Quality Assurance	We proposed to include this measure in the Physical Therapy/Occupational Therapy specialty set as it is clinically relevant to this clinician type. Stakeholders encouraged the addition of this measure to the Physical Therapy/Occupational Therapy specialty set upon coding revisions to allow physical therapists to report.
We received no public comments on the measures proposed for addition to this specialty set; therefore, we are finalizing the above measure for addition to the <i>Physical Therapy/Occupational Specialty Measure Set</i> as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.									

B.34. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101/ N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
After consideration of public comments, we are finalizing the above measure for removal from the <i>Physical Therapy/Occupational Specialty Measure Set</i> as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.								
We note that measure Q050: Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older was inadvertently included in the Removal table in the proposed rule (86 FR 39746) for this specialty set; however, it was not previously included in this specialty set. Measure Q050 has been moved to the correct table for measures finalized for Addition to this specialty set.								
Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program								

B.35. Plastic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
After consideration of public comments, we are finalizing the above measure for removal from the <i>Preventive Medicine Specialty Measure Set</i> as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.38. Pulmonology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE THORACIC SURGERY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0268 / N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin: Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients): Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	044	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery: Percentage of isolated Coronary Artery Bypass Graft (CABG) surgeries for patients aged 18 years and older who received a beta-blocker within 24 hours prior to surgical incision.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v1 0	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre- hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

After consideration of public comments, we are finalizing the above measures for removal from the *Thoracic Surgery Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Although we are retaining measure Q317 in the MIPS program, based on previous stakeholder feedback in prior rulemaking we are removing the measure from this specialty set. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.43. Urgent Care

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Urgent Care specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE UROLOGY SET

Indicator	NQF # / eCQM NQF #	Quali ty #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Appropriate Use)	N/A/ N/A	481	CMS646 v2	eCQM Specifications	Process	Effective Clinical Care	Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer: Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of initial diagnosis	Oregon Urology	We proposed to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. Given the high rates that patients are assessed, treated, and managed for this condition within this specialty, we recommended the inclusion of this measure within the Urology specialty set. See Table A.1 for rationale.

We received no public comments on the measures proposed for addition to this specialty set; therefore, we are finalizing the above measure for addition to the *Urology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

B.44. Urology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE UROLOGY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A/ N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients): Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	429	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Pelvic Organ Prolapse: Preoperative Screening for Uterine Malignancy: Percentage of patients who are screened for uterine malignancy prior to vaginal closure or obliterative surgery for pelvic organ prolapse.	American Urogynecologic Society	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	434	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Proportion of Patients Sustaining a Ureter Injury at the Time of Pelvic Organ Prolapse Repair: Percentage of patients undergoing pelvic organ prolapse repairs who sustain an injury to the ureter recognized either during or within 30 days after surgery.	American Urogynecologic Society	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

After consideration of public comments, we are finalizing the above measures for removal from the *Urology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.45. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

(Outcome)	N/A / N/A	420	N/A	MIPS CQMs Specifications	Patient- Reported Outcome- Based Performan ce Measure	Effective Clinical Care	Varicose Vein Treatment with Saphenous Ablation: Outcome Survey: Percentage of patients treated for varicose veins (CEAP C2-S) who are treated with saphenous ablation (with or without adjunctive tributary treatment) that report an improvement on a disease specific patient reported outcome survey instrument after treatment.	Society of Interventional Radiology
! (Outcome)	N/A / N/A	441	N/A	MIPS CQMs Specifications	Intermedi ate Outcome	Effective Clinical Care	Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control): The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: <ul style="list-style-type: none"> • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated. 	Wisconsin Collaborative for Healthcare Quality

B.45. Vascular Surgery**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE VASCULAR SURGERY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0268/ N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin: Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients): Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

After consideration of public comments, we are finalizing the above measures for removal from the *Vascular Surgery Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

TABLE Group C: Previously Finalized Quality Measures Finalized and Not Finalized for Removal in the CY 2022 Performance Period/2024 MIPS Payment Year and Future Years

In this final rule, we are removing 13 previously finalized quality measures from the MIPS Program for the CY 2022 performance period/2024 MIPS payment year and future years. These measures are discussed in detail below. Our measure removal criteria was discussed in the CY 2019 PFS final rule (83 FR 59763 through 59765).

Further considerations are given in the evaluation of the measure's performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion that we use for the removal of measures also includes extremely topped out measures, which means measures that are topped out with an average (mean) performance rate between 98-100 percent. Beginning with the 2020 performance period/2022 MIPS payment year, we also refer readers to the CY 2020 PFS final rule (84 FR 62957 through 62959) for additional quality measure removal criteria.

NOTE: Since publication of the measures in Table C in the CY 2022 PFS proposed rule, we have determined the following measures will be retained in the CY 2022 performance period/2024 MIPS payment year: Q014 (MIPS CQMs Specifications collection type only), Q019, Q050 (MIPS CQMs Specifications collection type only), Q137, Q144, and Q317. Our decisions not to finalize these measures for removal in this final rule are detailed in our responses to the public comments for these measures in Table Group C.

As noted in the introduction to Table Group B, measures that were not finalized for removal under Table Group C are added back to the Previously Finalized tables, where applicable, under the appropriate specialty set in Table Group B.

TABLE Group C: Previously Finalized Quality Measures Finalized and Not Finalized for Removal in the CY 2022 Performance Period/2024 MIPS Payment Year and Future Years

C.1. Age-Related Macular Degeneration (AMD): Dilated Macular Examination

Category	Description
NQF # / eCQM NQF #:	0087 / NA
Quality #:	014
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12 months performance period.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle. Given this measure continued topped out status (82 FR 53640), we believe it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: Many commenters opposed the removal of measure Q014: Age-Related Macular Degeneration (AMD): Dilated Macular Examination. Retinal imaging provides useful information and facilitates careful evaluation of these patients for initial diagnosis, monitoring of progression and managing treatment plans. However, adequate diagnostic evaluation of condition requires detailed examination of the retina, which can only be accomplished with a face-to-face visit, supplemented by additional examinations as needed when new symptoms or unexplained visual changes occur. This measure is essential to patient safety. In addition, this measure is important because blindness due to diabetes and AMD are significant public health concerns and this measure (in addition to measure Q019) calls attention to the importance of HbA1c control for vision and regular eye exams for those with non-neovascular (dry) AMD before they progress to neovascular (wet) AMD.</p> <p>Additionally, commenters mentioned that most ophthalmic practices only have six measures to report and removing the measure would make it impossible for practices to succeed at MIPS. Removal of this measure would adversely impact performance scores. There was concern on the impact of removing this measure on small rural practices. Removing this measure would also make it difficult for retinal specialists to find relevant measures to report.</p> <p>Response: We agree that this is an important concept and recognize that specialization within ophthalmology may make it difficult to identify meaningful measures to submit. However, we strive to ensure that all measures align with the Meaningful Measures Initiative, including the removal of measures that are at the end of the topped out lifecycle. Additionally, by removing measures at the end of the topped out lifecycle, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2021 Benchmark File. In addition, there are processes in place to address instances where clinicians do not have the ability to submit six quality measures. We will maintain the MIPS CQMs Specifications collection type as the 2021 Benchmark File that shows a potential gap in care with a performance rate of 89.42 percent. The Medicare Part B Claims Measure Specifications collection type will be removed for this measure as it shows a performance rate of 96.14 percent and does not align with the Meaningful Measures Initiative of moving towards all digital quality measures (dQMs).</p> <p>After consideration of public comments, we are finalizing the removal of measure Q014 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years for the Medicare Part B Claims Measure Specifications type and are retaining the MIPS CQMs Specifications collection type.</p>	

C.2. Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	019
CMS eCQM ID:	CMS142v10
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative. This is a process measure that is a standard of care requiring only the that results were communicated, which by itself may not have a meaningful direct impact on patient care as no follow-up or confirmation of care coordination is required. Additionally, the MIPS CQMs Specifications collection type is in the third year of the topped out lifecycle (82 FR 53640).
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: Many commenters opposed the removal of measure Q019: Diabetic Retinopathy: Communication With the Physician Managing Ongoing Diabetes Care. An ophthalmologist is needed to inform a primary care clinician or endocrinologist about a particular patient's retinopathy severity, possible diabetic macular edema, or other ocular co-morbidities. Retinopathy serves as a strong predictor of other serious medical conditions such as heart attack, stroke, kidney failure, amputation, and others. Without regular reporting from the ophthalmologist on this issue, the primary care clinician lacks valuable information key to the overall management of the patient. This measure is essential to patient safety and completes the feedback essential for treating a deadly, common disease. Before this measure, patients were not being referred for retinal exams until the blinding stages of disease. Commenters also stated that most ophthalmic practices only have six measures to report and removing the measure would make it impossible for practices to succeed at MIPS.</p> <p>There was also concern on the impact of removing this measure on small rural practices. It is also important to continue offering eCQM options for reporting since many providers do not want to pay for other reporting services. Also, removing this measure would make it difficult for retinal specialists to find measures to report.</p> <p>Response: We agree that this is an important concept and recognize that specialization within ophthalmology may make it difficult to identify meaningful measures to submit. While we agree that care coordination is extremely important, this measure only ensures that the specialist has documentation that they communicated exam findings to the physician managing ongoing care but does not require any confirmation from the ongoing care physician to ensure care coordination and closure of the feedback loop. However, we will maintain this measure for the CY 2022 performance period for consistency and stability as it has not reached the end of the topped-out lifecycle and still in alignment with guidelines but may consider removal in the future.</p> <p>After consideration of public comments, we are not finalizing the removal of measure Q019 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

C.3. Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin

Category	Description
NQF # / eCQM NQF #:	0268 / N/A
Quality #:	021
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.
Measure Steward:	American Society of Plastic Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure steward will not be further reviewing or updating the measure specifications. In addition, this measure has reached the end of the topped out lifecycle (82 FR 53640). Given this measure continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and the measure has become standard of care. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: One commenter opposed the removal of measure Q021: Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin from the MIPS program and therefore from the General Surgery set. Measuring stand-alone metrics have not been effective in achieving the goal of informing quality improvement cycles and driving real improvements in care. Therefore, the commenter supported a transition toward measures that do move toward that goal. Removal of this measure will make it more difficult for some groups—including surgical specialties—to succeed in the program. CMS should retain this measure until the agency has a clear plan for how they will replace them to give surgeons who are still required to report via traditional MIPS enough reporting options to avoid a MIPS-related penalty.</p> <p>Response: We agree that this is an important topic and would encourage the commenter to reach out to measure developers to collaborate/work towards a more comprehensive measure with robust evaluation methods for future consideration for implementation into MIPS. The measure steward believed the measure was no longer up to date and is currently topped out. Given the measure steward is no longer supporting the measure, we are unable to continue implementation within MIPS.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q021 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

C.4. Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	023
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.
Measure Steward:	American Society of Plastic Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure steward will not be further reviewing or updating the measure specifications. In addition, this measure has reached the end of the topped out lifecycle (82 FR 53640). Given this measure continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and the measure has become standard of care. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: One commenter opposed the removal of measure Q023: Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients) from the MIPS program and therefore from the General Surgery set. Removal of this measure will make it more difficult for some groups—including surgical specialties—to succeed in the program. CMS should retain this measure until the agency has a clear plan for how they will replace them to give surgeons who are still required to report via traditional MIPS enough reporting options to avoid a MIPS-related penalty.</p> <p>Response: We agree that this is an important topic and would encourage the commenter to reach out to measure developers to collaborate/work towards a more comprehensive measure with robust evaluation methods for future consideration for implementation into MIPS. The measure steward believed the measure was no longer up to date and is currently topped out. Given the measure steward is no longer supporting the measure, we are unable to continue implementation within MIPS.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q023 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

C.5. Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	044
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of isolated Coronary Artery Bypass Graft (CABG) surgeries for patients aged 18 years and older who received a beta-blocker within 24 hours prior to surgical incision.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle (82 FR 53640) and has a high performance rate of 96.08 percent for the MIPS CQMs Specifications collection type. Given this measure continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and should be a standard of care. The average performance rate and topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
We received no public comments on this measure; therefore, we are finalizing the removal of measure Q044 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

C.6. Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	050
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it splits a clinical process into individual quality measures. In order to align with the Meaningful Measures Initiative, we plan to maintain measure Q048: Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older. We recognize measure Q048 does not quantify the completion of plan of care but includes the assessment for the presence or absence of urinary incontinence within a broader patient population. Measure Q050 is limited to patients that were screened positive for urinary incontinence which results in an incomplete patient population being evaluated; whether screened for urinary incontinence or being voluntarily verbalized by the patient. We believe as a stand-alone measure it is not a true reflection of the quality of care being given, but only reflects care to a subpopulation of patients with documented urinary incontinence. To truly ensure quality of care for these patients, we believe that clinicians should engage patients and perform this assessment for all denominator eligible patients at risk for the presence or absence of urinary incontinence. Additionally, the Medicare Part B Claims Specifications collection type is at the end of the topped out lifecycle (82 FR 53640).
In the Circumstance the Measure is Retained	We would update the denominator eligible encounters to add coding for Physical Therapy MIPS eligible clinician type and add the measure to the Physical Therapy/Occupational Therapy specialty measure set.
<p>Comment: One commenter understood CMS' reasoning for removing measure Q050 but requested measure Q048 be added to the Physical Therapy/Occupational Therapy list in its place. Therapists treat patients with urinary incontinence and it would make sense to replace the topped out measure with the measure that allows therapists to most successfully report outcomes in that patient population.</p> <p>Response: As currently specified the denominator eligible criteria within the measure does not include physical therapy/occupational therapy specific coding. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. In the instance the coding is included, we agree to consider adding this measure to the Physical Therapy/Occupational Therapy specialty set.</p> <p>Comment: One commenter did not support removal of measure Q050 because a performance gap exists, treatments exist to create meaningful improvements in clinical outcomes/quality of life, and the benefits of reducing the patient disease burden outweigh the clinician measurement burden. A second commenter opposed removal of measure Q050 from MIPS and the Geriatrics set. Removing this measure may result in mere screening of urinary incontinence without development of an appropriate plan of care. An appropriate plan of care ensures proper follow-up assessment, referrals, and treatment depending on what matters most to the patient and the impact that urinary incontinence has on the patient's overall health status. The commenter believed that the measure does not split a single clinical process because detecting an issue (as measured by measure Q048) is different from treating the issue (as measured by measure Q050). There are different actions required by the two measures and denominators. The commenter recommended the development of a more rigorous quality measure rather than removing Q050, and instead revising measure Q048 to explicitly measure the establishment of an appropriate plan of care for patients identified through screening as having urinary incontinence so that it is an assessment as well as a plan of care measure. A similar comment stated that this measure may be better suited as a multi-strata measure with measure Q048.</p> <p>Response: As currently specified, measure Q048 ensures patients were assessed for the presence or absence of urinary incontinence and would not capture outcomes for this patient population. We acknowledged the clinicians screening for incontinence may not be the subsequent treating clinician, however, keeping these measures separate does not allow for full accounting of quality care. We encourage the commenters to reach out to the measure steward to collaborate on development of a measure that not only captures a complete picture of patient care, but also allows clinicians to report outcomes in this patient population. We strive to ensure that all measures align with the Meaningful Measures Initiative, including the removal of measures that are at the end of the topped out lifecycle. Additionally, by removing measures at the end of the topped out lifecycle, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2021 Benchmark File. After careful consideration, we will maintain MIPS CQMs Specifications collection type as the 2021 Benchmark File shows a potential gap in care with a performance rate of 71.93 percent. However, we will remove the Medicare Part B Claims Measure Specifications collection type is at the end of the topped out lifecycle and does not align with the Meaningful Measures Initiative of moving towards all digital quality measures (dQMs).</p> <p>After consideration of public comments, we are finalizing the removal of measure Q050 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years for the Medicare Part B Claims Measure Specifications type and are retaining the MIPS CQMs Specifications collection type.</p>	

C.7. Hematology: Myelodysplastic Syndrome (MDS) and Acute Leukemias: Baseline Cytogenetic Testing Performed on Bone Marrow

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	067
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of myelodysplastic syndrome (MDS) or an acute leukemia who had baseline cytogenetic testing performed on bone marrow.
Measure Steward:	American Society of Hematology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward's request as it is no longer being maintained for inclusion.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
We received no public comments on this measure; therefore, we are finalizing the removal of measure Q067 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

C.8. Hematology: Chronic Lymphocytic Leukemia (CLL): Baseline Flow Cytometry

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	070
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older, seen within a 12-month reporting period, with a diagnosis of chronic lymphocytic leukemia (CLL) made at any time during or prior to the reporting period who had baseline flow cytometry studies performed and documented in the chart.
Measure Steward:	American Society of Hematology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward's request as it is no longer being maintained for inclusion.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
We received no public comments on this measure; therefore, we are finalizing the removal of measure Q070 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

C.9. Melanoma: Continuity of Care – Recall System

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	137
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients, regardless of age, with a current diagnosis of melanoma or a history of melanoma whose information was entered, at least once within a 12 month period, into a recall system that includes: <ul style="list-style-type: none"> • A target date for the next complete physical skin exam, AND • A process to follow up with patients who either did not make an appointment within the specified timeframe or who missed a scheduled appointment.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Structure
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as the measure is not advancing quality care but offers performance by simply establishing a recall system. Despite this structure supporting patient care, it does not measure quality care that directly impacts patients. We believe this measure is not providing a meaningful impact to quality improvement.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: Commenters opposed removal of measure Q137: Continuity of Care – Recall Systems.</p> <p>Removal of this measure is a patient safety concern as regular skin exams for patients with a current or personal history of melanoma are extremely important. Commenters did not agree that this measure does not advance quality care to the patients, citing that many patients forget to make their next follow up visit and also do not call the practice when they receive their melanoma recall letter. Practices are able to catch melanoma diagnoses with these follow-up appointments. Removal of the measure is also unfair because measures related to cancer screenings for colorectal, breast, cervical cancers, etc., have been retained in the quality measure inventory.</p> <p>Commenters stated that primary care clinicians cannot monitor the course of ocular melanoma, and this can only be accomplished via ocular imaging and diagnostic examination techniques of an ophthalmologist. These are the last patients who should become lost to follow-up as a result of inadequate tracking and call-back procedures.</p> <p>Removal of measure Q137 would also be detrimental to small practices as they often rely on this measure for quality category score optimization as tracking and following up for patient safety reasons. Removing this measure would impact quality scoring for the Dermatology set. It was also cited that is not topped out.</p> <p>Response: We agree that it is important to ensure regular skin exams for patients with a current diagnosis or history of melanoma, however, this measure does not assess if the patient gets annual skin exams or if the process to follow up for those patients who miss an appointment is effective and leading to compliance. Therefore, we will maintain this measure for consistency and stability as it is not topped out, aligns with current guidelines, and has a high adoption amongst the dermatology clinician type. However, we may consider removal in the future. We encourage the commenters to reach out to the measure steward for possible collaboration in revising the measure to better capture an outcome that results from a recall system and regular skin exams. We prioritize measures that express performance reflected as outcomes rather than measures that represent quality-based processes.</p> <p>After consideration of public comments, we are not finalizing the removal of measure Q137 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

C.10. Oncology: Medical and Radiation - Plan of Care for Pain

Category	Description
NQF # / eCQM NQF #:	0383 / N/A
Quality #:	144
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it splits a clinical process into individual quality measures. In order to align with the Meaningful Measures Initiative, we plan to maintain measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. We recognize measure Q144 does not quantify the completion of a plan of care but includes the assessment of pain for patients undergoing cancer treatment. Measure Q144 is limited to those patients that were screened positive for pain; whether screened for pain or being voluntarily verbalized by the patient. We believe as a stand-alone measure it is not a true reflection of the quality of care being given, but only reflects care to a subpopulation of oncology patients with documented pain. To truly ensure quality of care for these patients, we believe that clinicians should engage all denominator eligible patients and perform this assessment to identify the presence of pain in patients undergoing cancer treatment.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: One commenter supported removal of this measure and agreed that it does not align with the Meaningful Measures Initiative. The commenter, however, stated that retaining the measure in the Radiation Oncology Model runs contrary to reducing complexity and aligning programs.</p> <p>Response: We thank the commenter for supporting removal of measure Q144 from the MIPS program.</p> <p>Comment: Commenters disagreed with the proposed removal of measure Q144: Medical and Radiation – Plan of Care for Pain. Ensuring that physicians are creating a plan of care for any pain is necessary. Patients with cancer can have multiple painful side effects and managing a patient's pain is key to their quality of life. This, and its paired measure, Q143: Oncology: Pain Intensity Quantified – Medical Oncology and Radiation Oncology, have been utilized since the Physician Quality Reporting System (PQRS) was initiated and are reliable quality measures. Both measures are capturable by electronic systems and are meaningful to the holistic care of patients.</p> <p>Commenters cited maintaining harmonization across quality reporting programs, and to maintain continuity between the paired measures. Additionally, measure Q144 is included in the proposed Oncology Care First Model and the Radiation Oncology Model and the measure has been in use for more than a decade in multiple programs and clinical settings. Removing measure Q144 from MIPS means that it will not align with other reporting programs. NQF also recently re-endorsed measure Q144.</p> <p>Commenters cited that that this measure is often paired with measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. Only those patients identified as having pain by measure Q143 are included in the denominator of measure Q144 to ensure their pain is addressed. The commenter emphasized the critical importance of addressing pain appropriately and believed this emphasis should outweigh the measure's status as a paired measure. Quantifying pain is only helpful if clinicians establish a plan of care to address it. Pain research has resulted in more effective therapies for treating pain in people with cancer, which may include pharmacologic, psychological, and other approaches. Until a new measure is introduced to address the need for the establishment of a plan of care for pain, the commenters requested that measure Q144 be retained in the MIPS program.</p> <p>Response: We acknowledge that a plan of care for pain is an important aspect of oncology care. However, we believe by splitting the clinical process into multiple quality measures, we are unable to obtain complete and meaningful performance data of pain management for patients receiving chemotherapy and/or radiation therapy. As measure Q144 only ensures that patients who have voiced having pain present receive a plan of care, it does not ensure that all patients are being screened for the presence or absence of pain. The removal of measure Q144 would not preclude development of a plan of care. Currently, the measure being proposed for the Oncology Care First Model is a pain assessment and management composite measure, which is more robust than measure Q144 in that it ensures all patients are being screened and those that screen positive for pain have a plan of care completed. The Radiation Oncology Model only addresses the documentation of a plan of care and is therefore missing the first piece, measure Q143, of assessing all applicable patients for the presence of pain. Additionally, the removal of measure Q144 would align with the Core Quality Measures Collaborative (CQMC). We encourage the commenter to reach out to the measure steward to collaborate on developing a measure that covers the entirety of the clinical topic being addressed via measure Q143 and measure Q144. After careful consideration, we will maintain this measure for consistency and stability as it has not reached the end of the topped out lifecycle and aligns with current guidelines, but may consider removal in the future.</p> <p>After consideration of public comments, we are not finalizing the removal of measure Q144 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

C.11. Falls: Risk Assessment

Category	Description
NQF # / eCQM NQF #:	0101 / N/A
Quality #:	154
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle (82 FR 53640). Given this measure continued topped out status, we believe it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: One commenter supported removal of measure Q154: Falls: Risk Assessment.</p> <p>Response: We thank the commenter for supporting removal of measure Q154 from the MIPS program.</p> <p>Comment: One commenter cited that if measure Q154 is removed, measure Q155 Falls: Plan of Care becomes impossible for physical therapists to report because measure Q155 is a two-part measure that is paired with measure Q154. If measure Q154 is removed, then physical therapists should be able to report measure Q318 Falls: Screening for Future Falls Risk.</p> <p>Response: We note that both measures Q155 and Q318 are included within the Physical Therapy/Occupational Therapy set. In regard to the comment about no longer being able to report measure Q155, the removal of measure Q154 would not impede a clinician's ability to submit measure Q155 as the denominator criteria of screening for future fall risk (CPT II code 1100F) could still be submitted on the Medicare Part B claims form if utilizing the Medicare Part B Claims Measure Specification collection type. The denominator for the MIPS CQM Specifications collection type for both measures is the same, in that each requires that the patient have been screened for future fall risk with documentation of two or more falls in the past year or any fall with injury in the past year.</p> <p>Comment: Many commenters opposed the removal of measure Q154. Patients with visual impairment, such as the elderly, are much more prone to falls than those who have normal vision and may have age-related eye conditions such as cataract, glaucoma, diabetic retinopathy and age-related macular degeneration. Screening these patients in the office to identify high-risk situations, especially compounded by visual impairment, can be an effective preventive service. In addition, database-driven analytics can provide important insights into fall risk and prevention strategies. This measure is essential to patient safety and well-being.</p> <p>Different specialties opposed removal of measure Q154. One commenter stated that removal of Q154 would impact the number of measures available to be reported by clinicians at cancer centers. Removal of Q154 would also negatively impact measures available in the Geriatrics and Physical Therapy/Occupational Therapy sets. Audiologists wanted retention of measure Q154 because the measure is reportable via Medicare Part B Claims.</p> <p>One commenter stated that although the measure is topped out, falls prevention is an excellent and critical tool to measure the quality of occupational therapy services. The commenter suggested CMS to ensure sufficient falls risk assessment measures exist in the MIPS program to ensure that falls risks are assessed and addressed by therapists in both healthy and vulnerable populations.</p> <p>Response: This measure is at the end of the topped-out lifecycle and the denominator eligible patient population is captured within measure Q155: Falls: Plan of Care. Measure Q154 requires a risk assessment be completed for those patients who have a history of falls, where measure Q155 requires a plan of care to address those risks and diminish the occurrence of future falls through balance, strength, and gait training. We believe that assessing for documentation of a risk assessment does not indicate that the patient has a plan in place to address future falls with mitigation strategies.</p> <p>We agree that falls prevention is an extremely important concept and that both physical and occupational therapists play a critical role in this area, which is why we are maintaining measure Q155, which requires that a plan of care for falls be documented with two or more falls in the past year or any fall with injury in the past year. The removal of measure Q154 does not preclude clinicians in completing these tasks, however, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2021 Benchmark File. In addition, there are processes in place to address instances where clinicians do not have the ability to submit six quality measures.</p> <p>Comment: One commenter questioned if measure Q154 would be removed from eCQM reporting as the collection type is not specifically identified.</p> <p>Response: Measure Q154 was only reportable through the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types. Measure 318: Falls: Screening for Future Fall Risk remains available through the eCQM Specifications collection type.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q154 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

C.12. Radiology: Stenosis Measurement in Carotid Imaging Reports

Category	Description
NQF # / eCQM NQF #:	0507 / N/A
Quality #:	195
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of final reports for carotid imaging studies (neck magnetic resonance angiography [MRA], neck computed tomography angiography [CTA], neck duplex ultrasound, carotid angiogram) performed that include direct or indirect reference to measurements of distal internal carotid diameter as the denominator for stenosis measurement.
Measure Steward:	American College of Radiology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle (82 FR 53640) and has a high performance rate of 95.62 percent for the Medicare Part B Claims Specifications collection type and 97.47 percent for the MIPS CQMs Specifications collection type. Given this measure continued topped out status, we believe it has a limited opportunity to improve clinical outcomes. The average performance rate and topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: Commenters opposed the removal of measure Q195: Radiology: Stenosis Measurement in Carotid Imaging Reports. Commenters cited the continued removal and lack of radiology, imaging, and neuroradiology measures and stated that radiology practices are struggling with measure selection.</p> <p>One commenter cited that this measure continues to be endorsed by NQF. During the recent NQF Neurology Committee Standing Committee endorsement period, the commenter discovered a variation in the measure denominator between those who submitted this measure and those who could have submitted it but did not. The commenter stated that given the adoption disparities with measure Q195 that CMS should remove its topped-out status and begin working with stakeholders to identify solutions for engaging those eligible radiologists to use it and reduce disparities in this area.</p> <p>Response: We acknowledge the difficulties non-patient facing clinicians encounter when submitting quality measures and continue to engage with stakeholders to develop strategies for addressing this gap. While we acknowledge the specializations found within radiology, the performance for measure Q195 has an extremely high and unvarying performance rate. This does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2021 Benchmark File. This measure also continues to receive multiple inquiries through the QPP Service Center desk, indicating the measure is difficult to implement. We encourage stakeholders to submit potential new measures that will align with the Meaningful Measures Initiative and allow MIPS eligible clinicians to maximize their potential performance within MIPS during the annual Call for Measures.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q195 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

C.13. Radiology: Reminder System for Screening Mammograms

Category	Description
NQF # / eCQM NQF #:	0509 / N/A
Quality #:	225
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients undergoing a screening mammogram whose information is entered into a reminder system with a target due date for the next mammogram.
Measure Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Structure
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it represents a structure measure rather than a measure that supports direct patient care. In addition, the performance on the MIPS CQMs Specifications collection type is extremely high and unvarying, making this measure extremely topped out for this collection type as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 98.37 percent for the MIPS CQMs Specifications collection type. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: One commenter opposed removal of measure Q225 as it is the only MIPS measure applicable to breast imagers following removal of numerous applicable measures from the MIPS program. Data in publications has shown lower return to screening by patients during the</p>	

COVID crisis, particularly in safety-net hospitals and underserved, rural, and minority populations. Removal of this measure may make it more difficult to create a potential mammography MVP in the future, as this MVP would certainly rely on existing MIPS mammography measures when establishing quality scoring. A second commenter indicated there have been no new radiology measures since 2017. Removing this measure would limit current measures to computed tomography, magnetic resonance imaging, and nuclear medicine, which does not fit their modality mix or patient population.

Response: While we acknowledge the importance of ensuring timely mammograms, the performance for measure Q225 MIPS CQM Specifications collection type has an extremely high and unvarying performance rate. This does not allow meaningful benchmarks to be established. Additionally, the measure does not require any follow-up for those patients who do not complete mammograms in accordance with their targeted due date, and therefore does not assess compliance only that a system is in place to notify patients. We encourage stakeholders to submit potential new measures that will align with the Meaningful Measures Initiative and allow MIPS eligible clinicians to maximize their potential performance within MIPS during the annual Call for Measures.

After consideration of public comments, we are finalizing the removal of measure Q225 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

C.14. Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	317
CMS eCQM ID:	CMS22v10
National Quality Strategy Domain:	Community/Population Health
Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it is low-bar and a frequently performed assessment. This is a process measure that only requires a blood pressure to be taken and if abnormal a follow-up plan of care be documented; however, the documented follow-up includes referring the patient to a primary care physician and does require confirmation of follow-up. Additionally, the measure does not strive to ensure adequate control of blood pressure as patients with an active diagnosis of hypertension are excluded from the denominator eligible patient population. While screening patients for high blood pressure is an important piece of quality care, it is the controlling of high blood pressure which reduces patient clinical risks and truly drives positive patient outcomes. This quality action is already available in measure Q236: Controlling High Blood Pressure.
In the Circumstance the Measure is Retained	We would update the description to replace 'pre-hypertensive' with 'elevated'. Additionally, the definition for all collection types would be revised to reflect 2017 ACC/AHA guidelines; including, changing blood pressure classifications, relevant thresholds, and applicable interventions. The eCQM Measure Specifications collection type would be revised to have the logic apply to exceptions based on blood pressure classification to more accurately capture a patient declining applicable intervention(s). This measure would also be removed from the Thoracic Surgery specialty measure set.
<p>Comment: Several commenters supported the removal of measure Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented.</p> <p>Response: We thank the commenters for supporting the removal of measure Q317 from the MIPS program.</p> <p>Comment: Commenters cited concerns with being able to meet reporting requirements if this measure was removed. One commenter stated that it can no longer met the six measures minimum if measure Q317 (in addition to measure Q154) is removed. For groups that have limited measures and a high weighted quality category, CMS now requires 100 percent quality to meet the minimum threshold, otherwise resulting in a negative adjustment. Clinician in small practices without EHRs have difficulty reaching the minimum measure requirement and this measure is of benefit for many specialists to reach the required six measures.</p> <p>Response: MIPS CQMs Specifications collection type may be reported without a third-party intermediary (see the '2021 MIPS Quality Quick Start Guide' at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1294/2021%20MIPS%20Quality%20Quick%20Start%20Guide.pdf). In addition, there are processes in place to address instances where clinicians do not have the ability to submit six quality measures.</p> <p>Comment: Several commenters opposed the removal of measure Q317. Cardiovascular disease remains the number one killer and disabler of Americans, and without adequate clinical screening and follow-up, hypertensive patients can go unrecognized and untreated, running counter to the high priority CMS should place on prevention. This measure is essential to patient safety. Making primary care clinicians accountable for screening, documenting, and treating hypertension has saved many lives.</p>	

One commenter stated that the measure developer for measure Q317 has made major changes to this measure since publication in the 2022 PFS proposed rule. The measure developer has added more follow up and changed the definition for high BP. They have also modified what follow up is needed based on the blood pressure, ex, F/U appt, meds, labs or EKG and looks at multiple blood pressure visits. The commenter suggested CMS not to remove EHR reportable eCQM measures when alternative eCQM measures are not available to be reported. Proposed scoring changes moving into 2022 will also create difficulty for many providers to be able to achieve a positive adjustment.

Response: We acknowledge the importance of monitoring blood pressure, and the impact cardiovascular disease has on the population, however, this measure does not ensure that high blood pressure is being treated and brought under control, which drives positive patient outcomes. Although, we do agree that clinicians that screen for hypertension would be able to detect and treat this disease sooner which supports a positive health outcome for their patients. “In 2007 the USPSTF published a reaffirmation of its 2003 A recommendation to screen for hypertension among all adults aged 18 years and older. The Task Force found good evidence that treatment of high blood pressure in adults can substantially decrease risk of cardiovascular disease” (<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5217841/>). Therefore, we will maintain this measure for consistency and stability as it is not topped out, aligns with current guidelines, and has high adoption amongst MIPS eligible clinicians, but may consider removal in the future. We would like to make measure Q317 an outcome measure in the future.

After consideration of public comments, we are not finalizing the removal of measure Q317 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

C.15. Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	337
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient’s history to determine if they have had appropriate management for a recent or prior positive test.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure is duplicative to measure Q176: Tuberculosis Screening Prior to First Course Biologic Therapy because we proposed in Table D.20 substantive changes to measure Q176 that would broaden the denominator by including an expanded list of biologic therapies that capture much of the denominator patient population for this measure.
In the Circumstance the Measure is Retained	We would update the denominator to include only those patients who are on a biologic immune response modifier prescribed within the current measurement period. There is no specialty set movement proposed for this measure.
<p>Comment: One commenter supported the removal of measure Q337: Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier.</p> <p>Response: We thank the commenter for supporting the removal of measure Q337 from the MIPS program.</p> <p>Comment: One commenter opposed removal of measure Q337 because removal would result in a Dermatology set where there will be a significant disadvantage when it comes to the quality scoring category.</p> <p>Another commenter opposed the removal to measure Q337 and stated that the proposed revisions to measure Q176 would mean that denominator population would overlap with Q337. For full comments relating to measure Q176, see Table D.20. Another commenter stated that measure Q176 is not included in the Dermatology registry nor is it in the Dermatology measure set. The commenter also stated that the proposed changes to measure Q176 do not adequately encompass the biological response modifiers used in dermatology and listed in measure Q337. The commenter requested for measure Q337 to remain in MIPS to allow time for development of additional dermatology measures.</p> <p>Response: As a result of the substantive changes being made to measure 176, this measure will now be available within the Dermatology Specialty Measure set and will take the place of measure 337, maintaining the clinical topic for the dermatology clinician type. Replacing measure Q337 with measure Q176 aligns with the Meaningful Measures Framework, as duplicative measures have no purpose in quality measurement, and we do not believe that this will disadvantage dermatologists.</p> <p>We also appreciate the commenters for their comment regarding potential patient population overlap of measure Q176 with measure Q337 and agree this would lead to duplicity in measures.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q337 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

C.16. Pain Brought Under Control Within 48 Hours

Category	Description
NQF # / eCQM NQF #:	0209 / N/A
Quality #:	342
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	MIPS CQMs Specifications
Measure Description:	Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.
Measure Steward:	National Hospice and Palliative Care Organization
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it does not align with the Meaningful Measures Initiative. This measure should be a standard of care given it represents a central pillar of quality palliative care by supporting effective pain management for patients. As currently specified, this measure only assesses if pain was brought to a comfortable level within 48 hours of the initial assessment and does not ensure treatment is aligned with patient goals, a plan of care for the duration of palliative care, and current guidelines; additionally, it may not be feasible dependent upon the medication and delivery method (i.e., procedural versus oral medication administration). It is important to incorporate shared-decision making and patient engagement while in palliative care, which may not always align with the time constraint of the measure.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
<p>Comment: One commenter supported the removal of Q342: Pain Brought Under Control Within 48 Hours.</p> <p>Response: We thank the commenter for supporting the removal of measure Q342 from the MIPS program.</p> <p>Comment: Several commenters opposed the removal of Q342, stating there has been a substantial decline in the number of quality measures related to pain management in the past several years that limits the number of measures the practice is able to report. One commenter stated that only one measure will be left specific to pain management and they will no longer be able to report a minimum of six measures in their practice. One commenter stated that Q342 is a high-priority measure that assesses an important outcome in the care of patients receiving palliative care.</p> <p>Response: We acknowledge that there are a limited number of quality measure related to pain management and encourage the commenter to reach out to measure stewards and developers to submit meaningful pain management measures to the MIPS Annual Call for Measures for potential future inclusion. We believe the goal of pain management for patients receiving palliative care is to improve quality of life for both the patient and the family and await a measure that is capable of assessing outcomes of quality care provided by these clinicians. We do not believe this measure fully represents quality care for pain management for patients receiving palliative care, as the assessment of pain under control only needs to occur once to meet performance of the measure. In addition, there are processes in place to address instances where clinicians do not have the ability to submit six quality measures. Additionally, the measure steward is no longer supporting the maintenance of this measure on an annual basis.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q342 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

C.17. Pelvic Organ Prolapse: Preoperative Screening for Uterine Malignancy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	429
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients who are screened for uterine malignancy prior to vaginal closure or obliterative surgery for pelvic organ prolapse.
Measure Steward:	American Urogynecologic Society
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it does not show meaningful measurement. The limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.
We received no public comments on this measure; therefore, we are finalizing the removal of measure Q429 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

C.18. Proportion of Patients Sustaining a Ureter Injury at the Time of Pelvic Organ Prolapse Repair

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	434
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients undergoing pelvic organ prolapse repairs who sustain an injury to the ureter recognized either during or within 30 days after surgery.
Measure Steward:	American Urogynecologic Society
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it is duplicative in denominator patient population to measure Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair with the quality action being completed concurrently. Additionally, the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. We received no public comments on this measure; therefore, we are finalizing the removal of measure Q434 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

C.19. Medication Management for People with Asthma

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	444
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Collection Type:	MIPS CQMs Specifications
Measure Description:	The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward's request as it is no longer being maintained for inclusion.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. Comment: One commenter did not support removal of measure Q444: Medication Management for People with Asthma because implementation may promote patient adherence to prescribed controller medication therapy and a 50 percent medication compliance rate is an achievable threshold. Medication adherence issues in patients with asthma and underuse of controller medication therapy is clearly a problem. Response: We agree that this is an important topic and would encourage the commenter to reach out to the measure developer to collaborate/work towards a more comprehensive measure with robust evaluation methods for future consideration for implementation into MIPS. The measure steward is no longer supporting the measure; therefore, we are unable to continue implementation within MIPS. After consideration of public comments, we are finalizing the removal of measure Q444 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

**TABLE Group D: Previously Finalized Quality Measures with Substantive Changes
Finalized for the CY 2022 Performance Period/2024 MIPS Payment Year and Future
Years**

NOTE: Electronic clinical quality measures (eQMs) that are National Quality Forum (NQF) endorsed are shown in Table D as follows: NQF # / eQMF NQF #.

The D Tables within this final rule provide the substantive changes proposed for the quality measures in CY 2022. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2022 may not be identified within the proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2022 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2023. The 2022 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the [Quality Payment Program Resource Library](https://qpp.cms.gov/resources/resource-library) at <https://qpp.cms.gov/resources/resource-library>. For eQMF Release Notes, see the eCQI Resource Center at <https://ecqi.healthit.gov/ep-ec?globalyearfilter=2021>.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but we believe are important to communicate to stakeholders. These changes align with the scope of the current coding; however, this will expand or contract the current eligible population, therefore, review the current year measure specification and the 2022 Quality Measure Release Notes or the eQMF Technical Release Notes once posted to review all coding changes. Language has also been added, to all applicable 2022 quality measure specifications, in the form of an 'Instructions Note', to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only in the instance telehealth encounters have not been previously allowed as denominator eligible, will the D table corresponding to that measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

It should be noted that in the 2021 PFS final rule (85 FR 84870), the CMS Web Interface Measures Specifications collection type would have sunset starting with the CY 2022 performance period; however, in section IV.A.3.d.(1)(d) of this final rule, we finalized to extend the availability of the CMS Web Interface measures as a collection type for the CY 2022 performance period (CY 2024 for APM Entities reporting through the APM Performance Pathway) and sunset the CMS Web Interface measures starting with the CY 2023 performance period (CY 2025 for APM Entities reporting through the APM Performance Pathway). Therefore, we proposed substantive changes to the CMS Web Interface Measure Specifications collection type as outlined in the applicable measures within the D tables. In conjunction with soliciting public comments on the proposal to extend the availability of the CMS Web Interface measures as a collection type, we solicited public comments on the substantive changes proposed for the CMS Web Interface Measure Specifications collection type given that the CMS Web Interface Measure Specifications collection type has generally remained the same for three consecutive (CY 2019, CY 2020, and CY 2021) performance periods.

