We anticipate over the next few years, there may be opportunities where outcomes-based measures are developed and can be reported utilizing the administrative claims collection type. For example, in the CY 2021 PFS final rule (85 FR 85049 through 85051), we finalized the *Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive*

[224] Mitchell, P., M. Wynia, R. Golden, B. McNellis, S. Okun, C.E. Webb, V. Rohrbach, and I. Von Kohorn. 2012. Core principles & values of effective team-based health care. NAM Perspectives. Discussion Paper, National Academy of Medicine, Washington, DC. *https://doi.org/10.31478/201210c.*

Payment Systems (MIPS) outcome-based administrative claims measure. We proposed to allow the inclusion of outcomes-based administrative claims measures within the quality component of an MVP. We believe these measures can be used to meet the outcome measure requirement discussed under the MVP reporting requirements in section IV.A.3.b.(4)(d)(ii) of this final rule. We solicited comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the requirement for MVPs to include at least one outcome measure.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing our policies as proposed.

(BB) Exception When None Are Available

As described in the CY 2021 PFS final rule (85 FR 84850), we are aware that not all specialties and subspecialties may have outcome measures currently available to them in the MIPS program. We are aware of this measurement gap, and believe it is appropriate to allow for the use of high priority measures when outcome measures are not available.

In the CY 2022 PFS proposed rule (86 FR 39368), we proposed that beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, in instances when outcome measures are not available, each MVP must include at least one high priority measure that is relevant to the MVP topic, so MVP Participants are measured on high priority measures that are meaningful to the care they provide. In addition, beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, each MVP must include at least one high priority measure that is relevant to each clinician specialty included. This is important since MVPs are proposed to be constructed in a manner that may include one or several clinician specialties, as described above in section IV.A.3.b.(4)(b)(i)(A) of this final rule. As previously established at § 414.1305, we define high priority measures to include outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measures.

We continue to encourage stakeholders to utilize our established pre-rulemaking processes, such as the Call for Measures: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rulemaking,* to develop outcome measures relevant to their specialty if outcome measures currently do not exist and for eventual inclusion in an MVP. We encourage, to the extent feasible, the inclusion of several outcome and/or high priority measures, if available and relevant to the MVP topic. The inclusion of several measures would allow clinicians to have some choice in selecting the most relevant outcome or high priority measure that is meaningful to their specific practice. We solicited comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the requirement for MVPs to include a high-priority measure if an outcome measure is not available.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing our policies as proposed.

(bb) Encouragement To Include Patient-Centered Measures

In the CY 2021 PFS final rule (85 FR 84850), we finalized MVP development criteria that takes into consideration the patient voice. Specifically, we finalized MVP development and selection criteria that considers the inclusion of (to the extent feasible), patient-reported outcome measures, patient experience measures, and/or patient satisfaction measures. Through interactions with stakeholders and presentations, we have referred to these measures as patient-centered measures.

As described in the CY 2022 PFS proposed rule (86 FR 39368), we did not propose any revisions to our previously finalized policy, however, we believe it is important that we rely on a consistent understanding of patient-centered measures. Health Affairs [225] stated the following with respect to such measures, ''Measures should be patient-centered and incorporate new approaches to assessing patient health status and patient experience. Such measures include assessment of clinical outcomes, patient-reported outcome measures, as well as new approaches to evaluation of patient experience.''

We acknowledge that our existing portfolio of patient reported outcome measures is limited and may not be applicable to all specialties and subspecialties. We continue to encourage stakeholders to utilize our established pre-rulemaking processes, such as the Call for Measures, described in the CY 2020 PFS final rule (84 FR 62953 through 62955) to develop patient reported outcome measures relevant to their specialty. In addition, we encourage measure stewards of new and existing quality measures in MIPS to consider updating their measures to include the patient centered approach through the measure maintenance cycle or the development of new measures.

We solicited and received public comments on whether there are other aspects of patient measurement that should be considered as a part of the patient-centered measures definition. We thank commenters for the feedback received through this request for information. We may consider this information to inform future rulemaking.

(cc) Requirements for QCDR Measures Considered for an MVP

In the CY 2021 PFS final rule (85 FR 84857 through 84859), we finalized that QCDR measures that were approved in the previous year may be considered for inclusion within an MVP. In addition, we finalized at § 414.1400(b)(3)(v)(C)(4) that QCDR measures should be fully tested at the clinician level prior to the QCDR measure being included in an MVP. We refer readers to the CY 2021 PFS final rule (85 FR 84857 through 84859) for the specific policies that were previously finalized. In the CY 2022 PFS proposed rule (86 FR 39368 through 39369), we clarified when we would expect a QCDR to prove that their QCDR measure is fully tested before it is implemented within an MVP. QCDRs must self-nominate as a QCDR and submit QCDR measures for CMS consideration within the 60-day self-nomination period that begins on July 1st of the calendar year prior to the applicable performance period and ending on September 1 of the same year. In order to determine whether a QCDR measure may be finalized within an MVP, we will need to receive QCDR measure testing data for review by the end of the self-nomination period, that is no later than September 1 of the year prior to the applicable performance period. We encourage, as feasible, that QCDRs share testing data for their fully tested QCDR measures at the time of MVP candidate submission which may be prior to the September 1st deadline. If a QCDR is unable to submit testing data to demonstrate that their QCDR measure is fully tested at the clinician level by end of the self-nomination period (September 1st) or does not

[225] Higgins, A., D. Safran, N. Fiore, E. Murphy, M. McClellan. 2019. Pathway To Patient-Centered Measurement For Accountability. Health Affairs Blog, Health Affairs. *https://www.healthaffairs.org/do/10.1377/hblog20190910.733376/full/.*

otherwise meet our requirements, we will not finalize the inclusion of the QCDR measure within an MVP.

(C) Foundational Layer

In the CY 2020 PFS final rule (84 FR 62947 through 62948), we establish that the implementation of a foundational population health core measure set using administrative claims-based quality measures that can be broadly applied to communities or populations can result in MVPs that provide more uniformity in how the program measures population health, reduce clinician reporting burden, focuses on important public health priorities, and increases the value of MIPS performance data. In addition, we discuss our beliefs that interoperability is also a foundational element that would apply to all clinicians, regardless of MVP, for whom the Promoting Interoperability performance category is required. Furthermore, we also discuss the importance of the integration of population health measures and Promoting Interoperability measures into MVPs, as they provide a degree of standardization across all clinician types and promotes an infrastructure on which to assess and improve value-based care.

(aa) Population Health Measure

In the CY 2021 PFS final rule, we discuss the inclusion of population health measures calculated from administrative claims-based data as a part of the foundational layer of MVPs, in an effort to improve patient outcomes, reduce reporting burden and costs, and better align with clinician quality improvement efforts. We refer readers to the CY 2021 PFS final rule (85 FR 84856 through 84857) where we discuss population health. In the CY 2022 PFS proposed rule (86 FR 39369), we proposed: (1) To define the term population health measure; and (2) update the population health measure inventory.

(AA) Proposed Definition

In the 2020 CMS Quality Measure Development Plan- 2020 Population Health Environmental Scan and Gap Analysis Report (*https://www.cms.gov/files/zip/2020-mdp-population-health-e-scan.zip*), we conducted an environmental scan to identify gaps in population health measurement within MIPS, specifically for use in the foundational layer of MVPs. Through this environmental scan and gap analysis, we have settled on a definition of ''population health measure''. In addition, as described in the ''Roadmap for Promoting Health Equity and Eliminating Disparities'': *https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86046,* developed by the National Quality Forum, health equity continues to be a priority for the agency, we believe it is important to include the measurement of health disparities when measuring population health.

In the CY 2022 PFS proposed rule (86 FR 39369), we proposed to codify this at § 414.1305, such that a population health measure means a quality measure that indicates the quality of a population or cohort's overall health and well-being, such as, access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services. We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters recommended that additional information be provided in the definition to clarify the intended use and attribution approaches to ensure transparency as to CMS' intent for population health measures. One commenter expressed concern for the size of the population or cohort in the proposed definition for population health measures.

Response: The proposed definition of population health was not intended to be comprehensive, and intentionally is flexible. With regards to the attribution, and the size of the population or cohort, we believe these areas may vary depending on the clinical topic of measurement. Standardization of the attribution does not take into consideration the various specialties that participate in MIPS and instances where certain specialties should not be attributed to a population health measure. Furthermore, standardization of a cohort or population size may lead to certain population health conditions being excluded from measurement because the cohort size is not sufficient. We do not believe it is appropriate to limit population health measurement this way. To account for instances where MVP participants may not be attributed to a certain population health measure or when MVP participants may not treat enough patients to meet the population or cohort size within the measure, we have proposed scoring rules for population health measures accordingly. We refer readers to the CY 2022 PFS proposed rule (86 FR 39378 through 39379) and section IV.A.3.b.(5)(b)(i)(B) of this final rule for discussion of the population health scoring rules.

Comment: Several commenters expressed concerns with the population health measures proposed for MVPs, because commenters believe that the measures are too broad and are outside of the control of the clinician. One commenter expressed the belief that the inclusion of population health measures in the foundational layer is essentially creating an entire new MIPS category which is outside the intent of the MACRA legislation. Another commenter believes that population health measures move the MVP away from incorporating the patient's voice, measuring clinical conditions and outcomes, and generating real-time feedback.

Response: The population health measures capture outcomes important to patients (that is, hospitalizations for acute illness) and thus provide meaningful information to clinicians so they can improve their practice. Although administrative claims measures use outcomes that are not directly reported by patients, they measure clinical outcomes that are central to patient well-being since avoidance of acute hospitalization is an important goal of care. They can thus generate feedback to help improve care. We anticipate sharing measure scores with clinicians scored on the measure, in addition to tying reimbursement payment adjustments to these scores, will encourage clinicians to improve care quality and patient outcomes. Each measure is fully tested to ensure that it reflects the quality of care provided by clinicians held accountable for care of their assigned patients.

We disagree with commenters that the inclusion of population health measures in the foundational layer is essentially creating an entire new MIPS category. The population health measures are still considered quality measures, and as described in section IV.A.3.b.(5)(b)(i)(B) of this final rule, are scored and incorporated into the quality score. Therefore, their use does not create a new performance category, rather, the foundational layer of MVPs was created to ensure that important areas of measurement would be reflected within all MVPs.

We also disagree that population health measures move the MVP away from incorporating the patient voice, measuring clinical conditions and outcomes, and generating real time feedback. We believe MVPs can be multi-faceted in covering these important areas, and believe there is importance in measuring the health of communities through population health

in addition to the value in including the patient voice. In addition, MVPs are expected to be developed to cover clinical conditions that are important to the specialties that participate in the program and would include outcome measures to the extent available. Furthermore, as discussed in the CY 2022 PFS proposed rule (86 FR 39383), we proposed to provide enhanced performance feedback to MVP participants within the annual performance feedback that is currently provided through traditional MIPS. We do not believe that reporting on population health measures will impede our ability to provide enhanced performance feedback to MVP participants. At this time, we are not able to provide real time or performance period feedback, as there are complexities that need to be mitigated.

Comment: Several commenters do not support the use of administrative claims-based measures in any of the MVPs. They are concerned that many of the existing administrative claims-based measures have not been tested at the physician level and are based on a retrospective analysis of claims and do not provide granular enough information for physicians to make improvements in practice. Overall, they do not believe that administrative claims-based measures will be appropriate in all MVPs. One commenter believes that the measures should focus on the domain of care that is most relevant to the care the physician provides. One commenter requested confirmation that each measure has a high level of reliability and is fully tested to ensure that the measure can appropriately be assigned to specific physicians or groups. Another commenter recommends the administrative claims-based measures be voluntary.

Response: We disagree. The administrative claims-based measures in MIPS have been tested and have been put forth through the Measures Application Partnership (MAP) process through the National Quality Forum. Each measure is fully tested at the clinician level to ensure that it reflects the quality of care provided by clinicians held accountable for care of their assigned patients. While there may be instances where administrative claims-based measures include a lookback period, many in MIPS are based on performance period dates, that is January 1 through December 31. We refer readers to the CY 2021 PFS final rule (85 FR 85045) and the CY 2022 PFS proposed rule (86 FR 3600 through 39602) for discussion of the data collection periods for these measures.

We believe administrative claims measures capture information related to outcomes that is important to patients (that is, hospitalizations for acute illness) and thus provide meaningful information to clinicians so they can improve their practice. Although administrative claims measures use outcomes that are not directly reported by patients, they measure clinical outcomes that are central to patient well-being since avoidance of acute hospitalization is an important goal of care. They can thus generate feedback to help improve care.

Overall, we believe administrative-claims based measures, such as the population health measures should be included as a facet of MVP measurement, across all MVPs. The clinical topics covered in the population health measures are applicable to most clinicians. However, as described in the CY 2022 PFS proposed rule (86 FR 39378), we are aware there may be instances where the population health measures cannot be calculated, and had proposed to adopt our scoring policies used in traditional MIPS for MVPs, we would exclude the measure from the total achievement points and the total available points if the administrative claims measure does not have a benchmark or meet the case minimum requirement in accordance with § 414.1380(b)(1)(i)(A)(*2*)(*ii*).

We also proposed at § 414.1365(d)(3)(i)(A) that except as provided in paragraph (d)(3)(i)(A)(*1*) each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP participant's total measure achievement points and total available measure achievement points. The population health measures in the MIPS program are fully tested, with a reliability of 0.4 with a minimum attributed case size of 20. We consider these measures to be of moderate reliability and believe the reliability thresholds for these measures are sufficient for these measures to be included as quality measures within the MIPS program. In the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77171), we identified reliability levels between 0.4 to 0.7 as moderate and reliability levels above 0.7 as high. We aim to measure quality performance for as many clinicians as possible, and limiting measures to reliability of 0.7 would result in fewer individual clinicians with quality performance category measures. In addition, a 0.4 reliability threshold ensures moderate reliability for most MIPS eligible clinicians or group practices that are being measured on quality.

We disagree with the commenter who recommended that administrative-claims based measures, such as the population health measures, be voluntary. Population health measurement has been purposefully included in the foundational layer of all MVPs to be broadly applied to communities or populations and provide more uniformity in how the program measures population health, reduces clinician reporting burden, and focus on important public health priorities.

After consideration of public comments, we are finalizing our policy as proposed.

(BB) Population Health Measures Inventory

In the CY 2022 PFS proposed rule (86 FR 39369) we discussed the population health measure inventory, and the expansion of the number of population health measures available in the foundational layer of MVPs. We also discussed and encouraged stakeholders to pursue population health measure development. As discussed in Appendix 1: MIPS Quality Measures of this final rule, we proposed to include the *Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions* in the MIPS program. As discussed in Appendix 3: MVP Inventory, this measure was proposed for inclusion as an additional population health measure for MVP reporters to choose from as part of the Foundational Layer. We refer readers to Appendix 3: MVP Inventory for the comments received on the specific population health measures and our responses.

(bb) Promoting Interoperability

In the CY 2021 PFS final rule (85 FR 84849 through 84850), as a part of the MVP development criteria, we had finalized that MVPs must include the full set of Promoting Interoperability measures. Any updates made to the set of Promoting Interoperability measures through traditional MIPS will apply to the MVPs. Therefore, we refer readers to section IV.A.3.d.(4) of this final rule where we discuss Promoting Interoperability performance category policies.

(D) Health Equity Measures in MVPs–Request for Information (RFI)

In the CY 2022 PFS proposed rule (86 FR 39369) we requested information regarding the incorporation of health equity measures in MVPs. We thank

commenters for the feedback received through this request for information. We may consider this information to inform future rulemaking.

(ii) Maintenance Process for MVPs

As described in the CY 2022 PFS proposed rule (86 FR 39370), we believe it is important that we implement a maintenance process for established MVPs. Independent of the implementation of MVPs; the individual measures typically undergo annual updates and maintenance for several reasons. These updates may include technical coding updates, changes to clinical guidelines, or modifications to various aspects of the measure specification (such as the numerator or denominator). It will be important that we monitor when changes are made to individual measures to ensure that the updated measure is relevant and should be maintained within the MVP.

Therefore, beginning with the CY 2023 MIPS performance period/2024 MIPS payment year, we proposed an annual maintenance process for finalized MVPs. In order to ensure that various stakeholder perspectives are also considered, we proposed a solicitation process to solicit stakeholder recommendations for potential updates to established MVPs. Under this proposal, beginning in January of the year prior to the performance period, stakeholders could submit their recommendations to revise established MVPs. We would accept stakeholder input on a rolling basis. Any changes to MVPs will be addressed through future notice and comment rulemaking, for example, suggesting the addition or removal of a quality measure or improvement activity. If changes are made to existing individual measures and activities, they would be made under the traditional MIPS performance category policies and criteria for measures and activities and those changes would be reflected within the MVP. We would be unable to communicate with a stakeholder about whether or not their recommendations are accepted ahead of rulemaking, and we would ultimately decide whether updates to the established MVPs should be made. Additional logistical information, such as where to submit recommendations would be provided through the QPP resource library and listserv messaging, prior to the opening of the solicitation process. We stated in the proposed rule that we would consult with the stakeholders who originally nominated the MVP about any publicly recommended changes to that MVP. To be clear, the annual maintenance process for finalized MVPs would be separate from the new MVP candidate solicitation process that was described in the CY 2021 PFS final rule (85 FR 84854 through 84856). We solicited comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters believe that it would be beneficial to have all relevant specialties and clinician types provide feedback on any MVP changes, because commenters believe it would generate more buy in and foster collaboration. A few commenters expressed concern for our process to only consult with stakeholders who submitted the MVP regarding changes to the MVP and suggested soliciting recommendations from major contributory stakeholders. Another commenter believes that involving multiple stakeholders in the maintenance of MVPs would make the process more transparent and nimbler to ensure that MVP owners do not unnecessarily prevent appropriate modifications of the MVP from taking place.

Response: We agree that it would be beneficial to have all relevant specialties and clinician types provide feedback on potential changes to established MVPs. To clarify, as discussed in the CY 2022 PFS proposed rule (86 FR 39370), we intend to solicit recommendations for potential changes to established MVPs from all interested parties through an MVP maintenance process, and not just from those stakeholders that submitted the MVP through the initial development process. In addition, the initial implementation of an MVP and any potential changes to an established MVP (for example, the addition or removal of measures) would need to be proposed and finalized in future notice-and-comment rulemaking which enables all interested parties to voice their opinions through the public comment process on any proposed changes to an MVP. We are also open to exploring additional options as to how we can better engage with a broader cohort of stakeholders on MVP maintenance. We would make the determination as to which MVP updates will be proposed and finalized and which will not.

Comment: A few commenters urged CMS to align the MVP maintenance process with timelines for MIPS and QCDR measure updates to minimize the burden on MVP developers.

Response: The timeline for MVP maintenance will coincide with our MIPS rulemaking timelines. As described in the CY 2022 PFS proposed rule (86 FR 39370), any changes to MVPs would be addressed through future notice and comment rulemaking. Unfortunately, we are not able to align with the QCDR self-nomination timeline (July 1st to September 1st) as it does not align with the rulemaking timeline. However, as described in the CY 2022 PFS proposed rule (86 FR 39368 through 39869) we are mindful of the QCDR self-nomination timeline when considering the inclusion of new QCDR measures in existing MVPs. In order to determine whether a QCDR measure may be finalized within an MVP, we will need to receive QCDR measure testing data for review by the end of the self-nomination period, that is no later than September 1st of the year prior to the applicable performance period. If a QCDR is unable to submit testing data to demonstrate that their QCDR measure is fully tested at the clinician level by the end of the self-nomination period or does not otherwise meet our requirements, we will not finalize the inclusion of the QCDR measure within an MVP.

After consideration of public comments, we are finalizing our policies as proposed.

(c) Establishing a Portfolio of MVPs

In the CY 2022 PFS proposed rule (86 FR 39879 through 39907), we proposed seven MVPs on the following topics: Rheumatology, Stroke Care, Ischemic Heart Disease, Chronic Disease Management, Emergency Medicine, Lower Extremity Joint Repair, and Anesthesia. We refer readers to Appendix 3: MVP Inventory of this final rule for a full description of each MVP, proposal rationales, summary of public comments and our responses. We anticipate that the portfolio of MVPs will continue to grow over the next few years. Through the review of data received through MIPS reporting for the 2019 performance period, we have identified the ten specialties who have the most participants in the MIPS program. These specialties include primary care, emergency medicine, diagnostic radiology, anesthesiology, cardiology, obstetrics and gynecology, orthopedic surgery, psychiatry, general surgery, and ophthalmology.

We believe it is important to develop MVPs that address these specialties, amongst the other specialties that participate in the program. We are, however, aware of the limited availability of relevant cost measures for all specialties and subspecialties. We refer readers to the CY 2022 PFS proposed rule (86 FR 39402 through 39405) and section IV.A.3.d.(2)(c) of this final rule, for discussion of the proposed cost measure development by external

stakeholders process, where we discuss a potential strategy to mitigate the issue of a limited inventory of cost measures that will potentially remove barriers for MVP implementation.

To support MVP development efforts over the next few years, and to ensure we build out a comprehensive MVP portfolio, we intend to identify additional MVP priority areas for development and include those within our guidance materials for the MVP candidate submission process: *https://qpp.cms.gov/mips/mips-value-pathways/submit-candidate.*

(d) MVP Reporting Requirements

(i) Overview

We have reviewed the existing reporting requirements under traditional MIPS and believe that by changing the reporting requirements for MVPs, we would reduce reporting burden. We believe MVP reporting would allow for measurement that is more meaningful by requiring clinicians to report on measures and activities that comprehensively reflect an episode of care or clinical condition. We have heard from stakeholders the importance of having a choice when reporting. In this section, we discuss our proposals for MVP reporting requirements and subgroup reporting limitations for the Quality performance category; Cost performance category; Improvement Activities performance category; and the foundational layer-, which consists of the Promoting Interoperability performance category, and the population health measures.

(ii) Quality Reporting Requirements in MVPs

As described in the CY 2022 PFS proposed rule (86 FR 39370), since MVPs would include cohesive and complementary subsets of measures and activities that are relevant and to a given specialty, we believe that MVP Participants would report on measures that provide more meaningful and actionable results. MVP Participants would have the opportunity to select from a subset of measures within an MVP. Furthermore, as discussed above, we believe it is important to continue to require the reporting of outcome and high priority measures in MIPS. Therefore, at § 414.1365(c)(1), we proposed that except as provided in paragraph § 414.1365(c)(1)(i), an MVP Participant must select and report, if applicable, 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure, included in the MVP, excluding the population health measure required under paragraph (c)(4)(ii). We discuss in section IV.A.3.b.(4)(b)(i)(B) of this final rule, that there may be instances where MVPs are developed to include outcomes-based administrative claims measures within the quality component of an MVP, where those measures are not considered to be population-health based. In such instances, we believe it would be appropriate to allow MVP Participants to select to be calculated on the outcomes-based administrative claims measure, at the time of MVP registration, and to allow that measure to meet the outcome measure requirement of MVP quality reporting.

In addition, we have concerns about the ability of small practices to report all required measures in the MVP quality performance category when they select Medicare Part B claims measures as a collection type. In cases when an MVP includes fewer than 4 Medicare Part B claims measures, an MVP Participant in a small practice would need to report an additional collection type which would add reporting burden. We are concerned that small practices do not have the same resources to meet the quality reporting requirement of 4 measures if the MVP does not include 4 Medicare Part B claims measures. We want to establish policy that does not penalize a small practice for submitting an MVP. Therefore, we proposed at § 414.1365(c)(1)(i) that paragraph § 414.1365(c)(1), does not apply to a small practice that reports on an MVP that includes fewer than 4 Medicare Part B claims measures, provided that the small practice reports each such measure that is applicable. We solicited comments on these proposals and refer readers to section IV.A.3.b.(5)(b)(i) of this final rule for details on the MVP quality scoring proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported a reduction in the number of quality measures within the MVP reporting option as compared with traditional MIPS because commenters believe that this would lead to a reduced burden for clinicians.

Response: We thank the commenters for their support.

Comment: One commenter supports the use of administrative claims measures to meet outcome-based measure requirements.

Response: We thank the commenter for their support.

Comment: One commenter urged CMS to develop MVPs that can be reported using only one collection type in order to reduce burden and maximize the number of MIPS eligible clinicians that can report MVPs.

Response: We disagree. We believe that limiting the number of collection types that are available for reporting an MVP would not be beneficial. If we were to only utilize one collection type in the reporting, fewer clinicians may be able to report the MVP if they are not using the collection type reflected in the MVP. Since MVPs include a focused selection of quality measures, MVP participants may select four measures to report on utilizing the collection types in which the measure is available, one of the four measures must be an outcome measure, or a high priority measure if an outcome is not available. We currently utilize measures that are implemented through one of the following collection types: MIPS CQMs; eCQMs; Medicare Part B Claims; and QCDR measures. As described above, we have concerns about the ability of small practices to report all required measures in the MVP quality performance category when they select Medicare Part B claims measures as a collection type. In cases when an MVP includes fewer than 4 Medicare Part B claims measures, an MVP Participant in a small practice will need to report an additional collection type which will add reporting burden. We are concerned that small practices do not have the same resources to meet the quality reporting requirement of 4 measures if the MVP does not include 4 Medicare Part B claims measures. We proposed to establish policy that does not penalize a small practice for submitting an MVP. As described in CY 2022 PFS proposed rule (86 FR 39370 through 39371). we proposed at § 414.1365(c)(1)(i) that paragraph (c)(1), does not apply to a small practice that reports on an MVP that includes fewer than 4 Medicare Part B claims measures, provided that the small practice reports each such measure that is applicable.

Comment: One commenter expressed concern that MIPS eligible clinicians will be required to participate in a registry in order to report an MVP because the commenter believes this would be a significant cost burden.

Response: To clarify, MVP participants are not required to participate in a registry in order to report an MVP. All the MVPs are reportable without the use of a third party intermediary, it is to the MVP participant's discretion whether or not they would like to use a registry to report. The only instance where an MVP participant would be required to report through a QCDR however, would be if they'd like to report on a QCDR measure that is available in the MVP. We note

that QCDR measures are only reportable via a QCDR that is approved to support said QCDR measures.

Comment: One commenter recommended CMS ensure that MVPs across specialties are equitable.

Response: We agree with the commenter. We have established MVP development requirements to ensure that all MVPs are developed utilizing the same criteria. In addition, we believe Interoperability and population health are important areas that should apply across all MVPs through the foundational layer. In addition, as described in section IV.A.3.b.(4)(d) of this final rule, all MVP participants are held to the same reporting requirements (with the exception of small practices if they have fewer Part B Claims measures to report on) to support that MVPs amongst MVP participants are fair and equitable.

Comment: A few commenters expressed concern for the lack of choice within the quality performance category under MVPs. One commenter expressed the belief that it should be up to the MIPS eligible clinician to select appropriate measures, rather than having a limited set of measures. One commenter recommends adding as many eCQMs into each MVP as possible since eCQMs have been encouraged and incentivized by CMS in the past. Another commenter urged CMS to allow MIPS eligible clinicians to submit additional outcome or high priority measures and receive bonus points.

Response: We disagree with the commenters who believe there is a lack of choice within the quality performance category under MVPs. A focused selection of quality measures have been curated based on consideration of clinical relevance and feedback from stakeholders. Over the past 5 years of traditional MIPS, as well as in precursor programs such as Physician Quality Reporting System (PQRS), we have found that clinicians, groups, practice administrators tend to select measures they believe they will perform the best on and not necessarily measures that would lead to improvements in the care provided. That has led to many measures that have topped out status, providing little to no value to clinicians, nor leading to improved patient outcomes. While we believe it is important that MVP participants have choice in the measures they report, we believe the level of choice should be narrowed to focus in on measures that are directly and clinically relevant to the topic being measured, and intend on identifying such measures through groupings within MVPs. We agree that eCQMs should be included in MVPs where feasible, dependent on whether the eCQM is clinically relevant to the topic being measured. We encourage stakeholders to submit more than the required number of outcome or high priority measures if they can. As described in section IV.A.3.b.(5), when MVP participants submit more than the required number of measures, only the highest scored measures will count towards the quality final score. We are currently not offering bonus points for the reporting of additional measures, however as discussed in section IV.A.3.b.(5) of this final rule, we are open to exploring additional incentives to report MVPs through future rulemaking.

After consideration of public comments, we are finalizing our policies as proposed.

(iii) Cost Reporting Requirements in MVPs

As described in the CY 2022 PFS proposed rule (86 FR 39371), as MVPs are implemented and available for reporting, each MVP would only include cost measures that are relevant and applicable to the MVP topic. Therefore, the number of cost measures in a given MVP may vary depending on the clinical topic of the MVP. An MVP may include the episode-based cost measures that are relevant to the topic, total per capita cost measure (TPCC), and/or Medicare Spending Per Beneficiary Clinician (MSPB Clinician) measure. As such, we proposed at § 414.1365(c)(2) that an MVP Participant is scored on the cost measures included in the MVP they select and report. To be clear, MVP Participants would not submit data for the cost measures; they would be calculated by CMS using administrative claims data, as in traditional MIPS. We solicited comments on this proposal. We did not receive any comments and are finalizing the proposal as proposed. In addition, we refer readers to section IV.A.3.b.(5)(b)(ii) of this final rule for details of the MVP cost scoring policies and Appendix 3: MVP Inventory for a summary of the comments we received and our responses related to individual cost measures.

(iv) Improvement Activity Requirements in MVPs

Similar to the quality performance category within MVPs, we also believe the improvement activities performance category should provide clinicians with an opportunity to select from a subset of improvement activities within an MVP that are relevant to the clinical topic being measured. Therefore, in the CY 2022 PFS proposed rule (86 FR 39371), we proposed at § 414.1365(c)(3), that MVP Participant who reports an MVP, must report one of the following: Two medium-weighted improvement activities; one high-weighted improvement activity; or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice as described at (82 FR 53652) and at § 414.1380(b)(3)(ii). We note that these proposed MVP improvement activity requirements are reduced in comparison to what is required in traditional MIPS (82 FR 53652) under which we generally require two high-weighted activities, one high-weighted and two medium-weighted activities, four medium-weighted activities, or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice. We believe reduced reporting requirements are necessary to support adoption of and reduce burden for implementation of MVPs. We solicited comments on this proposal and refer readers to section IV.A.3.b.(5)(b)(iii) of this final rule for proposals related to MVP improvement activities scoring and discussion of why improvement activities are double-weighted under MVP reporting.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported double weighted improvement activities for MVP reporters. One commenter believes that this would allow for a more cohesive participation experience.

Response: We thank the commenters for their support.

Comment: A few commenters requested that CMS provide more flexibility in MVP reporting requirements, including providing automatic credit for the Improvement Activities performance category. One commenter believes that a commitment to improvement is inherent in many of the measures in MIPS.

Response: We disagree that additional flexibilities are needed within the reporting requirements. We do not believe there is value in offering automatic credit for the improvement activities performance category. Improvement activities are meant to have a complimentary relationship to the quality measures and cost measures included in an MVP. We do not believe automatic credit will lead to improved patient outcomes or improvements in the care provided to patients. Lastly, as described in section 1848(q)(2) of the Act, we are required to have four performance categories: Quality,

improvement activities, cost, and promoting interoperability. We believe there are other ways to incentivize clinicians and groups to report MVPs, and refer readers to section IV.A.3.b.(5) of this final rule for further discussion of future considerations of incentives.

After consideration of public comments, we are finalizing our policies as proposed

(v) Reporting Requirements for the Foundational Layer

(A) Promoting Interoperability

(aa) Reporting Requirements

As described in the CY 2021 PFS final rule (85 FR 84849 through 84853), all MVPs should include the entire set of Promoting Interoperability measures, as a part of the foundational layer. We do not intend to establish different reporting requirements for Promoting Interoperability for MVPs from what is established under traditional MIPS. Therefore, in the CY 2022 PFS proposed rule (86 FR 39371), we proposed at § 414.1365(c)(4)(i) that an MVP Participant, is required to meet the Promoting Interoperability performance category reporting requirements described at § 414.1375(b). We solicited comments on this proposal and refer readers to section IV.A.3.b.(5)(b)(iv) of this final rule for details of the policies for MVP Promoting Interoperability scoring and reweighting.

The following is a summary of the comments we received and our responses.

Comment: Several commenters requested that CMS adopt different requirements for the Promoting Interoperability performance category within MVPs. One commenter urged CMS to use the MVP framework as an opportunity to provide clinicians with flexibility to demonstrate meaningful use in more innovative ways that account for differences in practices. One commenter requested that CMS include a menu of yes/no measures similar to the improvement activities performance category. Another commenter recommended that MVPs support meeting national standards that enable the bidirectional movement of health data across the digital environment through the Promoting Interoperability performance category.

Response: While we did not propose different reporting requirements for the Promoting Interoperability performance category in the first wave of MVPs, we are continuing to refine the composition of MVPs and may incorporate these suggestions in future rulemaking. In addition, we disagree that solely relying on measures that require a ''yes/no'' response would be sufficient for the Promoting Interoperability performance category. In the CY 2019 PFS final rule (83 FR 59785 through 59796) we finalized a performance-based scoring methodology for the Promoting Interoperability performance category that recognizes MIPS eligible clinicians who push themselves on measures that are most applicable to how they deliver patient care and increase health information exchange through interoperability. While we do have several yes/no measures in the Promoting Interoperability performance category, we do not believe using only ''yes/no'' measures would enable us to distinguish varying performance levels among MIPS eligible clinicians.

Comment: One commenter requested that CMS provide flexibilities for certain types of clinicians, such as non-patient facing clinicians, for the Promoting Interoperability performance category in general within MIPS because the commenter believes these clinicians often have difficulties meeting the requirements of the Promoting Interoperability performance category.

Response: Our current policy under § 414.1380(c)(2)(i)(C) is to reweight the Promoting Interoperability performance category for non-patient facing MIPS eligible clinicians as defined under § 414.1305, which includes groups and virtual groups that have more than 75 percent of clinicians as non-patient facing. This policy will apply under MVPs, as discussed in section IV.A.3.b.(5)(c)(i)(B)(aa) of this final rule.

Comment: One commenter suggested that in MVPs, the Promoting Interoperability performance category measures shift to yes/no attestation rather than percentages because some measures may not be applicable to a clinician's practice or different thresholds may be more appropriate.

Response: We disagree. Beginning with the CY 2019 performance period/CY 2021 MIPS payment year (83 FR 59785 through 59796) we implemented a performance-based scoring methodology to encourage clinicians to push themselves on measures that are the most applicable to how they deliver care to patients. We believe that having Promoting Interoperability performance category measures that require a numerator/denominator response allows clinicians to differentiate themselves from other clinicians by recognizing higher achievement on these measures. Our goal has been to enable clinicians to focus more on patient care and health data exchange through interoperability.

Many measures have exclusions available for instances where a measure is not applicable to the clinician's practice.

After consideration of public comments, we are finalizing our policies as proposed.

(bb) Subgroup Limitations

As described in the CY 2022 PFS proposed rule (86 FR 39371 through 39372), we believe that subgroups should be assessed using subgroup level data to the extent that it is operationally feasible. However, through the MVP Town Hall (85 FR 84846), we heard from stakeholders that some clinicians would need additional time to resolve operational challenges, including challenges related to configuration of EHR systems. Given these operational challenges, as well as other considerations specific to the Promoting Interoperability performance category, we believe that each subgroup should submit their affiliated group's data for the Promoting Interoperability performance category and receive a score based on that data. We acknowledge that requiring each subgroup to submit their affiliated group's data could result in duplicative reporting of the same data if their affiliated group also reports as a group for the Promoting Interoperability performance category. However, we believe that this approach is the most appropriate way to address the operational challenges identified by stakeholders and other issues specific to the Promoting Interoperability performance category. For instance, requiring clinicians to report Promoting Interoperability by subgroup may initially disincentivize clinicians from choosing to report MVPs as it may exacerbate the reporting burden and use of resources by a smaller cohort of clinicians. Furthermore, the Promoting Interoperability measures are applicable to many clinician types and are not designed to be specialty specific like the quality measures, therefore, it is unclear whether an advantage of assessing Promoting Interoperability performance on a subgroup of clinicians exists. Other performance categories include specialty specific measures, where assessment of performance at the subgroup level may be more meaningful. Therefore, we proposed at § 414.1365(c)(4)(i)(A) that for the CY 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years, to require an MVP Participant that is a subgroup to submit its affiliated group's data for the Promoting Interoperability performance category. The submission of the affiliated group's data will be on the subgroup's behalf. If the affiliated group chooses to report as

a group for the Promoting Interoperability performance category, the group still will be required to submit its own data separately and in accordance to the reporting rules for groups.

We refer readers to the CY 2022 PFS proposed rule (86 FR 39371 through 39372) for the discussion of subgroup limitations.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the reporting of Promoting Interoperability data for the affiliate group for subgroups.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing the policy as proposed.

(B) Population Health Measures

As described in the CY 2017 Quality Payment Program final rule (81 FR 77130 through 77136) we had received public comment that not all population health measures are applicable or attributable to all specialties. In order to mitigate this concern, we discuss our proposal in the CY 2022 PFS proposed rule (86 FR 39372), at § 414.1365(c)(4)(ii), that an MVP Participant is scored on 1 population health measure in accordance with paragraph § 414.1365(d)(1). To be clear, the population health measure calculation does not contribute to the required reporting of four quality measures, as described at § 414.1365(c)(1) and in section IV.A.3.b.(4)(d)(ii) of this final rule. Since the aforementioned population health measures are administrative claims based, they do not require data submission from clinicians. Therefore, it is important that an election period is established in which MIPS eligible clinicians, groups, subgroups, and APM entities would identify which MVP and population health measure they intend to report. We refer readers to the proposed registration process below and intend to provide additional guidance through subregulatory means.

In crafting our proposal, we also considered the alternative where we would note require MVP participants to select which population health measure to be calculated on. Under this alternative considered, we would require and calculate both population health measures and apply the higher score to the quality score. While we thought this approach would reduce some of the burden associated with requiring this selection at the time of MVP registration, we ultimately decided to proposed to allow MVP participants to select which population health measure to be calculated on. As discussed above, this selection process is being proposed in an effort to mitigate some of the previously stated concerns stakeholders had with these measures.

We solicited comments on our proposal as discussed above and refer readers to section IV.A.3.b.(5)(b)(i)(B) of this final rule for details on the scoring of population health measures.

We received public comments on the reporting requirements of the population health measures. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the use of cross-cutting, claims-based, population-level measures in the foundational layer of MVPs and recommended that CMS prioritize use of outcome measures with an evidence-based and tested risk adjustment methodology to ensure meaningful comparisons between clinicians and groups.

Response: We thank the commenter for their support and will take their recommendations into consideration.

After consideration of public comments, we are finalizing our policies as proposed.

(vi) Subgroup Reporting

(A) Subgroup Reporting Overview

As discussed in the CY 2022 PFS proposed rule (86 FR 39372 through 39373) and section IV.A.3.b.(3)(a) of this final rule, subgroup reporting would provide an avenue for clinician teams within a larger group to be able to submit MVPs that are clinically relevant to them and would be a first step in allowing more granular clinician information to be made available to patients. To generate more clinically relevant and granular information about clinician performance, we believe that subgroups should be assessed using subgroup level data to the extent that it is operationally feasible. We anticipate more granular data would be available for patients, clinicians, and other stakeholders through a three-pronged approach of mandatory subgroup reporting, broad use of standards-based APIs that leverage the FHIR standard and the creation and use of dQMs as discussed in section IV.A.1.c. of this final rule. We believe that subgroups should report data for the quality and improvement activities performance categories as a subgroup. The cost performance category does not require data submission; however, as described in section IV.A.3.b.(5)(b)(ii) of this final rule, we believe cost data should be assessed at the subgroup level as well.

(B) Subgroup Reporting Limits

As described in section IV.A.3.b.(2)(c)(i) of this final rule, we proposed voluntary reporting of MVPs as a gradual approach to prepare stakeholders through the transition plan for MIPS before eventually requiring reporting through an MVP or the APP. As a part of the transition, we discuss our intention to continue to offer reporting through traditional MIPS at the group level, as discussed in section IV.A.3.b.(2)(c)(i) of this final rule, to allow clinicians and groups additional time to continue reporting in traditional MIPS while we work expand the inventory of MVPs over the next few years.

While we intend to allow for this flexibility through the transition, we believe that groups should only form subgroups if they are reporting through an MVP or the APP and not through traditional MIPS. As such, we proposed at § 414.1318(c)(2) that individual eligible clinicians that elect to participate in MIPS as a subgroup will have their performance assessed at the subgroup level across all of the MIPS performance categories based on an MVP in accordance with § 414.1365, and on the APP in accordance with § 414.1367, as applicable. Subgroups that are MVP Participants must adhere to an election process described in § 414.1365(b). This includes MIPS eligible clinicians who are APM participants that choose to report on an MVP as a subgroup. We believe encouraging the subgroup reporting in MVPs is an important step to help MVP Participants transition to MVP reporting in the future.

As stated in the CY 2021 PFS final rule (85 FR 84846), we envisioned subgroup reporting would be implemented for multispecialty groups reporting MVPs. A subset of a TIN could form a subgroup if they are part of the same TIN, but could not form a subgroup if they are part of different TINs. For example, a group consisting of a single billing TIN that contains a number of participants in the same APM Entity, could form a subgroup to report an MVP or the APP. However, an APM Entity could not select eligible clinicians who are part of different TINs, based on their specialty, and report as a single subgroup. Due to operational and technical issues described above, we do not believe it is feasible to permit MIPS eligible clinicians in multiple TINs to form a subgroup to report MVPs or the APP. We solicited public comment on whether there are strategies we should consider to enable formation of

subgroups comprised of MIPS eligible clinicians from multiple billing TINS to report MVPs or the APP.

We did not receive public comments on this proposal, and are finalizing it as proposed.

(vii) MVP Reporting Requirements Summary

Table 47 summarizes the finalized MVP reporting requirements:

TABLE 47: MVP Reporting Requirements

Quality Performance Category*	Improvement Activities Performance Category*	Cost Performance Category
An MVP Participant selects 4 quality measures, 1 must be an outcome measure (or a high priority measure if an outcome is not available or applicable). *As applicable, an administrative claims measure, that is outcome-based, may be selected at the time of MVP registration to meet the outcome measure requirement.*	MVP Participant selects: Two medium weighted improvement activities **OR** One high weighted improvement activity. **OR** Participates in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at (82 FR 53652) and at § 414.1380(b)(3)(ii)	An MVP Participant, is scored on the cost measures that are included in the MVP that they select and report.
Foundational Layer (MVP agnostic) **Population Health Measures*** An MVP Participant selects 1 population health measure, at the time of MVP registration, to be scored on. The results are added to the quality performance category score. **Promoting Interoperability (PI) Performance Category** An MVP Participant is required to meet the Promoting Interoperability performance category requirements at § 414.1375(b).		

*Indicates MVP Participant may select measures and/or improvement activities.

(e) Third Party Intermediaries Reporting MVPs

We believe it is also important to ensure that third party intermediaries have the capabilities to support MVPs. We refer readers to section IV.A.3.h.(2)(b) of this final rule for proposals related to requiring third party intermediaries to support MVP and subgroup reporting.

(f) MVP Participant Registration

As described in our proposals in the CY 2022 PFS proposed rule (86 FR 39373 through 39376), we strive to limit administrative burden and offer as much flexibility as possible. With this principle in mind, we proposed steps that an MVP Participant must take to inform CMS of their participation and submission options, with certain exceptions for when the method of collection requires the information in advance of the performance period or we do not have any discretion (such as in virtual groups). We believe that a registration process will be easiest and the most efficient option for MVP Participants and CMS to accurately capture: (1) MVP selection; (2) population health measure selection; (3) administrative claim-based quality measure selection; and (4) subgroup participation.

(i) Registration Timeline

(A) General Timeline

We refer readers to the CY 2022 PFS proposed rule (86 FR 39373 through 39374) for discussion of the considerations that went into development of the registration timeline. We proposed at § 414.1365(b)(1), that to report an MVP, an MVP Participant must register for the MVP, and if applicable, as a subgroup during a period that begins on April 1 and ends on November 30 of the applicable CY performance period or a later date specified by CMS. Under this proposal, to report the CAHPS for MIPS survey associated with an MVP, a group, subgroup, or APM entity must complete their registration by June 30 of such performance period or a later date specified by CMS.

We believe the benefits of aligning MVP registration, MVP population health measure selection, and subgroup registration during the performance period, outweigh the limitations of performance period registration. Through the MVP town hall, we have heard stakeholders indicate that a registration period that is held during the performance period is limiting because it provides clinicians with less time to decide which MVP they would like to report or make changes to their selection. However, we believe that this would encourage clinicians to identify important MVP topics early on in the performance period, in which they can focus their quality improvement efforts on. Also, this would allow us sufficient time to identify clinician participation in subgroups and provide more granular and meaningful subgroup performance feedback to inform quality improvement and patient choice resulting in clinician assessment on more information relevant to their subgroups, such as targeted administrative claims quality measures and cost measures.

In addition, we believe that the proposed registration period would allow more flexibility in the creation of subgroups that represent clinical alignment and to add or remove clinicians from the subgroup, or

otherwise, make changes to their participation status in subgroups, before the end of the registration period.

We solicited public comments on our proposals as discussed above.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the registration timeline for MVPs, including the CAHPS for MIPS registration timeline. One commenter shared their belief that CMS proposed a large enrollment window that should give MVP participants the opportunity to determine the most appropriate MVP for their practice.

Response: We thank the commenters for their support.

Comment: A few commenters recommended that CMS open the MVP registration period on January 1 of the performance period instead in April to allow for more flexibility, especially for MVP participants who would like to register for more than one MVP and be able to assess which MVP may be the most appropriate.

Response: We considered beginning the registration period on January 1st of the performance period, but we believe that doing so would cause stakeholders undue burden considering in January stakeholders may be in the midst of data submission for the prior performance period. We understand that the data submission period may be a busy time for organizations and practices. Therefore, we proposed for the registration period to begin in April, once the data submission period is over. While the registration period will not open until April 1st, MVP participants may start to evaluate and determine which MVP they would like to report much earlier, once the final rule is published. We plan to continue to assess this registration timeline, along with all other MVP policies, and make any necessary changes, as needed through future rulemaking.

We note that, as described in the CY 2022 PFS proposed rule (86 FR 39374), MVP participants may select one MVP at the time of MVP registration, and may not make changes to their registration after the close of the registration period. Through the CY 2022 PFS proposed rule (86 FR 39374), we had solicited public comment on, if MVP participants would be interested in selecting multiple MVPs at the time of registration and the value in this allowance. We will consider any feedback received under consideration for future rulemaking.

Comment: A few commenters did not support the proposed registration timeline of April to November and recommended that CMS allow MVP participants to register at the time of data submission for the given year they report the MVP. One commenter believed that clinicians and subgroups will need additional flexibility as they shift from traditional MIPS reporting to MVP reporting.

Response: We disagree. We believe MVP participants should register prior to the data submission period in order to give our systems a sufficient amount of time to track the MVP for which participants would be eligible for the purposes of providing enhanced feedback. That is why we proposed the MVP registration window to encompass eight months of the performance period, to allow MVP participants sufficient time to identify and register for an MVP that is relevant to their practice. In addition, On January 7, 2021, we held the MVP Town Hall (85 FR 74729) (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1290/MIPS%20Value%20Pathways%20Town%20Hall%20Slide%20Deck.pdf*) in which stakeholders overwhelmingly voiced their preference for an earlier registration period. We believe participants who are ready to transition to MVP reporting will take the time to select a relevant MVP and understand the reporting requirements expected under MVPs before reporting.

Comment: One commenter requested CMS to consider the opportunity for MVP participants to change their registration status and switch from MVP reporting to traditional MIPS after the MVP registration deadline for the 2023 and 2024 MIPS performance periods. The commenter believes that such flexibility may be necessary in instances where a practice discovers that the MVP measures are not supported by its EHR vendor.

Response: We agree. As described in section IV.A.3.b.(5)(c)(i) of this final rule, MVP participants may register for an MVP then decide to report traditional MIPS instead; or may report the MVP and also choose to report measures and activities through traditional MIPS. We have finalized in section IV.A.3.f.(5) of this final rule, a scoring hierarchy that would account for MIPS eligible clinicians and groups reporting both traditional MIPS and an MVP. We believe this flexibility is important while MVP reporting is initially voluntary, to give stakeholders time to adjust their workflows and prepare for an eventual transition to mandatory MVP reporting when traditional MIPS sunsets. We refer readers to section IV.A.3.f.(5) of this final rule for additional discussion of the scoring hierarchy policies.

Comment: One commenter recommended that CMS offer clear guidance on the expectations for MVP participants, specifically requesting targeted communications to the clinicians that qualify for a given MVP and detailed information on how the registration process will work.

Response: We agree. As technically feasible, we intend on providing additional information and resources regarding the registration process after the final rule is published and prior to the beginning of the registration period to allow stakeholders sufficient time to prepare.

After consideration of public comments, we are finalizing our policies as proposed.

(B) Exception for MVP Participants That Want to Report the CAHPS for MIPS Survey Measure

Currently, as finalized in the CY 2017 Quality Payment Program final rule (81 FR 77072), groups that register to administer the CAHPS for MIPS survey measure prior to the registration deadline could cancel their registration or change their CAHPS for MIPS survey selection before the close of registration on June 30th. In the CY 2022 PFS proposed rule (86 FR 39374), we proposed at § 414.1365(b)(1) that in order for an MVP Participant to report the CAHPS for MIPS survey measure associated with an MVP, a group, subgroup, or APM entity will need to register by the same deadline as the CAHPS for MIPS registration, which is June 30 of the applicable 12-month performance period (81 FR 77072).

Under this proposal, clinicians participating in subgroups or groups reporting on the CAHPS for MIPS survey measure within an MVP would be unable to make any changes to their participation in the CAHPS for MIPS survey beginning July 1 of the applicable performance period. We note that clinicians in subgroups who do not intend to report the CAHPS for MIPS measure would still be able to make changes to their participation status in subgroups before the registration period ends on November 30th. We solicited public comments on these proposals.

We did not receive public comments on these proposals and are finalizing them as proposed.

(ii) MVP Participant Registration Requirements

We believe there are certain elements of information that are important to include at the time of MVP registration. Specifically, we proposed at § 414.1365(b)(2)(i) and (ii), that at the time of registration, an MVP Participant

must submit the following information, as applicable: (1) Each MVP Participant must select an MVP, 1 population health measure included in the MVP, and if applicable, any outcomes-based administrative claims measure on which the MVP Participant intends to be scored; (2) Each subgroup must submit a list of each TIN/NPI associated with the subgroup which identifies each individual eligible clinician NPI in the applicable subgroup for the group TIN and a plain language name for the subgroup. The following subsections discuss each of these elements.

(A) MVP Selection

To accurately capture who is participating in MVP reporting, it is important to establish the use of identifiers to identify what is intended to be reported, and by whom. We intend to publish a list of MVPs that have been finalized in rulemaking in the prior year, with identifiers available for a given performance period on the QPP Resource Library, prior to the start of the registration period, along with registration guidance. Therefore, we proposed that the MVP Participants must select a specific MVP, at the time of registration, as described at proposed § 414.1365(b)(2)(i). Under this proposal, MVP Participants would not be able to submit or make changes to the MVPs they select after the close of the registration period, and therefore, would not be allowed to report on an MVP they did not register for. We solicited comments on this proposal.

We did not receive public comments on our proposal, and are finalizing it as proposed. We have solicited public comment on whether MVP participants would be interested in the ability to select multiple MVPs at the time of registration. We thank commenters for the feedback received. We may consider this information to inform future rulemaking.

(B) Population Health Measure Selection

Similarly, we plan to publish a list of the population health measures that have been finalized for a given performance period on the QPP Resource Library. We plan for this to occur prior to the start of the registration period, along with posting registration guidance. As discussed in section IV.A.3.b.(4)(d)(v)(B) of this final rule, we proposed that MVP Participants who report an MVP, must submit one population health measure of their choice from the list of finalized population health measures within the foundational layer of the MVPs. The two proposed and previously finalized population health measures are both administrative claims based, and do not require physical data submission by clinicians. Therefore, in order for this selection to be tracked, we proposed at § 414.1365(b)(4)(i) that MVP Participants would be required to select this population health measure at the time of registration. Under this proposal, MVP Participants would not be able to submit or make changes to the selected population health measure after the close of the registration period. In addition, MVP Participants would not be able to successfully register to report an MVP if they do not select a population health measure, as the registration would be considered incomplete. We solicited comments on this proposal.

We did not receive public comments on this proposal, and are finalizing it as proposed.

(C) Outcomes-Based Administrative Claims Measure Selection

Within the MIPS quality performance category quality measure portfolio, there are some MIPS quality measures that are outcomes-based and utilize the administrative claims-based collection type. There are instances in which these measures are not identified as population health measures. For example, because the measure related to a specific procedure such as hip and knee arthroplasty we do not define this as population health since it does not necessarily impact the health of a population. While these measures may not be population health measures, they still reflect important clinical concepts and practices that are important to clinicians and lead to improved patient outcomes. Therefore, we believe it is important to not exclude these measures from MVPs. Depending on the MVP topic, these quality measures may be applicable and relevant to the topic being measured. In addition, administrative claims-based measures reduce reporting burden placed on clinicians because CMS calculates these measures utilizing administrative claims data. As such, we proposed at § 414.1365(b)(2)(i) that the MVP Participant must select any outcomes-based administrative claims measures on which the MVP Participant intends to be scored. As discussed in section IV.A.3.b.(4)(d)(ii) in this final rule, we proposed at § 414.1365(c)(1) that an MVP Participant must select and report 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure), included in the MVP. As applicable, an outcomes-based administrative claims measure, may be selected at the time of MVP registration to meet the outcome measure requirement (excluding the population health measures required under § 414.1365(c)(4)(ii)). We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the inclusion of administrative claims measures but expressed concern about the availability of these measures to anesthesiologists.

Response: We appreciate the commenter's support. We understand that the availability of administrative claims-based measures is currently limited. We will continue to assess the feasibility of developing additional administrative claims-based measures, and can evaluate the feasibility of developing such measures for specialties such as anesthesia.

After consideration of public comments, we are finalizing our policies as proposed.

(D) Subgroup Participants

As part of the registration process, to accurately capture all the clinicians participating in a subgroup, we proposed at § 414.1365(b)(2)(ii) that each subgroup must submit: (1) A list of each TIN/NPI associated with the subgroup, which should identify each individual eligible clinician NPI in the applicable subgroup for the group TIN; and (2) the subgroup's name in a plain language manner.

We believe that the subgroup names would help communicate the specialty, location, or other relevant information which would be displayed on the Compare Tools, helping stakeholders differentiate between subgroups. We plan to provide additional guidance for the template in subregulatory guidance for the nomenclature of subgroups and intend to provide a template and guidance to clinicians and practices on the use of plain language for naming subgroups. For example, a subgroup which consists of oncologists in the Mayberry location of one overall group TIN who chooses to report the Oncology MVP could be called Mayberry Oncology.

Upon successful registration submission, we would assign a unique subgroup identifier. This subgroup identifier would be separate from the individual NPI identifier, the group TIN identifier, and the MVP identifier, discussed in this final rule. We would maintain the same identifier year over year, as applicable. In scenarios where a subgroup's makeup changes, which will be identified at the time of registration, we will issue the subgroup

a new identifier. We believe this identifier is also needed to allow third-party intermediaries to capture and submit performance data for clinicians participating in subgroup reporting as discussed in section IV.A.3.b.(4)(f)(ii)(D) of this final rule.

We solicited public comments on these proposals. Additionally, we solicited feedback on if there are any additional operational considerations or recommendations for the implementation of this policy for future consideration.

The following is a summary of the comments we received and our responses.

Comment: One commenter requested that CMS offer clear and detailed guidance on subgroup registration and reporting requirements. Another commenter expressed concerns about identifying clinicians in the appropriate subgroup and recommended a process to rectify unintentional mistakes in the subgroup registration process.

Response: We intend on offering clear guidance regarding the registration process, including the process of subgroup registration. As described above in section IV.A.3.b.(4)(d)(v)(A)(bb) of this final rule, and at § 414.1365(c)(4)(i)(A) that for the CY 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years, an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category. Through the registration process, subgroups may make changes to their elections and rectify any unintentional mistakes before the close of the registration period. We thank the commenter for their recommendation that we should establish a process to rectify unintentional mistakes, that perhaps are identified after the registration period closes. We will take it into consideration as we plan for the establishment of the registration process.

After consideration of public comments, we are finalizing our policies as proposed.

(iii) Summary of the Overall Registration Process

Table 48 presents a comprehensive perspective of the overall finalized registration timeline:

BILLING CODE 4120–01–P

TABLE 48: Registration Process for MVP and Subgroup Elections Beginning with the CY 2023 MIPS Performance Period

April 1st of the applicable performance period, or a later date specified by CMS	MVP Participants may begin to register for MVP reporting.
June 30th of the applicable performance period, or a later date specified by CMS	Groups, subgroups, APM entities, who intend to report the CAHPS for MIPS Survey Measure through an MVP, must submit: • MVP selection and population health measure selection • As applicable, select an outcomes-based administrative claims measure that is associated with an MVP. • As applicable, each subgroup must submit a list of each TIN/NPI associated with the subgroup. • As applicable, each subgroup must submit a plain language name for the subgroup. • Separately register through the MIPS registration system by June 30th to participate in the CAHPS for MIPS Survey.
November 30th of the applicable performance period, or a later date specified by CMS	The registration period closes. New registrations or changes to registration will not be accepted after November 30th. MVP Participants cannot make any changes to registration of: • MVP selection • Population health measure selection • As applicable, the selection of an outcomes-based administrative claims measure associated with the MVP • As applicable, the list of each TIN/NPI associated with the subgroup. • As applicable, subgroup participation (including the subgroup's plan language name).

Table 49 presents a crosswalk of the various clinician types, the information expected at the time of registration, and a reminder of the finalized MVP reporting requirements.

TABLE 49: How MVP Reporting Will Work

Who Reports	Information Required at the time of MVP Registration	MVP Reporting Requirements
Years 1-3 (2023, 2024, and 2025)		
Individual Clinicians	MVP selection, Population Health Measure selection, and (as applicable) outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1.
Groups	MVP selection, Population Health Measure selection, and (as applicable) administrative-claims based measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1. Members of the group will be required to report on the same measures and activities within an MVP.
Subgroups	MVP selection, Population Health Measure selection, (as applicable) the outcomes-based administrative claims measure selection, and the subgroup participant information described at § 414.1365(b)(2). *Subgroups will also receive a subgroup identifier from CMS at the time of registration.*	Requirements in table 1. Members of the subgroup will be required to report on the same measures and activities within an MVP.
APM Entities	MVP selection, Population Health Measure selection, and as applicable outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1.
Year 4 and Future Years (2026 and beyond)		
Individual Clinicians	MVP selection, Population Health Measure selection, and (as applicable) outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1.
Single Specialty Groups[+]	MVP selection, Population Health Measure selection, and (as applicable) outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1. Members of the group will be required to report on the same measures and activities within an MVP.
Subgroups[+]	MVP selection, Population Health Measure selection, (as applicable) outcomes-based administrative claims measure selection, and the subgroup participant information described at § 414.1365(b)(2). *Subgroups will also receive a subgroup identifier from CMS at the time of registration.*	Requirements in table 1. Members of the subgroup will be required to report on the same measures and activities within an MVP.
APM Entities	MVP selection, Population Health Measure selection, and as applicable outcomes-based administrative claims measure selection, as proposed at § 414.1365(b)(2).	Requirements in table 1.

[+] *Multispecialty Groups will be required to form subgroups in order to report an MVP.* We refer readers to § 414.1305 for the definitions of MVP Participant and subgroup.

BILLING CODE 4120–01–C

(5) Scoring MVP Performance

(a) Overview of MVP Scoring

In the CY 2022 PFS proposed rule (86 FR 39377 and 39378), we described previous feedback we received on the CY 2020 PFS proposed rule and during the MVP Town Hall on January 7, 2021 related to how we should address scoring policies as we transition to MVPs (86 FR 39377). In general, we proposed policies to score MVPs similar to policies established for traditional MIPS, including, without limitation, the methodology to score MVP Participants based on their performance on measures and activities in the four performance categories; the use of performance standards for each of the performance categories; policies for calculation of achievement and improvement scores; and calculation of the final score. We stated that we aimed to ensure our methodology to convert the scores of measures and activities into a final score balanced the statutory requirements and goals of the program with ease of use, stability, and meaningfulness to MIPS eligible clinicians. We also stated that our proposed scoring methodology would allow for accountability and alignment across the performance categories and minimize burden on MIPS eligible clinicians. We also noted that we believed these proposed scoring policies would ensure the meaningful evaluation of performance of MVP Participants based on measures and activities in the MVP, and that several of the proposed MVP specific scoring policies would support our identified goal to simplify the program by offering MVPs that link clinically relevant measures and activities, which are meaningful to clinicians, patients, and the program (86 FR 39378).

We proposed at § 414.1365(d)(1) that an MVP Participant that is not an APM Entity is scored on measures and activities included in the MVP in

accordance with paragraphs § 414.1365(d)(1) through § 414.1365(d)(3) (86 FR 39378). We also proposed at § 414.1365(d)(1) that an MVP Participant that is an APM Entity is scored on measures and activities included in the MVP in accordance with § 414.1317(b) (86 FR 39378). Additionally, we proposed at § 414.1365(d)(2) that unless otherwise indicated in § 414.1365(d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP (86 FR 39378). Lastly, we proposed at § 414.1365(d)(3) that an MVP Participant is scored under MIPS in four performance categories (86 FR 39378).

We solicited public comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed the belief that, given the complexity of the program and multiple participation options, alignment of scoring policies with traditional MIPS will be essential to reducing burden on clinicians, especially small practices, as they familiarize themselves with MVPs and prepare for their eventual mandatory participation.

Response: We thank the commenters for their support.

Comment: A few commenters did not support our proposal to align MVP scoring with traditional MIPS. One commenter recommended a wholesale departure from traditional MIPS that offers a true onramp for clinicians to Alternative Payment Models (APMs). Another commenter recommended that CMS should develop a scoring methodology for MVPs that is more team-based, holding teams accountable for patient event rates, Patient Reported Outcomes Measures, and meeting patients' goals and expectations. The commenter supported attestation for quality measures, rather than measuring performance against a benchmark.

Response: We believe it is important, whenever possible, to build on the scoring that is familiar to clinicians to reduce confusion and complexity as we transition into MVPs. We are interested in supporting clinicians in the transition to APMs and believe that MVPs are an important step in gaining experience with submitting and scoring a cohesive set of measures and activities. We evaluated all traditional MIPS scoring policies and maintained those that are required under section 1848(q)(2) of the Act such as requirements to measure achievement and improvement of the quality and cost of care, and those policies that supported the goals of transitioning to MVPs. We believe that it is appropriate to adopt policies that are different from traditional MIPS policies in cases where different policies support the goals of our transition to MVPs. We have signaled the importance of incorporating the patient voice in MVPs; specifically, in the CY 2021 PFS final rule (85 FR 84850), we finalized MVP development and selection criteria that considers the inclusion of (to the extent feasible), patient-reported outcome measures, patient experience measures, and/or patient satisfaction measures. Furthermore, as measures for patient voice and Patient Reported Outcome Measures are added to MVPs we believe that no special scoring policies are needed. Our inventory of cost measures, which continues to expand, includes episode-based measures that can be used in MVPs when linked with meaningful quality outcome measures and improvement activities. We are required under section 1848(q)(3)(B) of the Act to use performance standards for measures and activities, and we have identified benchmarks to measure achievement of quality and cost measures, rather than relying on attestation. Additionally, when measures are compared to a benchmark, we can provide performance information to patients seeking care, as well as to clinicians to improve care. We are not aware of any scoring policies necessary for certain types of clinicians, including clinicians who are part of team-based risk bearing entities. We believe our MVP scoring policies hold clinicians accountable by scoring them against performance standards using relevant measures for the four performance categories. We look forward to hearing stakeholder feedback on scoring policies to determine if different approaches are needed in the future.

Comment: A few commenters recommended incentives for clinicians to report MVPs, including scoring policies that allow for MVPs to be reported during an informational period without scoring or scoring that will 'hold harmless' or ensure that no negative payment adjustments will be applied for any clinician reporting an MVP.

Response: The MIPS statute requires us to measure performance for purposes of determining a payment adjustment, using data from four performance categories, in a budget neutral manner. We believe that MVPs offer incentives in terms of requiring fewer measures and activities tied to a specialty or medical condition that can offer clinicians a more cohesive experience. In the CY 2022 PFS proposed rule, we discussed the delay in the implementation timeline to allow for a gradual process that provides MVP participants and third-party intermediaries with time to adapt to the changes in policy, requirements, and programming updates that would need to occur in technological systems (86 FR 39355 through 39356). We believe the delayed timeline should allow clinicians to change clinical workflows and be able to submit and be assessed on MVPs. We do not have discretion to have a ''hold harmless'' approach for clinicians reporting an MVP, and furthermore do not believe this approach would be appropriate. We do not intend for the MVP reporting option to be a mechanism to avoid a negative payment adjustment; but instead as an approach to improve value, reduce burden, inform patient choice in selecting clinicians, and reduce barriers to facilitate the movement into APMs. We also do not want to introduce bonuses for reporting MVPs or other incentives that may mask performance and artificially inflate final scores. However, we are evaluating additional incentives that align with our scoring policies and the goals of MVPs. We anticipate addressing any incentives through future notice and comment rulemaking.

Comment: Several commenters indicated that scoring policies should break down the silos between the four performance categories and that a single measure or activity should be scored in multiple performance categories. One commenter recommended that if a measure submitted by a QCDR encompasses actions for more than one performance category, scoring policies should provide automatic credit in the quality, Promoting Interoperability, and improvement activities categories. Commenters expressed the belief that this would allow better cohesion within the program, rather than having four separate categories. Commenters also believed that this would serve as an incentive to report an MVP and result in a reduction of reporting burden.

Response: We note that the MIPS statute requires the use of four performance categories (which we refer to as the quality, cost, improvement activities, and Promoting Interoperability performance categories) in determining the composite performance score (which we refer to as the final score). We refer readers to our discussion of the intent of MVPs (85 FR 84844) to make MIPS more meaningful by allowing a more cohesive participation experience by connecting

activities and measures from the four MIPS performance categories relevant to a patient population, standardizing performance measurement of a specialty or a medical condition, and reducing the siloed nature of the traditional MIPS participation experience. We also refer commenters to the CY 2021 PFS final rule, where we finalized MVP development criteria, including a criterion that assesses the extent to which the measures and activities in the MVP link to one another, as well as another criterion that assesses the extent to which improvement activities complement and/or supplement the quality action rather than duplicating it (85 FR 84849 through 84853). We believe that it is important that MVPs include measures and activities from the four performance categories that are complementary, and note that we do currently have improvement activities and measures that include related concepts. However, in addition to being required by statute, we believe each of the four performance categories offers value, and therefore, we do not at this time believe automatic credit for a performance category or assigning points to multiple performance categories for the submission of a single measure or activity would be appropriate. We invite further feedback from stakeholders on how offering multi-category credit will increase the information available to patients and improve patient outcomes. Our goals include providing comparative data to patients and caregivers who are evaluating clinician performance and making choices about their care (86 FR 39353) and we believe this is best achieved through the use of the four performance categories.

We did not receive any comments on proposals to score an MVP Participant that is an APM Entity.

After consideration of public comments, we are finalizing these policies as proposed.

(b) Performance Category Scores

(i) Scoring the Quality Performance Category in MVPs

(A) Scoring Based on Achievement

In the CY 2022 PFS proposed rule (86 FR 39378 through 86 FR 39379), we proposed to maintain scoring policies finalized in traditional MIPS for MVPs to leverage meaningful scoring policies and retain stable scoring for MVP Participants. We refer readers to § 414.1380(b)(1)(i) for details on our policies for scoring performance on quality measures for traditional MIPS (81 FR 77276 through 77307, 82 FR 53694 through 53701, 83 FR 59841 through 59856, 84 FR 63011 through 63019, and 85 FR 84904 through 84906). Our proposed policies for scoring quality in traditional MIPS are described in further detail in the CY 2022 PFS proposed rule (86 FR 39439 through 39437). We refer readers to the CY 2022 PFS proposed rule (86 FR 39432 through 39434) for our proposals to remove the 3-point floor for Class 1 and Class 2 measures for the CY 2022 performance year/2024 MIPS payment year for traditional MIPS, and to provide a score from 5 to 10 points in the first two performance periods a measure is used in MIPS for Class 4 measures (new measures). We proposed to align with these policies as well to maintain consistency between MVPs and traditional MIPS (86 FR 39378).

We proposed at § 414.1365(d)(3)(i) that, except as provided in paragraphs (d)(3)(i)(A)(*1*) and (B), the quality performance category score for MVP Participants is calculated in accordance with § 414.1380(b)(1) based on measures included in the MVP.

We did not receive any comments on our proposal, and we are finalizing it as proposed.

(B) Population Health Measures

In the CY 2022 PFS proposed rule, we proposed that we would score the selected measure according to § 414.1365(d)(3)(i) (86 FR 39378). Since we proposed to adopt our scoring policies used in traditional MIPS for MVPs, we also proposed that we would exclude the selected measure from the total achievement points and the total available points if the measure does not have a benchmark or meet the case minimum requirement in accordance with § 414.1380(b)(1)(i)(A)(2)(*ii*) (86 FR 39378). We proposed at § 414.1365(d)(3)(i)(A) that, except as provided in paragraph (d)(3)(i)(A)(*1*), each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP Participant's total measure achievement points and total available measure achievement points (86 FR 39378).

We also proposed at § 414.1365(d)(3)(i)(A)(*1*) that subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available (86 FR 39378). We stated that we believed this is appropriate because we believe it is important for subgroups to be scored on population health measures, and we believe that the groups score will be reflective of the subgroup's performance on population health measures. We are concerned about the ability of subgroups to meet the case minimum for an administrative claims measure and are interested in including population health measures in the subgroup's score for the MVP. Therefore, we also proposed at § 414.1365(d)(3)(i)(A)(*1*) that, if the subgroup's affiliated group score is not available, each population health measure is excluded from the subgroup's total measure achievement points and total available measure achievement points (86 FR 39378).

In the CY 2022 PFS proposed rule, we also noted our concern about scoring individual clinicians on population health measures (86 FR 39378 through 39379). Because population health measures have measured the quality of a population or cohort's overall health and well-being, we historically have required a minimum reliability standard of 0.4 which for most measures equates to a high case minimum in order to be scored. We believe it will be common that a solo practitioner, or an individual clinician that is part of a group but chooses to be scored as an individual clinician will not be scored on population health measures. In these scenarios, we proposed that each population health measure would be excluded from the subgroup's total measure achievement points and total available measure achievement points in accordance with § 414.1380(b)(1)(i)(A)(2)(*ii*). Historically, we have not combined performance for the individual clinician with performance from the group, and therefore, have concerns with using the group score for individual clinicians who cannot be scored for population health measures. We understand there may be concerns from stakeholders on scoring individual clinicians on broad population health measures. However, we solicited comment on approaches to scoring individual clinicians on population health measures given the importance of these measures.

We solicited comments on our proposals for scoring population health measures in MVPs. The following is a summary of the comments we received and our response:

Comment: One commenter did not support the use of population health measures for clinicians and stated they should be used as measures for APMs or facility-level quality measurement. The commenter recommended that if population health measures are used that they should not be scored and that the resulting data should be used only to provide clinicians with confidential feedback.

Response: We believe that we should score population health measures, when there is a sufficient case volume and a benchmark, for all MVP Participants, which includes MIPS eligible clinicians, groups, and APM entities (see section IV.A.3.b.(2)(c)(i) of this final rule). In the CY 2020 PFS final rule (84 FR 62947 through 62948), we established the implementation of a foundational population health core measure set that can be broadly applied to communities or populations and can result in MVPs that provide more uniformity in how the program measures population health, reduces clinician burden, focuses on important public health priorities, and increases the value of MIPS performance data. We believe that it is important to score population health measures as part of the foundational layer of the MVP when clinicians submitting an MVP can be scored on the selected population health measure.

Comment: A few commenters recommended that CMS not score individual clinicians on population health measures because individual clinicians may not have the infrastructure and resources required to positively influence population health measure outcomes. One commenter recommended that scoring for population health measures should not be implemented in a way that would penalize MVP Participants' quality performance category scores if the case minimum was not met.

Response: As discussed in section IV.A.3.b.(4)(b)(i)(C)(aa)(AA) of this final rule, we are finalizing our proposal to define a population health measure at § 414.1305 as a quality measure that indicates the quality of a population or cohort's overall health and well-being, such as access to care, clinical outcome, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services. MVPs include a cohesive set of measures and activities, including a foundational layer of population health measures. We believe that clinicians will select an MVP with an understanding that performance on all of the measures and activities will be used to determine a final score. We also believe that MVP Participants that meet the case minimum for the selected population health measure will have the infrastructure and resources to influence the population health measure.

We believe it is appropriate to score all MVP Participants, including individual clinicians, on population health measures using scoring policies for MVPs that align with our finalized policies for traditional MIPS and note that population health measures will be scored only if there is a benchmark or the case minimum is met. We have proposed that we exclude the selected measure from the total achievement points and total available points if the measure does not meet the case minimum or have a benchmark. We believe this approach to scoring which focuses on performance of measures that meet the standards for case minimum does not penalize MVP Participants, including individual clinicians, who have insufficient case volume to allow measurement.

After consideration of public comments, we are finalizing our policies as proposed.

We did not receive public comments on our proposal that subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available. We are finalizing this policy as proposed.

(C) Outcomes-based Administrative Claims Measures

In the CY 2022 PFS proposed rule (86 FR 39479), we proposed at § 414.1365(d)(3)(i)(B) that MVP Participants receive zero measure achievement points for each selected outcomes-based administrative claims measure that does not have a benchmark or meet the case minimum requirement (86 FR 39379). This aligns with our proposal to score Class 2 measures in traditional MIPS (86 FR 39432). If the clinician selects the outcomes-based administrative claims measure, which can be calculated and submits more than three measures including an additional outcome or high priority measure, scores from the highest four measures including one outcome or high priority measure would be used to determine the quality performance category score. Please see the CY 2022 PFS proposed rule (86 FR 39379 through 39380) for an example of scoring for outcomes-based administrative claims measures under this proposal. We solicited public comments on this proposal.

We did not receive any public comments on this proposal and are finalizing it as proposed.

(D) Scoring for MVP Participants That Do Not Meet the Quality Performance Category Requirements

In the CY 2022 PFS proposed rule (86 FR 39379), we described our rationale for why we do not believe we need a validation process to determine the availability and applicability of measures for MVP Participants because MVPs will focus on a condition or specialty, and we believe MVPs will be selected and reported because of the MVP applicability to their practice and patients. We refer readers to the CY 2022 PFS proposed rule (86 FR 393870 through 39380) for an example of scoring the quality performance category for an MVP.

(ii) Scoring the Cost Performance Category in MVPs

In the CY 2022 PFS proposed rule (86 FR 39380), we proposed to use the methodology established for traditional MIPS to score the cost performance category for MVPs, including the proposed revisions to that methodology described in the CY 2022 PFS proposed rule (86 FR 39437). We refer readers to § 414.1380(b)(2)(i) through (v) for our previously finalized policies to score the cost performance category for traditional MIPS based on achievement and improvement when the case minimum specified under § 414.1350(c) is met or exceeded and CMS has determined a benchmark. We proposed at § 414.1365(d)(3)(ii) that the cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report. We also noted that we intend to monitor for reporting of MVPs to ensure MVPs reflect the clinical nature of the MVP Participants that report (86 FR 39380). We solicited public comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter voiced concern that multispecialty groups may take advantage of the option to report for the entire group at the subgroup level and select an MVP for which the group does not meet the case minimum for the cost measures to avoid being scored on the cost performance category.

Response: We understand the potential gaming concern voiced by the commenter and will monitor how multispecialty groups report and are scored on MVPs. Although an entire multispecialty group cannot report as a single subgroup, we acknowledge that, initially, multispecialty groups will have the option to either participate in traditional MIPS as a group, to report a specific MVP as a group, or to form subgroups to report MVPs that are more meaningful to their scope of practice. As finalized in section IV.A.3.b.(2)(c)(ii) of this final rule, multispecialty groups will have to form subgroups in order to report an MVP beginning with the CY

2026 performance period/2028 MIPS payment year. We plan to monitor how often the cost performance category is reweighted for MVP participants in order to assess whether it may be possible that large multispecialty groups are reporting MVPs as subgroups in order to avoid being scored on the cost performance category.

After consideration of public comments, we are finalizing at § 414.1365(d)(3)(ii) that the cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report.

(iii) Scoring the Improvement Activities Performance Category in MVPs

Under traditional MIPS, we score improvement activities by assigning each improvement activity a weight, either high-weight or medium-weight, and by assigning 10 points for each medium-weighted improvement activity and 20 points for each high-weighted improvement activity. We refer readers to § 414.1380(b)(3) for details on scoring the improvement activities performance category for traditional MIPS. Additionally, we refer the reader to §§ 414.1317(b)(3) and 414.1380(b)(3)(i), which provide that a MIPS eligible clinician participating in an APM receives a score of at least 50 percent in the improvement activities performance category. As a result, an APM entity that reports an MVP will receive an improvement activities performance category score of at least 50 percent.

In the CY 2022 PFS proposed rule (86 FR 39380), we proposed at § 414.1365(d)(3)(iii) that the improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. We also proposed that MVP Participants would receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Therefore, to receive a score of 40 points, or full credit, an MVP Participant would be required to submit one high-weighted improvement activity or two medium-weighted improvement activities included in the MVP.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposal for scoring improvement activities in MVPs.

Response: We thank the commenter for their support.

Comment: A few commenters did not support the proposal to assign 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity. One commenter believed that different scoring policies for traditional MIPS and MVPs will add complexity to the program.

Response: We acknowledge the commenter's concern about complexity in the program and note that we are still scoring high-weighted and medium-weighted activities and the approach is not unfamiliar to clinicians. We believe the reduced requirements for the improvement activities performance category will incentivize clinicians to report MVPs by reducing burden, since fewer improvement activities are required to receive a full score for the category.

Comment: One commenter recommended that MVP developers identify improvement activities associated with using clinical data relevant to the MVP and recommended a scoring approach for improvement activities, including a graduated scale based on the MVP's potential impact on PROMs or care complications.

Response: We believe that a standardized approach to scoring is needed to provide consistency and to reduce complexity. We also have concerns and believe that a graduated scoring approach would introduce additional and unnecessary complexity to attestation, which would be confusing for clinicians accustomed to being scored by attestation on medium-weighted and high-weighted improvement activities. We believe that it is important, whenever possible, to build on the scoring approach is familiar to clinicians to reduce confusion and complexity as we transition into MVPs. We evaluated all traditional MIPS scoring policies and maintained those that are required by statute. Additionally, we believe that it is appropriate to adopt policies that are different from MIPS policies in cases where different policies support the goals of our transition to MVPs.

Comment: A few commenters recommended that CMS should award automatic credit for the improvement activities performance category, and potentially other performance categories, to reduce burden, simplify requirements and scoring for MVPs, and potentially serve as an incentive to submit MVPs.

Response: We do not believe it would be appropriate to provide automatic credit for any of the performance categories. Instead, we have finalized our proposal to provide full credit for MVP participants who report one high-weighted or two medium-weighted improvement activities or who participate in a certified or recognized patient-centered medical home or comparable specialty practice (please see section IV.A.3.b.(4)(d)(iv) of this final rule for more details). We are concerned about whether providing automatic credit would further our goals of improving patient outcomes, as this approach limits the data and information available and would reduce the impact of a performance category, all four of which we believe provide value. MVPs are complementary sets of measures and activities that are meaningful to clinicians. We have previously stated our belief in the importance of the clinician experience with MVPs, including through an aligned measurement of quality and cost, continuous improvement/innovation within the practice, and efficient management and transfer of information that will help remove barriers to APM participation (85 FR 84844 and 84845).

We believe each of the four performance categories offers value, and therefore, we do not at this time believe automatic credit for any category would be appropriate. We are concerned and would invite further feedback from stakeholders on how offering multi-category credit will increase the information available to patients and improve patient outcomes. Our goals include providing comparative data to patients and caregivers in evaluating clinician performance and making choices about their care (86 FR 39352 and 39353) and we believe this is best achieved through the use of the four performance categories. The improvement activities performance category is an important component of the MVP. We believe we should use the improvement activities performance category scoring established in traditional MIPS and continue scoring high-weighted and medium weighted improvement activities that support the linked activities and measures specified within the MVP.

We believe that incentives already exist in MVPs, including reduced reporting requirements, as described in section IV.A.3.b.(4)(d) of this final rule, which allow MVP Participants to report on a smaller, more cohesive subset of

measures and activities that are relevant to a given clinical topic, condition, or episode of care, as well as enhanced performance feedback, as described in section IV.A.3.b.(5)(d) of this final rule.

Comment: One commenter recommended we provide improvement activity credit for clinicians involved in testing QCDR measures that are undergoing testing for inclusion in MVPs.

Response: We appreciate suggestions for improvement activities that might be meaningful for MVP and recommend that the improvement activity be nominated during the Annual Call for Activities.

After consideration of public comments, we are finalizing this proposal as proposed.

(iv) Scoring the Promoting Interoperability Performance Category in MVPs

In the CY 2022 PFS proposed rule (86 FR 39380 through 39381), we proposed to use the scoring methodology established for the Promoting Interoperability performance category in traditional MIPS, as proposed to be revised in of the CY 2022 PFS proposed rule (86 FR 39409 through 39428), for MVP Participants, with the exception that subgroups would be scored based on their affiliated group's Promoting Interoperability performance category data. The Promoting Interoperability performance category is a foundational layer of MVPs that uses limited, connected complementary sets of measures that are meaningful to clinicians. The scoring methodology for the Promoting Interoperability performance category recognizes the importance of promoting adoption and use of CEHRT to support quality improvement, interoperability, and patient engagement and provides an important approach to scoring that we proposed to use for MVPs. Therefore, we proposed at § 414.1365(d)(3)(iv) to calculate the Promoting Interoperability performance category score for an MVP Participant using the methodology at § 414.1380(b)(4), except as provided at § 414.1365(d)(3)(iv)(A).

We solicited public comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed scoring for the Promoting Interoperability performance category and efforts to keep approaches as consistent as possible across MVPs and traditional MIPS.

Response: We thank the commenter for their support.

Comment: A few commenters recommended different scoring flexibilities for the Promoting Interoperability performance category for MVP Participants. Examples recommended include assigning all available points to any clinician who achieves 50 points or more, providing credit to clinicians who demonstrate meaningful use of EHRs in more innovative ways specific to the clinician's group composition, assigning points for infrastructure and experience with health information technology, allowing clinicians to attest to using 2015 Edition CEHRT, and providing full credit for the Promoting Interoperability performance category for PCMH recognition.

Response: As we established in the CY 2021 PFS final rule (85 FR 84849 through 84853), we believe all MVPs should include the entire set of Promoting Interoperability measures, as part of the foundational layer of MVPs. We do not believe that MVPs should introduce complexity through special scoring rules such as assigning full points to any MVP Participant who achieves 50 or more points in the Promoting Interoperability performance category, and that scoring should be based on the methodology established for traditional MIPS. As stated previously (86 FR 39381) we believe that the current scoring methodology recognizes the importance of promoting adoption and use of CEHRT to support quality improvement, interoperability, health information exchange and patient engagement. In regard to reducing the requirements of the Promoting Interoperability performance category to an attestation to the use of 2015 Edition CEHRT or achieving PCMH recognition, we refer readers to our earlier discussion of establishing interoperability as a foundational element of MVPs and the importance of using a uniform set of measures that would apply to all clinicians, regardless of MVP, for whom the Promoting Interoperability performance category is required (84 FR 62948). We believe that merely requiring an attestation regarding the use of 2015 Edition CEHRT would not align with our desire to recognize differences in performance on Promoting Interoperability performance category measures.

After consideration of public comments, we are finalizing at § 414.1365(d)(3)(iv) to calculate the Promoting Interoperability performance category score for an MVP Participant using the methodology at § 414.1380(b)(4), except as provided at § 414.1365(d)(3)(iv)(A).

We proposed at § 414.1365(c)(4)(i)(A) to require subgroups to submit their affiliated group's data for the Promoting Interoperability performance category. We proposed at § 414.1365(d)(3)(iv)(A) that if a subgroup does not submit its affiliated group's data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

We solicited public comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported our proposed scoring for Promoting Interoperability for MVP participants. One commenter recommended that CMS carry over numerous other scoring policies that keep approaches as consistent as possible across MVPs and traditional MIPS as we introduce subgroups.

Response: We thank the commenters for their support. We will continue to review opportunities to align scoring between MVPs and MIPS.

Comment: A few commenters did not support our proposal to require subgroups to submit their affiliated group's Promoting Interoperability data. One commenter indicated that groups may use multiple EHRs, and that if subgroups using a single EHR could report their own Promoting Interoperability performance category data, it would increase flexibilities in subgroup requirements. One commenter voiced concerns that non-patient facing clinicians would need to submit their affiliated group's Promoting Interoperability performance data, rather than have the Promoting Interoperability performance category reweighted. The commenter stated their preference to have the Promoting Interoperability performance category reweighted for non-patient-facing clinicians.

Response: As described in the CY 2022 PFS proposed rule (86 FR 39371), for MVPs, we proposed to require that each subgroup submit their affiliated group's data for the Promoting Interoperability performance category and receive a score based on that data because we heard from stakeholders that some clinicians would need additional time to resolve operational challenges to submit subgroup level data for the Promoting Interoperability performance category. We believe that, until MIPS eligible clinicians are able to resolve these operational challenges, the benefit of requiring subgroups to submit their affiliated group's data outweighs the benefit of any flexibility that can be

afforded from subgroups submitting their own Promoting Interoperability data, such as commenter's concern that groups may use multiple EHRs and subgroups using a single EHR could report their own Promoting Interoperability performance category data. In section IV.A.3.b.(5)(c)(i)(B) of this final rule, we finalized that a subgroup may receive reweighting independent of the affiliated group in certain circumstances, but non-patient facing status is not one of those circumstances. In section IV.A.3.b.(3)(c)(ii) of this final rule, we finalized that we determine special status (such as non-patient facing status) for a subgroup at the group level, not at the subgroup level.

After consideration of public comments, we are finalizing at § 414.1365(c)(4)(i)(A) to require subgroups to submit their affiliated group's data for the Promoting Interoperability performance category and are also finalizing at § 414.1365(d)(3)(iv)(A) that if a subgroup does not submit its affiliated group's data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

(v) Facility-Based Scoring

We believe facility-based MIPS eligible clinicians and groups should have the same opportunities to submit MVPs as other MIPS eligible clinicians and groups. In the CY 2022 PFS proposed rule (86 FR 39381), we proposed at § 414.1365(e)(3) that if an MVP Participant that is not an APM Entity is eligible for facility-based scoring, a facility-based score will also be calculated in accordance with § 414.1380(e). In this case, we would use the highest final score according to our policies at § 414.1380(e)(6)(vi).

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the policy to allow facility-based scoring for MVP Participants, because the policy aligns with traditional MIPS policies and accommodates the complex nature of physicians' contracting and business agreements.

Response: We appreciate the commenters' support.

After consideration of public comments, we are finalizing the policy as proposed.

(c) Calculating the Final Score in MVPs

(i) Final Score Calculation

In the CY 2022 PFS proposed rule (86 FR 39381), we proposed at § 414.1365(e) that the final score is calculated for an MVP Participant using the same scoring methodology at § 414.1380(c) unless otherwise indicated in § 414.1365(e).

We solicited public comment on the proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported our approach to calculate the final score for an MVP Participant who is not an APM entity using the same methodology established for traditional MIPS.

Response: We thank the commenter for their support.

Comment: One commenter voiced concerns that scoring for subgroups might be confusing for some clinicians, in terms of understanding when the subgroup performance is scored versus when the affiliated group performance is scored for population health and Promoting Interoperability measures.

Response: We have tried to use the same scoring methodology established in traditional MIPS where appropriate, with few differences. To ensure that subgroups can be scored on the foundational layers of the MVP, data from the affiliated group will be used for population health and Promoting Interoperability measures. We believe data from the group will be reflective of subgroup performance for the foundational layers of MVPs. The subgroup will be scored on the subgroup data for the cost performance category, improvement activities performance category and the quality performance category (except for the population health measure which will be assessed on the affiliated group data since that is part of the foundational layer). We will continue to provide future communication on how subgroups can participate in MVPs through routine communication channels, including but not limited to issuing emails and notices on the QPP website, *qpp.cms.gov.*

After consideration of public comments, we are finalizing the proposal as proposed.

(A) General Performance Category Weights

In the CY 2022 PFS proposed rule (86 FR 39381), we proposed at § 414.1365(e)(1) to use the performance category weights established for traditional MIPS and described at § 414.1380(c)(1) to calculate the final score for an MVP Participant that is not an APM Entity. We also proposed at § 414.1365(e)(1) to use the performance category weights established for APM Entities and described at § 414.1317(b) to calculate the final score for an MVP Participant that is an APM Entity.

We solicited public comments on these proposals and did not receive any.

We are finalizing as proposed at § 414.1365(e)(1) to use the performance category weights established for traditional MIPS and described at § 414.1380(c)(1) to calculate the final score for an MVP Participant that is not an APM Entity. We are also finalizing as proposed at § 414.1365(e)(1) to use the performance category weights established for APM Entities and described at § 414.1317(b) to calculate the final score for an MVP Participant that is an APM Entity.

(B) Flexibility for Weighting Performance Categories

(aa) Reweighting Performance Categories for MVPs

For MVP Participants, we proposed reweighting policies that generally align with our current policies for traditional MIPS with a few minor modifications (86 FR 39381). We proposed at § 414.1365(e)(2)(i) that for an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in the circumstances described at §§ 414.1380(c)(2)(i)(A)(*2*) through (*9*), and 414.1380(c)(2)(i)(C). As discussed in the CY 2022 PFS proposed rule, for MVP Participants, we do not believe there will be cases where no measures in the quality performance category are available and applicable and can be scored (86 FR 39381). Therefore, we stated that we do not believe the traditional MIPS policy for reweighting the quality performance category when no quality measures can be scored as specified at § 414.1380(c)(2)(i)(A)(1) should be applicable to MVP Participants. We also proposed at § 414.1365(e)(2)(i) that for an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

We proposed at § 414.1365(e)(2)(ii) that for an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. In addition, we proposed at § 414.1365(e)(2)(ii) that if reweighting is not applied to the affiliated group, the subgroup may receive reweighting

independent of the affiliated group in the following circumstances, for the reasons discussed in the CY 2022 PFS proposed rule (86 FR 39381). We proposed at § 414.1365(e)(2)(ii)(A) that a subgroup may submit an application to CMS demonstrating that it was subject to extreme and uncontrollable circumstances and receive reweighting in accordance with § 414.1380(c)(2)(i)(A)(*6*) and (c)(2)(i)(C)(*2*). Under this proposal, we proposed that in the event that a subgroup submits data for a performance category, the scoring weight described at § 414.1380(c)(1) would be applied and its weight would not be redistributed. We also proposed at § 414.1365(e)(2)(ii)(B) that a subgroup would receive reweighting if CMS determines, based on information known to the agency prior to the beginning of the relevant MIPS payment year, that data for the subgroup are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the subgroup and its agents, in accordance with § 414.1380(c)(2)(i)(A)(*9*) and (c)(2)(i)(C)(*10*).

We requested public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the use of the reweighting policies established in traditional MIPS for MVPs that are submitted by an MVP Participant that is not an APM Entity, including reweighting of the Promoting Interoperability performance category when applicable. One commenter recommended that CMS evaluate if automatic reweighting of performance categories unnecessarily and unfairly excludes clinicians, such as physical therapists from participating in MVPs.

Response: We believe the reweighting policies allow all MVP Participants that have sufficient measures and activities applicable and available to be scored fairly on their performance. We do not believe that our reweighting policies exclude clinicians from participating in MVPs. Rather, the reweighting policies allow clinicians to receive reweighting if they are impacted by a qualifying extreme and uncontrollable event and do not submit data.

Comment: One commenter supported the reweighting policy to not reweight the quality performance category in MVPs because no quality measures can be scored.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing these proposals and the regulation text at § 414.1365(e)(2) as proposed.

(C) Redistributing Performance Category Weights

In the CY 2022 PFS proposed rule (39381 through 39382), we proposed to redistribute the performance category weights for MVPs in accordance with the redistribution policies we proposed for traditional MIPS in the CY 2022 PFS proposed rule (86 FR 39448). We proposed at § 414.1365(e)(2)(iii) that for an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in accordance with § 414.1380(c)(2)(ii). We also proposed at § 414.1365(e)(2)(iii) that for an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

We solicited public comments on these proposals.

We did not receive public comments on these proposals. We are finalizing these proposals and the regulation text at § 414.1365(e)(2)(iii) as proposed.

(D) Complex Patient Bonus

We refer the reader to § 414.1380(c)(3) and to the proposed rule (86 FR 39439 through 39446) for our previously established and proposed policies on applying a complex patient bonus. In the CY 2022 PFS proposed rule (86 FR 39382), we proposed at § 414.1365(e)(4) to add a complex patient bonus to the final score for an MVP Participant in accordance with § 414.1380(c)(3).

We solicited public comments on this proposal.

Comment: One commenter supported the use of the traditional MIPS complex patient bonus scoring policies for MVPs.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing as proposed at § 414.1365(e)(4) to add a complex patient bonus to the final score for an MVP Participant in accordance with § 414.1380(c)(3).

We refer readers to the CY 2022 PFS proposed rule (86 FR 39382) for an example of the final score calculation for MVPs.

(d) Enhanced Performance Feedback in MVPs

(i) Background

In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that under section 1848(q)(12)(A)(i) of the Act, on an annual basis, we will provide confidential feedback to MIPS eligible clinicians and groups on their performance. Currently, in traditional MIPS, clinicians are not required to submit data throughout the performance period. Instead, data is submitted through the submission period that follows the performance period, as described at § 414.1325(e). In addition, current performance feedback includes measure-level performance data and scores, activity-level scores, and category comparison.

In the CY 2020 PFS final rule, we indicated a commitment to the transformation of MIPS to allow for streamlined, cohesive reporting through MVPs that would result in enhanced and timely feedback (84 FR 62945). Through previous rulemaking cycles, we have heard from stakeholders that clinicians are interested in receiving feedback reports from CMS throughout the year rather than annually to allow clinicians to review and make improvements where appropriate. Other stakeholders have expressed interest in receiving feedback which includes comparative data to other practices of similar size, location, and specialty. Stakeholders have indicated this is also key to put performance in perspective, particularly if performance evaluation and payment adjustments are contingent on the performance of other clinicians (84 FR 63057 through 63058).

(ii) Enhanced Performance Feedback in MVPs

In the CY 2022 PFS proposed rule, we explained that we considered two options for providing enhanced performance feedback (86 FR 39383). The first option is to provide comparative performance feedback, comparing the performance of like clinicians who report on the same MVP, which provides more granular comparison than is currently available. The second option is to provide performance feedback during the performance period to provide more timely and actionable feedback, but require clinicians to submit earlier. This option may require a significant investment of resources, including both time and money for CMS, third party intermediaries, and clinicians.

Therefore, beginning with the CY 2023 performance period/CY 2025 MIPS payment year, we proposed the first option described—to include comparative performance feedback within the annual performance feedback we provide for MVP Participants, comparing the performance of similar clinicians who report on the same MVP.

The comparative feedback would only be available to those who report on MVPs and will be incorporated into the annual performance feedback that we currently provide in traditional MIPS.

We solicited public comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to provide comparative feedback to clinicians who submit MVPs.

Response: We thank commenters for the support.

Comment: A few commenters had concerns that it is premature to offer feedback to clinicians on performance on MVPs, because MVPs are still under development, clinicians are still gaining experience with the use of population and cost measures and may not benefit from enhanced feedback. Commenters indicated that clinicians also have the burden of transitioning to digital quality measures (dQMs) and will not have resources to receive and understand enhanced performance feedback.

Response: We believe that MVPs provide an opportunity for enhanced feedback for MVP Participants, because MVPs allow for comparison to other MVP Participants who submitted the same MVP. We plan to provide enhanced feedback to MVP Participants beginning with the first performance period the MVP participation option is available (CY 2023 performance period/CY 2025 MIPS payment year). We do not believe it is premature to offer feedback after an MVP is submitted, particularly as the information is provided to the MVP participant only and is not publicly reported. As clinicians begin to adopt MVPs we will provide feedback in as timely a manner as possible and we anticipate that feedback reports will help clinicians become familiar with population health and cost measure data, as well as the other elements of the MVP. We acknowledge the concern that clinicians will be transitioning to dQMs, and while it is not required that clinicians review and use the feedback on MVPs, we continue to believe that feedback on MVPs will be a valuable source of information regarding performance. The comparative performance data from MVPs on connected measures and activities may help MVP Participants target potential gaps in care related to the MVP and focus needed changes in clinical workflow to address care gaps.

Comment: A few commenters wanted clarification on whether all clinicians that participate in the MVP would be compared to all clinicians who submitted the MVP, or if neurologists who participate in a stroke care MVP would be compared to other neurologists in the MVP.

Response: We will provide comparative feedback on performance of clinicians within a group or subgroup submitting an MVP to all other clinicians who reported the same MVP, which provides more granular comparison than is currently available under traditional MIPS. However, we do not plan to provide comparative feedback that is specialty specific for MVP Participants.

After consideration of public comments, we are finalizing our policy that beginning with the CY 2023 performance period/CY 2025 MIPS payment year, we will include comparative performance feedback within the annual performance feedback we provide for MVP Participants, comparing the performance of similar clinicians who report on the same MVP. The comparative feedback will only be available to those who report on MVPs and will be incorporated into the annual performance feedback that we currently provide in traditional MIPS.

(iii) Request for Information for Future Consideration

As described in the CY 2020 PFS proposed rule (84 FFR 40733 through 40734), stakeholders have requested that they be provided with actionable feedback. To gain a better understanding, we solicited comments from stakeholders to elaborate on what they consider to be ''actionable''. Would this include CMS identifying in the annual performance feedback areas of improvement based on how a clinician scores on a measure? Is there unintended burden to stakeholders such as third party intermediaries and EHR vendors associated with receiving ''actionable'' feedback? For example, this could include financial burden from system changes or operational burden on changes to workflows.

We thank commenters for the feedback received through this request for information. We may consider this information to inform future rulemaking.

b. APM Performance Pathway

(1) Overview

In the CY 2021 PFS final rule (85 FR 84859), we finalized the APM Performance Pathway (APP), which was designed to provide a predictable and consistent MIPS reporting option to reduce reporting burden and encourage continued APM participation. The APP is available for reporting by any submitter type, with the exception of Virtual Groups.

(2) MIPS Performance Category Scoring

(a) Quality Performance Category

In the CY 2021 PFS final rule, we finalized our proposal to use the measures listed in Table 50 for purposes of quality performance category scoring for the APP.

BILLING CODE 4120–01–P

TABLE 50: Measures included in the 2021 Final APM Performance Pathway Measure Set+

Measure #	Measure Title	Collection Type	Submitter Type	Meaningful Measure Area
Quality ID#: 321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Patient's Experience
Measure # 479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Admissions & Readmissions
Measure # TBD	Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for ACOs	Administrative Claims	N/A	Admissions & Readmissions
Quality ID#: 001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health
Quality ID#:236	Controlling High Blood Pressure	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 318	Falls: Screening for Future Fall Risk	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventable Healthcare Harm
Quality ID#: 110	Preventive Care and Screening: Influenza Immunization	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	CMS Web Interface*	APM Entity/Third Party Intermediary	Prevention and Treatment of Opioid and Substance Use Disorders
Quality ID#: 113	Colorectal Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 112	Breast Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 438	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 370	Depression Remission at Twelve Months	CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health

+ We note that Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID# 438); Depression Remission at Twelve Months (Quality ID# 370), and Preventive Care and Screening: Screening for Depression and Follow-up Plan (Quality ID# 134) do not have benchmarks and are therefore not scored; they are, however, required to be reported in order to complete the Web Interface dataset.

* ACOs will have the option to report via Web Interface for the 2021 MIPS Performance year only.

BILLING CODE 4120–01–C

In the CY 2021 PFS final rule, we finalized the inclusion of the CMS Web Interface as an option for Shared Savings Program ACOs to report quality for the 2021 performance period only, and this quality reporting option would no longer be available beginning with the CY 2022 performance period. However, as we explained in the CY 2022 PFS proposed rule (86 FR 39384), since the CY 2021 PFS final rule, we have received stakeholder feedback that the transition away from reporting the CMS Web Interface measures to the reporting of eCQMs/MIPS CQMs is more technologically difficult for some ACOs than originally anticipated, particularly under the extraordinary circumstances of the PHE for COVID–19. In light of this feedback, we proposed to extend the CMS Web Interface as a means of reporting quality under the APP for Shared Savings Program ACOs for performance years 2022 and 2023.

Under this proposal, for performance year 2022, Web Interface reporting would work in the same manner as for performance year 2021, where ACOs would have the option of reporting either the CMS Web Interface, the APP eCQM/MIPS CQM measure set, or both.

In addition, we proposed that for the 2023 performance year, we would score

Web Interface submissions only for ACOs that have also submitted at least one eCQM/MIPS CQM measure from the APP measure set. While we stated in the proposed rule that we understand that there may be barriers to ACOs transitioning away from the CMS Web Interface along the timeline originally contemplated, we further explained that we believe it is important to continue to encourage and incent that transition. By extending the CMS Web Interface for the 2022 and 2023 performance years, as proposed, we would give ACOs additional time to familiarize themselves with the eCQM/MIPS CQM measures and the data aggregation and submission processes. However, we also stated our belief that by proposing to limit the continued use of the CMS Web Interface in the 2023 performance year only to those ACOs that also attempt an eCQM/MIPS CQM submission, we would continue to move these ACOs and their ACO participants towards CMS' goal of more complete and uniform reporting requirements for all MIPS participants.

In the proposed rule, we noted that for both performance year 2022 and performance year 2023, ACOs would continue to have the opportunity to report on both the eCQMs/MIPS CQMs and the CMS Web Interface measures, and to have their MIPS quality performance category score based on the submission that receives a higher score. We stated our belief that these proposed policies would help to encourage ACOs to move towards eCQM/MIPS CQM reporting in a low-risk environment where they will have the opportunity to continue to rely on measures reported through the CMS Web Interface for purposes of quality performance scoring as they become familiar with the eCQM/MIPS CQM submission and scoring process.

We solicited comments on these proposals.

Comment: Many commenters supported our proposal to extend the CMS Web Interface reporting option for Shared Savings Program ACOs during the 2022 and 2023 performance years.

Response: We thank commenters for their support. We agree that given the complexity of the shift from the selective beneficiary sampling method of the CMS Web Interface to the use of all-patient data for reporting eCQM/MIPS CQMs, it is prudent to ensure that ACOs, their ACO participants, and vendors have sufficient time to implement the technology and workflows necessary to make this transition a success.

Comment: Some commenters supported the extension of the use of the Web Interface for Shared Savings Program ACOs, but believed that requiring reporting on at least one eCQM/MIPS CQM in 2023 as a prerequisite to scoring those Web Interface measures created the same level of burden as fully transitioning to eCQM/MIPS CQMs in that year. They recommended that the proposed requirement that ACOs report a minimum of one eCQM/MIPS CQM in 2023 should not be implemented.

Response: We understand commenters to mean that they believe that the majority of the burden is in developing the technical capabilities to report on these measures, and not in the data collection and reporting itself. Therefore, by including this requirement in performance year 2023, we would be imposing a deadline to have completed the transition to the new reporting framework before stakeholders believe they would be ready.

In light of these concerns, we are not finalizing our proposal to require a single eCQM measure to be reported in 2023 in order to be eligible for Web Interface scoring. Instead, we are finalizing at policy to continue the 2021 policy including use of the CMS Web Interface for Shared Savings Program ACOs into MIPS performance years 2022 and 2023. In addition, in response to comments received on our comment solicitation in the CY 2022 PFS proposed rule (86 FR 39269), we are also extending the use of the CMS Web Interface as a reporting option under the APP into MIPS performance year 2024.

For the CY 2021 MIPS performance period, we limited the use of the Risk-standardized, All-cause Unplanned Admissions for Multiple Chronic Conditions for ACOs (MCC for ACOs) measure to ACOs because, at that time, we were still investigating the question of whether it would be appropriate to include the Risk-standardized, All-cause Unplanned Admissions of Multiple Chronic Conditions for MIPS (MCC for MIPS) measure in the generally applicable MIPS quality measure set. However, in the CY 2022 PFS proposed rule (86 FR 39385), we proposed to add the MCC for MIPS measure into the MIPS quality measure set beginning with the CY 2022 MIPS performance period, as discussed in Appendix 1 of this final rule.

We also proposed to replace the MCC for ACOs measure with the MCC for MIPS measure within the APP beginning with the 2022 MIPS performance period. We explained that this change would continue our transition towards alignment of quality measure data reported by MIPS eligible clinicians who are not participants in APMs and those who are, as discussed in the CY 2021 PFS final rule (85 FR 84859). We stated our belief that the MCC for MIPS measure is a valuable tool in assessing quality performance, with no additional reporting burden, and is therefore an asset to the APP measure set as well. By replacing the MCC for ACOs measure with the MCC for MIPS measure, we would have the opportunity to capture performance on this measure for additional MIPS eligible clinicians who are not participants in ACO-based APMs.

We also stated our belief that it is important to remove the MCC for ACOs measure from the APP in order to reduce the potential for confusion around performance scores and feedback for MIPS eligible clinicians who might otherwise have been scored on both measures with differing results.

We solicited comments on our proposal to include the measures listed in Table 40 of the proposed rule (86 FR 39386) in the quality measure set for the APP for the 2022 MIPS performance period.

The following is a summary of the comments we received on the proposed APP quality measure set and our responses.

Comment: One commenter noted that it is also important to consider smaller groups and individual MIPS eligible clinicians who may not meet the case minimums or who are unfamiliar with the measures in early years and stressed that flexibility for these providers will be important.

Response: We recognize that smaller groups may not meet case minimums to report on this measure, but reiterate that in such a case, the group would have the measure excluded from its total measure achievement points and total available measure achievement points in accordance with § 414.1367(c)(1)(i), and would not be negatively affected by the inability to score this measure. We also reiterate that APM participants are no longer required to be scored for purposes of MIPS as part of their APM, but may report using any MIPS measures or pathways that would otherwise be available to them. It is our intention that these policies will provide all MIPS eligible clinicians with flexibility to report on the measures that are most relevant to their specific practice.

Comment: A few commenters raised questions about the proposed change from the MCC for ACOs measure to the MCC for MIPS measure. Commenters noted the difference in patient population between the MCC for ACOs measure, which relies on data for

Medicare beneficiaries assigned to the ACO, to the MCC for MIPS measure, which uses all Medicare beneficiary data and requested that CMS reconsider the use of the MCC for MIPS measure in scoring ACOs.

Response: We recognize that there is a difference in the patient population used to calculate the MCC for MIPS measure relative to the patient population for the MCC for ACOs measure. Like all other quality measures in the MIPS program (with the exception of the CMS Web Interface, claims, and administrative claims measures), the MCC for MIPS is a measure intended to capture reporting on all patients seen by the eligible clinicians being scored. The goal of this transition towards all-beneficiary and all-payer data is to produce a more comprehensive picture of the care being provided by the eligible clinicians participating in ACOs to all Medicare beneficiaries and patients within their care. This way, beneficiaries will be better positioned to compare performance of various clinicians and empowered to make better choices for their own health care.

Therefore, we are finalizing our proposal to add the MCC for MIPS measure to the APP measure set, and to remove the MCC for ACOs measure.

BILLING CODE 4120–01–P

TABLE 51: Measures included in the 2022-2024 APM Performance Pathway Measure Set+

Measure #	Measure Title	Collection Type	Submitter Type	Meaningful Measure Area
Quality ID#: 321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Patient's Experience
Measure # 479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Admissions & Readmissions
Measure # TBD	Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for MIPS	Administrative Claims	N/A	Admissions & Readmissions
Quality ID#: 001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health
Quality ID#:236	Controlling High Blood Pressure	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 318	Falls: Screening for Future Fall Risk	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventable Healthcare Harm
Quality ID#: 110	Preventive Care and Screening: Influenza Immunization	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	CMS Web Interface*	APM Entity/Third Party Intermediary	Prevention and Treatment of Opioid and Substance Use Disorders
Quality ID#: 113	Colorectal Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 112	Breast Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 438	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 370	Depression Remission at Twelve Months	CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health

+ We note that Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID# 438); Depression Remission at Twelve Months (Quality ID# 370), and Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID# 226) do not have benchmarks and are therefore not scored for PY 2022; they are, however, required to be reported in order to complete the Web Interface dataset.
* ACOs will have the option to report via Web Interface for the 2022, 2023, & 2024 MIPS performance periods only.

BILLING CODE 4120–01–C

d. MIPS Performance Category Measures and Activities

(1) Quality Performance Category

(a) Background

We refer readers to §§ 414.1330 through 414.1340 and the CY 2018 Quality Payment Program final rule (82 FR 53626 through 53641) for our previously established policies regarding the quality performance category.

In the proposed rule, we proposed to:

- Maintain the data completeness criteria threshold of at least 70 percent for CY 2021 and CY 2022 performance periods/2023 and 2024 MIPS payment years, and increase the data completeness criteria threshold to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year.
- Extend the availability of the CMS Web Interface as a collection and submission type for the CY 2022 performance period/2024 MIPS payment year.
- Make changes to the MIPS quality measure set as described in Appendix 1 of this final rule, including addition of new measures, updates to specialty sets,

removal of existing measures, and substantive changes to existing measures.

- Establish criteria for determining whether a measure change is considered substantive starting with the CY 2022 performance period.
- Beginning with the CY 2021 performance period/2023 MIPS payment year CAHPS for MIPS survey, Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs) are required to administer the CAHPS for MIPS Survey and report via the Alternative Payment Model (APM) Performance Pathway (APP). We proposed refinements to our policies for administration of the CAHPS for MIPS survey to align with certain policies that previously applied to the CAHPS for ACOs survey.

(b) Data Submission Criteria

(i) Submission Criteria for Quality Measures Excluding the CMS Web Interface and CAHPS for MIPS

In the CY 2017 Quality Payment Program final rule, we established the submission criteria for quality measures (excluding the CMS Web Interface measures and the CAHPS for MIPS survey measure) at § 414.1335, which requires a MIPS eligible clinician, group, or virtual group that is reporting on Qualified Clinical Data Registry (QCDR) measures, MIPS clinical quality measures (MIPS CQMs), electronic CQMs (eCQMs), or Medicare Part B claims measures to submit data on at least 6 measures, including at least 1 outcome measure (81 FR 77100 through 77114). If an applicable outcome measure is not available, then a MIPS individual eligible clinician, group, or virtual group will report on 1 other high priority measure. If there are fewer than 6 measures that apply to a MIPS eligible clinician, group, or virtual group, then reporting on each applicable measure is required. For MIPS eligible clinicians, groups, and virtual groups that report on a specialty or subspecialty measure set (as designated in the MIPS final list of quality measures established by CMS through rulemaking), they are required to submit data on at least 6 measures within the set, including at least 1 outcome measure. If an applicable outcome measure is not available, then a MIPS individual eligible clinician, group, or virtual group will report on 1 other high priority measure. If a specialty or subspecialty measure set contains fewer than 6 measures or if fewer than 6 measures within the measure set apply to a MIPS eligible clinician, group, or virtual group, then reporting on each applicable measure is required. In addition to the assessment of performance based on submitted data for at least 6 measures (all measures if there are fewer than 6 measures that are applicable), performance is also assessed on administrative claims measures. CMS automatically evaluates and calculates administrative claims measures for individual MIPS eligible clinicians, groups, and virtual groups if the case minimum requirement of the measure is met.

We noted in the CY 2022 PFS proposed rule that, with each year of program implementation, we continue to assess means for creating a more cohesive and meaningful participation experience in MIPS that improves value and reduces clinician burden. As the program evolves, we want to enable a seamless transition from participation in traditional MIPS to the preliminary onset of voluntary participation in MVPs to the required participation in MVPs. Transitioning from traditional MIPS to MVPs improves the participation experience of MIPS by having the program be more relevant to a clinician's scope of practice and meaningful to patient care. One element that we assessed in preparation for the transition from traditional MIPS to MVPs regards the utilization of outcomes-based administrative claims measures to reduce the reporting burden under MIPS, particularly the allowance of outcome-based administrative claims measures to be applied as the required outcome measure requirement under traditional MIPS (in general, 6 measures, including 1 outcome measure) and MVPs (in general, 4 measures as outlined in section IV.A.3.b.(4)(d)(ii) of this final rule).

In the CY 2022 PFS proposed rule, we noted that since the inception of MIPS under the Quality Payment Program, we established administrative claims measures that are automatically evaluated and calculated for individual MIPS eligible clinicians, groups, and virtual groups if the case minimum requirement of the measure is met (81 FR 77130 through 77136). The reporting burden is reduced for individual MIPS eligible clinicians, groups, and virtual groups when CMS conducts the assessment and calculations of administrative claims measures (81 FR 77134). A subset of the administrative claims measures are outcome-based measures (and in some cases, are also population health measures), which focus on the improvement of patient health outcomes. We want to further reduce the reporting burden by allowing outcome-based measures (not applicable to administrative claims measures that are considered population health measures) to fulfill the outcome measure requirement as more of such measures are implemented in MIPS, when applicable. For the CY 2022 performance period/2024 MIPS payment year, we proposed the following outcome-based administrative claims measure under MIPS: Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System (see Table Group A of Appendix 1 of this final rule).

In the CY 2022 PFS proposed rule, we proposed at § 414.1365(c)(1) to allow an administrative claims measure that is outcome-based (not applicable to administrative claims measures that are population health measures), if applicable, to be selected at the time of MVP registration as a measure to meet the outcome measure requirement starting with the CY 2023 performance period/2025 MIPS payment year. The outcomes-based administrative claims measure would be applicable and relevant to the specific MVP, and as a result, included as 1 of the measures available within an MVP. If an outcomes-based administrative claims measure was selected during the MVP registration process, the measure will meet the outcome-based measure reporting requirement and count as 1 of the 4 minimum required measures if the MVP Participant meet the case minimum requirement for the administrative claims measure; otherwise, the administrative claims measure would receive a score of zero points and the MVP Participant would not meet the minimum reporting requirement of 4 measures. However, if the MVP Participant selects an outcomes-based administrative claims measure available within the MVP and report on 4 measures, the MVP Participant would meet the minimum reporting requirement of 4 measures if it was determined that the case minimum requirement for the outcomes-based administrative claims measure was not met. We believe that such approach reduces reporting burden and allows for a more cohesive and meaningful participation experience that focuses on measures that are more relevant to a clinician's scope of practice while preventing gaming/misuse of selecting an outcomes-based administrative claims measures to be assessed and scored on for purposes of MVP participation.

As stated in the CY 2022 PFS proposed rule, we analyzed the allowance and utilization of outcome-based administrative claims measures

(not applicable to administrative claims measures that are population health measures) to be applied to fulfill the outcome measure requirement within traditional MIPS, it became apparent that the implementation of such a policy would pose challenges and obstacles. We assessed 3 options. For the first option, we assessed the potential implementation of outcomes-based administrative claims measures to fulfill the outcome requirement utilizing a registration system, similar to the proposal for MVPs. For traditional MIPS, a registration process would require the individual MIPS eligible clinicians, groups, and virtual groups to elect to have an outcomes-based administrative claims measure be calculated and scored to fulfill the outcome measure requirement as part of the 6 minimum required measures. Prior to an individual MIPS eligible clinician, group, or virtual group making such an election via a registration process, it would be imperative for a registration process to only permit an individual MIPS eligible clinician, group, or virtual group to register if eligible (meets case minimum requirement) for an outcome-based administrative claims measure (not applicable to administrative claims measures that are population health measures) to be calculated and scored. Such registration process would need to be able to identify which individual MIPS eligible clinicians, groups, and virtual groups would be eligible for an outcome-based administrative claims measure to fulfill the outcome measure requirement as part of the required minimum of 6 measures, which would prevent the potential for gaming and enable individual MIPS eligible clinicians, groups, and virtual groups to know in advance of the submission period if they would need to report on a minimum of 5 measures instead of a minimum of 6 measures; we believe that this approach would reduce burden.

In addition, for cases in which the case minimum of the outcomes-based administrative claims measure would not be met, and therefore, could not be calculated, we have considered whether the denominator should be reduced and performance assessment and scoring would be based on 5 measures instead of 6 measures (or less measures if, initially, there were fewer than 6 applicable measures or fewer than 6 measures available within a measure set), which would reduce the reporting burden under traditional MIPS. However, we recognize that if our policy—an election process, via a registration system, to have an outcome-based administrative claims measure as 1 of the required minimum of 6 measures—includes an element for a denominator reduction, we believe that our policy would pose the potential risk for gaming. We would want to prevent the potential for gaming—knowingly selecting an outcome-based administrative claims measures during registration that is not applicable to a practice or specialty, which would result in not meeting the case minimum requirement to be calculated and scored on such measure, and thus, having performance assessed on 5 measures instead of 6 measures (or less measures if, initially, there were fewer than 6 applicable measures or fewer than 6 measures available within a measure set).

As we assessed such approach, we believed that there would not be sufficient parameters/safeguards to ensure that only individual MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure calculation would be able to register. We would seek to prevent the potential for gaming by minimizing the number of individual MIPS eligible clinicians, groups, and virtual groups not eligible for an outcome-based administrative claims measure calculation to make such election. However, as we conducted our assessment, we determined that it would not be technically possible to develop a registration system based on applicable outcomes based administrative claims measure data for the applicable performance period to identify if a MIPS eligible clinician, group, or virtual group is eligible for an outcome-based administrative claims measure calculation given that such data would not be readily available until several months after the end of an applicable MIPS performance period. Without having an ability to identify MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure calculation for registration purposes based on data from the applicable performance period in order to prevent gaming, we believed that the implementation of a policy to allow for an outcome-based administrative claims measure to be applied as 1 of the minimum required 6 measures would pose risk to the integrity of the program. For the second option, we assessed the potential for automatically calculating an outcome-based administrative claims measure, if applicable, for individual MIPS eligible clinicians, groups, and virtual groups participating in traditional MIPS. For the implementation of such a policy, we would use the status quo of requiring the submission of the minimum of 6 measures (or less measures if fewer than 6 measures were applicable or fewer than 6 measures were available within a measure set) (81 FR 77100 through 77114) in addition to automatically calculating an applicable outcome-based administrative claims measure. We would calculate a score for a total of 7 measures (6 required measures and outcome-based administrative claims measure), but performance for the quality performance category would be based on 6 measures with the highest score, which would include an outcome-based measure.

For option 2, we would not be reducing the reporting burden given that the reporting requirements would remain as status quo, but instead of us applying all administrative claims to all MIPS eligible clinicians as an addition to their quality performance category denominator, we would be replacing the outcome measure requirement, with an available outcomes-based administrative claims measure, if it can be applied. Under this approach, we would not be able to objectively decipher the intent of a MIPS eligible clinician, group, or virtual group (without a formal process to signify an election) as to whether or not they would want to have the outcome-based administrative claims measure automatically calculated and applied as 1 of the 6 minimum required measures. To not objectively know the intension of a MIPS eligible clinician, group, or virtual group, the following scenario could arise under option 2. For example, a MIPS eligible clinician, group, or virtual group submitted 5 measures, it is unclear if it was intentional to only submit 5 measures with the expectation that the MIPS eligible clinician, group, or virtual group sought to be evaluated on the outcomes-based administrative claims measure or if the submission of 5 measures was a result of a MIPS eligible clinician, group, or virtual group of not meeting the minimum of 6 required measures and thus, receive zero points for 1 of the 6 required measures.

After assessing the first 2 aforementioned options, we assessed a third option that would address concerns regarding the first 2 options. For option 3, we assessed the utilization of historical data (for example, previous MIPS performance period data) given that applicable performance period data would not be readily available to be included as part of a registration process. The use of historical data for an outcome-based administrative claims measure as the means for eligibility

determinations within a registration system would only permit individual MIPS eligible clinicians, groups, and virtual groups identified as eligible for the calculation of an outcome-based administrative claims measure. Such option would allow an individual MIPS eligible clinician, group, or virtual group to select the application of an outcome-based administrative claims measure during a registration process, which would allow CMS to identify the individual MIPS eligible clinicians, groups, and virtual groups electing to have such measure applied as 1 of the minimum-required 6 measures that meets the outcome-based measure requirement. We believe that historical data would be able to adequately and reliably identify individual MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure calculation, which we anticipate could be available during the applicable MIPS performance period, as technically feasible. We believe that by providing this historical information to individual MIPS eligible clinicians, groups, and virtual groups would provide pertinent information to make a determine if they would be selecting an outcome-based administrative claims measure during a registration process to be applied as 1 of the minimum-required 6 measures. We believe this approach could minimize gaming and individual MIPS eligible clinicians, groups, and virtual groups would know that they would need to select a minimum of 5 (instead of 6) other measures to meet the reporting requirements for the quality performance category. The potential drawback to this option is it would only be available for individual MIPS eligible clinicians, groups, and virtual groups who participated in MIPS for a prior performance period, so not all clinicians would benefit under this option. However, if technically feasible, the utilization of historical data from the outcome-based administrative claims measure would be able to reduce the reporting burden and would align with the similar proposed process for MVPs. Although we did not make a proposal for the implementation of such policy, we requested feedback from stakeholders regarding how the automatic calculation of an outcome-based administrative claims measure and have it applied as 1 of the minimum 6 required measures, particularly the outcome-based measure requirement, and if such option is a policy that would be advantage for them as they participate in traditional MIPS. We actively seek the engagement of our stakeholders as we assess means for reducing the reporting burden and enhance the experience of participating in traditional MIPS.

Thus, we solicited public comment on the means for being able to implement such a policy. Are there other options that we should consider in determining how to implement such a policy? Are there other ways we would be able to identify which individual MIPS eligible clinicians, groups, and virtual groups are eligible for an outcomes-based administrative measure calculation to ensure that only those that are eligible are able make such an election? Should we consider the use of historical data that would allow the predetermination and identification of MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure? How would we be able to determine if a MIPS eligible clinician, group, or virtual group would like to have an automatic calculation of an outcome-based administrative claims measure conducted on their behalf outside of a registration process? Are there other challenges that we should be aware of as we continue to assess a means for developing and implementing such a policy?

We thank commenters for the feedback received. The information provided may inform future rulemaking.

(c) Data Completeness Criteria

(i) CY 2021 Performance Period (2023 MIPS Payment Year)

In the CY 2020 PFS final rule, we established the data completeness criteria at § 414.1340(a)(3) and (b)(3) for the CY 2020 performance period/2022 MIPS payment year, which determined that MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs, or Medicare Part B claims measures must submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer. In regard to the data completeness criteria established for Medicare Part B claims measures for the CY 2020 performance period/2022 MIPS payment year, we found that the policy established at § 414.1340(b)(3) erroneously reflected the data completeness criteria only applicable to QCDR measures, MIPS CQMs, and eCQMs, which requires data submission to pertain to patients that meet the measure's denominator criteria, regardless of payer (all-payer). It is not possible for Medicare Part B claims data to include all-payer patients; the submission of data for Medicare Part B claims measures can only account for Medicare Part B patients. Since the implementation of MIPS, the data completeness criteria for Medicare Part B claims measures has pertained to the applicable Medicare Part B patients seen during an applicable MIPS performance period. The issue with the policy established at § 414.1340(b)(3) in the CY 2020 PFS final rule for Medicare Part B claims measures only pertains to the type of patient population for data submission purposes and not the threshold established for data completeness of at least 70 percent. Thus, we proposed to modify the data completeness threshold criteria established at § 414.1340(b)(3) for the CY 2020 performance period/2022 MIPS payment year retroactively, effective January 1, 2020, in accordance with section 1871(e)(1)(A)(ii) of the Act. We believe that failure to apply the change retroactively will be contrary to the public interest because it will require individual eligible clinicians, groups, and virtual groups to meet data completeness criteria (the submission of patient data for all-payers) for Medicare Part B claims measures that is not possible. We believe that it is imperative for individual eligible clinicians, groups, and virtual groups to be certain as to the true criteria used to measure data completeness for Medicare Part B claims measures. For the CY 2021 performance period/2023 MIPS payment year, we proposed to modify the data completeness criteria established at § 414.1340(b)(3) to be as follows: MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment year 2022.

In the CY 2021 PFS proposed and final rules, we inadvertently omitted a proposal that would have otherwise extended our existing policy to determine the data completeness criteria for the CY 2021 performance period/2023 MIPS payment year; we only included a reference to the data completeness criteria of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year as it relates to the scoring policies for class 1 measures as outlined in Table 49 of the CY 2021 PFS proposed and final rules (85 FR 50309 and 85 FR 84906). Thus, in the CY 2022 PFS proposed rule, we proposed to establish the data completeness criteria for the CY 2021 performance period/2023 MIPS

payment year retroactively, effective January 1, 2021, in accordance with section 1871(e)(1)(A)(ii) of the Act (86 FR 39390). We noted our belief that failure to apply the change retroactively will be contrary to the public interest because it could be construed as permitting the submission of incomplete, inaccurate, or otherwise comprised data, which would have a detrimental effect on the performance data used for calculating MIPS payment adjustments and public reporting. For the CY 2021 performance period/2023 MIPS payment year, we proposed at § 414.1340(a)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs will need to submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer; and at § 414.1340(b)(3) to establish the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the CY 2021 performance period to which the measure applies for MIPS payment year 2023.

We stated our belief that it is imperative to establish the data completeness criteria for the CY 2023 MIPS payment year in this final rule and any failure to apply the updated data completeness criteria retroactively would be contrary to the public interest as such omission presents ambiguity and a potential notion for an array of interpretations. We believe that it is in the public interest to retroactively apply the updated data completeness threshold as it would ensure that all MIPS eligible clinicians participating in MIPS for the CY 2021 performance period/2023 MIPS payment year, whether at the individual, group, or virtual group levels, would be aware that there is a definitive data completeness criteria for the CY 2021 performance period and any data submitted for the quality performance category would need to meet the data completeness criteria. We noted that such approach would: Establish the data completeness criteria prior to the timeframe in which data submission will occur (first 3 months of CY 2022), which would enable MIPS eligible clinicians participating in MIPS at the individual, group, or virtual group levels to prepare their data submission to meet the updated data completeness criteria; and ensure that all data submitted for the quality performance category would meet the same criteria (that is, specific data completeness threshold of at least 70 percent of a MIPS eligible clinician or group's patient population that meets the measure's denominator criteria for QCDR measures, MIPS CQMs, and eCQMs; or specific data completeness threshold of at least 70 percent of the applicable Medicare Part B patients seen during the CY 2021 performance period for Medicare Part B claims measures) versus an unspecified, interpretive data completeness threshold that could result in various threshold ranges and inconsistent reported patient populations such as portion of submitted data be a representative of all patient (all-payer) data while the remaining portion of submitted data be a representative of only Medicare patient data, which would provide data integrity, usability, and reliability to assess the performance of MIPS eligible clinicians at the individual, group, or virtual group level in a manner that is consistent and enable performance data to be comparable to the applicable historical benchmarks that have been established for the various measures.

We solicited public comment on our proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year. We received public comments regarding the proposal. The following is a summary of the public comments received.

Comment: Most commenters supported the proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year.

Response: We appreciate the support from commenters.

Comment: A few commenters did not support the proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year and indicated that it is difficult for some clinicians to meet the data completeness criteria. The commenters recommended that the data completeness threshold be decreased to 60 percent for the CY 2021 performance period/2023 MIPS payment year.

Response: Due to the retroactive effect of our proposal, we believe it would be most appropriate to maintain the 70 percent data completeness criteria that had been adopted for the prior year. Interested parties that reviewed our data completeness standards for prior years and our statements in the CY 2021 PFS proposed rule and final rule regarding the completeness standard for class 1 measures during the CY 2021 performance period could most reasonably have expected that we would maintain a 70 percent data completeness criteria threshold. We do not agree with commenters that the data completeness criteria threshold for the CY 2021 performance period/2023 MIPS payment year should be decreased to a threshold established for the CY 2019 performance period/2021 MIPS payment year. When the data completeness criteria threshold increased from at least 60 percent to at least 70 percent for the CY 2020 performance period/2022 MIPS payment year (84 FR 62952), it was based on an analysis of data completeness rates from the submission of data from the CY 2017 performance period (84 FR 62951), in which the data analyzed demonstrated that it would be generally feasible for MIPS eligible clinicians and groups to achieve a higher data completeness threshold of at least 70 percent. Absent further analysis, we believe it is most appropriate to maintain the standard of at least 70 percent for the data completeness threshold.

After consideration of the public comments, we are finalizing our proposal as proposed at § 414.1340(a)(3) and 414.1340(b)(3) to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year.

(ii) CY 2022 MIPS Performance Period (2024 MIPS Payment Year)

In the CY 2017 and CY 2018 Quality Payment Program final rules, we note that we would increase the data completeness criteria threshold over time (81 FR 77121 and 82 FR 53632). Starting with the CY 2020 performance period/2022 MIPS payment year, we increased the data completeness criteria from at least 60 percent to at least 70 percent and as noted above, we proposed to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021 performance period/2023 MIPS payment year. We continue to believe that it is important to incrementally increase the data completeness criteria as MIPS eligible clinicians, groups, and virtual groups gain experience with MIPS. However, with the COVID–19 PHE that started during the CY 2020 performance period/2022 MIPS payment year and continued into the CY 2021 performance period/2023 MIPS payment year, we believe that it will be

appropriate to continue to maintain the data completeness criteria of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year as healthcare systems across the country have been overwhelmed and strained by the COVID–19 PHE.

In order to not place further undue burden as MIPS eligible clinicians, groups, and virtual groups navigate through the COVID–19 pandemic, we proposed for the CY 2020 performance period/2022 MIPS payment year:

- At § 414.1340(a)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs will need to submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer, for the CY 2022 performance period/2024 MIPS payment year; and
- At § 414.1340(b)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the CY 2022 performance period to which the measure applies for MIPS payment year 2024.

We solicited public comment on our proposals to maintain the data completeness criteria threshold of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year. We received public comments regarding the proposal. The following is a summary of the public comments received.

Comment: Most commenters supported the proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year.

Response: We appreciate the support from commenters.

Comment: A few commenters did not support the proposal to maintain the data completeness criteria threshold of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year and indicated that it is difficult for some clinicians to meet the data completeness criteria. The commenters recommended that the data completeness threshold be decreased to 60 percent for the CY 2022 performance period/2024 MIPS payment year.

Response: We do not agree with commenters that the data completeness criteria threshold for the CY 2022 performance period/2024 MIPS payment year should be decreased to a threshold established for the CY 2019 performance period/2021 MIPS payment year. When the data completeness criteria threshold increased from at least 60 percent to at least 70 percent for the CY 2020 performance period/2022 MIPS payment year (84 FR 62952), it was based on an analysis of data completeness rates from the submission of data from the CY 2017 performance period (84 FR 62951), in which the data analyzed demonstrated that it would be generally feasible for MIPS eligible clinicians and groups to achieve a higher data completeness threshold of at least 70 percent. Absent further analysis and further information from the commenters explaining why it would be difficult to meet a data completeness criteria threshold of at least 70 percent, we believe it is most appropriate to maintain the standard of at least 70 percent for the data completeness threshold; we believe that maintaining the current standard provides MIPS eligible clinicians, groups, and virtual groups with additional time to obtain more experience in meeting this standard and prepare for a future incremental increase in the data completeness criteria threshold.

After consideration of the public comments, we are finalizing our proposal as proposed at § 414.1340(a)(3) and (b)(3) to maintain the data completeness criteria threshold of at least 70 percent for the CY 2022 performance period/2024 MIPS payment year.

(iii) CY 2023 Performance Period (2025 MIPS Payment Year)

We believe that the incorporation of higher data completeness thresholds in future years ensure a more accurate assessment of a MIPS eligible clinician's performance on quality measures and avoid any selection bias. We have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients. The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure. The data completeness threshold of less than 100 percent is intended to reduce burden and accommodate operational issues that may arise during data collection during the initial years of the program.

Since the inception of the program, we have provided notice to MIPS eligible clinicians, groups, and virtual groups in order for them to take the necessary steps to prepare for higher data completeness thresholds in future years. In a similar manner, we are providing advance notice that we intend to increase the data completeness criteria threshold for the CY 2023 performance period/2025 MIPS payment year. We proposed: At § 414.1340(a)(4) to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs, or Medicare Part B claims measures will need to submit data on at least a 80 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer, for the CY 2023 performance period/2025 MIPS payment year; and at § 414.1340(b)(4) to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 80 percent of the applicable Medicare Part B patients seen during the CY 2023 performance period to which the measure applies for MIPS payment year 2025. We believe that MIPS eligible clinicians, groups, and virtual groups will be provided with adequate time to prepare for the data completeness criteria threshold to increase.

We solicited public comment on our proposal to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year. We received public comments regarding the proposal. The following is a summary of the public comments received.

Comment: A few commenters supported the proposal to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year.

Response: We appreciate the support from commenters.

Comment: Most commenters did not support the proposal to increase the data completeness criteria threshold to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year. Some commenters requested that CMS implement a more gradual increase of the data completeness criteria threshold, with one commenter urging CMS to not increase the data completeness threshold above 80 percent. A few commenters expressed concerns that the data completeness criteria threshold should not be increased amidst the COVID–19 PHE or as they prepare to

transition to MVPs and digital quality measures. A few commenters indicated that the increasing of the data completeness criteria threshold would make it more difficult for some MIPS eligible clinicians, groups, and virtual groups to meet the requirement, particularly small and rural practices. One commenter stated that it is difficult for some MIPS eligible clinicians to meet a data completion rate for patient reported outcome-based measures. Another commenter specified that other CMS quality programs have lower data completeness criteria thresholds and requested that the data completeness criteria threshold for MIPS reflect a lower threshold similar to other CMS quality programs.

Response: We acknowledge the concerns expressed from commenters regarding increasing the data completeness criteria threshold amidst the COVID–19 PHE that has healthcare systems across the country overwhelmed and strained, which may have continued implications that expand beyond the CY 2022 performance period/2024 MIPS payment year. Thus, we are not finalizing the proposal to increase the data completeness criteria threshold to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year while individual MIPS eligible clinicians, groups, and virtual groups recover from the unexpected impact of the COVID–19 PHE; instead, we will be maintaining the data completeness criteria threshold of at least 70 percent for the CY 2023 performance period/2025 MIPS payment year.

We also believe that maintaining the data completeness criteria threshold of at least 70 percent for the CY 2023 performance period/2025 MIPS payment year is most responsive to stakeholder concerns regarding an increase to the data completeness criteria threshold amidst the COVID–19 PHE. For the segment of MIPS eligible clinicians, groups, and virtual groups experiencing challenges in meeting the established data completeness criteria threshold of at least 70 percent, we believe that the COVID–19 PHE may have the potential to exacerbate those challenges. Maintaining the data completeness criteria threshold for the CY 2023 performance period/2025 MIPS payment year also would reduce burden and provide additional time for MIPS eligible clinicians, groups, and virtual groups to adopt the final policy changes and recover fiscally from the pandemic, prepare to transition to MVPs, which will be available starting with the CY 2023 performance period/2025 MIPS payment year. We considered not establishing a data completeness criteria threshold policy for the CY 2023 performance period/2025 MIPS payment year in this final rule, but we believe that it is more beneficial to establish such policy in advance for MIPS eligible clinicians, groups, and virtual groups. In establishing data completeness criteria thresholds in advance of an applicable performance period, we believe it is advantageous to delineate the expectations for MIPS eligible clinicians, groups, and virtual groups in order for them prepare for a transition to higher data completeness criteria threshold when such threshold is increased in the future. We believe that by maintaining the data completeness criteria threshold of at least 70 percent for the CY 2023 performance period/2025 MIPS payment year, the number of MIPS eligible clinicians, groups, and virtual groups able to meet a higher data completeness criteria threshold in future years would increase. We intend to continuously consider feedback from stakeholders as we plan to incrementally increase the data completeness criteria threshold and determine which performance period to increase the data completeness criteria threshold given that the threshold of at least 70 percent will be implemented for 4 years as of the CY 2023 performance period/2025 MIPS payment year.

We recognize that the user experience under MIPS varies across a continuum and there may be some MIPS eligible clinicians, groups, and virtual groups that will experience more challenges than others in meeting the reporting requirements for the quality performance category under MIPS, particularly MIPS eligible clinicians, groups, and virtual groups considered to be small practices for purposes of MIPS (15 or fewer clinicians). We note that, in order to enhance the user experience for such small practices, we established the Medicare Part B Claims collection type. The assessment of performance for such measures is based on Medicare Part B claims data, not all-payer claims data. In addition, to support the participation of small practices in MIPS, we established the small practice bonus, in which 6 measure bonus points are applied to the numerator of the quality performance category for small practices that submit data on at least one quality measure (83 FR 59850). As we evolve the implementation of MIPS, we continue to assess means for reducing burden and improving user experience.

In regard to the comment pertaining to challenges meeting the data completion rate for patient-reported outcome-based measures, we recognize that the user experience varies across a continuum. We do not believe that data completeness criteria threshold for patient-reported outcome-based measures would pose additional challenges. Such measures narrow the patient population to those that would benefit in capturing the patient voice. For example, many of the patient-reported outcome-based measures capture functional assessments that would allow clinicians to adjust their treatment plan to improve the outcomes. In the instance that the assessments are not completed, data completeness would not be impacted, but rather the performance rate would be impacted.

Lastly, we recognize that other CMS quality programs may have different data completeness criteria thresholds. While the commenter did not specify a CMS quality program or outline specific reporting requirements regarding data completeness that differ from MIPS, we believe that reporting requirements for CMS quality programs such as data completeness criteria, data validation, patient population eligible for a measure, measure specification requirements, case minimum standards, or measure exclusions or exceptions are not directly comparable across CMS quality programs. We believe that it is not accurate to characterize one element of a reporting requirement such as data completeness criteria threshold with an assertion that an overarching reporting burden for a CMS quality program is reduced if a standard differed from the data completeness criteria threshold of at least 70 percent established under MIPS. We note that reporting requirements may not only differ across CMS quality programs, but reporting requirements may differ by measure within a program. Thus, we believe that the reporting requirements such as the data completeness criteria threshold under other CMS quality programs should not be a factor in determining the data completeness threshold for MIPS as reporting requirements for other CMS quality programs are not directly comparable to the reporting requirements established under MIPS.

Furthermore, we believe that it is critical to increase data completeness thresholds over time to more accurately assess a MIPS eligible clinician's performance on quality measures and prevent any selection bias. A data completeness criteria threshold of less than 100 percent reduces burden and accommodates operational issues that may arise during data collection within the initial years of the program. We have previously provided notice to MIPS eligible clinicians in order for them to

take the necessary steps to prepare for higher data completeness criteria thresholds in future years (82 FR 53632, 83 FR 59758, and 84 FR 62951). We want to ensure that an appropriate, yet achievable, data completeness criteria threshold is applied to all eligible clinicians participating in MIPS.

Comment: A few commenters that did not support the increase of the data completeness criteria threshold of at least 80 percent for the CY 2023 performance period/2025 MIPS payment year indicated that some groups, virtual groups, and APM Entities such as ACOs rely on multiple EHR systems or use a combination of EHR systems and registries for submitting data to MIPS and ACOs. One commenter requested that CMS consider an allowance for groups, TINs within virtual groups, and TINs within ACOs using multiple EHR systems to submit data from each EHR to CMS and for CMS to aggregate the data for such groups. The commenter indicated placing this responsibility on such groups increases the cost of such reporting.

Response: We interpret the comments received to address the technological challenges that some groups, virtual groups, and APM Entities such ACOs experience as they transition from the reporting requirements for the CMS Web Interface to meeting the reporting requirements for eCQMs and/or MIPS CQMs. These challenges include reporting all-payer data in lieu of reporting only Medicare patient data under the CMS Web Interface and meeting higher data completeness criteria.

We recognize that there are technical and operational dynamics that groups, virtual groups, and APM Entities such ACOs must address, particularly the transition of multiple EHR systems to code and capture all-payer data that meets the data completeness criteria for eCQMs and/or MIPS CQMs. To ease the burden of transitioning to using an alternative collection type and/or submission type, we are extending the 70 percent data completeness criteria threshold, as described above. We refer readers to section IV.A.3.d.(1)(d) of this final rule regarding the proposal to extend the CMS Web Interface.

Comment: A few commenters indicated that there may be special circumstances in which clinicians, groups, and virtual groups participating in MIPS should be able to apply for an exemption regarding the data completeness criteria, such as the transition from one EHR system to another EHR system, which makes it difficult to report 12 months of data and meet the data completeness requirement.

Response: We recognize that there are certain circumstances when a MIPS eligible clinician, group, virtual group, or APM Entity may be unable to complete reporting to MIPS due to, for example, extreme and uncontrollable circumstances, hardship, or the unavailability or inapplicability of measures due to practice size or other data limitations. Therefore, under the authority provided in section 1848(q)(5)(F) of the Act, it may be necessary to reweight one or more performance categories. We believe our previously established reweighting policies account for an array of circumstances that may impact the ability to meet reporting requirements for one or more performance categories.

After consideration of the public comments, we are not finalizing our proposals at § 414.1340(a)(4) and (b)(4) to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent for the CY 2023 performance period/2025 MIPS payment year, but finalizing our proposals with modification at § 414.1340(a)(3) and (b)(3) to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years. Specifically, we are finalizing the following proposals with modification:

- At § 414.1340(a)(3), to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs will need to submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer, for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years; and
- At § 414.1340(b)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the CY 2021, CY 2022, and CY 2023 performance periods to which the measure applies for 2023, 2024, and 2025 MIPS payment years.

(d) Groups and Virtual Groups Reporting via the CMS Web Interface

The CMS Web Interface is a collection type through which a group and virtual group with 25 or more eligible clinicians may report data on a set of pre-determined quality measures. For the CY 2021 performance period, the total number of CMS Web Interface measures required to complete reporting on is 10 CMS Web Interface measures (83 FR 59756). In the CY 2021 PFS final rule, the CMS Web Interface was removed as an available collection and submission type under MIPS starting with the CY 2022 performance period (85 FR 84870). In addition, starting with the CY 2022 performance period, we revised the terms collection type and submission type to no longer include the CMS Web Interface measures as an available option. It was our belief that the removal of the CMS Web Interface as a collection and submission type would reduce the potential burden experienced by groups and virtual groups during the COVID–19 PHE. Based on the public comments we received on this proposal in the CY 2021 PFS proposed rule, we believed that the 1-year delay to remove the CMS Web Interface as a collection and submission type would provide stakeholders utilizing the CMS Web Interface sufficient time to prepare and transition to an alternative collection and/or submission type starting with the CY 2022 performance period.

We noted in the CY 2022 PFS proposed rule that, following the close of the data submission period for the CY 2020 performance period (March 31, 2021), stakeholders utilizing the CMS Web Interface had contacted CMS to convey their concerns that technological challenges and resource limitations would prevent them from transitioning to an alternative collection and/or submission type by the CY 2022 performance period (86 FR 39391). Also, they emphasized that some practices continued to endure a negative fiscal impact resulting from the COVID–19 pandemic and need additional time to prepare for a transition to an alternative collection and/or submission type. Such CMS Web Interface users indicated that if CMS extended the availability of the CMS Web Interface for an additional year (the CY 2022 performance period), they would have sufficient time to address the technological challenges such as the implementation of processes to aggregate data within one EHR system or across multiple EHR systems to align with the reporting requirements of another collection type (that is, MIPS CQMs or eCQMs), build and integrate new health IT infrastructures and systems, implement workflows, and train staff on new health IT systems.

In the CY 2022 PFS proposed rule, we recognized that an adequate and sufficient timeframe is a critical factor

in the success of a group or virtual group transitioning to an alternative collection and/or submission type, particularly with such a transition occurring amidst the COVID–19 pandemic (86 FR 39391). We noted that, as CMS Web Interface users had begun to transition to a different collection and/or submission type, the timeframe identified by most CMS Web Interface users (starting with the CY 2022 performance period) in response to the proposal in the CY 2021 PFS proposed rule did not provide adequate time for CMS Web Interface users to fully transition to an alternative collection and/or submission type. We noted that we considered the concerns expressed by CMS Web Interface users such as the technological challenges that they needed to overcome, their inability to update systems and workflows in time for the CY 2022 performance period, and the cost they bear to mitigate and respond to the COVID–19 PHE.

Due to such concerns, we noted our belief that it is appropriate to reduce the burden of groups and virtual groups at this time by extending the availability of the CMS Web Interface as a collection and submission type for the CY 2022 performance period. We recognized that, while groups and virtual groups are on a continuum regarding their technological readiness to transition to a different collection type, we believed that the availability of the CMS Web Interface for the CY 2022 performance period would reduce burden by providing additional time, and would enable more groups and virtual groups to successfully transition to another collection type by the start of the CY 2023 performance period. Moreover, we wanted to ensure that groups utilizing the CMS Web Interface were prepared to participate in MIPS as it evolves from traditional MIPS to MVPs. We noted that such groups could begin voluntary participation in an MVP as MVPs become available starting with the CY 2023 performance period.

Thus, we proposed at § 414.1325(c)(1) to remove the CMS Web Interface measures as a collection type/submission type starting with the CY 2023 performance period. Additionally, we proposed at § 414.1305 to modify the definition of the terms collection type and submission type to remove the CMS Web Interface measures as an available option starting with the CY 2022 performance period/2024 MIPS payment year. We proposed to modify the definition of ''collection type'' to mean a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years, CMS Web Interface measures; the CAHPS for MIPS Survey; and administrative claims measures. We proposed to modify the definition of ''submission type'' to mean the mechanism by which the submitter type submits data to CMS, including, but not limited to: Direct; log in and upload; log in and attest; Medicare Part B claims; and for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years, the CMS Web Interface.

For the CY 2022 performance period, the total number of CMS Web Interface measures required to complete reporting on will be 10 CMS Web Interface measures (83 FR 59713 through 79715 and 59756). In Table Group B of Appendix 1 of the CY 2022 PFS proposed rule, we proposed modifications to the CMS Web Interface measures and in Table Group D of Appendix 1 of the CY 2022 PFS proposed rule, we proposed substantive changes to the CMS Web Interface measures. We believe that it is necessary for the CMS Web Interface measures to be updated to reflect applicable substantive changes for the CY 2022 performance period given that the CMS Web Interface measures have remained the same for 3 consecutive (CY 2019, CY 2020, and CY 2021) performance periods.

We solicited public comment on our proposals: to extend the availability of the CMS Web Interface as a submission and collection type for the CY 2022 performance period, which would sunset and remove the collection and submission type under MIPS starting with the CY 2023 performance period; and update the CMS Web Interface measures with substantive changes for the CY 2022 performance period as outlined in Table Group D of Appendix 1 of the CY 2022 PFS proposed rule. The following is a summary of the public comments received regarding the proposal to extend availability of the CMS Web Interface as a collection and submission type for the CY 2022 performance period. For a summary of the comments received pertaining to the proposed substantive changes to the CMS Web Interface measures for the CY 2022 performance period, we refer readers to Table Group D of Appendix 1 of this final rule.

Comment: Most commenters supported the proposal to extend the CMS Web Interface for an additional year as a collection and submission type and thereby, to allow its use for the CY 2022 performance period. The commenters indicated that the additional year would provide them with the needed time to transition to a different collection and/or submission type.

Response: We appreciate the support from commenters.

Comment: Some commenters supported the eventual sunset of the CMS Web Interface as a collection and submission type, but recommended that CMS extend the availability of the CMS Web Interface by 2 additional years, not one. The commenters indicated that such an extension would provide groups and virtual groups with more time to transition to alternative collection and/or submission types.

A few commenters expressed concern that the sunset of the CMS Web Interface, starting with the CY 2023 performance period, would increase undue burden on groups and virtual groups as it would require them to invest in resources and staffing to prepare their EHR systems to collect and report quality data using a different collection and/or submission type such as eCQMs or MIPS CQMs amidst the COVID–19 pandemic and PHE. The commenters indicated that as groups and virtual groups navigate the COVID–19 pandemic, they are enduring resource and staffing (clinical and non-clinical staff) shortages, which exacerbates the difficulties of preparing to transition to using an alternative collection and/or submission type.

Response: In considering the concerns expressed by CMS Web Interface users such as the technological and staffing challenges that they would need to overcome and the fiscal implications they endure from mitigating and responding to the COVID–19 PHE, we believe that the extended availability of the CMS Web Interface as a collection and submission type for one additional year reduces burden and provides sufficient time for the transition to different collection and/or submission types for the CY 2023 performance period. In assessing a timeframe to transition to a new collection, based on an assumption that a group or virtual group is not prepared to collect and report data using EHR technology, we believe that it would be approximately 18 months for a group or virtual group to prepare and implement EHR technology to report data, which would enable a group or virtual group to use a collection/submission type for reporting on eCQMs or MIPS CQMs. With the extended availability of the CMS Web Interface, groups and virtual

groups would have more than 18 months to prepare and transition to using another collection and/or submission type.

Comment: One commenter did not support the sunset the CMS Web Interface as a collection and submission type. The commenter expressed concerns that the transition to utilizing a different collection and/or submission type would require the reporting of all-payer data, in which data would be pulled from an entire clinical patient population, including safety net clinics serving patients with high social determinants of health. Also, the commenter indicated that assessment of performance based on all-payer data may unfairly lower quality scores for some clinicians.

Response: We recognize that the user experience of meeting reporting requirements for the CMS Web Interface differs from the user experience of meeting reporting requirements using an alternative collection type such as eCQMs and/or MIPS CQMs. We believe that the assessment of performance based on all-payer data (compared to reporting Medicare patient data only under the CMS Web Interface) and data completeness criteria (compared to reporting on a sample of Medicare patients for each CMS Web Interface measure) requirements accurately assess the performance of a group or virtual group and avoid selection bias. We have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients. The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure. We do not believe that the assessment of performance should exclude any segment of a patient population based on social determinants of health, but assess performance based on an accurate reflection of a patient population. In order to further account for the dynamics pertaining to social determinants of health, we are seeking to include health equity. As we implement and enhance the inventory of quality measures under MIPS, health equity is an element we are encouraging for inclusion in measure development and would be an item we assess as part of the submission process for the annual Call for Quality Measures.

Based on the information available to us, we do not believe that the assessment of all-payer data, including patients with varying levels of social determinants of health, will negatively skew performance. With measure being risk adjusted and the way in which benchmarks are developed, we believe that social determinants of health will not inadvertently skew performance. For each collection type, specific benchmarks are established using historical data when possible, which allows us to account for the differing means of implementation of a measure for each collection type. Historical benchmarks for QCDR measures, MIPS CQMs, eCQMs, and Medicare Part B claims measures are based on historical performance data. As a result, the performance of each MIPS eligible clinician, group, or virtual group will be assessed relative to their actual performance compared to a benchmark that includes all-payer data, when specified in the measure and collection type.

We recognize that some MIPS eligible clinicians, groups, and virtual groups will experience more challenges than others in meeting the reporting requirements for the quality performance category under MIPS, particularly MIPS eligible clinicians, groups, and virtual groups considered to be small practices for purposes of MIPS (15 or fewer clinicians). We note that, in order to enhance the user experience for such small practices, we established the Medicare Part B Claims collection type. The assessment of performance for such measures is based on Medicare Part B claims data, not all-payer claims data. As we evolve the implementation of MIPS, we continue to assess means for reducing burden and improving user experience.

After consideration of the public comments, we are finalizing our proposal to sunset the CMS Web Interface measures as a collection type/submission type. We note that the availability of the CMS Interface as a collection type/submission type differs for groups and virtual groups participating in MIPS than for APM Entities participating in the Shared Savings Program and meeting the APM Performance Pathway reporting requirements. While the availability of the CMS Web Interface as a collection type/submission type for groups and virtual groups participating in MIPS is through the CY 2022 performance period, the availability of the CMS Web Interface for APM Entities (specifically, Shared Savings Program ACOs meeting the APM Performance Pathway reporting requirements only) is through the CY 2024 performance period. In section III.J.1.c. of this final rule, we discuss the final policies regarding the reporting requirements for Shared Savings Program ACOs reporting under the APM Performance Pathway, which include the extended availability of the CMS Web Interface as a collection type/submission type to the CY 2024 performance period.

In accordance with our finalized policy, we are finalizing conforming amendments to §§ 414.1305 and 414.1325(c)(1). Specifically, we are finalizing § 414.1305 with modification to amend the definition of ''collection type'' to mean a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS Survey; and administrative claims measures. Paragraph (1) of the amended definition of ''collection type'' provides that for the CY 2021 through CY 2024 performance periods/2023 through 2026 MIPS payment years, collection types include CMS Web Interface measures for APM Entities reporting through the APM Performance Pathway in accordance with § 414.1367. Similarly, we are finalizing to amend the definition of ''submission type'' to mean the mechanism by which the submitter type submits data to CMS, including, but not limited to: Direct; log in and upload; log in and attest; Medicare Part B claims; and the CMS Web Interface (except as provided in paragraph (5)(i) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years). Paragraph (5)(i) of the amended definition of ''submission type'' provides that for the CY 2021 through CY 2024 performance periods/2023 through 2026 MIPS payment years, submission types include the CMS Web Interface for APM Entities reporting through the APM Performance Pathway in accordance with § 414.1367. We note that our conforming amendments refer to APM Entities rather than Shared Savings Program ACOs to maintain consistency with existing regulatory terminology. However, no substantive distinction is intended as no APM Entities other than Shared Savings Program ACOs report via the CMS Web Interface for purposes of the APM Performance Pathway. Finally, we are finalizing § 414.1325(c)(1) with modification to remove the reference to the sunset of the CMS Web Interface measures as a collection type/submission type because § 414.1325(c)(1) is expressly listing data

''submission types'' for groups, and our sunsetting policies are now incorporated into the amended definitions of ''collection type'' and ''submission type''. Accordingly, it is unnecessary to restate them in § 414.1325(c)(1).

(e) Selection of MIPS Quality Measures

Previously finalized MIPS quality measures can be found in the CY 2021 PFS final rule (85 FR 85045 through 85377); CY 2020 PFS final rule (84 FR 63205 through 63513); CY 2019 PFS final rule (83 FR 60097 through 60285); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). Proposed changes to the MIPS quality measure set, as described in Appendix 1 of the CY 2022 PFS proposed rule, include the following: the addition of new measures; updates to specialty sets; removal of existing measures, and substantive changes to existing measures. For the CY 2022 performance period, we proposed a measure set of 195 MIPS quality measures.

The new MIPS quality measures we proposed for inclusion in MIPS for the CY 2022 performance period and future years can be found in Table Group A of Appendix 1 of the CY 2022 PFS proposed rule. For the CY 2022 performance period, we proposed five new MIPS quality measures, which includes 2 administrative claims measures. Also, in Table Group AA of Appendix 1, we outlined 1 potential new MIPS quality measure, the COVID–19 Vaccination by Clinicians measure, which we intended to propose in a future rulemaking cycle. We refer readers to the CY 2022 PFS proposed rule for our request for information pertaining to the COVID–19 Vaccination by Clinicians measure specifications (86 FR 39393 through 39394; and for reference, available in section IV.A.3.d.(1)(f) of this final rule).

In addition to the establishment of new individual MIPS quality measures, we also develop and maintain specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice. Our proposals for modifications to existing specialty sets and new specialty sets were outlined in Table Group B of Appendix 1 of the CY 2022 PFS proposed rule. We noted that specialty sets may include: new measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of existing MIPS quality measures. Specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 7, 2021, we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 6 of MIPS under the Quality Payment Program.[226] These recommendations were based on the MIPS quality measures finalized in the CY 2020 PFS final rule and the 2020 Measures Under Consideration List; they recommend to add or remove current MIPS quality measures from existing specialty sets, or to create new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with were proposed in the proposed rule.

In addition to establishing new individual MIPS quality measures and modifying existing specialty sets and new specialty sets as outlined in Tables Group A and Group B of Appendix 1 of the CY 2022 PFS proposed rule, we refer readers to Table Group C of Appendix 1 of the CY 2022 PFS proposed rule for a list of quality measures and rationales for removal. For the CY 2022 performance period, we proposed to remove 19 MIPS quality measures: 1 MIPS quality measure that is duplicative to another current MIPS quality measure; 9 MIPS quality measures that do not align with the Meaningful Measure Initiative; 5 MIPS quality measures that are no longer stewarded or maintained; and 4 MIPS quality measures that are under the topped out lifecycle. We have continuously communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. We noted our belief that our proposal to remove the quality measures outlined in Table Group C of the CY 2022 PFS proposed rule would lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to removing measures should occur through an iterative process that includes an annual review of the quality measures to determine whether they meet our removal criteria.

Lastly, MIPS quality measures with proposed substantive changes can be found in Table Group D of Appendix 1 of the CY 2022 PFS proposed rule. We proposed substantive changes to 84 MIPS quality measures. On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive. Section 1848(q)(2)(D)(i)(II)(cc) of the Act requires all substantive measure changes to be proposed and identified through notice-and-comment rulemaking. In the CY 2017 Quality Payment Program final rule (81 FR 77137), we determined that substantive changes to measures (that is, measure specifications, measure title, and domain modifications) will be identified during the rulemaking process while maintenance changes that do not substantively change the intent of the measure (that is, updated diagnosis and procedure codes, definitions, and changes to patient population exclusions) will not be included in the rulemaking process.

We did not propose any changes to our current approach of identifying substantive measure changes during the rulemaking process. However, in order to more precisely distinguish between substantive measure changes and non-substantive measure changes, we proposed to consider the following criteria for determining whether a measure change is substantive starting with CY 2022 performance period:

- Whether the change causes the measure to be more stringent;
- Whether the change modifies the collection and/or submission types applicable to the measure;
- Whether the change impacts the clinical action and/or outcome of the measure;
- Whether the change increases the burden of the measure;
- Whether the change modifies the premise and/or objective of the measure;
- Whether the change modifies the scope of the measure (such as patient population eligible for the measure or measurement period); and
- Other relevant criteria as may be identified by CMS on a case-by-case basis.

We noted that any substantive change made to a measure would be proposed and identified through notice-and-comment rulemaking. For a substantive change to a measure, we only intend to propose and identify the substantive change as applicable to the appropriate elements (that is, only include substantive changes if it is applicable to the measure specifications, collection type(s), measure description, measure title, etc.) of the measure through notice-and-comment rulemaking. For example, if there is a substantive change to a

[226] CMS, Quality Payment Program listserv, ''CMS is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2022 Program Year of MIPS'' (January 7, 2021).

measure in the measure specifications that changes the premise/overarching objective (that is, a screening measure that is changed to include treatment and follow-up) and/or clinical action of the measure, such substantive change would be proposed and identified through notice-and-comment rulemaking. We do not believe that it is necessary to propose or identify through notice-and-comment rulemaking changes to a measure that do not meet any of the above substantive change criteria for measures (for example, a modification to the title or domain that do not change or impact any element of the measure). We generally consider such changes to be non-substantive and would be published in subregulatory guidance. We noted our belief that it is important to provide a clear delineation of substantive changes to be included in a rulemaking process versus our previous approach, which generally included any changes made to measure specifications, measure titles, and domain modifications (81 FR 77137). We found that many changes made to measures based on our previous approach were not substantive in nature and should not be classified as substantive changes. Thus, we believe that establishing the substantive change criteria for measures provides further clarity as to what we consider a substantive change, particularly as it relates to how a change affects and/or impacts a measure. We noted that measures identified as having a substantive change would generally have an update to their applicable benchmark. For measures that meet the data completeness criteria, but do not have a benchmark or meet a case minimum (class 2 measures), we noted that they would be scored in accordance to our proposed scoring policy as outlined in the CY 2022 PFS proposed rule (86 FR 39433 through 39434).

In addition, we intended to align the utilization of terminology across CMS programs when appropriate and applicable for consistency purposes. Since the implementation of MIPS, we have referenced the term patient reported outcome as a type of measure, which is similar, but not exact to a measure type categorization reference in the CMS Blueprint. In order to align the categorization reference of such measure type under MIPS with the CMS Blueprint terminology, we are modifying how the term is referenced as a measure type under MIPS and will reference such measure type as patient-reported outcome-based performance measure (PRO–PM) starting with the CY 2022 performance period. We believe that such modification does not have any substantive implications, but is merely a minor technical change of semantics that enables the utilization of consistent terminology across CMS programs when referencing such measure type.

We refer readers to Table Groups A through D of Appendix 1 of this final rule for a summary of public comments received regarding the proposed changes to the MIPS quality measure set for the CY 2022 performance period and our final decisions. For the CY 2022 performance period, we are finalizing with modification a measure set of 200 MIPS quality measures, which includes the following:

- Implementation of 4 new MIPS quality measures (includes one administrative claims measure);
- Removal of 13 MIPS quality measures: 1 MIPS quality measure that is duplicative to another current MIPS quality measure; 4 MIPS quality measures that do not align with the Meaningful Measure Initiative; 5 MIPS quality measures that are no longer stewarded or maintained; and 3 MIPS quality measures that are under the topped out lifecycle; and
- Substantive changes to 87 MIPS quality measures.

We solicited public comment on our proposal to establish measure substantive change criteria that would be utilized by CMS to identify such measures. The following is a summary of the public comment received.

Comment: One commenter supported the intent and criteria for determining whether a substantive change has been made to a quality measure and encouraged CMS to consider the definition of a substantive change to include any modification to a measure that impacts performance scores that may likely be due to the changes in the measure construct or coding and not clinician performance.

Response: We appreciate the support from the commenter. However, when we assess whether or not a change to a measure is substantive, the factors we consider assess how the measure is changed. We recognize that a substantive change may affect performance, but we do not believe that an impact to performance scores necessitates for a change to a measure to be classified as substantive. We do not believe that it is appropriate for the determination of whether or not a measure change is substantive to be based on whether performance scores would increase or decrease. Rather, we believe that the determination of whether a measure change is substantive should pertain to elements of the measure and not to the spectrum of performance on the measure. If a change to a measure is substantive such as causing the measure to be more stringent, we believe that such dynamic reflects a change to an element in the measure. If the performance scores increase or decrease due to changes in a measure, we believe that performance scores reflect how measure requirements are met. As we assess whether or not a change to a measure is substantive, the premise of our assessment and analysis stems from how a measure is changed such as the construct of a measure, coding updates, and if the measure is more stringent or increases burden; the premise of our assessment and analysis does not stem from whether or not the measure substantive change will impact performance because we believe that it is inherent for a measure substantive change to have a potential effect on performance. We assess performance based on whether or not measure requirements for a clinical quality action is met.

After consideration of the public comment, we are finalizing our proposal to establish measure substantive change criteria that will be utilized by CMS to identify such measures. CMS will consider the following criteria for determining whether a measure change is substantive starting with CY 2022 performance period:

- Whether the change causes the measure to be more stringent;
- Whether the change modifies the collection and/or submission types applicable to the measure;
- Whether the change impacts the clinical action and/or outcome of the measure;
- Whether the change increases the burden of the measure;
- Whether the change modifies the premise and/or objective of the measure;
- Whether the change modifies the scope of the measure (such as patient population eligible for the measure or measurement period); and
- Other relevant criteria as may be identified by CMS on a case-by-case basis.

(f) Request for Information Regarding the COVID–19 Vaccination by Clinicians Measure

As of July 7, 2021, the Centers for Disease Control and Prevention (CDC) reported that there are 33,582,352 cases of coronavirus disease 2019 (COVID–19) and 603,656 deaths [227] caused by COVID–19 at the time of publication of

[227] *https://covid.cdc.gov/covid-data-tracker/#cases_totalcases.*

the CY 2022 PFS proposed rule and subject to change. In 2020, COVID–19 was the third leading cause of death in the United States, exceeded only by cancer and heart disease.[228] Widespread vaccination to prevent COVID–19 will be critically important to stemming the morbidity and mortality caused by this disease. Three vaccines have received the FDA emergency use authorization (EUA) for the prevention of COVID–19 (Pfizer-BioNTech, Moderna, and Janssen) as of July 7, 2021 (86 FR 39393). As noted in the CY 2022 PFS proposed rule, the EUA allows the Pfizer-BioNTech, Moderna, and Janssen COVID–19 vaccines to be distributed in the United States.[229] As of July 7, 2021, 331,651,464 vaccine doses have been administered (86 FR 39393).[230] However, in this final rule, we note that on August 23, 2021, the FDA approved the first COVID–19 vaccine. The vaccine has been known as the Pfizer-BioNTech COVID–19 Vaccine, and will now be marketed as Comirnaty, for the prevention of COVID–19 disease in individuals 16 years of age and older.[231]

To address this urgent PHE, CMS began the development of the COVID–19 Vaccination by Clinicians measure for MIPS, which would assess the percentage of patients aged 18 years and older seen for a visit during the measurement period who have ever completed or reported having ever completed a COVID–19 vaccination series. The measure would be reported by MIPS eligible clinicians as a MIPS CQM to determine the percentage of patients seen for a visit during the measurement period who have ever completed or reported having ever completed a COVID–19 vaccination series, either from the submitting MIPS eligible clinician or another MIPS eligible clinician. The measure as specified at the time of publication of the CY 2022 PFS proposed rule (see Table Group AA of Appendix 1 of the CY 2022 PFS proposed rule) would allow clinicians to determine a patient's vaccination status and deliver a vaccine dose, if possible and appropriate. The measure is intended to capture whether or not clinicians take an appropriate step to ensure that their patients are vaccinated. Patients receiving hospice care at any time during the measurement period would be excluded from the patient population of measure. The measure would allow for an exception if the COVID–19 vaccination series was not administered, as documented by a MIPS eligible clinician, due to patient contraindication, or vaccine availability.

Between November of 2020 and January of 2021, we solicited feedback on the measure from measure-specific multi-stakeholder expert workgroups, specifically the Measure Application Partnership (MAP) coordinated through the National Quality Forum.[232] While the MAP agreed that the COVID–19 Vaccination by Clinicians measure could be an important tool to: Support vaccine uptake by collecting valuable information from the field, provide feedback to clinicians, and help identify where to conduct targeted education and outreach to limit the spread of infections, the MAP expressed concerns regarding the following elements of the measure: The patient population that would be assessed to measure performance (the inclusion of assessing patients who received 1 dose of a COVID–19 vaccine versus only assessing patients who received a complete COVID–19 vaccination series), and lack of available evidence and clinical guidance for vaccine administration (the feasibility of implementing the measure given the limited vaccine supply and availability, and the potential inconsistencies and discrepancies derived from the novelty of data collection and reporting for COVID vaccinations). We seek to mitigate such issues by obtaining further information and feedback from additional stakeholders. We intend to utilize the obtained information and feedback to inform measure specification improvements that would be implemented for a future performance period.

We solicited public comment on the draft COVID–19 Vaccination by Clinicians measure specifications, which is available on the Quality Payment Program website in the Resource Library located at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1471/Draft%20COVID-19%20Vaccine%20Specs.pdf.*

Specifically, we solicited feedback on the following questions. Should the measure assess whether or not patients completed a COVID–19 vaccination series to capture provision of effective clinical care and why? Given that there are differences in the age ranges for patients eligible to receive the various COVID–19 vaccinations (Moderna and Janssen COVID–19 vaccines are authorized for patients ages 18 years and older; Pfizer-BioNTech COVID–19 vaccine is authorized for patients ages 12 and older; and future COVID–19 vaccines may be approved for other age ranges that are implemented after the publication of the CY 2022 PFS proposed rule), is 18 years and older an appropriate initial age threshold for this measure? Given the current COVID–19 PHE and the intent of the measure, should this measure be mandatory for reporting in a future year? If this measure would be mandated as a required measure for reporting purposes under MIPS, what issues or concerns would need to be considered and/or mitigated regarding the implementation of the measure in a future year? What are the potential unintended consequences associated with the potential future implementation of the measure as specified in Table Group AA of Appendix 1 of the CY 2022 PFS proposed rule and applicable measure specifications? What are the feasibility challenges and barriers to implementing the measure? What are the potential options and/or recommendations that we should consider to address and/or mitigate the feasibility challenges and barriers to be experienced during the CY 2022 performance period/2024 MIPS payment year that could be improved upon for the CY 2023 performance period? If this measure would be mandated, how would the collection of the measure data be useful after the CY 2023 performance period/2025 MIPS payment year?

We thank commenters for the feedback that we received. We may consider such information to inform future rulemaking.

(g) Quality Data Submission Criteria

(i) CAHPS for MIPS Background

As part of the CY 2021 PFS final rule (85 FR 84718), we finalized a policy requiring Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs) to report quality data via the Alternative Payment Model (APM) Performance Pathway (APP). Beginning with the CY 2021 performance period/2023 MIPS payment year, Shared Savings Program ACOs are required to field the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS survey as part of the APP. We had previously established in the CY 2019 PFS final rule that MIPS quality benchmarks will be based on collection type, from all available sources,

[228] *https://www.scientificamerican.com/article/covid-19-is-now-the-third-leading-cause-of-death-in-the-u-s1/.*

[229] *https://www.fda.gov/emergency-preparedness-and-response/coronavirus-disease-2019-covid-19/pfizer-biontech-covid-19-vaccine.*

[230] *https://www.cdc.gov/coronavirus/2019-ncov/vaccines/index.html.*

[231] FDA, News Release, ''FDA Approves First COVID–19 Vaccine'' (August 23, 2021) located at *https://www.fda.gov/news-events/press-announcements/fda-approves-first-covid-19-vaccine.*

[232] *http://www.qualityforum.org/map/.*

including MIPS eligible clinicians and APM Entities, to the extent feasible, during the applicable baseline or performance period (83 FR 59842). Given that Shared Savings Program ACOs will now be required to field the CAHPS for MIPS survey as part of the APP, we note that beginning with the CY 2022 performance period/2024 MIPS payment year CAHPS for MIPS survey, the CAHPS for MIPS benchmarks will be calculated based on summary survey measure (SSM) scores from MIPS groups and APM entities (including Shared Savings Program ACOs) that fielded the CAHPS for MIPS Survey in the applicable baseline or performance period. Furthermore, the CAHPS for MIPS SSM scores will be adjusted for patient case-mix using a single case-mix adjustment model that incorporates data from both MIPS groups and APM entities (including Shared Savings Program ACOs) that field the CAHPS for MIPS Survey.

Beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, to further support the alignment of CAHPS for MIPS sampling and scoring procedures between Shared Savings Program ACOs and MIPS groups, we proposed in the CY 2022 PFS proposed rule to adopt certain policies that had been part of the CAHPS for ACOs survey administration process, but had not previously been a part of CAHPS for MIPS. These policies fell into 3 broad categories: Sampling, case mix adjustment, and scoring. Policies related to certified survey vendors rendering the CAHPS for MIPS survey for subgroups were discussed in the proposed rule in section IV.A.3.h. (86 FR 39462 through 39463). We solicited comments on the following proposals related to CAHPS for MIPS.

(ii) CAHPS for MIPS Sampling Specifications

The CAHPS for MIPS Survey is administered to a sample of eligible patients for all Shared Savings Program ACOs and for those MIPS groups that elect the measure. Prior to drawing the sample, patients are excluded from the pool of potential survey recipients (called the sampling frame) for a number of reasons, including if they are known to have died or are known to be institutionalized. Currently, patients are considered institutionalized if 100 percent of their primary care charges are associated with an institutionalized setting during the sampling period. Starting in performance year 2018 under the Shared Savings Program, the CAHPS for ACOs survey additionally flagged patients as institutionalized if their *last* primary care visit during the sampling period was associated with an institutional setting. This change (called the ''last primary care visit rule'') was made to better identify and exclude from the sample, patients likely to be institutionalized at the time the survey is fielded, and by extension, to improve response rates on the survey. This was of particular importance for a few Shared Savings Program ACOs for which large portions of their assigned beneficiaries are in nursing homes. Analysis of the CY 2020 performance period/2022 MIPS payment year CAHPS for MIPS sample found that among the 100 MIPS groups that fielded the survey, less than 1 percent of the survey sample would be lost, on average, due to the application of this additional criterion to identify institutionalized patients. Of the groups fielding the survey in the CY 2020 performance period/2022 MIPS payment year, only 1 would have been excluded from participating in the survey as a result of falling below the minimum sampling threshold due to the expanded definition of institutionalization. Given these findings, which suggest a minimal impact on MIPS group sample sizes and eligibility to field the survey, we proposed beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey to add the ''last primary care visit rule'' as an additional exclusion to sampling for the CAHPS for MIPS survey. We explained that we expected this change would better identify and exclude from the sample those patients likely to be institutionalized at the time the survey is fielded, and by extension, would improve response rates on the survey.

As we explained in the CY 2022 PFS proposed rule, other CMS programs use different CAHPS surveys to gather information on patient experience in a variety of health care settings. The In-Center Hemodialysis (ICH) CAHPS survey is fielded twice per year to patients receiving dialysis treatment at an ICH facility. Previously, patients sampled for the ICH CAHPS survey during the spring implementation were removed from the CAHPS for ACOs sampling frame in an effort to improve response rates to the ICH CAHPS Survey and to avoid burdening patients with multiple surveys. Analyses of the CY 2019 and 2020 performance periods/ 2021 and 2022 MIPS payment years CAHPS for MIPS sampling frames suggest that implementing ICH CAHPS deduplication in CAHPS for MIPS would have only minor impacts on most MIPS groups. Of the groups fielding the survey in the CY 2020 performance period/2022 MIPS payment year, only 1 would have been excluded from participating in the survey due to falling below the minimum sampling threshold following ICH CAHPS deduplication (the same group that would have been excluded due to the ''last primary care visit rule'', above). For the CY 2019 performance period/2021 MIPS payment year, no participating groups would have been excluded. Therefore, we proposed that, beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, we would remove patients who were sampled for the Spring ICH CAHPS survey from the sampling frames for CAHPS for MIPS. We stated that we expected this change would have only a minor impact on the CAHPS for MIPS sampling frame, but would increase response rates to the ICH CAHPS Survey and would avoid burdening patients with multiple surveys.

We received public comments on the CAHPS for MIPS sampling specifications. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed their support for our proposed updates to the CAHPS for MIPS sampling specifications.

Response: We thank the commenter for their support.

After consideration of the public comments, we are finalizing the change to the CAHPS for MIPS sampling specifications as proposed, and beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, we will remove patients who were sampled for the Spring ICH CAHPS survey from the sampling frames for CAHPS for MIPS.

(iii) CAHPS for MIPS Case-Mix Adjustment Model

Under CAHPS for MIPS, we adjust summary survey measure scores for case-mix to promote meaningful comparison of the performance of MIPS groups despite differences in their patient populations (81 FR 77120). The case-mix adjustment model for CAHPS for MIPS includes the following case-mix adjustors: Age; education; self-reported general health status; self-reported mental health status; proxy response; Medicaid dual eligibility; and eligibility for Medicare's low-income subsidy. The CAHPS for ACOs Survey included an additional adjustor, Asian language survey, following prior literature that recommended adjustment for Asian language surveys to account

for cultural differences that affect reporting. The CAHPS for MIPS case-mix adjustment model has historically not included this adjustor because no Asian language surveys have been administered. Because Shared Savings Program ACOs are fielding the CAHPS for MIPS survey as of the CY 2021 performance period/2023 MIPS payment year, we proposed beginning with the CY 2022 performance period/2024 MIPS payment year CAHPS for MIPS survey to add use of an Asian language survey as a case-mix adjustor to the CAHPS for MIPS case-mix adjustment model. As we explained in the CY 2022 PFS proposed rule (86 FR 39395), use of an Asian language survey has been shown to be significantly associated with specific response patterns to a number of survey items that contribute to summary survey measures. In particular, Asian language survey respondents are generally less likely to use responses at the extremes of the scales, which tends to result in lower overall scores compared to patients who respond to English-language surveys. Therefore, it is important to retain use of Asian language survey as a case-mix adjustor for Shared Savings Program ACOs, and also appropriate to include it in the case-mix adjustment model for MIPS groups should Asian language surveys be completed for these groups in the future. Analysis of CY 2019 performance period/2021 MIPS payment year CAHPS for MIPS data found that adding the Asian language survey case-mix adjustor and pooling data from MIPS groups and Shared Savings Program ACOs for the purposes of case-mix adjustment had only a minimal impact on mean scores for MIPS groups, with scores increasing slightly as a result.

We received public comments on the CAHPS for MIPS case-mix adjustment model. The following is a summary of the comments we received and our response.

Comment: A few commenters supported the proposal to include the Asian language survey adjustor in the CAHPS for MIPS case-mix adjustment model.

Response: We thank the commenter for their support.

After consideration of the public comments, we are finalizing our proposal to add use of an Asian language survey as a case-mix adjustor to the CAHPS for MIPS case-mix adjustment model beginning with the CY 2022 performance period/2024 MIPS payment year CAHPS for MIPS survey.

(iv) Scoring CAHPS for MIPS Summary Survey Measures

The CAHPS for MIPS survey contains 10 summary survey measures (SSMs). Of these, 8 are benchmarked and scored while the other 2 (Health Status and Functional Status and Access to Specialists) are unscored and included for informational purposes only. The latter 2 measures had previously been scored but were changed to unscored starting with the CY 2018 performance period/2020 MIPS payment year (82 FR 53720). While Health Status and Functional Status was changed to unscored because it assesses underlying characteristics of a group's patient population and is less of a reflection of patient experience of care with the group, the Access to Specialists SSM was changed to unscored due to historically low reliability and response rates. At the same time this change was made (CY 2018 performance period/2020 MIPS payment year), a shorter, streamlined version of the CAHPS for MIPS Survey was implemented (82 FR 53632). Since the implementation of the shortened survey, which included a reduction in the number of survey items that make up the Access to Specialists SSM, response rates and reliability for this SSM have improved dramatically, with over 80 percent of MIPS groups achieving acceptable reliability on this SSM in the CY 2018, 2019, and 2020 performance periods/2020, 2021, and 2022 MIPS payment years, compared to less than 20 percent in the CY 2017 performance period/2019 MIPS payment year. Therefore, because CMS no longer had analytic concerns about scoring the measure, we proposed in the CY 2022 PFS proposed rule that beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, we would once again benchmark and score the Access to Specialists measure, which would mean there would be 9 SSMs included in the CAHPS for MIPS scoring process, with 1 SSM remaining unscored (86 FR 39395). We solicited comments on this proposed change to the CAHPS for MIPS scoring process.

We received public comments on the scoring of the CAHPS for MIPS summary survey measures. The following is a summary of the comments we received and our response.

Comment: A few commenters supported the proposed change to the CAHPS for MIPS scoring process to include the Access to Specialists Summary Survey Measure (SSM).

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing our proposal that beginning with the CY 2022 performance period/2024 MIPS payment year for the CAHPS for MIPS survey, we will once again benchmark and score the Access to Specialists measure, which means there will be 9 SSMs included in the CAHPS for MIPS scoring process, with 1 SSM remaining unscored.

(2) Cost Performance Category

(a) Background

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, and CY 2021 PFS final rules (81 FR 77162 through 77177, 82 FR 53641 through 53648, 83 FR 59765 through 59776, 84 FR 62959 through 62979, and 85 FR 84877 through 84881, respectively) for a description of the statutory basis and existing policies pertaining to the cost performance category.

In the CY 2022 PFS proposed rule (86 FR 39395 through 39406), we proposed to add 5 new episode-based measures to the cost performance category beginning with the MIPS CY 2022 performance period/2024 MIPS payment year, and to update the operational list of care episode and patient condition groups and codes. Additionally, we proposed a new process for stakeholders to develop cost measures for MIPS. Finally, we proposed to establish criteria for determining whether a cost measure change is considered substantive starting with the MIPS CY 2022 performance period/2024 MIPS payment year. These proposals are discussed in more detail in the following sections.

(b) Addition of Episode-Based Measures

(i) Background

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. We would continue to evaluate cost measures that are included in MIPS on an ongoing basis and anticipate that measures could be added, modified, or removed through rulemaking as measure development continues. Any substantive changes to a measure would be proposed for adoption in future years through notice and comment rulemaking, following review by the Measure Applications Partnership (MAP). The MAP is a multi-stakeholder partnership that provides guidance to CMS on performance measures for use in Federal health programs—more information is available at *https://*

www.qualityforum.org/Setting_Priorities/Partnership/Measure_Applications_Partnership.aspx. The MAP provides an additional opportunity for an interdisciplinary group of stakeholders to provide feedback on whether they believe the measures under consideration are applicable to clinicians and complement program-specific statutory and regulatory requirements. Through its Measure Selection Criteria, the MAP focuses on selecting high-quality measures that address the National Quality Strategy's (NQS) three aims of better care, healthy people/communities, and affordable care, as well as fill critical measure gaps and increase alignment among programs.

We will take all comments and feedback from both the public comment period and the MAP review process into consideration as part of the ongoing measure evaluation process. Some modifications to measures used in the cost performance category might incorporate changes that would not substantively change the measure. Examples of such non-substantive changes may include updated telehealth service codes, diagnosis or procedure codes or risk adjustors. While we address such changes on a case-by-case basis, we generally believe these types of maintenance changes are distinct from substantive changes to measures that result in what are considered new or different measures. However, as described in section 7 of the Blueprint for the CMS Measures Management System Version 16.0 (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf*), if substantive changes to these measures become necessary, we expect to follow the pre-rulemaking process for new measures, including resubmission to the Measures Under Consideration (MUC) list and consideration by the MAP.

In sections IV.A.3.d.(2)(b)(ii) through IV.A.3.d.(2)(b)(iii) of this final rule, we summarize the new measures that will be included in the cost performance category for the MIPS CY 2022 performance period and future performance periods. For the new chronic condition episode-based measures, we provide detail about the measure framework, which lets attributed clinicians or clinician groups know the cost of care that is clinically related to their management of a patient's chronic condition during an episode of care (''episode''). For more information regarding the measure development timeline for the new episode-based measures, we refer readers to the overview in the CY 2022 PFS proposed rule (86 FR 39396 through 39397).

(ii) New Episode-Based Measures for CY 2022 and Future Performance Periods

In this section of this final rule, we discuss the 5 new episode-based measures, including 2 new chronic condition measures, which we proposed to add for the MIPS CY 2022 and future performance periods. These measures are listed in Table 52. The acute inpatient medical condition and procedural measures are based on the previously established framework for episode-based measures, which we described in detail in the CY 2019 PFS final rule (83 FR 59767 through 59773).

Chronic condition episode-based measures expand on the previously established framework for episode-based measures to address unique factors inherent to the continuous nature of chronic disease care management. In section IV.A.3.d.(2)(b)(iii) of this final rule, we provide detail about the proposed episode definition and attribution methodology for chronic condition episode-based measures. After chronic condition episodes are defined and attributed to a clinician group and, or individual clinician, we include items and services furnished during the episode that are clinically related to the care and management of a patient's chronic condition. Items and services may include treatment and diagnostic services, ancillary items (such as medical nutrition therapy and refining and maintenance of a portable pump for diabetes), services directly related to treatment, and those furnished as a consequence of care. The two chronic condition measures specified in this final rule are calculated using claims data from Medicare Parts A, B, and D. Part D costs are included to account for the full range of treatment options used to manage chronic conditions. As with Part A and B payment standardization, Part D costs are standardized to facilitate meaningful comparisons of resource use within the market-based Medicare Part D program by accounting for non-clinical variation in costs. For more detail, the Part D payment standardization methodology is available at *https://resdac.org/articles/cms-price-payment-standardization-overview.* The Medicare Parts A and B payment standardization methodology is also available at *https://resdac.org/articles/cms-price-payment-standardization-overview.*

Similar to other episode-based measures, chronic condition measures include features intended to ensure a more accurate comparison of costs across clinicians. First, we stratify the patient population captured by the measure into smaller, clinically similar patient cohorts. For example, the Diabetes measure separates patients with type 1 and type 2 diabetes, and the risk adjustment model is assessed at the level of each stratification to ensure that only patients with similar case mixes are compared to each other. We note that the term ''stratification'' will be used to describe a portion of a group in relation to the cost performance category and that such term is synonymous with the term ''episode sub-group'' used in the cost measure specification documents and other documents related to the cost performance category. In general, unless otherwise indicated, the term ''episode sub-group'' used in the cost measure specification documents and other documents related to the cost performance category has a different meaning than the term ''subgroup'' that we define under § 414.1305 in this final rule. Second, we standardize episode costs to limit observed differences in costs to those that may result from health care delivery choices. Third, we exclude unique groups of patients from episodes where it may be unreasonable to compare the costs of these patients to the whole cohort. Last, the measures account for patient characteristics that can influence spending and are outside of a clinician's control using risk adjustment. For example, the risk adjustment model is run separately for patients with and without enrollment in a Part D drug plan to account for differences in costs that we might observe between patients enrolled in Part D and those who are not. In addition, the risk adjustment model for chronic condition episode-based measures specified in this rule account for a patient's status as a dual Medicare and Medicaid enrollee. This was based on testing demonstrating that dual status had a notable impact on performance for the two measures. For more information on the chronic condition episode-based measure framework, we refer readers to the Chronic Condition Cost Measure Framework located at *https://www.cms.gov/files/document/chronic-condition-cost-measure-framework-poster.pdf.*

The specifications for all 5 proposed episode-based measures are available at *https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback.* The specifications documents for each measure consist of a methods document

that describes the steps for constructing the measure and a measure codes list file that contains the medical codes used in that methodology. First, the methods document provides details about components of episode-based measures: Identifying patients receiving care, defining an episode-based measure, attributing episodes to clinicians and clinician groups, assigning costs, defining exclusions, risk adjusting, and calculating measure score. For each measure component, the methods document provides detailed methodology describing each logic step involved in constructing the measure. For the chronic condition episode-based measures, the specifications also include an appendix to the methods document which provides additional detail on particular components of the measure construction framework, including the sub-grouping methodology, episode construction and calculation, and attribution to individual clinicians. Second, the measure codes list contains the codes used in the measure specifications, including the episode triggers, attribution, sub-groups, assigned items and services, exclusions, and risk adjustors.

More information about the 5 proposed episode-based measures is available in the measure justification forms, the national summary data report, and the national summary data report addendum with risk adjustment regression results. These documents are available through the MACRA Feedback Page (*https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback*).

In the CY 2022 PFS proposed rule (86 FR 39395 through 39406), we solicited public comments on the 5 proposed episode-based measures, which are listed in Table 52.

TABLE 52: Episode-Based Measures Beginning with CY 2022 Performance Period/2024 MIPS Payment Year

Measure Name	Episode Type
Melanoma Resection	Procedural
Colon and Rectal Resection	Procedural
Sepsis	Acute inpatient medical condition
Asthma/Chronic Obstructive Pulmonary Disease (COPD)	Chronic condition
Diabetes	Chronic condition

We summarize and respond to the public comments on the proposed episode-based measures, which are listed in Table 52, after the discussion of the attribution for the new episode-based measures (that is, in section IV.A.3.d.(2)(b)(iii) of this final rule).

(iii) Attribution

In this section of this final rule, we discuss the attribution methodology for the episode-based measures. In the CY 2020 PFS final rule (84 FR 62962), we established at § 414.1350(b)(8) that beginning with the CY 2020 performance period/2022 MIPS payment year, each cost measure is attributed according to the measure specifications for the applicable performance period. For the proposed acute inpatient medical condition and procedural episode-based measures outlined in Table 52, we refer readers to the measure specifications for the attribution methodology, available at *https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback.* For the proposed chronic condition measures, we use a new attribution framework for identifying and confirming a clinician-patient relationship, which we discuss below. For further detail regarding the specific attribution methodology for the proposed Asthma/COPD and Diabetes measures, we refer readers to the measure specifications for each measure, available at *https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback.*

For chronic condition episode-based measures, we would attribute episodes to the clinician group that renders the services that constitute a trigger event, which is identified by the occurrence of two claims billed in close proximity by the same clinician group. Both claims must have a diagnosis code indicating the chronic disease captured by the measure (for example, type 1 or type 2 diabetes for the Diabetes episode-based measure). In the CY 2022 PFS proposed rule (86 FR 39398), we stated that the first claim must have an E/M code for primary care services and the second claim must have either another E/M code for primary care services or a condition-related HCPCS/CPT code for procedure codes related to the treatment or management of the chronic condition. In this final rule, for the chronic condition episode-based measures (the Asthma/COPD measure and the Diabetes measure referenced in Table 52), we are replacing the term ''primary care services'' with the term ''outpatient services''. We are describing these trigger E/M services as ''outpatient'' rather than ''primary care'' in order to more accurately characterize the nature of the specific E/M codes by referencing the setting rather than a nature of care. We believe that the revised terminology will be more readily understandable. There are no changes to the codes themselves being used in the trigger methodology. We intend to use such revised terminology in the chronic condition episode-based measure specifications, and any other future measures that use the same set of E/M codes, as well as other documents related to the cost performance category starting with the CY 2022 performance period/2024 MIPS payment year. The trigger event opens a year-long attribution window from the date of the initial E/M outpatient service, during which the same clinician group could reasonably be considered responsible for managing the patient's chronic disease. The initiation of the attribution window at the onset of the trigger event ensures that costs are attributed only after the start of the clinician-patient relationship. We could extend the initial attribution window and the clinician group's responsibility by another year each time we see additional E/M codes for outpatient services or condition-related HCPCS/CPT codes for procedure codes related to the treatment or management of the chronic condition that indicate an ongoing clinician-patient relationship. Therefore, the resulting total attribution window could span multiple years and vary in length for different patients. Because the total attribution window could span multiple performance periods, we measure it

incrementally and periodically by dividing it into segments of episodes, which we assess in the performance period in which they conclude. Dividing the total attribution window into episodes allows us to assign costs during the time-period in which the clinician group is responsible for the patient's chronic condition care management.

After we identify the attributed clinician group as described in the previous paragraph, we would attribute the episode to individual clinician(s). For individual clinicians, we would attribute episodes to each MIPS eligible clinician within an attributed clinician group that renders at least 30 percent of qualifying services during the episode. Qualifying services include E/M codes for outpatient services or condition-related HCPCS/CPT codes with a relevant chronic condition diagnosis. We would employ two additional checks to confirm the qualifying clinician's role in the ongoing management of the patient's chronic condition. First, we would check to ensure that the qualifying clinician(s) have rendered at least one E/M code for outpatient services or condition-related HCPCS/CPT code with a relevant diagnosis within 1 year prior to or on the episode start date. This ensures that clinicians are not attributed an episode before they have their first encounter with the patient. Second, we would check whether the clinician(s) have written at least 2 condition-related prescriptions on different days to two different patients during the performance period plus a one-year lookback period. The use of these prescription billing patterns would ensure that we are capturing the clinicians actually involved in providing ongoing chronic care management, rather than clinicians who may have only refilled a patient's prescription once, as a courtesy. MIPS eligible clinicians within an attributed clinician group that render at least 30 percent of qualifying services and meet the two additional checks are considered for attribution. The individual clinician's performance is based on all of the episodes attributed to the individual clinician, whereas the clinician group's performance is based on all of the episodes attributed to the clinician group. If a single episode is attributed to multiple clinicians in a single clinician group, the episode is only counted once toward the clinician group's performance. Additional detail for this attribution methodology is available in the measures specifications for the Diabetes and Asthma/COPD measures located on the MACRA Feedback Page at *https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback.*

To illustrate the attribution rules for chronic condition episode-based measures, we provide an example of a clinical scenario where 3 MIPS eligible clinicians (A, B, and C) are part of the same clinician group. A patient with type 2 diabetes presents to the clinician group to receive services related to their condition. Clinician A bills an initial E/M code for outpatient services related to the patient's diabetes (for example, an office/outpatient visit related to the patient's diabetes). During a follow-up appointment two weeks later, Clinician A bills a HCPCS/CPT code for tests related to the patient's diabetes. We consider the occurrence of these two services to constitute a trigger event indicating the start of a clinician-patient relationship. This trigger event opens a 1-year attribution window from the date of the initial E/M service and the clinician group that rendered the trigger event services would be attributed the Diabetes episode. If in this example, there were a total of 10 clinically related services captured during the episode, and Clinician A rendered 5 of those services, Clinician B rendered 2, and Clinician C rendered 3 of those services, then Clinicians A and C would be considered for attribution since they would have rendered at least 30 percent of qualifying services for the patient. Clinician B would not be considered for attribution. Before attributing the episode to Clinicians A and C, we check (i) whether the clinicians billed at least 1 E/M code for outpatient services or condition-related HCPCS/CPT code with a relevant diabetes diagnosis within 1 year prior to or on the episode start date and (ii) whether they wrote 2 diabetes-related prescriptions on different days for 2 different patients during the performance period plus a one-year lookback period. Assuming Clinician A met these two checks and Clinician C did not, then only Clinician A would be attributed this Diabetes episode. This episode would count towards the Diabetes measure's case minimum for Clinician A, but not for Clinicians B or C. At the group reporting level, the episode will be included in the calculation of the clinician group's measure score and would count towards the measure's case minimum for the clinician group.

The MAP considered these new episode-based measures in detail. For a full discussion on the MAP's evaluation of the measures, please see the description in the CY 2022 PFS proposed rule (86 FR 39399 through 39401).

We received public comments on the 5 new episode-based measures proposed in the CY 2022 PFS proposed rule (86 FR 39395 through 39403), which are listed in Table 52. The following is a summary of the comments we received and our responses.

Comment: Many stakeholders supported our proposal to include the 5 new episode-based measures in the MIPS program starting with MIPS CY 2022 performance period/2024 MIPS payment year. One commenter expressed appreciation for the transparent and efficient measure development process that incorporated input from various stakeholders through several different committees. Another commenter supported the development of episode-based measures as these include only the costs within the reasonable influence of the clinician.

Response: We thank commenters for their support of the measures and the robust measure development process.

Comment: Several commenters stated that there are no episode-based measures applicable to their specialties and also expressed concern that the population-based measures are not well-suited to assess the care provided within their specialty. Commenters highlighted the following specialties as needing cost measures: Occupational therapists, rheumatologists, radiologists, emergency clinicians. Commenters also provided suggestions of potential measure concepts within each respective scope of care. These include breast cancer screening or incidental findings from imaging for diagnostic radiologists, and a measure for clinical screening, diagnostic testing, and stabilization in the emergency department. One commenter believes that additional cost measures are needed for retina specialists, and another commenter requested the development of a low back pain measure to support the Low Back Pain MVP. One commenter urged CMS to develop more episode-based cost measures as rapidly as possible to address gaps in measurement.

Response: We thank commenters for their input and will take these suggestions into consideration during future waves of measure development. One of the criteria that we consider in prioritizing measure development is to address measurement gaps. When identifying measurement gaps, we consider clinical areas where specialties are not captured by the current set of measures. We have started to work on addressing these gaps that the commenters have identified. We note

that while there is no MVP specific to low back pain proposed in the CY 2022 PFS proposed rule, there are measures under development that address the management of low back pain (including the care provided by therapists) and focus on emergency medicine care. We expect the measures to undergo field testing in early 2022 and encourage stakeholders to provide feedback on those measures during that period. Future waves of measure development will also consider measurement gaps and the needs of potential MVPs. We also take into account other factors in measure prioritization, such as the opportunities for improvement and the potential for impact by covering a large share of Medicare cost. Additionally, we disagree that the population-based measures are not well-suited to assess care. As broadly applicable cost measures, the total per capita cost and Medicare Spending Per Beneficiary Clinician measures encourage clinicians to coordinate with other clinicians while treating a patient to improve overall cost performance. We also note that stakeholders can engage in their own cost measure development to submit measures (please see more information on the cost measure development process by stakeholders in section IV.A.3.d.(2)(c) of this final rule. As part of this process, we would publish materials outlining measurement gaps. Stakeholders can find summary of feedback on specific cost measurement gaps in the Wave 4 Public Comment Summary Report (*https://www.cms.gov/files/document/wave-4-public-comment-summary.pdf*) available on the MACRA Feedback page, and in the July 2021 Physician Cost Measures and Patient Relationship Codes TEP Summary Report (*https://www.cms.gov/files/document/physician-cost-measures-and-patient-relationship-codes-pcmp-technical-expert-panel-summary-report.pdf*) available on the CMS' TEP Current Panels website.

Comment: One commenter stated that the current measure development process is structured in a way that requires clinical experts to follow a single framework that does not account for the clinical condition or patient population, so the commenter disagreed that physician cost, quality and value of care can be evaluated using this approach. One commenter appreciated that CMS is introducing MIPS Value Pathways to better align cost and quality measures.

Response: We disagree with the commenter that the framework used to develop episode-based measures does not take into account the condition or patient population of interest. Episodes span a wide range of clinician-patient relationships, including acute inpatient conditions (for example, pneumonia hospitalization), chronic diseases (for example, diabetes management), and procedures (for example, hip replacement surgery), and the corresponding cost measure frameworks account for the differences in these clinician-patient relationships. Additionally, clinical subcommittees provide detailed input on measure specifications, which often include the components of the measure framework. Currently, there are 5 types of episode groups that serve as the basis for cost measures: (i) Procedural; (ii) acute inpatient medical condition; (iii) chronic conditions; (iv) therapy; and (v) emergency medicine. Please note that the therapy and emergency medicine frameworks are currently in development, and will undergo field testing in early 2022.

Additionally, to account for heterogeneity for patients with different cost profiles, we use various methods, such as episode subgroups (to compare episodes only with other episodes within that same episode subgroup), measure-specific risk adjustors (to predict expected episode cost based on patient or other characteristics that are out of the clinicians' reasonable influence and that may have an effect on episode cost), and episode-level exclusions (to remove episodes due to events or characteristics observed prior to or during the episode). Additionally, episode-based cost measures focus on resource use related to the treatment of a specific condition or procedure, by only including costs related to the condition under evaluation and attribute to multiple clinicians involved in this care, promoting collaborative care.

Finally, we agree with the commenter that to assess value, one needs to determine both quality and costs of care, and we appreciate the commenter acknowledging that CMS is introducing MIPS Value Pathways that would align episode-based measures with related quality measures. We agree with the importance of the MVPs as this alignment between episode-based measures and related quality measures will help further incentivize the transition from FFS to value-based care. As part of the new cost measure development process (please see section IV.A.3.d.(2)(c) of this final rule for more information), we encourage cost measures to be developed in a way that links and aligns cost and quality together to drive value, particularly in consideration of MVP development, while maintaining CMS priorities and meeting the standards/criteria outlined for cost measure development. The episode-based cost measures provide a nuanced examination of resource use that can be used alongside quality metrics to identify opportunities to improve the value by capturing costs that are clinically related to the care being delivered within a given patient-clinician relationship of care delivered to patients.

Comment: Some commenters stated that the measures should include social risk factors in the risk adjustment model. A commenter suggested that CMS explore alternative risk adjustment methodologies that do not rely on the HCC scores, while another stated that they believed that the risk adjustment model has not been adequately developed by CMS for cost measures.

Response: Each measure's risk adjustment model employs a common starting point of the CMS–HCC model, but the measure-specific expert workgroups considered enhancements to the model through the addition of risk factors specifically adapted for each episode group. The measure development contractor provided empirical analyses stratifying patient (or episode) cohorts of interest to inform the workgroup members' considerations of how particular factors should be accounted for in each measure's risk adjustment model. Workgroup members also considered patient characteristics, factors outside of the influence of the attributed clinicians, or any other measure-specific factors that would help prevent unintended consequences. We will continue to consider incorporating additional data sources in risk adjustment and welcome feedback on potential alternatives.

We consider the inclusion of social risk factors in risk adjustment based on the testing results for each measure. The Asthma/COPD and Diabetes cost measures include a risk adjustor for dual eligibility. This is based on extensive testing during the measure development process where these two chronic condition measures showed a greater impact from social risk factors than other measures. The measure development contractor conducted analyses to assess the impact of the following social risk factors: Income, education, employment, race, sex, and dual-eligibility status. For the Sepsis, Melanoma Resection, and Colon and Rectal Resection measures, the inclusion of social risk factors had minimal impact on the measures. For the two chronic condition measures, dual eligibility had an impact on the

measures; the other social risk factors tested had minimal impact beyond dual eligibility. Based on these results, we believe that it is necessary and appropriate to adjust for dual eligibility for the Asthma/COPD and Diabetes cost measures. Discussion of these results can be found in the measure justification form for the 5 episode-based measure on the MACRA Feedback Page (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html*). We will continue to monitor the effect of social risk factors on the measures on an ongoing basis.

Comment: Two commenters stated that the attribution method has not been adequately developed by CMS for cost measures, but did not provide additional detail.

Response: We appreciate the concern, and note that the attribution methodology has been developed with extensive stakeholder input to ensure that it captures clinician-patient relationships for the specific type of care being assessed. For instance, the attribution methodology for the Diabetes and Asthma/COPD measures reflects input from a TEP on the overall methodology and from a specific workgroup for each of the measures to determine details such as the list of codes to identify the start of a care relationship for the condition of focus. We encourage stakeholders to review the measure specifications, testing materials, and meeting summaries if there are additional concerns about the development of the attribution methodology for the cost measures.

Comment: One commenter stated that the most appropriate level of attribution for the measures is at the group practice/clinical team level.

Response: Generally, clinicians participating in MIPS can choose whether to report at the individual clinician or clinician group level. Thus, we believe it is important to allow for cost assessment at both levels of reporting, so the cost measures contain both individual clinician and clinician group level attribution methodologies.

Comment: Several commenters agreed with the comments brought up by the MAP (that is, correlations with quality measures, NQF endorsement, impact of upstream/high quality care and downstream costs) for the Diabetes, Asthma/COPD, and Sepsis measures. One commenter indicated that those concerns from the MAP need to be carefully monitored. Another commenter urged CMS to make NQF endorsement mandatory prior to finalizing any measures in the MIPS program. One commenter expressed concern about the cost measures used in the MIPS cost performance category in general, and asked CMS to not finalize the 5 new episode-based measures at this time. Finally, another commenter requested additional analyses for all cost measures in development that would look into the relationship between the cost and related quality measures. The commenter also stated that the cost measures need to be more actionable, and that CMS did not directly address one of the MAP's concerns for the Asthma/COPD and Diabetes measures on the examples of the connection between upstream medical interventions and downstream costs, as CMS did not provide any supporting data.

Response: We believe we have addressed the concerns raised by the MAP (as discussed in detail at 86 FR 39399 through 39401 of the proposed rule). The MAP's mitigation factors focused largely on testing, the results of which are publicly available in the testing updates document available on the MACRA Feedback Page (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html*). These results directly address the concerns raised by the MAP regarding the relationship between cost and quality metrics, coding variation for the Sepsis measure, and clarifying that the role of cost measures is not to dictate clinical practice but to accurately reflect it. To address the MAP's mitigation point of NQF endorsement, we plan to submit all 5 episode-based measures to a future endorsement cycle; however, NQF endorsement is not required for cost measures to be implemented in the program. We believe that the extensive testing (including national field testing), expert clinician input, feedback from individuals with lived experiences of the conditions in question, the NQF's review through the MAP pre-rulemaking process that focuses on the use of the measure within a program, and numerous opportunities for public comment ensure that the newly developed measures are ready for implementation in MIPS. Given this robust development, testing, and review processes, we do not believe it appropriate to delay implementation for further NQF review.

We consider the importance of care that is assessed by the Diabetes, Asthma/COPD, and Sepsis episode-based measures, the potential for these measures to be impactful given the number of episodes, and the need for more episode-based measures, and believe that these measures play an important role in expanding the MIPS cost measure inventory and in moving towards the statutory goal of covering 50 percent of Medicare Parts A and B spending. Finally, we thank the commenter for the suggestion to conduct more extensive analyses looking at the relationship between cost and quality measures, including examining the correlations for clinicians with low versus high cost or quality measure scores. Regarding actionability of the measures and providing supporting data to address the MAP's concern about the connection between upstream medical interventions and downstream costs, we would like to clarify that we gathered input from expert clinicians and available literature to outline the opportunities that clinician have to take action and improve their performance on the Asthma/COPD and Diabetes measures. For more information please see the Measure Justification Forms available on the MACRA Feedback Page (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html*). This document cites evidence for the measures' focus based in clinical guidance and current literature.

Comment: A few commenters stated that episode-based cost measures are more appropriate to measure clinician performance on cost than the population-based measures, specifically the total per capita cost measure. Specifically, some commenters have concerns over the attribution methodology for the population-based measures (total per capita cost and Medicare Spending Per Beneficiary Clinician) and the lack of control clinicians have over these measures. One commenter believes that clinicians could be unfairly penalized for successfully improving the utilization of recommended preventive services if total per capita costs are measures in the same year as those services are provided.

Response: We continue to believe that the total per capita cost and Medicare Spending Per Beneficiary Clinician measures provide an important measurement of clinician cost performance (82 FR 53644) and that the measures intent to capture broad, overall care plays a significant role in MIPS to complement the more granular information captured by episode-based measures. By including both episode- and population-based measures in the cost performance category, we are able

to capture more aspects of care and ensure that there is continuity in clinician incentives throughout a patient's care trajectory. Both the total per capita cost and Medicare Spending Per Beneficiary Clinician measures have an important place in cost measurement given that the episode-based measures will only apply to a subset of clinicians at this time. As broadly applicable cost measures, the total per capita cost and Medicare Spending Per Beneficiary Clinician measures encourage clinicians to coordinate with other clinicians while treating a patient to improve overall cost performance. By holding multiple clinicians accountable under the total per capita cost measure, this promotes shared responsibility for a patient's care across primary care and specialties who tend to provide ongoing care. It also includes a specialty adjustment to account for the different scope of care provided by primary care clinicians and specialists. We disagree that the total per capita cost measure would unfairly penalize a clinician for improving the use of preventive services. The total per capita cost measure assesses clinicians' performance for one year following an attribution event, so these longer attribution windows allow the measure to capture the long-term benefits of ongoing primary care management that might not be fully realized within a short period. Using the example from the comment, preventive care services could increase costs when initially provided but could lower costs when measured over a sufficiently long time as downstream costs that usually result from lack of preventive care may be avoided. Additionally, to address stakeholder concerns about clinicians being held accountable for care that is outside their control, the Medicare Spending Per Beneficiary Clinician measure implemented a set of service exclusions. For example, the measure excludes the cost of all hospice services occurring at any time during the episode window. There are also a set of service exclusions specific to each Major Diagnostic Category (MDC) to remove the cost of some unrelated services. The measure also has a revised attribution methodology that involves separate attribution methods for medical and surgical episodes to identify the clinicians who are providing inpatient care. For medical episodes, the measure requires that the TIN bill at least 30 percent of inpatient E&Ms to focus on clinician groups that play a substantial role in inpatient care. For surgical episodes, the measure attribution is based on the clinician billing the procedure code. This attribution methodology appropriately identifies the clinicians who are providing care and reflects the team-based nature of hospital care. Internal medicine clinicians have the largest share of episodes (46 percent), followed by hospitalists (19 percent).

Comment: One commenter urged CMS to recognize that the episode-based measures used in MIPS are valid only for a certain period of time, when they are developed, and that these measures do not account for the changes in treatments that happen over time.

Response: We disagree with the comment that cost measures are only valid when they are newly developed. All cost measures undergo a measure maintenance process (including annual updates and comprehensive re-evaluation) that ensures that measures continue to meet program goals and priorities. This process balances the need to ensure that cost measures continue to meet the measure intent with the priority of providing certainty to stakeholders of what a cost measure entails by avoiding making unnecessary changes, such as those that are not substantiated by evidence. During annual measure updates, we identify potential updates and assess the nature of these updates to determine the appropriate process for implementing substantive and non-substantive changes. These updates take into consideration any changes in payment policies or clinical practices and treatments based on environmental scans, literature searches, stakeholder feedback, and empirical testing. The comprehensive re-evaluation process occurs on a 3-year cycle that is in line with the NQF endorsement maintenance processes and aligns with the CMS Blueprint for measure development.

Comment: One commenter urged CMS to consider a triggering method under which chronic condition episodes would not be triggered by an inpatient stay, so that costs could be included even when an inpatient stay does not occur.

Response: We appreciate this comment on the newly developed chronic condition framework. To clarify, the chronic condition episode-based measure framework does not require an inpatient stay to identify the start of a clinician-patient relationship. Instead, since chronic condition are by definition ongoing, we require two services specific to the care of the condition to occur within a certain period of time (that is, 180 days). One must be a clinician visit, and the other can be either another visit or a service for the treatment of the condition. For example, for the Diabetes measure, these codes could be (i) an office/outpatient visit where the clinician group confirms the patient's type 1 diabetes diagnosis, and (ii) a diabetes self-management training for the patient's' type 1 diabetes. Please find more information on what codes are used to identify the start or continuation of a clinician-patient relationship in the measure-specific codes list files available on the MACRA Feedback page (*https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback*).

Comment: A few commenters opposed the inclusion of Medicare Part D prescription drug costs in the cost measures, as they stated they believe that including those costs would hold attributed physicians accountable for factors that are outside of their control, given that clinicians are not involved in the negotiations of formularies, coverage, and prices. One commenter also opposed the inclusion of Medicare Part B prescription drug costs in the cost measures, noting that inclusion of those costs would penalize physicians for costs over which they have no control.

Response: During the measure development process, our technical expert panel and measure-specific workgroup members recommended the inclusion of Part D costs in measures where Part D prescription drugs are a primary component of care for the relevant condition (for example, the Asthma/COPD, Diabetes, and Sepsis measures). For example, our analyses showed this was the case for the Diabetes measure, with results showing that 71 example of episodes contained Part D services in the episode window and more than 48 percent of episodes including Part D services were billed by an attributed clinician. Furthermore, analyses showed that approximately 62 percent of clinicians observe a change in measure score decile when Part D costs are added to the measure. Similarly, measure-specific workgroups have advised on including Medicare Part B prescription drugs in measures when clinically appropriate.

Importantly, the measures include Part B and Part D costs that have been standardized to remove price variation from non-clinical factors. For Part D costs specifically, by removing this variation, the measures (and the underlying standardization methodology) address concerns expressed by stakeholders during measure field testing that clinicians could be penalized during performance measurement for lacking control or awareness of drug pricing details set by plan and manufacturer negotiations. For

more detail, the Parts A and B payment standardization methodology and the Part D payment standardization methodology are available at *https://resdac.org/articles/cms-price-payment-standardization-overview.*

Comment: One commenter supported the inclusion of the Melanoma Resection measure in the MIPS program, as this measure would provide dermatologists an opportunity to fully participate in the MIPS program.

Response: We thank the commenter for their support.

Comment: A few highlighted the need to ensure that episode-based measures do not penalize clinicians for prescribing new and innovative medicines. Some commenters specifically stated this concern for the Melanoma Resection measure. One stakeholder recommended the removal of Lifileucel, a tumor-infiltrating lymphocyte (TIL) cell therapy from the measure as it could discourage clinicians from using this drug.

Response: Lifileucel is not included in the Melanoma Resection measure. The measure's focus is on resectable melanoma, not for treatment of advanced metastatic disease. For instance, the measure does not include any costs of chemotherapy or immunotherapy services.

More generally, as innovative drugs and treatments become available, we consider them on a case-by-case basis for each measure and whether they are clinically related to the condition in question and whether they are needed to help the measures accurately capture an episode of care. As cost measures include other types of care beyond direct treatment such as downstream complications, they are able to capture improvements that might result from the use of the innovative treatments. As with all other aspects of measure development, we consider unintended consequences and monitor for these through the maintenance processes. Finally, clinician and clinician group performance on cost measures is balanced with their performance on quality measures at the MIPS score level to capture the overall value of care provided to their patients.

Comment: One commenter supported the inclusion of the Sepsis episode-based measure in the MIPS program, as sepsis is an appropriate area of focus given the high impact on the patient population and Medicare costs.

Response: We appreciated the commenter's support for the measure.

Comment: One commenter noted optimism about the Asthma/COPD and Diabetes episode-based measures and was looking forward to potential endorsement of the measures by NQF.

Response: We intend to submit the episode-based measures for NQF endorsement in a future endorsement cycle.

Comment: One commenter did not support the inclusion of the Asthma/COPD measure, and stated they believe it needed additional testing, and was complex and difficult to use; therefore, the commenter urged CMS to postpone the measure's implementation until 2023. The commenter urged CMS to consider the impact of the U.S. West Coast wildfires that placed additional burden on physicians caring for beneficiaries with asthma and COPD, given that those patients required more intensive resource use.

Response: We believe that the measure is ready for implementation as it has undergone a rigorous development, testing, and review process. The Asthma/COPD measure was developed over a period of 18 months involving over 80 technical experts during 4 in-person and virtual meetings, input from a panel of patients and caregivers, and a national field testing. We continue to welcome feedback on how the field-testing period and the development process can be further refined to increase clinician familiarity with this and other cost measures. We also appreciate the commenter's concerns about the Asthma/COPD measure, particularly the increased burden on caring for patients with asthma and COPD due to the west coast wildfires. Under the regulations at § 414.1380(c)(2)(i)(A), clinicians who are subject to extreme and uncontrollable circumstances may submit an application to reweight the cost performance category. In the CY 2018 PFS final rule (82 FR 53780 through 53781), we define ''extreme and uncontrollable circumstance'' as '' rare (that is highly unlikely to occur in a given year) events entirely outside the control of the clinician and of the facility in which the clinicians practices that cause the MIPS eligible clinician to not be able to collect information that the clinician would submit for a performance category or to submit information that the clinician would submit for a performance category for an extended period of time.'' Natural disasters, including wildfires, are examples of such rare events. For more information, please reference the CMS QPP web page (*https://qpp.cms.gov/mips/exception-applications#extremeCircumstancesException-2021*).

After consideration of public comments, we are finalizing the 5 proposed episode-based measures listed in Table 52 as proposed.

(iv) Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve the physician, practitioner, and other stakeholder communities in enhancing the infrastructure for cost measurement, including for purposes of MIPS and APMs. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of an estimated one-half of expenditures under Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from stakeholders, and subsequently, post an operational list of such groups and codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other stakeholders.

In December 2016, we published the Episode-Based Measure Development for the Quality Payment Program (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/Draft-list-of-episode-groups-and-trigger-codes-December-2016.zip*) and solicited input on a draft list of care episode and patient condition groups and codes as required by sections 1848(r)(2)(E) and (F) of the Act. In accordance with section 1848(r)(2)(G) of the Act, in January 2018, we posted an operational list of 8 care episode groups and patient condition groups, which is available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2018-Operational-List-of-Care-Episode-and-Patient-Condition-Codes.zip.* Under section 1848(r)(5)(A)(iii) of the Act, to evaluate the resources used to treat patients with respect to care episode and patient condition groups, the Secretary shall, as the Secretary

determines appropriate, conduct an analysis of resource use with respect to care episode and patient condition groups. In accordance with this section, we used the 8 care episode groups and patient condition groups included in the operational list as the basis for the 8 episode-based measures that were finalized for use in MIPS in the CY 2019 PFS final rule (83 FR 59767 through 59773). In the CY 2020 PFS final rule (84 FR 62968 through 62969), in accordance with section 1848(r)(2)(H) of the Act, we revised the operational list beginning with CY 2020 to include 10 additional care episode and patient condition groups, which served as the basis for the 10 additional episode-based measures that were refined based on extensive stakeholder input and finalized for use in MIPS in that same final rule (84 FR 62979). The operational list as revised in the CY 2020 PFS final rule is available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html.*

Under section 1848(r)(2)(H) of the Act, we proposed to revise the operational list beginning with CY 2022 to include 5 new care episode and patient condition groups, based on input from clinician specialty societies and other stakeholders. These 5 care episode and patient condition groups were included in the draft list that we posted in December 2016 and refined based on extensive stakeholder input as described in the CY 2022 PFS proposed rule (86 FR 39396 through 39397). The codes and logic used to define these episode groups are available on our MACRA Feedback Page at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html.* These care episode and patient condition groups serve as the basis for the 5 new episode-based measures that we proposed in the CY 2022 PFS proposed rule (86 FR 39397 through 39398) and finalized for the cost performance category in section IV.A.3.d.(2)(b) of this rule. We solicited comments on our proposal to revise the operational list to include these 5 new care episode and patient condition groups.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposal to revise the operational list to add 5 new care episode and patient condition groups that served as the basis for the 5 new episode-based measure that we proposed for the cost performance category in the CY 2022 PFS proposed rule.

Response: We appreciate the commenter's support for this proposal.

After consideration of public comments, we are finalizing these revisions to the operational list as proposed.

(v) Reliability and Case Minimum

In this section of the rule, we discuss the case minima for the 5 proposed cost measures, weighing up considerations of reliability standards, the tradeoffs between accuracy and reliability, and the implications of increasing case minima on the extent to which the measure can apply to clinicians participating in MIPS. Reliability is a metric that evaluates the extent that variation in a measure comes from clinician performance (''signal'') rather than random variation (''noise''). Higher reliability suggests that a measure is effectively capturing differences between the clinician and their peer cohort.

In the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77171), we identified reliability levels between 0.4 to 0.7 as moderate and reliability levels above 0.7 as high. In the CY 2017 Quality Payment Program final rule, we also identified a threshold of 0.4 for mean reliability to be applied for measures in the cost performance category to ensure moderate reliability. This aligned with the reliability threshold applied to measures under the Value Modifier program and previous analyses of reliability.[233] We appreciate the concerns commenters had raised that this may be too low and as we stated in the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77171), we continue to work on developing measures with the highest level of reliability that is feasible within the MIPS program and have since continued to monitor the overall scientific evidence on reliability. There are many different interpretations of reliability and what these values represent. Studies have pointed to various standards to indicate sufficient, adequate, moderate, or good reliability across healthcare and other disciplines with performance measures and different methods of estimating reliability.[234] [235] [236] [237] [238] [239] [240] We also monitor the evaluation and standards applied throughout the measure endorsement processes, and note that the endorsement standards state there is no minimum threshold for reliability.[241] As such, we believe that the 0.4 threshold for mean reliability continues to be appropriate for moderate reliability.

Under section 1848(r)(5)(A) of the Act, to evaluate the resources used to treat patients (with respect to care episode and patient condition groups), the Secretary shall, as the Secretary determines appropriate, conduct an analysis of resource use (with respect to care episodes and patient condition groups of such patients) using codes reported on claims. Our approach to cost measurement focuses on defining clinically homogenous patient conditions and care episodes. This ensures that these measures accurately compare clinician performance without the results being solely driven by clinical differences across episodes.

[240] The Department of Education provides the following thresholds: ''Reliability of an outcome measure may be established by meeting the following minimum standards: (a) internal consistency (such as Cronbach's alpha) of 0.50 or higher; (b) temporal stability/test-retest reliability of 0.40 or higher; or (c) inter-rater reliability (such as percentage agreement, correlation, or kappa) of 0.50 or higher.'' (What Works Clearinghouse (WWC) Standards Handbook v4, p.78).

[241] The National Quality Forum (NQF) reviews measures on a case-by-case basis, and has endorsed many types of measures with reliability ranging from below 0.1 and above 0.9, accepting multiple varied reliability testing methods. For example, NQF endorsed the Percent of Residents Who Lose Too Much Weight (NQF #0689) facility-level outcome measure, which had a signal-to-noise ratio of 0.078. Alternatively, NQF has also endorsed the Routine Cataract Removal with Intraocular Lens (IOL) Implantation (NQF #3509) episode-based cost measure with a mean reliability score of 0.94 at the individual clinician level and a 10 episode case minimum.

While limiting the measure scope to improve homogeneity improves the accuracy of assessing cost performance, this also reduces the number of episodes per clinician. Fewer episodes per clinician results in lower reliability compared with global population measures. However, episode-based measures balance this concern using selective service assignment; only including the costs of services that are clinically related to the condition or procedure in the measures' cost calculation improves reliability by keeping the ''signal'' while reducing the ''noise.'' [242] Overall, these measures prioritize capturing clinically appropriate, homogeneous care episodes over achieving results on certain testing mechanisms to meet the statutory objective of episode-based resource measurement and create more actionable measures for clinicians. As such, we continue to evaluate cost measures on a broader range of testing, along with the details of measure construction. For this reason, we continue to caution against placing too much emphasis on reliability results in isolation as we noted in the CY 2018 Quality Payment Program proposed rule (82 FR 30050 through 30051).

As we discussed in the CY 2018 Quality Payment Program proposed rule (82 FR 30050 through 30051), while a higher case minimum generally improves measure reliability, these incremental increases must be considered against decreases in the coverage of the measure. There are several important implications for clinicians and the program. Increasing the case minimum reduces the number of clinicians that can have their performance assessed by that measure. This can limit the applicability of episode-based measures to larger group practices with sufficient case volume, leaving smaller practices and individual practitioners to be assessed only with population-based cost measures. In addition, for measures to have the potential to improve performance, they should apply to as many clinicians as can be reliably measured. Finally, it is important to recall that clinicians receive a cost performance category score which incorporates their scores across all applicable cost measures. Adding more measures that can be used in a category score increases the amount of data used to calculate the category score, which may improve the precision of overall assessment of cost performance. Additional measures also allows us to evaluate clinicians' cost category performance across a broader range of their care practice.

We examined the reliability of the 5 proposed episode-based measures, and Table 53 presents the percentage of TINs and TIN/NPIs that meet the 0.4 reliability threshold and the mean reliability for TINs and TIN/NPIs at our proposed case minimum for each of the episode-based measures. We previously established at § 414.1350(c)(4) a case minimum of 10 episodes for procedural episode-based measures and at § 414.1350(c)(5) a case minimum of 20 episodes for acute inpatient medical condition episode-based measures in the CY 2019 PFS final rule (83 59773 through 59774). For both the proposed Melanoma Resection procedural measure and the Sepsis acute inpatient medical condition measure, we found that the mean reliability for groups and individual clinicians exceeds 0.4 and that the majority of groups and individual clinicians meet the 0.4 reliability threshold when applying the established case minimum for the respective measure types. For the Colon and Rectal Resection procedural measure, at the established 10-episode case minimum for procedural measures, we found that the mean reliability does not exceed 0.4 for individual clinicians and that the majority of groups and individual clinicians do not meet the 0.4 reliability threshold. However, as displayed in Table 53, when the measure's case minimum is raised to 20 episodes, the mean reliability exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. As such, we proposed to raise the case minimum for the Colon and Rectal Resection procedural measure to 20 episodes, and corresponding revisions to § 414.1350(c)(4). For the chronic condition measures, we proposed at § 414.1350(c)(6), a case minimum of 20 episodes. At a 20-episode case minimum, the mean reliability for both measures exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. We believe that calculating the episode-based measures with these case minimums would accurately and reliably measure the performance of a large number of clinicians and clinician group practices.

[242] See for example Sandhu AT, Do R, Lam J, et al. Development of the Elective Outpatient Percutaneous Coronary Intervention Episode-Based Cost Measure. Circ Cardiovasc Qual Outcomes. Mar 2021;14:e006461.

TABLE 53: Percent of TINs and TIN/NPIs that Meet 0.4 Reliability Threshold

Measure name (case minimum)	% TINs meeting 0.4 reliability threshold	Mean reliability for TINs	% TIN/NPIs meeting 0.4 reliability threshold	Mean reliability for TIN/NPIs
Asthma/COPD (20 episodes)	88.23%	0.67	81.66%	0.60
Colon and Rectal Resection (20 episodes)	91.57%	0.56	76.10%	0.45
Diabetes (20 episodes)	82.51%	0.61	78.80%	0.57
Melanoma Resection (10 episodes)	100.00%	0.82	100.00%	0.80
Sepsis (20 episodes)	100.00%	0.68	79.89%	0.47

We received public comments on the reliability and case minimums of the proposed episode-based measures. The following is a summary of the comments we received and our responses.

Comment: A few stakeholders commented that CMS' use of 0.4 as the threshold for mean reliability is insufficient. Commenters urged CMS to increase the case minimums for the cost measures, stating that higher reliability with fewer clinicians being measured would be preferable.

Response: We thank the commenters for their feedback. We refer stakeholders to 86 FR 39400–39402 of the proposed rule where we discuss the 0.4 threshold in detail. As noted, we will continue to monitor the scientific evidence on reliability to consider whether the 0.4 threshold should be increased. At this time, we do not believe that there is sufficient evidence to substantiate a change to this threshold. In finding a balance between reliability and cost measures that have the potential to be impactful, we also consider stakeholder feedback about the need for clinicians to be assessed under episode-based cost measures. Since these measures are designed to be specific to a particular type of care, many clinicians would be attributed fewer of these episodes than of episodes for global or population-based cost measures. Using a moderate reliability threshold ensures the reliability of the measures while also guarding against the unintended consequences of excluding clinicians from episode-based cost measures.

After consideration of public comments, we are finalizing the proposal to raise the case minimum for the Colon and Rectal Resection procedural measure to 20 episodes, and corresponding revisions to § 414.1350(c)(4), as proposed. We are finalizing at § 414.1350(c)(6) a case minimum of 20 episodes for the chronic condition measures, as proposed.

(c) Process for Cost Measure Development by Stakeholders

(i) Background

Since 2017, we have conducted extensive stakeholder engagement to develop episode-based measures that cover a wide range of procedures, conditions, and specialties. This measure development process, as described in the CY 2019 PFS final rule (83 FR 59770), involves the measure development contractor convening hundreds of clinician experts to provide information to prioritize, conceptualize, and specify clinically refined cost measures and conducting national field testing on an 18-month timeline. The process involves engagement activities conducted by the measure development contractor to solicit expert input for measure development, gather feedback from individuals with lived experiences of the conditions in question, and collect stakeholder feedback on draft measure specifications that can inform how the measures can be improved. This approach follows CMS' standardized approach for developing, implementing, and maintaining measures. There are currently 18 episode-based measures in the cost performance category (CY 2020 PFS final rule (84 FR 62979)), and we are adding 5 more as discussed in section IV.A.3.d.(2)(b) of this rule. There are also 2 global or population-based measures, the Medicare Spending per Beneficiary Clinician measure and the total per capita cost measure which were most recently refined in the CY 2020 PFS final rule (84 FR 62969 through 62977).

Many stakeholders have expressed support for episode-based measurement and for a process that prioritizes clinician involvement (as noted in the CY 2018 QPP final rule (82 FR 53645)). In the CY 2021 PFS final rule (85 FR 84879), we noted that commenters expressed interest in expanding the limited inventory of cost measures available to assess cost performance applicable to specialties. Commenters believed that additional episode-based measures would address gaps in cost performance assessment for various specialties. Expanding the range of procedures, conditions, and specialties would enable more MIPS eligible clinicians from different specialties and sub-specialties to have their cost performance assessed under clinically relevant episode-based measures. An increase in the range of cost measures available in MIPS that can be linked with quality measures and improvement activities in future MVPs would support the assessment of clinician value in providing specific types of care.

A process outside of the current development process that would allow stakeholders to develop cost measures could expand the inventory of episode-based measures. However, this process must ensure that any cost measures developed are consistent with the goals of MIPS, align with CMS priorities, and consistent with the Meaningful Measures Framework (more information about the Meaningful Measures Framework can be found at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/*

MMF/General-info-Sub-Page). Episode-based measures developed by stakeholders that meet the standards and criteria we outline in section IV.A.3.d.(2)(c)(iii) for selecting measures would contribute to the target of an estimated 50 percent of expenditures under Parts A and B, as described in section 1848(r)(2)(D)(i)(I) of the Act.

We proposed to establish a process, beginning in CY 2022, for the development of cost measures by stakeholders that would ensure that the cost performance category has consistency across measures. The sections below outline the proposals for the measure prioritization criteria, standards for measure construction, pre-rulemaking submission process and development support, which altogether comprises our proposed process of cost measure development by stakeholders.

(ii) Measure Prioritization Criteria

As described in the CY 2022 PFS proposed rule (86 FR 39396 through 39397) of this rule, the current process for prioritizing cost measures for development involves the measure development contractor identifying candidate clinical areas and episode groups informed by a TEP, patient and family engagement perspective, and clinician stakeholders. Criteria reflecting TEP input have guided strategic decisions and informed clinical subcommittees' considerations for measure prioritization. These criteria include:

- Clinical coherence of measure concept (to ensure valid comparisons across clinicians).
- Impact and importance to MIPS (including cost coverage, clinician coverage, and patient coverage).
- Opportunity for performance improvement.
- Alignment with quality measures and improvement activities to ensure meaningful assessments of value.

To inform cost measure development by stakeholders, we proposed to apply these criteria to an environmental scan to identify a list of priority areas and suggested measures for development. This would ensure that measures developed by stakeholders align with program needs, while also providing flexibility for stakeholders to apply their own clinical expertise when identifying the most important areas for value improvement within the criteria listed above. Stakeholders who choose to develop cost measures can access the Blueprint for the CMS Measures Management System at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint* and the Meaningful Measures Framework at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page* for further information.

We solicited public comments on the proposed measure prioritization criteria, as well as priority areas for future episode-based measure development, such as specialties, types of clinical care, or specific conditions or procedures that would support proposed or future MVPs.

The following is a summary of the comments we received and our responses.

Comment: Many commenters were supportive of the proposal to establish a new measure development process by stakeholders. One commenter expressed support for the new process for cost measure development as it would be open to public and would grow the cost measure inventory. Another commenter stated that expanding the range of cost measures through this process could facilitate the transition away from the total per capita cost measure.

Response: We believe that the population-based measures like total per capita cost measure continue to play an important role in MIPS alongside episode-based measures. Its focus on primary care is an area that affects many beneficiaries with potential for cost improvement.

Comment: Another commenter suggested that instead of the proposed method to develop new cost measures, CMS should involve stakeholders to directly edit inclusion, exclusion, and selection criteria for existing measures.

Response: We encourage stakeholders to engage during the 18-month measure development process for new measures under development. As part of measure development, all stakeholders can participate in the national field testing and observe clinical expert workgroup meetings via a listen-only line. Stakeholders are also encouraged to provide feedback about the specifications of current cost measures in MIPS via the QPP Service Center. We would consider these as part of the routine measure maintenance process.

Comment: One commenter was supportive of the current measure development process established by CMS, and stated that while it urged CMS to work with the specialty societies to develop new measures, it was apprehensive of the new process to develop cost measures outside of MVPs. To ensure adequate input from specialty societies, the commenter encouraged CMS to require any measure developer to demonstrate that they have the correct clinical and methodological input during the measure development process.

Response: We thank the commenter for the feedback. We believe that the measure criteria outlined in the proposed process for cost measure development by stakeholders (86 FR 39403) addresses the need for a measure developer to demonstrate clinical coherence of the measure and to ensure its alignment with quality measures and improvement activities, so that the measure can be incorporated into MVPs. Additionally, for a cost measure to be implemented in MVPs, it needs to go through the notice-and-comment rulemaking process, as well as the MAP's review of the methodological approach and empirical testing results of the measures.

Comment: One commenter urged CMS to consider using other types of measures in the MIPS cost performance category as a proxy for cost. These could include measures for time spent in the ICU, transfusions, ventilator times, or length of stay. Another commenter recommended that cost measures do not just assess when there is waste in the system, but also promote clinically appropriate utilization of health care services, including for clinicians treating significant portions of older adults.

Response: To clarify, cost measures encourage reduction in spending by minimizing waste in the system and incentivizing appropriate level of utilization of healthcare services for patients. Measures used in the cost performance category are intended to be based on care episode and patient condition groups, as outlined in section 1848(r)(2) of the Act. Using other types of measures as a proxy for cost would not align with this direction. In regards to frailty, we continue to explore ways to include indicators of frailty in the episode-based measures, where appropriate. We are also tracking ASPE's research into validating and expanding claims-based algorithms of frailty and functional disability for value-based care and payment (more information on the research is available on the ASPE's website at *https://aspe.hhs.gov/validating-expanding-claims-based-algorithms-frailty-functional-disability-value-based-care-payment*).

Comment: A commenter highlighted the importance of using clinician-led clinical data registries, in addition to the comprehensive Medicare claims data, to support the development of meaningful cost measures.

Response: We have concerns about the feasibility of calculating cost

measures that use clinical registry data as part of their construction and the potential unintended consequences of excluding certain clinicians and beneficiaries if registry data is not available. To ensure that cost measures incorporated into MIPS are meaningful, measures submitted for CMS consideration would be evaluated for potential use against the standards for measure construction and criteria outlined in section IV.A.3.d.(2)(c)(iii) of this rule, such as whether the measure has been tested for reliability and validity.

Comment: A few commenters stated that specialty societies should be involved in the proposed measure development process. One stakeholder suggested that all specialty societies that would benefit from the new measures should be involved in the development process, while another encouraged CMS to partner with specialty societies similar to the current cost measure development approach.

Response: We encourage specialty societies that are interested in cost measure development to coordinate and engage with other societies that may have common expertise in cost measure concepts. This process for cost measure development is separate from CMS' current approach where a cost measure development contractor engages with specialty societies and other stakeholders.

Comment: One commenter requested more information on how CMS intends to use the prioritization criteria outlined in the proposed rule. The commenter also urged CMS to seek input from stakeholders on the measurement gaps in the MIPS cost performance category.

Response: We do not have any additional information on how we intend to use the prioritization criteria beyond what was proposed in the CY 2022 PFS rule (86 FR 39403). Regarding the stakeholder's second comment, we would apply the prioritization criteria to an environmental scan that would inform stakeholders of priority areas and suggested measures for development. This list would provide flexibility for stakeholder to then apply their own clinical expertise when determining the most important areas for measure development based on the measurement gaps identified by CMS. We also encourage stakeholder to reference the Blueprint for the CMS Measures Management System at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint* and the Meaningful Measures Framework at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page* for further guidance.

(iii) Standards for Measure Construction

Our current rigorous cost measure development process has included a series of standards that ensure measures are effective in assessing clinician cost performance within MIPS. These standards have been developed and vetted over time by a standing TEP and further refined through discussions with clinical subcommittees and clinician expert workgroups convened by the measure development contractor around areas of care and specific measures, respectively. For further detail, we refer readers to our detailed discussion of the measure development process and framework in response to stakeholder comments in the CY 2019 PFS final rule (83 FR 59770). To ensure that cost measures developed by stakeholders meet the same standards applied during the current measure development and testing process, we proposed to apply the following standards when considering stakeholder developed measures:

- Measures must assign services that accurately capture the role of attributed clinicians.
- Measures must have clear, ex ante attribution to clinicians.
- Measures must be based on episode definitions that have clinical face validity and are consistent with practice standards.
- Measures' construction methodology must be readily understandable to clinicians.
- Measures must hold clinicians accountable for only the costs they can reasonably influence.
- Measures must convey clear information on how clinicians can alter their practice to improve measured performance.
- Measures must demonstrate variation to help distinguish quality of care across individual clinicians.
- Measure specifications must allow for consistent calculation and reproducibility using Medicare claims data.

To implement these standards and to meet the methodology requirements of section 1848(r)(5) of the Act, we believe that it is necessary to ensure that measures within the cost performance category are consistent and share the same key features. Specifically, cost measures must be based on a standard set of measure components informed by the standards outlined above. These include: (1) Episode definition based on trigger codes that determine the patient cohort; (2) attribution; (3) service assignment; (4) exclusions; and (5) risk adjustment.

Regarding item (1) episodes must be defined based on trigger codes for services, which are identifiable on Medicare claims, indicate the occurrence of the episode, and determine the patient cohort. Trigger codes must be based on services, and can incorporate diagnosis and other service information to define an episode. The patient cohort may be stratified into mutually exclusive stratifications (or ''episode sub-groups'') for meaningful clinical comparison to ensure that measures fairly compare clinicians with similar patient case-mix. Regarding item (2), episodes must be attributed to MIPS eligible clinician groups and clinicians who render the trigger services and are responsible for the patient's care and management. It is important that the attribution methodology allows for the most appropriate clinicians who have a significant role in a patient's care to be attributed and receive actionable feedback on their performance. Regarding item (3), all services that are clinically related to the attributed clinician's role in managing patient care must be included. This includes cases where the clinician can influence the frequency or intensity of services. The measure must include enough services to allow the measure to demonstrate that it captures variation in clinician performance. To address any potential concern around care stinting, the measure must cover a sufficiently long timeframe and broad enough services to capture downstream services. This includes expected follow-up care, rehabilitation, post-acute care (required if inpatient hospitalizations are included) and other support services, as well as complications, readmissions, and other consequences of care. Clinically unrelated services must not be assigned to the measure. Regarding item (4), measures must include applicable exclusions, which can be applied to the patient cohort or the episodes. Certain patients must be excluded for data cleaning or to ensure completeness of data. For example, patients who do not have Medicare as their primary payer or were not continuously enrolled in Medicare Parts A and B and not C must be excluded as we would not be able to observe their complete care. Certain episodes must be excluded to improve episode homogeneity and to remove unique groups of patients from the measure in cases where it may be impractical or unreasonable to compare the costs of caring for these patients to the costs of

caring for the measure cohort as a whole. Regarding item (5), measures must be adjusted for patient risk. Risk adjustment aims to isolate variation in clinician costs to only the costs that clinicians can reasonably influence by accounting for risk factors. The determination of an appropriate risk adjustment approach should be based on empirical testing. A base risk adjustment model must include standard risk adjustors (Hierarchical Condition Category [HCC] codes, interaction variables for certain comorbidities, age, disability status, end-stage renal disease status, recent use of institutional long-term care), as well as additional measure-specific risk factors. Finally, measures must include payment standardized claims data.

We have outlined in section IV.A.3.d.(2)(b)(iii) of this final rule a new methodological framework for assessing the cost of care for chronic conditions. This new chronic condition framework meets all the standards we outline above, and could serve as a basis for chronic condition measures developed by stakeholders that would ensure consistency with other MIPS measures. We proposed to apply the standards for measure construction and measure components outlined above when considering stakeholder-developed measures to ensure that these measures follow the same standards as cost measures currently used in MIPS.

We solicited public comments on our proposed standards for measure construction and measure components, as well as the challenges that stakeholders may encounter in the development of cost measures along with any resources that would assist stakeholders in development.

The following is a summary of the comments we received and our responses.

Comment: One commenter specifically expressed support for the proposed standards for measure construction and measure components.

Response: We thank the commenter for their support.

Comment: One commenter pointed out the lack of flexibility in the approach to develop cost measures, as under the proposed Standards for Measure Construction and the Measure Prioritization Criteria, measure developers would be constrained by the structure and scope of existing cost measures.

Response: We believe that it is important for cost measures to share key common features for consistency within the performance category. These features have been identified through extensive stakeholder input as being essential for cost measures to accurately reflect care within the reasonable influence of the attributed clinician; this in turn is essential for clinicians to be able to make practice changes for cost improvement. Having consistency across cost measures is important to make it easier for stakeholders to understand how they are being assessed on cost and guards against the risks and unintended consequences that would result from creating different standards for similar types of care. We believe that establishing standards and criteria helps provide clarity for stakeholders before they begin development, and that this approach achieves an appropriate balance between the goal of a coherent cost measure inventory and encouraging innovative ways of assessing clinicians on cost performance.

Comment: One commenter urged CMS to use common episode definitions across MIPS cost measures and information required by price transparency regulations. This would provide consistent information to clinicians and patients.

One commenter requested that episodes use more comprehensive definitions by looking at care from the perspective of the patient, rather than charges under the control of a single clinician. They also emphasized the importance of the team-based nature of care, and stated that shared accountability for care should be encouraged by cost measures.

Response: The episode-based measures include the cost of services furnished by clinicians providing care that is related to the condition or procedure being measured. That is, an episode for a knee arthroplasty procedure could include the cost of the surgery performed by the orthopedic surgeon, anesthesia services provided by an anesthesiologist or CRNA, the cost of walking aids to assist with recovery, and physical therapy services provided by a physical therapist to help regain function. By including these services, the attributed clinician is incentivized to coordinate with these members of the care team in providing care for the patient. In these instances, common episode definitions would not be appropriate because episode-based measures require episodes specific to the condition or procedure. However, the total per capita cost and Medicare Spending Per Beneficiary Clinician measures do address the concern that there should be a more comprehensive definitions of cost; these measures are designed to be a global cost measure where a clinician is responsible for the costs of all services provided to a patient. We therefore believe that there is an important role for both global or population-based cost measures and episode-based cost measures as they have different yet complementary measure intents. Finally, given that the price transparency regulations are newly implemented, we will continue to assess the potential ways to align cost measures and the price transparency regulations.

Comment: One commenter encouraged CMS to add two standards for cost measure construction: Actionability and alignment of cost and quality. The commenter also stated that field testing must be conducted as part of the measure development process, and encouraged CMS to minimize the number of cost measures that is in development at one time, to ensure stakeholders are able to comprehensively review the measures being developed.

Response: We believe that the standards we would apply when considering stakeholder developed measures ensure that the measures implemented in MIPS would be actionable, by requiring the methodology to be understandable and that the developers convey clear information on how clinicians can improve their performance. In addition, submissions to the MUC list require measure developers to demonstrate a measure's actionability (please see section IV.A.3.d.(2)(c)(iv) for more information on MUC submission criteria). Additionally, one of the measure construction criteria is alignment with quality measures and improvement activities to ensure meaningful assessments of value. We agree that field testing is an important step in assessing newly developed measures and gathering feedback from stakeholders. We have worked to improve our field testing materials and outreach so that stakeholders can more easily understand the measures and provide meaningful feedback. We will take your suggestion to limit the number of cost measures in development at one time into consideration for future measure development cycles.

(iv) Cost Measure Submission to the Measures Under Consideration (MUC) List and Development Support

We proposed that cost measures developed by stakeholders for potential use in MIPS would undergo the pre-rulemaking process described in section 1890A(a) of the Act. More details on the pre-rulemaking process can be found at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rulemaking.* As with the process for the

call for quality measures, we proposed that the submission process for cost measures developed by stakeholders would begin with a Call for Cost Measures, where stakeholders would be invited to submit their candidate cost measures. We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53635 through 53637) for details on the process for quality measure submissions and selection. During the Call for Cost Measures period, we would organize webinars and office hours to provide stakeholders with information about the process and be available to answer questions. We would also provide templates of written materials, such as the measure codes lists for stakeholders to use. At the end of this period, stakeholders would submit their candidate measures for review by completing the required data fields required for submission to the MUC list and if approved, measures would be placed on the final MUC List, which we publicly post on December 1 of every year. Measures submitted to the MUC List must be fully specified and tested for reliability and validity.

Submissions to the MUC list must include all required information and would be reviewed against a set of inclusion criteria identified below to determine whether they should be considered for use in MIPS. The inclusion criteria for cost measures developed by stakeholders are based on the criteria outlined in the MUC List submission template, as well as relevant criteria that the MIPS quality performance category follows as indicated in the CY 2020 PFS final rule (84 FR 62953 through 62954). For purposes of our review, we proposed that stakeholders who wish to submit measures must submit measure specification information, testing results, and related research to address the following inclusion criteria:

- *Applicable:* There is clinical coherence and comparability in clinician treatment; measures ensure alignment with quality indicators.
- *Feasible:* Measures use Medicare claims data; there is a high degree of data completeness and limited frequency of missing data.
- *Scientifically acceptable:* measures are clinically valid assessments of cost performance; testing is available for reliability at different case minima; beta testing and statistical testing are conducted.
- *Not be duplicative of existing measures:* measures assess opportunities and gaps based on CMS priorities and goals; there is an assessment of duplicate measures to see which would be the better measure.
- *Fully developed:* measures are fully developed and ready for implementation at the time of submission.
- *Consistent:* the measure is constructed using a methodology to assess resource use that is consistent with sections 1848(r)(2) through (5) of the Act, consistent with other MIPS cost measures.
- *Fulfill a clinical performance gap:* environmental scans and literature reviews show evidence for measures, performance gaps, and opportunities for improvement; there is evidence for measures' impact and importance to MIPS.

We solicited comments on this proposed approach, and challenges stakeholders may encounter in the development of cost measures.

The following is a summary of the comments we received and our responses.

Comment: One commenter expressed support for holding cost measures to the same review and submission process (that is, the pre-rulemaking process submission) as the quality measures.

Response: We thank the commenter for their support.

Comment: A few commenters expressed concerns that the outlined proposal does not address the obstacles faced by potential measure developers, mostly noting the challenges in obtaining the necessary data. Several other commenters requested that CMS provide greater development support, also around data access. One commenter believed the proposal would not be successful at creating cost measures for MVPs starting in 2025 as the process would be time-consuming and burdensome.

Response: We appreciate the interest in cost measure development. The proposed process for cost measure development by stakeholders is intended to align with the process that has been available to developers of quality measures. The public can access Medicare claims data through the process described on the CMS ResDAC website at *https://resdac.org/research-identifiable-files-rif-requests.* ResDAC's process has multiple safeguards in place to protect the sensitive data that is available for researchers. Stakeholders also have access to the Physician and Other Supplier Public Use Files (Physician and Other Supplier PUFs), which contain information on procedures and services provided to Medicare patients by physicians and other healthcare professionals in a given year.

After consideration of public comments, we are finalizing the process for cost measure development by stakeholders as proposed.

(d) Substantive Changes Criteria for Cost Measures

On an annual basis, we review the MIPS measures that have been adopted and consider updates to the cost measures. Changes to measures are an important part of the measure maintenance process to ensure that measures are continuing to function as intended, and may be substantive or non-substantive. Section 1848(q)(2)(D)(i)(II)(cc) of the Act requires all substantive changes to quality measures to be proposed and identified through notice-and-comment rulemaking. Although this section of the Act does not establish this requirement for cost measures, we believe that similar considerations should apply to cost measures. As discussed in prior rulemaking, examples of non-substantive changes to cost measures include maintenance changes such as updated diagnosis or procedure codes or changes to existing exclusions to the patient populations or definitions, while substantive changes to a measure are changes that result in what are considered new or different measures (83 FR 59767 and 84 FR 62961). As we evaluate existing cost measures to determine whether such measures need to be updated, we believe that it is important to establish criteria for determining whether a measure change is substantive. Thus, we proposed to establish several criteria for determining whether a cost measure change is substantive starting with the MIPS CY 2022 MIPS performance period/2024 MIPS payment year. The criteria include, but are not limited to, the following:

- Whether the change modifies the premise and/or objective of the measure;
- Whether the change modifies the scope of the measure (such as patient population eligible for the measure or a new category of costs); and
- Whether the change to the measure calculation significantly impacts how a measure is assessed.

Certain changes to a measure may affect multiple elements of a measure, requiring an overall assessment of the measure specifications. The following are some examples of potential substantive and non-substantive changes:

- *Measure objective:* The measure objective refers to what is being assessed; in general, changes to the measure objective would be considered substantive. The question of what is being assessed can generally be thought of as: What type of care is the measure

assessing, who is providing this care, and who is in the patient cohort. Specifically, under this criterion, a change to the measure objective could include updates to the triggering logic, measure exclusions, attribution rules, or other aspects of the specifications. While the effect of such updates may also be relevant while considering whether the change is substantive or not, the effect is secondary to the intention behind changes to the measure. Consider the following example: A hypothetical episode-based measure focuses on major joint repair, and is updated to cover all joint procedures by adding a range of trigger codes. This likely would be a substantive change, as the measure would be evaluating different joints and procedures than the initial measure objective.

- *Types of Costs being Assessed:* In general, new rules about which costs are being captured by a measure would be considered substantive if they change which categories or types of costs are included in a measure, and non-substantive if they merely refine how an existing category is captured. For example, a change to an episode-based measure's service assignment rules which adds a new category of costs (for example, adding Part D costs to a measure that did not previously include any Part D costs) likely would be a substantive change. By contrast, a measure update to reflect new codes for existing types of codes, for instance, where a code is split into sub-codes for greater granularity, likely would be considered non-substantive.
- *Risk Adjustment:* The purpose of risk adjustment is to account for factors outside of the clinician's or clinician group's reasonable influence. In certain cases, it is necessary to make changes to the risk adjustment model and/or individual risk adjustors to ensure that the risk adjustment approach is working as intended. Generally, changes to risk adjustment variables and the mechanics of the regression would be considered non-substantive if they continue to give effect to the measure's intent. However, some changes to the risk adjustment approach may be substantive, such as changes to the type of risk adjustors used (for example, the addition of non-claims-based variables when the model previously only used claims-based data), or changes to the stratification that modify the interpretation of what the measure score represents.

We note that there are degrees in any evaluation of whether a change is substantive. For instance, there may be important differences in the effect of adding one service or code compared to a suite of services and codes that we would also consider as part of determining whether a change is substantive or not. We believe the proposed substantive change criteria for cost measures would help us to determine whether a change to a cost measure should be made through notice-and-comment rulemaking before it is implemented in MIPS. We solicited public comments on our proposed criteria for determining whether a change to a cost measure is substantive.

The following is a summary of the comments we received and our responses.

Comment: Two commenters agreed with an approach for evaluating substantive changes to cost measures, and one commenter stated that substantive changes (for example, updates to the risk adjustment methodology) must go through the pre-rulemaking and rulemaking processes. The commenter also suggested that a contractor may facilitate this process. Finally, the commenter emphasized that service assignment codes and other measure elements should be reviewed annually.

Response: We appreciate the commenters' support for this proposal. Currently, contractors can facilitate the process for evaluating substantive changes. All cost measures undergo a measure maintenance process that includes annual updates, and comprehensive re-evaluation to ensure that measures continue to meet program goals and priorities. Annually, CMS reviews measures to identify potential updates and assess the nature of these updates to determine the appropriate process for implementing substantive and non-substantive changes. These updates take into consideration any changes in payment policies or clinical practices, as well as empirical data. The comprehensive re-evaluation process occurs on a 3-year cycle, aligning with the CMS Blueprint for measure development. This process draws upon input from clinician experts to identify any thorough updates that may be required to address stakeholder concerns raised during annual maintenance or to make refinements to the measure set.

Comment: One commenter also encouraged CMS to conduct a year-to-year analysis examining the impacts on performance scores that occurred because of a substantive change versus the actual changes in performance.

Response: We appreciated the commenter's request to conduct an analysis to examine the impacts on performance scores that occurred due to a substantive change versus the actual changes in performance, and note that we do conduct analyses that compare year-to-year changes to cost measures as part of regular monitoring.

After consideration of public comments, we are finalizing the criteria for determining whether a cost measure change is substantive as proposed.

The previously established and finalized measures for the cost performance category for the CY 2022 performance period/2024 MIPS payment year and future periods are summarized in Table 54.

BILLING CODE 4120–01–P

TABLE 54: Summary Table of Cost Measures for the CY 2022 Performance Period/2024 MIPS Payment Year and Future Performance Periods

Measure Topic	Measure Type	Measure Status
Total Per Capita Cost	Population-Based	Currently in use for 2022 Performance Period and Beyond
Medicare Spending Per Beneficiary Clinician	Population-Based	Currently in use for 2022 Performance Period and Beyond
Elective Outpatient Percutaneous Coronary Intervention (PCI)	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Knee Arthroplasty	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Revascularization for Lower Extremity Chronic Critical Limb Ischemia	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Routine Cataract Removal with Intraocular Lens (IOL) Implantation	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Screening/Surveillance Colonoscopy	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Intracranial Hemorrhage or Cerebral Infarction	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
Simple Pneumonia with Hospitalization	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
ST-Elevation Myocardial Infarction (STEMI) with Percutaneous Coronary Intervention (PCI)	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
Acute Kidney Injury Requiring New Inpatient Dialysis	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Elective Primary Hip Arthroplasty	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Femoral or Inguinal Hernia Repair	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Hemodialysis Access Creation	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
Lower Gastrointestinal Hemorrhage *(at group level only)*	Acute inpatient medical condition episode-based	Currently in use for 2022 Performance Period and Beyond
Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Lumpectomy, Partial Mastectomy, Simple Mastectomy	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Non-Emergent Coronary Artery Bypass Graft (CABG)	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Renal or Ureteral Stone Surgical Treatment	Procedural episode-based	Currently in use for 2022 Performance Period and Beyond
Melanoma Resection	Procedural episode-based	Finalized for 2022 Performance Period and Beyond
Colon and Rectal Resection	Procedural episode-based	Finalized for 2022 Performance Period and Beyond
Sepsis	Acute inpatient medical condition episode-based	Finalized for 2022 Performance Period and Beyond
Asthma/Chronic Obstructive Pulmonary Disease (COPD)	Chronic condition episode-based	Finalized for 2022 Performance Period and Beyond
Diabetes	Chronic condition episode-based	Finalized for 2022 Performance Period and Beyond

BILLING CODE 4120–01–C

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 PFS final rule (83 FR 59776 through 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), and the CY 2021 PFS final rule (85 FR 84881 through 84886). We also refer readers to §§ 414.1305 for the definition of improvement activities and attestation, 414.1320 for the performance period, 414.1325 for the data submission requirements, 414.1355 for the improvement activity performance category generally, 414.1360 for data submission criteria, and 414.1380(b)(3) for improvement activities performance category scoring.

We proposed in the CY 2022 PFS proposed rule (86 FR 39405 through 39409) for the CY 2022 performance period and future years: (1) To revise group reporting requirements for the 50 percent threshold to address subgroups; (2) to revise the timeframe for improvement activities nominated during a PHE; (3) to revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (4) to suspend activities that raise possible safety concerns or become obsolete from the program when this occurrence happens outside of the rulemaking process; (5) to add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously adopted improvement activities; (6) to revise the ''Drug Cost Transparency to include requirements for use of real-time benefit tools'' improvement activity; and (7) to add the COVID–19 ''Clinical Data Reporting with or without Clinical Trial'' improvement activity.

(b) Group Reporting

In the CY 2020 PFS final rule (84 FR 62981 through 62988), we revised § 414.1360(a)(2) to state that, beginning with the CY 2020 performance period, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance period.

In the CY 2021 PFS final rule (85 FR 84844 through 84849), we finalized to update the MIPS Value Pathways guiding principle #2 as follows: ''2. MVPs should include measures and activities that will result in providing comparative performance data that is valuable to patients and caregivers in evaluating MIPS eligible clinician performance and making choices about their care; MVPs will enhance this comparative performance data as they allow subgroup reporting that comprehensively reflects the services provided by multispecialty groups.''

In the CY 2022 PFS proposed rule (86 FR 39372 through 39373), we proposed the details of subgroup reporting for MVPs, and we refer readers to section IV.A3.b.(2) of this final rule for further details regarding the adoption of such policies. We noted in the proposal that, in order to implement group requirements in relation to subgroup reporting, we must modify our policy regarding group reporting for improvement activities. We stated our belief that a 50 percent threshold is achievable and appropriate because, if a group or virtual group has implemented an improvement activity, the activity should be recognized and adopted throughout much of the practice to improve clinical practice, care delivery, and outcomes (86 FR 39405). Similarly, we stated that it makes sense to allow subgroups to perform and attest to their improvement activities separately and apply the 50 percent threshold within their subgroup. Therefore, we proposed to revise § 414.1360(a)(2) to state that, beginning with the CY 2022 performance period, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group's TIN or virtual group's TINs or that are part of the subgroup, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance period.

Over the past year, we have received many inquiries through the Quality Payment Program help desk [243] requesting clarification on how to apply the 50 percent threshold to groups. Many clinicians requested that their groups be allowed to account for the 50 percent threshold by specialty or as subgroups as they have more in common than their groups when considering applicable improvement activities. We note that our proposal is responsive to these stakeholder requests because it provides the ability to attest to improvement activities at the subgroup level, including the ability to compose subgroups by specialty for reporting MVPs.

We received public comment on our proposal to revise § 414.1360(a)(2). The following is a summary of the comment we received and our response.

Comment: One commenter supported the proposal to ensure that subgroups have the same improvement activities reporting requirements as MIPS eligible clinicians in traditional MIPS. The commenter stated that aligning requirements ensures that MIPS eligible clinicians reporting through a subgroup are meaningfully contributing to an improvement activity rather than relying on others in the group to receive credit.

Response: We appreciate the commenter's support of this proposal.

After consideration of the public comment, we are finalizing this policy as proposed.

(c) Improvement Activities Inventory

(i) Annual Call for Activities

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial improvement activities Inventory (81 FR 77817 through 77830) consisting of approximately 95 activities. We took several steps to ensure the Inventory was inclusive of activities in line with statutory and program requirements. We discussed that we had conducted numerous interviews with highly performing organizations of all sizes, and had conducted an environmental scan to identify existing models, activities, or measures that met all or part of the improvement activities performance category, including the patient-centered medical homes, the Transforming Clinical Practice Initiative (TCPI), CAHPS surveys, and AHRQ's Patient Safety Organizations. In addition, we reviewed the CY 2016 PFS final rule with comment period (80 FR 70886) and the comments received in response to the MIPS and APMs RFI regarding the improvement activities performance category.

For Year 2, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive improvement activities

[243] The Quality Payment Program help desk tracks, documents, and resolves inquiries submitted by MIPS eligible clinicians and groups. Stakeholders may submit inquiries to the help desk via 1–866–288–8292 (Monday–Friday 8 a.m.–8 p.m. ET) or email *QPP@cms.hhs.gov.*

Inventory for the Quality Payment Program Year 2 and future years through subregulatory guidance (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf*). In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for Year 3 and future years, we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the improvement activities Inventory, including the requirement to submit a nomination form similar to the one we utilized for Year 2 (82 FR 53656 through 53659). In order to submit a request for a new activity or a modification to an existing improvement activity, the stakeholder must submit a nomination form available at *www.qpp.cms.gov* during the Annual Call for Activities.

(A) Timeframe for the Annual Call for Activities

We refer readers to the CY 2019 PFS final rule (83 FR 59781 through 59782) for our most recent policies with respect to the timeframe for the Annual Call for Activities. We did not propose any changes to this policy for CY 2022. However, we refer readers to section IV.A.3.d(3)(c)(i)(B)(aa) of this final rule where we adopt changes to the timeframe for nominating new improvement activities during a PHE.

(B) Changes for Nominating New Improvement Activities

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77190), the initial improvement activities Inventory was not based on established criteria. Rather, it was compiled via stakeholder input; an environmental scan; MIPS and APMs RFI comments; subsequent working sessions with AHRQ and ONC; and additional communications with CDC, SAMHSA, and HRSA. In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the improvement activities Inventory. We stated that we would use the criteria when selecting measures for inclusion in the program. In the CY 2019 PFS final rule (83 FR 59778 through 59779), we adopted one new criterion and removed a criterion from the improvement activities nomination criteria. We also clarified our considerations in selecting improvement activities. In the CY 2022 PFS proposed rule (86 FR 39405 through 39408), we proposed: (1) Changes to the timeframe for improvement activities nomination during a PHE; (2) two new improvement activities criteria; (3) to increase the required minimum number of criteria that must be met for improvement activities nominations; and (4) to separate required from optional criteria for improvement activities nominations. These proposals are discussed in detail below.

(aa) Changes to the Timeframe for Nominating New Improvement Activities During a PHE

In the CY 2021 PFS final rule (85 FR 84882 through 84883), we finalized an exception to the Annual Call for Activities providing that, during a PHE, stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe. Instead of only accepting nominations and modifications submitted February 1 through July 1 each year, we adopted a policy to accept nominations for the duration of the PHE, as long as the improvement activity is still relevant. No other aspect of the Annual Call for Activities process was affected (for example, criteria for nominating improvement activities, considerations for selection of improvement activities, or weighting policies all still apply). We noted that we continue to believe that it is important for stakeholders to be able to comment on improvement activities. Therefore, any improvement activity related to the PHE considered for inclusion in the Inventory will need to be finalized through rulemaking.