D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

Category	Description
NQF # / eCQM NQF #:	0059 / N/A
Quality#:	001
CMS eCQM ID:	CMS122v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications CMS Web Interface Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
Substantive Change:	<p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</p> <ol style="list-style-type: none"> 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period. 3. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: <ul style="list-style-type: none"> - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior <p>Added:</p> <ol style="list-style-type: none"> 1. Exclude patients receiving palliative care during the measurement period. <p>Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Revised: Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator confirmation: For the CMS Web Interface Measure Specifications collection type: Revised: Determine if the patient has an active diagnosis of diabetes during the measurement period OR an active diagnosis of diabetes during the year prior.</p> <p>- If the patient has an active diagnosis of diabetes in the medical record, select "Yes"</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p>Updated guidance: For the CMS Web Interface Measure Specifications collection type: Added: Do not include HbA1c levels reported by the patient.</p> <p>Updated numerator guidance: For the CMS Web Interface Measure Specifications collection type: Removed:</p> <p>- Patient Reported Requirement: Date and most recent value (distinct value required)</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</p> <ol style="list-style-type: none"> 1. Palliative care services provided to patient any time during the measurement period
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We proposed that the denominator exclusion language be updated for all collection types, except for the CMS Web Interface Measure Specifications collection type, to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured.</p> <p>We proposed to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.</p> <p>We proposed to update the denominator exclusion language for the CMS Web Interface Measure Specifications collection type, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period. Additionally, the denominator confirmation was updated to clarify that the diagnosis should be active during the performance period or year prior. We proposed to update the guidance for the CMS Web Interface Measure Specifications collection type to ensure that patient reported HbA1c levels should not be utilized for quality action assessment for the purposes of this measure.</p>
Comment:	One commenter stated that measure Q001 includes a denominator exclusion for any patient that has received hospice services at any time during the measurement period, but it does not include denominator exclusion for patients receiving palliative care. Many Medicare beneficiaries utilize palliative care prior to or in lieu of hospice care to promote quality of life and comfort near the end of life. Beneficiaries often choose palliative care over hospice care in order to

Category	Description
	continue to receive treatment or therapy that may improve their quality of life. The commenter supported this patient-centered care and requests that CMS/QPP include a palliative care exclusion for this measure to reflect that this service is regularly utilized in populations with high mortality rates, such as a long-term care institutional population.
	One commenter agreed that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in this measure and supported CMS proposal to add palliative care exclusions or exceptions.
	Response: We agree that this patient population is not appropriate for assessment of the clinical quality action within this measure.
	Comment: One commenter noted that CMS proposed add Palliative Care to the denominator exclusions for this eCQM measure (as we as adding for measures Q112, Q113, and Q236). The commenter encouraged CMS to work with the measure stewards for all of the measures that correspond to the 10 in use by Web Interface to match the exclusions of hospice and palliative care, since these are automatically screened out of the denominator in the patient qualification review that is part of Web Interface reporting. Deceased patients are also excluded in this Web Interface approach, and the commenter encouraged CMS to standardize this exclusion for all CQMs and submission types.
	Response: We encourage the commenter to reach out to the measure stewards to discuss revisions for possible implementation in future years. Reporting for the CMS Web Interface Measure Specifications collection type excludes this patient population from the sampling process rather than specifying it within the Web Interface Measure specification. We make efforts to exclude patients that are not qualified for the sample, but because there are limitations in the claims data used to identify the sample, the CMS Web Interface Measure Specification collection type allows a patient to be skipped because they are not qualified for the sample. The patient must meet one of the following criteria to be considered not qualified for the sample and will be removed from all CMS Web Interface measure samples: (1) In hospice; (2) Moved out of the U.S.; (3) Deceased; or (4) Non-Fee-for-Service (FFS) Medicare. If any of those circumstances are true for a sampled patient, at any time during the measurement period, that patient is not qualified for the sample. This is specific to the CMS Web Interface Measure Specifications collection type.
	After consideration of public comments, we are finalizing the changes to measure Q001 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

D.2 Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nepiryls Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
NQF # / eCQM NQF #:	0081 / 0081e
Quality#:	005
CMS eCQM ID:	CMS135v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	Updated definition: For the eCQM Specifications collection type: Added: The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients. Updated value set/coding: For the eCQM Specifications collection type: Revised: "Pregnancy" (2.16.840.1.113883.3.526.3.378) value set to more accurately capture pregnancy state
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the eCQM Specifications collection type definition section to align the measure language with the logic to allow for quantitative or qualitative documentation of moderate or severe left ventricular systolic dysfunction (LVSD). Additionally, we proposed to update the eCQM Specifications "Pregnancy" value set to more accurately capture the state of pregnancy to ensure the denominator exclusion is being applied to the correct patient population.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q005 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.3 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%)

Category	Description
NQF # / eCQM NQF #:	0070 / 0070e
Quality#:	007
CMS eCQM ID:	CMS145v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF < 40% who were prescribed beta-blocker therapy.
Substantive Change:	<p>Updated definition: For the eCQM Specifications collection type: Added: LVEF < 40% corresponds to qualitative documentation of moderate dysfunction or severe dysfunction (LVSD). The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients.</p> <p>Updated denominator logic: For the eCQM Specifications collection type: Revised: Myocardial Infarction timing logic to use the start date for the myocardial infarction.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Revised: "Coronary Artery Disease No MI" (2.16.840.1.113883.3.526.3.369) to remove coding related to Dressler's Syndrome.</p> <p>Updated denominator note: For the MIPS CQM Specifications collection type: Added: Submission Criteria 1: LVEF < 40% corresponds to qualitative documentation of moderate dysfunction or severe dysfunction (LVSD). The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients.</p>
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the eCQM Specifications collection type definition section to align the measure language with the logic to allow for quantitative or qualitative documentation of moderate or severe left ventricular systolic dysfunction (LVSD). We proposed to update the denominator logic for the eCQM Specifications collection type to use the start date for the myocardial infarction. This will ensure those patients without a documented myocardial infarction end date within the medical record will be captured within the measure denominator as these patients would be appropriate for the denominator eligible patient population. Additionally, we proposed to remove 'Dressler's Syndrome' from the "Coronary Artery Disease No MI" value set for the eCQM Specifications collection type as this is not a conclusive diagnosis to indicate coronary artery disease and therefore, not appropriate for this value set.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q007 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.4 Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
NQF # / eCQM NQF #:	0083 / 0083e
Quality#:	008
CMS eCQM ID:	CMS144v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	<p>Updated definition: For the eCQM Specifications collection type: Added: The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients</p>
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the eCQM Specifications collection type definition section to align the measure language with the current measure logic to allow for quantitative or qualitative documentation of moderate or severe left ventricular systolic dysfunction (LVSD).
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q008 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.5 Anti-Depressant Medication Management

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	009
CMS eCQM ID:	CMS128v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication treatment. Two rates are reported. a. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks). b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months).
Substantive Change:	Updated denominator exclusion: Revised: Exclude patients who are in hospice care for any part of the measurement period
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise the denominator exclusion to remove the term 'overlaps' and replace with plain language for clarity and to ensure consistency in implementation.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q009 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.6 Appropriate Treatment for Upper Respiratory Infection (URI)

Category	Description
NQF # / eCQM NQF #:	0069 / N/A
Quality#:	065
CMS eCQM ID:	CMS154v10
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.
Substantive Change:	<p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</p> <ol style="list-style-type: none"> 1. Exclude URI episodes when the patient had hospice care for any part of the measurement period. 2. Exclude URI episodes when the patient had an active prescription of antibiotics in the 30 days prior to the episode date, including the episode date up until the time of the encounter. <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic so definitions point to the encounter as a basis for evaluating other clinical data.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: value sets "Observation care discharge day management", "Home Healthcare Services", "Medical Disability Exam", and "Observation".</p> <p>Updated denominator: For the MIPS CQMs Specifications collection type: Added: Home Health setting and coding for Work Related or Medical Disability Evaluation services.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Revised: URI episodes when the patient had an active prescription of antibiotics (Table 1) in the 30 days prior to the episode date.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to update the eCQM Specifications collection type denominator exclusion to remove the term 'overlapping' and replace with plain language for clarity and to ensure consistency in implementation. Additionally, we proposed to revise the denominator exclusion to align with the logic regarding the timing of the active prescription and the encounter for the purposes of this exclusion. We proposed to update the eCQM Specifications collection type logic so that the definitions point to the encounter as a basis for evaluation of other clinical data as this will align with the measure intent and ensure appropriate time intervals for implementation. Additionally, we proposed to add value sets to the eCQM Specifications collection type as these value sets are appropriate and applicable to this measure's denominator eligibility.</p> <p>We proposed to revise the MIPS CQMs Specifications collection type denominator exclusion to clarify that all patients with active antibiotic prescriptions up to the time of the encounter should be excluded from the denominator eligible patient population. Additionally, we proposed to update the denominator eligible coding to include home visits and disability evaluation services as these are appropriate and applicable clinical settings.</p> <p>In the event the proposed substantive change(s) are finalized, for the MIPS CQMs Specifications collection type, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q065 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.7 Appropriate Testing for Pharyngitis

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	066
CMS eCQM ID:	CMS146v10
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strep) test.
Substantive Change:	<p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</p> <p>1. Exclude episodes where the patient is taking antibiotics in the 30 days prior to the episode date, or had an active prescription on the episode date.</p> <p>3. Exclude episodes where the patient is in hospice care for any part of the measurement period.</p> <p>Updated denominator logic: For the eCQM Specifications collection type: Revised: definitions to point to the encounter as a basis for evaluating other clinical data</p> <p>The measure guidance is revised to read: For the eCQM Specifications collection type: This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. The intent is to determine whether antibiotics are being dispensed appropriately. Antibiotics should only be dispensed if a strep test has been performed to confirm a bacterial infection. Antibiotics should not be dispensed for viral infections.</p> <p>This eCQM is an episode-based measure. An episode is defined as each eligible encounter for patients aged 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event during the measurement period.</p> <p>This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>The measure initial patient population/denominator is revised to read: For all collection types: Outpatient, telephone, online assessment (i.e. e-visit or virtual check-in), observation, or emergency department (ED) visits with a diagnosis of pharyngitis and an antibiotic dispensing event on or within 3 days after the episode date among patients 3 years or older.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised: Prescribed or dispensed antibiotic on or within 3 days after the episode date (Table 1).</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Revised: Episodes where the patient is taking antibiotics (Table 1) in the 30 days prior to the episode date, or had an active prescription on the episode date.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to update the eCQM Specifications collection type denominator exclusions to clarify timing of exclusion criteria and to remove the term 'overlap' and replace with plain language for clarity and to ensure consistency in implementation. We proposed to update the eCQM Specifications collection type logic so that the definitions point to the encounter as a basis for evaluation of other clinical data as this will align with the measure intent and ensure appropriate time intervals for implementation. We proposed to update the eCQM Specifications collection type guidance section to clarify the intent of the measure and appropriate antibiotic dispensing. Additionally, we proposed to update the eCQM Specifications collection type initial patient population to capture those patients with an antibiotic dispensing event on or within 3 days after the episode event to align with intent of the measure.</p> <p>We proposed to update the denominator and denominator criteria of the MIPS CQMs Specifications collection type to reflect that patients with an antibiotic dispensing event on or within 3 days after the episode event should be included within the denominator eligible population as this aligns with the intent of the measure to assess appropriate antibiotic dispensing. We proposed to revise the MIPS CQMs Specifications collection type denominator exclusion to clarify that all patients with active antibiotic prescriptions up to the time of the encounter should be excluded from the denominator eligible patient population.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q066 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.8 Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use

Category	Description
NQF # / eCQM NQF #:	0654 / N/A
Quality#:	093
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.
Substantive Change:	Modified collection type: MIPS CQM Specifications collection type
Steward:	American Academy of Otolaryngology – Head and Neck Surgery
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q093 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.9 Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients

Category	Description
NQF # / eCQM NQF #:	0389 / 0389e
Quality#:	102
CMS eCQM ID:	CMS129v11
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy who did not have a bone scan performed at any time since diagnosis of prostate cancer.
Substantive Change:	<p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised: Any patient, regardless of age</p> <p>The measure instructions are revised to read: For the MIPS CQMs Specifications collection type: This measure is to be submitted once per performance period for patients with a diagnosis of prostate cancer at low (or very low) risk of recurrence who receive interstitial prostate brachytherapy, external beam radiotherapy to the prostate, radical prostatectomy during the performance period. The quality-data code or equivalent needs to be submitted only once during the performance period. It is anticipated that Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the listed procedures as specified in the denominator coding will submit this measure.</p> <p>Updated denominator note: For the MIPS CQMs Specification collection type: Added: Most recent risk assessment of recurrence completed before the first prostate cancer treatment during the performance period will be used for denominator eligibility.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the MIPS CQMs Specifications collection type to remove the gender specificity from the denominator criteria to ensure a complete patient population. Additionally, we proposed to revise the measure instructions and denominator note for the MIPS CQMs Specifications collection type to reflect the update in measure submission frequency from once per episode to once per performance period utilizing the most recent risk assessment for purposes of denominator eligibility, as this is more aligned with the measure intent as well as bringing all collection types into alignment.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q102 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.9 Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients

Category	Description
NQF # / eCQM NQF #:	0389 / 0389e
Quality#:	102
CMS eCQM ID:	CMS129v11

Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy who did not have a bone scan performed at any time since diagnosis of prostate cancer.
Substantive Change:	<p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised: Any patient, regardless of age</p> <p>The measure instructions are revised to read: For the MIPS CQMs Specifications collection type: This measure is to be submitted once per performance period for patients with a diagnosis of prostate cancer at low (or very low) risk of recurrence who receive interstitial prostate brachytherapy, external beam radiotherapy to the prostate, radical prostatectomy during the performance period. The quality-data code or equivalent needs to be submitted only once during the performance period. It is anticipated that Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the listed procedures as specified in the denominator coding will submit this measure.</p> <p>Updated denominator note: For the MIPS CQMs Specification collection type: Added: Most recent risk assessment of recurrence completed before the first prostate cancer treatment during the performance period will be used for denominator eligibility.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the MIPS CQMs Specifications collection type to remove the gender specificity from the denominator criteria to ensure a complete patient population. Additionally, we proposed to revise the measure instructions and denominator note for the MIPS CQMs Specifications collection type to reflect the update in measure submission frequency from once per episode to once per performance period utilizing the most recent risk assessment for purposes of denominator eligibility, as this is more aligned with the measure intent as well as bringing all collection types into alignment.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q102 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.10 Preventive Care and Screening: Influenza Immunization

Category	Description
NQF # / eCQM NQF #:	0041 / 0041e
Quality#:	110
CMS eCQM ID:	CMS147v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications CMS Web Interface Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Substantive Change:	<p>Updated guidance: For the eCQM Specifications collection type: Added: Patient self-report for procedures as well as immunizations should be recorded in 'Procedure, Performed' template or 'Immunization, Administered' template in QRDA-1.</p> <p>Updated value set/coding: For the eCQM Specifications and CMS Web Interface Measure Specifications collection types: Removed: "Previous Receipt of Influenza Vaccine" (2.16.840.1.113883.3.526.3.1185) value set.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the eCQM Specifications collection type in order to accurately capture those patients who had previously received the influenza immunization. The current logic definition does not capture the date of immunization receipt nor does it ensure the patient was assessed during the flu season and is not fully aligned with measure intent. Therefore, the value set "Previous Receipt of Influenza Vaccine" will be removed from the measure and the guidance section will be updated to outline the process for capturing those patients who have previously received the influenza immunization for the purposes of this measure. Additionally, the value set "Previous Receipt of Influenza Vaccine" will be removed from CMS Web Interface Measure Specifications collection type to align with the eCQM Specifications collection type, however, this will not impact the numerator of the measure. Medical record documentation of previous receipt of the influenza vaccine during the flu season will still suffice for completion of the quality action, though this value set will no longer be available for mapping purposes.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q110 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.11 Pneumococcal Vaccination Status for Older Adults

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	111
CMS eCQM ID:	CMS127v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.
Substantive Change:	<p>The measure description is revised from 'Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine' to: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.</p> <p>The measure denominator exclusion is revised to read: For the eCQM Specifications collection type: Exclude patients who are in hospice care for any part of the measurement period.</p> <p>Updated initial patient population: For the eCQM Specifications collection type: Revised: patient age changed to 66 years of age or older.</p> <p>The measure numerator is revised to read: For all collection types: Patients who received a pneumococcal vaccination on or after their 60th birthday and before the end of the measurement period; or had an adverse reaction to the vaccine before the end of the measurement period.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Revised: Removed: "Pneumococcal Vaccine" (2.16.840.1.113883.3.464.1003.110.12.1027) and "Pneumococcal Vaccine Administered" (2.16.840.1.113883.3.464.1003.110.12.1034) Added: "Pneumococcal Polysaccharide 23 Vaccine" (2.16.840.1.113883.3.464.1003.110.12.1089)</p> <p>The measure denominator is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Patients 66 years of age and older with a visit during the measurement period</p> <p>The measure denominator criteria is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Patients aged \geq 66 years on date of encounter</p> <p>The measure denominator note is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: This measure assesses whether patients 66 years of age or older have received one or more pneumococcal vaccinations.</p> <p>The measure numerator options are revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Performance Met: Pneumococcal vaccine administered on or after patient's 60th birthday and before the end of the measurement period Performance Met: Documentation of medical reason(s) for not administering pneumococcal vaccine (e.g., adverse reaction to vaccine) Performance Not Met: Pneumococcal vaccine was not administered on or after patient's 60th birthday and before the end of the measurement period, reason not otherwise specified</p> <p>The measure numerator note is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: The measure provides credit for adults 66 years of age and older who have received the PPSV23 vaccine on or after the patient's 60th birthday. Patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the measure description, initial patient population, denominator, denominator criteria, and denominator note (as applicable) for all collection types to assess patients aged 66 years and older as this allows time for clinicians to administer the pneumococcal vaccination in accordance with current Advisory Committee on Immunization Practices (ACIP) recommendations. Additionally, the numerator for all collection types is proposed to be revised to assess for the administration of the pneumococcal vaccine on or after the patients 60th birthday and before the end of the measurement period or documentation of medical reason(s) for not administering the pneumococcal vaccine.</p> <p>We proposed to update the eCQM Specifications collection type denominator exclusion to remove the term 'overlaps' and replace with plain language for clarity and to ensure consistency in implementation. Additionally, we proposed to update the value sets for the eCQM Specifications collection type to reflect the updates to the measure to align with current ACIP recommendations that all adults age 65 years and older receive one dose of the 23-valent pneumococcal polysaccharide vaccine (PPSV23). The MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection type will also be updated to only allow for the PPSV23 vaccine to suffice for numerator compliance.</p> <p>We proposed to update the numerator options for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for the receipt of the pneumococcal vaccine on or after the patient's 60th birthday or the documentation of medical reasons, such as an adverse reaction, to meet the quality action of this measure as it better aligns with current ACIP recommendations. Additionally, we proposed to update the MIPS CQMs Specifications and the Medicare Part B</p>

Category	Description
	Claims Measure Specifications collection types by revising the Numerator Note in order to align with current ACIP recommendations and clarify that patient self-reporting is allowable for this measure's required clinical quality action.
<p>Comment: One commenter stated that CMS indicated the updates to measure Q111: Pneumococcal Vaccination Status for Older Adults are intended to align with the current CDC's Advisory Committee on Immunization Practices (ACIP) recommendation that all adults aged 65 years and older receive one dose of the 23-valent pneumococcal polysaccharide vaccine (PPSV23).</p> <p>However, the Pneumococcal Workgroup of the ACIP is currently reviewing the Pneumococcal Vaccine Recommendations and is expected to vote on a revised adult Pneumococcal Vaccine Recommendation in October 2021. A CDC MMWR with the finalized recommendation should be published in the months following the vote; therefore, a new recommendation is expected in early 2022. This may render the proposed measure changes out of alignment with the new guidelines almost immediately upon implementation in CY 2022.</p> <p>Therefore, the commenter requested CMS to reconsider the proposed revisions at this time, and whether there will be unintended consequences of introducing new measure changes given it will likely not align with the forthcoming revised ACIP Pneumococcal Vaccine recommendation. Otherwise, the commenter requested CMS to consider how it will incorporate needed measure changes upon release of the revised ACIP recommendation in a timely fashion. The forthcoming ACIP Pneumococcal Vaccine Recommendation will be evaluating age-based and risk-based recommendations.</p> <p>Response: We acknowledge that ACIP recommendations with regard to the pneumococcal vaccine may be revised in the year 2022. As currently specified, the measure does not fully align with current ACIP guidelines nor would it align with potential updated ACIP guidelines and therefore, requires revision for PY2022. The proposed revisions will allow the measure to work with any revisions in recommendation by ACIP as it gives credit to clinicians in situations where the PPSV23 vaccine is not administered due to medical reason(s), as long as there is documentation by the clinician. Each year the measures are reviewed and revised in accordance with updated clinical guidelines. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q111 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.12 Breast Cancer Screening

Category	Description
NQF # / eCQM NQF #:	2372 / N/A
Quality#:	112
CMS eCQM ID:	CMS125v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications CMS Web Interface Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	<p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior</p> <p>Added: 1. Exclude patients receiving palliative care during the measurement period.</p> <p>For the CMS Web Interface Measure Specifications collection type: Revised: 1. Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: Palliative care services used by patient any time during the measurement period</p> <p>Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: Patient reported mammograms, when recorded in the medical record, are acceptable for meeting the numerator.</p> <p>For the Medicare Part B Claims Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured.</p> <p>We proposed to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component. Additionally, we proposed to add a numerator note to the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for patient self-report as this is appropriate to avoid overtreatment.</p> <p>We proposed to update the denominator exclusion language for the CMS Web Interface Measure Specifications collection type, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period.</p>
<p>Comment: One commenter agreed that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in this measures and supported CMS' proposal to add palliative care exclusions or exceptions.</p> <p>Response: We thank the commenter for supporting the substantive change to measure Q112.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q112 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.13 Colorectal Cancer Screening

Category	Description
NQF # / eCQM NQF #:	0034 / N/A
Quality#:	113
CMS eCQM ID:	CMS130v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications CMS Web Interface Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	<p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: 1. Exclude who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior Added: 1. Exclude patients receiving palliative care during the measurement period.</p> <p>For the CMS Web Interface Measure Specifications collection type: Revised: 1. Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: 1. Patient was provided palliative care services any time during the measurement period</p> <p>Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: Patient reported procedures and diagnostic studies, when recorded in the medical record, are acceptable for meeting the numerator.</p> <p>For the Medicare Part B Claims Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. D.14 Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis

Category	Description
NQF # / eCQM NQF #:	0058 / N/A
Quality#:	116
CMS eCQM ID:	N/A

Category	Description
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.
Substantive Change:	<p>Updated denominator exclusion: Revised: Acute bronchitis/bronchiolitis episodes when the patient had a new or refill prescription of antibiotics (Table 1) in the 30 days prior to the episode date.</p> <p>Updated numerator instructions: Removed: Ticarcillin clavulanate and Erythromycin sulfisoxazole from Table 1 - Antibiotic Medications</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to revise the denominator exclusion to clarify that all patients with active antibiotic prescriptions up to the time of the encounter should be excluded from the denominator eligible patient population. We proposed to update Table 1 – Antibiotic Medications to ensure the list includes current and appropriate medications for the purposes of this measure.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q116 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.15 Diabetes: Eye Exam

Category	Description
NQF # / eCQM NQF #:	0055 / N/A
Quality#:	117
CMS eCQM ID:	CMS131v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
Substantive Change:	<p>The measure description is revised to read: For all collection types: Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior</p> <p>Added: 1. Exclude patients receiving palliative care during the measurement period.</p> <p>The measure guidance is revised to read: For the eCQM Specifications collection type: Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included. The eye exam must be performed by an ophthalmologist or optometrist, or there must be evidence that fundus photography results were read by a system that provides an artificial intelligence (AI) interpretation. This eCQM is a patient-based measure.</p> <p>This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: 1. Palliative care services provided to patient any time during the measurement period</p> <p>The measure numerator is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Patients with an eye screening for diabetic retinal disease. This includes diabetics who had one of the following: • Diabetic with a diagnosis of retinopathy during the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period • Diabetic with no diagnosis of retinopathy during the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period or the year prior to the measurement period</p> <p>The measure numerator note is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: The eye exam must be performed or reviewed by an ophthalmologist or optometrist, or there must be evidence that fundus photography results were read by a system that provides an artificial intelligence (AI) interpretation. Alternatively, results may be read by a qualified reading center that operates under the direction of a medical director who is a retinal specialist</p> <p>Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the description of the measure to remove the term 'overlaps' and replace with plain language for clarity and to ensure consistency in implementation. Additionally, we proposed to update the numerator for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to remove the terms 'overlaps' and 'overlapping' and replace with plain language for clarity and to ensure consistency in implementation.</p> <p>We proposed that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured.</p>

Category	Description
	<p>Additionally, we proposed to update the guidance for the eCQM Specifications collection type and numerator note for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for the use of artificial intelligence as it is applicable and clinically appropriate for numerator compliance for this measure.</p> <p>We proposed to revise the denominator note for the MIPS CQMs Specifications collection type and the numerator note for the Medicare Part B Claims Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.</p>
<p>Comment: One commenter supported that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in these measures and supported CMS' proposal to add palliative care exclusions or exceptions. Another commenter supported the proposed change to clarify that the diagnosis must be active during the measurement period, rather than "overlapping the measurement period". This has been a long-standing source of confusion for people reporting this measure and this is a welcome clarification.</p> <p>Response: We thank the commenters for their support of measure Q117 regarding the addition of a palliative care denominator exclusion and language to clarify timing of the denominator diagnosis.</p> <p>Comment: For measure Q117: Diabetes: Eye Exam, one commenter cited the proposed revision of: "The eye exam must be performed by an ophthalmologist or optometrist, or there must be evidence that fundus photography results were read by a system that provides an artificial intelligence (AI) interpretation." The commenter recommended that a qualification be added to this revision requiring that an AI interpretation must be generated by an FDA-approved system to qualify. CMS proposed this revision to update the guidance to allow for the use of artificial intelligence as it is applicable and clinically appropriate for numerator compliance for this measure.</p> <p>CMS proposed that the measure numerator note is revised to include the statement "Alternatively, results may be read by a qualified reading center that operates under the direction of a medical director who is a retinal specialist." The commenter believed that to maintain consistency and clarity, the measure guidance should include the CMS proposed additional statement directly above regarding the inclusion of a qualified reading center operating under a retinal specialist that is in the numerator note. In addition, the commenter recommended new language requiring use of an FDA-approved system when AI is referenced.</p> <p>Response: We believe that allowing AI will increase the accessibility and therefore occurrence of yearly eye exams, leading to quality outcomes in this patient population (https://www.aao.org/eye-health/news/artificial-intelligence-trends-in-eye-care). While we agree that best practices would dictate the use of FDA-approved AI systems, that language is not currently included within the measure specification. This request has been communicated with the measure steward for future consideration. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>Comment: One commenter was concerned with the proposed revision to the measure numerator for the "Diabetes Eye Exam" quality measure that was proposed to indicate, "The eye exam must be performed by an ophthalmologist or optometrist, or there must be evidence that fundus photography results were read by a system that provides an artificial intelligence (AI) interpretation." The commenter stated that screenings with high sensitivity and specificity may help identify risk, which is a risk that only an in-person comprehensive eye examination can begin to value, mitigate, and/or address. Creating a measure where both a comprehensive eye exam, which is considered the gold standard of care, and an AI screening equally denote health care "quality" is not appropriate.</p> <p>The commenter believes that a more appropriate approach may be to require that if an AI screening is used to meet the measure, the patient must have been identified as not being at risk for diabetic retinopathy. When AI screenings for diabetic retinopathy are used, if a patient is identified as being at risk for diabetic retinopathy, that patient is directed to a Doctor of Optometry or ophthalmologist for a comprehensive eye exam. For the quality measure, an AI screening conducted which identifies that the patient does not appear to be at risk for retinopathy would be a greater indicator of quality than just allowing the measure to be met just by acknowledging that the patient was screened for retinopathy without regard to the screening results.</p> <p>The commenter suggested CMS to delay any changes to this quality measure for 2022 to evaluate commenters related to AI. Another alternative would be to develop a unique quality measure based on the use of AI to assess diabetic retinopathy.</p> <p>Response: According to the AAO, it is estimated that 61 million adults in the United States are at high risk for vision loss although only half have visited an eye doctor sometime in the last 12 months. New technology, such as artificial intelligence, may be an important step to make initial screenings more convenient and accessible, reaching people who may have otherwise gone without. While it is not expected that artificial intelligence would replace physicians, it will increase efficiency. As artificial intelligence may be able to assist in the detection of diabetic retinopathy and macular degeneration, it may help to catch those patients that are currently being missed for this extremely important examination (https://www.aao.org/eye-health/news/artificial-intelligence-trends-in-eye-care). We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q117 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.16 Diabetes: Medical Attention for Nephropathy

Category	Description
NQF # / eCQM NQF #:	0062 / N/A
Quality#:	119
CMS eCQM ID:	CMS134v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.
Substantive Change:	<p>Updated denominator exclusion: For the eCQM Specifications collection type:</p> <p>Revised:</p> <ol style="list-style-type: none"> 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: <ul style="list-style-type: none"> - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior <p>Added:</p> <ol style="list-style-type: none"> 1. Exclude patients receiving palliative care during the measurement period. <p>Updated value set/coding: For the eCQM Specifications collection type: Removed: coding related to transplant donors from “Kidney Transplant” (2.16.840.1.113883.3.464.1003.109.12.1012) value set.</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Added: To assess the age for exclusions, the patient’s age at the end of the measurement period should be used.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications collection types:</p> <p>Added:</p> <ol style="list-style-type: none"> 1. Patients who use palliative care services any time during the measurement period
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term ‘overlaps’ was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured. Additionally, we proposed to update the “Kidney Transplant” value set to remove coding related to kidney transplant donors as it would be appropriate for these patients to still receive a screening for nephropathy.</p> <p>We proposed to revise the denominator note for the MIPS CQMs Specifications collection type to clarify the timing for those exclusions that have an age-related component.</p>
<p>Comment: One commenter agreed that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in this measure and supported CMS’ proposal to add palliative care exclusions or exceptions.</p> <p>Response: We thank the commenter for supporting the substantive change to measure Q119.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q119 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.17 Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	128
CMS eCQM ID:	CMS69v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.
Substantive Change:	<p>The measure denominator exclusion is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</p> <ol style="list-style-type: none"> 1. Documentation stating the patient has received or is currently receiving palliative or hospice care 2. Documentation of patient pregnancy anytime during the measurement period prior to and including the current encounter
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the denominator exclusions to increase clarity and add specificity to ensure the appropriate patient population is being excluded from the assessment of the quality action.
<p>Comment: One commenter agreed that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in this measure and supported CMS' proposal to add palliative care exclusions or exceptions.</p> <p>Response: We thank the commenter for supporting the substantive change to measure Q128.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q128 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.18 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	134
CMS eCQM ID:	CMS2v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications CMS Web Interface Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.
Substantive Change:	<p>The measure description is revised to read: For the CMS Web Interface Measure Specifications collection type: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.</p> <p>The measure guidance is revised to read: For the eCQM Specifications collection type: The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure.</p> <p>A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the diagnosis or treatment of depression.</p> <p>This measure does not require documentation of a specific score, just whether results of the normalized and validated depression screening tool used are considered positive or negative. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression.</p> <p>This eCQM is a patient-based measure. Depression screening is required once per measurement period, not at all encounters.</p> <p>Screening Tools:</p> <ul style="list-style-type: none"> * An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. * The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record. * The depression screening must be reviewed and addressed by the provider filing the code, on the date of the encounter. <p>Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice.</p> <ul style="list-style-type: none"> * The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter. * The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. In order to satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. <p>Follow-Up Plan:</p> <p>The follow-up plan must be related to a positive depression screening, for example: "Patient referred for psychiatric evaluation due to positive depression screening."</p> <p>Examples of a follow-up plan include but are not limited to:</p> <ul style="list-style-type: none"> * Referral to a practitioner or program for further evaluation for depression, for example, referral to a psychiatrist, psychologist, social worker, mental health counselor, or other mental health service such as family or group therapy, support group, depression management program, or other service for treatment of depression * Other interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options <p>Should a patient screen positive for depression:</p> <ul style="list-style-type: none"> * A clinician should only order pharmacological intervention when appropriate and after sufficient diagnostic evaluation. <p>However, for the purposes of this measure, additional screening and assessment during the qualifying encounter will not qualify as a follow-up plan.</p> <ul style="list-style-type: none"> * A clinician should opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. <p>However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool will not qualify as a follow-up plan.</p> <p>This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>For the CMS Web Interface Measure Specifications collection type: A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression.</p> <p>This is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. This measure does not require documentation of a specific score, just whether results of the normalized and validated depression screening tool used are considered positive or negative. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression.</p> <p>The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure.</p> <p>Screening Tools:</p> <ul style="list-style-type: none"> * An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. * The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record * The depression screening must be reviewed and addressed by the provider, filing the code, on the date of the encounter. <p>Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention</p>

Category	Description
	<p>as determined by the provider practice</p> <p>* The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter</p> <p>* The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool.</p> <p>Follow-Up Plan:</p> <p>The follow-up plan must be related to a positive depression screening, for example: "Patient referred for psychiatric evaluation due to positive depression screening."</p> <p>Examples of a follow-up plan include but are not limited to:</p> <p>* Referral to a provider practitioner or program for further evaluation for depression, for example, referral to a psychiatrist, psychologist, social worker, mental health counselor, or other mental health service such as family or group therapy, support group, depression management program, or other service for treatment of depression</p> <p>* Other interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options</p> <p>Should a patient screen positive for depression, a clinician should:</p> <p>* Only order pharmacological intervention when appropriate and after sufficient diagnostic evaluation. However for the purposes of this measure, additional screening and assessment during the qualifying encounter will not qualify as a follow-up plan.</p> <p>* Opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool will not qualify as a follow-up plan.</p> <p>Updated guidance denominator: For the CMS Web Interface Measure Specifications collection type: Revised: The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure.</p> <p>Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Revised: Patients who have been diagnosed with depression or with bipolar disorder.</p> <p>The measure numerator instructions are revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</p> <p>Numerator Instructions:</p> <p>A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression.</p> <p>This is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record. This measure does not require documentation of a specific score, just whether results of the normalized and validated depression screening tool used are considered positive or negative. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression. The depression screening must be reviewed and addressed by the provider on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice. The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter.</p> <p>The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. In order to satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool.</p> <p>Should a patient screen positive for depression, a clinician should:</p> <ul style="list-style-type: none"> • Only order pharmacological intervention when appropriate and after sufficient diagnostic evaluation. However, for the purposes of this measure, additional screening and assessment during the qualifying encounter will not qualify as a follow-up plan. • Opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool, will not qualify as a follow-up plan <p>Updated definitions (numerator): For the CMS Web Interface Measure Specifications collection type: Revised:</p> <p>Follow-Up Plan: Documented follow-up for a positive depression screening must include one or more of the following:</p> <ul style="list-style-type: none"> • Referral to a provider for additional evaluation and assessment to formulate a follow-up plan for a positive depression screen • Pharmacological interventions • Other interventions or follow-up for the diagnosis or treatment of depression <p>Updated numerator submission guidance: For the CMS Web Interface Measure Specifications collection type: Removed:</p> <p>If recommended follow-up is additional evaluation or assessment, the additional evaluation or assessment must occur at the eligible encounter.</p> <p>Revised:</p> <p>Submission Guidance: Numerator Submission, Guidance Note: Use most recent screening for depression which occurred either during the encounter or up to 14 days prior to the encounter</p>

Category	Description
	<p>Although the patient may have access to the depression screening tool in advance of the encounter, the depression screening results must be documented on the date of the encounter. The results must be reviewed/verified and documented by the eligible professional in the medical record on the date of the encounter to meet the screening portion of this measure.</p> <p>Updated numerator option: For the CMS Web Interface Measure Specifications collection type: Revised: Medical Reason(s) Documentation of medical reason for not screening patient for depression (e.g., cognitive, functional, or motivational limitations that may impact accuracy of results; patient is in an urgent or emergent situation where time is of the essence and to delay treatment would jeopardize the patient's health status)</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the eCQM Specifications and CMS Web Interface Measure Specifications collection types guidance section to remove the requirement for an in-office review of the assessment as it is appropriate to allow this to be completed via telehealth encounter, clarify requirements as only documentation of a negative or positive depression screening is needed to align with the intent of the measure, and revise the numerator compliant follow-up plans based on stakeholder feedback to ensure clinical appropriateness.</p> <p>We proposed to update the CMS Web Interface Measure Specification collection type description, guidance sections, definitions, and numerator sections to provide clarity as to what constitutes a follow-up plan. Additionally, language throughout the measure specification was updated allowing for alignment with clinical workflow. The measure assesses the most recent depression screening completed either during the encounter or up to 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening to count towards a follow-up, since that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. Additionally, suicide risk assessments have been removed as a numerator compliant follow-up plan option as this should be completed when appropriate and based on the assessment by the clinician regarding the severity of the patient's symptoms of depression at the time of depression screening. We also proposed to update the measure language and denominator exclusions to reflect that this measure is screening of depression for patients who have not been previously diagnosed or have an active diagnosis of depression or bipolar disorder. This preventive measure assesses screening and follow up plan for patients that are screened positive for depression. The denominator exception was revised in order to streamline the language.</p> <p>We proposed to update the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types numerator instructions to clarify requirements as only documentation of a negative or positive depression screening is needed to align with the intent of the measure and revise instructions for the numerator compliant follow-up plans based on stakeholder feedback to ensure clinical appropriateness.</p>
<p>Comment: One commenter stated that measure Q134 includes a denominator exclusion for any patient that has received hospice services at any time during the measurement period, but it does not include denominator exclusion for patients receiving palliative care. Many Medicare beneficiaries utilize palliative care prior to or in lieu of hospice care to promote quality of life and comfort near the end of life. Beneficiaries often choose palliative care over hospice care in order to continue to receive treatment or therapy that may improve their quality of life. The commenter supported this patient-centered care and requested that CMS include a palliative care exclusion for this measure to reflect that this service is regularly utilized in populations with high mortality rates, such as a long-term care institutional population.</p> <p>Response: We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q134 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.19 Oncology: Medical and Radiation – Pain Intensity Quantified

Category	Description
NQF # / eCQM NQF #:	0384 / 0384e
Quality#:	143
CMS eCQM ID:	CMS157v10
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
Substantive Change:	<p>The measure guidance is revised to read: For the eCQM Specifications collection type: This eCQM is an episode-based measure. An episode is defined as each eligible encounter for patients with a diagnosis of cancer who are also currently receiving chemotherapy or radiation therapy during the measurement period.</p> <p>For patients receiving radiation therapy, pain intensity should be quantified at each radiation treatment management encounter where the patient and physician have a face-to-face or telehealth interaction. Due to the nature of some applicable coding related to radiation therapy (e.g., delivered in multiple fractions), the billing date for certain codes may or may not be the same as the face-to-face or telehealth encounter date. In this instance, for the reporting purposes of this measure, the billing date should be used to pull the appropriate patients into the initial population. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face or telehealth encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face or telehealth encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face or telehealth encounter occurring on the actual billing date or within the 6 days prior to the billing date.</p> <p>For patients receiving chemotherapy, pain intensity should be quantified at each face-to-face or telehealth encounter with the physician while the patient is currently receiving chemotherapy. For purposes of identifying eligible encounters, patients "currently receiving chemotherapy" refers to patients administered chemotherapy on the same day as the encounter or during the 30 days before the date of the encounter AND during the 30 days after the date of the encounter.</p> <p>Pain intensity should be quantified using a standard instrument, such as a 0-10 numerical rating scale, visual analog scale, a categorical scale, or pictorial scale. Examples include the Faces Pain Rating Scale and the Brief Pain Inventory (BPI). This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Removed: Topical chemotherapy from value set "Chemotherapy Administration" (2.16.840.1.113883.3.526.3.1027) and coding for neurofibromatosis from value set "Cancer" (2.16.840.1.113883.3.526.3.1010).</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Removed: Submission criteria one coding related to neurofibromatosis.</p> <p>Revised: Patient procedure on or within 30 days before denominator eligible encounter AND Patient procedure on or within 30 days after denominator eligible encounter</p> <p>Updated instructions: For the MIPS CQMs Specifications collection type: Revised: NOTE: For patients receiving radiation therapy, pain intensity should be quantified at each radiation treatment management encounter, where the patient and physician have a face-to-face or telehealth interaction. Due to the nature of some applicable coding related to the radiation therapy (e.g., delivered in multiple fractions), the billing date for certain codes may or may not be the same as the face-to-face or telehealth encounter date. In this instance, for the reporting purposes of this measure, the billing date should be used to pull the appropriate patients into the initial population. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face or telehealth encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face or telehealth encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face or telehealth encounter occurring on the actual billing date or within the 6 days prior to the billing date.</p> <p>For patients receiving chemotherapy, pain intensity should be quantified at each face-to-face or telehealth encounter with the physician while the patient is currently receiving chemotherapy. For purposes of identifying eligible encounters, patients "currently receiving chemotherapy" refers to patients administered chemotherapy on the same day as the encounter or during the 30 days before the date of the encounter AND during the 30 days after the date of the encounter</p>
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to revise the eCQM Specifications guidance section to align the statement regarding timing of chemotherapy to ensure alignment with the logic timing constraints and added language for telehealth encounters as they are appropriate for inclusion for assessment of quality action completion. Additionally, we proposed to remove topical chemotherapy from the "Chemotherapy Administration" value set and neurofibromatosis from the "Cancer" (2.16.840.1.113883.3.526.3.1010) value set as these patient populations are not appropriate for inclusion within the initial patient population for the purposes of clinical quality action assessment.</p> <p>We proposed to remove coding related to neurofibromatosis from the MIPS CQMs Specifications collection type denominator criteria for Submission Criteria One as this patient population is not appropriate for inclusion with the denominator eligible patient population for the purposes of clinical quality action assessment. Additionally, the denominator criteria was revised to clarify the timing of the chemotherapy and align with the intent of the measure. We proposed to update the MIPS CQMs Specifications collection type instructions note to add clarity in timing of chemotherapy and ensure alignment throughout the measure specification in accordance with measure intent.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q143 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.20 Tuberculosis Screening Prior to First Course Biologic Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	176
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.
Substantive Change:	<p>Updated denominator instructions:</p> <p>Revised: Patients are considered to be receiving a first course of therapy using a biologic DMARD only if they have been prescribed DMARD biologic therapy during the measurement period and also have not been prescribed DMARD biologic therapy in the 15 months preceding the encounter where DMARD biologic therapy was newly started. Biologic DMARD therapy includes</p> <p>Added: Guselkumab (Tremfya), Infliximab-axxq (Avsola), Ixekizumab (Taltz), Upadacitinib (RINVOQ)</p> <p>Added: To be included in the denominator, patient must have an encounter and a prescription for DMARD biologic therapy in the measurement period (1/1/2022-12/31/2022) WITHOUT a prior prescription for DMARD biologic therapy within the 15 months prior to the DMARD prescribed during the measurement period.</p> <p>Updated denominator criteria: Added: coding for federally qualified health center (FQHC) visit.</p>
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the denominator instructions to include a 15-month lookback period in response to stakeholder feedback to align with clinical workflow for more established patients and to add clarity regarding the denominator eligible patient population. Additionally, the medications list was updated to align with current DMARD medications available to treat rheumatic disease.</p> <p>We proposed to add coding to the denominator eligibility criteria for visits that occur at a FQHC to allow of quality action assessment for these clinicians. This revision is not a reflection of any policy update and was made to allow those clinicians who bill exclusively through a FQHC to track their performance on the measure. This payment method is still not eligible for payment adjustments under MIPS.</p>
<p>Comment: As indicated in comments on the removal of measure Q337 (Table C.15), one commenter stated that the proposed revisions to measure Q176 would mean that denominator population would overlap with measure Q337. Instead of the measure being specific to rheumatoid arthritis (measure Q176) or psoriasis patients (measure Q337), it looks to assess all patients prescribed a first course biologic DMARD therapy. The revision to measure Q176 does not sufficiently cover the patients that dermatologists treat or the medications that are used, as are currently reported under Q337. If measures Q176 and Q337 are to be combined, to avoid confusion and to be as inclusive as possible, the commenter prefers that a new number and title be assigned.</p> <p>The commenter suggested CMS again to make the following edits to measure Q176:</p> <ul style="list-style-type: none"> • The new measure should be added to the Dermatology Specialty Set. • The description must explicitly include psoriasis and psoriatic arthritis. • The language in the denominator should be modified so that its more inclusive and does not specify “anti-rheumatic therapy.” DMARDs is not a term used by most dermatologists. This should be listed as “biologic immune response modifier”. • The list of medications should be expanded to include biologics dermatologists use and that are included in measure Q337. • The new measure must be applicable to all patients regardless of age. • Additional biologics to be added to the list of covered therapies. <p>Response: While we acknowledge that these revisions may not perfectly align with what is specific to dermatology, it is important to ensure duplicative measures are removed from the MIPS program in accordance with the Meaningful Measures Initiative as this ensures clinicians are not utilizing one quality action to achieve numerator compliance for multiple measures. The denominator eligible patient population is not limited to a diagnosis(es) in order to allow a broad range of clinician types to submit it as different specialties utilize biologic therapies for the treatment of their patients. Regardless of the diagnosis, clinical recommendations support tuberculosis screening prior to the initiation of a biologic therapy for patient safety, and therefore should not be limited to patients suffering from psoriasis and psoriatic arthritis. The denominator criteria would apply to any patients aged 18 years and older receiving one of the listed biologic therapies for the first time (or have not been prescribed in the 15 months preceding the encounter where a biologic was newly started). This request has been communicated with the measure steward for future consideration. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q176 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.20 Tuberculosis Screening Prior to First Course Biologic Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A

D.21 Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity

Category	Description
NQF # / eCQM NQF #:	2523 / N/A
Quality#:	177
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment of disease activity using an ACR-preferred RA disease activity assessment tool at $\geq 50\%$ of encounters for RA for each patient during the measurement year.
Substantive Change:	Updated denominator criteria: Added: coding for federally qualified health center (FQHC) visit.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to add coding to the denominator eligibility criteria for visits that occur at a FQHC to allow of quality action assessment for these clinicians.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q177 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.22 Rheumatoid Arthritis (RA): Functional Status Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	178
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months.
Substantive Change:	Updated denominator criteria: Added: coding for federally qualified health center (FQHC) visit.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to add coding to the denominator eligibility criteria for visits that occur at a FQHC to allow of quality action assessment for these clinicians.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q178 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.23 Rheumatoid Arthritis (RA): Glucocorticoid Management

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	180
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone > 5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months.
Substantive Change:	Updated denominator criteria: Added: coding for federally qualified health center (FQHC) visit.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to add coding to the denominator eligibility criteria for visits that occur at a FQHC to allow of quality action assessment for these clinicians.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q180 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.24 Functional Outcome Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	182
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.
Substantive Change:	<p>Modified collection type: MIPS CQM Specifications collection type.</p> <p>Updated numerator definition: Added: EAT-10: A Swallowing Screening Tool, Health Partners Hearing Assessment and Tinnetti Performance Oriented Mobility Assessment (POMA) as eligible standardized tools.</p> <p>Revised: Standardized Tool definition note to include speech and language capacity. Functional Outcome Deficiencies – Impairment or loss of function related to musculoskeletal/neuromusculoskeletal capacity, including but are not limited to: restricted flexion, extension and rotation, back pain, neck pain, pain in the joints of the arms or legs, and headaches OR Impairment or loss of function related to speech and language capacity, including but not limited to: swallowing, hearing, and balance disorders</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.</p> <p>We proposed to update the numerator definition to include concepts of swallowing, hearing, and balance to the measure as it is appropriate to assess this patient population for impairment or loss of function and create a follow-up plan of care based upon any identified loss of function or impairment.</p> <p>In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.</p>
<p>Comment: One commenter supported the addition of swallowing to measure Q182: Functional Outcome Assessment. Occupational therapists often treat patients with swallowing and feeding dysfunction. The commenter did not support removing the Medicare Part B Claims Specification collection type as many small therapy practices are still reporting via claims and there is currently a limited number of high priority measures available in this specialty set. Another commenter supported the proposed update to the measure numerator for measure Q182: Functional Outcomes Assessment but suggested the following revisions for clarity:</p> <ul style="list-style-type: none"> • Added: Health Partners Hearing Assessment and Tinnetti Performance Oriented Mobility Assessment (POMA) as an eligible standardized tool. • Revised: Standardized Tool definition note to include speech and language capacity. Functional Outcome Deficiencies – Impairment or loss of function related to speech and language capacity, including but not limited to swallowing, OR impairment or loss of function related to hearing and/or balance disorders—hearing, and balance disorders. (Note, request to add the Bold text and remove the strikethrough text). <p>The commenter also encouraged CMS to maintain the Medicare Part B Claims Specifications collection type.</p> <p>The commenter also believes that measure Q182 should remain limited to a subset of audiology codes for vestibular function, including:</p> <ul style="list-style-type: none"> • CPT 92540 (Basic vestibular evaluation, includes spontaneous nystagmus test with eccentric gaze fixation nystagmus, with recording, positional nystagmus test, minimum of 4 positions, with recording, optokinetic nystagmus test, bidirectional foveal and peripheral stimulation, with recording, and oscillating tracking test, with recording); • CPT 92542 (Positional nystagmus test, minimum of 4 positions, with recording); • CPT 92546 (Sinusoidal vertical axis rotational testing - rotary chair); • CPT 92548 (Computerized dynamic posturography sensory organization test (CDP-SOT), 6 conditions (i.e., eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway) including interpretation and report). <p>These CPT codes represent audiology procedures that are most consistent with the functional capacity of patients referenced in measure Q182.</p> <p>Response: We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>The Medicare Part B Claims Measure Specifications collection type has reached the end of the topped-out life cycle, which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2021 Benchmark File.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q182 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.25 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