In 2020, we used several IFCs to propose necessary policies due to the PHE for COVID–19, including adding and modifying the COVID–19 Clinical Data Reporting with or without Clinical Trial (IA_ERP_3) for implementation in the same year. However, we want to be clear that we are not limited to implementing policies through IFCs, and those vehicles may not be the most timely or feasible for a particular situation. In a typical year, we use various fiscal and calendar year rules to implement policy (for example, the IPPS, Inpatient Psychiatric Facility Prospective Payment System (IPF PPS), OPPS, etc. rules). In order to best operationalize our policy for improvement activities nominated during a PHE, we proposed to modify our policy such that these nominations should be submitted by January 5 of the year in which the activity is targeted for implementation, unless otherwise specified by CMS, in order to maximize the chance that a potential improvement activity could be implemented in the same year via the most timely rulemaking vehicle.

We received public comments on our proposal regarding the improvement activities nominations received during a PHE. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported CMS' proposals for nominating new improvement activities during the national PHE for COVID–19.

Response: We appreciate the support of commenters.

After consideration of public comments, we are finalizing this policy as proposed.

(bb) Currently Adopted Criteria

In the CY 2017 Quality Payment Program final rule (81 FR 77190 through 77195), we discussed guidelines for the selection of improvement activities. In the CY 2018 Quality Payment Program final rule (82 FR 53660), we formalized the Annual Call for Activities process for Year 3 and future years and added additional criteria: Stakeholders should apply one or more of the below criteria when submitting nominations for improvement activities. In addition, in the CY 2019 PFS final rule (83 FR 59779) we added a ''public health emergency as determined by the Secretary'' criterion, and in the CY 2021 PFS final rule (85 FR 84883 through 84884) we added an ''Include activities which can be linked to existing and related MIPS quality and cost measures, as applicable and feasible'' criterion. The current criteria are listed below.

- Relevance to an existing improvement activities subcategory (or a proposed new subcategory);
- Importance of an activity toward achieving improved beneficiary health outcomes;
- Importance of an activity that could lead to improvement in practice to reduce health care disparities;
- Aligned with patient-centered medical homes;
- Focus on meaningful actions from the person and family's point of view;
- Support the patient's family or personal caregiver;
- Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care);
- Feasible to implement, recognizing importance in minimizing burden, especially for small practices, practices in rural areas, or in areas designated as geographic HPSAs by HRSA;

- Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes;
- Include activities which can be linked to existing and related MIPS quality and cost measures, as applicable and feasible;
- Include a PHE as determined by the Secretary; or
- CMS is able to validate the activity.

(cc) Proposed Two New Criteria

We proposed two new criteria beginning with the CY 2022 Annual Call for Activities MIPS improvement activities: Activities (1) should not duplicate other improvement activities in the Inventory; and (2) should drive improvements that go beyond standard clinical practices. Regarding the first proposed criterion, we believe that there should not be duplicate activities in the Inventory as MIPS eligible clinicians could get double credit for doing the same activity. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77185), while the minimum reporting period for one improvement activity is 90 days, the maximum frequency for which an improvement activity may be reported is once during the 12-month performance period. It is important that stakeholders review the current Inventory to ensure there is not a broader improvement activity that MIPS eligible clinicians could attest to for the same activity. Regarding the second proposed criterion, we believed that improvement activities should drive improvements that go beyond standard clinical practices and should be innovative, to have the potential for significant patient benefit when MIPS eligible clinicians learn and implement the activities.

We received public comments on our proposal regarding the two new criteria for considering new improvement activities. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the addition of these additional criteria stating that they believe the new criteria will ensure high quality improvement activities. Many commenters supported the proposal of two new criteria, agreeing that new improvement activities should not be duplicative.

Response: We appreciate the support of these commenters.

After consideration of public comments, we are finalizing this policy as proposed.

(dd) Minimum Requirement

We have received feedback from stakeholders through the Annual Call for Activities process and during the CY 2021 PFS rulemaking process that the nomination acceptance process is unclear, stakeholders are frustrated by nominating improvement activities that are not accepted, and our reasoning for not accepting their nominations is not clear.

Our current policy requires that stakeholders apply one or more of the established criteria when submitting a nomination through the Annual Call for Activities process for a new improvement activity (82 FR 53660). Through past Annual Calls for Activities, we have found that many of the nominations that we receive meet the minimum one criterion, but are not appropriate for inclusion in the Inventory for other reasons. We often receive submissions describing practices that are standard and submissions that are too specific to a particular specialty. We believe that when evaluating nominations, we should use multiple factors in deciding on the selection of submitted improvement activities, not all of which can be listed up front. Ultimately, we must rely on our internal processes and expertise in determining whether or not a nominated improvement activity meets the criteria and needs of the program. However, in an effort to increase transparency, we have reevaluated our criteria and believe there are a number of significant criteria that improvement activity proposals should meet to be included in the Inventory. Therefore, beginning with nominations submitted during the 2022 nomination period for the Annual Call for Activities, we proposed to increase the number of criteria stakeholders are required to meet when submitting an activity proposal, from a minimum of one to eight criteria, which include the two newly adopted criteria described in section IV.A.3.d(3)(c)(i)(B)(cc) of this final rule.

We believed that the following eight criteria, six of which are on the current list and two of which were proposed (in italics), should be the foundation for all improvement activities:

1. Relevance to an existing improvement activities subcategory (or a proposed new subcategory) (82 FR 53660);
2. Importance of an activity toward achieving improved beneficiary health outcomes (82 FR 53660);
3. Feasible to implement, recognizing importance in minimizing burden, including, to the extent possible, for small practices, practices in rural areas, or practices in areas designated as geographic HPSAs by the Health Resources and Services Administration (HRSA) (82 FR 53660);
4. Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes (82 FR 53660);
5. Can be linked to existing and related MIPS quality, Promoting Interoperability, and cost measures as applicable and feasible (85 FR 84884);
6. CMS is able to validate the activity (82 FR 53660);
7. *Does not duplicate other improvement activities in the Inventory;* and
8. *Should drive improvements that go beyond purely common clinical practices.*

When we previously finalized the first six criteria in prior rulemakings, we did not specifically require activity nominations to meet all the criteria. In crafting this proposal, we noted that we are seeking to minimize improvement activity nominations that do not meet program standards and to increase nominations that will substantively contribute to improved patient care and outcomes.

We also considered whether any of the above proposed required criteria should be optional (see section IV.A.3.d(3)(c)(i)(B)(cc) of this final rule). Ultimately, we proposed that the above criteria should not be optional because we believe these reflect the minimum standard for improvement activities in the Inventory and will help increase transparency in our decisions.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

(ee) Optional Factors

We proposed that the remaining six previously established factors would serve as optional factors beginning with nominations submitted during the 2022 nomination period for the Annual Call for Activities as we believe they may be relevant to certain nominations, but not all. We stated that meeting one or more of the optional factors may increase a nomination's chances of being added to the Inventory. The proposed optional factors were:

1. Alignment with patient-centered medical homes (82 FR 53660);
2. Support for the patient's family or personal caregiver (82 FR 53660);
3. Responds to a PHE as determined by the Secretary (83 FR 59779);
4. Addresses improvements in practice to reduce health care disparities (82 FR 53660);
5. Focus on meaningful actions from the person and family's point of view (82 FR 53660); and
6. Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for

example, primary care, specialty care) (82 FR 53660).

The following is a summary of the comments we received and our responses.

Comment: One commenter requested that CMS clarify what is considered ''standard clinical practice.'' Another commenter stated that the criteria of driving improvements that go beyond standard clinical practices might be unrealistic. They stated that if there are gaps in standard clinical practice that need improvement, those gaps should be addressed, particularly for members in niche specialties or particularly high risk or vulnerable populations. They believe that the current weighting system for Improvement Activities is sufficient to help MIPS eligible clinicians prioritize high weight activities that go beyond standard clinical practice.

Response: We thank the commenter for their perspective on standard clinical practice. We consider standard clinical practice to be the standard of care: Actions that all clinicians should do all the time as part of their care. Examples include obtaining an informed consent before surgery or counting instruments/suture needles at the end of a surgery to ensure nothing was left in the patient. We believe that improvement activities should drive improvements that go beyond the floor for competent clinical practices and should be innovative, in order to have the potential for significant patient benefit when MIPS eligible clinicians learn and implement the activities.

After consideration of public comments, we are finalizing these policies as proposed.

(C) Improvement Activity Removal

In the CY 2020 PFS final rule (84 FR 62988 through 62990), we finalized the factors for consideration in removing improvement activities from the Inventory. Under this process, we fully examine each activity prior to its removal and commenters have an opportunity to provide their input during notice-and-comment rulemaking.

(aa) Improvement Activity Suspension Policy

We noted that a circumstance came to our attention that required us to examine the specifics of the improvement activities removal of activities policy in relation to the performance period. Following the publication of the CY 2021 PFS proposed rule, we became aware that the underlying program for one of the improvement activities in the Inventory had expired on March 31, 2020. Therefore, MIPS eligible clinicians could no longer complete the activity from April 1 through December 31, 2020. To avoid any potential confusion or incorrect attestation, we removed this activity in the CY 2021 PFS final rule (85 FR 84885). We stated that this occurrence alerted us to the potential that other activities could become obsolete or be impacted by clinical practice guideline changes that affect the activity and could potentially result in patient harm, and that we may not learn about this information during the rulemaking timeframes. Because changes made in rulemaking do not apply until the following performance period, this timing could affect an improvement activity that needs to be urgently addressed.

As a result, beginning with the CY 2022 performance period, we proposed that in the case of an improvement activity for which there is a reason to believe that the continued inclusion raises possible patient safety concerns or is obsolete, we would promptly suspend the improvement activity and immediately notify MIPS eligible clinicians and the public through the usual communication channels, such as listservs and Web postings. We stated that we would then propose to remove or modify the improvement activity as appropriate in the next rulemaking cycle.

We received public comments on the improvement activity removal outside of the rulemaking cycle. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to suspend and remove improvement activities that the agency believes raise patient safety concerns or are obsolete.

Response: We thank commenters for their support.

Comment: One commenter stated that declaring an activity ''obsolete'' during the performance period seems inappropriate. There should be adequate review ahead of the start of the performance period to remove any improper activities. Another commenter questioned what would happen if a MIPS eligible clinician selects an improvement activity and begins implementation and later in the year the improvement activity is suspended.

Response: While it is not our preference to remove improvement activities during the performance period, despite our best efforts, we may become aware that an improvement activity is obsolete during the performance period. Therefore, we believe that it is necessary to be able to remove activities during the performance period—especially in situations where all or part of the improvement activity is not available for MIPS eligible clinicians to utilize. In instances where we do remove an improvement activity during the performance period, the MIPS eligible clinician completed the activity, they will still be able to attest for that activity and will not need to select a different improvement activity.

After consideration of public comments, we are finalizing these policies as proposed.

(ii) Changes to the Improvement Activities Inventory

(A) Background

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would establish improvement activities through notice-and-comment rulemaking. We refer readers to Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), Tables A and B in the Appendix 2 of the CY 2019 PFS final rule (83 FR 60286 through 60303), Tables A, B, and C in the Appendix 2 of the CY 2020 PFS final rule (84 FR 63514 through 63538), and Tables A, B, and C in the Appendix 2 of the CY 2021 PFS final rule (85 FR 85370 through 85377) for our previously finalized improvement activities Inventory. We also refer readers to the Quality Payment Program website under Explore Measures and Activities at *https://qpp.cms.gov/mips/explore-measures?tab=improvementActivities&py=2020* for a complete list of the current improvement activities. In this final rule, we are adding 7 new improvement activities, modifying 15 existing improvement activities, and removing 6 previously adopted improvement activities for the CY 2022 performance period and future years. We refer readers below and to Appendix 2 of this final rule for more details.

(B) Changes to Adopted Improvement Activities

(aa) Changes to the ''Drug Cost Transparency To Include Requirements for Use of Real-Time Benefit Tools'' Improvement Activity

In the CY 2020 PFS final rule (84 FR 63515), we adopted IA_BE_25, titled ''Drug Cost Transparency to include requirements for use of real-time benefit tools'' beginning with the 2020 performance year and for subsequent years. This activity description reads as follows:

To receive credit for this improvement activity, MIPS eligible clinicians must attest that their practice provides counseling to patients and/or their caregivers about the costs of drugs and the patients' out-of-pocket costs for the drugs. If appropriate, the MIPS eligible clinician must also explore with their patients the availability of alternative drugs and patients' eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of pharmaceuticals could be a real-time benefit tool (RTBT), which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. (CMS finalized in the Modernizing Part D and Medicare Advantage to Lower Drug Prices and Reduce Out of Pocket Expenses final rule (84 FR 23832, 23883) that beginning January 1, 2021 Medicare Part D plans will be required to implement one or more RTBT(s)).

Thus, this activity allows a RTBT to be one source of information for the pricing of pharmaceuticals, which provides to the prescriber real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary.

The 2021 Consolidated Appropriations Act (H.R. 116–133, Pub. L. 116–260) included section 119 in Division CC entitled ''Increasing the use of real-time benefit tools to lower beneficiary costs.'' Subsection (c) of section 119 includes a provision called ''Inclusion of Use of Real-Time Electronic Information in Shared Decision-Making Under MIPS.'' This provision amends section 1848(q)(2)(B)(iii)(IV) of the Act to require that this subcategory shall include as an activity, for performance periods beginning on or after January 1, 2022, the use of a RTBT as described in section 1860D–4(o) of the Act. In addition, the amendment provides that the Secretary may establish this activity as a standalone activity or as a component of another activity.

In accordance with this statutory requirement, we proposed to modify the IA_BE_25 improvement activity such that, beginning with the CY 2022 performance period and for subsequent years, the activity will require the use of an RTBT. As previously finalized, use of an RTBT was optional. We refer readers to Appendix 2 of this final rule for additional details regarding our adoption of this policy, including a summary of the comments received and our responses.

(bb) Changes to the COVID–19 Clinical Data Reporting With or Without Clinical Trial (IA_ERP_3) Improvement Activity

We refer readers to the March 31 IFC for COVID–19 (85 FR 19276 through 19277) and the September 2 COVID–19 IFC (85 FR 54848 through 54851) for a regulatory history of this improvement activity. In the September 2 COVID–19 IFC, we extended the modified COVID–19 Clinical Data Reporting with or without Clinical Trial improvement activity through the CY 2021 performance period due to the continued COVID–19 infections we were experiencing nationwide. We anticipated the need for COVID–19 clinical trials and data collection/sharing through registries to continue through CY 2021 at which time we will reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these types of data are not needed.

We again proposed to extend the COVID–19 Clinical Data Reporting with or without Clinical Trial improvement activity for the CY 2022 performance period and future years due to the continued COVID–19 infections we are experiencing nationwide and the need for further research. We stated that clinicians will continue to treat beneficiaries with COVID–19, and we anticipate the need for COVID–19 clinical trials and data collection/sharing through registries to continue, through CY 2022 and future years. For each year after 2022, we intend to reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these types of data are not needed. We believe that it is important for MIPS eligible clinicians to be able to attest to this improvement activity if it is still pertinent. Further, we believe that participation in this improvement activity is likely to result in improved outcomes by improving the collection of data that MIPS eligible clinicians use for the care of their patients as they monitor and manage COVID–19. We will continue to reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these types of data are not needed and will discontinue the activity through notice-and-comment rulemaking as needed. We also refer readers to Appendix 2 of this final rule for details regarding our adoption of this policy, including a summary of the comments received and our responses.

(4) Promoting Interoperability Performance Category

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record technology (CEHRT) as a performance category under the MIPS. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of the MIPS shall be used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the Promoting Interoperability performance category.

(b) Promoting Interoperability Performance Category Performance Period

As finalized in the CY 2021 PFS final rule at § 414.1320(g)(1) (85 FR 84886), for the 2024 MIPS payment year, and each subsequent MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Thus, for the CY 2024 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within CY 2022, up to and including the full CY 2022 (January 1, 2022 through December 31, 2022). We did not propose any changes to the Promoting Interoperability performance category performance period that we established under § 414.1320(g)(1) (85 FR 84886).

(c) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

(i) Changes to the Query of Prescription Drug Monitoring Program Measure Under the Electronic Prescribing Objective

(A) Measure Background

We have adopted a Query of Prescription Drug Monitoring Program (PDMP) measure under the Electronic Prescribing objective. For background on this measure, we refer readers to the CY 2019 PFS final rule (83 FR 59800 through 59803) and the CY 2020 PFS final rule (84 FR 62992 through 62994). In the CY 2021 PFS final rule (85 FR 84887 through 84888), we finalized that the Query of PDMP measure will remain optional and eligible for 10 bonus points for the CY 2021 performance period/CY 2023 MIPS payment year.

(B) State PDMPs' Progress and Previous Stakeholder Feedback

In the CY 2020 and CY 2021 PFS final rules (84 FR 62992 through 62994 and 85 FR 84887 through 84888), we described the concerns expressed by stakeholders that they believed it was premature for the Promoting Interoperability performance category to require the Query of PDMP measure and score it based on performance. In the CY 2022 PFS proposed rule (86 FR 39410) we discussed our support of efforts to expand the use of PDMPs, describing federally supported activities aimed at developing a more robust and standardized approach to EHR–PDMP integration, and additional discussions on the feedback we have received from health IT vendors and MIPS eligible clinicians thus far. For more detailed information, we refer readers to the CY 2022 PFS proposed rule (86 FR 39410).

(C) Measure Changes

Given current efforts to improve the technical foundation for EHR–PDMP integration, the continued implementation of the SUPPORT for Patients and Communities Act (in particular, its provisions specific to Medicaid providers and qualified PDMPs), our ongoing review of alternative measure approaches, and stakeholder concerns about the current readiness across States for implementation of the existing measure, we believe that at least 1 more year is needed prior to potentially requiring the Query of PDMP measure.

While we appreciate the concerns that stakeholders have shared, we continue to believe that this measure can play an important role in helping to address the opioid crisis. By integrating PDMP data into the health record, health care providers can improve clinical decision making by utilizing this information to identify potential opioid use disorders, inform the development of care plans, and develop effective interventions. Maintaining this as an optional measure with bonus points signals to the MIPS eligible clinician and vendor community that this is an important measure to address a current gap that can help spur development and innovation in order to reduce barriers and challenges.

Therefore, in the CY 2022 PFS proposed rule (86 FR 39409 through 39410), we proposed to maintain the Electronic Prescribing Objective's Query of PDMP measure as optional and worth 10 bonus points for the CY 2022 performance period/CY 2024 MIPS payment year. We received public comments on our proposal, and the following is a summary of the comments we received.

Comment: All commenters were supportive of our proposal to maintain the Electronic Prescribing Objective's Query of PDMP measure in the CY 2022 MIPS performance period/CY 2024 MIPS payment year as optional and worth 10 bonus points. One commenter shared that PDMP data has the capacity to improve patient care, and could aid in addressing the opioid crisis. A few commenters shared that 10 bonus points provides MIPS eligible clinicians enough incentive for participation.

Response: We acknowledge that the time required for State programs to advance EHR–PDMP integration may vary, and we will continue to collaborate with the Office of the National Coordinator for Health Information Technology (ONC) to develop additional approaches to sharing data with PDMPs. Finalizing this proposal provides at least 1 additional year for States and other stakeholders to make greater progress toward improving interoperability across systems.

Comment: Several commenters supported our proposal, but suggested that this measure should remain optional indefinitely, unless or until all States and EHRs share the same functional capabilities. Some commenters suggested that the measure remain as a ''yes/no'' attestation, rather than being considered as a numerator/denominator measure in the future.

Response: We thank commenters for sharing their suggestions for the Query of PDMP measure in the future. We believe the Query of PDMP measure will be a useful and informative measure as more State PDMPs and EHR systems are effectively integrated. We refer readers to the CY 2022 PFS proposed rule (86 FR 39410) for an overview of the key efforts aimed towards improving the technical approaches to EHR–PDMP integration, including the implementation of key provisions from the SUPPORT for Patients and Communities Act. We may take commenters' feedback under consideration in future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal to maintain the Query of PDMP measure as optional and worth 10 bonus points for the CY 2022 performance period/2024 MIPS payment year. The maximum total points available for the Electronic Prescribing Objective will remain at 20 points for the CY 2022 performance period/2024 MIPS payment year. Last, we received many public comments in response to our request for comment in the CY 2022 PFS proposed rule (86 FR 39410 through 39411) regarding the future of the Electronic Prescribing Objective's Query of PDMP measure. We thank commenters for this feedback and may consider this information to inform future rulemaking.

(ii) Changes to the Provide Patients Electronic Access to Their Health Information Measure Under the Provider to Patient Exchange Objective

(A) Background

In the CY 2019 PFS final rule (83 FR 59812 through 59815), we renamed the Patient Electronic Access Objective to the Provider to Patient Exchange Objective, which includes the Provide Patients Electronic Access to Their Health Information measure. For more information about the Provide Patients Electronic Access to Their Health Information measure, we refer readers to the following preamble discussions in prior rulemaking: 84 FR 62995 and 62999 through 63000, 83 FR 59812, 82 FR 53674, 81 FR 77228, 80 FR 62841 through 62851, 77 FR 54007, and 75 FR 44353.

(B) Data Availability Requirement for MIPS eligible clinicians

The Provide Patients Electronic Access to Their Health Information measure requires, for at least one unique patient seen by the MIPS eligible clinician: (1) The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and (2) the MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT (84 FR 62999 through 63000 and 82 FR 53674). In the CY 2022 PFS proposed rule (86 FR 39411 through 39412), we proposed to modify this measure to require MIPS eligible clinicians to ensure that patient health information remains available to the patient (or patient-authorized representative) to access indefinitely and using any application of their choice that is configured to meet the technical specifications of the API in the MIPS eligible clinician's CEHRT. MIPS eligible clinicians would be required to ensure this information remains available indefinitely (that is, not merely for a defined period of time). The proposed requirement would apply beginning with the performance period

in 2022, and would include all patient health information from encounters on or after January 1, 2016.

Currently, the Provide Patients Electronic Access to Their Health Information measure does not specify how long MIPS eligible clinicians are required to make patient data available, or to ensure that patient data remain available to patients in the event that a MIPS eligible clinician switches EHR vendors (81 FR 77228). In an effort to minimize stakeholder burden, we wanted to align the date under our proposal for making information about encounters available, with the date of service start date (January 1, 2016) as finalized in the Patient Access and Interoperability final rule (85 FR 25528), and as proposed for the Promoting Interoperability Program for eligible hospitals and CAHs in the FY 2022 IPPS/LTCH proposed rule (86 FR 25631). As an alternative to our proposal, we considered different encounter start dates, such as encounters on or after January 1, 2012, or encounters on or after January 1, 2019. We believed, however, that a requirement for MIPS eligible clinicians to ensure patient health information remains available indefinitely, as well as an encounter start date of January 1, 2016, would provide the most benefit to patients when accessing their health information as compared to the burden and costs to MIPS eligible clinicians implementing these proposed requirements.

We sought public comment on our proposal to modify the Provide Patients Electronic Access to Their Health Information measure, as well as the alternatives we considered and discussed above, and received the following comments.

Comment: One commenter supported our proposal, stating that the benefit to patients outweighs the burden to MIPS eligible clinicians.

Response: We would like to thank this commenter for their support, and agree that providing patients (or their patient authorized representatives) access to their data is beneficial.

Comment: Many commenters supported the principle that patients should have prompt access to their data with minimal effort, but did not support our proposal as it was proposed. Several commenters stated that the lack of clarity around key terminology was a main concern. Specifically, commenters requested additional clarification on how CMS is defining an ''indefinite'' timeline, what specific data would be included in ''all patient health information,'' and how we will address software platform changes and/or system updates given these terms. Last, many commenters asked that we provide exclusions for this measure to allow exceptions for those unable to meet the measure requirements, as exclusions were not discussed in the proposed rule.

Response: We agree that patients (or their patient authorized representatives) should have access to their data with minimal effort. We appreciate the requests from commenters requesting additional clarification on the terms used in the proposal, including ''indefinite'' and ''all patient health information''. We agree with commenters that we need to more clearly define what an ''indefinite'' timeline entails, as well as to more clearly define what specific data should be included in ''all patient health information.'' We agree with commenters that we need to consider defining and allowing for exclusions as well, with the understanding that there are varying limitations between eligible clinicians. We agree that as proposed, this modification needs additional clarification, and for these reasons, we are not finalizing this proposal at this time. In the future, we will be seeking additional feedback from MIPS eligible clinicians, in the event that we decide to propose changes to the measure in future rulemaking.

Regarding software platform changes, we would like to note that the ONC 21st Century Cures Act final rule established a new criterion, ''electronic health information export'' at 45 CFR 170.315(b)(10), which requires a certified health IT module to electronically export all electronic health information (EHI), as defined in § 171.102, that can be stored at the time of certification by the product of which the health IT module is a part (85 FR 25690 through 25693). A health IT developer of certified health IT products, which, at the time presented for certification electronically stores EHI, must certify such products to this new criterion and make these products available to their customers by December 31, 2023. We believe this certified functionality will further support the capability to seamlessly transfer electronic health information between systems.

Comment: A few commenters shared concerns regarding potential conflict between State laws and our proposed data availability requirement, and also potential conflict between State laws and our proposed requirement to make ''all patient health information'' available. One example shared by commenters is that different States have different requirements for data retention (mentioned were 7 and 10 years), as opposed to our proposal for an ''indefinite'' availability period. Another commenter shared that some States have laws requiring that physicians withhold certain patient health information from being released (specifically, California protected health information laws were shared), where our proposal included ''all patient health information,'' non-specific of any exclusions. Commenters have requested that CMS continue to work alongside ONC and the Patient Access and Interoperability teams to ensure that we address these discrepancies between State and Federal policy.

Response: We agree with commenters that we need to continue our collaborative efforts with the CMS Patient Access and Interoperability team and ONC as we consider how we might address these issues in future rulemaking. We also agree with commenters that we need to address varying data availability requirements between individual States, potential discrepancies between State and Federal policy, and ensure that we also account for State protected personal health information. For these reasons, we are not finalizing our proposal at this time. Instead, we may hold a listening session in the future where we welcome feedback as we continue to consider potential revisions to this measure amidst the feedback we have received.

Comment: Many commenters did not support our proposal but offered suggestions for CMS to consider. A few commenters suggested that CMS consider setting expectations on a forward-looking basis rather than taking a retrospective approach. Some commenters suggested that CMS consider working more closely with ONC to clearly distinguish between USCDI and the larger set of electronic health information as defined in the ONC Information Blocking rules. Another commenter requested that CMS ensure this policy is aligned with ONC's requirements for certified health IT. One commenter suggested that CMS allow for a rolling timeframe where 6 years' worth of data are maintained, but that those years not be fixed.

Response: We agree with the commenters' suggestions and will continue to collaborate with the CMS Patient Access and Interoperability team and ONC, especially regarding the feedback commenters shared above. We agree with commenters that it is important to distinguish between the data included in the USCDI, which is relevant to the Provide Patients Access to their Health Information measure, and the information included in the

electronic health information definition. We agree with commenters that additional work is essential on this proposal and will not be finalizing it at this time. As mentioned previously, CMS may hold a listening session in the future where we welcome additional feedback as we consider this measure for future rulemaking.

After consideration of the public comments we received, we are not finalizing our proposed modifications to the Provide Patients Electronic Access to Their Health Information measure. We wish to emphasize that CMS and HHS strongly believe that a patient's health information should remain available to the patient (or patient-authorized representative) through the technology currently required to successfully report on the Provide Patient Access to the Health Information measure. We will take commenters' suggestions under consideration and will seek further input as we consider whether to propose changes to the measure in future rulemaking.

(iii) Modifications to the Public Health and Clinical Data Exchange Objective

(A) Background

In the CY 2019 PFS final rule (83 FR 59795, 59815 through 59817), for the Public Health and Clinical Data Exchange Objective, we finalized that a MIPS eligible clinician must submit a yes/no response for two different public health agencies or clinical data registries for any of the five measures associated with the Public Health and Clinical Data Exchange objective (Syndromic Surveillance Reporting; Immunization Registry Reporting; Clinical Data Registry Reporting; Electronic Case Reporting; and Public Health Registry Reporting) to earn 10 points for the objective. Failure to report on two different public health agencies or clinical data registries or submitting a ''no'' response for a measure will earn a score of zero. If an exclusion is claimed for one measure, but the MIPS eligible clinician submits a ''yes'' response for another measure, they will earn the 10 points for the objective. If a MIPS eligible clinician claims exclusions for both measures they select to report on, the 10 points will be redistributed to the Provide Patients Electronic Access to Their Health Information measure under the Provider to Patient Exchange objective.

Effective responses to public health events, such as the COVID–19 pandemic, require fast, accurate exchange of data between health care providers and Federal, State, tribal, local, and territorial public health agencies (PHAs). Health care providers collect these data for patient care and PHAs need them to protect the public, whether to track an outbreak, initiate contact tracing, find gaps in vaccine coverage, or pinpoint the source of a foodborne outbreak.

While our current approach has encouraged health care systems to stand up some of these capabilities, significant gaps remain, and absent stronger incentives it will be difficult to stand up the comprehensive data exchange needed for future public health response. Thus, we believe that a more assertive approach is needed.

(B) Modifications to the Reporting Requirements for the Public Health and Clinical Data Exchange Objective

We proposed in the CY 2022 PFS proposed rule (86 FR 39412 through 39414) to require two of the measures associated with the Public Health and Clinical Data Exchange Objective, beginning with the performance period in CY 2022: Immunization Registry Reporting; and Electronic Case Reporting. Requiring these two measures will put PHAs on better footing for future health threats and a long-term COVID–19 pandemic recovery by strengthening two important public health functions: (1) Vaccine uptake; and (2) case surveillance. Requiring these measures will enable automated case reporting for fast public health response; and local and national visibility on immunization uptake so PHAs can tailor vaccine distribution strategies.

The following is a summary of the comments we received and our responses.

Comment: Many commenters agreed with the proposed modifications to the reporting requirements for the Public Health and Clinical Data Exchange Objective. They stated that the COVID–19 pandemic has underscored the value of consistent and high quality reporting of these public health measures and the proposed requirements would certainly greatly accelerate adoption of reporting for these measures. This regulatory requirement, in concert with the increased capabilities for such reporting, will better position the U.S. to identify and respond to current and future public health challenges. Another commenter agreed with the requirement of the Immunization Registry Reporting measure and the Electronic Case Reporting measure of the Public Health and Clinical Data Exchange objective stating that the recent pandemic has highlighted the need for immediate access to patient data for greater public health. A commenter supported our proposals stating that requiring those measures is an excellent step toward improving real-time, electronic data exchange from eligible clinicians to public health agencies. This will help ensure that public health and clinical communities collaborate as a unified health system to act quickly and keep our people safe and healthy.

Response: We thank commenters for their support and we appreciate their rationales.

Comment: One commenter agreed with the value of and need for public health data exchange, but added that public health registries and other mechanisms for data exchange have not been universally adopted because they are not integrated into physicians' clinical workflow and CEHRT does not have a user-centered experience for data submission and use of these registries. They added that the problem is not that physicians are unwilling to report to public health registries, but rather that the current process for doing so is overly burdensome and in some cases prohibitively expensive.

Response: We thank the commenter for their feedback, and understand that physicians and other clinicians are eager to report to public health agencies. The ONC Health IT Certification Program ensures that the health care provider's health IT is capable of capturing and reporting data to PHAs. Moreover, we note that the eCR Now application and platform offered by the CDC and other partners is designed so that it operates in the background of the EHR system, using information that is captured in the EHR as part of care delivery, and does not interrupt the clinician's workflow. Automating the generation and transmission of case reports electronically reduces the burden on health care providers to accomplish this reporting requirement. To learn more about ways that eCR Now works, please visit *https://www.cdc.gov/ecr/index.html.* We also remind readers that there are exclusions available for the Immunization Registry Reporting and Electronic Case Reporting measures (83 FR 35929 through 35930).

Comment: Some commenters did not support our proposal and urged CMS to consider allowing practices to attest to their choice of any two of the registries from the objective as the requirements are currently structured. One added that allowing practices to choose any two of the available registries would enable most practices to be able to attest without having to claim an exclusion.

Response: We believe that letting clinicians choose to report any two different public health agencies or clinical data registries for the Public

Health and Clinical Data Exchange objective is no longer effective in our current PHE environment. Further, both immunization reporting and electronic case reporting are both supported with corresponding ONC Certification Criteria (§ 170.315(f)(1) and (f)(5)) that were finalized in 2015. We proposed the modifications to better prepare the healthcare system and public health agencies for future health threats and long-term pandemic recovery by strengthening critical public health functions through the use of CEHRT.

Comment: Many commenters urged CMS to delay implementing the requirement to report on the Immunization Registry Reporting and Electronic Case Reporting measures. One stated that clinicians need at least a year to find, register, and implement reporting to a public health agency without penalty. Therefore, CMS should, at most, announce its intention of implementing this change but delay the implementation until the performance year 2023 to give clinicians adequate time to meet the new requirements.

Response: We do not believe that it is necessary to delay these requirements. We established multiple exclusions for each measure for those MIPS eligible clinicians who may not be able to report on these measures due to the scope of their practice (83 FR 59815). We also established three levels of active engagement which indicate the progress a clinician is making toward sending production data to a public health agency (80 FR 62863 through 62864). We remind readers of option 1, the first level of active engagement—Completed Registration to Submit Data (80 FR 62863 through 62864): The MIPS eligible clinician registered to submit data with the PHA or, where applicable, the clinical data registry (CDR) to which the information is being submitted; registration was completed within 60 days after the start of the MIPS performance period; and the MIPS eligible clinician is awaiting an invitation from the PHA or CDR to begin testing and validation. This option allows MIPS eligible clinicians to meet the measure when the PHA or the CDR has limited resources to initiate the testing and validation process. MIPS eligible clinicians that have registered in previous years do not need to submit an additional registration to meet this requirement for each MIPS performance period.

(aa) Immunization Registry Reporting Measure

Immunizations are considered one of the ten great public health achievements and have resulted in declines in cases, hospitalizations, deaths, and health care costs associated with vaccine preventable diseases.[244] The benefits and value of immunizations are realized when public policy, health systems, and community-based intervention efforts are working in coordination. Ensuring the coordination of these efforts can achieve high immunization coverage is dependent on the availability of timely, accurate, and complete information on vaccinations received by individuals in a population.

Immunization registries (also called immunization information systems, or IIS) are powerful tools that allow collaboration between vaccine providers and public health agencies and enable coordination of population-based interventions. Immunization registries are confidential, population-based, computerized systems that record all vaccination doses administered by participating health care providers for individuals residing within a particular jurisdiction. At the point of clinical care, an immunization registry can provide consolidated immunization histories to assist vaccine providers in determining appropriate patient vaccinations. At the population level, immunization registries provide data on vaccination coverage assessment and program operations and in guiding public health action to improve vaccination rates.

Currently, 50 States, the District of Columbia, eight island territories, and three cities (New York City, Philadelphia, and San Diego) operate an immunization registry. CDC provides technical assistance and nationwide leadership to all State immunization registries to ensure the optimal use of immunization registries for determining vaccination coverage at local, State, and national levels. Immunization registries already have connections in place to capture administered doses in real-time for a substantial portion of the population, a process accelerated over the last 10 years by the Medicare and Medicaid Promoting Interoperability Programs. According to data from the most recent CDC IIS Annual Report (2019) available, immunization registries currently hold demographics and immunization data on 95 percent of children 0–6 years, 82 percent of adolescents, and 60 percent of adults.[245] While each State Immunization registry currently coordinates with health care providers and EHR systems to achieve interoperability and facilitate immunization reporting, varying State reporting policies limit the completeness and timeliness of records in immunization registries and the optimal use of immunization registries for determining vaccination coverage.

We proposed in the CY 2022 PFS proposed rule (86 FR 39412 through 39413) to make the Immunization Registry Reporting a required measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the CY 2022 performance period/CY 2024 MIPS payment year as it is critical for understanding vaccination coverage both at the jurisdiction level and nationwide and identifying where additional vaccination efforts are needed. For more information about the Immunization Registry Reporting measure, we refer readers to the preamble discussion in prior rulemaking at 81 FR 77230. Making standardized reporting to an immunization registry a required measure will provide an immediate benefit by increasing the COVID–19 vaccination records reported to these systems. Making the measure required will also improve the data quality of records in immunization registries and facilitate use of immunization registries for clinical decision support and tracking of vaccine administration and distribution.

We believe that making the Immunization Registry Reporting measure required will increase the reporting of immunization data by health care providers to public health agencies. Making the measure required is also critical for the COVID–19 vaccination response because it will provide a better view of the vaccines administered and distributed at national, State and local levels. This is a function that immunization registries currently provide for all public vaccines, but is particularly important for COVID–19 vaccines. In addition to the COVID–19 vaccination response is the equally important need for routine vaccination coverage to increase. Fear of COVID–19 has caused deferrals of routine vaccinations as patients limit their interactions, including with their family doctors. More complete data in immunization registries as a result of the required measure will also optimize the use of immunization registries to determine who has not been vaccinated, pockets of under vaccination, and identifying where interventions should be focused for routine and emergency response vaccines. Requiring the measure will reduce the regulatory and

[244] Ten Great Public Health Achievements—United States, 2001–2010 (*cdc.gov*).

[245] *https://www.cdc.gov/vaccines/programs/iis/annual-report-iisar/2019-data.html.*

administrative burden health care providers experience when exchanging information with immunization registries.

We did not propose any changes to the description of the measure including any of the exclusions that we established in CY 2019 PFS final rule at 83 FR 59815 through 59817.

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to require the Immunization Registry Reporting measure. One stated that significant strides have been made in immunization reporting throughout the PHE that have enabled those that previously lacked the resources to successfully report on this measure to now do so. Another commenter strongly supported our proposal and stated that immunization reporting plays a critical role in improving vaccination at the point of clinical care, at the population health level, and to help address the health disparities which have only worsened during the pandemic. They stated that requiring the Immunization Registry Reporting measure could: (1) Increase reporting of immunization data into a centralized jurisdiction-based system—thereby increasing patient data completeness and quality in immunization registry reporting, (2) facilitate better inter- and intra-State data sharing between other immunization registry reporting, health systems, and other HIT systems, and (3) improve vaccination uptake and health equity by determining areas of under vaccination.

Response: We thank commenters for their support and we appreciate their rationales.

Comment: A commenter suggested that prior to requiring immunization registry reporting, CMS should ensure there are exclusions available if there is not a State immunization registry available for providers. Additionally, CMS should survey the State immunization registries to determine if there is readiness at the State level to conduct this level of exchange.

Response: The following exclusion has been available to MIPS eligible clinicians since the CY 2019 performance period/CY 2021 MIPS payment year (83 FR 35929): ''Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period.'' Every State, in addition to the District of Columbia, eight island territories, and three cities (New York City, Philadelphia, and San Diego), operate an immunization registry. State reporting policies and the capability to receive immunization-related data vary across jurisdictions. CDC provides financial and technical support to improve data exchange within each jurisdiction. CDC publishes the Immunization Information Systems Annual Report (IISAR) which provides an assessment of jurisdictions' efforts in developing, maintaining, and enhancing IIS activities for a given calendar year. CDC has developed an accompanying dashboard which allows the user to view a jurisdiction's performance according to 26 domains, including interoperability and clinical-decision making.

After consideration of public comments, we are finalizing our proposal to make the Immunization Registry Reporting a required measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the CY 2022 performance period/CY 2024 MIPS payment year.

(bb) Electronic Case Reporting

Health care providers are required by State law to report certain diseases and conditions, a process called case reporting, which provides PHAs with data on approximately 120 diseases and conditions of public health significance.[246] Case reporting is a vital and longstanding tool that PHAs use to prevent the spread of infectious diseases. Case reporting serves as early notification to PHAs for potential outbreaks and includes information that enables PHAs to start contact tracing and other prevention measures. Case reports also include critical clinical information that will not be included in syndromic surveillance or laboratory reporting, and can help to illuminate the impact of comorbidities, treatments, and variable access to care. Information from the case reports can be used to further work on social determinants of health and ensure equal access to preventative care across populations. Electronic case reporting is the automated, real-time, bidirectional exchange of case report information between EHRs and PHAs. Electronic case reporting uses standard codes to trigger the transfer of relevant clinical data to PHAs for case investigation and follow-up. As of March 2021, most States do not require electronic submission of case reports as part of their regulations and case reporting often occurs through outdated manual methods (for example, fax, email, or phone), which results in delays, underreporting, and incomplete or inaccurate case data. Manual case reporting also imposes burdens on health care providers, taking staff time away from patients to submit case reports and comply with State reporting requirements. Electronic case reporting allows health care providers to fulfill mandated public health reporting requirements without imposing additional burden and disrupting the clinical workflow. This automated data exchange facilitates faster and more efficient disease tracking, case management, and contact tracing. Electronic case reporting provides more timely and complete data than manual reporting, including data on demographics, comorbidities, immunizations, medications, occupation, and other treatments.

Recent efforts by the CDC have sought to significantly improve the effectiveness of electronic case reporting through eCR Now, a strategic initiative that allows for rapid adoption and implementation of electronic case reporting for COVID–19 (*https://www.cdc.gov/coronavirus/2019-ncov/hcp/electronic-case-reporting.html*). As part of this initiative, CDC and its partners have developed an eCR Now FHIR® application (app) to establish electronic case reporting capability in EHR systems. EHR vendors can also implement the eCR functionality within their products to accomplish this reporting. The initiative also supports an electronic case reporting infrastructure that is helping to advance interoperability. This infrastructure supports the transmission of electronic case reports to a shared service platform, and not directly to a PHA, which means that any health care provider that has established an electronic case reporting connection also has a connection with every State PHA, many large local health departments, and some territories. This promotes nationwide interoperability and increases the availability of data for patients who may be traveling or spending time away from their home State. For example, if a patient is a resident of one State but seeks care in another State, this infrastructure will automatically route the case report to both States that would have jurisdiction over this report. This increases inter-jurisdictional reporting, allowing for more seamless case investigation at the national level. The interoperable infrastructure and the use of a standard data format also reduces the variability of case report forms across conditions

[246] CSTE State Reportable Condition Assessment page: *https://www.cste.org/page/SRCA.*

and jurisdictions, streamlining reporting forms for EHR vendors and health care providers.

As a result of the CDC effort to scale up eCR for COVID–19, all 50 States, the District of Columbia, Puerto Rico and 13 large local jurisdictions have connected to the shared services platform and are currently receiving electronic case reports, with more than 9,400 healthcare facilities on board and 11.6 million reports for COVID–19 received by PHAs as of October 5, 2021.[247] The eCR infrastructure is designed to rapidly scale for PHEs, such as COVID–19, and it is enabled to currently support data transmission for 99 reportable and notifiable conditions. While these are significant advancements, the piecemeal approach of encouraging adoption of these tools by individual health care providers has not been an effective or efficient means to quickly scale this effort nationally as has been needed for the COVID–19 PHE response.

We believe the uneven adoption of electronic case reporting creates a public health vulnerability. We proposed in the CY 2022 PFS proposed rule (86 FR 39413 through 39414) to make the Electronic Case Reporting measure a required measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the performance period in CY 2022. For more information about the Electronic Case Reporting measure, we refer readers to the preamble discussion in prior rulemaking at 81 FR 77229. We believe making this a required measure will accelerate development of electronic case reporting capabilities in EHR systems, reduce health care administrative burden of complying with State-mandated disease reporting requirements, provide regulatory clarity for EHR vendors, and improve the timeliness, completeness, and utility of case report data for PHAs. We believe that requiring the Electronic Case Reporting measure will be feasible and beneficial for MIPS eligible clinicians. This change will encourage EHR vendors to make electronic case reporting available to their customers, which will make adoption of this capability relatively straightforward for MIPS eligible clinicians. To meet the CEHRT definition when reporting on this measure, in our EHR Incentive Program Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (80 FR 62870 through 62885) we established that health care providers are required to use a health IT module certified to the ''Transmission to public health agencies—electronic case reporting'' certification criterion at § 170.315(f)(5) that relates to how the health IT uses structured data within an EHR to trigger or indicate the generation of an electronic initial case report.[248] They may then transmit the report in the manner specified by the case reporting requirements of the entity to which they are transmitting a report.

We believe that requiring the Electronic Case Reporting measure will not only provide certainty to EHR vendors and facilitate an organized and industry-wide rollout of electronic case reporting capabilities, but will also reduce burden on health care providers to fulfill their public health reporting requirements.

We did not propose any changes to the description of the Electronic Case Reporting measure and the exclusions that we established in the CY 2019 PFS final rule at 83 FR 59815 through 59817 will remain available.

The following is a summary of the comments we received and our responses.

Comment: One commenter reported that their State is not ready for electronic case reporting. The State, EHR vendors and the providers need more time to adopt the functionality required to do electronic case reporting.

Response: All 50 States, DC, Puerto Rico, and several local public health agencies currently receive eCR messages supported under the eCR Now Initiative, which can enable successful completion of electronic case reporting. Based on information from the CDC and their extensive engagement with public health agencies, many public health agencies are in the process of updating their websites to reflect their readiness for public health measurement requirements in the Promoting Interoperability Program, including electronic case reporting.

For a current list of PHA websites that provide their readiness to receive information please see ONC's Interoperability Standards Advisory (*https://www.healthit.gov/isa/appendix-iv-state-and-local-public-health-readiness-interoperability*). If a PHA does not declare readiness, then the MIPS eligible clinician can claim an exclusion for this measure.

Comment: One commenter stated that if CMS requires clinicians to report to an electronic case reporting registry then a national, State, and local listing of available case registries to report on would be extremely helpful for organizations/clinicians to reference, ensuring they are meeting the requirements of MIPS.

Response: Electronic case reporting is not submitting to a registry. Rather, electronic case reporting replaces the manual disease reporting by clinicians to State or local public health agencies required under State or local law with the automated, real-time exchange of case report information between EHRs and public health agencies.

Comment: Many commenters stated that their EHRs are not certified for electronic case reporting. A few commenters stated that this measure and the use of the certified capability were not previously required, and clinicians may be unable to adopt a newly certified capability in a timely way prior to the start of their performance period. Commenters stated that requiring the electronic case reporting measure may pose issues for clinicians who do not possess the certified functionality product for this capability and may have difficulty procuring and implementing one by CY 2022. Commenters stated that clinicians often have little control over the CEHRT capabilities available to them especially when they are provided their CEHRT by a larger parent organization.

A commenter urged CMS to not impose reporting obligations on clinicians before the technology can facilitate such reporting. Another commenter stated the proposed reporting requirements for clinicians will burden EHR developers. Specifically, the commenter stated that the time between when the CY 2022 PFS final rule is issued and the start of CY 2022 is insufficient for developers to certify and deploy a solution for electronic case reporting. The commenter stated that not all of their EHR developers' products are certified to electronic case reporting. The commenter stated that these developers would need to develop, test, certify, and then deploy a certified solution within just a few months. The commenter urged CMS to add an exclusion to the electronic case reporting measure for instances where a clinician's CEHRT is not certified to electronic case reporting at the beginning of the performance period.

Several commenters recommended that CMS consider adding an exclusion for this measure for instances where the clinician's CEHRT developer does not yet offer products that are certified for electronic case reporting. One commenter suggested a 1-year, limited

[247] Healthcare Facilities in Production for COVID–19 Electronic Case Reporting | CDC.

[248] For more information about this certification criterion, please see the Certification Companion Guide at *https://www.healthit.gov/test-method/transmission-public-health-agencies-electronic-case-reporting.*

exclusion could maintain the primary benefits of requiring the electronic case reporting measure while ensuring clinicians do not fail to satisfy the requirements of the Promoting Interoperability performance category if they are not able to meet the electronic case reporting measure.

Response: We have consulted with ONC, and they report that certification to the criterion for electronic case reporting at § 170.315(f)(5) has increased significantly since the publication of the proposed rule, so we do not believe that lack of certification will be an impediment to successfully reporting the Electronic Case Reporting measure. As ONC clarified earlier this year,[249] for health IT developers that do not already support electronic case reporting, these capabilities can be certified to the certification criterion for ''Transmission to public health agencies—electronic case reporting'' at § 170.315(f)(5) by providing their ONC-Authorized Certification Body documentation that sufficiently describes how the health IT module meets the functional requirements of the criterion and/or documentation of electronic case reporting implementation using the eCR Now FHIR application and the ability to meet paragraph (i) of this criterion. Health IT developers are encouraged to visit the 2015 Edition Cures Update Certification Companion Guide page (*https://www.healthit.gov/test-method/transmission-public-health-agencies-electronic-case-reporting*) for more information. With appropriate prioritization, we believe health IT developers can rapidly and successfully implement electronic case reporting capabilities.

While we believe that the adoption of certified technology for electronic case reporting by eligible clinicians is achievable in 2022, and that the active engagement requirements (80 FR 62863 through 80FR 62864) and existing exclusions of the measure (83 FR 59815 through 59817) offer significant flexibilities that can ensure most clinicians will be able to meet the measure or claim an exclusion, we acknowledge the commenters' concerns about technology and vendor readiness and clinicians potentially not being ready to report the measure due to the functionality not being certified. Rather than delaying or not finalizing the proposal to require the measure, we are establishing a new 1-year exclusion for the Electronic Case Reporting measure only for the CY 2022 performance period/CY 2024 MIPS payment year: the MIPS eligible clinician uses CEHRT that is not certified to the electronic case reporting certification criterion at § 170.315(f)(5) prior to the start of the performance period they select in CY 2022. By requiring the Electronic Case Reporting measure beginning with the CY 2022 performance period/CY 2024 MIPS payment year, but also adding a new exclusion for the CY 2022 performance period/CY 2024 MIPS payment year only, we will be able to: (1) Ensure health care providers that possess certified functionality adopt and implement this functionality before CY 2023; and (2) signal to EHR developers that they must prioritize adding electronic case reporting to their products to ensure their customers can report on the measure once the exclusion is no longer available.

We believe that the flexibility provided by this additional exclusion should provide ample time for MIPS eligible clinicians to implement electronic case reporting using available options and for health IT developers to ensure that they have successfully completed certification.

Comment: A commenter suggested that prior to requiring the adoption of electronic case reporting, CMS needs to engage with ONC, the CDC and the vendor community to gauge the ability for electronic case reporting to be implemented and utilized by the proposed deadline of CY 2022.

Response: CMS, ONC, and CDC have worked together to evaluate the readiness of the EHR developer community. There are many developers who are working towards implementing electronic case reporting capabilities and making those capabilities available to their clients. According to the Certified Health IT Product List (*https://chpl.healthit.gov/*) 93 products are already certified to the electronic case reporting certification criterion.

In addition, vendors can provide electronic case reporting to their clients using the eCR Now FHIR app which uses a suite of ONC-required standards and backend services that should be invisible to front-line clinicians. As discussed in a recent blog, ONC has provided clarification that EHR vendors who support the eCR Now FHIR app can be certified for electronic case reporting certification criterion by providing their ONC-Authorized Certification Body with appropriate documentation as specified in the technical explanations and clarifications.[250]

Comment: One commenter suggested that prior to requiring the adoption of electronic case reporting CMS should determine if States are willing to move towards electronic data exchange. Many State agencies continue to mandate manual reporting. If States continue to do this and CMS mandates electronic reporting, physicians will be burdened with the need to report in two different formats.

Response: All 50 States, DC, Puerto Rico, and several local public health agencies currently receive electronic case reporting messages. In addition, based on conversations that CDC has had with public health agencies, there is a limited period of time when public health agencies require clinicians to report by sending data through electronic case reporting and through traditional means (for example, manual reporting). Public health agencies have reported to CDC that they will use this time to make modifications to their data systems, onboard staff who can review the data, establish policies and processes for quality reviews, and ensure that their electronic feeds meet quality standards before they can turn off other forms of data transmission. We understand that this may place additional burden on MIPS eligible clinicians, and we know that many public health agencies are working on accelerating their processes to reduce the amount of time in parallel production. To help States reduce the amount of time that MIPS eligible clinicians need to spend doing dual reporting, CDC has invested heavily in helping public health agencies implement eCR. This funding will help public health agencies develop processes to turn off manual reporting processes and accelerate the quality review of the electronic feeds.

After consideration of public comments, we are finalizing our proposal to require the Electronic Case Reporting measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the CY 2022 performance period/CY 2024 MIPS payment year. We are also establishing an additional one-year exclusion for the Electronic Case Reporting measure for the CY 2022 performance period/CY 2024 MIPS payment year only: The MIPS eligible clinician uses CEHRT that is not certified to the electronic case reporting certification criterion at § 170.315(f)(5) prior to the start of the performance period they select in CY 2022.

[249] *https://www.healthit.gov/test-method/transmission-public-health-agencies-electronic-case-reporting.*

[250] *https://www.healthit.gov/buzz-blog/health-it/federal-agencies-align-to-promote-public-health-reporting.*

(cc) Scoring of the Public Health and Clinical Data Exchange Objective

We proposed in the CY 2022 PFS proposed rule (86 FR 39414) that beginning with the CY 2022 performance period/CY 2024 MIPS payment year, a MIPS eligible clinician will receive 10 points for the Public Health and Clinical Data Exchange objective if they report a ''yes'' response for each of the following required measures: Immunization Registry Reporting; and Electronic Case Reporting. In the event that a MIPS eligible clinician is able to claim an exclusion for one or more of these required measures, we proposed they will receive 10 points for the objective if they report a ''yes'' response for one measure and claim an applicable exclusion for which they qualify for the remaining measure. If the MIPS eligible clinician fails to report on any one of the two measures required for this objective or reports a ''no'' response for one or more of these measures, we proposed that the MIPS eligible clinician will receive a score of zero for the Public Health and Clinical Data Exchange objective, and a total score of zero for the Promoting Interoperability performance category. If a MIPS eligible clinician claims applicable exclusions for which they qualify for both required measures, we proposed to redistribute the points associated with the objective to the Provider to Patient Exchange objective.

We proposed in the CY 2022 PFS proposed rule (86 FR 39414) to retain the Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures, and to make them optional and available for bonus points beginning with the CY 2022 performance period/CY 2024 MIPS payment year. For more information about these measures, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77229) and the EHR Incentive Program Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (80 FR 62818 through 62825). We proposed a MIPS eligible clinician may earn 5 bonus points if they report a ''yes'' response for either the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure. Reporting on more than one of these optional measures will not yield additional bonus points.

In connection with our proposal to make these measures optional, we proposed to remove the three exclusions that we established in the CY 2019 PFS final rule at 83 FR 59815 through 59817 for the Public Health Registry Reporting measure, Clinical Data Registry Reporting measure, and the Syndromic Surveillance Reporting measure.

We solicited comments on these proposals.

The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposal to retain the Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures, and to make them optional and available for bonus points beginning with the performance period in CY 2022.

Response: We appreciate commenters' support for our proposal.

Comment: One commenter stated that syndromic surveillance has played a critical role in evaluating and monitoring many public health events in their State, including the COVID pandemic. We strongly support submission of syndromic surveillance data from providers and believe that providing this as an optional measure in this rule strengthens our ability to maintain the robust system into which both public health and healthcare facilities have already made significant investments.

Response: We appreciate the support for this proposal.

Comment: One commenter stated that surveillance data is used to monitor short-and long-term health trends and to alert health professionals to the important changes in disease trends. Surveillance data also provide the basis for determining public health priorities and for planning and implementing prevention and control programs.

Response: While we considered requiring the Syndromic Surveillance Reporting measure as we had proposed and subsequently finalized it as a required measure for eligible hospitals and critical access hospitals participating in the Medicare Promoting Interoperability Program (86 FR 45472 through 45473), we did not propose it as a required measure for MIPS because majority of data comes from emergency departments and only a small number of MIPS eligible clinicians practice in that setting.

Comment: One commenter requested clarification on how bonus points for reporting an additional registry measure will be awarded when a clinician claims an exclusion for the two measures proposed to be required in 2022.

Response: The five bonus points for reporting an additional registry measure can be earned even if exclusions are claimed for the two required measures.

Comment: One commenter supported the allocation of bonus points for the Clinical Data Registry Reporting measure, the Public Health Registry Reporting measure, and the Syndromic Surveillance Reporting measure. However, the commenter stated that the Promoting Interoperability performance category and these measures should align with congressional intent to incentivize registry reporting. Further registry reporting outside of the proposed required measures should be worth ten or more bonus points to encourage the use of registry reporting.

Response: We disagree. We chose 5 bonus points to create an incentive for clinicians to report an additional measure for the Public Health and Clinical Data Exchange objective. We have allocated 10 points for the two required measures and believe that allocating 5 points for reporting an additional measure aligns with the scoring of the required measures. We are not aware of congressional intent to incentivize registry reporting within the Promoting Interoperability performance category.

After consideration of public comments, we are finalizing our proposals: Beginning with the CY 2022 performance period/CY 2024 MIPS payment year, a MIPS eligible clinician will receive 10 points for the Public Health and Clinical Data Exchange objective if they report a ''yes'' response for each of the following required measures: Immunization Registry Reporting; and Electronic Case Reporting. In the event that a MIPS eligible clinician is able to claim an exclusion for one or more of these required measures, they will receive 10 points for the objective if they report a ''yes'' response for one measure and claim an applicable exclusion for which they qualify for the remaining measure. If the MIPS eligible clinician fails to report on any one of the two measures required for this objective or reports a ''no'' response for one or more of these measures, the MIPS eligible clinician will receive a score of zero for the Public Health and Clinical Data Exchange objective, and a total score of zero for the Promoting Interoperability performance category. If a MIPS eligible clinician claims applicable exclusions for which they qualify for both required measures, we will redistribute the points associated with the objective to the Provider to Patient Exchange objective.

The Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures will be optional and available for bonus points beginning with the CY

2022 performance period/CY 2024 MIPS payment year. A MIPS eligible clinician may earn 5 bonus points if they report a ''yes'' response for either the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure. We are removing the three exclusions that we established in the CY 2019 PFS final rule at 83 FR 59815 through 59817 for the Public Health Registry Reporting measure, Clinical Data Registry Reporting measure, and the Syndromic Surveillance Reporting measure.

(d) SAFER Guides

(i) Background

ONC developed and released the Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) in 2014, and later updated them in 2016. This series of nine user guides support the ability of health care providers to address EHR safety.[251] Collectively, the SAFER Guides help health care organizations at all levels, from small practices to multi-system chains and tertiary care facilities, to conduct self-assessments which optimize the safety and safe use of EHRs in the three areas listed in Table 55. The SAFER Guides were intended to be utilized by EHR users, developers, patient safety organizations, and those who are concerned with optimizing the safe use of health IT. By completing an annual self-assessment using the SAFER Guides, providers can help develop a ''culture of safety'' within their organizations and ensure they are responsible operators of technology tools, including certified health IT products, which they utilize in the delivery of care. The SAFER Guides are based on the best evidence available at the time of publication, which included a literature review, expert opinion, and field-testing at a wide range of health care organizations, from small ambulatory care practices to large health systems.

In the case of system disruption, failure, natural disaster, the SAFER Guides provide recommended safety practices during planned or unplanned EHR unavailability, where end users are unable to access all or part of their EHR. Also included are back-up procedures to prevent the potential loss of clinical and administrative data, and how to utilize paper charting during such downtime. We believe that conducting an annual self-assessment starting with the High Priority Practices Guide will support consistent safety practices for all EHR users.

The High Priority Practices Guide identifies ''high risk'' and ''high priority'' recommended safety practices, intended to optimize the safety and safe use of EHRs.[252] This guide broadly discusses EHR safety concerns that are described in greater detail in the subsequent 8 SAFER Guides. The High Priority Practices Guide is considered the first to be completed of the 9 SAFER Guides.

TABLE 55: The SAFER Guides

Foundational Guides	- High Priority Practices - Organizational Responsibilities
Infrastructure Guides	- Contingency Planning - System Configuration - System Interfaces
Clinical Process Guides	- Patient Identification - Computerized Provider Order Entry with Decision Support - Test Results Reporting with Follow-Up - Clinician Communication

(ii) New SAFER Guides Measure

We proposed in the CY 2022 PFS proposed rule (86 FR 39414 through 39416), to add a new SAFER Guides measure to the Protect Patient Health Information objective, beginning with the CY 2022 performance period/2024 MIPS payment year. For this measure, we proposed that a MIPS eligible clinician must attest to having conducted an annual self-assessment using the High Priority Practices Guide (available at *https://www.healthit.gov/topic/safety/safer-guides*), at any point during the calendar year in which the performance period occurs, with one ''yes/no'' attestation accounting for the complete self-assessment using the High Priority Practices Guide. We proposed that this measure will be required, but it would not be scored, and that reporting ''yes'' or ''no'' will not affect the total number of points earned for the Promoting Interoperability performance category. We believe this measure would further enable the electronic exchange of health information to improve the quality of health care, such as promoting care coordination, as described in section 1848(o)(2)(A)(ii) of the Act. We also proposed to add corresponding regulatory text for this measure at § 414.1375(b)(2)(ii)(C).

In order to complete a ''self-assessment'' using the High Priority Practices Guide, we expect that each MIPS eligible clinician would complete a review and mark the associated checkboxes (fully, partially, or not implemented) of recommended practices included at the beginning of the Guide. Detailed worksheets with the rationales for, and examples of how to implement each recommended practice follow the checklist section of the High Priority Practices Guide. These worksheets also include likely sources of information where the practice can turn to, in order to complete their assessment of a particular practice, as well as fillable note fields to record follow-up actions.

We understand that every organization faces unique circumstances, and will implement a particular practice differently. As a result, some of the specific examples in the SAFER Guides for recommended practices may not be applicable to every organization. A ''self-assessment'' does not require an organization to confirm that it has implemented ''fully in all areas'' each practice described in a particular SAFER guide, nor will an organization be scored on how many of the practices the organization has fully implemented. Rather, the intent is for MIPS eligible clinicians to regularly

[251] *https://www.healthit.gov/topic/safety/safer-guides.*

[252] *https://www.healthit.gov/sites/default/files/safer/guides/safer_high_priority_practices.pdf.*

assess their progress and status on important facets of patient safety.

The recommended practices in the SAFER Guides are intended to be useful for all EHR users, and we recognize that the individuals responsible for the proposed annual assessment may vary across organizations. An optimal team for completing an annual review of the SAFER Guides might include representation from clinicians (including physicians, nurses, pharmacists, and allied health staff), and the technical staff responsible for implementing and maintaining a practice's EHR, as well as data connections with external partners, such as an HIE.

Regarding the frequency of completing the self-assessment for the High Priority Practices Guide, we proposed that a MIPS eligible clinician must attest to completing their assessment using the High Priority Practices Guide on an annual basis, following an initial completion of the assessment (some clinicians may have already completed an assessment using the SAFER Guides prior to implementation of this requirement). We would expect MIPS eligible clinicians to revisit this assessment to determine whether any changes have occurred for their organization. We believe that requiring MIPS eligible clinicians to periodically review this self-assessment would support a stronger culture of change management within organizations, and would assist organizations in actively understanding and addressing potential safety vulnerabilities, which may significantly impact an organization's safety posture. We recognize that organizations may be at different stages in their progress towards assessing patient safety vulnerabilities, and that MIPS eligible clinicians vary in the resources that they could devote to an annual self-assessment using the High Priority Practices Guide. Gathering this information may be time consuming for some, and others may not have the expertise available on staff to complete all of the requirements. For MIPS eligible clinicians with less experience in these areas, we note that there are a number of resources available, which may be able to assist with completing a self-assessment.

We invited public comments on our proposal to require an annual self-assessment of the High Priority Practices Guide from MIPS eligible clinicians. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to require an annual self-assessment of the High Priority Practices Guide. Commenters stated that this requirement will encourage program participants to regularly assess their progress on practices that optimize the safety and safe use of EHRs, and others agree that completion of the self-assessment will promote best practices for the safe use and maintenance of health IT by MIPS eligible clinicians.

Response: We agree that given the opportunity to regularly assess progress, the High Priority Practices Guide will help optimize the safety and safe use of EHRs, and allow MIPS eligible clinicians the opportunity to make improvements as necessary over time.

Comment: Several commenters supported our proposal, but have requested clarification and/or suggestions for improvement. A few commenters stated that much of the High Priority Practices Guide represents a one-time configuration or verification steps, which for many MIPS eligible clinicians, would remain unchanged from year to year. One commenter suggested that after the initial review, MIPS eligible clinicians should be able to focus subsequent self-assessments on areas of the High Priority Practices Guide that have changed or require additional focus. Another commenter suggested that CMS and ONC collaborate to ensure that all of the SAFER Guides be updated regularly to ensure the most current guidance is shared with MIPS eligible clinicians. Several commenters requested confirmation that this requirement will not be scored, and that an answer of ''yes'' and ''no'' are both acceptable, without affecting their total scores.

Response: As discussed above, the completion of the annual self-assessment would assist organizations in actively understanding and addressing potential safety vulnerabilities regularly. The ''self-assessment'' does not require an organization to confirm that it has implemented ''fully in all areas'' each practice, nor will the organization be scored on how many of, or to what degree the organization has implemented these practices. As commenters have mentioned, several components of the High Priority Practices Guide will require an initial assessment that may not change significantly unless the MIPS eligible clinician has made significant system upgrades or has transitioned between systems. Further, we agree that MIPS eligible clinicians should focus their efforts on areas of change or improvement after having completed the initial assessment, as much of the assessment will remain unchanged. Our larger focus is for MIPS eligible clinicians to regularly assess their progress and status on important facets of patient safety. We would like to thank commenters for their suggestions that CMS and ONC coordinate efforts to regularly assess and update the SAFER Guides and to consider expanding on Education and Outreach efforts. We will continue to collaborate with ONC and take these suggestions under consideration. Last, we do confirm that for CY 2022, both ''yes'' and ''no'' are acceptable, an attestation of ''no'' will not alter final scores, and an attestation of ''no'' will not affect one's ability to be considered a Meaningful EHR User for MIPS.

Comment: Few commenters did not support our proposal to require an annual self-assessment of the High Priority Practices Guide. One commenter expressed concern that the High Priority Practices Guide does not improve interoperability, but instead creates additional reporting burden on MIPS eligible clinicians. A few commenters have suggested that vendors be required to complete the annual assessments and upon initial implementation of the health IT, rather than placing the additional burden on MIPS eligible clinicians.

Response: With a central focus on patient safety, we disagree that the High Priority Practices Guide does not improve interoperability. We would like to remind commenters that the Protect Patient Health Information objective is essential to all aspects of meaningful use of CEHRT, and ensuring that Patient Health Information is protected and secure is a critical element of effectively using EHRs. Under the Protect Patient Health Information objective, the High Priority Practices Guides measure is one way that we can proactively assess individual readiness. For the commenter who raised concerns about the additional reporting burdens this measure may present, we appreciate this feedback. We would like to reiterate that MIPS eligible clinicians are not being scored on this measure in the 2022 performance year, and that an attestation of ''yes'' and ''no'' are both acceptable answers, and that an answer of ''no'' will not affect the total number of points earned for the Promoting Interoperability performance category. Last, after the initial self-assessment, eligible clinicians could simply confirm that their initial assessment is still accurate, barring vendor and/or system updates that may affect the assessment.

Comment: Several commenters raised concern that CMS did not explicitly establish expectations surrounding

group reporting for this measure. Commenters seek clarification on whether each MIPS eligible clinician within the group is required to attest to having completed an annual self-assessment of the High Priority Practices Guide, or, if existing reporting requirements apply to this measure.

Response: For those who participate in group reporting, the existing group reporting policies apply to this measure. We are not requiring an annual self-assessment of the High Priority Practices Guide from each MIPS eligible clinician within the group.

After consideration of the public comments we have received, we are finalizing our proposal to add the SAFER Guides measure to the Protect Patient Health Information objective beginning with the CY 2022 performance period/CY 2024 MIPS payment year. MIPS eligible clinicians must attest to having conducted an annual self-assessment using the High Priority Practices Guide (available at *https://www.healthit.gov/topic/safety/safer-guides*), at any point during the calendar year in which the performance period occurs, with one ''yes/no'' attestation statement accounting for the complete self-assessment using the Guide. We are finalizing that in the CY 2022 performance period/CY 2024 MIPS payment year, this measure will be required, but it will not be scored, and that an attestation of ''yes'' and ''no'' would not affect the total number of points earned for the Promoting Interoperability performance category. We are also finalizing our proposal to add corresponding regulatory text to § 414.1375(b)(2)(ii)(C).

(e) Incrementation of the Numerator and Denominator for Promoting Interoperability Performance Category Measures

In the CY 2019 PFS final rule (83 FR 59799), we summarized a comment we received in response to proposals we had made in the CY 2019 PFS proposed rule concerning the measures for the Promoting Interoperability performance category beginning with the performance period in 2019. The commenter indicated that for some measures, MIPS eligible clinicians and group practices should be able to get credit for actions that are taken outside of the 90-day performance period. We responded to the comment by stating that since the inception of the Quality Payment Program, we have limited the ability to increment the numerator and denominator of measures to actions occurring during the performance period chosen, with the exception of the Security Risk Analysis measure, for which the relevant actions may occur any time during the calendar year. We now understand that our response to this comment may have caused confusion, and we wish to clarify our response. Instead of referring to the inception of the Quality Payment Program, we should have stated that the measures we proposed beginning with the performance period in 2019 would limit the ability to increment the numerator and denominator to actions occurring during the performance period chosen, with the exception of the Security Risk Analysis measure, for which the relevant actions may occur any time during the calendar year. We note an additional exception is the SAFER Guides measure (as discussed in section IV.A.3.d.(4)(d) in this final rule) because the relevant actions may also occur at any time during the calendar year.

(f) Changes to the Scoring Methodology for the 2022 Performance Period

For ease of reference, Table 56 lists the objectives and measures for the Promoting Interoperability performance category for the CY 2022 performance period/CY 2024 MIPS payment year as revised to reflect the policies finalized in this final rule. Table 57 lists the 2015 Edition certification criteria required to meet the objectives and measures.

BILLING CODE 4120–01–P

TABLE 56: Objectives and Measures for the Promoting Interoperability Performance Category in 2022

Objective	Measure	Numerator	Denominator	Exclusion
e-Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is queried for a drug formulary and transmitted electronically using CEHRT.	Number of prescriptions in the denominator generated, queried for a drug formulary, and transmitted electronically using CEHRT.	Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.
e-Prescribing: Generate and transmit permissible prescriptions electronically.	Query of PDMP (bonus): For at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law.	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider (1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.	Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically	Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.

Objective	Measure	Numerator	Denominator	Exclusion
other health care providers into their EHR using the functions of CEHRT.				
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from other health care providers into their EHR using the functions of CEHRT.	Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, mediation allergy, and current problem list.	Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.	Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.	Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles	HIE Bi-Directional Exchange	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A

Objective	Measure	Numerator	Denominator	Exclusion
summary of care information from other health care providers into their EHR using the functions of CEHRT.				
Provider to Patient Exchange: The MIPS eligible clinician provides patients (or patient-authorized representative) with timely electronic access to their health information.	Provide Patients Electronic Access to Their Health Information: For at least one unique patient seen by the MIPS eligible clinician: 1. The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and 2. The MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT.	Number of patients in the denominator (or patient authorized representative) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications of the API in the MIPS eligible clinician's CEHRT.	Number of unique patients seen by the MIPS eligible clinician during the performance period.	N/A
Public Health and Clinical Data Exchange: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT,	Immunization Registry Reporting: The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).	N/A (measure is Yes/No)	N/A (measure is Yes/No)	The MIPS eligible clinician: 1.does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period; OR 2.operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the performance

Objective	Measure	Numerator	Denominator	Exclusion
except where prohibited, and in accordance with applicable law and practice.				period; OR 3. operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period.
Public Health and Clinical Data Exchange: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.	Electronic Case Reporting: The MIPS eligible clinician is in active engagement with a public health agency to electronically submit case reporting of reportable conditions.	N/A (measure is Yes/No)	N/A (measure is Yes/No)	The MIPS eligible clinician: 1.Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the performance period; OR 2.operates in a jurisdiction for which no public health agency is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. operates in a jurisdiction where no public health agency has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the performance period: OR 4. for the CY 2022 performance period/CY 2024 MIPS payment year only, the MIPS eligible clinician uses CEHRT that is not certified to the electronic case reporting certification criterion at § 170.315(f)(5) prior to the start of the performance period they select in CY 2022.
Public Health and Clinical Data Exchange: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice. TABLE 57: Promoting Interoperability Performance Category Objectives and Measures in 2022, and 2015 Edition Certification Criteria

Objective	Measure	2015 Edition
Electronic Prescribing	e-Prescribing	§ 170.315(b)(3) Electronic prescribing
	Bonus: Query of PDMP	§ 170.315(b)(3) Electronic prescribing
Health Information Exchange	Support electronic referral loops by sending health information	§ 170.315(b)(1) Transitions of care
	Support electronic referral loops by receiving and reconciling health information	§ 170.315(b)(1) Transitions of care § 170.315(b)(2) Clinical information reconciliation and incorporation
Health Information Exchange	HIE Bi-Directional Exchange	Examples of certified health IT capabilities to support the actions of this measure may include, but are not limited to, technology certified to the following criteria: § 170.315(b)(1) Transitions of care § 170.315(b)(2) Clinical information reconciliation and incorporation § 170.315(g)(7) Application access – patient selection § 170.315(g)(8) Application access — data category request § 170.315(g)(9) Application access – all data request § 170.315(g)(10) Application access — standardized API for patient and population services
Provider to Patient Exchange	Provide patients electronic access to their health information	§ 170.315(e)(1) View, download, and transmit to 3rd party § 170.315(g)(7) Application access — patient selection § 170.315(g)(8) Application access — data category request § 170.315(g)(9) Application access — all data request § 170.315(g)(10) Application access — standardized API for patient and population services
Public Health and Clinical Data Exchange	Immunization registry reporting	§ 170.315(f)(1) Transmission to immunization registries
	Electronic case reporting	§ 170.315(f)(5) Transmission to public health agencies — electronic case reporting
	Public health registry reporting	§ 170.315(f)(4) Transmission to public health agencies — transmission to cancer registries § 170.315(f)(7) Transmission to public health agencies — health care surveys
	Clinical data registry reporting	No 2015 health IT certification criteria at this time.
	Syndromic surveillance reporting	§ 170.315(f)(2) Transmission to public health agencies — syndromic surveillance
Protect Patient Health Information	Security Risk Analysis	The requirements are a part of CEHRT specific to each certification criterion.
	Safety Assurance Factors for EHR Resilience Guide (SAFER Guide)	None

Table 58 reflects the scoring methodology for the Promoting Interoperability performance category for the performance period in CY 2022.

TABLE 58: Scoring Methodology for the Performance Period in CY 2022

Objective	Measure	Maximum Points
Electronic Prescribing	e-Prescribing	10 points
	Bonus: Query of PDMP	10 points (*bonus*)*
Health Information Exchange -OR-	Support Electronic Referral Loops by Sending Health Information	20 points
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	20 points
Health Information Exchange (alternative)	Health Information Exchange Bi-Directional Exchange	40 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points
Public Health and Clinical Data Exchange	Report the following 2 measures:* • Immunization Registry Reporting • Electronic Case Reporting	10 Points
	Report on any one of the following measures: • Public Health Registry Reporting OR • Clinical Data Registry Reporting OR • Syndromic Surveillance Reporting	5 points (*bonus*)*

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored.
* Signifies a proposal finalized in this CY 2022 PFS final rule.

BILLING CODE 4120–01–C

We also refer readers to section IV.A.3.d.(4)(f) of this final rule, where we finalized our proposed changes to the regulatory text for scoring the Promoting Interoperability performance category at § 414.1380(b)(4)(ii).

(g) Actions To Limit or Restrict the Compatibility or Interoperability of CEHRT

(i) Background

Section 106(b)(2) of the Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10) (MACRA) includes the heading ''Preventing Blocking The Sharing Of Information.'' Section 106(b)(2)(A) amended section 1848(o)(2)(A)(ii) of the Act to require that, to be a meaningful EHR user, a clinician demonstrates (through a process specified by the Secretary, such as the use of an attestation) that the clinician has not knowingly and willfully taken action (such as to disable functionality) to limit or restrict the compatibility or interoperability of the certified EHR technology. To implement these provisions, we established and codified at § 414.1375(b)(3)(ii) attestation requirements for the Promoting Interoperability performance category to support the prevention of information blocking, which consist of three statements containing specific representations about a MIPS eligible clinician's implementation and use of CEHRT. For further discussion on these requirements, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77028 through 77035). The attestation statements finalized for MIPS eligible clinicians at § 414.1375(b)(3)(ii) are:

- *Statement A:* Did not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology.
- *Statement B:* Implemented technologies, standards, policies, practices, and agreements reasonably calculated to ensure, to the greatest extent practicable and permitted by law, that the certified EHR technology was, at all relevant times: (1) Connected in accordance with applicable law; (2) compliant with all standards applicable to the exchange of information, including the standards, implementation specifications, and certification criteria adopted at 45 CFR part 170; (3) Implemented in a manner that allowed for timely access by patients to their electronic health information; and (4) Implemented in a manner that allowed for the timely, secure, and trusted bi-directional exchange of structured electronic health information with other health care providers (as defined by 42 U.S.C. 300jj(3)), including unaffiliated providers, and with disparate certified EHR technology and health IT vendors.
- *Statement C:* Responded in good faith and in a timely manner to requests to retrieve or exchange electronic health information, including from patients, health care providers (as defined by 42 U.S.C. 300jj(3)), and other persons, regardless of the requestor's affiliation or technology vendor.

Section 4004 of the 21st Century Cures Act added section 3022 to the Public Health Service Act (PHSA) (the ''PHSA information blocking provision,''), which describes practices by health care providers, health IT developers, and HIEs and networks, that constitute information blocking, and provides for civil monetary penalties and other disincentives for those who engage in information blocking.

In the ONC 21st Century Cures Act final rule published in the May 1, 2020 **Federal Register**, ONC finalized a definition of information blocking and identified reasonable and necessary activities (''exceptions'') that do not constitute information blocking (85 FR 25642). For health care providers (as defined in 42 U.S.C. 300jj), information blocking means a practice that, except as required by law or covered by an exception, is likely to interfere with access, exchange, or use of electronic health information; and if conducted by a health care provider, such provider knows that such practice is unreasonable and is likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information (45 CFR 171.103).

The 21st Century Cures Act provides for civil monetary penalties for any individual or entity that is a developer, network, or exchange that has committed information blocking (see section 3022(b)(2)(A) of the PHSA). Regarding health care providers, the

21st Century Cures Act provides that ''Any [health care provider] determined by the [HHS] Inspector General to have committed information blocking shall be referred to the appropriate agency to be subject to appropriate disincentives using authorities under applicable Federal law, as the Secretary sets forth through notice and comment rulemaking'' (section 3022(b)(2)(B) of the PHSA).

(ii) Changes to the Attestation Statements

Although there could be some degree of overlap between conduct described in the attestation statements under § 414.1375(b)(3)(ii) and conduct that could be considered information blocking under section 3022 of the PHSA and ONC's implementing regulations at 45 CFR 171.103, it is important to note these are separate and distinct authorities. For instance, the ONC 21st Century Cures Act final rule finalized a definition for what constitutes information blocking, and exceptions to information blocking that are not reflected in the previously finalized attestation statements under § 414.1375(b)(3)(ii). While we previously stated in the CY 2017 QPP final rule that these attestations statements did not impose ''unnecessary or unreasonable requirements'' on health care providers (81 FR 77029), after careful review of these attestation statements in light of the information blocking regulations at 45 CFR part 171, we believe that statements B and C are no longer necessary. Thus, beginning with the performance period in CY 2022, we proposed in the CY 2022 PFS proposed rule (86 FR 39423 through 39425) to no longer require statements B and C. We believe that the similarities between practices described under statements B and C, and the practices that could constitute information blocking under section 3022 of the PHSA and ONC's implementing regulations will create confusion for stakeholders. To this point, the practices that could constitute information blocking under 45 CFR part 171 are much broader than those described in the attestation statements. We discuss specific instances of potential confusion below.

Statement B requires attestation to a series of statements regarding the use of certified technology and a designated manner for implementing certified technology. For instance, attestations to the implementation of technology compliant with the standards for certified health IT at 45 CFR part 170, and use of functionality to support health information exchange with other health care providers. However, as noted above, the definition of information blocking finalized in the ONC 21st Century Cures Act final rule is not specific to, nor limited to the use of certified technology, which is compliant with certain standards or the use of certain functionality. Under the ONC 21st Century Cures Act final rule, a health care provider may still be determined to have engaged in practices likely to interfere with access, exchange, or use of electronic health information (information blocking) regardless of whether they are using certified technology.

Regarding statement C, we stated in the CY 2017 QPP final rule that ''technical, legal, and other practical constraints may prevent a health care provider from responding to some requests to access, exchange, or use electronic health information in a health care provider's certified EHR technology'' (81 FR 77033). Subsequently, in the ONC 21st Century Cures Act final rule, ONC established a set of reasonable and necessary activities that are not considered information blocking when responding to a request for EHI. The reasonable and necessary activities established under the ONC 21st Century Cures Act final rule now provide more specific direction to health care providers when responding to a request for EHI than the general ''technical, legal, and other practical constraints,'' which we described in the CY 2017 QPP final rule. Accordingly, we believe that continuing to require statement C may introduce confusion for those health care providers who are obligated to comply with the regulations finalized in the ONC 21st Century Cures Act final rule when responding to a request for EHI.

In order to distinguish the attestation required by section 106(b)(2)(A) of MACRA from information blocking under section 3022 of the PHSA, we further proposed in the CY 2022 PFS final rule (86 FR 39423 through 39425) to modify the headings of §§ 414.1375(b)(3) and (b)(3)(ii), add § 414.1375(b)(3)(iii), and modify the definition of ''meaningful EHR user for MIPS'' under § 414.1305 to specify that the clinician does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, which reflects the language used in section 106(b)(2)(A) of MACRA. In addition, we proposed to no longer require attestation statements B and C beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year and we proposed corresponding regulatory text amendments at § 414.1375(b)(3)(ii) and (iii). We finalized a similar proposal for the Medicare Promoting Interoperability Program in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45481 through 45482).

We received public comments on our proposal to remove Statements B and C under § 414.1375(b)(3)(ii), beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, and here are our responses.

Comment: All commenters supported our proposal to no longer require Statements B and C under § 414.1375(b)(3)(ii). Commenters shared appreciation for our efforts to eliminate duplicative reporting burden, eliminate redundancies, and our efforts towards streamlining our requirements.

Response: We would like to thank commenters for their support.

Comment: One commenter requested that CMS remain involved with the information blocking issue, as challenges will continue to persist. Another commenter shared a similar concern, and further urged that CMS seek public comment prior to introducing any ''appropriate disincentives'' in the future.

Response: We do consider Information Blocking an important issue, and believe that in finalizing this policy, we are addressing concerns regarding improving clarity and reducing redundancies. We will take the suggestion of seeking public comment prior to introducing any ''appropriate disincentives'' for future rulemaking.

After consideration of the public comments, we are finalizing our proposal to modify the headings of §§ 414.1375(b)(3) and 414.1375(b)(3)(ii), add § 414.1375(b)(3)(iii), and to modify the definition of ''meaningful EHR user for MIPS'' under § 414.1305 to specify that the clinician does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, which reflects the language used in section 106(b)(2)(A) of MACRA. In addition, we are finalizing our proposal to no longer require attestation statements B and C beginning with the CY 2022 performance period/CY 2024 MIPS payment year, and we are finalizing our proposed corresponding regulatory text amendments at §§ 414.1375(b)(3)(ii) and (iii).

(h) Additional Considerations

(i) Reweighting the Promoting Interoperability Performance Category for MIPS Eligible Clinicians in Small Practices

We previously established under § 414.1380(c)(2)(i)(C)(9) a significant

hardship exception for MIPS eligible clinicians in small practices as defined in § 414.1305. In the CY 2018 Quality Payment Program final rule (82 FR 53682 through 53683), we established that we will reweight the Promoting Interoperability performance category to zero percent of the MIPS final score for MIPS eligible clinicians who qualify for this hardship exception. We established that a MIPS eligible clinician seeking to qualify for this exception must submit an application to us demonstrating that there are overwhelming barriers that prevent them from complying with the requirements for the Promoting Interoperability performance category, and that the exception is subject to annual renewal. In the CY 2018 Quality Payment Program final rule (82 FR 53579 through 53581), we also established that we will determine the size of small practices by utilizing claims data. This policy was further modified in the CY 2019 PFS final rule (83 FR 59727 through 59730) so that beginning with the CY 2021 MIPS payment year, a small practice is a TIN consisting of 15 or fewer eligible clinicians during the MIPS determination period.

In the CY 2018 Quality Payment Program proposed rule (82 FR 30076), we stated that we believed that special consideration should be available for MIPS eligible clinicians in small practices based on concerns previously identified by commenters, including small practices not being able to afford the upfront investments (including investments in EHR technology), and small practices not adopting EHRs due to the administrative and financial burden. Although some commenters requested that we automatically apply the proposed hardship exception to clinicians in small practices, at the time we disagreed and stated that we believed that many small practices will be able to successfully report for the Promoting Interoperability performance category (82 FR 53683).

We have been monitoring the submission of data for the Promoting Interoperability performance category by small practices and individual clinicians who are part of a small practice, and the numbers remain low despite the no-cost technical assistance we offered small practices through the Small, Underserved, and Rural Support Initiative. Data from CY 2019 revealed that of the 49,278 clinicians in small practices who were scored as an individual for MIPS, 84 percent of them did not submit Promoting Interoperability performance category data and did not apply for a small practice hardship exception application even though they may have qualified for the exception. Among clinicians who did not qualify for Promoting Interoperability performance category reweighting, only 29 percent of small practices compared to 61 percent of practices with more than 15 clinicians billing under the practice's TIN submitted data for the Promoting Interoperability performance category. Although we had expected many small practices would be able to successfully report data for the Promoting Interoperability performance category, we are concerned to see such low numbers of them either reporting data or applying for the small practice hardship exception, as such inaction would result in a score of zero for this performance category.

We want to support small practices and help them successfully participate in MIPS. As our analysis of the data suggests that successfully participating in the Promoting Interoperability performance category may be particularly challenging for small practices, in the CY 2022 PFS proposed rule (86 FR 39424 through 39425) we proposed a modification of our policy. Beginning with the CY 2022 performance period/CY 2024 MIPS payment year, we proposed to no longer require an application for clinicians and small practices seeking to qualify for the small practice hardship exception and reweighting. We proposed instead to assign a weight of zero percent to the Promoting Interoperability performance category and redistribute its weight to another performance category or categories (as discussed further in section IV.A.3.e. of the proposed rule) in the event no data is submitted for any of the measures for the Promoting Interoperability performance category by or on behalf of a MIPS eligible clinician in a small practice. We proposed that if data is submitted for a MIPS eligible clinician in a small practice, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category will be given the weight prescribed by section 1848(q)(5)(E) of the Act. We proposed the small practice significant hardship exception still will be subject to annual renewal, and we will verify whether a practice meets the definition of a small practice under § 414.1305 on an annual basis. We proposed corresponding revisions to § 414.1380(c)(2)(i)(C)(9).

While we proposed this policy at this time, it is not our intention that this policy be in place for the long term, but rather only for a few years, as we would like to increase participation of small practices in the Promoting Interoperability performance category. We sought comment on potential options to increase small practice participation in the Promoting Interoperability performance category.

We proposed that in the case of an APM Entity that also meets the definition of a small practice, we will continue applying the Promoting Interoperability performance category reporting and exception requirements at the group level, as described at § 414.1317. However, if the APM Entity is composed of a single TIN which itself meets the definition of a small practice, all TINs within the APM Entity (that is, the single TIN) will be eligible for this exception, and therefore, the Promoting Interoperability performance category will be reweighted for the APM Entity and the performance category reweighting described above will be applied.

We received public comments on the proposal to automatically reweight the Promoting Interoperability performance category for MIPS eligible clinicians in small practices. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposal to automatically reweight the Promoting Interoperability performance category for MIPS eligible clinicians in small practices. Several commenters stated that they believe that it will reduce the administrative burden for small practices. Other commenters suggested that MIPS eligible clinicians in small practices have not applied for the hardship exception because they are not aware of it or because it is a burden to apply. Several commenters stated that small practices have not applied due to resource constraints. One commenter stated that MIPS eligible clinicians in small practices do not apply because they are afraid of being audited.

Response: We thank commenters for their support and agree the proposal may reduce administrative burden for small practices that face overwhelming barriers that prevent them from complying with the requirements for the Promoting Interoperability performance category.

Comment: One commenter applauded CMS' continued flexibility for small practices and believed the availability of hardship exceptions for small practices for the Promoting Interoperability performance category is necessary, but they do not agree with CMS' proposal to automatically reweight the Promoting Interoperability performance category for small practices. This proposal removes an incentive for practices to move towards the adoption of EHRs

which has been CMS' goal for many years. In line with CMS' messaging, their organization has also been pushing their membership towards EHR adoption to comply with MIPS reporting and the increasing requirements to avoid a negative payment adjustment. Because of this, they expressed concerns that this proposal sends the wrong message to practices newly adopting EHRs and practices with EHRs who have been diligently working to meet the requirements of this category. Another commenter did not support the proposal to automatically reweight Promoting Interoperability performance Category for small practices. They believe small practices should have to request reweighting. The Promoting Interoperability performance category has encouraged clinics of all sizes to engage their patients through the use of technology, such as patient portals and use of HIEs, improving access to care. By reweighting Promoting Interoperability performance Category, clinics may disable or neglect these features to the determent of the patient experience. They suggested that CMS consider reducing the number of measures within the Promoting Interoperability performance category for these smaller clinics, such as 2 or 3 measures, instead of a total reweight of 0 for all the measures.

Response: We understand these concerns and we stated in the CY 2022 PFS proposed rule (86 FR 39425) that it is not our intention for this policy to be in place for the long term. Too many small practices neglect to apply for the small practice hardship exception so we believe that putting this automatic reweighting policy in place in concert with increased outreach will help to reduce administrative burden for small practices. As we intend this policy to be temporary we hope that there will still be an impetus for small practices to strive to adopt CEHRT and report on the Promoting Interoperability performance category. We remind readers that if a small practice submits data for the Promoting Interoperability performance category, the data will be scored and the Promoting Interoperability performance category will not be reweighted. We appreciate the suggestion to reduce reporting requirements for small practices, and this is something that we may consider in future rulemaking.

Comment: One commenter urged CMS to use several methods to communicate in clear and unambiguous language that if the small practice submits data for the Promoting Interoperability performance category that the reweighting will be cancelled. Another commenter requested that CMS undertake an extensive educational campaign, partnering with specialty societies, to ensure that all small practices and their vendors are aware of this automatic reweighting and the fact that if they report any data for the Promoting Interoperability performance category, they will receive a Promoting Interoperability performance category score and not be reweighted.

Response: We thank commenters for these suggestions. We intend to include this policy in our educational materials and work with specialty societies to help disseminate this information.

We received comments in response to the questions we posed in the CY 2022 PFS proposed rule (86 FR 39425) related to small practice participation in the Promoting Interoperability performance category. We will analyze all of the comments that we received and may use them to inform future rulemaking and outreach initiatives.

After consideration of public comments, we are finalizing our proposal such that beginning with the CY 2022 performance period/CY 2024 MIPS payment year, we will no longer require an application for clinicians and small practices seeking to qualify for the small practice hardship exception and reweighting. We will assign a weight of zero percent to the Promoting Interoperability performance category and redistribute its weight to another performance category or categories (as discussed further in section IV.A.3.e.(2)(b) of this final rule) in the event no data is submitted for any of the measures for the Promoting Interoperability performance category by or on behalf of a MIPS eligible clinician in a small practice. If data is submitted for a MIPS eligible clinician in a small practice, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category will be given the weight prescribed by section 1848(q)(5)(E) of the Act. The small practice significant hardship exception still will be subject to annual renewal, and we will verify whether a practice meets the definition of a small practice under § 414.1305 on an annual basis. We are making corresponding revisions to § 414.1380(c)(2)(i)(C)(*9*).

(ii) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

We established a policy at § 414.1380(c)(2)(i)(A)(*5*) for the performance periods in 2017 through 2021 under section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the Promoting Interoperability performance category, but if they choose to report, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act.

As in past years, we intend to use data from prior performance periods to further evaluate the participation of NPs, PAs, CRNAs, and CNSs in the Promoting Interoperability performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians. We have analyzed the data submitted for the 2017 performance period for the Promoting Interoperability performance category and have discovered that the vast majority of MIPS eligible clinicians submitted data as part of a group. Although we are pleased that MIPS eligible clinicians utilized the option to submit data as a group, it does limit our ability to analyze data at the individual NPI level. For the 2017 performance period, approximately 4 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs submitted data individually for MIPS, and more than two-thirds of them did not submit data for the Promoting Interoperability performance category. For the 2018 performance period, we reported that of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually, approximately 34 percent submitted data for the Promoting Interoperability performance category. However, after further review and the refinement of our analytics it was revealed that the percentage was not 34 percent but was 24 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs that submitted data individually for the Promoting Interoperability performance category. For the 2019 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually, approximately 30 percent submitted data individually for the Promoting Interoperability performance category, a modest increase from 2018. We continued our reweighting policy in 2020 but have not yet analyzed the data

to determine what proportion of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs that submitted data individually for MIPS also submitted data for the Promoting Interoperability performance category.

We believe that having these clinician types using CEHRT and submitting data for the Promoting Interoperability performance category is important for increased interoperability and data exchange. We are exploring the possibility that these clinician types are able to submit data but are choosing not to due to our current reweighting policies. In the future we may use other factors besides the submission data to determine whether to continue to reweight the Promoting Interoperability performance category for these clinicians. We solicited comments as to whether these clinician types are using CEHRT and are able to submit data on the measures for the Promoting Interoperability performance category.

While we are encouraged by the increasing numbers of NPs, PAs, CRNAs, and CNSs submitting data for the Promoting Interoperability performance category, we believe that the low numbers warrant the continued reweighting of the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the CY 2022 performance period/CY 2024 MIPS payment year. Thus, in the CY 2022 PFS proposed rule (86 FR 39425 through 39426), we proposed to continue the existing policy for the CY 2022 performance period/CY 2024 MIPS payment year and proposed to revise § 414.1380(c)(2)(i)(A)(*5*), which is being redesignated as § 414.1380(c)(2)(i)(A)(*4*)(*ii*), to reflect the proposal.

We did not receive comments on our proposal. We are finalizing our proposal to continue the existing policy to reweight the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the CY 2022 performance period/2024 MIPS payment year and have revised § 414.1380(c)(2)(i)(A)(*5*), which is being redesignated as § 414.1380(c)(2)(i)(A)(*4*)(*ii*). We thank commenters for their responses to our requests for comment and may consider this information to inform future rulemaking.

(iii) Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologists, Qualified Audiologists, Clinical Psychologists, and Registered Dieticians or Nutrition Professionals

In the CY 2020 PFS final rule (84 FR 63003 through 63004), we adopted a policy at § 414.1380(c)(2)(i)(A)(*4*) to apply the same policy we adopted for NPs, PAs, CNSs, and CRNAs to other types of MIPS eligible clinicians who are NPPs (physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals) for the performance period in 2020. We stated that because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category. We extended this policy for the performance period in 2021 (85 FR 84895). As these clinicians were first eligible to participate in MIPS in the CY 2020 performance period/CY 2022 MIPS payment year, we have not yet analyzed the data to inform a potential modification to our current policy and do not anticipate a completed analysis being available prior to the release of this final rule. In the CY 2022 PFS proposed rule (86 FR 39426) we proposed to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals for the CY 2022 performance period/2024 MIPS payment year. We proposed to revise § 414.1380(c)(2)(i)(A)(*4*), which is being redesignated as § 414.1380(c)(2)(i)(A)(*4*)(*i*), to reflect this proposal.

We received public comments on the proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologists, Qualified Audiologists, Clinical Psychologists, and Registered Dieticians or Nutrition professionals. The following is a summary of the comments we received and our responses.

Comment: One commenter fully supported reweighting the Promoting Interoperability performance categories for these clinicians. In addition to similar difficulties in data capture as NPs, PAs, etc., many of the measures are not clinically applicable to these specific clinicians. Some would not prescribe medications (nutrition professionals), administer vaccines (immunization registry reporting) and/or reconcile certain clinical data. Although we believe many of these professionals are an integral part of the patient's care team, we do not believe they should be required to individually report Promoting Interoperability performance category data.

Response: We appreciate the support of the commenter.

Comment: One commenter appreciated CMS extending the reweighting policy for the Promoting Interoperability performance category data for occupational therapy practitioners for CY 2022 performance period/CY 2024 MIPS payment year. Non-physician clinicians are still at a disadvantage because not all Promoting Interoperability performance category data are applicable to their practices. The commenter requested that CMS review measure applicability and adjust measure requirements to allow for NPP reporting if the Promoting Interoperability performance category data is to become a requirement in future years.

Response: As we have stated previously, we will continue to monitor the participation of NPPs in the Promoting Interoperability performance category. We will use this data to inform future policy proposals.

Comment: Commenters requested that CMS confirm that psychologists and certain other non-physician eligible clinicians will continue to have the Promoting Interoperability performance category reweighted to zero given that they never had the opportunity to receive Federal funds to invest in EHRs. It is critical that all psychologists, including those in practices with more than 15 eligible clinicians, continue to have the Promoting Interoperability performance category reweighted to zero unless they choose to report Promoting Interoperability performance category measures or are provided with Federal funding to invest in EHRs.

Response: We proposed (86 FR 39426) and are finalizing our proposal to continue to reweight clinical psychologists for the Promoting Interoperability performance category for the CY 2022 performance period/CY 2024 MIPS payment year.

After consideration of public comments, we are finalizing our proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals for the CY 2022 performance period/2024 MIPS payment year. We are finalizing our revisions at § 414.1380(c)(2)(i)(A)(*4*),

which is being redesignated as § 414.1380(c)(2)(i)(A)(*4*)(*i*).

(iv) Clinical Social Workers and Certified Nurse-Midwives (CNMs)

We proposed at 86 FR 39426 to add clinical social workers and CNMs to the definition of a MIPS eligible clinician. These clinician types were not eligible to participate in the Medicare Promoting Interoperability Program to earn incentive payments for meaningful use of CEHRT or receive reduced Medicare payments for failing to meaningfully use CEHRT. Clinical social workers were not eligible for Medicaid EHR incentive payments and thus may lack experience with the adoption or use of CEHRT. CNMs were eligible for the Medicaid EHR incentive payments, and the majority did earn incentives. For the CY 2022 performance period/CY 2024 MIPS payment year, we proposed in the CY 2022 PFS proposed rule (86 FR 39426) to apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to clinical social workers as we believe that there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to clinical social workers. We will assign a weight of zero only in the event that a clinical social worker does not submit data for any of the measures specified for the Promoting Interoperability performance category. We proposed to add § 414.1380(c)(2)(i)(A)*(4)*(*iii*) to reflect this proposal for clinical social workers.

We believe there are sufficient measures applicable and available to CNMs under the Promoting Interoperability performance category because of their experience with the Medicaid Promoting Interoperability Program. Many of them have adopted CEHRT and earned a Medicaid incentive payment, and the measures for the Medicaid Promoting Interoperability Program generally are the same or slightly modified versions of the Promoting Interoperability performance category measures. Thus, we did not propose to apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to CNMs. However, we solicited comments on whether there are in fact sufficient measures applicable and available to CNMs under the Promoting Interoperability performance category, and whether barriers exist that prevent CNMs from complying with the requirements of the Promoting Interoperability performance category and may warrant reweighting. Like other types of MIPS eligible clinicians, a CNM may be able to qualify for a significant hardship exception from and reweighting of the Promoting Interoperability performance category under the existing policies at § 414.1380(c)(2)(i)(C), depending on their circumstances.

We received public comments on reweighting the Promoting Interoperability performance category for clinical social workers and CNMs. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the reweighting of the Promoting interoperability performance category for clinical social workers and added that they do not prescribe medications or administer vaccines.

Response: We appreciate the support for our proposal and remind readers that if clinical social workers choose to submit data for the Promoting interoperability performance category they will be scored and not reweighted.

Comment: A few commenters expressed their opposition to requiring CNMs to report for the Promoting Interoperability performance category as CMS reweights all other non-physician clinicians eligible under MIPS. They acknowledged CMS' rationale for not applying the same Promoting Interoperability reweighting policy previously adopted for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to CNMs given that they were an eligible professional type under the Medicaid EHR Incentive Program, but stated that NPs were also eligible professional types under that Program and have been reweighted for the Promoting Interoperability performance category since the CY 2017 performance period/CY 2019 MIPS payment year. They requested that CMS also reweight CNMs.

Response: When we established the reweighting policy for NPs, we stated that their low numbers of participation in the Medicaid EHR Incentive Program may have indicated that the EHR Incentive Program measures were not applicable or available to them. (81 FR 77243 through 77244). For CNMs, we believe that there are sufficient measures applicable and available. Many CNMs have adopted CEHRT and earned Medicaid EHR Incentive Program/Medicaid Promoting Interoperability Program payments. Further the measures under these Medicaid Programs are the same or slightly modified versions of those required for the MIPS Promoting Interoperability performance category. We did request comments on whether barriers exist that prevent CNMs from complying with the requirements of Promoting Interoperability performance category but we did not receive any comments related to barriers.

After consideration of public comments, we are finalizing our proposals as proposed. For the CY 2022 performance period/CY 2024 MIPS payment year, we will apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to clinical social workers as we believe that there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to clinical social workers. We will assign a weight of zero only in the event that a clinical social worker does not submit data for any of the measures specified for the Promoting Interoperability performance category and we are adding § 414.1380(c)(2)(i)(A)(*4*)(*iii*) to reflect this policy.

(i) Technical Corrections to the Regulations

In the CY 2019 PFS final rule (83 FR 59798 through 59817), we adopted objectives and measures for the Promoting Interoperability performance category that will apply beginning with the performance period in 2019. The requirement for MIPS eligible clinicians to report on these objectives and measures can be found under § 414.1375(b)(2). In the CY 2021 PFS rulemaking, we inadvertently neglected to update this provision of the regulation text, although our intention was a continuation of the policy we established for the CY 2021 and 2022 MIPS payment years. We proposed a technical correction to § 414.1375(b)(2)(ii) to specify that the reporting requirements apply beginning with the 2021 MIPS payment year. We solicited comments on this proposal.

We did not receive public comments on this proposal, and therefore, we are finalizing as proposed.

(j) Requests for Information (RFI)

The CY 2022 PFS proposed rule contained the following RFIs (86 FR 39427 through 39428):

- Request for Information on Additional Objectives Adopting FHIR®-based API Standards
- Request for Information on a Patient Access Outcomes Measures
- Request for Information on Clinical Notes

We thank commenters for their responses to these requests for information. We may consider this

information to inform future rulemaking.

(5) APM Entity Level Participation for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

In the CY 2021 PFS final rule (85 FR 84896), we finalized our policy to terminate the APM scoring standard effective January 1, 2021, and to retain certain APM Entity group reporting policies that were established and finalized for reporting and scoring under MIPS beginning with the CY 2021 MIPS performance period. Therefore, we redesignated, in part, the regulation that describes APM Entity group determinations, from § 414.1370(e) to § 414.1317, and titled that section ''APM Entity Groups.''

(b) APM Entity Level Reporting of Facility-Based Measures

In the CY 2021 PFS final rule (85 FR 84896), we finalized a policy to allow APM Entities to report to traditional MIPS using the same quality measures available to other groups, according to all applicable MIPS quality scoring policies. It has been brought to our attention that we did not make it clear whether APM Entities may be eligible for facility-based scoring. In the CY 2022 PFS proposed rule (86 FR 39429), we clarified that because facility-based measures are not submitted, but rather are collected by CMS using group-level participation scores used for the Hospital Value Based Purchasing Program, it would be impossible for CMS to calculate a score for a facility-based measure that represents the performance of an APM Entity. Therefore, facility-based scoring is not available to APM Entities under MIPS quality scoring rules, as described at § 414.1330. We also noted that participants in APM Entities that are eligible for facility-based scoring at the individual or group level would still be eligible to receive these scores for purposes of individual or group MIPS scoring.

(c) APM Entity Performance Category Weights

In the CY 2021 PFS final rule (85 FR 84896), we finalized a policy to weight the cost performance category at zero percent of the final score for APM Entities in MIPS APMs. We codified the weight of the cost performance category at § 414.1317(b)(2), but we did not discuss in the CY 2021 PFS final rule how the weight that otherwise would have applied to the cost performance category will be redistributed among the other performance categories. In the CY 2022 PFS proposed rule (86 FR 39429), for purposes of clarity, we proposed to add to § 414.1317(b)(2) that the performance category reweighting scenarios under § 414.1380(c)(2) apply to an APM Entity.

We explained that because APM Entities are participating in traditional MIPS and generally are being scored according to traditional MIPS scoring rules at § 414.1380 unless otherwise specified, the performance category reweighting scenarios under § 414.1380(c)(2) are applicable to APM Entities. Using the 2021 MIPS performance period/2023 MIPS payment year as an example, if the cost performance category is the only performance category weighted at zero percent for an APM Entity, the performance category weights would be as follows under § 414.1380(c)(2)(ii)(E): Quality 55 percent, cost zero percent, improvement activities 15 percent, and promoting interoperability 30 percent. If both cost and promoting interoperability are weighted at zero percent, then quality would be 85 percent and improvement activities would be 15 percent. For the remaining reweighting scenarios for the 2021 MIPS performance period/2023 MIPS payment year, we refer readers to Table 6 under § 414.1380(c)(2)(ii)(E). The reweighting scenarios applicable to APM Entities for the 2022 MIPS performance period/2024 MIPS payment year can be found in Table 7 under § 414.1380(c)(2)(ii)(F). We refer readers to section IV.A.3.e.2 of this final rule where we discuss our proposal to apply the reweighting policy finalized for the 2022 MIPS performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(F) to the 2025 MIPS payment year and each subsequent MIPS payment year. In the event we establish additional reweighting scenarios, they would also apply to APM Entities.

We did not receive any comments on this proposal and are finalizing as proposed.

e. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

For the CY 2022 performance period/2024 MIPS payment year, we intend to continue to build on the scoring methodology we finalized for prior years. The scoring methodology allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. We proposed to update many of our scoring policies, focusing on removing transition policies. Specifically, we proposed to—

- Change certain terminology related to scoring.
- Amend our scoring flexibility policy to include quality measures with omitted or deactivated codes in the finalized measure specifications.
- Implement benchmarking and topped out scoring policies that are responsive to potential low reporting rates for the CY 2020 performance period/2022 MIPS payment year due to the national PHE for COVID–19 and establishing a benchmark when measures are suppressed in the baseline period.
- Amend policies for scoring quality measures based on achievement and measures that do not meet case minimum or have a benchmark and introduce scoring policies for new measures.
- Amend the minimum case requirement policy.
- End the high priority and end-to-end reporting bonuses in the quality performance category.
- Continue improvement scoring in the quality performance category.
- Implement a scoring flexibility policy for changes that impact cost measures during the performance period.
- Revise certain provisions of the regulation text for the Promoting Interoperability performance category.

We did not propose changes to scoring policies for the improvement activities performance category.

We also maintained our approach to how MIPS eligible clinicians are scored against performance standards for each performance category, receive a final score comprised of their performance category scores, and how the final score is calculated according to the final score methodology. We refer readers to § 414.1380 for policies on scoring.

(b) Terminology Updates

We proposed updates to § 414.1380 in an effort to more clearly and concisely capture previously established policies (86 FR 39429). These proposed updates were not intended to be substantive in nature, but rather to bring more clarity to the regulatory text. We proposed to change the term ''performance category percent score'' to ''performance category score'' in §§ 414.1380(b)(1)(vi)(C) and (E) related to improvement scoring, 414.1380(b)(1)(vii) related to scoring the quality performance category score, 414.1380(b)(2)(iii) and (v) related to scoring the cost performance category, 414.1380(c) and (c)(2)(ii)(A) on calculating the final score and final score reweighting, and

414.1380(e)(6)(iv) and (v) related to facility-based scoring. Again, these changes were not intended to change the underlying policies reflected in the regulation text. Initially, the quality and cost performance categories used the term ''performance category percent score'' because those categories had improvement scoring and have a slightly different approach to calculation than the Promoting Interoperability and improvement activities performance category. However, the terms ''performance category percent score'' and ''performance category score'' have been used in the same way. For that reason, we proposed to consolidate our language and use only the latter aforementioned term.

We received public comments on our terminology updates. The following is a summary of those comments.

Comment: One commenter supported the change in terminology.

Response: We thank the commenter for their support.

After consideration of the public comments, we are finalizing this proposal as proposed.

(c) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to § 414.1380(b)(1) for our policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category percent score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913). We proposed in the CY 2022 PFS proposed rule to amend policies finalized in prior years to simplify scoring in MIPS as we transition to MVPs (86 FR 39429 through 39430).

(i) Scoring Flexibility for Changes That Impact Quality Measures During the Performance Period or Prior to Implementation

We refer readers to CY 2018, CY 2019, and CY 2021 Quality Payment Program final rules (82 FR 53714 through 53716, 83 FR 59845 through 59847, and 85 FR 84898 through 84901 respectively) and § 414.1380(b)(1)(vii)(A) for our previously establish scoring flexibilities policy.

In the CY 2018 Quality Payment Program Final rule (82 FR 53714 through 53716), we finalized that, beginning with the 2018 MIPS performance period, we will assess performance on measures considered significantly impacted by ICD–10 coding changes during the performance period based only on the first 9 months of the 12-month performance period. We noted that we believe that 9 months of data is sufficient to assess performance when 12 months of data is not available. We finalized that we would publish a list of measures requiring 9 months of data on the CMS website by October 1st of the performance period if technically feasible, but no later than the beginning of the data submission period (for example, January 2, 2021 for the 2020 performance period) (82 FR 53716). We refer readers to § 414.1380(b)(1)(viii) for more on our policy for scoring flexibility for ICD–10 changes.

In the CY 2019 Quality Payment Program final rule (83 FR 59845 through 59847), we finalized policies beginning with the 2019 performance period/2021 MIPS payment year to reduce the total available measure achievement points from the quality performance category by 10 points for MIPS eligible clinicians for each measure submitted that is significantly impacted by clinical guideline changes or other changes when we believe adherence to the guidelines in the existing measures could result in patient harm or otherwise no longer be comparable to a historic benchmark. We wanted the flexibility to respond to instances in which the clinical evidence and guidelines change and approved measures no longer reflect the most up-to-date clinical evidence and could even result in a practice that is harmful to patients. We finalized expanding the list of reasons that a quality measure may be impacted during the performance period in addition to revising when we will allow scoring of the measure with a performance period truncation (to 9 months of data) or the complete suppression of the measure if 9 months of data are not available.

In the CY 2021 Quality Payment Program final rule, we finalized a consolidation of the CY 2018 and CY 2019 scoring flexibilities policy that allowed, beginning with the 2021 performance period/2023 MIPS payment year, truncation of the performance period or suppression of a quality measure if CMS determines that revised clinical guidelines, measure specifications or codes impact clinician's ability to submit information on the measure or may lead to potentially misleading results. Based on the timing of the changes to clinical guidelines, measure specifications or codes, we will assess the measure on 9 months of data, and if 9 consecutive months of data are not available, we will suppress the measure by reducing the total available measure achievement points from the quality performance category by 10 points for each measure submitted that is impacted (85 FR 84898 through 84901).

In previous rules, we noted that we believe that there may be instances when there are changes after the final approval of quality measures including changes to the measure specification, or updates to coding that may lead to misleading results (85 FR 84899). Additionally, we believe that there may be instances in which there is an inadvertent omission of codes, or inclusion of deactivated codes in the measure specifications that do not have the correct status. Typically, codes that are contained within the measure specifications either have a reimbursable status or a non-reimbursable status that still allows processing for purposes of quality reporting programs. We have encountered instances where CMS has been alerted that codes have inadvertently received an inactive status which results in the associated codes not being processed and stored in the National Claims History (NCH) database, and therefore, not available for quality purposes. As the measure specifications are considered technical documents that include several fields such as, but not limited to: The numerator, denominator, measure description, denominator exclusions, clinical guidance statements, and codes relevant to how the measure should be captured. The measure specifications are finalized and published in coordination with the final rule, and prior to the start of the performance period. An inadvertent omission of codes, or inclusion of inactive codes in the measure specifications, may result in misleading results by affecting clinicians who submit the measure. In these instances, implementation errors could lead to misleading performance rates by failure to reflect accurate numerator and/or denominator values for calculation of the measure. These are not changes that occur during the performance period, but errors that would affect the performance period.

It recently came to our attention through Help Desk inquiries that Medicare Administration Carriers (MACs) were rejecting 2021 Part B Claims submissions for Quality Measure ID (QID) 001: Hemoglobin A1c (HbA1c)

Poor Control (>9%) and QID 117 Diabetes: Eye Exam due to an inactive status for certain CPT II codes. The omission of these claims from the total denominator population of the measure could skew scores and lead to misleading results. We believe suppression of the measures is consistent with current § 414.1380(b)(1)(vii)(A). Information on the suppression of the Part B claims collection type of these measures for the 2021 MIPS performance period/2023 MIPS payment year was announced via the QPP listserv on July 1st, 2021. For more information please refer to our website *qpp.cms.gov.*

We proposed to amend § 414.1380(b)(1)(vii)(A) to clarify our intended policy on instances in which we become aware of changes to the active or payable status of the codes and/or implementation errors included in the measure specifications as finalized that would lead to misleading results. Accordingly, we proposed to revise § 414.1380(b)(1)(vii)(A) to change ''significant changes'' to ''significant changes or errors'' and to include the omission of codes or inclusion of inactive or inaccurate codes to provide that for each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points. For purposes of paragraph (b)(1)(vii)(A), ''significant changes or errors'' means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes, or inclusion of inactive or inaccurate codes; changes to clinical guidelines; or measure specifications. We will publish on the CMS website a list of all measures scored under paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than data submission deadline at § 414.1325(e)(1).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters offered additional suggestions. One commenter suggested that, for each circumstance, CMS work with stakeholders to assess whether it would be appropriate to measure a practice on 9 months of data for a quality measure with a 12-month performance period. One commenter requested a better way to address errors in measures besides suppression and truncation as measure stewards need more flexibility to adjust measures with errors. The commenter noted that if a measure with an error is suppressed immediately and there is no opportunity for the error to be fixed, measure stewards will not be incentivized to put forth corrections to CMS.

Response: We thank the commenters for their comments. The policy to truncate the performance period to 9 months may be used when there are changes in the final quarter of the performance period that are substantial enough to significantly impact the measure. In instances in which measures include significant changes or errors at the time of finalization, we would not have 9 months of appropriate data to assess. When these errors come to CMS' attention, the agency works with measure stewards to correct the issue. Whether or not the measure can be corrected is contingent upon the timing of discovery of the errors. In instances in which measures can be corrected, we believe that measure stewards are incentivized to correct them in as timely a manner as possible to support their presence and use in the program. We also believe that measures stewards want their measures in MIPS and will work to ensure that their measures are maintained and that errors are corrected. We will continue to work with measure stewards both to ensure measure specifications are correct before finalization, as well as correct any errors that are finalized.

Comment: A few commenters supported the expanded list of reasons that a quality measure may be impacted to include errors included in the measure specifications as finalized as cause to suppress or truncate a measure. One commenter appreciated that the policy will prevent scores from being negatively affected based on changes to measures.

Response: We thank the commenters for their response and their support of the edits to the scoring flexibilities policy.

After consideration of public comments, we are finalizing our proposal as proposed by revising § 414.1380(b)(1)(vii)(A) to change ''significant changes'' to ''significant changes or errors'' and to include the omission of codes or inclusion of inactive or inaccurate codes to provide that for each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points. For purposes of paragraph (b)(1)(vii)(A), ''significant changes or errors'' means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes, or inclusion of inactive or inaccurate codes; changes to clinical guidelines; or measure specifications.

We will publish on the CMS website a list of all measures scored under paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than data submission deadline at § 414.1325(e)(1).

(ii) Quality Measure Benchmarks

We refer readers to the CY 2017, CY 2018, CY 2019, CY 2020, and CY 2021 Quality Payment Program final rules (81 FR 77277 through 77282, 82 FR 53699 through 53718, 83 FR 59841 through 59842, 84 FR 63014 through 63016, and 85 FR 84901 through 84904) for our previously established benchmarking policies.

In the CY 2017 QPP final rule (81 FR 77277 through 77282), we finalized that we will use performance in the baseline period to set benchmarks for the quality performance category, with the exception of new quality measures, quality measures that lack historical data, or where we do not have comparable data from the baseline period, for which we will set the benchmarks using performance in the performance period. We defined the baseline period to be the 12-month CY, that is, 2 years prior to the performance period for the MIPS payment year. For example, for the CY 2022, the baseline period two performance periods prior will be the CY 2020 performance period (81 FR 77277). Additionally, we further clarified that CMS can establish benchmarks either by the applicable baseline or performance period in the

CY 2019 PFS final rule (83 FR 59842), where we finalized the terminology change amending § 414.1380(b)(1)(ii) to remove the mention of each individual benchmark and instead state that benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

Because of the flexibility provided to MIPS eligible clinicians to allow for no data submission for the 2020 performance period (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1198/2020%20MIPS%20Automatic%20EUC%20Fact%20Sheet.pdf*), we may not have as representative of a sample of data as we will have had without the national PHE for COVID–19. Therefore, we want to revisit our benchmarking policy for the 2022 performance period/2024 MIPS payment year similarly to how we revisited the benchmarking policy for the 2021 performance period/2023 MIPS payment year (85 FR 84901 through 84902). We anticipate that we may have a gap in our data due to receiving fewer submissions for CY 2020, which could skew the benchmarking results. We believe this gap in data could result in different distributions of scores from what we normally see; thus, skewing the benchmarks when using CY 2020 data as the baseline for the CY 2022 performance period/2024 MIPS payment year. Additionally, we anticipate that only those not experiencing a hardship will submit data, thus skewing benchmarks much higher than normal. We ultimately, did not finalize this proposal for CY 2021 because analysis of the submitted data from the CY 2019 performance period/2021 payment period showed that it was suitable for use in calculating benchmarks. However, as we know from the events of 2020, we anticipate that the effects of the national PHE for COVID–19 may be more significant for the CY 2020 performance period.

For this reason, we considered two benchmarking options for the CY 2022 performance period/2024 MIPS payment year. We proposed to use performance period benchmarks for the CY 2022 performance period/2024 MIPS payment year in accordance with § 414.1380(b)(1)(ii). As discussed in the CY 2021 PFS final rule (85 FR 84902), this would mean that benchmarks for the CY 2022 performance period/2024 MIPS payment year are based on the actual data submitted during the CY 2022 performance period. Last year, we received comments supportive of our proposal to use performance period benchmarks citing that the performance period benchmarks will capture any changes in care due to the national PHE for COVID–19 and avoid unfairly penalizing practices for variation in performance compared to data from prior to the national PHE for COVID–19 (85 FR 84902 through 84903). We also received comments that opposed the use of performance period benchmarks, as clinicians would not have advance notice of performance targets. As a result, we also considered and sought feedback as an alternative to performance period benchmarks, utilizing the historic benchmarks from the 2021 MIPS performance period (which are based on submissions for CY 2019 MIPS performance period/2021 MIPS payment year) for the CY 2022 performance period/2024 MIPS payment year. We believed that this option would allow clinicians to continue to receive advance notice for quality performance category measures so that MIPS eligible clinicians can set a clear performance goal for these measures for the CY 2022 performance period/2024 MIPS payment year. However, we remained concerned that utilizing outdated data could also potentially result in distributions of scores used for benchmarks that no longer reflect the standard of care especially as care changes in response to the PHE. Additionally, any new or substantively changed measures in the CY 2022 performance period/2024 MIPS payment year will lack a benchmark, as would measures that were suppressed in the CY 2019 performance period/2021 MIPS payment year alternate baseline period. We noted that we would analyze the CY 2020 performance period data and compare the distribution of the CY 2020 performance period data to that of previous years to assess if we could in fact use data from the CY 2020 performance period for benchmarks for the CY 2022 performance period/2024 MIPS payment year and if not, we would evaluate the suitability of the alternatives.

Additionally, we proposed to expand the definition of the baseline period. In instances in which a measure is suppressed two performance periods prior in the standard baseline period and cannot be used to calculate a benchmark, we proposed to use the data from three performance periods prior to calculate benchmarks in the event that a performance period benchmark cannot be calculated. This will mean that for the CY 2022 performance period/2024 MIPS payment year, if a measure was suppressed in the 2020 performance period and a performance period benchmark could not be calculated using the 2022 performance period data because it was not reported by 20 different clinicians or groups that met data completeness and case minimum requirements, we would calculate a benchmark from performance period data from CY 2019. If a measure had undergone a substantive change or was also suppressed in the baseline period 3 performance periods prior, we would not use it to calculate benchmarks and the measure will be subject to our scoring policies for class 2 measures. We would not use benchmarks calculated from performance periods that are older than 3 performance periods prior. We believed it is important to continue using the most up-to-date data to drive clinical quality improvement. We believed that this policy will reduce burden to clinicians and allow them to continue to have performance targets in the event that a measure is suppressed.

We solicited public comments on our intent to use performance period benchmarks for the CY 2022 performance period and to expand the baseline period to three performance periods prior for measures that are suppressed two performance periods prior. Table 59 reflects a summary of the benchmarking hierarchy in our proposal.

TABLE 59: Quality Performance Category: Proposed Benchmarking Hierarchy

Policy Hierarchy	Baseline period used to calculate Benchmark	Condition
1	Historical Baseline Period: Two Performance Periods prior to the applicable performance period	A benchmark can be calculated from the historical baseline period defined as two performance periods prior to the applicable performance period.
2	Performance Period Benchmark	A benchmark cannot be calculated from the historical baseline period, but 20 or more clinicians report on a measure and meet or exceed the case minimum of 20 cases during the performance period.
3	Alternate Historical Baseline Period: Three Performance periods prior to the applicable performance period	A measure is suppressed in the historical baseline period two years prior to the applicable performance period and a performance period benchmark cannot be calculated, but a benchmark can be calculated from the alternate historical baseline period defined as three performance periods prior to the applicable performance period can be calculated because the measure had not undergone a substantive change in the time since the data was collected or been suppressed in the baseline period.
4	No baseline: Subject to class 2 scoring policy	A benchmark cannot be calculated from the historical baseline period, the performance period, or the alternate baseline period.

We received public comments to the quality measure benchmarks. The following is a summary of the comments we received and our responses.

Comment: Many commenters requested that CMS undertake more analysis on the impact of the use of 2019, 2020 and 2021 data on setting benchmarks and risk adjustment models before moving forward with its proposed policy to use 2022 benchmark data. One commenter supported the plan to apply the same process used for evaluating 2019 performance year data to 2020 performance year data to determine if data are sufficient to establish benchmarks. A few urged CMS to evaluate CY 2021 data to determine if there are data anomalies that will require the avoidance of using that data, as well.

Response: Based on analysis of CY 2020 performance period/2022 MIPS payment year submissions data, we believe there is sufficient data to calculate historical benchmarks and do not believe it is necessary to use either of the proposed alternative approaches. Overall, despite a modest decrease in submission volume, average scores remained consistent to those observed in CY 2019 performance period/2021 MIPS payment year. The analysis showed minimal to no impact for the Part B Claims and MIPS CQM collection types. However, we did see moderate distributional effects in 64 measures. We note that these 64 measures are less commonly reported and the effects seen are not categorically different than the change in the performance distribution that would be observed in any given year, although it is possible that the observed effects may be greater than they would otherwise be as a result of the COVID–19 PHE.

Ultimately, we believe that the best option available is to use the CY 2020 performance period/2022 MIPS payment year data. These data will provide clinicians with advance notice of performance targets that are more representative samples of performance as a result of the PHE than the use of performance period benchmarks. Additionally, we believe that data from the CY 2020 performance period/2022 MIPS payment year, which is the most recent available dataset, is more appropriate for use than the historical benchmarking data from the CY 2019 performance period/2021 MIPS payment year. We believe that it is important to benchmark performance using data that reflects care provided during the PHE. We also believe that the CY 2020 performance period/2022 MIPS payment year data better represents this care. Data collected during the CY 2019 performance period was largely not affected by the COVID–19 PHE, rather we saw effects during the associated submission period which occurred during the first calendar quarter of 2020 which affected the number of submissions, but would not reflect a performance period in which clinicians were facing the PHE. We note that we could not analyze data from the CY 2021 performance period/2023 MIPS payment year as it is not currently available. This data will be submitted from the close of the performance period through March 31, 2022 (§ 414.1325(e)). For this same reason we could not use this data to set benchmarks for the CY 2022 performance period/2024 payment year. We are committed to using the most up-to-date representative data available. For that reason, we are not finalizing the proposal to use performance period benchmarks and will calculate benchmarks according to the standard baseline period policy.

Comment: One commenter suggested that CMS exclude CY 2020 data from all future reporting due to COVID–19 and maintain consistency in excluding 2020 reporting year data as was proposed in the 2022 Inpatient Prospective Payment System (IPPS) and Outpatient Prospective Payment System (OPPS) regulations.

Response: We believe the commenter is misunderstanding policies in the IPPS and OPPS regulations. In March 2020, prior to either the CY 2022 OPPS/ASC proposed rule or the FY 2022 IPPS/LTCH PPS proposed rule, we issued an extraordinary circumstance exception (ECE) [253] for a number of Q1 and Q2 2020 requirements in hospital pay-for-reporting and value-based purchasing programs, including the Hospital Inpatient Quality Reporting Program and the Hospital Outpatient Quality Reporting Program.

In the FY 2022 IPPS final rule, we established a measure suppression policy in a number of value-based purchasing programs, including the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program and the Hospital-Acquired Conditions Program. This measure suppression policy allowed for

[253] *https://www.cms.gov/files/document/guidance-memo-exceptions-and-extensions-quality-reporting-and-value-based-purchasing-programs.pdf.*

suppression of measures if we determine that circumstances caused by the COVID–19 PHE have affected those measures (86 FR 45266). Additionally, for the FY 2022 for Hospital VBP program year, because of wide-spread measure suppression, it was finalized that we would not calculate total performance scores nor issue any penalties or incentive payments as awarding negative or positive incentive payment adjustment percentages using TPSs calculated using the current scoring methodology would not provide a representative score of a hospital's overall performance in providing quality of care during a pandemic (86 FR 45276). We did not propose any additional policies related to suppression or exclusions in the CY 2022 OPPS/ASC proposed rule as the comment suggested. We do not believe it will be necessary to exclude CY 2020 performance period data from MIPS. As stated above, our analysis supports the use of CY 2020 performance period/2022 MIPS payment year data to calculate quality measure benchmarks.

Comment: Many commenters supported the use of performance period benchmarks. These commenters stated that such benchmarks would be more representative of the care provided during the COVID–19 pandemic and would be ''more appropriate'' than using historical benchmarks. Many commenters agreed with CMS' concern that 2020 performance data may not be a representative sample of historic data and benchmarks for 2022 will be more accurate and reliable. To support the use of performance period benchmarks, one commenter encouraged CMS to release the 2021 performance year benchmarks as soon as possible in 2022. One clinician supported providing 2019 historic benchmarks to give clinicians a target while the performance period benchmarks are used for scoring.

Response: We agree that performance period benchmarks would provide the most up-to-date data to calculate benchmarks; however, we also believe there is significant value in the advance notice of performance targets. Participants may have difficulty meeting relevant performance targets if they lack advance notice of the target as they may not be able to determine the appropriate level of resources necessary to achieve the performance target. Participant concerns regarding this issue may be particularly acute where performance may result in a payment adjustment. We thank the commenters for their suggestions, but we believe that it is most appropriate to continue to rely on historical benchmarks for the CY 2022 performance period/2024 MIPS payment year. We will continue to monitor the impact of the national PHE on performance benchmarks. We note that the CY 2019 performance period/2021 MIPS payment year benchmarks are currently available in the resource library on the QPP website (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip*). The historical benchmarks based on CY 2020 performance period/2022 MIPS payment year will be available prior to the CY 2022 performance period. The CY 2023 historical benchmarks which are calculated from CY 2021 performance period/2023 MIPS payment year data will be available spring/summer of CY 2022 at the earliest.

Comment: Many commenters did not support the use of performance period benchmarks because clinicians would not know the benchmarks ahead of time and performance period benchmarks would prevent meaningful assessment in advance of the performance year and would hinder the ability to select measures that will maximize scoring in advance of the year. One commenter stated that advanced notice of targets is essential to ensure fair and meaningful incentives for high quality, efficient health care. One commenter noted that as payment consequences associated with MIPS scores increase, it becomes more important to provide clinicians with adequate information to enable appropriate selection of measures. One commenter stated that any value gained by using performance period benchmarks is outweighed by the negative impact on clinicians as they would not have benchmarks available for comparison and performance improvement.

Response: As noted above, we agree that the use of performance period benchmarks would not allow clinicians the opportunity to fully prepare for the respective performance period. We will not finalize the use of performance period benchmarks for the CY 2022 performance period/2024 MIPS payment year. We believe the use of data from the CY 2020 performance period/2022 MIPS payment year will be representative of performance and allow clinicians advanced notice of performance targets to aid in measure selection and help clinicians to work towards improvement on quality measures.