Category	Description
NQF # / eCQM NQF #:	0565 / 0565e
Quality#:	191
CMS eCQM ID:	CMS133v10

Category	Description
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
Substantive Change:	<p>Updated denominator exclusion: For the eCQM Specifications collection type: Added: coding for homonymous bilateral field defects and generalized contraction of visual field to the “Visual Field Defects” (2.16.840.1.113883.3.526.3.1446) value set and coding for disorders of visual cortex in (due to) inflammatory disorders to the “Disorders of Visual Cortex” (2.16.840.1.113883.3.526.3.1458) value set.</p> <p>Updated denominator exclusion: For all collection types: Removed: episcleritis.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Added: diagnoses codes to the Significant Ocular Conditions 'Visual Fields Defects' for sector or arcuate defects, other localized visual field defect, homonymous and heteronymous bilateral field defects, and generalized contraction of visual field.</p>
Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We proposed to update the eCQM Specifications collection type denominator exclusion coding to add appropriate coding for other relevant “disorders of visual field defects” and “disorders of visual cortex” diagnosis codes as these patients should not be included in the initial patient population for the assessment of the clinical quality action. The denominator exclusion coding was updated for all collection types removing diagnosis of episcleritis as a denominator exclusion as the measure steward’s Technical Expert Panel (TEP) advised that this would not affect central visual acuity and as such, should not be a criteria for denominator exclusion as it would be appropriate for these patients to be assessed for best-corrected visual acuity following cataract surgery.</p> <p>We proposed to update the denominator exclusion for the MIPS CQMs Specifications collection type to include appropriate coding for conditions to ensure the appropriate patient population is being included in the eligible denominator patient population for assessment of the clinical quality action.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q191 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.26 Functional Status Change for Patients with Knee Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	217
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	The measure description is revised to read: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to update the measure description to align language across Focus on Therapeutic Outcomes, Inc. (FOTO) measures in order to provide clarity to clinicians.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q217 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.27 Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	219
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle and lower leg impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	The measure description is revised to read: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle or lower leg impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). 	<p>measure, the denominator eligible encounter should be used to determine if the numerator action for the tobacco cessation intervention was performed within the 12 month look back period from the date of the denominator eligible encounter. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who provided the measure-specific denominator coding.</p> <p>This measure will be calculated with 3 performance rates:</p> <ol style="list-style-type: none"> 1) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period 2) Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months 3) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months <p>Updated submission criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: The language “on the date of the encounter or within the previous 12 months” to submission criteria 2 and 3.</p> <p>Updated numerator: For the eCQM Specifications collection types: Revised: NUMERATOR (SUBMISSION CRITERIA 1): Patients who were screened for tobacco use at least once within the measurement period NUMERATOR (SUBMISSION CRITERIA 3): Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user For the MIPS CQMs Specifications, Medicare Part B Claims Measure Specifications, and CMS Web Interface Measure Specifications collection types: Revised: NUMERATOR (SUBMISSION CRITERIA 1): Patients who were screened for tobacco use at least once within the measurement period NUMERATOR (SUBMISSION CRITERIA 2): Patients who received tobacco cessation intervention on the date of the encounter or within the previous 12 months NUMERATOR (SUBMISSION CRITERIA 3): Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months</p> <p>Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Replaced "12 months" with "the measurement period" for submission criteria 1 and 3. Added: The language “on the date of the encounter or within the previous 12 months” to submission criteria 2 and 3 in reference to tobacco cessation intervention.</p> <p>Updated guidance numerator note: For the CMS Web Interface Measure Specifications collection type: Updated: Revised language to reflect that the tobacco screening is once per performance period and tobacco cessation intervention if necessary must be completed during the encounter or previous 12 months.</p> <p>Updated numerator options: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Submission Criteria 2: Performance Met: Patient identified as a tobacco user received tobacco cessation intervention on the date of the encounter or within the previous 12 months (counseling and/or pharmacotherapy) Denominator Exception: Documentation of medical reason(s) for not providing tobacco cessation intervention on the date of the encounter or within the previous 12 months (e.g., limited life expectancy, other medical reason) Performance Not Met: Patient identified as tobacco user did not receive tobacco cessation intervention on the date of the encounter or within the previous 12 months (counseling and/or pharmacotherapy), reason not given Submission Criteria 3: Denominator Exception: Documentation of medical reason(s) for not providing tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user (e.g., limited life expectancy, other medical reason)</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the language for the MIPS CQMs Specifications, the Medicare Part B Measure Specifications, and CMS Web Interface Measure Specifications collection types to clarify the timing for tobacco use screening and tobacco cessation intervention for those patients identified as tobacco users. The intent of the measure is to ensure all patients are screened for tobacco use on an annual basis (each performance period) and receive tobacco cessation intervention, if identified as a tobacco user on the date of the encounter or within the previous 12 months.</p> <p>We proposed to update the eCQM Specifications collection type to reflect that both the tobacco use screening and tobacco use intervention for those patients identified as tobacco users should occur annually (each performance period). We understand that causes a slight misalignment between the different collection types, which is due to the annual update timeline differences between the collection types. This misalignment will be reviewed in future annual update cycles. Additionally, we proposed to update the eCQM Specifications and CMS Web Interface Measure Specifications collection type to “Tobacco User” value set to remove passive smoker coding as these patients are not appropriate for inclusion in the tobacco user identified patient population as they do not meet the intent of the measure and the clinical quality action would not be applicable to them.</p> <p>In the event the proposed substantive change(s) are finalized, for the CMS Web Interface Measure Specifications collection type, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of the substantive changes. Under MIPS, the CMS Web Interface measures are scored in comparison to quality measure benchmarks established under the Medicare Shared Savings Program. The benchmarks established for the CMS Web Interface measures are based on historical data. If a benchmark is able to be established for a CMS</p>

Category	Description
	Web Interface measure with the proposed substantive changes, then such benchmark would be used for scoring purposes. If a benchmark is not able to be established for a CMS Web Interface measure, then the following would apply for such CMS Web Interface measure: excluded from MIPS scoring in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided that the data completeness requirement is met and the applicable measure data is submitted via the CMS Web Interface.
<p>Comment: Several commenters stated that if all substantive changes are finalized as proposed it will likely mean these measures will be capped at 3 points as they would not have a historical benchmark for comparison. This means that the majority of dermatology measures available within this specialty set are not eligible to score up to 10 full points and therefore is significantly limiting a clinician's ability to score well in the Quality category. The commenters specifically mentioned this in relation to substantive changes proposed for measures Q226, Q238, Q265, Q317, and Q374.</p> <p>Response: The substantive changes above would only impact the CMS Web Interface Measure Specifications collection type benchmark. Under MIPS, the CMS Web Interface measures are scored in comparison to quality measure benchmarks established under the Medicare Shared Savings Program. The benchmarks established for the CMS Web Interface measures are based on historical data. If a benchmark is able to be established for a CMS Web Interface measure with the proposed substantive changes, then such benchmark would be used for scoring purposes. If a benchmark is not able to be established for a CMS Web Interface measure, then the following would apply for such CMS Web Interface measure: excluded from MIPS scoring in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided that the data completeness requirement is met and the applicable measure data is submitted via the CMS Web Interface. There would be no policy related impacts to the benchmark for the eCQM Specifications, MIPS CQMs Specifications, or Medicare Part B Claims Measure Specifications collection types.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q226 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.29 Controlling High Blood Pressure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	236
CMS eCQM ID:	CMS165v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications CMS Web Interface Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18 - 85 years of age who had a diagnosis of hypertension overlapping the measurement period or the year prior to the measurement period, and whose most recent blood pressure was adequately controlled (< 140/90 mmHg) during the measurement period.
Substantive Change:	<p>The measure description is revised to read: For all collection types: Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type:</p> <p>Revised:</p> <ol style="list-style-type: none"> 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: <ul style="list-style-type: none"> - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior <p>Added:</p> <ol style="list-style-type: none"> 1. Exclude patients 81 and older with an indication of frailty for any part of the measurement period. 2. Exclude patients receiving palliative care during the measurement period. <p>Revised:</p> <p>Logic to allow ESRD encounter to be on or before the end of the measurement period.</p> <p>For the CMS Web Interface Measure Specifications collection type:</p> <p>Revised:</p> <ol style="list-style-type: none"> 1. Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period. 2. Patients 66 – 80 years of age with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. 3. Patients 66 - 80 years of age with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period. <p>Added:</p> <ol style="list-style-type: none"> 1. Patients 81 years of age and older with at least one claim/encounter for frailty during the measurement period. <p>Updated value set/coding: For the eCQM Specifications and CMS Web Interface Measure Specifications collection types:</p> <p>Revised: "Pregnancy" (2.16.840.1.113883.3.526.3.378) value set to more accurately capture pregnancy state.</p> <p>Removed: coding related to transplant donors from "Kidney Transplant" (2.16.840.1.113883.3.464.1003.109.12.1012) value set.</p> <p>The measure guidance is revised to read: For the eCQM Specifications collection type: In reference to the numerator element, only blood pressure readings performed by a clinician or a remote monitoring device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by a remote monitoring device and conveyed by the patient to the clinician are also acceptable. It is the clinician's responsibility and discretion to confirm the remote monitoring device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient's medical record.</p> <p>Do not include BP readings:</p> <ul style="list-style-type: none"> -Taken during an acute inpatient stay or an ED visit -Taken on the same day as a diagnostic test or diagnostic or therapeutic procedure that requires a change in diet or change in medication on or one day before the day of the test or procedure, with the exception of fasting blood tests. -Taken by the patient using a non-digital device such as with a manual blood pressure cuff and a stethoscope. <p>If no blood pressure is recorded during the measurement period, the patient's blood pressure is assumed "not controlled."</p> <p>If there are multiple blood pressure readings on the same day, use the lowest systolic and the lowest diastolic reading as the most recent blood pressure reading.</p> <p>This eCQM is a patient-based measure.</p> <p>This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications and CMS Web Interface Measure Specifications collection types: Patients 18-85 years of age who had a visit and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.</p>

Category	Description
	<p>The measure denominator is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Patients 18-85 years of age who had a visit and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: Palliative care services given to patient any time during the measurement period</p> <p>Updated denominator confirmation: For the CMS Web Interface Measure Specifications collection type: Revised: The language to reflect the diagnosis for essential hypertension must start before and continue into, or start during the first six months of the measurement period.</p> <p>Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>Updated denominator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: The diagnosis of essential hypertension must be present some time between 1 year prior to the measurement period and the first six months of the measurement period (January 1, 2021 - June 30, 2022). For the MIPS CQMs Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>The measure instructions note, numerator note, and narrative guidance are revised to read: For the MIPS CQMs Specifications, Medicare Part B Claims Measure Specifications, and CMS Web Interface Measure Specifications collection types: In reference to the numerator element, only blood pressure readings performed by a clinician or a remote monitoring device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by a remote monitoring device and conveyed by the patient to the clinician are also acceptable. It is the clinician's responsibility and discretion to confirm the remote monitoring device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient's medical record.</p> <p>Do not include BP readings:</p> <ul style="list-style-type: none"> • Taken during an acute inpatient stay or an ED visit • Taken on the same day as a diagnostic test or diagnostic or therapeutic procedure that requires a change in diet or change in medication on or one day before the day of the test or procedure, with the exception of fasting blood tests. BP readings taken on the same day that the member receives a common low-intensity or preventive procedure are eligible for use. For example, the following procedures are considered common low intensity or preventive (this list is just for reference, and is not exhaustive): <ul style="list-style-type: none"> • Vaccinations. • Injections (e.g., allergy, vitamin B-12, insulin, steroid, toradol, Depo-Provera, testosterone, lidocaine). • TB test. • IUD insertion. • Eye exam with dilating agents. • Wart or mole removal. • Taken by the patient using a non-digital device such as with a manual blood pressure cuff and a stethoscope. <p>If no blood pressure is recorded during the measurement period, the patient's blood pressure is assumed "not controlled."</p> <p>If there are multiple blood pressure readings on the same day, use the lowest systolic and the lowest diastolic reading as the most recent blood pressure reading.</p> <p>Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We proposed to update the measure description to remove the term 'overlapping' and add clarity to the timing associated with the hypertension diagnosis. We proposed that the denominator exclusion language be updated for all but the CMS Web Interface Measure Specifications collection type to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured.</p> <p>We proposed to update the CMS Web Interface Measure Specifications collection type denominator exclusions language to clarify that, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period. Additionally, for the CMS Web Interface Measure Specifications collection type denominator exclusions, we proposed to update the ages for the frailty and advanced illness exclusions and add an exclusion specific to those patients 81 years and older to ensure the appropriate patients are being assessed for the quality action.</p> <p>We proposed to update the eCQM Specifications and CMS Web Interface Measure Specifications collection types "Pregnancy" value set to more accurately capture the state of pregnancy to ensure the denominator exclusion is being applied to the correct patient population and revised the logic for the end stage renal disease (ESRD) encounter to align with the intent of the measure.</p>

Category	Description
	<p>Additionally, we proposed to update the “Kidney Transplant” value set to remove coding related to kidney transplant donors as it would be appropriate for these patients to still be assessed for blood pressure control if diagnosed with essential hypertension. We proposed to revise the eCQM Specifications guidance section to provide clarification that patient obtained blood pressure readings captured via non-digital devices are not acceptable for this measure as they may not provide an accurate reading and therefore do not meet the intent of the measure, as well as the addition of clarifying language for what suffices as an acceptable blood pressure reading. Additionally, we proposed to update the initial patient population for the eCQM Specifications collection type to align with clarification for the timing of the hypertension diagnosis.</p> <p>We proposed to update the MIPS CQMs Specifications, Medicare Part B Claims Measure Specifications, and CMS Web Interface Measure Specifications collection types denominator, denominator note, and denominator confirmation to align with clarification for the timing of the hypertension diagnosis. Additionally for the MIPS CQMs Specifications, the Medicare Part B Claims Measure Specifications, and the CMS Web Interface Measure Specifications collection types, we proposed to update the instructions note, numerator note, and narrative guidance to better clarify acceptable blood pressure readings for the purposes of clinical quality action assessment and examples of low intensity or preventive procedures that would not preclude the use of a blood pressure reading from that day or the day prior. We proposed to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.</p>
<p>Comment: One commenter stated measure Q236 includes a denominator exclusion for any patient that has received hospice services at any time during the measurement period, but it does not include denominator exclusion for patients receiving palliative care. Many Medicare beneficiaries utilize palliative care prior to or in lieu of hospice care to promote quality of life and comfort near the end of life. Beneficiaries often choose palliative care over hospice care in order to continue to receive treatment or therapy that may improve their quality of life. The commenter supported this patient-centered care and requests that CMS/QPP include a palliative care exclusion for this measure to reflect that this service is regularly utilized in populations with high mortality rates, such as a long-term care institutional population.</p> <p>Another commenter agreed that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in these measures and supported CMS’ proposal to add palliative care exclusions or exceptions.</p> <p>Response: We agree that this patient population is not appropriate for assessment of the clinical quality action within this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q236 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.30 Use of High-Risk Medications in Older Adults

Category	Description
NQF # / eCQM NQF #:	0022/ N/A
Quality#:	238
CMS eCQM ID:	CMS156v10
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications.
Substantive Change:	<p>The measure description is revised to read: For the eCQM Specifications collection type: Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class. Three rates are reported. 1. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class. 2. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class, except for appropriate diagnoses. 3. Total rate (the sum of the two numerators divided by the denominator, deduplicating for patients in both numerators). For the MIPS CQMs Specifications collection type: Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.</p> <p>Updated definition: For the eCQM Specifications collection type: Added: Index prescription start date. The start date of the earliest prescription ordered for a high-risk medication during the measurement period.</p> <p>The measure denominator exclusion is revised to read: For the eCQM Specifications collection type: 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients receiving palliative care during the measurement period.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Removed: the 90-day supply criterion to the non-benzodiazepine hypnotics.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: drug classes methscoepolamine and pyrilamine. Removed: drug class Diphenhydramine hydrochloride.</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Rate 1: Patients with at least two orders of the same high-risk medication to avoid from the same drug class. Rate 2: Patients with at least two orders of high-risk medications from the same medication class (i.e., antipsychotics and benzodiazepines), except for appropriate diagnoses. Total rate (the sum of the two previous numerators, deduplicated).</p> <p>Updated numerator exclusion: For the eCQM Specifications collection type: Added: Rate 2: For patients with two or more antipsychotic prescriptions ordered, exclude patients who did have a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the Index Prescription Start Date (IPSD) for antipsychotics. For patients with two or more benzodiazepine prescriptions ordered, exclude patients who did have a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines.</p> <p>Updated instructions: For the MIPS CQMs Specifications collection type: Added: This measure will be calculated with 2 performance rates: 1. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class. 2. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class, except for appropriate diagnoses. For accountability reporting in the CMS MIPS program, the rate for submission criteria 1 is used for performance.</p> <p>The measure denominator is revised to read: For the MIPS CQMs Specifications collection type: SUBMISSION CRITERIA 1: PERCENTAGE OF PATIENTS 65 YEARS OF AGE AND OLDER WHO WERE ORDERED AT LEAST TWO HIGH-RISK MEDICATIONS FROM THE SAME DRUG CLASS Denominator (Submission Criteria 1): Patients 65 years and older who had a visit during the measurement period SUBMISSION CRITERIA 2: PERCENTAGE OF PATIENTS 65 YEARS OF AGE AND OLDER WHO WERE ORDERED AT LEAST TWO HIGH-RISK MEDICATIONS FROM THE SAME DRUG CLASS, EXCEPT FOR APPROPRIATE DIAGNOSES Denominator (Submission Criteria 2): Patients 65 years and older who had a visit during the measurement period</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Added: Submission Criteria 2 Denominator Criteria: Patient aged ≥ 65 years on date of encounter. Patient encounter during performance period (in alignment with submission criteria 1). Denominator exclusions for hospice and palliative care during the measurement period.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Added: Submission Criteria 1: Patients receiving palliative care during the measurement period.</p>

Category	Description
	<p>The measure numerator is revised to read: For the MIPS CQMs Specifications collection type: Numerator (Submission Criteria 1): Patients ordered at least two high-risk medications from the same drug class during the measurement year. Numerator (Submission Criteria 2): Patients with at least two orders of high-risk medications from the same drug class (i.e., antipsychotics and benzodiazepines), except for appropriate diagnoses.</p> <p>Updated numerator definition: For the MIPS CQMs Specifications collection type: Revised: Numerator (Submission Criteria 1): Definitions: The intent of the measure is to assess if the eligible clinician ordered high-risk medication(s). The intent of the numerator is to assess if the patient has either been ordered: • At least two high-risk medications from the same drug class (grouped by row) in Table 1 on different dates of service, or • At least two high-risk medications from the same drug class (grouped by row) in Table 2 on different dates of service, where the sum of days supply exceeds 90 days If the patient had a high-risk medication previously prescribed by another provider, they would not be counted towards the numerator unless the submitting provider also ordered a high-risk medication for them from the same drug class. Cumulative Medication Duration – an individual's total number of medication days over a specific period; the period counts multiple prescriptions with gaps in between, but does not count the gaps during which a medication was not dispensed. To determine the cumulative medication duration, determine first the number of the Medication Days for each prescription in the period: the number of doses divided by the dose frequency per day. Then add the Medication Days for each prescription without counting any days between the prescriptions. For example, there is an original prescription for 30 days with 2 refills for thirty days each. After a gap of 3 months, the medication was ordered again for 60 days with 1 refill for 60 days. The cumulative medication duration is $(30 \times 3) + (60 \times 2) = 210$ days over the 10 month period.</p> <p>Table 1 - High-Risk Medications at any dose or duration: Removed: Orphenadrine from Anticholinergics, first-generation antihistamines Revised: Antithrombotics – Dipyridamole, oral short-acting Added: Nonbenzodiazepine hypnotics – Eszopiclon, Zolpidem, Zaleplon</p> <p>Table 2 - High-Risk Medications With Days Supply Criteria Removed: Nonbenzodiazepine hypnotics</p> <p>Added: Numerator (Submission Criteria 2): Definitions: The intent of the numerator is to assess if the patient has been ordered at least two high-risk medications from the same drug class (grouped by row) in Table 3 on different dates of service. The intent of the measure is to assess if the submitting provider ordered the high-risk medication(s). If the patient had a high-risk medication previously prescribed by another provider, they would not be counted towards the numerator unless the submitting provider also ordered a high-risk medication for them from the same drug class.</p> <p>Index Prescription Start Date - the start date of the earliest prescription ordered for a high-risk medication during the measurement period.</p> <p>Table 3 - High-Risk Medications: Antipsychotics, first (conventional) and second (atypical) generation and Benzodiazepines, long, short, and intermediate acting.</p> <p>Updated numerator instructions: For the MIPS CQMs Specifications collection type: Added: Submission Criteria 2: INVERSE MEASURE - A lower calculated performance rate for this measure indicates better clinical care or control. The "Performance Not Met" numerator option for this measure is the representation of the better clinical quality or control. Submitting that numerator option will produce a performance rate that trends closer to 0%, as quality increases. For inverse measures a rate of 100% means all of the denominator eligible patients did not receive the appropriate care or were not in proper control. A high-risk medication is identified by: • A prescription for medications classified as high risk at any dose and for any duration listed in Table 3</p> <p>Updated numerator note: For the MIPS CQMs Specifications collection type: Removed: numerator note.</p> <p>Updated numerator options: For the MIPS CQMs Specifications collection type: Revised: Submission Criteria 1: Performance Met: At least two orders for high-risk medications from the same drug class Performance Not Met: At least two orders for high-risk medications from the same drug class not ordered</p> <p>Added: Submission Criteria 2: Performance Met: At least two orders for high-risk medications from the same drug class Performance Not Met: At least two orders for high-risk medications from the same drug class not ordered Performance Not Met: Two or more antipsychotic prescriptions ordered for patients who had a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the Index Prescription Start Date (IPSD) for antipsychotics Performance Not Met: Two or more benzodiazepine prescriptions ordered for patients who had a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines</p>

Category	Description
	Updated measure analytic: For all collection types: Revised: performance rate 1 will be utilized for benchmarking purposes.
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to restructure all of the collection types to introduce new performance rates based upon the American Geriatric Society Beers Criteria and expert panel recommendations, with performance rate one being utilized for benchmarking purposes as it is more comprehensive in assessment and aligns across the collection types. These revisions allow for the inclusion of antipsychotics and benzodiazepines to ensure alignment with most recent recommendations. The description for the measure is being updated for all collection types to align with the revisions in the measure and reflect the restructuring within multiple components of the specifications. Additionally, there will be multiple performance rates: three performance rates for the eCQM Specifications collection type and two performance rates for the MIPS CQMs Specifications collection type. We proposed that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and consistency in implementation. The eCQM Specifications collection type's value sets were revised to add and remove drug classes and the logic for the non-benzodiazepine hypnotics was revised to remove the 90-day supply criterion to align with the American Geriatric Society Beers Criteria guidelines.</p> <p>We proposed to revise the MIPS CQMs Specifications collection type to add a second performance rate and submission criteria as the measure is restructured to align with the American Geriatric Society Beers Criteria guidelines. Additionally, the medication tables have been revised to align with the current guidelines and intent of the measure revisions. Multiple components of the MIPS CQMs Specifications collection type were updated to align with revised structure and the American Geriatric Society Beers Criteria guidelines to ensure consistent language throughout and alignment with the measure intent.</p>
<p>Comment: One commenter agreed that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in these measures and supported CMS' proposal to add palliative care exclusions or exceptions.</p> <p>Response: We thank the commenter for supporting the substantive change to measure Q238.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q238 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.31 Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	239
CMS eCQM ID:	CMS155v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	<p>Percentage of patients 3-17 years of age who had an outpatient visit with a Primary Care Physician (PCP) or Obstetrician/Gynecologist (OB/GYN) and who had evidence of the following during the measurement period. Three rates are reported.</p> <ul style="list-style-type: none"> • Percentage of patients with height, weight, and body mass index (BMI) percentile documentation. • Percentage of patients with counseling for nutrition. • Percentage of patients with counseling for physical activity.
Substantive Change:	<p>The measure title is revised from 'Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents' to: Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents</p> <p>Updated denominator exclusion: Revised: Exclude patients who are in hospice care for any part of the measurement period.</p> <p>Updated value set/coding: Revised: "Pregnancy" (2.16.840.1.113883.3.526.3.378) value set to more accurately capture pregnancy state.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the title for alignment across programs. We proposed to update the "Pregnancy" value set to more accurately capture the state of pregnancy to ensure the denominator exclusion is being applied to the correct patient population and remove the term 'overlaps' and replace with plain language for clarity and consistency in implementation.</p> <p>We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q239 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>

D.32 Childhood Immunization Status

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	240
CMS eCQM ID:	CMS117v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.
Substantive Change:	<p>The measure denominator exclusion is revised to read: Exclude patients who are in hospice care for any part of the measurement period.</p> <p>The measure guidance is revised to read: Numerator criteria includes evidence of receipt of the recommended vaccine or the following: -- DTaP: Adverse reaction to the DTaP or Td vaccine; or encephalopathy due to DTaP or Td vaccination -- Polio (IPV) vaccine: Adverse reaction to the IPV vaccine, streptomycin, polymyxin B, or neomycin -- MMR Vaccination: Immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; history of measles, mumps, or rubella; or a seropositive result for the antigens -- Hib: Adverse reaction to the Hib vaccine -- Hepatitis B: Seropositive result for the antigen, adverse reaction to the hepatitis B vaccine, adverse reaction to common baker's yeast, or a history of hepatitis B illness -- Chicken pox (varicella zoster): Seropositive result for the antigen; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; or a history of varicella zoster -- Pneumococcal: Adverse reaction to the pneumococcal vaccine -- Hepatitis A: Seropositive result for the antigen, adverse reaction to the hepatitis A vaccine, or a history of hepatitis A illness -- Rotavirus: Adverse reaction to the rotavirus vaccine, severe combined immunodeficiency, or a history of intussusception -- Influenza: Adverse reaction to the influenza vaccine; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; or adverse reaction to neomycin The measure allows a grace period by measuring compliance with these recommendations between birth and age two. This eCQM is a patient-based measure.</p> <p>This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>Updated logic and logic definitions: Added: influenza LAIV vaccination as numerator compliant.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to remove the term 'overlaps' from the denominator exclusion and replace with plain language for clarity and consistency in implementation. The measure guidance is updated to reflect the intent of the measure and clarify the criteria for numerator compliance more accurately. Additionally, we proposed to update the logic and logic definitions to include the influenza LAIV vaccination to align with current clinical guidelines.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q240 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.33 Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	254
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location.
Substantive Change:	<p>Modified collection type: MIPS CQM Specifications collection type.</p> <p>Updated denominator criteria: Revised: Patient has any emergency department encounter during the performance period with Place of Service Indicator 23 (The claim form Place of Service field must indicate emergency department) OR Patient encounter during the performance period (CPT)</p>
Steward:	American College of Emergency Physicians
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the denominator criteria to capture all patients with an encounter with a Place of Service indicator 23 to ensure that all applicable patients are being assessed for the quality action as it is appropriate for those patients who meet all other denominator criteria and are seen at any emergency department encounter.</p> <p>In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q254 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.34 Biopsy Follow-Up

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	265
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.
Substantive Change:	The measure denominator note is revised to read: *Signifies that this CPT Category I code is a non-covered service under the Medicare Part B Physician Fee Schedule (PFS). These non-covered services should be counted in the denominator population for MIPS CQMs. Only the first biopsy results for new patients should be reported for this measure. Do not include specimens sent for debridement.
Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the denominator note to clarify which biopsy, if multiple biopsies are performed, should be utilized for assessment of the clinical quality action and that only new patients should be reported for the purposes of this measure.
<p>Comment: One commenter supported CMS' proposed clarifications to this measure that if multiple biopsies are performed, only the first biopsy is used for this measure and that only new patients should be reported for this measure.</p> <p>Response: We thank the commenter for supporting the substantive changes to measure Q265.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q265 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.35 Dementia: Cognitive Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / 2872e
Quality#:	281
CMS eCQM ID:	CMS149v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.
Substantive Change:	Updated logic and logic definitions: Revised: dementia and qualifying encounter logic to clarify timing of during the measurement period.
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise the technical definition names and logic to provide clarity and ensure alignment with measure intent.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q281 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.36 Parkinson's Disease: Psychiatric Symptoms Assessment for Patients with Parkinson's Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	290
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for psychiatric symptoms once in the past 12 months
Substantive Change:	<p>The measure title is revised from 'Parkinson's Disease: Psychiatric Symptoms Assessment for Patients with Parkinson's Disease' to: Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease.</p> <p>The measure description is revised to read: Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period.</p> <p>Updated denominator criteria: Removed: coding related to Hospital Inpatient Services.</p> <p>The measure numerator is revised to read: Patients who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period.</p> <p>The measure numerator definition is revised to read: Assessed – use of a screening tool or discussion with the patient or care partner. Please see “Opportunity for Improvement” section below for suggestions on possible screening tools. Psychosis: includes hallucinations, illusions, delusions, paranoia</p> <p>Updated numerator instructions: Added: For Depression: Patient Health Questionnaire 2 (PHQ2), Patient Health Questionnaire 9 (PHQ9), Montgomery-Asberg Depression Rating Scale (MADRS) For Anxiety: Parkinson Anxiety Scale (PAS) Removed: For Impulse Control Disorder (9): Questionnaire for Impulsive-Compulsive Disorders in Parkinson's Disease-Rating Scale (QUIP-RS) Minnesota Impulsive Disorders Interview</p> <p>Updated numerator note: Removed: the Numerator Note.</p> <p>The measure numerator options are revised to read: Performance Met: Depression, anxiety, apathy, AND psychosis assessed Performance Not Met: Depression, anxiety, apathy, AND psychosis not assessed</p>
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the measure to lessen the requirements necessary for numerator compliance to balance quality patient care and clinician burden based upon feedback and recommendations from the measure steward's expert work group. The measure title, description, numerator, and numerator options will have updates to align with the proposed change to the measure's clinical quality action requirement. We proposed to remove Hospital Inpatient Services from the denominator criteria as patients seen in the inpatient setting are not appropriate for inclusion within the denominator eligible patient population for the clinical quality action being assessed, as this is to address care for patients seen during outpatient encounters. Additionally, we proposed to revise the numerator definition to more clearly define what “assessed” means for the purposes of this measure and what components are included within the term “psychosis”. We proposed to revise the list of tools available for use in the Parkinson's disease patient population to align with current availability and applicability. We proposed to remove the numerator note to align with the updated time frame to ensure annual assessment.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q290 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.37 Parkinson's Disease: Cognitive Impairment or Dysfunction Assessment for Patients with Parkinson's Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	291
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for cognitive impairment or dysfunction once in the past 12 months.
Substantive Change:	<p>The measure title is revised from 'Parkinson's Disease: Cognitive Impairment or Dysfunction Assessment for Patients with Parkinson's Disease' to: Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease.</p> <p>The measure description is revised to read: Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for cognitive impairment or dysfunction once during the measurement period.</p> <p>Updated denominator criteria: Removed: coding related to Hospital Inpatient Services.</p> <p>The measure numerator is revised to read: Patients (or care partner as appropriate) who were assessed for cognitive impairment or dysfunction once during the measurement period.</p> <p>The measure numerator definition is revised to read: Assessed – Is defined as a discussion with the patient or care partner or use of a screening tool OR referral to neuropsychologist for testing.</p> <p>Updated numerator instructions: Added: Neuro-QoL and Patient-Reported Outcomes Measurement Information System (PROMIS).</p> <p>Updated numerator note: Removed: the Numerator Note.</p> <p>Updated numerator options: Added:</p> <p>Denominator Exception: Patient or care partner decline assessment</p> <p>Denominator Exception: On date of encounter, patient is not able to participate in assessment or screening, including non-verbal patients, delirious, severely aphasic, severely developmentally delayed, severe visual or hearing impairment and for those patients, no knowledgeable informant available.</p>
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the measure's title to remove redundancy in wording. We proposed to remove Hospital Inpatient Services from the denominator criteria as patients seen in the inpatient setting are not appropriate for inclusion within the denominator eligible patient population for the clinical quality action being assessed, as this is to address cares for patients seen during outpatient encounters. We proposed to update the measure numerator and numerator definition to include the care partner within the assessment of the clinical quality action as patients who have severe cognitive impairment may be unable to accurately respond to questions, leaving clinicians to rely on care partners for accurate information. We proposed to add the PROMIS and Neuro-QoL (Quality of Life) to the list of tools in the numerator instructions as these are applicable to the intent of the measure. Additionally, we proposed to update the numerator options to add denominator exceptions as the measure steward's expert work group felt it was important not to penalize clinicians for patients/care partners who are unable to participate in or decline the assessment. Additionally, we proposed to update the description and numerator to reflect that the quality action should be completed annually to ensure timely capture of cognitive impairment or dysfunction. To align with these revisions, we proposed to remove the numerator note.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q291 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.38 Parkinson's Disease: Rehabilitative Therapy Options

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	293
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease (or caregiver(s), as appropriate) who had rehabilitative therapy options (i.e., physical, occupational, and speech therapy) discussed once in the past 12 months.
Substantive Change:	<p>The measure title is revised from 'Parkinson's Disease: Rehabilitative Therapy Options' to: Rehabilitative Therapy Referral for Patients with Parkinson's Disease.</p> <p>The measure description is revised to read: Percentage of all patients with a diagnosis of Parkinson's Disease who were referred to physical, occupational, speech, or recreational therapy once during the measurement period.</p> <p>Updated denominator criteria: Added: Physical and Occupational Therapy, Speech Language Pathology</p> <p>The measure numerator is revised to read: Patients who were referred to physical, occupational, speech, or recreational therapy once during the measurement period.</p> <p>Updated numerator note: Removed: the Numerator Note.</p> <p>The measure numerator options is revised to read: Performance Met: Referral to physical, occupational, speech, or recreational therapy Denominator Exception: Patient and/or care partner decline referral Denominator Exception: Clinician determines patient does not require referral Denominator Exception: Patient already receiving physical/occupational/speech/recreational therapy during the measurement period Performance Not Met: Patient not referred, reason not otherwise specified</p>
Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to update the measure title to remove redundancy in wording. We proposed to update the measure description and numerator to include recreational therapy as it is clinically relevant and can be beneficial to the Parkinson's disease patient population. We proposed to update and expand the denominator coding to include additional MIPS eligible clinician types as this measure may be appropriate to their scope of care. We proposed to remove the numerator note to align with the updated time-frame to ensure annual assessment. Additionally, we proposed to update the numerator options to align with the addition of recreational therapy as numerator compliant and allowing for denominator exceptions for those patients that decline a referral, do not need a referral based on the stage of the disease, or for those patients who are already receiving one or more of the services, as clinicians should not be penalized in these situations.</p>
<p>Comment: One commenter questioned the changes to measure Q293: Parkinson's Disease: Rehabilitative Therapy Options, as the commenter does not believe recreational therapy qualifies as rehabilitative therapy. The commenter appreciates that the measure includes referrals to OT, PT, and SLP but asserts that the measure would be more effective if it was linked back to a specific therapy evaluation code rather than simply a referral. This would ensure that the patients were receiving medically necessary rehabilitative therapy rather than receiving a referral and not acting upon it.</p> <p>Response: Recreational therapy may provide physical, social, emotional, and cognitive benefits and incorporates the interests of the patient, which may better align with the patient's goals. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q293 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.39 Initiation and Engagement of Alcohol and Other Drug Dependence Treatment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	305
CMS eCQM ID:	CMS137v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	<p>Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported.</p> <p>a. Percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis.</p> <p>b. Percentage of patients who engaged in ongoing treatment including two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention.</p>
Substantive Change:	<p>The measure denominator exclusion is revised to read:</p> <ol style="list-style-type: none"> 1. Exclude patients with a negative diagnosis history, defined as an encounter or medication treatment for a diagnosis of alcohol, opioid or other drug abuse or dependence in the 60 days prior to the first episode of alcohol or drug dependence. 2. Exclude patients who are in hospice care for any part of the measurement period. <p>Updated initial patient population: Revised: logic for timing associated with the timing of the first dependence diagnosis.</p> <p>Updated numerator logic: Revised: timing attribute associated with orders of medications to 'authorDatetime'.</p> <p>The measure stratification is revised to read: Report a total score, and each of the following strata: Stratum 1: Patients age 13-17 at the start of the Measurement Period Stratum 2: Patients age >=18 at the start of the Measurement Period</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to revise the denominator exclusion to more accurately represent the intent to exclude patients with prior and recent history of substance abuse treatment as this patient population is not appropriate for the clinical quality action being assessed. The term 'overlaps' was removed from the denominator exclusion and replaced with plain language for clarity and consistency in implementation. We proposed to revise the logic for the timing associated with the first dependence diagnosis timing to align with the intent of the measure to correctly capture all diagnoses during the measurement period through November 14. We proposed to update the datatype for "Medication, Order" to use 'authorDatetime' as this is the preferred timing attribute. We proposed to revise the anchor for age calculations of the stratifications to align with those within the initial patient population for alignment.</p>
<p>Comment: One commenter proposed an additional numerator change for measure Q305: Initiation and Engagement of Alcohol and Other Drug Dependence Treatment. For the percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis, currently, the guidance states "within 14 days of diagnosis" while the CQL implementation does not include "within 14 days" including the day of the encounter. Greenway recommends that CMS review and include the day of the encounter as "within the 14 days" to meet the numerator action since treatment can often clinically occur the same day as diagnosis. The commenter did not believe that providers should be penalized for providing treatment on the same day as the diagnosis, which does not meet the intent of the guidance.</p> <p>Response: The numerator definitions for population criteria 1 have different timings, with one including the day of diagnosis and one not including the day of diagnosis. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q305 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.40 Cervical Cancer Screening

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	309
CMS eCQM ID:	CMS124v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria: * Women age 21-64 who had cervical cytology performed within the last 3 years * Women age 30-64 who had cervical human papillomavirus (HPV) testing performed within the last 5 years
Substantive Change:	Updated denominator exclusion: Revised: Exclude patients who are in hospice care for any part of the measurement period. Added: Exclude patients receiving palliative care during the measurement period. Updated value set/coding: Updated: replaced "Congenital absence of cervix (disorder)" ("SNOMEDCT Code (37687000)") with "Congenital or Acquired Absence of Cervix" (2.16.840.1.113883.3.464.1003.111.12.1016) value set.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed and the term 'overlaps' was removed and replaced with plain language for clarity and consistency in implementation. We proposed to update the value sets for the denominator exclusion to include acquired absence of cervix as this patient population is not appropriate for the clinical quality action being assessed.
Comment: One commenter agreed that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in these measures and supported CMS' proposal to add palliative care exclusions or exceptions.	
Response: We thank the commenter for supporting the substantive change to measure Q309.	
After consideration of public comments, we are finalizing the changes to measure Q309 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.41 Chlamydia Screening for Women

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	310
CMS eCQM ID:	CMS153v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of women 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.
Substantive Change:	Updated denominator exclusion: Revised: Exclude patients whose who are in hospice care for any part of the measurement period. Updated value set: Added: Clutton's joints "Diagnoses Used to Indicate Sexual Activity" value set.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to remove the term 'overlaps' and replace with plain language for clarity and consistency in implementation. We proposed to update the "Diagnoses Used to Indicate Sexual Activity" value set to align with coding utilized in other programs, however, this code set will undergo further refinements in future years.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q310 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.42 Falls: Screening for Future Fall Risk

Category	Description
NQF # / eCQM NQF #:	0101 / N/A
Quality#:	318
CMS eCQM ID:	CMS139v10
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications CMS Web Interface Measure Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.
Substantive Change:	<p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: Exclude patients who are in hospice care for any part of the measurement period.</p> <p>Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Removed: Exclude patients who were assessed to be non-ambulatory during the measurement period.</p> <p>Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Removed: Denominator Exclusion, count as non-ambulatory only if non-ambulatory at the most recent encounter during the measurement period (i.e., patient is not ambulatory, bed ridden, immobile, confined to chair, wheelchair bound, dependent on helper pushing wheelchair, independent in wheelchair or minimal help in wheelchair).</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed for the eCQM Specifications collection type to remove the term ‘overlaps’ from the denominator exclusion and replace with plain language for clarity and consistency in implementation.</p> <p>We proposed for the CMS Web Interface Measure Specifications collection type to remove the denominator exclusion for non-ambulatory patients to address implementation challenges as there is a lack of available documentation for a non-ambulatory status. Additionally, the denominator guidance has been updated to reflect this revision.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q318 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.43 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy

Category	Description
NQF # / eCQM NQF #:	1525 / N/A
Quality#:	326
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with nonvalvular atrial fibrillation (AF) or atrial flutter who were prescribed warfarin OR another FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
Substantive Change:	<p>Modified collection type: MIPS CQM Specifications collection type.</p> <p>The measure description is revised to read: Percentage of patients aged 18 years and older with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.</p> <p>Updated denominator exclusion: Added:</p> <ol style="list-style-type: none"> 1. Patients with moderate or severe mitral stenosis 2. Patients with mechanical prosthetic heart valve
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.</p> <p>We proposed to revise the measure description to align with the language revisions in the measure to no longer explicitly state the valve types. We proposed to add denominator exclusions that align with language revisions to remove those patients for whom the clinical quality action being assessed would not be appropriate.</p> <p>In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q326 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.44 Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	335
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at < 39 weeks of gestation completed who had elective deliveries by cesarean section (C-section), or early inductions of labor, without medical indication.
Substantive Change:	<p>The measure title is revised from 'Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse)' to: Maternity Care: Elective Delivery (Without Medical Indication) at < 39 Weeks (Overuse)</p> <p>The measure description is revised to read: Percentage of patients, regardless of age, who gave birth during a 12-month period, delivered a live singleton at < 39 weeks of gestation, and had elective deliveries (without medical indication) by cesarean birth or induction of labor.</p> <p>The measure numerator options are revised to read: Performance Met: Elective delivery (without medical indication) by cesarean birth or induction of labor performed (<39 weeks of gestation) Denominator Exception: Medical indication for delivery by cesarean birth or induction of labor (<39 weeks of gestation) [Documentation of reason(s) for elective delivery (e.g., hemorrhage and placental complications, hypertension, preeclampsia and eclampsia, rupture of membranes (premature or prolonged), maternal conditions complicating pregnancy/delivery, fetal conditions complicating pregnancy/delivery, late pregnancy, prior uterine surgery, or participation in clinical trial)] Performance Not Met: Elective delivery (without medical indication) by cesarean birth or induction of labor not performed (<39 weeks of gestation)</p> <p>Updated performance calculation: Revised: Measure analytic was updated to be inverse.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We proposed to update the measure analytic to be inverse to better align with the intent of the measure as this is an overuse measure. We proposed to update the measure title, description, and numerator options to align with the revision in analytic as a lower calculated performance rate will now indicate better clinical care for the purposes of this measure.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q335 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.45 Maternity Care: Postpartum Follow-up and Care Coordination

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	336
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 8 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.</p> <p>The measure denominator is revised to read: All patients, regardless of age, who gave birth during a 12-month period and were seen for postpartum care at a visit before or at 12 weeks of giving birth.</p> <p>Updated denominator criteria: Revised: Postpartum care visit before or at 12 weeks of giving birth.</p> <p>Updated instructions: This measure is to be submitted a minimum of once per performance period for all patients seen for postpartum care before or at 12 weeks of giving birth during the performance period.</p> <p>Updated numerator definition: Revised: to align with the measure change from 8 weeks to 12 weeks postpartum.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the timeframe for the postpartum care visit from before or at 8 weeks of giving birth to before or at 12 weeks of giving birth, which is reflected in revisions to multiple components of the measure for alignment. This revision aligns with American College of Obstetricians and Gynecologists (ACOG) guidance and better aligns with current clinical workflows. This also ensures a more complete patient population is addressed to drive quality care.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q336 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.46 HIV Medical Visit Frequency

Category	Description
NQF # / eCQM NQF #:	2079 / N/A
Quality#:	340
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age with a diagnosis of HIV who had at least one medical visit in each 6 month period of the 24 month measurement period, with a minimum of 60 days between medical visits.
Substantive Change:	The measure denominator note is revised to read: In order to determine denominator eligibility, patients should be diagnosed with HIV during the first 3 months of the 24-month measurement period or have a diagnosis prior to the 24-month measurement period. The 24-month measurement period is defined as the 24 months prior to and including the date of the first qualifying encounter during the performance period (i.e., January 1, 2022 through December 31, 2022). Performance of the measure is met when there is at least one medical visit in each 6 month interval with 60 days between denominator eligible encounters for patients with HIV within the 24-month measurement period.
Steward:	Health Resources and Services Administration
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise the denominator note to clarify the 24-month period to ensure alignment with the measure intent and consistency in implementation.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q340 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.47 Total Knee Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	350
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients regardless of age undergoing a total knee replacement with documented shared decision-making with discussion of conservative (non-surgical) therapy (e.g., non-steroidal anti-inflammatory drug (NSAIDs), analgesics, weight loss, exercise, injections) prior to the procedure.
Substantive Change:	<p>The measure title is revised from 'Total Knee Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy' to: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy.</p> <p>The measure description is revised to read: Percentage of patients regardless of age undergoing a total knee or total hip replacement with documented shared decision-making with discussion of conservative (non-surgical) therapy (e.g., non-steroidal anti-inflammatory drug (NSAIDs), analgesics, weight loss, exercise, injections) prior to the procedure.</p> <p>Updated instructions: Revised: This measure is to be submitted each time a procedure for total knee or total hip replacement is performed during the performance period.</p> <p>Updated denominator: Added: Total hip replacement.</p>
Steward:	American Association of Hip and Knee Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to update the measure to include total hip replacements as denominator eligible as the clinical quality action being assessed is applicable to this procedure as well. This will ensure that a broader patient population is being assessed as it is important to for the patient and clinician to engage in shared decision making to ensure that joint replacement therapy is the best treatment option. Multiple components of the measure will be updated to reflect the additional procedure of total hip replacement.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q350 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.48 Total Knee Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	351
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients regardless of age undergoing a total knee replacement who are evaluated for the presence or absence of venous thromboembolic and cardiovascular risk factors within 30 days prior to the procedure (e.g., History of Deep Vein Thrombosis (DVT), Pulmonary Embolism (PE), Myocardial Infarction (MI), Arrhythmia and Stroke).
Substantive Change:	<p>The measure title is revised from 'Total Knee Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation' to: Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation.</p> <p>The measure description is revised to read: Percentage of patients regardless of age undergoing a total knee or total hip replacement who are evaluated for the presence or absence of venous thromboembolic and cardiovascular risk factors within 30 days prior to the procedure (e.g., History of Deep Vein Thrombosis (DVT), Pulmonary Embolism (PE), Myocardial Infarction (MI), Arrhythmia and Stroke).</p> <p>Updated instructions: Revised: This measure is to be submitted each time a procedure for total knee or total hip replacement is performed during the performance period.</p> <p>Updated denominator: Added: Total hip replacement.</p>
Steward:	American Association of Hip and Knee Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to update the measure to include total hip replacements as denominator eligible as the clinical quality action being assessed is applicable to this procedure as well. This will ensure that a broader patient population is being assessed as it is important to evaluate this patient population for venous thromboembolic and cardiovascular risk factors within 30 days prior to the procedure to ensure that joint replacement therapy is the best treatment option. Multiple components of the measure will be updated to reflect the additional procedure of total hip replacement.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q351 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.49 Patient-Centered Surgical Risk Assessment and Communication

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	358
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon.
Substantive Change:	Updated denominator criteria: Added: Coding related to 'Ablation, irreversible electroporation; 1 or more tumors per organ'
Steward:	American College of Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the denominator criteria to add a procedure that is appropriate for the measure intent.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q358 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.50 Follow-Up Care for Children Prescribed ADHD Medication (ADD)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	366
CMS eCQM ID:	CMS136v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	<p>Percentage of children 6-12 years of age and newly dispensed a medication for attention-deficit/hyperactivity disorder (ADHD) who had appropriate follow-up care. Two rates are reported.</p> <p>a) Percentage of children who had one follow-up visit with a practitioner with prescribing authority during the 30-Day Initiation Phase.</p> <p>b) Percentage of children who remained on ADHD medication for at least 210 days and who, in addition to the visit in the Initiation Phase, had at least two additional follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.</p>
Substantive Change:	<p>Updated denominator exclusion: Revised: For all denominators: Exclude patients who are in hospice care for any part of the measurement period.</p> <p>The measure guidance is revised to read: This eCQM is a patient-based measure.</p> <p>This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>The measure numerator is revised to read: Numerator 1: Patients who had at least one visit with a practitioner with prescribing authority within 30 days after the IPSD. Numerator 2: Patients who had at least one visit with a practitioner with prescribing authority during the Initiation Phase, and at least two follow-up visits during the Continuation and Maintenance Phase.</p> <p>Updated performance calculation: Revised: Performance Rate 2 will be used for benchmarking purposes.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to remove the term ‘overlaps’ from the denominator exclusion and replace with plain language for clarity and consistency in implementation. We proposed to update the guidance to remove the language regarding how cumulative medication duration is calculated as this is outdated and no longer in alignment with the measure intent. We proposed to revise the numerator language to allow for telehealth visits as these are appropriate for inclusion when assessing for the clinical quality action. We proposed to update the performance calculation for the measure to utilize the performance rate for submission criteria 2 as this is more indicative of quality care during and after the Initiation Phase.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q366 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.51 Depression Remission at Twelve Months

Category	Description
NQF # / eCQM NQF #:	0710 / 0710e
Quality#:	370
CMS eCQM ID:	CMS159v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications CMS Web Interface Measure Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.
Substantive Change:	<p>Updated logic definitions: For the eCQM Specifications collection type: Revised: timing of denominator exclusion elements; 'Global.' 'ToDate' {element} on or before end of "Measurement Assessment Period".</p> <p>Updated denominator criteria: For all collection types: Added: coding for mental and behavioral health MIPS eligible clinicians to both submission criteria.</p> <p>Updated initial population: For the CMS Web Interface Measure Specifications collection type: Revised: Adolescent patients 12 to 17 years of age and adult patients 18 years of age and older with a diagnosis of major depression or dysthymia and an initial Patient Health Questionnaire-9 item version (PHQ-9) or Patient Health Questionnaire-9 Modified for Teens and Adolescents (PHQ-9M) score greater than nine during the index event. Patients may be assessed using PHQ-9 or PHQ-9M on the same date or up to 7 days prior to the encounter (index event).</p> <p>Updated guidance: For the CMS Web Interface Measure Specifications collection type: Added: When a baseline assessment is conducted with PHQ 9M, the follow-up assessment can use either a PHQ 9M or PHQ 9.</p> <p>Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Added: Patients with a diagnosis of personality disorder emotionally labile.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We proposed to update the eCQM Specifications collection type to revise the timing of the denominator exclusion elements to ensure the full 12 months + 60 days after the index event date is allowed in order to align with the measure intent and language. We proposed to expand the denominator eligible encounters for all collection types to include mental and behavioral health MIPS eligible clinicians as this measure is applicable to their scope of care.</p> <p>We proposed to update the CMS Web Interface Measure Specification collection type as the measure steward believes that allowing flexibility for the timeframe in which a PHQ-9/PHQ-9M can be obtained will accommodate pre-visit planning or distribution of a PHQ-9/PHQ-9M tool prior to the encounter (office visit, psychiatry or psychotherapy visit, telephone or online encounter). The intent of this change includes the following principles:</p> <ol style="list-style-type: none"> (1) The patient must have the corresponding diagnosis at the time of the index encounter. (2) The patient must have completed the PHQ-9/PHQ-9M and have a score greater than 9. (3) That same PHQ-9/PHQ-9M is directly tied to and used during the index encounter. <p>We proposed to revise the denominator exclusion language for the CMS Web Interface Measure Specifications collection type for a diagnosis of personality disorder to further clarify ensuring the correct patient population is being excluded from quality action assessment. We proposed to update the guidance for CMS Web Interface Measure Specifications collection type to add clarity regarding the assessment that may be used for the follow-up assessment for the purposes of meeting performance for this measure.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q370 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.52 Closing the Referral Loop: Receipt of Specialist Report

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	374
CMS eCQM ID:	CMS50v10
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.
Substantive Change:	The measure numerator note is revised to read: For the MIPS CQMs Specifications collection type: The consultant report that will successfully close the referral loop should be related to the first referral for a patient during the measurement period. If there are multiple consultant reports received by the referring provider which pertain to a particular referral, use the first consultant report to satisfy the measure. The provider to whom the patient was referred is responsible for sending the consultant report that will fulfill the communication. Note: this is not the same provider who would report on the measure.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the numerator note for the MIPS CQMs Specification collection type to add clarifying language that the first referral for a patient should be utilized for the purposes of assessing whether the referral loop was closed and the clinical quality action completed, as this aligns with the intent of the measure.
Comment: One commenter supported CMS' proposed change clarifying that the first referral during the measurement period is the one that will count toward this measure.	
Response: We thank the commenter for supporting the substantive change to measure Q374.	
After consideration of public comments, we are finalizing the changes to measure Q374 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.53 Functional Status Assessment for Total Knee Replacement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	375
CMS eCQM ID:	CMS66v10
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older who received an elective primary total knee arthroplasty (TKA) and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.
Substantive Change:	The measure denominator exclusion is revised to read: 1. Exclude patients with two or more fractures indicating trauma at the time of the total knee arthroplasty or patients with severe cognitive impairment that starts before or in any part of the measurement period. 2. Exclude patients who are in hospice care for any part of the measurement period. Updated value set/coding; Revised: 'Primary TKA Procedure' (2.16.840.1.113883.3.464.1003.198.12.1007) value set to include revisions of one component of total prosthetic replacement of knee joint.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to remove the term 'overlaps' from the denominator exclusion and replace with plain language for clarity and consistency in implementation. We proposed to expand the 'Primary TKA Procedure' value set to include revisions of one component of total prosthetic replacement of knee joint to create a more complete denominator eligible patient population as completing a functional status assessment would be appropriate for this patient population.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q375 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.54 Functional Status Assessment for Total Hip Replacement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	376
CMS eCQM ID:	CMS56v10
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.
Substantive Change:	<p>The measure denominator exclusion is revised to read:</p> <ol style="list-style-type: none"> 1. Exclude patients with two or more fractures indicating trauma at the time of the total hip arthroplasty or patients with severe cognitive impairment that starts before or in any part of the measurement period. 2. Exclude patients who are in hospice care for any part of the measurement period.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to remove the term 'overlaps' from the denominator exclusion and replace with plain language for clarity and consistency in implementation.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q376 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.55 Functional Status Assessments for Congestive Heart Failure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	377
CMS eCQM ID:	CMS90v11
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older with congestive heart failure who completed initial and follow-up patient-reported functional status assessments.
Substantive Change:	<p>The measure title is revised from 'Functional Status Assessments for Congestive Heart Failure' to: Functional Status Assessments for Heart Failure.</p> <p>The measure description is revised to read: Percentage of patients 18 years of age and older with heart failure who completed initial and follow-up patient-reported functional status assessments.</p> <p>The measure denominator exclusion is revised to read:</p> <ol style="list-style-type: none"> 1. Exclude patients with severe cognitive impairment in any part of the measurement period. 2. Exclude patients who are in hospice care for any part of the measurement period. <p>The measure guidance is revised to read: Initial functional status assessment (FSA) and encounter: The initial FSA is an FSA that occurs two weeks before or during an encounter, in the 180 days or more before the end of the measurement period. Follow-up FSA: The follow-up FSA must be completed at least 30 days but no more than 180 days after the initial FSA. The same FSA instrument must be used for the initial and follow-up assessment. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>The measure initial patient population is revised to read: Patients 18 years of age and older who had two outpatient encounters during the measurement period and a diagnosis of heart failure that starts before and continues into the measurement period.</p> <p>Updated logic and logic definitions: Updated: restructured the logic to ensure the patient meets the denominator criteria by 1) had multiple assessments in the year and that 2) there is sufficient time for them to have had repeat assessments in the year 3) there is sufficient time between assessments for their condition to have changed or for them to have responded to treatment (30-180days).</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to remove the term 'congestive' from the measure title and description based upon the expert work group recommendations in order to align the language with the denominator eligible patient population to ensure all appropriate patients are included in the initial patient population. We proposed to remove the term 'overlaps' from the denominator exclusion and replace with plain language for clarity and consistency in implementation. We proposed to revise the measure guidance to aid in measure implementation, align with measure intent and the timing constraints within the logic of the measure. We proposed to update the initial patient population to clarify timing of the heart failure diagnosis and ensure alignment with the logic. Additionally, we proposed to revise the logic to more clearly reflect relationships between the encounter and assessment(s), as identifying the first encounter without ensuring a relationship with an assessment does not meet the intent of the measure.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q377 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.56 Children Who Have Dental Decay or Cavities

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	378
CMS eCQM ID:	CMS75v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, 6 months - 20 years of age, who have had tooth decay or cavities during the measurement period.
Substantive Change:	<p>The measure description is revised to read: Percentage of children, 6 months - 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period.</p> <p>The measure denominator exclusion is revised to read: Exclude patients who are in hospice care for any part of the measurement period.</p> <p>The measure numerator is revised to read: Children who had a diagnosis of cavities or decayed teeth in any part of the measurement period.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to revise the measure description to be more explicit of the timing associated with the patient's age. We proposed to remove the term 'overlaps' from the denominator exclusion and numerator and replace with plain language for clarity and consistency in implementation.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q378 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.57 Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	379
CMS eCQM ID:	CMS74v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, 6 months - 20 years of age, who received a fluoride varnish application during the measurement period.
Substantive Change:	The measure denominator exclusion is revised to read: Exclude patients who are in hospice care for any part of the measurement period
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to remove the term 'overlaps' from the denominator exclusion and replace with plain language for clarity and consistency in implementation.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q379 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.58 Adherence to Antipsychotic Medications For Individuals with Schizophrenia

Category	Description
NQF # / eCQM NQF #:	1879 / N/A
Quality#:	383
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of individuals at least 18 years of age as of the beginning of the performance period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.
Substantive Change:	<p>Updated denominator criteria: Added: Filled at least two prescriptions for any of the qualifying antipsychotic medications listed under "Denominator Note" during the performance period</p> <p>Added: outpatient mental health encounters occurring at federally qualified health centers for the 'Patient encounter during the performance period determination Outpatient Setting Option 1'.</p> <p>Updated denominator note: Added: lumateperone to 'Atypical Antipsychotic Medications'</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to add denominator criteria to ensure that only those patients who fill at least two prescriptions for any of the qualifying antipsychotic medications are included within the denominator eligible patient population as this aligns with the intent of the measure and protects clinicians from being held accountable for non-established patients. We proposed to add outpatient mental health encounters occurring at FQHCs as denominator eligible as schizophrenia may be diagnosed at these encounters. This revision is not a reflection of any policy update and was made to allow those clinicians who bill exclusively through a FQHC to track their performance on the measure. This payment method is still not eligible for payment adjustments under MIPS. We proposed to update the 'Atypical Antipsychotic Medications' to align with current Food and Drug Administration (FDA) approved treatments for adults with schizophrenia.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q383 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.59 Follow-Up After Hospitalization for Mental Illness (FUH)

Category	Description
NQF # / eCQM NQF #:	0576 / N/A
Quality#:	391
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	<p>The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted:</p> <ul style="list-style-type: none"> • The percentage of discharges for which the patient received follow-up within 30 days after discharge. • The percentage of discharges for which the patient received follow-up within 7 days after discharge.
Substantive Change:	<p>The measure description is revised to read: The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health provider. Two rates are submitted:</p> <ul style="list-style-type: none"> • The percentage of discharges for which the patient received follow-up within 30 days after discharge • The percentage of discharges for which the patient received follow-up within 7 days after discharge
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise the description to utilize the term provider in place of practitioner for alignment within the specification.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q391 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.60 Lung Cancer Reporting (Biopsy/Cytology Specimens)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	395
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Pathology reports based on biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.
Substantive Change:	<p>The measure description is revised to read: For all collection types: Pathology reports based on lung biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type following the International Association for the Study of Lung Cancer (IASLC) guidance or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.</p> <p>The measure numerator is revised to read: For all collection types: Lung biopsy and cytology specimen reports with a diagnosis of primary non-small cell lung cancer classified into specific histologic type following IASLC guidance (see below) (including but not limited to squamous cell carcinoma or adenocarcinoma) OR classified as NSCLC-NOS with an explanation included in the pathology report</p> <p>IASLC Guidance: The IASLC recommends the following regarding terminology for small biopsy and cytology specimens:</p> <ol style="list-style-type: none"> 1. Do not use the term “large cell carcinoma” 2. Do not use the term “AIS (adenocarcinoma in situ)” or “MIA (minimally invasive adenocarcinoma)” —if a noninvasive pattern is present in a small biopsy, the term “lepidic growth” should be used instead 3. Do not use the term “BAC (bronchioloalveolar carcinoma)” <p>All three recommendations must be followed in order for a case to be considered Met (ie if any one of these terms is present, the case is Not Met)</p> <p>The measure numerator options are revised to read: For all collection types:</p> <p>Performance Met: Primary non-small cell lung cancer lung biopsy and cytology specimen report documents classification into specific histologic type following IASLC guidance OR classified as NSCLC- NOS with an explanation</p> <p>Denominator Exception: Documentation of medical reason(s) for not including the histological type OR NSCLC-NOS classification with an explanation (e.g. Specimen insufficient or non-diagnostic, specimen does not contain cancer, or other documented medical reasons)</p> <p>Performance Not Met: Primary non-small cell lung cancer lung biopsy and cytology specimen report does not document classification into specific histologic type OR histologic type does not follow IASLC guidance OR is classified as NSCLC-NOS but without an explanation</p>
Steward:	College of American Pathologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise the measure description to add clarity in alignment with the measure intent. We proposed to update the numerator and numerator options to add guidance regarding what phrases should be avoided within the pathology reports to align with IASLC guidance and to clarify what is acceptable for numerator compliance.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q395 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.61 Lung Cancer Reporting (Resection Specimens)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	396
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Pathology reports based on resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.
Substantive Change:	The measure description is revised to read: For all collection types: Pathology reports based on lung resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.
Steward:	College of American Pathologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise the measure description to include the term ‘lung’ for clarity and alignment within the specification.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q396 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.62 Melanoma Reporting

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	397
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Pathology reports for primary malignant cutaneous melanoma that include the pT category and a statement on thickness, ulceration and mitotic rate.
Substantive Change:	<p>The measure description is revised to read: For all collection types: Pathology reports for primary malignant cutaneous melanoma that include the pT category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors.</p> <p>The measure instructions are revised to read: For all collection types: This measure is to be submitted each time a patient's pathology report addresses specimens with a diagnosis of malignant cutaneous melanoma; however, only one quality-data code (QDC) per date of service for a patient is required. In instances where multiple specimens from different/unique lesions are submitted and resulted in a single report, each eligible specimen must be Met in order for the case to be considered Met (Denominator Exclusions and Denominator Exceptions are not considered eligible specimens). If any eligible specimen is Not Met, the quality data code for Not Met should be submitted for this report. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.</p> <p>The measure numerator is revised to read: For all collection types: Pathology reports for primary malignant cutaneous melanoma that include the pT category thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors</p> <p>The measure numerator options are revised to read: For all collection types:</p> <p>Performance Met: Pathology report includes the pT Category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors</p> <p>Denominator Exception: Documentation of medical reason(s) for not including pT Category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors (e.g., negative skin biopsies, insufficient tissue, or other documented medical reasons)</p> <p>Performance Not Met: Pathology report does not include the pT Category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors</p>
Steward:	College of American Pathologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the measure for all collection types to require new data elements for numerator compliance to align with updated American Academy of Dermatology (AAD) guideline recommendations. This revision is reflected in the proposed description, numerator, and numerator options language revisions to ensure the measure is aligned with the current clinical recommendations. Additionally, we proposed to revise the instructions for all collection types to clarify how to handle instances where there are multiple samples included within one report.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q397 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.63 One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	400
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with one or more of the following: a history of injection drug use, receipt of a blood transfusion prior to 1992, receiving maintenance hemodialysis, OR birthdate in the years 1945-1965 who received one-time screening for hepatitis C virus (HCV) infection.
Substantive Change:	<p>The measure title is revised from 'One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk' to: One-Time Screening for Hepatitis C Virus (HCV) for all Patients.</p> <p>The measure description is revised to read: Percentage of patients age >= 18 years who received one-time screening for hepatitis C virus (HCV) infection.</p> <p>The measure instructions are revised to read: This measure is to be submitted a minimum of once per performance period for all patients >=18 years of age seen during the performance period AND who were seen twice for any visits or who had at least one preventive visit within the 12-month performance period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.</p> <p>The measure denominator is revised to read: All patients >= 18 years of age who had at least one preventive visit OR were seen at least twice within the 12-month reporting period.</p> <p>Updated denominator criteria: Removed: Patients who were born in the years 1945 to 1965 OR History of receiving blood transfusions prior to 1992 OR Receiving maintenance hemodialysis (CPT) OR History of injection drug use</p>
Steward:	American Gastroenterological Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update this measure to align with current clinical recommendations which no longer require at-risk conditions for HCV screening. The measure will be updated to require one-time HCV screening for all patients aged 18 years and older, in accordance with current clinical recommendations. We proposed to revise the measure title, description, instructions, and denominator to reflect the removal of the at-risk criteria. Additionally, we proposed to remove the at-risk criteria from the denominator criteria.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q400 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.64 Clinical Outcome Post Endovascular Stroke Treatment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	409
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with a mRS score of 0 to 2 at 90 days following endovascular stroke intervention.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients with a Modified Rankin Score (mRS) score of 0 to 2 at 90 days following endovascular stroke intervention.</p> <p>Updated instructions: Revised: This measure is to be submitted a minimum of once per performance period for patients undergoing an endovascular stroke intervention procedure during the performance period. This measure is intended to reflect the success of the endovascular intervention inclusive of appropriate patient selection. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding. Include only patients that have cerebrovascular accidents through September 18 of the performance period. This will allow the evaluation of clinical outcome 90 days after the cerebrovascular accident within the performance period. Assessment of the mRS between 75 and 105 days is considered acceptable for reporting this measure.</p> <p>Added: Unique to this measure is the Minimum Process of Care Performance Threshold Requirement. This measure based threshold requires that at least 90% of all eligible patients have an mRS score assessed 90 days following endovascular stroke intervention. Therefore, if the performance rate for Submission Criteria 1 is below 90%, the MIPS eligible clinician would not be able to meet the denominator of the Submission Criteria 2 and this measure CANNOT BE SUBMITTED. CMS anticipates the performance rate for Submission Criteria 2 will be calculated using 100% of patients that met performance in Submission Criteria 1.</p> <p>This measure contains two submission criteria which together measure the outcome following an endovascular stroke intervention. Submission Criteria 1 evaluates whether an appropriate percentage of patients received the applicable clinical follow-up assessment using mRS. Submission Criteria 2 evaluates the rate of achieving an mRS score of 0 to 2 in those patients for whom an mRS score was obtained (during clinical follow-up, Submission Criteria 1). The rate of achieving an mRS of 0 to 2 at 90 days (Submission Criteria 2) can be used to compare this measure to performance prior to the 2021 performance year, when the measure had a single performance rate. For accountability reporting in the CMS MIPS program, the rate for Submission Criteria 2 is used for performance. For the purposes of submitting this measure Data Completeness has been determined in Submission Criteria 1.</p> <p>THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE:</p> <ol style="list-style-type: none"> 1) Percentage of patients with mRS score assessed at 90 days following endovascular stroke intervention <p>AND</p> <ol style="list-style-type: none"> 2) Percentage of patients with mRS score of 0 to 2 assessed at 90 days following endovascular stroke intervention <p>Updated denominator: Revised: Submission Criteria 1: Percentage of patients with clinical follow-up and mRS score assessed at 90 days following endovascular stroke intervention. Denominator (Submission Criteria 1): All patients with CVA undergoing endovascular stroke treatment. Submission Criteria 2: Percentage of patients with Performance Met for Submission Criteria 1 with an mRS score of 0 to 2 assessed at 90 days following endovascular stroke intervention therapy. Denominator (Submission Criteria 2): Patients with Performance Met for Submission Criteria 1 who received clinical follow-up and mRS score assessed at 90 days following endovascular stroke intervention therapy.</p> <p>Updated denominator criteria: Revised: Denominator (Submission Criteria 1) <ul style="list-style-type: none"> • All patients • Diagnosis for ischemic stroke • Patient procedure (endovascular stroke treatment) Denominator (Submission Criteria 2) <ul style="list-style-type: none"> • Minimum Process of Care Threshold Requirement: At least 90% of all eligible patients had an mRS score assessed at 90 days following endovascular stroke intervention (GXXXX submitted for Submission Criteria 1) Updated numerator: Revised: Numerator (Submission Criteria 1): Patients who received clinical follow-up and mRS score assessed at 90 days. Numerator (Submission Criteria 2): Patients with Performance Met for Submission Criteria 1 with 90 day mRS score of 0-2.</p> <p>Updated numerator note: Added: For the purposes of submitting this measure Data Completeness has been determined in Submission Criteria 1. The performance rate calculated for Submission Criteria 2 of this measure is calculated using the subset of patients identified in the Performance Met Numerator Option of Submission Criteria 1 (GXXXX).</p> <p>Updated numerator options: Added: Numerator Options (Submission Criteria 1): Performance Met: Clinical follow-up and mRS score assessed at 90 days following endovascular stroke intervention Performance Not Met: Clinical follow-up and mRS score not assessed at 90 days following endovascular stroke intervention Revised: Numerator Options (Submission Criteria 2): Performance Met: Patients with 90 day mRS score of 0 to 2</p>

Category	Description
	Performance Not Met: Patients with 90 day mRS score greater than 2
Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We proposed an update to the measure that includes a new submission criterion to assess whether a clinical follow-up and mRS score is being completed post endovascular stroke treatment. Additionally, this new submission criterion will ensure that the denominator eligible patient population being assessed for an mRS score of 0 – 2 is representative of the assessed population post treatment to determine the degree of disability or dependence in daily activities for patient suffering stroke. We proposed to add an additional denominator criterion for submission criteria 2 that requires a ‘Minimum Process of Care Threshold Requirement’ of 90%. This ensures that patients are receiving post treatment follow-ups as a standard of care being and assessed for good outcomes following a stroke. This update is reflected with the restructure of multiple components of the specification to ensure clarity on the implantation of the measure change. We also proposed to update the measure instructions to clarify what timeframe constitutes the 90-day follow-up and to align with the revisions to add a submission criterion.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q409 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.65 Door to Puncture Time for Endovascular Stroke Treatment

Category	Description
NQF # / eCOM NQF #:	N/A / N/A
Quality#:	413
CMS eCOM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of less than two hours.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of 90 minutes or less.</p> <p>The measure numerator is revised to read: Patients with CVA undergoing endovascular stroke treatment who have a door to puncture time of less than 90 minutes.</p> <p>Updated numerator options: Revised: To align with door to puncture time of 90 minutes or less.</p>
Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to revise the measure to reflect an updated door to puncture time of 90 minutes or less to more closely align with Target Stroke (a national initiative organized by the American Heart Association/American Stroke Association) which has an initial goal of achieving a door-to-puncture time of no more than 60 minutes for at least 50 percent of acute ischemic stroke patients. Additionally, The Joint Commission has set an ambitious goal of 80 percent of patients treated within 1 hour for primary stroke centers. This revision will drive quality care for this patient population as every delay in time from onset to arterial puncture will result in significant decreases in likelihood of a good outcome.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q413 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.66 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	416
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.
Substantive Change:	Updated numerator options: For all collection types: Added: Performance Met: Pediatric patient with minor blunt head trauma and PECARN prediction criteria are not assessed.
Steward:	American College of Emergency Physicians
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	We proposed to add a Performance Met numerator option to this measure to ensure those patients without a documented PECARN prediction score are correctly submitted as a Performance Met. As the PECARN prediction should be assessed for all patients seen for minor blunt head trauma, those patients without a documented PECARN prediction score would not meet the intent of the measure.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q416 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.67 Osteoporosis Management in Women Who Had a Fracture

Category	Description
NQF # / eCQM NQF #:	0053 / N/A
Quality#:	418
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of women age 50-85 who suffered a fracture in the six months prior to the performance period through June 30 of the performance period and who either had a bone mineral density test or received a prescription for a drug to treat osteoporosis in the six months after the fracture.
Substantive Change:	<p>The measure description is revised to read: For all collection types: The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture.</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.</p> <p>Updated denominator exclusion: For all collection types: Added: Patients who receive palliative care services any time during the intake period through the end of the measurement year</p> <p>Added: Donzepezil-memantine to Dementia medication list.</p> <p>Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the description for alignment with other programs. We proposed that the denominator exclusion language be updated to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, the medications were update for the Dementia medication list to include Donzepezil-memantine as this is an applicable medication for the purposes of the denominator exclusion. We proposed to revise the denominator note for the MIPS CQMs Specifications collection type and the numerator note for the Medicare Part B Claims Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.
<p>Comment: One commenter agreed that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in these measures and supported CMS' proposal to add palliative care exclusions or exceptions.</p> <p>Response: We thank the commenter for supporting the substantive change to measure Q418.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q418 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.68 Photodocumentation of Cecal Intubation

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	425
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	The rate of screening and surveillance colonoscopies for which photodocumentation of at least two landmarks of cecal intubation is performed to establish a complete examination.
Substantive Change:	Modified collection type: MIPS CQMs Specifications collection type
Steward:	American Society for Gastrointestinal Endoscopy
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped-out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.
<p>Comment: One commenter opposed removal of Medicare Part B Claims Measure Specifications collection type for measure Q425: Photodocumentation of Cecal Intubation, although the commenter appreciated retaining the MIPS CQMs Specifications collection type for this measure as the measure is recognized by the gastroenterology specialty as an important quality indicator for colonoscopy. Removing the Medicare Part B Claims Measure Specifications collection type disadvantages gastroenterologists in small and rural practices who provide screening colonoscopy services and do not participate in registry reporting from having a meaningful, specialty-specific measure to report. If this measure is removed the only other gastroenterology measure available for the Medicare Part B Claims Measure Specifications collection type would be Q320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients, which is considered topped out with a seven-point cap. Measure Q425 illustrates the commenter's concern with removal of quality measures from MIPS regardless of whether the measure is truly topped out and not just representative of top performers or one data source. Gastroenterologists have been challenged over the years in being able to meaningfully report across a broad array of QPP and QCDR specialty-specific quality measures with available measures changing each performance year.</p> <p>Response: The Medicare Part B Claims Measure Specifications collection type has reached the end of the topped-out life cycle, which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2021 Benchmark File. In addition, there are processes in place to address instances where clinicians do not have the ability to submit six quality measures. MIPS CQMs Specifications collection type may be reported without a third-party intermediary (see the '2021 MIPS Quality Quick Start Guide' at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1294/2021%20MIPS%20Quality%20Quick%20Start%20Guide.pdf).</p> <p>After consideration of public comments, we are finalizing the changes to measure Q425 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.69 Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	430
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, who undergo a procedure under an inhalational general anesthetic, AND who have three or more risk factors for post-operative nausea and vomiting (PONV), who receive combination therapy consisting of at least two prophylactic pharmacologic antiemetic agents of different classes preoperatively and/or intraoperatively.
Substantive Change:	Updated numerator definition: Added: Propofol for induction and maintenance of anesthesia
Steward:	American Society of Anesthesiologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise the numerator definition to add propofol as this is a commonly used prophylactic antiemetic and aligns with current clinical recommendations.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q430 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.70 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	438
CMS eCQM ID:	CMS347v5
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications CMS Web Interface Measure Specifications MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> • Adults aged ≥ 21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR • Adults aged ≥ 21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; OR • Adults aged 40-75 years with a diagnosis of diabetes with a fasting or direct LDL-C level of 70-189 mg/dL.
Substantive Change:	<p>The measure description is revised to read: For all collection types: Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <p>*All patients who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR</p> <p>*Patients aged ≥ 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR</p> <p>*Patients aged 40-75 years with a diagnosis of diabetes</p> <p>The measure definition is revised to read: For the eCQM Specifications collection type:</p> <p>Clinical atherosclerotic cardiovascular disease (ASCVD) includes:</p> <ul style="list-style-type: none"> * Acute coronary syndromes * History of myocardial infarction * Stable or unstable angina * Coronary or other arterial revascularization * Stroke or transient ischemic attack (TIA) * Peripheral arterial disease of atherosclerotic origin <p>Lipoprotein density cholesterol (LDL-C) result:</p> <ul style="list-style-type: none"> * A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record. When both direct and calculated test results are available on the same day, the direct LDL-C test result should be used. <p>Statin therapy:</p> <ul style="list-style-type: none"> * Administration of one or more of a group of medications that are used to lower plasma lipoprotein levels in the treatment of hyperlipoproteinemia. <p>Statin Medication Therapy List (NOTE: List does NOT include dosage):</p> <p>[Generic name] (Brand or trade name) and (-) Medication type, if applicable:</p> <p>[Atorvastatin] (Lipitor) - Statin</p> <p>[Fluvastatin] (Lescol XL or Lescol) - Statin</p> <p>[Lovastatin (Mevinolin)](Mevacor or Altoprev) -Statin</p> <p>[Pitavastatin] (Livalo or Zypitamag or Nikita) - Statin</p> <p>[Pravastatin Sodium] (Pravachol) - Statin</p> <p>[Rosuvastatin Calcium] (Crestor) - Statin</p> <p>[Simvastatin] (Zocor) - Statin</p> <p>[Amlodipine Besylate/Atorvastatin Calcium] (Caduet) – Fixed Dose Combination</p> <p>[Ezetimibe/Simvastatin] (Vytorin) – Fixed Dose Combination</p> <p>Statin-Associated Muscle Symptoms (SAMS) – The 2018 ACC/AHA/MS Guideline (Grundy et al., 2019) includes the following SAMS: myalgias, myositis, myopathy, or statin-associated autoimmune myopathy. Patients who experience significant or repeated statin-associated muscle symptoms may prefer not to take or continue statin therapy and therefore may be removed from the denominator.</p> <p>Updated denominator exception:</p> <p>For the eCQM Specifications CMS Web Interface Measure Specifications collection types:</p> <p>Revised: Patients with statin-associated muscle symptoms or an allergy to statin medication</p> <p>Removed: Patients with diabetes who have the most recent fasting or direct LDL-C laboratory test result < 70 mg/dL and are not taking statin therapy</p> <p>For the MIPS CQM Specifications collection type:</p> <p>Revised:</p> <p>Documentation of medical reason(s) for not currently being a statin therapy user or receiving an order (prescription) for statin therapy (e.g., patients with statin-associated muscle symptoms or an allergy to statin medication therapy, patients who are receiving palliative or hospice care, patients with active liver disease or hepatic disease or insufficiency, and patients with end stage renal disease [ESRD])</p> <p>Removed: Submission Criteria Three:</p> <p>Documentation of patients with diabetes who have a most recent fasting or direct LDL-C laboratory test result < 70 mg/dL and are not taking statin therapy</p> <p>Updated denominator exclusion: For all collection types: Added: Timeframe of 'at any time during the measurement period' to all denominator exclusions.</p> <p>The measure guidance is revised to read: For the eCQM Specifications collection type: Initial Population Guidance:</p> <p>The initial population covers three distinct populations. Use the following process to prevent counting patients more than once.</p> <p>Initial Population 1:</p> <p>All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure, before the end of the measurement period.</p>

Category	Description
	<p>-If YES, meets Initial Population 1 risk category -If NO, screen for next risk category Initial Population 2: Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory test result of LDL-C ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia -If YES, meets Initial Population 2 risk category -If NO, screen for next risk category Initial Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with an active diagnosis of Type 1 or Type 2 diabetes at any time during the measurement period -If YES, meets Initial Population 3 risk category -If NO, patient does NOT meet Initial Population criteria and is NOT eligible for measure inclusion Initial Population Guidance for Encounter: -In order for the patient to be included in the Initial Population, the patient must have ONE initial population-eligible visit, defined as follows: outpatient visit, initial or established office visit, face-to-face interaction, preventive care services, or annual wellness visit. LDL-C Laboratory test result options: The measure can be reported for all patients with a documented LDL-C level recorded as follows: To meet Initial Population 1: There is no LDL-C result required. To meet Initial Population 2: If a patient has ANY previous laboratory result of LDL-C ≥ 190 mg/dL, report the highest value ≥ 190 mg/dL. To meet Initial Population 3: There is no LDL-C result required. Numerator instructions and guidance: -Current statin therapy use must be documented in the patient's current medication list or ordered during the measurement period. -ONLY statin therapy meets the measure Numerator criteria (NOT other cholesterol lowering medications). -Prescription or order does NOT need to be linked to an encounter or visit; it may be called to the pharmacy. -Statin medication "samples" provided to patients can be documented as "current statin therapy" if documented in the medication list in health/medical record. -Patients who meet the denominator criteria for inclusion, but are not prescribed or using statin therapy, will NOT meet performance for this measure unless they have an allowable denominator exception. Patients with an allowable denominator exception should be removed from the denominator of the measure and reported as a valid exception. -There is only one performance rate calculated for this measure: the weighted average of the three populations. -Adherence to statin therapy is not calculated in this measure. -It may not be appropriate to prescribe statin therapy for some patients (see exceptions and exclusions for the complete list) Intensity of statin therapy in primary and secondary prevention: The expert panel of the 2018 ACC/AHA/MS Guidelines (Grundy et al., 2019) defines recommended intensity of statin therapy on the basis of the average expected LDL-C response to specific statin and dose. Although intensity of statin therapy is important in managing cholesterol, this measure assesses prescription of ANY statin therapy, irrespective of intensity. Assessment of appropriate intensity and dosage documentation added too much complexity to allow inclusion of statin therapy intensity in the measure at this time. Lifestyle modification coaching: A healthy lifestyle is important for the prevention of cardiovascular disease. However, lifestyle modification monitoring and documentation added too much complexity to allow its inclusion in the measure at this time. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>Updated guidance/denominator confirmation: For the CMS Web Interface Measure Specifications collection type: Revised: Language within all of the guidance/confirmation sections was updated to reflect the changes to the initial patient populations.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications and CMS Web Interface Measure Specifications collection types: Population 1: All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure Population 2: Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes</p> <p>Updated denominator: For the eCQMs Specifications collection type: Revised: Equals Initial Population For the CMS Web Interface Measure Specifications collection types: Revised: Population 1: All patients who were previously diagnosed with or currently have an active diagnosis of ASCVD, including an ASCVD procedure, Population 2: Patients aged ≥ 20 years at the beginning of the measurement period who have ever had laboratory result of LDL-C ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes</p>

Category	Description
	<p>The measure rate aggregation is revised to read: For the eCQM Specifications collection type: This measure is intended to have one reporting rate, which aggregates the following populations into a single performance rate for reporting purposes: Population 1: All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure, before the end of the measurement period. Population 2: Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory test result of LDL-C ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with an active diagnosis of Type 1 or Type 2 diabetes at any time during the measurement period. For the purposes of this measure, a single performance rate can be calculated as follows: Performance Rate = (Numerator 1 + Numerator 2 + Numerator 3) / [(Denominator 1 - Denominator Exclusions 1 - Denominator Exclusions 1) + (Denominator 2 - Denominator Exclusions 2 - Denominator Exclusions 2) + (Denominator 3 - Denominator Exclusions 3 - Denominator Exclusions 3)]</p> <p>Updated definition: For the MIPS CQMs Specifications collection type: Revised: Lipoprotein Density Cholesterol (LDL-C) result – A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record. When both direct and calculated test results are available, the direct LDL-C test result should be used. Added: - Statin-Associated Muscle Symptoms (SAMS) – The 2018 ACC/AHA/MS Guideline (Grundy et al., 2019) includes the following SAMS: myalgias, myositis, myopathy, or statin-associated autoimmune myopathy. Patients who experience significant or repeated statin-associated muscle symptoms may prefer not to take or continue statin therapy and therefore may be removed from the denominator. The following ICD-10-CM codes are included in the Denominator Exception (G9781) to define SAMS: G72.0, G72.9, M60.9, M79.10. - Zypitomag and Nikita to statin medication therapy list. Revised: Caduet and Vytorin to 'Fixed Dose Combination'. For the CMS Web Interface Measure Specifications collection type: Revised: Statin therapy - Administration of one or more of a group of medications that are used to lower plasma lipoprotein levels in the treatment of hyperlipoproteinemia.</p> <p>Table 1 - Statin Medication Therapy List (NOTE: List does NOT include dosage): [Generic name] (Brand or trade name) and (-) Medication type, if applicable: [Atorvastatin] (Lipitor) - Statin [Fluvastatin] (Lescol XL or Lescol) - Statin [Lovastatin (Mevinolin)](Mevacor or Altoprev) - Statin [Pitavastatin] (Livalo or Zypitomag or Nikita) - Statin [Pravastatin Sodium] (Pravachol) - Statin [Rosuvastatin Calcium] (Crestor) - Statin [Simvastatin] (Zocor) - Statin [Amlodipine Besylate/Atorvastatin Calcium] (Caduet) – Fixed Dose Combination [Ezetimibe/Simvastatin] (Vytorin) – Fixed Dose Combination</p> <p>Statin-Associated Muscle Symptoms (SAMS) – The 2018 ACC/AHA/MS Guideline (Grundy et al., 2019) includes the following SAMS: myalgias, myositis, myopathy, or statin-associated autoimmune myopathy. Patients who experience significant or repeated statin-associated muscle symptoms may prefer not to take or continue statin therapy and therefore may be removed from the denominator.</p> <p>Lipoprotein Density Cholesterol (LDL-C) result - A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record. When both direct and calculated test results are available on the same day, the direct LDL-C test result should be used.</p> <p>Updated denominator: For the MIPS CQMs Specifications collection type: Revised: Submission Criteria: 1) All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure. 2) Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. 3) Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes.</p> <p>Updated denominator criteria is revised to read: For the MIPS CQMs Specifications collection type: Updated: Submission Criteria 1: Revised: - All patients, regardless of age - Previously diagnosed or have an active diagnosis of clinical ASCVD, including ASCVD procedure. Submission Criteria 2: Revised: - Patient aged ≥ 20 years at the beginning of the measurement period - Any LDL-C laboratory test result ≥ 190 mg/dL - History of or active diagnosis of familial hypercholesterolemia Submission Criteria 3: Removed:</p>

Category	Description
	<p>Patient's highest fasting or direct LDL-C laboratory test result in the measurement period or two years prior to the beginning of the measurement period is 70 –189 mg/dL.</p> <p>Updated numerator guidance: For the CMS Web Interface Measure Specifications collection type: Revised: These drugs may be used as a Denominator Exception if present in the patient's record accompanied by an appropriate conditional reason why the patient is not taking the drug (e.g. statin-associated muscle symptoms or an allergy to statin medication)</p> <p>- Documentation of statin therapy prescribed or being taken during the measurement period can be completed during a telehealth encounter.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the measure to align with 2018 American College of Cardiology (ACC)/American Heart Association (AHA) cholesterol guidelines and recommendations. These revisions are reflected in multiple components of the measure specifications for all collection types. The measure definitions and/or guidance sections for all collection types were revised to align with and add clarity to the revisions within the measure to align with current clinical guidelines and recommendations. We proposed to remove the denominator exception found in submission criteria 3 for patients with diabetes not taking statin therapy who have the most recent fasting or direct LDL-C laboratory test result < 70 mg/dL as it is no longer applicable as the denominator criteria was revised to remove LDL-C laboratory testing criteria. Additionally, we propose to add statin-associated muscle symptoms to the denominator exception for documentation of medical reason(s) for all submission criteria and all collection types as it would not be appropriate to prescribe statin therapy for this patient population.</p> <p>We proposed to update the numerator guidance for the CMS Web Interface Measure Specifications collection type to allow for the documentation of statin therapies prescribed or taken during the measurement period to be completed during a telehealth encounter as this aligns with the intent of the measure and clinical workflow.</p> <p>We proposed to revise the statin medication therapy list for all collection types to reflect current clinical guidelines and recommendations. Additionally, we proposed to update the denominator exclusions for all submission criteria and collection types to include a timing component in order to clarify when it must occur and for consistency in implementation.</p>
<p>Comment: One commenter agreed that patients receiving palliative care are not appropriate for the clinical quality actions being assessed in these measures and supported CMS' proposal to add palliative care exclusions or exceptions.</p> <p>Response: We thank the commenter for supporting the substantive change to measure Q438.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q438 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.71 Appropriate Workup Prior to Endometrial Ablation

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	448
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results are documented before undergoing an endometrial ablation.
Substantive Change:	<p>The measure denominator definition is revised to read: Index Date –Date of first endometrial ablation during the performance period.</p> <p>Updated denominator exclusion: Revised: Patients who had an endometrial ablation procedure during the 12 months prior to the index date (exclusive of the index date).</p> <p>The measure numerator is revised to read: Patients who received endometrial sampling or hysteroscopy with biopsy and results were documented during the 12 months prior to the index date (exclusive of the index date) of the endometrial ablation.</p> <p>The measure numerator options are revised to read: Performance Met: Endometrial sampling or hysteroscopy with biopsy and results documented during the 12 months prior to the index date (exclusive of the index date) of the endometrial ablation Performance Not Met: Endometrial sampling or hysteroscopy with biopsy and results not documented during the 12 months prior to the index date (exclusive of the index date) of the endometrial ablation</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to revise the measure denominator definition to reference the first endometrial ablation as the index date. This change aligns with the measure intent as the timing of the quality action should be assessed based on the date of the endometrial ablation procedure. We proposed to revise the denominator exclusion for clarity in timing of previous endometrial ablations that may suffice for this exclusion. Additionally, we proposed to revise the numerator and numerator options for clarity in timing of the quality action as well as to align with the revised definition for Index Date to ensure alignment with measure intent.</p>
<p>We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q448 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.</p>	