Comment: Many commenters supported using CY 2019 performance period/2021 MIPS payment year data to create quality benchmarks since clinicians appreciate notice on which measures will have benchmarks and the CY 2019 performance period/2021 MIPS payment year data would allow clinicians time to review and compare data to drive improvement based on the known benchmark. A few commenters noted that, to maintain consistency and predictability of MIPS performance through the pandemic, CMS should use CY 2019 performance period/2021 MIPS Payment year historic data as benchmarks. One commenter supported the use of CY 2019 performance period/2021 MIPS payment year historic benchmarks as EHRs and registries track performance in real time relative to the benchmark as the only way for clinicians to determine if there are deviations in their quality performance which can occasionally indicate real clinical issues, such as complication rates, that need to be addressed. One commenter stated that for measures with substantive changes since CY 2019, CMS should use the CY 2022 performance year/2024 MIPS payment year data, that is, use a performance period benchmark, to determine the score, but the general use of CY 2019 quality measure data for benchmarks would allow clinicians to have some ability to know what they are being benchmarked against. One commenter suggested that CMS should provide clinicians with historic benchmarks using CY 2019 performance period/2021 MIPS payment year data and calculate historic and performance period benchmarks and use the more favorable to score.

Response: We agree that the opportunity to review and compare data helps to drive improvement against the known benchmark and enables clinicians track performance in real time to respond to any clinical issues that the data indicates. These benefits provide value to clinicians and support their meaningful participation in the program. This is ultimately the reason our existing policy establishes the preference to use historical benchmarks. In this instance, we believe that the use of CY 2020 performance period/2022 MIPS payment year to calculate benchmarks better balances issues that arise from using historical data than the use of CY 2019 performance period/2022 MIPS payment year data. Ultimately, as stated in a previous response, we believe that it is most appropriate to base a benchmark on the more up-to-date historical data and on the historical data that is most representative of the current standard of care.

We agree with the commenters' suggestion that measures suppressed in the CY 2019 performance period/2021 payment year should use performance

period data for benchmarking and will apply this approach to measures suppressed in the CY 2020 performance period/2022 MIPS payment year, as this is our current approach. Historical benchmarks from the CY 2019 performance period/2021 MIPS payment year are currently available in the resource library in the QPP website.

Comment: A few commenters did not support expanding the definition of the baseline period to calculate a benchmark because the underlying data would be too retrospective and not reflective of current performance and that this approach would not address the concerns of using a representative sample of historic data since many of the baseline periods would include data from 2019, 2020, and 2021 data—all of which are impacted by the COVID–19 pandemic. One commenter encouraged CMS to avoid the use of these data for benchmarking purposes.

Response: We believe there is value in the advance notice for quality measures, but agree that extending the baseline period would be too retrospective and fails to reflect current performance that could come as a result in advances in care. For this reason, we are not finalizing the proposal to add an alternate historical baseline period defined as three performance periods prior.

Comment: A few commenters supported the proposal to add an alternate baseline period of three performance periods prior for measures that are suppressed two performance periods prior. One commenter suggested that it would be better to use the Alternate Historical Baseline Period at level 2 in the proposed benchmarking hierarchy and set the Performance Period Benchmark as level 3 since CMS has expressed concern that alternate historical benchmarks could become too outdated to accurately reflect the current standard of care. Moving the Alternate Historical Baseline to level 2 within the proposed benchmarking hierarchy would allow CMS to give providers advanced notice using historical benchmarks, while still having the discretion to use concurrent performance period benchmarks if determined that the standard of care has changed too significantly to use the alternate historical data.

Response: We thank commenters for their support, but will not be finalizing this proposal for the reasons cited in the previous response. Our proposal was to allow for scoring of measures that had been suppressed in the baseline period two performance periods prior when a performance period benchmark could not be calculated. For the reasons stated above, we prefer to use the most-up-to date historical data that is available in the program and believe using an alternate baseline period of three performance periods prior may be too retrospective. We will continue to use our use of performance period benchmarks for measures that lack a benchmark in the baseline period.

After consideration of public comments, we are not finalizing our proposal to use performance period benchmarks in the CY 2022 performance period/2024 MIPS payment year or a historic benchmark calculated from CY 2019 performance period data. Instead, we will calculate benchmarks from the CY 2020 performance period/2022 MIPS payment year data as is our standard policy according to § 414.1380(b)(1)(ii). Any measures suppressed in the CY 2020 performance period/2022 MIPS payment year will have a performance period benchmark calculated for scoring purposes. Additionally, we are not finalizing our proposal to define an alternative baseline period for benchmarking defined as three performance periods priors for measures suppressed in the baseline period two performance period prior.

(iii) Assigning Quality Measure Achievement Points

We refer readers to § 414.1380(b)(1)(i) for more details on our current policies for scoring performance on quality measures (81 FR 77276 through 77307, 82 FR 53694 through 53701, 83 FR 59841 through 59856, 84 FR 63011 through 63019, and 85 FR 84906 through 84907).

(A) Scoring Measures Based on Achievement

We previously established at § 414.1380(b)(1)(i) a global 3-point floor for each scored quality measure, as well as each administrative claims measure. MIPS eligible clinicians receive between 3 and 10 measure achievement points for each submitted measure that can be reliably scored against a benchmark, which requires meeting the case minimum and data completeness requirements. In the CY 2017 Quality Payment Program final rule (81 FR 77282), we established that measures with a benchmark based on the performance period (rather than on the baseline period) will continue to receive between 3 and 10 measure achievement points for performance periods after the first transition year. For measures with benchmarks based on the baseline period, we stated that we will revisit the 3-point floor in future years. For the 2021 performance period/2023 MIPS payment year, we maintained the application of the 3-point floor for each measure that can be reliably scored against a benchmark.

For the 2022 performance period/2024 MIPS payment year, we proposed to remove 3-point floor for each measure that can be reliably scored against the benchmark and score the measure from 1 to 10 points. As we move towards the MVP framework discussed the CY 2021 PFS final rule (85 FR 84904), we are moving towards a simplified scoring standard in which we can score quality measures from 1 to 10 for measures in MVPs and as such will amend the MIPS program to begin promoting this alignment. As a result, we previously discussed that we would wait until there is further policy development under the MVP framework before removing the 3-point floor (85 FR 84904). However, with the delay in the implementation of MVPs, we will begin the transition to MVPs by removing policies established on the transition years of MIPS. We have signaled through rulemaking for several years that we would revisit policies established during the transition years of the program from the legacy programs to MIPS. As the legacy programs have been sunsetted for many years now, we believe that it is appropriate to transition the MIPS program to its mature state. Additionally, we believe that transitioning MIPS to its mature state will serve as a transition period to allow clinicians to adjust to the simplified scoring standard that we will be using in MVPs.

Accordingly, we proposed to revise § 414.1380(b)(1)(i) to add beginning the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians would receive between 1 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340 (86 FR 39432).

We solicited public comments on our proposal to remove the 3-point floor for each measure that can be reliably scored against a benchmark for the 2022 performance period/2024 MIPS payment year.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: One commenter did not support the removal of the three-point

floor and noted that it would likely be an additional challenge for practices that are already struggling with the pandemic. Another commenter suggested that the proposal to remove the 3-point floor should be delayed and should be implemented as part of the CY 2023 rulemaking process as the pandemic has shifted clinician focus off of the mechanics of MIPS and very few clinicians may be ready for such a significant change during the CY 2022 performance period.

Response: We agree that the national PHE for COVID–19 has affected the health care sector in unprecedented ways and has understandably shifted clinician focus off of participation in MIPS. We agree that delaying the implementation of the removal of the 3-point scoring floor until the CY 2023 performance period/2025 MIPS payment year would recognize this hardship and would avoid harshly penalizing clinicians for any changes in performance that may be observed during this time. CMS does remain committed to the removal of transition policies and moving towards a simplified scoring standard in MVPs.

Comment: A few commenters opposed the removal of the scoring floor along with the higher performance threshold. The commenters requested that CMS account for the challenges that will result from an increased performance threshold and retain the scoring floor instead of removing many of the possibilities of avoiding a negative payment adjustment.

Response: We agree that removing the scoring floors and raising the performance threshold at this time, particularly with the ongoing PHE, could present challenges to clinicians. However, we do not want to continue masking true performance on quality measures. As discussed in section IV.A.3.f.(2) of this final rule, beginning with the CY 2022 performance period/2024 MIPS payment year, section 1848(q)(6)(D)(i) of the Act requires the performance threshold to be the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. Accordingly, we proposed to use a performance threshold of 75 points which was the mean final score from CY 2017 performance period/2019 MIPS payment year (86 FR 39454). As this represents an increase of about 15 points from the previous year's performance threshold, we understand clinicians' concern. For this reason, we are delaying the removal of the 3-point scoring floor for measures that can be reliably scored against a benchmark until the CY 2023 performance period/2025 MIPS payment year. We believe this will allow clinicians some leniency as we they adjust to a higher performance threshold and continue to face the PHE.

Comment: One commenter stated that CMS should assess scoring 1–10 points before removing the 3-point floor. The commenter encouraged CMS to review how frequently eligible clinicians have performance rates that place them below the 3-point floor, particularly clinicians in small and rural practices.

Response: We thank the commenter for their suggestion and will perform these analytics. To further assist MIPS eligible clinicians in the transition of removing the 3-point scoring floor, we will begin providing information on deciles below 3 in our forthcoming benchmark file, as technically feasible before the removal of the 3-point floor in 2023.

Comment: One commenter stated that the methodology to estimate the quality performance category score and the transition from old scoring policies to new are too complicated as clinicians need to understand how their scores are calculated and which measures to select to optimize performance.

Response: We believe that removing the 3-point scoring floor and scoring measures that can reliably be scored against a benchmark from 1–10 will make scoring simpler. The 3-point scoring floor was established when the performance threshold was 3 points during the transition year of the MIPS in order to avoid penalizing clinicians at the start of the program (81 FR 77287). As the performance threshold has since changed and clinicians have more familiarity with reporting through MIPS, this policy is no longer relevant. In order to move towards complete and meaningful scoring, scores will be evenly distributed across a range from 1 to 10. This allows CMS to more accurately distinguish performance amongst clinicians. We believe that the changes in quality measure comparison will also provide great benefits to clinicians by reducing score inflation in the quality performance category and by enabling payment adjustments that reflect meaningful distinctions in quality of care. We currently provide a tool on the QPP website for clinicians to explore measures and activities to aid in measure and activity selection (*https://qpp.cms.gov/mips/explore-measures*). We offer this tool and provide clinicians with performance targets (historical benchmarks) before the start of the performance period in order promote transparency in scoring and support clinicians in making decisions to support fair and meaningful participation in program.

After consideration of public comments, we are not finalizing the policy to remove the 3-point scoring floor as proposed. We are finalizing the removal of the 3-point scoring floor for measures that can be reliably scored against a benchmark to be implemented in CY 2023 and revise § 414.1380(b)(1)(i) to add beginning the 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians will receive between 1 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340. We believe that delaying the implementation of this policy allows clinicians to acclimate to other changes in the program such as the increase of the performance threshold and the removal of the scoring bonuses in the quality performance category. Additionally, we believe this policy provides some flexibility to clinicians in response to the national PHE.

(B) Scoring Measures That Do Not Meet Case Minimum, Data Completeness, and Benchmark Requirements

We refer readers to § 414.1380(b)(1)(i)(A) and (B) for more on our current scoring policies for a measure that is submitted but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data completeness requirement (84 FR 63012).

In the 2017 QPP final rule (81 FR 77288) and the 2018 QPP final rule (82 FR 53727), we identified ''classes of measures'' which were intended to characterize measures for the ease of discussion. Class 1 measures are measures that can be scored based on performance because they have a benchmark, meet the case minimum and data completeness requirements. Class 2 measures are measures that cannot be scored based on performance because they do not have a benchmark or do not meet the case minimum which is generally 20 cases. Class 3 measures are measures that do not meet the data completeness requirement. We also noted that policies for Class 2 and Class 3 measures will not apply to measures submitted with the CMS Web Interface or administrative claims-based measures.

In the CY 2022 PFS proposed rule, we proposed to modify how we score these measures within MIPS, as we considered policies for transitioning to MVPs (86 FR 89433). For class 2 measures, for the 2022 performance period/2024 MIPS payment year, we proposed to remove special scoring policies for measures that meet the data completeness requirement but do not have a benchmark, due to fewer than 20 individual clinicians or groups adequately reporting the measure, or meet the case minimum requirement except in the case of small practices, for which we will maintain the 3-point floor. Practices of other sizes would receive zero points.

We noted that, as we move to MVPs, we are seeking to simplify scoring by removing transition policies. To encourage complete and meaningful reporting, we cannot continue to award measure achievement points for measures that cannot be reliably scored against a benchmark. In a quality measurement program such as MIPS, we noted that it is imperative that we can reliably measure performance on clinical quality measures to achieve the goals of the program and incentivize clinicians that are providing the high-quality care. However, we remained concerned that it may be harder for smaller practices to reach case minimums, and as such, we are maintaining the 3-point floor policy for small practices. We believed that measure selection that is better reflective of the care most commonly provided in a practice would increase the value of the program by allowing us to score for achievement in clinical quality and subsequently drive changes in performance on clinical quality measures.

Measure benchmarks are posted in advance of the MIPS performance period and can be used to drive clinician measure selection. While not all measures relevant to a clinician's practice may have a historic benchmark posted, clinicians have the option to make informed decisions about their participation in the MIPS program. Additionally, we believe that while clinicians do not have control over the case volume and mix that their practices treat, under normal circumstances, they can anticipate which measures would be most reflective of the care generally provided by said practices. Scoring 3 points for class 2 measures was established as a policy during the transition years of the program, when the performance threshold was 3 points and scoring 3 points for quality will help clinicians transitioning to the program without receiving scores for poor performance. The intent of the policy was to provide time for clinicians to acclimate to the scoring standard before being held fully accountable for their participation in the program (81 FR 77287). As we believe we have provided sufficient time for clinicians to acclimate to our reporting requirements and scoring practices, we believe that we can hold clinicians accountable for their meaningful participation in the program.

We remain concerned about that case minimums and the availability of a benchmark are in some instances out of the control of the clinician, but we believe that clinician choice of measure allows us to move forward with the removal of transition scoring policies. We note that we also have policies in place to account for the calculation of a performance period benchmark if a historical benchmark is unavailable. Simulations of the effects of this policy show minimal effects of removing the 3-point floor as described above, with only a 0.4 point-decrease in median quality performance category score and 0.2 point-decrease in mean performance quality performance category score when compared to a baseline score that maintains the previously finalized class 2 measure scoring policy (86 FR 39433). We noted that we considered other approaches to address this issue such as a denominator reduction for class 2 measures; however, we remained concerned over the potential for gaming under this approach, such as where a clinician only selects class 2 measures resulting in their quality performance category score being reweighted.

We did not want this policy to discourage the reporting of new measures in the program because they may lack a benchmark or fail to meet the case minimum requirement. For this reason, we proposed a 5-point floor for new measures in the program for all collection types for their first 2 years in the program, as well as a new class for these measures. Measures in either their first or second performance period in the program would be classified as class 4 measures. Measures that can be reliably scored against a benchmark because they meet data completeness requirement can have a performance period benchmark calculated, and meet case minimum requirements would be considered class 4a and scored from 5 to 10 measure achievement points. In the event that a measure cannot be reliably scored against a benchmark because it lacks a benchmark or does not meet case minimum, but meets the data completeness requirement, it would be considered class 4b and receive a score of 5. Measures that cannot be scored because they do not meet the data completeness requirement would remain subject to the class 3 measure policy and receive a score of zero for clinicians other than small practices, while small practices will continue to receive three points.

We noted our belief that a 5-point floor for new measures would allow us to introduce new, applicable measures into the program, by reducing the burden to clinicians in selecting them. We also noted our belief that this policy was responsive to stakeholder concerns that new measures run the risk of lacking enough data to have a benchmark and clinicians earning only 3 points according to the current policy on measures that cannot be reliably scored against a benchmark. We believed that the possibility of earning 5 points for a measure that lacks a benchmark will not unfairly penalize clinicians who report on new measures. Additionally, clinicians have the possibility of earning up to 10 points with the lowest possible score of 5. The 5-point floor would only be in place for a measure's first 2 years in the program to ease their transition, and will be scored in accordance with policies for standard class 1, 2, and 3 measures thereafter, to maintain a simplified scoring methodology. In the CY 2017 Quality Payment Program final rule, we received comments of support on our proposal to provide a scoring floor for new measures citing that a scoring floor for new measures would encourage clinicians to report new measures and prevent gaming. Commenters were also supportive other approaches to reducing the burden of reporting new measures such as reducing the weight of new measures in the performance category score (81 FR 77281).

Accordingly, we proposed to revise § 414.1380(b)(1)(i)(A)(*1*) to provide that except as provided in paragraph (b)(1)(i)(A)(*2*) and (*3*) of this section, for the 2017 through 2021 CY performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement. Beginning within the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians other than small practices receive zero measure achievement points for each such submitted measures and small practices receive three measure achievement points

We also proposed to add the policy for new measures at § 414.1380(b)(1)(i)(C)(*1*) to provide that beginning with the CY 2022

performance period/2024 MIPS payment year, MIPS eligible clinicians receive between 5 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340. We also proposed to add a policy at § 414.1380(b)(1)(i)(C)(*2*) to provide that for purposes of this section ''new measures'' means a quality measure this is in its first 2 years in the program.

We solicited public comments on our proposal to modify the special scoring policies for measures that meet the data completeness requirement but do not have a benchmark or meet the case minimum requirement for the MIPS 2024 payment year and to introduce a 5-point scoring floor for new measures in for their first 2 years in the program. Table 60 reflects a summary of our proposed policies.

We received public comments on the scoring measures that do not meet case minimum, data completeness, and benchmark requirements. The following is a summary of the comments we received and our responses.

Comment: Many commenters did not support the removal of the 3-point floor for Class 2 measures, especially while the COVID–19 pandemic is ongoing. A few commenters stated that there are often changes to quality measure specifications or calculations and as such a benchmark cannot be established for these measures and there are groups of all sizes that cannot make the case minimum for certain measures and that no such groups should receive zero points. One commenter noted that this scoring policy would disincentivize the use of these measures as the measures would then never accrue enough data for a benchmark, and clinicians would hesitate to use them—creating a self-perpetuating cycle. One commenter noted that with a measure score of zero points, and even with the 3-point floor, there is no incentive for groups to branch out and implement workflows to capture data for specialty specific measures if no benchmarks are set. One commenter suggested that instead of scoring zero points for measures with no benchmarks, CMS should provide credit to clinicians who take the time to report on more focused measures and contribute to the building of performance benchmarks. A few commenters noted that measures without benchmarks for multiple years will never get enough data for a benchmark if they are scored at zero points. One commenter noted that this could be harmful to QCDRs as measures do not always have a benchmark because it is submitted by a limited group of specialists. One commenter stated that finalizing this policy could lead to important measures being overlooked because of the lack of a benchmark. One commenter recommended maintaining the 3-point scoring policy for measures that were introduced during PY 2020 because of the impacts of the extreme and uncontrollable circumstances policies on reporting. A few commenters stated the CMS should not make any significant changes to scoring policies during the COVID–19 PHE. One commenter stated that CMS needs to address the lack of sufficient, relevant measures before further reducing scoring for measures not meeting the case minimum or benchmark criteria.

Response: We understand that our current and proposed class 2 measure policy presents risk in reporting measures, including measures that have undergone substantive changes and had their benchmarks reset, that may not have a benchmark calculated, or in instances in which a clinician or group cannot meet the case minimum requirements. We cannot, however, provide scores for measures for which we cannot reliably distinguish meaningful differences in performance nor can we continue to award points for reporting as MIPS moves out of its transition phase. To support meaningful participation in MIPS, we provide clinicians with benchmarks in advance, as well as other tools to support measure selection (*https://qpp.cms.gov/mips/explore-measures*). We believe that there is little to no value in maintaining underreported measures for which we cannot establish benchmarks, and therefore, we cannot score.

As described in section IV.A.3.h.(1)(d)(iii) of this final rule, QCDR measures that do not meet case minimums or cannot have a benchmark calculated after their first two performance periods in the program must submit a participation plan or run the risk of being removed from the program as established in § 414.400(b)(4)(i)(B)(*10*)(*i*). We proposed the new measure policy to reduce the risk associated with reporting new measures that may not receive a benchmark. However, we recognize that there are important areas that require measurement such as specialty specific measures that may be currently underreported. We believe that the new measure policy can help to incentivize reporting of more applicable measures over those that are historically underreported. We will monitor the effect that these policies have on the reporting of specialty specific measures and continue to explore alternative scoring solutions to solve for this problem such as MVPs. Ultimately, we are delaying implementation of the removal of the 3-point floor policy until CY 2023 in order to be responsive to clinician concerns about reporting through MIPS during the COVID–19 PHE. We believe this delay in implementation takes a phased approached to simplifying scoring as we transition to MVPs.

Comment: Many commenters supported maintaining a 3-point floor when scoring small practice clinicians on quality measures. One commenter supported this proposal as small practices face a greater administrative burden when reporting for MIPS and they support any effort to lessen this burden on those practices in particular.

Response: As noted above in section IV.A.3 e.(1)(c)(iii)(A) of this final rule, we have decided to maintain the 3-point scoring floor for practices of all sizes until the CY 2023 performance period/2025 MIPS payment year in response to concerns about the PHE, a higher performance threshold, and the removal of quality performance category bonuses. We believe this phased approached to simplifying scoring as we transition to MVPs by delaying the removal of the scoring floor policies while finalizing our proposals to remove the high priority and end-to-end electronic bonuses will provide flexibility during the COVID–19 PHE. We appreciate the commenters support to maintain the scoring floor for small practices.

Comment: One commenter did not support removing the 3 points for many practices while keeping the 3 points for small practices and stated that there should not be a difference in the size of practices for point allocation. One commenter noted that if a measure now does not have a benchmark, a clinician would not get any benefit from submitting a measure without a benchmark compared to the 3 points provided previously. A few commenters mentioned that measure reporting rates are not necessarily an indication of a low value measure, particularly for highly specialized procedures or patient populations and these trends may instead be a result of program policies that disincentivize the uptake of these measures.

Response: We believe it is important to support small practices so that they may meaningfully engage in MIPS. We did not want to penalize smaller

practices that may find it harder to reach case minimums. Additionally, we believe that maintaining the 3-point floor on class 2 measures for small practices would offset some of the additional challenges to reporting that small practices face, that practices of other size do not. We understand that removing the 3-point floor makes reporting measures that do not have a benchmark riskier for clinicians, we however, do not want to continue offering points for reporting. We want to award points for high performance and demonstrated improvements in clinical care. We will continue to assess our policies and find ways to encourage the uptake of high value, but underutilized measures that do not involve offering points for reporting.

Comment: Many commenters supported and appreciated the proposed 5-point floor for Class 4 measures in their first 2 years of the program as it will allow for greater utilization of innovative measures that show evidence of driving improvements in care and encourage the use of newly developed measures. One commenter recommended that CMS indicate and communicate which measures will be considered Class 4 measures so clinicians can plan appropriately. One commenter suggested that CMS expand this policy to existing measures that may add additional collection types. One commenter noted that this policy will incentivize the use of QCDR measures and increase the robust nature of the measures.

Response: We agree that providing a scoring floor for new measures will incentivize greater utilization of innovative, newly developed measures; QCDR measures; and increase the robust nature of the measures. We will not apply this policy to measures that have existed as a MIPS measure but are being introduced for a new collection type. For example, if a measure is currently available as a MIPS CQM and it becomes newly available as an eCQM, that would not be considered ''new'' under this policy. Those changes are considered substantive changes, but not new measures as they usually will share the same measure ID. CMS will communicate which measures will be considered class 4 from Appendix 1 and resources that will be available in the resource library on the QPP website.

Comment: Several commenters requested CMS raise the floor for reporting on new measures to 7 points, instead of the proposed 5 to ensure that this incentive will be sufficient to encourage practices to take the risk of using these measures, which will then allow for greater understanding of their evidence base, the ability to ensure patient-centeredness, and actionability. A few commenters note that a higher incentive will encourage clinicians to take on the risk of reporting on a new measure and investing in new protocols and workflow, which often require IT and practice redesign costs. A few commenters requested that the measures be considered new for 3 years, instead of the proposed 2 years. One commenter suggested higher point floors for measures that are high priority or outcome measures. A few commenters requested that the measures be considered new for 3 years. A few additional commenters requested that CMS expand the new measures proposal to 4 years, instead of the proposed 2 years, as this would prevent ''premature'' removal of meaningful measures from the program and would recognize the valuable practice resources that are necessary to begin using new measures.

Response: We agree that a higher 7-point floor would be a greater incentive for clinicians to invest in new protocols and workflow in order to support reporting on new measures. Additionally, we believe that introducing a 7-point floor for new measures could be effective in incentivizing the reporting of new measures over topped out measures though we had not previously considered the connection between these two policies previously. However, 7-points is a high score and we do not want to introduce new sources of scoring inflation or gaming into the program. For this reason, we believe a phased scoring floor policy would be an appropriate solution. This approach would introduce a 7-point scoring floor for new measures across all collection types in their first year in the program, then dropping the scoring floor to 5-points for measures in their second year in the program. After their first 2 performance periods in the program, measures would be subject to our standard class 1 and 2 measure policies. We believe this approach incentivizes early adoption of new measures, while limiting the duration of potential scoring inflation and gaming. Additionally, we believe that the eventual mandatory reporting of MVPs would reduce the impact of scoring inflation and gaming in MIPS. We will monitor these measures to assure that they are having the intended effect and not being used to game the program. Policies related to QCDR measures in MIPS at § 414.1400(b)(3)(iv)(J) discuss a period of two performance periods after which measures may be reassessed. We proposed a two-performance period timeframe in which measures will be considered class 4 measures in alignment with this previously establish policy related to QCDR measures. We will also monitor the application of this policy to assure that the 2-performance period new measure period is adequate. If analytics supports a longer new measure period, we may revisit this topic in later rulemaking.

Comment: A few commenters requested clarification on the logistics of the policy and if it applies to QCDR measures and if this methodology only applies to measures in their lifecycle going forward or if it would be applied to measures finalized starting in 2021. Another commenter suggested that CMS apply this policy retroactively for measures introduced in CY 2020 and CY 2021.

Response: The modified Class 4 measure policy would apply a 7-point scoring floor to new measures in their first performance period in the program across all collection types including QCDRs and a 5-point scoring floor to measures in their second year, thereafter being subject to scoring policies for Class1 and 2 measures. We believe this policy should begin effective the CY 2022 performance period/2024 MIPS payment year, meaning measures new to the program in CY 2022 will receive a 7-point scoring floor. We do not believe there is a benefit in applying this policy retroactively to CY 2020 or CY 2021 performance periods/2022 or 2023 MIPS payment year as a retroactive policy would inflate scores without providing the corresponding incentive for clinicians to adopt new measures. Additionally, measures in their second year in the CY 2022 performance period/2024 MIPS payment year, will receive a 5-point scoring floor.

Comment: One commenter opposed the creation of Class 4 measures as practices are already incentivized to submit data for measures that are relevant to their practice, and therefore, quickly establish benchmarks for a measure.

Response: We have heard form stakeholders that the possibility that new measures or Class 4 may not be reliably scored is a deterrent from reporting such measures. We believe that it is important to provide incentives to report new measures that so that there is less risk in reporting these new measures.

Comment: One commenter suggested that CMS suppress new measures to account for high performance threshold.

Response: We will not suppress new measures. We seek to encourage the reporting of new high-quality measures

in the program and have delayed the removal of the class 2 measure policy to 2023 in order to provide flexibilities in response to the PHE, higher performance threshold, and removal of the high priority and end-to-end-electronic reporting quality performance category bonuses.

After consideration of public comments, we are finalizing our proposed policies with modification. We will delay the removal of the 3-point floor for all practice sizes until CY 2023, maintaining it only for small practices thereafter and revise § 414.1380(b)(1)(i)(A)(*1*) to provide that except as provided in paragraph (b)(1)(i)(A)(*2*) and (*3*) of this section, for the 2017 through 2022 CY performance periods/2019 through 2024 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement. Beginning within the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians other than small practices receive 0 measure achievement points for each such submitted measures and small practices receive 3 measure achievement points.

Additionally, we are modifying our proposal regarding new measures at § 414.1380(b)(1)(i)(C) to provide that, beginning with the CY 2023 performance period/2025 MIPS payment year, for each measure in required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340, MIPS eligible clinicians receive between 7 and 10 measure achievement points (including partial points) for such each measure in its first year in MIPS and between 5 and 10 measure achievement points for each such measure in its second year in MIPS. In adopting this final policy with modification, we have consolidated paragraphs (b)(1)(i)(C)(*1*) and (*2*) into a single paragraph (b)(1)(i)(C).

We are also finalizing our policy at § 414.1380(b)(1)(i)(A)(*3*) to provide that, beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive 7 measure achievement points for each submitted measure in its first year in MIPS and 5 measure achievement points for each submitted measure in its second year in MIPS that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement.

BILLING CODE 4120–01–P

TABLE 60: Quality Performance Category: Finalized Scoring Policies for the CY 2022 MIPS Performance Period*

Measure type	Description	Current Scoring Policy for CY 2021	Scoring Policy for CY 2022
Class 1	Measures that can be scored based on performance. Measures that are submitted or calculated that meet all the following criteria: (1) Has a benchmark; (2) Meets case minimum; and (3) Meets the data completeness standard (generally 70 percent for 2022.)**	3-10 measure achievement points based on performance compared to the benchmark	No Change
Class 2	Measures that are submitted and meet data completeness, but do not have either of the following: (1) A benchmark; and (2) Meets case minimum.	3 points	No change
Class 3	Measures that are submitted, but do not meet data completeness threshold, even if they have a measure benchmark and/or meet the case minimum.	MIPS eligible clinicians other than small practices will receive zero points for this measure. Small practices will continue to receive 3 points.	No change
New Measures: Class 4	Measures that are in their first two performance periods in the MIPS program that meet the data completeness requirement, but (1) May lack a benchmark (2) May not meet case minimum	No Policy	(a) For measures that can be reliably scored against a benchmark: 7-10 measure achievement points for measures in their first year 5-10 measure achievement points for measures in their second year (b) For measures that cannot be reliably scored against a benchmark because they lack a benchmark or do not meet case minimum: 7 points in their first year. 5 points in their second year

*The Class 2 and 3 measure scoring policies are not applicable to Web Interface and administrative claims-based measures.

**We refer readers to § 414.1335(a)(3) for our policy on data completeness.

BILLING CODE 4120–01–C

(iv) Scoring for MIPS Eligible Clinicians That Do Not Meet Quality Performance Category Criteria

In the CY 2018 Quality Payment Program final rule (82 FR 53732), we finalized that, beginning with the 2019 performance period/2021 MIPS payment year, we will validate the availability and applicability of quality measures only with respect to the collection type that a MIPS eligible clinician utilizes for the quality performance category for a performance period, and only if a MIPS eligible clinician collects via claims only, MIPS CQMs only, or a combination of MIPS CQMs and claims collection types. We will not apply the validation process to any data collection type that the MIPS eligible clinician does not utilize for the quality performance category for the performance period. We sought comment on how to modify the validation process for the 2019 performance period/2021 MIPS payment year when clinicians may submit measures collected via multiple collection types.

In the CY 2019 PFS final rule (83 FR 59847), we finalized a proposal to modify our validation process to provide that it only applies to MIPS CQMs and the claims collection type, regardless of the submitter type chosen. For example, this policy will not apply to eCQMs even if they are submitted by a registry. We noted that a MIPS eligible clinician may not have available and applicable quality measures. If we are unable to score the quality performance category, then we may reweight the clinician's score according to the reweighting policies.

In this year's rule, we proposed to modify our validation process to provide that it only applies to MIPS CQMs or the Part B claims collection type, but it will not apply in instances when a MIPS eligible clinician submits for both collection types. Currently, very few reporters report for a combination of Part B claims and MIPS CQMs. In CY 2020, of submissions with less than 6

measures, only 0.08 percent of individual submissions and 0.3 percent of group submissions included a combination of Part B claims and other submission types. In CY 2019, of submissions with less than 6 measures, only 0.094 percent of individual submissions and 0.07 percent of group submissions included a combination of Part B claims and other submission types. We see that reporting using both collection types is an option very few clinicians have chosen to utilize, and consequently believe that the associated costs for validation of a combination of the both the Part B claims based and MIPS CQM collection types is too great in these instances. To align with this reality that very few clinicians submit data in this manner, we proposed to update our policy.

We invited public comments to modify our validation process to provide that it only applies to MIPS CQMs or the claims collection type and not a combination of the two.

We did not receive public comments on this provision, and therefore, are finalizing as proposed.

(v) Assigning Measure Achievement Points for Topped Out Measures

We refer readers to § 414.1380(b)(1)(iv) for our previously finalized policies regarding the identification of topped out measures and § 414.1380(b)(1)(iv)(B) for our finalized policies regarding the scoring of topped out measures. Under § 414.1380(b)(1)(iv), we identify topped out measures in the benchmarks published for each Quality Payment Program year. Under § 414.1380(b)(1)(iv)(B), beginning with the 2021 MIPS payment year, measure benchmarks (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years will receive a maximum of 7 measure achievement points beginning in the second year the measure is identified as topped out (82 FR 53726 through 53727).

We noted in the CY 2021 PFS proposed rule (85 FR 50307) that we intended to use performance period benchmarks for the 2021 performance period/2021 MIPS payment year, which would mean we will not be able to publish measures that are topped out prior to the 2021 MIPS performance period. As discussed in that proposed rule (85 FR 50309), this also means we would not be able to identify those that have been topped-out for 2 or more consecutive years for purposes of the topped out scoring of 7 measure achievement points. As we were intending to use performance period benchmarks again for the 2022 performance period/2024 MIPS payment year, these problems would occur again. We believed it is still important to retain a topped-out scoring cap of 7 measure achievement points so that clinicians have incentives to pick alternate measures that are not topped out. We also believed that if a measure were not topped out in the 2022 performance period benchmark, then it should have the ability to achieve up to 10 measure achievement points.

In the CY 2022 PFS proposed rule, we proposed to use performance period benchmarks again and subsequently needed to adjust the topped-out measure lifecycle to account for this. Therefore, we proposed as an exception to the general rule at § 414.1380(b)(1)(iv)(B) at paragraph (b)(1)(iv)(B)(1) that, for the CY 2022 MIPS performance period/2024 MIPS payment year, MIPS eligible clinicians would receive no more than 7 measure achievement points for each measure (except for measures in the CMS Web Interface) for which the applicable benchmark were identified as topped out for 2 or more consecutive years based on the historical benchmarks published for the CY 2021 MIPS performance period and continues to be identified as topped out based on the performance period benchmarks published for the CY 2022 MIPS performance period/2024 MIPS payment year.

We believe these two criteria collectively would provide clinicians the information to know prior to the CY 2022 performance period/2024 MIPS payment year which measures would have the topped-out scoring applied but will also account for the scenario where a measure is no longer topped out. We would not limit the number of measure achievement points for measures that have not been topped out for at least 2 years as published in the 2021 MIPS performance period/2023 MIPS payment year historical benchmarks.

We invited public comments on our proposal to apply the 7-measures achievement point cap to measures that meet the two criteria.

We received public comments on the assigning measure achievement points for topped out measures. The following is a summary of the comments we received and our responses.

Comment: One commenter noted that clinicians want to know which measures are topped out before the performance period begins.

Response: We will continue to provide notice of topped out measures according to our standard policy. We are not finalizing our proposal to use performance period benchmarks, and therefore, will communicate topped out measures before the performance period begins as is customary.

Comment: One commenter supported the policy to provide clinicians with additional information to determine which measures are topped out prior to the performance period and noted that the policy will ensure that clinicians can select meaningful measures and earn maximum points on quality measures due to the extraordinary circumstances of the COVID–19 pandemic

Response: We appreciate the commenters for their support for this policy based on the intended use of the performance period benchmarks, but note that as we are not finalizing the use of performance period benchmarks as discussed in section IV.A.3.e.(1)(c)(ii) of this final rule. We are not finalizing this proposal.

Comment: A few commenters requested that the 7-point scoring cap on topped out measures be waived for specific measure sets that only have topped out measures from which to select. One commenter requested that the topped-out scoring cap be suspended as topped out performance may not be accurate due to shifting program requirements and COVID–19 related disruptions in care.

Response: As MIPS is a performance-based program, we do not believe that MIPS eligible clinicians electing to report topped out measures should be able to receive the same maximum score as other measures that demonstrate variation in performance and room for improvement. Therefore, we continue to believe it necessary to maintain the 7-point cap for measures identified as topped out, including those belonging to measure sets. Additionally, please refer to *qpp.cms.gov/about/covid19* our national PHE for COVID–19 response and flexibilities provided within QPP.

After consideration of public comments, we are not finalizing our proposal to revise paragraph (b)(1)(iv)(B)(1). We will instead continue our policy that the 7-point cap will be applied to measures (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years, beginning in the second year the measure is identified to be topped out.

(vi) Minimum Case Requirements

We refer readers to § 414.1380(b)(1)(iii) for our previous finalized policies regarding case minimum requirements for the quality performance category, which establishes the case minimum requirement

threshold at 20 cases for quality measures, with the exception of administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1). As more measures are introduced under MIPS, there may be measures, similar to the administrative claims-based measures, that warrant a different case minimum requirement from the other quality measures. In Table Group A of Appendix 1 of the proposed rule, we proposed to add the following quality measure starting with the 2022 MIPS performance period: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO–PM), which uses a comprehensive and parsimonious set of 11 patient-reported items to assess the broad scope of primary care (86 FR 39435 and 39436).

In order to achieve the appropriate reliability of the measure—the survey results (adequate number of surveys to provide an accurate representation of the MIPS eligible clinician, group, subgroup, virtual group, and APM Entity), for each MIPS eligible clinician, group, subgroup, virtual group, and APM Entity, a minimum of 30 PCPCM PROM instruments per clinician are needed for submission of this measure. For MIPS eligible groups, subgroups, virtual groups, and APM Entities with 5 or more clinicians, a minimum of 150 PCPCM PROM instruments per TIN for each site/location associated with the clinicians' part of the group, subgroups, virtual groups, and APM Entities are needed for submission of this measure. For TINs with a composition of multiple specialty practices at one site/location, a minimum of 150 PCPCM PROM instruments per specialty practice within a TIN are needed for submission of this measure. If the MIPS eligible group, subgroup, virtual group, and APM Entity with 5 or more clinicians encompasses multiple sites/locations, each site/location will need to meet the PCPCM PROM instruments requirements as noted above. To allow for the reliable implementation of PCPCM PRO–PM under MIPS, such measure requires a case minimum that exceeds 20 cases.With more measures being introduced under MIPS that warrant differing case minimum requirements (other than administrative claims-based measures), we proposed to modify our minimum case requirements policy to broaden the type of measures (to not only include administrative claims-based measures) that would have an exception to the minimum case requirement threshold of 20 cases and to provide a measure-specific case minimum requirement for measures identified and determined on a case-by-case basis by CMS. For each measure with a measure-specific case minimum, the minimum case requirement is specified in the annual list of MIPS measures. Specifically, we proposed to amend § 414.1380(b)(1)(iii) to reflect that, except as otherwise specified in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

We invited public comment on our proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported including flexibility to enable larger case minimum requirements on a measure-by-measure basis to ensure measures are reliable and valid, as adequate reliability may not always be achieved using a case minimum of 20 patients.

Response: We are committed to assure reliable and valid quality measurement under the MIPS program and will assess our measures and policy to assure we are meeting this goal.

Comment: A few commenters stated that CMS must ensure that the data produced yields scores that accurately and consistently represent the quality of care provided by an individual clinician and practice and believed that the current average reliability threshold of 0.4 is too low and the minimum sample size should be increased to a higher number to produce a minimum reliability threshold of sufficient magnitude (0.7). One commenter cautioned that having too many case minimum requirements will add to the complexity and burden and a few commenters asked CMS to monitor whether there are increasing numbers of existing measures requiring measure specific case minimums and the impact on burden.

Response: We will continue to review measures to ensure they meet the reliability threshold of 0.4 as previously establish (81 FR 77287). We believe that measures with a reliability of 0.4 with a minimum attributed case size of 20 meet the standards for being included as quality measures within the MIPS program. We aim to measure quality performance for as many clinicians as possible, and limiting measures to reliability of 0.7 would result in fewer individual clinicians with quality performance category measures. In addition, a 0.4 reliability threshold ensures moderate reliability for most MIPS eligible clinicians or group practices that are being measured on quality. We acknowledge that inclusion of too many case minimum requirements may add complexity. However, we believe that the benefit to the program from adding measures that require additional case minimum standards for effective implementation justifies the burden created by the additional complexity. We will continue to listen to stakeholder feedback and monitor the effects of this policy on burden.

After consideration of public comments, we are finalizing our amendment at § 414.1380(b)(1)(iii) to reflect that, except as otherwise specified in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

(vii) Incentives to Report High-Priority Measures

We refer readers to current § 414.1380(b)(1)(v)(A) for our previously finalized policies regarding incentives to report high priority measures. In the CY 2017 Quality Payment Program final rule (81 FR 77293), we established the scoring policies for high priority measure bonus points to encourage the selection of additional high-priority and outcome measures that impact beneficiaries and were closely aligned to our measurement goals. In the CY 2019 PFS final rule (83 FR 59850), we discontinued awarding measure bonus points to CMS Web Interface reporters for reporting high priority measures since CMS Web Interface reporters have no choice in measures.

We stated in the CY 2019 PFS proposed and final rules (83 FR 35950 and 59851) that as part of our move towards fully implementing high value measures, we believe that bonus points for high priority measures for all collection types may no longer be needed. We noted in the CY 2019 PFS final rule (83 FR 59851) that measure bonus points were created as transition policies which were not meant to continue through the life of the program. We believe with the finalized framework for transforming MIPS through MVPs (84 FR 62948), we will find ways in the future to emphasize high priority measures without needing to incentivize with bonus points.

In the CY 2022 PFS proposed rule, we proposed to end the high-priority measure bonus points. As we move to MVPs we are simplifying our scoring by ending transition policies that were established in the initial years of the program. We have signaled for many years now that this policy was temporary and would be removed from the program. As we transition to a new State, we anticipate that there will no longer be a need to incentivize high-

priority measures by usage of bonus points in MIPS and MVPs as we increase the share of high-priority measures in the program.

We proposed to end measure points for reporting high priority measures beginning the 2022 performance period/2024 MIPS payment year. Accordingly, we proposed to revise § 414.1380(b)(1)(v)(A) to provide that for the 2017 through 2021 performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure and 1 measure bonus point for each other high priority measure. Beginning with the 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus points.

We invited public comments on our proposal to end measure bonus points for reporting high priority measures beginning the 2022 performance period/2024 MIPS payment year.

The following is a summary of the comments we received and our responses.

Comment: Several commenters asked to delay the removal of the high-priority bonus by at least one year, until the CY 2023 performance period, due to the COVID–19 pandemic impacts and since the performance threshold is also increasing this year. Many commenters suggested keeping the bonus in place until final MVP measure sets are available as this would be less disruptive to eligible clinicians with few quality performance measures and who depend on bonus points to successfully participate in the MIPS program. One commenter noted that the pandemic took clinician focus off of the mechanics of MIPS and few clinicians will be prepared for the removal of the high priority bonus. One commenter suggested that a delay in removal of the bonus would ensure a less disruptive transition to a higher performance threshold. Another commenter suggested that CMS do a phased-out removal of these bonuses in consideration of the performance threshold.

Response: We agree that the national PHE of COVID–19 has resulted in a reduced focus by clinicians from the mechanics of MIPS to providing effective care in response to the PHE. We also understand that clinicians are worried about their performance in the program as a result of the proposal to increase the performance threshold. We remain committed to addressing stakeholder feedback, while working towards the goals of the program.

As previously noted in section IV.A.3.e.(1)(c)(iii). of this final rule, we have decided to delay the removal of the 3-point floor until the CY 2023 performance period/2025 MIPS payment year, but will move forward with the removal of the bonuses in the quality performance category. We believe that this provides a phased approach to removing the transition policies to which clinicians have become accustomed, while also moving towards the program goal of reducing sources of scoring inflation and being able to score based on meaningful distinctions in performance on quality measures. We will not maintain bonuses until MVP measures set are available. MVP measure sets are in development and will be introduced overtime. We are aiming to simplify MIPS scoring ahead of MVPs so as to develop scoring s provide incentives to report MVPs as discussed in section IV.A.3.b.(5)(a) of this final rule. We cannot continue to support reporting strategies that rely on bonus points awarded for reporting. We note that we have signaled for years that the measure bonus and scoring floor policies were intended to support the transition to MIPS and would be removed (86 FR 39436). In order to be responsive to the challenges of the COVID–19 PHE, we are maintaining the policies related to the scoring floors, but will continue through future rulemaking to remove these transition policies and the scoring inflation they introduce.

Comment: Many commenters opposed the removal of the high-priority bonus. A few commenters noted that the bonus serves as an incentive to report important measures, recognizes clinicians for their efforts to meet CMS' priorities, and provides clinicians extra help in meeting the increased performance threshold. One commenter stated that the bonus helps make up for what is lost based on limited measure selection if a clinician only has topped out measures from which to choose. One commenter noted that small practices are reliant on the bonus points and are otherwise not able to have scores that reflect the quality care small practices provide. One commenter requested the bonuses remain in place for small practices given the continued inequities between small and large practices and to help level the playing field and to encourage continued small practice participation. A few commenters noted that given the impacts of the COVID–19 pandemic the bonuses should remain in place to provide additional assistance. One commenter noted that as the program gets harder, clinicians need more assistance in achieving the threshold to avoid a penalty.

Response: We understand that receiving bonus points for submitting high-priority measures has eased clinicians' participation in the program and supported their adoption of high priority measures. That was the intent of offering bonus points at the start of the program (81 FR 77292). Now that it has been several years, we believe clinicians should be familiar with the areas that CMS considers high priority and familiar with reporting them. Ultimately, these bonuses have fulfilled their purpose and a high proportion of clinicians and groups report on high-priority measures. CMS wishes to measure performance on clinical quality measures and some types of bonus points can mask performance, and therefore, we want to use them judiciously such as to provide a scoring floor for new measures and incentivize reporting in MVPs. As the program transitions to MVPs, we will focus on providing incentives to report through MVPs. Reporting strategies that solely use bonus points for reporting to offset lower performance or topped out measure selection are not compatible with the intent of a performance-based program. We understand that with the removal of the quality performance category level bonus points and increase in the performance threshold, clinicians are concerned about receiving negative payments. We ultimately believe these scoring changes will enable fairer scoring that will benefit many clinicians, including those in small practices. Additionally, we believe the impact of this policy is partially mitigated by the maintenance of small practice bonus points within the quality performance category, as well as the Complex Patient Bonus for all MIPS eligible clinicians. To ease the transition to the new policies and to be responsive to hardships caused by the COVID–19 PHE, we are maintaining the 3-point scoring floor until CY 2023, but we are removing the high priority measure bonus points. We believe this decision will lead to fairer and simpler scoring that clinicians will ultimately benefit from.

Comment: One commenter requested feedback reports that include detailed information about which and how many bonus points were earned as a result of high priority measures.

Response: We currently provide information about the total number of bonus points added to the quality performance category score as part of

the final feedback reports that are available to all MIPS eligible clinicians.

Comment: One commenter suggested CMS finalize greater accommodations for small practices, such as applying a separate small practice bonus to the MIPS final score rather than limit the small practice bonus to the quality performance category or increasing the size of the existing small practice bonus. Commenters also recommended that CMS allow small practices to continue to receive bonus points for reporting high priority measures or reporting measures using end-to-end electronic reporting.

Response: We are committed to ensuring the small practices are able to fairly participate in MIPS. As the commenter noted, we currently offer measure bonus points for small practices at quality performance category score level (83 FR 59847). For the reasons stated in the CY 2019 PFS final rule, we believe a small practice bonus specific to the quality performance category is preferable for the CY 2019 performance period/2021 MIPS payment year and future years (83 FR 59847). Data analytics suggest that the removal of the high priority and end-to-end electronic reporting measure bonus points for all practices would help small practices by reducing scoring inflation at the quality performance category level by reducing the over-utilization of these measure bonus points by larger practices that have the resources to report additional measures. A greater proportion of larger practices receive high priority measure bonus points and reach the measure bonus point cap when compared with practices of all other sizes and solo and small practitioners utilize these points and reach the measure bonus point cap the least. We will continue to monitor the performance of small practices in MIPS and make the appropriate interventions, as well as develop MVPs to facilitate the meaningful participation of small practices in MVPs which may include increasing the size of the existing small practice bonus.

Comment: One commenter noted that without the high priority bonus, clinicians may opt to submit data for fewer measures leading to smaller datasets for benchmarking and public reporting. The commenter requested that CMS add a new opportunity for clinicians to earn points to encourage such reporting, such as higher bonuses for performance improvement or incentives for reporting extra measures.

Response: We understand that clinicians may submit data for fewer measures as a result of this policy and that this may affect datasets available for benchmarking and public reporting, but do not believe these changes will be significant. We will monitor the effect that this has on benchmarking however, we will not be instituting new bonuses in MIPS. As we move to MVPs we are moving to simplify scoring in MIPS and focus on incentives for reporting through MVPS.

After consideration of public comments, we are finalizing our proposal as proposed.

(viii) Incentives To Use CEHRT To Support Quality Performance Category Submissions

Section 1848(q)(5)(B)(ii)(I) of the Act requires the Secretary to encourage MIPS eligible clinicians to report on applicable quality measures through the use of CEHRT and qualified clinical data registries. Section 1848(q)(5)(B)(ii)(II) of the Act requires that the Secretary shall treat such clinicians as satisfying the clinical quality measures reporting requirement described in section 1848(o)(2)(A)(iii) of the Act if they report such measures through the use of such EHR technology for a given performance period. In the CY 2017 Quality Payment Program final rule (81 FR 77297), we established the measure bonus point and bonus cap for using CEHRT for end-to-end electronic reporting. We refer readers to § 414.1380(b)(1)(v)(B) for our previously finalized policies regarding measure bonus points for end-to-end electronic reporting. We believe that with the framework for transforming MIPS through MVPs discussed in the CY 2020 PFS proposed rule (84 FR 40739) and the CY 2021 PFS proposed rule (85 FR 50279 through 50285), we will find ways to encourage the use of CEHRT for reporting quality measures without needing to incentivize the use of CEHRT for end-to-end electronic reporting with bonus points. In the CY 2018 Quality Payment Program final rule (82 FR 53636), we encouraged stakeholders to consider electronically specifying their quality measures as eCQMs, to encourage clinicians and groups to move towards the utilization of electronic reporting. As noted in the CY 2019 PFS final rule (83 FR 59851), bonus points were created as transition policies which were not meant to continue through the life of the program.

In the CY 2022 PFS proposed rule, we proposed to end measure bonus points for end-to-end electronic reporting. We noted that as we move to MVPs we are simplifying scoring by removing many of the transition policies that we established in the early years of the program. We believe it is imperative to remove transition policies in order to develop a stronger MVP program and promote alignment between MIPS and MVPs. As stated in previous rulemaking, we are working to develop ways to encourage the use of CEHRT for electronic reporting without offering measure bonus points. Measure bonus points introduce scoring inflation into the program and preclude our ability to accurately compare clinicians' clinical quality. As the program works to focus on the quality of care provided to beneficiaries, we intend to score for performance on measures and not for reporting. Additionally, we believed that we can fulfill the statutory requirement at sections 1848(q)(5)(B)(ii)(I) of the Act to encourage the usage of CEHRT, through other means. As a program and across the Department of Health and Human Services, we are working towards the goal of all measures within MIPS being digital by 2025 through a movement towards the inclusion of more digital quality measures (dQMs), emphasizing approaches to electronic data sharing that utilize the FHIR standard. As part of these approaches we intended to further leverage the use of electronic reporting from CEHRT for all quality measurement completed in the MIPS program including measurement and reporting facilitated by third party intermediaries such as QCDRs and plan to further address this issue through rulemaking in future years. We are also giving preference to dQMs including eCQMs in our annual call for measures. More information on dQMs and the FHIR standard is available in section IV.A.1.c. of this final rule, information on the call for measures and CMS measurement needs and priorities is available at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1313/2021%20Call%20for%20Measures%20and%20Activities%20Toolkit.zip,* and *https://www.cms.gov/files/document/cms-measurement-priorities-and-needs.pdf,* respectively. Furthermore, over the past few years, we have reduced the availability and limited who can submit data for the Medicare Part B claims collection type to only small practices. We note that the Medicare Part B claims collection type is not an electronic means of submission. We solicited comments on other methods that we could use to encourage the use of CEHRT for electronic reporting (86 FR 39436 and 39437).

Accordingly, we proposed at § 414.1380(b)(1)(v)(B) that for the 2017 through 2021 performance period/2019 through 2023 MIPS payment years,

MIPS eligible clinicians would receive 1 measure bonus point for each measure (except claims-based measures) submitted with end-to-end electronic reporting for a quality measure under certain criteria determined by the Secretary. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus points for submitting using end-to-end electronic reporting.

We invited public comments on our proposal to end measure bonus points for end-to-end electronic reporting beginning in the 2022 performance period/2024 MIPS payment year. The following is a summary of the comments we received and our responses.

Comment: Many commenters opposed the removal of the end-to-end reporting bonus as electronic reporting remains a priority for CMS; bonus points provide an incentive to report through end-to-end reporting, which is often costly; and bonus points help the clinicians reach the increasing performance threshold. A few commenters noted that practices should be awarded for going above and beyond in their quality reporting. A few commenters opposed the removal of these bonus achievement points considering the COVID–19 PHE, MVP reporting beginning in performance year 2023, and the move to digital quality measurement by 2025. Many commenters believed that an incentive is still required to encourage the use of CEHRT for electronic reporting. One commenter noted that the bonus should be maintained during the transition to dQMs. One commenter stated that many hospitals and some entities are still not providing clinicians with access to medical record information and some EMR vendors are still not in compliance with the ability to provide adequate clinical data. One commenter stated that the bonus furthers the goal of the program and provides more useable real-world data while encouraging clinicians to sign up with QCDRs. One commenter suggested that CMS apply bonus points at the composite score level providing some consistency to providers. One commenter noted that maintaining the bonus would help combat problems obtaining appropriate differentiation among practice performance due to clinical quality measure selection bias. A few commenters expressed concern with the removal of the bonus negatively impacting specialists' scores given that the diminished scoring opportunities are not due to changes in performance. One commenter requested that all electronic measures be eligible for end-to-end reporting bonus points, even if there is an eCQM equivalent.

Response: As MIPS transitions to MVPs, our priority is to simplify scoring and score for performance rather than for reporting. We believe that the use of CEHRT adds value for clinicians and will work to develop other ways that encourage its use as we move to MVPs and digital quality measurement. We recognize concern about the effects of the PHE and increase in the performance threshold, and therefore, are maintaining our 3-point scoring floor policy to ease clinicians' transition to simplified scoring as we move towards MVPs. We do not believe that using CEHRT for electronic reporting is going above and beyond as the commenter suggests, nor do we believe that reporting via end-to-end electronic reporting still requires awarding bonus points. Rather we believe it is important to facilitate high quality clinical care and the ability to participate in this program meaningfully as such will no longer provide incentives for reporting in MIPS as we transition to MVPs. We understand the commenter's concerns about data blocking and/or hospitals not sharing data with Third Party Intermediaries and will continue to work with partners across HHS to explore ways to address this issue. The end-to-end electronic reporting bonus has been active throughout the last few years of MIPS. While we intended it to encouraged some clinicians to transition to an electronic data submission mechanism, our assumption was that the applicable clinicians would have transitioned by now. Additionally, we believe that clinicians who have made the transition to an electronic data submission mechanism likely will not make the decision to revert back to a manual/claims-based option. Furthermore, we do not believe it is necessary or appropriate to apply this bonus at the final score level. As mentioned in the previous section of this final rule, reporting strategies that solely use bonus points for reporting to offset lower performance or topped out measure selection are not compatible with the intent of a performance-based program. We will continue to try and find other solutions to the diminished scoring opportunities for specialists through MVPs.

After consideration of public comments, we are finalizing our proposal as proposed.

(ix) Improvement Scoring for the MIPS Quality Performance Category Score

We refer readers to § 414.1380(b)(1)(vi)(C)(4) for more on our current for the 2020 through 2023 MIPS payment years, which provides for the purpose of improvement scoring that we will assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

In the CY 2022 PFS proposed rule, we proposed to continue our previously established policy for improvement scoring for the 2022 performance period/2024 MIPS payment year and to revise § 414.1380(b)(1)(vi)(C)(4) to remove the phrase ''2020 through 2023 MIPS payment years'' and adding in its place the phrase ''beginning the 2018 performance period/2020 MIPS payment year'' to indicate that for each MIPS payment year after 2020, we would assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year. Specifically, for the 2022 performance period/2024 MIPS payment year, we would compare the MIPS eligible clinician's quality performance category achievement percent score for the 2022 performance period/2024 MIPS payment year to an assumed quality performance category achievement percent score of 30 percent if the MIPS eligible clinician earned a quality performance score less than or equal to 30 percent for the 2021 performance period/2023 MIPS payment year.

We did not receive public comments on this proposal, and we are finalizing as proposed.

(d) Cost Performance Category

(i) Scoring Flexibility for Changes That Impact Cost Measures During the Performance Period

We refer readers to § 414.1380(b)(2) for our policies regarding scoring for the cost performance category and to previous rules where these policies were finalized, including the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311), the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752), the CY 2019 PFS final rule (83 FR 59856), and the CY 2021 PFS final rule (85 FR 84877 through 84880). In § 414.1380(b)(2)(v), we finalized that a cost performance category score is not calculated if a MIPS eligible clinician or group is not attributed any cost measures for the performance period because the clinician or group has not met the minimum case volume specified by CMS for any of the cost measures or a

benchmark has not been created for any of the cost measures that would otherwise be attributed to the clinician or group.

We have identified that there is a need for additional flexibility in calculating the scores for cost measures to account for the impact of changing conditions that are beyond the control of MIPS eligible clinicians and groups. This flexibility would allow us to ensure that clinicians are not impacted negatively when performance is affected not due to the care provided, but due to external factors. Thus, beginning with the 2022 MIPS performance period/2024 MIPS payment year, we proposed a policy to provide scoring flexibility in instances where changes during a performance period impede the effective measurement of resource use. We stated that we believe that there may be instances when there are rapid or unprecedented changes to the delivery of healthcare services that are reflected in administrative claims data used to calculate cost measures. In the CY 2022 PFS proposed rule (86 FR 39437), we provided the example of the COVID–19 PHE and referred readers to section IV.A.3.e.(2)(b)(ii)(A) of the proposed rule, where we summarized our assessment of the impact of COVID–19 on the calculation of cost measure scores for the 2020 performance period. In this discussion, we concluded that due to the unique and rapid changes to healthcare in the COVID–19 pandemic, which significantly affected service utilization and the underlying data used to calculate cost measures, we could not reliably calculate scores for the cost measures that adequately capture and reflect clinician performance for 2020. This example demonstrated that the assessment of costs could be impeded by substantial changes to clinical practice and service utilization, and result in misleading or inaccurate results.

We noted (86 FR 39438) that we would determine whether such external changes impede the effective measurement of resource use by considering factors including: The extent and duration of the changes, and the conceptual and empirically tested relationship between the changes and each measure's ability to accurately capture clinician cost performance. Empirical testing could include assessing whether there are rapid or unprecedented changes to patient case volume or case mix, and the extent to which this could lead to misleading or inaccurate results. We noted that substantial changes in service utilization may not impede our ability to accurately calculate a cost measure score. Consider for example the case of a hypothetical measure that includes the cost of a series of procedures to treat the condition being measured. Due to advances in clinical knowledge, the procedures are declared to no longer be appropriate to treat the condition during a performance period. This would hypothetically lead to rapid and substantial changes in the services captured in the measure in that performance period; however, these changes will not necessarily lead to misleading or inaccurate results as the measure will be appropriately capturing the costs of care for that condition and appropriately reflecting changes in clinician practice. We stated that we would assess this empirically for each measure, as we believe that even widespread external changes to service utilization could have a range of different impacts across measures as they focus on diverse types of care. For example, a hypothetical national shortage of blood products may lead to the suspension of elective surgeries. This may not affect the care patterns for a particular outpatient screening or preventative care procedure, meaning that a hypothetical cost measure focused on that outpatient procedure would still accurately reflect clinician cost performance.

While we can monitor the impact of these changes during the performance period, we noted (86 FR 39438) that there is an inherent delay between the time we can identify trends in administrative claims data and when we can test for potential impact on the cost measures, due to the claims run-out period necessary to ensure that data included in our analyses reflect final claims for all services in episodes. To ensure sufficient case volume, we expected that we would not be able to properly test the full impact of external changes on the cost measures until after the end of the performance period in which the changes occurred. Thus, we would not be able to determine whether a cost measure should be suppressed due to changes in the performance period until after the completion of the performance period. To allow sufficient time for claims data query and investigatory work to test for potential impacts on cost measure calculations, we expected that we would reach a conclusion as to whether a cost measure should be suppressed and notify clinicians affected by the suppression no later than when performance feedback is issued for the performance period. We believed this will not put undue burden on clinicians since cost measures are calculated by CMS using administrative claims data without any additional data submission by clinicians.

Accordingly, we proposed to add § 414.1380(b)(2)(v)(A) to provide that beginning with the 2024 MIPS payment year, if data used to calculate a score for a cost measure were impacted by significant changes during the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure would be excluded from the MIPS eligible clinician's or group's cost performance category score. We proposed that, for the purposes of this paragraph (b)(2)(v)(A), ''significant changes'' are changes external to the care provided, and that CMS determines may lead to misleading or inaccurate results. Significant changes include, but are not limited to, rapid or unprecedented changes to service utilization, and will be empirically assessed by CMS to determine the extent to which the changes impact the calculation of a cost measure score that reflects clinician performance.

We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the addition of the policy to suppress a cost measure for a MIPS eligible clinician or group in instances where changes during a performance period impede the effective measurement of resource use. One commenter stated that the unpredictability of the pandemic makes it difficult to understand the impact on cost. The commenter stated that CMS should assess whether clinicians can reasonably be scored on the cost performance category. Another commenter suggested that CMS consider national disasters, such as wildfires and hurricanes, as significant changes warranting measure suppression. One commenter stated that CMS should evaluate scoring variation year-to-year to determine if it can be attributed to changes in performance and investigate whether a measure should be suppressed due to factors outside of the control of the physician.

Response: We recognize the impact that the pandemic has on clinicians and continue to monitor its effects on cost measures to ensure that clinicians' performance is being fairly assessed. In addition, we conduct regular monitoring of cost measures, to assess year-to-year changes in patterns of care and analyze whether certain circumstances or events impact clinicians' performance on

measures. These monitoring efforts can help to inform whether a future event, such as a natural disaster, could warrant measure suppression.

Comment: One commenter urged CMS to delay the application of any new episode-based measures to a TIN's final MIPS score for the first 2 years of applicability. The believe applying these measures without adequate prior information or data on an ongoing basis furthers the burden on clinicians and TIN's.

Response: We disagree with the commenter that delaying the application of new episode-based measures for 2 additional years after their incorporation into the MIPS cost performance category would reduce the burden on clinicians (TIN–NPIs) or clinician groups (TINs). We note that the episode-based measures are claims-based, so there is no submission burden for MIPS eligible clinicians, groups, and virtual groups. Additionally, the measure specifications that describe the steps for constructing the measures and contain the medical codes used in that methodology are publicly available during the measure development and notice-and-comment rulemaking processes. Thus, MIPS eligible clinicians, groups, and virtual groups have the opportunity to understand the measure specifications, including what costs are included in each episode, prior to the implementation of such measures in MIPS.

We further believe that newly developed measures generally would be ready for implementation in MIPS beginning with the performance period following the publication of the final rule in which they are adopted for the cost performance category. The episode-based measures are developed with extensive involvement of clinician experts, including clinicians from the attributed specialties, as well as other clinicians involved in the relevant care continuum for each measure, who make informed recommendations based on empirical data. Throughout the measure development and implementation processes, we work to help clinicians get familiar with the new measures through ample education and outreach activities, and also encourage them to provide feedback on the measure specifications (we refer readers to 86 FR 39396 and 39397 for more information on the development process for new episode-based measures). For example, for the 5 new episode-based measures that we proposed for inclusion in MIPS in the CY 2022 PFS proposed rule, stakeholders had an opportunity to observe all clinical expert workgroup meetings via a listen-only line, as well as participate in the national field-testing activities on the measures in the summer of 2020. Additionally, the measures were published in the Measures Under Consideration (MUC) list in December 2020, and the measure specifications and testing results were later available for public comments during the NQF's pre-rulemaking process and as part of the CY 2022 PFS proposed rule (86 FR 39397 through 39401). Given that the 5 new episode-based measures are ready for implementation in MIPS and that these measures play an important role in expanding the MIPS cost measure inventory, we believe that a delay in the application of those measures is not appropriate and would only prevent the performance of a MIPS eligible clinician, group, and virtual group from being assessed.

After consideration of public comments received, we are finalizing this policy as proposed.

(e) Promoting Interoperability Performance Category

For our previously established policies regarding scoring the Promoting Interoperability performance category, we refer readers to § 414.1380(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77216 through 77227), the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53670), the CY 2019 PFS final rule (83 FR 59785 through 59796), the CY 2020 PFS final rule (84 FR 63020) and the CY 2021 PFS final rule (85 FR 84893 through 84894). We also refer readers to § 414.1375 and the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), the CY 2019 PFS final rule (83 FR 59785 through 59820), and the CY 2021 PFS final rule (85 FR 84886 through 84895 for our previously established policies regarding the Promoting Interoperability (formerly the advancing care information) performance category generally.

In the CY 2019 PFS final rule, we established a new performance-based scoring methodology for the Promoting Interoperability performance category that applies beginning with the 2019 performance period/2021 MIPS payment year (83 FR 59787 through 59796). The scoring methodology is codified at § 414.1380(b)(4)(ii); however, the regulation text refers only to the 2021 and 2022 MIPS payment years, and does not mention subsequent years. We proposed to revise § 414.1380(b)(4)(ii) for consistency with the previously established policy, by indicating that the methodology applies beginning with the 2019 MIPS performance period/2021 MIPS payment year and continuing to subsequent years. We proposed to revise § 414.1380(b)(4)(ii) to remove ''for the 2021 and 2022 payment years'' and add in its place ''beginning with the 2019 performance period/2021 MIPS payment year'' and remove the word ''six'' to provide that beginning with the 2019 performance period/2021 MIPS payment year, a MIPS eligible clinician's Promoting Interoperability performance category score equals the sum of the scores for each of the required measures and any applicable bonus scores, not to exceed 100 points.

In addition, for the 2020 performance period/2022 MIPS payment year, each optional measure in the Promoting Interoperability performance category was worth five bonus points (84 FR 63003), and for the 2021 performance period/2023 MIPS payment year, each optional measure was worth ten bonus points (85 FR 84894). In the proposed rule, we proposed that the Query of Prescription Drug Monitoring Program measure would be worth 10 bonus points; we also proposed that submission of a ''yes'' for the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure would be worth 5 bonus points (86 FR 39438). To reflect these policies, we proposed a change to § 414.1380(b)(4)(ii)(C) to reflect that the optional measures are worth five or ten bonus points, as specified by CMS.

We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposal to revise the language to reflect that optional measures are worth 5 or 10 bonus points.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing our proposal as proposed.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for each MIPS eligible clinician, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, and CY 2021 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785, 83 FR 59868 through 59878, 84 FR 63020 through 63031, 85 FR 84908 through 84917, respectively) on final score calculations, performance category

weights, reweighting the performance categories, and the complex patient bonus.

As described in more detail in the following sections, we:

- Proposed to continue doubling the complex patient bonus for the CY 2021 performance period/2023 MIPS payment year, as was previously finalized with a cap of 10 bonus points for the CY 2020 performance period/2022 MIPS payment year (86 FR 39439 through 39440).
- Proposed to revise the complex patient bonus formula, which currently provides a bonus to all MIPS eligible clinicians, groups, virtual groups, and APM entities who submit data for at least one MIPS performance category, so that beginning with the CY 2022 performance period/2024 MIPS payment year the complex patient bonus better targets clinicians who treat a higher caseload of more complex and high-risk patients (86 FR 39442 through 39446).
- Solicited comments on potential circumstances where we may not be able to reliably calculate a score for any of the cost measures as described under § 414.1380(c)(2)(i)(A)(*2*). Additionally, we note that we are reweighting the cost performance category for the CY 2020 performance period/2022 MIPS payment year because we have concluded there are not sufficient measures and activities applicable and available for us to score any clinicians on performance due to the national PHE for COVID–19 (86 FR 39446 through 39448).
- Proposed to continue performance category weight redistribution policies finalized for the CY 2022 performance period/2024 MIPS payment year (86 FR 39448).
- Proposed policies for redistributing the weight of the performance categories for small practices (86 FR 39448 through 39449).
- Clarify how our application-based and automatic extreme and uncontrollable circumstances policies intersect (86 FR 39450).
- Proposed a new policy to determine the MIPS final score for clinicians and groups who are eligible for facility-based measurement (86 FR 39450 through 39452).

(a) Complex Patient Bonus

(i) Background

Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our MIPS scoring methodology. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate and based on an individual's health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS; and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185, October 6, 2014) and, as appropriate, other information, including information collected before completion of such studies and recommendations. In the CY 2018 Quality Payment Program final rule, under the authority in section 1848(q)(1)(G) of the Act, we established at § 414.1380(c)(3) a complex patient bonus of up to 5 points to be added to the final score for the 2020 MIPS payment year (82 FR 53771 through 53776). In subsequent rulemaking, we continued the complex patient bonus at § 414.1380(c)(3) for the 2021, 2022, and 2023 MIPS payment years (83 FR 59870, 84 FR 63023, and 85 FR 84910, respectively). Additionally, we finalized for the 2022 MIPS payment year at § 414.1380(c)(3)(iv) that the complex patient bonus will be calculated under the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value will then be multiplied by 2 (85 FR 84911 through 84913). We refer readers to these final rules for additional details on the background, statutory authority, policy rationale, and previously finalized calculation of the complex patient bonus.

We intended for this bonus to serve as a short-term strategy to address the impact patient complexity may have on MIPS scoring while we continue to work with stakeholders on methods to account for patient risk factors. The overall goal, when considering a bonus for complex patients, is two-fold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. We used the term ''patient complexity'' to consider a multitude of factors that describe and have an impact on patient health outcomes; such factors include the health status and medical conditions of patients, and social risk factors. We believe as the number and intensity of these factors increase for a single patient, the patient may require more services, more clinician focus, and more resources to achieve health outcomes similar to those who have fewer factors. In developing the policy for the complex patient bonus, we assessed whether there was a MIPS performance discrepancy by patient complexity using two well-established indicators in the Medicare program: Medical risk as measured through Hierarchical Condition Category (HCC) risk scores, and social risk as measured through the proportion of patients that is dually eligible for Medicare and Medicaid (82 FR 53771 through 53776).

(ii) Complex Patient Bonus for the CY 2021 Performance Period/2023 MIPS Payment Year

In the CY 2022 PFS proposed rule (86 FR 39439 through 39440), we proposed to modify the complex patient bonus for the CY 2021 performance period/2023 MIPS payment year in response to the PHE for COVID–19. In the CY 2020 PFS final rule, we finalized a policy to continue the complex patient bonus for the CY 2020 performance period/2022 MIPS payment year (84 FR 63021 through 63023). However, due to the national PHE for COVID–19 during performance period 2020, we noted in the CY 2021 PFS proposed rule that we need to re-evaluate the previously established policy for the complex patient bonus for the CY 2020 performance period/2022 MIPS payment year (85 FR 50311). We refer readers to the CY 2021 PFS proposed rule (85 FR 50311 through 50313) for further details on how the PHE for COVID–19 impacts care delivery both directly and indirectly. We acknowledged there are direct effects of COVID–19 for those patients who tested positive for SARS–CoV–2 and indirect effects of COVID–19 for other patients whose care was impacted because of the PHE, including increased complexity and barriers such as postponing care, accessing care in a different way (for example, via telecommunications), and disruptions to lab results and medications, which are not accounted for in our existing final score calculations using these complexity indicators.

Considering both these direct and indirect effects, we finalized § 414.1380(c)(3)(iv) (85 FR 84913), under which the complex patient bonus is calculated for the CY 2022 MIPS payment year pursuant to the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value is then multiplied by 2 but cannot exceed 10.0. The doubled numerical value

(subject to the 10-point cap) is added to the final score.

We noted we had made significant progress against COVID–19. While we are encouraged by the progress, we believed that there may be some direct and indirect effects from the PHE that could affect the CY 2021 performance period/2023 MIPS payment year. In particular, through the third quarter of CY 2021, we had high COVID cases in multiple regions.[254] Additionally, we cannot quantify the effect of beneficiaries who delayed care because of the PHE and are now seeking care.

Because of the concerns of the direct and indirect effects of the COVID–19 PHE, we proposed to continue doubling the complex patient bonus as described at § 414.1380(c)(3)(iv) for the CY 2023 MIPS payment year, and we proposed corresponding revisions to the regulation text at § 414.1380(c)(3)(iv). The doubled numerical value (subject to the 10-point cap) will be added to the final score. Since the COVID–19 cases and deaths have decreased throughout the year, we considered applying a smaller multiplier (like 1.5 for a cap of up to 7.5 points) or to not apply a multiplier at all. However, we believe doubling the complex patient bonus is appropriate given the continuation of the national PHE for COVID–19 into the 2021 MIPS performance period, the potential direct and indirect effects of COVID–19 on care delivery and care postponement, and additional uncertainties. We solicited comments on this proposal and whether a different multiplier should be applied as we plan to consider the options based on public comment.

We received public comments on the doubling of the complex patient bonus for the CY 2021 performance period/2023 MIPS payment year. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the doubling of the complex patient bonus for CY 2021 performance period/2023 MIPS payment year due to the impacts of the ongoing national PHE for COVID–19. A few commenters suggested that CMS continue to double the complex patient bonus in CY 2022 given the continuation of the national PHE for COVID–19.

Response: We appreciate commenters' support of this proposal. As noted in section IV.A.3.e.(2)(a)(iii)(B) of this final rule, we have revised the formula for CY 2022 performance period/2024 MIPS payment year in efforts to better acknowledge complex patients treated by MIPS eligible clinicians.

Comment: One commenter opposed CMS' proposal to continue doubling the complex patient bonus for the CY 2021 performance period/2023 MIPS payment year saying that MIPS eligible clinicians have had over a year to adapt to the changes caused by the national PHE for COVID–19.

Response: While we are encouraged by the progress made against COVID–19, we believe that there continues to be direct and indirect effects from the PHE that could affect the CY 2021 performance period/2023 MIPS payment year for reasons stated in the CY 2021 PFS final rule (85 FR 84913).

After consideration of public comments, we are finalizing the proposal to continue doubling the complex patient bonus as described at § 414.1380(c)(3)(iv) for the CY 2021 performance period/2023 MIPS payment year, and the corresponding revisions to the regulation text at § 414.1380(c)(3)(iv). The doubled numerical value (subject to the 10-point cap) will be added to the final score.

(iii) Complex Patient Bonus Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

(A) Complex Patient Bonus Background and Analysis

As discussed in the CY 2021 PFS final rule (85 FR 84908), we intended the complex patient bonus as a short-term solution to address the impact patient complexity may have on MIPS scoring. However, during the development of the CY 2021 PFS final rule, we did not have sufficient information available to develop a long-term solution to account for patient risk factors in MIPS that we could include as a finalized policy for the CY 2021 performance period/2023 MIPS payment year. In the CY 2020 PFS proposed and final rules, we considered whether newly available data from the Quality Payment Program still supported the complex patient bonus at the final score level (84 FR 40793 through 40795). More specifically, within the data analysis, we did not observe a consistent linear relationship for any reporting type or complexity measure, HCC risk score or dual proportion (84 FR 63021 through 63023). However, we only had a few years of data and believed more recent data may bring different results than the findings we explained in detail in the CY 2020 PFS final rule. We refer readers to the CY 2020 PFS final rule for further details on the methodology and findings (84 FR 63021 through 63023).

Further, section 1848(q)(1)(G) of the Act requires us to consider the relevant studies conducted under section 2(d) of the IMPACT Act and, as appropriate, other information, including information collected before completion of such studies and recommendations. We refer readers to section IV.A.3.e.(2)(a)(iii)(A) of the CY 2022 PFS proposed rule (86 FR 39440 through 39441) for discussion on HHS Assistant Secretary for Planning and Evaluation's (ASPE) first report (released in December 2016) and ASPE's second report (released in June 2020). Further, we noted in the CY 2021 PFS final rule (85 FR 84909) that as we continue to review the findings from the report, we intend to consider its recommendations, along with any updated data that would become available, for future rulemaking. In the CY 2021 PFS final rule (85 FR 84909), we also noted we plan to continue working with ASPE, the public, and other key stakeholders on this important issue to identify longer term policy solutions that achieve the goals of attaining health equity for all beneficiaries, and minimizing unintended consequences, and would propose modifications to the complex patient bonus in future rulemaking as appropriate.

Under § 414.1380(c)(3), the complex patient bonus is calculated as follows. For MIPS eligible clinicians and groups: [The average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group] + [the dual eligible ratio × 5]. For APM entities and virtual groups: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively] + [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively, × 5].

For the CY 2022 PFS proposed rule, we explored alternative calculation methodologies to modify the complex patient bonus formula based on several factors including stakeholder feedback, updated data analysis, and implications from ASPE reports to Congress. We also reviewed a series of literature recently published utilizing the 2017 MIPS performance period data. We refer readers to section IV.A.3.e.(2)(a)(iii)(A) of the CY 2022 PFS proposed rule (86

[254] *https://www.nytimes.com/interactive/2021/us/covid-cases.html.*

FR 39441) for the detailed discussion on the Johnston KJ, Hockenberry JM et al. article [255] which found that the current complex patient bonus formula appears unlikely to mitigate the most regressive effects of MIPS. Further details in section IV.A.3.e.(2)(a)(iii)(A) (86 FR 39441) of the CY 2022 PFS proposed rule also highlighted the two other research studies we considered related to how risk scores, specifically related to HCCs, differ between both rural and urban areas.

While ASPE's reports to Congress support the use of a complex patient bonus at the final score level, we also acknowledge the findings reported in the published literature by identifying ways to make the complex patient bonus more targeted for clinicians caring for high risk and complex patients and to mitigate differences in resources that affect MIPS scores. Once it became available, we reviewed the 2018 MIPS actual data to see if we could replicate the findings and identified some structural issues within the current complex patient bonus formula. We refer readers to section IV.A.3.e.(2)(a)(iii)(A) of the CY 2022 PFS proposed rule (86 FR 39441 through 39442) for the details on the updated analysis.

In summary, our updated analyses using actual 2018 MIPS scored data found that clinicians who have a higher share of complex patients have lower final scores, on average, prior to the assignment of the complex patient bonus than other clinicians. Additionally, our analyses showed that there is little evidence of association between the complex patient risk indicators (HCC and dual proportion) and MIPS final scores among the clinicians with a lower share of complex patients. We also noted, based on the above analysis using actual 2018 MIPS scored data for clinicians scored as individuals and groups examined separately, the median raw final scores for engaged clinicians in the calculated top complex patient bonus quintile were more than 10 points less than the median raw final score of those in the bottom complex patient bonus quintile. Specifically, the median raw final scores for engaged clinicians in the top complex patient bonus quintile were 82.33 for groups and 60.76 for individuals compared to median raw scores of 94.36 for groups and 81.28 for individuals in the lowest quintile. Additionally, when we compared the median raw final scores for engaged clinicians in the calculated middle complex patient bonus quintile to the highest quintile, we still observed a difference in median raw final scores of greater than 10 points for both individuals and groups. Table 61 shows 2018 median MIPS raw final scores for the engaged individuals and groups within the lowest, middle and highest complex patient bonus (CPB) quintiles.

TABLE 61: 2018 Median MIPS Raw Final Scores for Engaged Individuals and Groups by Complex Patient Bonus Quintile

	Lowest CPB Quintile	Middle CPB Quintile	Highest CPB Quintile
Median MIPS Final Score (Individual)	81.28	77.44	60.76
Median MIPS Final Score (Group)	94.36	94.38	82.33

We found while the two risk indictors, dual proportion and HCC risk score, were correlated substantially, each has a different scale. For example, the dual proportion has a natural upper bound of 1 whereas the HCC risk score does not. The distribution of each risk indicator around its mean and median is also different. Given these findings, we have identified areas within the complex patient bonus that can be improved. Most importantly, the complex patient bonus formula used through the CY 2021 performance period/2023 payment year gave bonus points to clinicians not adversely affected by social risk and medical risk of their patients and does not sufficiently account for clinicians who treat patients who are high-risk and/or medically complex.

(B) Updates to the Complex Patient Bonus Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

Based on the ASPE report and our analyses, we proposed to revise the complex patient bonus by—(1) limiting the bonus to clinicians who have a median or higher value for at least one of the two risk indicators (HCC and dual proportion); (2) standardizing the distribution of the two risk indicators so that the policy can target clinicians who have a higher share of socially and/or medically complex patients; and (3) providing one overall complex patient bonus cap at 10 bonus points. To accomplish this, we included five separate proposals to update our complex patient bonus for the CY 2022 performance period/2024 MIPS payment years and future performance periods/MIPS payment years. We note that in section IV.A.3.e.(2)(a)(iii)(B) of this final rule, we use the term ''clinician(s)'' to generally refer to those individuals and entities that these proposals apply to, including MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups. First, we proposed to add to § 414.1380(c)(3) that, similar to our current policy, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraph (c)(3)(v) through (c)(3)(viii). Second, we proposed at § 414.1380(c)(3)(v) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, the

[255] Johnston KJ, Hockenberry JM et al. (Sept 2020) ''Clinicians With High Socially At-Risk Caseloads Received Reduced Merit-Based Incentive Payment System Scores'' HEALTH AFFAIRS 39, NO. 9 (2020): 1504–1512.

Khullar D, Schpero WL, et al. (Sept 2020) ''Association between Patient Social Risk and Physician Performance Scores in the First Year of the Merit-based Incentive Payment System'' JAMA. 2020; 324 (10):975–983.

complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. Third, we proposed the revised formulas at § 414.1380(c)(3)(vi). For MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component = 1.5 + 4 * associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation. Fourth, we proposed the revised formulas at § 414.1380(c)(3)(vii). For APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component = 1.5 + 4 * the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation. Finally, we proposed at § 414.1380(c)(3)(viii) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

(aa) Continuing the Requirement To Submit Data and To Use the Same Risk Indicators

Under the first proposal, beginning with the CY 2022 performance period/2024 MIPS payment years, we proposed at § 414.1380(c)(3) to continue the requirement to submit data for at least one MIPS performance category for the applicable performance period for the MIPS payment year for a MIPS eligible clinician, group, subgroup, virtual group or APM entity to receive a complex patient bonus added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii).

As discussed below in section IV.A.3.e.(2)(a)(iii)(B)(cc) of this final rule, the proposals at § 414.1380(c)(3)(vi) and (vii) include complex patient bonus components within the formulas proposed beginning with the CY 2022 performance period/2024 MIPS payment year to account for social and medical risk, while still using our current established risk indicators of dual proportion and HCC risk scores, respectively. We also continue to believe that applying this bonus at the final score is appropriate because caring for complex and vulnerable patients can affect all aspects of a practice and not just specific performance categories.

We requested public comments on the proposal to continue the requirement that a MIPS eligible clinician, group, subgroup, virtual group or APM entity must submit data for at least one MIPS performance category for the applicable performance period for the MIPS payment year to receive a complex patient bonus added to the final score for the MIPS payment year, if applicable.

However, we did not receive public comments on this proposal, and we are finalizing as proposed.

(bb) Cutoff at the Median for Complex Patient Bonus Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

Beginning with the CY 2018 performance period/2020 MIPS payment year, a complex patient bonus was added to the final score for the MIPS payment year for all MIPS eligible clinicians, groups, virtual groups and APM entities if they submitted data for at least one MIPS performance category for the applicable performance period for the MIPS payment year (§ 414.1380(c)(3)). We did not include any requirement that clinicians had to attain a certain threshold to receive the complex patient bonus. Under the second proposal, we proposed at § 414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment, the complex patient bonus would be limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. This proposal limits the component for social risk to clinicians with a dual proportion value at or above the median dual proportion, and it limits the component for medical risk to clinicians with an HCC score value at or above the median HCC score. Those at or above the median for a risk indicator will get complex bonus points for that risk indicator component. To ensure the points are impactful and provided specifically to clinicians treating higher numbers of medically and socially complex patients, we proposed to provide bonus points beginning at the respective calculated medians.

Both medical and social factors within the newly proposed methodology, discussed in section IV.A.3.e.(2)(a)(iii)(B)(bb) of this final rule, will have separate medians and distributions calculated to provide more transparent bonuses to directly target those clinicians who treat a higher caseload of high-risk and complex patients. Both the dual proportion and the HCC risk indicators attributed to each clinician will be calculated in the same manner as under our current policy (for more information about the current policy, see the CY 2018 Quality Payment Program final rule (82 FR 30135)).

To determine the median for the respective risk indicator (HCC and dual proportion), we proposed to use the risk indicators associated with the final score assigned to a clinician from the prior performance period for all engaged MIPS clinicians, which we stated means those who have submitted data for at least one MIPS performance category or are facility-based. We inadvertently did not include this proposal in regulatory text in the CY 2022 PFS proposed rule (86 FR 39443), but for clarity, we are adding the following text to § 414.1380(c)(3)(v) in this final rule: To determine the median for the respective risk indicator (HCC and dual proportion), risk indicators associated with the final score assigned to a clinician from the most recent prior performance period, for all those who have submitted data for at least one MIPS performance category or are facility-based, are used. For example, the medians from the CY 2021

performance period, calculated using the associated risk indicators from the CY 2021 performance period, would be compared to the CY 2022 MIPS performance period risk indicator values to determine who would be eligible for a CY 2022 performance period/2024 MIPS payment year complex patient bonus. We stated that we would also use this same final score distribution to determine the standardized score discussed in the proposed rule (86 FR 39444). These statistics would be applied to the applicable performance period values of the risk indicators for each clinician to calculate the social and medical risk component scores for the MIPS performance period. We stated that we believe we need a prospective determination of the median, and standardized score from a prior performance period where the final scores are already resolved.

In our proposal, only those clinicians with risk indicator scores at or above the median for either one or both risk indicators will receive complex patient bonus points. Based on this final rule regulatory impact analysis (see section VI.F.18. of this final rule), we estimate 64 percent of clinicians will receive a complex patient bonus because there is not 100 percent overlap in the clinicians that are at or above the median for both risk indicators. Approximately 36.3 percent of engaged clinicians will not receive any complex patient bonus points, as they are below the median for both the HCC risk score and the dual proportion. We believe this number is appropriate as we will be targeting the complex patient bonus points to clinicians treating a higher caseload of highly complex patients.

Additionally, the complex patient bonus points will be more impactful as the difference in awarded bonus points between those with high caseloads of complex patients and those with low caseloads, will be greater. We believe establishing a cutoff point at the median, as opposed to the mean, is appropriate given the median is less impacted by outlier cases since the median is simply the middle value. We considered whether to use the mean, instead of the proposed median, but estimated that will result in about 50 percent of clinicians no longer receiving any complex patient bonus points because outliers could increase the mean.

In the CY 2022 PFS proposed rule (86 FR 39443), we acknowledged that alternate approaches could be used to target the bonus at clinicians with higher caseloads of complex patients. For example, we considered using a different distribution of risk indicator scores, such as one from an earlier performance period, so clinicians could know their scores in advance, or through using a distribution that includes individual clinician scores and counts group scores, APM Entity scores, virtual group scores, and, starting in the CY 2023 MIPS performance period/2025 MIPS payment year, subgroup scores only once, so the group, APM Entity, virtual group, or subgroup score is not weighted by the number of clinicians in the group, APM Entity, virtual group, or subgroup. We also considered building risk benchmarks based on our current quality measure benchmark methodology (81 FR 77282 and 82 FR 53718) to determine the number of complex patient bonus points. Under that methodology, risk indicator scores higher than the decile in which the median risk factor lies would receive complex patient bonus points and all of the clinicians in the top decile would receive 5 points for each risk indicator. We solicited comments on alternate approaches for calculating the complex patient bonus.

We received public comments on our proposal to limit the complex patient bonus to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median beginning in the CY 2022 MIPS performance period/2024 MIPS payment. The following is a summary of the comments we received and our responses.

Comment: A few commenters support CMS' proposal to set the cutoff at the median for complex patient bonus points.

Response: We thank the commenters for their feedback and support.

Comment: Several commenters opposed CMS' proposal to use the cutoff at the median for the individual risk indicators. A few commenters were concerned that the proposed methodology would disadvantage rural practices. One of the commenters was specifically concerned about rural areas having lower HCC due to coding differences and recommended that CMS utilize the median HCC risk indicator at both the national and regional levels and determine eligibility using the lower of the two scores. A few commenters noted that utilizing the median as a cutoff may introduce a ''cliff'' in which practices with small differences in risk factor scores could experience very different complex patient bonuses. Other commenters suggested that having the cutoff below the median would result in unintended consequences and discourage clinicians from treating complex patients.

Several commenters advised that CMS proceed very cautiously before eliminating the bonus for those clinicians who have relatively few complex patients versus those clinicians who have a larger number of such patients. Finally, one commenter suggested that CMS continue the already established complex patient bonus formula and provide complex patient bonus points to all clinicians.

Response: We believe the structure of the formula prevents a major cliff from occurring at the median as those right below the median and those right above median do not experience very different complex patient bonuses. Within the formula, the standardized score is based on the mean, which, at this time, is higher than the median. The additive component of 1.5 allows clinicians with standardized scores between the median and the mean to receive between zero and 1.5 points for each risk indicator, thus slowly increasing the number of bonus points as clinicians' standardized scores increase. For example, if the dual proportion risk indicator median is 0.2 and the dual proportion risk indicator mean is 0.23, a clinician with an associated standardized score of -0.25 (0.25 standard deviations below the mean, but still above the median), the clinician will receive a complex patient bonus equal to $1.5 + 4 * (-0.25)$ which equals 0.5 for the dual proportion component. We note that CMS will continue to monitor the impact of our policy for those clinicians who will no longer receive the complex patient bonus under the revised formula, but at this time, we continue to support targeting the bonus to make the points more impactful. We believe that generating a risk score at a regional or State level may be beneficial, however, there are complexities and technicalities that would need to be addressed such as defining the appropriate region, addressing circumstances when groups or individuals practice across multiple regions or States, and assessing how much of the score is national versus regional. Additionally, our analysis regarding the impact of the revised formula on rural areas showed that while there is no significant difference between rural and non-rural TIN/NPIs at the payment adjustment level, we do see differences in HCC scores that align with the literature findings discussed at section IV.A.3.e.(2)(a)(iii)(A) of the CY 2022 PFS proposed rule (86 FR 33441). As this topic is complex, we will monitor and consider changes in the future, if necessary, based on available data. Further, we disagree having the

cutoff at the median would discourage clinicians from treating complex patients because they have always treated those patients even prior to CMS establishing the complex patient bonus. We continue to believe the goal of the bonus for complex patients is two-fold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. Finally, we do not believe that we should continue to use the previous formula given that the revised formula more precisely targets clinicians caring for high risk and complex patients and better mitigates differences in resources that affect MIPS scores.

After consideration of public comments, we are finalizing at § 414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. To determine the median for the respective risk indicator (HCC and dual proportion), risk indicators associated with the final score assigned to a clinician from the most recent prior performance period, for all those who have submitted data for at least one MIPS performance category or are facility-based, are used.

(cc) Revised Complex Patient Bonus Formulas Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

Under the third proposal, we proposed at § 414.1380(c)(3)(vi) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment, for MIPS eligible clinicians, groups, and subgroups, that the complex patient bonus components would be calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component = 1.5 + 4 * associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation. For example, we will use the mean and standard deviation from the CY 2021 MIPS performance period and the indicator assigned in the CY 2022 MIPS performance period to determine the clinician's standard score for the CY 2022 performance period/2024 MIPS payment year.

Under the fourth proposal, we also proposed at § 414.1380(c)(3)(vii), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, for APM entities and virtual groups, that the complex patient bonus components would be calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component = 1.5 + 4 * the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation.

The mean and standard deviation statistics will be used along with the performance period values of the risk indicators for each clinician to calculate the standardized score used to calculate the social and medical risk component scores for the MIPS payment year. For example, if the raw dual proportion score calculated for a clinician is 0.25, the dual proportion mean (from the prior performance period) is 0.23, and the dual proportion standard deviation (from the prior performance period) is 0.15, the clinician's standardized score will be (0.25 − 0.23)/0.15 = 0.13. We believe that the standardized score calculation is appropriate as it is typically used to understand how far the raw risk indicator scores fall from the mean. We noted that those with a mean score will have a standardized score of zero, and those with a standardized score of 1 are one standard deviation above the mean. Those below the mean will have a negative standardized score. The proposed formulas will also provide bonus points to clinicians who have a negative risk indicator standardized score and fall between the calculated median and mean for the respective risk indicator and to those who fall at or above the mean and thus have a positive risk indicator standardized score. As noted in section IV.A.3.e.(2)(a)(iii)(B)(bb) of the final rule, at § 414.1380(c)(3)(vi) and (vii), the new bonus components will use respective means to calculate standardized scores to then calculate and provide bonus points for clinicians with risk indicators, HCC and dual proportion, at or above the median, to capture medical and social risk, separately. For each of the two component calculations, higher standardized scores above the mean would be associated with more bonus points. For example, a clinician with a standardized score of zero (the mean value) for each risk indicator, HCC and dual proportion, will receive bonus points for each component that is equivalent to the constant, additive factor within the new formula, 1.5. The proposed formulas acknowledged complexity without creating a large cliff between those who are just below the median and those who have a marginally higher caseload of complex patients. The bonus, as proposed, would increase proportionally with the increased number of complex patients a clinician is treating and/or the degree of patient complexity. For example, we did not want to provide those who fall at the mean 1.5 bonus points, and then provide 10 bonus points to those who only have only a slightly higher caseload. Hence, we intended to incorporate a standardized score multiplied by 4 to ensure the score got proportionally higher as complexity increases.

The additive factor of 1.5 ensures that all clinicians at or above the mean for the social complex patient bonus calculation, based on dual proportion, will receive at least 1.5 complex patient bonus points and all clinicians at or above the mean for the medical complex patient bonus calculation, based on HCC risk score, will receive at least 1.5 complex patient bonus points. Further, the additive factor of 1.5 will allow clinicians between the median and mean to still receive complex patient bonus points. For example, if the dual proportion risk indicator median is 0.2

and the dual proportion risk indicator mean is 0.23, a clinician with an associated standardized score of −0.1 (0.1 standard deviations below the mean, but still above the median), the clinician will receive a complex patient bonus equal to 1.5 + 4 * (−0.1) which equals 1.1 for the dual proportion component. If the dual proportion risk indicator calculated for a clinician falls below the median, they will receive zero complex patient bonus points for the dual proportion component. Based on the standardized score calculation, if the dual proportion risk indicator calculated for a clinician falls above the mean, they will receive complex patient bonus component points greater than the additive factor of 1.5 for the dual proportion component.

We believe this formula avoids a major complex patient bonus points cliff that could be created by providing the clinicians right *above* the cutoff point significant bonus points compared to the clinicians right *below* the cutoff point (who do not receive any complex patient bonus points). We acknowledge those who fall below the median will no longer receive any complex patient bonus points, per proposal at § 414.1380(c)(3)(v) that for the CY 2022 performance period/2024 MIPS payment years and future MIPS performance periods/MIPS payment years, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median.

We received public comments on our proposal to revise the complex patient bonus formula. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported CMS' proposal to revise the complex patient bonus formula for the CY 2022 performance period/2024 MIPS and future payment years to better account for care delivered to highly complex patients.

Response: We thank the commenters for their support and feedback.

Comment: A few commenters suggested some modifications to revise the proposed formulas. One commenter suggested that the proposed methodology for standardizing the scores for risk indicators is overly sensitive to outliers. Rather, they suggested that CMS standardize risk indicators using the median instead of the mean. The commenter also suggested that we use a more robust measure of variation than the standard deviation. Another commenter suggested that CMS standardize the dual eligible ratio using the median value in each State, rather than the median or mean at a national level. More specifically, the commenter suggested this given that the dual eligible ratio for a clinician varies depending on the number of Medicaid-eligible beneficiaries attributed to clinician which may be lower if a State has not expanded Medicaid. Finally, another commenter suggested that CMS increase the average HCC score for clinician based on the proportion of patients living in rural areas.

Response: We acknowledge that Medicaid eligibility criteria vary across States, and this could impact the number of dual-eligible patients attributed to a clinician. We also understand that there may be advantages to having an average HCC score for clinicians based on the proportion of patients living in rural areas. More specifically due to the potential coding differences between rural and non-rural areas as noted in the Tyler Malone, Denise Kirk et al. study [256] which indicated that Medicare beneficiaries in rural counties have lower average CMS–HCC risk scores compared to urban counties despite previous research suggesting that rural populations are sicker than urban populations. However, it may be misleading to create a median value for a State when a clinician or group may practice in multiple locations across different State lines. More specifically, we note that clinicians providing patient care as part of a clinical team may practice in different locations under the same group (TIN) which would make it difficult for us to assign a State-based dual eligible ratio. Additionally, dually-eligible patients may seek care across State lines, adding to the complexity. We are interested in exploring these suggestions further through future rulemaking but would need to do extensive modeling to rule out unintended consequences, identify appropriate data sources, and assess whether the advantages outweigh the additional complexity. We will continue to evaluate dual proportion to see if any additional modifications are needed. We would also be interested in hearing from stakeholders the best way to resolve these challenges in the future.

Further, the proposed policy standardizes each risk indicator (HCC risk score and dual proportion) using the mean and standard deviation. Specifically, the proposed policy used the standardized score formula of (risk indicator − mean of risk indicator)/standard deviation of risk indicator. We conducted a preliminary analysis that uses the median instead of the mean and the median absolute deviation (MAD) instead of the standard deviation for each risk indicator (HCC risk score and dual proportion) to create the standardized score. We used Year 5 final RIA data to calculate the values of the median and the MAD. The MAD first takes the absolute difference between a risk indicator value and the median of the risk indicator and then takes the median of the absolute differences. In other words, MAD = median (absolute difference (risk factor − median of the risk factor)) and the standardized score would be calculated using (risk indicator-median of risk indictor)/MAD of risk indicator.

Based on the analysis, we observed that the MAD is smaller than the standard deviation, used in our proposed rule's analysis, for each risk indicator. More specifically, using the median and MAD, the standard score is, on average, more than twice the value when compared to using the mean and standard deviation. Given that the standardized scores would be larger using the median and MAD to standardize, we recalibrated the multiplier as the initial multiplier was 4 but would effectively become 8 or more with the larger standardized scores. Additionally, if we use the median to standardize, clinicians at the risk indicator median would receive, at minimum, the initial constant (1.5 in the proposed formula). Because of these two reasons, when conducting our analysis, the proposed formula for the complex patient bonus (which is currently 1.5 + 4 * standardized score) needed to be recalibrated for our analysis to avoid unintended consequences.

We conducted our analysis using the median and the MAD to standardize and we used the formula 0.25 + 2 * standardized score for each risk indicator. We used 0.25 as the additive component to provide those at the median for each risk indicator with a non-zero amount of bonus points that would also not create a cliff. We used 2 as the multiplicative component to provide a bonus that gets proportionally higher as complexity increases while also accounting for the larger size of the standardized score. Using this formula, the number of clinicians receiving complex patient bonus points decreases slightly due to changes in entity type and clinicians would receive slightly fewer complex patient bonus points compared to the proposed formula.

[256] UNC Rural Health Research Program, ''CMS Hierarchical Condition Category (HCC) 2014 Risk Scores Are Lower for Rural Medicare Beneficiaries than for Urban Beneficiaries,'' December 2020.

However, the adjusted standardization method using the median and the MAD and associated formula did not have any major impact on the overall distribution and no impact of outliers was detected.

Comment: One commenter supported CMS' proposal to use the current risk indicators including HCC and dual eligibility. A few commenters requested that CMS look at additional risk indicators to account for additional complexities within the complex patient bonus formula. Specifically, a few commenters suggested that CMS consider clinical data to capture comorbidities and alternatives to dual eligibility to capture social risk. A few commenters suggested that CMS consider using other data such as Z-codes and indices (for example, Social Vulnerability Index, Community Needs Index, etc.).

Response: We thank the commenters for their support and suggestions and will take them into consideration as we continue updating the complex patient bonus in future years. We note that, although the ASPE report [257] found dual eligibility to be a reliable indicator of social risk, we understand there may be some limitations. However, we are not aware of data sources and/or methodologies to account for other social indicators such as income and education that are readily available for all Medicare beneficiaries that would be more complete indices of a patient's complexity. Further, we continue to believe that average HCC risk scores are a valid proxy for medical complexity that are also used by other CMS programs. Therefore, we have decided to continue to pair the HCC risk score with the proportion of dually eligible patients to create a more complete complex patient indicator than can be captured using HCC risk scores alone. We will evaluate additional, more comprehensive options, such as Z-codes and indices, in future years based on any updated data or additional information, including to better account for social risk factors while minimizing unintended consequences and consider these as we move forward.

After consideration of public comments, we finalize the proposal at § 414.1380(c)(3)(vi) that beginning with the CY 2022 performance period/CY 2024 MIPS payment, for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component = 1.5 + 4 * associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation.

We also finalize the proposal at § 414.1380(c)(3)(vii), beginning with the CY 2022 performance period/2024 MIPS payment years, for APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component = 1.5 + 4 * the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation.

(dd) Cap for the Complex Patient Bonus Beginning With the CY 2022 Performance Period/2024 MIPS Payment Year

When we originally established the complex patient bonus policy in the CY 2018 Quality Payment Program final rule (82 FR 53774), we finalized at § 414.1380(c)(3)(iii) that the complex patient bonus cannot exceed 5.0. At that time, our data analysis estimated a decrease in simulated scores of 5.4 points (for individuals who report 6 or more quality measures) and 4.5 points (for groups) from the top quartile to the bottom quartile for the average patient HCC risk scores and 4.8 points (for individuals who report 6 or more quality measures) and 4.5 points (for groups) from the top quartile to the bottom quartile for the dual proportion. Therefore, we believed a cap for the complex patient bonus of 5 points was supported by the data and was sufficient to compensate for the estimated differences in performance based on HCC risk scores and dual proportion (82 FR 53773). In CY 2019, CY 2020, and CY 2021 PFS final rules, we continued to believe that the 5-point cap was appropriate given that we had not updated our prior analyses (83 FR 58769 through 59870, 84 FR 63021 through 63023, 85 FR 84908 through 84913, respectively). However, based on our updated analyses using actual 2018 MIPS scored data, described above, about 5 percent of clinicians scored as group or individual had a complex patient bonus that would have been more than 5-points had the cap not been in place. The complex patient bonus cap of 5-points (82 FR 53773 through 53776) affects clinicians who are most likely carrying higher caseloads for patient complexity, which is inconsistent with the intent of the policy, and we no longer believe we should maintain the overall cap of 5-points. As discussed in section IV.A.3.e.(2)(a)(iii)(A) of this final rule, our updated analyses using actual 2018 MIPS scored data also found that clinicians with a higher caseload of complex patients have lower final scores, by more than 10 points on average, prior to the assignment of the complex patient bonus than clinicians with lower caseloads of complex patients. We believe, with a cap of 10 bonus points, we are targeting the bonus to address the differences in final scores these clinicians face more appropriately without capping at a larger number, such as 15 or 20 bonus points, which could result in inappropriate score inflation and masking of poor performance. A cap of fewer than 10 bonus points would not address the differences in the observed raw final scores and would not adequately address the need to provide more equity within our scoring system for those clinicians treating higher caseloads of socially and/or medically complex patients. We did consider lower caps, such as 5 or 7 bonus points, or higher caps, such as 20 bonus points, but for the reasons described above, we proposed the cap of 10 bonus points. However, if future analyses and more recent data show differences in raw

[257] ASPE. Second Report to Congress on Social Risk and Medicare's Value-Based Purchasing Programs. June 29, 2020. *https://aspe.hhs.gov/pdf-report/second-impact-report-to-congress.*

final scores that differ from our previous findings, we would consider proposing in future rulemaking the use of a cap that aligns with new findings.

As discussed in section IV.A.3.e.(2)(a)(iii)(B)(cc) of this final rule, we proposed the formulas as: Risk indicator complex patient bonus component = 1.5 + 4 * associated risk indicator standardized score. The formula, as proposed, has a multiplier of 4. We also considered a multiplier of 2 with a cap of 5 bonus points which results in a lower final score mean and median but does not change the number of clinicians receiving a complex patient bonus when compared to the proposed policy. We do not believe that this alternate approach would produce a bonus impactful enough to overcome the differences seen at the final score level when comparing complex patient bonus quintiles. We solicited feedback on this alternate approach and additional alternate approaches we should consider.

Under the fifth proposal, we proposed at § 414.1380(c)(3)(viii) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0. Based on the proposed formulas at § 414.1380(c)(3)(vi) and (vii), the social complex patient bonus component (using dual proportion standardized score) and the medical complex patient bonus component (using HCC risk score standardized score) will be added together to calculate one overall complex patient bonus. Then, based on the proposal at § 414.1380(c)(3)(viii) the complex patient bonus will then be capped at the 10 points overall.

For example, if a clinician's dual proportion standardized score is 1.5, their complex patient bonus social risk component is 1.5 + 4 * 1.25 = 6.5. If their HCC risk score standardized score is 0.25, their complex patient bonus medical risk component is 1.5 + 4 * 0.25 = 2.5. The two complex patient bonus components are then added together to total 9 complex patient bonus points for this clinician. Had the total been above 10 bonus points, the 10-point cap would have applied and the clinician would have received 10 complex patient bonus points added to their final MIPS score.

We solicited feedback on whether we should use the multiplier of 4 and cap of 10 bonus points as proposed, a multiplier of 2 and cap of 5 bonus points as discussed as an alternative, or if we should consider additional options and rationale for the complex patient bonus formula and bonus cap, such as a cap of 7 or 20 bonus points.

We received public comments on the cap for the complex patient bonus. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to place the complex patient bonus cap at 10 points, similarly to how it was capped for the previous 2 years due to the policy to double the previously established 5-point cap in response to the impacts of the national PHE.

Response: We thank the commenters for their support and feedback.

Comment: A few commenters suggested that CMS increase the complex patient bonus cap from 10 points to 20 points. One commenter specifically suggested that CMS scale the formula so that individual clinicians in the upper quintile can receive at least 15 complex patient bonus points.

Response: At this time, we do not believe we need to increase the complex patient bonus cap from 10 points to 20 points or provide at least 15 complex patient bonus points to the upper quintile. We believe, with a cap of 10 bonus points, we are appropriately targeting the bonus to address the differences in final scores these clinicians face without capping at a larger number. Fifteen bonus points would contribute to the final score the same amount of points as the entire Improvement Activities performance category. However, if future analyses and more recent data show differences in raw final scores that differ from our previous findings, we would consider proposing in future rulemaking the use of a cap that aligns with new findings.

After consideration of public comments, we finalize the proposal at § 414.1380(c)(3)(viii) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

In summary, we finalized the five separate proposals for the CY 2022 performance period/2024 MIPS payment year and future MIPS performance periods/MIPS payment years as follows:

- Finalized as proposed at § 414.1380(c)(3), by adding, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii).
- At § 414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we finalized as proposed the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. To determine the median for the respective risk indicator (HCC and dual proportion), risk indicators associated with the final score assigned to a clinician from the most recent prior performance period, for all those who have submitted data for at least one MIPS performance category or are facility-based, are used.
- At § 414.1380(c)(3)(vi), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we finalized as proposed for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroups; social complex patient bonus component = 1.5 + 4 * associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation.
- At § 414.1380(c)(3)(vii), we finalized as proposed that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component = 1.5 + 4 * the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or

virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation.

- At § 414.1380(c)(3)(viii), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we finalized as proposed the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

In addition to the proposals we made, we also considered the alternative of continuing the use of the complex patient bonus formulas, as previously finalized at § 414.1380(c)(3)(i) and (ii), along with the 5.0 point cap as previously finalized at § 414.1380(c)(3)(iii) for the CY 2022 MIPS performance period/CY 2024 MIPS payment year. We solicited comment on that alternative and have addressed the comments we received above under section (IV.A.3.e.(2)(a)(iii)(B)(bb)) of this final rule.

(b) Final Score Performance Category Weights

(i) General Weights

Section 1848(q)(5)(E)(i) of the Act specifies weights for the performance categories included in the MIPS final score: In general, 30 percent for the quality performance category; 30 percent for the cost performance category; 25 percent for the Promoting Interoperability performance category; and 15 percent for the improvement activities performance category. For more of the statutory background and descriptions of our current policies, we refer readers to the CY 2017 through CY 2018 Quality Payment Program final rules, and CY 2019 through CY 2021 PFS final rules (81 FR 77320 through 77329, 82 FR 53779 through 53785, 83 FR 59870 through 59878, and 84 FR 62950 through 62959, 85 FR 84898 through 84908, respectively). Table 62 summarizes the weights established in prior rulemaking (85 FR 84913) for each performance category for the CY 2022 performance period/2024 MIPS payment year and each subsequent MIPS payment year.

TABLE 62: Weights by MIPS Performance Category for the CY 2022 Performance Period/2024 and each Subsequent MIPS Payment Year

Performance Category	2024 and Future MIPS Payment Years
Quality	30%
Cost	30%
Improvement Activities	15%
Promoting Interoperability	25%

(ii) Flexibility for Weighting Performance Categories

Under section 1848(q)(5)(F) of the Act, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of zero) for each performance category based on the extent to which the category is applicable to the type of MIPS eligible clinician involved and for each measure and activity with respect to each performance category based on the extent to which the measure or activity is applicable and available to the type of MIPS eligible clinician involved.

Under section 1848(q)(5)(B)(i) of the Act, in the case of a MIPS eligible clinician who fails to report on an applicable measure or activity that is required to be reported by the clinician, the clinician must be treated as achieving the lowest potential score applicable to such measure or activity. In this scenario of failing to report, the MIPS eligible clinician generally would receive a score of zero for the measure or activity, which would contribute to the final score for that MIPS eligible clinician. Under certain circumstances, however, a MIPS eligible clinician who fails to report could be eligible for an assigned scoring weight of zero percent and a redistribution of the performance category weights. For a description of our existing policies for reweighting performance categories, please refer to § 414.1380(c)(2) and the CY 2021 PFS final rule (85 FR 84914 through 84916).

(A) Reweighting the Cost Performance Category

Under § 414.1380(c)(2)(i)(A), we will assign a different weight to a performance category and redistribute its prescribed weight to another performance category or categories in certain circumstances where we determine there are not sufficient measures and activities applicable and available under section 1848(q)(5)(F) of the Act. For the cost performance category, this includes circumstances where we cannot reliably calculate a score for the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician (*see* § 414.1380(c)(2)(i)(A)(*2*)). In the CY 2018 Quality Payment Program final rule (82 FR 53780), for the cost performance category, we noted in the proposed rule we had stated that we continue to believe having sufficient measures applicable and available means that we can reliably calculate a score for the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician, and that MIPS eligible clinicians who are not attributed enough cases to be reliably measured should not be scored for the cost performance category. We noted (82 FR 53780) we had established a policy in the CY 2017 Quality Payment Program final rule that if a MIPS eligible clinician is not attributed enough cases for a measure (in other words, has not met the required case minimum for the measure), or if a measure does not have a benchmark, then the measure will not be scored for that clinician (81 FR 77323). We stated (82 FR 53780) if we do not score any cost measures for a MIPS eligible clinician in accordance with this policy, then the clinician would not receive a cost performance category percent score. In the CY 2022 PFS proposed rule (86 FR 39446 through 39448), we solicited comments on potential circumstances where we may not be able to reliably calculate a score for any of the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician, and may assign a different

weight to the cost performance category and redistribute its prescribed weight to another performance category or categories. We stated that we are interested in comments on circumstances that could affect all MIPS eligible clinicians, as well as those that could affect a subset of MIPS eligible clinicians or individual MIPS eligible clinicians. We noted the cost performance category reweighting provision at § 414.1380(c)(2)(i)(A)(*2*) is distinct from the measure suppression policy proposed in section IV.A.3.e.(1)(d)(i) of the proposed rule, as it applies to the performance category as a whole and not on a measure-by-measure basis.

In the CY 2022 PFS proposed rule (86 FR 39447), we discussed our responses to commenters' concerns in the CY 2021 PFS final rule regarding the potential for COVID–19 to impact cost measures and our analyses of whether we could reliably calculate scores for the cost measures for the 2020 performance period. We noted that because we determined we cannot reliably calculate scores for the cost measures that adequately capture and reflect the performance of MIPS eligible clinicians, we announced via email communication (subject: *CMS Reweighting 2020 MIPS Cost Performance Category*) on May 20, 2021, in accordance with § 414.1380(c)(2)(i)(A)(*2*), we will assign a weight of 0 percent to the cost performance category for the CY 2020 performance period/2022 payment year and redistribute the prescribed weight of 15 percent to another performance category or categories, as established at § 414.1380(c)(2)(ii)(D). We noted as with all measures, we continue to monitor the evolving impact of COVID–19.

We stated in the CY 2022 PFS proposed rule (86 FR 39447) that we recognize there may be additional circumstances where we may not be able to reliably calculate a score for any of the cost measures within the cost performance category that adequately captures and reflects the performance of a MIPS eligible clinician, which could include external factors beyond the control of clinicians. Similar to the Measure Suppression Factors proposed and subsequently finalized in the FY 2022 IPPS/LTCH PPS rulemaking (86 FR 25473, 45301), we stated that such external factors may include significant national shortages or rapid or unprecedented changes in: (1) Healthcare personnel; (2) medical supplies, equipment, or diagnostic tools or materials; or (3) patient case volumes or patient case mix.

We solicited comments on whether these external factors should inform our future decision-making on whether to reweight the cost performance category under § 414.1380(c)(2)(i)(A)(*2*). We also solicited comments on whether there are other external factors we should consider, or other circumstances in general that could affect our ability to reliably calculate a score for the cost performance category as described under § 414.1380(c)(2)(i)(A)(*2*). We received public comments on these external factors. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported CMS considering additional external factors in future decision-making on whether to reweight the cost performance category under § 414.1380(c)(2)(i)(A)(2).

Response: We thank the commenters for their support.

Comment: One commenter recommended that CMS specifically consider whether events will impact multiple performance periods and whether medical guidelines (such as the changing COVID–19 vaccination schedule) are being updated. One commenter recommended CMS consider small practices and practices with low volume when determining whether to reweight the cost performance category. A few commenters recommended reweighting decisions be based, in part, on an assessment of whether an external event impacts patterns of care or a clinician's ability to control complications, admissions, and readmissions.

Response: We appreciate the commenters' suggestions for external factors or other circumstances we should consider. We recognize that certain circumstances can affect clinicians and clinician groups across multiple performance periods, and we intend to assess each performance period to determine whether clinicians' performance has been affected by external factors that are not within their control. We also agree about the importance of monitoring potential impacts for small practices and practices with low volume of cases and note that setting a case minimum for a measure helps to ensure that practices have a sufficient case volume to be reliably scored on a measure. We continue to apply the appropriate case minimum for each measure as part of monitoring and testing for the impact of external events. Additionally, to address a stakeholder's comment on the importance of assessing whether external events impact patterns of care or a clinician's ability to control complications, admissions, and readmissions, we note that as part of our regular monitoring of the cost measures, we run empirical analyses to assess changes in patterns of care and evaluate whether certain circumstances or events impact clinicians' performance on measures. This assessment would help us to determine if these circumstance or events warrant cost performance category reweighting. This monitoring would include empirical analyses to compare cost performance across years. Depending on the specific measure, this may include the cost of complications, admissions, and readmissions.

After consideration of the public comments we received, we intend to consider the following three factors, in addition to any other factors that may be relevant in the future, when we make a determination as to whether we can reliably calculate a score for the cost performance category that adequately captures and reflects the performance of a MIPS eligible clinician, as described under § 414.1380(c)(2)(i)(A)(2): Significant national shortages or rapid or unprecedented changes in: (1) Healthcare personnel; (2) medical supplies, equipment, or diagnostic tools or materials; or (3) patient case volumes or patient case mix. We offer the following examples to illustrate each of these three factors.

- Factor 1: A significant national shortage or rapid or unprecedented change in healthcare personnel could mean that there is a systematic decrease in medical services being provided and similar impacts on data availability.
- Factor 2: A rapid and unprecedented national change in medical supplies, equipment, or diagnostic tools or materials could mean a rapid and systematic change in the way medical care is provided, which might result in distortions to resource use measurement.
- Factor 3: A rapid and unprecedented national change in the number and case mix of patients receiving medical services could mean that the measure cannot be reliably calculated due to systemic decreases in case counts and data available for risk adjustment.

(iii) Redistributing Performance Category Weights

In the CY 2017 through CY 2018 Quality Payment Program final rules, and CY 2019 through CY 2021 PFS final rules (81 FR 77325 through 77329, 82 FR 53783 through 53785, 83 FR 59876 through 59878, 84 FR 63027 through 63031, and 85 FR 84914 through 84916), and at § 414.1380(c)(2)(ii), we established policies for redistributing

the weights of the performance categories in the event that a scoring weight different from the generally applicable weight is assigned to a category or categories.

In CY 2021 PFS final rule, we finalized a policy for redistributing the performance category weights for the CY 2022 performance period/2024 MIPS payment year and noted that we planned to revisit our redistribution policies in future rulemaking and may consider redistributing more weight to the cost performance category after clinicians have more experience with cost being weighted at 30 percent (85 FR 84914). While we still intend to redistribute more weight to the cost performance category in future years, we believe it will be beneficial to establish the redistribution policies for the CY 2023 performance period/2025 MIPS payment year and future years to provide as much notice as possible to clinicians and other stakeholders. Hence, we proposed to apply the redistribution policy finalized for the CY 2022 performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(F) to the 2025 MIPS payment year and each subsequent MIPS payment year, and we proposed corresponding revisions to § 414.1380(c)(2)(ii)(F). We still plan to revisit our redistribution policies in future rulemaking after clinicians have more experience with cost being weighted at 30 percent and gain more experience with our newly proposed MVPs.

We solicited public comments on this proposal.

We received public comments on the redistribution policy. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported CMS' proposal to continue the redistribution policies for future MIPS performance periods/MIPS payment years.

Response: We thank the commenters for their support and feedback.

After consideration of public comments, we finalize our proposal to apply the redistribution policy finalized for the CY 2022 performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(F) to the 2025 MIPS payment year and each subsequent MIPS payment year, and we finalize the proposed corresponding revisions to § 414.1380(c)(2)(ii)(F).

TABLE 63: Performance Category Redistribution Policies Finalized for the CY 2022 Performance Period/2024 MIPS Payment Year and for Future MIPS Performance Periods/MIPS Payment Years

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	30%	30%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability	55%	30%	15%	0%
-No Quality	0%	30%	15%	55%
-No Improvement Activities	45%	30%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	70%	0%	0%	30%
-No Promoting Interoperability and no Quality	0%	50%	50%	0%
-No Promoting Interoperability and no Improvement Activities	70%	30%	0%	0%
-No Quality and no Improvement Activities	0%	30%	0%	70%

Our finalized redistribution policies for the CY 2025 MIPS payment year and each subsequent MIPS payment year are included in Table 63. We note that not all the redistribution scenarios described in Table 63 will apply to MIPS eligible clinicians in small practices. Please refer to Table 64 for the redistribution policy for small practices.

(A) Redistributing Performance Category Weight for Small Practices

Clinicians and groups who work in small practices are a crucial part of the health care system. The Quality Payment Program provides options designed to make it easier for these clinicians and groups to report on performance and quality and participate in advanced alternative payment models for incentives. We have heard directly from clinicians in small practices that they face unique challenges related to financial and other resources, environmental factors, and access to health information technology. We heard from many commenters that the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). In response to the feedback on the potential burden on small practices, we have established special policies available for small practices including the small practice bonus and special scoring policies. For example, in the CY 2018 QPP final rule (82 FR 53682 through 53683), we established a significant hardship exception for small practices for the Promoting Interoperability performance category.

In this section of the rule, we discuss how we would redistribute the Promoting Interoperability performance category weight for small practices. Within the reweighting policy for the CY 2022 performance period/2024 MIPS payment year, the Promoting Interoperability performance category weight is redistributed fully to the quality performance category, unless the

quality performance category is weighted at zero percent. In general, our reweighting policies have emphasized the quality performance category over the improvement activities performance category. We have noted it is important to prioritize performance on measures that show a variation in performance such as quality measures, rather than the activities under the improvement activities performance category, which are based on attestation of completion (85 FR 84914). We believe this helps reduce incentives to not report measures for the quality performance category in circumstances when a clinician may be able to report but chooses not to do so. However, given stakeholder input and recently published literature, we believe there could be other reasons why a small practice would not report quality measures. One recent article [258] stated that physicians in larger group practices, multispecialty practices, or participating through alternative payment models had higher MIPS scores, possibly reflecting such practices' greater infrastructure and resources to collect, analyze, and report measures to CMS. We have also heard directly from clinicians in small practices that they face unique challenges related to financial and other resources and access to health information technology. Many commenters have shared their belief that the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). Indeed, 85 percent of clinicians who are not engaged with MIPS (who do not submit data) are clinicians in small practices (85 FR 85018), which we believe may be due to their limited resources. Given infrastructure and resource limitations within small practices, we believe it is appropriate to place more emphasis on a performance category that poses a reduced reporting burden such as the improvement activities performance category. We proposed that for small practices, as defined at § 414.1305, when the Promoting Interoperability performance category is reweighted, the quality performance category will be weighted at 40 percent, the cost performance category will be weighted at 30 percent, and the improvement activities performance category will be weighted at 30 percent. When both the cost performance category and the Promoting Interoperability performance category are reweighted, the quality performance category will be weighted at 50 percent and the improvement activities performance category will be weighted at 50 percent. We plan to revisit this redistribution policy in future rulemaking and may consider redistributing more weight to the cost performance category after clinicians have more experience with cost being weighted at 30 percent.

We anticipate that our proposal noted in the two rows in Table 64 will greatly assist small practices by providing further flexibilities to help with our goal of increasing engagement across the MIPS program and to be able to meet the MIPS requirements. Beginning with the CY 2022 performance period/2024 MIPS payment year, we proposed at § 414.1380(c)(2)(ii)(G) redistribution policies for small practices, as shown in Table 64.

We solicited public comments on this proposal.

We received public comments on the redistribution of performance category weights for small practices. The following is a summary of the comments we received and our responses.

Comment: Many commenters support CMS' proposal to redistribute the Promoting Interoperability weight in efforts to reduce burden on small practices.

Response: We thank the commenters for their support and feedback.

Comment: A few commenters supported CMS' proposal to redistribute the Promoting Interoperability weight for small practices but provided additional comments. A few commenters suggested that CMS apply this redistribution matrix to all practices particularly given that the performance threshold is increasing. A few commenters suggested that CMS allow for small practices to choose between reweighting of the quality performance category and improvement activities categories to 50 percent each and the standard reweighting option of quality performance category and improvement activities performance category. Another commenter suggests that CMS score small practices using both redistribution scenarios and apply the higher of the two scores to the final score. Finally, one commenter recommended that CMS distribute the weight more evenly across the MIPS performance categories.

Response: We continue to believe that it is appropriate to redistribute the Promoting Interoperability performance category weight across the quality and improvement activities performance categories as proposed for small practices. More specifically, we believe this is appropriate, given the infrastructure and resource limitations within small practices, to place more emphasis on a performance category that poses a reduced reporting burden such as the improvement activities performance category. We do not believe it necessary to provide small practice clinicians with a choice of which redistribution matrix they would like applied since we believe this would add burden by requiring small practices to inform CMS as how they would like to be scored—contradicting our reasoning for establishing this policy. Given the additional burden and resource limitations known to impact small practices to an extent greater than non-small practice clinicians, we, at this time, continue to believe this policy should remain limited to small practices. We also choose not to take the higher of the two scores for small practices as this may create an unfair advantage across MIPS eligible clinicians and we will continue to monitor this policy to ensure that there are no inadvertent impacts.

After consideration of public comments, we finalize the proposed redistribution policies for small practices at § 414.1380(c)(2)(ii)(G), as shown in Table 64, beginning with the CY 2022 performance period/2024 MIPS payment year.

*The finalized redistribution policy specifically for MIPS eligible clinicians in small practices.

(iv) MIPS Reweighting Based on Extreme and Uncontrollable Circumstances

(A) MIPS Applications for Reweighting for the CY 2021 Performance Period/ 2023 MIPS Payment Year Based on Extreme and Uncontrollable Circumstances

We anticipate that the national PHE for COVID–19 will continue through CY 2021. Therefore, we remind clinicians that the application-based extreme and uncontrollable circumstances policy, as described in § 414.1380(c)(2)(i)(A)(*6*) and (c)(2)(i)(C)(*2*), will be available for the CY 2021 performance period/2023 MIPS payment year (85 FR 84916 through 84917). Please refer to *https://qpp.cms.gov/about/covid19?py=2021* for details. The application allows clinicians, groups, and virtual groups significantly impacted by the PHE for COVID–19 to request reweighting for any or all MIPS performance categories. Under this policy, if a clinician, group, or virtual group submits a reweighting application and also submits data for a performance category for which an application was submitted, the data submission will override the application, and the clinician, group, or virtual group will be scored on the data submitted.

Additionally, if an application is submitted for one performance category only, and data is submitted for the other 2 performance categories, only the performance category for which the application was submitted will be reweighted and the other performance categories will be scored. We believe this approach maintains a balance of encouraging participation in the Quality Payment Program while still providing for flexibility in weighting the performance categories for those who have been affected by the national PHE for COVID–19. Please refer to *https://qpp.cms.gov/about/covid19?py=2021* for more information.

(B) MIPS Reweighting Based on Extreme and Uncontrollable Circumstances; Automatic and Application-Based Policies Clarification

Under the application-based extreme and uncontrollable circumstances policy codified at § 414.1380(c)(2)(i)(A)(*6*) for the quality, cost, and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(*2*) for the promoting interoperability performance category, clinicians who are subject to extreme and uncontrollable circumstances may submit an application to CMS to request reweighting of a performance category or categories. We also established an automatic extreme and uncontrollable circumstances policy at § 414.1380(c)(2)(i)(A)(*8*) for the quality, cost, and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(*3*) for the promoting interoperability performance category, under which we automatically reweight the performance categories for clinicians who are located in an area affected by extreme and uncontrollable circumstances as identified by us.

Based on stakeholder inquiries, we recognize not all stakeholders understand how individual MIPS eligible clinicians who are eligible for reweighting under the automatic extreme and uncontrollable circumstances policy and who also submit an application for reweighting based on extreme and uncontrollable circumstances are affected by the intersection of these policies. Currently, under both the application-based and automatic extreme and uncontrollable circumstances policies, if a MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS submits data for any of the MIPS performance categories by the applicable submission deadline for the MIPS performance period, they will be scored on each performance category for which they submit data, and the performance category will not be reweighted to zero percent in the final score. Under the automatic extreme and uncontrollable circumstances policy, the other performance categories for which data was not submitted will remain reweighted to zero percent (82 FR 53898, 83 FR 59874). Additionally, as described in the CY 2019 PFS final rule (83 FR 59874), under the automatic extreme and uncontrollable circumstances policy, a MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS will

not be scored on the cost performance category. As we stated in the CY 2019 PFS final rule (83 FR 59874), if a MIPS eligible clinician is located in an affected area, we would assume the clinician does not have sufficient cost measures applicable to him or her and assign a weight of zero percent to that category in the final score, even if we receive administrative claims data that will enable us to calculate the cost measures for that clinician.

The following example is intended to illustrate the intersection of the automatic and application-based extreme and uncontrollable circumstances policies. A MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS and eligible for the automatic extreme and uncontrollable circumstances policy submits an application for reweighting based on extreme and uncontrollable circumstances. The application requests reweighting for the Promoting Interoperability performance category, and the clinician submits data for the quality and improvement activities performance categories. The clinician will be scored on the quality and improvement activities performance categories because they submitted data for those categories; the cost performance category is reweighted to zero percent under the automatic extreme and uncontrollable circumstances policy, as discussed above; and the Promoting Interoperability performance category is also reweighted to zero percent under the automatic extreme and uncontrollable circumstances policy. The application for reweighting was not needed in this example to reweight the Promoting Interoperability performance category.

Please refer to *https://qpp.cms.gov/about/covid19?py=2021* for more information.

(v) Redistributing Performance Category Weights for Facility-Based Measurement

(A) Background

In the CY 2018 Quality Payment Program final rule, we established facility-based measurement under section 1848(q)(2)(C)(ii) of the Act which provides that the Secretary may use measures used for payment systems other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories (82 FR 53752 through 53767). Scoring under facility-based measurement was available for clinicians beginning with the CY 2019 performance period/2021 MIPS payment year. We established facility-based measurement to better align incentives between facilities and the MIPS eligible clinicians who provide services there (82 FR 53753). For more background on facility-based measurement, we refer readers to both the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767) and the CY 2019 PFS final rule (83 FR 59856 through 59867).