D.72 Appropriate Treatment for Patients with Stage I (T1c) - III HER2 Positive Breast Cancer

Category	Description
NQF # / eCQM NQF #:	1858 / N/A
Quality#:	450
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of female patients aged 18 to 70 with stage I (T1c) - III HER2 positive breast cancer for whom appropriate treatment is initiated.
Substantive Change:	Updated denominator criteria: Added: exclusion for telehealth
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to add an exclusion for telehealth as adjuvant therapy would require an in-person encounter and this will ensure only the appropriate patients are being pulled into the denominator eligible patient population.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q450 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.73 Back Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	459
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, back pain is rated by the patients as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at three months (6 to 20 weeks) postoperatively.
Substantive Change:	Updated numerator definition: Revised: Preoperative Assessment VAS Pain - A preoperative VAS pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained via a telephone screening or more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS was obtained, use the VAS that is the most recent and prior to the procedure. Postoperative Assessment VAS Pain - A postoperative VAS pain scale score can be obtained from the patient at three months (6 - 20 weeks) after the date of procedure. Assessment scores obtained via a telephone screening or prior to six weeks and after 20 weeks postoperatively will not be used for measure calculation. If more than one postoperative VAS was obtained during the six to 20 weeks following the procedure, use the most recent score obtained during the allowable timeframe.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q459 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.74 Back Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	460
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar fusion procedure, back pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at one year (9 to 15 months) postoperatively.
Substantive Change:	Updated numerator definition: Revised: Preoperative Assessment VAS Pain - A preoperative VAS pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained via a telephone screening or more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS was obtained, use the VAS that is the most recent and prior to the procedure. Postoperative Assessment VAS Pain - A postoperative VAS pain scale score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained via a telephone screening or prior to 9 months and after 15 months postoperatively will not be used for measure calculation. If more than one postoperative VAS was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q460 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.75 Leg Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	461
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS Pain scale at three months (6 to 20 weeks) postoperatively.
Substantive Change:	Updated numerator definition: Revised: Preoperative Assessment VAS Pain - A preoperative VAS pain scale score can be obtained from the patient any time up to three months pre-operatively, inclusive of the date of the procedure. Assessment scores obtained via a telephone screening or more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS was obtained, use the VAS that is the most recent and prior to the procedure. Postoperative Assessment VAS Pain - A postoperative VAS pain scale score can be obtained from the patient three months (6 to 20 weeks) after the date of the procedure. Assessment scores obtained via a telephone screening or prior to 6 weeks and after 20 weeks postoperatively will not be used for measure calculation. If more than one postoperative VAS was obtained during the six to 20 weeks following the procedure, use the most recent score obtained during the allowable timeframe.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q461 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.76 Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	462
CMS eCQM ID:	CMS645v5
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.
Substantive Change:	Updated logic definitions: Revised: First Androgen Deprivation Therapy' to 'Androgen Deprivation Therapy Start Date'. Added: 'Androgen Deprivation Therapy for Urology Care Medication Active Start Dates' and 'Androgen Deprivation Therapy for Urology Care Medication Order Start Dates.
Steward:	Oregon Urology Institute
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise the logic to include order for androgen deprivation therapy as an option to meet eligibility for the initial patient population as these patients would be appropriate for inclusion to be assessed for the quality action.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q462 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.77 Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	463
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 3 through 17 years, who undergo a procedure under general anesthesia in which an inhalational anesthetic is used for maintenance AND who have two or more risk factors for post-operative vomiting (POV), who receive combination therapy consisting of at least two prophylactic pharmacologic anti-emetic agents of different classes preoperatively and/or intraoperatively.
Substantive Change:	Updated numerator definition: Added: Propofol for induction and maintenance of anesthesia.
Steward:	American Society of Anesthesiologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise the numerator definition to add Propofol as this is a commonly used prophylactic antiemetic and aligns with current clinical recommendations.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q463 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.78 Functional Status After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	469
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.
Substantive Change:	<p>The measure description is revised to read: For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.</p> <p>Updated instructions: Revised: NOTE: This measure is a target-based measure with two ways to meet the numerator; either a postoperative ODI score that is less than or equal to 22 OR an improvement of 30 points or greater from the preoperative to postoperative score. It is expressed as a proportion or rate. Patients having received a lumbar fusion procedure who are not assessed for functional status postoperatively remain in the denominator and are considered as not meeting the target. The measure intent is that MIPS eligible clinicians will submit all denominator eligible procedures for performance calculation.</p> <p>The measure numerator is revised to read: All eligible patients whose functional status is less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI Version 2.1a) patient reported outcome tool at one year (9 to 15 months) postoperatively</p> <p>Updated numerator definition: Revised: Preoperative Assessment Oswestry Disability Index (ODI version 2.1a)- A preoperative ODI functional assessment score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative ODI was obtained, use the ODI that is the most recent and prior to the procedure.</p> <p>Postoperative Assessment Oswestry Disability Index (ODI version 2.1a) - A postoperative ODI functional assessment score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to nine months and after fifteen months postoperatively will not be used for measure calculation. If more than one postoperative ODI was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.</p> <p>Functional Status Target #2 - A patient who does not meet Functional Status Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the improvement is greater than or equal to 30 points.</p> <p>The measure numerator note is revised to read: NUMERATOR NOTE: It is recommended that both a preoperative and postoperative tool be administered to the patient to increase the chance that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1043 or G2143 is submitted.</p> <ul style="list-style-type: none"> • ODI is not administered postoperatively at one year (9 to 15 months) • Functional status is measured using a different patient reported functional status tool or ODI version • Postoperative ODI is administered less than 9 months or greater than 15 months (1 year window) • Postoperative ODI is greater than 22 and no valid preoperative ODI to measure improvement • Postoperative ODI was greater than 22 and preoperative ODI (to measure improvement) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure.) <p>The measure numerator options are revised to read:</p> <p>Performance Met: Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was less than or equal to 22 OR Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of 30 points or greater.</p> <p>Performance Not Met: Functional status was not measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.</p> <p>Performance Not Met: Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was greater than 22 AND Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of less than 30 points.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered. Additionally, we proposed to update multiple components of the measure specifications to remove 'a change' and replace it with 'an improvement' as the intent of the measure is to assess if there was improvement in a patient's functional status.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q469 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.79 Functional Status After Primary Total Knee Replacement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	470
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) or a 71 or greater on the KOOS, JR tool at one year (9 to 15 months) postoperatively.
Substantive Change:	Updated numerator definition: Revised: Measure Assessment Period (Performance Period) - The period of time following the procedure date that is in which a postoperative Oxford Knee Score (OKS) or KOOS, JR. functional status score can be obtained reflecting a one year post operative assessment with a 9 to 15 month window. If more than one postoperative assessment was obtained during the 9 to 15 month window, use the most recent score during the allowable timeframe.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q470 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.80 Functional Status After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	471
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively.
Substantive Change:	<p>The measure description is revised to read: For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively.</p> <p>The measure numerator is revised to read: All eligible patients whose functional status is less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively.</p> <p>Updated numerator definition: Revised: Preoperative Assessment Oswestry Disability Index (ODI version 2.1a) - A preoperative ODI functional assessment score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative ODI was obtained, use the ODI that is the most recent and prior to the procedure.</p> <p>Postoperative Assessment Oswestry Disability Index (ODI version 2.1a) - A postoperative ODI functional assessment score can be obtained from the patient three months (6 to 20 weeks) after the date of procedure. Assessment scores obtained prior to six weeks and after twenty weeks postoperatively will not be used for measure calculation. If more than one postoperative ODI was obtained during the 6 to 20 weeks following the procedure, use the most recent score obtained during the allowable timeframe. ODI can be obtained below or at the following link https://eprovide.mapi-trust.org/instruments/oswestry-disability-index.</p> <p>Functional Status Target #2 - A patient who does not meet Functional Status Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at three months (6 to 20 weeks) after the procedure AND the improvement is greater than or equal to 30 points.</p> <p>Updated instructions: Revised: NOTE: This measure is a target-based measure with two ways to meet the numerator; either a postoperative ODI score that is less than or equal to 22 OR an improvement of 30 points or greater from the preoperative to postoperative score. It is expressed as a proportion or rate. Patients having received a lumbar discectomy/laminectomy procedure who are not assessed for functional status postoperatively remain in the denominator and are considered as not meeting the target. The measure intent is that MIPS eligible clinicians will submit all denominator eligible procedures to be utilized for performance calculation.</p> <p>The measure numerator note is revised to read: NUMERATOR NOTE: It is recommended that both a preoperative and postoperative be administered to the patient increasing chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1049 or G2145 is submitted.</p> <ul style="list-style-type: none"> • ODI is not administered postoperatively at three months (6 to 20 weeks) • Functional status is measured using a different patient reported functional status tool or ODI version • Postoperative ODI is administered less than 6 weeks or greater than 20 weeks (3 month window) • Postoperative ODI is greater than 22 and no valid preoperative ODI to measure improvement • Postoperative ODI is greater than 22 and preoperative ODI (to measure improvement) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure) <p>The measure numerator options are revised to read:</p> <p>Performance Met: Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at three months (6 – 20 weeks) postoperatively was less than or equal to 22 OR Functional status measured by the ODI version 2.1a within three months preoperatively AND at three months (6 - 20 weeks) postoperatively demonstrated an improvement of 30 points or greater.</p> <p>Performance Not Met: Functional status was not measured by the Oswestry Disability Index (ODI version 2.1a) at three months (6 - 20 weeks) postoperatively.</p> <p>Performance Not Met: Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at three months (6 – 20 weeks) postoperatively was greater than 22 AND Functional status measured by the ODI version 2.1a within three months preoperatively AND at three months (6 - 20 weeks) postoperatively demonstrated an improvement of less than 30 points.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered. Additionally, we proposed to update multiple components of the measure specifications to remove 'a change' and replace it with 'an improvement' as the intent of the measure is to assess if there was improvement in a patient's functional status.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q472 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.81 Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture

Category	Description
NQF # / eCQM NQF #:	N/A / 3475e
Quality#:	472
CMS eCQM ID:	CMS249v4

Category	Description
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.
Substantive Change:	<p>Updated denominator exclusion: Revised: The following risk factors may occur at any time in the patient's history or during the measurement period:</p> <p>Rheumatoid arthritis</p> <p>Hyperthyroidism</p> <p>Malabsorption Syndromes: celiac disease, inflammatory bowel disease, ulcerative colitis, Crohn's disease, cystic fibrosis, malabsorption</p> <p>Chronic liver disease</p> <p>Chronic malnutrition</p> <p>Osteoporotic fracture</p> <p>The following risk factors may occur any time in the patient's history prior to the start of the measurement period but do not need to be active at the start of the measurement period:</p> <p>Documentation of history of hip fracture in parent</p> <p>Glucocorticoids [cumulative medication duration >= 90 days]</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise the denominator exclusion to remove the dosage requirements associate with glucocorticoid usage calculation to more accurately capture patients with relevant exposure and to exclude patients who had an osteoporotic fracture at any point in time, based upon stakeholder feedback. This will ensure that only patients appropriate for the assessment of the quality action are being included within the initial patient population.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q472 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.82 Leg Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	473
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively.
Substantive Change:	<p>Updated numerator definition: Revised: Preoperative Assessment VAS Pain - A preoperative VAS pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained via a telephone screening or more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS was obtained, use the VAS that is the most recent and prior to the procedure.</p> <p>Postoperative Assessment VAS Pain - A postoperative VAS pain scale score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained via a telephone screening or prior to 9 months and after 15 months postoperatively will not be used for measure calculation. If more than one postoperative VAS was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q473 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.83 Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	476
CMS eCQM ID:	CMS771v3
National Quality Strategy Domain:	Person and Caregiver-centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.
Substantive Change:	Updated logic definitions: Revised: the denominator exclusion "Patients with an initial BPH diagnosis that starts during, or within 30 days of hospitalization" logic has been updated to identify the encounter for the first diagnosis. Updated value set/coding: Updated: the denominator exclusion "Patients with a diagnosis of morbid obesity, or with a BMI Exam >40 before the follow up urinary symptom score" value set was updated to allow only calculated BMIs
Steward:	Large Urology Group Practice Association and Oregon Urology Institute
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise the logic of the denominator exclusion to ensure that the first encounter is being utilized to correctly identify the initial Benign Prostatic Hyperplasia (BPH) diagnosis to align with the intended timing component of the exclusion. Additionally, we proposed to update the body mass index (BMI) denominator exclusion value set to allow for calculated BMIs to align with the measure intent and ensure only applicable patients are being excluded.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q476 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.84 Functional Status Change for Patients with Neck Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	478
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	This is a patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with neck impairments. The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).
Substantive Change:	The measure description is revised to read: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with neck impairments. The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to update the measure description to align language across Focus on Therapeutic Outcomes, Inc. (FOTO) measures.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q478 as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

D.85 Age-Related Macular Degeneration (AMD): Dilated Macular Examination

Category	Description
NQF # / eCQM NQF #:	0087 / N/A
Quality#:	014
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12 month performance period.
Substantive Change:	Modified collection type: MIPS CQM Specifications collection type.
Steward:	American Academy of Ophthalmology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640.
After consideration of public comments received under Table C.2, we are finalizing the removal of measure Q014 as indicated for the CY 2022 performance period/2024 MIPS payment year and future years for the Medicare Part B Claims Specifications collection type only. Measure Q014 will remain in the MIPS program for the CY 2022 performance period/2024 MIPS payment year for the MIPS CQMs Specifications collection type.	

D.86 Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	050
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.
Substantive Change:	Modified collection type: MIPS CQM Specifications collection type.
	Updated denominator: Added Physical Therapy MIPS eligible clinician.
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640.
After consideration of public comments received under Table C.6, we are finalizing the removal of measure Q050 as indicated for the CY 2022 performance period/2024 MIPS payment year and future years for the Medicare Part B Claims Specifications collection type only. Measure Q050 will remain in the MIPS program for the CY 2022 performance period/2024 MIPS payment year for the MIPS CQMs Specifications collection type.	

D.87 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	317
CMS eCQM ID:	CMS22v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.
Substantive Change:	<p>The measure description is revised to read: For all collection types: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.</p> <p>The measure definition is revised to read: For the eCQM Specifications collection type: Blood Pressure (BP) Classification: BP is defined by four (4) BP reading classifications: Normal, Elevated, First Hypertensive, and Second Hypertensive Readings</p> <ul style="list-style-type: none"> * Normal BP: Systolic BP (SBP) < 120 mmHg AND Diastolic BP (DBP) < 80 mmHg * Elevated BP: SBP of 120-129 mmHg AND DBP < 80 mmHg * First Hypertensive Reading: SBP of >= 130 mmHg OR DBP of >= 80 mmHg without a previous SBP of >= 130 mmHg OR DBP of >= 80 mmHg during the 12 months prior to the encounter * Second Hypertensive Reading: Requires a SBP >= 130 mmHg OR DBP >= 80 mmHg during the current encounter AND a most recent BP reading within the last 12 months SBP >= 130 mmHg OR DBP >= 80 mmHg <p>Recommended BP Follow-Up: The 2017 Guideline for the Prevention, Detection, Evaluation and Management of High Blood Pressure in Adults from the American College of Cardiology and American Heart Association (2017 Guideline) recommends BP screening thresholds as defined under Blood Pressure Classifications and recommends interventions based on the current BP reading as listed in the "Recommended Blood Pressure Follow-Up Interventions" below</p> <p>The types of Recommended Nonpharmacologic Interventions, such as lifestyle modifications, are listed following the section on Recommended Follow-Up Interventions based on BP Classification.</p> <p>Recommended Blood Pressure Follow-Up Interventions:</p> <ul style="list-style-type: none"> * Normal BP: No follow-up required for SBP < 120 mmHg AND DBP < 80 mmHg * Elevated BP: Patients with SBP of 120-129 mmHg AND DBP < 80 mmHg: <ul style="list-style-type: none"> * Referral to Alternate/Primary Care Health Care Professional OR * Follow-up with rescreen in 2 to 6 months AND recommend nonpharmacologic interventions * First Hypertensive BP Reading: Patients with one elevated reading of SBP >= 130 mmHg OR DBP >= 80 mmHg: <ul style="list-style-type: none"> * Referral to Alternate/Primary Care Health Care Professional OR * Follow-up with rescreen > 1 day and < 4 weeks AND recommend nonpharmacologic interventions * Second Hypertensive BP Reading: <ul style="list-style-type: none"> - Second Hypertensive BP Reading: Patients with second elevated reading of SBP of 130-139 mmHg OR DBP of 80-89 mmHg: <ul style="list-style-type: none"> * Referral to Alternate/Primary Care Healthcare Professional OR * Nonpharmacologic intervention AND reassessment in 2-6 months AND an order for a laboratory test or ECG for hypertension - Second Hypertensive BP Reading: SBP >= 140 or DBP >= 90: <ul style="list-style-type: none"> * Referral to Alternate/Primary Care Healthcare Professional OR * Nonpharmacologic intervention AND BP-lowering medication AND reassessment within 4 weeks AND an order for a laboratory test or ECG for hypertension <p>The 2017 Guideline outlines nonpharmacologic interventions (lifestyle modifications) which must include one or more of the following as indicated:</p> <ul style="list-style-type: none"> * Weight Reduction * Dietary Approaches to Stop Hypertension (DASH) Eating Plan * Dietary Sodium Restriction * Increased Physical Activity * Moderation in alcohol (ETOH) Consumption <p>Updated numerator logic: For the eCQM Specifications collection type: Revised: logic to apply exceptions based on blood pressure classification.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Removed: Hypertensive encephalopathy from Diagnosis of Hypertension (2.16.840.1.113883.3.600.263) value set.</p> <p>The measure numerator definition is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Definitions:</p>

Category	Description
	<p>Blood Pressure (BP) Classification – BP is defined by four (4) BP reading classifications: Normal, Elevated, First Hypertensive, and Second Hypertensive Readings</p> <ul style="list-style-type: none"> • Normal BP: Systolic BP (SBP) < 120 mmHg AND Diastolic BP (DBP) < 80 mmHg • Elevated BP: SBP of 120-129 mmHg AND DBP < 80 mmHg • First Hypertensive Reading: SBP of \geq 130 mmHg OR DBP of \geq 80 mmHg without a previous SBP of \geq 130 mmHg OR DBP of \geq 80 mmHg during the 12 months prior to the encounter • Second Hypertensive Reading: Requires a SBP \geq 130 mmHg OR DBP \geq 80 mmHg during the current encounter AND a most recent BP reading within the last 12 months SBP \geq 130 mmHg OR DBP \geq 80 mmHg <p>Recommended BP Follow-Up – The 2017 Guideline for the Prevention, Detection, Evaluation, and Management of High Blood Pressure in Adults from the American College of Cardiology and American Heart Association (2017 Guideline) recommends BP screening and thresholds as defined under Blood Pressure Classifications and recommends interventions based on the current BP reading as listed in the “Recommended Blood Pressure Follow-Up Table” below.</p> <p>Recommended Nonpharmacologic Interventions (Lifestyle Modifications) – The 2017 Guideline outlines nonpharmacologic interventions which must include one or more of the following as indicated:</p> <ul style="list-style-type: none"> • Weight Reduction • Dietary Approaches to Stop Hypertension (DASH) Eating Plan • Dietary Sodium Restriction • Increased Physical Activity • Moderation in alcohol (ETOH) Consumption <p>Patients with a Documented Reason for not Screening or no Follow-Up Plan for High Blood Pressure (Denominator Exceptions) –</p> <ul style="list-style-type: none"> • Documentation of medical reason(s) for not screening for high blood pressure (for example, patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status). • Documentation of patient reason(s) for not screening for blood pressure measurements or for not ordering an appropriate follow-up intervention if patient BP is elevated or hypertensive (e.g., patient refuses). <p>Updated numerator definition: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Recommended Blood Pressure Follow-Up Table' to reflect the updated blood pressure classifications.</p> <p>Revised: Recommended follow-up for Elevated BP Reading - Rescreen BP in 2 to 6 months AND recommended nonpharmacologic interventions OR Referral to Alternate/Primary Care Provider First Hypertensive BP Reading - Rescreen BP > 1 day and < 4 weeks AND recommended nonpharmacologic interventions OR Referral to Alternate/Primary Care Provider Second Hypertensive BP Reading (130 - 139 systolic OR 80-89 diastolic) - Recommended nonpharmacologic intervention AND reassessment in 2 to 6 months AND an order for laboratory test or ECG for hypertension OR Referral to Alternate/Primary Care Provider</p> <p>Added: Second Hypertensive BP Reading (over 140 systolic OR over 90 diastolic) - Recommended nonpharmacologic intervention AND BP-lowering medication AND reassessment within 4 weeks AND an order for laboratory test or ECG for hypertension OR Referral to Alternate/Primary Care Provider.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the description to replace ‘pre-hypertensive’ with ‘elevated’. Additionally, the definition for all collection types was revised to reflect 2017 ACC/AHA guidelines; including, changing blood pressure classifications, relevant thresholds, and applicable interventions. The eCQM Measure Specifications collection type was revised to have the logic apply to exceptions based on blood pressure classification to more accurately capture a patient declining applicable intervention(s).
After consideration of public comments, as outlined in Table C.14, the substantive change above to measure Q317 is finalized as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

Table A: New Improvement Activities for the CY 2022 Performance Period/2024 MIPS Payment Year and Future Years

New Improvement Activity	
Proposed Activity ID:	IA_AHE_8
Proposed Subcategory:	Achieving Health Equity
Proposed Activity Title:	Create and Implement an Anti-Racism Plan
Proposed Activity Description:	<p>Create and implement an anti-racism plan using the CMS Disparities Impact Statement or other anti-racism planning tools.¹ The plan should include a clinic-wide review of existing tools and policies, such as value statements or clinical practice guidelines, to ensure that they include and are aligned with a commitment to anti-racism and an understanding of race as a political and social construct, not a physiological one.</p> <p>The plan should also identify ways in which issues and gaps identified in the review can be addressed and should include target goals and milestones for addressing prioritized issues and gaps. This may also include an assessment and drafting of an organization's plan to prevent and address racism and/or improve language access and accessibility to ensure services are accessible and understandable for those seeking care. The MIPS eligible clinician or practice can also consider including in their plan ongoing training on anti-racism and/or other processes to support identifying explicit and implicit biases in patient care and addressing historic health inequities experienced by people of color. More information about elements of the CMS Disparities Impact Statement is detailed in the template and action plan document at https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Disparities-Impact-Statement-508-rev102018.pdf.</p>
Proposed Weighting:	High
Rationale:	<p>The proposed activity aimed to address systemic inequities, including systemic racism, as called for in Executive Order 13985: Advancing Racial Equity and Support for Underserved Communities Through the Federal Government, published January 20, 2021.² This activity began with the premise that it is important to acknowledge systemic racism as a root cause for differences in health outcomes between socially-defined racial groups.^{3 4}</p> <p>We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, per the improvement activity definition at § 414.1305, because it supports MIPS eligible clinicians in identifying health disparities and implementing processes to reduce racism and provide equitable quality health care. This activity is intended to help MIPS eligible clinicians move beyond analyzing data to taking real steps to naming and eliminating the causes of the disparities identified. We also proposed making this activity high-weighted because MIPS eligible clinicians will need considerable time and resources to develop a thorough anti-racism plan that is informed by data, and to implement it throughout the practice or system. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Comments:	Several commenters expressed support for the proposal to adopt this improvement activity, and for the high weight that we assigned to it. One commenter stated that this activity would be easier for larger, more established practices than smaller or solo practices to adopt. Another commenter stated that CMS should encourage MIPS eligible clinicians to implement this and other new equity-related activities for longer than 90 days to track and impact real improvement.
Response:	We appreciate the commenters' support. We disagree that this activity would be more appropriate for larger, more established practices to adopt. A small or new practice could tailor the activity to their context, fulfilling the requirements within their constraints in the same way as a larger, more established practice. MIPS eligible clinicians will be encouraged to fit these requirements to their specific context. We currently require a minimum of 90 days for the implementation period of this activity, but we support MIPS eligible clinicians who wish to implement this activity for longer periods of time. MIPS eligible clinicians could also attest to this activity in multiple years as they make steady progress towards intended outcomes. As mentioned in the Disparities Impact Statement, CMS offers technical assistance on health equity which a MIPS-eligible clinician can access by emailing healthequityTA@cms.hhs.gov .
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_AHE_8
Subcategory:	Achieving Health Equity

Activity Title:	Create and Implement an Anti-Racism Plan
Activity Description:	<p>Create and implement an anti-racism plan using the CMS Disparities Impact Statement or other anti-racism planning tools.¹ The plan should include a clinic-wide review of existing tools and policies, such as value statements or clinical practice guidelines, to ensure that they include and are aligned with a commitment to anti-racism and an understanding of race as a political and social construct, not a physiological one.</p> <p>The plan should also identify ways in which issues and gaps identified in the review can be addressed and should include target goals and milestones for addressing prioritized issues and gaps. This may also include an assessment and drafting of an organization's plan to prevent and address racism and/or improve language access and accessibility to ensure services are accessible and understandable for those seeking care. The MIPS eligible clinician or practice can also consider including in their plan ongoing training on anti-racism and/or other processes to support identifying explicit and implicit biases in patient care and addressing historic health inequities experienced by people of color. More information about elements of the CMS Disparities Impact Statement is detailed in the template and action plan document at https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Disparities-Impact-Statement-508-rev102018.pdf.</p>
Weighting:	High
New Improvement Activity	
Proposed Activity ID:	IA_AHE_9
Proposed Subcategory:	Achieving Health Equity
Proposed Activity Title:	Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
Proposed Activity Description:	<p>Create or improve, and then implement, protocols for identifying and providing appropriate support to: a) patients with or at risk for food insecurity, and b) patients with or at risk for poor nutritional status. (Poor nutritional status is sometimes referred to as clinical malnutrition or undernutrition and applies to people who are overweight and underweight.) Actions to implement this improvement activity may include, but are not limited to, the following:</p> <ul style="list-style-type: none"> • Use Malnutrition Quality Improvement Initiative (MQii) or other quality improvement resources and standardized screening tools to assess and improve current food insecurity and nutritional screening and care practices. • Update and use clinical decision support tools within the MIPS eligible clinician's electronic medical record to align with the new food insecurity and nutrition risk protocols. • Update and apply requirements for staff training on food security and nutrition. • Update and provide resources and referral lists, and/or engage with community partners to facilitate referrals for patients who are identified as at risk for food insecurity or poor nutritional status during screening. <p>Activities must be focused on patients at greatest risk for food insecurity and/or malnutrition—for example patients with low income who live in areas with limited access to affordable fresh food, or who are isolated or have limited mobility.</p>
Proposed Weighting:	Medium
Rationale:	<p>Food insecurity is a widespread and worsening issue in the United States. Estimates indicate that the number of food insecure people in the United States increased from 35.2 million people (1 in 9 people) in 2019 to 45 million people (1 in 7 people) in 2020.⁵ Older adults are particularly at risk because of low income, mobility issues, dementia, and other factors such as social isolation. Food insecurity also disproportionately affects Black and Latinx households.⁶</p> <p>Malnutrition is also widespread in the United States.⁷ Both food insecurity and malnutrition are associated with worse health outcomes and higher spending on healthcare. ^{Error! Bookmark not defined.} For example, adults who are malnourished at the time of hospitalization or surgery are more likely to have worse hospitalization, surgical, and recovery outcomes.⁸</p> <p>The improvement activity would fill a gap in the inventory, which does not currently include an improvement activity related to food insecurity or malnutrition. We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because ameliorating food insecurity and malnutrition leads to better health outcomes.⁹¹⁰ This activity would create an opportunity for MIPS eligible clinicians to help address food insecurity and malnutrition, and provide the Malnutrition Quality Improvement Initiative as a resource.¹¹ Evidence indicates that they can help patients by increasing enrollment in the Supplemental Nutrition Assistance Program (SNAP) (https://www.fns.usda.gov/snap/supplemental-nutrition-assistance-program), which is associated with reduced food insecurity¹² or connecting their patients to other community resources. This activity also created an opportunity for MIPS eligible clinicians to help address malnutrition by ensuring patients in need receive a detailed nutritional assessment and appropriate nutritional care.</p>

	We proposed weighting this activity medium, because this activity may be accomplished by providing literature and/or facilitating a conversation with a patient during a regular visit. The estimated level of effort for MIPS eligible clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).
Comments:	Several commenters expressed support for the proposal to adopt this improvement activity. One commenter stated that this activity would be easier for larger, more established practices than smaller or solo practices to adopt. Another commenter reminded CMS that malnutrition in food insecure individuals can present as either undernutrition or overnutrition.
Response:	We appreciate the commenters' support. We disagree that this activity would be more appropriate for larger, more established practices to adopt. A small or new practice could tailor the activity to their context, fulfilling the requirements within their constraints in the same way as a larger, more established practice. We agree with the commenter who stated that malnutrition in food insecure individuals can present as either undernutrition or overnutrition. We also note that CMS offers technical assistance on health equity which a MIPS eligible clinician can access by emailing healthequityTA@cms.hhs.gov .
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_AHE_9
Subcategory:	Achieving Health Equity
Activity Title:	Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
Activity Description:	<p>Create or improve, and then implement, protocols for identifying and providing appropriate support to: a) patients with or at risk for food insecurity, and b) patients with or at risk for poor nutritional status. (Poor nutritional status is sometimes referred to as clinical malnutrition or undernutrition and applies to people who are overweight and underweight.) Actions to implement this improvement activity may include, but are not limited to, the following:</p> <ul style="list-style-type: none"> • Use Malnutrition Quality Improvement Initiative (MQii) or other quality improvement resources and standardized screening tools to assess and improve current food insecurity and nutritional screening and care practices. • Update and use clinical decision support tools within the MIPS eligible clinician's electronic medical record to align with the new food insecurity and nutrition risk protocols. • Update and apply requirements for staff training on food security and nutrition. • Update and provide resources and referral lists, and/or engage with community partners to facilitate referrals for patients who are identified as at risk for food insecurity or poor nutritional status during screening. <p>Activities must be focused on patients at greatest risk for food insecurity and/or malnutrition—for example patients with low income who live in areas with limited access to affordable fresh food, or who are isolated or have limited mobility.</p>
Weighting:	Medium
New Improvement Activity	
Proposed Activity ID:	IA_BMH_11
Proposed Subcategory:	Behavioral and Mental Health
Proposed Activity Title:	Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
Proposed Activity Description:	<p>Create and implement a plan for trauma-informed care (TIC) that recognizes the potential impact of trauma experiences on patients and takes steps to mitigate the effects of adverse events in order to avoid re-traumatizing or triggering past trauma. Actions in this plan may include, but are not limited to, the following:</p> <ul style="list-style-type: none"> • Incorporate trauma-informed training into new employee orientation • Offer annual refreshers and/or trainings for all staff • Recommend and supply TIC materials to third party partners, including care management companies and billing services • Identify patients using a screening methodology • Flag charts for patients with one or more adverse events that might have caused trauma • Use ICD-10 diagnosis codes for adverse events when appropriate <p>TIC is a strengths-based healthcare delivery approach that emphasizes physical, psychological, and emotional safety for both trauma survivors and their providers.¹³ Core components of a TIC approach are: awareness of the prevalence of trauma; understanding of the impact of past trauma on services utilization and engagement; and a commitment and plan to incorporate that understanding into training, policy, procedure, and practice.¹⁴</p>
Proposed Weighting:	Medium

Rationale:	<p>We proposed this activity because the psychological impact of trauma influences the clinical care needs of a large population in the United States and adopting a TIC approach could help all MIPS eligible clinicians avoid retraumatizing affected patients and support providers and staff who have experienced trauma themselves.¹⁵ Research indicates that MIPS eligible clinicians have a positive view of TIC but need more resources and support to apply the concepts to practice.¹⁶</p> <p>For the purposes of this proposed improvement activity, trauma is the experience of a harmful or life-threatening event or series of events and their longer-term psychological impact, which can include development of post-traumatic stress disorder (PTSD) and changes to brain functioning and even genetics.¹⁷ Approximately 60 percent of men and 50 percent of women in the U.S. have experienced trauma in their lifetimes and 7-8 percent of the population will have PTSD at some point in their lives.¹⁸ Multi-generational trauma, whereby experiences that traumatized earlier generations, such as the genocide of Native American tribes, are passed down, impact many families and communities.¹⁹ Clinicians (and not just mental health clinicians) who take a TIC approach anticipate and avoid institutional processes and individual practices that are likely to retraumatize individuals who have histories of trauma.²⁰ We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because trauma-informed approaches in healthcare are associated with improved outcomes for patients.²¹</p> <p>We proposed weighting this activity medium, because this activity may be accomplished by conducting a training, providing resources, or incorporating new procedures into a MIPS eligible clinician's practice. The estimated level of effort for MIPS eligible clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Comments:	Several commenters expressed support for the proposal to adopt this improvement activity. One commenter stated that this activity would be easier for larger, more established practices than smaller or solo practices to adopt.
Response:	<p>We appreciate the commenters' support. We disagree that this activity would be more appropriate for larger, more established practices to adopt. A small or new practice could tailor the activity to their context, fulfilling the requirements within their constraints in the same way as a larger, more established practice. They can also consider using the Substance Abuse and Mental Health Services Administration's resource for providers who seek additional information about Trauma-Informed Care at:</p> <p>https://www.samhsa.gov/sites/default/files/programs_campaigns/childrens_mental_health/atc-whitepaper-040616.pdf.¹⁶</p>
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BMH_11
Subcategory:	Behavioral and Mental Health
Activity Title:	Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
Activity Description:	<p>Create and implement a plan for trauma-informed care (TIC) that recognizes the potential impact of trauma experiences on patients and takes steps to mitigate the effects of adverse events in order to avoid re-traumatizing or triggering past trauma. Actions in this plan may include, but are not limited to, the following:</p> <ul style="list-style-type: none"> • Incorporate trauma-informed training into new employee orientation • Offer annual refreshers and/or trainings for all staff • Recommend and supply TIC materials to third party partners, including care management companies and billing services • Identify patients using a screening methodology • Flag charts for patients with one or more adverse events that might have caused trauma • Use ICD-10 diagnosis codes for adverse events when appropriate <p>TIC is a strengths-based healthcare delivery approach that emphasizes physical, psychological, and emotional safety for both trauma survivors and their providers.¹³ Core components of a TIC approach are: awareness of the prevalence of trauma; understanding of the impact of past trauma on services utilization and engagement; and a commitment and plan to incorporate that understanding into training, policy, procedure, and practice.¹⁴</p>
Weighting:	Medium

New Improvement Activity	
Proposed Activity ID:	IA_BMH_12
Proposed Subcategory:	Behavioral and Mental Health
Proposed Activity Title:	Promoting Clinician Well-Being
Proposed Activity Description:	<p>Develop and implement programs to support clinician well-being and resilience—for example, through relationship-building opportunities, leadership development plans, or creation of a team within a practice to address clinician well-being—using one of the following approaches:</p> <ul style="list-style-type: none"> • Completion of clinician survey on clinician well-being with subsequent implementation of an improvement plan based on the results of the survey. • Completion of training regarding clinician well-being with subsequent implementation of a plan for improvement.
Proposed Weighting:	High
Rationale:	<p>We believe this activity would help MIPS eligible clinicians prioritize and improve their own well-being and the well-being of their staff and colleagues. Focusing on improving clinician well-being is especially critical now, given the stress that the COVID-19 public health emergency has exerted on clinicians. Many organizations, including the National Academies of Sciences, Engineering, and Medicine,²² have prioritized interventions to improve clinician well-being. Studies indicate that clinician burnout, including emotional exhaustion, depersonalization, and reduced personal accomplishment, is associated with poorer quality healthcare and reduced safety for patients.^{23 24} Studies also indicate that some interventions have been shown to reduce burnout and improve well-being.²⁵</p> <p>This improvement activity would fill a gap in the inventory because it does not currently include an improvement activity related to clinician well-being. We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because promoting clinician well-being and mitigating burnout leads to better quality health care and increased patient safety.²⁵</p> <p>Given the impact of the COVID-19 pandemic on the medical community and the considerable time and resources required to mitigate its effects and promote well-being among clinicians, we believe that this activity should be weighted as high, in alignment with our definition in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Comments:	One commenter expressed support for the proposal to adopt this improvement activity but recommended that CMS modify it so that both the survey and training are required components of the activity; surveys contain relevant questions by role; and that the survey be conducted annually. The commenter also suggested that MIPS eligible clinicians implementing this activity combine the clinician well-being survey with all other essential workforce themed surveys to minimize survey fatigue.
Response:	We appreciate the commenter's support. The option to choose between a clinician survey and a training on clinician well-being provides two ways a MIPS eligible clinician could meet the requirements for this activity, tailored to the clinician's practice's needs and abilities. The requirement to implement a plan for improvement with either the survey or training further ensures that a MIPS eligible clinician selecting this activity take action towards improving clinician well-being. A clinician may also conduct surveys annually and attest to this activity in multiple years as they make steady progress towards intended outcomes.
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BMH_12
Subcategory:	Behavioral and Mental Health
Activity Title:	Promoting Clinician Well-Being
Activity Description:	<p>Develop and implement programs to support clinician well-being and resilience—for example, through relationship-building opportunities, leadership development plans, or creation of a team within a practice to address clinician well-being—using one of the following approaches:</p> <ul style="list-style-type: none"> • Completion of clinician survey on clinician well-being with subsequent implementation of an improvement plan based on the results of the survey. • Completion of training regarding clinician well-being with subsequent implementation of a plan for improvement.
Weighting:	High
New Improvement Activity	
Proposed Activity ID:	IA_ERP_4
Proposed Subcategory:	Emergency Response and Preparedness
Proposed Activity Title:	Implementation of a Personal Protective Equipment (PPE) Plan
Proposed Activity Description:	Implement a plan to acquire, store, maintain, and replenish supplies of personal protective equipment (PPE) for all clinicians or other staff who are in physical proximity to patients.

	<p>In accordance with guidance from the Centers for Disease Control and Prevention (CDC) the PPE plan should address:</p> <ul style="list-style-type: none"> • Conventional capacity: PPE controls that should be implemented in general infection prevention and control plans in healthcare settings, including training in proper PPE use. • Contingency capacity: actions that may be used temporarily during periods of expected PPE shortages. • Crisis capacity: strategies that may need to be considered during periods of known PPE shortages. <p>The PPE plan should address all of the following types of PPE:</p> <ul style="list-style-type: none"> • Standard precautions (e.g., hand hygiene, prevention of needle-stick or sharps injuries, safe waste management, cleaning and disinfection of the environment) • Eye protection • Gowns (including coveralls or aprons) • Gloves • Facemasks • Respirators (including N95 respirators)
Proposed Weighting:	Medium
Rationale:	<p>The COVID-19 pandemic illustrated the importance of maintaining adequate PPE supplies for caregivers. Especially early in the pandemic, inadequate PPE supplies reduced access to care and exposed healthcare workers to unnecessary risk.²⁶</p> <p>While clinicians may be following surge capacity procedures, they may not have a written plan for both preventing and preparing for surge capacity. In a survey conducted in mid-March of 2020, over 50 percent of physician practices cited a lack of supplies as an obstacle to caregiving.²⁷ Also, in a 2009 survey of American College of Emergency Physician Disaster Medicine Section members, fewer than 75 percent of respondents indicated that their emergency department had a plan for responding to pandemic influenza and other infectious disease threats.²⁸ This proposed improvement activity is based on the CDC guidelines for optimizing PPE supplies²⁹ and aligns with World Health Organization guidelines.³⁰</p> <p>We believe that including this improvement activity in the inventory would encourage formalizing the process for creating a PPE plan, training staff, and ensuring adequate PPE inventory. Thus, it has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because both clinicians and their patients would be safer when responding to epidemics, reducing the transmission of viruses, and allowing clinicians to provide patients with appropriate care because supplies are available.</p> <p>We proposed that this activity should be weighted as medium, because it may be accomplished by conducting a training, providing resources, or incorporating new procedures into a MIPS eligible clinician's practice. The estimated level of effort for MIPS eligible clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Comments:	<p>A commenter recommended that this improvement activity be modified to focus more on planning for access to PPE rather than on replenishing PPE, because accessing PPE has been challenging at times during the COVID-19 public health emergency. Another commenter suggested that CMS finalize the activity as a high-weighted activity because of the impact of lack of PPE during the COVID-19 public health emergency, and because preparation for current and future pandemics is essential for healthcare workers.</p>
Response:	<p>We agree that planning for access to PPE is essential. This activity addresses both access to and replenishment of PPE as it requires a written plan for the acquisition, storage, maintenance, and replenishment of PPE as well as for preventing and preparing for a surge in the need for PPE in contingency and crisis scenarios.</p> <p>We agree with the commenter who noted the impact of inadequate PPE during the COVID_19 public health emergency and its importance to health care workers. As explained in section III.I.3.h.(4)(d)(i)(C) of the CY 2019 PFS final rule (83 FR 59780 through 59781) high weighting is used for those activities of high intensity, requiring significant investment of time and resources. We do not believe creating a PPE plan requires significant levels of resources and therefore, we do not believe a high weighting is warranted.</p>
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA ERP 4
Subcategory:	Emergency Response and Preparedness
Activity Title:	Implementation of a Personal Protective Equipment (PPE) Plan

Activity Description:	<p>Implement a plan to acquire, store, maintain, and replenish supplies of personal protective equipment (PPE) for all clinicians or other staff who are in physical proximity to patients.</p> <p>In accordance with guidance from the Centers for Disease Control and Prevention (CDC) the PPE plan should address:</p> <ul style="list-style-type: none"> • Conventional capacity: PPE controls that should be implemented in general infection prevention and control plans in healthcare settings, including training in proper PPE use. • Contingency capacity: actions that may be used temporarily during periods of expected PPE shortages. • Crisis capacity: strategies that may need to be considered during periods of known PPE shortages. <p>The PPE plan should address all of the following types of PPE:</p> <ul style="list-style-type: none"> • Standard precautions (e.g., hand hygiene, prevention of needle-stick or sharps injuries, safe waste management, cleaning and disinfection of the environment) • Eye protection • Gowns (including coveralls or aprons) • Gloves • Facemasks • Respirators (including N95 respirators)
Weighting:	Medium
New Improvement Activity	
Proposed Activity ID:	IA_ERP_5
Proposed Subcategory:	Emergency Response and Preparedness
Proposed Activity Title:	Implementation of a Laboratory Preparedness Plan
Proposed Activity Description:	<p>Develop, implement, update, and maintain a preparedness plan for a laboratory intended to support continued or expanded patient care during COVID-19 or another public health emergency. The plan should address how the laboratory would maintain or expand patient access to health care services to improve beneficiary health outcomes and reduce healthcare disparities.</p> <p>For laboratories without a preparedness plan, MIPS eligible clinicians would meet with stakeholders, record minutes, and document a preparedness plan, as needed. The laboratory must then implement the steps identified in the plan and maintain them.</p> <p>For laboratories with existing preparedness plans, MIPS eligible clinicians should review, revise, or update the plan as necessary to meet the needs of the current PHE, implement new procedures, and maintain the plan.</p> <p>Maintenance of the plan in this activity could include additional hazard assessments, drills, training, and/or developing checklists to facilitate execution of the plan. Participation in debriefings to evaluate the effectiveness of plans are additional examples of engagement in this activity.</p>
Proposed Weighting:	Medium
Rationale:	<p>The COVID-19 pandemic demonstrated a need for many laboratories to develop and implement protocols to respond to the public health emergencies, as an increase in demand (due to a surge in COVID testing) and reduced staffing (due to needing to maintain distancing and other factors, such as childcare becoming unavailable) compromised laboratory functioning.³¹</p> <p>We believe that including this improvement activity in the inventory would encourage formalizing, updating, and maintaining preparedness plans to better equip laboratories to address another public health emergency, as well as other disasters such as floods, fires, or other emergencies. Such a plan will allow laboratory staff to respond and maintain operations during emergency situations. Thus, it has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because if needed laboratory services increase with the surge in demand, staff will be prepared to meet those needs.</p> <p>We proposed weighting this activity medium, because this activity may be accomplished by developing a plan and training staff on that plan. The estimated level of effort for MIPS eligible clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>