(B) Redistribution of Performance Category Weights Under Facility-Based Measurement

In the CY 2019 PFS final rule, we established that clinicians and groups would not need to elect or opt-in to facility-based measurement, but instead we would automatically apply facility-based measurement to MIPS eligible clinicians and groups who are eligible for facility-based measurement and who would benefit by having a higher combined quality and cost performance category score (83 FR 59863). In this same final rule, we finalized policies for redistributing weight among the performance categories for the CY 2019 performance period/2021 MIPS payment year under § 414.1380(c)(2)(ii)(C). Under those redistribution policies, if the cost performance category is reweighted to zero percent of the final score, its weight is redistributed entirely to the quality performance category, unless the quality performance category is reweighted to zero percent, in which case the quality and cost performance category weights would be redistributed to the improvement activities and Promoting Interoperability performance categories. A clinician or group could have the weight of the cost performance category redistributed because they did not meet the case minimum for any of the measures in the cost performance category. Because facility-based measurement always includes both the quality and cost performance categories, it is possible a clinician or group would be scored on the cost performance category under facility-based measurement but not outside of facility-based measurement. There are two common scenarios for a facility-based clinician or group which could occur in the CY 2019 performance period/2021 MIPS payment year. In the first scenario, a facility-based clinician or group meets the case minimum for at least one cost performance category measure and receives a cost performance category percent score as defined at § 414.1380(b)(2). The respective quality and cost scores will be multiplied by the available points in the quality performance category (45 points) and the available points in the cost performance category (15 points) to determine the combined contribution of the quality performance category and the cost performance category to the final score out of the available 60 points. In the second scenario, a facility-based clinician or group does not meet the case minimum for any cost performance category measure and the cost performance category weight is redistributed to the quality performance category so the quality performance category score alone determines the score out of the available 60 points. Table 65 shows these two scenarios.

TABLE 65: Two Scenarios for a Facility-based Clinician or Group Which Could Occur Under Current Policy

Quality Performance Category Percent Score	Cost Performance Category Percent Score	Combined Quality and Cost Performance Category Scores (out of 60 available points)
75%	50%	(45 points x 0.75) + (15 points x 0.5) = 41.25
75%	N/A (no cost measures met case minimum)	(60 points x 0.75) = 45

In the CY 2020 PFS final rule, we established a redistribution policy for the CY 2020 performance period/2022 MIPS payment year at § 414.1380(c)(2)(ii)(D), for scenarios when the cost performance category weight is redistributed to the Promoting Interoperability performance category, as well as to the quality performance category (84 FR 63028). Under this policy, the weights of the combined quality and cost performance categories could be different for a clinician or group under facility-based measurement and outside of facility-based measurement in circumstances in which the clinician or group was not scored on the cost performance category outside of facility-based measurement but was scored on all other performance categories. Table 66 shows the scenario in which the combined weights of the quality and cost performance categories differ if cost is included, which occurs when the cost performance category is redistributed, and all other categories are scored.

TABLE 66: Scenario in which the Combined Weights of the Quality and Cost Performance Categories Differ if Cost is Included

Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability	Combined Quality and Cost
Scores for all four performance categories	45	15	15	25	60
No cost	55	0	15	30	55

We established similar redistribution policies for CY 2021 performance period/2023 MIPS payment year and CY 2022 performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(E) and (F) in that same rule (84 FR 63029 through 63031), which also described situations where the combined weight of the cost and quality performance categories was not always consistent. For more on the background and proposed policies related to redistribution of performance categories, please see section IV.A.3.e.(2)(b)(iii) of this final rule.

Based on inquires we received from clinicians who were eligible for facility-based measurement, we believe our policy for determining the combined quality and cost performance category scores via facility-based measurement and outside of facility-based measurement is not ideal because it could result in a facility-based clinician or group receiving a lower final score than they would otherwise receive outside of facility-based measurement. We considered whether this more complex consideration of the scores and the weights in the performance categories necessitated a reconsideration of an opt-in requirement for facility-based measurement. However, we believe that establishing such a requirement would create administrative burden for clinicians and groups.

Instead of adding an opt-in requirement, we proposed a new policy to determine the MIPS final score for clinicians and groups who are eligible for facility-based measurement. We proposed at § 414.1380(e)(6)(vi)(B) that beginning with the CY 2022 performance period/2024 MIPS payment year, the MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission. Under this proposed policy, we will calculate two final scores for clinicians and groups who are facility-based. One score will be based on the clinician or group's performance and the weights of the performance categories if facility-based measurement did not apply, and the other will be based on the application of facility-based measurement. The example below shows how this proposed policy will apply for a facility-based group that did not meet the case minimum for any of the cost measures but was scored on all other performance categories.

TABLE 67: Application of Policy for a Facility-based Group that Did Not Meet the Case Minimum for any of the Cost Measures but was Scored on All Other Performance Categories

Scenario	Quality Points/available points	Cost points/available points	Improvement Activities points/available points	Promoting Interoperability points/ available points	Final Score
Facility-based	26/30	27/30	15/15	20/25	88/100
Not facility-based	52/55	0/0	15/15	24/30	91/100

As a result of this policy, the group in this example will receive a final score on the basis of their performance outside of facility-based measurement because they have obtained a higher final score through the combination of their submitted quality measures, submitted improvement activities and submitted promoting interoperability measures.

We solicited comments on this proposal.

We received public comments on the redistribution of performance category weights under facility-based measurement. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported CMS' proposal to take the higher of the two scores when

determining the final score for facility-based eligible clinicians and groups. One commenter suggested that CMS adopt this policy starting from CY 2021 performance period/2023 MIPS payment year.

Response: We thank the commenters for their support and feedback and note that, as mentioned in the 2021 Facility-Based Measurement Quick Start Guide, because the FY 2022 total performance score from the Hospital Value-Based Purchasing Program will be unavailable, we will not be able to calculate MIPS facility-based scores for the CY 2021 MIPS performance period/2023 MIPS payment year.[259] Please refer to *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1293/2021%20MIPS%20Facility%20Based%20Quick%20Start%20Guide.pdf* for more information.

After consideration of public comments, we finalize the proposal at § 414.1380(e)(6)(vi)(B) that beginning with the CY 2022 performance period/2024 MIPS payment year, the MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission.

f. MIPS Payment Adjustments

(1) Background

For our previously established policies regarding the final score used to determine MIPS payment adjustments we refer readers to the CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799) and CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343). In the CY 2022 PFS proposed rule (86 FR 39453 through 39458), we proposed: (1) To select the mean as our methodology for calculating the performance threshold; (2) to establish the performance threshold for the 2024 MIPS payment year using 2019 MIPS payment year data; (3) to establish the additional performance threshold for exceptional performance for the 2024 MIPS payment year; and (4) to update the scoring hierarchy to include subgroups. In addition, we are including information about our timing for providing MIPS performance feedback to clinicians for the performance period in 2020.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act included a special rule for the initial 2 years of MIPS, which requires the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018) amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the 2024 MIPS payment year) to which the MIPS applies.

We have applied these special rules for the past 5 years to provide for a gradual and incremental transition to the year 6 performance threshold. For further information on established performance threshold policies we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program (82 FR 53787 through 53794), CY 2019 PFS final rule (83 FR 59880 through 59883), the CY 2020 PFS final rule (84 FR 63031 through 63037), and the CY 2021 PFS final rule (85 FR 84919 through 84923). We codified the performance thresholds for each of the first 5 years of MIPS at § 414.1405(b)(4), (5), (6), (7), and (8) as presented in Table 68.

[259] *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1293/2021%20MIPS%20Facility%20Based%20Quick%20Start%20Guide.pdf.*

TABLE 68: Performance Thresholds for the 2019 MIPS Payment Year through 2023 MIPS Payment Year

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	2022 MIPS Payment Year	2023 MIPS Payment Year
	Year 1	Year 2	Year 3	Year 4	Year 5
Performance Threshold	3 points	15 points	30 points	45 points	60 points
Difference in PT (year n minus (year n-1))	N/A	12 points	15 points	15 points	15 points

In the CY 2020 PFS final rule (84 FR 63031 through 63037) at § 414.1405(b)(7) and (8), we finalized the performance thresholds for the 2022 and 2023 MIPS payment years at 45 and 60 points, respectively, an increase of 15 points each year until the 2024 MIPS payment year, for which we estimated that the performance threshold would be 74.01 points. We believe that this approach effectively provided for a gradual and incremental transition to the performance threshold we had estimated for the 2024 MIPS payment year, as required by the statute.

Beginning with the 2024 MIPS payment year, section 1848(q)(6)(D)(i) of the Act requires the performance threshold to be the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. That section also provides that the Secretary may reassess the selection of the mean or median every 3 years. Thus, we considered whether to use the mean or median as the methodology for determining the performance threshold. We will use this methodology to determine a performance threshold for each of the following 3 years: The 2024 MIPS payment year, 2025 MIPS payment year, and 2026 MIPS payment year. We would then reassess and establish the methodology (mean or median) that we will use for each of the next 3 years (2027 MIPS payment year, 2028 MIPS payment year, and 2029 MIPS payment year). At the time of drafting of this final rule, we have final score data from the CY 2017 performance period/2019 MIPS payment year through the CY 2020 performance period/2022 MIPS payment year available to use in our assessment of whether to use the mean or median as our methodology for the next 3 years. At this time, however, the targeted review process (see § 414.1385) for the CY 2020 performance period/2022 MIPS payment year has not yet concluded, and the data for the CY 2020 performance period/2022 MIPS payment year may be subject to change as a result of targeted review which began on August 2, 2021, and will conclude on November 29, 2021, at 8:00 p.m., eastern standard time. For more information on the targeted review process, see our announcement sent to our list serve on September 27th, 2021 available at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1631/2020%20Scoring%20Updates_EUC%20Reweighting%20Requests%20Extension_Listserv.pdf.*

We do not believe it would be appropriate to consider mean and median final scores from the CY 2020 performance period/2022 MIPS payment year for purposes of establishing the performance threshold for the 2024 MIPS payment year in this final rule when those scores may be subject to change as a result of the targeted review process. Furthermore, we are not utilizing final scores from the CY 2020 performance period/2022 MIPS payment for the creation of our regulatory impact analysis model. For a detailed discussion of the RIA methodology, including the basis of our decision to not use CY 2020 performance period/2022 MIPS payment year data, please see section VI.F.18.a of this final rule.

From our review of the data available to us, we have identified the mean and median final scores for each of the 2019 through 2021 MIPS payment years, as shown in Table 69. These six values represent the prior year mean and median final scores that we considered for the 2024 MIPS payment year performance threshold.

TABLE 69: Possible Values for the 2024 MIPS Payment Year Performance Threshold

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year
Mean	74.65 Points	87 Points	85.61 Points
Median	89.71 Points	99.63 Points	92.30 Points

As shown in Table 69, using the median final score gives a possible range of performance thresholds from 89.71 points to 99.63 points. Given our performance threshold of 60 points in year 5, these values would result in an increase of 29.71 points to 39.63 points for year 6. Selecting the median of final scores as our methodology would, at a minimum, nearly double the annual increase in the performance threshold of 15 points that we had from year 2 to year 5 of the program. Section 1848(q)(6)(D)(iv) of the Act required that we increase the performance threshold for each of the third, fourth, and fifth years of MIPS to ensure a gradual and incremental transition to the performance threshold we estimated with respect to the sixth year of MIPS. In prior rules we estimated the year six

performance threshold to be 74.01 points and used this estimate to determine how to gradually raise the performance threshold (83 FR 59881, 84 FR 63032, 84 FR 40802). Although section 1848(q)(6)(D)(iv) of the Act does not require this approach for the sixth year and subsequent years of MIPS, we believe that it is appropriate to set the performance threshold at a level that is in line with our previous estimates for year 6. We believe that continuing the gradual and incremental increase into year 6 would provide consistency to our stakeholders. After evaluating the possible values shown in Table 69, we believe that using the mean as our methodology would continue this approach.

Using the mean final score as the methodology would yield a possible range of performance thresholds from 74.65 points to 85.61 points (rounded to 75 points and 86 points respectively). Given our performance threshold of 60 points in year 5, these values would result in an increase of 15 points to 26 points for year 6. Given these values and our annual performance threshold increases of 15 points for years 2 to 5 of the program, 75 is the value that is most consistent with the gradual and incremental approach that we have elected to continue. Therefore, we proposed at § 414.1405(g) that for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b). This methodology will be used for MIPS payment years 2024 through 2026 of the program after which we will reassess the methodology for MIPS payment years 2027 through 2029.

In addition to selecting the methodology (mean or median), section 1848(q)(6)(D)(i) of the Act also requires us to specify a prior period from which we will use the final scores for all MIPS eligible clinicians to calculate the mean or median. As shown in Table 69, the mean final scores are 74.65, 87, and 85.61 points for MIPS payment years 2019 through 2021 respectively. In previous rules (83 FR 59881, 84 FR 63032), we used the MIPS payment year 2019 mean final score to estimate a performance threshold of 74.01 points for year 6 of the program. Our data have been updated to reflect completed targeted reviews since the time we made this estimate, and the mean final score for the 2019 MIPS payment year is now 74.65 points (see Table 69). This value would be an increase of almost exactly 15 points from the MIPS payment year 2023 performance threshold of 60 points, which is identical to the increases of the previous 3 years and consistent with our intention to continue the gradual and incremental approach that has been utilized in prior years. After reviewing the available final score data, we proposed at § 414.1405(b)(9) to use the MIPS payment year 2019 as the prior period and the rounded mean final score of 75 points as the year 6 performance threshold. When we establish the performance threshold for future MIPS payment years in future rulemaking, we will reassess using the mean final score for MIPS payment year 2019 as mean final scores for subsequent years become available.

We solicited comments on these proposals, as well as the alternative methodology of the median that we considered but did not propose. Additionally, we solicited comments on calculating the performance threshold using an alternative year's final scores that we considered but did not propose.

We received public comments on establishing the performance threshold. The following is a summary of the comments we received and our responses.

Comment: One commenter requested that CMS not roll back or reduce the performance threshold from its current value with the transition to MVPs in future years. The commenter believes that the extended phase in of the performance threshold under traditional MIPS was not necessary and had the unintended consequence of clinicians not taking MIPS as seriously as they should have. The commenter also stated that any phase-in does not advance the goals of transitioning to value-based care.

Response: In future years of the program we will evaluate the data available to us and select a performance threshold in accordance with the requirements of the statute. The gradual and incremental increase in the performance threshold gave clinicians time to anticipate the transition to the statutorily mandated methodology for the performance threshold beginning in year six. The CY 2022 performance period/2024 MIPS payment year is the first year of the program where CMS does not have additional flexibilities and must set the performance threshold at the mean or median of a prior year's final scores, thus ending the performance threshold transition period. While we agree with the commenter that further phase in of the performance threshold is not needed, it is possible the performance threshold numerical value for a future year could be lower than the numerical value for the CY 2022 performance period/2024 MIPS payment year, depending on the final score data available.

Comment: One commenter believes that data from the CY 2019 performance period/2021 MIPS payment year is a better basis for creating performance thresholds than the CY 2017 performance period/2019 MIPS payment year. The commenter believes that the entire structure of the program as far as scoring was very different in 2017 and that 2019 offers a more accurate picture compared to 2017.

Response: We understand that the program has undergone modifications since the CY 2017 performance period/2019 MIPS payment year. However, we have previously stated our intent to use a gradual and incremental approach to raising the performance threshold. For reference, the mean and median final scores for CY 2019 performance period/2021 MIPS payment year are 85.61 and 92.30 respectively and would represent an increase in the performance threshold of 25.61 or 32.3 points. We raised the performance threshold 12 points from CY 2017 performance period/2019 MIPS payment year to CY 2018 performance period/2020 MIPS payment year and raised the performance threshold 15 points in each subsequent year. We believe that raising the performance threshold 15 points in CY 2022 performance period/2024 MIPS payment year is consistent with our gradual and incremental approach. We recognize that clinicians are facing ongoing difficulties due to the PHE, and we believe that choosing the lowest performance threshold value available to us would gradually increase the performance threshold while minimizing disruption to clinicians during this emergency.

Comment: Several commenters supported setting the performance threshold at 75 and using the mean from a prior performance period. Some commenters stated the 15-point increase aligns with the gradual increase over the last 4 years. One commenter stated it was an attainable goal. A few commenters stated this meant having a larger budget neutral pool to redistribute funds, but one commenter requested more information about impact to their specialty. One commenter supported that it was the lowest of the possible options.

Response: We thank the commenters for their support for setting the performance threshold for the CY 2022 performance period/2024 MIPS payment year at 75 points, for noting that the 15-point increase is the same magnitude as the change in prior years, and for noting that the performance threshold selected was the lowest of the

possible options. Overall information on prior year's final scores can be found in the corresponding Quality Payment Program Experience Report and specialty specific information can be found in the Public Use File in the QPP resource library (*https://qpp.cms.gov/resources/resource-library*).

Comment: A few commenters expressed concern with the proposed performance threshold, specifically for small practices. A few commenters requested setting a separate performance threshold for small practices at a value such as 60, or setting the performance threshold for other practices higher at 85 points.

Response: We appreciate this feedback from commenters. However, as we previously discussed, the statute requires us to set the performance threshold at the mean or median of a prior period's final scores, and we do not have the statutory authority to establish a separate performance threshold for small practices. We also note that CMS does not have the authority to waive the statutory requirements for setting the performance threshold using our extreme and uncontrollable circumstances policies or section 1135 of the Act. We encourage the commenters to look at our estimates of how our proposed policies will affect the payment adjustments, broken down by practice size, for the MIPS 2024 payment year in our regulatory impact analysis (see section VI.F.18.e of this final rule). As shown in the impact analysis, we project the discrepancy in payment adjustments between large and small practices to shrink as a cumulative result of our policies, including raising the performance threshold.

Comment: Many commenters opposed the proposed performance threshold and recommended that CMS lower the performance threshold. Most of these commenters requested that CMS explore ways to use its authority to adjust the performance threshold beginning with the CY 2022 performance period/2024 MIPS payment year. Commenters specifically requested that CMS consider emergency authorities under the PHE such as the section 1135 waiver authority or its Extreme and Uncontrollable Circumstances policy. Commenters noted the stress of the continuing pandemic on practices; that the proposed performance threshold of 75 points represents a significant increase from the 30 points in 2019 or 45 points for 2020. A few commenters acknowledged that CMS has chosen the lowest value possible (75 points), but the commenters believe that positive payment adjustments will become more difficult to obtain, especially as the COVID–19 pandemic continues. One commenter expressed concern that clinicians may become frustrated and lose motivation to engage with the MIPS program. Another commenter stated that the steep increases in the performance threshold assumes that practices will not only perform, as well as they did before COVID–19 but that they will be able to perform better than before. Some commenters stated that CMS should establish a transitional policy that recognizes the impact of the COVID–19 PHE. One commenter appreciated the flexibilities that CMS has put in place during the pandemic and urges CMS not to flip a switch in 2022 as if the past 3 years have been business as usual. A few commenters suggested lower performance threshold levels, including 60, 50 and 45. One commenter requested that CMS delay the increase to the performance threshold until the implementation of MVPs.

Response: We understand the commenters concern about the stress the PHE is putting on practices. However, we do not have the authority to set the performance threshold for MIPS payment year 2024 at a value other than the mean or median of the final scores with respect to a prior period, as required by section 1848(q)(6)(D)(i) of the Act. We agree that positive payment adjustments could be more difficult to obtain with a higher performance threshold and are actively working to keep clinicians engaged with the introduction of MVPs which provide a streamlined way for clinicians to participate in the program with a set of measures that are relevant to their practice. We understand that the performance threshold of 75 represents a steep increase from the pre-pandemic performance threshold of 45 points, which was applicable for the CY 2019 performance period/2021 MIPS payment year. For the past 4 years we have finalized increases of 15 points. We increased the performance threshold from 15 to 30 between the CY 2018 and 2019 performance periods/2020 and 2021 MIPS payment years, from 30 to 45 between the CY 2019 and 2020 performance periods/2021 and 2022 MIPS payment years, and from 45 to 60 between the CY 2020 and 2021 performance periods/2022 and 2023 MIPS payment years. We acknowledge the commenter's concern that this increase assumes that clinicians will not only perform, as well as they did before COVID–19 but that they will be able to perform better than before. We note that the proposed increase of 15 points is the same as the increase in the previous 3 years and was based on a gradual and incremental approach to setting the performance threshold. As discussed previously, we are statutorily required to set the performance threshold for the 2024 MIPS payment year at the mean or median of the final scores with respect to a prior period, and we do not have the flexibility to choose other values. We appreciate the commenter's suggestion to adopt a transitional policy for the performance threshold due to the PHE but reiterate that we do not have the flexibility to do so due to the statutory requirements discussed previously. We also note that CMS does not have the authority to waive the statutory requirements for setting the performance threshold under section 1135 of the Act.

Comment: A few commenters opposed the proposed performance threshold for specialty related or practice related reasons. A few commenters were specifically concerned about groups or specialties that can only be measured on two performance categories. One commenter expressed their opinion that setting the performance threshold at the mean or median of prior final scores of all MIPS eligible clinicians in a prior period was an unfair standard for their specialty because they are limited in their ability to report under the Promoting Interoperability performance category. They stated this limitation gives them fewer opportunities to amass points. Another commenter stated that their group was unable to report Promoting Interoperability performance category measures and would be reweighted in a manner that would increase their cost category weight. A different commenter stated that they have a limited number of quality measures that they can report. As a result, they stated that for groups such as theirs that have limited measures and a high-weighted quality category, CMS now requires 100 percent quality to meet the performance threshold or otherwise they would receive a negative MIPS payment adjustment.

One commenter expressed concern that CRNAs cannot report 6 of the measures in the MIPS Anesthesia Measure set because they do not provide relevant services. The commenter suggested CMS should address how specialties such as anesthesia can meet the performance threshold, perhaps through the use of CAHPS data or by allowing them to report additional Improvement Activities.

Response: We understand that different specialties sometimes face challenges with not being able to report

measures and activities for every performance category. We agree that the final scores of these clinicians may be based on fewer categories than they would be for a clinician reporting all 4 performance categories. However, we remind clinicians that even if their final score is based on fewer than 4 performance categories they still have the ability to score anywhere from 0 to 100 points for their final score, just as a clinician reporting all 4 performance categories would. In this way, we do not believe that a performance threshold of 75 points is disadvantageous to clinicians reporting fewer than 4 performance categories. As stated below, we also encourage clinicians that do not have enough quality measures relevant to their scope of practice to work with their specialty societies to provide recommendations during the specialty measure set solicitation process and to consider reporting a relevant MVP when one becomes available.

We note, for the commenter who stated that not being able to report Promoting Interoperability would cause their group to be reweighted in a manner that would increase their cost category weight, that the cost category weight would only increase if a group was reweighted for the Promoting Interoperability and Quality performance categories. If a group is reweighted for the Promoting Interoperability performance category only, the cost category weight remains at 30 percent. We believe the commenter who stated that they have a limited number of quality measures that they can report is referring to the possibility that if the weight of other performance categories is redistributed to the quality category, a clinician may need to achieve a high score in quality in order to exceed the proposed performance threshold of 75 points. We understand that some clinicians may not have 6 measures in the Quality performance category that are relevant to their practice. To address this, we have our eligible measure applicability policy within the quality performance category to reduce the denominator of required measures for the MIPS CQM and Medicare Part B claims collection types, in the event that a clinician has less than 6 applicable measures to report. In this way, clinicians can be scored on the quality measures that are relevant to their scope of practice. For more information on the eligible measure applicability policy please see the CY 2017 through CY 2019 PFS final rules (81 FR 77290 through 77291, 82 FR 53750 through 53732).

For the commenter's concerns on the specialty measures available, we solicit stakeholder recommendations for new specialty measure sets and revisions to existing specialty sets on an annual basis. We urge stakeholders to work with their specialty societies to provide recommendations during the specialty measure set solicitation process (for more information please see the QPP resource library at *http://www.qpp.cms.gov*). We are also developing MIPS Value Pathways (MVPs) to provide clinicians with a simplified method to report measures that are relevant to their practice and we encourage them to report an MVP when one that is relevant to their scope of practice is available. We thank the commenter for their suggestion to expand the use of CAHPS or to allow clinicians to report additional improvement activities if they cannot report 6 quality measures.

Comment: Many commenters expressed concern that the proposal to increase the performance threshold to 75 points would increase the number of clinicians receiving a negative payment adjustment and decrease the number of clinicians with positive or neutral adjustments. Many commenters also stated their concern that the increase in the performance threshold comes with several proposed policies to remove bonuses and floors for quality measures and proposals to change quality data completeness which may lower the MIPS final score. A few commenters requested that CMS reconsider the reporting and scoring policies, delay the scoring policies, or gradually phase in the scoring changes, especially if CMS finalized the proposed performance threshold. One commenter specifically requested continuing current scoring for an additional year. A few commenters noted the difficulty of achieving the performance threshold now compared to a few years ago because of the scoring changes. A few commenters noted the cost of participating in MIPS versus the potential incentive. One commenter cited a study on the cost to participate in MIPS and expressed concern that clinicians would still get negative MIPS payment adjustment after these costs due to a premature increase in the performance threshold following 3 years of flexibilities due to the COVID–19 PHE.

Response: We acknowledge the commenters concerns regarding the increased burden on clinicians due to the COVID–19 PHE and agree that the statutory formula for determining the performance threshold beginning with the 2024 MIPS payment year could lead to additional clinicians receiving a negative payment adjustment. The MIPS is a budget neutral program and is designed in the statute to balance the positive payment adjustments of clinicians who score above the performance threshold against the negative payment adjustments of clinicians whose scores are below the performance threshold. We encourage the commenter to look at our estimates of how our proposed policies will affect the payment adjustments for the MIPS 2024 payment year in our regulatory impact analysis (see section VI.F.18.e of this final rule). In light of the continuing burden of the PHE we are making changes to some scoring flexibility proposals including postponing the removal of the 3-point scoring floor on quality measures and keeping the data completeness threshold at 70 percent (see section IV.A.3.e.(1)(c)(iii)(B) of this final rule). We are also introducing some new flexibilities including a 7-point floor for scoring new measures in their first year and a 5-point floor in their second year (see section IV.A.3.e.(1)(c)(iii)(B) of this final rule).

Comment: A few commenters discussed refinements for the performance threshold methodology. One commenter suggested CMS determine what the mean or median of ''raw'' or ''achievement'' final performance scores would be and use that figure to set the 2022 threshold. The commenter stated that CMS only uses the base quality measure score, absent any bonus points, to determine improvement scoring in the Quality category. Therefore, the commenter stated that method could be used in setting the performance threshold as well. Another commenter recommended that CMS evaluate balancing the reported data from 2019, 2020, and 2021 to control for self-selection bias since the commenter believed MIPS reporting has been fundamentally voluntary for these performance periods. One commenter asked what the agency's intent is with respect to performance thresholds and quality benchmark data going forward given that CY 2022 performance period/2024 MIPS payment year benchmarks will be based on CY 2022 performance period data while CY 2024 performance period/2026 MIPS payment year benchmarks appear to revert to performance period 2017 data. The commenter noted the performance threshold is based on CY 2017 performance period data while benchmarks are proposed to be based on CY 2022 performance period data.

Response: We appreciate the commenter's suggestion to use a ''raw'' or ''achievement'' score to set the performance threshold; we interpret the

suggestion of ''raw'' or ''achievement'' scores to mean removing any performance category bonuses, final score bonuses or improvement scoring. We note section 1848(q)(6)(D)(i) of the Act requires us to set the performance threshold using composite performance scores, which we refer to as the final score as defined under § 414.1305 (81 FR 77319 through 77320). We do not believe that the statute allows us to use ''raw'' or ''achievement'' scores when setting the performance threshold. We thank the commenter for the suggestion of balancing the scores from 2019, 2020, and 2021 but reiterate that the statute requires us to choose the mean or median from a prior period and does not allow us to balance scores from multiple years.

We refer the commenter to section IV.A.3.e(1)(c)(ii) of this final rule, where we are not finalizing our proposal to use performance period benchmarks and instead we will continue to use historic quality benchmarks for the CY 2022 performance period/2024 MIPS payment year will be based on CY 2020 performance period data. In regards to the comment on using 2017 data for purposes of the CY 2024 performance period/2026 MIPS payment year benchmarks, we note that we have not yet made any proposals on quality benchmarks for the CY 2024 performance period/2026 MIPS payment year.

Comment: One commenter supported the larger size of positive payment adjustments that a higher performance threshold would cause due to a greater quantity of money being redistributed through BN, but requested more information on the impact to specialties and practices. The commenter stated that this information will give societies a stronger argument for their membership as to why clinicians should continue to participate in MIPS.

Response: We encourage the commenter to read our projections of the impact of the Quality Payment Program Finalized policies on payment adjustments for MIPS payment year 2024 in our Regulatory Impact Analysis (see section VI.F.18.e of this final rule). We also note that CMS publishes a Quality Payment Program Experience Report and Public Use File at *https://qpp.cms.gov/resources/resource-library.* A detailed breakdown of a prior year's scores can be found in the QPP Experience Report and specialty specific information can be found in the Public Use File.

After consideration of public comments, we are finalizing our proposal at § 414.1405(g) that for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b). We are also finalizing our proposal at § 414.1405(b)(9) to use the MIPS payment year 2019 as the prior period and the rounded mean final score of 75 points as the year 6 performance threshold.

(3) Additional Performance Threshold for Exceptional Performance

Section 1848(q)(6)(D)(ii) of the Act requires the Secretary to compute, for each year of the MIPS (beginning with the 2019 MIPS payment year and ending with the 2024 MIPS payment year), an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors for exceptional performance under section 1848(q)(6)(C) of the Act. For each such year, the Secretary shall apply either of the following methods for computing the additional performance threshold: (1) The threshold shall be the score that is equal to the 25th percentile of the range of possible final scores above the performance threshold determined under section 1848(q)(6)(D)(i) of the Act; or (2) the threshold shall be the score that is equal to the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to the prior period described in section 1848(q)(6)(D)(i) of the Act. Under section 1848(q)(6)(C) of the Act, a MIPS eligible clinician with a final score at or above the additional performance threshold will receive an additional MIPS payment adjustment factor and may share in the $500 million of funding available for the year under section 1848(q)(6)(F)(iv) of the Act. We note that under section 1848(q)(6)(F)(iv) of the Act, funding is available for additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act only through the 2024 MIPS payment year, which is the sixth year of the MIPS program.

In the CY 2020 PFS final rule (84 FR 63037 through 63040), we used the special rule under section 1848(q)(6)(D)(iii) of the Act to set the additional performance threshold at 85 points for the 2022 and 2023 MIPS payment years. We note that the special rule under section 1848(q)(6)(D)(iii) of the Act applies only to the initial 5 years of MIPS, so we cannot use that rule to establish the additional performance threshold for the 2024 MIPS payment year. As noted above, under section 1848(q)(6)(D)(ii) of the Act, we may set the additional performance threshold at either: (1) The 25th percentile of the range of possible final scores above the performance threshold, or (2) the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to the prior period described in section 1848(q)(6)(D)(i) of the Act.

TABLE 70: Possible Values for the 2024 Payment Year Additional Performance Threshold

	2019 MIPS Payment Year Mean	2019 MIPS Payment Year Median	2020 MIPS Payment Year Mean	2020 MIPS Payment Year Median	2021 MIPS Payment Year Mean	2021 MIPS Payment Year Median
25th Percentile of Possible Scores	81.26	92.51	90.26	100	89.51	94.01
25th Percentile of Actual Scores	88.94	94.84	98.33	100.00	91.83	94.70

In the CY 2022 PFS proposed rule (86 FR 39453), for illustrative purposes, we referenced the possible additional performance thresholds shown in Table 70. Note that mean or median refers to the methodology for calculation of the performance threshold. As can be seen in Table 70, the potential values for the additional performance threshold range from a low of 81.26 to a high of 100. However, to remain consistent with our gradual and incremental approach, we proposed to use the mean as our methodology for setting the performance threshold during the next 3 years and

we proposed to use the final score data from MIPS payment year 2019. We are finalizing these proposals in section IV.A.3.f.2 of this final rule. The selection of the mean for the methodology and final score data from the 2019 MIPS payment year leaves us with the options in the first column of Table 70 for where we can set the additional performance threshold.

With a performance threshold of 75 points for the 2024 MIPS payment year based on final scores for the 2019 MIPS payment year, the calculation methods in section 1848(q)(6)(D)(ii) of the Act give us two possible options for where we can set the additional performance threshold for MIPS payment year 2024. The first calculation method (described in section 1848(q)(6)(D)(ii)(I) of the Act), using the range of possible final scores above the proposed performance threshold for the 2024 MIPS payment year, yields a value of 81.26 points (the 25th percentile of the range of 75.01 to 100). The calculation is as follows: 75.01 + [(100 − 75.01) * 0.25] = 81.26. The second calculation method (described in section 1848(q)(6)(D)(ii)(II) of the Act), the 25th percentile of the actual final scores for the 2019 MIPS payment year at or above the proposed performance threshold for the 2024 MIPS payment year, yields a value of 88.94. For the second calculation method, we will apply the 25th percentile calculation of (n+1)p/100 to the 2019 MIPS payment year final score data that are at or above 75.

We considered using each of these methods, but we do not believe that it would be appropriate to lower the additional performance threshold to 81.26 points from its present value of 85 points. Maintaining or increasing the additional performance threshold will serve as a greater incentive to clinicians to continue to improve their performance on the MIPS measures and activities and to achieve exceptional performance. We believe that an additional performance threshold of 88.94 points rounded to 89 points is appropriate. This is an increase of 4 points from the prior year, which we believe is a gradual increase. Therefore, using the second calculation method described above, we proposed at § 414.1405(d)(7) to set the additional performance threshold for the 2024 MIPS payment year at 89 points.

We solicited comments on these proposals, as well as the alternative additional performance thresholds listed that we considered but did not propose.

We received public comments on the additional performance threshold for exceptional performance. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed concern about the exceptional performance funding under section 1848(q)(6)(F)(iv) of the Act ending after the CY 2022 performance period/2024 MIPS payment year. One commenter believes that eliminating this funding is contradictory to the mission of the Quality Payment Program as it provides an additional incentive for improving performance. A few commenters expressed concerns about the cost of participating in MIPS and that the majority of the MIPS adjustment has been funded from the exceptional performance funding under section 1848(q)(6)(F)(iv) of the Act rather than from negative payment adjustments. Some commenters requested that CMS work with Congress to extend the funding.

Response: We acknowledge the commenters' concern about the exceptional performance funding under section 1848(q)(6)(F)(iv) of the Act ending after the CY 2022 performance period/2024 MIPS payment year. We acknowledge that in previous years the additional performance threshold has funded a large portion of positive MIPS payment adjustments. However, we point the commenter to our Regulatory Impact Analysis (see section VI.F.18.e of this final rule) where we estimate that positive MIPS payment adjustments funded by BN will be much higher than in previous years.

Comment: A few commenters suggested that CMS should consider using the section 1135 waiver authority it has under the PHE or its Extreme and Uncontrollable Circumstances policy to waive the statutory requirement to set the additional performance threshold at either: (1) The 25th percentile of the range of possible final scores above the performance threshold, or (2) the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to the prior period described in section 1848(q)(6)(D)(i) of the Act, and instead keep the additional performance threshold at 85 points in 2022.

Response: We note that CMS does not have the authority to waive the statutory requirements for setting the additional performance threshold using our extreme and uncontrollable circumstances policies or section 1135 of the Act.

Comment: One commenter acknowledged the two statutory options CMS presented for the additional performance threshold (81.26 and 88.94), but urged CMS to use PHE authorities to maintain the additional performance threshold at 85 points instead of 89 points. The commenter stated that it gives clinicians a final opportunity to qualify for this funding and takes into account the unusual operational and clinical circumstances present during the COVID–19 pandemic.

Response: We agree with the commenter that there have been unusual operational and clinical circumstances for clinicians during the COVID–19 pandemic. However, we are not aware of any PHE authorities available to CMS that would allow us to set the additional performance threshold for the 2024 MIPS payment year at any value other than those resulting from the calculation methods described in section 1848(q)(6)(D)(ii) of the Act.

Comment: A few commenters supported the additional performance threshold. One commenter stated that the increase to the additional performance threshold increases the difficulty but still makes the additional positive payment adjustment an attainable goal.

Response: We thank the commenters for their support.

Comment: A few commenters supported a lower additional performance threshold. Some commenters requested that CMS select the option of 81 points rather than the proposed 89 points to account for loss of score potential due to removal of bonus points in the quality performance category and the increased weight of the cost performance category. One commenter noted that CMS has the latitude to select 81 points as it meets the 25th percentile of possible scores and believes that the lower additional performance threshold will incentivize a greater number of clinicians. The commenter also noted that choosing a lower additional performance threshold will allow CMS to both reward top performers in MIPS and incentivize more of them by setting reasonable thresholds to reward them for their performance. Other commenters requested keeping the additional performance threshold at 85 points.

Response: We established the additional performance threshold at 85 points for the 2022 and 2023 MIPS payment years in the CY 2020 PFS final rule (84 FR 63037 through 63040). We do not believe that it is appropriate to set the additional performance threshold at a lower value (81 points) than it was set at for the CY 2020 performance period/2022 MIPS payment year nor do we have the authority to keep the additional

performance threshold at 85 points as was requested by the commenter. We believe that 89 points is an appropriate value to incentivize the highest performing clinicians, given that the threshold has been 85 points for the past 2 years.

After consideration of public comments, we are finalizing the proposal at § 414.1405(d)(7) to set the additional performance threshold for the 2024 MIPS payment year at 89 points.

(4) Example of Adjustment Factors

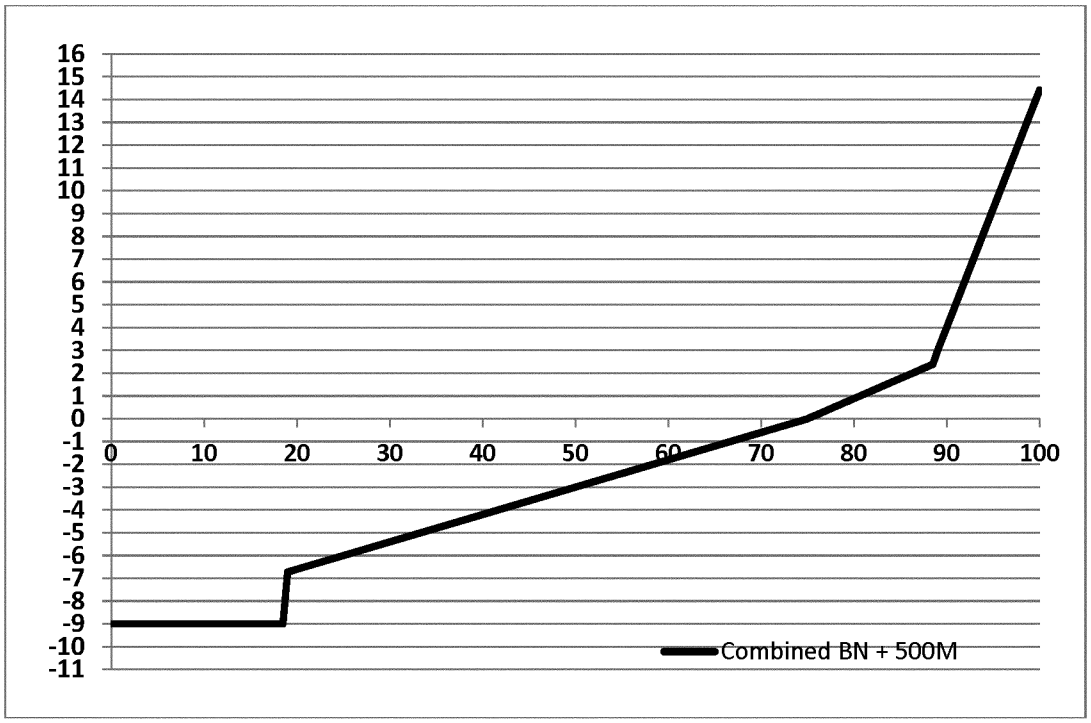

Figure A provides an illustrative example of how various final scores will be converted to a MIPS payment adjustment factor and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on our finalized policies for the 2024 MIPS payment year. In Figure A, the performance threshold is set at 75 points. The applicable percentage is 9 percent for the 2024 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 9 percent for the 2024 MIPS payment year) and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the performance threshold of 75 points for the 2024 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive the lowest negative applicable percentage (negative 9 percent for the 2024 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent. If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent.

Only those MIPS eligible clinicians with a final score equal to 75 points (which is the finalized performance threshold) will receive a neutral MIPS payment adjustment. Because the performance threshold is 75 points, we anticipate that more clinicians will receive a positive adjustment than a negative adjustment and that the scaling factor will be less than 1 and the MIPS payment adjustment factor for each MIPS eligible clinician with a final score of 100 points will be less than 9 percent.

BILLING CODE 4120–01–P

Figure A: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold and Additional Performance Threshold for the 2024 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustartive. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is inteded to ensure BN, but cannot be higher than 3.0. MIPS eligible clinicians with a final score of at least 89 points will also receive an additional adjustment factor for expectional performance. The additional adjustment factor starts at 0.5 percent, cannot exceed 10 percent, and is also mulitiplied by a scaling factor that is greather than zero and less than or equal to 1. MIPS eligible clinicians at or above the additional performance threshold will receive the amount of the adjustment factor plus the additional adjustment factor. This example is illustartive as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 71 illustrates the changes in payment adjustment based on the final policies from the CY 2021 PFS final rule (85 FR 84923 through 84925) for the 2023 MIPS payment year and the final policies for the 2024 MIPS payment year, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

TABLE 71: Illustration of Point System and Associated Adjustments Comparison between the Finalized 2023 MIPS Payment Year and the 2024 MIPS Payment Year

2023 MIPS Payment Year		2024 MIPS Payment Year	
Final Score Points	**MIPS Adjustment**	**Final Score Points**	**MIPS Adjustment**
0.0-15.0	Negative 9%	0.0-18.75	Negative 9%
15.01-59.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
60.0	0% adjustment	75.0	0% adjustment
60.01-84.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 60.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	75.01-88.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality
85.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 60.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 85.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance	89.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 89.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance

(5) Final Score Hierarchy Used in Payment Adjustment Calculation

In the CY 2021 PFS final rule (85 FR 84917 through 84919), we modified the final score hierarchy that applies when more than one final score is associated with a TIN/NPI, as displayed in Table 72. Beginning with the CY 2021 performance period/2023 MIPS payment year, if a TIN/NPI has a virtual group final score associated with it, we use the virtual group final score to determine the MIPS payment adjustment. If a TIN/NPI does not have a virtual group final score associated with it, we use the highest available final score associated with the TIN/NPI to determine the MIPS payment adjustment.

TABLE 72: Hierarchy for Final Score When More than One Final Score Is Associated with a TIN/NPI

Scenario	Final Score Used to Determine Payment Adjustments
TIN/NPI has a virtual group final score, an APM Entity final score, an APP final score, a group final score, and/or an individual final score.	Virtual group final score.
TIN/NPI has an APM Entity final score, an APP final score, a group final score, and/or an individual final score, but is not in a virtual group.	The highest of the available final scores.

In the CY 2022 PFS proposed rule (86 FR 39457), we proposed policies applicable to subgroups, including a definition of a subgroup at § 414.1305 as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, subgroup identifier, and each eligible clinician's NPI. Each clinician in a subgroup would be identifiable by a unique TIN/NPI combination just as in any MIPS group or APM Entity. In addition, a clinician, group, subgroup, or APM Entity could choose more than one MIPS reporting option for a performance period. A clinician, group, subgroup, or APM Entity could choose to report through MVPs, traditional MIPS, and/or the APP (assuming they are eligible for each of these reporting options) for a performance period. As a result, there could be more than one final score for a clinician, group, subgroup, or APM Entity for a performance period from MVPs, traditional MIPS, and/or the APP. Therefore, we proposed to update the scoring hierarchy to include subgroups and to specify that the scoring hierarchy would apply with respect to any available final score that is associated with a TIN/NPI from MVPs, traditional MIPS, and/or the APP. The proposed updated scoring hierarchy can be seen in Table 73. We solicited comments on this proposal.

TABLE 73: Proposed Hierarchy for Final Score When More than One Final Score Is Associated with a TIN/NPI

Scenario	Final Score Used to Determine Payment Adjustments
TIN/NPI has a virtual group final score, an APM Entity final score, a group final score, a subgroup final score, and/or an individual final score, from MVPs, traditional MIPS, and/or the APP.	Virtual group final score.
TIN/NPI has an APM Entity final score, a group final score, a subgroup final score, and/or an individual final score, from MVPs, traditional MIPS, and/or the APP. The TIN/NPI is not in a virtual group.	The highest of the available final scores.

BILLING CODE 4120–01–C

We received public comments on the proposed updated scoring hierarchy. The following is a summary of the comments we received and our responses.

Comment: A few commenters requested clarification on the scoring hierarchy. One commenter expressed concerns with the modified hierarchy, citing the complexity of adding subgroups to MIPS and concerns about allowing ACO clinicians to report outside the ACO. The commenter recommended that to reduce complexity, ACO performance should be evaluated at the ACO level for MIPS evaluations. Another commenter noted confusion about how payment adjustments would be calculated and applied for clinicians reporting an MVP as part of a subgroup.

Response: We acknowledge the commenters concern about the complexity of the scoring hierarchy for ACO reporters. However, we disagree with the recommendation that ACOs only be evaluated at the ACO level. CMS is introducing subgroups to collect data at a more granular level that will be more useful for beneficiaries to use to make informed healthcare decisions. Having data at the subgroup level will allow beneficiaries to evaluate performance data, especially performance data about specialists, that is more closely related to the actual clinicians the beneficiaries may see for their medical care. We also note that subgroup scores will not be rolled up to the ACO level. If a TIN reports as a subgroup, the subgroup score would only be applicable to the NPIs in the subgroup.

Comment: A few commenters supported the proposed scoring hierarchy. Commenters appreciated CMS' intent to select the highest final score achieved for a TIN/NPI across the QPP pathways for individual, group subgroup or APM entity.

Response: We thank the commenter for their support.

Comment: One commenter asked CMS to confirm that a MIPS eligible clinician that participates in MVPs via multiple subgroups would receive the highest final score that can be attributed to their TIN/NPI combination from any reporting option (traditional MIPS, APP reporting, or any MVP subgroup reporting) and participation option (as an individual, group, subgroup, or APM Entity (with the exception of virtual groups).

Response: The commenter is correct that, with the exception of virtual groups, a MIPS eligible clinician will receive the highest final score that can be attributed to their TIN/NPI combination from the listed reporting options (traditional MIPS, APP, or MVPs) and participation options (individual, group, subgroup, or APM entity).

After consideration of public comments, we are finalizing the proposed updated scoring hierarchy as proposed.

g. Review and Correction of MIPS Final Score

(1) Feedback and Information To Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are at a minimum required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories.

On July 1, 2018, we provided the first performance feedback for the Quality Payment Program. The second performance feedback was provided on July 1, 2019. In the CY 2021 PFS proposed rule (85 FR 50321), we noted that we aim to provide performance feedback on or around July 1 of each year, but due to the PHE and COVID–19, we estimated that we would provide performance feedback for the performance period in 2019 in late July

or early August of 2020. The third performance feedback (for the CY 2019 performance period) was provided on August 5, 2020. In the proposed rule, we noted that similar to the CY 2019 performance period, due to the PHE for COVID–19, we may provide performance feedback for the CY 2020 performance period after July 1, 2021. Although we aim to provide performance feedback on or around July 1 of each year, it is possible that the release date could be later than July 1 depending on the circumstances. We provided performance feedback for the CY 2020 performance period on August 2 and September 27, 2021. We direct readers to *qpp.cms.gov* for more information.

h. Third Party Intermediaries

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID–19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947) for our previously established policies regarding third party intermediaries.

As discussed in the CY 2022 PFS proposed rule (86 FR 39458), we proposed to make several changes: (1) Reorganization and consolidation of § 414.1400 generally; (2) new third party intermediaries general requirements; (3) new requirements specific to both QCDRs and qualified registries; (4) new requirements specific to only QCDRs; and (5) remedial action and termination of third parties.

(1) Reorganization and Consolidation of § 414.1400 Generally

We recognize that many of our policies for third party intermediaries are similar or verbatim, and yet in prior rules, we have described them separately. To minimize the lengthiness and burden of reading our policies, we proposed to consolidate our regulatory text under § 414.1400. To be clear, our proposed updates would not change previously finalized requirements for third party intermediaries, but would bring more clarity and simplicity to the regulatory text. These changes are discussed by topic in more detail below. We also note that in several places at § 414.1400 the regulation text was only updated to reflect both the applicable MIPS performance period/MIPS payment year.

(a) Reorganization for Requirements Related to MIPS Performance Categories That Must Be Supported by Third Party Intermediaries

We previously established in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), further revised in the Quality Payment Program provisions in the CY 2019 and CY 2020 PFS final rules ((83 FR 60088 and 84 FR 63049 through 63052, respectively), and further clarified our requirements for QCDRs, qualified registries, and health IT vendors with regards to submitting data for the purposes of the MIPS program in the Quality Payment Program provisions in the CY 2021 PFS final rule. Our current policy, codified at § 414.1400(a)(2), states that, beginning with the CY 2021 performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories, and Health IT vendors must be able to submit data for at least one of the following MIPS performance categories: Except as provided under paragraph (a)(2)(ii), QCDRs, qualified registries, and health IT vendors must be able to submit data for all of the following MIPS performance categories:

- Quality, except:

++ The CAHPS for MIPS survey; and

++ For qualified registries and Health IT vendors, QCDR measures;

- Improvement activities; and
- Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*) or (*5*) or (c)(2)(i)(C)(*1*) through (*7*) or (c)(2)(i)(C)(9)).

++ Health IT vendors that do not support MIPS Value Pathways must be able to submit data for at least one of the MIPS performance categories described in paragraphs (a)(2)(i)(A) through (C) of this section.

++ Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*) or (*5*) or § 414.1380(c)(2)(i)(C)(*1*) through (*7*) or § 414.1380(c)(2)(i)(C)(*9*)).

In an effort to simplify, we proposed reorganizing the existing language at § 414.1400(a)(2). Specifically, we proposed providing updates to separately identify and provide clarity to data submission requirements since data requirements vary based on third party intermediary type and to provide clarification to exceptions to Promoting Interoperability for virtual groups and subgroups. We proposed the following updates:

- To revise and redesignate existing paragraph at § 414.1400(a)(2) through (a)(2)(i) to proposed paragraphs § 414.1400(b)(1)(i) and (c)(1) through (c)(1)(i) to state the following:
- To state at proposed § 414.1400(b)(1)(i), beginning with the CY 2021 performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories:
- Quality, except:

++ The CAHPS for MIPS survey; and

++ For qualified registries, QCDR measures.

- Improvement activities; and
- Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:

++ The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*)(*i*) through (*iii*) or (c)(2)(i)(C)(*1*) through (*7*) or (c)(2)(i)(C)(*9*)).

- To state at proposed § 414.1400(c)(1), beginning with the CY 2021 performance period/2023 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:
- To state at proposed § 414.1400(c)(1)(i) through (c)(1)(i)(B), health IT vendors that support MVPs must be able to submit data for all of the MIPS performance categories:
- Quality, except:

++ The CAHPS for MIPS survey; and

++ QCDR measures;

- Improvement activities; and
- To revise and redesignate existing paragraph at § 414.1400(a)(2)(iii) to proposed paragraph § 414.1400(c)(1)(i)(C) state, Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:

++ The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*)(*i*) through (*iii*) or (c)(2)(i)(C)(*1*) through (*7*) or (c)(2)(i)(C)(*9*).

- To revise and redesignate existing paragraph at § 414.1400(a)(2)(ii) to proposed paragraph § 414.1400(c)(1)(ii) to state, health IT vendors that do not support MVPs must be able to submit data for at least one of the MIPS

performance categories described in paragraphs (c)(1)(i) through (iii) of this section.

- We proposed to create a new requirement at § 414.1400(c)(1)(iii) for health IT vendors to support MVPs. For more information on this proposal, please refer to section ''proposed new requirement for third party intermediaries to support MVPs and the APP'' at section IV.A.3.h.(2)(b)(i) of this final rule.
- To move the current Health IT vendor requirements from paragraphs §§ 414.1400(a)(2)(ii) through (iii) and (d) to a new paragraph applicable to Health IT vendor requirements at § 414.1400(c). This will separately identify and provide clarity to data submission requirements specific to Health IT vendors.
- To move the current CMS-approved survey vendor requirements from paragraphs (a)(3) and (e) to a new paragraph applicable to CMS-approved survey vendor requirements at § 414.1400(d). We proposed to the redesignate paragraph (a)(3) current requirements to paragraph (d)(1) CMS-approved survey vendors may submit data on the CAHPS for MIPS survey for the MIPS quality performance category. For the current requirements at paragraph (e), we proposed to move up those requirements to paragraph (d)(2).
- To redesignate paragraph (a)(4) as paragraph (a)(2).
- To redesignate paragraph (a)(5) as paragraph (a)(3).

We solicited public comments on our proposals.

We did not receive public comments on these proposals, and therefore, we are finalizing them as proposed.

(b) Reorganization for Requirements Related QCDR and Qualified Registries Self-Nomination

We proposed to consolidate and redesignate the existing language at § 414.1400(b)(1) and (c)(1) to proposed § 414.1400(b)(2) to reference both QCDR and qualified registries. We proposed this consolidation to provide clarity and alignment with the aforementioned proposals and consolidate the duplicative criteria of QCDRs and qualified registries. As discussed below, we also proposed to consolidate and redesignate the performance feedback requirements previously at existing § 414.1400(b)(1) and (c)(1) to § 414.1400(b)(3)(iii). We proposed to state at § 414.1400(b)(2), Self-nomination. For the CY 2018 and 2019 performance periods/2020 and 2021 MIPS payment years, entities seeking to qualify as a QCDR or qualified registry must self-nominate September 1 until November 1 of the CY preceding the applicable performance period. For the CY 2020 performance period/2022 MIPS payment year and future years, entities seeking to qualify as a QCDR or qualified registry must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking to qualify as a QCDR or qualified registry for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review process. For the CY 2019 performance period/2021 MIPS payment year and future years, existing QCDRs and qualified registries that are in good standing may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period.

We also proposed removing the last two sentences of existing § 414.1400(b)(1), which are duplicative with existing § 414.1400(b)(3)(iii). We proposed consolidating this language with existing paragraph (b)(3)(iii). We solicited public comments on our proposals.

The following is a summary of the comments we received and our responses.

Comment: One commenter suggested that we refine the QCDR option under MIPS to streamline the self-nomination process, and to provide better incentives for organizations, including medical associations, to continue to invest in their QCDRs and develop new, meaningful measures for specialists to use for MIPS reporting and other clinical and research purposes.

Response: We thank the commenter for their suggestion. We may consider it for future rulemaking.

Comment: One commenter expressed support for the updates that CMS has made to the QCDR and qualified registry self-nomination process, including the development of the measure submission portal at *QualityPaymentProgram.cms.gov.*

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing these policies as proposed.

(c) Reorganization for Requirements Related to QCDR and Qualified Registries Conditions for Approval

We refer readers to existing § 414.1400(b)(2) for QCDR conditions for approval and existing § 414.1400(c)(2) for qualified registries conditions for approval. In this final rule, we proposed the following in order to better organize, consolidate the duplicative criteria of QCDRs and qualified registries, and refer to both ''QCDR and qualified registry'' instead of one or the other:

- We proposed to redesignate existing paragraph (b)(2) to proposed paragraph (b)(3) and to revise the paragraph heading as, *Conditions for approval.*
- We also proposed to update the reference to both QCDR and qualified registry in proposed paragraph (b)(3).
- We proposed to revise to include both QCDR and qualified registry and redesignate existing paragraph (b)(2)(i) to proposed paragraph (b)(3)(i).
- We proposed to revise and redesignate existing paragraph (b)(2)(ii) to paragraph (b)(3)(ii). We also proposed to extend our policy for collaboration. For more information on this proposal, please refer to section ''collaboration of entities to become a QCDR and proposal to extend policy for collaboration of entities to become a qualified registry'' at section IV.A.3.h.(3)(a)(ii) of this final rule.
- As discussed above, we proposed to consolidate and redesignate the performance feedback requirements previously at existing § 414.1400(b)(1) and (c)(1) to § 414.1400(b)(3)(iii). Furthermore, to consolidate similar performance feedback requirements, we also proposed to revise and redesignate existing paragraph (b)(2)(iii) to paragraph (b)(3)(iii) to state, beginning with the CY 2021 performance period/2023 MIPS payment year, require the QCDR or qualified registry must to provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR or qualified registry. Exceptions to this requirement may occur if the QCDR or qualified registry submits notification to CMS within the reporting period promptly within the month of realization of the impending deficiency and provides sufficient rationale as to why they do not believe they would be able to meet this requirement (for example, if the QCDR does not receive the data from their clinician until the end of the performance period).
- We proposed to consolidate and redesignate paragraphs (b)(2)(iv) and (c)(2)(iii) in their entirety, into a new paragraph (b)(3)(v), and to correct a typographical error in which the word ''MIPS'' was omitted in the first sentence.

• We proposed to consolidate and redesignate paragraphs (b)(2)(v) and (c)(3)(iv), in their entirety, into a new paragraph (b)(3)(vi).

We solicited public comments on our proposals.

We did not receive public comments on these proposals, and therefore, we are finalizing them as proposed.

(d) Reorganization for Requirements Related to QCDR Measures

(i) Reorganization for Requirements Related to QCDR Measures for the Quality Performance Category

We refer readers to existing language at § 414.1400(b)(3) for QCDR measures for the quality performance category. We currently define ''QCDR measure'' at existing § 414.1400(b)(3). We recognize that the QCDR measure definition is referred to throughout our policies and that it is not specific to § 414.1400(b)(3) or third party intermediaries. Therefore, to provide further clarity and to better align with the current policy, we proposed moving the QCDR measure definition to the definitions section at § 414.1305. We also proposed the following revisions to better organize regulation text at § 414.1400(b)(4) and to update cross-references to correspond to the new section numbers as reflected in this final rule:

• We proposed to redesignate paragraphs (b)(3)(i), (b)(3)(i)(A), and (b)(3)(i)(B) to definitions at § 414.1305.

• We proposed to revise and redesignate existing paragraph (b)(3)(ii) to proposed paragraph (b)(4)(i) to state, for the CY 2018 performance period/2020 MIPS payment year and future years, at the time of self-nomination an entity seeking to become a QCDR must submit the following information for any measure it intends to submit for the payment year:

++ For MIPS quality measures, the entity must submit specifications including the MIPS measure IDs and specialty-specific measure sets, as applicable.

+ For QCDR measures, the entity must submit for CMS-approval measure specifications including: Name/title of measures, NQF number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS approval of any QCDR measure specifications, the entity must publicly post the measure specifications for that QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

• We also proposed adding a header to state, ''QCDR measure self-nomination requirements''. We believe adding a heading will help readers clearly distinguish QCDR measure self-nomination requirements.

• We proposed moving existing paragraph (b)(3)(iii) in its entirety to proposed paragraph (b)(4)(ii) and adding a header to state, ''QCDR measure submission requirements''. We believe adding a heading will help readers clearly distinguish QCDR measure submission requirements.

• We proposed moving existing paragraphs (b)(3)(v) through (v)(C)(*1*) in its entirety, to proposed paragraphs (b)(4)(iii) through (b)(4)(iii)(A)(*3*).

• We proposed to revise and redesignate existing paragraph at (b)(3)(v)(C)(*2*) to paragraph (b)(4)(iii)(A)(*3*)(*i*) to state, to be included in an MVP for the CY 2022 performance period/2024 MIPS payment year and future years, a QCDR measure must be fully tested.

• We proposed moving existing paragraph (b)(3)(vii) in its entirety, to paragraph (b)(4)(iv).

(ii) Reorganization for Requirements Related to QCDR Measure Approval Criteria

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375) and the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63059), where we finalized existing § 414.1400(b)(3)(v).

At § 414.1400, we proposed to reorganize and make minor updates to the existing requirements at paragraph (b)(3)(v) to proposed paragraph (b)(4)(iii). We proposed to reorganize the existing requirements so that QCDR measure approval at paragraph (b)(3)(v) is discussed before QCDR measure considerations at paragraph (b)(3)(iv). Therefore, we proposed the following revisions:

• To revise and redesignate existing paragraph (b)(3)(v) ''QCDR measure requirement for approval include'' to proposed paragraph (b)(4)(iii) and add a heading to state, ''QCDR measure approval criteria''. We believe adding a heading will help readers clearly distinguish QCDR measure approval criteria. We also proposed to include the following updates:

++ Move existing paragraph (b)(3)(v) to proposed revised paragraph (b)(4)(iii)(A) to state, QCDR measure requirements for approval are.

++ Move existing paragraph (b)(3)(v)(A) in its entirety to proposed paragraph (b)(4)(iii)(A)(*1*).

++ Move existing paragraph (b)(3)(v)(B) in its entirety to proposed paragraph (b)(4)(iii)(A)(*2*).

++ Revise existing paragraphs (b)(3)(v)(C) and (b)(3)(v)(C)(*1*) to proposed paragraph (b)(4)(iii)(A)(*3*) to state, beginning with the CY 2022 performance period/2024 MIPS payment year, all QCDR measures must meet face validity. To be approved for the CY 2023 performance period/2025 MIPS payment year, all QCDR measures must be must meet face validity for the initial MIPS payment year for which it is approved. For subsequent years after being initially approved, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.

++ Move existing paragraph (b)(3)(v)(C)(*2*) in its entirety to proposed paragraph (b)(4)(iii)(A)(*3*)(*i*).

++ Move existing paragraph (b)(3)(v)(D) in its entirety to proposed paragraph (b)(4)(iii)(A)(*4*).

++ Move existing paragraph (b)(3)(v)(E) in its entirety to proposed paragraph (b)(4)(iii)(A)(*5*).

We solicited public comment on our proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the measure requirement for face validity testing of measures and stated it should be extended for future years. One commenter noted particular concern for the face validity testing requirement, as the testing process is arduous and funding, staff, and other resources have been significantly reduced due to the PHE for COVID–19. A few commenters suggested that CMS delay the deadline for full QCDR measure testing to 2023 or later due to the impact of COVID–19 on providers and registries. Another commenter suggested that CMS limit the face validity testing requirement, stating that because the COVID–19 extreme and uncontrollable circumstances exception decreased the number of groups reporting to MIPS through QCDRs, the face validity testing requirement should be limited to the first 2 years for which measures are approved or until 2 years after the end of the COVID PHE. Several commenters expressed concerns with QCDR measure testing requirements and pointed to the significant burden of these requirements. One commenter expressed the belief that a barrier to use of QCDR measures is the requirement that they be fully tested, which is

extremely burdensome for QCDR measure owners. Another commenter asked for clarification as to what constitutes acceptable measure testing. Commenters requested that CMS develop a transparent and consistent process for evaluating QCDR testing approaches and results. Commenters noted that failure to ease the QCDR requirements may result in interested parties opting to not participate in the QCDR program.

Response: We note that we did not propose to substantively modify the measure requirement for face validity and testing in the proposed rule, such as to delay these requirements. The existing requirement (85 FR 84939) at § 414.1400(b)(3)(v)(C)(*1*) states that, for a QCDR measure to approved for the CY 2022 performance period/2024 MIPS payment year it must meet face validity. To be approved for the CY 2023 performance period/2025 MIPS payment year and for each subsequent year, a QCDR measure must meet face validity for the initial MIPS payment year for which it is approved. Separately, paragraph (b)(3)(v)(C) provides that, beginning with the CY 2022 performance period/2024 MIPS payment year, a QCDR measure must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination. In addition, paragraph (b)(3)(v)(C)(*1*) requires that, for each subsequent year, for which a QCDR measure is approved, it must be fully tested. We intended our proposed reorganization of these standards at paragraph (b)(4)(B)(iii)(*3*) to track these existing requirements.

In regards to what constitutes acceptable testing and the burden associated with, and possible delay of such testing, we refer readers to our discussion of this and related issues in past rules (85 FR 27594 through 27595; 85 FR 84940; 85 FR 84926; 85 FR 84936; 84 FR 63066; 84 FR 63065 through 63067; 83 FR 59901 through 59902; 82 FR 53805 through 53806) and guidance documents, including the current CMS Measures Management System Blueprint for additional guidance in measure testing at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf*.

Although we did not address any changes to the QCDR measure testing requirement at § 414.1400(b)(3)(v)(C)(*1*) in the CY 2022 PFS proposed rule, based on public comments received on our proposals, we are considering proposing in next year's rulemaking to further delay this requirement for traditional MIPS until the CY 2024 performance period/2026 MIPS payment year, instead of the CY 2023 performance period/2025 MIPS payment year as previously finalized. We clarify that this delay would not modify the existing requirement at paragraph (b)(3)(v)(C)(*2*), to be included in an MIPS Value Pathway for the 2024 MIPS payment year and future years, a QCDR measure must be fully tested.

Comment: One commenter suggested that CMS provide more meaningful credit/incentivization for measure testing participation given the difficulty to motivate practices to engage in measure testing. The commenter suggested an improvement activity credit for measure testing given the difficulty to motivate practices to engage in measure testing.

Response: We thank the commenter for their suggestion. We may consider it for future rulemaking. We encourage the commenter to visit the 2021 Improvement Activities Inventory for additional guidance on improvement activities that focus on QCDR participation at *https://qpp-cm-prodcontent.s3.amazonaws.com/uploads/1189/2021%20Improvement%20Activities%20List.zip*.

After consideration of public comments, we are finalizing these policies as proposed.

(iii) Reorganization for Requirements Related to QCDR Measure Considerations for Approval

We refer readers to the Quality Payment Program provisions in the CY 2019 PFS final rule (84 FR 63198 through 63199), where we finalized existing § 414.1400(b)(3)(iv) ''QCDR measure considerations for approval.'' We proposed to reorganize and make minor updates to the language at existing paragraph (b)(3)(iv) to paragraph (b)(4)(iii)(B). We proposed to reorganize the existing requirements so that QCDR measure approval at paragraph (b)(3)(v) is discussed before QCDR measure considerations at paragraph (b)(3)(iv).

We also proposed to redesignate existing paragraph (b)(3)(vi) to paragraph (b)(4)(iii)(C). Specifically, we proposed the following revisions:

- To revise and redesignate existing paragraph (b)(3)(iv) ''QCDR measure considerations for approval include'' to paragraph (b)(4)(iii)(B) ''QCDR measure considerations for approval include, but are not limited to''.
- Move existing paragraphs (b)(3)(iv)(A) in its entirety to paragraph (b)(4)(iii)(B)(*1*).
- Move existing paragraph (b)(3)(iv)(B) in its entirety to paragraph (b)(4)(iii)(B)(*2*).
- Move existing paragraph (b)(3)(iv)(C) in its entirety to paragraph (b)(4)(iii)(B)(*3*).
- Move existing paragraph (b)(3)(iv)(D) in its entirety to paragraph (b)(4)(iii)(B)(*4*).
- Move existing paragraph (b)(3)(iv)(E) in its entirety to paragraph (b)(4)(iii)(B)(*5*).
- Move existing paragraph (b)(3)(iv)(F) in its entirety to paragraph (b)(4)(iii)(B)(*6*).
- Move existing paragraph (b)(3)(iv)(G) in its entirety to paragraph (b)(4)(iii)(B)(*7*).
- Revise and consolidate existing paragraph (b)(3)(iv)(G)(*1*) to paragraph (b)(4)(iii)(B)(*7*)(*i*) to state that QCDR link their QCDR measures as feasible to at least one cost measure, improvement activity, or an MVP at the time of self-nomination.
- Revise and redesignate existing paragraph (b)(3)(iv)(G)(*2*) to paragraph (b)(4)(iii)(B)(*7*)(*ii*) to state that in cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, CMS would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements and considerations.
- Move existing paragraph (b)(3)(iv)(H) in its entirety to paragraph (b)(4)(iii)(B)(*8*).
- Move existing paragraph (b)(3)(iv)(I) in its entirety to paragraph (b)(4)(iii)(B)(*9*).
- Revise and redesignate existing paragraph (b)(3)(iv)(J) to paragraph (b)(4)(iii)(B)(*10*) to state beginning with the CY 2020 performance period/2022 MIPS payment year, CMS places greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not, may not continue to be approved.
- Move existing paragraph (b)(3)(iv)(J)(*1*) in its entirety to paragraph (b)(4)(iii)(B)(*10*)(*i*).
- Move existing paragraph (b)(3)(iv)(J)(*2*) to paragraph reserve (b)(4)(iii)(B)(*10*)(*ii*).
- Move existing paragraph (b)(3)(vi) in its entirety to paragraph (b)(4)(iii)(C).

We solicited public comments on our proposals. The following is a summary of the comments we received and our responses.

Comment: The commenter suggested that we assess whether the limit on the number of QCDR measures available (30 measures) should be revised.

Response: We thank the commenter for their suggestion. We may consider it for future rulemaking.

After consideration of public comments, we are finalizing these policies as proposed.

(iv) QCDR Measure Rejection Criteria

We refer readers to the existing requirements at § 414.1400(b)(3)(vii). We proposed reorganizing existing requirements at paragraph (b)(3)(vii) to proposed paragraph (b)(4)(iv). Therefore, we proposed the following revisions:

- To revise and redesignate existing paragraph (b)(3)(vii) ''QCDR measure rejection criteria'' to paragraph (b)(4)(iv) and add a heading to state, *QCDR measure rejection criteria.* We believe adding a heading will help readers clearly distinguish measure rejection criteria.

We also proposed to include the following updates:

- To move existing paragraph (b)(3)(vii) to proposed paragraph (b)(4)(iv) to state, *QCDR measure rejection criteria.* Beginning with the CY 2020 performance period/2022 MIPS payment year, QCDR measure rejection considerations include, but are not limited to.
- Move existing paragraphs (b)(3)(vii)(A) through (L) in their entirety to (b)(4)(iv)(A) through (L).

We solicited public comments on our proposals.

We did not receive public comments on these proposals, and therefore, we are finalizing them as proposed.

(e) Reorganization for Requirements Related to Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548), CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), and the CY 2021 PFS final rule (85 FR 84930 through 84937) for previously finalized policies for remedial action and termination of third party intermediaries. With the proposed updates being made at § 414.1400, we proposed to redesignate the following sections:

- We proposed to redesignate current paragraph (f) as paragraph (e) and to update cross-references to correspond to the new section numbers as reflected in this final rule.
- We also proposed to redesignate current paragraph (g) as paragraph (f) and to update cross-references to correspond to the new section numbers as reflected in this final rule.

We solicited public comments on these proposals.

We did not receive public comments on these proposals, and therefore, we are finalizing them as proposed.

(2) Third Party Intermediaries General Requirements

We refer readers to previously established § 414.1400(a) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), and as further revised in the CY 2019 PFS final rule (83 FR 60088), CY 2020 PFS final rule (84 FR 63049 through 63052), CY 2021 PFS final rule (85 FR 84926 through 84947) for our established policy regarding third party intermediaries general requirements.

In the CY 2022 PFS proposed rule, we proposed two changes for third party intermediaries: (1) Third party intermediary submissions for APM Entities; and (2) MIPS performance categories that must be supported by third party intermediaries. We also solicited comment on third party intermediaries that derive data from CEHRT. These proposals and the request for comments are discussed in more detail below.

(a) Third Party Intermediary Submissions for APM Entities

As finalized in the Quality Payment Program provisions in the CY 2021 PFS final rule (85 FR 84895), APM Entities now have the option of reporting to MIPS on behalf of the MIPS eligible clinicians participating in their APM Entity. They have the option of reporting to traditional MIPS or via the APP (85 FR 84859). APM Entities have historically used Third Party Intermediaries for submitting their quality measures to their APMs, rather than to MIPS, however, these third party intermediaries now have the opportunity to submit these data for purposes of MIPS.

In the CY 2022 PFS proposed rule, we proposed to add APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS.

We note that the Promoting Interoperability performance category is scored for APM Entities based on data submitted by the participant MIPS eligible clinicians and groups as described at § 414.1317(b)(1), and therefore, would not be required to be submitted by the third party intermediary on behalf of the APM Entity.

We solicited comments on this proposal.

We did not receive public comments on this proposal, and therefore, we are finalizing it as proposed.

(b) MIPS Performance Categories That Must Be Supported by Third Party Intermediaries

We refer readers to previously established § 414.1400(a)(2) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), and as further revised in the CY 2019 PFS final rule (83 FR 60088), CY 2020 PFS final rule (84 FR 63049 through 63052), CY 2021 PFS final rule (85 FR 84926 through 84947) for our established policy regarding the types of MIPS data that third party intermediaries may submit.

In the CY 2022 PFS proposed rule, we proposed new requirements in alignment with our proposals in sections IV.A.3.b.(2)(c), IV.A.3.b.(4)(e) and IV.A.3.b.(3)(e) of this final rule to adopt MVPs and subgroups.

(i) New Requirement for Third Party Intermediaries To Support MVPs and the APP

As described in the Quality Payment Program provisions finalized in the CY 2021 PFS final rule (85 FR 84849), MVPs should include measures and activities from the quality, cost, improvement activities, and Promoting Interoperability performance categories. As described in section IV.A.3.b.(2)(c)(i) of this final rule, we discussed our proposals related to furthering our transition to MIPS Value Pathways (MVPs). As MVPs are implemented, proposed beginning with the CY 2023 performance period/2025 MIPS payment year, we also proposed the methods in which an MVP participant may report on an MVP or the APP. Since QCDRs, qualified registries, and health IT vendors are required under existing § 414.1400(a)(1) to submit data for quality, improvement activities, and promoting interoperability, we believe they would have the experience needed to support MVP and APP reporting.

Therefore, we proposed to create a new requirement at § 414.1400(b)(1)(ii) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP. Additionally, we proposed to create a new requirement at paragraph § 414.1400(c)(1)(iii) to state that beginning with the CY 2023 performance period/2025 MIPS payment year, Health IT vendors must support MVPs that are applicable to the

MVP participants on whose behalf they submit MIPS data. Health IT vendors may also support the APP.

Based off historical participation, we are aware that some third party intermediaries (QCDRs and qualified registries) support a single specialty or subspecialty, while others support multiple specialties. Therefore, we believe that it is not appropriate to expect that all third party intermediaries are able to support all MVPs that are implemented in the program. Rather, the third party intermediaries should identify and support MVPs that are relevant to the clinicians and groups they support. We do not believe that CMS-approved survey vendors will be able to support MVP reporting, because they are historically limited, in that they only support the CAHPS for MIPS Survey Measure.

As discussed in section IV.A.3.b.(2)(c) of this final rule, MVPs will start with the CY 2023 performance period/2025 MIPS payment year. We believe this delay in implementation will allow third party intermediaries sufficient time for programming and system preparation for MVP reporting success. We solicited comments on our proposals.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported third party intermediaries only reporting on the MVPs that reflect their participant needs but suggested third-party intermediaries be able to choose which MVPs they wish to support. The commenter expressed concerns about MVPs being arbitrarily assigned to third-party intermediaries. One commenter noted that supporting an entire MVP is very different from supporting the inclusion of specific QCDR measures in an MVP and could carry much more burden for the registry and sought clarification of whether CMS will assign specific MVPs to a QCDR or qualified registry.

Response: We thank the commenter for their support. At this time, CMS does not intend on assigning specific MVPs to a third party intermediary. As described in the CY 2022 PFS proposed rule (86 FR 39462), we proposed at § 414.1400(b)(1)(ii) and (c)(1)(iii) that QCDRs, qualified registries, and Health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. We refer readers to Appendix 3 of this final rule, where discuss the MVPs being finalized beginning with the CY 2023 performance period/CY 2025 MIPS payment year, around the clinical topics of stroke care, heart disease, rheumatology, chronic conditions, emergency medicine, anesthesia, and lower extremity joint repair. QCDRs, qualified registries, and Health IT vendors that support MVP participants, who work in the aforementioned clinical areas will be required to support these MVPs, as applicable. Furthermore, we expect that QCDRs, qualified registries, and Health IT vendors who support MVPs would support all measures and activities, across the quality, PI, and improvement activities performance category that are included in the MVP (cost measures and population health measures are calculated by CMS and do not require data submission by a third party intermediary or a clinician). The expectation that the QCDR and qualified registry support measures and activities across all three performance categories is not new, as these third party intermediaries are currently required to do so. We believe allowing QCDRs to only support specific QCDR measures in an MVP creates undue burden on the MVP Participant who would need to find other means to complete MVP reporting requirements; this may deter clinicians from utilizing a third party intermediary. For the time being, CMS does not intend on assigning specific MVPs to a third party intermediary. It is required for QCDRs, qualified registries, and Health IT vendors to identify (CMS approved) MVPs that are relevant to the clinicians they support and report on those.

Comment: One commenter supported third party intermediaries supporting MVPs but requested clarification on whether a QCDR would be responsible for validating an MVP participant's performance on population health measures and/or providing ''enhanced'' performance feedback, including performance data comparing the performance of similar clinicians who report on the same MVP.

Response: Third party intermediaries will not be expected to validate the performance on the current population health measures, since they are administrative claims-based and do not require external data submission. The responsibility of identifying the population health measure that should be calculated will fall to the MVP participant to determine at the time of MVP registration. CMS calculates these measures based on administrative claims data. In the CY 2022 PFS proposed rule (86 FR 39383), we describe our proposal to include comparative performance feedback within the annual performance feedback that CMS currently provides under traditional MIPS. While CMS intends to provide this enhanced feedback through our existing performance feedback processes, QCDRs and qualified registries will still be required to provide clinicians they support with performance feedback as described at § 414.1400(b)(iii) and (c)(ii), regardless of whether the clinician chooses to report through traditional MIPS or an MVP.

Comment: One commenter suggested that CMS mandate that EHR vendors support the quality measures in MVPs, otherwise clinicians would be forced to join multiple registries with the cost exceeding the maximum penalty.

Response: To clarify, health IT vendors (such as EHRs), QCDRs, and qualified registries who support MVPs are required to support all measures and activities available in the MVP across the quality, improvement activities, and promoting interoperability performance categories. The exceptions to this requirement are the cost measures and population health measures, which do not require external data submission to be calculated. In addition, some MVPs may include QCDR measures, which are only reportable through a QCDR. In instances where QCDR measures are included in an MVP, a qualified registry or health IT vendor will be expected to support all other quality measures included within the MVP.

Comment: One commenter expressed concerns about layering another auditing requirement on QCDRs and qualified registries when MVPs are finalized as this could increase regulatory complexity and result in added work and burden without making a significant difference in the quality of data submitted. One commenter requested that CMS add more detail in future requirements for third-party intermediaries to validate data submitted by MVP participants.

Response: We disagree with the commenter. QCDRs and qualified registries are currently required to conduct data validation on data that is submitted to CMS for purposes of the MIPS program, to ensure the data is true, accurate, and complete. We refer readers to section IV.A.3.h.(3)(a)(iii) of this final rule for a detailed discussion of those requirements. The current data validation requirements that are utilized in traditional MIPS, will also be applied to MVP submissions. MVPs are considered a method of reporting under MIPS, but is nonetheless a part of the program. Therefore, the requirements and expectations remain the same—QCDRs and qualified registries must conduct data validation on data submitted to CMS for purposes of the MIPS program, regardless of whether

the data is submitted under traditional MIPS or through an MVP. In the future, data validation information that is covered in the Self-Nomination Toolkit for QCDRs and qualified registries available at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1083/2021%20Self-Nomination%20Toolkit%20for%20QCDRs%20and%20Qualified%20Registries.zip* will also include MVPs.

Comment: One commenter requested clarification on whether QCDRs and qualified registries are required or permitted to support the APP, stating that the preamble states this is a requirement while the regulatory text says that QCDRs and qualified registries may support the APP. The commenter opposed a requirement for QCDRs and qualified registries to support the APP.

Response: In the CY 2021 PFS final rule (85 FR 84859), we discussed that APM Entities have the option of reporting to MIPS on behalf of the MIPS eligible clinicians participating in their APM Entity. Additionally, there is an option of reporting to traditional MIPS or via the APP. Furthermore, in the proposed rule (86 FR 39462), we proposed to add APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all. We want to note that QCDRs and qualified registries would not be required to support the APP, but may do so. If QCDRs and qualified registries would like to support the APP, they would need to meet all of the other requirements of being a QCDR or qualified registry reporting to MIPS (with the exception of PI reporting, which has some exceptions) as described above.

After consideration of public comments, we are finalizing these policies as proposed.

(ii) Requirements for All Third Party Intermediaries To Support Subgroup Reporting

As proposed in section IV.A.3.b.(3) of this final rule, subgroup reporting would allow clinicians in multispecialty practices to participate in MIPS more meaningfully. Since subgroups would be implemented concurrently with MVPs, it is important that third party intermediaries have the capability to support subgroup reporting of MVPs. As described above, we believe QCDRs, qualified registries, and health IT vendors would have the capacity to support MVP and APP reporting.

In the CY 2022 PFS proposed rule, we proposed to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. Therefore, we proposed to revise § 414.1400(a)(1) to state that MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup or APM Entity by any of the following third party intermediaries: QCDR; qualified registry; health IT vendor; or CMS-approved survey vendor. We believe it is imperative for all third party intermediaries to be able to support subgroup reporting as we envision that to be the future of the program.

While the CAHPS for MIPS survey vendors cannot support MVPs or the APP, we believe they can support the reporting of the CAHPS for MIPS measure within an MVP and the APP, if a subgroup decides to report on that measure. Due to the limited experience, CAHPS for MIPS survey vendors have in quality reporting, we do not believe it is feasible for them to support MVP reporting since MVP reporting would require experience with reporting across the performance categories and the use of several collection types for quality reporting. However, there may be instances where the CAHPS for MIPS survey measure may be included in an MVP. For example, in the Optimizing Chronic Conditions Management MVP, as described in Appendix 3: MVP Inventory, of this final rule. In such instances, if groups or subgroups would like to report this measure, they should be able to utilize a CAHPS for MIPS survey vendor to do so. We believe it is important that all third party intermediaries support subgroup reporting in order to support meaningful quality reporting. We understand that there may be a level of burden to third party intermediaries that are required in supporting subgroup reporting by requiring them to support another clinician type. However, we believe that requiring third party intermediaries to support subgroup reporting will allow for clinicians to participate in a manner that is more meaningful. We noted in section IV.A.3.b.(4)(f)(ii)(D) of this final rule, subgroups would have to register through the MVP participant registration process. Third party intermediaries would need to be able to track the subgroup identifiers and support the data submission process accordingly.

We solicited comments on our proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed concern regarding the burden for registries to identify and validate subgroup reporting.

Response: To clarify, as discussed in section IV.A.3.b.(4)(f)(ii)(D) of this final rule, subgroups must self-identify and register through a registration process in order to be considered a subgroup. The subgroup would need to register directly through the MVP registration process, that is done separately and not through a third party intermediary. Therefore, we believe there is no burden to registries to identify the subgroups. As MVP participants such as subgroups enroll to use the services of a registry, the subgroup will share with the registry their CMS-assigned identifier and a list of participants within that subgroup. The registry will need to submit the subgroup identifier information with the subgroup's data at the time of submission. We understand there may be concerns in scenarios in which subgroups inadvertently provide an incorrect subgroup identifier to the registry. We will take that into consideration for future rulemaking, as we determine whether there are additional system safeguards, such as a system rejection of an incorrect identifier can be implemented to limit the occurrence of such issues. With regards to data validation, all QCDRs and qualified registries will continue to be held to the data validation requirements that currently exist, regardless of whether a clinician or group decides to participate in MVP reporting or traditional MIPS reporting. While we understand there is a level of burden associated with data validation, we believe the benefit outweighs the burden to ensure that all data submitted to CMS is true, accurate, and complete.

Comment: One commenter suggested that CMS delay its proposal requiring third party intermediaries to support subgroup reporting to allow more time for registries to implement reporting processes. Several commenters expressed concern that subgroup reporting will impose a large increase in burden on registries, particularly with respect to how registries validate NPIs. A few commenters expressed concern that QCDRs may lack the capacity to support subgroup reporting.

Response: We disagree with the need for further delay. We intentionally proposed MVPs and subgroup reporting with a delayed implementation to account for the time that clinicians, third party intermediaries, and healthcare organizations would need to prepare to operationalize MVP and subgroup reporting. We believe the availability of subgroup reporting

should go hand-in-hand with the implementation of MVPs, and therefore, should be jointly available beginning with the CY 2023 performance period/2025 MIPS payment year. The delayed implementation should provide third party intermediaries sufficient time for system and operation preparations for subgroup reporting. In addition, we do not believe that subgroup reporting will impose a large increase in burden to registries. We refer readers to section IV.A.3.b.(3) of this final rule, for further discussion of validation requirements. Subgroups are derived from their affiliated TINs who would have otherwise reported traditional MIPS through a registry.

After consideration of public comments, we are finalizing this policy as proposed.

(c) Request for Comment on Third Party Intermediaries That Derive Data From CEHRT

For third party intermediaries that will be submitting quality measure data on behalf of MIPS eligible clinicians, we believe that EHR systems will be able to provide measure results for a set of providers that are part of a subgroup where required for subgroup reporting. We note that the existing CEHRT definition for eligible clinicians at § 414.1305 includes the 45 CFR 170.315(c)(4) ''Clinical quality measures—filter'' as an optional element. This criterion requires health IT to be able to filter CQM results at both patient and aggregate levels. Moreover, a Health IT Module must be able to filter by a single proposed data element (for example, provider type) or a combination of any of the data elements). Historically, the ''Clinical quality measures—filter'' at 45 CFR 170.315(c)(4)'' (CQM-filter) criterion has been applicable for certified health IT modules supporting quality measurement for participants in certain APMs.

We believe technology certified to this optional criterion could support subgroup reporting via third party intermediaries that derive data from CEHRT by ensuring that an EHR can produce CQM results filtered for a specific group of provider NPIs that are part of a subgroup. These filtered CQM results could then be shared with a third party intermediary, which provides this data for reporting to CMS. However, we also believe health IT developers are offering non-certified functionality that can effectively support reporting of measure results for a subgroup. As a result, we did not propose any changes at this time to the language in the CEHRT definition for eligible clinicians regarding the ''optional'' status of technology certified to the CQM-filter criterion.

We are interested in general feedback from stakeholders on the current capabilities of third party intermediaries that derive data from CEHRT to successfully receive and transmit data to CMS for CQMs based on subgroups; capabilities of EHR systems to support subgroup reporting, including reporting facilitated by third party intermediaries, and whether requiring the adoption of technology certified to the CQM-filter criterion would help to support subgroup reporting; and challenges which entities may face in meeting requirements to report on subgroups when deriving data from CEHRT. We solicited feedback on this topic.

Comment: A few commenters responded to CMS' request for information regarding CEHRT and third party intermediaries. One commenter urged CMS to establish clear expectations and guidelines to ensure data security and to define roles and responsibilities for data validation and data cleaning. Another commenter recommended that CMS consider making the CQM filter criterion mandatory for CEHRT because, otherwise, organizations would likely be required to contract with qualified registries/QCDRs to submit MIPS data. Another commenter disagreed, stating that as a developer of CEHRT that provides CQM functionality, they do not believe that the CQM-filer criterion is necessary.

Response: We thank commenters for the feedback received through this request for information. We may consider this information to inform future rulemaking.

(3) New Requirements for Both Qualified Clinical Data Registries (QCDRs) and Qualified Registries

(a) Background

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID–19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947) for our previously established policies regarding QCDRs and qualified registries.

In the CY 2022 PFS proposed rule, we proposed several changes for both QCDRs and qualified registries: (1) New requirement for approved QCDRs and qualified registries that have not submitted performance data; (2) collaboration of entities to become a QCDR and qualified registry; and (3) data validation audit and targeted audit requirements. These proposals are discussed in more detail below.

(i) New Requirement for Approved QCDRs and Qualified Registries That Have Not Submitted Performance Data

We require that both QCDRs and qualified registries must have a minimum of 25 participants signed up by the prior performance period at existing § 414.1400(b)(2) and (c)(2). We refer readers to CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID–19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947). We identified a number of QCDRs and qualified registries that have continued to self-nominate to become a third party intermediary for the MIPS program, but have not submitted clinician, group or virtual group data to CMS. As the MIPS program continues to mature, we wish to reduce the number of vendors that self-nominate to become a qualified vendor, but do not actively participate in the MIPS program. We believe that maintaining these vendors who do not actively participate does not provide a benefit to the MIPS program, rather it creates stakeholder confusion by including these vendors in our qualified postings.

We proposed a two-tiered approach to solve this issue. First, we proposed to create a new requirement at § 414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year) through the CY 2020 performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. Exceptions to this requirement may occur if data is received for the CY 2021 performance period/2023 MIPS payment year. Under this scenario, QCDRs and qualified registries would not need to submit a participation plan for CY 2023 of the self-nomination period. If they do not submit data, their participation plan must be submitted as part of self-nomination for CY 2023 and must be accepted by CMS to continue to be an approved QCDR or qualified registry.

Secondly, we proposed to codify a new requirement at paragraph (b)(3)(viii) to state, beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. For example, for the CY 2024 performance period/2026 MIPS payment year, vendors will be required to have submitted performance data for the CY 2021 and 2022 performance periods/2023 and 2024 MIPS payment years. Under this proposal, the participation plan must explain the QCDR's or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor. We note that this proposed participation plan was modeled off of the current requirement for QCDR measure participation at existing § 414.1400(b)(3)(iv)(J)(*1*) (redesignated to proposed paragraph (b)(4)(iii)(B)(10)(*i*)). We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters disagreed with the proposal to require a participation plan for approved QCDRs that did not submit data for 2 years preceding the applicable self-nomination period. One commenter stated that the COVID PHE reduced reporting by eligible clinicians to QCDRs.

Response: While we are sympathetic and acknowledge that the impact the PHE may have had on reduced reporting, we note that we are proposing an incremental approach to assess QCDR data reporting. This includes the first proposal which would apply to any QCDR or qualified registry that has not submitted data to CMS since the inception of MIPS (CY 2017). We believe a QCDR should have been able to report data to CMS for years preceding CY 2021. Specifically, we believe a QCDR should have been able to report data to CMS for CY 2019. If a QCDR was new in CY 2020 and did not submit data to CMS, the QCDR still has CY 2021 to report for clinicians which in turn, satisfies this requirement. Furthermore, the proposal provides QCDRs and qualified registries the opportunity to submit participation plans, which could support the decision to allow a QCDR or qualified registry to continue their MIPS participation. This plan would outline possible reasons for low/no reporting to CMS and the efforts the QCDR plans to take to further encourage their clinicians to submit data to CMS. Some examples include but are not limited to: A reduction in associated fees, improvement of an EHR interface to reduce data extraction burden, expansion of the numbers/types of measures the QCDR chooses to report, etc. As such, this proposal would not immediately remove a QCDR or qualified registry from participating as a third party intermediary. As discussed above, we want to reduce the number of vendors that self-nominate to become a qualified vendor, but do not actively participate in the MIPS program. We believe that maintaining these vendors who do not actively participate does not provide a benefit to the MIPS program. We note that our goal is to decrease the operational burden on CMS and those vendors who do not submit MIPS data to CMS. CMS would decrease its operational burden by not having to go through the vetting process of these entities or monitor program compliance during the year. Additionally, we believe that we can better utilize the resources used for vendors that do not submit MIPS data elsewhere to improve the MIPS program. Furthermore, vendors who choose not to submit MIPS data to CMS are depriving CMS of data that would benefit the MIPS program. Lastly, vendors who do not submit data will decrease their burden in the long-term by not self-nominating year after year.

Comment: One commenter disagreed with the proposal for QCDRs and qualified registries who do not submit data 2 years preceding the applicable self-nomination period to submit a participation plan at the time of self-nomination. The commenter noted that CMS would also require the participation plan to include moving users over to submit their MIPS data through the qualified registry. The commenter expressed concern that this policy would create significant demand on QCDRs specifically, due to the already cumbersome Eligible Measure Applicability (EMA) process required for qualified registries. The commenter currently uses both the qualified registry and QCDR to collect data, however, the commenter only submits the data to CMS through the QCDR.

Response: We disagree with the commenter's interpretation of this policy. The intention of the participation plan requirement is to explain the QCDR's or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third party intermediary on behalf of clinicians or group and to explain why they should still be allowed to participate as a qualified vendor. The participation plan will not require moving users over to submit their MIPS data through the qualified registry and that this policy would create significant demand on QCDRs. We note that during the CY 2019 MIPS performance period, the Eligible Measure Applicability (EMA) process was updated to be applicable to collection types (that is, EMA applies to Part B Claims measures and MIPS clinical quality measures (CQMs) but does not apply to electronic clinical quality measures (eCQMs), QCDR measures, or Web Interface) rather than third party intermediaries. As such, EMA does not apply to QCDRs and qualified registries as an entity, rather it could apply to MIPS CQMs that the QCDR or qualified registry is approved to support. We encourage third party intermediaries to participate as a QCDR if they intend to self-nominate their own QCDR measures or use another QCDR's measures (with permission from the QCDR who owns the measure) or as a qualified registry if they plan to support their clients through the reporting of CQMs or eCQMs only.

After consideration of public comments, we are finalizing these policies as proposed.

(ii) Collaboration of Entities To Become a QCDR and Proposal To Extend Policy for Collaboration of Entities To Become a Qualified Registry

(A) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77377), we finalized to allow collaboration of entities to become a QCDR based on our experience with the qualifying entities wishing to become QCDRs for performance periods. We stated that we believed our previously finalized policy supporting entity collaboration should be continued under MIPS. Therefore, we discussed that an entity that may not meet the criteria of a QCDR solely on its own, but could do so in conjunction with another entity and would be eligible for qualification through collaboration with another entity. Additionally, we finalized at § 414.1400(b)(2)(ii), specifically for QCDRs, that if the entity uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the

responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period.

For example, an entity, such as a specialty society, that needs technical support may partner with an outside entity such as a health IT vendor to qualify as a QCDR. While entities, such as QCDRs, Health IT vendors, and qualified registries, can collaborate with external organizations, those entities could only do so to meet requirements to be a QCDR. We did not explicitly create a policy for entities to collaborate to meet the requirements to be a qualified registry.

(B) Proposal To Extend to Qualified Registries

We believe we should extend the previously finalized policy to apply to entities that wish to collaborate to become a qualified registry as well because extending this policy to qualified registries would also help smaller specialty societies that may not have the resources on their own to become a qualified registry. This will allow those societies to be able to partner with other entities to meet the definition of a qualified registry. Therefore, in the CY 2022 PFS proposed rule, we proposed to revise and redesignate existing paragraph (b)(2)(ii) to new paragraph (b)(3)(ii) to state, if the entity seeking to qualify as a QCDR or qualified registry uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period. For example, an entity, such as a specialty society, that needs technical support may partner with an outside entity such as a health IT vendor to qualify as a qualified registry. We solicited comments on this proposal.

We did not receive public comments on this proposal, and therefore, we are finalizing it as proposed.

(iii) Data Validation Audit and Targeted Audit Requirements

(A) Information Required at the Time of Self-Nomination

In the CY 2017 Quality Payment Program final rule (81 FR 77366 through 77367; 81 FR 77383 through 77384) we discussed our expectation for QCDRs and qualified registries to conduct validation on the data they intend to submit for the MIPS performance period. We also discussed that the full self-nomination process would require the following: A submission of basic information, a description of the process the QCDR and qualified registry will use for completion of a targeted audit of a subset of data prior to submission, the provision of a data validation plan along with the results of the executed data validation plan by May 31 of the year following the performance period. Additionally, in the Quality Payment Program provisions in the CY 2021 PFS final rule (85 FR 84930 through 84937; 85 FR 84944 through 84947) at existing § 414.1400(b)(2)(iv) and (v), and (c)(2)(iii) and (iv), we finalized the data validation audit requirements as condition for approval. While we did finalize the requirements for the data validation audits as condition for approval, we did not codify the requirements for QCDR and qualified registries to submit data validation plan during self-nomination along with the results of the executed data validation plan by May 31 of the year following the performance period.

In order to provide clarification and to better align with the previously finalized policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we proposed to codify the following revisions. As stated in previous polices (81 FR 77366 through 77367;81 FR 77383 through 77384), QCDRs and qualified registries are required to submit the results of their data validation plan to CMS by May 31 of the year following the performance period. Therefore, we proposed to codify at § 414.1400(b)(3)(v)(G)(*1*) to state that QCDRs and qualified registries must conduct validation on the data they intend to submit for the applicable MIPS performance period, and provide the results of the executed data validation plan by May 31st of the year following the performance period.

Furthermore, QCDRs and qualified registries are required to submit their data validation plan explaining their process of data validation submission annually during self-nomination, and it must be approved by CMS for before use. To provide further clarity and to better align with the existing policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we also proposed to codify a new requirement at § 414.1400(b)(3)(iv) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and may not change the plan once approved, without the prior approval of the agency.

As discussed above we proposed to codify at § 414.1400(b)(3)(iv) to provide further clarity to better align with previous policies. Therefore, we proposed to reorganize at § 414.1400(b)(2)(iv) though (viii) to better align with the above changes. We proposed with the following revisions:

- We proposed to revise and redesignate existing paragraph (b)(2)(iv) to paragraph (b)(3)(v) to state, that beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct annual data validation audits in accordance with this paragraph (b)(3)(v).
- We proposed to revise and redesignate existing paragraph (b)(2)(iv)(A) to paragraph (b)(3)(vi)(A) to state that, if a data validation audit under paragraph (b)(3)(v) identifies one or more deficiency or data error, the QCDR or qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.
- We proposed to revise and redesignate existing paragraph (b)(2)(v) to paragraph (b)(3)(vi) to state that beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with this paragraph (b)(3)(vi).
- We proposed to revise and redesignate paragraph (b)(2)(vi) to paragraph (b)(3)(vii), to state for the CY 2023 performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the CY 2017 through 2021 performance periods/2019 through 2023 MIPS payment years must submit a participation plan for CMS' approval. This participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.
- We proposed to revise and redesignate existing paragraph (b)(2)(vii) to paragraph (b)(4)(viii) to state that beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval.

The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed concerns about the ''overly burdensome'' nature and significant cost of the CMS data validation audit requirements for third party intermediaries. One commenter expressed concerns with the randomized auditing resulting in an unintended consequence of increasing burden on small and mid-sized group practices because of the low number of participants reporting via the qualified registry as individuals. One commenter stated that the audit requirements are duplicative, unnecessary, and do not enhance data quality and validity because QCDRs already have rigorous internal data and quality standards. A few commenters stated that clinicians and registries were impacted by the COVID–19 pandemic, specifically that dozens of audits were conducted and QCDRs and qualified registries have encountered practices struggling to collect and report data while a majority of their time and effort has been spent on responding to the COVID–19 pandemic.

Response: While we understand that data validation requires a level of effort, time, and cost by the QCDRs and qualified registries, we disagree that this causes undue burden. While we acknowledge and appreciate the efforts and participation of all group practices of varying sizes including small and mid-sized groups, we believe it is important to hold all practices to the same standards for data validation audits to ensure that all data submitted is true, accurate, and complete. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77366 through 77367; 81 FR 77383 through 77384), we expect that QCDRs and qualified registries would conduct validation on the data they intend on submitting for the MIPS performance period and provide the results of the data validation to CMS in the form of a data validation execution report by May 31st of the year following the performance period. As noted in the CY 2017 PFS final rule (81 FR 77366 through 77367), we believe it is necessary to establish a requirement that QCDRs conduct data validation to ensure they are actively monitoring the data they submit to CMS for purposes of a pay-for-performance program. We also believe it is important for QCDRs to validate the data that they intend to submit to us for purposes of the MIPS program to ensure that the data submitted is true, accurate, and complete (85 FR 84936). We disagree that audit requirements are duplicative, unnecessary, and do not enhance data quality and validity because QCDRs already have rigorous internal data and quality standards. While we appreciate that many QCDRs already have rigorous internal data and quality standards, we are not asking QCDRs to duplicate work. If QCDRs have their own auditing requirements, they can use the same auditing process or combine the efforts to reduce duplication as long as they meet the data validation requirements specified by the regulation at a minimum (81 FR 77366 through 77367; 81 FR 77383 through 77384). For example, if a QCDR already audits 10 percent of their data prior to submission for all performance categories, this would meet the 3 percent portion of the data validation requirement. Additionally, despite our requirements to have validation audits, each year there are still some QCDRs that submit inaccurate data. As payment adjustments increase, this could adversely affect a practice with respect to their payment because these payment calculations were based on inaccurate data submitted to CMS.

Furthermore, while we do acknowledge that the impact of the PHE for COVID–19 may have affected some providers and registries ability to conduct audits due to practices struggling to collect and report data due to majority of their time and effort being spent on responding to the COVID–19 pandemic, as stated above, we believe it is important to enforce the requirements for data validation audits to ensure all data submitted is true, accurate, and complete. We will continue to assess the implications of the PHE for COVID–19 and will consider whether to make any policy changes in future rulemaking.

Comment: One commenter expressed that NCQA data validation alleviates the burden on health plans having to perform their own audit of data received from an HIE and on providers from having to respond to data requests from health plans. This commenter suggested that CMS leverage NCQA processes for data validation.

Response: We thank the commenter for their suggestion. We may consider it for future rulemaking.

After consideration of public comments, we are finalizing these policies as proposed.

(4) New Requirements Specific to QCDRs

(a) Background

We refer readers to § 414.1400(b), the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID–19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (84937 through 84944) for where we previously finalized standards and criteria for QCDRs, specifically QCDR measure requirements. In this section, we proposed to update policies related to QCDR measure rejections.

(b) QCDR Measures

(i) QCDR Measure Rejections

(A) New QCDR Measure Rejection Criteria

We refer readers to the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63070 through 63073) at § 414.1400(b)(3)(vii) where we have previously adopted QCDR measure rejection criteria. In the CY 2022 PFS proposed rule, we proposed to add two new criteria: (1) QCDR does not have permission to use a QCDR measure; and (2) QCDR not approved or not in good standing. These are discussed in more detail below in this section.

(aa) QCDR Does Not Have Permission To Use a QCDR Measure

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we discussed that beginning with the 2018 performance period and for future program years, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. We noted that the QCDR measure owner (QCDR vendor) would still own and maintain the QCDR measure, but would allow other QCDRs to utilize their measure with proper notification. We intended for this policy to help reduce the number of QCDR measures that are similar in concept or clinical topic, or duplicative of other QCDR measures that are being approved. Additionally, in the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63070 through 63073) at § 414.1400(b)(3)(vii), we finalized the QCDR measure rejection criteria considerations. We noted that these considerations would help to ensure that QCDR measures are meaningful and measurable. Although we finalized the QCDR measure rejection criteria, we did not codify that QCDRs may seek permission from another QCDR to use an existing measure that is owned by another QCDR. In order to provide further clarity to the existing policies (82 FR 53813 through 53814; 84 FR

63070 through 63073), we proposed to codify a new requirement and add a rejection criterion at § 414.1400(b)(4)(iv)(M) to state, a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. We solicited comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to add the rejection criterion that ''A QCDR does not have permission to use QCDR measure owned by another QCDR for the applicable performance period'' because CMS currently allows QCDRs to seek permission from another QCDR to report on an existing measure that is owned by the other QCDR, and because if a QCDR would like to use an existing QCDR measure that is owned by another QCDR, it must obtain permission from the QCDR measure owner that it can use the measure for the performance period and include proof of such permission in its self-nomination application.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing this policy as proposed.

(bb) QCDR Not Approved or Not in Good Standing

Additionally, if a QCDR measure owner is not approved or is not in good standing, any QCDR measures associated with that QCDR would also not be approved. We believe it is important to have an approved QCDR measure owner for all approved QCDR measures. This would ensure that there is active involvement by the QCDR measure owner so that any potential measure issues can be mitigated during the specified MIPS performance period. For example, any mid-year guideline changes or measure questions would need to be immediately clarified to avoid negative impacts to clinicians such as the inability to construct a benchmark due to an error in the measure specifications. Therefore, we proposed to codify another rejection criterion at § 414.1400(b)(4)(iv)(N) to state that, if a QCDR measure owner is not approved during a given self-nomination period, any associated QCDR measures with that QCDR would also not be approved. We solicited comments on this proposal.

We have received inquiries from stakeholders on what can be done in circumstances when an active QCDR wishes to use an inactive QCDR's measure. We are interested in feedback from stakeholders on what should be done in such circumstances. For example, what should happen if ''QCDR A'' is using ''QCDR B's'' measures in a given performance period and ''QCDR B'' is terminated mid performance period? Alternatively, what if ''QCDR A'' is using a measure from ''QCDR B'' and ''QCDR B'' decides not to self-nominate for the subsequent performance period? While ''QCDR A'' could partner with ''QCDR B'' as described at § 414.1400(b)(3)(ii), are there other policy options we should consider to minimize impact to the MIPS eligible clinician who has selected the QCDR measure for reporting?

We solicited comments on the above circumstances. The following is a summary of the comments we received and our responses.

Comment: A few commenters disagreed with the proposal to add a rejection criterion requiring permission to use an inactive QCDR's measures. One commenter stated that there is no evidence that inactive QCDRs are withholding access to these measures. The commenter noted the ability of QCDRs to license measures allows QCDRs to ensure the appropriate use of their measures and incentivizes organizations to invest in developing new and improved measures. The commenter suggested that CMS should continue its policy that allows active or inactive QCDR measure owners to choose to license their measures only to QCDRs that have the experience and expertise to properly implement a measure in a particular specialty. Therefore, there is no reason to change CMS' current policy under which an active QCDR that wishes to use an inactive QCDR's measure can approach the inactive QCDR and the two QCDRs can negotiate an agreement regarding the transfer of ownership if the active QCDR has the appropriate experience and expertise in QCDR measure development. In the event that such agreement cannot be reached between the two parties, the inactive QCDR can decline to license rights to the QCDR measure. One commenter suggested that CMS require that either there be an agreement between the two QCDRs to transfer ownership of the measure or that the initial QCDR should maintain their measures and license it to other QCDRs.

Response: We thank the commenters for their comments and suggestions. We clarify that if a QCDR measure owner is not approved or is not in good standing, any QCDR measures owned or maintained with that QCDR would also not be approved. We disagree that the proposal to add a rejection criterion requiring permission to use an inactive QCDR's measures is not supported by evidence that inactive QCDRs are withholding access to these measures. We note that there have been instances where active QCDRs have inquired about using QCDR measures of inactive QCDR measure stewards. We also disagree that this policy is not needed. We believe it is imperative that all QCDR measures in the MIPS program have an active QCDR measure steward to provide ongoing maintenance and updates to QCDR measures. For example, recently, a QCDR who shares their measures with several other QCDRs discovered multiples discrepancies, including risk adjustment calculation issues. If they had not been an active QCDR and performing quality assurance on these QCDR measures, this issue would likely not have been discovered and resolved.

We do agree that the ability of QCDRs to license measures allows QCDRs to ensure the appropriate use of their measures and incentivizes organizations to invest in developing new and improved measures. We also agree that active or inactive QCDR measure owners may choose to license their measures only to QCDRs that have the experience and expertise to properly implement a measure in a particular specialty. Furthermore, this process is consistent with what CMS requires for all other measures available for all clinicians to report in the MIPS program (the non-QCDR measures). That is, every measure in the program needs an active measure steward that agrees to support and maintain the measure. A non-active QCDR cannot be compelled to meet this requirement.

In this context, we interpret the commenter's reference to a ''policy under which an active QCDR that wishes to use an inactive QCDR's measure can approach the inactive QCDR and the two QCDRs can negotiate an agreement regarding the transfer of ownership'', to apply to our statements regarding QCDR licensing as discussed in the CY 2018 PFS final rule (82 FR 53813). There we noted that, beginning with the 2018 performance period and for future program years, a QCDR vendor may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. While we thank the commenter for the suggestion to require the transfer of ownership of a measure from an inactive QCDR to an active QCDR or that the inactive QCDR should maintain the measure and license it to active QCDRs, we note that such approaches are beyond the scope of our regulations, which in this case is limited to approval and disapproval criteria for QCDRs and

QCDR measures. We are considering building out additional policies to ensure that all QCDR measures that are used/owned are properly maintained throughout the performance period.

After consideration of public comments, we are finalizing this policy as proposed.

(5) Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548), CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), and the CY 2021 PFS final rule (85 FR 84930 through 84937) for previously finalized policies for remedial action and termination of third party intermediaries.

In the Quality Payment Program provisions in the CY 2019 PFS final rule (83 FR 59908 through 59910), we discussed that the threshold for ''inaccurate, unusable or otherwise compromised'' may be met if the submitted data includes TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies that affect more 3 percent of the total number of MIPS eligible clinicians or groups for which data was submitted by the third party intermediary. We proposed to update the existing language at § 414.1400(f)(3)(ii) to broadly explain that it is up CMS' discretion on whether third party intermediaries' inaccuracies may lead to possible remedial action or termination. As discussed earlier, we proposed consolidating and redesignating the existing language at § 414.1400(f) as paragraph (e) and § 414.1400(g) as paragraph (f) to provide clarity and alignment with the aforementioned proposals to consolidate the duplicative criteria of QCDRs and qualified registries. Therefore, we proposed to revise and redesignate existing language at § 414.1400(f)(3)(ii) to paragraph (e)(3) to state, contains data inaccuracies affecting the third party intermediary's total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

We did not receive public comments on this policy, and therefore, we are finalizing it as proposed.

i. Public Reporting on the Compare Tools Hosted by the U.S. Department of Health & Human Services (HHS)

In the CY 2022 PFS proposed rule, we proposed to amend § 414.1395(c) to add a 1-year delay of publicly reporting new improvement activities and Promoting Interoperability measures and attestations reported via MVP. We also proposed a one-time, 1-year delay to subgroup-level public reporting, such that subgroup-level public reporting will begin with CY 2024 performance information available in 2025, and each year thereafter, on the Compare Tools hosted by the U.S. Department of Health and Human Services (HHS), referred to as ''compare tool'' throughout this final rule, available at *https://www.medicare.gov/care-compare/* and *data.medicare.gov,* as technically feasible. We proposed to add facility affiliations, beyond the hospital affiliations currently displayed on individual profile pages. Additional facility affiliations would include: Inpatient rehabilitation facilities (IRFs); long-term care hospitals (LTCHs); skilled nursing facilities (SNFs); inpatient psychiatric facilities (IPFs); home health agencies (HHAs); hospices; and dialysis facilities. Finally, we solicited comments on publicly reporting utilization data on clinician and group profile pages (86 FR 39466 through 39469).

For previous discussions on public reporting, we refer readers to the CY 2016 PFS final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), the CY 2020 PFS final rule (84 FR 63080 through 63083), the CY 2021 PFS final rule (85 FR 84947 through 85 FR 84948) and the Care Compare: Doctors and Clinicians Initiative Page at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Compare-DAC.*

(1) MVP and Subgroup Public Reporting

The introduction of MVPs and subgroup reporting provides for new types of performance information that are available for public reporting, provided they meet the established public reporting standards at § 414.1395(b). In consideration of our MVP and subgroup performance information public reporting proposals, we wish to remind readers that all submitted MIPS performance information is available for public reporting (81 FR 77395 through 77397). Additionally, we previously finalized at § 414.1395(c) that, for each program year, CMS does not publicly report any first-year measures for the first 2 years, meaning any measure in its first 2 years of use in the quality and cost performance categories. We also note that MIPS performance category and composite final scores for MIPS eligible clinicians participating in MVPs will continue to be publicly reported as required under section 1848(q)(A)(i)(I) of the Act and finalized at § 414.1395(a)(1)(i).

We believe delaying public reporting of certain MVP and subgroup performance information provides a catalyst to encourage clinician participation in MVPs and subgroups while they familiarize themselves with these options. For this reason, we proposed, for individuals, groups, and subgroups reporting via MVP, to add a 1-year delay for publicly reporting new improvement activities and Promoting Interoperability measures and attestations, as technically feasible. This means that new improvement activities and Promoting Interoperability measures and attestations would be available for public reporting at their inception in traditional MIPS, but we would delay public reporting of new improvement activities and Promoting Interoperability measures and attestations by 1 year after inception for those reporting via MVP. We note that improvement activities and Promoting Interoperability measures and attestations that have already been in MIPS for more than 1 year and become newly available as part of an MVP would be available for public reporting in the first year the MVP is in the program. That is, non-first year improvement activities and Promoting Interoperability measures and attestations that are newly part of an MVP would be available for public reporting in the first year the MVP is in the program (86 FR 39466 through 39467). Table 74 further clarifies when this 1-year delay would apply.

TABLE 74: MVP vs Traditional MIPS: Performance Information Delay Amount

New Improvement Activities and Promoting Interoperability measures and attestations	Delay Amount
Reported via traditional MIPS	No delay; CMS publicly reports new improvement activities and Promoting Interoperability measures and attestations at their inception.
Reported via MVP	CMS does not publicly report the new improvement activities and Promoting Interoperability measures and attestations for the first year.

We recognized that under this proposal, we would be further delaying the release of performance information for improvement activities and Promoting Interoperability measures and attestations reported via MVP. Because of this, as a potential incentive, we also considered whether to delay public reporting of quality and cost measure information reported via MVP by 1 additional year, for a total of 3 years. We solicited comments on our proposal to delay public reporting of new improvement activities and Promoting Interoperability measures and attestations reported via MVP by 1 year, as well as any feedback on alternate approaches we should consider spurring clinicians to report performance data on MVPs while making performance data available for patients on the compare tool. We proposed to amend this MVP public reporting policy at § 414.1395(c)(2) to state CMS does not publicly report any MVP data on new improvement activities or Promoting Interoperability measure, objective, or activity included in an MVP for the first year in which it is included in the MVP. We also proposed to amend § 414.1395(c)(1) to state that CMS does not publicly report any data on new quality or cost measure for the first 2 years in which it is in the program, after which CMS evaluates the measure to determine whether it is suitable for public reporting under § 414.1395(b). Currently, § 414.1395(c) refers to these quality and cost measures as ''first year measures''. We proposed to change ''first year measures'' to ''new measures'' (86 FR 39467).

The introduction of MVPs and subgroup reporting in MIPS provides for new types of performance information that are available for public reporting, provided they meet the public reporting standards. Currently, we display information on profile pages at the individual clinician and group level, since this is the level of information we provide for and at which patients and caregivers search for on the compare tool. To ensure that patients and caregivers have access to subgroup performance information, we proposed creating a separate workflow from the established ones for individuals and groups, since we only display information at the level at which it was publicly reported (86 FR 39467). That is, we only publicly report individual-level performance information on individual clinician profile pages and group-level performance information on group profile pages. We do not publicly report group-level performance information on individual profile pages or individual-level information on group profile pages, as doing so would not be truly representative of either the group's or individual's own performance, and we do not want to mislead website users. Instead, we would link from the individual or group profile page to the corresponding subgroup performance information. That is, we proposed to create a subgroup public reporting workflow, in which we would indicate with plain language on an individual profile page that the clinician reports performance information as part of a subgroup or on a group profile page that the group has subgroups for purposes of performance information and then link to that subgroup's performance information. Future user testing would determine how to best display and put in plain language subgroup performance information. Subgroup performance information will also be available on *http://data.medicare.gov/*.

Subgroups represent a new type of reporting for MIPS, that is available for clinicians reporting on MVPs or via the APP. For this reason, we also proposed to delay all subgroup-level public reporting for 1 year, including measures, activities and attestations across the quality, cost, improvement activities, and Promoting Interoperability performance categories in order to encourage clinician participation in subgroups without the risk of displaying subgroup performance information as clinicians familiarize themselves with the option of subgroup reporting. This would only be a one-time delay in public reporting of subgroup-level information. That is, we would not publicly report any CY 2023 subgroup-level measure, attestation, or activity performance information; this information would be available for public reporting beginning with CY 2024 performance period/2026 MIPS payment year. We would publicly report CY 2024 performance period/2026 MIPS payment year subgroup information and for each performance period thereafter if the information meets our established public reporting standards. Since we are moving toward more granular level performance information, we believe delaying subgroup public reporting by 1 year provides an incentive for subgroup participation and experience. As an alternative, we also considered a 1-year public reporting delay of performance information for all new subgroups each performance year, as technically feasible. For example, subgroups that begin in CY 2023 are not eligible for public reporting until CY 2024, subgroups that begin in CY 2024 are not eligible for public reporting until CY 2025, and so on for each subsequent year. Another alternative we considered was to publicly report all subgroup performance information without delay and provide new subgroups the opportunity to opt-out, during the preview period, of having their performance information publicly reported for their first year. Some subgroups may want to have their performance information publicly reported and having an overall 1-year delay may be a disincentive to subgroup participation. We solicited comments on these considerations. We noted that MIPS performance category and composite final scores for MIPS eligible clinicians participating in MVPs will continue to be publicly reported for those participating in subgroups, as required under section 1848(q)(A)(i)(I) of the Act and finalized at § 414.1395(a)(1)(i), and will not be delayed by 1 year for public reporting.

We also solicited comments on additional factors that we should consider as we look to expand the availability of MVP and subgroup data on the compare tools. For example,

should there be a certain threshold of MVPs available, or clinicians participating in MVPs prior to public reporting? For public reporting of subgroups, are there factors we should consider to make this information usable to the patient but reflective of the subgroups characteristics and composition? Should we test an indicator of MVP participation for compare tool profile pages to see if this is useful information for patients making healthcare decisions? We solicited comments on this proposal and additional ways public reporting may encourage MVP participation.

The following is a summary of the comments we received and our responses.

Comments: Several commenters supported the proposal to delay, by 1 year, the public reporting of new improvement activities and Promoting Interoperability measures attestations reported through MVPs. One commenter requested clarification as to why new Promoting Interoperability measures and attestations would be delayed only for MVP participants. While some commenters supported the delay, they recommended extending the delay beyond 1 year. Two commenters stated a concern that delaying public reporting for MVPs and not traditional MIPS may be confusing for patients. One of the commenters recommended adding a note to profile pages explaining why there may not be performance information. The same commenter also recommended that instead of delaying public reporting for MVPs, CMS should allow MVP participants to opt-out of public reporting for their first year. Another commenter recommended beginning public reporting MVP performance information only once MVP reporting becomes mandatory.

Response: We agree with most commenters that a 1-year delay of new improvement activities and Promoting Interoperability measures and attestations is an appropriate way to incentivize participation in MVPs. We also want to clarify that we proposed this 1-year delay as an incentive because new quality and cost measures already have a delay in public reporting for the first 2 years of use for clinicians in traditional MIPS. This delay is for new improvement activities and Promoting Interoperability measures, objectives, and activities in all MVPs whether they are new or existing MVPs. We appreciate the recommendations to extend the delay beyond 1 year, to allow MVP participants to opt-out of public reporting in their first year, and to only publicly report performance information reported via MVPs once MVP reporting becomes mandatory. We do believe that a 1-year delay is enough time to allow clinicians to familiarize themselves with MVPs as we do not want to further delay valid performance information that consumers can use to make informed healthcare decisions. It is for this same reason that we do not want to have MVP participants opt-out of public reporting or to delay public reporting of performance information reported via MVPs until MVP reporting becomes mandatory. We also want to clarify that performance information available via MVPs is the same as the performance information available in traditional MIPS and that we are required to publicly report performance information submitted by MIPS eligible clinicians. We do not believe that a delay for MVP participants and not traditional MIPS will be confusing to website users. Under traditional MIPS, we delay public reporting of new quality and cost measures by 2 years, and this has not caused any confusion to date. We also clarify that improvement activities and Promoting Interoperability measures and attestations that are already in traditional MIPS will be available for public reporting without any 1-year delay.

After consideration of public comments, we are finalizing this policy as proposed.

Comment: Several commenters supported the one time, 1-year delay of subgroup public reporting, such that subgroup public reporting will begin with the availability of CY 2024 performance period/2026 MIPS payment year performance information. One commenter recommended extending the delay to 3 years.

Response: We agree that a one-time 1-year delay is enough time for participants to familiarize themselves with this subgroup-level reporting. We also clarify that CY 2023 performance period/2025 MIPS payment year subgroup-level measure, attestation, or activity performance information across all MIPS performance categories would not be available for public reporting. We would begin publicly reporting subgroup-level performance information with CY 2024 performance period/2026 MIPS payment year, which would be available for public reporting in CY 2025. After consideration of the public comments, we are finalizing this policy as proposed.

After consideration of all of the public comments received on MVP and subgroup public reporting, we are finalizing all policies in this section as proposed. We did not receive any public comments on the proposal to create a separate subgroup workflow, and therefore, are finalizing it as proposed.

(2) Publicly Reporting APM Performance Pathway Information

In the CY 2021 Quality Payment Program final rule, we finalized to establish an APM performance pathway (APP) beginning in the 2021 MIPS performance year. This is an optional MIPS reporting and scoring pathway for MIPS eligible clinicians who participate in MIPS APMs. We also note that since APP participants are MIPS eligible clinicians, their MIPS performance category and composite final scores will be publicly reported as required under section 1848(q)(A)(i)(I) of the Act and finalized at § 414.1395(a)(1)(i).

In the CY 2017 Quality Payment Program final rule, we finalized, as technically feasible, to use ACO profile pages as a guide to publicly reporting more APM data (81 FR 77398). Currently, groups who participate in an ACO have an indicator showing their participation, as well as a link to the ACO profile page with available performance information. User testing has shown that website users find the ACO information meaningful and displayed in a user-friendly way. For this reason, we plan to continue this approach for APM performance information, including that which comes in via the APP, as technically feasible. We also solicited comments on alternative ways to publicly report performance information reporting via APPs and additional considerations to publicly reporting this information (86 FR 39467).

We did not receive public comments on alternative ways to publicly report performance information reported via APPs or any additional considerations to publicly reporting this information.

(3) Facility Affiliations

Compare tool profile pages for clinicians currently provide demographic information, including names, addresses, phone numbers, medical specialties, APM affiliations, Medicare assignment status, board certifications, education and residency, gender, and group and hospital affiliations. User testing consistently shows that Medicare patients and caregivers find value in these types of information. For hospital affiliations, website users have consistently noted the importance of understanding up front the relationships clinicians may have with facilities where they perform services when searching for a clinician. Specifically, patients and caregivers have noted during user testing that hospital affiliation is important to them,

since they may be looking for a clinician to perform a procedure at a hospital or want to know the hospitals a clinician could potentially admit them if needed. Linking from the clinician profile page to their affiliated hospital page has provided a seamless experience for patients and caregivers, as they do not need to separately search for clinicians and hospitals; rather, they can navigate to a hospital profile page directly from the clinician's profile page.

With these user testing findings in mind, and because the Compare Tools include information on a number of other types of facilities beyond hospitals, we believe it would benefit patients and caregivers to also be able to navigate from clinician profile pages to profile pages for other types of facilities such as: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities (86 FR 39468).

Expanding the types of clinician-facility affiliations, beyond hospital affiliation, publicly reported would allow us to provide additional information about clinicians with or without any hospital affiliation but who are affiliated with other types of facilities. User testing with patients and caregivers has shown that facility affiliations not only for hospitals but also for IRFs, LTCHs, SNFs, IPFs, HHAs, hospices, and dialysis facilities would be helpful to their healthcare decision-making. Specifically, we proposed adding affiliations to clinician profile pages for each of the following types of facilities, pending the results of user testing, as applicable and technically feasible: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities. User testing will determine how to best display these affiliations on compare tool clinician profile pages. To determine clinician affiliations to these facilities, we would use claims data the same way we do to display the hospital affiliations currently available on clinician profile pages (77 FR 69165). We build the clinician-hospital affiliations based on observing a clinician practicing at a given hospital caring for at least three different Medicare patients on three different dates of service in the preceding 6 months, as documented in Medicare claims. We would use similar criteria for determining additional facility affiliations. Clinicians can email the Quality Payment Program Service Center at *http://www.QPP@cms.hhs.gov* if they believe their facility affiliations are displayed incorrectly. We solicited comments on the proposal to add affiliations to clinician profile pages for each of the following types of facilities and link to the specific facility's page on the compare tool: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities. Further, we also solicited comment on whether there should be a limit on the number of procedures done or conditions treated at a given facility to determine clinician-facility affiliations.

The following is a summary of the comments we received and our responses.

Comments: Several commenters supported adding facility affiliations beyond hospital affiliations to clinician profile pages on the compare tools. Specifically, these commenters supported the addition of affiliations for all facilities proposed, including IRFs, LTCHs, SNFs, IPFs, HHAs, hospices, and dialysis facilities. One commenter also recommended including clinicians' role as SNF medical directors on their profile pages. A few commenters noted concern, with two of these commenters opposing the proposal, related to the threshold for determining facility affiliations and how CMS would handle a clinician with multiple affiliations. These commenters believed that the three different Medicare patients on three different dates of service in the preceding 6 months threshold may be too low for determining facility affiliations. One of the commenters recommended CMS conduct user testing to determine how consumers react when a clinician is affiliated with multiple facilities or with a facility that has poor quality ratings. Another commenter requested clarification on how we plan to obtain and verify facility affiliation and noted concern about location and specialty accuracy.

Response: We agree with commenters that adding affiliations to facilities beyond hospitals, on clinician profile pages, will aid patients in making healthcare decisions. We currently do not have a mechanism or source of data for verifying medical director or other healthcare administrative roles in SNFs or other types of care settings. Rather, if the clinician has filed a claim, it is because that clinician is actively treating patients and furnishing healthcare services, even if they also have an administrative role. We would not have information to report for a medical director or other healthcare administrator unless they have filed a claim. We understand the commenters concern and will explore alternative data sources that are found to be reliable. Regarding the concern about a clinician having multiple affiliations, we have user tested clinician profile pages that display multiple facility affiliations and have found that if a clinician has multiple affiliations, beneficiaries and their caregivers consider it important for them to know when making healthcare decisions. We also want to note that the threshold for determining facility affiliations has been reliable for determining the hospital affiliations that are currently on clinician profile pages, which is why we proposed using this threshold for the additional facility affiliations. We will continue to monitor this process as we expand using our currently methodology to affiliate other settings of care to clinicians. In response to questions regarding how we plan to obtain and verify facility affiliation, we plan to determine additional facility affiliations by using claims data in the same way we determine the hospital affiliations currently on clinician profile pages. This analysis includes reviewing claims for clinicians practicing at a given facility caring for at least three different Medicare patients on three different dates of service in the preceding 6 months, as documented in Medicare claims. Clinicians can email the Quality Payment Program Service Center at *http://www.QPP@cms.hhs.gov* with the correct information if they believe their facility affiliations are displayed incorrectly, as they do today for hospital affiliation. We would then manually edit the affiliation on the website. This manual edit would remain in effect for 6 months only. To ensure a more permanent change, clinicians must update their information in the Medicare Provider Enrollment, Chain, and Ownership System (PECOS). For more information, clinicians can visit the Care Compare: Doctors and Clinicians Initiative Page at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Compare-DAC.* Regarding the accuracy of clinician specialty and location, we note that this information is obtained from the PECOS. We rely on clinicians to ensure that their information in PECOS is up to date to ensure the most accurate information is publicly reported.

After consideration of public comments, we are finalizing this policy as proposed.

(4) Utilization Data Request for Information

Under section 104(e) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), beginning with 2016, the Secretary is required to integrate utilization data information on

Physician Compare.[260] To satisfy section 104(e) of the MACRA, we previously implemented a policy to begin to include utilization data in a downloadable format in late 2017 using the most currently available data, and previously finalized that the specific codes to be included will be determined via data analysis and reported at the eligible clinician level (80 FR 71130). We finalized to continue to include utilization data in the downloadable database (81 FR 77398). This information continues to be available today on *www.data.cms.gov/provider-data.*

To date, we have gathered utilization data for procedures from physician/supplier Medicare Part B non-institutional claims on certain services and procedures and published it in the public use file (PUF) file entitled ''Physician and Other Supplier Data.'' These data are useful to the healthcare industry, healthcare researchers, and other stakeholders who can accurately interpret these data and use them in meaningful analyses. However, this information is presented in a technical way that is not easily accessible or usable by patients, who do not frequently visit *data.cms.gov* or understand medical procedure coding. This information also does not provide detail on the specific conditions clinicians treat, though in select cases it may be inferred by the clinicians and researchers reviewing this information.

Section 10331(b)(3) of the Affordable Care Act requires that for public reporting, to the extent practicable, to include processes to assure that the data made available provides a robust and accurate portrayal of a clinician's performance. In our efforts to continue to provide patients and caregivers with meaningful information to make informed healthcare decisions, we believe utilization data may also have a place on clinician and group profile pages, if presented in a consumer-friendly way. We envision utilization data on patient-facing profile pages providing two main areas of benefit. The first is allowing for more granular clinician searches, so that patients not only find specific types of clinicians but also those clinicians experienced in performing specific types of procedures and/or treating specific conditions. The second is providing categories of utilization data in a more plain language display that is usable to patients and their caregivers. In summary, utilization data could provide information to Medicare patients and their caregivers on the specific diagnoses clinicians treat and the frequency with which certain services or procedures are performed by a clinician or group and/or which types of clinicians do not provide certain services.

For example, someone with severe arthritis of the knee may want to search for an orthopedic surgeon who specifically does knee replacements. The way the clinician search works currently would only show results for ''orthopedic surgeons'' generally. That is, the patient would not see which of these clinicians specialize in this procedure, and likely would need to spend time calling clinicians to ascertain more detail. This could similarly be the case for finding a clinician who focuses on treatment of a certain condition. We believe indicating which clinicians focus on certain procedures or conditions would relieve some of this patient burden, as it would yield more specific search results. There are a number of factors that could influence how procedure- and condition-specific information is determined, which is why we solicited comments on this topic in several areas.

For display purposes, we may wish to apply a minimum experience level, such as the number of times a clinician performed a procedure or treated a condition, before a clinician profile is annotated to indicate experience with the condition or procedure. Regarding the methods in which we would identify clinician volume of procedures conducted or treat specific conditions, we would need to set a threshold for making these assertions. We have considered several options. The threshold could be based on the number of times a clinician has performed a procedure or treated a condition within a certain time-period, or the proportion of the clinician's practice that is represented by the procedure or condition. Alternatively, thresholds may be devised based on ranking clinicians compared to their peers (specialty and geography may be considered when defining peers) in volume of procedures performed or frequency with which they treat each condition.