Comments:	Several commenters supported the addition of this improvement activity. One commenter urged CMS to finalize this improvement activity in order to expand the limited number of activities available to pathologists for reporting in this category.
Response:	We appreciate the support and would welcome the nomination of additional activities for pathologists and other non-patient facing clinicians.
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA ERP 5
Subcategory:	Emergency Response and Preparedness
Activity Title:	Implementation of a Laboratory Preparedness Plan
Activity Description:	<p>Develop, implement, update, and maintain a preparedness plan for a laboratory intended to support continued or expanded patient care during COVID-19 or another public health emergency. The plan should address how the laboratory would maintain or expand patient access to health care services to improve beneficiary health outcomes and reduce healthcare disparities.</p> <p>For laboratories without a preparedness plan, MIPS eligible clinicians would meet with stakeholders, record minutes, and document a preparedness plan, as needed. The laboratory must then implement the steps identified in the plan and maintain them.</p> <p>For laboratories with existing preparedness plans, MIPS eligible clinicians should review, revise, or update the plan as necessary to meet the needs of the current PHE, implement new procedures, and maintain the plan.</p> <p>Maintenance of the plan in this activity could include additional hazard assessments, drills, training, and/or developing checklists to facilitate execution of the plan. Participation in debriefings to evaluate the effectiveness of plans are additional examples of engagement in this activity.</p>
Weighting:	Medium
New Improvement Activity	
Proposed Activity ID:	IA PSPA 33
Proposed Subcategory:	Patient Safety and Practice Assessment
Proposed Activity Title:	Application of CDC's Training for Healthcare Providers on Lyme Disease
Proposed Activity Description:	Apply the Centers for Disease Control and Prevention's (CDC) Training for Healthcare Providers on Lyme Disease using clinical decision support (CDS). CDS for Lyme disease should be built directly into the clinician workflow and support decision making for a specific patient at the point of care. Specific examples of how the guideline could be incorporated into a CDS workflow include but are not limited to: electronic health record (EHR) based prescribing prompts, order sets that require review of guidelines before prescriptions can be entered, and prompts requiring review of guidelines before a subsequent action can be taken in the record.
Proposed Weighting:	Medium
Rationale:	<p>Lyme disease has a high burden of disease, with approximately 476,000 cases diagnosed and treated annually. Additionally, the places where Lyme disease is common is expanding.³²</p> <p>We believe that including this improvement activity in the inventory would increase knowledge about Lyme disease. The CDC has developed a training course to support clinicians in identifying and treating Lyme disease, and this course will provide foundational knowledge to incorporate Lyme disease diagnosis and treatment into the workflow using CDS.³³ It has the potential to improve clinical practice and care delivery and is likely to result in improved outcomes; additional education to improve Lyme disease testing, ordering, and reporting systems are likely to improve patient care, reduce errors, and result in better Lyme disease-related outcomes.^{34 35 36}</p> <p>We proposed weighting this activity medium because this activity may be accomplished by conducting a training and incorporating new procedures into a MIPS eligible clinician's practice. The estimated level of effort for MIPS eligible clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Final Action	We received no comments on this proposal; therefore, we are finalizing as proposed.
Finalized Improvement Activity

Table B: Changes to Previously Adopted Improvement Activities for the CY 2022 Performance Period/ 2024 MIPS Payment Year and Future Years

Current Improvement Activity	
Current Activity ID:	IA_AHE_1
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Engagement of new Medicaid patients and follow-up
Current Activity Description:	Seeing new and follow-up Medicaid patients in a timely manner, including individuals dually eligible for Medicaid and Medicare. A timely manner is defined as within 10 business days for this activity.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). The proposed modified activity would continue to address the important objective of providing timely care to Medicaid patients, but also expand the target population to include all patients who are underserved and may face barriers to timely access to appropriate care. We also proposed modifying the description so that, instead of stating patients should receive follow-up in a “timely manner,” defined as within 10 business days, clinicians would use their own time-to-treat data (i.e., data measuring the time between clinician identifying a need for an appointment and the patient having a scheduled appointment) to ensure that patients receive follow-up within standard guidelines and create, implement and monitor an approach for improvement in engagement in care. We wanted to broaden the description, because the amount of time that is clinically relevant for a follow up visit varies widely,¹ and therefore, setting a specific definition of “timely manner” may not be clinically appropriate for all patients. The proposed modification acknowledges this variation and encourages clinicians to use their own time-to-treat data and standard practice guidelines to enhance engagement.</p> <p>The proposed modified activity describes that this approach to improving engagement in care may include screening for treatment barriers, especially transportation barriers, and providing resources to patients who need assistance, including access to federally-mandated Medicaid transportation benefits. Lack of suitable transportation can pose a barrier to accessing needed care for many underserved patients—particularly for those who are elderly, disabled, or low-income.² As finalized in Federal regulation (42 CFR 431.53 and 440.170), Medicaid beneficiaries are eligible for the non-emergency medical transportation benefit, which assures transportation to and from non-emergency medical care for those without other options.³ This activity is intended to encourage MIPS eligible clinicians to direct Medicaid beneficiaries and other underserved patients to access resources to reduce barriers to their timely access of needed care and ultimately help them achieve better health outcomes.</p> <p>We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it creates more flexibility around the timeline for follow-up by using time-to-treat data, specifies that these data guide an approach for patient engagement, and addresses a broader range of underserved populations.</p>
Proposed Revised Activity Title	Enhance Engagement of Medicaid and Other Underserved Populations
Proposed Revised Activity Description:	To improve responsiveness of care for Medicaid and other underserved patients: use time-to-treat data (i.e., data measuring the time between clinician identifying a need for an appointment and the patient having a scheduled appointment) to identify patterns by which care or engagement with Medicaid patients or other groups of underserved patients has not achieved standard practice guidelines; and with this information, create, implement, and monitor an approach for improvement. This approach may include screening for patient barriers to treatment, especially transportation barriers, and providing resources to improve engagement (e.g., state Medicaid non-emergency medical transportation benefit).
Comments:	Many commenters expressed support for the proposed modifications to this improvement activity. One commenter expressed concern that the modifications would make the activity harder to implement. The commenter believed that expanding the population would increase the burden for reporting and documenting by requiring that a MIPS eligible clinician ask patients sensitive questions about income and family. They also suggested that the modification’s proposed expanded patient population may make it more difficult to filter records to identify targeted patients. For these reasons, they suggested CMS amend the definition of the applicable patient population defined in this activity. The commenter also expressed concern about changing the definition of timeliness, because the broader definitions for timeliness and population seem to require more complex analysis to identify trends in care and engagement.
Response:	We appreciate the commenters’ support. We would like to clarify that expanding the population to all underserved populations would simply allow a MIPS eligible clinician to select and target an underserved community relevant to their practice. Targeting a patient population of their choice would enable them to determine the data they would need to collect and analysis they

	<p>would need to perform to allow them to adequately meet the requirements of this activity, within the confines of their practice's resources and interests. One may focus on Medicaid beneficiaries, while another may select a different underserved community.</p> <p>Regarding the commenter's preference for the original threshold of 10 days for determining timeliness: as stated above, the amount of time that is clinically relevant for a follow up visit varies widely, and any given specific definition of "timely manner" may not be clinically appropriate for all patients. However, if a MIPS eligible clinician believes that the 10-day threshold for timeliness is clinically appropriate, they could still apply it to their time-to-treat data for a specific target population to identify timeliness issues in delivering care. Given the flexibility for a MIPS eligible clinician to define their population of interest and their time-to-treat threshold, we do not believe this modification increases burden or complexity of analysis to identify patients or trends in care and engagement.</p>
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_AHE_1
Subcategory:	Achieving Health Equity
Activity Title:	Enhance Engagement of Medicaid and Other Underserved Populations
Activity Description:	To improve responsiveness of care for Medicaid and other underserved patients: use time-to-treat data (i.e., data measuring the time between clinician identifying a need for an appointment and the patient having a scheduled appointment) to identify patterns by which care or engagement with Medicaid patients or other groups of underserved patients has not achieved standard practice guidelines; and with this information, create, implement, and monitor an approach for improvement. This approach may include screening for patient barriers to treatment, especially transportation barriers, and providing resources to improve engagement (e.g., State Medicaid non-emergency medical transportation benefit).
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_AHE_5
Current Subcategory:	Achieving Health Equity
Current Activity Title:	MIPS Eligible Clinician Leadership in Clinical Trials or Community-Based Participatory Research (CBPR)
Current Activity Description:	MIPS eligible clinician leadership in clinical trials, research alliances or community-based participatory research (CBPR) that identify tools, research or processes that can focus on minimizing disparities in healthcare access, care quality, affordability, or outcomes.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2018 Quality Payment Program final rule (82 FR 54175). The proposed modification would add as an explicit option that the research could focus on addressing health-related social needs as drivers of health. Risks for health-related social needs are more acute and widespread in underserved communities.⁴ These risks are linked to worse health outcomes and addressing them can reduce costs.⁵ The modification would also change verbiage in ways that clarify the activity, but do not affect the intent of the activity.</p> <p>The health-related social needs included in the proposed modification are aligned with our Accountable Health Communities (AHC) Model (https://innovation.cms.gov/innovation-models/ahcm), which looks at the impact of identifying and addressing patients' health-related social needs on their health outcomes. AHC has prioritized five areas of health-related social needs, namely: food insecurity, housing insecurity, transportation, utilities, and interpersonal safety.⁶ These areas were selected as priority, because there is high-quality evidence linking it with poor health or increased health care utilization and cost, there are community providers who can help meet the need, and health care providers are not yet comprehensively screening for or addressing these needs.⁷ We proposed to modify this improvement activity to identify the same five health-related social needs prioritized in the AHC Model as potential areas of research.</p> <p>Criteria for selecting new improvement activities, which we finalized in section IV.A.3.d.(3)(c)(i) of this final rule, align with those used for prioritizing health-related social needs. With this modification, this improvement activity would become more explicitly a part of our plan to help clinicians provide patient-centered care to patients who have complex and multi-faceted needs. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it explicitly includes research into health-related social needs, which are central to understanding and addressing disparities in achieving positive health outcomes. We believe that we would achieve the objectives of the Quality Payment Program—specifically, to improve beneficiary population health, to improve the care received by Medicare beneficiaries, and to lower costs to the Medicare program—by helping address health-related social needs.</p>

Proposed Revised Activity Description:	Lead clinical trials, research alliances, or community-based participatory research (CBPR) that identify tools, research, or processes that focus on minimizing disparities in healthcare access, care quality, affordability, or outcomes. Research could include addressing health-related social needs like food insecurity, housing insecurity, transportation barriers, utility needs, and interpersonal safety.
Comments:	One commenter was supportive of improvement activity modifications that addressed using data to address disparities in health equity, for example, gathering and analyzing data by race and documenting disparities by different population groups. The commenter recommended that when implementing such modifications, CMS should ensure that such modifications do not alter the core intent of the activity.
Response:	We thank the commenter for this input and agree with this approach. When modifying several improvement activities to include collecting and analyzing population-level data, including health-related social needs, our intent is to highlight opportunities to strengthen core activities to close health equity gaps using a data-informed approach. This activity's modification includes an option, not a requirement, to address health-related social needs as part of research activities.
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_AHE_5
Subcategory:	Achieving Health Equity
Activity Title:	MIPS Eligible Clinician Leadership in Clinical Trials or Community-Based Participatory Research (CBPR)
Activity Description:	Lead clinical trials, research alliances, or community-based participatory research (CBPR) that identify tools, research, or processes that focus on minimizing disparities in healthcare access, care quality, affordability, or outcomes. Research could include addressing health-related social needs like food insecurity, housing insecurity, transportation barriers, utility needs, and interpersonal safety.
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_BE_1
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Use of certified EHR to capture patient reported outcomes
Current Activity Description:	In support of improving patient access, performing additional activities that enable capture of patient reported outcomes (e.g., home blood pressure, blood glucose logs, food diaries, at-risk health factors such as tobacco or alcohol use, etc.) or patient activation measures through use of certified EHR technology, containing this data in a separate queue for clinician recognition and review.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We proposed to modify the activity by replacing examples of patient reported outcomes with current industry standards —functional status, symptoms and symptom burden, health behaviors, and patient experience.</p> <p>We also proposed to include a definition for patient activation⁸ —measures of patient involvement in their care -- to improve clarity of the activity.</p> <p>Finally, we also proposed to simplify the wording in ways that clarify the activity but do not affect the purpose. These proposed modifications would improve the accuracy, applicability, and clarity of the activity. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it promotes clarity by providing more accurate and current industry standard patient reported outcomes.</p>
Proposed Revised Activity Description:	To improve patient access, perform activities beyond routine care that enable capture of patient reported outcomes (for example, related to functional status, symptoms and symptom burden, health behaviors, or patient experience) or patient activation measures (that is, measures of patient involvement in their care) through use of certified electronic health record technology, and record these outcomes data for clinician review.
Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BE_1
Subcategory:	Beneficiary Engagement
Activity Title:	Use of certified EHR to capture patient reported outcomes
Activity Description:	To improve patient access, perform activities beyond routine care that enable capture of patient reported outcomes (for example, related to functional status, symptoms and symptom burden, health behaviors, or patient experience) or patient activation measures (that is, measures of patient involvement in their care) through use of certified electronic health record technology, and record these outcomes data for clinician review.

Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_BE_6
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Collection of and follow-up on patient experience and satisfaction data on beneficiary engagement
Current Activity Description:	Collection of and follow-up on patient experience and satisfaction data on beneficiary engagement, including development of improvement plan.
Current Weighting:	High
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We proposed to combine multiple activities into this IA_BE_6 improvement activity to remove overlapping content and improve the applicability and ease of use.</p> <p>In addition to this activity, the previously adopted BE_13 (81 FR 77825) and PSPA_11 (81 FR 77825) improvement activities also require the collection of patient experience and satisfaction data with the objective of increasing patient-centeredness of care. The previously adopted activity descriptions are as follows:</p> <ul style="list-style-type: none"> IA_BE_13: Regularly assess the patient experience of care through surveys, advisory councils and/or other mechanisms. IA_PSPA_11: Participation in the Consumer Assessment of Healthcare Providers and Systems Survey (CAHPS) or other supplemental questionnaire items (e.g., Cultural Competence or Health Information Technology supplemental item sets) <p>We proposed to modify IA_BE_6 to include additional detail covering the unique content of IA_BE_13 and IA_PSPA_11. Specifically, we proposed to add surveys such as CAHPS, advisory councils, and other mechanisms in the modified version of BE_6 as options for tools used for collecting the patient experience data.</p> <p>We also proposed to update the title of the improvement activity to better reflect the full scope of the revised activity description.</p> <p>We also proposed to add language that will encourage MIPS eligible clinicians to consider the linguistic needs of their population, so that the satisfaction survey results could include the perspectives of patient groups who may not feel comfortable taking a survey in English.</p>
Proposed Revised Title:	Regularly Assess Patient Experience of Care and Follow Up on Findings
Proposed Revised Activity Description:	Collect and follow up on patient experience and satisfaction data. This activity also requires follow-up on findings of assessments, including the development and implementation of improvement plans. To fulfill the requirements of this activity, MIPS eligible clinicians can use surveys (e.g., Consumer Assessment of Healthcare Providers and Systems Survey), advisory councils, or other mechanisms. MIPS eligible clinicians may consider implementing patient surveys in multiple languages, based on the needs of their patient population.
Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BE_6
Subcategory:	Beneficiary Engagement
Activity Title:	Regularly Assess Patient Experience of Care and Follow Up on Findings
Activity Description:	Collect and follow up on patient experience and satisfaction data. This activity also requires follow-up on findings of assessments, including the development and implementation of improvement plans. To fulfill the requirements of this activity, MIPS eligible clinicians can use surveys (e.g., Consumer Assessment of Healthcare Providers and Systems Survey), advisory councils, or other mechanisms. MIPS eligible clinicians may consider implementing patient surveys in multiple languages, based on the needs of their patient population.
Weighting:	High
Current Improvement Activity	
Current Activity ID:	IA_BE_16
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Evidenced-based techniques to promote self-management into usual care
Current Activity Description:	Incorporate evidence-based techniques to promote self-management into usual care, using techniques such as goal setting with structured follow-up, Teach Back, action planning or motivational interviewing.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We proposed to combine this IA_BE_16 with the previously adopted IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 because of overlapping and duplicative content and to improve the applicability and ease of use of the inventory. The above previously

	<p>adopted improvement activities included effective interventions for helping patients better engage in self-management. The previously adopted activity descriptions are as follows:</p> <ul style="list-style-type: none"> • IA_BE_17: Use tools to assist patients in assessing their need for support for self-management (e.g., the Patient Activation Measure or “How’s My Health”). (81 FR 77825) • IA_BE_18: Provide peer-led support for self-management. (81 FR 77825) • IA_BE_20: Provide condition-specific chronic disease self-management support programs or coaching or link patients to those programs in the community. (81 FR 77825) • IA_BE_21: Provide self-management materials at an appropriate literacy level and in an appropriate language. (81 FR 77825) <p>We proposed to change IA_BE_16 to include additional detail covering the unique content of IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21. Specifically, we proposed to add tools for self-management, peer-led support, provision of self-management materials, and retain the examples of evidence-based approaches patients may use to better engage in self-management included in the original IA_BE_16: goal setting with structured follow-up,⁹ Teach-back methods,¹⁰ action planning,¹¹ assessment of need for self-management (for example, the Patient Activation Measure¹²), and motivational interviewing¹³ as options for tools and resources to provide patients as part of fulfilling the requirements for the activity. These tools and techniques could be particularly helpful for people with substance use disorders and individuals managing chronic physical conditions such as diabetes and heart disease¹⁴.</p> <p>We also proposed to add that evidence-based techniques for promoting self-management should be culturally and linguistically tailored.</p>
Proposed Revised Activity Title:	Promote Self-management in Usual Care
Proposed Revised Activity Description:	To help patients self-manage their care, incorporate culturally and linguistically tailored evidence-based techniques for promoting self-management into usual care, and provide patients with tools and resources for self-management. Examples of evidence-based techniques to use in usual care include: goal setting with structured follow-up, Teach-back methods, action planning, assessment of need for self-management (for example, the Patient Activation Measure), and motivational interviewing. Examples of tools and resources to provide patients directly or through community organizations include: peer-led support for self-management, condition-specific chronic disease or substance use disorder self-management programs, and self-management materials.
Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BE_16
Subcategory:	Beneficiary Engagement
Activity Title:	Promote Self-management in Usual Care
Activity Description:	To help patients self-manage their care, incorporate culturally and linguistically tailored evidence-based techniques for promoting self-management into usual care, and provide patients with tools and resources for self-management. Examples of evidence-based techniques to use in usual care include: goal setting with structured follow-up, Teach-back methods, action planning, assessment of need for self-management (for example, the Patient Activation Measure), and motivational interviewing. Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_BE_25
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Drug Cost Transparency
Current Activity Description:	To receive credit for this improvement activity, MIPS eligible clinicians must attest that their practice provides counseling to patients and/or their caregivers about the costs of drugs and the patients’ out-of-pocket costs for the drugs. If appropriate, the MIPS eligible clinician must also explore with their patients the availability of alternative drugs and patients’ eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of pharmaceuticals could be a real-time benefit tool (RTBT), which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. (CMS finalized in the Modernizing Part D and Medicare Advantage to Lower Drug Prices and Reduce Out of Pocket Expenses final rule (84 FR 23832, 23883) that beginning January 1, 2021 Medicare Part D plans will be required to implement one or more RTBT(s).)
Current Weighting:	High

Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2020 PFS final rule (84 FR 63539). In the CY 2020 PFS final rule (84 FR 63515), we adopted IA_BE_25, titled “Drug Cost Transparency to include requirements for use of real-time benefit tools” beginning with the 2020 performance year and for subsequent years. It allows a real-time benefit tool (RTBT) to be one source of information for pricing of pharmaceuticals, which provides to the prescriber real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary.</p> <p>The 2021 Consolidated Appropriations Act (H.R. 116-133, Pub. L. 116-260) subtitle B included section 119 “Increasing the use of real-time benefit tools to lower beneficiary costs” subsection (c) “Inclusion of Use of Real-Time Electronic Information in Shared Decision-Making Under MIPS” amended section 1848(q)(2)(B)(iii)(IV) of the Act by adding at the end the following new sentences: “This subcategory shall include as an activity, for performance periods beginning on or after January 1, 2022, use of a real-time benefit tool as described in section 1860D-4(o). The Secretary may establish this activity as a standalone or as a component of another activity.”</p> <p>In response to this amendment, in the proposed rule, we proposed to modify this improvement activity such that beginning with the CY 2022 performance period/2024 MIPS payment year and for subsequent years the activity will require use of RTBT. As previously finalized, use of RTBT was optional.</p> <p>We also proposed to update the description in ways that clarify the activity, but do not affect the intent of the activity.</p> <p>We believe that requiring RTBT will make this activity more likely to reduce the costs of care. As explained in the CY 2019 Modernizing Part D final rule (84 FR 23832), RTBTs that are integrated with at least one prescriber’s e-prescribing and electronic medical record systems can make beneficiary-specific drug coverage and cost information visible to prescribers. Using RTBT thus allows the prescriber and patient, when appropriate, to choose among clinically acceptable alternatives while weighing costs. By making RTBT a requirement, this modification will also require prescribers to look for alternative drugs, in contrast to the existing activity where such comparisons are optional. We believe that furthering prescription price transparency is critical to lowering overall drug costs and patients’ out-of-pocket costs and improving medication adherence. Additionally, it could help advance efforts to improve patient safety, quality of care, and efficiencies and cost savings in the delivery of care.</p>
Proposed Revised Activity Description:	Provide counseling to patients and/or their caregivers regarding: costs of medications using a real time benefit tool (RTBT) which provides to the prescriber real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary.
Comments:	One commenter recommended that the use of a RTBT remain optional to meet the requirements for this activity given the variation in practices’ access to RTBT.
Response:	The modification to this improvement activity was proposed to satisfy the requirement of the 2021 Consolidated Appropriations Act (H.R. 116-133, Pub. L. 116-260), which provides that the Improvement Activity performance category include a new or modified activity that requires use of RTBT. We chose to combine this requirement with an existing activity about RTBT because we viewed the CAA amendment as an opportunity to further advance patient counseling regarding drug cost. Requiring the use of RTBT would make this activity more likely to reduce the costs of care for patients. Moreover, MIPS eligible clinicians with delayed access to RTBT can choose appropriate improvement activities from over 100 activities in the inventory, until their access issues are resolved.
Final Action:	After consideration of the public comments we received, we are finalizing our CY 2022 performance period/2024 MIPS payment year proposal to modify IA_BE_25 without modification.
Finalized Improvement Activity	
Activity ID:	IA_BE_25
Subcategory:	Beneficiary Engagement
Activity Title:	Drug Cost Transparency
Activity Description:	Provide counseling to patients and/or their caregivers regarding: costs of medications using a real time benefit tool (RTBT) which provides to the prescriber real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary.
Current Weighting:	High
Current Improvement Activity	
Current Activity ID:	IA_CC_14
Current Subcategory:	Care Coordination
Current Activity Title:	Practice improvements that engage community resources to support patient health goals
Current Activity Description:	<p>Develop pathways to neighborhood/community-based resources to support patient health goals that could include one or more of the following:</p> <ul style="list-style-type: none"> • Maintain formal (referral) links to community-based chronic disease self-management

	<p>support programs, exercise programs and other wellness resources with the potential for bidirectional flow of information; and provide a guide to available community resources.</p> <ul style="list-style-type: none"> • Including through the use of tools that facilitate electronic communication between settings; • Screen patients for health-harming legal needs; • Screen and assess patients for social needs using tools that are preferably health IT enabled and that include to any extent standards-based, coded question/field for the capture of data as is feasible and available as part of such tool; and/or • Provide a guide to available community resources.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). The previously adopted improvement activity includes screening as one option to assess patients specifically for social and legal needs. We proposed to modify this improvement activity to instead require screening for a range of health-related social needs using evidence-based tools before and in addition to supporting connections to community resources. We believe that screening patients using evidence-based tools could help clinicians adopt a more systematic approach to addressing health related social needs among their patient population, including effective documentation and follow-up, and avoid missing patients who have such needs. Including screening in addition to supporting connections to community resources, represents a continuum of support that clinicians can provide to patients from within the health system.</p> <p>We also proposed to remove the promotion of systems for communication that have the “potential for bi-directional flow of information” and the option for using “tools that facilitate electronic communication between settings.” In many communities, the resources and programs that might best provide patients who have health-related social needs with support may not have the baseline technological capacity to engage with clinician groups in ways that eclipse basic forms of communication like phone and email.</p> <p>We also proposed to add an option for using electronic health records to document screening results, trigger follow-up, and analyze data to better tailor approaches. For practices that already have processes for enabling connections to community resources established, this option would allow continued improvement and provision of more streamlined and systematized support to patients in need.</p> <p>The specific set of health-related social needs that clinicians might choose to prioritize remains part of the improvement activity, as does examples that were previously mentioned in the activity—for example, health-related legal needs. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it requires MIPS eligible clinicians to both screen for and address health related social needs, which are major contributors to health care access and health outcomes.</p> <p>In light of the above list of proposed changes in this modification, we also proposed to increase the weight for this activity from medium to high. Specifically, the modifications would require screening in addition to an activity that links patients to community resources. Previously, the activity required screening <i>or</i> linkages to community. Conducting screening then devoting clinical staff time to using that data to identify and disseminate appropriate community resource information to patients takes considerable time and resources. We proposed to increase the weight for this activity from medium to high to reflect the additional effort required, per high-weight criteria finalized in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Proposed New Weighting:	High
Proposed Revised Activity Description:	<p>Select and screen for the health-related social needs (HRSN) that are relevant for your patient population using tools that have been tested with underserved populations. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded question/field for the capture of data. After screening, address HRSNs identified through at least one of the following:</p> <ul style="list-style-type: none"> • Update a guide to available community resources and provide it to patients who are found to be at risk in one or more HRSN area; • Maintain formal (referral) links to key community resources and programs to strengthen the referral process, implementing closed-loop referrals where feasible; or • Record findings of screening and trigger follow-up within the electronic health record (EHR); then analyze EHR data on patients with one or more HRSN needed to identify and implement approaches to better serve their holistic needs through linkages with community resources.

	HRSNs prioritized by your practice might include health-harming legal needs, which require both health and legal support to resolve, areas such as food and housing insecurity, or needs such as exercise, nutrition, or chronic disease self-management.
Comments:	One commenter was supportive of improvement activity modifications that address using data to address disparities in health equity, e.g., gathering and analyzing data by race and documenting disparities by different population groups. The commenter recommended that when implementing such modifications, CMS ensures that such modifications do not alter the core intent of the activity. We also received feedback suggesting CMS modify the activity description to reflect that a MIPS eligible clinician should maintain relationships with community-based organizations to strengthen community service referrals to HRSN, especially for underserved populations. They suggested CMS could emphasize this point by placing this bullet first in the activity description. They believed these edits were needed to underscore the importance of leveraging the experience of and relationships with community-based organizations to connect patients to community services to address HRSN. They also suggested we modify the activity to specify that in addition to updating a guide to community resources, a MIPS eligible clinician could work with community partners to provide a community resource guide. They explain this addition would highlight the option for community organizations to share existing resource guides with patients found to be at risk for HRSN, via the MIPS eligible clinician.
Response:	We thank the commenter for this input and agree with this approach. When modifying several improvement activities to include collecting and analyzing population-level data including health-related social needs, our intent is to highlight opportunities to strengthen core activities to close health equity gaps using a data-informed approach. This activity's modification adds a requirement to screen patients for health-related social needs, which may rely on population-level data analysis. The intent of this modification is to help MIPS eligible clinicians adopt a more systematic approach to referring patients to community-based resources without altering the core intent of the activity. We also agree with the feedback regarding modifying the language of this activity to emphasize the importance of relationships between a MIPS eligible clinician and community-based organizations to strengthen community service referrals, and to include the option for community partners to share existing resource guides related to HRSN areas. We also agree to include these options for completing this activity in this order, involving a switch of the current second bullet to become the first.
Final Action:	After consideration of the public comments we received, we are modifying this activity by moving the current second bullet first and by editing the language to refer to a relationship between a MIPS eligible clinician and community-based organizations and to specify that they strengthen referrals to community services; and to include the option for community partners to share existing resource guides.
Finalized Improvement Activity	
Activity ID:	IA_CC_14
Subcategory:	Care Coordination
Activity Title:	Practice improvements that engage community resources to support patient health goals
Activity Description:	<p>Select and screen for the health-related social needs (HRSN) that are relevant for your patient population using tools that have been tested with underserved populations. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded question/field for the capture of data. After screening, address HRSNs identified through at least one of the following:</p> <ul style="list-style-type: none"> • Maintain formal relationships with community-based organizations to strengthen the community service referral process, implementing closed-loop referrals where feasible; or • Update a guide to available community resources, or work with community partners to provide a community resource guide and provide it to patients who are found to be at risk in one or more HRSN area; or • Record findings of screening and trigger follow-up within the electronic health record (EHR); then analyze EHR data on patients with one or more HRSN needed to identify and implement approaches to better serve their holistic needs through linkages with community resources. <p>HRSNs prioritized by your practice might include health-harming legal needs, which require both health and legal support to resolve, areas such as food and housing insecurity, or needs such as exercise, nutrition, or chronic disease self-management.</p>
Weighting:	High
Current Improvement Activity	
Current Activity ID:	IA_CC_15
Current Subcategory:	Care Coordination
Current Activity Title:	PSH Care Coordination
Current Activity Description:	Participation in a Perioperative Surgical Home (PSH) that provides a patient-centered, physician-led, interdisciplinary, and team-based system of coordinated patient care, which coordinates care from pre-procedure assessment through the acute care episode, recovery, and post-acute care.

	<p>This activity allows for reporting of strategies and processes related to care coordination of patients receiving surgical or procedural care within a PSH. The MIPS eligible clinician must perform one or more of the following care coordination activities:</p> <ul style="list-style-type: none"> • Coordinate with care managers/navigators in preoperative clinic to plan and implementation comprehensive post discharge plan of care; • Deploy perioperative clinic and care processes to reduce post-operative visits to emergency rooms; • Implement evidence-informed practices and standardize care across the entire spectrum of surgical patients; or • Implement processes to ensure effective communications and education of patients' post-discharge instructions.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2018 Quality Payment Program final rule (82 FR 54175). We proposed to increase the weight for this activity from medium to high, because it came to our attention that the level of effort to complete this activity was better aligned to our high-weight criteria, which specifies that high-weight activities reflect high intensity activities, requiring significant investment of time and resources. This activity requires team-based, interdisciplinary care coordinated across multiple care settings and requires efforts to both plan for and implement the selected care coordination actions. We note that the activity description will remain the same.</p>
Proposed New Weighting:	High
Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.
Finalized Improvement Activity	
Activity ID:	IA_CC_15
Subcategory:	Care Coordination
Activity Title:	PSH Care Coordination

Weighting:	High
Current Improvement Activity	
Current Activity ID:	IA_EPA_1
Current Subcategory:	Expanded Practice Access
Current Activity Title:	Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
Current Activity Description:	<p>Provide 24/7 access to MIPS eligible clinicians, groups, or care teams for advice about urgent and emergent care (e.g., MIPS eligible clinician and care team access to medical record, cross-coverage with access to medical record, or protocol-driven nurse line with access to medical record) that could include one or more of the following:</p> <ul style="list-style-type: none"> • Expanded hours in evenings and weekends with access to the patient medical record (e.g., coordinate with small practices to provide alternate hour office visits and urgent care); • Use of alternatives to increase access to care team by MIPS eligible clinicians and groups, such as e-visits, phone visits, group visits, home visits and alternate locations (e.g., senior centers and assisted living centers); and/or • Provision of same-day or next-day access to a consistent MIPS eligible clinician, group or care team when needed for urgent care or transition management.
Current Weighting:	High
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We proposed to remove references to a "consistent" MIPS eligible clinician, group or care team, because the requirement for a consistent clinician was unclear and unnecessary to achieve the activity's objectives.</p> <p>We also proposed to limit the scope of the activity to "urgent care" only rather than both "urgent</p>

	<p>and emergent care," because emergent care would only require the activity's interventions when also urgent. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because the improved clarity will promote expanded access to MIPS eligible clinicians in urgent care settings.</p> <p>We believe that these modifications help clarify the nature and intent of this activity, and thus would help clinicians selecting it to improve access to care for their patients.</p>
Proposed Revised Activity Description:	<p>Provide 24/7 access to MIPS eligible clinicians, groups, or care teams for advice about urgent care (e.g., MIPS eligible clinician and care team access to medical record, cross-coverage with access to medical record, or protocol-driven nurse line with access to medical record) that could include one or more of the following:</p> <ul style="list-style-type: none"> Expanded hours in evenings and weekends with access to the patient medical record (e.g., coordinate with small practices to provide alternate hour office visits and urgent care); Use of alternatives to increase access to care team by MIPS eligible clinicians and groups, such as e-visits, phone visits, group visits, home visits and alternate locations (e.g., senior centers and assisted living centers); and/or Provision of same-day or next-day access to a MIPS eligible clinician, group or care team when needed for urgent care or transition management.
Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.
Finalized Improvement Activity	
Activity ID:	IA_EPA_1
Subcategory:	Expanded Practice Access
Activity Title:	Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
Activity Description:	<p>Provide 24/7 access to MIPS eligible clinicians, groups, or care teams for advice about urgent care (e.g., MIPS eligible clinician and care team access to medical record, cross-coverage with access to medical record, or protocol-driven nurse line with access to medical record) that could include one or more of the following:</p> <ul style="list-style-type: none"> Expanded hours in evenings and weekends with access to the patient medical record (e.g., coordinate with small practices to provide alternate hour office visits and urgent care); Use of alternatives to increase access to care team by MIPS eligible clinicians and groups, such as e-visits, phone visits, group visits, home visits and alternate locations (e.g., senior centers and assisted living centers); and/or Provision of same-day or next-day access to a MIPS eligible clinician, group or care team when needed for urgent care or transition management.
Weighting:	High
Current Improvement Activity	
Current Activity ID:	IA_EPA_2
Current Subcategory:	Expanded Practice Access
Current Activity Title:	Use of telehealth services that expand practice access
Current Activity Description:	Use of telehealth services and analysis of data for quality improvement, such as participation in remote specialty care consults or teleaudiology pilots that assess ability to still deliver quality care to patients.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 QPP final rule (81 FR 77825). We proposed to shift the focus of the activity to developing standardized approaches for telehealth in their daily practice and away from the analysis of data to evaluate effectiveness. This proposed shift retains the objective of the original activity, namely, of improving health outcomes for patients utilizing telehealth services. We believe this proposed shift makes the activity more relevant, because while telehealth has become a routine part of health care during the COVID-19 pandemic and is perceived as effective by clinicians and patients, clinicians may not have implemented it in a standardized manner or as widely as possible due to the rapid adaptation needed during the pandemic.¹⁵ We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it promotes creation and implementation of standardized telehealth services, which can improve access and quality of care by offering another mode by which patients can interact with their care team.</p>
Proposed Revised Activity Description:	Create and implement a standardized process for providing telehealth services to expand access to care.
Comments:	Commenters expressed support for the proposed modifications to this improvement activity.
Response:	We appreciate the commenters' support.
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_EPA_2

Subcategory:	Expanded Practice Access
Activity Title:	Use of telehealth services that expand practice access
Activity Description:	Create and implement a standardized process for providing telehealth services to expand access to care.
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_PM_6
Current Subcategory:	Population Management
Current Activity Title:	Use of toolsets or other resources to close health care disparities across communities
Current Activity Description:	Take steps to improve healthcare disparities, such as Population Health Toolkit or other resources identified by CMS, the Learning and Action Network, Quality Innovation Network, or National Coordinating Center. Refer to the local Quality Improvement Organization (QIO) for additional steps to take for improving health status of communities as there are many steps to select from for satisfying this activity. QIOs work under the direction of CMS to assist MIPS eligible clinicians and groups with quality improvement, and review quality concerns for the protection of beneficiaries and the Medicare Trust Fund.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We proposed to add language that is more explicit about the improvement activity's focus on using population health data analysis to assess the prevalence of inequities in a practice and community.</p> <p>Specifically, we proposed to modify the activity description to specify that population health data analysis tools should be used to identify health inequities; MIPS eligible clinicians should then assess the options for effective interventions to address those inequities.¹⁶ We also proposed to add a requirement that MIPS eligible clinicians create, refine, and implement an action plan to address inequities based on the data analysis conducted.</p> <p>We also proposed to remove references to the Learning and Action Network, Quality Innovation Network, and National Coordinating Center as organizations that may identify tools or resources, because they may not be appropriate resources to support clinicians in assessing and addressing health disparities. Population health data analytic tools may be identified in a number of ways, and we seek to keep the activity broad in this manner.</p> <p>We also proposed to replace the term "disparities" with "inequities" in both the title and description of the activity, which acknowledges structural problems like racism are inequities (that is, state of being unfair) rather than using the term disparities, which is defined as being different or not at parity but does not clearly state the unjustness of the result. We also proposed to modify the title to recognize that inequities in both health (that is, status and outcomes) and health care (that is, access, quality, and safety) may be addressed.</p> <p>With the proposed modifications, MIPS eligible clinicians attesting to this improvement activity would need to first analyze inequities in their patient populations, and then use that data to identify and then address issues or gaps. We believe that participation in the modified version of this improvement activity will be more likely to result in improved outcomes, because it is more focused on a data-driven approach to population health analysis and requires practices to use this data to inform a formal action planning process to address them.</p>
Proposed Revised Activity Title:	Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities
Proposed Revised Activity Description:	Address inequities in health outcomes by using population health data analysis tools to identify health inequities in the community and practice and assess options for effective and relevant interventions such as Population Health Toolkit or other resources identified by the clinician, practice, or by CMS. Based on this information, create, refine, and implement an action plan to address and close inequities in health outcomes and/or health care access, quality, and safety.
Comments:	Commenters expressed support for the proposed modifications to this improvement activity. One commenter was supportive of improvement activity modifications that addressed using data to address disparities in health equity, e.g., gathering and analyzing data by race and documenting disparities by different population groups. The commenter recommended that when implementing such modifications, CMS ensures that such modifications do not alter the core intent of the activity.
Response:	We appreciate the commenters' support and agree with this approach to implementing such modifications. When modifying several improvement activities to include collecting and analyzing population-level data, our intent is to highlight opportunities to strengthen core activities to close health equity gaps using a data-informed approach. This activity's modification specifies that population health data analysis tools should be used to identify health inequities. This strengthens, but does not alter, the intent of the activity, which was already focused on using toolsets or other resources to address such inequities. We refer stakeholders to the Executive

	Order On Advancing Racial Equity and Support for Underserved Communities Through the Federal Government for more information about health equity. ¹⁷
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_PM_6
Subcategory:	Population Management
Activity Title:	Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities
Activity Description:	Address inequities in health outcomes by using population health data analysis tools to identify health inequities in the community and practice and assess options for effective and relevant interventions such as Population Health Toolkit or other resources identified by the clinician, practice, or by CMS. Based on this information, create, refine, and implement an action plan to address and close inequities in health outcomes and/or health care access, quality, and safety.
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_PM_11
Current Subcategory:	Population Management
Current Activity Title:	Regular review practices in place on targeted patient population needs
Current Activity Description:	Implementation of regular reviews of targeted patient population needs, such as structured clinical case reviews, which includes access to reports that show unique characteristics of MIPS eligible clinician's patient population, identification of vulnerable patients, and how clinical treatment needs are being tailored, if necessary, to address unique needs and what resources in the community have been identified as additional resources.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We proposed to make explicit the acknowledgement that structural issues, like racism, are a root cause of many disparities in health outcomes across populations.</p> <p>Specifically, we proposed to modify the improvement activity to encourage MIPS eligible clinicians to explore structural issues like racism explicitly and openly during their reviews of targeted patient population needs. We proposed to remove reference to “vulnerable patients” and replace it with “underserved patients” to better clarify that there is nothing inherently vulnerable about a person. Instead, their poorer health outcomes are due to systemic failures within and beyond the health system—failures which leave the health needs of underserved communities unmet. We believe these additions would allow MIPS eligible clinicians to gain perspective and ideas beneficial to their patients by specifically identifying underserved patients, related structural inequities such as those due to racism, and tailor treatment needs and identify community resources to address those problems.</p> <p>We also proposed to modify the description language in ways that clarify the activity, but do not change the intent.</p> <p>We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it requires MIPS eligible clinicians to implement regular reviews of patient population needs to identify and address the needs of underserved populations and connect those patients to resources in the community.</p>
Proposed Revised Activity Description:	Implement regular reviews of targeted patient population needs, such as structured clinical case reviews, which include access to reports that show unique characteristics of MIPS eligible clinician's patient population, identification of underserved patients, and how clinical treatment needs are being tailored, if necessary, to address unique needs and what resources in the community have been identified as additional resources. The review should consider how structural inequities, such as racism, are influencing patterns of care and consider changes to acknowledge and address them. Reviews should stratify patient data by demographic characteristics and health related social needs to appropriately identify differences among unique populations and assess the drivers of gaps and disparities and identify interventions appropriate for the needs of the sub-populations.
Comments:	Commenters expressed support for the proposed modifications to this improvement activity.
Response:	We appreciate the commenters' support.
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_PM_11
Subcategory:	Population Management
Activity Title:	Regular review practices in place on targeted patient population needs
Activity Description:	Implement regular reviews of targeted patient population needs, such as structured clinical case

	reviews, which include access to reports that show unique characteristics of MIPS eligible clinician's patient population, identification of underserved patients, and how clinical treatment needs are being tailored, if necessary, to address unique needs and what resources in the community have been identified as additional resources. The review should consider how structural inequities, such as racism, are influencing patterns of care and consider changes to acknowledge and address them. Reviews should stratify patient data by demographic characteristics and health related social needs to appropriately identify differences among unique populations and assess the drivers of gaps and disparities and identify interventions appropriate for the needs of the sub-populations.
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_PSPA_6
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Consultation of the Prescription Drug Monitoring program
Current Activity Description:	Clinicians would attest to reviewing the patients' history of controlled substance prescription using State prescription drug monitoring program (PDMP) data prior to the issuance of a Controlled Substance Schedule II (CSII) opioid prescription lasting longer than 3 days. For the transition year, clinicians would attest to 60 percent review of applicable patient's history. For the Quality Payment Program Year 2 and future years, clinicians would attest to 75 percent review of applicable patient's history performance.
Current Weighting:	High
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We proposed to increase the percentage of applicable patients for whom clinicians must review prescription history within the PDMP from 75 percent to 100 percent and remove language referencing prior year requirements, which are now obsolete. States are increasingly mandating that providers review the PDMP for all applicable patients.¹⁸</p> <p>We also proposed to include an exception for patients receiving palliative and hospice care, as they are exempt from CDC prescribing guidelines.¹⁹ The CDC has identified increasing use of PDMP as the most promising State-level strategy for improving clinical care and outcomes for at-risk patients.²⁰ We support the continued efforts of MIPS eligible clinicians to increase usage of PDMP in their practice.</p> <p>We also proposed to modify the description language in ways that clarify the activity but do not affect its intent.</p> <p>We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it supports use of prescription drug monitoring programs to reduce overprescribing of controlled substance prescriptions lasting longer than three days,²¹ which can lead to substance use disorder.</p>
Proposed Revised Activity Description:	Review the history of controlled substance prescriptions for 100 percent* of patients using State prescription drug monitoring program (PDMP) data prior to the issuance of a Controlled Substance Schedule II (CSII) opioid prescription lasting longer than 3 days. *Apply exceptions for patients receiving palliative and hospice care.
Comments:	One commenter stated they do not support the changes made to IA_PSPA_6 to increase the percentage of applicable patients for whom clinicians must review prescription history within the PDMP from 75 percent to 100 percent. They requested that CMS issue detailed guidance on which patient populations are exempt from these PDMP checks to ensure clinicians can provide individualized care and meet varied patient needs. They suggested that CMS take an alternative approach to this improvement activity—one that focuses on reducing deaths from non-medical use of drugs, which accounts for more drug-related deaths than prescriptions. Furthermore, they recommended a new/alternative activity that is intended to reduce deaths from non-medical use of drugs.
Response:	<p>The proposed modification to this improvement activity aligns with the CDC's guidance that increasing use of PDMP is the most promising State-level strategy for improving clinical care and outcomes for at-risk patients.²⁰ The PDMP is a basic tool to ensure clinicians are well-informed when prescribing opioids. We recognize that this improvement activity will not alone resolve the opioid epidemic. However, MIPS eligible clinicians implementing it can still reduce the overprescribing of controlled substance prescriptions. We invite stakeholders to submit new or alternate activities on this subject through the annual Call for Improvement Activities.</p> <p>With respect to the exceptions to this activity, the improvement activity includes exceptions for patients receiving palliative and hospice care, per the CDC prescribing guidelines,¹⁸ which state clear definitions for palliative care and hospice care.</p> <p>Checking the PDMP would not preclude the prescription of opioids after careful individual</p>

	evaluation. While we understand that 100 percent seem to be a high, we believe that 75 percent is too low. Due the importance of reviewing the history of controlled substance prescriptions using PDMP data we believe that a 90 percent is attainable and does not require perfection in instances where a review is impossible.
Final Action:	After consideration of the public comments we received, we are finalizing this activity with an increase in the percentage of applicable patients for whom MIPS eligible clinicians must review prescription history within the PDMP from 75 percent to 90 percent, instead of the proposed increase to 100 percent. We also added language to direct clinicians to the CDC prescribing guidelines for determining exceptions to this activity's required prescription history review percentage.
Finalized Improvement Activity	
Activity ID:	IA_PSPA_6
Subcategory:	Patient Safety and Practice Assessment
Activity Title:	Consultation of the Prescription Drug Monitoring program
Activity Description:	Review the history of controlled substance prescriptions for 90 percent* of patients using State prescription drug monitoring program (PDMP) data prior to the issuance of a Controlled Substance Schedule II (CSII) opioid prescription lasting longer than 3 days. *Apply exceptions for patients receiving palliative and hospice care per CDC prescribing guidelines.
Weighting:	High
Current Improvement Activity	
Current Activity ID:	IA_PSPA_18
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Measurement and improvement at the practice and panel level
Current Activity Description:	<p>Measure and improve quality at the practice and panel level, such as the American Board of Orthopaedic Surgery (ABOS) Physician Scorecards, that could include one or more of the following:</p> <ul style="list-style-type: none"> • Regularly review measures of quality, utilization, patient satisfaction and other measures that may be useful at the practice level and at the level of the care team or MIPS eligible clinician or group (panel); and/or • Use relevant data sources to create benchmarks and goals for performance at the practice level and panel level.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We proposed to modify this activity to include the opportunities for MIPS eligible clinicians to fulfill this improvement activity by applying the quality, utilization, patient satisfaction, and other measures or quality improvement actions to address inequities in quality and outcomes for underserved populations, including racial, ethnic, and gender minorities.</p> <p>We also proposed to improve the activity language in ways that clarify the activity, but do not affect its intent, including simplifying the first activity option by removing the language “that may be useful at the practice level and at the level of the care team or MIPS eligible clinician or group (panel),” since it is stated at the beginning of the description that these activities can take place at the practice and panel levels.</p> <p>We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because MIPS eligible clinicians who review these relevant data sources for particular underserved populations and create benchmarks and goals for improvement are likely to provide better quality and more equitable care.</p>
Proposed Revised Activity Description:	<p>Measure and improve quality at the practice and panel level, such as the American Board of Orthopaedic Surgery (ABOS) Physician Scorecards that could include one or more of the following:</p> <ul style="list-style-type: none"> • Regularly review measures of quality, utilization, patient satisfaction and other measures; and/or • Use relevant data sources to create benchmarks and goals for performance at the practice or panel levels. <p>MIPS eligible clinicians can apply the measurement and quality improvement to address inequities in quality and outcomes for underserved populations, including racial, ethnic, and/or gender minorities.</p>
Comments:	One commenter was supportive of improvement activity modifications that addressed using data to address disparities in health equity, e.g., gathering and analyzing data by race and documenting disparities by different population groups. The commenter recommended that when implementing such modifications, we ensure that such modifications do not alter the core intent of the activity.
Response:	We thank this commenter for this input and agree with this approach. When modifying several improvement activities to include collecting and analyzing population-level data, our intent is to highlight opportunities to strengthen core activities to close health equity gaps using a data-informed approach. This activity's modification includes an option, not a requirement, to use data to create benchmarks or performance goals to address inequities and improve outcomes.

Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Finalized Improvement Activity

Current Improvement Activity	
Current Activity ID:	IA_ERP_3
Current Subcategory:	Emergency Response and Preparedness
Current Activity Title:	COVID-19 Clinical Data Reporting with or without Clinical Trial
Current Activity Description:	<p>To receive credit for this improvement activity, a MIPS eligible clinician or group must: (1) participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. Data should be submitted to the extent permitted by applicable privacy and security laws. Examples of COVID-19 clinical trials may be found on the U.S. National Library of Medicine website at https://clinicaltrials.gov/ct2/results?cond=COVID-19. In addition, examples of COVID-19 clinical data registries may be found on the National Institute of Health website at https://search.nih.gov/search?utf8=%E2%9C%93&affiliate=nih&query=COVID19+registries&commit=Search.</p> <p>For purposes of this improvement activity, clinical data registries must meet the following requirements: (1) the receiving entity must declare that they are ready to accept data as a clinical registry; and (2) be using the data to improve population health outcomes. Most public health agencies and clinical data registries declare readiness to accept data from clinicians via a public online posting. Clinical data registries should make publicly available specific information on what data the registry gathers, technical requirements or specifications for how the registry can receive the data, and how the registry may use, re-use, or disclose individually identifiable data it receives. For purposes of credit toward this improvement activity, any data should be sent to the clinical data registry in a structured format, which the registry is capable of receiving. A MIPS eligible clinician may submit the data using any standard or format that is supported by the clinician's health IT systems, including but not limited to, certified functions within those systems. Such methods may include, but are not limited to, a secure upload function on a web portal, or submission via an intermediary, such as a health information exchange. To ensure interoperability and versatility of the data submitted, any electronic data should be submitted to the clinical data registry using appropriate vocabulary standards for the specific data elements, such as those identified in the United States Core Data for Interoperability (USCDI) standard adopted in 45 CFR 170.213.</p>
Current Weighting:	High
Proposed Action and Rationale:	<p>We previously adopted this improvement activity to the inventory for the 2020 and 2021 MIPS performance periods only in response to the PHE for COVID-19 and planned to reassess its need for the CY 2022 performance period/2024 MIPS payment year and future years. We proposed to continue this improvement activity for the CY 2022 performance period/2024 MIPS payment year and future years.</p> <p>Despite increasing dissemination of COVID-19 vaccines, we anticipate that COVID-19 infections may continue to be prevalent in communities with low vaccine adoption and/or among groups (i.e., children) who do not yet have access to vaccines. Additionally, new variants of COVID may introduce additional challenges to the eradication and treatment of the illness. Due to these concerns, clinicians may likely continue to encounter COVID-19 patients, and therefore we anticipate the need for COVID-19 clinical trials and data collection/sharing through registries to continue through CY 2022 and future years. Each year we will reassess whether there remains a</p>

	<p>need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these type of data are not needed. We want MIPS eligible clinicians to be able to attest to this improvement activity if it is still pertinent. If this improvement activity becomes no longer needed, we would remove the activity through rulemaking. While COVID-19 continues to be a PHE and a great concern for clinicians, patients, and communities, we believe that continued participation in this improvement activity would result in improved outcomes by improving the collection of data MIPS eligible clinicians use for the care of their patients as they monitor and manage COVID-19.</p> <p>We note that the activity description will remain the same.</p>
Comments:	One commenter expressed support for the proposed modifications to this improvement activity and suggested we continue to extend the improvement activity as long as appropriate.
Response:	We appreciate the commenter's support.
Final Action:	After consideration of the public comment we received, we are finalizing this activity as proposed.

**TABLE C: Improvement Activities for Removal for the CY 2022 Performance Period/
2024 MIPS Payment Year and Future Years**

Current Improvement Activity	
Current Activity ID:	IA_BE_13
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Regularly assess the patient experience of care through surveys, advisory councils and/or other mechanisms
Current Activity Description:	Regularly assess the patient experience of care through surveys, advisory councils and/or other mechanisms.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor 1, improvement activity is “duplicative” and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_13 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_6. We proposed to consolidate the unique language from IA_BE_13 into IA_BE_6 per the proposed changes in Table B. The proposed revised IA_PM_6 adds additional detail from IA_BE_13 (e.g., use of advisory councils). IA_BE_6 has a stronger relationship to improvement in clinical practice because it also requires the development of an improvement plan based on the results of the patient experience data gathered and assessed. We note that this proposed removal was made in conjunction with our proposal to change IA_BE_6 in Table B, as well as our proposal to remove IA_PSPA_11 in Table C.
Comments:	One commenter disagreed with our proposal to remove this activity, as they use surveys and activities in meaningful ways for their practice.
Response:	We direct this commenter to revised activity BE_6 in Table B, above, which now incorporates the unique components of BE_13. As such, this commenter may continue to use surveys and related patient experience assessment activities and attest to BE_6 to receive improvement activity credit for this work.
Final Action:	After consideration of the public comments we received, we are finalizing this activity as proposed.
Current Improvement Activity	
Current Activity ID:	IA_PSPA_11
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Participation in CAHPS or other supplemental questionnaire
Current Activity Description:	Participation in the Consumer Assessment of Healthcare Providers and Systems Survey or other supplemental questionnaire items (e.g., Cultural Competence or Health Information Technology supplemental item sets).
Current Weighting:	High
Removal Rationale:	We proposed to remove this activity under removal factor 1, improvement activity is “duplicative.” We believe IA_PSPA_11 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_6. We proposed to consolidate the unique language from IA_PSPA_11 into IA_BE_6 per the proposed change in Table B. The proposed revised IA_BE_6 adds additional detail from IA_PSPA_11 (e.g., CAHPS). We note that this proposed removal was made in conjunction with our proposal to change IA_BE_6 in Table B, as well as our proposal to remove IA_BE_13 in Table C.
Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.
Current Improvement Activity	
Current Activity ID:	IA_BE_17
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Use of tools to assist patient self-management
Current Activity Description:	Use tools to assist patients in assessing their need for support for self-management (e.g., the Patient Activation Measure or How’s My Health).
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor 1, improvement activity is “duplicative” and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_17 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_16. We proposed to consolidate the unique language from IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 into IA_BE_16 per the proposed change in Table B. The proposed revised IA_BE_16 adds additional detail from IA_BE_17 (e.g., Patient Activation Measure). Proposed modified IA_BE_16 has a stronger relationship to improvement in clinical practice, because it emphasizes the incorporation of new tools and techniques into routine care processes. We note that this proposed removal was made in conjunction with our proposal to change IA_BE_16 in Table B, as well as our proposals to remove IA_BE_18, IA_BE_20, and IA_BE_21 in Table C.

Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.
Current Improvement Activity	
Current Activity ID:	IA_BE_18
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Provide peer-led support for self-management.
Current Activity Description:	Provide peer-led support for self-management.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor 1, improvement activity is “duplicative” and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_18 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_16. We proposed to consolidate the unique language from IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 into IA_BE_16 per the proposed change in Table B. The proposed revised IA_BE_16 adds additional detail from IA_BE_18 (e.g., peer-led support for self-management). Proposed modified IA_BE_16 has a stronger relationship to improvement in clinical practice because it emphasizes the incorporation of new tools and techniques into routine care processes. We note that this proposed removal was made in conjunction with our proposal to modify IA_BE_16 in Table B, as well as our proposals to remove IA_BE_17, IA_BE_20, and IA_BE_21 in Table C.
Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.
Current Improvement Activity	
Current Activity ID:	IA_BE_20
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Implementation of condition-specific chronic disease self-management support programs
Current Activity Description:	Provide condition-specific chronic disease self-management support programs or coaching or link patients to those programs in the community.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor 1, improvement activity is “duplicative” and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_20 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_16. We proposed to consolidate the unique language from IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 into IA_BE_16 per the proposed change in Table B. The proposed revised IA_BE_16 adds additional detail from IA_BE_20 (e.g., condition-specific chronic disease self-management support programs). Proposed modified IA_BE_16 has a stronger relationship to improvement in clinical practice because it emphasizes the incorporation of new tools and techniques into routine care processes. We note that this proposed removal was made in conjunction with our proposal to change IA_BE_16 in Table B, as well as our proposals to remove IA_BE_17, IA_BE_18, and IA_BE_21 in Table C.
Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.
Current Improvement Activity	
Current Activity ID:	IA_BE_21
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Improved practices that disseminate appropriate self-management materials
Current Activity Description:	Provide self-management materials at an appropriate literacy level and in an appropriate language.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor 1, improvement activity is “duplicative” and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_21 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_16. We proposed to consolidate the unique language from IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 into IA_BE_16 per the proposed change in Table B. The proposed revised IA_BE_16 adds additional detail from IA_BE_21 (e.g., provision of appropriate self-management materials). Proposed modified IA_BE_16 has a stronger relationship to improvement in clinical practice because it emphasizes the incorporation of new tools and techniques into routine care processes. We note that this proposed removal was made in conjunction with our proposal to change IA_BE_16 in Table B, as well as our proposals to remove IA_BE_17, IA_BE_18, and IA_BE_20 in Table C.
Final Action:	We received no comments on this proposal; therefore, we are finalizing as proposed.

APPENDIX 3: MVP INVENTORY

MVP Development Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), we finalized a set of criteria to be used in the development of MVPs. In addition, in section IV.A.3.b of this final rule, we are finalizing additional MVP policies, including MVP reporting requirements and selection of measures and activities within an MVP.

This appendix includes seven MVPs that we are finalizing for implementation beginning with the CY 2023 performance period/2025 MIPS payment year.²⁸⁷ Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category that are relevant to the clinical theme of the MVP. In addition, as described in the CY 2021 PFS final rule (85 FR 84841) and section IV.A.3.b.(4)(b)(i)(C) of this final rule, all MVPs include a foundational layer, which is comprised of population health measures and Promoting Interoperability performance category measures. We refer readers to CY 2021 PFS final rule (85 FR 84849) and section IV.A.3.b.(4)(b)(i) of this final rule for key considerations and overall development approach for the MVPs included in this appendix. For additional details regarding the finalized annual maintenance process for MVPs, we refer readers to section IV.A.3.b.(4)(b)(ii) of this final rule.

MVP Development Performance Category Sources

The MVP tables below contain a set of MIPS quality measures, which may include QCDR measures, improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities in the MVP tables are as follows:

- Existing MIPS quality measures considered in developing the MVPs are located in Appendix 1: MIPS Quality Measures of this final rule.
- Existing QCDR measures considered in developing the MVPs were based on the most recent publication of the 2021 QCDR Measure Specification file. The QCDR measures are listed in the 2021 QCDR Measure Specification file located in the QPP Resource Library.²⁸⁸ An updated list of 2022 QCDR measures will be available in December 2021. We refer readers to section IV.A.3.b.(4)(b)(i) of this final rule for additional details regarding QCDR measures and selection of measures within an MVP.
- Improvement activities considered in developing the MVPs are located in the 2021 Improvement Activities Inventory and the 2021 MIPS Data Validation Criteria located in the QPP Resource Library.²⁸⁹
- Existing cost measures considered in developing the MVPs are located in the CY 2020 PFS final rule (84 FR 62979).
- For further details on the new episode-based cost measures, refer to section IV.A.3.d.(2)(b) of this final rule.
- For further details on the population health measures included in the foundational layer, refer to section IV.A.3.b.(4)(b)(i)(C)(aa) of this final rule.
- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located in the QPP Resource Library.²⁹⁰ In addition, see section IV.A.3.d.(4)(c) of this final rule for any modifications to the existing Promoting Interoperability measures.

Please note that new quality and Promoting Interoperability measures for inclusion in MIPS beginning with the CY 2022 performance period/2024 MIPS payment year are identified with a caret symbol (^) within the MVP tables in this appendix. (See Appendix 1, MIPS Quality Measures: Table Group A for further information regarding new MIPS measures and section IV.A.3.d.(4)(d)(ii) of this final rule regarding new Promoting Interoperability measures.) In addition, existing quality measures and improvement activities with revisions are identified with an asterisk (*) before the quality measure or improvement activity ID # within the MVP tables in this appendix. See Appendix 1: MIPS Quality Measures and Appendix 2: Improvement Activities for further details regarding the substantive changes and revisions in this final rule.

Quality measures that are considered high priority are noted with an exclamation point (!) and outcome measures are noted with a double exclamation point (!!). Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

²⁸⁷ See section IV.A.3.b.(2)(d) of this final rule for additional details regarding the MVP implementation timeline.

²⁸⁸ See <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1231/2021%20QCDR%20Measure%20Specifications.xlsx> for QCDR measures.

²⁸⁹ See the 2021 Improvement Activities Inventory: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1189/2021%20Improvement%20Activities%20List.zip> 2021 MIPS Data Validation Criteria: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1316/2021%20MIPS%20Data%20Validation%20Criteria.zip> for improvement activity details.

²⁹⁰ See the 2021 MIPS Promoting Interoperability Measure Specifications: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1260/2021%20MIPS%20Promoting%20Interoperability%20Measure%20Specifications.zip> for Promoting Interoperability measure details.

To determine whether a QCDR measure may be finalized within an MVP, we requested that we receive QCDR measure testing data for review by the end of the self-nomination period (that is, no later than September 1 of the year prior to the applicable performance period). If a QCDR was unable to submit testing data to demonstrate that their QCDR measure was fully tested by the end of the self-nomination period (September 1st) or otherwise did not meet our requirements, we were unable to finalize the inclusion of the QCDR measure within an MVP. In this final rule, in instances where evidence of testing data at the clinician level was received and demonstrates the QCDR measure is fully tested at the clinician level, we are finalizing the QCDR measures within the relevant MVPs. We refer readers to section IV.A.3.b.(4)(b)(i) of this final rule for additional details regarding QCDR measures and selection of measures within the MVP.

In addition, consistent with Executive Order 13985, “Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,” each MVP includes improvement activities designed to advance health equity and address and eliminate barriers to care in underserved communities.²⁹¹ Improvement activities that include a health equity component are noted with a tilde (~) before the improvement activity ID # within the MVP table. Improvement activity medium/high weight designations are identified in parentheses after each improvement activity. IA_PCMH is noted with a percent (%) before the improvement activity ID # within the MVP tables below to indicate that attestation to this improvement activity will provide full credit for the improvement activities performance category within the MVP.

²⁹¹ <https://www.whitehouse.gov/briefing-room/presidential-actions/2021/01/20/executive-order-advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government/>.

Advancing Rheumatology Patient Care MVP Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

In the CY 2022 PFS proposed rule (86 FR 39881 through 39884), we proposed and solicited comments on the Advancing Rheumatology Patient Care MVP for implementation beginning with the CY 2023 performance period/2025 MIPS payment year.

We received public comments on the Advancing Rheumatology Patient Care MVP. The following is a summary of the comments we received and our responses:

Comment: Some commenters expressed support for the seven proposed MVPs.

Response: We thank the commenters for their support.

Comment: One commenter expressed concern that their vendors do not support any of the measures through the eCQM format under this MVP, which would require them to join multiple registries/QCDRs to submit the various quality measures. The commenter stated that this would be cost prohibitive because many of their clinicians are in rural areas and may only cover one weekend a month.

Response: MVPs include a more focused selection of quality measures and would allow clinicians to use their discretion to determine which quality measures and collection types to submit to meet the MVP reporting requirements. We disagree with the commenter's statement that participants would be required to join multiple registries or QCDRs due to lack of available eCQMs and note that all of the above MIPS quality measures are available for the MIPS CQM Specifications collection type and may be submitted either directly by the MIPS eligible clinician as noted in the 2021 MIPS Quality Quick Start Guide²⁹² or by using a third-party intermediary. As stated in section IV.A.3.h.(2)(b)(i) of this final rule, beginning with the 2023 performance period/2025 MIPS payment year, QCDRs, qualified registries, and health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. We believe that the commenter's circumstances are a temporary result of the transition to MVPs and will be addressed prior to implementation. We will also require QCDRs, qualified registries, health IT vendors, and CMS-approved survey vendors to support subgroup reporting beginning with the 2023 performance period/2025 MIPS payment year, as outlined in section IV.A.3.h.(2)(b)(ii) of this final rule. For these reasons, MVP participants will not have to work with multiple third-party intermediaries to report an MVP.

Comment: One commenter did not support Q111: Pneumococcal Vaccination Status for Older Adults in this MVP. They stated the implementation could promote treatment overuse if patients seek medical care from multiple clinicians and/or have poor medical record continuity. Additionally, they suggested the developer update the numerator specifications to align with current clinical recommendations on pneumococcal vaccination.

Response: We disagree with the commenter. This MIPS quality measure has been included to ensure that pneumococcal vaccinations are comprehensively assessed and used. Vaccinations play an important role in the management of patients with rheumatological conditions who are at an increased risk for infections because of their underlying condition, comorbidities, and use of immunosuppressive therapies. We would like to note that the intent of the measure can be met by reporting that the pneumococcal vaccine was previously administered and does not require a patient to receive a vaccine during each performance period. Additionally, care coordination remains a priority and we believe previously administered vaccines should be documented within a patient's medical record to facilitate communication amongst the clinicians providing care. We encourage the commenter to reach out to the measure steward to collaborate on measure revisions for potential inclusion in future rulemaking; however, please review Table D.11 in Appendix 1: MIPS Quality Measures of this final rule for any updates we are finalizing for the 2022 performance period.

Comment: One commenter did not support Q130: Documentation of Current Medications in the Medical Record in this MVP and stated there is a lack of high-quality evidence to support its inclusion in accountability programs, it is burdensome for clinicians to document complete medication lists at every patient visit and encouraging documentation at every visit could result in underuse of more valuable clinical services. In addition, they noted there is no evidence cited that links attesting to medication reconciliation to quality outcomes and in particular medication safety.

Response: We disagree with the commenter. This MIPS quality measure has been included as a broadly applicable measure to promote care coordination to collect complete and reliable medication records, while promoting patient and medication safety. We note this measure requires documentation of all known prescriptions utilizing all immediate resources. Various studies have shown that patients with a chronic disease have a low adherence to medications, understanding and addressing issues with adherence as expediently as possible may drastically improve the effectiveness of drug therapy for patients with rheumatological conditions. Additionally, one study looked at the incidence of drug-related problems (DRPs) in rheumatoid arthritis patients and found at least one DRP in 78.5 percent of the population, with the second and third most common DRPs being drug interactions

²⁹² <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1294/2021%20MIPS%20Quality%20Quick%20Start%20Guide.pdf>

and drug-choice problems, respectively.²⁹³ Therefore, we believe that it is of critical importance to ensure the current medication list is reviewed at each visit to mitigate potential DRPs or address them quickly.

Comment: One commenter did not support Q180: Rheumatoid Arthritis (RA): Glucocorticoid Management in this MVP. They stated that the developers did not provide adequate information to meaningfully evaluate the validity of the measure. In their opinion, the numerator and the denominator are poorly specified, and the measure specifications do not include appropriate exclusions for patients prescribed prednisone therapy for a symptomatic flare. Additionally, the current American College of Rheumatology (ACR) clinical guidelines demonstrate the importance of assessing glucocorticoid use, but only in patients who have specifically been prescribed glucocorticoid therapy.

Response: We disagree with the commenter. Glucocorticoids are a common treatment for rheumatological conditions; however, use of these medications is concomitant with significant morbidity and mortality. This measure requires providers to assess all rheumatoid arthritis (RA) patients, regardless of current medications, for glucocorticoid use to allow for ongoing monitoring of glucocorticoid use and to minimize potential health complications to the patient. The numerator options within the measure cover the concerns raised as there is delineation between patients who are not currently taking or are on low dose glucocorticoid therapy as well as those patients who have used glucocorticoids for less than 6 months. A glucocorticoid management plan is only required for patients receiving prolonged, high doses of prednisone (or equivalent). This approach ensures a complete patient population is being monitored for numerator compliance, accounting for patients being treated for symptomatic flares and not prolonged usage. Assessing for and monitoring glucocorticoid use in RA patients is extremely important and should be an ongoing discussion between the clinician and patient to ensure positive outcomes. We encourage the commenter to reach out to the measure steward to collaborate on measure revisions for potential inclusion in future rulemaking.

Comment: Some commenters expressed concern that either IA_BE_24: Financial Navigation Program or IA_BE_25: Drug Cost Transparency were not included in this MVP, despite stating that most of these patients require assistance given the associated costs with the medications used to manage their rheumatologic disease. The commenter also expressed concern that the improvement activities included limits practices to a too narrow set of activities.

Response: We agree with the commenters that either IA_BE_24: Financial Navigation Program or IA_BE_25: Drug Cost Transparency should be considered for this MVP because of the significant costs associated with managing rheumatologic disease. We will consider the inclusion of these activities through future MVP maintenance and rulemaking processes.

Comment: A few commenters opposed the TPCC cost measure in MIPS and MVPs. In their opinion, the measure is difficult to influence outside of a total cost of care APM, where there is shared interest and accountability in improving performance by the larger health care system. Since there is no such shared accountability in MIPS, it seems likely primary care physicians will be penalized for decisions made by other members of a patient's care team.

Response: We disagree with the commenters. We continue to believe that the measure is appropriate for use in MIPS and MVPs, as the measure underwent a comprehensive re-evaluation process and has now been endorsed by the NQF in 2020 with testing at the TIN and TIN-NPI level. The measure is intended to capture costs of care broadly; the measure complements episode-based measures which have a more targeted focus. As a broadly applicable measure, clinicians are encouraged to coordinate with other providers for treating a patient to improve overall cost performance. By holding multiple clinicians accountable, this promotes shared responsibility for a patient's care across primary care and specialties who tend to provide ongoing care. In this way, the measure promotes shared accountability amongst clinicians in MIPS. This shared accountability can reflect the role of both primary care clinicians and specialists in managing and treating a patient's ongoing care. That is, many types of clinicians can be attributed to the TPCC measure which aligns incentives to provide cost-effective, high-quality care to mitigate the concern that primary care clinicians could be penalized based on other clinicians' decisions. Additionally, the TPCC measure includes a specialty adjustment to account for the different scope of care provided by primary care clinicians and specialists, and to ensure fair comparisons.

After consideration of public comments, we are finalizing the *Advancing Rheumatology Patient Care MVP* as proposed in Table A below for the CY 2023 performance period/2025 MIPS payment year and future years.

²⁹³ Ther Clin Risk Manag. 2019; 15: 505–524. Published online 2019 Mar 21. doi: 10.2147/TCRM.S194921

**TABLE A: Advancing Rheumatology Patient Care MVP
Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year**

The table below serves to represent the measures and activities that are finalized within the Advancing Rheumatology Patient Care MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability measures are identified below with a caret symbol (^)^a; existing quality measures and improvement activities with revisions are identified below with an asterisk (*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2022 PFS proposed rule (86 FR 39881 through 39884), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, in instances where evidence of testing data at the clinician level was received and demonstrates the QCDR measure is fully tested at the clinician level, we are finalizing the QCDR measures within this MVP and the pound sign (#) was removed. Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

Quality	Improvement Activities	Cost	
(*) Q111: Pneumococcal Vaccination Status for Older Adults (Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)	(~) IA_AHE_3: Promote use of Patient-Reported Outcome Tools (High)	Total Per Capita Cost (TPCC)

Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

In the CY 2022 PFS proposed rule (86 FR 39885 through 39887), we proposed and solicited comments on the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP for implementation beginning with the CY 2023 performance period/2025 MIPS payment year.

We received public comments on the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP. The following is a summary of the comments we received and our responses:

Comment: Some commenters expressed support for the seven proposed MVPs.

Response: We thank the commenters for their support.

Comment: One commenter expressed concern that the measures included in this MVP are not widely applicable to stroke neurologists. They stated that measure Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) is outside the scope of the neurologist, three others are cross-cutting or would often fall to a primary care provider (Q047: Advance Care Plan, Q236: Controlling High Blood Pressure, Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)) and one is topped out (Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy), leaving neurologists with three measures to potentially report. They noted concern that this MVP will not be attractive to neurologists (especially those in small practices) given the measures offered and dearth of outpatient stroke measures. The commenter noted this MVP will include a condition-specific cost measure, and has concerns about its applicability and attribution to outpatient neurologists, as it currently assesses management of inpatient care for stroke patients. The commenter noted CMS should work with specialty societies and provide funding to them to develop clinically relevant, condition-specific cost measures for inclusion in future MVPs.

Response: We thank the commenter for their feedback. While we understand that this MVP may not be applicable to all neurologists, the goal of this MVP is to support prevention of strokes and promote positive outcomes for patients suffering from strokes, as a medical condition specific MVP. As stated in the introduction of the CY 2022 PFS proposed rule (86 FR 39885 through 39887), cerebral infarction is the 9th most expensive condition treated in United States hospitals making it a high priority condition as it is more common in the aged 65 and older patient population and is the leading cause of serious long-term disability.²⁹⁴ This MVP was intentionally developed to include other clinician types that may support the prevention and/or treatment of strokes and patient positive outcomes, such as a stroke care team which may consist of neurologists, neurosurgeons, and vascular surgeons, among other clinician types. As such, this MVP could be utilized within an existing stroke care team and additionally may foster a team-based care approach promoting coordination of patient care, while also being applicable to individual clinician types whose scope of care aligns with the MVP topic. Measure Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) may not be applicable to neurologists although we believe this measure is beneficial to patients at low risk for morbidity, in achieving the benefit of long-term risk of stroke reduction and supports a team-based approach to patient care. Measure Q047: Advance Care Plan captures the patient voice, which is part of the guiding principles for MVP development and is an important clinical topic to ensure that the treatment plan considered by the clinician is in alignment with the patient's wishes, are being documented and respected. We believe that the addition of advance care planning is valuable especially for those patients that are at a higher risk of potential life altering medical events. Measures Q236: Controlling High Blood Pressure and Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) are important aspects for stroke prevention and support the enhancement of communication and care coordination for patients by clinicians. While Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy is currently topped out, it is a critical clinical action for stroke prevention and was included to allow for clinician choice. However, through the maintenance process, the quality measures contained within the MVP may be revised through future public notice and comment. We encourage the commenter to reach out to measure developers/stewards to develop new outpatient measures for submission to the Call for Measures or through the QCDR self-nomination process for possible future implementation (see section IV.A.3.b.(4)(b)(i)(B)(cc) of this final rule for specifics on QCDR measure requirements within an MVP). Additionally, inclusion of this stroke specific MVP would not preclude the potential future inclusion of a broader neurology MVP, one that is applicable and attributable to outpatient neurologists. We encourage the commenter to reach out to CMS and other stakeholders to collaborate on the development of measures and to support the creation of a meaningful MVP for outpatient neurology.

Comment: One commenter requested emergency medicine clinicians who treat patients within the emergency department as an additional clinician type for whom this MVP would also be applicable. They stated this change would appropriately reflect the fact that emergency medicine clinicians play a key role in driving better patient outcomes in acute stroke care due to the highly time-dependent nature of clinical outcomes in this disease, which correlate with reduced times to treatment initiation. In addition, the commenter suggested breaking out the

²⁹⁴ <https://www.hcup-us.ahrq.gov/reports/statbriefs/sb261-Most-Expensive-Hospital-Conditions-2017.jsp>.

risk reduction measures that are currently included in the MVP into a separate, standalone stroke prevention MVP that would be applicable for primary care clinicians and cardiologists. In addition, they recommended that in order to ensure comprehensive measurement of “Door to Treatment Time” for all stroke patients that there should be a new quality measure added to this MVP for “Door to Needle Time for Intravenous Thrombolytic Therapy”, which would be applicable for patients who are treated with thrombolytic instead of endovascular therapy.

Response: We agree with the commenter that emergency medicine clinicians play an important role in treating acute stroke patients. Although only neurology and vascular surgery clinician types were specifically indicated, all clinician types are encouraged to submit this MVP if it is applicable and meaningful to their treatable patient population. The submission of MVPs and choice of MVP is at the clinician’s discretion. We thank the commenter for their feedback and will consider the development of an MVP that separately addresses stroke risk reduction; however, MVPs allow choice in quality measure selection and therefore would allow clinicians to choose those measures that best align with their scope of care. By keeping all of these clinical actions together, we are able to obtain an overall picture of stroke related clinical care from prevention to positive outcomes. The MVP does include the measure Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy, which requires initiation of IV alteplase within three hours of last known well time, with the denominator criteria including that the patient must arrive in the emergency department within two hours of last known well time. We encourage the commenter to reach out to measure developers/stewards to develop new measures addressing thrombolytic therapy for submission to the Call for Measures or through the QCDR self-nomination process for possible future implementation (see section IV.A.3.b.(4)(b)(i)(B)(cc) of this final rule for specifics on QCDR measure requirements within an MVP).

Comment: One commenter stated most vascular surgeons will not select to participate in this MVP due to low volume of stroke care and the lack of four quality measures for them to report.

Response: When developing this MVP, we attempted to include quality measures that are both meaningful to the clinical topic being addressed and broad enough to allow inclusion of all clinicians that may participate, whether individually or within a team, in stroke prevention and positive outcomes for patients that experience a stroke. The measure and activities found within the MVP may allow for vascular surgeons to participate if their scope of care aligned with this MVP clinical topic; however, through the maintenance process, the quality measures contained within the MVP may be revised through future public notice and comment. We encourage the commenter to reach out to measure developers/stewards to develop new measures applicable to vascular surgeons for submission to the Call for Measures or through the QCDR self-nomination process for possible future implementation (see section IV.A.3.b.(4)(b)(i)(B)(cc) of this final rule for specifics on QCDR measure requirements within an MVP).

Comment: One commenter did not support Q047: Advance Care Plan in this MVP. They object to the requirement for clinicians to annually document an advance care plan for all patients aged 65 years and older because they stated it is burdensome and lacks empirical support. Furthermore, it may be inappropriate for clinicians to perform this intervention during an initial office visit. They suggested the developers revise the specifications to limit the denominator population to established patient visits only.

Response: We disagree with the commenter. During development of this MVP, we reached out for feedback from stakeholders regarding the measures and activities being considered for inclusion, who expressed their support for including this measure as it is both appropriate and applicable to the MIPS eligible neurology clinician type. Additionally, this measure captures the patient voice, which is part of the guiding principles for MVP development. The measure does not require that an advance care plan be developed and documented each year, only that there is documentation of a discussion regarding an advance care plan annually or that a surrogate decision maker is documented in the medical record. This is an important clinical topic to ensure that the treatment plan considered by the clinician is in alignment with the patient’s wishes, are being documented within the medical record and are being respected. We believe that the addition of advance care planning is valuable especially for those patients that are at a higher risk of potential life altering medical events. We believe that there are benefits to ensuring an advance care plan is in place as demonstrated by a 2014 systemic review showing an increase in compliance with patient preferences, quality of life for the patient, increased use of hospice and palliative care services, and a decrease in subsequent hospitalization among other outlined benefits.²⁹⁵ We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. MVPs allow choice in quality measure selection, if a clinician does not find that this measure is meaningful to their scope of care, they may choose not to submit it as one of their four quality measures.

Comment: One commenter did not support Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy in this MVP. They stated that the measure specification requires further clarification and is not clinically specific regarding the indications for treatment. They shared evidence suggesting that in some cases the harms of thrombolytic therapy may outweigh the benefit, especially if the full exclusion criteria published by the National Institute of Neurological Disorders and Stroke and others are not followed. The commenter stated this should be made explicit in the measure exclusion criteria. In addition, their understanding is that there are specific

²⁹⁵ https://www.uptodate.com/contents/advance-care-planning-and-advance-directives?topicRef=86295&source=see_link

qualifications hospitals must meet in order to provide tPa and the absence of such conditions should also be noted as an exclusion criterion.

Response: We disagree with the commenter. We acknowledge that not every patient is eligible for recombinant tissue plasminogen activator (alteplase or r-tPa); however, the safety, efficacy, and benefit of this treatment when administered within the first three hours after onset of stroke is evidence-based and supported through empirical data (Class 1, Level of Evidence A)(AHA/ASA).^{296 297} Given the MVP clinical topic being addressed, this measure is directly applicable and important in ensuring early treatment of acute ischemic strokes and does contain a denominator exception allowing documented reasons for the clinician not initiating IV alteplase. MVPs allow choice in quality measure selection, if a clinician does not find that this measure is meaningful to their scope of care, they may choose not to submit it as one of their four quality measures. We encourage the commenter to reach out to the measure steward to collaborate on measure revisions for potential inclusion in future rulemaking.

Comment: One commenter did not support the Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) in this MVP. They stated that the measure disregards patient preferences, that the specifications do not consider factors beyond the clinicians' control (for example, patient adherence, patient access), and stated it does not align with the Eighth Joint National Committee (JNC-8) recommendations for hypertension management. Another commenter did not support Q236: Controlling High Blood Pressure for application at the proposed levels of attribution: Individual Clinician, Group/Practice, Health Plan, and Integrated Delivery System, because there is uncertain validity. The commenter noted concerns with the strict blood pressure control across the whole patient population, especially for older patients. Based on AAFP/ACP guidelines, the commenter stated that less than 140 is ideal for every hypertensive patient across all age groups. Moreover, they noted that by assessing the most recent blood pressure from the measurement period, the measure deviates from actual practice.

Response: We disagree with the commenter. We acknowledge that the JNC-8 recommends pharmacological treatment for the general population should be initiated at 140/90 mm Hg or higher for adults younger than 60 years of age and 150/90 mm Hg or high for adults 60 year of age and older; however, Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) is not addressing the general population as it requires either a diagnosis of coronary artery disease (CAD) or a CAD risk-equivalent condition or an acute coronary event for denominator eligibility. According to an ACC/AHA statement regarding the treatment of hypertension in patients with CAD, they recommend a goal blood pressure for patient with CAD of <140/90.²⁹⁸ This measure is directly applicable to the MVP topic as heart disorders, such as coronary artery disease, increase your risk for stroke, therefore it is extremely important to ensure optimal control within this patient population to mitigate clinical risk factors by keeping blood pressure within target, staying tobacco free, use of daily aspirin or antiplatelet, and statin. We encourage the commenter to reach out to the measure steward to collaborate on measure revisions for potential inclusion in future rulemaking.

Comment: One commenter stated that the proposed improvement activities are relevant to this MVP.

Response: We thank the commenter for supporting the improvement activities included in this MVP.

Comment: One commenter expressed concerns with the condition-specific cost measure for this MVP regarding its applicability and attribution to outpatient neurologists, as it currently assesses management of inpatient care for stroke patients. They noted that CMS should work with specialty societies and provide funding to them to develop clinically relevant, condition-specific cost measures for inclusion in future MVPs.

Response: We thank the commenter for their feedback. The commenter is correct in that the cost measure does not apply to outpatient neurologists; rather, it focuses on the inpatient care for patients with stroke which includes hospitalists and internal medicine clinicians, as well as neurologists. This measure intent was selected as a priority and conceptualized as an inpatient measure as stroke is amongst the top 10 costliest conditions treated in US hospitals.²⁹⁹ For developing further clinically relevant, condition-specific cost measures, such as conditions treated by outpatient neurologists, we appreciate the comment and encourage stakeholders to participate in future cycles of episode-based cost measure development.

After consideration of public comments, we are finalizing the *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP* as proposed in Table B below for the CY 2023 performance period/2025 MIPS payment year and future years.

TABLE B: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP
Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

The table below serves to represent the measures and activities that are finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability measures are identified below with a caret symbol (^)^b; existing quality measures and improvement activities with revisions are identified below with an asterisk (*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2022 PFS proposed rule (86 FR 39881 through 39884), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, in instances where evidence of testing data at the clinician level was received and demonstrates the QCDR measure is fully tested at the clinician level, we are finalizing the QCDR measures within this MVP and the pound sign (#) was removed. Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

Quality	Improvement Activities	Cost

Advancing Care for Heart Disease MVP Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

In the CY 2022 PFS proposed rule (86 FR 39888 through 39891), we proposed and solicited comments on the Advancing Care for Heart Disease MVP for implementation beginning with the CY 2023 performance period/2025 MIPS payment year.

We received public comments on the Advancing Care for Heart Disease MVP. The following is a summary of the comments we received and our responses:

Comment: A couple commenters expressed support for the seven proposed MVPs.

Response: We thank the commenters for their support.

Comment: One commenter noted that they believe the MVP falls short of capturing heart disease as a condition, and in general is not inclusive for all of heart disease/cardiology or a broad-based heart program. The commenter also noted that the MVP included measures related to heart failure, ischemic heart disease, and several broadly applicable measures relevant to heart disease. However, some pertinent measures that would be applicable to the MVP were not included, such as those related to rhythm disorders, complications, and pharmacotherapy (for example, anticoagulation for atrial fibrillation).

Response: We thank the commenter for their feedback and will consider expanding this MVP or consider the development of an MVP that addresses the additional cardiac concepts such as rhythm disorders, complications, and pharmacotherapy. Our goal is to implement MVPs that are meaningful, provide data and feedback to MIPS eligible clinicians, and enhance information provided to patients. We assessed for inclusion of these clinical topics for this MVP but believed we did not have at least four quality measures to represent this specific specialty of clinicians. We encourage the commenter to submit potential new measures that covers these concepts (rhythm disorders, complications, and pharmacotherapy) during the annual Call for Measures or through the QCDR self-nomination process for possible future implementation (see section IV.A.3.b.(4)(b)(i)(B)(cc) of this final rule for specifics on QCDR measure requirements within an MVP).

Comment: One commenter recommended the inclusion of Q006: CAD Antiplatelet Therapy measure as it is a guideline-directed therapy for the population included in this MVP.

Response: At this time, we disagree with the inclusion of Q006: CAD Antiplatelet Therapy within this MVP. We do not plan to include this quality measure in this MVP as we believe it would be duplicative to Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) since this measure includes a component that specifically addresses use of aspirin or other antiplatelet. Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) includes specific CAD diagnosis coding, reflective of the patient population applicable to this MVP, which ensures that clinicians who choose to report this MVP have meaningful measures that reflect and support positive patient outcomes. We believe Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) is a more robust measure in that it is a composite and outcome measure and will be able to provide clinicians with meaningful performance data to drive quality care.

Comment: One commenter recommended the removal or significant revision of Q007: CAD: Beta Blocker therapy - prior MI or LVEF<40% from this MVP due to the dramatic changes in treatment and diagnosis of myocardial infarction.

Response: We disagree with the commenter. There are two patient populations within this measure: (1) patients with a diagnosis of CAD or history of cardiac surgery who have a current or prior LVEF < 40 percent and (2) patients with a diagnosis of CAD or history of cardiac surgery who have a prior myocardial infarct within the past 3 years. For the population of patients that may have endured a myocardial infarct, we acknowledge that there has been further research regarding the length of time beta blocker therapy may be continued after a patient experiences myocardial infarction. However, as noted by the National Institutes of Health, "at the present time, the data on duration of therapy with beta blockers after an MI is inconclusive. In patients with preserved left ventricular ejection fraction and without any evidence of arrhythmias and ischemia, beta blockers can most likely be stopped after one year."³⁰⁰ Based on this information, we believe the measure continues to be in alignment with current clinical guidelines and meaningful to MIPS eligible clinicians who treat this patient population and continues to allow these clinicians to determine the best therapy for their patients. Measure performance is not reliant on the length of time in which the beta blocker must be prescribed and allows for medical, patient, or system reasons for the pharmacological therapy to be discontinued or not prescribed. We will await potential revisions for the measure from the measure steward.

Comment: One commenter did not support Q047: Advance Care Plan in this MVP. They objected to the requirement for clinicians to annually document an advance care plan for all patients aged 65 years and older because they stated it would be burdensome and would lack empirical support. Furthermore, it may be inappropriate for clinicians to perform this intervention during an initial office visit. They suggested the developers revise the specifications to limit the denominator population to established patient visits only.

³⁰⁰ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4438466/>

Response: We disagree with the commenter. This measure captures the patient voice, which is part of the guiding principles for MVP development. The measure does not require that an advance care plan be developed and documented each year, only that there is documentation of a discussion regarding an advance care plan annually or that a surrogate decision maker is documented in the medical record. This is an important clinical topic to ensure that the treatment plan considered by the clinician is in alignment with the patient's wishes, are being documented within the medical record, and respected. We believe that the addition of advance care planning is valuable especially for those patients that are at a higher risk of potential life altering medical events. We believe that there are benefits to ensuring an advance care plan is in place as demonstrated by a 2014 systemic review showing an increase in compliance with patient preferences, quality of life for the patient, increased use of hospice and palliative care services, and a decrease in subsequent hospitalization among other outlined benefits.³⁰¹ We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. MVPs allow choice in quality measure selection, if a clinician does not find that this measure is meaningful to their scope of care, they may choose not to submit it as one of their four quality measures.

Comment: One commenter did not support Q128: Preventive Care and Screening: BMI Screening and Follow-Up in this MVP. They stated it is a burdensome "check box" measure that lacks sufficient evidence to support implementation of obesity interventions for patients with a BMI measurement between 25-30 kg/m². In addition, they noted they believe the specified obesity interventions do not necessarily lead to meaningful improvements in quality outcomes. Their recommendation is that measure developers update the measure specifications to align with current United States Preventive Services Task Force (USPSTF) recommendations on obesity screening and include waist circumference as a screening tool. In addition, without evidence regarding appropriate screening intervals they advocate for annual versus biennial screening.

Response: We disagree with the commenter. We believe that this process measure is important as it encourages patients to implement lifestyle modifications, with the support of their clinician, to reduce their BMI. Currently, data from the U.S. Preventive Services Task Force suggests that "obesity is associated with health problems such as increased risk for coronary heart disease, type 2 diabetes, various types of cancer, gallstones, and disability. Obesity is also associated with an increased risk for death, particularly among adults younger than 65 years."³⁰² The quality measure allows a clinician to use his or her expertise and best judgement in selecting intervention(s) for their patients in this category until more adequate evidence emerges from research for this clinical topic. The intent of this measure is to screen for BMI values that are above or below "normal" parameters. The measure intent is to screen all patients aged 18 years and older for BMIs outside of the normal range by requiring documentation of the patient's BMI during the current encounter or within the previous twelve months. Therefore, it implies that a patient should be screened annually. As such, the measure specification also states, "This measure is to be submitted a minimum of once per performance period for patients seen during the performance period." This performance period is a 12-month period, from January 1 - December 31. Annually, we convene a measure expert work group (EWG) to review evidence and reassess the appropriateness of the measure. We believe that this measure currently represents the 2018 United States Preventive Services Task Force (USPSTF) recommendations on obesity screening. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: One commenter did not support Q238: Use of High-Risk Medications in the Elderly measure in this MVP. They noted that while it is clinically important to monitor high-risk medications in elderly adults, implementation may result in underuse of clinically appropriate pharmacotherapy in adults aged > 65 years. Furthermore, they indicated developers cite the controversial American Geriatrics Society Beers Criteria to form the basis of the measure, which is based on expert opinion as opposed to high-quality evidence. In addition, the commenter noted that there are several issues with the measure specification and that while the measure is appropriate for health plan-level assessment, individual clinicians may encounter interoperability barriers to patient information access.