We note also that these approaches utilize Medicare claims data only. That is, these data would not include procedures performed or conditions treated for patients who have other types of insurance, since this information is not available. We also acknowledge that this utilization data only represents the care provided to Medicare beneficiaries and clinicians offer care to those with other forms of insurance. This disclaimer could be added to any data that may be publicly reported. We solicited comments on these approaches and whether there are any additional ones we should consider.

Additionally, because the Compare Tools utilize a location-based search, national or local thresholds may be appropriate. For example, clinicians in urban centers may specialize in a small number of procedures that they perform on a weekly basis, while a clinician in a rural area might be the most experienced at a given procedure, but not have comparable volume to the urban clinician who practices a very narrow scope. We solicited comments on these considerations, as well as if there are others.

We also solicited comments on the potential types of utilization data that, if publicly reported, could help Medicare patients and their caregivers make informed healthcare decisions, as well as on technical considerations for presenting a specific affiliation between clinicians and diagnoses and/or procedures. Specifically, we solicited comments on:

- The types of conditions and procedures that would most benefit patients' clinician searches;
- Important features and considerations for clinician searches by conditions or procedures;
- The lookback period for Medicare claims in order to identify a clinician's volume of procedures balancing frequency with recent experience (for example, 6 months, 1 year, 2 years);
- Clinician specialties or conditions with special considerations (for example, non-patient facing clinicians);
- The maximum number of conditions treated or procedures performed to display on a given clinicians profile page; and
- Methods to set a threshold of treatment volume to display that a clinician commonly performs a procedure or treats a condition. For example, the threshold could be: (1) The number of times a clinician treated a condition or performed a procedure; (2) the total scope that a condition or treatment represents in a clinician's practice; or (3) the clinician's rank—either overall among all clinicians or among a subset of clinicians—in the number of times that clinician treated a condition or performed a procedure.
- Any other factors or considerations not listed above.

We received public comments on considerations for publicly reporting utilization data. We thank the commenters' feedback and will take these comments into consideration in future years.

[260] Physician Compare is defined at § 414.1305 as Physician Compare internet website of CMS (or a successor website).

4. Overview of the APM Incentive

(a) Overview

Under the Quality Payment Program, eligible clinicians who are Qualifying APM Participants (QPs) for a year are eligible to receive an APM Incentive Payment in the corresponding payment year for payment years 2019 through 2024. In the CY 2017 Quality Payment Program final rule (81 FR 77480 through 77489), we finalized at § 414.1450(d) that this payment is made based on the clinician's QP status in the QP Performance Period that is 2 years prior (for example, the 2021 payment will correspond to the 2019 performance year), and at § 414.1450(b)(1) that the payment is equal to 5 percent of the estimated aggregate payments for covered professional services in the base period (the year between the QP performance and payment years).

We also finalized at § 414.1450(c)(1) (82 FR 31729) that the APM Incentive Payment will go to the TIN associated with the Advanced APM Entity through which an eligible clinician becomes a QP during the QP Performance Period. In 2019, our first year of making APM Incentive Payments, we learned that the amount of time between the QP Performance Period (during which QP status is attained) and the QP payment year (during which APM Incentive Payments are issued) creates challenges to disbursing the payment for some QPs in a routine and efficient manner, for example for QPs who may have changed practices in the interim. Consistent with section 1833(z) of the Act, QP status is determined for, and connected to, an eligible clinician (identified by their NPI) for the QP payment year based on their Advanced APM participation during the QP Performance Period. In the proposed rule, we stated that we do not believe that changes in a QP's practice or TIN in the interim year between the QP determination and the QP payment year should affect a QP's ability to receive the APM Incentive Payment. To address some of the unanticipated challenges we encountered in disbursing the APM Incentive Payments, in the CY 2021 PFS final rule, we finalized a hierarchy, codified at § 414.1450, that, based on our experience and lessons learned in making payments in 2019, provides more ways to identify an appropriate TIN to which we can make the APM Incentive Payment when a QP has experienced changes in their practice or TIN since the performance year in which they attained QP status.

(c) APM Incentive Payment Recipient

In the 2021 PFS final rule (85 FR 84472), we revised our approach to identifying the TIN or TINs to which we make the APM Incentive Payment and established a process that enables QPs to provide CMS with updated enrollment information that could be used to complete the payment in the event our approach does not yield an appropriate TIN or TINs to which to send their APM Incentive Payments. The process for those QPs to update their information, as well as a preliminary list of NPIs to whom it may be applicable, is included in a public notice published annually in the **Federal Register**. We explained in the CY 2021 PFS final rule that the revised approach would involve looking at a QP's relationship with TINs at different, specified periods in time, as well as considering the relationships such TINs have with certain APM Entities and Advanced APMs. We stated that we believe this revised approach enables us to more appropriately identify TINs with which QPs currently have relationships to receive other Medicare payments, and through which the QPs likely would anticipate receiving their APM Incentive Payments. We noted that, when the QP is no longer affiliated with the TIN through which they achieved QP status, this approach will prioritize identifying an alternate TIN with which the QP is affiliated at the time the APM Incentive Payment is made, and to which it is appropriate to make the payment. The approach we adopted also serves to reduce uncertainty for QPs as they anticipate the APM Incentive Payments, as well as potential delays in our ability to make their payments.

To improve and expand the ways we identify the TIN(s) to which we make the APM Incentive Payment for a QP in a timely and efficient manner, we finalized a policy to sequentially apply a decision hierarchy and codified the hierarchy in § 414.1450(c). We apply the hierarchy by beginning at the first step, and if we are unable to identify one or more TINs with which the QP has a current affiliation at this step, we move to the next and successive steps of the hierarchy until we do identify one or more TINs with which the QP is affiliated.

As discussed in the CY 2021 PFS final rule, if we identify more than one TIN at the applicable step in the hierarchy, we divide the APM Incentive Payment proportionally between the QP's TINs based on the relative paid amount for Part B covered professional services that are billed through each of the TINs. We proposed to clarify that, when we divide the APM Incentive Payment between two or more TINs, we apportion the APM Incentive Payment among TINs based on the share of total payments for covered professional services made to each TIN in the same base year that we use to calculate the APM Incentive Payment for the year. To calculate the APM Incentive Payment, we sum the total estimated aggregate payments for covered professional services for a QP for the base year, which is based on claims submitted for covered professional services, as codified at § 414.1450(b)(1) through (3). We proposed to codify this policy at § 414.1450(c).

In the course of making APM Incentive Payments during CY 2020 PFS final rule, we explored the possibility of expanding our search at each step of the hierarchy at § 414.450(c) to identify potential payee TINs that are associated with the QP during the QP payment year. Based on our findings, we stated we believe expanding our search in this way would enable us to make payments earlier in the calendar year and reduce the number of QP NPIs for whom we cannot identify a payee TIN using our hierarchy, and thus, rely on our public notice to request additional information. Therefore, we proposed to revise the hierarchy at § 414.1450(c) so that, using the criterion described in each step of our current regulation, we would first seek to identify a TIN associated with the QP during the base year, and if no such TIN is identified in the base year, we would then seek to identify a TIN associated with the QP during the payment year. We have found in many instances that there are changes in enrollment information in PECOS for a QP over the span of 2 years between the QP performance period and payment year. By using enrollment information for the QP during the payment year, we are more likely to identify an appropriate TIN to which to make the APM Incentive Payment hierarchy. Under the proposal, applying the steps in the APM Incentive Payment hierarchy, we would make the APM Incentive Payment to one or more solvent TINs associated with the QP, identified by paid Medicare Part B claims for covered professional services and associated PECOS enrollment information during the base period; and if no such TIN is identified, we will make the payment to such TINs associated with the QP during the payment year. We proposed to codify this policy in the regulation at § 414.1450(c).

If no such TIN or TINs can be identified at a particular step, we will

move to the next and successive steps listed in § 414.1450(c)(1) through (8) until we identify one or more solvent TINs with which the QP is associated, and then would make the APM Incentive Payment to any such TIN(s). If more than one TIN is identified at a step based on paid claims during the applicable year either the base year or payment year, as we explain earlier and proposed to codify in the regulation under § 414.1450(c), would divide the APM Incentive Payment proportionately among such TINs according to the relative total paid amounts for Part B covered professional services to each TIN in same the base year we use to calculate the APM Incentive Payment.

We proposed, for each step in the APM Incentive Payment decision hierarchy, we would first search for a payment TIN or TINs associated with the QP during the base period. If no such TIN is found during the base year, we would search for any TIN or TINs that are similarly situated with respect to the criterion at that step in the hierarchy and associated with the QP during the payment year. If such a TIN or TINs are found, we would make the APM Incentive Payment to such TIN or TINs. We will continue at each step in the hierarchy to first attempt to identify the relevant base year TIN or TINs associated with the QP because, as noted in the proposed rule, we believe such TINs are more likely to be associated with the APM Entity through which the QP attained their QP status during the QP performance period. However, if no such TIN is found in the base year, we would proceed at that step to search for a TIN or TINs with which the QP is associated in the payment year.

We explained that we believe this approach creates the greatest opportunity to identify and pay an appropriate TIN as efficiently and early as possible during the payment year. The proposed change would maintain the current hierarchy while adding a sub-step at each level in which we would conduct our search based on more current enrollment information. The proposed change would allow for the identification of an appropriate TIN or TINs at each step by first checking the base year, and then checking the payment year before moving on to the next step in the process. We stated we believe that by maintaining the current hierarchy we would continue to incent Advanced APM participation by prioritizing making payments to TINs affiliated with Advanced APMs, even if they are not in the same Advanced APM Entity through which QP status originally was achieved. For example, we stated that we anticipate that many eligible clinicians who earned QP status in 2020 through a practice participating in the CPC+ model will join the new Primary Care First (PCF) model in 2022.

In the event the eligible clinician's CPC+ participant TIN is no longer active, our proposed modification to the hierarchy would enable us to pay the APM Incentive Payment to a TIN participating in the PCF model in 2022. We stated that we continue to believe it would be appropriate to first identify the relevant base year TIN or TINs at each step in of the hierarchy because we believe those TINs are more likely to be associated with the APM Entity through which the QP attained their QP status during the QPs performance period. However, if no TIN is found in the base year, we would proceed to identify any TINs associated with the QP in the payment year, and then use the same process for the subsequent steps in the hierarchy until we identify one or more TINs associated with the QP at a particular step for a particular year (base year or payment year). We explained that we believe this approach will be a more efficient and expeditious way to identify a TIN or TINs to which to make the APM Incentive Payment for QPs.

We solicited comments on this proposal to amend our APM Incentive Payment decision hierarchy to include an additional attempt to identify and pay, at each step, one or more solvent TINs associated with the QP during the payment year when no such TIN is identified for the QP in the base year.

We received several comments on this proposal.

Comment: We received many public comments in support of this approach to identifying payee TINs during the payment year.

Response: We thank commenters for their support of this policy.

Comment: We received two public comments advocating that the APM Incentive Payment should be paid directly to the ACO or APM Entity.

Response: We disagree with this comment for several reasons. First, the APM Incentive Payment is not earned by the APM Entity in the way a shared savings payment may be earned by the ACO under the Shared Savings Program. Although QP determinations are in some cases are made at the APM Entity group level, QP status is conferred on an individual eligible clinician. As a result, the individual QP is excluded from the MIPS reporting and payment adjustment requirements, and it is the QP who earns the APM incentive payment. Therefore, the payment is disbursed for the eligible clinician who is a QP to a TIN that is affiliated with the QP, even in instances where the QP is no longer affiliated with the APM Entity. The payment is designed as an incentive in lieu of the pursuance of a MIPS payment adjustment. CMS makes the APM Incentive Payment to one or more TINs to which the QP has reassigned their billing rights. Thus, the QP and TIN may resolve between themselves the handling of the APM Incentive Payment. Some APM Entities are the same as the Medicare enrolled TIN to which QPs have reassigned their Medicare payment rights, and to which we would make the APM Incentive Payment. Other APM Entities, such as ACOs, are not. For these reasons, we do not make the APM Incentive Payment directly to an ACO, and we do not believe it would be appropriate to do so.

Comment: One commenter suggested that we should allow QPs to individually identify their preferred payee TIN to receive the APM Incentive Payment.

Response: It would not be practically feasible for every QP to individually identify a recipient TIN for the QP incentive payment. Our experience working with PECOS and other voluntary systems, including our annual public notice, indicate that requiring individual eligible clinicians to elect a recipient TIN for the incentive payment could cause significant delays in completing the payments. These delays would be of such duration that CMS would likely miss the statutory deadline of December 31 of the payment year in which we are required to have completed these payments. Further, some QPs might never complete the prerequisite step, which would make it difficult if not impossible to disburse APM Incentive Payments for them. Moreover, eligible clinicians are not without an opportunity to indicate to CMS the TINs with which they have current billing arrangements. In fact, all Medicare enrolled eligible clinicians are required to update their billing information, including reassignments within the PECOS system within a specified timeframe. By ensuring PECOS is updated at all times, eligible clinicians have an opportunity to ensure that if they become QPs for a year, the APM Incentive Payment will be received by a TIN to which they have reassigned their billing rights. We believe it is both appropriate and efficient for clinicians to use the longstanding and required processes that are in place to update their billing information, which enables us to identify one or more appropriate TINs to which to make the APM Incentive Payment. Finally, we have established in regulations a payment decision

hierarchy that specifies how we will identify the TIN or TINs to which we will distribute the APM Incentive Payment. One of the main purposes for establishing this hierarchy and for updating it this year is to provide predictability for eligible clinicians regarding the APM Incentive Payment disbursements.

After consideration of the public comments, we are finalizing our proposed update to the APM Incentive Payment decision hierarchy, and amending our regulation at § 415.1415(c), as proposed.

c. Advanced APMs

1. Qualifying APM Participant Determination

a. General Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy at § 414.1425(b) for Qualifying APM Participant (QP) determinations. For the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the ''snapshot dates'' (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician included on a Participation List on any one of such dates is included in the APM Entity group even if that eligible clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for the eligible clinicians in an APM entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP snapshot dates. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a snapshot date that we use to determine the APM Entity group and to make QP determinations at the APM Entity group level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List in more than one APM Entity, but do not to achieve QP status based on any APM Entity level determinations, we make QP determinations at the individual level as described in § 414.1425(c)(4). Likewise, for eligible clinicians on an Affiliated Practitioner list for an Advanced APM we make QP determinations at the individual level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2).

b. QP Thresholds and Partial QP Thresholds

Section 1833(z)(2)(B) of the Act describes the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, has been applicable since payment year 2019. The All-Payer Combination Option, which uses the Medicare Option, as well as an eligible clinician's participation in Other Payer Advanced APMs, is applicable beginning in the payment year 2021. In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439) we finalized our policy for the Medicare Option as codified at § 414.1430(a) and for the All-Payer Option at § 414.1430(b).

Section 114 of Division CC of the CCA amended section 1833(z)(2)(B) of the Act with regard to payment years 2023 and 2024 (which correspond respectively to performance years 2021 and 2022), by freezing for such years the applicable payment amount and patient count thresholds for an eligible clinician to achieve QP status. Specifically, the CAA amended section 1833(z)(2)(B) of the Act to continue the QP payment amount thresholds that apply in payment years 2021 and 2022 to payment years 2023 and 2024. Additionally, the CAA amended section 1833(z)(2)(D) of the Act to require that, for payment years 2023 and 2024, the Secretary use the same percentage criteria for the QP patient count threshold that are applied in payment year 2022. As such, the Medicare Option QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will remain at 50 percent for the payment amount method and 35 percent for the patient count method. The CAA also amended section 1848(q)(1)(C)(iii) of the Act to extend through payment year 2024 the Partial QP thresholds that are established for payment years 2021 and 2022. Therefore, the Partial QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will remain at 40 percent for the payment amount method and 25 percent for the patient count method. For performance years beginning with 2023 (corresponding to payment years beginning with 2025) the statute prescribes the QP thresholds for the payment amount method, and the QP thresholds we established for the patient count method at § 414.1430 will take effect. Specifically, for performance years beginning with 2023, the Medicare Option QP thresholds will be 75 percent for the payment amount method and 50 percent for the patient count method. The Partial QP thresholds under the Medicare Option will be 50 percent for the payment amount method and 35 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for performance years 2021 and 2022 (corresponding to payment years 2023 and 2024) will be 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for performance years 2021 and 2022 will be 40 percent for the payment amount method and 25 percent for the patient count method. In order to become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain threshold percentages under the Medicare Option. For performance years 2021 and later (corresponding to payment year 2023 and later), the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option is 25 percent for the payment amount method or 20 percent under the patient count method.

BILLING CODE 4120–01–P

TABLE 75: QP Threshold Score Updates

Medicare Option - Payment Amount Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Payment Amount Threshold	50		50		75	
Partial QP Payment Amount Threshold	40		40		50	
Medicare Option - Patient Count Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	35		35		50	
Partial QP Patient Count Threshold	25		25		35	
All-Payer Combination Option - Payment Amount Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	50	25	50	25	75	25
Partial QP Patient Count Threshold	40	20	40	20	50	20
	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum
All-Payer Combination Option - Patient Count Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	35	20	35	20	50	20
Partial QP Patient Count Threshold	25	10	25	10	35	10
	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum

Although we included proposed amendments to our regulation at § 414.1430(a)(1) and (2) in the CY 2022 PFS proposed rule to reflect the changes made by the CAA to the QP and Partial QP Thresholds under the Medicare Option payment amount method, we inadvertently neglected to discuss those proposed amendments in the preamble. Additionally, we inadvertenly did not include proposed regulation text at § 414.1430(a)(3) or (4) to reflect the amendments made by the CAA to the QP and Partial QP thresholds under the Medicare Option patient count method; or to the regulation text at § 414.1430(b) to reflect amendments to the All Payer Option payment amount and patient count QP and Partial QP thresholds. However, we believe it is preferable to revise the regulation text to consistently and accurately reflect the statutory threshold percentages for each year in accordance with the CAA amendments for both the Medicare Option and All Payer Option and for both the payment amount and patient count methods for each of the options. Therefore, we are finalizing the proposed amendments to § 414.1430(a)(1) and (2) and making amendments to § 414.1430(a)(3) and (4); and § 414.1430(b)(1) through (4) to reflect the applicable statutory threshold percentages as amended by the CAA.

We received four public comments, all in support of the statutory changes to the QP and Partial QP threshold levels. We thank the commenters for their input and will implement the amendments made by the CAA as discussed and revise the regulation at § 414.1430 as proposed.

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a ''collection of information'' requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of OMB's implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We solicited public comment on each of the required issues under section 3506(c)(2)(A) of the PRA for the following information collection requirements.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics' May 2020 National Occupational Employment and Wage Estimates for all salary estimates (*http://www.bls.gov/oes/current/oes_nat.htm*). In this regard, Table 76 presents the mean hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

TABLE 76: National Occupational Employment and Wage Estimates

Occupation title	Occupation code	Mean hourly wage ($/hr)	Fringe benefits and overhead ($/hr)	Adjusted hourly wage ($/hr)
Administrative Support Worker	43-9000	18.41	18.41	36.82
Anesthesiologists	29-1211	130.50	130.50	261.00
Billing and Posting Clerks	43-3021	20.01	20.01	40.02
Bookkeeping, Accounting, and Auditing Clerks	43-3031	21.20	21.20	42.40
Computer System Analysts	15-1211	47.61	47.61	95.22
Family Medicine Physicians	29-1215	103.06	103.06	206.12
General Internal Medicine Physicians	29-1216	101.42	101.42	202.84
Licensed Practical and Licensed Vocational Nurses	29-2061	24.08	24.08	48.16
Medical and Health Services Managers	11-9111	57.12	57.12	114.24
Obstetricians and Gynecologists	29-1218	114.96	114.96	229.92
Office and Administrative Support Workers, All Other	43-9199	18.91	18.91	37.82
Pediatricians, General	29-1221	88.74	88.74	177.48
Physicians, All Other; Ophthalmologists, Except Pediatric	29-1228	105.22	105.22	210.44
Psychiatrists	29-1223	104.38	104.38	208.76
Secretaries and Administrative Assistants	43-6014	19.43	19.43	38.86
Surgeons, Except Ophthalmologists	29-1248	120.99	120.99	241.98

For the CY 2019 and CY 2020 PFS final rules, we used the BLS wage for ''Physicians and Surgeons'' (occupation code 29–1060) to estimate the cost for Physicians. In BLS' most recent set of occupational wage rates (dated May 2020) they have discontinued this occupation in their wage data. As a result, in order to estimate the burden for Physicians, similar to the estimates in the CY 2021 PFS final rule (85 FR 84958), we are using a rate of $217.32/hr which is the average of the following BLS occupations and adjusted wage estimates.

TABLE 77: Physician Wage Estimates

Occupation title	Occupation code	Mean hourly wage ($/hr)	Fringe benefits and overhead ($/hr)	Adjusted hourly wage ($/hr)
Anesthesiologists	29-1211	130.50	130.50	261.00
Family Medicine Physicians	29-1215	103.06	103.06	206.12
General Internal Medicine Physicians	29-1216	101.42	101.42	202.84
Obstetricians and Gynecologists	29-1218	114.96	114.96	229.92
Pediatricians, General	29-1221	88.74	88.74	177.48
Physicians, All Other; Ophthalmologists, Except Pediatric	29-1228	105.22	105.22	210.44
Psychiatrists	29-1223	104.38	104.38	208.76
Surgeons, Except Ophthalmologists	29-1248	120.99	120.99	241.98
Total				1,738.54
Average Wage (1,738.54/8)				217.32

BILLING CODE 4120–01–C

As indicated, we adjusted BLS' hourly wage estimates by a factor of 100 percent to obtain the adjusted hourly wage estimate. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and because methods of

estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

B. Information Collection Requirements (ICRs)

1. ICRs Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802 and 414.806)

The following provisions will be subject to the standard PRA process under OMB control number 0938–0921 (CMS–10110). The standard PRA process includes the publication of 60- and 30-day **Federal Register** notices that will provide the public with opportunities for public review and comment. We expect to publish the 60-day notice shortly after the publication of this final rule.

The new provisions at §§ 414.802 and 414.806 will implement new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021 (for the purposes of this section of this final rule, hereinafter is referred to as ''section 401''), which requires manufacturers without a Medicaid drug rebate agreement to report ASP information to CMS for calendar quarters beginning on January 1, 2022, for drugs or biologicals payable under Medicare Part B and described in sections 1842(o)(1)(C), (E), or (G) or 1881(b)(14)(B) of the Act, including items, services, supplies, and products that are payable under Part B as a drug or biological. Specifically, to implement the new reporting requirements for manufacturers without Medicaid drug rebate agreements, we proposed to modify: (1) The definition of drug at § 414.802; and (2) the regulations describing civil money penalties at § 414.806. The new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

For the purposes of section 401's new reporting requirements, for manufacturers without Medicaid drug rebate agreements, confidentiality requirements appear in section 1847A(f)(2)(D) of the Act which states that the ASP data are confidential and shall not be disclosed by the Secretary in a form which discloses the identity of a specific manufacturer or wholesaler or prices charged for drugs or biologicals by such manufacturer or wholesaler, except—as the Secretary determines to be necessary to carry out section 1847A of the Act (including the determination and implementation of the payment amount), or to carry out section 1847B of the Act; to permit the Comptroller General of the United States to review the information provided; to permit the Director of the Congressional Budget Office to review the information provided; to permit the MedPAC to review the information provided; and to permit the Medicaid and CHIP Payment and Access Commission to review the information provided.

For manufacturers with Medicaid drug rebate agreements, confidentiality requirements appear in section 1927(b)(3)(D) of the Act which states that the ASP data are confidential and shall not be disclosed by the Secretary in a form which discloses the identity of a specific manufacturer or wholesaler, prices charged for drugs by such manufacturer or wholesaler, except—in relevant part, as the Secretary determines to be necessary to carry out section 1847A of the Act (including the determination of the payment amount), or to carry our section 1847B of the Act, to permit the Comptroller General to review the information provided, to permit the Director of the Congressional Budget Office to review the information provided, and to permit the Executive Director of the Medicare Payment Advisory Commission (MedPAC) and the Executive Director of the Medicaid and CHIP Payment and Access Commission to review the information provided.

The burden associated with these requirements is the time and effort required by manufacturers of drugs and biologicals payable under Medicare Part B to prepare and submit the required ASP data to CMS. We have previously estimated the burden associated with ASP reporting requirements for manufacturers with Medicaid drug rebate agreements. Because section 401 extends the ASP reporting requirements to manufacturers without Medicaid drug rebate agreements, we are updating our burden estimates to account for the additional manufacturers who will now be required to report ASP data to us.

As described in section III.D.1. of this final rule, in considering whether to exclude repackagers from the reporting requirements at section 1847A(f)(2) of the Act, we conducted analyses to estimate: (1) The proportion of repackaged products in our existing ASP data; (2) the number of new ASP submissions we can expect as a result of the new reporting requirements under section 401; and (3) the proportion of those (new) submissions that involve repackaged products.

Based on our existing ASP data, 547 manufacturers (respondents) report ASP data to us. Of these, 331 respondents have products for which they are required to submit ASP data, and 216 respondents have products for which they currently submit ASP data voluntarily, but will now be required to do so under section 1847A(f)(2) of the Act. (331 + 216 = 547)

We also estimate that under the new reporting requirements of section 401, a total of 568 respondents have products for which they will now be required to report ASP data to us. The 568 includes the 216 respondents (above) and 361 respondents who have products (identified by us) for which they will now be required to submit ASP data under section 1847A(f)(2) of the Act and did not previously voluntarily submit these data to us. There were 9 respondents who voluntarily submitted ASP data for some, but not all, of their products identified in our analysis. (216 + 361 − 9 overlap = 568)

We estimate a total of 740 respondents will report ASP data to us. This includes the 547 respondents who currently submit ASP data to us (voluntarily, or as currently required), and the 361 respondents who have products (identified by us) for which they will now be required to submit ASP data under section 1847A(f)(2) of the Act and did not previously voluntarily submit these data to us. However, there were 168 respondents who currently are required to submit ASP data to us, or who voluntarily submit ASP data to us, for whom we identified additional products that they did not previously submit ASP data, and will now be required to submit ASP data for these additional products under the new reporting requirements of section 401. (547 + 361 − 168 overlap = 740)

These respondents submit ASP data four times per year for a total of 2,960 submissions (740 respondents × 4 submissions/year).

Based on our experience with ASP data reporting, we continue to estimate that the time associated with reporting, record keeping, and third-party disclosure for ASP data reporting is 13 hours: 10 hours to review instructions and search existing data resources and 3 hours to gather the data, compile the data, submit via electronic media and upload to the automated system. This estimate includes labor costs for respondents to extract data from their information systems and to compile and submit the ASP data, including signature, to CMS via the internet-based automated system and electronic media. This estimate also includes the cost of the compact disc (CD) and overnight mail service used to report the data,

time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection.

Based on these analyses and assumptions, we estimate an annual burden of 38,480 hours (2,960 submissions/yr × 13 hours per response) at a cost of $1,495,332.80 (38,480 hr × $38.86/hr), rounding to $1,495,333.

TABLE 78: Annual Requirements and Burden for Requiring Certain Manufacturers to Report Drug Pricing Information for Part B

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§§ 414.802, 414.806 (Requiring Certain Manufacturers to Report Drug Pricing Information for Part B)	0938-0921	740	2,960	13	38,480	38.86	1,495,333

We solicited comment on the likely costs or savings manufacturers from this provision.

We did not receive public comments on the analyses or the estimates. We are finalizing the definition of the term ''drug'' at § 414.802 as proposed.

2. ICRs Regarding the Medicare Shared Savings Program (Sections VI.F.8.a. and b.)

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out burden under the authority of the PRA. Please refer to sections VI.F.8.a. and b. of this final rule for a discussion of the impacts associated with this rule's changes to the Shared Savings Program's quality reporting requirements, quality performance standard, beneficiary assignment methodology, repayment mechanism requirements, requirements for disclosure of prior participation in the Shared Savings Program by the ACO, ACO participants, and ACO providers/suppliers, requirements for ACOs to submit sample ACO participant agreements and executed ACO participant agreements to CMS, and beneficiary notification requirements.

3. ICRs Regarding the Medicare Ground Ambulance Data Collection System (§ 414.626)

Section 1834(l)(17) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(l)(17)(I) of the Act states that the PRA does not apply to the collection of information required under section 1834(l)(17) of the Act. Accordingly, this collection of information section does not set out any burden for the proposed provisions that we are finalizing in this final rule. Please see section VI. of this final rule for a discussion of the estimated impacts.

We received no public comments on the collection of information requirements for the Medicare Ground Ambulance Data Collection System. We are finalizing as proposed.

4. ICRs Regarding the Medicare Diabetes Prevention Program (MDPP) Expanded Model (§§ 410.79, 414.84, 424.205, and 424.502)

In section III.L. of this final rule, we finalize policies necessary to shorten the Medicare Diabetes Prevention Program (MDPP) services period to one (1) year on a prospective basis, amend and update the amount of the performance payments for the Core Sessions and Core Maintenance Sessions, and make changes to eliminate the ongoing maintenance phase for MDPP beneficiaries who start MDPP set of services on or after January 1, 2022. In addition, we are finalizing a provision to waive the provider enrollment Medicare application fee for all organizations enrolling in Medicare as MDPP suppliers during the MDPP expanded model on or after January 1, 2022. We expect the finalized policies will increase the number of eligible organizations willing to enroll as MDPP suppliers. We also anticipate that the shortened service period will make MDPP more marketable to beneficiaries in that their time commitment is reduced and less intimidating with a 12-month vs. 24-month service period. We anticipate the shortened MDPP services period will reduce the recordkeeping burden for suppliers. Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model, from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the provisions. Please see section VI. of this final rule for a discussion of the estimated impacts.

5. ICRs for Prepayment and Post-Payment Definitions, Documentation Request Timeframes, and Payment Denials for Noncompliance With Documentation Requests (§§ 405.902, 405.903, 405.929, and 405.930)

In section III.N.2. of this final rule, we proposed to: (1) Define key terms including ''additional documentation,'' ''additional documentation request,'' ''post-payment medical review,'' and ''prepayment medical review;'' (2) codify contractors' authority to request additional documentation for prepayment and post-payment review within established timeframes; (3) codify timeframes for response to requests for documentation; (4) codify result of a failure to comply with prepayment or post-payment documentation request(s) by a provider or supplier, specifically denial of payment.

The codification of contractor authority to request additional documentation for post-payment reviews, associated timeframes, and resulting denials for failure to comply with these requests is not subject to the PRA per 5 CFR 1320.3(h)(9). The request for additional documentation will be on a case-by-case basis using non-standardized follow-up questions.

With regard to the (1) definitions for ''additional documentation'' and ''additional documentation request,'' ''post-payment medical review,'' and ''prepayment medical review;'' (2) the codification of contractor authority to

request additional documentation for pre-payment reviews; (3) the associated provider and supplier timeframes for providing additional documentation from the pre-payment reviews; and (4) possible denials for failure to comply with these requests, we do not expect that these proposals will affect our information collection burden estimates because these policies do not require providers or suppliers to submit any more documentation to CMS than what is already approved by OMB under control number 0938–0969 (CMS–10417). The regulations simply codify certain requirements by clarifying definitions, timeframes, and results for noncompliance.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

6. ICRs Regarding the Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan (§ 423.160(a))

Pending our finalization of the following provisions, the changes will be subject to the standard PRA process under OMB control number 0938–1396 (CMS–10755) to give stakeholders optimal opportunity to comment on our burden for this provision, given how dynamic the burden for EPCS is. The standard PRA process includes the publication of 60- and 30-day **Federal Register** notices that will provide the public with opportunities for public review and comment. We expect to publish the 60-day notice shortly after the publication of the final rule.

The purpose of this provision is to continue to implement section 2003 of the SUPPORT for Patients and Communities Act, which requires that the prescribing of a Schedule II, III, IV, or V controlled substance under Medicare Part D be done electronically in accordance with an electronic prescription drug program beginning January 1, 2021, subject to any exceptions, which HHS may specify. We refer readers to the CY 2021 PFS final rule (85 FR 84472) for our previously finalized requirements and burden for the first phase of implementing this statutory mandate, which required prescribers to use the NCPDP SCRIPT 2017071 standard for Electronic Prescription for Controlled Substances (EPCS) prescription transmissions. The purpose of this final rule is to delay the date for CMS to begin taking compliance actions, implement certain exceptions to the mandate, and implement a compliance threshold.

In the CY 2021 PFS final rule, we estimated that the one-time burden to implement this provision would be 828,750 hours (165,750 prescribers * 6 hr) at a cost of $36,418,590 (994,500 hr * $36.62/hr). We arrived at the estimate of 165,750 prescribers having to implement EPCS based on taking the 425,000 Part D prescriber practices, and decreasing that amount by 60 percent to account for the 60 percent of prescriber practices that likely already had EPCS in place by January 1, 2021. Based on our current PDE data, we estimate that 70 percent of Part D prescribers already conduct EPCS,[261] which would leave 30 percent of Part D prescribers that would have to implement EPCS, if we did not propose any exceptions to this mandate. We also proposed that prescribers writing prescriptions for beneficiaries in long term care facilities will have an extension for those prescriptions until January 1, 2025 along with the following exceptions to the EPCS mandate: (1) For prescriptions issued when the prescriber and dispensing pharmacy are the same entity; (2) cases where prescribers issue only a small number of Part D; (3) cases where a prescriber's NCPDP database address is in a geographic service area of an emergency or disaster declared by a Federal, State or local government entity; and (4) cases where a prescriber has received a CMS-approved waiver. These exceptions will result in fewer prescribers being required to conduct EPCS.

Based on our PDE data, we believe that these exceptions will substantially decrease the number of prescribers having to implement EPCS as a result of this regulation. We have listed the exceptions and the estimated number of prescribers falling under each exception in Table 79.[262] We do not anticipate that our proposal to include a compliance threshold of 70 percent will have any material effect on the impact of this provision. The reason for this is that based on our PDE data and conversations with prescribers, we believe that the 30 percent or less of the time that prescribers are not e-prescribing is because they are unable to e-prescribe, so they would have applied for a waiver. Although there are sometimes scenarios where beneficiaries may request that their prescriptions not be transmitted electronically, it appears as though those circumstances are not enough to make a material impact, since beneficiaries often change their views when they are given countervailing reasons that the prescriptions should be transmitted via EPCS.

[261] This information is based on PDE data pulled on April 6, 2021.

[262] This information is based on PDE data pulled on April 6, 2021.

TABLE 79: Number of Affected Prescribers by Exception Type

Exception	Estimated Number of Impacted Prescribers*
Cases where the Practitioner and Dispensing Pharmacy Are the Same Entity	75,927
Prescribers who Prescribe fewer than 100 Part D controlled substance prescriptions per year	470,000
Cases where Prescriber is in a Disaster or Emergency Area	30,964
Cases where Prescriber Applies for a Waiver	100
Individuals in Long Term Care Facilities	5,773
Total Number of Impacted Prescribers	582,764

* This information is based on PDE data pulled on April 6, 2021.

Table 79 gives our estimate of the number of prescribers affected by our exceptions broken down by the type of exception. As shown in Table 79, we estimate that our exceptions will exempt approximately 582,664 prescribers from the EPCS requirement, which consistutes approximately 38 percent of prescribers, since there are an estimated 1,548,221 Part D prescribers [263] (582,664/1,548,221). Since the number of exempted prescribers from this mandate far exceeds the number of prescribers who currently do not e-prescribe controlled substances in Part D, we do not expect that the total number of Part D prescribers who electronically prescribe controlled substances will increase following our implementation of this mandate. As a result, we do not believe there will be a measurable impact to the prescriber community as a whole, once this provision is finalized.

However, for individual prescribers who have to implement this mandate, we expect that the implementation costs will be the same amounts that we finalized in the CY 2021 PFS final rule. Based on the modeling that we have seen, we have found that EHR companies provide the initial set-up of e-prescribing software free of charge, provided the prescribers pay the per transaction cost of $1.88 mentioned in the CY 2021 PFS final rule. Based on the comments received on our CY 2021 PFS proposed rule, we understand that implementing EPCS can lead to technological glitches, and then fixing those issues. We understand that the EHR companies remedy the issues free of charge. However, we also understand that such fixes take time away from the medical office staff. We estimate that such fixes would take the staff approximately 1 extra hour from the estimate given in our CY 2020 PFS proposed rule, when averaged across all prescribers. As a result, we have changed our one-time burden estimate of e-prescribing set-up from 5 hours to 6 hours per provider, which means a total of 994,500 hours (165,750 prescribers * 6 hr) at a cost of $36,617,490 (994,500 hr * $36.82/hr), since we anticipate that this work will be completed by an Administrative Support Worker. In this regard, the impact of this rule is plus 1 hour per response, plus 165,750 hours (165,750 prescribers × 1 hr/response), and $6,102,915 (165,750 hr × $36.82/hr).

We proposed that prescribers have the ability to apply for a waiver from the EPCS requirement, should they be facing circumstances beyond their control that prevent them from e-prescribing, and these circumstances are not the result of a natural disaster or emergency. Due to the high prevalence of EPCS, the miniscule compliance actions that we proposed for non-compliance, and the number of prescribers that we expect to exempt from the mandate, we only expect to receive about 100 attestations per year. Although we proposed certain fields be in this attestation, these were minimal, and there was no accompanying documentation required. (Note, as outlined in section II.Q. of this final rule, to meet the standard for a waiver, prescribers must provide documentation showing the existence of a circumstance beyond their control and that such a circumstance prevents them from conducting EPCS.) We expect that each attestation will take 10 minutes (0.1667 hr) for a prescriber at $217.32/hr to complete. In aggregate, CMS estimates an annual burden for filling out attestations of 16.67 hours (100 attestations × 0.1667 hr) at a cost of $3,622.72 (16.67 hr × $217.32/hr). In addition, we solicit comment on any other potential information collection implications.

We received no comments on our proposed burden estimates and assumptions, and have finalized our provision as proposed. As a result, we are finalizing our burden estimates and assumptions as proposed.

[263] This information is based on PDE data pulled on April 6, 2021.

TABLE 80: Burden for Electronic Prescribing of Controlled Substances Requirement

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§ 423.160(a) (Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan)	0938-1396	100	100	0.1667	16.67 hours	217.324	3,622.72

7. ICRs Regarding Open Payments Provisions Included in the CY 2022 PFS (42 CFR Part 403)

The following requirement and burden changes will be submitted to OMB for approval under control number 0938–1237 (CMS–10495). The following estimates burden changes to the Open Payments final rule at §§ 403.900 through 403.914 in this final rule.

a. Payment Context Field for Teaching Hospitals

The mandatory context field is a new requirement for reporting entities submitting and attesting to records that are attributed to teaching hospitals only. The field will be freeform text entry. We estimate that for each applicable manufacturer and applicable group purchasing organization (GPO), the inclusion of this field for collection and reporting activities will average an additional 6 total hours. The applicable instrument for these activities in the current PRA package is the ''General-Research-Ownership Submission Data Elements''. At the support staff cost per FTE of $42.40/hr, this will increase costs by $254.40 (6 hr × $42.40/hr) per applicable manufacturer or applicable GPO submitting teaching hospital records. However, because we anticipate fewer disputes due to this field, we believe it will decrease dispute resolution by 2 total hours for support staff at $42.40/hr respectively, reducing costs by $84.80 (2 hr × $42.40/hr) per applicable manufacturer and applicable GPO. This results in a net increase in burden for each applicable manufacturer and applicable GPO submitting teaching hospital records of $169.60 ($254.40 − $84.80). In Program Year (PY) 2019, 794 applicable manufacturers and applicable GPOs submitted at least one teaching hospital record, meaning the increase in burden will be a total of 3,176 hours (4 hours × 794 reporting entities) at a cost of $42./40/hr or a total of $134,662.40 (3,176 × $42.40).

In addition, we estimate this will reduce teaching hospital dispute resolution estimates by 2 hours per support staff FTE at $37.82/hr or $75.64 (2 hr × $37.82/hr) per teaching hospital with records attributed to them. In PY 2019, 1,202 hospitals had record attributed to them, so for teaching hospitals we estimate a total burden reduction of 2,404 hours at a cost of $90,919.28 (2,404 × $75.64).

In aggregate, we estimate an annual burden of 772 hours (3,176 − 2,404) at a cost of $43,743.12 ($134,662.40 − $90,919.28).

b. Optional Annual Recertification

The annual recertification is voluntary for applicable manufacturers or applicable group purchasing organizations. We approximate that 15 percent of applicable manufacturers and group purchasing organizations, or 240 reporting entities (0.15 [1,595 applicable manufacturers and applicable GPOs]) will complete and submit the proposed optional annual recertification. We anticipate that it will be a simple check box form to be included in the AM (Attestation) and GPO (Attestation) Annual IC Requirement and the ''Attestation and Assumptions Screen Shots'' Instrument in the existing PRA package. We estimate that it will take 0.5 hours at $42.40/hr for support staff to complete and submit the recertification. In aggregate, we estimate an added annual burden of 120 hours (240 entities × 0.5 hr/response) at a cost of $5,088 (120 hr × $42.40/hr).

c. Defining a Physician-Owned Distributorship (42 CFR 403.902)

The new definition is not subject to the PRA since it will not revise, add, or remove any collection of information requirements or burden.

d. Disallowing Record Deletion Without Reason (§ 403.904(a)(3))

This provision clarifies that entities are not permitted to delete records without reason once their timeliness, completeness, and accuracy has been attested to. In order to ensure compliance with this requirement, a freeform text dialogue box will be added to the system when records are deleted that asks the applicable manufacturer or GPO to input a reason for the deletion. This will be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the ''Open Payments User Guide'' Instrument in the existing PRA package. We anticipate that this will take an average of 2 hours at $42.40/hr to input a reason for the deletion. In aggregate, we estimate an added annual burden of 80 hours (40 applicable manufacturers or GPOs deleting records annually × 2 hr/response) at a cost of $3,392 (80 hr × $42.40/hr).

e. Disallow Publication Delays of General Payments

A very small number of general payments are delayed from publication by reporting entities every year, and these records will simply either be reported as research records instead, or not delayed at all. Therefore, we anticipate a negligible burden for this provision.

f. Short Term Loans (§ 403.902)

This provision is merely a clarification of an existing requirement in regulation text. The purpose of this language is to clarify that the exemption for short-term loans from reporting requirements only applies for loans of less than 91 cumulative days per calendar year. In other words, multiple short-term loans in a calendar year will still meet reporting requirements if they add up to 91 days or greater. We do not believe this provision will change reporting behavior, and therefore do not anticipate an increase in burden.

g. Remove General Ownership Records

Currently the Open Payments system allows for a reporting entity to submit either a general record with a nature of payment category of ownership, or an ownership and investment interest record. For Program Years 2015–2019, approximately 92 applicable

manufacturers and GPOs reported records with the nature of payment category of ownership. Since reporting these general records as ownership records will require the addition of two additional pieces of information, we anticipate that it will take these 92 entities an additional 3 hours at $42.40/hr to report the two extra fields. In aggregate, we estimate an added annual burden of 276 hours (92 entities × 3 hr/response) at a cost of $11,702 (276 hr × $42.40/hr). This will be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the ''Open Payments User Guide'' Instrument in the existing PRA package.

h. Updated Contact Information (§ 403.908(c)(3))

This provision creates a requirement for reporting entities to keep their contact information up to date with CMS. The ability to communicate with a reporting entity is important because CMS may need to contact the entity in the case of perceived issues with the records. Applicable manufacturers and applicable GPOs will only be required to update their contact information if the two contacts provided become obsolete due to a change in the organization. This will also only apply to entities that do not have records to report for 2 years after a program year in which they reported. Therefore, we anticipate that it will only affect approximately 30 applicable manufacturers and applicable group purchasing organizations. We estimate that it will take 0.5 hours at $42.40/hr to update the contact information. In aggregate, we estimate an added annual burden of 15 hours (30 entities × 0.5 hr/response) at a cost of $636 (15 hr × $42.40/hr). This will be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the ''Open Payments User Guide'' Instrument in the existing PRA package.

i. Summary

TABLE 81: Open Payments Burden Changes

	Total Increase in Burden	Total Decrease in Burden	Total
Teaching Hospital Contact Field	$201,993.60	$158,250.48	$43,743.12
Optional Annual Recertification	$5,088.00	$0.00	$5,088.00
Defining a Physician Owned Distributorship	$0.00	$0.00	$0.00
Disallowing Record Deletion Without Reason	$3,392.00	$0.00	$3,392.00
Disallow Publication Delays of General Payments	$0.00	$0.00	$0.00
Short Term Loans	$0.00	$0.00	$0.00
Remove General Ownership Records	$11,702.00	$0.00	$11,702.00
Updated Contact Information	$636.00	$0.00	$636.00
			$64,561.12

8. The Quality Payment Program (QPP) (42 CFR Part 414 and Section IV. of This Final Rule)

The following QPP-specific ICRs reflect this final rule's policy changes as well as adjustments to the policies that have been finalized in the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), the CY 2019, CY 2020, and CY 2021 PFS final rules (83 FR 59452, 84 FR 62568 and 85 FR 84472, respectively).

a. Background

(1) ICRs Associated With MIPS and Advanced APMs

There is a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The MIPS ICRs consist of: Registration for virtual groups (see section V.B.8.b of this final rule); QCDR self-nomination applications and other requirements (see section V.B.8.c.(2) of this final rule); qualified registry self-nomination applications and other requirements (see section V.B.8.c.(3) of this final rule); CAHPS survey vendor applications (see section V.B.8.c.(4) of this final rule); Health IT vendors (see section V.B.8.c.(5) of this final rule); Open Authorization credentialing and token request process (see section V.B.8.d of this final rule); Quality Payment Program Identity Management Application Process (see section V.B.8.e.(3) of this final rule); quality performance category data submission by Medicare Part B claims collection type (see section V.B.8.e.(4) of this final rule), QCDR and MIPS CQM collection type (see section V.B.8.e.(5) of this final rule), eCQM collection type (see section V.B.8.e.(6) of this final rule), MVP Quality submission (see section V.B.8.e.(7)(a)(iii) of this final rule), and CMS Web Interface collection type (see section V.B.8.e.(8) of this final rule); CAHPS for MIPS survey beneficiary participation (see section V.B.8.e.(9) of this final rule); group registration for CMS Web Interface (see section V.B.8.e.(10) of this final rule); group registration for CAHPS for MIPS survey (see section V.B.8.e.(11) of this final rule); MVP registration (see section V.B.8.e.(7)(a)(i) of this final rule); subgroups registration (see section V.B.8.e.(7)(a)(ii) of this final rule); all for quality measures (see section V.B.8.f of this final rule); reweighting applications for Promoting Interoperability and other performance categories (see section V.B.8.g.(2) of this final rule); Promoting Interoperability performance category data submission (see section V.B.8.g.(3) of this final rule); call for Promoting Interoperability measures (see section V.B.8.h of this final rule); improvement activities performance category data submission (see section V.B.8.i of this final rule); nomination of improvement activities (see section V.B.8.j of this final rule); nomination of MVPs (see section

V.B.8.k of this final rule); and opt-out of Physician Compare for voluntary participants (see section V.B.8.o of this final rule).

The ICRs for Advanced APMs consist of: Partial Qualifying APM Participant (QP) election (section V.B.8.m of this final rule); Other Payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes (sections V.B.8.n.(1) and V.B.8.n.(2) of this final rule); and submission of data for QP determinations under the All-Payer Combination Option (section V.B.8.n.(3) of this final rule).

(2) Summary of Quality Payment Program Changes: MIPS

We have included the change in estimated burden for the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years due to the finalized policies and information collections in this final rule. The finalized policies in this rule impact the burden estimates for the CY 2022 and CY 2023 MIPS performance periods/ 2024 and 2025 MIPS payment years. However, our currently approved burden estimates for the CY 2021 performance period (85 FR 84958 through 84998) approved by OMB on May 28, 2021, included estimated burden due to finalized policies and assumptions for the CY 2021 and CY 2022 performance periods/2023 and 2024 MIPS payment years. The currently approved estimated burden for the package does not include the CY 2023 performance period/2025 MIPS payment year. To understand the burden implications of the policies finalized in this final rule relative to the current package that was approved by OMB on May 28, 2021:

- We have subtracted the burden for the policies and information collections set forth for the CY 2021 performance period/2023 MIPS payment year in the CY 2021 PFS final rule (see Table 128).
- We have revised our burden estimates for the CY 2022 performance period/2024 MIPS payment year due to the finalized policies in this rule and changes for continuing the policies and information collections set forth in the CY 2021 PFS final rule into the CY 2022 performance period/2024 MIPS payment year (see Table 129).
- We are setting forth new burden for the CY 2023 performance period/2025 MIPS payment year (see Table 130), meaning that there will be no currently approved figures for these estimates.

In the CY 2022 PFS proposed rule (86 FR 39479 through 39528), we compared our proposed burden estimates for the CY 2022 and 2023 performance periods/ 2024 and 2025 MIPS payment years to the CY 2022 performance period/2024 MIPS payment year in the CY 2021 PFS final rule (85 FR 84994). We believe that using the approach described above for the final rule will help readers easily understand and follow the changes in the estimated burden due to the policies and assumptions in the CY 2022 PFS final rule relative to the currently approved burden.

The following nine MIPS ICRs show changes in burden due to the finalized policies in this rule: (1) QCDR self-nomination applications; (2) Qualified Registry self-nomination applications; (3) Quality performance category data submission by QCDR and MIPS CQM collection type; (4) Quality performance category data submission by eCQM collection type; (5) Group registration for CMS Web Interface; (6) CMS Web Interface submission burden; (7) Reweighting applications for Promoting Interoperability and other performance categories; (8) Promoting Interoperability performance category data submission; and (9) Nomination of improvement activities. In aggregate, we estimate the finalized policies will result in a net increase in burden of 3,805 hours and $358,305 for the CY 2022 performance period/2024 MIPS payment year. The remaining changes to our currently approved burden estimates are adjustments due to the revised burden assumptions based on the updated data available at the time of publication of this final rule.

We have also added 3 new ICRs (MVP Registration, MVP Quality Submissions, and Subgroups Registration) for the associated burden related to the policies for implementation of MVPs and subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. The MVP and subgroup registration ICRs reflect the burden associated with the MVP and subgroup registration requirements described in section IV.A.3.b(4)(f) of this rule. The MVP quality submission ICR reflects the change in burden associated with the requirements for the quality performance category of MVPs described in section IV.A.3.b(4)(d)(ii) of this rule.

With these new ICRs and the other policy changes discussed for the CY 2022 performance period/2024 MIPS payment year, we estimate the finalized policies will result in a net increase in burden of 1,383,049 hours and $139,501,770 for the CY 2023 performance period/2025 MIPS payment year. As discussed above, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no currently approved estimates for comparison.

We are not making any changes or adjustments to the following ICRs: Registration for virtual groups; CAHPS survey vendor applications; Quality Payment Program Identity Management Application Process; group registration for CAHPS for MIPS survey; CAHPS for MIPS survey beneficiary participation; Open Authorization (OAuth) Credentialing and Token Request Process; nomination of MVPs and call for Promoting Interoperability measures. See section V.B.8. of this final rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted by two primary factors. First, we are unable to predict with absolute certainty who will be a QP for the CY 2022 performance period/2024 MIPS payment year. New eligible clinician participants in Advanced APMs who become QPs will be excluded from MIPS reporting requirements and payment adjustments, and as such, are unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity's eligible clinicians may not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict what Partial QPs, who can elect whether to report to MIPS, will do in the CY 2022 performance period/2024 MIPS payment year compared to the CY 2019 performance period/2021 MIPS payment year, and therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data. Additionally, we will continue to update our estimates annually as data becomes available.

In the 2022 PFS proposed rule (86 FR 39480), we discussed a recent JAMA article (Khullar, et al., 2021) [264] which included new data on the burden involved in submitting data for the Quality Payment Program. We have chosen not to include this data in our estimates because of the small sample size included (30 TINs, half of which are APM participants, which we do not include in our estimates). In addition, the article did not indicate the time

[264] JAMA Health Forum. 2021;2(5):e210527. doi:10.10001/jamahealthforum.2021.527.

spent per activity involved in submissions for MIPS, so we are unable to determine if the totals in the article represent only the activities relevant for regulatory burden or separate the totals for the individual ICRs. We solicited comment on our assumptions for estimating the burden for clinicians submitting data for the Quality Payment Program.

We did not receive public comments regarding our burden estimates for clinicians submitting data in the Quality Payment Program. We are finalizing to not include the data from the above referenced article in our assumptions.

We made updates to our figures to correct a few technical errors that we observed in the CY 2022 PFS proposed rule.

(3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs (identified above under, ''ICRs Associated with MIPS and Advanced APMs''), the changes to currently approved burden estimates are adjustments based on updated projections for the CY 2022 performance period/2024 MIPS payment year. We did not implement any changes to the Other Payer Advanced APM identification: Eligible Clinician Initiated Process and submission of Data for QP determinations under the All-Payer Combination Option ICRs.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 82 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 82, MIPS eligible clinicians and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section unless otherwise noted. We want to note that we have included subgroups to Table 82 due to the introduction of subgroups for clinicians choosing to report MVPs or the APP in the CY 2023 performance period/2025 MIPS payment year described in section IV.A.3.b.(2)(d)(ii) of this final rule. Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 82.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. As discussed in section IV.A.3.c. of this final rule, for clinicians in APM Entities, the APM Performance Pathway is available for both ACO and non-ACOs to submit quality data. Due to data limitations and our inability to determine who will use the APM Performance Pathway versus the traditional MIPS submission mechanism for the CY 2022 performance period/ 2024 MIPS payment year, we assume ACO APM Entities will submit data through the APM Performance Pathway, using the CMS Web Interface option, and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. We also want to note that as finalized in section IV.A.3.d.(1)(d) of this final rule, we are finalizing to extend the CMS Web Interface as a collection type beyond the CY 2022 performance period/2024 MIPS payment year for clinicians participating in the Shared Savings Program. Per section 1899 of the Act (42 U.S.C. 1395jjj), submissions received from eligible clinicians in ACOs are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 PFS final rule, we described that for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the improvement activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 PFS final rule (82 FR 53841 through 53844).

BILLING CODE 4120–01–P

TABLE 82: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician*

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Promoting Interoperability Performance Category	Improvement Activities Performance Category	Other Data Submitted on Behalf of MIPS Eligible Clinicians
MIPS Eligible Clinicians and Other Eligible Clinicians Voluntarily Submitting MIPS Data, Participating in Shared Savings Program, and other MIPS APMs that use the APM Performance Pathway for model measures (CMS Web Interface will be available to only clinicians in ACOs after the CY 2022 performance period/2024 MIPS payment year.)	As virtual group, group, subgroup, individual clinicians, or APM Entity.[a]	As virtual group, group, subgroup, individual clinicians, or APM Entity. Certain types of MIPS eligible clinicians are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category. Clinicians who submit an application and are approved for significant hardship or other exceptions are also eligible for a zero percent weighting. Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [The burden estimates for this final rule assume group TIN-level reporting].[b]	As virtual group, group, subgroup, or individual clinicians. MIPS APMs do not submit information. CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM.[c]	Groups electing to use a CMS-approved survey vendor to administer CAHPS must register. Groups electing to submit via CMS Web Interface for the first time must register. MVP participants electing to submit data for the measures and activities in an MVP must register. MIPS APMs electing the APM Performance Pathway. **(CMS Web Interface will be available to only clinicians in ACOs after the CY 2022 performance period/2024 MIPS payment year.)** APM Entities will make Partial QP election for participating eligible clinicians. Virtual groups must register via email.[d]

* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

[a] Submissions by the ACO are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. Section 1899 of the Act (42 U.S.C. 1395jjj) states that the Shared Savings Program is not subject to the PRA.

[b] Both group TIN and individual clinician Promoting Interoperability data will be accepted. If both group TIN and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. The TIN/NPI scores are then aggregated for purposes of calculating the APM Entity score.

[c] The burden estimates for this final rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score. APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent (§ 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

[d] Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.

BILLING CODE 4120–01–C

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules, the CY 2019, CY 2020, and CY 2021 PFS final rules, and continued in this final rule create some additional data collection requirements not listed in Table 82. These additional data collections, some of which are currently approved by OMB under the control numbers 0938–1314 (Quality Payment Program, CMS–10621) and 0938–1222 (CAHPS for MIPS, CMS–10450), are as follows:

Additional ICRs Related to MIPS Third-Party Intermediaries (See Section V.B.8.c)

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and

83 FR 59998 through 60000) (OMB 0938–1314).

- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938–1314).
- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938–1222).
- Open Authorization Credentialing and Token Request Process (New) (OMB 0938–1314) (see section V.B.8.d).

Additional ICRs Related to the Data Submission and the Quality Performance Category (See Section V.B.8.e)

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938–1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938–1314).

Additional ICRs Related to the Promoting Interoperability Performance Category (See Section V.B.8.g)

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938–1314).

Additional ICRs Related to Call for New MIPS Measures and Activities (See Sections V.B.8.f, V.B.8.h, V.B.8.j. and V.B.8.k)

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938–1314).
- Call for new Promoting Interoperability measures (83 FR 60014 through 60015) (OMB 0938–1314).
- Call for MIPS quality measures (83 FR 60010 through 60011) (OMB 0938–1314).
- Nomination of MVPs (OMB 0938–1314).

Additional ICRs Related to MIPS (See Section V.B.8.o)

- Opt out of performance data display on Physician Compare for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938–1314).

Additional ICRs Related to APMs (See Sections V.B.8.m and V.B.8.n)

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938–1314).
- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938–1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule is not implementing any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938–1343 (CMS–10652). Consequently, we are not making any changes to the virtual group election process under that control number.

c. ICRs Regarding Third-Party Intermediaries (§ 414.1400)

The finalized requirements and burden associated with this rule's data submission changes related to qualified registries and QCDRs will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In section IV.A.3.h. of this rule, we are finalizing policies related to the third-party intermediary regulations at § 414.1400. Specifically, we are finalizing: (1) Requirement for third-party intermediaries to submit MIPS data for APM Entities; (2) requirement for QCDRs and qualified registries to support MVPs, QCDRs and qualified registries may also support the APP; (3) requirement for all QCDRs and qualified registries to support subgroup reporting; (4) requirements for approved QCDRs and qualified registries that have not submitted performance data; and (5) new QCDR measure rejection criteria. The burden associated with each of these topics is discussed separately below for qualified registries, QCDRs, and survey vendors.

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nomination process annually.[265] The processes for self-nomination for entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

(2) QCDR Self-Nomination Applications

As described below, in this rule we are adjusting the number of self-nomination applications based on current data (from 82 to 84), change the number of QCDR measures submitted for consideration by each QCDR at the time of self-nomination (from 2 to 12), and adjust the average time required to submit information for each QCDR measure (from 2.5 hours to 0.75 hours).

(a) Self-Nomination Process and Other Requirements

In section IV.A.3.h.(1) of this rule, we are reorganizing and consolidating § 414.1400 generally. We assume that this provision does not change the existing requirements for third-party intermediaries during the self-nomination process. Therefore, we are not revising our burden estimates related to these provisions. We refer readers to § 414.1400 which states that QCDRs interested in submitting MIPS data to us on behalf of a MIPS eligible clinician, group, or virtual group will need to complete a self-nomination process to be considered for approval to do so. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final rule (82 FR 53906 through 53908), CY 2019 PFS final rule (83 FR 59998 through 60000), the CY 2020 PFS final rule (84 FR 63116 through 63121) and the CY 2021 PFS final rule (85 FR 84964 through 84969) for our previously finalized requirements and burden for self-nomination of QCDRs and nomination of QCDR measures.

In section IV.A.3.h.(2)(a) of this rule, we are finalizing to add APM Entities to § 414.1400(a)(1), and expand the general participation requirements of third-party intermediaries, to third-party intermediaries reporting to MIPS on behalf of APM Entities reporting to MIPS in order to align reporting requirements for all participants in

[265] As stated in the CY 2019 PFS final rule (83 FR 59998), health IT vendors are not included in the burden estimates for MIPS.

MIPS. We are also finalizing that beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP, and MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. As finalized in the CY 2017 PFS final rule, third-party intermediaries currently support MIPS data submission on behalf of eligible clinicians (81 FR 77016). APM Entities have historically used third party intermediaries for submitting their quality measures to their APMs. Additionally, QCDRs, qualified registries and health IT vendors are required under existing § 414.1400(a)(1) to submit data for the quality, improvement activities, and Promoting Interoperability performance categories in MIPS. Therefore, we anticipate no additional steps being added to the self-nomination process as a result of this provision for third-party intermediaries to submit MIPS data on behalf of APM Entities, and to support measures and activities in MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. For this final rule, we assume that there will be no impact on the time required for QCDRs to complete either the simplified or full self-nomination process because of the above provisions. Additionally, we are finalizing to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. We anticipate that at the time of self-nomination, QCDRs would be using a checkbox to indicate their compliance for the requirement to support data submission for subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. We assume that this will not impact the overall time estimated for QCDRs to submit their information at the time of self-nomination. Therefore, as discussed in the CY 2022 PFS proposed rule (86 FR 84965) we did not make any adjustments in the time required for QCDRs during the simplified or full self-nomination process because of this provision. However, we anticipate that third-party intermediaries will need to make administrative changes to their existing workflows for submission of MVPs and APP data for clinicians participating as subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to section VI.F.18.g(2)(f) of this final rule where we discuss our impact analysis.

In section IV.A.3.h.(3)(a)(iii) of this rule, to provide further clarity and to better align with the existing policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we are finalizing to codify that QCDRs, and qualified registries must conduct validation on the data they intend to submit for the applicable MIPS performance period and provide the results of the executed data validation plan by May 31st of the year following the performance period. Additionally, we are finalizing to codify a new requirement at § 414.1400(b)(3)(iv) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and may not change the plan once approved, without the prior approval of the agency. We anticipate that this provision does not make any changes to the existing data validation requirements for QCDRs and qualified registries. Through this provision, we are codifying the finalized policies related to data validation for QCDRs and qualified registries in previous rules. In the CY 2022 PFS proposed rule (86 FR 39483), we did not revise our burden estimates as a result of the above provision because the associated burden was captured in the CY 2017 PFS final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999) and submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In section IV.A.3.h(3)(a)(i) of this final rule, we are finalizing new requirements for approved QCDRs and qualified registries that have not submitted performance data. First, we are finalizing to create a new requirement at § 414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year) through the CY 2020 performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. If the QCDRs and qualified registries did not submit data, their participation plan must be submitted as part of self-nomination for the 2023 self-nomination period and must be accepted by CMS to continue to be an approved QCDR or qualified registry. We are also finalizing to codify a new requirement at paragraph § 414.1400(b)(3)(viii) to state that, beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. Under this provision, the participation plan must explain the QCDR and/or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third-party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor.

Based on our review of the existing list of approved QCDRs that did not submit performance data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year), we estimate that approximately 10 QCDRs will submit participation plans for the CY 2022 and the CY 2023 self-nomination periods. Similar to our assumptions for submission of a Corrective Action Plan (CAP) in the CY 2021 PFS final rule (85 FR 84968), we anticipate that the effort involved in developing a participation plan including the policies specified in this rule and submitting it to CMS is likely to be no more than 3 hours for a computer systems analyst at a rate of $95.22/hr. For the CY 2022 performance period/2024 MIPS payment year, we estimate an annual burden of 30 hours (3 hr × 10 participation plans) at a cost of $2,857 (30 hr × $95.22/hr) for QCDRs that will need to develop and submit a participation plan.

In section IV.A.3.h.(4) of this rule, we are finalizing to codify new requirements that if a QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. Additionally, we are finalizing to codify a new requirement in section IV.A.3.h.(4)(a)(i)(A) of this rule and add a rejection criterion at § 414.1400(b)(4)(iv)(M) to state, a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. It was finalized in the CY 2018 PFS final rule (82 FR 53813) that beginning with the CY 2018 performance period/2020 MIPS payment year, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. Additionally, in the CY 2020 PFS final rule (84 FR 63070 through 63073), we finalized the QCDR measure rejection criteria considerations. Specifically, we stated that all previously approved QCDR measures and new QCDR measures would be reviewed on an annual basis (as a part of the QCDR measure review

process that occurs after the self-nomination period closes on September 1st) to determine whether they are appropriate for the program. In the CY 2020 PFS final rule, we indicated to stakeholders that as information becomes available in future years, we will revisit our assumptions to better reflect the impact of these requirements on QCDRs and the quantity of measures annually (84 FR 63118 through 63119). As discussed in the CY 2019 PFS final rule (83 FR 60000) and CY 2020 PFS final rule (84 FR 63118), we are not accounting for QCDR measure licensing costs as part of our burden estimate.

Based on the number of QCDR measures submitted at the time of self-nomination for the CY 2021 performance period/2023 MIPS payment year, we assume that 82 QCDRs will submit 984 measures for consideration in the CY 2022 performance period/2024 MIPS payment year, approximately 12 measures per QCDR, on average. We anticipate that out of the 984 measures, 820 measures will be existing or borrowed measures, approximately 10 measures submitted per QCDR self-nomination application. The remaining 104 measures will be new measures, approximately 2 measures on average per QCDR.

Using the above assumption that each QCDR submitting measures for approval during the self-nomination process will submit approximately 12 measures (10 existing or borrowed measures + 2 new measures), we estimate an increase of 10 measures from the currently approved estimate of 2 measures per QCDR. The estimated increase in the total number of measures submitted by a QCDR at the time of self-nomination is due to the inclusion of the existing or borrowed QCDR measures in our assumptions. Additionally, we anticipate that less information is needed for a QCDR to submit an existing or borrowed measure for approval, therefore, we estimate that the time needed for a QCDR to submit an existing or borrowed measure is 0.5 hours, independent of the selection of the simplified or full self-nomination process. Consistent with our assumption in the CY 2020 PFS final rule (84 FR 63119), we continue to estimate that each QCDR will require 2 hours to submit a new QCDR measures for approval, independent of the selection of the simplified or full self-nomination process. To account for the difference in the time for submission of new vs existing QCDR measures for approval, we are using the weighted average to estimate the time required for QCDR measure submission at the time of self-nomination. Therefore, we assume that the weighted average of the time required for each QCDR to submit a new or existing or borrowed measure for approval during the self-nomination process is 0.75 hours [((2 new measures × 2 hours) + (10 existing or borrowed measures × 0.5 hours))/total # of measures (12)]. Based on the above assumptions, we are finalizing to revise our estimates in the amount of time required for a QCDR to submit measures during the self-nomination process from a total of 2 hours to approximately 0.75 hours, a decrease of 1.75 hours from the currently approved estimated burden per QCDR measure submission.

In the CY 2019 PFS final rule, we estimated that it would take 0.5 hours and 3 hours for a QCDR to submit all the required information during the simplified and full self-nomination process, respectively (83 FR 59999). Based on our experience with the amount of time needed for QCDRs during the 2020 self-nomination period, we assume that the estimated time of 3 hours per QCDR for a full self-nomination process is an overestimate and therefore, are adjusting our estimated time required for the QCDR full-self-nomination process to 2.5 hours, a decrease of 0.5 hours. We are not making any adjustments in the amount of time needed for simplified self-nomination process.

For this final rule, we are adjusting the number of QCDRs that submitted applications for self-nomination from 90 to 84 based on the actual number of applications received during the CY 2021 self-nomination period for the CY 2022 performance period/2024 MIPS payment year, an increase of two applications from the currently approved estimate of 82. This is a decrease of 6 from the estimate of 90 provided in the CY 2022 PFS proposed rule (86 FR 39484). For QCDRs that submit measures as part of their self-nomination process, while simultaneously accounting for the estimated increase in the number of existing or borrowed QCDR measures submitted with the self-nomination application and the decrease in the estimated time for the QCDR full-nomination process, we are finalizing to revise our estimated time for the QCDR self-nomination process to a minimum of 9.5 hours [0.5 hours for the simplified self-nomination process + (12 measures × 0.75 hr/measure for QCDR measure submission)] and a maximum of 11.5 hours [2.5 hours for the full self-nomination process + (12 measures × 0.75 hr/measure for QCDR measure submission)], an increase of 4 hours at a cost of $ 380.88 (4 hr × $95.22/hr) and 3.5 hours at a cost of $333.27 (3.5 hr × $95.22/hr) from the currently approved burden per respondent estimate in the CY 2021 PFS final rule (85 FR 84965).

Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84967), based on updated data for the number of QCDR applications submitted during the CY 2020 self-nomination period, we are adjusting our estimate that 18 QCDRs will submit targeted audits for the CY 2022 performance period/2024 MIPS payment year, an increase of 1 from the currently approved estimate of 17 targeted audits in the CY 2021 PFS final rule (85 FR 84965). This is a decrease of 2 compared to our estimate of 20 targeted audits in the CY 2022 PFS proposed rule (86 FR 39484). Using the currently approved unchanged burden per respondent estimate, the estimated burden associated with QCDRs completing targeted audits will range from 90 hours (18 audits × 5 hr/audit) at a cost of $8,570 (18 audits × $476.10/audit) for the simplified self-nomination process to 180 hours (18 audits × 10 hr/audit) at a cost of $17,140 (18 audits × $952.20/audit) for the full self-nomination process (see Table 68 for the cost per audit). We assume that this would adjust our burden estimates for targeted audits by +5 hours (+1 respondents × 5 hr/audit) at a cost of $476 (5 hrs × $95.22/hr) and +10 hours (+1 respondents × 10 hr/audit) at a cost of $952 (10 hrs × $95.22/hr) for the simplified and full self-nomination process, respectively. Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered ''qualified'' to submit quality measures results and numerator and denominator data on behalf of MIPS eligible clinicians.

As shown in Table 83, we assume that the staff involved in the QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of $95.22/hr. Using the change in the number of respondents and the estimated time per respondent for QCDRs that submit measures for approval during the self-nomination process, the annual burden for the simplified and full-self nomination process will range from 798 hours (84 QCDRs × 9.5 hr) to 966 hours (84 QCDRs × 11.5 hr) at a cost ranging from $75,986 (798 hr × $95.22/hr) and $91,983 (966 hr × $95.22/hr), respectively.

As shown in Table 83, combined with our adjusted estimate of annual burden for targeted audits and the burden for submission of participation plans, we are finalizing to revise our estimated

burden for the QCDR self-nomination process, ranging from 918 hours [798 hr (84 QCDRs × 9.5 hr) + 90 hr (18 audits × 5 hr) + 30 hr (10 participation plans × 3 hr)] at a cost of $87,413 [$75,986 (798 hr × $95.22/hr) + $8,570 (18 audits × $476.10/audit) + $2,857 (30 hr × $95.22/hr)] for a simplified self-nomination process to 1,176 hours [966 hr (84 QCDRs × 11.5 hr) + 180 hr (18 audits × 10 hr) + 30 hr (10 participation plans × 3 hr)] at a cost of $111,980 [$91,983 (966 hr × $95.22/hr) + $17,140 (18 audits × $952.20/audit) + $2,857 (30 hr × $95.22/hr)] for the full self-nomination process.

BILLING CODE 4120–01–P

TABLE 83: Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Minimum	Maximum
# of QCDR Simplified Self-Nomination Applications submitted (a)	84	0
# of QCDR Full Self-Nomination Applications submitted (b)	0	84
Total Applications (c)	**84**	**84**
Annual Hours Per QCDR for Simplified Process (d)	9.5	0
Annual Hours Per QCDR for Full Process (e)	0	11.5
Total Annual Hours for Self-nomination (f) = (a) * (d) and (b) * (e)	**798**	**966**
# of Hours per Completion of Targeted Audit (g)	5	10
Total Annual Hours for Completion of 18 Targeted Audits (h)	**90**	**180**
# of Hours per Submission of Participation Plan (i)	3	3
Total Annual Hours for Submission of 10 Participation Plans (j)	**30**	**30**
Total Annual Time (Hours) (k) = (f) + (h) + (j)	**918**	**1,176**
Cost Per Simplified Process Per QCDR (@ computer systems analyst's labor rate of $95.22/hr) (l) = (d) * $95.22/hr	$904.60	$904.60
Cost Per Full Process Per QCDR (@ computer systems analyst's labor rate of $95.22/hr) (m) = (e) * $95.22/hr	$1,095.03	$1,095.03
Cost Per Targeted Audit (@ computer systems analyst's labor rate of $95.22/hr) (n) = (h) * $95.22/hr	$476.10	$952.20
Cost Per Participation Plan (@ computer systems analyst's labor rate of $95.22/hr) (o) = (j) * $95.22/hr	$285.70	$285.70
Total Annual Cost (l) = (a) * (l) + (h) * 18 + (0) * 10 (min) and (b) * (l) + (h) * 18 + (0) * 10 (max)	**$87,413**	**$111,980**

As shown in Table 84, for the CY 2022 performance period/2024 MIPS payment year, independent of the change to our per response time estimate, the estimated increase in 2 respondents from the currently approved 82 respondents to 84 results in an increase of between +19 hours (+2 respondents × 9.5 hrs/respondent for the simplified self-nomination process) and +23 hours (+ 2 respondents × 11.5 hrs/respondent for the full self-nomination process) at a cost of between +$1,809 (+2 respondents × $904.60/respondent for the simplified self-nomination process) and +$2,190 (+2 respondents × $1,095.03/respondent for the full self-nomination process) (see Table 83 for the cost per QCDR).

Accounting for the change in time required for the QCDR self-nomination process results in an adjustment of between +328 hours (82 respondents × +4 hr for the simplified self-nomination process or also referred to as minimum burden) at a cost + $31,232 [82 respondents × $380.88 (+4 hr × $95.22/hr)/respondent) and +287 hours (82 respondents × 3.5 hr for the full self-nomination process or also referred to as maximum burden) at a cost of and +$27,328 (82 respondents × $333.27 (+3.5 hr × $95.22/hr)/respondent). The reason for the increase in minimum burden compared to the maximum burden is due to an increase in the change in the number of hours required for the simplified self-nomination process compared to the increase in the number of hours for the full self-nomination process.

In aggregate, when these impacts are combined with the estimate for targeted audits and participation plans discussed above, the net impact ranges between + 382 hours [19 hr (+2 respondents × 9.5 hrs/respondent) + 5 hr (+1 targeted audit × 5 hrs/audit) + 30 hr (10 participation plans × 3 hr/plan) + 328 hr (82 respondents × 4 hr)] at a cost of $36,374 ($1,809 + $476 + $2,857 + $31,232) for the simplified self-nomination process (also referred to as minimum burden) and +350 hours [23 hr (+2 respondents × 11.5 hrs/respondent) + 10 hr (+1 targeted audits × 10 hrs/audit) + 30 hr (10 participation plans × 3 hr/plan) + 287 hr (+82 respondents × 3.5 hr)] at a cost of $33,328 [$2,190 (+2 respondents × $1,095.03/respondent + $952 (10 hr × $95.22/hr) + $2,857 (30 hr × $95.22/hr) + $27,328 (82 respondents × $333.27/respondent)] for the full self-nomination process (also referred to as maximum burden) for the CY 2022 performance period/2024 MIPS payment year.

As discussed above in this section of the rule, we are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year. Therefore, we estimate the total change in burden for the QCDR self-nomination process would be 918 hours at a cost of $87,413 for the simplified self-nomination process (also referred to as minimum burden) and 1,176 hours at a cost of $111,980 for the full self-nomination process (also referred to as maximum burden). For the purposes of calculating estimated change in burden in Tables 128, 129, and 130 of this final rule, we use only the maximum burden estimate.

TABLE 84: Change in Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Minimum Burden	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	536	826	826	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 83, row (c))	918	0	1,176	1,176
Difference (c) = (b) - (a)	**+382**	**-826**	**+350**	**+1,176**
Total Currently Approved Annual Cost (d)	$51,038	$78,652	$78,652	N/A

Difference (f) = (c) - (d)	**+36,375**	**-$78,652**	**+33,328**	**+$111,980**

BILLING CODE 4120–01–C

(b) QCDR Measure Requirements

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we discussed that beginning with the CY 2018 performance period/2020 MIPS payment year and for future program years, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. Additionally, in the CY 2020 Quality Payment Program rule (84 FR 63070 through 63073) we finalized the QCDR measure rejection criteria considerations.

In section IV.A.3.h.(4)(a)(i)(A)(aa) of this rule, we are finalizing to codify a new requirement and add a rejection criterion that a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. Additionally, we are finalizing to codify new requirements that if a QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. The inactive QCDR measure owner has the option to transfer ownership of the QCDR measure to an active QCDR or agree upon terms set forth with the active QCDR allowing co-ownership of the QCDR measure. We refer readers to section IV.A.3.h.(4)(a)(i)(A) of this rule for additional details on the finalized policies for transfer of ownership of QCDR measures. This provision is to codify the existing requirements for the QCDR self-nomination process. We are not adjusting our burden estimates as result of this provision because we assume that this does not change the requirements, or the time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

Additionally, we are finalizing to codify another rejection criterion at § 414.1400(b)(4)(iv)(N) to state that, if a QCDR measure owner is not approved during a given self-nomination period, any associated QCDR measures with that QCDR will also not be approved. We are not revising our burden estimates as a result of the above provision because we assume that there will not be additional requirements for QCDRs to submit at the time of self-nomination. This is part of the measure specification requirements for QCDRs which submit measures for approval during the self-nomination process.

(3) Qualified Registry Self-Nomination Process and Other Requirements

The requirements and burden associated with this rule's data submission changes related to qualified registries will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to § 414.1400 which states that qualified registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-nomination process to be considered for approval to do so. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final rule (82 FR 53906 through 53908), CY 2019 PFS final rule (83 FR 59997 through 59998), CY 2020 PFS final rule (84 FR 63114 through 63116) and the CY 2021 PFS final rule (85 FR 84967 through 85 FR 84969) for our previously finalized requirements and burden for self-nomination of qualified registries.

In section IV.A.3.h.(1) of this rule, we are finalizing reorganization and consolidation of § 414.1400 generally. We assume that this provision does not change the existing requirements for third-party intermediaries during the self-nomination process. Therefore, we did not revise our burden estimates related to these provisions.

In section IV.A.3.h.(2)(a) of this rule, we are finalizing to add APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third-party intermediaries, to third party intermediaries reporting to MIPS on behalf of APM Entities reporting to MIPS to align reporting requirements for all participants in MIPS. We are also finalizing that beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support APP, and MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. As finalized in the CY 2017 PFS final rule, third-party intermediaries currently support MIPS data submission on behalf of eligible clinicians (81 FR 77016). APM Entities have historically used third party intermediaries for submitting their quality measures to their APMs. Additionally, QCDRs, qualified registries and health IT vendors are required under existing § 414.1400(a)(1) to submit data for the quality, improvement activities, and promoting interoperability performance categories in MIPS. Similar to our discussion for QCDRs above, we anticipate no additional steps being added to the qualified registry self-nomination process as a result of this provision for third-party intermediaries to submit MIPS data on behalf of APM Entities, and to support measures and activities in MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. For this final rule, we assume that there will be no impact on the time required for qualified registries to complete either the simplified or full

self-nomination process because of the above provisions. Additionally, we are finalizing to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. We anticipate that at the time of self-nomination, qualified registries would be using a checkbox to indicate their compliance for the requirement to support data submission for subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. We assume that this would not impact the overall time estimated for qualified registries to submit their information at the time of self-nomination. Therefore, we are not making any adjustments in the time required for qualified registries during the simplified or full self-nomination process because of this provision. However, we anticipate that third-party intermediaries would need to make administrative changes to their existing workflows for submission of MVPs and APP data for clinicians participating as subgroups beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to section VI.F.18.g.(2)(f) of this rule where we discuss our impact analysis.

For this final rule, we are adjusting the number of qualified registries that submitted applications for self-nomination from 210 to 147 based on the number of applications received during the CY 2021 self-nomination period for the CY 2022 performance period/2024 MIPS payment year, a decrease of 36 applications from the currently approved estimate of 183. This is also a decrease of 63 from the estimate of 210 provided in the CY 2022 PFS proposed rule (86 FR 39487). Therefore, we are revising our estimates for this information collection related to the qualified registry self-nomination process. We are not making any new adjustments to the estimated burden per respondent as a result of this updated data.

Based on our estimates in the CY 2021 PFS final rule (85 FR 84967) and the updated data received for the number of qualified registries that submitted self-nomination applications, we are adjusting the estimated number of qualified registries that will submit targeted audits for the CY 2022 performance period/2024 MIPS payment year. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84967) and based on the updated data received from the CY 2021 self-nomination period, we are adjusting our estimate that 46 qualified registries will be required to conduct targeted audits, a decrease of 10 from the currently approved estimate of 56 in the CY 2021 PFS final rule (85 FR 84965). Therefore, we estimate the total impact associated with qualified registries completing targeted audits will range from 230 hours (46 registries × 5 hours/audit) at a cost of $21,901 (46 registries × $476.10/audit) to 460 hours (46 registries × 10 hours/audit) at a cost of $43,801 (46 registries × $952.20/audit) for the simplified and full self-nomination process, respectively (see Table 83 for the cost per audit). We assume that this would adjust our burden estimates for targeted audits by −50 hours (−10 respondents × 5 hr/audit) at a cost of −$4,761 (−50 hrs × $95.22/hr) and + −100 hours (−10 respondents × 10 hr/audit) at a cost of −$9,522 (−100 hrs × $95.22/hr) for the simplified and full self-nomination process, respectively.

Using our currently approved time per response estimate of 3 hours, the resulting adjustment in burden for QCDRs and qualified registries to submit CAPs is 30 hours (10 respondents × 3 hrs/respondent) at a cost of $2,857 (30 hours × $95.22/hr).

In section IV.A.3.h.(3)(a)(i) of this final rule, we are finalizing new requirements for approved QCDRs and qualified registries that have not submitted performance data. First, we are finalizing to create a new requirement at paragraph at § 414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year) through the CY 2020 performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. Exceptions to this requirement may occur if data is received for the CY 2021 performance period/2023 MIPS payment year. Under this scenario, QCDRs and qualified registries will not need to submit a participation plan for the CY 2023 self-nomination process. If the QCDRs and qualified registries did not submit data, their participation plan must be submitted as part of self-nomination for the CY 2023 MIPS self-nomination period and must be accepted by CMS to continue to be an approved QCDR or qualified registry. We are also finalizing to codify a new requirement that, beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. Under this provision, the participation plan must explain the QCDR and/or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third-party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor.

Based on our review of the existing list of approved qualified registries that did not submit performance data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year), we estimate that 19 qualified registries would submit participation plans for the CY 2023 self-nomination period. Similar to our assumptions used for submission of a CAP in the CY 2021 PFS final rule (85 FR 84968), we anticipate that the effort involved in developing a participation plan including the policies specified in this rule and submitting it to CMS is likely to be no more than 3 hours for a computer systems analyst at a rate of $95.22/hr. For the CY 2023 performance period/2025 MIPS payment year, we estimate an annual burden of 57 hours (3 hr × 19 participation plans) at a cost of $5,428 (57 hr × $95.22/hr) for qualified registries to develop and submit a participation plan.

As stated above, based on the number of self-nominations received for the CY 2022 performance period/2024 MIPS payment year, we are finalizing to adjust the estimated number of qualified registries that will self-nominate for the CY 2022 self-nomination period to 147, a decrease of 36 from the currently approved estimate of 183 in the CY 2021 PFS final rule (85 FR 84969). In the CY 2019 PFS final rule, we estimated that it would take 3 hours for a qualified registry to submit all the required information during the full self-nomination process (83 FR 59998). Based on our experience with the self-nomination process, we believe that the number of fields needed to be submitted for a qualified registry are fewer than those needed for a QCDR. We assume that our previous assumption of 3 hours is an overestimate. Therefore, we are adjusting the estimated time required for a qualified registry submitting a full-self-nomination process to 2 hours, a decrease of 1 hour.

We assume that the staff involved in the qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of $95.22/hr. Using the change in estimated burden per respondent time, associated with the self-nomination process range from a minimum of 0.5 hours to a maximum of 2 hours, we

estimate that the annual burden would range from 74 hours (147 qualified registries × 0.5 hr) to 294 hours (147 qualified registries × 2 hr) at a cost ranging from $7,046 (74 hr × $95.22/hr) and $27,995 (294 hr × $95.22/hr), respectively (see Table 85).

Both the minimum and maximum burden shown in Table 85 reflect the adjustments to the number of respondents due to availability of more recent data. Combined with our estimates of burden associated with completing targeted audits and developing and submitting participation plans and corrective action plans, our total burden estimate ranges from 391 hours [74 hr (147 qualified registries × 0.5 hr) + 57 hr (+19 participation plans × 3 hr/plan) + 230 hr (46 targeted audits × 5 hours/audit) + 30 hr (10 CAPs × 3 hr) at a cost of $37,232 [$7,046 (74 hr × $95.22/hr) + $5,428 (57 hr × $95.22/hr) + $21,901 (46 registries × $476.10/audit) + $2,857 (30 hours × $95.22/hr)] to 841 hours [294 hr (147 qualified registries × 2 hr) + 57 hr (+19 participation plans × 3 hr/plan) + 460 hr (46 targeted audits × 10 hours/audit) + 30 hr (10 CAPs × 3 hr)] at a cost of $80,081 [$27,995 (294 hr × $95.22/hr) + $5,428 (57 hr × $95.22/hr) + $43,801 (46 registries × $952.20/audit) + $2,857 (30 hours × $95.22/hr) for the simple self-nomination process (see minimum burden in Table 85) and full self-nomination process (see maximum burden in Table 85) respectively.

Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a qualified registry self-nominating to be considered ''qualified'' to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

BILLING CODE 4120–01–P

TABLE 85: Estimated Burden for Qualified Registry Self-Nomination

Burden and Respondent Descriptions	Minimum	Maximum
# of Qualified Registry Simplified Self-Nomination Applications submitted (a)	147	0
# of Qualified Registry Full Self-Nomination Applications submitted (b)	0	147
Total Applications (c)	**147**	**147**
Total Annual Hours Per Qualified Registry for Simplified Process (d)	0.5	0
Total Annual Hours Per Qualified Registry for Full Process (e)	0	2
Total Annual Hours for Self-Nomination for min. (f) = (a) * (d) and max. (b) * (e)	**74**	**294**
Total Annual Hours for Completion of 46 Targeted Audits (g)	**230**	**460**
Total Annual Hours for development and submittal of 19 Participation Plans (h)	**57**	**57**
Total Annual Hours for Submittal of 10 CAPs (i)	**30**	**30**
Total Annual Time (Hours) (j) = (e) + (f) + (g) + (h)	**391**	**841**
Cost Per Simplified Process Per Qualified Registry (@ computer systems analyst's labor rate of $95.22/hr) (k)	$47.61	$47.61
Cost Per Full Process Per Qualified Registry (@ computer systems analyst's labor rate of $95.22/hr) (l)	$190.44	$190.44
Cost Per Targeted Audit (@ computer systems analyst's labor rate of $95.22/hr) (m)	$476.10	$952.20
Cost Per Participation Plan (@ computer systems analyst's labor rate of $95.22/hr) (n)	$285.66	$285.66
Cost per CAP (@ computer systems analyst's labor rate of $95.22/hr) (o)	$285.66	$285.66
Total Annual Cost for min. (p) = (a) * (k) + (m) *46 + (n) * 19 + (o) * 10 and max. (b) * (l) + (m) * 46 + (n) * 19 + (o) * 10	**$37,232**	**$80,081**

As shown in Table 86, for the CY 2022 performance period/2024 MIPS payment year, independent of the change to our per response time estimate, the estimated decrease in 36 respondents from the currently approved 183 respondents to 147 results in a change of −18 hours (−36 respondents × 0.5 hrs/respondent) at a cost of −$1,714 (−18 hours × $95.22/hr) for the simplified self-nomination process and a change of −72 hours (−36 respondents × 2 hrs/respondent) at a cost of −$6,856 (−72 hours × $95.22/hr). Accounting for the change in time required for the qualified registry self-nomination process results in an adjustment of 0 hours for the simplified self-nomination process and −183 hours (183 respondents × −1 hours) at a cost of −$17,425 (−183 hours × $95.22/hr) for the full self-nomination process.

When the above impacts are combined with the estimates for targeted audits, participation plans and corrective action plans discussed above, the net impact ranges between −11 hours [−18 hr (−36 respondents × 0.5 hrs/respondent) + 0 hr + −50 hr (−10 audits × 5 hr/audit) + 57 hr (+19 participation plans × 3 hr/plan) + 0 hr)] at a cost of −$1,046 [(−$1,713 (−18 hours × $95.22/hr) + $0 + −$4,761 (−50 hrs × $95.22/hr) + $5,428 (+57 hr × $95.22/hr) + $0)] for the simplified self-nomination process and −298 hours [(−72 hr (−36 respondents × 2 hrs/respondent) + −183 hr (183 respondents × −1 hours) + −100 hr (−10 audits × 10 hr/audit) + 57 hr (+19 participation plans × 3 hr) + 0 hr)] at a cost of −$28,375 [(−$6,856 (−72 hours × $95.22/hr) − $17,425 (−183 hours × $95.22/hr) − $9,522 (−100 hrs × $95.22/hr) + $5,428 (+57 hr × $95.22/hr) + $0)] for the full self-nomination process for the CY 2022 performance period/2024 MIPS payment year.

As discussed above in this section of the rule, we are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year. Therefore, we estimate the total change in burden for the qualified registry self-nomination process would be 391 hours at a cost of $37,232 for the simplified self-nomination process and 841 hours at a cost of $80,081 for the full self-nomination process. For the purposes of calculating estimated change in burden in Tables 128, 129, and 130 of this final

rule, we use only the maximum burden estimate.

TABLE 86: Change in Estimated Burden for Qualified Registry Self Nomination

Burden and Respondent Descriptions	Minimum Burden	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	401.5	1,139	1,139	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 85, row (c))	391	0	841	841
Difference (c) = (b) - (a)	**-11**	**-1,139**	**-298**	**+841**
Total Currently Approved Annual Cost (d)	$38,278	$108,456	$108,456	N/A

BILLING CODE 4120–01–C

We received public comments for our burden estimates related to QCDRs and qualified registries. The following is a summary of the public comments received for the Quality Payment Program ICRs regarding the burden estimates for QCDR and qualified registries.

Comment: One commenter did not agree with CMS burden estimates for audits conducted by QCDRs and qualified registries and shared their belief that the time required for a QCDR was two to three-fold more than CMS estimates. The commenter shared their concern that our estimate does not accurately represent the total amount of time it takes for a QCDR or qualified registry to conduct data audits.

Response: We would like to clarify that our burden estimates provided for the QCDR and qualified registry self-nomination process are not intended to capture the holistic total annual time for a QCDR or a qualified registry to participate in MIPS. Our burden estimate of 9.5 hours to 11.5 hours for the QCDR and 0.5 hours to 2 hours for the qualified registry self-nomination process specifically includes the estimated time it takes for a QCDR or qualified registry to populate and submit a self-nomination form and QCDR measures, if applicable. These burden estimates do not include any time needed to comply with third-party intermediary requirements outside of the self-nomination process. We believe our burden estimate is a reasonable average across all respondents based on our review of the nomination process, the information required to complete the nomination form, and the criteria required to self-nominate as a QCDR or registry.

After consideration of public comments, we are not making any changes to our estimates of the time required for the QCDR and qualified registry self-nomination process.

(4) Survey Vendor Requirements

In section IV.A.3.h(2)(b)(ii) of this rule, we are finalizing to require CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. Because of this provision, we anticipate no additional steps being added to the requirements for CAHPS for MIPS survey vendors to submit a participation form and assume there would be no impact on the time required for the survey vendors. Therefore, we are not making any adjustments in the time required for CAHPS survey vendors to submit their information because of this provision. The requirements and burden for CAHPS survey vendors to submit data for eligible clinicians are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any changes to the CAHPS for MIPS Survey vendor information collection request under that control number.

(5) Health IT Vendors

In section IV.A.3.h.(2)(b) of this rule, we are finalizing to create a new requirement at paragraph § 414.1400(c)(1)(iii) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. Health IT vendors may also support the APP. Additionally, we are finalizing to require health IT vendors to support subgroup reporting beginning with the CY 2023 performance period/2025 MIPS payment year. We do not anticipate any requirement or burden changes as it relates to the support of reporting data. As stated in the CY 2019 PFS final rule (83 FR 59998), health IT vendors are not included in the burden estimates for MIPS.

d. ICR Regarding Open Authorization (OAuth) Credentialing and Token Request Process

This rule is not implementing new or revised collection of information requirements or burden related to the identity management application process. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the identity management application process under that control number.

e. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Background

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77502 through 77503), CY 2018 Quality Payment Program final rule (82 FR 53908 through 53912), CY 2019 PFS final rule (83 FR 60000 through 60003), CY 2020 PFS final rule (84 FR 63121 through 63124), and the CY 2021 PFS final rule (85 FR 84970 through 84974) for our previously finalized requirements for data submission for the quality performance category.

Under our current policies, two groups of clinicians must submit quality data under MIPS: Those who submit as MIPS eligible clinicians and those who submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly

enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

(2) Changes and Adjustments to Quality Performance Category Respondents

To determine which QPs should be excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. From this data, we calculated the QP determinations as described in the Qualifying APM Participant (QP) definition at § 414.1305 for the CY 2022 performance period/2024 MIPS payment year. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future CY 2022 performance period/2024 MIPS payment year (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the CY 2019 performance period/2021 MIPS payment year and allowing clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). As in the CY 2021 PFS final rule, we continue to use CY 2019 performance period/2021 MIPS payment year data to estimate the number of respondents in the CY 2022 PFS final rule.

There may be an undercount in submissions due to the PHE for COVID–19, because of the automatic extreme and uncontrollable circumstances policy, and application-based policy that allowed clinicians to elect not to submit during the submission period for the CY 2019 performance period/2021 MIPS payment year that we are using to inform our burden estimates. Despite this limitation, we believe the data from the CY 2019 performance period/2021 MIPS payment year is still the best data source available as it most accurately reflects the impacts of policies finalized in previous rules and trends toward increased group reporting.

In section IV.A.3.d.(1)(d) of this rule, we are finalizing to continue the CMS Web Interface measures as a collection type for the CY 2022 performance period/2024 MIPS payment year. Additionally, we are finalizing to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2023 performance period/2025 MIPS payment year. In the CY 2021 PFS final rule (85 FR 84981), we finalized the sunset of CMS Web Interface as a collection type for the CY 2022 performance period/2024 MIPS payment year. We refer readers to the CY 2021 PFS final rule for discussion on our assumptions for the CY 2022 performance period/2024 MIPS payment year, where we estimated a burden of zero due to our assumption that all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types. Based on the number of groups that submitted quality performance data via the CMS Web Interface in the CY 2019 performance period/2021 MIPS payment year, we are not able to ascertain what alternative collection type(s) the groups would elect. In order to estimate the number of groups that will select each of these collection types, we first clustered the number of groups which submitted data via the CMS Web Interface collection type during the CY 2019 performance period/2021 MIPS payment year by practice size (between 25 and 49 clinicians, between 50 and 99 clinicians, etc.). Then, for each cluster, we allocated these groups to each of the MIPS CQM and QCDR and eCQM collection types based on the percent of TINs that submitted MIPS data via these two collection types. For example, of the 1,629 TINs with a practice size of 25 to 49 clinicians which submitted data for the CY 2019 performance period/2021 MIPS payment year, 1,066 (65 percent) submitted data via the MIPS CQM and QCDR collection type and 563 (35 percent) submitted data via the eCQM collection type. We applied these percentages to the 7 TINs with a practice size of 25 to 49 clinicians which submitted data via the CMS Web Interface collection type for the CY 2019 performance period/2021 MIPS payment year to estimate that 4 (7 TINs $\times$ 0.56) would elect to submit data via the MIPS CQM and QCDR collection type and the remaining 3 (7 TINs $\times$ 0.44) would elect to submit data via the eCQM collection type. In total, beginning with the CY 2023 performance period/2025 MIPS payment year, we estimate that 64 of the 114 groups that submitted data via the CMS Web Interface collection type for the CY 2019 performance period/2021 MIPS payment year will submit quality data via the MIPS CQM and QCDR collection type and 50 groups will now submit quality data via the eCQM collection type. We note that 114 groups are an increase of 114 from our currently approved estimate of 0 groups in the CY 2022 performance period/2024 MIPS payment year. We also performed this analysis to determine the number of clinicians that will be affected and will need to submit quality data via an alternate collection type beginning with the CY 2023 performance period/2025 MIPS payment year. In total, of the estimated 45,599 individual clinicians affected by this provision, we estimate that 11,432 will submit quality data as part of a group via the MIPS CQM and QCDR collection type and 34,167 will submit quality data as part of a group via the eCQM collection type. These estimates are reflected in Tables 90 and 92 and the associated changes in burden are reflected in Tables 91 and 93. In aggregate, as discussed in section V.B.8.p. of this final rule, we estimate the provision to sunset the CMS Web Interface measures as a collection type/submission type will result in a net decrease in quality performance data reporting burden while acknowledging the additional financial impacts on clinicians as discussed in section VI.F.18.g.(2)(a) of the Regulatory Impact Analysis. We assume that 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional reporting for ACO APM entities, consistent with assumptions used in the CY 2020 and CY 2021 PFS final rules (84 FR 63122 and 85 FR 84972), we include all quality data voluntarily submitted by MIPS APM participants at the individual or TIN-level in our respondent estimates. As stated in section V.B.8.e.(2) of this final rule, we assume non-ACO APM Entities will participate through traditional MIPS and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the CY 2022 performance period/2024 MIPS payment year, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. We elected to use this data source because the overlap with the data submissions for the CY 2019 performance period/2021 MIPS payment year enabled the exclusion of Partial QPs that elected to not participate in MIPS and required fewer assumptions as to who is a QP or not. Based on this information, if we determine that a MIPS eligible clinician will not be scored as a MIPS APM, then their reporting assumption is based on their reporting as a group or individual

for the CY 2019 performance period/2021 MIPS payment year.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The burden is excluded from this collection of information section but is discussed in the regulatory impact analysis section of this final rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.[266] Tables 84, 85, and 86 explain our revised estimates of the number of organizations (including groups, virtual groups, and individual MIPS eligible clinicians) submitting data on behalf of clinicians segregated by collection type.

Table 87 provides our estimated counts of clinicians that will submit quality performance category data as MIPS individual clinicians or groups in the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years based on data from the CY 2019 performance period/2021 MIPS payment year.

For the CY 2022 performance period/2024 MIPS payment year, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types, and Web Interface. For the CY 2023 performance period/2025 MIPS payment year, respondents will no longer have the option to submit quality performance category data via the Web Interface. We estimate the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, eCQMs, and the CMS Web Interface. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintaining consistency with previous rulemaking.

For the CY 2023 performance period/2025 MIPS payment year, we are finalizing in section IV.A.3.b.(2)(c) of this rule that clinicians in MIPS will have the option to submit measures and activities in MVPs. We refer readers to section IV.A.3.b.(4)(d) of this rule for additional details on the reporting requirements for MVPs. For the quality performance category of MVPs, we assume that MVP Participants will choose to report via the Medicare Part B claims, QCDR, MIPS CQMs, and eCQMs collection type. Table 99 of this rule includes the estimated burden for collecting data for the quality performance category of MVPs.

As shown in Table 87, using participation data from the CY 2019 performance period/2021 MIPS payment year, combined with the estimate of QPs for the CY 2022 performance period/2024 MIPS payment year, we estimate a total of 625,703 clinicians will submit quality data as individuals or groups in each of the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years, a decrease of 25,811 clinicians when compared to our estimate of 651,514 clinicians in the CY 2021 PFS final rule (85 FR 84972). For the CY 2022 performance period/2024 payment year, we estimate 28,252 clinicians will submit data as individuals for the Medicare Part B claims collection type; 279,247 clinicians will submit data as individuals or as part of groups for the MIPS CQM and QCDR collection type; 273,819 clinicians will submit data as individuals or as part of groups via eCQM collection types; and 44,385 clinicians will submit as part of groups via the CMS Web Interface. Compared to the CY 2022 performance period/2024 MIPS payment year burden estimated in the CY 2021 PFS final rule (85 FR 84972), these are decreases from the estimates of 29,273, 295,941, and 326,300 for Medicare Part B claims, MIPS CQM and QCDR, eCQM, and an increase of 44,385 for the CMS Web Interface collection types, respectively. These adjustments are due to the availability of updated data from the CY 2019 performance period/2021 MIPS payment year and the delay in sunsetting the CMS Web Interface from the CY 2022 performance period/2024 MIPS payment year to the CY 2023 performance period/2025 MIPS payment year. For the CY 2023 performance period/2025 MIPS payment year, we estimate 25,427 clinicians will submit data as individuals for the Medicare Part B claims collection type; 288,637 clinicians will submit data as individuals or as part of groups for the MIPS CQM and QCDR collection type; 311,326 clinicians will submit data as individuals or as part of groups via the eCQM collection type.

Table 87 provides estimates of the number of clinicians to collect quality measures data via each collection type, regardless of whether they decide to submit as individual clinicians or as part of groups. Because our burden estimates for quality data submission assume that burden is reduced when clinicians elect to submit as part of a group, we also separately estimate the expected number of clinicians to submit as individuals or part of groups.

[266] Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.

TABLE 87: Estimated Number of Clinicians Submitting Quality Performance Category Data by Collection Type (as Individual Clinicians or as Part of Groups)

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2022 MIPS performance period (excludes QPs) (a)	28,252	279,247	273,819	44,385	625,703
* Currently approved 2022 MIPS performance period (excludes QPs) (b)	29,273	295,941	326,300	0	651,514
Difference (c) = (a) - (b)	-1,021	-16,694	-52,481	44,385	-25,811
2023 MIPS performance period prior to MVP and Web Interface adjustments (excludes QPs) (d)	28,252	295,941	326,300	0	650,493
Adjustment for Web Interface Sunset (e)	0	24,767	19,618	0	44,385
Adjustment for Shift to MVP (10% reduction) (f) = ((d) + (e)) * -.1	-2,825	-32,071	-34,592	0	-69,488
2023 after adjustments (g) = (d) + (e) + (f)	25,427	288,637	311,326	0	625,390
* Currently approved 2022 MIPS performance period (excludes QPs) (h)	N/A	N/A	N/A	0	N/A
Difference (i) = (g) - (h)	+25,427	+288,637	+311,326	-0	+625,390

*Currently approved by OMB under control number 0938-1314 (CMS-10621) from the CY 2021 PFS final rule.

Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the CY 2019 performance period/2021 MIPS payment year. We captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types.

Table 88 uses methods similar to those described to estimate the number of clinicians that will submit data as individual clinicians via each collection type in the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years. For the CY 2022 performance period/2024 MIPS payment year, we estimate that approximately 28,252 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 40,507 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 40,446 clinicians will submit data as individuals using eCQMs collection type. Based on performance data from the CY 2019 performance period/2021 MIPS payment year, these are decreases of −1,021, −833, and −1,809 respondents from the currently approved estimates of 29,273, 41,340, and 42,255 for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, respectively.

As shown in Table 88, for the CY 2023 performance period/2025 MIPS payment year, we estimate that approximately 25,427 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 36,456 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 36,401 clinicians will submit data as individuals using eCQMs collection type. As stated above, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no currently approved estimate.

TABLE 88: Estimated Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2022 MIPS Performance Period (excludes QPs) (a)	28,252	40,507	40,446	0	109,205
*Currently approved 2022 MIPS performance period (excludes QPs) (b)	29,273	41,340	42,255	0	112,868
Difference (c) = (a) - (b)	-1,021	-833	-1,809	0	-3,663
2023 MIPS Performance Period (excludes QPs) prior to MVP adjustment (d)	28,252	40,507	40,446	0	109,205
MVP adjustment (10% reduction) (e) = (d)*- 0.1	-2,825	4,051	-4,044	0	-10,920
2023 MIPS Performance Period (excludes QPs) (f) = (d) + (e)	25,427	36,456	36,401	0	98,285
*Currently approved 2022 MIPS performance period (excludes QPs) (g)	N/A	N/A	N/A	0	N/A
Difference (h) = (f) - (g)	+25,427	+36,456	+36,401	0	+98,285

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 88 are not mutually exclusive.

Table 89 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years. We assume that clinicians that submitted quality data as groups in the CY 2019 performance period/2021 MIPS payment year will continue to submit quality data either as groups or virtual groups for the same collection types as they did as a group or TIN within a virtual group for the CY 2022 and 2023 performance periods/2024 and 2025 MIPS payment years. Specifically, for the CY 2022 performance period/2024 MIPS payment year we estimate that 11,529 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type on behalf of 243,169 clinicians; 8,127 groups and virtual groups will submit for eCQM collection types on behalf of 249,878 eligible clinicians; and 114 groups will submit data via the CMS Web Interface on behalf of 44,385 clinicians. These are decreases of −75 and −93 respondents from the currently approved estimates of 11,604, and 8,220 groups and virtual groups for the MIPS CQM and QCDR and eCQM collection types, and an increase of +114 groups from the currently approved estimates of 0 groups for the CMS Web Interface collection types, respectively.

As shown in Table 89, for the CY 2023 performance period/2025 MIPS payment year we estimate that 10,434 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type on behalf of 313,038 clinicians and 7,359 groups and virtual groups will submit for eCQM collection types on behalf of 339,109 eligible clinicians. As stated above, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no currently approved estimate. The reason for the difference in estimated number of respondents from the estimates for the CY 2022 performance period/2024 MIPS payment year described above, is due to the sunset of the CMS Web Interface as a collection type and the implementation of MVPs beginning with the CY 2023 performance period/ 2025 MIPS payment year. As the data does not exist for APM performance pathway or MIPS quality measures for non-ACO APM entities, we assume non-ACO APM Entities will participate through traditional MIPS and base our estimates on submissions received in the CY 2019 performance period/2021 MIPS payment year.

TABLE 89: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type on Behalf of Clinicians

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2022 MIPS performance period (excludes QPs) (a)	0	11,529	8,127	114	19,770
*Currently approved 2022 MIPS performance period (excludes QPs) (b)	0	11,604	8,220	0	19,824
Difference (c) = (a) - (b)	0	-75	-93	+114	-54
2023 MIPS performance period (excludes QPs) (d) prior to adjustments	0	11,529	8,127	114	19,770
Adjustment for Web Interface (e)	0	64	50	-114	0
Adjustment for MVPs (10%) (g) = ((d) + (e)) * 0.1	0	-1,159	-817.7	0	-1,977
2023 MIPS performance period (excludes QPs) – Adjusted. (h) = (d) + (e) + (f) + (g)	0	10,434	7,359	0	17,793
*Currently approved 2022 MIPS performance period (excludes QPs) (i)	N/A	N/A	N/A	N/A	N/A
Difference (j) = (h) - (i)	0	+10,434	+7,359	0	+17,793

*Currently approved by OMB under control number 0938-1314 (CMS-10621) from the CY 2021 PFS final rule.

The burden associated with the submission of quality performance category data have some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their EHR implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. For the CY 2023 performance period/2025 MIPS payment year we refer readers to section IV.A.3.b.(4)(d) of the rule for the changes related to MVP and subgroup reporting requirements. In terms of the quality measures available for clinicians and groups to report for the CY 2022 performance period/2024 MIPS payment year, we are finalizing that the total number of quality measures will be 200. The new MIPS quality measures finalized for inclusion in MIPS for the CY 2022 performance period/2024 MIPS payment year and future years are found in Table Group A of Appendix 1; MIPS quality measures with substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures finalized for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 90, as well as counts of new, removed, and substantively changed measures.

TABLE 90: Summary of Quality Measures Finalized for the CY 2022 Performance Period/2024 MIPS Payment Year

Collection Type	# Measures Finalized as New	# Measures Finalized for Removal*	# Measures Finalized with a Substantive Change*	# Measures Finalized for CY 2022*
Medicare Part B Claims Specifications	0	-13	16	34
MIPS CQMs Specifications	+2	-13	70	174
eCQM Specifications	+1	0	41	48
Survey – CSV	0	0	0	1
CMS Web Interface Measure Specifications	0	0	10	10
Administrative Claims	+1	0	0	3
Total	+4	-13*	+87*	200*

*A measure may be specified under multiple collection types but will only be counted once in the total.

For the CY 2022 performance period/2024 MIPS payment year, we are finalizing a net reduction of 9 quality measures across all collection types compared to the 209 measures finalized for the CY 2021 performance period/2023 MIPS payment year (85 FR 84974). Specifically, as discussed in section IV.A.3.d.(1)(e) of this rule, we are finalizing to add 1 new administrative claims outcome measure, remove 13 quality measures, and make substantive updates to 87 quality measures. We do not anticipate that our provision to remove these measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for 6 measures. For the change in associated burden related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year, we refer readers to Table 99 of this section.

(3) Quality Payment Program Identity Management Application Process

This rule is not implementing any new or revised collection of information requirements or burden related to the identity management application process. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the identity management application process under that control number.

(4) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

This rule is not implementing any new or revised collection of information requirements related to the submission of Medicare Part B claims data for the quality performance category. However, we are adjusting our currently approved burden estimates based on more recent data. For the change in associated burden related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year, we refer readers to Table 99 of this section.

The following burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77501 through 77504), CY 2018 Quality Payment Program final rule (82 FR 53912), CY 2019 PFS final rule (83 FR 60004 through 60005), CY 2020 PFS final rule (84 FR 63124 through 63126) and the CY 2021 PFS final rule (85 FR 84975 through 84976) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

As noted in Table 88, based on data from the CY 2019 performance period/2021 MIPS payment year, we assume that 28,252 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type. In this rule, we are finalizing to adjust the number of Medicare Part B claims respondents from the currently approved estimate of 29,273 to 28,252 (a decrease of 1,021) based on more recent data and our methodology of accounting only for clinicians in small practices who submitted such claims data in the CY 2019 performance period/2021 MIPS payment year rather than all clinicians who submitted quality data codes to us for the Medicare Part B claims collection type.

As shown in Table 91, consistent with our currently approved per response time figures, we estimate that the burden of quality data submission using Medicare Part B claims will range from 0.15 hours (9 minutes) for a computer systems analyst at a cost of $14.28 (0.15 hr × $95.22/hr) to 7.2 hours for a computer systems analyst at a cost of $685.58 (7.2 hr × $95.22/hr). The burden will involve becoming familiar with MIPS quality measure specifications.

Consistent with our currently approved per response time figures, we believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours at $114.24/hr for a medical and health services manager, 1 hour at $217.32/hr for a physician, 1 hour at $48.16/hr for an LPN, 1 hour at $95.22/hr for a computer systems analyst, and 1 hour at $40.02/hr for a billing and posting clerk. We are not revising our currently approved per response time estimates.

As shown in Table 91, considering both data submission and start-up requirements for our adjusted number of clinicians, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In this regard the total annual time for the CY 2022 performance period/2024 MIPS payment year ranges from 202,002 hours (7.15 hr × 28,252 clinicians) to 401,178 hours (14.2 hr × 28,252 clinicians). The estimated annual cost (per clinician) ranges from $758 [(0.15 hr × $95.22/hr) + (3 hr × $114.24/hr) + (1 hr × $95.22/hr) + (1 hr × $48.16/hr) + (1 hr × $40.02/hr) + (1 hr × $217.32/hr)] to a maximum of $1,429.02 [(7.2 hr × $95.22/hr) + (3 hr × $114.24/hr) + (1 hr × $95.22/hr) + (1 hr × $48.16/hr) + (1 hr × $40.02/hr) + (1 hr × $217.32/hr)]. The total annual cost for the CY 2022 performance period/2024 MIPS payment year ranges from a minimum of $21,407,105 (28,252 clinicians × $758)

to a maximum of $40,372,673 (28,252 clinicians × $1,429.02).

As shown in Table 91, for purposes of calculating total burden associated with the Claims collection type for the CY 2023 performance period/2025 MIPS payment year only the maximum burden is used. The decrease in the number of annual respondents results in an estimated total annual time of 361,063 hours (14.2 hr × 25,427 clinicians) for the CY 2023 performance period/2025 MIPS payment year. Using the currently approved unchanged estimate for cost per respondent, the total annual cost for the CY 2023 performance period/2025 MIPS payment year is $36,335,692 (25,427 clinicians × $1,429.02 per respondent).

Table 91 summarizes our estimated range of total annual burden associated with clinicians submitting quality data via Medicare Part B claims for both the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years.

BILLING CODE 4120–01–P

TABLE 91: Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

	Minimum Burden	Median Burden	Maximum Burden (CY 2022)	Maximum Burden (CY 2023)
# of Clinicians (a)	28,252	28,252	28,252	25,427
Hours Per Clinician to Submit Quality Data (b)	0.15	1.05	7.2	7.2

# of Hours LPN Review Measure Specifications (e)	1	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1	1
# of Hours Physician Review Measure Specifications (g)	1	1	1	1
Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g)	7.15	8.05	14.2	14.2
Total Annual Hours (i) = (a) * (h)	**202,002**	**227,429**	**401,178**	**361,063**
Cost to Submit Quality Data (@ computer systems analyst's labor rate of $95.22/hr @ varying times) (j)	$14.28	$99.98	$685.58	$685.58
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of $114.24/hr @ 3 hr) (k)	$342.72	$342.72	$342.72	$342.72
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of $95.22/hr @ 1 hr) (l)	$95.22	$95.22	$95.22	$95.22
Cost to Review Measure Specifications (@ LPN's labor rate of $48.16/hr @1 hr) (m)	$48.16	$48.16	$48.16	$48.16
Cost to Review Measure Specifications (@ billing clerk's labor rate of $40.02/hr @ 1 hr) (n)	$40.02	$40.02	$40.02	$40.02
Cost to Review Measure Specifications (@ physician's labor rate of $217.32/hr @ 1 hr) (o)	$217.32	$217.32	$217.32	$217.32
*Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o)	$758	$843	$1,429.02	$1,429.02
***Total Annual Cost (q) = (a) * (p)**	**$21,407,105**	**$23,828,302**	**$40,372,673**	**$36,335,692**

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 91, using the unchanged currently approved hours per respondent, we estimate that the burden per respondent for quality data submission using the Medicare Part B Claims collection type will range from $758 to $1,429.02. The decrease in number of respondents from 29,273 to 28,252 results in a total adjustment of between −7,300 hours (−1,021 respondents × 7.15 hr/respondent) at a cost of −$773,918 (−1,021 respondents × $758/respondent) and −14,498 hours (−1,021 respondents × 14.2 hr/respondent) at a cost of −$1,459,029 (−1,021 respondents × $1,429.02/respondent). For purposes of calculating total burden associated with this final rule as shown in Tables 125, 126, 127, and 128, only the maximum burden is used.

As shown in Table 92, for purposes of calculating total burden associated the CY 2023 performance period/2025 MIPS payment year only the maximum burden is used. We are setting forth our CY 2023 performance period/2025 MIPS payment year estimate as new burden, which results in an increase of 361,063 hours (25,427 respondents × 14.2 hr/respondent) at a cost of $36,355,692 (25,427 respondents × $1,429/respondent).

BILLING CODE 4120–01–C

(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

The following requirement and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77504 through 77505), CY 2018 Quality Payment Program final rule (82 FR 53912 through 53914), CY 2019 PFS final rule (83 FR 60005 through 60006), CY 2020 PFS final rule (84 FR 63127 through 63128), CY 2021 PFS final rule (85 FR 84977 through 84979) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types. For the change in associated burden for quality data submission related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year, we refer readers to Table 99.

As noted in Tables 84, 85, and 86, and based on data from the CY 2019 performance period/2021 MIPS payment year, for the CY 2022 performance period/2024 MIPS payment year, we assume that 279,247 clinicians will submit quality data as individuals or groups using MIPS CQM or QCDR collection types; 52,036 clinicians will submit as individuals and the remaining 279,223 clinicians will submit as members of 11,527 groups and virtual groups. This is an increase of 10,696 individuals and a decrease of 32 groups from the estimates of 41,340 individuals and the 11,559 groups provided in the CY 2021 PFS final rule (85 FR 84977). Given that the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party intermediary to submit the data to us on the clinician's or group's behalf. We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or group to review measure specifications and submit quality data is total of 9 hours at a cost of $922.76 per response. This consists of 3 hours at $95.22/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at $114.24/hr for a medical and health services manager, 1 hour at $95.22/hr for a computer systems analyst, 1 hour at $48.16/hr for an LPN, 1 hour at $40.02/hr for a billing clerk, and 1 hour at $217.32/hr for a physician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) at $95.22/hr for a computer systems analyst at a cost of $7.90 (0.083 hr × $95.22/hr). Overall, we estimate 9.083 hr/response (3 hr + 2 hr + 1 hr + 1 hr + 1 hr + 1 hr + 0.083 hr) at a cost of $922.76/response [(3 hr × $95.22/hr) + (2 hr × $114.24/hr) + (1 hr × $217.32/hr) + (1 hr × $95.22/hr) + (1 hr × $48.16/hr) + (1 hr × $40.02/hr) + (0.083 hr × $95.22/hr)].

For the CY 2022 performance period/2024 MIPS payment year, in aggregate, we estimate a burden of 472,643 hours [9.083 hr/response × (40,507 clinicians submitting as individuals + 11,527 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians or 52,036 responses)] at a cost of $ $48,016,739 (52,036 responses × $922.76/response).

For the CY 2023 performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 425,902 hours [9.083 hr/response × (36,456 clinicians submitting as individuals + 10,434 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians or 46,890 responses)] at a cost of $43,268,216 (46,890 responses × $922.76/response). Based on these assumptions, we have estimated in

Table 93 the burden for these submissions.

BILLING CODE 4120–01–P

TABLE 93: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

	2022 Performance Period	2023 Performance Period
# of clinicians submitting as individuals (a)	40,507	36,456
# of groups submitting via QCDR or MIPS CQM on behalf of individual clinicians (b)	11,529	10,434
# of Respondents (groups plus clinicians submitting as individuals) (c)=(a)+(b)	**52,036**	**46,890**
Hours Per Respondent to Report Quality Data (d)	3	3
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	2	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1	1
# of Hours LPN Review Measure Specifications (g)	1	1
# of Hours Billing Clerk Review Measure Specifications (h)	1	1
# of Hours Physician Review Measure Specifications (i)	1	1
# of Hours Per Respondent to Authorize Qualified Registry to Report on Respondent's Behalf (j)	0.083	0.083
Annual Hours Per Respondent (k)= (d) + (e) + (f) + (g) + (h) + (i) + (j)	9.083	9.083
Total Annual Hours (l) = (c)*(k)	**472,643**	**425,902**
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of $95.22/hr) (m)	$285.66	$285.66
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of $114.24/hr) (n)	$228.48	$228.48
Cost Computer System's Analyst Review Measure Specifications (@ computer systems analyst's labor rate of $95.22/hr) (o)	$95.22	$95.22
Cost LPN Review Measure Specifications (@ LPN's labor rate of $48.16/hr) (p)	$48.16	$48.16
Cost Billing Clerk Review Measure Specifications (@ clerk's labor rate of $40.02/hr) (q)	$40.02	$40.02
Cost Physician Review Measure Specifications (@ physician's labor rate of $217.32/hr) (r)	$217.32	$217.32
Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@ computer systems analyst's labor rate of $95.22/hr) (s)	$7.90	$7.90
*Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s)	$922.76	$922.76
***Total Annual Cost (u) = (c) * (t)**	**$48,016,739***	**$43,268,216***

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 94, using the unchanged currently approved hours per respondent burden estimate, the decrease of 913 respondents from 52,944 to 52,036 for the CY 2022 performance period/2024 MIPS payment year results in a decrease of −8,247 hours (−908 respondents × 9.083 hr/respondent) and −$837,866 (908 respondents × $922.76/respondent).

We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 425,902 hours (46,890 respondents × 9.083 hr/respondent) and $43,268,216 (46,890 respondents × $922.76/respondents).

TABLE 94: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period

BILLING CODE 4120–01–C

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77505 through 77506), CY 2018 Quality Payment Program final rule (82 FR 53914 through 53915), CY 2019 PFS final rule (83 FR 60006 through 60007), CY 2020 PFS final rule (84 FR 63128 through 63130) and the CY 2021 PFS final rule (85 FR 84979 through 84980) for our previously finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year, we refer readers to Table 99 of this section.

Based on CY 2019 performance period/2021 MIPS payment year data, for the CY 2022 performance period/2024 MIPS payment year, we assume that 322,392 clinicians will elect to use the eCQM collection type; 40,446 clinicians are expected to submit eCQMs as individuals; and 8,127 groups and virtual groups are expected to submit eCQMs on behalf of the remaining 273,819 clinicians. This is a decrease of 2,109 individuals and 27 groups from the estimates of 42,555 individuals and 8,154 groups provided in the CY 2021 PFS final rule (85 FR 84979). We expect the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at $95.22/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at $114.24/hr for a medical and health services manager, 1 hour at $217.32/hr for a physician, 1 hour at $95.22/hr for a computer systems analyst, 1 hour at $48.16/hr for an LPN, and 1 hour at $40.02/hr for a billing clerk. Overall, we estimate a cost of $812.76/response [(2 hr × $95.22/hr) + (2 hr × $114.24/hr) + (1 hr × $217.32/hr) + (1 hr × $95.22/hr) + (1 hr × $48.16/hr) + (1 hr × $40.02/hr)].

For the CY 2022 performance period/2024 MIPS payment year, in aggregate, we estimate a burden of 388,584 hours [8 hr × 48.573 (40,446 clinicians + 8,127 groups and virtual groups)] at a cost of $39,812,374 (48,573 responses × $819.64/response). For the CY 2023 performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 350,186 hours [8 hr × 43,773 (36,401 clinicians + 7,372 groups and virtual groups)] at a cost of $35,878,102 (43,773 responses × $819.64/response). Based on these assumptions, we have estimated in Table 95 the burden for these submissions.

Cost to Review Measure Specifications (@ physician's labor rate of $217.32/hr) (q)	$217.32	$217.32
*Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)	$819.64	$819.64
***Total Annual Cost (s) = (c) * (r)**	**$39,812,374**	**$35,878,102**

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 96, using the unchanged currently approved hours per respondent burden estimate, the decrease of 1,902 respondents from 50,475 to 48,573 for the CY 2022 performance period/2024 MIPS payment year results in a total difference of ×15,216 hours at a cost of ×$1,558,955. For CY 2023 performance period/2025 MIPS payment year, we are setting forth our estimate as new burden, which represents an increase of 350,184 hours (43,773 respondents × 8 hr/respondent) and $35,878,102 (43,773 respondents × $819.64/respondent).

TABLE 96: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	403,272	403,800	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (see Table 95, row (k))	0	388,584	350,186
Difference (c) = (b) - (a)	**-403,272**	**-15,216**	**+350,186**
Total Currently Approved Annual Cost (d)	$40,317,233	$41,371,239	N/A

BILLING CODE 4120–01–C

(7) ICRs Regarding Burden for MVP Reporting

Section IV.A.3.b.(2)(d) of this rule describes provisions related to implementing MVPs beginning with the CY 2023 performance period/2025 MIPS payment year. The MVPs will include the Promoting Interoperability performance category as a foundational element and incorporate population health claims-based measures, as feasible, along with the relevant measures and activities in the quality, cost, and improvement activities performance categories. For the CY 2023 performance period/2025 MIPS payment year, we are finalizing an inventory of seven MVPs included in Appendix 3: MVP Inventory of this rule to assess performance across MVPs for the quality, cost, improvement activities, and Promoting Interoperability performance categories. Additionally, in section IV.A.3.b.(2)(b)(i) of this rule, we are finalizing to use the term ''MVP Participant'' to refer to clinicians who will choose to participate in MIPS for reporting MVPs.

The following new ICRs reflect the burden associated with the first year of data collection related to the implementation of MVPs and subgroup reporting in the CY 2023 performance period/2025 MIPS payment year as described in section IV.A.3.b.(2)(c) of this rule. The requirements and burden associated with the implementation of MVPs and subgroups will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

While MVP respondents report on all performance categories, we believe that for purposes of data submission, the burden for clinicians submitting information for the Promoting Interoperability and improvement activities performance categories of MVPs will be consistent with the currently approved estimated burden per respondent for clinicians submitting data for these performance categories in traditional MIPS. We acknowledge that clinicians participating through MVPs will have fewer requirements to meet for the improvement activity performance category as discussed in section IV.A.3.b.(4)(d)(iv) of this final rule. We assume that these requirement changes will not significantly lower the burden for clinicians reporting MVPs. Therefore, we will not add additional ICRs to capture the burden for the Promoting Interoperability and Improvement Activity performance categories. For this rule, we are finalizing to create a separate ICR for estimating the burden associated with data submission for the Quality performance category of MVPs. We considered whether we should have a separate ICR to estimate burden for submission of measures and activities in the Promoting Interoperability performance category of MVPs. Based on our assumption above that the burden for clinicians submitting information for these performance categories of MVPs will be consistent with the currently approved estimated burden per respondent for clinicians submitting data in traditional MIPS, we anticipate that the separate ICRs will not be of value to clinicians.

We solicited comment on our proposal to distinctly estimate burden only for data submission in the Quality performance category of MVPs and whether we should revise the MVP submission ICR to include all the four MIPS performance categories and whether our assumptions on Promoting Interoperability and Improvement Activities should be modified for MVPs.

We did not receive public comments on this provision. We are finalizing as proposed.

(a) Burden for MVP Quality Submission

In section IV.A.3.b.(4)(d)(ii) of this rule, we are finalizing to implement voluntary MVP reporting beginning with the CY 2023 performance period/2025 MIPS payment year. Therefore, clinicians participating in MIPS will have the option to voluntarily submit data using MVPs starting with the CY 2023 performance period/2025 MIPS payment year. While we recognize the implementation of MVPs in MIPS will result in a burden for registration, we also assume that MVP reporting will result in a decline in burden for MVP participants due to the finalized changes in the MVP reporting requirements described in section IV.A.3.b.(4)(d) of this rule. We anticipate that the clinicians choosing to participate in MIPS for reporting MVPs will need to select from a reduced inventory of measures and activities for the quality and improvement activities performance categories. This reduction in burden is described in the quality, improvement activities and Promoting Interoperability performance categories sections below.

For the ICRs related to MVP participants, we used the MIPS submission data from the CY 2019 performance period/2021 MIPS payment year. Based on our review of the inventory of 7 MVPs in Appendix 3: MVP Inventory of this rule and the existing submission trends in MIPS for the measures and activities included in these MVPs, we anticipate that 10 percent of the clinicians who participate in traditional MIPS in the CY 2022 performance period/2024 MIPS payment year will report MVPs in the CY 2023 performance period/2025 MIPS payment year. Given that MVPs are new, voluntary, and represent a

reduction in burden per response, we believe that we should be conservative in estimating the number of clinicians submitting through MVPs during the initial year. Given that MVPs are a new mechanism available for clinicians, we believe that initial participation numbers will be relatively low. In an effort to be conservative in our estimate of burden reduction due to MVP reporting and reflect the anticipate low uptake by clinicians in the first year of MVP availability, we assume that a total of 10 percent of MIPS submitters will become MVP participants in the CY 2023 performance period/2025 MIPS payment year.

As described in section IV.A.3.b.(2)(c)(ii) of this rule, beginning with the CY 2023 performance period/2025 MIPS payment year, we are finalizing voluntary subgroup reporting within MIPS limited to clinicians reporting the MVP or the APP. We recognize the implementation of subgroups for clinicians to participate in MVP and APP reporting in MIPS will result in additional burden. However, we believe that subgroup participation option will allow clinicians in certain specialties and subspecialties to report on measures and activities meaningful to the scope of care provided. We anticipate that public reporting of subgroup performance information will allow patients to identify clinicians in multispecialty groups that are representative of the care specific to their clinical condition. Clinician participation in subgroups is new to MIPS and we do not have any historical participation data to estimate the submission burden for clinicians who will choose to participate as subgroups for reporting the MVP or the APP. We refer readers to section IV.A.3.b.(3) of this final rule for details on the provisions related to subgroup composition.

We anticipate that the subgroup reporting option will increase reporting and allow clinicians in specialties to report on measures and activities meaningful to their practice. Due to the delay in implementation of subgroup reporting in the CY 2023 performance period/2025 MIPS payment year, we anticipate that there is an adequate amount of time for clinicians that historically participate in MIPS to determine if they will be able to participate as subgroups for reporting on the measures and activities in an MVP. However, due to the limited number of MVPs available for clinicians to choose, the additional burden involved in reporting, and also given the voluntary option to participate as subgroups for reporting the MVPs or the APP, we anticipate that a relatively small number of clinicians will choose to participate as subgroups in the CY 2023 performance period/2025 MIPS payment year. Therefore, we assume there will be 20 subgroups reporters in the CY 2023 performance period/2025 MIPS payment year. We assume that more clinicians will choose to participate as subgroups in future years. We solicited comment on our MVP and subgroup reporting assumptions for the CY 2023 performance period/2025 MIPS payment year.

We received public comments on our MVP and subgroup reporting assumptions for the CY 2023 MIPS performance period/2025 MIPS payment year. The following is a summary of the comments we received and our responses.

Comment: One commenter stated that our estimate that 10 percent of eligible clinicians would report as MVP participants in the first year of implementation is low. The commenter shared their belief that the number of MVP participants would be higher because of the reduced reporting burden associated with MVP reporting.

Response: We thank the commenter for their feedback. We acknowledge the commenter's concern that our assumptions for MVP reporting are low. We agree with the commenter that MVP reporting is associated with a reduction in reporting burden. However, we believe that our estimates are appropriate because there would be a limited number of MVPs available for all clinicians during the CY 2023 performance period/2025 MIPS payment year. We expect that there would be increased participation in MVP reporting as more MVPs become available for clinicians in future years. We plan to revise our estimates for future years as more data becomes available.