Response: We agree with the commenter that it is important to monitor high-risk medications in elderly adults although we disagree that implementation may result in underuse of clinically appropriate pharmacology in adults aged > 65 years. Within Table D.30 in Appendix 1: MIPS Quality Measures of this final rule, we proposed and are finalizing to restructure all of the collection types to introduce new performance rates based upon the American Geriatric Society (AGS) Beers Criteria and expert panel recommendations, with performance rate one being utilized for benchmarking purposes as it is more comprehensive in assessment and aligns across the collection types. The AGS Beers Criteria is based on the review of over 1400 clinical trials and research studies by a panel of 13 experts. Based on the number of clinical trials under review to provide to determine the recommendations, we believe there is clinical evidence to support the measure. These revisions allow for the inclusion of antipsychotics and benzodiazepines to ensure alignment with most recent recommendations. Due to these updates in the measures, we believe that this measure aligns with the AGS Beers Criteria in that it "aims to guide older people and health

³⁰¹ https://www.uptodate.com/contents/advance-care-planning-and-advance-directives?topicRef=86295&source=see_link

³⁰² <https://www.uspreventiveservicestaskforce.org/uspstf/document/RecommendationStatementFinal/obesity-in-adults-interventions#tab>

professionals away from potentially harmful medications while also helping health systems recognize such decisions when assessing care quality.” Therefore, this quality measure “should never solely dictate how medications are prescribed, nor should it serve as a justification for restricting health coverage.”³⁰³

Comment: One commenter expressed concerns with the inclusion of Q238: Use of High-Risk Medications in the Elderly in this MVP. They shared that many cardiac medications are not considered high-risk except for digoxin as it is often prescribed indefinitely. They voiced their concern that clinicians may wrongfully not perform well on this measure if a medication such as digoxin is prescribed long-term.

Response: We disagree with the commenter. This quality measure includes other high-risk medications including Methyldopa and Disopyramide along with Digoxin. The intent of this inverse quality measure is that there are at least two orders for the same high-risk medication on different days during the measurement period. Therefore, we believe that MIPS eligible clinicians should still be able to meet the intent of the measure even if the medication is prescribed long-term. Specifically, the quality measure negatively impacts performance if there are two or more prescriptions on different days, where the sum of days’ supply exceeds 90 days or, specifically for Digoxin, the prescription does not exceed the average daily dose criteria.

Comment: One commenter stated that patients are typically referred for cardiac rehabilitation from an inpatient setting, therefore some clinicians may not receive credit for Q243: Cardiac Rehab Patient Referral from an Outpatient Setting.

Response: We disagree with the commenter. When developing this MVP, we attempted to include quality measures that are both meaningful to the clinical topic being addressed and broad enough to allow inclusion of all clinicians that may participate in the cares for this population of patients. In the instance a patient is referred to cardiac rehabilitation from the inpatient setting, if the patient is seen in the outpatient setting, the clinician may receive credit based on the documented previous referral. Alternatively, the patient would not be eligible for the measure until the patient is seen in the outpatient setting. We encourage the commenter to reach out to CMS and other stakeholders to collaborate on the development of measures and support this MVP being meaningful to patients and the clinicians that support them.

Comment: One commenter recommended the addition of Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease to the MVP. They stated that the statin therapy has one of the greatest impacts on decreasing mortality and morbidity in patients with atherosclerotic cardiovascular disease. Additionally, they noted that the measure represents an opportunity for improvement with substantial clinical benefit.

Response: At this time, we disagree with the inclusion of Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease within this MVP. We do not plan to include this quality measure in this MVP as we believe it would be duplicative to Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) since this measure includes a component that specifically addresses use of statin within the CAD patient population. This ensures that clinicians who choose to report this MVP have meaningful measures that reflect and support positive patient outcomes. We believe Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) is a more robust measure in that it is a composite and outcome measure and will be able to provide clinicians with meaningful performance data to drive quality care.

Comment: One commenter did not support the Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) in this MVP. They noted that the measure disregards patient preferences, that the specifications do not consider factors beyond the clinicians’ control (for example, patient adherence, patient access), and noted it does not align with the Eighth Joint National Committee (JNC-8) recommendations for hypertension management.

Response: We disagree with the commenter. We acknowledge that the JNC-8 recommends pharmacological treatment for the general population should be initiated at 140/90 mm Hg or higher for adults younger than 60 years of age and 150/90 mm Hg or high for adults 60 year of age and older, however, measure 441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) is not addressing the general population as it requires either a diagnosis of coronary artery disease (CAD) or a CAD risk-equivalent condition or an acute coronary event for denominator eligibility. According to an ACC/AHA statement regarding the treatment of hypertension in patients with CAD, they recommend a goal blood pressure for patient with CAD of <140/90.³⁰⁴ We also acknowledge that the measure does not account for denominator exceptions such as patient adherence or patient access, but it does account for medical reasons for not performance the components of this intermediate outcome quality measure. We believe that the quality actions presented within this intermediate outcome measure represent and support the reduction of risk factors for patients that are diagnosed with CAD or a CAD risk-equivalent condition. Therefore, we believe this measure is beneficial to supporting positive clinical outcomes in patients diagnosed with CAD or a CAD risk-equivalent condition. According to the American Heart Association, “preventive measures instituted early are thought to have greater lifetime benefits. Healthy lifestyles will delay the

³⁰³ <https://www.americangeriatrics.org/media-center/news/older-people-medications-are-common-updated-ags-beers-criteriar-aims-make-sure>

³⁰⁴ AHA/ACC Guidelines for Secondary Prevention for Patients With Coronary and Other Atherosclerotic Vascular Disease: 2006 Update Originally published 16 May 2006 <https://doi.org/10.1161/CIRCULATIONAHA.106.174516> Circulation. 2006;113:2363–2372

progression of CAD, and there is hope that CAD can be regressed before it causes CHD”.³⁰⁵ We encourage the commenter to reach out to the measure steward to collaborate on measure revisions for potential inclusion in future rulemaking.

Comment: One commenter recommended including NQF 0076: Optimal Vascular Care since it is NQF-endorsed in this MVP instead of Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control).

Response: We disagree with the commenter. We note that NQF 0076: Optimal Vascular Care is not currently a measure within the MIPS quality measure inventory. Quality measures not currently in the MIPS inventory will be required to follow the existing pre-rulemaking processes in order to be considered for inclusion within an MVP.

Comment: One commenter recommended the addition of IA_PM_13: Chronic Care and Preventative Care Management for Empaneled Patients as this activity is designed to directly address patients assigned to care teams for the purpose of population health management and encourages the adoption of practices and protocols that are essential in high-quality care for chronic diseases. An important action noted in this activity includes an individualized plan of care as appropriate to age and health status, including gender, age, and condition-specific preventive care services (for example, managing cardiovascular risk in patients with diabetes). The absence of this activity as an option is a noteworthy omission given the intent of this MVP. If the addition of this activity requires the removal of another activity the commenter recommended that IA_EPA_4: Additional improvement in access as a result of QIN/QIO TA be removed as the activity has minimal specificity for this MVP.

Response: We disagree with the commenter that this MVP lacks activities that address an individualized plan of care. This MVP includes IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care and IA_CC_9: Implementation of practices/processes for developing regular individual care plans, which both address plan of care elements. We agree that IA_PM_13: Chronic Care and Preventative Care Management for Empaneled Patients could be a viable option in general for this MVP and will consider the inclusion of this activity through future MVP maintenance and rulemaking processes.

Comment: A few commenters expressed opposition to the TPCC cost measure in MIPS and MVPs. In their opinion the measure is difficult to influence outside of a total cost of care APM, where there is shared interest and accountability in improving performance by the larger health care system. Since there is no such shared accountability in MIPS, it seems likely primary care physicians will be penalized for decisions made by other members of a patient's care team.

Response: We disagree with the commenters. We continue to believe that the measure is appropriate for use in MIPS and MVPs, as the measure underwent a comprehensive re-evaluation process and has now been endorsed by the NQF in 2020 with testing at the TIN and TIN-NPI level. The measure is intended to capture costs of care broadly; the measure complements episode-based measures which have a more targeted focus. As a broadly applicable measure, clinicians are encouraged to coordinate with other providers for treating a patient to improve overall cost performance. By holding multiple clinicians accountable, this promotes shared responsibility for a patient's care across primary care and specialties who tend to provide ongoing care. In this way, the measure promotes shared accountability amongst clinicians in MIPS. This shared accountability can reflect the role of both primary care clinicians and specialists in managing and treating a patient's ongoing care. That is, many types of clinicians can be attributed the TPCC measure which aligns incentives to provide cost-effective, high-quality care to mitigate the concern that primary care clinicians could be penalized based on other clinicians' decisions. Additionally, the TPCC measure includes a specialty adjustment to account for the different scope of care provided by primary care clinicians and specialists, and to ensure fair comparisons.

Comment: One commenter expressed concern with the inclusion of the Q479: Hospital Wide 30-Day Hospital-Wide All Cause Readmission Rate population health measure in this MVP. They noted that they do not believe the measure should be attributed to individual physicians or smaller specialty groups that have smaller case numbers and limited ability to influence readmission rates.

Response: We disagree with the commenter. This measure is a re-specification of Q458: the All-Cause Readmission measure currently within the MIPS program, which attributes outcomes solely to the primary care physician that provides the plurality of care during the measurement period. However, the primary care physician may not be the clinician with opportunity to impact readmissions. The intent of this measure is to improve upon the attribution of the current ACR measure and incentivize collaboration of care across inpatient and outpatient settings by considering shared attribution to up to three eligible clinician groups that provide care for patients inside and outside of the hospital and are therefore in position to influence patient risk of readmission.

Comment: One commenter recommended that if CMS finalizes and adopts the Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure administrative claims measure, that this administrative claim measure be included in this MVP.

Response: We agree with the commenter. This measure would result in providing comparative performance data, which would be valuable to patients and caregivers in evaluating clinician performance and

³⁰⁵ <https://www.heart.org/en/health-topics/consumer-healthcare/what-is-cardiovascular-disease/coronary-artery-disease>

making choices about their care. However, as described in Table A.4 in Appendix 1: MIPS Quality Measures of this final rule, we have received opposition to this administrative measure from commenters. Therefore, we are not finalizing this measure. We will continue to monitor this measure's progress and evaluate it for future inclusion within this MVP.

After consideration of public comments, we are finalizing the *Advancing Care for Heart Disease MVP* as proposed in Table C below for the CY 2023 performance period/2025 MIPS payment year and future years.

TABLE C: Advancing Care for Heart Disease MVP
Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

The table below serves to represent the measures and activities that are finalized within the Advancing Care for Heart Disease MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability measures are identified below with a caret symbol (^); existing quality measures and improvement activities with revisions are identified below with an asterisk (*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2022 PFS proposed rule (86 FR 39881 through 39884), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, in instances where evidence of testing data at the clinician level was received and demonstrates the QCDR measure is fully tested at the clinician level, we are finalizing the QCDR measures within this MVP and the pound sign (#) was removed. Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

Quality	Improvement Activities	Cost
(*) Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) (eCQM Specifications, MIPS CQMs Specifications)	IA_BE_12: Use evidence-based decision aids to support shared decision-making (Medium)	Elective Outpatient Percutaneous Coronary Intervention (PCI) ST Elevation Myocardial Infarction (STEMI) with PCI Total Per Capita Cost (TPCC)
(*) Q007: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%) (eCQM Specifications, MIPS CQMs Specifications)	IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care (Medium)

Optimizing Chronic Disease Management MVP Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

In the CY 2022 PFS proposed rule (86 FR 39892 through 39895), we proposed and solicited comments on the Optimizing Chronic Disease Management MVP for implementation beginning with the CY 2023 performance period/2025 MIPS payment year.

We received public comments on the Optimizing Chronic Disease Management MVP. The following is a summary of the comments we received and our responses:

Comment: Some commenters expressed support for the seven proposed MVPs.

Response: We thank the commenters for their support.

Comment: One commenter noted that despite its prevalence, direct measures of chronic kidney disease (CKD) care are absent from this MVP. This is likely because there are limited measures in the current MIPS set that specifically address CKD aside from the cross-cutting population health measures.

Response: We thank the commenter for their feedback. The intent of this MVP is to include quality measure concepts that may be applicable to a broad type of MIPS eligible clinicians. We agree that the current MIPS quality measure does not include measures that specifically address CKD; therefore, we encourage stakeholders to submit potential new measures that will align with the Meaningful Measures Initiative during the annual Call for Measures. Additionally, this MVP was intentionally developed to include other clinician types that may support the prevention and/or treatment of chronic conditions, such as an interdisciplinary care team which may consist of family practitioners, internist, cardiologist, nephrologist, and/or endocrinologists among other clinician types. As such, this MVP could be utilized within an existing interdisciplinary care team and additionally may foster a team-based care approach promoting coordination of patient care, while also being applicable to individual clinician types whose scope of care aligns with the MVP topic.

Comment: One commenter requested clarification and further information as to CMS' rationale for including measures of coronary artery disease in the Chronic Disease Management MVP as they may also be applicable in the Heart Disease MVP. They noted that this MVP has the potential to capture such a broad range of clinicians that some settings may choose to report this set for all clinicians and not implement specific MVPs that would be more clinically relevant to specialty care.

Response: We thank the commenter for their feedback. CAD measures were included within this MVP and the Advancing Care for Heart Disease MVP due to the prevalence of CAD within the patient population. The CDC indicates that 'coronary heart disease is the most common type of heart disease, killing 365,914 people in 2017'.³⁰⁶ Therefore, we believe that this clinical condition is an important clinical topic to address in patients with chronic conditions. We understand that some MVPs may have overlap in clinical concepts that are represented in the MVPs. We encourage clinicians to explore all finalized MVPs in order to choose the MVP that is most appropriate and best represents engagement with their patients, while also representing performance data that is meaningful to their clinical practice and driving quality care.

Comment: One commenter recommended that one or more of the measures with the eQOM Specifications collection type that are in the proposed Heart Disease MVP be added to the Chronic Disease Management MVP.

Response: We disagree with the commenters suggestion to include eQOM Specification collection type measures found within the proposed Advance Heart Disease MVP based upon collection type. The intent of the Optimizing Chronic Disease Management MVP is to provide treatment and management of chronic diseases such as diabetes, coronary artery disease, asthma, and major adult depression. We believe the inclusion of the eQOMs within the Heart Disease MVP would skew the intent of this MVP on the treatment and management of patients with chronic conditions to potentially promoting a focus specifically to the heart clinical chronic conditions.

Comment: One commenter expressed concern that if two different specialties are reporting different measures and activities within the MVP that the MVP is too broad and should be split into two separate MVPs, one appropriate for cardiologists and one appropriate for family physicians. They noted that this would better meet the intention of MVPs by allowing an appropriate comparison. Furthermore, the commenter noted that having too broad of a selection of measures is more likely to encourage providers to choose measures for which they will get the best quality score rather than the measures that are most appropriate for their clinical setting.

Response: We believe the quality actions and resultant performance rates that may be captured within this MVP would be applicable to the clinicians that choose to report the Optimizing Chronic Disease Management MVP. MVPs allow choice in quality measure selection and therefore would allow clinicians to choose those measures that best align with their scope of care. For this reason, we believe that this MVP would be able to support quality measure performance comparison across clinicians, and potentially different specialties that provide similar care.

Comment: One commenter recommended the addition of Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) as a high priority quality measure option for this MVP. In addition, the HbA1c control measure aligns with measures in the MIPS APM Performance Pathway and insurer-level programs.

³⁰⁶ <https://www.cdc.gov/heartdisease/facts.htm>.

Response: We thank the commenter for their feedback and will consider adding this quality measure to the MVP in the future. We agree that this measure would align with measures in the MIPS APM Performance Pathways and other insurer-level programs and will consider the inclusion of this measure through future MVP maintenance and rulemaking.

Comment: Some commenters did not support Q047: Advance Care Plan in this MVP. They objected to the requirement for clinicians to annually document an advance care plan for all patients aged 65 years and older because they feel it is burdensome and lacks empirical support. Furthermore, the commenters noted it may be inappropriate for clinicians to perform this intervention during an initial office visit. They suggested the developers revise the specifications to limit the denominator population to established patient visits only.

Response: We disagree with the commenters. This measure captures the patient voice, which is part of the guiding principles for MVP development. The measure does not require that an advance care plan be developed and documented each year, only that there is documentation of a discussion regarding an advance care plan annually or that a surrogate decision maker is documented in the medical record. This is an important clinical topic to ensure that the treatment plan considered by the clinician is in alignment with the patient's wishes, are being documented within the medical record and are being respected. We believe that the addition of advance care planning is valuable especially for those patients that are at a higher risk of potential life altering medical events. We believe that there are benefits to ensuring an advance care plan is in place as demonstrated by a 2014 systemic review showing an increase in compliance with patient preferences, quality of life for the patient, increased use of hospice and palliative care services, and a decrease in subsequent hospitalization among other outlined benefits.³⁰⁷ We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. MVPs allow choice in quality measure selection, if a clinician does not find that this measure is meaningful to their scope of care, they may choose not to submit it as one of their four quality measures.

Comment: One commenter did not support Q236: Controlling High Blood Pressure in this MVP. They did not support application at the proposed levels of attribution: Individual Clinician and Group/Practice because they noted there is uncertain validity. The commenter expressed concerns with the strict blood pressure control across the whole patient population, especially for older patients. Based on AAFP/ACP guidelines, the commenter did not believe that less than 140 is ideal for every hypertensive patient across all age groups. Moreover, they noted that by assessing the most recent blood pressure from the measurement period, the measure deviates from actual practice.

Response: We disagree with the commenter. CMS strives to ensure alignment between the different reporting programs and the measures implemented within each program. MIPS measures are required to be tested prior to implementation into the program and MIPS has implemented a version that is functional within the MIPS requirements. Therefore, we believe this measure are valid for reporting within MIPS. We acknowledge that the JNC-8 recommends pharmacological treatment for the general population should be initiated at 140/90 mm Hg or higher for adults younger than 60 years of age and 150/90 mm Hg or high for adults 60 year of age and older; however, Q236: Controlling High Blood Pressure is not addressing the general population as it requires a diagnosis of essential hypertension condition for denominator eligibility. According to an ACC/AHA statement regarding the treatment of hypertension in patients with CAD, they recommend a goal blood pressure for patient with CAD of <140/90.³⁰⁸

Comment: One commenter did not support the Q398: Optimal Asthma Control measure in this MVP. The commenter stated that they do not believe the measure developer cited any evidence to form the basis of the measure. Additionally, they noted the measure is difficult to navigate and unnecessarily burdensome for clinicians to report on the six components of asthma control included in the numerator. Furthermore, the measure is not risk-adjusted for disease severity and socioeconomic status and could potentially penalize clinicians who care for sicker patients. Clinicians who treat severely affected populations may incur financial penalties which could worsen health disparities by penalizing safety-net hospitals and institutions with lower socioeconomic status patients. Lastly, although the Asthma Control Test (ACT) is considered best practice it is a proprietary assessment tool.

Response: We disagree with the commenter. The intent of this outcome measure is to determine the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age-appropriate patient reported outcome tools and not at risk for exacerbation. We believe that this composite measure is a well-constructed measure, as it allows clinicians to obtain performance data based on the stratification of age of the patient population, based on well-controlled asthma without elevated risk of exacerbation, and the results of the age-appropriate assessment tool used for patients for which they provide treatment. Therefore, if the clinician supports adult patients, they would only be required to report the three applicable components. We believe this stratification of the denominator allows the clinician to focus on the patients they treat, reducing burden of reporting for this robust composite measure. Additionally, this measure's denominator focuses on outpatient encounters for established patients. We believe this will mitigate the risk of penalizing safety-net hospitals and institutions with lower socioeconomic status patients since the patient will be known to the clinician reporting the measure. The

³⁰⁷ https://www.uptodate.com/contents/advance-care-planning-and-advance-directives?topicRef=86295&source=see_link

³⁰⁸ AHA/ACC Guidelines for Secondary Prevention for Patients With Coronary and Other Atherosclerotic Vascular Disease: 2006 Update Originally published 16 May 2006 <https://doi.org/10.1161/CIRCULATIONAHA.106.174516> Circulation. 2006;113:2363–2372

quality measure also identifies the assessment tools that would be considered best practice and allows for clinician choice of tool. The denominator criteria of the measure ensures that patients have a diagnosis of asthma with any contact during the current or prior performance period or had asthma present on an active problem list any time during the performance period, ensuring that the clinician submits measure data on patients specific to their practice. Additionally, the measure does allow patients to be excluded from the denominator in instances where the patient presents with a diagnosis for chronic obstructive pulmonary disease, emphysema, cystic fibrosis, or acute respiratory failure, in addition to other exclusions, to constrict the denominator eligible patient population being assessed. MVPs allow choice in quality measure selection, if a clinician does not find that this measure is meaningful to their scope of care, they may choose not to submit it as one of their four quality measures. We encourage the commenter to reach out to the measure steward to collaborate on measure revisions for potential inclusion in future rulemaking.

Comment: A few commenters supported the Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) as part of the Optimizing Chronic Disease Management MVP. In addition, one commenter noted that well-designed quality measures, preferably outcomes measures, can help provide a counter-balance to cost measures and ensure that patients are receiving the right types of treatment to achieve desired health outcomes, particularly if those quality measures relate to cost or efficiency measures. Cost measures that are not accompanied by strong quality measures create a risk of incentives for stinting on care that best meets varying patient needs. They noted the inclusion of the Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) will be an important quality measure in this MVP as a counterbalance to the cost measures.

Response: We agree that outcome measures ensure that patients are receiving the best health outcomes and strive to include outcome measures within MVPs. This preference of outcome measures aligns with the agency's prioritization of outcome and patient reported outcome measures. We also agree that selecting complimentary quality measures, improvement activities, cost measures, and foundational layer measure is very important in supporting clinicians and patients with meaningful data to drive quality care outcomes.

Comment: Some commenters did not support the Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) in this MVP. They expressed concerns that the measure was poorly specified and does not have data to show that it will lead to improvements in care or clinical outcomes. Additionally, the measure includes all patients who have completed the survey without any exclusions or risk adjustment, and hence this would result in a non-representative sample. Also, while the measure intends to establish a benchmark for good, comprehensive primary care, they noted the evidence that this measure will lead to improved outcomes and is actionable at the level of the individual clinician or group, has not been presented. There are no articles cited to support the actions that can be done to improve the scores on individual items. The vast majority of these interventions are at the system level. While the developer presents quite a bit of information regarding the validity and reliability of the PCPCM instrument, the commenter had a number of concerns regarding the face validity of the instrument. The commenter also expressed concerns on how the measure would work in a clinical practice when there are multiple issues to focus on during a patient visit, and therefore, is not certain the measure would apply to internal medicine.

Response: We disagree with the commenters. Fielding of the PCPCM PROM for reliability and validation was conducted both digitally and at point of care. The measure steward utilized three methods for reliability testing, and a multistep process for validity testing, which resulted in a fully tested measure. Based on the information submitted by the measure steward for this measure, the reliability and validity of the instrument are sufficient.³⁰⁹ Validity of the PCPCM PRO-PM was created through a multi-step approach to identify stakeholder-defined characteristics of high-quality care, compare these with best-practices as represented in the literature, fit these areas to purpose through conversation with national experts of measure development and high-quality primary care, and then test for meaningfulness and validity among patients and clinicians. This process involves extensive use of face validity and concurrent validity to test the PCPCM PROM and resulting PCPCM Performance Measure. For reliability, the variation of PCPCM performance measure scores as found during the measure steward's validation process, illustrated a difference of moderate (0.5) to large effect size (0.8) among clinicians in our validation tests, is evidence of a performance gap and opportunities for improvement. In a recently submitted manuscript regarding the score validity and reliability of the PCPCM PROM, among 6 practices, there were significant differences ($p=0.004$) in PCPCM PROM scores with a moderate effect size (at least .5 standard deviation). According to the measure steward, the American Board of Family Medicine, the Person-Centered Primary Care Measure PRO-PM (PCPCM PRO-PM) fulfills the call from the Institute of Medicine and from CMS to create a stakeholder informed, meaningful measure that is an assessment of quality, low burden for implementation and collection, and provides adequate ability to compare performance across clinicians and practices while providing greater transparency and actionable information.

³⁰⁹ Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650>.

Comment: One commenter shared their enthusiasm for the Optimizing Chronic Disease Management MVP. Additionally, they noted that if the Kidney Health Evaluation measure is adopted by CMS, then CMS should consider the measure for use in this MVP by the CY 2023 Performance Period.

Response: We will monitor the progress of the Kidney Health Evaluation measure as it progresses for possible inclusion of MIPS for a future program year. If this measure becomes available as a MIPS measure, we will assess it for possible inclusion in this MVP through future MVP maintenance and rulemaking processes.

Comment: One commenter supported the improvement activities included in this MVP.

Response: We thank the commenter for their support.

Comment: One commenter recommended the addition of IA_PM_13: Chronic Care and Preventative Care Management for Empaneled Patients as this activity is designed to directly address patients assigned to care teams for the purpose of population health management and encourages the adoption of practices and protocols that are essential in high-quality care for chronic diseases. An important action noted in this activity includes an individualized plan of care as appropriate to age and health status, including gender, age, and condition-specific preventive care services (for example, managing cardiovascular risk in patients with diabetes). The absence of this activity as an option is a noteworthy omission given the intent of this MVP. If the addition of this activity requires the removal of another activity the commenter recommended that IA_PSPA_19: Implementation of formal quality improvement methods, practice changes or other practice improvement processes be removed as the activity has minimal specificity for this MVP.

Response: We disagree with the commenter that this MVP lacks activities that address an individualized plan of care. This MVP includes IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings, and IA_PCMH: Implementation of Patient-Centered Medical Home model, which both address plan of care elements. We agree that IA_PM_13: Chronic Care and Preventative Care Management for Empaneled Patients could be a viable option in general for this MVP and will consider the inclusion of this activity through future MVP maintenance and rulemaking processes.

Comment: A few commenters opposed the TPCC cost measure in MIPS and MVPs. In their opinion, the measure is difficult to influence outside of a total cost of care APM, where there is shared interest and accountability in improving performance by the larger health care system. Since there is no such shared accountability in MIPS, it seems likely primary care physicians will be penalized for decisions made by other members of a patient's care team.

Response: We disagree with the commenters. We continue to believe that the measure is appropriate for use in MIPS and MVPs, as the measure underwent a comprehensive re-evaluation process and has now been endorsed by the NQF in 2020 with testing at the TIN and TIN-NPI level. The measure is intended to capture costs of care broadly; the measure complements episode-based measures which have a more targeted focus. As a broadly applicable measure, clinicians are encouraged to coordinate with other providers for treating a patient to improve overall cost performance. By holding multiple clinicians accountable, this promotes shared responsibility for a patient's care across primary care and specialties who tend to provide ongoing care. In this way, the measure promotes shared accountability amongst clinicians in MIPS. This shared accountability can reflect the role of both primary care clinicians and specialists in managing and treating a patient's ongoing care. That is, many types of clinicians can be attributed the TPCC measure which aligns incentives to provide cost-effective, high-quality care to mitigate the concern that primary care clinicians could be penalized based on other clinicians' decisions. Additionally, the TPCC measure includes a specialty adjustment to account for the different scope of care provided by primary care clinicians and specialists, and to ensure fair comparisons.

Comment: Some commenters recommended that if CMS finalizes and adopts the Diabetes and Asthma/COPD episode-based cost measures they should both be included in this MVP to evaluate a clinician's or clinician group's risk-adjusted cost to Medicare for patients receiving medical care to manage and treat these chronic conditions.

Response: We are finalizing these two episode-based measures, as described in section IV.A.3.d.(2)(b) of this final rule. These measures cover two highly prevalent chronic conditions; assessing costs for the management of those chronic disease processes could align well with the quality measures and improvement activities in this MVP. To give stakeholders time to become familiar with these measures, we will consider adding the Diabetes and Asthma/COPD cost measures to this MVP in a future year. Consideration to adding these measures to the MVP would occur through the MVP maintenance process and future rulemaking processes.

Comment: One commenter recommended that if CMS finalizes and adopts the Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure administrative claims measure, that this administrative claims measure be included in this MVP.

Response: We agree with the commenter. This measure would result in providing comparative performance data, which would be valuable to patients and caregivers in evaluating clinician performance and making choices about their care. However, we have received opposition to this administrative measure from commenters in Table A.4 in Appendix 1: MIPS Quality Measures of this final rule. Therefore, we are not finalizing this measure. We will continue to monitor this measure's progress and evaluate it for future inclusion within this MVP through the MVP maintenance process and future rulemaking.

After consideration of public comments, we are finalizing the *Optimizing Chronic Disease Management MVP* as proposed with modifications in Table D below for the CY 2023 performance period/2025 MIPS payment year and future years. We refer readers to Appendix 2: Improvement Activities Inventory, where we discuss the finalization of updates to the improvement activities IA_BE_20: Implementation of condition-specific chronic disease self-management support programs and IA_BE_21: Improved Practices that Disseminate Appropriate Self-Management Materials have been combined into the improvement activity IA_BE_16: Promote Self-management in Usual Care. Therefore, in this MVP, we have removed IA_BE_20: Implementation of condition-specific chronic disease self-management support programs and IA_BE_21: Improved Practices that Disseminate Appropriate Self-Management Materials from this MVP; and added IA_BE_16: Promote Self-management in Usual Care to this MVP to reflect this change.

**TABLE D: Optimizing Chronic Disease Management MVP
Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year**

The table below serves to represent the measures and activities that are finalized within the Optimizing Chronic Disease Management MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability measures are identified below with a caret symbol (^)^d; existing quality measures and improvement activities with revisions are identified below with an asterisk (*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2022 PFS proposed rule (86 FR 39881 through 39884), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, in instances where evidence of testing data at the clinician level was received and demonstrates the QCDR measure is fully tested at the clinician level, we are finalizing the QCDR measures within this MVP and the pound sign (#) was removed. Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

Quality	Improvement Activities	Cost	
Q006: Coronary Artery Disease (CAD): Antiplatelet Therapy (MIPS CQMs Specifications)	(~) IA_AHE_3: Promote use of Patient-Reported Outcome Tools (High)	Total Per Capita Cost (TPCC)	
(!) Q047: Advance Care Plan (Medicare Part B Claims, MIPS CQMs Specifications)	IA_BE_4: Engagement of patients through implementation of improvements in patient portal (Medium)		
Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment (eCQM Specifications)	(*) IA_BE_16: Promote Self-management in Usual Care (Medium)		
Q118: Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%) (MIPS CQMs Specifications)	IA_BE_22: Improved practices that engage patients pre-visit (Medium)		
(*) Q119: Diabetes: Medical Attention for Nephropathy (eCQM Specifications, MIPS CQMs Specifications)	IA_CC_2: Implementation of improvements that contribute to more timely communication of test results (Medium)		
(*)(!) Q236: Controlling High Blood Pressure (Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)	IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings (Medium)		
(!!) Q398: Optimal Asthma Control (MIPS CQMs Specifications)	IA_CC_13: Practice improvements for bilateral exchange of patient information (Medium)		
(*) Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (eCQM Specifications, MIPS CQMs Specifications)	(*)(~) IA_CC_14: Practice improvements that engage community resources to support patient health goals (High)		
(^)(!!) Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) (MIPS CQMs Specifications)	(*)(~) IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record (High)		
	(%) IA_PCMH: Implementation of Patient-Centered Medical Home model		
	IA_PSPA_19: Implementation of formal quality improvement methods, practice changes or other practice improvement processes (Medium)

Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

In the CY 2022 PFS proposed rule (86 FR 39896 through 39899), we proposed and solicited comments on the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP for implementation beginning with the CY 2023 performance period/2025 MIPS payment year.

We received public comments on the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. The following is a summary of the comments we received and our responses:

Comment: Some commenters expressed support for the seven proposed MVPs.

Response: We thank the commenters for their support.

Comment: One commenter supported the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. They noted this MVP will help improve quality of care, reduce costs, and transition emergency physicians to alternative payment models (APMs) as it aligns with the Acute Unscheduled Care Model (AUCM).

Response: We thank the commenter for their support.

Comment: One commenter stated there are ongoing coverage gaps in the episode-based cost measures and that many of the proposed MVPs rely on the Medicare Spending Per Beneficiary (MSPB) measure. They noted that the MSPB measure was originally developed for hospital-level accountability but has limited actionable information for clinicians when used under MIPS. They also noted that this measure can result in holding specialists accountable for care that is often beyond their direct control and have ability to impact care coordination in a clinician-focused accountability program. As such, they request CMS to only use the global or population-based measures only for confidential feedback and continue to develop more episode-based measures.

Response: We disagree with the commenter. The MSPB Clinician measure was previously used in the Value-Based Payment Modifier program and has now undergone comprehensive re-evaluation to ensure that it is well-suited to assessing clinicians on cost in MIPS. It is intended to apply broadly to inpatient care alongside more focused, episode-based measures. That is, the measure intends to apply to a broad range of costs of care. To address stakeholder concerns about clinicians being held accountable for care that is outside their control, the measure was re-evaluated to implement a set of service exclusions. For example, the measure excludes the cost of all hospice services occurring at any time during the episode window. There are also a set of service exclusions specific to each Major Diagnostic Category (MDC) to remove the cost of some unrelated services. For example, a downstream hospital admission for acute major eye infections is excluded from an episode that was triggered in the MDC for diseases and disorders of the respiratory system; this is because clinical input identified these services as unrelated. As such, a clinician who had treated the patient's initial respiratory hospitalization would not be held responsible for the cost of that subsequent hospitalization for eye infection. The revised attribution methodology involves separate attribution methods for medical and surgical episodes to identify the clinicians who are providing inpatient care. For medical episodes, the measure requires that the TIN bill at least 30 percent of inpatient E&Ms to focus on clinician groups that play a substantial role in inpatient care. For surgical episodes, the measure attribution is based on the clinician billing the procedure code. This attribution methodology appropriately identifies the clinicians who are providing care and reflects the team-based nature of hospital care. Internal medicine clinicians have the largest share of episodes (46 percent), followed by hospitalists (19 percent). We believe that it is appropriate to continue to use MSPB Clinician in MIPS and for MVPs where it is related to the focus of the care being assessed. CMS is also continuing to develop episode-based measures and has finalized five new measures for implementation in MIPS in section IV.A.3.d.(2)(b) of this final rule. We will continue to explore opportunities to incorporate more episode-based measures in MVPs when clinically appropriate.

After consideration of public comments, we are finalizing the *Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP* as proposed with modifications in Table E below for the CY 2023 performance period/2025 MIPS payment year and future years. In the CY 2022 PFS proposed rule (86 FR 39896 through 39899), we proposed the inclusion of several QCDR measures in this MVP. We did not receive data indicating that the QCDR measure ECPR55: Avoidance of Long-Acting (LA) or Extended-Release (ER) Opiate Prescriptions and Opiate Prescriptions for Greater Than 3 Days Duration for Acute Pain is fully tested at the clinician level, therefore we are not finalizing the inclusion of this QCDR measure in this MVP.

**TABLE E: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP
Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year**

The table below serves to represent the measures and activities that are finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability measures are identified below with a caret symbol (^); existing quality measures and improvement activities with revisions are identified below with an asterisk (*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2022 PFS proposed rule (86 FR 39881 through 39884), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, in instances where evidence of testing data at the clinician level was received and demonstrates the QCDR measure is fully tested at the clinician level, we are finalizing the QCDR measures within this MVP and the pound sign (#) was removed. Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

Quality	Improvement Activities	Cost
(*) Q116: Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis (MIPS CQMs Specifications)	IA_BE_4: Engagement of patients through implementation of improvements in patient portal (Medium)	Medicare Spending Per Beneficiary (MSPB) Clinician

Improving Care for Lower Extremity Joint Repair MVP Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

In the CY 2022 PFS proposed rule (86 FR 39900 through 39903), we proposed and solicited comments on the Improving Care for Lower Extremity Joint Repair MVP for implementation beginning with the CY 2023 performance period/2025 MIPS payment year.

We received public comments on the Improving Care for Lower Extremity Joint Repair MVP. The following is a summary of the comments we received and our responses:

Comment: Some commenters expressed support for the seven proposed MVPs.

Response: We thank the commenters for their support.

Comment: Some commenters supported the Improving Care for Lower Extremity Joint Repair MVP.

Response: We thank the commenters for their support.

Comment: One commenter expressed concern that this MVP does not incorporate post-fracture follow-up and care coordination. They noted that they believe as constructed the MVP fails to consider the care gap patients suffer in post-acute follow-up to address the chronic underlying bone loss that increases risk of future fractures and associated morbidity, mortality, and costs. The commenter was also concerned that the MVP would widen, rather than reduce, the care gap in osteoporosis. Finally, they recommended including measures that reflect appropriate use of screening DXA in male and female populations at risk for an osteoporotic fracture, as well as appropriate diagnosis and pharmaceutical management in individuals who have experienced one or more osteoporotic fractures.

Response: We agree with the commenter and will finalize inclusion of measure Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older within this MVP. During the development, the intention was to focus on those patients who have undergone a total joint arthroplasty; however, we agree that ensuring care coordination for the treatment of osteoporosis is important for this patient population to driving improved quality care for patient undergoing lower extremity joint repair. Additionally, this measure contains procedural coding for lower extremity fracture repair which would be applicable to those clinicians completing total knee and hip arthroplasty.

Comment: One commenter recommended the Q375: Functional Status Assessment After Total Knee Replacement eCQM be added to this MVP.

Response: We thank the commenter for their feedback to include Q375: Functional Status Assessment for Total Knee Replacement within this MVP. We acknowledge that this eCQM would apply to orthopedic surgeons who perform total joint replacements; however, Q470: Functional Status After Primary Total Knee Replacement is included in this MVP and captures the quality action assessed for in Q375 for the same patient population, making it duplicative and allows multiple measures to be met through a single quality action. While Q375: Functional Status Assessment for Total Knee Replacement requires completion of a functional assessment following total knee replacement, Q470: Functional Status After Primary Total Knee Replacement requires functional status target achievement following total knee replacement making it the more robust measure focused on quality outcomes.

After consideration of public comments, we are finalizing the *Improving Care for Lower Extremity Joint Repair MVP* as proposed with modifications in Table F below for the CY 2023 performance period/2025 MIPS payment year and future years.

**TABLE F: Improving Care for Lower Extremity Joint Repair MVP
Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year**

The table below serves to represent the measures and activities that are finalized within the Improving Care for Lower Extremity Joint Repair MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability measures are identified below with a caret symbol (^); existing quality measures and improvement activities with revisions are identified below with an asterisk (*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2022 PFS proposed rule (86 FR 39881 through 39884), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, in instances where evidence of testing data at the clinician level was received and demonstrates the QCDR measure is fully tested at the clinician level, we are finalizing the QCDR measures within this MVP and the pound sign (#) was removed. Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

Quality	Improvement Activities	Cost
<p>(!) Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older (Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications)</p> <p>(*) Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*)(!) Patient Safety and Support of Positive Experiences with Anesthesia MVP Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

In the CY 2022 PFS proposed rule (86 FR 39904 through 39907), we proposed and solicited comments on the Patient Safety and Support of Positive Experiences with Anesthesia MVP for implementation beginning with the CY 2023 performance period/2025 MIPS payment year.

We received public comments on the Patient Safety and Support of Positive Experiences with Anesthesia MVP. The following is a summary of the comments we received and our responses:

Comment: Some commenters expressed support for the seven proposed MVPs.

Response: We thank the commenters for their support.

Comment: One commenter supported the finalization of the Patient Safety and Support of Positive Experiences with Anesthesia MVP as proposed.

Response: We thank the commenter for their support.

Comment: One commenter noted they believe CMS should also include “CRNAs” or “anesthesia providers” to recognize the contributions and value of all anesthesia providers where they use the term “anesthesiologist,” in the anesthesia MVP.

Response: We thank the commenter for their feedback. As noted in the introduction for this MVP, this MVP will be most applicable to clinicians who provide anesthesia services to patients within the surgical setting or who are considered anesthesiologists or other qualified anesthesia professionals. We appreciate the feedback and intended the MVP to be inclusive of all anesthesia providers and will be more cognizant of language in the future.

Comment: One commenter noted they believe there are ongoing coverage gaps in the episode-based cost measures and that many of the proposed MVPs rely on the Medicare Spending Per Beneficiary (MSPB) measure. They noted that the MSPB measure was originally developed for hospital-level accountability but has limited actionable information for clinicians when used under MIPS. They also noted that this measure can result in holding specialists accountable for care that is often beyond their direct control and have ability to impact care coordination in a clinician-focused accountability program. As such, they requested CMS to only use the global or population-based measures only for confidential feedback and continue to develop more episode-based measures.

Response: We disagree with the commenter. The MSPB Clinician measure was previously used in the Value-Based Payment Modifier program and has now undergone comprehensive re-evaluation to ensure that it is well-suited to assessing clinicians on cost in MIPS. It is intended to apply broadly to inpatient care alongside more focused, episode-based measures. That is, the measure intends to apply to a broad range of costs of care. To address stakeholder concerns about clinicians being held accountable for care that is outside their control, the measure was re-evaluated to implement a set of service exclusions. For example, the measure excludes the cost of all hospice services occurring at any time during the episode window. There are also a set of service exclusions specific to each Major Diagnostic Category (MDC) to remove the cost of some unrelated services. For example, a downstream hospital admission for acute major eye infections is excluded from an episode that was triggered in the MDC for diseases and disorders of the respiratory system; this is because clinical input identified these services as unrelated. As such, a clinician who had treated the patient’s initial respiratory hospitalization would not be held responsible for the cost of that subsequent hospitalization for eye infection. The revised attribution methodology involves separate attribution methods for medical and surgical episodes to identify the clinicians who are providing inpatient care. For medical episodes, the measure requires that the TIN bill at least 30 percent of inpatient E&Ms to focus on clinician groups that play a substantial role in inpatient care. For surgical episodes, the measure attribution is based on the clinician billing the procedure code. This attribution methodology appropriately identifies the clinicians who are providing care and reflects the team-based nature of hospital care. Internal medicine clinicians have the largest share of episodes (46 percent), followed by hospitalists (19 percent). We believe that it is appropriate to continue to use MSPB Clinician in MIPS and for MVPs where it is related to the focus of the care being assessed. We are also continuing to develop episode-based measures and has finalized five new measures for implementation in MIPS in section IV.A.3.d.(2)(b) of this final rule. We will continue to explore opportunities to incorporate more episode-based measures in MVPs when clinically appropriate.

After consideration of public comments, we are finalizing the *Patient Safety and Support of Positive Experiences with Anesthesia MVP* as proposed with modifications in Table G below for the CY 2023 performance period/2025 MIPS payment year and future years. In the CY 2022 PFS proposed rule (86 FR 39904 through 39907), we proposed the inclusion of several QCDR measures in this MVP. We did not receive data to demonstrate that the QCDR measure AQ170: Prevention of Arterial Line-related Bloodstream Infections is fully tested at the clinician level. Therefore, we are not finalizing its inclusion in this MVP.

**TABLE G: Patient Safety and Support of Positive Experiences with Anesthesia MVP
Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year**

The table below serves to represent the measures and activities that are finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability measures are identified below with a caret symbol (^); existing quality measures and improvement activities with revisions are identified below with an asterisk (*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2022 PFS proposed rule (86 FR 39881 through 39884), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, in instances where evidence of testing data at the clinician level was received and demonstrates the QCDR measure is fully tested at the clinician level, we are finalizing the QCDR measures within this MVP and the pound sign (#) was removed. Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

Medicare Program; Opioid Treatment Programs: CY 2022 Methadone Payment Exception

AGENCY: Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

ACTION: Interim final rule with comment period.

SUMMARY: This interim final rule with comment period (IFC) freezes the payment to Opioid Treatment Programs for methadone in CY 2022 at the CY 2021 rate because it would not be appropriate to implement a decrease to the rate when substance use and overdoses have been exacerbated by the Coronavirus Disease 2019 (COVID–19) pandemic.

DATES: *Effective date:* These regulations are effective on January 1, 2022.

Comment date: To be assured consideration, comments on CMS–1751–IFC must be received at one of the addresses provided below, no later than 5 p.m. January 3, 2022.

ADDRESSES: Please refer to file code CMS–1751–IFC when commenting on issues in the interim final rule with comment period.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the “Submit a comment” instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1751–IFC, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1751–IFC, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

FOR FURTHER INFORMATION CONTACT:

Lindsey Baldwin, (410) 786–1694, and Michele Franklin, (410) 786–9226.

SUPPLEMENTARY INFORMATION:

I. Background

A. Methadone

The Food and Drug Administration (FDA) has approved three medications for the treatment of opioid use disorder (OUD): Methadone, buprenorphine, and naltrexone. These are referred to as medications for opioid use disorder (MOUD). The combination of MOUD with counseling and behavioral therapies to provide a “whole-patient” approach to OUD care is referred to as medication-assisted treatment (MAT). Opioid treatment programs (OTPs) are clinically driven and tailored to meet each patient’s needs.¹ MOUD are also used to prevent or reduce opioid overdose. These medications are safe to use for months, years, or even a lifetime.²

As discussed in the CY 2020 PFS final rule (84 FR 62630), when used to treat those with a confirmed diagnosis of OUD, methadone cannot be dispensed by a pharmacy like certain other MOUD treatments (that is buprenorphine, buprenorphine-naloxone combination