After consideration of public comments, we are finalizing our proposed estimate for the number of MIPS eligible clinicians that would participate in MVP reporting during the CY 2023 performance period/2025 MIPS payment year.

(i) Burden for MVP Registration: Individuals, Groups and APM Entities

Beginning with the CY 2023 performance period/2025 MIPS payment year, we are finalizing that clinicians interested in participating in MIPS through MVP reporting would be required to complete an annual registration process described in section IV.A.3.b.(4)(f) of this rule. At the time of registration, MVP participants would need to select a specific MVP, a population health measure and if administrative claims measures are included in the selected MVP, the MVP participants would also need to choose an applicable administrative claims measure in the MVP. We refer readers to section IV.A.3.b.(4)(f) of this rule for additional details on MVP registration requirements.

Due to the delay in implementation of MVPs to the CY 2023 performance period/2025 MIPS payment year, we anticipate that there is an adequate amount of time for clinicians that historically participate in MIPS to determine if the measures and activities in an MVP are applicable to the scope of care provided. In Table 97, we estimate that the registration process for clinicians choosing to submit MIPS data for the measures and the activities in an MVP would require 0.25 hours of a computer systems analyst's time, similar to the currently approved burden of group registration process for CMS Web Interface finalized in the CY 2021 PFS final rule (85 FR 84983) for the CY 2023 performance period/2025 MIPS payment year. We assume that the staff involved in the MVP registration process will mainly be computer systems analysts or their equivalent, who have an average labor cost of $95.22/hour.

As discussed above, based on data from the CY 2019 performance period/2021 MIPS payment year, we assume that approximately 10 percent of the clinicians that currently participate in MIPS would submit data for the measures and activities in an MVP. Note that we apply this 10 percent calculation after adding the clinicians who begin submitting though the CQM and eCQM collection types due to the sunset of Web Interface in the CY 2023 performance period/2025 MIPS payment year. For the CY 2023 performance period/2025 MIPS payment year, we assume that a total of 25,798 submissions will be received for the measures and activities included in MVPs. This total includes our estimate of 20 subgroup reporters that would also be reporting MVPs in addition to MVP reporters who currently participate in MIPS. Therefore, we assume that the total number of individual clinicians, groups, subgroups and APM Entities to complete the MVP registration process is 12,917. We estimate that the total cost to clinicians participating as individuals and groups associated with the MVP registration process would be approximately $307,465. Table 97 includes our burden assumptions related to the MVP registration process for clinicians participating in MIPS for

reporting MVPs as individuals, groups, subgroups, and APM Entities.

TABLE 97: Total Estimated Burden for MVP Registration (Individual clinicians, Groups, Subgroups and APM Entities)

Burden and Respondent Descriptions	CY 2023 Burden Estimate
Estimated # of Individual clinicians, groups, subgroups and APM Entities Registering (a)	12,917
Estimated Total Annual Burden Hours Per Registration (b)	0.25
Estimated Total Annual Burden Hours for MVP Registration (c) = (a) * (b)	**3,229***
Estimated Cost Per MVP (@ computer systems analyst's labor rate of $95.22/hr. (d)	95.22
Estimated Total Annual Burden Cost for MVP Registration (e) = (c) * (d)	**$307,465***

*Due to burden being estimated in fractions of minutes and hours, totals may reflect impact of rounding.

(ii) Burden for Subgroup Registration

We are finalizing the proposal to add a separate ICR to estimate the burden associated with subgroup registration to capture the subgroup registration requirements in section IV.A.3.b.(4)(f)(ii)(D) of this rule. In section IV.A.3.b.(3)(b)(ii) of this rule, we finalized the definition of a subgroup at § 414.1305 as a subset of a group, as identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician's NPI. In addition to the burden for MVP registration process described above, clinicians who choose to form subgroups for reporting the MVPs or the APP will need to submit a list of each TIN/NPI associated with the subgroup and a plain language name for the subgroup in a manner specified by CMS, described in section IV.A.3.b.(4)(f)(ii)(D) of this rule.

As discussed above, we estimate that clinicians will choose to form 20 subgroups for reporting the measures and activities in MVPs. Additionally, we estimate that clinicians who choose to participate as subgroups for reporting MVPs will require a minimum of 0.5 hours per subgroup respondent to submit the finalized requirements for subgroup registration. We assume that the staff involved in the subgroup registration process will mainly be computer systems analysts or their equivalent, who have an average labor cost of $95.22/hr.

We assume that all subgroups would report MVPs, the burden associated with subgroup quality reporting will be included with the MVP quality reporting ICR. The burden associated with subgroup submissions for Promoting Interoperability and improvement activities will be included with those ICRs.

TABLE 98: Total Estimated Burden for Subgroup Registration CY 2023 Performance Period/2025 MIPS Payment Year

Burden and Respondent Descriptions	CY 2023 Burden Estimate
Estimated # of Subgroups Registering(a)	20
Estimated Total Annual Burden Hours Per Subgroup (b)	0.5
Estimated Total Annual Burden Hours for Subgroup Reporting (c) = (a) * (b)	**10**
Estimated Cost Per Subgroup (@ computer systems analyst's labor rate of $95.22/hr. (d)	$95.22
Estimated Total Annual Burden Cost for Subgroup Registration (e) = (a) * (d)	**$952**

(iii) Burden for MVP Quality Performance Category Submission

In the CY 2017 PFS final rule (81 FR 77100 through 77114), we established the submission criteria for quality measures (excluding the CMS Web Interface measures and the CAHPS for MIPS survey measure) at § 414.1335, which requires a MIPS eligible clinician, group, or virtual group that is reporting on Qualified Clinical Data Registry (QCDR) measures, MIPS clinical quality measures (MIPS CQMs), electronic CQMs (eCQMs), or Medicare Part B claims measures to submit data on at least six measures, including at least one outcome measure. As discussed in section IV.A.3.b.(4)(d)(ii) of this final rule, we finalized the proposal that except as provided in paragraph

§ 414.1365(c)(1)(i), an MVP Participant must select and report 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure, included in the MVP. The decrease in the number of required measures in the quality performance category from 6 to 4 is a two-thirds reduction in the number of measures needed for eligible clinicians to submit data for the quality performance category in MVPs described in Appendix 3: MVP Inventory of this final rule. Therefore, we estimate that the time for submitting the measures in the MVP quality performance category would, on average, take two-thirds of the currently approved burden per respondent for the quality performance category as it does to complete a MIPS quality submission through the CQM, eCQM, and Claims submission types.

As described above in this section of the final rule, we estimate that 10 percent of the clinicians who participated in MIPS for the CY 2019 performance period/2021 MIPS payment year would submit data for the quality performance category of MVPs beginning with the CY 2023 performance period/2025 MIPS payment year. We anticipate that there would be 20 subgroups reporters in the CY 2023 performance period/2025 MIPS payment year. As shown in Table 99, we estimate that approximately 2,825 clinicians would submit data for the MVP quality performance category using the Medicare Part B claims collection type; approximately 5,210 clinicians and 10 subgroups would submit data using MIPS CQM and QCDR collection type; and approximately 4,862 clinicians and 10 subgroups would submit data using eCQMs collection type. We want to note that we used the same methodologies used in sections V.B.8.e.(4), V.B.8.e.(5) and V.B.8.e.(6) to estimate the quality submission burden for each collection type. As shown in Table 99, for the clinicians and subgroups submitting data for the MVP quality performance category, we estimate a burden of 26,670 hours (9.44 hr × 2,825 clinicians) at a cost of $2,691,329 (2,825 respondents × 952.68/respondent) for the Medicare Part B claims collection type, 31,163 hours [5.97 hr × 5,220 (5,210 + 10)] at a cost of $3,211,216 (5,220 × 615.18/respondent) for the MIPS CQM and QCDR collection type, and 25,822 hours [5.3 hr × 4,872 (4,862 + 10) respondents] at a cost of $2,662,191 (4,872 × 546.43/respondent) for the eCQM collection types.

BILLING CODE 4120–01–C

(8) Quality Data Submission via CMS Web Interface

The finalized requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Background

In the CY 2021 PFS final rule, we finalized our policy to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2022 performance period/2024 MIPS payment year. As a result of this provision, for the CY 2022 performance period/2024 MIPS payment year, we estimated a burden of zero due to our assumption that all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types (85 FR 84981).

In section IV.A.3.d.(1)(d) of this rule, we are finalizing to continue the CMS Web Interface measures as a collection type for the CY 2022 performance period/2024 MIPS payment year. Additionally, we are finalizing to sunset the CMS Web Interface measures as a collection type for the CY 2023 performance period/2025 MIPS payment year. For this final rule, we estimate burden for the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years.

For the CY 2022 performance period/2024 MIPS payment year, we assume that 114 groups will submit quality data via the CMS Web Interface based on the number of groups who completed 100 percent of reporting quality data via the Web Interface in the CY 2019 performance period/2021 MIPS payment year. This is an increase of 114 groups from the currently approved number of 0 groups provided in the CY 2021 PFS final rule (85 FR 84981 due to the provision to continue with the CMS Web Interface as a collection type for the CY 2022 performance period/2024 MIPS payment year. We estimate that 44,385 clinicians will submit as part of groups via this method, an increase of 44,385 from our currently approved estimate of 0 clinicians.

The estimated burden associated with the group submission requirements is the time and effort associated with submitting data on a sample of the organization's beneficiaries that is

prepopulated in the CMS Web Interface. Our burden estimate for submission includes the time (61 hours and 40 minutes or 61.67 hours) needed for each group to populate data fields in the web interface with information on approximately 248 eligible assigned Medicare beneficiaries and submit the data (we will partially pre-populate the CMS Web Interface with claims data from their Medicare Part A and B beneficiaries). The patient data either can be manually entered, uploaded into the CMS Web Interface via a standard file format, which can be populated by CEHRT, or submitted directly. Each group must provide data on 248 eligible assigned Medicare beneficiaries (or all eligible assigned Medicare beneficiaries if the pool of eligible assigned beneficiaries is less than 248) for each measure. In aggregate, we estimate a burden for the CY 2022 performance period/2024 MIPS payment year of 7,030 hours (114 groups × 61.67 hr) at a cost of $669,433 (114 groups × $5,872.21/group). For the CY 2023 performance period/2025 MIPS payment year, we are finalizing to revise our estimated burden to zero due to our assumption that with the finalized policy to sunset the CMS Web Interface as a collection type, all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types. Based on the assumptions discussed in this section, Table 100 summarizes the finalized estimated burden for groups submitting to MIPS via the CMS Web Interface.

TABLE 100: Estimated Burden for Quality Data Submission via the CMS Web Interface

Burden and Respondent Descriptions	CY 2022 MIPS Performance Period	CY 2023 MIPS Performance Period
# of Eligible Group Practices (a)	114	0
Total Annual Hours Per Group to Submit (b)	61.67	0
Total Annual Hours (c) = (a) * (b)	7,030	0
Cost Per Group to Report (@ computer systems analyst's labor rate of $95.22/hr) (d) = ($95.22/hr) * (b)	$5,872.21	0
Total Annual Cost (e) = (a) * (d)	$669,433	0

TABLE 101: Change in Estimated Burden for Quality Data Submission via the CMS Web Interface

Total Currently Approved Annual Hours (a)	6,845	0	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (see Table 100, row (c))	0	7,030	0
Difference (c) = (b)-(a)	**-6,845**	**+7,030**	**0**
Total Currently Approved Annual Cost (d)	$651,816	$0	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (see Table 100, row (e))	0	$669,433	0
Difference (f) = (e)-(d)	**-$651,816**	**+$669,433**	**0**

(9) Beneficiary Responses to CAHPS for MIPS Survey

This rule is not implementing any new or revised collection of information requirements or burden related to the CAHPS for MIPS survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any changes to the CAHPS for MIPS Survey process under that control number.

(10) Group Registration for CMS Web Interface

The finalized requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2021 PFS final rule, we finalized to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2022 performance period/2024 MIPS payment year. As a result, we estimated that there will be zero hours and $0 burden for group registration for the CMS Web Interface for the CY 2022 performance period/2024 MIPS payment year (85 FR 84984). As discussed in section IV.A.3.d.(1)(d) of this final rule, we are finalizing to continue the CMS Web Interface measures as a collection type for the CY 2022 performance period/2024 MIPS payment year. We are also finalizing to sunset the CMS Web Interface as a collection type starting with the CY 2023 performance period/2025 MIPS payment year.

Groups interested in participating in MIPS using the CMS Web Interface for the first time must complete an online registration process. After first time registration, groups will only need to opt out if they are not going to continue to submit via the CMS Web Interface. In Table 102, we estimate that the registration process for groups under MIPS involves approximately 0.25 hours at $95.22/hr for a computer systems analyst (or their equivalent) to register the group.

Because we are finalizing to sunset the CMS Web Interface beginning with the CY 2023 performance period/2025 MIPS payment year, it is possible that fewer groups will elect to register to submit quality data for the first time in the performance year prior to the collection type/submission type no longer being available; however, we currently have no data with which to estimate what the associated reduction may be. Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84983), we continue to assume that approximately 90 groups will elect to use the CMS Web Interface for the first time during the CY 2022 performance period/2025 MIPS payment year based on the estimated number of new registrations during the CY 2021 performance period/2023 MIPS payment year. As shown in Table 102, we estimate a burden of 23 hours (90 new registrations × 0.25 hr/registration) at a cost of $2,190 (22.5 hr × $95.22/hr).

TABLE 102: Estimated Burden for Group Registration for CMS Web Interface

Burden and Respondent Descriptions	Burden Estimate
Number of New Groups Registering for CMS Web Interface (a)	90
Annual Hours Per Group (b)	0.25
Total Annual Hours (c) = (a) * (b)	23
Labor rate for a computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (a) * (d)	$2,190

As shown in Table 103, the estimated increase in the number of groups registering for the CMS Web Interface collection type to submit the MIPS data and the estimated increase in burden per respondent results in adjustment to the total time burden of +23 hours (+90 respondents × 0.25 hr/respondent) at a cost of $2,190 for the CY 2022 performance period/2024 MIPS payment year. For the CY 2023 performance period/2025 MIPS payment year, our finalized burden estimate is zero hours and $0.

TABLE 103: Change in Estimated Burden for Group Registrations for the CMS Web Interface

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	22.5	0	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 102, row (c))	0	23	0
Difference (c) = (b) - (a)	**-22.5**	**+23**	**0**
Total Currently Approved Annual Cost (d)	$2,142	0	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 102, row (e))	0	$2,190	0

(11) Group Registration for CAHPS for MIPS Survey

This rule is not implementing any new or revised collection of information requirements or burden related to the group registration for the CAHPS for MIPS Survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any changes to the CAHPS for MIPS Survey registration process under that control number.

f. ICRs Regarding the Call for MIPS Quality Measures

This rule is not implementing any new or revised collection of information requirements or burden related to the call for MIPS quality measures. However, outside of the rulemaking process we replaced the existing tool for stakeholders beginning with the 2021 Annual Call for Measures. As described below, to account for the updated tool (MERIT), we are finalizing to revise our currently approved burden estimates. The updated tool and revised burden will be submitted to OMB under control number 0938–1314 (CMS–10621).

Beginning with the 2021 Annual Call for Measures, we replaced the customary Office of the National Coordinator (ONC) Issue Tracking System Jira platform that stakeholders

used to submit candidate quality measure specifications and all supporting data files for CMS review with the MUC Entry/Review Information Tool (MERIT). For the ONC Issue Tracking System Jira platform used by stakeholders, the approved estimated time for a practice administrator to identify, propose, and link to a quality measure is 0.9 hours and for a clinician to identify, propose, link to quality measure, and complete the Peer Review Journal Article form is 4.6 hours (0.6 hours to identify, propose, and link to quality measure (84 FR 63132) and 4 hours to complete the Peer Review Journal Article Form (84 FR 63133), with a total estimated time of 5.5 hours per quality measure submission. Based on the stakeholder experience with the updated tool and additional information collected at the time of submission, we estimate that it will add approximately 1.5 hours for the practice administrator at $114.24/hr and 0.5 hours at $217.32/hr for a clinician to identify, propose, and link the quality measure, and reduce approximately 2 hours at $217.32/hr for a clinician to complete the Peer Review Journal Article Form, resulting in a new estimated time of 2.4 hours for a practice administrator and 3.1 hours for a clinician, and an unchanged total estimated time of 5.5 hours per quality measure submission. In order to account for the implementation of the MERIT tool starting with the 2021 Annual Call for Measures, we are revising the estimated time required for a practice administrator to identify, propose, and link to a quality measure to 2.4 hours (from 0.9 hr) and a clinician to identify, propose, link to quality measure, and complete the Peer Review Journal Article Form to 3.1 hours (from 4.6 hr), resulting in a total estimated time of 5.5 hours per quality measure submission. Based on the number of submissions received during the CY 2020 Call for Quality Measures process, we anticipate receiving the same number of 28 submissions during the CY 2021 Call for Quality Measures process (84 FR 63132).

Although the total estimated time of 5.5 hours for completing a quality measure submission using the MERIT tool (see Table 104) is the same estimated time as the ONC Issue Tracking System Jira platform, we need to account for the changes to the individual components of the estimated time required by a practice administrator and clinician using the MERIT tool. Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84984), we estimate an annual burden of 154 hours (28 submissions × 5.5 hr/measure). Thus, we are finalizing to adjust our estimated annual burden from $30,197 (28 submissions × [(0.9 hr × $110.74/hr) + (4.6 hr × $212.78/hr)) to $26,541 (28 measures × [(2.4 hr × $114.24/hr) + (3.1 hr × $217.32/hr)]) a difference of −$4,329 for the CY 2022 performance period/2024 MIPS payment year.

TABLE 104: Estimated Burden for Call for Quality Measures

	Burden estimate
# of New Quality Measures Submitted for Consideration (a)	28
# of Hours per Practice Administrator to Identify, Propose and Link Measure (b)	2.4
# of Hours per Clinician to Identify and Link Measure (c)	1.1
# of Hours per Clinician to Complete Peer Review Article Form (d)	2
Annual Hours Per Response (e) = (b) + (c) + (d)	5.5
Total Annual Hours (f)=(a)*(e)	**154**
Cost to Identify and Submit Measure (@ practice administrator's labor rate of $114.24/hr) * 2.4 hr = (g)	$274.20
Cost to Identify Quality Measure and Complete Peer Review Article Form (@ clinician's labor rate of $217.32/hr) * 3.1 hr = (h)	$673.69
Total Annual Cost Per Submitted Measure (i)	$947.89
***Total Annual Cost (j)=(a)*(i)**	**$26,541**

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 105, using our currently approved burden estimates, the redistribution of the estimated time needed for the clinician and practice administrator as discussed above, we are estimating an adjustment of 0 hours at a cost of −$4,329 for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of $26,541 (28 measures × $947.89/respondent).

TABLE 105: Change in Estimated Burden for Call for Quality Measures

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	154	154	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 104, row (c))	0	154	154
Difference (c) = (b) - (a)	**-154**	**0**	**+154**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$30,870	$30,870	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 104, row (e))	0	$26,541	$26,541
Difference (f) = (e) - (d)	**-$30,870**	**-$4,329**	**+$26,541**

g. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the CY 2022 performance period/2024 MIPS payment year, clinicians and groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, which is not available for the quality performance category, we anticipate that individuals and groups will use the same data submission type for both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. Although this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis, and decisions are expected to be made for the program as a whole.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

The finalized requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53918 through 53919), CY 2019 PFS final rule (83 FR 60011 through 60012), CY 2020 PFS final rule (84 FR 63134 through 63135), and the CY 2021 PFS final rule (85 FR 84984 through 84985) for our previously finalized requirements and burden for reweighting applications for Promoting Interoperability and other performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an application requesting a zero percent weighting for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785). Respondents who apply for a reweighting of the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting of the Promoting Interoperability performance category on the same online form. We assume that respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

Table 106 summarizes the burden for clinicians to apply for reweighting of the Promoting Interoperability performance category to zero percent due to a significant hardship exception or as a result of a decertification of an EHR. Based on the number of reweighting applications received by March, 2021 for the CY 2020 performance period/2022 MIPS payment year, we assume 20,192 respondents (eligible clinicians or groups) will submit a request to reweight the Promoting Interoperability performance category to zero percent due to a significant hardship or EHR decertification and an additional 22,635 respondents will submit a request to reweight one or more of the quality, cost, Promoting Interoperability, or improvement activities performance categories due to an extreme or uncontrollable circumstance. For the CY 2022 performance period/2024 MIPS payment year, we estimate that a total of 42,797 reweighting applications will be submitted. This is a decrease of 9,302 respondents compared to our currently approved estimate of 52,099 respondents (85 FR 84984). This decrease is likely due to the provision in section IV.A.3.e.(2)(b)(iv)(A) of this rule to automatically reweight the Promoting Interoperability performance category for small practices who previously had to apply for reweighting. For the CY 2020 performance period/2024 MIPS payment year, 13,894 respondents requested reweighting due to significant hardship for small practices. Similar to the data used to estimate the number of respondents in the CY 2021 PFS final rule, our respondent estimate includes a significant number of applications submitted as a result of a data issue CMS was made aware of and is specific to a single third-party intermediary. While we do not anticipate similar data issues to occur in each performance period, we do believe future similar incidents may occur and are electing to use this data without adjustment to reflect this belief. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84984), our respondent estimate does not include reweighting

applications submitted during the extended period ending November 29, 2021 due to the PHE for COVID–19, as we do not believe it would be an accurate basis of future estimates for reweighting application submissions. We assume that, out of our total respondent count of 42,797 above, we estimate that 22,605 respondents (eligible clinicians or groups) will submit a request for reweighting the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR.

In the CY 2021 PFS final rule (85 FR 84984) we discussed that, beginning with the CY 2019 performance period/2021 MIPS payment year, APM Entities may submit an extreme and uncontrollable circumstances exception application for all four performance categories and applicable to all MIPS eligible clinicians in the APM Entity group. As discussed in this section of this final rule, due to data limitations and our inability to determine who will use the APP versus the traditional MIPS submission mechanism for the CY 2022 performance period/2024 MIPS payment year, we assume ACO APM Entities will submit data through the APP and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. Therefore, we limited our analysis to ACOs that were eligible for an exception due to extreme and uncontrollable circumstances during the CY 2020 performance period/2022 MIPS payment year and elected not to report quality data. Based on this data, we estimate that 30 APM Entities will submit an extreme and uncontrollable circumstances exception application for the CY 2022 performance period/2024 MIPS payment year. Combined with our aforementioned estimate of 42,797 eligible clinicians and groups, the total estimated number of respondents for the CY 2022 performance period/2024 MIPS payment year is 42,827.

Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84984–84985), we continue to estimate it will take 0.25 hours for a computer system analyst to complete and submit the application. As shown in Table 106, we estimate an annual burden of 10,707 hours (42,827 applications × 0.25 hr/application) and $1,019,521 (10,707 hr × $95.22/hr).

TABLE 106: Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

Burden and Respondent Descriptions	Burden Estimate
# of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions or Extreme and Uncontrollable Circumstances (a)	42,797
# APM Entities requesting Extreme and Uncontrollable Circumstances exception (b)	30
Total Applications Submitted (c)	42,827
Hours Per Applicant per Application Submission (d)	0.25
Total Annual Hours (e) = (a) * (c)	**10,707**
Labor Rate for a computer systems analyst (f)	$95.22/hr
Total Annual Cost (g) = (e) * (f)	**$1,019,521**

As shown in Table 107, using our currently approved burden estimates, the decrease in the estimated number of respondents (from 52,099 to 42,827 respondents) results in an adjustment of minus 2,318 hours (9,272 respondents × 0.25 hr/respondent) and minus $220,720 for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 10,707 hours (42,827 respondents × 0.25 hr/respondent) and $1,019,521 (10,707 hours × $95.22/respondents).

TABLE 107: Adjusted Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	13,025	13,025	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 106, row (c))	0	10,707	10,707
Difference (c) = (b) - (a)	**-13,025**	**-2,318**	**+10,707**
Total Currently Approved Annual Cost (d)	$1,240,241	$1,240,241	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 106, row (e))	0	$1,019,521	$1,019,521
Difference (f) = (e) - (d)	**-$1,240,241**	**-$220,720**	**+$1,019,521**

(3) Submitting Promoting Interoperability Data

The requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77509 through 77511), CY 2018 Quality Payment Program final rule (82 FR 53919 through 53920), CY 2019 PFS final rule (83 FR 60013 through 60014), CY 2020 PFS final rule (84 FR 63135 through 63137), and the CY 2021 PFS final rule (85 FR 84985 through 84987) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category.

In section IV.A.3.d.(4)(d)(ii) of this final rule, we are finalizing the additional requirement that MIPS eligible clinicians must attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides beginning with the CY 2022 performance period/2024 MIPS payment year. Clinicians will complete this attestation by checking a box when they submit their Promoting Interoperability performance category data. We estimate that this requirement will add an additional minute to the current estimated time it takes to complete the submission of Promoting Interoperability data. In the CY 2022 PFS proposed rule, we assumed no change in estimates as result of the proposal to modify the Provide Patients Electronic Access to Their Health Information measure to require MIPS eligible clinicians to ensure that patient health information remains available to the patient (or patient-authorized representative) to access indefinitely (86 FR 39509). As discussed in section IV. of this final rule, this policy is not being finalized as proposed at this time.

As shown in Table 108, based on data from the CY 2019 performance period/ 2021 MIPS payment year, we estimate that a total of 51,647 respondents consisting of 40,172 individual MIPS eligible clinicians and 11,475 groups and virtual groups will submit Promoting Interoperability data. Since our CY 2021 PFS final rule estimated 53,636 respondents, this represents a decrease of 1,989 respondents (51,647 respondents − 53,636 active respondents).

We assume that MIPS eligible clinicians previously scored under the APM scoring standard, as described in the CY 2020 PFS final rule, will continue to submit Promoting Interoperability data (84 FR 63006) in a similar way through the APP. As a result, we do not anticipate any change in burden. Each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA. However, in the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822 through 59823). Burden estimates for this final rule assume group TIN-level reporting as we believe this is the most reasonable assumption for the Shared Savings Program, which requires that ACOs include full TINs as ACO participants.

TABLE 108: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data on Behalf of Clinicians in CY 2022

Burden and Respondent Descriptions	# of Respondents
Number of individual clinicians to submit Promoting Interoperability (a)	40,172
Number of groups to submit Promoting Interoperability (b)	11,475
Total Respondents in CY 2022 performance period (CY 2022 PFS Final Rule) (c) = (a) + (b)	51,647
*Total Respondents in CY 2021 performance period (CY 2021 PFS Final Rule) (d)	53,636
Difference (e) = (c) – (d)	-1,989

As discussed in section IV.A.3.b.(2)(c)(ii) of this final rule, we will be introducing subgroup reporting in CY 2023 performance period/2025 MIPS payment year. As we discussed above in this section of the final rule, we estimate that there will be 20 subgroup submissions in CY 2023 performance period/2025 MIPS payment year, each of which will have burden related to the submission of Promoting Interoperability data. We have included this burden in Table 109.

TABLE 109: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data on Behalf of Clinicians in CY 2023

Burden and Respondent Descriptions	# of Respondents
Number of individual clinicians to submit Promoting Interoperability in CY 2023 (a)	40,172
Number of groups to submit Promoting Interoperability in CY 2023 (b)	11,475
# of Subgroups to submit Promoting Interoperability in MVPs during the CY 2023 MIPS performance period (c)	20
Total Respondents in 2023 MIPS performance period (CY 2022 PFS Final Rule) (d) = (a) + (b) + (c)	51,667
*Total Respondents in 2021 MIPS performance period (CY 2021 PFS Final Rule) (e)	0
Difference (f) = (d) – (e)	+51,667

With the inclusion of the additional minute (0.02 hr) to attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides, we are adjusting our estimate of the time required for an individual or group to submit Promoting Interoperability data from 2.67 hours to 2.69 hours (2.67 hr + 0.02 hr). As shown in Table 110, the total burden estimate for submitting data on the specified Promoting Interoperability objectives and measures is estimated to be 138,930 hours (51,647 respondents × 2.69 incremental hours for a computer analyst's time above and beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and $13,228,915 (138,930 hr × $95.22/hr)).

TABLE 110: Estimated Burden for Promoting Interoperability Performance Category Data Submission in CY 2022

Burden and Respondent Descriptions	Burden Estimate
Number of individual clinicians to submit Promoting Interoperability (a)	40,172
Number of groups to submit Promoting Interoperability (b)	11,475
Total (c) = (a) + (b)	51,647
Total Annual Hours Per Respondent (d)	2.69
Total Annual Hours (e) = (c) * (d)	**138,930**
Labor rate for a computer systems analyst to submit Promoting Interoperability data (f)	$95.22/hr
Total Annual Cost (g) = (e) * (f)	**$13,228,915**

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 111, with the introduction of subgroup reporting in CY 2023 performance period/2025 MIPS payment year, the total burden for submitting data on the specified Promoting Interoperability objectives and measures is estimated to be 138,984 hours (51,667 respondents × 2.69 incremental hours for a computer analyst's time above and beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and $13,234,078 (138,984 hr × $95.22/hr)).

TABLE 111: Estimated Burden for Promoting Interoperability Performance Category Data Submission in CY 2023

Burden and Respondent Descriptions	Burden Estimate
Number of individual clinicians to submit Promoting Interoperability (a)	40,172
Number of groups to submit Promoting Interoperability (b)	11,475
Number of subgroups to submit Promoting Interoperability (c)	20
Total (d) = (a) + (b) + (c)	51,667
Total Annual Hours Per Respondent (e)	2.69
Total Annual Hours (f) = (d) * (e)	**138,984**
Labor rate for a computer systems analyst to submit Promoting Interoperability data (g)	$95.22/hr
Total Annual Cost (h) = (f) * (g)	**$13,234,078**

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

Table 112, using our updated per respondent burden estimate (+0.02 hr/response), the decrease in number of respondents and SAFER guide attestation requirement results in a total adjustment of −4,278 hours at a cost of −$407,351 for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 138,984 hours (51,667 respondents × 2.69 incremental hours for a computer analyst's time above and beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and $13,234,078 (138,984 hours × $95.22/hour).

TABLE 112: Change in Estimated Burden for Promoting Interoperability Performance Category Data Submission

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance period
Total Currently Approved Annual Hours (a)	143,208	143,208	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (see Table 111, row (f))	0	138,930	138,984
Difference (c) = (b) - (a)	**-143,208**	**-4,278**	**+138,984**
Total Currently Approved Annual Cost (d)	$13,636,266	$13,636,266	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (see Table 111, row (h))	0	$13,228,915	$13,234,078
Difference (f) = (e) - (d)	**-$13,636,226**	**-$407,351**	**+$13,234,078**

h. ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule is not implementing any new or revised collection of information requirements or burden related to the nomination of Promoting Interoperability measures. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the process for nomination of Promoting Interoperability measures under that control number.

i. ICR Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

The finalized requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77511 through 77512), CY 2018 Quality Payment Program final rule (82 FR 53920 through 53922), CY 2019 PFS final rule (83 FR 60015 through 60017), CY 2020 PFS final rule (84 FR 63138 through 63140) and the CY 2021 PFS final rule (85 FR 84987 through 84989) for our previously finalized requirements and burden for submission of data for the improvement activities performance category.

In section IV.A.3.d.(3) of this rule, we are finalizing to: (1) Revise group reporting requirements for the 50 percent threshold to address subgroups; (2) add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously adopted improvement activities for the CY 2022 performance period/2024 MIPS payment year and future years; (3) revise the ''Drug Cost Transparency to include requirements for use of real-time benefit tools'' improvement activity; and (4) add the COVID–19 ''Clinical Data Reporting with or without Clinical Trial'' improvement activity for CY 2022 performance period/2024 MIPS payment year and future years. Additionally, we are finalizing to adjust our currently approved burden estimates based on more recent data.

Specifically, we are finalizing to revise § 414.1360(a)(2) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, each improvement activity for which groups and virtual

groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group's TIN or virtual group's TINs or that are part of the subgroup, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance year. In section IV.A.3.d.(3)(b) of this rule, we discussed stakeholder requests through the Quality Payment Program help desk to apply the 50 percent threshold to a portion of clinicians in a group. We anticipate that clinicians will find applicable and meaningful activities specific to practice size, specialty, or practice setting. Therefore, we assume that the provision to apply the 50 percent minimum threshold to clinicians who submit for the improvement activity performance category as part of groups, virtual groups, or choose to participate as subgroups beginning with the CY 2023 performance period/2025 MIPS payment year will not present additional complexity or burden.

We do not believe the changes to the improvement activities inventory will impact time or financial burden on stakeholders because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. Therefore, we are not adjusting the estimated time of 5 minutes (per response) currently approved for improvement activities submission.

As represented in Table 113, based on data from the CY 2019 performance period/2021 MIPS payment year, we estimate that a total of 81,562 respondents consisting of 63,845 individual clinicians and 17,717 groups will submit improvement activities during the CY 2022 performance period/2024 MIPS payment year. Since our currently approved burden sets out 79,927 respondents, this represents an increase of 1,635 respondents (81,562 respondents − 79,927 active respondents). This is an increase of 1,242 individuals and 393 groups from the estimates of 62,603 individuals and 17,324 groups provided in the CY 2021 PFS final rule (85 FR 50362).

As discussed in sections V.B.8.e. and V.B.8.g.(3) of this final rule regarding our estimate of clinicians and groups submitting data for the quality and Promoting Interoperability performance categories, we are finalizing to update our estimates for the number of clinicians and groups that will submit improvement activities data based on projections of the number of eligible clinicians that were not QPs or participating in an ACO in the CY 2019 performance period/2021 MIPS payment year but will be QPs in the CY 2022 performance period/2024 MIPS payment year, and will therefore not be required to submit improvement activities data.

TABLE 113: Estimated Number of Organizations Submitting Improvement Activities Performance Category Data on Behalf of Clinicians in CY 2022

Burden and Respondent Descriptions	Count
# of clinicians to participate in improvement activities data submission as individuals during the CY 2022 MIPS performance period (a)	63,845
# of Groups to submit improvement activities on behalf of clinicians during the CY 2022 MIPS performance period (b)	17,717
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2022 MIPS performance period (CY 2022 Final Rule) (c) = (a) + (b)	81,562
*Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2020 MIPS performance period (CY 2021 PFS Final Rule) (d)	79,927
Difference (e) = (c) - (d)	**+1,635**

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

As discussed in section IV.A.3.b.(2)(c)(ii) of this final rule, we are finalizing subgroup reporting in the CY 2023 performance period/2025 MIPS payment year. As we discussed in section V.B.8.e.(7)(a) of this final rule, we estimate that there will be 20 subgroup reporters in the CY 2023 performance period/2025 MIPS payment year, each of which will have burden related to the submission of improvement activities. We have included this burden in Table 114.

TABLE 114: Estimated Number of Organizations Submitting Improvement Activities Performance Category Data on Behalf of Clinicians in CY 2023

Burden and Respondent Descriptions	Count
# of clinicians to participate in improvement activities data submission as individuals during the CY 2023 MIPS performance period (a)	63,845
# of Groups to submit improvement activities on behalf of clinicians during the CY 2023 MIPS performance period (b)	17,717
# of Subgroups to submit improvement activities in MVPs during the CY 2023 MIPS performance period (c)	20
Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 MIPS performance period (CY 2022 PFS Final Rule) (d) = (a) + (b) + (c)	81,582
*Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2020 MIPS performance period (CY 2021 PFS Final Rule) (e)	0
Difference (f) = (d) - (e)	**+81,582**

Consistent with the CY 2021 PFS final rule, we continue to estimate that the per response time required per individual or group is 5 minutes for a computer system analyst to submit by logging in and manually attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials (84 FR 63140).

As shown in Table 115, we estimate an annual burden of 6,770 hours (81,562 responses × 0.083 hr) at a cost of $644,639 (6,770 hr × $95.22/hr)) for the CY 2022 performance period/2024 MIPS payment year.

TABLE 115: Estimated Burden for Improvement Activities Submission in CY 2022

Burden and Respondent Descriptions	Burden Estimate
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2022 performance period (a)	81,562
Total Annual Hours Per Respondent (b)	0.083
Total Annual Hours (c) = (a) * (b)	**6,770**
Labor rate for a computer systems analyst to submit improvement activities (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$644,639**

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 116, with the introduction of subgroup reporting in the CY 2023 performance period/2025 MIPS payment year, we estimate an annual burden of 6,771 hours (81,582 responses × 0.083 hr) and $644,735 (6,771 hr × $95.22/hr).

TABLE 116: Estimated Burden for Improvement Activities Submission in CY 2023

Burden and Respondent Descriptions	Burden Estimate
Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 performance period (a)	81,582
Total Annual Hours Per Respondent (b)	0.083
Total Annual Hours (c) = (a) * (b)	**6,771**
Labor rate for a computer systems analyst to submit improvement activities (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$644,735**

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 117, using our unchanged currently approved per respondent burden estimate, the increase in the number of respondents results in an adjustment of 109 hours at a cost of $10,379 (109 hr × $95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 6,771 hours (81,582 responses × 0.083 hr) at a cost of $644,735 (6,771 hr × $95.22/hr).

TABLE 117: Change in Estimated Burden for Improvement Activities Submission

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	6,661	6,661	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 116, row (c))	0	6,770	6,771
Difference (c) = (b) - (a)	**-6,661**	**+109**	**+6,771**
Total Currently Approved Annual Cost (d)	$634,221	$634,260	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 116, row (e))	0	$644,639	$644,735
Difference (f) = (e) - (d)	**-$634,221**	**+10,379**	**+$644,735**

j. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

The requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53922), CY 2019 PFS final rule (83 FR 60017 through 60018), CY 2020 PFS final rule (84 FR 63141) and the CY 2021 PFS final rule (85 FR 84989 through 85 FR 84990) for our previously finalized requirements and information collection burden for the nomination of improvement activities.

In section IV.A.3.d.(3)(c)(i)(B) of this rule, we are finalizing: (1) To revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (2) changes to the timeline for improvement activities nomination during a PHE; and (3) to suspend activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process.

In section IV.A.3.d.(3)(c)(i)(B)(cc) of this rule, we are finalizing 2 new criteria that beginning with the CY 2022 Annual Call for Activities MIPS improvement activities: (1) Should not duplicate other improvement activities in the Inventory; and (2) should drive improvements that go beyond purely common clinical practices.

Additionally, we are finalizing to increase the number of criteria stakeholders are required to meet when submitting an activity provision from a minimum of 1 to all 8 criteria, which includes the two new provision criteria. We believe that this provision will provide clearer guidance to stakeholders when submitting a nomination for an improvement activity. In the CY 2021 PFS final rule, we estimated that it would require 0.6 hours for a medical and health services manager or equivalent and 0.4 hours for a physician to link the nominated improvement activity to existing and related cost and quality measures (85 FR 84989). Given that our current approved estimated time per respondent to nominate an improvement activity is 3 hours (1.8 hours for a medical and health services manager or equivalent and 1.2 hours for a physician), we assume that the new requirement to meet all 8 criteria will require approximately 1 hour at $114.24/hr for a medical and health services manager to identify and submit an activity and 0.4 hours at a rate of $217.32/hr for a clinician to review each activity. Combined with our currently approved burden estimate, we are finalizing to revise our estimate to 2.8 hours at $114.24/hr for a medical and health services manager or equivalent and 1.6 hours at $217.32/hr for a physician to nominate an improvement activity. This represents a change of +1

hours (2.8 hr − 1.8 hr) for a medical and health services manager or equivalent and +0.4 hours (2 hr − 1.6 hr) for a physician and an overall increase of 1.4 hours. We considered whether we should double our estimates for nomination of an improvement activity to 6 hours. Since only 2 of the required 8 criteria are new, we assume that stakeholders are familiar with the existing criteria and will not need additional time to review but will need the additional time to verify and confirm if the considered activity meets all the 8 criteria. We solicited comment on our estimate to revise the time for nomination of an improvement activity to 4.4 hours and if there are additional burden implications that we should consider for above provisions to revise the criteria.

We did not receive public comments on the proposed burden estimates for this information collection. We are finalizing as proposed. The burden estimates have not been updated from the CY 2021 PFS proposed rule (86 FR 39514 through 39516).

In the CY 2021 PFS final rule, we finalized an exception stating that during the PHE, stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe (85 FR 84989). Instead of only accepting nominations and modifications submitted February 1st through July 1 each year, we would accept nominations for the duration of the PHE as long as the improvement activity is still relevant. No other aspects of the Annual Call for Activities process would be affected (for example, criteria for nominating improvement activities, considerations for selection of improvement activities, or weighting policies would all still apply). In section IV.A.3.d.(3)(c)(i)(B)(aa) of this rule, we are finalizing to clarify that in order to implement a new improvement activity for a PHE during the same year as the nomination, the nomination will need to be received no later than January 5th of the nomination year to be included in a rule for notice-and-comment rulemaking during that fiscal or calendar year, a necessary precursor to implementation if it were to be finalized, as described above.

We believe this provision will not affect our currently approved burden estimates since we assume that the number of nominations will not change, but it will make an activity available for reporting to clinicians in the same performance year it was intended to be implemented. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84989), we expect additional nominations may be received as a result of this change. However, we do not have any data with which to estimate what the additional number may be. As a result, we are not making any changes our currently approved burden estimate.

In section IV.A.3.d.(3)(c)(i)(C)(aa) of this rule, we are finalizing that beginning with the CY 2022 performance period/2024 MIPS payment year, for each improvement activity that is in the Inventory, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline, it will be removed from the program as soon as possible. In the CY 2020 PFS final rule (84 FR 62988 through 62990), we finalized the factors for consideration in removing improvement activities. Following the publication of the CY 2021 PFS proposed rule, the improvement activities team became aware that clinicians could no longer complete the activity from April 1 through December 31, 2020, because one of the improvement activities in the Inventory had expired on March 31, 2020. We do not anticipate any burden for stakeholders because of the above provision as described, the policy does not change requirements for the nomination of improvement activities. This provision will help avoid stakeholder confusion and ensure the accuracy of the available activities in the Inventory. Therefore, we are not making any changes to our estimated burden due to the above policy.

Additionally, consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84990) we continue to use our currently approved assumption that we will receive 31 nominations of new or modified activities which will be evaluated for the Improvement Activities Under Consideration (IAUC) list for possible inclusion in the CY 2023 Improvement Activities Inventory as we believe this estimate is more realistic than basing our estimate on the number of nominations received during the 2021 Annual Call for Activities.

As shown in Table 118, accounting for the change in burden per respondent estimate due to the provision to require all the 8 criteria for nomination of an improvement activity as described above in this section, we are adjusting our estimated annual information collection burden to 136 hours (31 nominations × 4.4 hr/nomination) at a cost of $20,695 (31 × [(2.8 hr × $114.24/hr) + (1.6 hr × $217.32/hr)]).

TABLE 118: Estimated Burden for Nomination of Improvement Activities

	Burden Estimate
# of Nominations of New Improvement Activities (a)	31
# of Hours Per Medical and Health Services Manager to Identify and Nominate Activity (b)	2.8
# of Hours Per Physician to Identify Activity (c)	1.6
Annual Hours Per Respondent (d)= (b) + (c)	4.4
Total Annual Hours (e) = (a) * (d)	**136**
Cost to Identify and Submit Activity (@ medical and health services manager's labor rate of $114.24/hr) (f) = $114.24/hr * (b)	$319.87
Cost to Identify Improvement Activity (@ physician's labor rate of $210.44/hr) (g) = $217.32/hr * (c)	$347.71
Total Annual Cost Per Respondent (h)=(f)+(g)	$667.58
Total Annual Cost (i) = (a) * (h)	**$20,695**

As shown in Table 119, using our unchanged estimate of the number of activities nominated, the increase in the burden per nomination results in a change of 43 hours (31 nominations × 1.4 hr/nomination) at a cost of $6,492 (31 activities × [(1 hr × $114.24/hr) + (0.4 hr × $217.32/hr)]) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 136 hours (31 nominations × 4.4 hr) at a cost of $20,695 (31 × [(2.8 hr × $114.24/hr) + (1.6 hr × $217.32/hr)]).

TABLE 119: Change in Estimated Burden for Nomination of Improvement Activities

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	93	93	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 118, row (c))	0	136	136
Difference (c) = (b) - (a)	**-93**	**+43**	**+136**
Total Currently Approved Annual Cost (d)	$14,203	$14,203	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 118, row (e))	0	$20,695	$20,695
Difference (f) = (e) - (d)	**-$14,203**	**+$6,492**	**+$20,695**

k. Nomination of MVPs

This rule is not implementing any new or revised collection of information requirements or burden related to the nomination of MVPs for inclusion in the Quality Payment Program. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the MVP nomination process under that control number.

l. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the policies in this rule do not result in the need to add or revise or delete any claims data fields. Consequently, we are not making any changes to this information collection under that control number.

m. ICRs Regarding Partial QP Elections (§§ 414.1310(b) and 414.1430)

This rule is not implementing any new or revised collection of information requirements related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. However, we are finalizing to adjust our currently approved burden estimates based on updated projections for the CY 2022 performance period/2024 MIPS payment year. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As shown in Table 120, based on our predictive QP analysis for the 2022 QP performance period/2024 MIPS payment year, which accounts for historical response rates in the CY 2020 performance period/2022 MIPS payment year, we are revising our estimate that 150 APM Entities and 100 eligible clinicians (representing approximately 9,000 Partial QPs) will make the election to participate as a Partial QP in MIPS, a total of 250 elections which is a decrease of 50 from the 300 elections that are currently approved by OMB under the aforementioned control number. We continue to estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hr) to make this election. In aggregate, we are revising our estimated annual burden to 63 hours (250 respondents × 0.25 hr/election) and $5,999 (63 hr × $95.22/hr).

TABLE 120: Estimated Burden for Partial QP Election

Burden and Respondent Description	Burden Estimate
# of respondents making Partial QP election (150 APM Entities, 100 eligible clinicians) (a)	250
Total Hours Per Respondent to Elect to Participate as Partial QP (b)	0.25
Total Annual Hours (c) = (a) * (b)	**63**
Labor rate for computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$5,999**

As shown in Table 121, using our unchanged currently approved per respondent burden estimate (85 FR 84991), the decrease in the number of Partial QP elections results in an adjustment of 12.5 hours (−50 elections × 0.25 hr) at a cost of −$1,191 (−12.5 hr × $95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 63 hours (250 respondents × 0.25 hr/election) at a cost of $5,999 (63 hr × $95.22/hr).

TABLE 121: Change in Estimated Burden for Partial QP Election

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	75	75	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 120, row (c))	0	63	63
Difference (c) = (b) - (a)	**-75**	**-12**	**+63**
Total Currently Approved Annual Cost (d)	$7,142	$7,142	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 120, row (e))	0	$5,999	$5,999
Difference (f) = (e) - (d)	**-$7,142**	**-$1,143**	**+$5,999**

n. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician Initiated Process (§ 414.1445)

The following burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

(1) Payer Initiated Process (§ 414.1445)

This rule is not implementing any new or revised collection of information requirements related to the Payer-Initiated Process. However, we are adjusting our currently approved burden estimates based on updated projections for the CY 2022 performance period/2024 MIPS payment year.

As shown in Table 122, based on the actual number of requests received in the 2020 QP performance period, we are revising our estimate that for the 2023 QP performance period, 15 payer-initiated requests for Other Payer Advanced APM determinations will be submitted (6 Medicaid payers, 6 Medicare Advantage Organizations, and 3 remaining other payers), a decrease of 65 from the 80 total requests currently approved by OMB under the aforementioned control number. We continue to estimate it will take 10 hours for a computer system analyst per arrangement submission. We are revising our estimated annual burden to 150 hours (15 submissions × 10 hr/submission) and $14,283 (150 hr × $95.22/hr).

TABLE 122: Estimated Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

	Burden Estimate
# of other payer payment arrangements (3 Medicaid, 3 Medicare Advantage Organizations, 1 remaining other payers) (a)	15
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a) * (b)	**150**
Labor rate for a computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$14,283**

As shown in Table 123, using our unchanged currently approved per respondent burden estimate (85 FR 84992), the decrease in the number of payer-initiated requests from 800 to 150 results in an adjustment of −650 hours (−65 requests × 10 hr) at a cost of −$61,893 (−650 hr × $95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 150 hours (15 requests × 10 hr) at a cost of $14,283 (150 hr × $95.22/hr).

TABLE 123: Estimated Change in Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	800	800	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 122, row (c))	0	150	150
Difference (c) = (b) - (a)	**-800**	**-650**	**+150**
Total Currently Approved Annual Cost (d)	$76,176	$76,176	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 122, row (e))	0	$14,283	$14,283
Difference (f) = (e) - (d)	**-$76,176**	**-$61,893**	**+$14,283**

(2) Eligible Clinician Initiated Process (§ 414.1445)

This rule is not implementing any new or revised collection of information requirements or burden related to the Eligible-Clinician Initiated Process. As described below, we are adjusting our currently approved burden estimates based on updated projections for the CY 2022 performance period/2024 MIPS payment year. As mentioned above, the new and adjusted burden will be submitted to OMB for approval.

As shown in Table 124, based on the actual number of requests received in the 2020 QP performance period, we estimate that in CY 2022 for the 2023 QP performance period, 15 Eligible-Clinician Initiated request for Other Payer Advanced APM determinations will be submitted, a decrease of 135 from the 150 total requests currently approved by OMB under the aforementioned control number. We continue to estimate it will take 10 hours for a computer system analyst per arrangement submission. We are adjusting our estimated annual burden to 150 hours (15 submissions × 10 hr/submission) and $14,283 (150 hr × $95.22/hr).

TABLE 124: Estimated Burden for Other Payer Advanced APM Identification Determinations: Eligible Clinician Initiated Process

	Burden Estimate
# of other payer payment arrangements from APM Entities and eligible clinicians	15
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a) * (b)	**150**
Labor rate for a computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$14,283**

As shown in Table 125, using our unchanged currently approved per respondent burden estimate (85 FR 84993), the decrease in the number of eligible clinician-initiated requests from 150 to 15 results in an adjustment of −1,350 hours (−135 requests × 10 hr) at a cost of −$128,547 (−1,350 hr × $95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 150 hours (15 submissions × 10 hr/submission) at a cost of $14,283 (150 hr × $95.22/hr).

TABLE 125: Estimated Change in Burden for Other Payer Advanced APM Identification Determinations: Eligible Clinician Initiated Process

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	1,500	1,500	N/A
Total Annual Hours for Respondents in CY 2022 PFS Final Rule (b) (See Table 124, row (c))	0	150	150
Difference (c) = (b) - (a)	**-1,500**	**-1,350**	**+150**
Total Currently Approved Annual Cost (d)	$142,830	$142,830	N/A
Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 124, row (e))	0	$14,283	$14,283
Difference (f) = (e) - (d)	**-$142,830**	**-$128,547**	**+$14,283**

(3) Submission of Data for QP Determinations Under the All-Payer Combination Option (§ 414.1440)

This rule is not implementing any new or revised collection of information requirements related to the Submission of Data for QP Determinations under the All-Payer Combination Option. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes under that control number.

o. ICRs Regarding Voluntary Participants Election To Opt-Out of Performance Data Display on Physician Compare (§ 414.1395)

This rule is not implementing any new or revised collection of information requirements related to the election by voluntary participants to opt-out of public reporting on Physician Compare. As described below, we are adjusting our currently approved burden estimates based on data from the CY 2019 performance period/2021 MIPS payment year. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53924 through 53925), CY 2019 PFS final rule (83 FR 60022), CY 2020 PFS final rule (84 FR 63145 through 63146) and the CY 2021 PFS final rule (85 FR 84993) for our previously finalized requirements and burden for voluntary participants to opt-out of public reporting on Physician Compare.

In the CY 2021 PFS final rule (85 FR 84993), we estimated that 10 percent of the clinicians and groups who voluntarily participate in MIPS would opt out of public reporting. Based on the number of opt-out eligible clinicians that chose to opt-out of public reporting in the CY 2019 performance period/2021 MIPS payment year, we are revising our estimates. We anticipate that 0.1 percent of the total clinicians and groups who will voluntarily participate in the CY 2022 performance period/2024 MIPS payment year will also elect not to participate in public reporting. This results in a total of 38 (0.001 × 37,934 voluntary MIPS participants) clinicians and groups, a decrease of 3,448 from the currently approved estimate of 3,486. Voluntary MIPS participants are clinicians that are not QPs and are expected to be excluded from MIPS after applying the eligibility requirements set out in the CY 2019 PFS final rule but have elected to submit data to MIPS. As discussed in the RIA section of the CY 2019 PFS final rule, we continue to estimate that 33 percent of clinicians that exceed one (1) of the low-volume criteria, but not all three (3), will elect to opt-in to MIPS, become MIPS eligible, and no longer be considered a voluntary reporter (83 FR 60050).

Table 126 shows that for these voluntary participants, we continue to estimate it will take 0.25 hours for a computer system analyst to submit a request to opt-out. In aggregate, we estimate an annual burden of 10 hours (38 requests × 0.25 hr/request) and $952 (10 hr × $95.22/hr).

BILLING CODE 4120–01–P

TABLE 126: Estimated Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

	Burden Estimate
# of Voluntary Participants Opting Out of Physician Compare (a)	38
Total Annual Hours Per Opt-out Requester (b)	0.25
Total Annual Hours (c) = (a) * (b)	**10**
Labor rate for a computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$952**

As shown in Table 127, using our unchanged currently approved per respondent burden estimate, the decrease of 3,448 opt outs by voluntary participants results in an adjustment of −862 hours (−3,448 requests × 0.25 hr) at a cost of $−82,079 (−862 hr × $95.22/hr) for the CY 2022 performance period/2024 MIPS payment year. We are setting forth new burden estimates for the CY 2023 performance period/2025 MIPS payment year, which results in an increase of 10 hours (38 requests × 0.25 hr/request) at a cost of $952 (10 hr × $95.22/hr).

TABLE 127: Estimated Change in Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

Burden and Respondent Descriptions	CY 2021 Performance Period	CY 2022 Performance Period	CY 2023 Performance Period

Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e) (See Table 126, row (e))	0	$952	$952
Difference (f) = (e) - (d)	**-$82,984**	**-$82,032**	**+$952**

p. Summary of Annual Quality Payment Program Burden Estimates

Table 128 summarizes this final rule's total burden estimates for the Quality Payment Program for the CY 2021, CY 2022 and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years.

As discussed earlier, for this final rule, we are subtracting the currently approved burden for the CY 2021 performance period/2023 MIPS payment year. As shown in table 128, this represents a decrease in burden of 1,479,672 hours and $144,576,960.

In the CY 2021 PFS final rule, the total estimated burden for the CY 2022 MIPS performance period/2024 MIPS payment year was 1,473,741 hours at a cost of $144,034,968 (85 FR 84994). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs discussed in this rule compared to the CY 2021 PFS final rule, the total estimated annual burden of continuing policies and information set forth in the CY 2021 PFS final rule into the CY 2022 performance period/2024 MIPS payment year is 1,468,566 hours at a cost of $148,078,846. These represent a decrease of 5,175 hours and an increase of $4,043,878. To understand the burden implications of the policies in this rule, we provide an estimate of the total burden associated with continuing the policies and information collections set forth in the CY 2021 PFS final rule into the CY 2022 performance period/2024 MIPS payment year. This burden estimate of 1,424,586 hours at a cost of $143,651,994 reflects the availability of more accurate data to account for all potential respondents and submissions across all the performance categories and more accurately reflect the exclusion of QPs from all MIPS performance categories, a decrease of 43,980 hours and $4,426,813. This burden estimate is lower than the burden approved for information collection related to the CY 2021 PFS final rule due to updated data and assumptions. Our total burden estimate for the CY 2022 performance period/2024 MIPS payment year is 1,428,391 hours and $144,014,757, which represents a decrease of 40,175 hours and $4,068,418 from the CY 2021 PFS final rule. The difference of +3,805 hours (43,980 hours − 40,175 hours) and +$358,395 ($4,426,813 − $4,068,418) between this estimate and the total burden shown in Table 128 is the increase in burden associated with impacts of the policies for the CY 2022 performance period/2024 MIPS payment year, which includes the re-introduction of the CMS Web Interface measures as a collection type/submission type.

Table 128 also offers a comparison between the total currently approved estimated burden from the CY 2021 PFS final rule and our estimated burden for the CY 2023 performance period/2025 MIPS payment year. As discussed above, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no currently approved estimate. Our total burden estimate for the CY 2023 MIPS performance period/2025 MIPS payment year is 1,383,049 hours and $139,501,770.

We have included Table 128 to assist in understanding these differences. Note that the difference between the burden estimates for the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years is entirely due to the policies to introduce MVP and subgroup reporting and sunset the CMS Web Interface measures as a collection type/submission type beginning in the CY 2023 MIPS performance period/2025 MIPS payment year.

TABLE 128: Summary of Burden Estimates and Requirements from the CY 2022 PFS Final Rule

CY 2021 Performance Period/2023 MIPS Payment Year		
Burden Estimate Description	**Time (Hours)**	**Cost**
Currently approved burden in CY 2021 PFS Final Rule (a)	1,479,672	$144,576,960
CY 2022 PFS Final Rule Total Burden (b)	0	0

AVERAGE	+121,140	-7,027	Varies	-45,599	Varies	-3,047,869

Table 132 provides the reasons for changes in the estimated burden for information collections in the Quality Payment Program segment of this final rule. We have divided the reasons for our change in burden into those related to new policies and those related to adjustments in burden from continued Quality Payment Program Year 5 policies that reflect updated data and revised methods.

TABLE 132: Reasons for Change in Burden Compared to the Currently Approved CY 2021 Information Collection Burden

Quality Payment Program Table	Changes in burden due to CY 2022 Final Rule policies	Adjustments in burden from continued CY 2021 PFS Final Rule policies due to revised methods or updated data
Section V.B.8.c.(2): QCDR Self-Nomination and other Requirements (See Table 84)	Increase in burden due to the policy requiring submission of participation plans, as necessary (3 hours per plan). Increase in burden due to current policies not previously having a burden estimate. (QCDR pre-existing measures)	Increase in number of hours required for simplified and full self-nomination process.
Section V.B.8.c.(3): Qualified Registry Self-Nomination and other Requirements (See Table 86)	Increase in burden due to the policy requiring submission of participation plans, as necessary (3 hours per plan).	Decrease in the estimated number of hours required for full-self nomination process
Section V.B.8.e.(4): Quality Performance Category Medicare Part B Claims Collection Type (See Table 92)	(CY 2023 Performance Period/2025 MIPS Payment Year) Decrease in burden due to estimated 10% of submitters reporting through MVPs. This decrease is offset slightly by the addition of Web Interface submitters due to the sunset of the CMS Web Interface collection type.	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Decrease in number of respondents due to updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year and updated QP projections for the CY 2022 MIPS performance period/2024 MIPS payment year.
Section V.B.8.e.(5): Quality Performance Category QCDR/ MIPS CQM Collection Type (See Table 94)	(CY 2022 Performance Period/2024 MIPS Payment Year) Decrease in the number of respondents due to the policy to extend the CMS Web Interface measures as a collection type/submission type for the CY 2022 performance period/2024 MIPS payment year. (CY 2023 Performance Period/2025 MIPS Payment Year) Increase in the number of respondents due to the policy to sunset the CMS Web Interface measures as a collection type/submission type and decrease in respondents due to MVP implementation.	Decrease in number of respondents due to updated projections from the CY 2022 MIPS performance period/2024 MIPS payment year and updated QP projections for the CY 2022 MIPS performance period/2024 MIPS payment year.

Quality Payment Program Table	Changes in burden due to CY 2022 Final Rule policies	Adjustments in burden from continued CY 2021 PFS Final Rule policies due to revised methods or updated data
Section V.B.8.e.(6): Quality Performance Category eCQM Collection Type (See Table 96)	(CY 2022 Performance Period/2024 MIPS Payment Year) Decrease in the number of respondents due to the policy to extend the CMS Web Interface measures as a collection type/submission type for the CY 2022 performance period/2024 MIPS payment year. (CY 2023 Performance Period/2025 MIPS Payment Year) Increase in number of respondents due to the policy to sunset the CMS Web Interface measures as a collection type/submission type and decrease in respondents due to MVP implementation.	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year and updated QP projections for the CY 2022 performance period/2024 MIPS payment year.
SectionV.B.8. e.(7)(a)(i): MVP Registration (See Table 97)	(CY 2023 MIPS Performance Period/2025 MIPS Payment Year) New information collection request	Not applicable
Section V.B.8.e.(7)(a) (ii): Subgroup Registration (See Table 98)	(CY 2023 MIPS Performance Period/2025 MIPS Payment Year) New information collection request	Not applicable
Section V.B.8.e.(7)(a) (iii): MVP Quality Performance Category Submission (See Table 99)	(CY 2023 MIPS Performance Period/2025 MIPS Payment Year) New information collection request	Not applicable
Section V.B.8.e.(8): Quality Performance Category CMS Web Interface Collection Type (See Table 101)	(CY 2022 Performance Period/2024 MIPS Payment Year) Addition of information collection due to the policy to extend the CMS Web Interface measures as a collection type/submission type. (CY 2023 Performance Period/2025 MIPS Payment Year) Removal of information collection due to the policy to sunset the CMS Web Interface measures as a collection type/submission type.	(CY 2022 Performance Period/2024 MIPS Payment Year) Increase in number of respondents (+114) due to policy to extend the CMS Web Interface measures as a collection type/submission type.
Section V.B.8.e.(10): Registration for CMS Web Interface (See Table 103)	(CY 2022 Performance Period/2024 MIPS Payment Year) Addition of information collection due to the policy to extend the CMS Web Interface measures as a collection type/submission type. (CY 2023 Performance Period/2025 MIPS Payment Year) Removal of information collection due to the policy to sunset the CMS Web Interface measures as a collection type/submission type.	(CY 2022 Performance Period/2024 MIPS Payment Year) Increase in number of respondents (+90) due to policy to extend the CMS Web Interface measures as a collection type/submission type.
Section V.B.8.g.(2): Reweighting Applications for Promoting Interoperability and Other Performance Categories (See Table 107)	Decrease in the number of respondents due to the policy to allow automatic reweighting of the Promoting Interoperability performance category for small practices	None

Quality Payment Program Table	Changes in burden due to CY 2022 Final Rule policies	Adjustments in burden from continued CY 2021 PFS Final Rule policies due to revised methods or updated data
Section V.B.8.g.(3): Promoting Interoperability Performance Category Data Submission (See Table 112)	(CY 2022 Performance Period/2024 MIPS Payment Year) Increase in per response burden (+0.02 hours) due to the policy for annual assessment SAFER Guides requirement (CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Increase in number of respondents (+20) due to the implementation of subgroup reporting for MVPs and APP.	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year and updated QP projections for the CY 2022 performance period/2024 MIPS payment year.
Section V.B.8.i: Improvement Activities Submission (See Table 117)	(CY 2023 Performance Period/2025 MIPS Payment Year) Increase in number of respondents (+20) due to the implementation of subgroup reporting for MVPs and APP.	Increase in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year
Section V.B.8.j: Nomination of Improvement Activities (See Table 119)	Increase in per response burden (+1.4 hours) due to the revised criteria for nomination of improvement activities	None.
Section V.B.8.m: Partial QP Election (See Table 121)	None	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year.
Section V.B.8.n.(1): Other Payer Advanced APM Identification: Other Payer Initiated Process (See Table 123)	None.	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year.
Section V.B.8.o: Voluntary Participants to Elect to Opt Out of Performance Data Display on Physician Compare (See Table 127)	None.	Decrease in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year.

C. Summary of Annual Burden Estimates for Changes

TABLE 133: Annual Requirements and Burden Estimates

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§§ 414.802 and 414.806 (Requiring Certain Manufacturers to Report Drug Pricing Information for Part B) *	0938-0921	740	2,960	13	38,480	38.86	1,495,333
§ 423.160(a) (Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan) *	0938-1396	100	100	0.1667	16.67	210.44	3,508
Part 403 (Open Payments Provisions included in the CY 2022 PFS)	0938-1237	2,398	2,398	Varies	1,263	Varies	64,561
§§ 414.1325 and 414.1335, 414.1360, 414.1375, 414.1380, 414.1395, 414.1400, 414.1430, and 414.1440 (Quality Payment Program) **	0938-1314	121,140	-7,027	Varies	-45,599	Varies	-3,047,869
TOTAL		123,138	1,739	varies	-22,647.33	varies	-$4,752,038

*The finalized requirements and burden will be submitted to OMB using the standard PRA process.
**Averages the CY 2021, CY 2022, and CY 2023 MIPS performance period burden changes over the 3-year 2023, 2024, and 2025 MIPS payment years.

BILLING CODE 4120–01–C

VI. Regulatory Impact Analysis

A. Statement of Need

In this final rule, we are finalizing payment and policy changes under the Medicare PFS and required statutory changes under the Consolidated Appropriations Act, 2021 and sections 2003 and 2005 of the SUPPORT for Patients and Communities Act of 2018. We also are finalizing changes to payment policy and other related policies for Medicare Part B. In addition, this final rule will make modest revisions to certain Medicare provider and supplier enrollment regulatory provisions and add already existing provider and supplier requirements pertaining to prepayment and post-payment review activities.

This final rule is necessary to make policy changes under Medicare FFS and to address various provider and supplier enrollment issues. Therefore, we included a detailed Regulatory Impact Analysis (RIA) to assess all costs and benefits of available regulatory alternatives and explain the selection of these regulatory approaches that we believe adhere to statutory requirements and, to the extent feasible, maximize net benefits

B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). An RIA must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). We estimated, as discussed in this section, that the PFS provisions included in this final rule will redistribute more than $100 million in 1 year. Therefore, we estimate that this rulemaking is ''economically significant'' as measured by the $100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at *http://www.sba.gov/content/table-small-business-size-standards* (refer to the 620000 series)). Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities.

The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this final rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, the PFS pays for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2021, that threshold is approximately $158 million. This final rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this final rule does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this final rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this final rule, we discussed a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and to implement provisions of the statute. We provide information for each of the policy changes in the relevant sections of this final rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this final rule. The relevant sections of this final rule contain a description of significant alternatives if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by more than $20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve BN.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2021 with payment rates for CY 2022 using CY 2020 Medicare utilization. The payment impacts described in this final rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services he or she furnishes. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical laboratory services that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The PFS update adjustment factor for CY 2022, as specified in section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments. In addition, section 101 of Division N of the CAA provided a 3.75 percent increase in PFS payment amounts for services furnished on or after January 1, 2021, and before January 1, 2022 and required that the increase shall not be taken into account in determining PFS payment rates for subsequent years. The expiration of this 3.75 percent increase in payment amounts will result in the CY 2022 conversion factor being calculated as though the 3.75 percent increase for the CY 2021 conversion factor had never been applied.

To calculate the CY 2022 PFS conversion factor (CF), we took the CY 2021 conversion factor without the 1-year 3.75 percent increase provided by the CAA and multiplied it by the BN adjustment required as described in the preceding paragraphs. We estimate the CY 2022 PFS CF to be 33.5983 which reflects the BN adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.75 percent increase for services furnished in CY 2021, as provided in the CAA. We estimate the CY 2022 anesthesia CF to be 20.9343 which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE 134: Calculation of the CY 2022 PFS Conversion Factor

CY 2021 Conversion Factor		34.8931
Conversion Factor without CY 2021 Consolidated Appropriations Act Provision		33.6319
Statutory Update Factor	0.00 percent (1.0000)	
CY 2022 RVU Budget Neutrality Adjustment	-0.10 percent (0.9990)	
CY 2022 Conversion Factor		**33.5983**

TABLE 135: Calculation of the CY 2022 Anesthesia Conversion Factor

CY 2021 National Average Anesthesia Conversion Factor		21.5600
Conversion Factor without CY 2021 Consolidated Appropriations Act Provision		20.7807
Statutory Update Factor	0.00 percent (1.0000)	
CY 2022 RVU Budget Neutrality Adjustment	-0.10 percent (0.9990)	
CY 2022 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.84 percent (1.0084)	
CY 2022 Conversion Factor		**20.9343**

Table 136 shows the payment impact of the policies contained in this final rule on PFS services. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 136 (CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 136.

- *Column A (Specialty):* Identifies the specialty for which data are shown.
- *Column B (Allowed Charges):* The aggregate estimated PFS allowed charges for the specialty based on CY 2020 utilization and CY 2021 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- *Column C (Impact of Work RVU Changes):* This column shows the estimated CY 2022 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.
- *Column D (Impact of PE RVU Changes):* This column shows the estimated CY 2022 impact on total allowed charges of the changes in the PE RVUs.
- *Column E (Impact of MP RVU Changes):* This column shows the estimated CY 2022 impact on total allowed charges of the changes in the MP RVUs.
- *Column F (Combined Impact):* This column shows the estimated CY 2022 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

BILLING CODE 4120–01–C

2. CY 2021 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including diagnostic testing facilities, portable x-ray, podiatry, hand surgery, and geriatrics, reflect increases relative to other physician specialties. These increases can be attributed largely to the update to clinical labor pricing as the services that these specialties furnish involve a higher proportion of clinical labor cost that is reflected in their PE RVUs. These increases are also due to increases in value for particular services after considering the recommendations from the American Medical Association (AMA)'s Relative Value Scale Update Committee (RUC), and CMS review and increased payments resulting from updates to supply and equipment pricing.

The estimated impacts for several specialties, including interventional radiology, vascular surgery, radiation oncology, and cardiology, reflect decreases in payments relative to payment to other physician specialties which are largely the result of the redistributive effects of the clinical labor pricing update. The services furnished by these specialties involve proportionally higher supply or equipment item costs, and therefore are affected negatively by the updates to clinical labor pricing. Since PE is budget neutralized within itself, increased pricing for clinical labor holds a corresponding relative decrease for other components of PE such as supplies and equipment. These decreases are also due to the revaluation of individual procedures based on reviews by the AMA RUC and CMS, as well as decreases resulting from the continued phase-in implementation of the previously finalized updates to supply and equipment pricing. The estimated impacts also reflect decreases due to continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS. As a result, the estimated 2 percent decrease for CY 2021 is only applicable to approximately 17 percent of the Medicare payment to these entities.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 136), including comments received in response to the valuations. We remind stakeholders that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 136 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2020 utilization data, Total RVUs change between −1 percent and 1 percent for more than 90 percent of practitioners, representing more than 81 percent of the changes in Total RVUs for all practitioners, with variation by specialty. Many specialties, such as chiropractic, clinical social worker, family practice, internal medicine and emergency medicine, exhibit little variation in changes in total RVUs per practitioner. For these specialties, more than 90 percent of these practitioners will experience a change in Total RVUs between −1 percent and 1 percent. Other specialties exhibit more variation in changes in total RVUs per practitioner. For example, for diagnostic testing facilities, 39 percent of IDTFs will experience a 2 percent or more decrease in Total RVUs, but these suppliers represent only 33 percent of Total RVUs for this specialty. Meanwhile, one percent of IDTFs will experience 10 percent or more increases in Total RVUs and these suppliers account for 33 percent of Total RVUs for this specialty. We also note the code level RVU changes are available in the Addendum B public use file that we make available with each rule.

Many commenters requested that CMS maintain the 3.75 percent increase in PFS payment amounts that was specified under section 101 of the CAA for services furnished during CY 2021. We remind commenters that this increase was provided through a time-limited amendment to the statute, which CMS does not have legal authority to alter. The expiration of this 3.75 percent increase in payment amounts will result in the CY 2022 conversion factor being calculated as though the 3.75 percent increase for the CY 2021 conversion factor had never been applied. Several commenters requested clarification regarding whether the specialty impacts displayed in Table 136 reflected the expiration of the 3.75 percent CAA provision for CY 2022. We can clarify for the commenters that the specialty impacts displayed in Table 136 reflect changes that take place within the pool of total RVUs. The specialty impacts table therefore includes any changes in spending which result from finalized policies within BN (such as the revaluation of E/M codes in CY 2021 or the clinical labor

pricing update in CY 2022) but does not include any changes in spending which result from finalized policies outside of BN. The expiration of the 3.75 percent CAA provision for CY 2022 is a statutory change that takes place outside of BN, and therefore, is not captured in the specialty impacts displayed in Table 136.

b. Impact

Column F of Table 136 displays the estimated CY 2022 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under ''downloads'' on the CY 2022 PFS final rule website at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysisianFeeSched/.* We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysisianFeeSched/.*

D. Effect of Changes Related to Telehealth Services

Before the PHE for COVID–19, approximately 15,000 FFS Medicare beneficiaries received a Medicare telemedicine service each week. According to a report prepared by the Assistant Secretary for Planning and Evaluation (ASPE),[267] in the last week of April 2020, nearly 1.7 million beneficiaries received telehealth services. By April 2020, nearly half of all Medicare primary care visits were telehealth encounters, a level consistent with health care encounters more broadly. There are approximately 271 services currently included on the list of Medicare telehealth services, including more than 165 that were added on a temporary basis during the PHE for COVID–19 (including service categories such as emergency department visits, initial inpatient and nursing facility visits, and discharge day management services) that are covered through the end of the PHE. Preliminary data show that between mid-March and mid-October 2020, over 24.5 million out of 63 million Medicare beneficiaries and enrollees have received a Medicare telemedicine service during the PHE. It is important to note that preliminary data reflect that the largest increases in services furnished via telehealth communications systems, by beneficiary access/volume, were for services that were already on the Medicare telehealth services list before the PHE.

As discussed in section II.D. of this final rule, we are finalizing our proposal to amend the regulatory definition of interactive telecommunications system for purposes of Medicare telehealth services to include audio-only communication technology under certain circumstances for mental health services furnished to established patients in their homes. We anticipate that this policy will increase utilization of Medicare telehealth mental health services relative to utilization that will occur without the change. The estimated cost impact on overall Medicare services is unclear, though these changes will largely maintain current policies and access to the specific mental health services that are available to beneficiaries during the PHE. By requiring that a modifier be appended to the claim to identify that the service was furnished via audio-only communication technology, we will be able to closely monitor utilization and address any potential concerns regarding overutilization through future rulemaking.

Comment: Commenters were very supportive of our proposal to allow for mental health services to be furnished using audio-only communications technology. A few commenters, while supportive of the use of audio-only communications technology during the PHE, urged CMS to further study and evaluate the safety and effectiveness of the audio-only modality for various levels of care and treatments to determine appropriateness of continuing payment after the PHE expires. Commenters supported the proposal to create a service-level modifier to identify mental health telehealth visits ''furnished to a beneficiary in their home using audio-only communications technology.''

Response: We are finalizing creation of a service-level modifier that would identify mental health telehealth services furnished to a beneficiary in their home using audio-only communications technology. We anticipate that our policy of allowing mental health services to be furnished using audio-only communications technology this will have a positive impact on access to care for mental health services and contribute to overall health equity.

Section 123 of the CAA removed the geographic and site of service restrictions for telehealth services furnished for the purpose of diagnosis, evaluation, or treatment of a mental health disorder, and required as a condition of payment for these telehealth services furnished in the patient's home that a physician or practitioner furnish an in-person, non-telehealth service to a beneficiary within 6 months prior to the first time the physician or practitioner furnishes a telehealth service to the beneficiary, and thereafter, at intervals as specified by the Secretary. Section 125 of the CAA created a new Medicare provider type—the rural emergency hospital, effective beginning in CY 2023—and added rural emergency hospitals to the list of eligible telehealth originating sites at section 1834(m)(4)(C)(ii) of the Act. As discussed in section II.D. of this final rule, we will require, as a condition of payment for a telehealth service described in section 1834(m)(7) of the Act, that the billing physician or practitioner must have furnished an in-person, non-telehealth service to the beneficiary within the 6-month period before the date of service of a telehealth service as specified in section 1834(m)(7)(B)(i) of the Act, and proposed in this final rule that an in-person, non-telehealth service to the beneficiary must occur at 12-month intervals for subsequent care, with the possibility for exceptions that must be documented by the practitioner in the medical record.

We solicited comment on whether the required in-person, non-telehealth service could also be furnished by another physician or practitioner of the same specialty and same subspecialty within the same group as the physician or practitioner who furnishes the telehealth service, and we are finalizing a policy to allow this. Given that the removal of the geographic and site of service restrictions for telehealth will expand the availability of mental health services, we anticipate that utilization of these mental health services will be comparable to observed utilization for mental health services during the COVID–19 PHE.

We received public comments on whether the required in-person, non-telehealth service could also be furnished by another physician or practitioner of the same specialty and same subspecialty within the same group as the physician or practitioner who furnishes the telehealth service. The following is a summary of the comments we received and our responses.

Comment: Many commenters agreed with the alternative policy we considered to allow the required in-

[267] Medicare Beneficiary Use of Telehealth Visits: Early Data from the Start of the Covid–19 Pandemic (*hhs.gov*).

person, non-telehealth service to be furnished by another physician or practitioner of the same specialty and subspecialty in the same group as the practitioner who furnishes the mental health telehealth services to the beneficiary if the practitioner who furnishes the telehealth services is unavailable.

Response: We are adopting the alternative policy discussed in the proposed rule to allow a clinician's colleague in the same subspecialty in the same group to furnish the in-person, non-telehealth service to the beneficiary if the original practitioner is unavailable. This is also consistent with longstanding policy, which defines an established patient as an individual who receives professional services from the physician/NPP or another physician of the same specialty and subspecialty who belongs to the same group within the previous 3 years, for purposes of billing for E/M services. While the language in the CAA states that the physician or practitioner furnishing the in-person, non-telehealth service must be the same person as the practitioner furnishing the telehealth service, we believe this policy would be consistent with statutory requirements, because we have historically treated the billing practitioner and other practitioners of the same specialty or subspecialty in the same group as if they were the same individual.

After consideration of public comments, we are finalizing our alternative policy that a practitioner in the same subspecialty and the same group may furnish the in-person, non-telehealth service to the same beneficiary, if the original practitioner is unavailable.

With regard to our policy to retain all services added to the Medicare telehealth services list on a Category 3 basis until the end of CY 2023, we believe the establishment of this certain end date will provide clarity to the stakeholder community but will have a negligible impact on PFS expenditures. For example, services that have already been added to the permanent telehealth services list are furnished via telehealth, on average, less than 0.1 percent of the time they are reported. Further, although data is still being collected, in our initial review of the data, we have not noticed an increase in the overall utilization trend for these services suggesting that practitioners may be furnishing these services via telehealth as replacement for in person encounters. The statutory conditions on payment for Medicare telehealth services under section 1834(m) of the Act, such as the originating site requirements related to geographic location and site of service, have limited increases in telehealth service utilization outside of the PHE for COVID–19; however, we believe there is value in allowing physicians to furnish services added to the Medicare telehealth services list on a Category 3 basis, and for patients to receive broader access to this care through telehealth, through the end of CY 2023 in order to ease the transition from the PHE. Additionally, for services added to the Medicare telehealth list on a Category 3 basis, outside of the circumstances of the PHE for COVID–19, all of the statutory restrictions under section 1834(m) of the Act will also apply to these services; therefore, we do not anticipate any significant increase in utilization.

E. Effect of Changes Related to Services Furnished in Whole or in Part by PTAs and OTAs

As discussed in section II.H.1., we are finalizing proposed revisions to the current *de minimis* policy for services furnished in whole or in part by PTAs/OTAs that we finalized in CY 2020 PFS final rule (84 FR 62702 through 62708) under which the CQ or CO modifier applies when the PTA or OTA furnished more than 10 percent of a service or a 15-minute unit of service. Beginning January 1, 2022, CMS will apply a 15 percent reduction to the payment amount for a physical or occupational therapy service when the CQ/CO modifier is applied to the service. Our revision to the *de minimis* policy will allow the PT/OT to bill without the CQ/CO modifier for the final 15-minute unit (in a multi-unit billing scenario) when the PT/OT meets the billing threshold of 8 minutes, which is when the minutes are greater than the midpoint (7.5 minutes) of the 15-minute unit, regardless of any minutes provided by the PTA/OTA for that final unit.

Under the policy we are finalizing, the PT/OT services will not be discounted as the result of any ''left-over'' minutes provided by the PTA/OTA when the therapist provides enough minutes on his or her own to meet the billing threshold amount. In these scenarios, the PTA's/OTA's minutes are considered immaterial for the purposes of billing. For example, if the PT/OT provided 23 minutes of a 15-minute service and the PTA/OTA provided another 20 minutes of the same service—three units of service can be billed for the 43 total minutes (38 minutes through 52 minutes). Here, one full 15-minute unit of service is billed without the CQ/CO modifier for the PT/OT service with 8 minutes remaining, and one full unit of service is billed with the CQ/CO modifier for the service provided by the PTA/OTA with 5 minutes remaining. Under the policy, the third unit is billed without the CQ/CO modifier because the 8 minutes provided by the PT/OT meets the billing threshold amount. However, under our current *de minimis* policy, the 5 minutes provided by the PTA/OTA is more than 10 percent (it is 38 percent of the total service − PTA/OTA minutes divided by the total of PTA/OTA + PT/OT minutes: 5 divided by 13 = 38 percent) meaning the CQ/CO modifier is applied to the third and final unit of service.

Under our current *de minimis* policy, under which the CQ/CO modifier is applied whenever the PTA/OTA provides more than 10 percent of a service whether or not the PT/OT furnishes enough of the service to bill for it without the portion furnished by the PTA/OTA, stakeholders have expressed concern that the PT/OT has a financial incentive not to have the PTA/OTA provide any additional minutes, regardless of the individual patient's needs, when those minutes of service lead to a reduced payment for a unit of a service. There may be a cost implication to this policy as fewer billing scenarios may result in application of the CQ/CO modifiers and consequent payment reduction. However, we believe that basing our policy on a ''midpoint rule'' in which the PT/OT provides enough minutes on their own (8 or more minutes) to bill for the final unit of a billing scenario could eliminate the PT's/OT's financial incentive to not provide appropriate therapy to an individual patient when it is furnished by the PTA/OTA. On the other hand, if we were to continue with our *de minimis* standard to apply to all billing scenarios for PTA/OTA services that exceed the 10 percent standard, we are uncertain how to gauge the overall costs of this policy because of the possible altered PT/OT behavioral change that is due to the financial incentives built into that policy as discussed above.

F. Other Provisions of the Regulation

1. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.A. of this final rule, we make multiple provisions related to RHCs and FQHCs. In terms of estimated impacts to the Medicare program, Payment for Attending Physician Services Furnished by RHCs or FQHCs to Hospice Patients as required by section 132 of the CAA, 2021 and Concurrent Billing for CCM and

Transitional Care Management TCM Services for RHCs and FQHCs will have negligible impact to Medicare spending.

Section 130 requires that all independent RHCs are now subject to the per-visit limit (which is also referred to as ''cap'') and phases in an increase in the statutory payment cap over an 8-year period. The cap in CY 2021, for services furnished after March 31, is set at $100 per visit, then at $126 per visit in 2022; at $139 per visit in 2023; at $152 per visit in 2024; at $152 per visit in 2025; at $165 per visit in 2026; at $178 per visit in 2027; and at $190 per visit in 2028. Beyond 2028, the limit is updated by the applicable Medicare Economic Index (MEI).

This provision also controls the annual rate of growth in payments to certain provider-based RHCs whose payments are currently higher than the payment limit. Each year, but for services provided after March 31 in 2021, the payment limit shall be set at the greater of: (1) The RHC per visit amount from the prior year, increased by the percentage increase in the applicable MEI; and (2) the cap limits applicable to each year as described above. In order to be eligible for this ''grandfathering'' policy, the RHC must have been based in a hospital with fewer than 50 beds and enrolled in Medicare as of December 31, 2019.

Section 2 of Public Law 117–7, enacted on April 14, 2021, made technical corrections to section 130. First, for an RHC that is hospital-based and whose parent hospital has fewer than 50 beds, the date by which the RHC must be Medicare-certified, in order to be grandfathered, was changed from December 31, 2019 to December 31, 2020. Next, a clinic that is owned by a hospital with fewer than 50 beds and that submitted certain applications (received by Medicare) for certification as a Medicare RHC prior to the end of 2020 can be grandfathered, and its clinic-specific cap is to be set based on its 2021 cost per visit. Lastly, a grandfathered RHC must continue to be owned by a hospital with fewer than 50 beds; if the parent hospital exceeds 50 beds, the RHC will lose its grandfathered status.

Table 137 are the FY estimates (in millions) for the impact of section 130, which improves payments to RHCs. These providers are currently paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services, and qualified preventive health services furnished on the same day (with some exceptions). The AIR is subject to a payment limit, except for certain provider-based RHCs that have an exception to the payment limit. The RHC payment limit per visit for CY 2021 is $87.52, which is 1.4 percent higher than the CY 2020 payment limit of $86.31.

TABLE 137: Fiscal Year Estimates for the Impact of Section 130 of the CAA

Medicare (Part B)	2021	2022	2023	2024	2025	2026	2026	2028	2029	2030	2031	2022-26	2022-31
Part B benefits	10	180	160	230	310	390	490	580	640	700	750	1,270	4,430
Premium offset	–	-40	-40	-60	-80	-100	-120	-140	-160	-170	-190	-320	-1,100
Net Part B	10	140	120	170	230	290	370	440	480	530	560	950	3,330

In section III.B. of this final rule, we discuss that we proposed to revise the regulatory requirement that an RHC or FQHC mental health visit must be a face-to-face (that is, in person) encounter between an RHC or FQHC patient and an RHC or FQHC practitioner to also include encounters furnished through interactive, real-time telecommunications technology, but only when furnishing services for the purposes of diagnosis, evaluation, or treatment of a mental health disorder.

According to our analysis of Medicare Part B claims data for services furnished via Medicare telehealth under the PFS during the PHE, use of telehealth for many professional services spiked in utilization around April 2020 and diminished over time, but not to pre-pandemic levels. In contrast, Medicare claims data suggests that for mental health services both permanently and temporarily added to the Medicare Telehealth list, subsequent to April 2020, the trend is toward maintaining a steady state of usage over time. Given the expanded availability of mental health services at RHCs and FQHCs, we do anticipate that this policy will increase spending; however, we are not certain of the magnitude of this increase, since it is not clear at this time how or whether trends related to utilization of communication technology during the PHE will continue after such a time that the PHE were to end. While the estimated cost impact of this provision is unclear, the requirement that a modifier be appended to the claim to identify that the service was furnished via audio-only communication technology will allow us to closely monitor utilization and address any potential concerns regarding overutilization through future rulemaking.

2. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802 and 414.806)

This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of the CAA (for the purposes of this section of this final rule, hereinafter is referred to as ''section 401''). These new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

As described in section III.D.1. of this final rule, in considering whether to exclude repackagers from the reporting requirements at section 1847A(f)(2) of the Act, we conducted two analyses to estimate: (1) The proportion of repackaged products in our existing ASP data; (2) the number of new ASP submissions we can expect as a result of the new reporting requirements under section 401; and (3) the proportion of those (new) submissions that involve repackaged products.

Additionally, while we believe it will impact reporting volume and payment limits under section 1847A of the Act for many billing and payment codes, we are unable to estimate the magnitude of these effects for the following reasons. We estimate: (1) 361 non-reporting manufacturers (of either single source or multiple source drugs) will now be required to report ASP data under section 1847A(f)(2) of the Act; and (2) 6114 products payable under Part B that these non-reporting manufacturers sell. However, we do not know which Healthcare Common Procedure Coding System (HCPCS) code payment limits will be impacted by these 6114 products, nor do we know the sales volume of these 6114 products. Because this information is used to calculate volume-weighted ASP payment limits, we are unable to quantitatively estimate the economic impacts of this provision (that is, the likely costs or savings) on beneficiaries, the government, and other

stakeholders. (We note that the economic impacts on manufacturers, as a result of the information collection requirements of this provision is discussed in section V. of this final rule.)

For single source drugs, these changes may result in lower payment limits because, typically, the WAC-based pricing is higher than ASP plus 6 percent. This then translates to cost savings for both the government and beneficiaries, who will pay coinsurance on a lesser amount. However, for the reason stated previously, we are unable to predict the magnitude of this effect.

Similarly, payment limits for multiple source drugs could increase or decrease, and we are unable to predict the direction or magnitude of specific or aggregate effects at this time.

We do not anticipate that this provision of this final rule will necessitate the revision of existing Medicaid Drug Rebate Agreements.

We welcomed comment on (1) the likely costs or savings to beneficiaries, the government, and other stakeholders and (2) other related impacts of this provision.

We received public comments on the likely costs or savings to beneficiaries, the government, and other stakeholders, and other related impacts of this provision. The following is a summary of the comments we received and our responses.

Comment: One commenter suggested that CMS exclude repackagers from the proposed ASP reporting requirements. They stated that requiring all repackagers to report would likely be duplicative and increase the burden on all parties without providing tangible benefit. They recommend repackagers who already report ASP data continue to do so, but that CMS not require repackagers, as a group, to be subject to the reporting requirements at this time.

Response: We are not persuaded that repackagers should be excluded at this time. In order to maintain consistency and integrity of the ASP data for those manufacturers with and without Medicaid drug rebate agreements, and for operational reasons, we do not believe it is appropriate to exclude repackagers from the ASP reporting requirements. If warranted, we could revisit this in future rulemaking.

Comment: One commenter concluded that CMS' analysis and proposal not to exclude repackagers without a rebate agreement from reporting ASP data is reasonable. The commenter stated given that repackagers with a rebate agreement are required to report ASP data, it is reasonable not to exclude repackagers without a rebate agreement from the requirements of section 401. They added that having ASP data from repackagers with and without rebate agreements could also permit future analysis of the effect of repackagers' ASP submissions on Medicare Part B payment rates.

Response: We agree it is reasonable not to exclude repackagers without a Medicaid drug rebate agreement and thank the commenter for their feedback.

After consideration of public comments, we are finalizing as proposed.

3. Determination of ASP for Certain Self-Administered Drug Products

a. Anticipated Effects

This provision implements new statutory requirements under section 1847A(g) of the Act, as amended by section 405 of the CAA 2021, (for the purposes of this section of this final rule, hereinafter is referred to as ''section 405''). As identified by the OIG studies discussed in section III.D.2. of this final rule, the CMS payment-limit determination under section 1847A of the Act includes all versions of a product marketed under a single FDA approval, and consistent with section 1847A(b)(5) of the Act, the payment-limit determination does not exclude products based on packaging. Thus, the volume-weighted, average-ASP determination can include self-administered versions that may lead to increased program and beneficiary costs because of distorted ASP-based payment limits. In particular, the OIG studies identified two billing and payment codes that included self-administered NDCs. The OIG study determined that as a result of the inclusion of these NDCs in the calculation of the ASP payment limit, Medicare payment amounts remained inflated in 2017 and 2018, causing the program and its beneficiaries to pay an additional $497 million during this period. Since 2014, current payment methodology has resulted in an additional $173 million in Medicare beneficiary coinsurance for these two NDCs. (See OIG's July 2020 report titled, ''Loophole in Drug Payment Rule Continues To Cost Medicare and Beneficiaries Hundreds of Millions of Dollars,'' available at *https://oig.hhs.gov/oei/reports/OEI–BL–20–00100.asp*.)

Implementation of the regulatory changes has the potential to result in decreased payment limits for identified billing and payment codes that could, in turn, substantially reduce Medicare and beneficiary expenditures, as described in the OIG study. Since section 1847A(g)(3) of the Act requires CMS to implement the required payment changes beginning on July 1, 2021, these potential savings may be observed within the year.

By adding sections 1847A(g)(1) and (2) of the Act, section 405 also directs the OIG to conduct future studies with same or similar methodologies to those in the July 2020 report and directs CMS to apply the lesser of payment methodology to the applicable billing and payment codes. This has the potential to result in additional savings to the program and beneficiaries if additional products are identified by these periodic OIG studies.

b. Expected Benefits

Codifying the provisions set forth by section 405 will permit to CMS to apply the lesser of payment methodology at section 1847(g)(2) of the Act to billing and payment codes identified by future OIG studies (described in section III.D.2. of this final rule). This provision addresses distorted payment limits for these products and may result in payment amounts that are better aligned with versions of these products that are payable under Part B (for example, versions that are usually not self-administered). Although we are unable to quantify the total magnitude of the potential savings, these changes have the potential to substantially reduce program expenditures and beneficiary coinsurance.

4. Appropriate Use Criteria

Section 1834(q)(2) of the Act, as added by section 218(b) of the Protecting Access to Medicare Act (PAMA), established a program to promote the use of appropriate use criteria (AUC) for applicable imaging services furnished in an applicable setting.

In the CY 2019 PFS final rule (83 FR 59452), we performed an RIA for this program. In this final rule, we are finalizing our proposal to begin the payment penalty phase of the program on the later of January 1, 2023 or the January 1 of the year after the year in which the PHE for COVID–19 ends. Because, under our provisions, the payment penalty phase will be further delayed, we are updating the estimates for incremental changes from the RIA from the CY 2019 PFS final rule. Since we did not propose new policy requirements nor do we have sufficient reason to change any of the assumptions made in the RIA finalized in the CY 2019 PFS (83 FR 60034 through 60044), we are only updating the analysis to reflect 2019 Medicare claims data (updated from 2014). We identify four incremental changes from the CY 2019

PFS final rule estimates due to updated claims data: (1) Impact of required AUC consultations by ordering professionals; (2) impact to Medicare beneficiaries; (3) process efficiencies to potentially offset the estimated burden on Medicare beneficiaries; and (4) impact on transmitting orders for advanced diagnostic imaging services. Each of these incremental changes results in a lower estimate.

a. Impact of Required AUC Consultations by Ordering Professionals

As discussed in detail in the CY 2019 PFS final rule (83 FR 60035 through 60037), the annual impact estimate of consultations by ordering professionals was $70,001,700. In our estimates, we calculated the burden for auxiliary personnel to consult AUC under the direction of an ordering professional and the burden for ordering professionals to perform the consultation directly. We estimated that 90 percent of consultations will be performed by a medical assistant (occupation code 31–9092) and 10 percent of consultations will be performed by a general practitioner (occupation code 29–1062). We estimated that 43,181,818, 2-minute consultations occur annually.

Using 2019 Medicare claims data as our basis for the analysis, we proposed to change the methodology used to determine the volume of consultations and proposed to use more granular data that will reduce potential double-counting of advanced diagnostic imaging services. For example, an imaging service furnished in an outpatient hospital department could have two claims associated with that service. There could be a claim from the facility and a claim from the physician that interprets that imaging service. In the CY 2019 RIA (83 FR 60034 through 60044) we were concerned that the estimate of 43,181,818 consultations may be an overestimate because it took into account total claims. For this CY 2022 RIA, we proposed to change the method of counting the total number of advanced diagnostic imaging services that will be furnished under the AUC program which will correspond to the total number of consultations.

Using the Integrated Data Repository we identified Medicare claims using the following parameters: (1) 2019 date of service; (2) claim lines containing one of the procedure codes identified in CR10481 and CR11268 at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2018Downloads/R2040OTN.pdf* and *https://www.cms.gov/files/document/r2404otn.pdf,* respectively; and (3) claims types of outpatient or practitioner. Claims were then separated based on the setting in which the imaging service was furnished and further by claim type. Using only services billed on the professional claim type, the total number of claim lines containing one of the identified procedure codes was included to total 30,359,901 advanced diagnostic imaging services estimated to be subject to the AUC program. By using this combination, we believe we can reduce the risk of double-counting services to obtain a more accurate estimate of total number of diagnostic imaging services subject to the AUC program. Therefore, this analysis will use the estimate of 30,359,901 AUC consultations.

Using the May 2020 BLS mean hourly wages, we update our estimates for a medical assistant (occupation code 31–9092) with mean hourly wage of $17.75 and 100 percent fringe benefits for 90 percent of consultations (910,797 hours) to be $30,511,701 (910,797 hours × $33.50/hour). The occupation for general practitioner is no longer listed on the BLS so, instead, we update our estimate using the occupation code for general internal medicine physician (29–1216) with mean hourly wage of $101.42 and 100 percent fringe benefits for 10 percent of consultations (101,200 hours) to be $20,527,408 (101,200 hours × $202.84/hour). The updated total annual estimated impact of consultations is $51,039,109, for an incremental change (reduction) of $18,962,591.

b. Impact to Medicare Beneficiaries

In the CY 2019 PFS final rule, we estimated that the additional 2-minute consultation would impact the Medicare beneficiary when their advanced diagnostic imaging service is ordered by the ordering professional by introducing additional time to their office visit. For this update, we used the updated number of consultations calculated above from claims data, as well as the May 2020 BLS mean hourly wage. To estimate this annual cost, we multiplied the annual burden of 1,011,997 hours by the BLS occupation code that represents all occupations in the BLS (00–0000) as mean hourly wage plus 100 percent fringe ($54.14/hr) for a total estimate of $54,789,518 per year for an incremental change (reduction) of $13,211,482. We also estimated that, over time, process efficiencies may be implemented. We assumed that 50 percent of practices implemented an improvement process that streamlined AUC consultation so Medicare beneficiaries spent the same amount of time in the physician's office regardless of whether an advanced diagnostic imaging service was ordered. The updated estimate that such an improvement process could offset the estimated burden on Medicare beneficiaries by $27,394,759 annually for an incremental change (reduction) of $6,605,741.

c. Impact on Transmitting Orders for Advanced Diagnostic Imaging Services

In the CY 2019 PFS final rule, we estimated that including AUC consultation information on the order for an advanced diagnostic imaging service to the furnishing professional or facility is estimated as the additional 5 minutes spent by a medical secretary (occupation code 43–6013). To update this estimate, we use the May 2020 mean hourly wage of $18.75 plus 100 percent fringe benefits to transmit the order for the advanced diagnostic imaging service. In aggregate, we assumed in the CY 2019 PFS final rule that 40,000,000 advanced diagnostic imaging services are ordered annually. We proposed to update that number to match the total number of AUC consultations proposed earlier in this RIA to 30,359,901, so the updated total annual burden to communicate additional information in the order is estimated as $94,495,192 ($18.75/hr × 2 × 0.083 hr × 30,359,901 orders) for an incremental change (reduction) of $20,044,808.

d. Impact on Furnishing Professionals and Facilities

As described in the CY 2019 PFS final rule, we identified an estimated 174,064 furnishing professionals (comprising radiologists, ASCs, IDTFs and hospitals) and assumed that every identified furnishing professional will choose to update their processes for the purposes of the AUC program in the same way by purchasing an automated solution to report AUC consultation information which was estimated to cost $10,000 for each furnishing professional. We update this cost to account for inflation and therefore the updated estimated cost is $10,636.07 ($10,000 adjusted for inflation to 2021 dollars) for a total estimated one-time update cost of $1,851,356,888.48 (174,064 × $10,636.07).

e. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

As described in the CY 2019 PFS final rule, we assumed that there may be some savings to the Medicare program due to the AUC program requirements and potential decreases in inappropriate utilization of advanced diagnostic imaging services. This assumption was based on literature describing prior

experiences with clinical decision support in a pilot project conducted in Minnesota, a retrospective cohort study on evidence-based clinical decision support for lumbar MRI, brain MR and sinus CT and local implementation of clinical decision support, and we estimated that savings may account for $700,000,000 savings per year.

f. Summary of Delay-Attributable Changes and Discounted Rates

Table 138 summarizes the substantive changes from the CY 2019 PFS final rule to the CY 2022 PFS final rule impact estimates. The effect of a 3-year delay is approximated by applying 3 years' worth of discounting at 7 percent or 3 percent discount rates (Circular A–4, *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/assets/regulatory_matters_pdf/a-4.pdf*).

TABLE 138: AUC Program Related Activities with Changes in Impact Estimates Resulting from a 3-Year Delay

AUC Program Related Activity	CY 2022 PFS Rule Impact Estimate	Change from CY 2019 PFS Final Rule (as a function of the discount rate)
Impact of required AUC consultations by ordering professional	$51,039,109	- $4.3 million (3%) - $9.4 million (7%)
Impact to Medicare beneficiaries	$54,789,518	- $4.6 million (3%) - $10.1 million (7%)
Impact on transmitting orders for advanced diagnostic imaging services	$94,495,192	- $8.0 million (3%) - $17.4 million (7%)
AUC automated solution	$1,851,356,888	- $157.1 million (3%) - $340.1 million (7%)
Medicare program impacts associated with advanced diagnostic imaging services	$700,000,000	- $59.4 million (3%) - $128.6 million (7%)
Total Change Attributable to a 3-Year Delay		- $174.1 million (costs, 3%) - $376.9 million (costs, 7%) - $59.4 million (transfers, 3%) - $128.6 million (transfers, 7%)

5. Removal of Selected National Coverage Determinations (NCDs)

We proposed to remove two older NCDs that no longer contain clinically pertinent and current information or that involve items or services that are used infrequently by beneficiaries. Generally, proactively removing obsolete or unnecessary NCDs removes barriers to innovation and reduces burden for stakeholders and CMS. The two NCDs fall into two impact categories. First, eliminating an NCD for items and services that were previously covered means that the item or service will no longer be automatically covered by Medicare. Instead, the coverage determinations for those items and services will be made by Medicare Administrative Contractors (MACs). Second, if the previous national coverage determination barred coverage for an item or service under title XVIII, MACs will now be able to cover the item or service if the MAC determines that such action is appropriate under the statute. We believe that allowing local contractor flexibility in these cases better serves the needs of the Medicare program and its beneficiaries since we believe the future utilization for items and services within these policies will be limited, each affecting less than one percent of the Medicare FFS population.

For the one NCD where NCD removal changes coverage from limited national coverage to MAC discretion, claims data from 2019 shows that less than one percent of the Medicare population is affected. Specifically, NCD 180.2 Enteral and Parenteral Nutrition Therapy provided coverage with limitations. Where in 2019 CMS paid 1,643,739 Medicare FFS claims for 83,551 unique beneficiaries totaling CMS payments of $356,228,606. While we have claims data available for 2020, the data shows a decrease in claims, unique beneficiaries and total amount paid by CMS. We believe this may be due in part to the COVID–19 pandemic; however, we do not have any information to be able to say that conclusively. The change could be due to other factors not examined here. We estimate there will be *de minimis* change to 2022 payments, compared to 2019 or 2020 because, as discussed in section III.F. of the final rule, local contractors have finalized two LCDs, effective for dates of service on or after September 5, 2021 that will continue to provide parenteral and enteral nutrition coverage for Medicare beneficiaries, after removal of NCD 180.2. Therefore, we believe that removing this NCD will not result in significant changes to payments.

For the one non-covered NCD to be eliminated, Positron Emission Tomography (PET) Scans under NCD 220.6, we did not expect to find historical claims data for the non-oncologic uses of PET at issue. We broadly noncover non-oncologic indications of PET, in other words, we required that every non-oncologic indication for PET must have its own NCD in order to receive coverage. Because this NCD provides for noncoverage on non-oncologic indications, we do not have accurate claims data to estimate total impact. However, based on the service, we expect future claims to affect less than one percent of Medicare FFS beneficiaries. As discussed in section III.F. of this final rule, the NCD allows coverage for diagnostic PET imaging for oncologic uses not already determined by an NCD, to be made at the discretion of local MACs. We believe that extending local contractor discretion for non-oncologic indications of PET provides an immediate avenue to potential coverage in appropriate

candidates and provides a framework that better serves the needs of the Medicare program and its beneficiaries. For clarity, we did not propose to change any other subsections of 220.6. Thus, the NCDs listed at 220.6.1 through 220.6.20 will not be changed by this provision.

6. Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation

As discussed in section III.H., Pulmonary Rehabilitation (PR), Cardiac Rehabilitation (CR) and Intensive Cardiac Rehabilitation (ICR), of this final rule, we proposed largely conforming changes throughout §§ 410.47 (PR) and 410.49 (CR/ICR). These changes are intended to ensure consistency and accuracy in terminology, definitions and requirements where appropriate across PR and CR/ICR conditions of coverage. Specific to PR, we proposed to remove the requirement for direct physician-patient contact related to the periodic review of the patient's treatment plan because such interaction within the PR program is not necessary for all patients and can be specified, as needed, in individualized treatment plans (ITPs). We also proposed to add coverage of PR for beneficiaries who were hospitalized with a COVID–19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge. After considering public comments and additional clinical evidence, we are finalizing the revisions to improve consistency and accuracy across PR and CR/ICR conditions of coverage as proposed. We are also finalizing the removal of the PR requirement for direct physician-patient contact. We are expanding upon our proposal to cover PR for beneficiaries who were hospitalized with a COVID–19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge. We are removing the proposed hospitalization requirement and finalizing coverage of PR for beneficiaries who have had confirmed or suspected COVID–19 and experience persistent symptoms that include respiratory dysfunction for at least 4 weeks. We did not receive public comments on the proposed impact so we use the same methodology in estimating the impact of the final expansion of coverage for PR below.

In assessing the impact of these provisions, we note that the expansion of PR coverage may increase utilization. Based on the low utilization rate discussed below, we do not believe the other revisions will significantly impact utilization and the Medicare program.

To estimate the potential increase from the expansion of coverage for PR, we searched the literature for articles that evaluated the utilization rate of PR for the currently eligible diagnosis of chronic obstructive pulmonary disease (COPD) in order to determine the historical utilization trends of this service.

Nishi et al. (2016) investigated the number of Medicare beneficiaries with COPD who received PR from January 1, 2003 to December 31, 2012. Their results included both individuals who had experienced hospitalizations for COPD and those who were outpatients only. The number of unique patients with COPD who initially participated in PR during the study period was 2.6 percent in 2003 (before conditions of coverage at § 410.47 were established) and 2.88 percent in 2012 (after conditions of coverage at § 410.47 were established).[268] In 2019, Spitzer, et al. published an article based on Medicare claims data from 2012, finding that 2.7 percent of eligible Medicare beneficiaries received PR within 12 months of hospitalization with COPD.[269] Using claims data from FFS Medicare beneficiaries hospitalized for COPD in 2014, Lindenauer et al. (2020) reported that only 3 percent initiated PR within 1 year of their hospital discharge.[270] Taken together, this data informs us that utilization of PR in the Medicare population is very low, and that the majority of patients who avail themselves of this service do so, post hospitalization.

There are limitations to applying this data to identify the utilization rate of PR to the conditions of coverage specified at § 410.47. Most notably, some of these studies included patients whose services were billed with non-PR respiratory therapy codes (G0237, G0238 and G0239), instead of only patients whose services were billed with the PR code (G0424). But the authors also limited patient inclusion to those with a principal or secondary COPD diagnosis, so we believe this suggests that 3 percent is an upper bound for the utilization of PR currently in Medicare beneficiaries. Given that participation in PR has remained steady for many years, we do not expect this pattern to change. As such, for the purposes of this analysis, we assume that 3 percent of eligible beneficiaries under the expansion of coverage (beneficiaries who have had confirmed or suspected COVID–19 and experience persistent symptoms that include respiratory dysfunction for at least 4 weeks) will participate in PR.

To identify the eligible beneficiaries under our provision, we first identify the number of beneficiaries who had COVID–19 using the Preliminary Medicare COVID–19 Data Snapshot.[271] At the time of writing, the Snapshot included data from January 1, 2020 to July 24, 2021, and identified 4,656,553 total COVID–19 cases for Medicare beneficiaries. Using Medicare FFS data from February 24, 2020 to September 27, 2020 as compared to the same time frame in 2015 through 2019, Tarazi et al. (2021) found that the COVID–19 related mortality rate, defined as death within 60 days of COVID–19 diagnosis, was 17.5 percent.[272] To calculate the number of beneficiaries that survive COVID–19 to be eligible for PR under our coverage expansion, we reduced 4,656,553 by 17.5 percent (814,897) to 3,841,656 beneficiaries. A paper published by the Tony Blair Institute for Global Change [273] states that the Covid Symptom Study led by King's College London indicated that about 10 percent of survey participants reported symptoms (including shortness of breath and other symptoms like fatigue, headache and loss of smell) beyond a four-week recovery period. Using this information, we estimate that the patient population we are expanding PR coverage to, those who have had confirmed or suspected COVID–19 and experience persistent symptoms that include respiratory dysfunction for at least 4 weeks, to be 384,166 beneficiaries (3,841,656 × 0.10). Based on our assumption of utilization above, 3 percent, for the newly covered patient population, we estimate 11,525

[273] Published at https://institute.global/sites/default/files/articles/Long-Covid-Reviewing-the-Science-and-Assessing-the-Risk.pdf on October 5 2020.

beneficiaries will receive PR (384,166 × 0.03).

Medicare covers PR for a maximum of 72 sessions. Using 2018 and 2019 Medicare claims data from the Chronic Conditions Data Warehouse (CCW), beneficiaries on average completed 14 sessions of PR. If we assume patients eligible based on our expansion of coverage will participate, on average, in the same number of sessions, we estimate the expansion of coverage will increase PR utilization by 161,350 sessions annually (11,525 beneficiaries × 14 average sessions completed per beneficiary).

Claims for PR are submitted using CPT code G0424. Our analysis of Medicare claims data indicates that 97.54 percent of PR sessions are billed under the Hospital OPPS at $55.66 (national average price) for an estimated total of $8,759,815 (161,350 PR sessions × 0.9754 × $55.66). The remaining 2.46 percent of PR sessions are billed under the PFS, with 2.12 percent of PR sessions furnished in a physician's office which has a national average price of $30.36 and 0.34 percent billed by a physician when PR was furnished in a HOPD which has a national average price of $13.96. Taken together, the estimated total for this remaining 2.46 percent of PR sessions is $111,508 ((161,350 PR sessions × 0.0212 × $30.36) + (161,350 PR sessions x 0.0034 × $13.96)). We estimate the total added cost to the Medicare program of this expansion of coverage to be $8,871,323 ($8,759,815 + $111,508) annually during and immediately following the PHE for COVID–19. The impact of our final rule increases the final estimate by $6,709,876 which reflects the larger patient population that will be eligible for PR. Removing the proposed hospitalization requirement increased the number of eligible beneficiaries by 290,555. As COVID–19 cases decline, we expect the annual impact to decrease because eligible patient populations will likely decrease; however, we are unable to estimate the longer term impact of our provisions due to the unpredictable nature of the PHE and the lack of long term data on COVID–19.

7. Medical Nutrition Therapy

As discussed in section III.I., Medical Nutrition Therapy (MNT), of this final rule, we proposed to remove the restriction that patients only be referred to MNT by the treating physician and update the glomerular filtration rate (GFR) eligibility for patients with chronic kidney disease. We do not anticipate any significant increase in utilization of MNT services resulting from our revisions. Despite various policy changes that could have improved use, such as increasing payment via adding work RVUs to MNT codes in 2006, approving MNT for telehealth coverage in 2005 and including registered dieticians (RDs) and nutrition professionals as telehealth distant site providers, and waiving out-of-pocket costs to beneficiaries, MNT participation remains under 2 percent of eligible beneficiaries. Based on an analysis of Medicare claims data from 2018, 2019, 2020, we identify the utilization rate of MNT services among eligible beneficiaries to be between 1.5 and 1.8 percent.

Although MNT is covered by many State Medicaid programs and private insurers, use is low in the US.[274] [275] [276] The Academy of Nutrition and Dietetics recognizes that research specific to the underuse of MNT services is scant.[277] Anecdotal reports and related research on diabetes self-management training point to a multitude of reasons why utilization of the MNT services benefit have remained low. These potential barriers include lack of awareness of MNT by patients and clinicians, inconsistent coverage for MNT services by non-Medicare payers, patient travel and time issues to receive the services and lack of availability of services from RDs who may perceive the process of Medicare enrollment/insurance credentialing and billing as being burdensome and complex.[278] Of about 100,000 RDs in the US, only 1,589 submitted Medicare FFS MNT claims in 2017. One study revealed that less than half of RDs providing MNT services in an ambulatory care setting indicated they were not Medicare providers due to reasons such as perceived low reimbursement rates, not providing MNT to Medicare eligible patients, not knowing how to become a Medicare provider, and providing MNT to Medicare patients for diagnoses not covered by Medicare.[279]

Our revisions may increase beneficiary access to the MNT benefit and reduce primary care physician burden since we proposed that referrals can come from other physicians and not only from the physician treating the patient for their diabetes or kidney disease; although, as discussed above, we do not expect the changes to make a significant impact on the Medicare program. We do not anticipate increased administrative burden as documentation in the medical record of any referred service is already a part of discharge planning in the hospital setting. The changes to the GFR requirements are to conform our regulation to updated clinical standards and also do not pose a significant change.

8. Medicare Shared Savings Program

a. Modifications to the Shared Savings Program Quality Reporting Requirements Under the APP and the Quality Performance Standard

In section IV.A.3.d.(1)(d) of this final rule, we are extending the use of the CMS Web Interface as a collection type for the Quality Payment Program for performance years 2022, 2023, and 2024 for Shared Savings Program ACOs reporting under the APP. In section III.J.1.c. of this final rule, we are finalizing that in order for ACOs to meet the quality reporting requirements under the Shared Savings Program for performance year 2022 and subsequent performance years, ACOs must meet the following requirements:

For performance years 2022, 2023, and 2024: An ACO must report on either:

(a) The ten CMS Web Interface measures and administer a CAHPS for MIPS survey and CMS will calculate the two claims-based measures included under the APP, or

(b) The three eCQMs/MIPS CQMs and administer a CAHPS for MIPS survey and CMS will calculate the two claims-based measures included under the APP.

If an ACO chooses to report the three eCQMs/MIPS CQMs, its performance on all three eCQMs/MIPS CQMs will be used for purposes of MIPS scoring under the APP. If an ACO decides to report both the ten CMS Web Interface measures and the three eCQMs/MIPS CQMs, it will receive the higher of the

two quality scores for purposes of the MIPS Quality performance category. For performance year 2025 and subsequent years: The ACO must report the three eCQMs/MIPS CQMs and administer a CAHPS for MIPS survey and CMS will calculate the two claims-based measures included under the APP.

Absent the related provision analyzed below to reduce the quality performance standard for PY 2023 to the 30th percentile MIPS Quality performance category score, the changes to the quality reporting requirements, including the accommodation to continue the availability of the CMS Web Interface as a reporting mechanism under the APP will likely provide an easier path for a meaningful subset of ACOs that would otherwise have faced difficulty meeting the quality performance threshold previously established in rulemaking for PY 2023. However, we estimate that nearly all such ACOs would already have met the lower 30th percentile performance standard in PY 2023 without the additional reporting flexibility. Of the relatively few, remaining ACOs that we estimate would have failed to meet the lower 30th percentile performance standard without the additional reporting flexibility, we estimate that about half (on average) will meet the quality performance standard as a result of the quality reporting flexibility adopted in this final rule, and thereby further increase shared savings payments to ACOs by about $20 million in PY 2023.

In section III.J.1.d. of this final rule, we are finalizing, with modifications, the proposal to freeze the quality performance standard at the 30th percentile across all MIPS Quality performance category scores for performance year 2023, and to establish incentives to encourage ACOs to begin the transition to eCQM/MIPS CQM reporting in performance year 2022 and performance year 2023. The quality performance standard will increase to the 40th percentile across all MIPS Quality performance category scores for performance years 2024 and subsequent performance years. The quality performance standard is the minimum performance level ACOs must achieve in order to share in any savings earned, avoid maximum shared losses under certain payment tracks, and avoid quality-related compliance actions.

We are finalizing that, with the exception of an ACO in the first performance year of its first agreement period, an ACO will meet the quality performance standard under the Shared Savings Program by reporting quality data via the APP established under § 414.1367 according the method of submission established by CMS and for:

- Performance years 2022 and 2023:

++ Achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or

++ If the ACO reports the three eCQMs/MIPS CQMs, meeting the data completeness requirement at § 414.1340 and the case minimum requirement at § 414.1380 for all three measures, and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least 1 of the 4 outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least 1 of the 5 remaining measures in the APP measure set. Consequently, the ACO would be required to meet the performance benchmark on either 2 outcome measures (one measure at the 10th percentile and the other at the 30th percentile), or 1 outcome measure at the 10th percentile and any other measure in the APP measure set at the 30th percentile.

If the ACO (1) does not report any of the 10 CMS Web Interface measures or any of the three eCQMs/MIPS CQMs and (2) does not administer a CAHPS for MIPS survey, the ACO would not meet the quality performance standard.

- Performance year 2024 and subsequent performance years:

Achieving a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

If the ACO (1) does not report any of the 10 CMS Web Interface measures or any of the three eCQMs/MIPS CQMs and (2) does not administer a CAHPS for MIPS survey, the ACO would not meet the quality performance standard.

Our analysis of quality performance data reported by ACOs for performance years starting during 2019 indicates that about 20 percent of ACOs would have failed a quality performance standard defined as the 40th percentile across all MIPS Quality performance category scores. There is significant uncertainty whether PY 2023 will play out similarly to the baseline data. The fraction of ACOs that would ultimately fail to meet a higher standard in PY 2023 could change significantly if the universe of MIPS Quality performance category scores improves relative to ACOs' quality performance scores, or alternatively if ACOs, particularly ACOs at risk of failing, respond to the increased quality performance standard by boosting their performance. Utilizing a Monte Carlo approach, assuming that the simulated poor performing ACOs have a 50 percent chance of improving their quality performance beyond the 40th percentile, if CMS kept the quality performance standard at the 40th percentile, then the cost of reducing to the 30th percentile in 2023 will be $190 million (range $10 million to $370 million). There is a wide range because slight changes in quality scoring at the low end of the distribution could render the 40th percentile more or less of an effective point of discrimination among ACOs earning shared savings.

b. Modifications to Other Shared Savings Program Requirements

We do not anticipate a material aggregate impact for the other changes we are finalizing as proposed related to the Shared Savings Program, specifically: Revisions to the definition of primary care services used in the Shared Savings Program's beneficiary assignment methodology (section III.J.2. of this final rule); revisions to the repayment mechanism arrangement policy, including changes to the calculation and recalculation of repayment mechanism amounts (section III.J.3. of this final rule); revision of the requirements concerning disclosure of prior participation in the Shared Savings Program by the ACO, ACO participants, and ACO providers/suppliers, and revisions to Shared Savings Program requirements to reduce the frequency and circumstances under which ACOs submit sample ACO participant agreements and executed ACO participant agreements to CMS (section III.J.4. of this final rule); and revisions to the beneficiary notification requirement as it applies to ACOs under prospective assignment and ACOs under preliminary prospective assignment with retrospective reconciliation (section III.J.5. of this final rule).

However, as we note in section III.J.3. of this final rule, lower required repayment mechanism amounts could reduce costs for ACOs in fees charged by financial institutions for letters of credit and by insurance companies for surety bonds. We estimate that such relief, in total for all participating ACOs, could be worth $2 to $4 million annually under the approach we are finalizing (assuming a reduction of approximately $196 million in repayment mechanism amounts, in aggregate).

We also note that the revisions we are finalizing to the definition of primary care services used in the assignment methodology may have differing effects on a subset of participating ACOs, for example, by leading a beneficiary to be assigned to a competing ACO, for a small subset of beneficiaries. We do not anticipate such ACO-level changes will result in a net impact on program spending overall.

9. Medicare Ground Ambulance Data Collection System

In section III.K. of this final rule, we finalized our proposed changes to the Medicare Ground Ambulance Data Collection System including the proposed change to the data collection period and data reporting period for selected ground ambulance organizations in year 3, proposed revisions to the timeline for when the payment reduction for failure to report will begin and when the data will be publicly available, and proposed revisions to the Medicare Ground Ambulance Data Collection Instrument.

We stated in the proposed rule that while we believed that these changes and clarifications will be well received by the ground ambulance stakeholders, we did not believe that these changes will have any substantive impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. We also noted in the proposed rule that the overall length of the Medicare Ground Ambulance Data Collection Instrument would be the same as previously finalized (84 FR 62888) with these changes. Additionally, some of the instructions which we proposed to add were intended to improve clarity and may therefore reduce the time the ground ambulance organizations spend addressing the questions. We did not receive any public comments on our estimated impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. As we discussed in section III.K of this final rule, we are finalizing our proposed changes to the Medicare Ground Ambulance Data Collection System.

10. Medicare Diabetes Prevention Program Expanded Model

a. Effects of Provisions Relating to the Medicare Diabetes Prevention Program Expanded Model

(1) Effects on Beneficiaries

We proposed to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) Allow CMS to remove the ongoing maintenance phase (months 13–24) of the MDPP set of services for those beneficiaries who started their first core session on or after January 1, 2022; (2) update the performance payments for the MDPP set of services in the core and core maintenance performance periods; and (3) waive the Medicare provider enrollment application fee for all organizations enrolling as MDPP suppliers on a prospective basis. These changes will have a positive impact on beneficiaries' health by increasing the capacity of MDPP eligible organizations to enroll in Medicare as MDPP suppliers and increasing access to the MDPP set of services for beneficiaries. Eligible beneficiaries receive these services as preventive services, which require no copays or cost sharing. These changes address MDPP supplier and beneficiary needs based upon all available monitoring and evaluation data. The changes are also responsive respond to stakeholder comments.

(2) Effects on the Market

Currently, more than 1,000 organizations nationally are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes Prevention Recognition Program (DPRP) status. However, only 27 percent of eligible organizations are participating in MDPP. We anticipate that the removal of the second year of the MDPP set of services will make MDPP attractive and feasible to more MDPP eligible organizations. Not only does a 12-month MDPP services period align with that of the CDC's National DPP and the DPP model test, our data show that only 10 percent of enrolled MDPP participants continue with the Ongoing Maintenance phase sessions (Year 2), and the majority are reaching their weight loss milestone within the first 6 months of the set of MDPP services. Stakeholders report that the second year of MDPP, or the ongoing maintenance phase, is cost prohibitive due to the costs to retain beneficiaries in year 2 of the expanded model as well as the costs to deliver an additional year of the expanded model that is not supported by the CDC National DPP curriculum. The CDC's National DPP curriculum supports a 1-year program and suppliers have found it difficult to extrapolate the curriculum to a second year. Additionally, MDPP suppliers commented that they have an increasingly difficult time making the business case for MDPP given the costs associated with the ongoing maintenance phase and the low performance payments associated with the second year. Given the low volume of participants continuing in the second year of MDPP, delivering the MDPP ongoing maintenance period creates an undue burden to MDPP suppliers. The cost to offer and deliver the sessions to a small cohort of individuals outweigh the maximum payments available from Medicare.

Stakeholders have consistently commented that CMS should shorten the MDPP expanded model to 1 year, with payment levels at least equivalent to the levels provided in the DPP model test. For example, during the DPP model test, suppliers were paid an average of $462 per beneficiary for the 1-year model test. The second year has made delivering MDPP both financially unattractive and unstainable for many of the current and eligible MDPP suppliers. Suppliers have reported that it is very difficult to engage and retain beneficiaries in a second year, and the reimbursement levels for a second year are inadequate to cover supplier costs. We proposed to shorten the MDPP service period to 1 year and increase the performance payments in the first year. These changes respond to stakeholder feedback and may alleviate some of the difficulty retaining MDPP participants during the core maintenance phase of the expanded model.

(3) Burden Related to Information Collection Requirements—No impact

(a) Supplier Standards

MDPP suppliers may encounter the Medicare enrollment fee during the following Medicare provider enrollment transactions: initial enrollment; revalidation (every 5 years for MDPP); or the addition of a new practice location. The provider/supplier enrollment fee for Calendar Year 2021 is $599. Although MDPP suppliers may submit a written request to CMS for a hardship exception to the application fee in accordance with § 424.514, many will not qualify and the hardship application process will simply add more burden on the organization. We have heard from the CDC as well as other stakeholders that the enrollment fee is a potential barrier to eligible MDPP suppliers who will not otherwise enroll in Medicare except for MDPP. Approximately 39 percent of our current suppliers are non-traditional suppliers that serve their local communities and play a critical role in enrolling more diverse, equitable, and inclusive cohorts of Medicare beneficiaries to MDPP. These non-traditional suppliers include, but are not limited to YMCAs, county health departments, community health centers, and non-profit organizations that focus on health education, and otherwise will neither enroll nor be able

to enroll as a Medicare supplier at all if it were not for MDPP. They often serve as trusted sources of health information for their communities. However, they also represent a large number of eligible organizations who have not enrolled in Medicare as MDPP suppliers. We anticipate that waiving the enrollment fee on a prospective basis along with the other programmatic adjustments are likely to result in more MDPP suppliers, increased beneficiary access to MDPP services, and an ongoing reduction of the incidence of diabetes in eligible Medicare beneficiaries, in both urban and rural communities.

In April 2020, CMS waived all provider enrollment application fees as part of the COVID–19 Emergency Declaration Blanket Waivers for Health Care Providers. As a result, we saw an increase in MDPP supplier enrollment. We believe that granting a waiver of the fee for MDPP suppliers to extend beyond the COVID–19 Emergency Declaration Blanket Waiver, along with the other change to MDPP, may stimulate MDPP supplier enrollment and enhance the MDPP evaluation. We proposed waiving the Medicare provider enrollment fee beyond COVID–19 Emergency Declaration Blanket Waivers for Health Care Providers because the enrollment fee creates a potential barrier to MDPP supplier enrollment, beneficiary access to the program, and subsequently, our ability to evaluate MDPP. Specifically, we proposed, to waive the enrollment fee as described in section 1866(j)(2)(C)(i) and (ii) of the Act during the MDPP expanded model test phase.

(b) Payment for MDPP Services

Our regulations at § 414.84 specify the payments MDPP suppliers may be eligible to receive, payments for furnishing MDPP services, and meeting performance targets related to beneficiary weight loss and/or attendance. MDPP suppliers are paid by CMS by submitting claims for MDPP beneficiaries using claim form CMS–1500 (*https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS1500.pdf*). As a condition for payment, claims submitted by MDPP suppliers must be for services furnished to eligible beneficiaries in accordance with § 414.84(b) and (c). We have streamlined the performance payments so that they are easier to understand and suppliers receive larger payments for participants reaching attendance and weight loss performance-based milestones. For example, the attendance-based performance payments are based on a standardized per-session rate, paid after the 1st, 4th, and 9th sessions attended during the core sessions interval, and after attending the two (2) sessions during each of the core maintenance intervals. We have redistributed all the Year 2 ongoing maintenance sessions phase performance payments to certain core and core maintenance session performance payments in Year 1. As finalized, the maximum payment of $705 over a 1-year service period is $1 more than the current maximum payment of $704 under the original 2-year payment structure. We believe eliminating the second year and its associated payments while increasing the first-year payments will result in a more financially sustainable expanded model.

Increasing the first year MDPP payment amounts should not negatively affect a supplier's performance (for example, participants' weight loss). As finalized, we increased the per session payments to $35, with suppliers receiving $53 more per beneficiary who attends the 4th core session compared to current payments and $27 more than proposed. We increased the attendance-based payments in response to stakeholder comments and maintained the 5 percent weight loss payments. Although some of the largest payments to suppliers are still driven by weight loss achievement, the maximum payment for attendance only is finalized at $455 compared to $338 proposed and $205 current. Further, in order to maintain CDC Diabetes Prevention Recognition Program (DPRP) recognition status, which is required to be an MDPP supplier, certain levels of performance metrics (for example, weight loss) must be satisfied. There is no evidence that eliminating the second-year maintenance sessions, shortening the MDPP services period to 1 year, will have any negative effects on performance of the expanded model.

(4) Effects on the Medicare Program

(a) Estimated 10-Year Impact of MDPP

Table 140 shows an updated estimate (in millions) for the impact on Medicare spending of two changes to the Medicare Diabetes Prevention Program (MDPP) to be implemented in 2022, with corrected assumptions:

- Waiving the Medicare enrollment fee for all new MDPP suppliers; and
- Shortening the MDPP services period to 1 year and shifting all of the Ongoing Maintenance reimbursement amounts to year one.

TABLE 140: Estimated 10-Year Impact of MDPP on Medicare Spending for CYs 2022 through 2031

Year	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	Total
Impact on Medicare Spending	$0.3	$0.2	$0.2	$0.1	-$0.0	-$0.1	-$0.2	-$0.3	-$0.3	-$0.4	-$0.6

These estimates by the CMS Office of the Actuary do not consider waiving the Medicare enrollment fee as a direct cost and assume there will be an additional 500 beneficiaries per year participating in MDPP. The average payment for an MDPP participant will increase by $150. While the maximum payment available to an MDPP supplier is only slightly greater than the maximum payment available under the original 2-year payment structure, the second year set of MDPP services have historically been far less utilized than the first year set of services. Therefore, eliminating the second-year payments has a minimal negative effect to the assumed costs of the expanded model. In the most recent year prior to the PHE, 747 Medicare FFS beneficiaries entered MDPP. Increasing the first-year payment amounts to suppliers and waiving the Medicare enrollment fee should increase access to MDPP, resulting in more utilization of the MDPP set of services. Starting in 2022, we can assume that 750 beneficiaries will have entered the expanded model each year without including the finalized changes. After including these changes, we will now

assume 1,250 beneficiaries will enter the expanded model each year. This assumption has a high level of uncertainty and we revisit it in the Sensitivity Analysis section.

Increasing the first year MDPP payment amounts should not negatively affect a supplier's performance (for example, participants' weight loss). Almost all of the increases to the payment amounts are applied after the 4th core session. Even though most of the payment increases are not tied to weight loss achievement, in order to maintain CDC Diabetes Prevention Recognition Program recognition status, which is required to be an MDPP supplier, certain levels of performance metrics (for example, weight loss) must be satisfied.

There is no evidence that eliminating the second-year maintenance sessions, shortening the MDPP services period to one year, will have any negative effects on performance of the expanded model.

(b) Sensitivity Analysis

Since the cost to suppliers for delivering the MDPP set of services is generally unknown, how utilization of the expanded model will be affected by the changes is highly uncertain. Table 141 shows the 10-year impact estimates (in millions) for different levels of additional beneficiary participation as a result of the changes:

TABLE 141: 10 Year Impact Estimates

Additional Beneficiaries Per Year	10-year Estimated Impact
0	$0.5
250	$0.3
500 (assumption used in best estimate)	-$0.6
1,000	-$2.3

Finally, higher projected savings are associated with increases in beneficiary participation, while no additional beneficiaries will result in an estimated cost.

The financial impacts we provided for the previously proposed payment schedule changes included errors that impacted our estimates: additional costs resulting from payment increases were not applied to the baseline participants; the count of 1,742 participants used to estimate future baseline participation included Medicare Advantage beneficiaries, which should have been excluded; and since there were only 747 new FFS participants in the most recent year prior to the start of the PHE, our best estimate would have assumed 250 additional FFS participants per year resulting from the previously proposed changes.

TABLE 142: Estimated 10-Year Impact of Previously Proposed MDPP Payment Schedule Changes on Medicare Spending for CYs 2022 through 2031, Corrected

Year	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	Total
Impact on Medicare Spending (previous)	$0.2	$0.2	$0.1	$0.0	-$0.1	-$0.2	-$0.2	-$0.3	-$0.3	-$0.4	-$0.9
Impact on Medicare Spending (corrected)	$0.2	$0.1	$0.1	$0.0	$0.0	-$0.1	-$0.1	-$0.1	-$0.2	-$0.2	-$0.2

b. Alternatives Considered

No alternatives were considered. The 2-year MDPP service period has depressed interest in MDPP among would-be MDPP suppliers. These actions address stakeholder comments on the barriers to MDPP expanded model success. If we do not take action, we will not be able to scale MDPP as intended, impacting Medicare beneficiary access to this expanded model. Reducing the MDPP from a 24- to a 12-month services period, increasing the year 1 performance payments, and waiving the Medicare provider enrollment application fee not only better aligns the expanded model with the evidence that helped certify the DPP model test initially, but it will encourage eligible organizations to enroll as MDPP suppliers.

c. Impact on Beneficiaries

This change will have a positive impact on eligible MDPP beneficiaries, as it better aligns with the CDC's National DPP, giving both the participants and the coaches similar messaging regarding this expanded model, regardless of payer. MDPP suppliers often offer the MDPP set of services to mixed cohorts, or classes with participants who are not eligible for MDPP, but who are enrolled in a National DPP cohort. Since MDPP generally follows the CDC's National DPP and aligns its expanded model with the CDC's DPRP Standards, it is confusing to participants, coaches, and staff when talking about a 2-year set of services to its eligible Medicare participants when the non-Medicare participants have a 1-year program. Finally, reducing the MDPP service period from 2 years to 1 year allows more cohorts to start and finish MDPP during the expanded model initial period of performance, which is expected to end in March 2023.

d. Estimating Regulatory Familiarization Costs

Given that we tried to align this rule as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rule impacts only enrolled MDPP suppliers and eligible beneficiaries who

have started the MDPP expanded model or are interested in MDPP.

11. Vaccine Administration Services

In section II.J.1. of this final rule, we are finalizing that effective January 1, 2022, CMS will pay $30 per dose for the administration of the influenza, pneumococcal and hepatitis B virus vaccines. In addition, CMS will maintain the current payment rate of $40 per dose for the administration of the COVID–19 vaccines through the end of the calendar year in which the ongoing PHE ends. Effective January 1 of the year following the year in which the PHE ends, the payment rate for COVID–19 vaccine administration will be set at a rate to align with the payment rate for the administration of other Part B preventive vaccines.

We estimate that the policy to increase the administration cost for influenza/pneumococcal/HBV vaccine services to $30 in 2022 will increase Medicare spending by roughly $250 million in CY 2022. This estimate doesn't reflect the impact of induced utilization of the vaccine, or any offsetting savings resulting from averted hospitalizations for those who would now get the vaccine. This policy may encourage more health care providers to offer these services or encourage those that already offer these services to proactively identify and vaccinate more beneficiaries compared to what they might under the lower rates, which would result in further additional vaccine costs. However, if more beneficiaries were vaccinated then Medicare costs associated with the treatment of influenza, pneumonia, and hepatitis B could be reduced. In order to offset the costs associated with this policy roughly 10–11K influenza-related hospitalizations would have to be averted.

12. Medicare Provider and Supplier Enrollment Changes—Provider Enrollment

As explained in section III.N. of this final rule, we proposed changes to three of our existing revocation reasons:

- We proposed to expand § 424.535(a)(2) to permit revocation based on the OIG exclusion of administrative or management services personnel furnishing services payable by a Federal health care program, such as a billing specialist, accountant, or human resources specialist.
- We proposed to expand § 424.535(a)(13) to permit revocation of a physician's or other eligible professional's enrollment if he or she surrenders his/her Drug Enforcement Administration (DEA) certificate of registration in response to an order to show cause.
- We proposed to revise the factors in § 424.535(a)(8)(ii) (which permits revocation based on a pattern or practice of submitting non-compliant claims) to better enable CMS to target shorter periods of non-compliant billing.

We believe that all three of these changes will result in an increase in the number of revocations that CMS imposes. However, we believe this number will be rather small. We currently impose only a limited number of revocations under §§ 424.535(a)(2), (a)(13), and (a)(8)(ii). Accordingly, since our expansion of these three revocation reasons will be fairly modest, we do not foresee more than a very slight increase in revocations.

Table 143 outlines the number of revocations we estimate will ensue under our revocation expansions. These numbers only account for additional revocations stemming from our changes:

TABLE 143: Additional Revocations

Revocation Reason	Number
§ 424.535(a)(2)	5
§ 424.535(a)(13)	5
§ 424.535(a)(8)(ii)	5
Total	**15**

Internal CMS data indicates that the average provider/supplier that will be affected by these regulatory expansions receives roughly $50,000 in Medicare payments each year. (We used a similar $50,000 annual payment estimate for our provider enrollment provisions in the CY 2020 PFS final rule) (84 FR 62568)). Providers/suppliers revoked under our revocation expansions will thus not receive these payments. Hence, multiplying our $50,000 estimate by the revocation totals in Table 143 results in a projected transfer from these providers/suppliers to the Federal Government of $750,000 ($50,000 × 15 revocations).

We did not receive public comments on these estimates and are therefore finalizing them as proposed.

13. Provider/Supplier Medical Review Requirements—Prepayment and Post-Payment Reviews

In section III.N.2. of this final rule, we proposed to: (1) Define key terms including ''additional documentation,'' ''additional documentation request,'' ''post-payment medical review,'' and ''prepayment medical review;'' (2) codify contractors' authority to request additional documentation for prepayment and post-payment review within established timeframes; (3) codify timeframes for response to requests for documentation; and (4) codify result of a failure to comply with prepayment or post-payment documentation request(s) by a provider or supplier, specifically denial of payment. We do not believe these provisions involve any additional impact or burden on providers, suppliers, or States; however, we welcomed feedback from stakeholders regarding the potential costs of these provisions.

The regulations will incorporate already established key terms and definitions as well as processing requirements pertaining to prepayment and post-payment medical review into regulation. Placing this information in regulation will improve provider and supplier understanding of the medical review process and their responsibilities in complying with our review contractor's requests. Further, the regulations represent no change to medical review requirements. As such, we did not anticipate any change in the number of prepayment medical reviews, post-payment medical reviews or the number of additional documentation requests made by contractors.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

14. Effect of Modifications to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As discussed in section III.O of this final rule, we are finalizing our proposal to allow OTPs to continue to furnish the therapy and counseling portions of the weekly bundles, as well as any additional counseling or therapy that is billed using the add-on code, using audio-only telephone calls rather than via two-way interactive audio-video communication technology in cases where audio/video communication is not available to the beneficiary after the conclusion of the PHE for COVID–19, provided all other applicable requirements are met. We believe this change will facilitate broader access to these services for beneficiaries. We are also finalizing our proposal to require that when these services are furnished using audio-only technology, practitioners certify that they had the capacity to furnish the services using two-way audio/video communication technology, but instead, used audio-only technology because audio/video communication technology was not available to the beneficiary.

We believe the Part B cost impact of these final policies will be minimal, since payment for therapy and counseling is included in the bundled payment regardless of the modality used to deliver it and we do not expect that this provision will increase the frequency at which medically necessary counseling and therapy services are billed using the counseling and therapy add-on code (HCPCS code G2080).

Additionally, as discussed in section III.O. of this final rule, the FDA recently announced the approval of a new, higher dose naloxone hydrochloride nasal spray product used to treat opioid overdose and that the newly approved product delivers 8mg of naloxone. In the CY 2021 PFS final rule (85 FR 84683 through 84685), we finalized payment for HCPCS code G2215 (Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure). HCPCS code G2215 was priced based on an assumption of a typical case in which the beneficiary will be provided with a box of two 4mg nasal spray products. At the time of drafting the proposed rule, we did not yet have any available pricing information for this newly approved product. However, in order to be able to make payment to OTPs under Medicare for this product, we proposed to create a new G-code describing a take-home supply of this higher dose naloxone hydrochloride nasal spray product. After considering the comments received, we are finalizing our proposal to establish a new code for a higher-dose of naloxone hydrochloride nasal spray. We will price this code as proposed; the drug component is based on the methodology at § 410.67(d)(2)(i) and the amount of the non-drug component of the code is based on the CY 2020 Medicare payment rate for CPT code 96161, as updated by the MEI. Based on utilization of the existing naloxone codes under the OTP benefit, we believe that the cost impact of finalizing this new code will be minimal.

15. Physician Self-Referral Update

The physician self-referral law provisions are discussed in section III.P. of this final rule.

As discussed in section III.P.2. of this final rule, we are amending the provisions of § 411.354(c)(2) identifying unbroken chains of financial relationships that constitute ''indirect compensation arrangements'' to ensure that a longstanding prohibition on certain per unit of service-based compensation formulas for determining charges for the rental of office space and equipment remains within the ambit of the law. This provision, which was inadvertently omitted when the definition of ''indirect compensation arrangement'' was revised in the December 2, 2020 final rule entitled ''Modernizing and Clarifying the Physician Self-Referral Regulations'' (85 FR 77492), is necessary to protect against potential abuses such as overutilization and anti-competitive behavior. We believe that most parties have continued to comply with the regulatory provisions on per unit of service-based compensation formulas for the rental (or lease) of office space and equipment as they have done since the requirements became effective on October 1, 2009. We are also adding provisions to assist stakeholders in identifying the individual unit to be analyzed under the provisions of § 411.354(c)(2)(ii)(A)(2)(i) through (iv). We believe that the clarity provided by these provisions will facilitate compliance without adding burden.

As discussed in section III.P.3. of this final rule, we are finalizing our proposal to permit the use of the exception for preventive screening tests and vaccines at § 411.355(h) for COVID–19 vaccines during such period as the vaccines are not subject to CMS-mandated frequency limits, provided that all other requirements of the exception are satisfied. We believe that this provision will ensure that the physician self-referral law will not impede the availability of critically important COVID–19 vaccines for Medicare and other patients.

As discussed in section III.P.4. of this final rule, we are finalizing our proposal to publish the Code List for Certain Designated Health Services (Code List) solely on the CMS website. Commencing after the publication of the January 1, 2022 Code List in this final rule, the Code List will be updated annually and published on the CMS website at *https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.* No less than 30 consecutive calendar days prior to the effective date of a Code List update, we will provide advance notice of the updated Code List on the CMS website. We will also provide for a 30-day public comment period for each update using *www.regulations.gov,* and publish instructions for submitting comments on the CMS website. We will address all public comments that we receive through this process on the CMS website. Finally, we are revising the definition of ''List of CPT/HCPCS Codes'' at § 411.351 by updating the URL that indicates where the Code List is published on the CMS website. We believe that these provisions will facilitate compliance with the physician self-referral law and allow easier access to the most up-to-date Code List.

16. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA–PD Plan (section 2003 of the SUPPORT Act)

In addition to the cost reflected in the Collection of Information section of this final rule, we expect that there will be an additional burden for CMS to award and work with a CMS contractor to develop a process for reviewing the PDE data to assess prescriber compliance with the regulatory provision and review and process prescriber attestations. Based on similar contracts, and conversations with the industry, in the CY 2022 PFS proposed rule, we estimated the costs of (A) development of operational strategy for the new program, (B) reviewing PDE data, and (C) prescriber case work. We solicited stakeholder feedback on our estimate and all our assumptions.

(A) Development of policy: We estimated that it would take our contractor a week of work, 40 hours, to develop the strategy for how the contractor will process the prescriber attestations. We estimated that it would take an operations manager and compliance officer working together at a combined hourly wage of $193.60/hr

($120.90/hr + $72.70/hr) a full 40-hour work week to operationalize this aspect of it. Therefore, we estimated the aggregate cost to be $7,744 (40hr * $193.60/hr).

(B) Since systems already exist to collect the appropriate PDE data, in our proposed rule, we stated that our contractor would only have to review the data for compliance with the EPCS mandate. Therefore, we estimated that it would take 2 computer systems analysts each working at $95.22/hr, a week and a half of work, 60 hours. Therefore, the aggregate cost would be $5,713.20 (60 hr * $95.22/hr).

(C) We estimated that it would take 4 administrative support workers each working at $36.82/hr, 60 hours to generate the letters and disseminate them to the appropriate prescriber, which means that it would cost our contractor $2,209.20/year (60 hr * $36.82/hr) in administrative support costs. We estimated that it would be the full-time job of a customer service representative working at $37.02/hr to field prescriber inquiries about the disseminated letters. Thus, we estimated that our contractor would spend $77,001.60 ($37.02/hr * 40 * 52) on the salary of the customer service representative for this task.

The aggregate impact for our contractor is 200 hours at a cost of $92,668. We solicited comment on the accuracy of this burden estimate and on any measures that CMS can take to decrease the impact of this provision, while maintaining its utility and implementing the statutory mandate. We did not receive public comments on the burden estimates for this provision, and therefore, we are finalizing as proposed.

17. Open Payments

a. Payment Context Field for Teaching Hospitals

This provision is for a mandatory freeform text context field. We have created this provision at the request of stakeholders, particularly after conversations with teaching hospitals. The teaching hospitals confirmed that the majority of their disputes arise because of a lack of information within the record and an inability to associate the payment to the correct area within their large organization, not the inaccuracy of the record itself. The benefit of this field is to give better context to the records attributed to teaching hospitals and thereby reduce the number of disputes. For this reason, we also believe it will increase goodwill between the program's stakeholders. The cost is that reporting entities will need to collect an additional piece of information, which will increase burden. We do not believe this burden will be great because the volume of reported teaching hospital payments is much lower than the volume of physician covered recipient payments. In addition, we have created flexibility with this field so that the reporting entity can choose which piece of information is most appropriate and can be something that they already collect, such as a check number or name of the department in the hospital.

b. Optional Annual Recertification

The optional annual recertification is at the request of reporting entities and will increase the availability of communication to CMS. The burden associated with this action is low because it will be a low-effort process only completed by the entities who choose to do so.

c. Defining a Physician-Owned Distributorship

Since the program began in 2013, we have heard feedback that physician-owned distributorship (PODs) should be better represented in the data because the conflict of interest potentially created by PODs is at the heart of the program. We created this new definition due to the lack of an existing POD definition that would be appropriate for the program's needs. Although this is a new definition, it will only be a subset of the existing definitions of applicable manufacturer and applicable group purchasing organization. ''Applicable manufacturer—POD'' and ''Group purchasing organization—POD'' are already ''business type'' choices when registering in the Open Payments system. Therefore, this definition will not alter existing regulations beyond requiring PODs to identify themselves as such.

d. Disallowing Record Deletion Without Reason

We believe there is not currently language to prevent an applicable manufacturer or applicable group purchasing organization from submitting and attesting to records, then deleting the records to prevent publication. This action would be contrary to the spirit of transparency of the program. To help ensure compliance with this requirement, we are also adding a new field that will allow entities to communicate the reason for the deletion to CMS. Since the entities will have attested to the accuracy and completeness of these records, we believe it is appropriate to confirm the reason for the deletion. We have not perceived the behavior of inappropriate deletions within the data and do not believe it will increase burden beyond the additional field when deleting a record. We are preemptively closing a potential loophole.

e. Disallow Publication Delays of General Payments

The statute requires that delays are ''made pursuant to product research or development agreements and clinical investigations'' (1128G(c)(1)(E) of the Act). A small number of general payments are delayed annually, which we are unable to verify meet this requirement. Research payments contain the appropriate fields to ensure that the statutory provisions are being met. We do not believe that it will be a burden for the small number of general payments to either be reported as research payments or not delayed.

f. Short-Term Loans

Short-term loans are not required to be reported, but they must be shorter than 91 days to meet the exception. This provision does not create burden because it only clarifies that those 90 days must be the cumulative total for a year, which is already outlined in subregulatory guidance. We do not anticipate that this will change reporting behavior but want to explain the exception more clearly within the text of the final rule.

g. Remove General Ownership Records

Ownership records have special rules for reporting outlined in the statute (section 1128G(a)(2) of the Act), which are not included in the format for general records. However, there is currently a general record for reporting ownership and investment interest (Nature of Payment = 11). We anticipate a small burden for the approximately 92 reporting entities who have previously used the general nature of payment category in order to fill out the different fields in the ownership record. This burden will allow the records to meet statutory mandates.

h. Updated Contact Information

Open Payments conducts regular compliance-related outreaches to reporting entities when it encounters data that may not meet program requirements. We have found that the two contacts provided by applicable manufacturers and group purchasing organizations often become obsolete, especially if a company has not updated its contact information during the recertification process. It is crucial for the integrity of the data that we have the ability to contact entities in the case of

irregularities. Additionally, we believe that ensuring informal communications from CMS will reduce burden since it may prevent more formal compliance actions if the entity is unresponsive due to outdated contact information. However, we do not believe this is an issue for the majority of reporting entities, nor do we believe that keeping the contact information updated will create a large burden.

18. Updates to the Quality Payment Program

In section IV.A. of this final rule, we include our finalized policies for the Quality Payment Program. In this section, we first present the overall and incremental impacts to the number of expected QPs and associated APM Incentive Payments. In the following sections, we estimate the overall and incremental impacts to the total MIPS eligible population and the payment impacts by practice size for the CY 2022 performance period/2024 MIPS payment year based on various finalized policies, including policies to modify MIPS eligibility, the MIPS final score and the performance threshold and additional performance threshold as discussed in sections IV.A.3.a., IV.A.3.d., IV.A.3.e., and IV.A.3.f. of this final rule.

For the MIPS payment adjustment, we ran two RIA models: A baseline and a final policies model. The aim of the baseline model is to model the status of our population of clinicians for the CY 2022 performance period/2024 MIPS payment year if this final rule does not take effect. It therefore reflects previously finalized policies for the CY 2022 performance period/2024 MIPS payment year. Select examples of the baseline policies scheduled to start in the CY 2022 performance period/2024 MIPS payment year include the removal of the Web Interface as a collection type and the change in the performance category weights. There was no defined performance threshold or additional performance threshold, so our baseline model assumed the performance threshold and additional performance threshold used for the previous period (CY 2021 performance period/2023 MIPS payment year).

The aim of the final policies model is to estimate the incremental effect of the final policies for the CY 2022 performance period/2024 MIPS payment year on MIPS eligibility, MIPS final scores, and payment adjustments. In other words, by comparing the difference between our baseline model and our final policies model we can estimate the incremental impact of finalizing the policies contained in this final rule. Select examples of the finalized policies include, the inclusion of new MIPS eligible clinician types, the inclusion of the Web Interface as a collection type, the change in performance threshold and additional performance threshold, and the changes to the complex patient bonus. Refer to section VI.F.18.e.(2) of this final rule for the detailed methods on how we integrated the policies into the baseline and final policies models.

a. Assessing Use of 2020 Data for Estimating Future MIPS Performance

In the 2022 PFS proposed rule (86 FR 39546), we stated that the RIA used the 2019 MIPS performance period data because the data for the 2020 MIPS performance period were not available in time to incorporate into the proposed rule model. We noted we would evaluate whether it is appropriate to use the 2020 performance period data to predict performance in CY 2022 for the final rule and whether adjustments would need to be made if CY 2020 performance period data are used. We have already acknowledged some data from the CY 2020 performance period is not usable. For example, we have stated that based on our analysis of the 2020 performance period data, we could not reliably calculate scores for the cost measures that would adequately capture and reflect the performance of MIPS eligible clinicians. As a result, we reweighted the cost performance category for all MIPS eligible clinicians for the CY 2020 MIPS performance period.[280] Additionally, in section IV.A.3.f.(2) of this final rule, we noted we have final score data for the CY 2020 performance period/2022 MIPS payment year available to use in our assessment of whether to use the mean or median for the performance threshold, but the data for the CY 2020 performance period/2022 MIPS payment year may be subject to change as a result of the targeted review process. However, we have also indicated that for certain purposes 2020 performance period data could be beneficial too. As discussed in section IV.A.3.e.(1)(c)(ii) of this final rule, we believe 2020 performance period data is appropriate to use for historic benchmarks in part because it is the most recent available dataset and it reflects a performance period in which clinicians were facing the PHE.

To evaluate whether the 2020 MIPS performance period data is appropriate to use to predict future performance, we considered whether the extreme and uncontrollable circumstances policy impacted submissions and data, and whether the COVID–19 PHE impacted services provided (for example, quality measures, the number of MIPS eligible clinicians, claims). For the 2020 performance year, we applied the MIPS automatic extreme and uncontrollable circumstances policy to all individual MIPS eligible clinicians and allowed for extreme and uncontrollable applications due to the COVID–19 PHE (*https://qpp.cms.gov/resources/covid19?py=2020*). Due to these extreme and uncontrollable circumstances policies, not all clinicians or groups may have submitted data for the 2020 MIPS performance period.

When we evaluated whether the 2020 MIPS performance period data is appropriate to use to estimate 2022 MIPS performance period performance for MIPS eligible clinicians, we compared the 2020 MIPS performance period data to the 2019 MIPS performance period data on key metrics. Overall, we observed a decrease in the number of MIPS eligible clinicians at the individual level who exceed the low-volume threshold. We also observed a decline in data submitted by individual and group. Finally, when examining actual scores and payment information for the 2020 performance period/2022 MIPS payment year compared to the 2019 performance period/2021 MIPS payment year, we found an increase in the number of MIPS eligible clinicians receiving a neutral score. However, our initial findings suggest the extreme and uncontrollable circumstances policy combined with the COVID–19 PHE limit the data needed to simulate future MIPS eligible population and associated performance. Therefore, this RIA uses the 2019 MIPS performance period submissions which were used for the CY 2021 PFS final rule RIA (85 FR 85011 through 85023) and CY 2022 PFS proposed rule RIA (86 FR 39545 through 39556). We note that the findings are specific for purposes of estimating future performance for the entire population of MIPS eligible clinicians.

b. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

For payment years 2019 through 2024, through the Medicare Option, eligible clinicians with a sufficient percentage of Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs in the applicable QP performance period for a year. These QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of

[280] *https://qpp.cms.gov/mips/cost?py=2020.* Last accessed October 20, 2021.

their estimated aggregate paid amounts for Medicare covered professional services furnished during the calendar year immediately preceding the payment year. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs but meet a lower threshold to become Partial QPs for the year may elect to report to MIPS and, if they elect to report, will then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status and does not meet any other exemption category, the eligible clinician will be subject to MIPS, will report to MIPS, and will receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, the update to the PFS CF for services that are furnished by clinicians who achieve QP status for a year is 0.75 percent, while the update to the PFS CF for services that are furnished by clinicians who do not achieve QP status for a year is 0.25 percent. In addition, MIPS eligible clinicians will receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B PFS services in a payment year based on performance during a prior performance period. Although the statute establishes overall payment rate and procedure parameters until 2026 and beyond, this impact analysis covers only the 2024 MIPS payment year of the Quality Payment Program.

Overall, we estimate that for the 2022 QP Performance Period between 225,000 and 290,000 eligible clinicians will become QPs. Therefore, they will be excluded them from MIPS and will qualify for the lump sum APM incentive payment in Payment Year 2024 based on 5 percent of their Part B paid amounts for covered professional services in the preceding year. These paid amounts for QPs are estimated to be between approximately $12,000 million and $15,000 million in total for the 2022 performance year. The analysis for this final rule used the 2020 third snapshot participation file. We based APM Incentive Payment Amounts on paid amounts with service dates of January 1, through September 30, 2020. We multiplied the calculated amounts by 1.5 to approximate payment amounts for the full calendar year. We estimate that the total lump sum APM Incentive Payments will be approximately $600–750 million for the 2024 Quality Payment Program payment year.

In section VI.F.18.a. of this final rule, we projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2022 QP Performance Period as well as some Advanced APMs anticipated to be operational during the 2022 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that will attain QP status through the All-Payer Combination Option. We note that the Kidney Care Choices Model and the Radiation Oncology model have been included in our analysis as we anticipate that the model will be Advanced APMs in 2022. Additionally, we anticipate that the Maryland Primary Care Program will not be an Advanced APMs in 2022. The following APMs are expected to be Advanced APMs for the 2022 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- Global and Professional Direct Contracting Model;
- Kidney Care Choices Model (Kidney Care First; Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program);
- Medicare Shared Savings Program (Basic Track Level E, and the ENHANCED Track);
- Oncology Care Model (Two-Sided Risk Arrangements);
- Primary Care First (PCF) Model;
- Radiation Oncology model; and,
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (see 81 FR 77444 through 77445 for information on the APM Participant Lists and QP determinations) on the 2020 third snapshot participation file to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2022 QP Performance Period. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 50 percent of their Part B covered professional services or at least 35 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

c. Impact for the CY 2021 Performance Period/2023 MIPS Payment Year

In section IV.A.3.e.(2)(a)(ii) of this final rule, we finalize our proposal to double the complex patient bonus, and to increase its cap to 10 points for the CY 2021 Performance Period/2023 MIPS Payment Year. We expect this policy to result in an increase of 3 points in the median bonus thus increasing MIPS final scores at the median by 3 points. We do not know the effects of the PHE for COVID–19 and its effect on MIPS performance in 2021, so we did not recreate the analysis and payment distributions with the updated bonus for the CY 2021 performance period/2023 MIPS payment year (85 FR 85012 through 85019). The increase in complex patient bonus points will result in smaller payment adjustments for three reasons. First, the resulting increase in final scores will reduce the budget neutral pool. Second, the increase in complex patient bonus points will increase the number of clinicians with scores above the performance threshold or additional performance threshold, meaning more clinicians will share in the budget neutral pool and additional $500 million for exceptional performance and potentially lower the scaling factor that is applied to the MIPS payment adjustment and additional payment adjustment. Third, the average scores of those receiving a positive or additional adjustment will be higher, which means the adjustment rates for clinicians that have scores above the performance threshold or additional performance threshold will be lower.

d. Estimated Number of Clinicians Eligible for MIPS Eligibility for the CY 2022 Performance Period/2024 MIPS Payment Year

(1) Methodology To Assess MIPS Eligibility

(a) Clinicians Included in the Model Prior To Applying the Low-Volume Threshold Exclusion

To estimate the number of MIPS eligible clinicians for the CY 2022 performance period/2024 MIPS payment year and the effect of the final

policies in this final rule, we ran two models as described in section VI.F.18., a baseline model and final policies model.

For the baseline and final policies models, we used the same eligibility files and approach described in the CY 2021 PFS final rule (85 FR 85013) which resulted in the inclusion of 1.6 million clinicians who had PFS claims from October 1, 2018 to September 30, 2019, as well as additional clinicians associated with a group who had at least one PFS claim from October 1, 2019, through December 31, 2019. We used the same exclusion criteria to exclude clinicians from our MIPS eligibility assessment as described in the CY 2021 PFS final rule RIA (85 FR 85013) with the following model updates:

(1) In both the baseline and final policies models, we excluded practitioners in Next Generation ACOs because the Next Generation ACO model ends in the CY 2021 MIPS performance period.

(2) In both the baseline and final policies models, to determine which clinicians in the initial population of 1.6 million should be excluded as QPs, we used Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. We elected to use this data source because the APM participant list for the 2019 final snapshot can reliably be used for RIA projections. From this data, we calculated the QP and Partial QP determinations as described in section of IV.A.4.c.(1)(b) of this final rule for the 2022 QP performance period for both models.

(3) In the final policies model, we included in our estimated MIPS eligible population for the CY 2022 performance period/2024 MIPS payment year clinical social workers and CNMs as finalized in section IV.A.3.a.(1) of this final rule.

(4) In the final policies model, we are integrating the provision that starting with the CY 2022 MIPS performance period/2024 MIPS payment year, small practices, excluding virtual groups, must submit data as a group in any performance category to indicate that they wish to be scored as a group for Medicare Part B claims. This affects eligibility because previously a single Medicare Part B claims submission, without any other submission, started a group score. Once a group score is created, a clinician who was individually excluded from MIPS for being under the low-volume threshold, may now be eligible if the group exceeds the low-volume threshold. This policy is described at section IV.A.3.a.(3) of this rule.

(b) Assumptions Related To Applying the Low-Volume Threshold Exclusion

The low-volume threshold policy may be applied at the individual (TIN/NPI) or group (TIN) levels based on how data are submitted including under the APM Entity level if the clinician is part of an APM Entity in a MIPS APM (hereafter, a MIPS APM Entity) that elects to submit to MIPS. A clinician or group that exceeds at least one but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby getting measured on performance and receiving a MIPS payment adjustment.

For the final policies model, we describe below the estimated MIPS eligibility status and the associated PFS allowed charges of clinicians in the initial population of 1.6 million clinicians. We present in section VI.F.18.d.(1)(c) the incremental impact of the final policies from the baseline model for the CY 2022 performance period/2024 MIPS payment year on the MIPS eligible clinician population and their associated PFS allowed charges. We applied the same assumptions presented in the CY 2021 PFS final rule RIA to apply the low-volume threshold and to understand whether clinicians participate as a group, virtual group, APM entity, or as individuals (85 FR 85013 through 85016), except for three modifications. We assumed only individuals or APM TINs that exceeded the low-volume threshold will receive an APM Performance Pathway (APP) score consistent with the policy as finalized in the CY 2021 PFS final rule (85 FR 84897).[281] We assumed APM TINs that qualified for opt-in and submitted data as a TIN will also be eligible. Finally, we did not consider clinicians in groups as MIPS eligible clinicians nor start a group score for clinicians in small practices with only Medicare Part B claims submissions to reflect the policy finalized at section IV.A.3.a.(3) of this rule.

Table 144 summarizes our eligibility estimates for the final policies model. We identify approximately 212,000 clinicians[282] as having ''required eligibility'' in Table 144. These clinicians will be MIPS eligible because they exceed the low volume threshold as individuals and are not otherwise excluded. These clinicians may ultimately choose to participate in MIPS as an individual, group, virtual group or APM entity or to not participate. Regardless of how they participate they will be considered MIPS eligible. We estimate approximately 595,000 additional MIPS eligible clinicians will be eligible as ''group eligibility'' in Table 144. These clinicians belong to an APM entity, group or virtual group that meets the low-volume threshold and submits to MIPS. If they were not associated with the group submission, these clinicians would not be eligible for MIPS. Finally, we estimate about 3,000 clinicians will be eligible through ''opt-in eligibility'' through the ''opt-in'' policy for a total MIPS eligible clinician population of approximately 810,000. This leads to an associated $67 billion allowed PFS charges estimated to be included in the CY 2022 performance period/2024 MIPS payment year.

BILLING CODE 4120–01–P

[281] Under the policy, APM TINs must submit data, but as that was not a requirement for 2019 Shared Saving Program participants, we assumed all TINs that exceed the low-volume threshold would submit data.

[282] The count of 212,000 MIPS eligible clinicians for required eligibility is rounded and includes those who participated in MIPS (approximately 186,000 MIPS eligible clinicians), as well as those who did not participate (approximately 26,000 MIPS eligible clinicians).

TABLE 144: Description of MIPS Eligibility Status for CY 2022 Performance Period/2024 MIPS Payment Year Using the CY 2022 PFS Final Rule Assumptions**

		CY 2022 PFS Final Rule estimates	
Eligibility Status	**Predicted Participation Status in MIPS Among Clinicians***	**Number of Clinicians**	**PFS allowed charges ($ in mil)*****
Required eligibility (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Participate in MIPS	185,684	$45,201
	Do not participate in MIPS	26,087	$6,117
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria and submit as a group)	Submit data as a group	594,567	$15,194
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS and submit data)	Elect to opt-in and submit data	3,255	$77
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		**809,593***	**$66,589**
Not MIPS Eligible			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Do not opt-in; or Do not submit as a group	411,837	$10,529
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	100,501	$565
Excluded for other reasons (Non-eligible clinician type, newly enrolled, QP)	Not applicable	303,873	$14,951
Total Number of Clinicians Not MIPS Eligible		816,211	$26,045
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,625,804	$92,634

* Estimated MIPS Eligible Population

** This table does not include clinicians impacted by the automatic extreme and uncontrollable policy. (approximately 6,000 clinicians and $531 million in PFS allowed charges). It also excludes CPC+, NextGen and submitters with one or more categories identified as being suppressed as a result of bad data.

*** Allowed charges estimated using 2019 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

Furthermore, we estimate there will be approximately 412,000 clinicians as ''Potentially MIPS eligible'' in Table 144. These clinicians are not MIPS eligible but could be if their practice decides to participate or they elect to opt-in. These clinicians will be included as MIPS eligible in the unlikely scenario in which all group practices elect to submit data as a group, or clinicians in a group that does not submit are eligible to opt-into MIPS individually and choose to do so. This assumption is important because it quantifies the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate the MIPS eligible clinician population could be as high as 1.2 million clinicians. Finally, we estimate approximately 101,000 clinicians will not be MIPS eligible because they and their group are below the low-volume threshold on all three criteria and another approximately 304,000 will not be MIPS eligible because they are categorically excluded regardless of volume or submission activity.

Eligibility among many clinicians is contingent on submission to MIPS as a

group, virtual group or election to opt-in, therefore we will not know the number of MIPS eligible clinicians who submit until the submission period for the 2022 MIPS performance period is closed. For this final policies model analysis, we use the estimated population of 809,593 MIPS eligible clinicians described above.

(c) Estimated Impact of the Final Policies on MIPS Eligibility and PFS Allowed Charges

We illustrate in Table 145 how the final policies to add clinical social workers and CNMs as MIPS eligible clinician types and the policy to require small practices to submit data as a group for a group quality performance category score as finalized in sections IV.A.3.a.(1) and IV.A.3.a.(3) of this final rule affects the estimated number of MIPS eligible clinicians. The amended regulation text that we finalized in section IV.A.3.a.(2) of this final rule does not make modify how we assess eligibility in MIPS in our final policies model.

The first row in Table 145 presents the estimates from the RIA baseline model with the number of individuals that will be MIPS eligible clinicians for the 2022 performance period/2024 MIPS payment year if this rule does not take effect. The second row presents estimates from the RIA final policies model with the incremental impact of adding the two new MIPS eligible clinician types on the number of MIPS eligible clinicians for the CY 2022 performance period/2024 MIPS payment year. As shown in Table 145, the final policies lead to a small increase in the number of MIPS eligible clinicians (1.1 percent increase) and a minimal increase in the PFS allowed charges (0.1 percent increase) for the CY 2022 performance period/2024 MIPS payment year.

TABLE 145: Effect of Eligibility Changes on the Expected Number of Clinicians and the Allowed Paid Amount in the CY 2022 Performance Period/2024 MIPS Payment Year

Policy changes	Estimated cumulative effect of policy change on number of clinicians	Estimated number of clinicians impacted by policy change	% Change /from Baseline in number of MIPS eligible clinicians	Estimated Cumulative PFS Allowed Charges (mil)	% Change in PFS Allowed Charges from Baseline
Baseline policies model: If the CY 2022 PFS final rule did not exist.	801,013	N/A	N/A	66,503	N/A
Final policies model: After applying policies finalized in the CY 2022 PFS final rule.	809,593	8,580	1.1%	$66,589	0.1%

BILLING CODE 4120–01–C

e. Estimated Impacts on Payments to MIPS Eligible Clinicians for the CY 2022 Performance Period/2024 MIPS Payment Year

(1) Summary of Approach

In sections IV.A.3.d., IV.A.3.e. and IV.A.3.f. of this final rule, we present several provisions which impact the measures and activities that impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VI.F.18.e.(2). of this RIA as we describe our methodology to estimate MIPS payments for the CY 2022 performance period/2024 MIPS payment year. We then present the impact of the overall final policies on the CY 2022 performance period/2024 MIPS payment year and then compare select metrics to the baseline model, which only incorporates previously finalized policies for the CY 2022 performance period/2024 MIPS payment year. By comparing the baseline model to the final policies model, we can estimate the incremental impact of this rule's policies to the CY 2022 performance period/2024 MIPS payment year.

The payment impact for a MIPS eligible clinician is based on the clinician's final score, and MIPS eligible clinicians can participate as an individual, group, virtual group, or APM Entity in the four MIPS performance categories: Quality, cost, improvement activities, and Promoting Interoperability. As discussed in section VI.F.18. of this final rule, we generally used data submitted for the 2019 performance period. For the cost performance category, we used the same data as the CY 2020 PFS final rule (84 FR 63169), which is primarily testing data for the cost measures.

The estimated payment impacts presented in this final rule are averages by practice size weighted by Medicare utilization. The payment impact for a MIPS eligible clinician will vary from the average and will depend on the measure submissions, scores and their performance.

(2) Methodology To Assess Impact

To estimate participation in MIPS for the CY 2022 performance period/2024 MIPS payment year for this final rule, we generally used 2019 MIPS performance period data for both the baseline and final policies models. Our baseline and final policies scoring models included the 801,013 and 809,593 estimated MIPS eligible clinicians, respectively, as described in section VI.F.18.d.(1) of this RIA.

To estimate the impact of MIPS policies on MIPS eligible clinicians, we generally used the 2019 MIPS performance period submissions data, including data submitted for the quality, improvement activities, and Promoting Interoperability performance categories. We supplemented this information with 2019 data available for CAHPS for MIPS and CAHPS for ACOs, testing data for the revised total per capita cost measure and Medicare Spending Per Beneficiary (MSPB) clinician measures which were finalized in the CY 2020 PFS final rule (84 FR 62969 through 62977), testing data for the new episode cost measures, administrative claims data for the new quality performance category measures, and other data sets.[283] We calculated a hypothetical final score for the 2022 performance period/2024 MIPS

[283] Data submitted to MIPS for the 2018 MIPS performance period data was used for the improvement score for the quality performance category. We also incorporated some additional data sources when available to represent more current data.

payment year for the baseline and final policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, Promoting Interoperability, and improvement activities performance categories, where each are described in detail in the following subsections.

(a) Methodology To Estimate the Quality Performance Category Score

We estimated the quality performance category score using a methodology like the one described in the CY 2021 PFS final rule (85 FR 85016 through 85017) for baseline and final policy RIA models for the CY 2022 performance period/2024 MIPS payment year.

For the baseline policies RIA model, which does not reflect the final policies for CY 2022 performance period/2024 MIPS payment year from this final rule, we made the following modifications to reflect the previously finalized policies for the CY 2022 performance period/2024 MIPS payment year for the quality performance category:

- As previously finalized in the CY 2021 PFS final rule (85 FR 84870 and 85 FR 84843), we removed the Web Interface as a collection type in MIPS and through the APP for the CY 2022 performance period/2024 MIPS payment year. Although the Web Interface is to be reinstated for groups for the CY 2022 performance period/2024 MIPS payment year and ACOs for CY 2022 performance period/2024 MIPS payment year through CY 2024 performance period/2026 MIPS payment year as discussed in sections IV.A.3.d.(1)(d) and IV.A.3.c.(2)(a), respectively, the baseline model is attempting to capture the CY 2022 performance period/2024 MIPS payment year as if this provision did not exist. Therefore, the baseline model does not incorporate the Web Interface as a collection type for groups and ACOs. To estimate a quality performance category score for clinicians in groups who previously used the Web Interface as a collection type in 2019, we assumed these groups will use the other two other collection types (MIPS CQMs and eCQMs) available in the 2022 performance period/2024 MIPS payment year. We then applied the same methodology described in the CY 2021 PFS proposed rule when the removal of Web Interface as a collection type was previously proposed (85 FR 50387 through 50388) using 2019 MIPS submissions data. To estimate a quality performance category score for ACOs, we used the same methodology described in the CY 2021 PFS proposed rule when the Web Interface was not included in the APP (85 FR 50388).
- We used the published 2021 MIPS historical quality benchmarks file to identify measures subject to the topped out scoring cap that was finalized (82 FR 53721 through 53727).[284]

For the final policies model, we made the following modifications to the baseline model to reflect the new final policies for the 2022 performance period/2024 MIPS payment year for the quality performance category:

- As discussed in section IV.A.3.d.(1)(e) of this final rule, we finalized one new administrative claims measure for those for whom it is applicable: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions. To implement this policy in our final policies RIA model for the CY 2022 performance period/2024 MIPS payment year, we used testing data for this new administrative claims measure.
- As discussed in section IV.A.3.d.(1)(c) of this final rule, we are finalizing our proposals with modification to maintain the data completeness criteria threshold of at least 70 percent for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years for QCDR measures, MIPS CQMs, or eCQMs. This is not a change from our baseline model assumptions.
- As discussed in section IV.A.3.d.(1)(e) of this final rule, we are finalizing our proposal to establish measure substantive change criteria. We did not make modifications to the final policies model for this policy. We scored measures using the benchmarks described below.
- In section IV.A.3.d.(1)(g) of this final rule, we are finalizing several changes to the CAHPS for MIPS survey. We did not incorporate these changes into our model due to the lack of data.
- In Appendix 1 of this final rule, we added 4 new quality measures, removed 13 measures, and finalized 87 substantially modified measures. Consistent with prior rules, (83 FR 50053), our RIA estimates assume that clinicians who reported Medicare Part B claims, eCQM, MIPS CQM and QCDR measures that are removed would find alternate measures; therefore, we assign points to the measures that and included them in our scoring model.
- As discussed in section IV.A.3.e.(1)(c)(ii) of this final rule, we did not finalize our proposal to use performance period benchmarks for the CY 2022 performance period in accordance with § 414.1380(b)(1)(ii) as opposed to a historical benchmark. For the final policies model, we utilized the most recent benchmark file: the 2021 MIPS performance period historic benchmarks.[285] However, the 2019 performance data we are using to estimate future performance includes data on measures that do not have a benchmark in the 2021 MIPS benchmark file (either because the measure was removed or because there were significant changes). If a benchmark was not available in the 2021 MIPS performance period historic benchmark file, then we supplemented the 2021 MIPS benchmark file with the benchmarks used for the CY 2019 performance period/2021 MIPS payment year.
- As discussed in section IV.A.3.e.(1)(c)(iii)(A) of this final rule, we are delaying our proposal to remove the 3-point floor for each measure that can be reliably scored against the benchmark and score the measure from 1 to 10 points until the CY 2023 performance period/2025 MIPS payment year. Similarly, we are delaying our proposal in section IV.A.3.e.(1)(c)(iii)(B) of this final rule to remove the special scoring policy of scoring 3 points for class 2 measures, except for clinicians in small practices until the CY 2023 performance period/2025 MIPS payment year. Therefore, our RIA for the CY 2022 performance period/2024 MIPS payment year re-established the 3-point floor for class 1 measures and 3 points for class 2 measures.
- As discussed in section IV.A.3.e.(1)(c)(iii)(B), we are finalizing our proposed policies for scoring new measures with modifications. For measures in their first two performance periods that meet data completeness and can be reliably scored against a benchmark (class 4a measures), we will assign a floor of 7 points for measures in their first year and a floor of 5 points for measures in their second year. For new measures in their first two performance periods that meet data completeness, but cannot be reliably scored against a benchmark because they lack a benchmark or do not meet case minimum in the program (class 4b measures), we will assign 7 points for measures in their first year and 5 points for measures in their second year. We incorporated these scoring changes into our final policies model. Because we are using 2019 MIPS performance period

[284] Data downloaded on April 9, 2021 from *https://qpp.cms.gov/resources/resource-library.*

[285] Data downloaded on September 1, 2021 from *https://qpp.cms.gov/resources/resource-library.*

data, we assume that measures new to MIPS in 2019 are in their first year and measures new to MIPS in 2018 are in their second year.

- As discussed in sections IV.A.3.e.(1)(c)(vii) and IV.A.3.e.(1)(c)(viii) of this final rule, we finalized our proposal to remove measure bonus points for reporting high priority measures and for submitting with end-to-end electronic reporting beginning in the 2022 MIPS performance period. We incorporated these scoring changes into our final rule model for all MIPS collection types.
- As discussed in section IV.A.3.d.(1)(d), we are extending the Web Interface measures for the CY 2022 performance period/2024 MIPS payment year for groups and virtual groups using the existing 10 CMS Web Interface measures. To estimate the impact of this policy, we used the same methodology described in the CY 2021 PFS final rule (85 FR 85016 through 85017) using 2019 MIPS submissions data.
- Finally, we will extend the CMS Web Interface as a means of reporting quality under the APM Performance Pathway for Shared Savings Program ACOs for the 2022 performance period/2024 MIPS payment year through the 2024 performance period/2026 MIPS payment years as described in section IV.A.3.c.(2)(a) of this final rule. Under the provision, Web Interface reporting will work in the same manner as for performance year 2021, where ACOs will have the option of reporting either the CMS Web Interface, the APP eCQM/MIPS CQM measure set, or both. To estimate the impact of this policy, we used the same methodology described in the CY 2021 PFS final rule RIA (85 FR 85016 through 85017) when Web Interface was retained for the APP.

(b) Methodology To Estimate the Cost Performance Category Score

We estimated the cost performance category score using a similar methodology described in the CY 2020 PFS final rule (84 FR 63169) with the modifications to the baseline and the final policies RIA model described in this section.

In the baseline model, we refined our methodology for developing benchmarks to better reflect the previously finalized policy in CY 2017 Quality Payment Program final rule (81 FR 77308 through 77309). We did not estimate cost improvement scoring that starts in the 2022 performance period/2024 MIPS payment year as previously finalized at § 414.1380(a)(1)(ii) and in the CY 2019 PFS final rule (83 FR 58956) since we did not have sufficient data to conduct improvement scoring, which requires 2 years of cost data to model.

In the final policies model, we modified the baseline model to incorporate the provision to add five new episode-based cost performance category measures in the CY 2022 performance period/2024 MIPS payment year as described in section IV.A.3.d.(2) of this final rule, by using claims data from January 1, 2019 to December 31, 2019. Cost measures were scored if the clinicians or groups met or exceeded the case volume: 10 episodes for Melanoma Resection to align with the reporting case minimum for procedural cost measures currently in use in MIPS, 20 episodes for Sepsis to align with the reporting case minimum for acute inpatient condition cost measures currently in use in MIPS, 20 episodes for Diabetes and Asthma/COPD as used in field testing for these chronic measures, and 20 episodes for Colon Resection. These new cost episode-based measures were calculated for both the TIN/NPI and the TIN.

(c) Methodology To Estimate the Facility-Based Measurement Scoring

For the baseline model, we estimated the facility-based score using the scoring policies finalized in the CY 2018 Quality Payment Program final rule (82 FR 53763) and the methodology described in the CY 2020 PFS final rule (84 FR 63169). For the final policies model, we used the methodology for the CY 2022 performance period/2024 MIPS payment year as discussed in section IV.A.3.e.(2)(b)(v)(B) of this final rule. We proposed at § 414.1380(e)(vi) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission. Therefore, if a MIPS eligible clinician or a group is eligible for facility-based measurement, but they participate in MIPS as an individual or group, we used the higher final score between the facility-based scoring and MIPS submission-based scoring.

(d) Methodology To Estimate the Promoting Interoperability Performance Category Score

For the baseline model, we used the CY 2019 MIPS Promoting Interoperability performance period data submissions data to estimate CY 2022 MIPS performance for the Promoting Interoperability performance category. We made the following two modifications to the 2019 performance period scoring to reflect the previously finalized policy changes between the CY 2019 and CY 2021 performance periods: (1) We doubled the bonus points for clinicians who submitted the PDMP measure as described in section IV.A.3.d.(4)(c)(i) of this final rule; and (2) we did not incorporate the Verify Opioid Treatment Agreement measure data, a measure that was finalized in the CY 2019 performance period (83 FR 59807) but removed in the CY 2020 performance period (84 FR 62994). We retained the PDMP bonus for the baseline model for continuity between the CY 2021 and 2022 performance periods and for consistency since bonuses for the quality performance category were retained for the baseline as well. Because we lacked data on who would adopt the finalized Health Information Exchange bi-directional exchange measure for the CY 2021 performance period we only used past reporting on the two existing Health Information Exchange Objective measures to estimate CY 2022 Promoting Interoperability performance.

For the final policies model, we considered the following policy provisions as potential modifications to the baseline model:

- In section IV.A.3.d.(4)(c)(i) of this final rule, we finalized our proposal for the PDMP measure to remain optional and at 10 points. Modifications were not made to reflect this policy in the final policies model since the baseline model already incorporated this policy.
- In section IV.A.3.d.(4)(c)(ii) of this final rule, we did not finalize our proposed modifications to the Provide Patients Electronic Access to Their Health Information measure. For this model, we did not make any modifications and continued to use the Provide Patients Electronic Access to Their Health Information measure that was submitted for the 2019 MIPS performance period.
- In section IV.A.3.d.(4)(c)(iii) of this final rule, we finalized to require two of the measures associated with the Public Health and Clinical Data Exchange Objective, beginning with the CY 2022 performance period: Immunization Registry Reporting; and Electronic Case Reporting. We also finalized in section IV.A.3.d.(4)(c)(iii) of this final rule to retain the Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures, and to make them optional and available for bonus points beginning with the CY 2022 performance period/2024 MIPS payment year. We did not model these policy changes because the Promoting

Interoperability data we used for this analysis is based on the CY 2019 performance period when a clinician was only required to report two of the possible 5 measures for the Public Health and Clinical Data Exchange Objective. We believe incorporating this policy might artificially lower scores for the Public Health and Clinical Data Exchange Objective because there was no requirement to specifically report the Immunization Registry Reporting and Electronic Case Reporting measures in 2019.

- In section IV.A.3.d.(4)(d) of this final rule, we finalized the additional requirement that eligible clinicians must attest to conducting an annual assessment of the High Priority Guide of the SAFER Guides beginning with the 2022 performance period. This policy was not implemented in the final policies model as it does not affect eligibility or payment. We included this policy in our burden calculations in section V.B.8.g.(3) of this rule.
- In section IV.A.3.d.(4)(g) of this final rule, we finalized changes to the attestation statements for information blocking. We did not include this policy in our model due to lack of information.
- In section IV.A.3.d.(4)(h)(i) of this final rule, we finalized beginning with the CY 2022 performance period/2024 MIPS payment year, we will no longer require an application for clinicians and small practices seeking to qualify for the small practice hardship exception and reweighting. We will assign a weight of zero only in the event a small practice did not submit any data for any of the measures specified for the Promoting Interoperability performance category. This policy was implemented in the final policies model.
- In section IV.A.3.d.(4)(h)(ii) and IV.A.3.d.(4)(h)(iii) of this final rule, we finalized our proposal to continue the existing policy to reweight the Promoting Interoperability performance category for NPs, PAs, CRNAs, CNSs, physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals for the CY 2022 performance period/2024 MIPS payment year. The baseline model already incorporated this policy.
- In section IV.A.3.d.(4)(h)(iv), we finalized that we will apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to clinical social workers. This policy was implemented in the final policies model.

(e) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline model, we modeled the improvement activities performance category score based on CY 2019 performance period data and APM participation identified in section VI.F.18.d.(1) of this final rule. For clinicians and groups not participating in a MIPS APM, we used the CY 2019 submissions improvement activities score. We did not model the policy finalized for the CY 2020 performance period (84 FR 62980) to require a minimum threshold of 50 percent of clinicians in a group to complete an improvement activity for the group to receive credit since we did not have data to determine the proportion of clinicians in a group that completed the improvement activity. We continued to apply the methodology described in the CY 2020 PFS final rule (84 FR 63170) to assign an improvement activities performance category score. For the APM participants identified in section VI.F.18.d.(1) of this final rule, we assigned an improvement activity performance category score of 100 percent.

For the final policies model, we did not make modifications to the baseline model for the improvement activities changes finalized in section IV.A.3.d.(3) of this final rule. The final policies are (1) revise group reporting requirements for the 50 percent threshold to address subgroups; (2) revise the timeframe for improvement activities nominated during a PHE; (3) revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (4) suspend activities that raise possible safety concerns or become obsolete from the program when this occurrence happens outside of the rulemaking process; (5) add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously adopted improvement activities; (6) revise the ''Drug Cost Transparency to include requirements for use of real-time benefit tools'' improvement activity; and (7) add the COVID–19 ''Clinical Data Reporting with or without Clinical Trial'' improvement activity. For policy 1, we lacked data to model the impact on improvement activities performance category. Policies 2 and 3 are related to the call for improvement activities which does not affect the improvement activities performance category scores. Policies 4 through 7 address changes to specific improvement activities or the improvement activity inventory. We anticipate most clinicians performing improvement activities will continue to identify and report similar improvement activities from the inventory in future years. Please see section VI.F.18.g.(2)(f) of this final rule for additional details on the impact of these policy changes.

(f) Methodology To Estimate the Complex Patient Bonus Points

In section IV.A.3.e.(2)(a)(iii)(B) of this final rule, we will continue to apply the complex patient bonus, with updates, for the CY 2022 performance period/2024 MIPS payment year. For the baseline model, we used the complex patient bonus information calculated for the 2019 performance period data for the CY 2022 performance period/2024 MIPS payment year, as was previously done in the CY 2021 PFS final rule (85 FR 85017).

For the final policies model, we calculated the complex patient bonus using the calculation in section IV.A.3.e.(2)(a)(iii)(B) of this final rule for the CY 2022 performance period/2024 payment year. We finalized updates to the complex patient bonus for the CY 2022 performance period/2024 MIPS payment year and future MIPS performance periods/payment years to account for social and medical complexity, while still using our current established indicators of dual proportion and HCC risk scores, respectively. Consistent with the policy for the 2022 performance period, our final policies RIA model calculated and applied the separate risk indicator complex patient bonus components methodology with a single overall cap.

(g) Methodology To Estimate the Final Score

We did not make changes for how we calculated the MIPS final score. Our baseline and final policies models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For the baseline model, we applied the performance category weights and redistribution weights finalized in the CY 2021 PFS final rule (85 FR 84913 through 84916).

For the final policies model, we modified the redistribution policy for small practices as described in section IV.A.3.e.(2)(b)(iii)(A) of this final rule.

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For

MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to section IV.A.3.e.(2)(b)(ii) of this final rule.

(h) Methodology To Estimate the MIPS Payment Adjustment

For the baseline model, we applied the hierarchy as finalized in the CY 2021 PFS final rule (85 FR 84917 through 84919) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. For the final policies model, we applied the scoring hierarchy finalized in section IV.A.3.f.(5) of this final rule. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, minimum and maximum adjustment percentages, and additional payment adjustment for exceptional performance (§ 414.1405).

For the baseline model, we applied the performance threshold and additional performance thresholds finalized for the CY 2021 performance period/2023 payment year (85 FR 84923), of 60 and 85, respectively. For the final policies model, we used the performance threshold of 75 points in section IV.A.3.f.(2) and the additional performance threshold of 89 points in section IV.A.3.f.(3). We used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the paid amount for covered professional services furnished by the MIPS eligible clinician. As discussed in the CY 2021 PFS final rule RIA (85 FR 85013), we adjusted the paid amount of non-engaged clinicians to equal their proportion of paid amount prior to the PHE for COVID–19 for the baseline and final policies models.

(3) Impact of Payments by Practice Size

As we shift from previous MIPS transition policies by removing bonuses from the quality performance category and increasing the performance threshold and the additional performance threshold, we observe large changes between the baseline model and final policies model.

First, we observe an increase in the funds available for redistribution due to the increase in clinicians with final scores below the performance threshold. The baseline model estimates $428 million will be redistributed through BN and that $500 million will be distributed to MIPS eligible clinicians for exceptional performance. The mean and median final scores for the baseline model are 78.13 and 82.59, respectively. Our final policies model estimates that $603 million will be redistributed through BN. For clinicians who meet or exceed the additional performance threshold, an additional $360 million was estimated to be distributed. The mean and median final scores for the final policies model are 75.21 and 79.59, respectively.

In the final policies model, the estimated bonus for exceptional performance is less than the $500 million of available funding because the maximum additional payment adjustment for clinicians with exceptional performance reached 10 percent. As finalized in the 2017 QPP final rule (81 FR 77339 through 77340), we stated the maximum additional payment adjustment would be 10 percent, which is established by the statute, and that it would be multiplied by a scaling factor that cannot exceed 1.0. We reached the maximum additional payment adjustment allowed of 10 percent because the additional performance threshold is higher, and fewer clinicians performed above this higher additional performance threshold while a greater percentage of clinicians performed below the additional performance threshold. As a result, fewer clinicians are estimated to share the funds available through the additional bonus for exceptional performance.

Second, we observe an increase in the maximum positive payment adjustment. The baseline model estimates the maximum positive MIPS payment adjustment based on the budget neutral pool at 1.5 percent and the maximum positive MIPS additional payment adjustment for exceptional performance at 5.1 percent, for a combined maximum payment adjustment of 6.6 percent. The final policies model estimates the maximum MIPS positive payment adjustment based on the budget neutral pool is 4.4 percent and the maximum positive additional MIPS payment adjustment for exceptional performance bonus at 10.0 percent for a combined maximum payment adjustment of 14.4 percent.

Finally, we see narrower differences in performance across practice sizes due to the shift from MIPS transition policies. Table 146 shows the overall impact of the payment adjustments by practice size and based on whether clinicians are expected to submit data to MIPS for the final policies model. In Table 147, we present the overall impact of the baseline and the final policies models among clinicians who submit data to assess the incremental impact of the final policies. The overall proportion of clinicians receiving a positive or neutral payment adjustment decreases from 91.7 percent to 66.8 percent with the implementation of the final policies that shift away from MIPS transition policies. In addition, we no longer observe a disproportionate number of clinicians in small practices receiving a negative payment adjustment when implementing the final policies.

For the CY 2022 performance period/2024 payment year, we have policies targeted towards small practices including special scoring policies to minimize burden and facilitate small practice participation in MIPS or APMs, which we describe in section VI.F.18.g.(2)(e) of this final rule. The intention of the final policies is to provide a more equitable participation process and reduce the disparity in performance between clinicians in large and small practices. These findings and final policies reflect movement away from the transition policies implemented during the early years of MIPS and how MIPS has shifted its focus to value rather than primarily on engagement. However, non-engagement by not submitting data to MIPS among clinicians in small practices is still a concern. Among those who we estimate will not submit data to MIPS, 86 percent are in small practices (22,475 out of 26,180 clinicians who do not submit data). We intend to continue working with stakeholders to improve engagement in MIPS among clinicians in small practices.

We want to highlight we are using 2019 MIPS performance period submissions data to simulate a 2022 MIPS performance period final score, and it is likely that there will be changes that we cannot account for at this time, including services and payments disrupted by the PHE for COVID–19 or clinicians changing behavior in response to the performance thresholds increased for the CY 2022 performance period/2024 MIPS payment year to avoid a negative payment adjustment. It should also be noted that the estimated number of clinicians who do not submit data to MIPS may be an overestimate of non-engagement in MIPS for the CY 2022 performance period/2024 MIPS payment year. This is because the PHE for COVID–19 may have resulted in fewer clinicians submitting data to MIPS or more clinicians electing to apply for the extreme and uncontrollable circumstances policies due to the PHE for COVID–19 for the 2019 MIPS performance period. Therefore, engagement levels in MIPS

for the CY 2022 performance period/2024 MIPS payment year may differ from these reported estimates. We also note this participation data is generally based off participation for the 2019 performance period, which is associated with the CY 2019 performance period/2021 MIPS payment year and had a performance threshold of 30 points, and that participation may change for the CY 2022 performance period/2024 MIPS payment year when the performance threshold is 75 points.

Finally, the combined impact of negative and positive adjustments and the additional positive adjustments for exceptional performance as a percent of paid amount among those that do not submit data to MIPS on average was negative 8.5 percent. It was not the maximum negative payment adjustment of 9 percent because some MIPS eligible clinicians that do not submit data to MIPS can still receive a MIPS final score that is greater than ¼ of the performance threshold (and avoid the maximum negative adjustment as stipulated by section 1848(q)(6)(A)(iv)(II) of the Act [286]) if they have sufficient claims volume to measure performance for cost measures or quality administrative claim measure, which utilizes administrative claims data and does not require separate data submission to MIPS.

f. Estimated Impacts on Payments to MIPS Eligible Clinicians for the CY 2023 Performance Period/2025 MIPS Payment Year

We proposed for the CY 2023 MIPS Performance Period to begin transitioning to MIPS Value Pathways (MVPs) and introduce subgroup reporting in the CY 2023 MIPS performance period/2025 payment year. As described in section IV.A.3.b.(2)(c) of this final rule, the first step in the transition plan for MVPs and subgroup reporting is to be voluntary, where eventually MVPs and subgroups will become required. Additionally, subgroups, if applicable, will have the option to report an APP. Since MVP and subgroup reporting will only begin in the CY 2023 performance period/2025 MIPS payment year, we do not have the data to report who will select MVPs and who will report through subgroups in the first year and how these clinicians will score. As discussed in section IV.A.3.b.(5) of this final rule, for MVP scoring policies, we evaluated all traditional MIPS scoring policies and maintained those that are required under section 1848(q)(2) of the Act such as requirements to measure achievement and improvement of the quality and cost of care. We noted MVPs offer incentives in terms of requiring fewer measures and activities tied to a specialty or medical condition which can offer clinicians a more cohesive experience and that we would continue to evaluating additional incentives that align with our scoring policies and the goals of MVPs in future rulemaking. For this RIAs, we assume clinicians who elect to use MVPs and subgroups for reporting to MIPS will perform similarly to how they performed through traditional MIPS because the scoring policies are similar. We will revisit this assumption in future rulemaking as needed. As discussed in section V.B.8.e.(7)(a) of this final rule, for the purposes of estimating burden associated with the provision to implement MVP and subgroup reporting, we assume that 10 percent of MIPS eligible clinicians in the CY 2022 performance period/2024 MIPS payment year will report as MVP participants in the CY 2023 performance period/2025 MIPS payment year. In addition, we assume that there will be 20 subgroup reporters in the CY 2023 performance period/2025 MIPS payment year. We anticipate a per respondent reduction of 3 hours and $412 dollars per CQM/QCDR quality submission, 3 hours and $336 per eCQM quality submission, and 5 hours and $717 per claims quality submission. Overall, we estimate a net reduction in burden of $7,463,145 in the quality performance category ICRs due to the introduction of MVP and subgroup reporting in the CY 2023 performance period/2025 MIPS payment year. We refer readers to section V.B.8.e.(7)(a)(iii) of this final rule for further discussion of our burden associated with MVPs and subgroups including the number of respondents.

g. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting the payment adjustments, we proposed several policies that have an impact on burden in the CY 2022 and CY 2023 performance periods/2024 and 2025 MIPS payment years. In section V.B.8 of

this final rule, we outline estimates of the costs of data collection that includes both the effect of policy updates and adjustments due to the use of updated data sources. For each provision included in this regulation which impacts our estimate of collection burden, the incremental burden for each is summarized in Table 148. We also provide additional burden discussions that we are not able to quantify.

As discussed in the section V.B.8 of this final rule, we are setting forth our estimates for the CY 2023 performance period/2025 MIPS payment year as new burden with no currently approved estimate. To provide the reader a better sense of the differences in burden between our CY 2022 and CY 2023 performance period/2024 and 2025 MIPS payment year estimates due to changes in policy, we are presenting our CY 2023 performance period/2025 MIPS payment year estimates in Table 148 in comparison to the CY 2022 performance period/2024 MIPS payment year estimate found in the CY 2021 PFS final rule. In Table 148, we are only including our CY 2023 performance period/2025 MIPS payment year estimates for the ICRs where our estimate is different from our CY 2022 performance period/2024 MIPS payment year estimate.

TABLE 148: Incremental Burden from Associated Final Policies

Burden Description and associated finalized proposals	Burden Hours	Burden Dollars
Total burden associated with the provision to continue the policies and ICRs set forth in the CY 2021 PFS final rule into the CY 2022 and 2023 MIPS performance periods (as discussed in section V.B.8.p.)	1,468,566	$148,078,846
Burden change due to policy to continue the CMS Web Interface measures as a collection type/submission type for CY 2022	+7,030	+$669,433
Burden change due to policy to sunset the CMS Web Interface measures as a collection type/submission type for CY 2023*	0	0
Burden change due to policy to continue CMS Web Interface group registration for CY 2022	+23	+2,190
Burden change due to policy to continue CMS Web Interface group registration for CY 2023	0	0
Burden change due to the policy to require QCDRs to submit participation plans for the CY 2022 self-nomination period, if necessary	+30	+$2,857
Burden change due to the policy to require qualified registries to submit participation plans for the CY 2022 self-nomination period., if necessary	+57	+$5,428
Burden change due to the revised criteria for nomination of improvement activities: increase of criteria from 1 to 8 including addition of 2 new criteria for nomination of improvement activities beginning with the CY 2022 Annual Call for MIPS Improvement Activities	+43	+$6,492
Burden change due to automatic reweighting of the Promoting Interoperability performance category for small practices	-3,474	-$330,747
Burden change due to SAFER guides attestation requirement for the Promoting Interoperability performance category for CY 2022	+1,033	+$98,362
Burden change due to the new ICR for capturing MVP registration requirement for clinicians participating in MVPs reporting beginning with the CY 2023 MIPS performance period*	+3,229	+$307,465
Burden change due to the new ICR for capturing subgroup registration requirement for clinicians choosing to participate as subgroups for reporting the MVP or the APP beginning with the CY 2023 MIPS performance period*	+10	+$952
Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to MVP Quality Submissions beginning with the CY 2023 MIPS performance period*	-40,115	-$4,036,981
Burden change for Quality Data Submission by Clinicians: CQM/QCDR Collection Type ICR for capturing reduced number of quality submissions due to MVP Quality Submissions beginning with the CY 2023 MIPS performance period*	-46,742	-$4,748,523
Burden change for Quality Data Submission by Clinicians: eCQM Collection Type ICR for capturing reduced number of quality submissions due to MVP Quality Submissions beginning with the CY 2023 MIPS performance period*	-38,398	-$3,934,272
Burden change due to new ICR for capturing the reduced reporting requirements for the quality performance category of MVPs beginning with the CY 2023 MIPS performance period *	+83,673	+$8,564,736
Total change in burden due to policy for CY 2022	**+3,805**	**+$358,395**
Total change in burden due to policy for CY 2023, in comparison to CY 2022 estimate from CY 2021 PFS Final	**-41,591**	**-4,159,851**

Burden Description and associated finalized proposals	Burden Hours	Burden Dollars
Rule		
Total burden set forth in the CY 2022 PFS final rule for CY 2022	**1,428,391**	**$144,014,757**
Total burden set forth in the CY 2022 PFS final rule for CY 2023	**1,383,049**	**$139,501,770**

* The total change in burden due to this policy includes a decrease in burden due to elimination of the "Quality Data Submission: CMS Web Interface collection type" ICR beginning with the CY 2023 MIPS performance period and "Group Registration for CMS Web Interface" ICR beginning with the CY 2023 MIPS performance period as well as an increase in burden for the "Quality Data Submission: MIPS CQM and QCDR collection type" and "Quality Data Submission: eCQM collection type" ICRs beginning with the CY 2023 MIPS performance period for respondents who previously submitted via the CMS Web Interface submitting data via an alternate collection type. Burden will decrease in the "Quality Data Submission: MIPS CQM and QCDR collection type," "Quality Data Submission: eCQM collection type," and "Quality Data Submission: Claims collection type" ICRS beginning with the CY 2023 MIPS performance period due to respondents who previously submitted MIPS through those collection types submitting data with reduced Quality submission requirements as an MVP participant. Total change in burden also includes the increase in submission burden due to the introduction of the "MVP Quality Submission," "MVP registration," and "Subgroup registration" ICRs beginning with the CY 2023 MIPS performance period. See section V.B.8 of this final rule.

BILLING CODE 4120–01–C

(2) Additional Impacts to Clinicians

(a) Web Interface

As discussed in section IV.A.3.d.(1)(d) of this final rule, we finalized the proposal to continue the use of the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians for the CY 2022 performance period/2024 MIPS payment year. We are also sunsetting the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians starting with the CY 2023 performance period/2025 MIPS payment year. As discussed in section IV.A.3.c.(2)(a), we are also extending the CMS Web Interface as a means of reporting quality under the APP for Shared Savings Program ACOs for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2025 MIPS payment year.

We refer readers to sections V.B.8.e.(8) and V.B.8.e.(10) of this final rule for our discussion on the estimated burden associated with the extension of the CMS Web Interface collection type in CY 2022 performance period/2024 MIPS payment year and the sunset of the CMS Web Interface collection type in the CY 2023 performance period/2025 MIPS payment year (for those not using the APP). Additionally, we assume that the impacts associated with the sunset of CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians will remain the same as our discussion in the CY 2021 PFS final rule (85 FR 85020 through 85021).

(b) Administrative Claims Measure

As discussed in section IV.A.3.d.(1)(e), we are adding one new administrative claims measures beginning in the CY 2022 performance period/2024 MIPS payment year and for future performance periods: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions. We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure that clinicians, groups, and organizations may choose to monitor. However, because these costs can vary significantly due to organizational size, number of administrative claims measures being reported, volume of clinicians reporting each measure, and the specific methods employed to improve performance, we are unable to provide an estimate of the financial impact each clinician, group, or organization may experience. In summary, we are acknowledging that while there are no data submission requirements per § 414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.

(c) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.3.d.(3)(c)(ii) of this final rule, we finalized the proposals to remove 7 previously adopted improvement activities, modify 15 existing improvement activities, and adopt 5 new improvement activities. We refer readers to Appendix 2 of this final rule for further details. We do not believe these changes to the inventory will impact time or financial burden on stakeholders because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. We do not expect these changes to the inventory to affect our currently approved information collection burden estimates in terms of neither the number of estimated respondents nor the burden per response. We anticipate most clinicians performing improvement activities, to comply with existing MIPS policies, will continue to perform the same activities under the policies in this final rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the CY 2022 performance period/2024 MIPS payment year.

(d) Stakeholders Nominating Improvement Activities

In section IV.A.3.d.(3)(c)(i)(B) of this rule, we finalized these proposals: (1) To revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (2) changes to the timeline for improvement activities nomination during a PHE; and (3) to suspend

activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process.

Regarding the provision to clarify the timeline for an improvement activity nominated during the PHE, we believe this provision will not affect our currently approved burden estimates since we believe that the number of nominations will not change, but it would make an activity available for reporting to clinicians in the same performance year it was intended to be implemented. In section IV.A.3.d.(3)(c)(i)(B)(aa) of this rule, we finalized the proposal that in order to implement a new improvement activity for a PHE during the same year as the nomination, the nomination will need to be received no later than January 5th of the nomination year to be included in a rule for notice-and-comment rulemaking during that fiscal or calendar year, a necessary precursor to implementation if it were to be finalized. As described in section V.B.8.j of this rule, we expect additional nominations may be received as a result of this provision, but we do not have any data with which to estimate what the additional number may be. As a result, we did not make any revisions to our currently approved burden estimate.

Regarding the provision to suspend activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process, we do not anticipate additional burden for stakeholders because of the provision described above as the policy does not change requirements for the nomination of improvement activities.

As described in section IV.A.3.d.(3)(c)(i)(B) of this rule, due to the provisions to add two new criteria and to increase the number of criteria stakeholders are required to meet when submitting an activity provision from a minimum of 1 to all 8 criteria, which includes the two new criteria, we proposed to revise our estimated annual information collection burden for nomination of improvement activities to 136 hours (31 nominations × 4.4 hr/nomination) at a cost of $20,355 (31 × [(2.8 hr × $114.24/hr) + (1.6 hr × $210.44/hr)]).

(e) Impact on Small Practices

As described in section VI.F.18.e.(3) of this final rule RIA, we found 85 percent of clinicians who did not submit data to MIPS were in small practices. However, the estimated number of MIPS eligible clinicians who do not submit data, including those in small practices, may be smaller in the CY 2022 performance period/2024 MIPS payment year since the submission window for the 2019 performance period was impacted by the start of the PHE for COVID–19. CMS is committed to identifying flexibilities and options to help clinicians in small practices participate meaningfully and successfully in MIPS. Specifically, CMS finalized several policies to support clinicians in small practices once they engage with MIPS in the quality, improvement activities and Promoting Interoperability performance categories for the CY 2022 performance period/2024 MIPS payment year. Based on our RIA model findings described in section VI.F.18.e.(3) of this final rule, the final policies for the CY 2022 performance period/2024 payment year led to clinicians in small practices no longer disproportionately receiving negative payment adjustments compared to clinicians in larger sized practices. Therefore, the combination of the special scoring policies for clinicians in small practices is expected to positively affect this group of clinicians and will hopefully encourage and improve future engagement in MIPS among clinicians in small practices.

(f) Impact on Third Party Intermediaries

In section IV.A.3.h. of this rule, we finalized multiple changes to the third-party intermediary regulations at § 414.1400. Specifically, we finalized: (1) Reorganization and consolidation of § 414.1400 generally; (2) an expansion of the general participation requirements of third-party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS; (3) a requirement that, beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. Health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data; (4) to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year; (5) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/2019 MIPS payment year) through the 2020 performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023; (6) a requirement that, beginning with the 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval; (7) a requirement that, beginning with the CY 2023 performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and may not change the plan once approved, without the prior approval of the agency; and (8) to add a rejection criterion to state that a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. Additionally, to provide further clarification of our current policy (84 FR 63070 through 63073), we finalized the proposal to state that if a QCDR measure owner is not approved during a given self-nomination period, any associated QCDR measures with that QCDR would also not be approved.

With regard to the reorganization and consolidation of § 414.1400 generally, we do not anticipate this to require any additional effort for affected entities as the provision is to allow CMS to reorganize the existing information.

For the requirements related to expanding the general participation requirements of third-party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS, we did not propose to revise our burden estimates as this requirement is not different from how third-party intermediaries currently submit data for the quality, improvement activities and Promoting Interoperability performance categories in MIPS on behalf of individual eligible clinicians and groups.

As previously discussed in section IV.A.3.h.(2)(b)(ii) of this rule, we finalized the proposal to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 performance period/2025 MIPS payment year. During the MVP Town Hall held in January 2021 (85 FR 74729), we heard from third-party intermediaries that they are confident that they can make the necessary updates to allow for subgroup reporting, if they have enough time. A few vendors suggested that we add

subgroup reporting to the existing CEHRT requirements. Given our provision described in section IV.A.3.b.(2)(d) of this rule to delay the implementation of subgroup reporting option to the CY 2023 performance period/2025 MIPS payment year, we assume that the delay will give these entities adequate time to make the necessary updates. We assume that there will be no additional burden that third-party intermediaries will incur to implement the subgroup reporting option. We anticipate that there may be administrative burden associated with changes in workflows to their existing systems for submission of subgroup data for the CY 2023 performance period/ 2025 MIPS payment year. However, given that each of these entities and their information technology systems are unique, we are unable to quantify the burden for these entities to capture and submit data on behalf of clinicians who may choose to participate as subgroups.

We do not anticipate a significant impact to QCDRs and qualified registries resulting from the finalized provision to require QCDRs and qualified registries to conduct an annual data validation audit and if one or more deficiencies or data errors are identified also conduct targeted audits. First, we are not revising our burden estimates because the finalized data validation requirements are like existing expectations which we have already accounted for the associated burden as stated in the CY 2017 Quality Payment Program final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999). Second, we believe that the requirements for conduct of the data validation audits are aligned with methods and procedures which stakeholders currently utilize.

As discussed in section IV.A.3.h.(3)(a)(i) of this rule, due to the provision to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 performance period/ 2019 MIPS payment year) through the CY 2020 performance period/2022 MIPS payment year to submit a participation plan as part of their self-nomination for CY 2023 performance period/2025 MIPS payment year, we refer readers to section V.B.8.c.(2) of this rule for details on the adjusted burden.

As discussed in section V.B.8.c.(2) of this rule, we are not adjusting our burden estimates due to the provision related to two new rejection criteria for QCDR measures.

(g) Assumptions & Limitations

We note several limitations to our estimates of clinicians' MIPS eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the CY 2022 performance year/2024 MIPS payment year. Due to the PHE for COVID–19, we are aware that there may be changes in health care delivery and billing patterns that will impact results for the CY 2022 performance year/2024 MIPS payment year that we are not able to model with our historic data sources. The scoring model results presented in this final rule assume that CY 2019 Quality Payment Program data submissions and performance are representative of CY 2022 Quality Payment Program data submissions and performance. The estimated performance for the CY 2022 performance year/2024 MIPS payment year using CY 2019 Quality Payment Program data may be underestimated because the performance threshold to avoid a negative payment adjustment for the 2019 MIPS performance period/2021 MIPS payment year was significantly lower (30 out of 100 points) than the performance threshold for the 2022 performance year/2024 payment year (75 out of 100). We anticipate clinicians may participate more robustly by submitting more performance categories to meet the higher performance threshold to avoid a negative payment adjustment.

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in in the CY 2019 Quality Payment Program and submitted data would continue to elect to opt-in in the CY 2022 performance year/2024 MIPS payment year. It is difficult to predict, based on 2019 data, whether clinicians will elect to opt-in to participate in MIPS with the CY 2022 performance year/2024 payment year finalized policies.

In addition to the limitations described throughout the methodology sections, there are additional limitations to our estimates including: (1) To the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 144; and (2) due to updates in measure specifications and new measures, our cost performance is modeled using test data that does not always overlap with CY 2019 so we may not be capturing performance for clinicians or groups that change practices or TINs between when the testing data and the 2019 performance period. Due to the limitations described, there is considerable uncertainty around our estimates that is difficult to quantify.

G. Alternatives Considered

This final rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this final rule, we presented the estimated impact on total allowed charges by specialty.

1. Alternatives Considered for Utilization Data in PFS Ratesetting

As discussed earlier in this section II.C.1 (Changes in Relative Value Unit (RVU) Impacts), our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2021 with payment rates for CY 2022 using CY 2020 Medicare utilization. As an alternative to using CY 2020 data, we considered using CY 2019 utilization data for the purposes of determining the CY 2022 RVUs, as well as in determining the CY 2022 BN adjustment and conversion factor. We considered using CY 2019 data due to the PHE for COVID–19, which has impacted the delivery of health care services over the past 18 months. Increases in remote delivery of services to reduce risk of exposure to both practitioner and patients, as well as postponement of elective procedures have resulted in a change to service utilization patterns across Medicare FFS payment systems. Specific to the PFS, overall service utilization decreased by approximately 20 percent in CY 2020 compared to CY 2019, which caused us to question whether CY 2020 data is the best available data to use for CY 2022 ratesetting.

In order to determine if lower overall utilization in CY 2020 would result in differential impacts on specialties and practitioners, we modeled the PFS ratesetting process using CY 2019 utilization data. We found that the use of CY 2020 as opposed to CY 2019 data in establishing payment rates had relatively little differential impacts on payment, despite the approximately 20 percent decrease in overall service utilization. Table 149 illustrates specialty-specific impacts for the proposed rule using CY 2019 data.

BILLING CODE 4120–01–P

TABLE 149: CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty using CY 2019 Claims for the Proposed Rule

(A) Specialty	(B) Allowed Charges (mil)	(C) Impact of Work RVU Changes	(D) Impact of PE RVU Changes	(E) Impact of MP RVU Changes	(F) Combined Impact
Allergy/Immunology	$265	0%	-2%	0%	-2%
Anesthesiology	$1,971	0%	1%	0%	1%
Audiologist	$75	0%	-1%	0%	-1%
Cardiac Surgery	$255	0%	0%	0%	0%
Cardiology	$7,087	0%	-1%	0%	-1%
Chiropractic	$743	0%	1%	0%	0%
Clinical Psychologist	$884	0%	0%	0%	0%
Clinical Social Worker	$922	0%	0%	0%	0%
Colon and Rectal Surgery	$172	0%	0%	0%	0%
Critical Care	$375	0%	0%	0%	0%
Dermatology	$3,971	0%	0%	0%	0%

Total	$100,377	0%	0%	0%	0%

BILLING CODE 4120–01–C

The majority of specialties experienced shifts of less than a percent when we used CY 2019 data, as opposed to CY 2020 data, as displayed in Table 136, as the basis for setting rates. Several specialties shifted by approximately one percent. We did not detect a pattern of specialties that were notably affected by the choice of claims data, either positively or negatively. While Pediatrics shifted from a 1 percent impact when we used CY 2020 claims data to a 5-payment impact when we used CY 2019 claims data, this shift is likely due to the smaller amount of allowed charges associated with the Pediatrics specialty.

We analyzed the percentage change in total RVUs per practitioner. Using CY 2019 utilization data, Total RVUs change between −1 percent and 1 percent for 53 percent of practitioners, representing more than 48 percent of the changes in Total RUs for all practitioners, similar to the results we found when using CY 2020 claims that we discussed in section II.C.1. Variations by specialty were also similar to the results we found using CY 2020 claims and are contained in the public use file that describes the percentage change in total RVUs per practitioner.

Similar to the process described in section II.C.1. of this final rule, we used CY 2019 claims data to estimate the CY 2021 PFS CF to be 33.6184 which reflects a BN adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, which we estimated to be −0.04 using CY 2019 data, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.75 percent fee schedule payment increase for CY 2021 provided by the CAA. The anesthesia CF, which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments, would shift by a similar magnitude as the PFS CF. Thus, the estimated PFS CF and anesthesia CF using CY 2019 data is slightly higher compared to using claims data for CY 2020 with an estimated difference of 0.0336 (a little less than three and half cents). We note that the BN adjustment will be recalculated for the CY 2022 PFS final rule and the use of CY 2019 claims may or may not be higher than the use of CY 2020 claims based on which policies are ultimately finalized.

Comment: We received few comments on our Alternatives Considered for Utilization Data in PFS Ratesetting. One commenter stated that they supported the use of the alternate CY 2019 claims data because it resulted in a slight improvement (approximately 1 percent) in the impact of changes in RVUs for their specialty. A different commenter stated that practice patterns in CY 2020 were atypical as a result of the COVID–19 pandemic and they believed that the use of 2019 claims data would be likely to more closely approximate overall PFS service utilization and costs in 2022.

Response: We continued to believe that the use of CY 2020 as opposed to CY 2019 data in establishing payment rates had relatively little differential impacts on payment, despite the approximately 20 percent decrease in overall service utilization. We found that the use of CY 2020 as opposed to CY 2019 data in establishing payment rates had little differential impact on payment at the specialty, service categories, and individual services levels. We also did not detect a pattern of specialties who were notably affected by the choice of claims data, either positively or negatively. We received few comments on this alternative considered which we believe indicates support for our use of CY 2020 claims data from the majority of commenters.

After consideration of the comments, we are finalizing our continued use of CY 2020 claims data instead of the potential alternative to use CY 2019 claims data for the purposes of determining the CY 2022 RVUs as well as in determining the CY 2022 BN adjustment and conversion factor.

2. Alternatives Considered for Split (or Shared) Visits

In section II.F of this final rule, we codify our current policy allowing billing of certain ''split'' or ''shared'' E/M visits by a physician, when the visit is performed in part by both a physician and an NPP, who are in the same group and the physician performs a substantive portion of the visit. We will codify in our regulations a definition of a split (or shared) visit as an E/M visit in the facility setting that is performed in part by both a physician and NPP who are in the same group, in accordance with applicable laws and regulations, such that the E/M visit could be billed by either the physician or the NPP if it were furnished independently by only one of them in the facility setting (rather than as a split (or shared) visit). The physician or NPP who performs the substantive portion of the split (or shared) visit will bill for the visit. We are also finalizing our proposed definition of substantive portion as more than half of the total time spent by the physician and NPP.

We considered several alternative approaches. First, we considered the option of disallowing split (or shared) visit billing beginning in CY 2022. Under this alternative, in settings where payment for ''incident to'' services is prohibited, physicians and NPPs would only be able to bill for visits they furnish in their entirety under their own NPI. Such a policy would be administratively simple, and reduce the likelihood of paying significantly more than the actual resource costs incurred. When physicians and practitioners furnish services in facility settings, they do not ordinarily incur the cost of clinical staff or other PE costs involved in furnishing the services. When the physician bills for an E/M visit, in accordance with section 1833(a)(1)(N) of the Act, the Medicare Part B payment is equal to 80 percent of the payment basis under the PFS which, under section 1848(a)(1) of the Act, is the lesser of the actual charge or the full fee schedule

amount for the service. In contrast, if the NPP bills for it, in accordance with section 1833(a)(1)(O) of the Act, the Medicare Part B payment is equal to 80 percent of the lesser of the actual charge or 85 percent of the fee schedule rate. Because of this payment differential and the lower resource costs associated with E/M visits performed partly by a physician and partly by an NPP, it could be argued that the physician should not be able to bill for such a visit and be paid at the higher fee schedule amount. Our proposal was informed by our belief that longstanding clinical practice relies substantially upon shared visits between physicians and NPPs in facility settings. To avoid the potential disruption in this common medical practice approach, we did not propose to disallow billing for split (or shared) visits.

Comment: We received public comments confirming that it would be disruptive of current practice patterns to disallow split (or shared) visit billing. We did not receive public data indicating specifically how often split (or shared) visits occur.

Response: After consideration of the public comments, we are finalizing a policy to continue allowing billing of split (or shared) visits under specified conditions. We will require a modifier on claims for these types of visits, as proposed, to help inform future policy in this area.

We also considered several alternatives for how to define the substantive portion of a split (or shared) visit. We considered defining ''substantive portion'' as any face-to-face portion of the split (or shared) visit, consistent with our current definition. We did not believe it would be appropriate to consider just any portion of the visit—with or without direct patient contact— as a substantive portion. For instance, we did not believe it would be appropriate to consider a brief or trivial interaction, with or without direct patient contact, such as where the physician merely ''pokes their head'' into the room, to be a substantive portion of the visit. We did not believe it would be appropriate to permit a physician to bill for a visit if they do not substantially participate in the visit, given that physicians are paid under the PFS at a higher rate than NPPs. Therefore, we proposed to define ''substantive portion'' as more than half of the total time spent by the physician or NPP.

Another alternative we considered, but did not propose, was to utilize the medical decision making (MDM) to define substantive portion. We did not propose this approach because MDM is not easily attributed to a single physician or NPP when the work is shared, because MDM is not necessarily quantifiable and can depend on patient characteristics. We believed that time is a more precise factor than MDM to use as a basis for deciding which practitioner performs the substantive portion of the visit. We believed that using the time spent by each practitioner furnishing the split (or shared) visit would provide a more precise metric than potentially finding a way to parse MDM between the physician and the NPP.

We also considered defining substantive portion as performance of the history and/or physical exam, which are key components of certain E/M visits. Given recent changes in the CPT E/M Guidelines, history and physical exam are no longer necessarily included in all E/M visits, because for office/outpatient E/M visits, the visit level can now be selected based on either MDM or time, and history and exam are performed only as medically appropriate. Also, the CPT Editorial Panel is considering removing history and physical exam as key visit components for institutional visits, similar to the changes already made for office/outpatient E/M visits. Accordingly, defining ''substantive portion'' as any key component including history or exam did not seem to be a viable approach.

Lastly, we considered not defining substantive portion and instead leaving determinations regarding the substantive portion to MAC and/or medical review discretion. However, this approach would impose a significant burden on MACs to assess individual cases and could lead to too much regional variation in payment. We solicited public comment to help inform what we consider to be the ''substantive portion'' of a split (or shared) visit in institutional settings and assist us in consideration of our definition of ''substantive portion''.

We received public comments to help inform what we consider to be the ''substantive portion'' of a split (or shared) visit in institutional settings and assist us in consideration of our definition of ''substantive portion.'' We refer readers to section II.F. of this final rule with comment period for a complete discussion of the public comments on this topic and our responses, summarized below.

Comment: The commenters agreed that the individual who performs the substantive portion should bill for the visit. Approximately half of the commenters supported our proposal, believing that it was appropriate and would provide a clear rule. However, approximately half of the public comments recommended alternative definitions of substantive portion, including:

- A lower percentage of time (25 to 30 percent of the total time) (several comments).
- MDM (several comments).
- Some portion of MDM (several comments).
- Choice of MDM or time, for example, based on whichever is used to select visit level (several comments).
- One of the three key components of history, exam, or MDM, at least until the AMA completes changes for E/M visit coding and the CPT E/M Guidelines that the commenters expect for 2023 (several comments).
- Some combination of the above, for example, more than half of the MDM or more than half of total time (several comments).
- Working with the CPT Editorial Panel to develop a policy (several comments).

These commenters were concerned about a perceived devaluation of the medical decision-making portion of visits, disruptions to current practice patterns, and administrative burdens associated with timing each of the practitioner's contribution to the visit.

Response: Regarding recommendations to consider the substantive portion to be a lower percentage of time, having reviewed our current policy, we do not believe that the higher physician payment rate under the PFS should be made when a physician performs less than half of the visit, such as a quarter or a third of the total time or less than half of the MDM. We do not think that MDM is necessarily the most critical or central component of E/M visits, and it is not the only service component being paid for. PFS payment rates incorporate and assume a certain amount of physician time per visit, reflected in the assigned RVUs and reflected annually in our physician time files. PFS payment rates reflect the typical amount of time spent on visits, and the Act requires us to reflect both time and intensity of work (physician and practitioner) in our payment rates. We do not believe this in any way devalues the unique education, training, experience, or expertise of physicians, but rather that both time and expertise are important and included in payment under the PFS. We continue to believe that MDM cannot be readily attributed to only the physician or the NPP, or definitively divided between them.

We believe the commenters overestimate the administrative burden

of tracking and attributing time, given the advent of EHRs and new E/M visit coding structures. However, we understand that an adjustment period may be needed to establish systems to track and attribute time for split (or shared) visits, especially since the coding for E/M visits in many facility settings will not use MDM or time to distinguish visit levels until 2023. Therefore, we are finalizing our definition of substantive portion for split (or shared) visits as proposed (more than half of the total time spent by the physician and NPP performing the split (or shared) visit) beginning January 1, 2023. However, we are modifying our proposed policy for one transitional year. For CY 2022, except for critical care visits, the substantive portion will be defined as one of the three key components (history, exam, or MDM), or more than half of the total time spent by the physician and NPP performing the split (or shared) visit). In other words, for CY 2022, the practitioner who spends more than half of the total time, or performs the history, exam, or MDM can be considered to have performed the substantive portion and can bill for the split (or shared) E/M visit. We wish to be clear that practitioners can still use MDM to select visit level for the E/M split (or shared) visit, as proposed. We also are clarifying that when one of the three key components is used as the substantive portion in CY 2022, the practitioner who bills the visit must perform that component in its entirety in order to bill (see section II.F.1.c.1. of this final rule for a more detailed discussion).

For visits that are already timed (that is, critical care services), the choice to use more than half of the total time, or performance of the history, exam, or MDM will not apply. For critical care visits, starting in CY 2022, the substantive portion will be more than half of the total time, as proposed. We will continue to review and consider any future changes by the AMA/CPT Editorial Panel to the CPT E/M Guidelines for split (or shared) visits. We also intend to monitor the claims data for split (or shared) visits, to better understand how frequently practitioners use or rely upon this billing construct.

We considered disallowing split (or shared) billing in critical care, SNF and nursing facility (NF) visits, as well as new patient and initial patient visits. We require certain SNF/NF visits to be provided entirely by a physician, but we believed we should allow split (or shared) visit billing for other visits that can be split (or shared) in these settings. (We refer readers to our Conditions of Participation in 42 CFR 483.30 for information regarding the SNF/NF visits that are required to be performed in their entirety by a physician. That regulation requires that certain SNF/NF visits must be furnished directly and solely by a physician). However, we believed current clinical practice generally allows sharing of critical care visits by appropriately trained and qualified practitioners, and we solicited comment on this belief and this alternative considered. We proposed to allow split (or shared) visit billing in critical care because we believe the practice of medicine has evolved towards a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by clinicians in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued current policy may no longer be as relevant. We understand that there have been changes in the practice of medicine over the past several years, some facilitated by the advent of EHRs and other systems, toward a more team-based approach to care. There has also been an increase in alternative payment models that employ a more team-based approach to care.

Comment: We received many comments on our proposals for allowed settings of care, all in support of those proposals.

Response: We thank the commenters for their support. After consideration of the public comments, we are finalizing as proposed.

We proposed to allow split (or shared) visits for both new and established patients as well as initial and subsequent visits. After conducting an internal review, including consulting our medical officers, we believed that the practice of medicine has evolved toward a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by practitioners in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued the manual instructions may no longer be as relevant. We understand that there have been changes in the practice of medicine over the past several years, some facilitated by the advent of EHRs and other systems, toward a more team-based approach to care. There has also been an increase in alternative payment models that employ a more team-based approach to care. In considering and reevaluating our policy, we saw no reason to preclude the physician or NPP from billing for split (or shared) visits for a new patient, in addition to an established patient, or for initial and subsequent split (or shared) visits. Therefore, we proposed to permit the physician or NPP to bill for split (or shared) visits for both new and established patients, as well as for initial and subsequent visits. We believed this approach is also consistent with the CPT E/M Guidelines for split (or shared) visits, which does not exclude these types of visits from being billed when furnished as split (or shared) services.

Comment: We received many comments on this proposal, all in support of it.

Response: We thank the commenters for their support. After consideration of public comments, we are finalizing as proposed.

3. Alternatives Considered for Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802, 414.806)

This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of the CAA (for the purposes of this section of this final rule, hereinafter is referred to as ''section 401''). These new requirements will improve the accuracy of reported prices and limit the use of WAC-based pricing.

As discussed in section III.D.1. of this final rule, section 1847A(c)(6)(A) of the Act incorporates the definition of manufacturer at section 1927(k)(5) of the Act, but permits the Secretary to exempt repackagers from the definition of manufacturer, as determined appropriate, for purposes of section 1847A(f)(2) of the Act.

We considered whether to implement the flexibility afforded by the statute. However, implementing the flexibility afforded by the statute could potentially lead to a gap in the ASP reporting requirements, meaning that ASPs could be distorted to the extent that certain sales are carved out of the reporting requirement through the use of repackagers.

As discussed previously in this RIA, we are unable to quantitatively estimate the impacts of this provision. We welcomed comments on our approach, and on the alternative relative to: (1) The likely costs or savings (to manufacturers, beneficiaries, the government, and other stakeholders); and (2) any other related impacts of this provision.

4. Alternatives Considered for the MDPP Expanded Model Emergency Policy

For the MDPP Expanded Model Emergency Policy, no alternatives were considered. The 2-year MDPP service period has depressed interest in MDPP among would-be MDPP suppliers. These actions address stakeholder comments on the barriers to MDPP expanded model success. If we do not take action, we will not be able to scale MDPP as intended, impacting Medicare beneficiary access to this program. Reducing the MDPP from a 24- to a 12-month services period, increasing the year 1 performance payments, and waiving the Medicare provider enrollment application fee not only better aligns the model with the evidence that helped certify the DPP model test initially, but it will encourage eligible organizations to enroll as MDPP suppliers.

5. Alternatives Considered for the Quality Payment Program

We view the performance threshold as a critical factor affecting the distribution of payment adjustments in the Quality Payment Program. We ran a separate final policies RIA model based on the actual mean for the CY 2019 performance period/2021 MIPS payment year with a performance threshold of 86 and an additional performance threshold of 92 points, which are potential values that may be used for the CY 2022 performance period/2024 MIPS payment year. The model with a performance threshold of 86 and additional performance threshold of 92 has the same mean and median final score as our policies RIA model since the performance threshold does not change the final score. We estimate that $ 907 million will be redistributed through BN. For clinicians who meet or exceed the additional performance threshold, an additional $241 million was distributed. The maximum positive payment adjustment will be 18.2 percent prior to the maximum additional payment adjustment and 28.2 percent after considering the MIPS maximum positive payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 74.0 percent of MIPS eligible clinicians will receive a negative payment adjustment among those that submit data.

We report the findings for the baseline model which describes the impact for the CY 2022 performance period/2024 MIPS payment year if this regulation did not exist. The baseline model has a final score mean of 78.13 and median of 82.59. We estimate that $428 million will be redistributed through BN. There will be a maximum payment adjustment of 6.6 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 8.3 percent of MIPS eligible clinicians will receive a negative payment adjustment among those that submit data.

H. Impact on Beneficiaries

We do not believe these provisions will have a negative impact on beneficiaries given overall PFS BN.

1. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802, 414.806)

Section 1927(b)(3)(A)(iii) of the Act requires manufacturers with a Medicaid drug rebate agreement to report ASP data consistent with the information required for such reporting at section 1847A of the Act. Some manufacturers without Medicaid drug rebate agreements voluntarily submit ASP data for their single source drugs or biologicals that are payable under Part B, however other manufacturers without Medicaid drug rebate agreements do not voluntarily submit such data. Without manufacturer reported ASP data, CMS cannot calculate the ASP payment limit, and consequently, payment is typically based on Wholesale Acquisition Cost (WAC).

Consistent with section 1847A(c)(3) of the Act and our regulations at § 414.804(a)(2), the ASP is net of price concessions. However, consistent with the definition of WAC at section 1847A(c)(6)(B) of the Act, the WAC is not net of price concessions and is thus nearly always, and sometimes significantly, higher than ASP. Drugs with payment allowances based on WAC may have greater ''spreads'' between acquisition costs and payment than drugs for which there is an ASP-based payment allowance, which, in turn, may: (1) Incent the use of the drug based on its spread rather than on purely clinical considerations; (2) result in increased payments under Medicare Part B; and (3) result in increased beneficiary cost sharing. This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021. These new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

For single source drugs, these changes may result in lower payment limits because, typically, the WAC plus 3 percent is higher than ASP plus 6 percent. This then translates to cost savings for both the government and beneficiaries, who will pay coinsurance on a lesser amount. However, for the reason stated earlier in this RIA (see section VI.G.4. of this final rule), we are unable to predict the magnitude of this effect.

Similarly, payment limits for multiple source drugs could increase or decrease, and we are unable to predict the direction or magnitude of specific or aggregate effects at this time.

2. Determination of ASP for Certain Self-Administered Drug Products

Although we are unable to quantify the total magnitude of the potential savings, these changes have the potential to substantially reduce program expenditures and beneficiary coinsurance. The OIG's July 2020 report (discussed in section III.D.2. of this final rule) determined that the inclusion of self-administered versions of certolizumab and abatacept in their respective volume-weighted, average ASPs, alone, has resulted in $173 million in additional Medicare beneficiary coinsurance between 2014 and 2018.

The regulatory changes have the potential to result in decreased payment limits for identified billing and payment codes and could, in turn, substantially reduce beneficiary coinsurance. Since section 405 of Division CC, Title IV of the CAA, 2021 directs CMS to implement the statutory changes at section 1847A(g)(3) of the Act beginning on July 1, 2021, these potential savings may be observed within the year.

3. Medicare Diabetes Prevention Program Expanded Model Emergency Policy

This change will have a positive impact on eligible MDPP beneficiaries, as it better aligns with the CDC's National DPP, giving both the participants and the coaches similar messaging around this program, regardless of payer. MDPP suppliers often offer the MDPP set of services to mixed cohorts, or classes with participants who are not eligible for MDPP, but who are enrolled in a National DPP cohort. Since MDPP generally follows the CDC's National DPP and aligns its program with the CDC's DPRP Standards, it is confusing to participants, coaches, and staff when talking about a 2-year program to its eligible Medicare participants when the non-Medicare participants have a 1-year program. Finally, reducing the MDPP service period from 2 years to one (1) year allows more cohorts to start and finish MDPP during the expanded

model initial period of performance, which ends in March 2023.

4. Quality Payment Program

There are several changes in this rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, will lead to more meaningful and relevant data being available to beneficiaries on the type and scope of care provided by clinicians on the compare tool. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate this will improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new measures include patient-reported outcome-based measures, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcome-based measured are factors frequently of interest to patients when making decisions about treatment.

K. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year's rule will be the number of reviewers of last year's rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters will review this year's rule in detail, and it is also possible that some reviewers will choose not to comment on the rule. For these reasons we thought that the number of commenters will be a fair estimate of the number of reviewers of last year's rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this rule is $114.24 per hour, including overhead and fringe benefits *https://www.bls.gov/oes/current/oes_nat.htm.* Assuming an average reading speed, we estimate that it will take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is $913.92 (8.0 hours × $114.24). Therefore, we estimated that the total cost of reviewing this regulation is $32,380,186 ($885.92 × 35,430 reviewers on this year's proposed rule).

J. Accounting Statement

As required by OMB Circular A–4 (available at *http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf*), in Tables 150 and 151 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2021 to CY 2022 based on the FY 2022 President's Budget baseline.

TABLE 150: Accounting Statement: Classification of Estimated Expenditures

CATEGORY	TRANSFERS
CY 2022 Annualized Monetized Transfers	Estimated increase in expenditures of $2.7 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 151: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings

CATEGORY	TRANSFER
CY 2022 Annualized Monetized Transfers of beneficiary cost coinsurance.	-$0.7 billion
From Whom to Whom?	Beneficiaries to Federal Government.

K. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on October 28, 2021.

List of Subjects

42 CFR Part 403

Grant programs—health, Health insurance, Hospitals, Intergovernmental relations, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health insurance, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 403—SPECIAL PROGRAMS AND PROJECTS

■ 1. The authority citation for part 403 continues to read as follows:

Authority: 42 U.S.C. 1302, and 1395hh.

■ 2. In § 403.902—

■ a. Amend the definition of ''Ownership or investment interest'' by adding paragraphs (3)(vi) and (vii);

■ b. Add a definition for ''Physician-owned distributorship'' in alphabetical order; and

■ c. Revise the definition of ''Short term medical supply or device loan''.

The additions and revision read as follows:

§ 403.902 Definitions.

* * * * *

Ownership or investment interest

* * *

(3) * * *

(vi) A titular ownership or investment interest that excludes the ability or right to receive the financial benefits of ownership or investment, including, but not limited to, the distribution of profits, dividends, proceeds of sale, or similar returns on investment; or

(vii) An interest in an entity that arises from an employee stock ownership plan (ESOP) that is qualified under section 401(a) of the Internal Revenue Code of 1986.

* * * * *

Physician-owned distributorship, for the purposes of determining the existence of a reportable ownership or investment interest under this subpart, means an entity that:

(1) Meets the definition of an applicable manufacturer or applicable group purchasing organization as defined in this section, and

(2) Meets at least one of the following two conditions:

(i) Has a minimum of 5 percent direct or indirect ownership or investment interest in the applicable manufacturer or applicable group purchasing organization held by a physician or a physician's immediate family member, or

(ii) A physician or a physician's immediate family member receives compensation from the applicable manufacturer or group purchasing organization in the form of a commission, return on investment, profit sharing, profit distribution, or other remuneration directly or indirectly derived from the sale or distribution of devices by the applicable manufacturer or group purchasing organization in which the physician or physician's immediate family member has ownership.

(3) This physician owned distributor definition does not apply for purposes of any other laws or regulations, including, but not limited to, section 1877 of the Act, the regulations at 42 CFR part 411, subpart J, section 1128B of the Act, or the regulations at 42 CFR 1001.952.

* * * * *

Short term medical supply or device loan means the loan of a covered device or a device under development, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 cumulative days per calendar year or a quantity of 90 cumulative days of average daily use per calendar year, to permit evaluation of the device or medical supply by the covered recipient.

* * * * *

■ 3. Amend § 403.904 by adding paragraph (a)(3) to read as follows:

§ 403.904 Reports of payments or other transfers of value to covered recipients.

(a) * * *

(3) An applicable manufacturer or applicable group purchasing organization that has reported payments or transfers of value under the scope of this section may not remove, delete, or alter any record/(s) unless an error is discovered in the information that had been furnished, or the record is otherwise believed to meet exceptions for reporting.

* * * * *

■ 4. Amend § 403.908 by revising paragraph (c)(3) and adding paragraph (c)(4) to read as follows:

§ 403.908 Procedures for electronic submission of reports.

* * * * *

(c) * * *

(3) During registration, applicable manufacturers and applicable group purchasing organizations must name two points of contact with appropriate contact information. These points of contact must be updated for 2 years following record submission.

(4) An applicable manufacturer or applicable group purchasing organization that meets the definition of physician-owned distributorship as defined in § 403.902 must identify its status as a physician-owned distributorship when registering or recertifying.

* * * * *

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 5. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 6. Amend § 405.902 by adding definitions for ''Additional documentation'', ''Additional documentation request (ADR)'', ''Post-payment medical review'', and ''Prepayment medical review'' in alphabetical order to read as follows:

§ 405.902 Definitions.

* * * * *

Additional documentation means any information requested by a contractor when conducting a prepayment review or post-payment review.

Additional documentation request (ADR) means a contractor's initial documentation request in reviewing claims selected for prepayment review or post-payment review.

* * * * *

Post-payment medical review (or post-payment review) means a review that occurs after payment is made on the selected claim to determine whether the initial determination for payment was appropriate.

Prepayment medical review (or prepayment review) means a review that occurs before an initial determination for payment is made on the selected claim to determine whether payment should be made.

* * * * *

■ 7. Add § 405.903 to read as follows:

§ 405.903 Prepayment review.

(a) A contractor may select a claim(s) for prepayment review.

(b) In conducting a prepayment review, a contractor may issue additional documentation requests to a provider or supplier.

(1) A provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor's request, except as stated in paragraph (b)(2) and (c) of this section.

(2) A contractor may accept documentation received after 45-calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.

(c) A provider or supplier will be provided 30 calendar days to submit additional documentation in response to a UPIC's request for additional documentation. A UPIC may accept documentation received after the 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

(d) A contractor's prepayment review will result in an initial determination under § 405.920.

■ 8. Add §§ 405.929 and 405.930 under the undesignated ceneter heading ''Initial Determinations'' in subpart I to read as follows:

§ 405.929 Post-payment review.

(a) A contractor may select a claim(s) for post-payment review, which is conducted under the reopening authority in § 405.980.

(b) In conducting a post-payment review, a contractor may issue an additional documentation request to a provider or supplier.

(1) A provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor's request, except as stated in paragraph (b)(2) and (c) of this section.

(2) A contractor may accept documentation received after 45 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.

(c) A provider or supplier will be provided 30 calendar days to submit additional documentation in response to a UPIC's request for additional documentation. A UPIC may accept documentation received after 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

(d) The outcome of a contractor's review will result in either no change to the initial determination or a revised determination under § 405.984.

§ 405.930 Failure to respond to additional documentation request.

If a contractor gives a provider or supplier notice and time to respond to an additional documentation request and the provider or supplier does not provide the additional documentation in a timely manner, the contractor has authority to deny the claim.

■ 9. Amend § 405.986 by revising the paragraph (a) subject heading to read as follows:

§ 405.986 Good cause for reopening.

(a) *Establishing good cause for reopening.* * * *

* * * * *

■ 10. Amend § 405.2411 by—

■ a. Revising paragraph (b)(2);

■ b. Redesignating paragraph (b)(3) as (b)(4); and

■ c. Adding a new paragraph (b)(3).

The revision and addition read as follows:

§ 405.2411 Scope of benefits.

* * * * *

(b) * * *

(2) Covered when furnished during a Part A stay in a skilled nursing facility only when provided by a physician, nurse practitioner, physician assistant, certified nurse midwife or clinical psychologist employed or under contract with the RHC or FQHC at the time the services are furnished;

(3) Inclusive of hospice attending physician services, and are covered when furnished during a patient's hospice election only when provided by an RHC/FQHC physician, nurse practitioner, or physician assistant designated by the patient as his or her attending physician and employed or under contract with the RHC or FQHC at the time the services are furnished; and

* * * * *

■ 11. Amend § 405.2446 by revising paragraph (c) to read as follows:

§ 405.2446 Scope of services.

* * * * *

(c) FQHC services are covered when provided in outpatient settings only, including a patient's place of residence, which may be a skilled nursing facility or a nursing facility, other institution used as a patient's home, or are hospice attending physician services furnished during a hospice election.

* * * * *

■ 12. Amend § 405.2462—

■ a. By revising paragraphs (a) and (b);

■ b. By redesignating paragraphs (c) through (g) as paragraphs (e) through (i), respectively;

■ c. By adding new paragraphs (c) and (d); and

■ d. In newly redesignated paragraph (e) introductory text, by removing the reference ''paragraph (d)'' and adding in its place ''paragraph (f)''.

The revisions and additions read as follows:

§ 405.2462 Payment for RHC and FQHC services.

(a) *Payment to independent RHCs that are authorized to bill under the reasonable cost system.* (1) RHCs that are authorized to bill under the reasonable cost system are paid on the basis of an all-inclusive rate, subject to a payment limit per visit determined in paragraph (b) of this section, for each beneficiary visit for covered services. This rate is determined by the Medicare Administration Contractor (MAC), in accordance with this subpart and general instructions issued by CMS.

(2) The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(b) *RHC payment limit per visit.* (1) In establishing limits on payment for rural health clinic services provided by rural health clinics the limit for services provided prior to April 1, 2021:

(i) In 1988, after March 31, at $46 per visit; and

(ii) In a subsequent year (before April 1, 2021), at the limit established for the previous year increased by the percentage increase in the Medicare Economic Index (MEI) (as defined in section 1842(i)(3) of the Act) applicable to primary care services (as defined in section 1842(i)(4) of the Act) furnished as of the first day of that year.

(2) In establishing limits on payment for rural health services furnished on or after April 1, 2021, by rural health clinics or any rural health clinic that is enrolled on or after January 1, 2021 under section 1866(j) of the Act), the limit for services provided:

(i) In 2021, after March 31, at $100 per visit;

(ii) In 2022, at $113 per visit;

(iii) In 2023, at $126 per visit;

(iv) In 2024, at $139 per visit;

(v) In 2025, at $152 per visit;

(vi) In 2026, at $165 per visit;

(vii) In 2027, at $178 per visit; and

(viii) In 2028, at $190 per visit.

(ix) In a subsequent year, at the limit established for the previous year increased by the percentage increase in MEI applicable to primary care services furnished as of the first day of such year.

(3) In establishing limits on payment for rural health services furnished on or after April 1, 2021, by provider-based rural health clinics as described in section (c)(4) of this part, the limit for services provided:

(i) In 2021, after March 31, at an amount equal to the greater of:

(A) For rural health clinics that had an all-inclusive rate established for services furnished in 2020—

(*1*) The all-inclusive rate applicable to the rural health clinic for services furnished in 2020, increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of 2021, or

(*2*) The payment limit per visit applicable in paragraph (b)(2) of this section.

(B) For rural health clinics that did not have an all-inclusive rate established for services furnished in 2020—

(*1*) The all-inclusive rate applicable to the rural health clinic for services furnished in 2021, or

(*2*) The payment limit per visit applicable in paragraph (b)(2) of this section.

(ii) In a subsequent year, at an amount equal to the greater of:

(A) The amount established under paragraph (b)(3)(i)(A) or (B) of this section, as applicable for the previous year, increased by the percentage increase in MEI applicable to primary care services furnished as of the first day of such subsequent year, or

(B) The payment limit per visit applicable under paragraph (b)(2) of this section for such subsequent year.

(c) *Payment to provider-based RHCs that are authorized to bill under the reasonable cost system.* (1) An RHC that is authorized to bill under the reasonable cost system is paid in accordance with parts 405 and 413 of this subchapter, as applicable, if the RHC is—

(i) An integral and subordinate part of a hospital, skilled nursing facility or home health agency participating in Medicare (that is, a provider of services); and

(ii) Operated with other departments of the provider under common licensure, governance and professional supervision.

(2) An RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-inclusive rate, subject to a payment limit per visit, described in paragraphs (b)(1) and (2) of this section, for each beneficiary visit for covered services when in a hospital with greater than 50 beds as determined in § 412.105(b) of this subchapter. This all-inclusive rate is determined by the MAC, in accordance with this subpart and general instructions issued by CMS. The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(3) Prior to April 1, 2021, an RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-inclusive rate and is not subject to a payment limit per visit described in paragraphs (b)(1) and (2) of this section for each beneficiary visit for covered services when in a hospital with less than 50 beds as determined in § 412.105(b) of this subchapter. This all-inclusive rate is determined by the MAC, in accordance with this subpart and general instructions issued by CMS. The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(4) On or after April 1, 2021, an RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-inclusive rate, subject to a payment limit per visit, described in paragraph (b)(3) of this section, for each beneficiary visit for covered services when it meets the specified qualifications in paragraph(d) of this section. This all-inclusive rate is determined by the MAC, in accordance with this subpart and general instructions issued by CMS. The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(d) *Specified qualifications.* A provider-based rural health clinic must meet the following qualifications to have a payment limit per visit established in accordance with paragraph (b)(3) of this section.

(1) As of December 31, 2020, was in a hospital with less than 50 beds (as determined in § 412.105(b) of this subchapter) and after December 31, 2020, in a hospital that continues to have less than 50 beds (not taking into account any increase in the number of beds pursuant to a waiver during the COVID–19 Public Health Emergency (PHE)); and one of the following circumstances:

(i) As of December 31, 2020, was enrolled under section 1866(j) of the Act (including temporary enrollment during the COVID–19 PHE); or

(ii) Submitted an application for enrollment under section 1866(j) of the Act (or a request for temporary enrollment during the COVID–19 PHE) that was received not later than December 31, 2020.

(2) [Reserved]

* * * * *

■ 13. Amend § 405.2463 by revising paragraphs (a)(1)(i) introductory text and (b)(3) introductory text to read as follows:

§ 405.2463 What constitutes a visit.

(a) * * *

(1) * * *

(i) Face-to-face encounter (or, for mental health disorders only, an encounter that meets the requirements under paragraph (b)(3) of this section) between an RHC patient and one of the following:

* * * * *

(b) * * *

(3) *Visit—Mental health.* A mental health visit is a face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder, including an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary

is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record, between an RHC or FQHC patient and one of the following:

* * * * *

■ 14. Amend § 405.2466 by revising paragraph (b)(1)(iv) to read as follows:

§ 405.2466 Annual reconciliation.

* * * * *

(b) * * *

(1) * * *

(iv) For RHCs and FQHCs, payment for pneumococcal, influenza, and COVID–19 vaccine and their administration is 100 percent of Medicare reasonable cost.

* * * * *

■ 15. Amend § 405.2469 by revising paragraph (d) to read as follows:

§ 405.2469 FQHC supplemental payments.

* * * * *

(d) *Per visit supplemental payment.* A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in § 405.2463. Additionally, there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 16. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 17. Amend § 410.33 by—

■ a. Revising paragraphs (c) and (g)(6)(i) and (ii);

■ b. Redesignating paragraphs (g)(8)(i) through (iii) as paragraphs (g)(8)(i)(A) through (C), respectively; and

■ c. Adding paragraphs (g)(8)(i) introductory text and (g)(8)(ii); and

■ d. Revising paragraph (g)(9).

The revisions and additions read as follows:

§ 410.33 Independent diagnostic testing facility.

* * * * *

(c) *Nonphysician personnel.* (1) Except as otherwise stated in paragraph (c)(2) of this section, any nonphysician personnel used by the IDTF to perform tests must demonstrate the basic qualifications to perform the tests in question and have training and proficiency as evidenced by licensure or certification by the appropriate State health or education department. In the absence of a State licensing board, the technician must be certified by an appropriate national credentialing body. The IDTF must maintain documentation available for review that these requirements are met.

(2) For services that do not require direct or in-person beneficiary interaction, treatment, or testing, any nonphysician personnel used by the IDTF to perform the tests must meet all applicable State licensure requirements for doing so. If there are any applicable State licensure requirements, the IDTF must maintain documentation available for review that these requirements are met.

* * * * *

(g) * * *

(6) * * *

(i) Except as otherwise stated in paragraph (g)(6)(ii) of this section, have a comprehensive liability insurance policy of at least $300,000 per location that covers both the place of business and all customers and employees of the IDTF. The policy must be carried by a nonrelative-owned company. Failure to maintain required insurance at all times will result in revocation of the IDTF's billing privileges retroactive to the date the insurance lapsed. IDTF suppliers are responsible for providing the contact information for the issuing insurance agent and the underwriter. In addition, the IDTF must—

(A) Ensure that the insurance policy must remain in force at all times and provide coverage of at least $300,000 per incident; and

(B) Notify the CMS designated contractor in writing of any policy changes or cancellations.

(ii) Paragraph (g)(6)(i) of this section does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.

* * * * *

(8) * * *

(i) Except as otherwise stated in paragraph (g)(8)(ii) of this section, answer, document, and maintain documentation of a beneficiary's written clinical complaint at the physical site of the IDTF. (For mobile IDTFs, this documentation would be stored at their home office.) This includes, but is not limited to, the following:

* * * * *

(ii) Paragraph (g)(8)(i) of this section does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.

(9) Openly post these standards for review by patients and the public. (This requirement does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.)

* * * * *

■ 18. Amend § 410.37 by adding paragraph (j) to read as follows:

§ 410.37 Colorectal cancer screening tests: Conditions for and limitations on coverage.

* * * * *

(j) *Expansion of coverage of colorectal cancer screening tests.* Effective January 1, 2022, colorectal cancer screening tests include a planned screening flexible sigmoidoscopy or screening colonoscopy that involves the removal of tissue or other matter or other procedure furnished in connection with, as a result of, and in the same clinical encounter as the screening test.

■ 19. Amend § 410.47—

■ a. In paragraph (a), by revising the definitions of ''Individualized treatment plan'', ''Medical director'', Outcomes assessment'', ''Physician prescribed exercise'', ''Psychosocial assessment'', and ''Supervising physician'';

■ b. By revising paragraphs (b) through (e);

■ c. By removing paragraph (f); and

■ d. By redesignating paragraph (g) as paragraph (f).

The revisions read as follows:

§ 410.47 Pulmonary rehabilitation program: Conditions of coverage.

(a) * * *

Individualized treatment plan means a written plan tailored to each individual patient that includes all of the following:

(i) A description of the individual's diagnosis.

(ii) The type, amount, frequency, and duration of the items and services furnished under the plan.

(iii) The goals set for the individual under the plan.

Medical director means the physician who oversees the pulmonary rehabilitation program at a particular site.

Outcomes assessment means an evaluation of progress as it relates to the individual's rehabilitation which includes the following:

(i) Evaluations, based on patient-centered outcomes, which must be measured by the physician or program staff at the beginning and end of the program. Evaluations measured by program staff must be considered by the physician in developing and/or reviewing individualized treatment plans.

(ii) Objective clinical measures of exercise performance and self-reported measures of shortness of breath and behavior.

* * * * *

Physician-prescribed exercise means aerobic exercise combined with other types of exercise (such as conditioning, breathing retraining, step, and strengthening) as determined to be appropriate for individual patients by a physician.

Psychosocial assessment means an evaluation of an individual's mental and emotional functioning as it relates to the individual's rehabilitation or respiratory condition which includes an assessment of those aspects of an individual's family and home situation that affects the individual's rehabilitation treatment, and psychosocial evaluation of the individual's response to and rate of progress under the treatment plan.

* * * * *

Supervising physician means a physician that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished to individuals under pulmonary rehabilitation programs.

(b) *General rule*—(1) *Covered conditions.* Medicare Part B covers pulmonary rehabilitation for beneficiaries:

(i) With moderate to very severe COPD (defined as GOLD classification II, III and IV), when referred by the physician treating the chronic respiratory disease;

(ii) Who have had confirmed or suspected COVID–19 and experience persistent symptoms that include respiratory dysfunction for at least four weeks;

(iii) Additional medical indications for coverage for pulmonary rehabilitation may be established through a national coverage determination (NCD).

(2) *Components.* Pulmonary rehabilitation must include all of the following:

(i) Physician-prescribed exercise during each pulmonary rehabilitation session.

(ii) Education or training that is closely and clearly related to the individual's care and treatment which is tailored to the individual's needs and assists in achievement of goals toward independence in activities of daily living, adaptation to limitations and improved quality of life. Education must include information on respiratory problem management and, if appropriate, brief smoking cessation counseling.

(iii) Psychosocial assessment.

(iv) Outcomes assessment.

(v) An individualized treatment plan detailing how components are utilized for each patient. The individualized treatment plan must be established, reviewed, and signed by a physician every 30 days.

(3) *Settings.* (i) Medicare Part B pays for pulmonary rehabilitation in the following settings:

(A) A physician's office.

(B) A hospital outpatient setting.

(ii) All settings must have the following:

(A) A physician immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the program. This provision is satisfied if the physician meets the requirements for direct supervision for physician office services, at § 410.26 of this subpart; and for hospital outpatient services at § 410.27 of this subpart.

(B) The necessary cardio-pulmonary, emergency, diagnostic, and therapeutic life-saving equipment accepted by the medical community as medically necessary (for example, oxygen, cardiopulmonary resuscitation equipment, and defibrillator) to treat chronic respiratory disease.

(c) *Medical director standards.* The physician responsible for a pulmonary rehabilitation program is identified as the medical director. The medical director, in consultation with staff, is involved in directing the progress of individuals in the program and must possess all of the following:

(1) Expertise in the management of individuals with respiratory pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the pulmonary rehabilitation program is offered.

(d) *Supervising physician standards.* Physicians acting as the supervising physician must possess all of the following:

(1) Expertise in the management of individuals with respiratory pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the pulmonary rehabilitation program is offered.

(e) *Limitations on coverage:* The number of pulmonary rehabilitation sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare Administrative Contractor.

* * * * *

■ 20. Amend § 410.49—

■ a. In paragraph (a), by revising the definition of ''Medical director'', revising paragraph (i) in the definition of ''Outcomes assessment'', and revising the definition of ''Physician-prescribed exercise''; and

■ b. By revising paragraphs (b)(1) introductory text, (b)(2) introductory text, (b)(2)(ii), (b)(3)(i) introductory text, (d) introductory text, (e) introductory text, and (f).

The revisions read as follows:

§ 410.49 Cardiac rehabilitation program and intensive cardiac rehabilitation program: Conditions of coverage.

(a) * * *

Medical director means the physician who oversees the cardiac rehabilitation or intensive cardiac rehabilitation program at a particular site.

Outcomes assessment * * *

(i) Evaluations, based on patient-centered outcomes, which must be measured by the physician or program staff at the beginning and end of the program. Evaluations measured by program staff must be considered by the physician in developing and/or reviewing individualized treatment plans.

* * * * *

Physician-prescribed exercise means aerobic exercise combined with other types of exercise (such as strengthening and stretching) as determined to be appropriate for individual patients by a physician.

* * * * *

(b) * * *

(1) *Covered conditions.* Medicare Part B covers cardiac rehabilitation and intensive cardiac rehabilitation for beneficiaries who have experienced one or more of the following:

* * * * *

(2) *Components.* Cardiac rehabilitation and intensive cardiac rehabilitation must include all of the following:

* * * * *

(ii) Cardiac risk factor modification, including education, counseling, and behavioral intervention, tailored to the individual's needs.

* * * * *

(3) * * *

(i) Medicare Part B pays for cardiac rehabilitation and intensive cardiac rehabilitation in the following settings:

* * * * *

(d) *Medical director standards.* The physician responsible for a cardiac rehabilitation program or intensive cardiac rehabilitation program is identified as the medical director. The medical director, in consultation with staff, is involved in directing the progress of individuals in the program and must possess all of the following:

* * * * *

(e) *Supervising physician standards.* Physicians acting as the supervising physician must possess all of the following:

* * * * *

(f) *Limitations on coverage*—(1) *Cardiac rehabilitation.* The number of cardiac rehabilitation sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare Administrative Contractor.

(2) *Intensive cardiac rehabilitation.* Intensive cardiac rehabilitation sessions are limited to 72 1-hour sessions (as defined in section 1848(b)(5) of the Act), up to 6 sessions per day, over a period of up to 18 weeks.

■ 21. Amend § 410.59 by revising paragraph (a)(4)(iii)(B) and adding paragraphs (a)(4)(iv) and (v) to read as follows:

§ 410.59 Outpatient occupational therapy services: Conditions.

(a) * * *

(4) * * *

(iii) * * *

(B) Except as provided in paragraph (a)(4)(iv) of this section, furnishes a portion of a service, or in the case of a 15-minute (or other time interval) timed code, a portion of a unit of service separately from the part furnished by the occupational therapist such that the minutes for that portion of a service (or unit of a service) furnished by the occupational therapist assistant exceed 10 percent of the total minutes for that service (or unit of a service).

(iv) Paragraph (a)(4)(iii)(B) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day when the occupational therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the occupational therapy assistant.

(v) Where there are two remaining 15-minute units to bill of the same service, and the occupational therapist and occupational therapy assistant each provided between 9 and 14 minutes of the service with a total time of at least 23 minutes and no more than 28 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the occupational therapy assistant and one unit is billed without the prescribed modifier for the service provided by the occupational therapist.

* * * * *

■ 22. Amend § 410.60 by revising paragraph (a)(4)(iii)(B) and adding paragraphs (a)(4)(iv) and (v) to read as follows:

§ 410.60 Outpatient physical therapy services: Conditions.

(a) * * *

(4) * * *

(iii) * * *

(B) Except as provided in paragraph (a)(4)(iv) of this section, furnishes a portion of a service, or in the case of a 15-minute (or other time interval) timed code, a portion of a unit of service separately from the part furnished by the physical therapist such that the minutes for that portion of a service (or unit of a service) furnished by the physical therapist assistant exceed 10 percent of the total minutes for that service (or unit of a service).

(iv) Paragraph (a)(4)(iii)(B) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day, when the physical therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the physical therapist assistant.

(v) Where there are two remaining 15-minute units to bill of the same service, and the physical therapist and physical therapist assistant each provided between 9 and 14 minutes of the service with a total time of at least 23 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the physical therapist assistant and one unit is billed without the prescribed modifier for the service provided by the physical therapist.

* * * * *

■ 23. Amend § 410.67—

■ a. In paragraph (b), by revising paragraphs (3) and (4) in the definition of ''Opioid use disorder treatment service'';

■ b. By revising paragraphs (d)(4)(ii) and (iii) and (d)(5); and

■ c. By adding paragraph (d)(6).

The revisions and addition read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

* * * * *

(b) * * *

Opioid use disorder treatment service

* * *

(3) Substance use counseling by a professional to the extent authorized under State law to furnish such services including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the counseling services may be furnished using audio-only telephone calls if all other applicable requirements are met.

(4) Individual and group therapy with a physician or psychologist (or other mental health professional to the extent authorized under State law), including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the therapy

services may be furnished using audio-only telephone calls if all other applicable requirements are met.

* * * * *

(d) * * *

(4) * * *

(ii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be geographically adjusted using the Geographic Adjustment Factor described in § 414.26 of this subchapter.

(iii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be updated annually using the Medicare Economic Index described in § 405.504(d) of this subchapter.

(5) Payment for medications delivered, administered or dispensed to a beneficiary as part of the bundled payment or an adjustment to the bundled payment under paragraph (d)(4)(i) of this section is considered a duplicative payment if a claim for delivery, administration or dispensing of the same medications for the same beneficiary on the same date of service was also separately paid under Medicare Part B or Part D. CMS will recoup the duplicative payment made to the opioid treatment program.

(6) For purposes of the adjustment to the bundled payment under paragraph (d)(4)(i)(A) of this section, after the end of the Public Health Emergency as defined in § 400.200 of this chapter, when services are furnished using audio-only technology the practitioner must certify, in a form and manner specified by CMS, that they had the capacity to furnish the services using two-way, audio/video communication technology, but used audio-only technology because audio/video communication technology was not available to the beneficiary.

* * * * *

■ 24. Add § 410.72 to read as follows:

§ 410.72 Registered dietitians' and nutrition professionals' services.

(a) *Definition: Registered dietitians and nutrition professionals.* Meet the qualifications at § 410.134.

(b) *Covered registered dietitian and nutrition professional services.* Medicare Part B covers:

(1) *Coverage condition.* Medical nutrition therapy (MNT) services as defined at § 410.130 under the conditions of coverage at § 410.132.

(2) *Other services.* Registered dietitians and nutrition professionals may also provide diabetes self-management (DSMT) services if they are or represent an accredited DSMT entity and have an order from a physician or qualified nonphysician practitioner who is treating the patient's diabetic condition.

(3) *Limits on MNT and DSMT.* (i) DSMT and MNT cannot be furnished to a patient on the same date of service, and

(ii) MNT and DSMT services cannot be furnished incident to the professional services of a physician or nonphysician practitioner service.

(c) *Limitations.* The following services are not registered dietitian or nutrition professional services for purposes of billing Medicare Part B:

(1) Services furnished by a registered dietitian or nutrition professional to an inpatient of a Medicare-participating hospital.

(2) Services furnished by a registered dietitian or nutrition professional to an inpatient of a Medicare-participating SNF.

(3) Services furnished by a registered dietitian or nutrition professional to a patient in a Medicare-participating ESRD facility in accordance with the limitation on coverage of MNT service listed at § 410.132(b)(1).

(d) *Professional services.* Registered dietitians and nutrition professionals can be paid for professional services only when the services have been directly performed by them.

(e) *Telehealth services.* MNT and DSMT services may be provided as telehealth services (meeting the requirements in § 410.78) when registered dietitians or nutrition professionals act as distant site practitioners.

(f) *Restrictions.* The services of a registered dietitian or nutrition professional are provided on an assignment-related basis, and a registered dietitian or nutrition professional may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made payment for a service in excess of these limits, the registered dietitian or nutrition professional must refund the full amount of the impermissible charge to the beneficiary.

■ 25. Amend § 410.74 by revising paragraphs (a)(2)(v) and (d)(2) to read as follows:

§ 410.74 Physician assistants' services.

(a) * * *

(2) * * *

(v) Prior to January 1, 2022, furnishes services that are billed by the employer of a physician assistant; and

* * * * *

(d) * * *

(2) The services of a physician assistant are provided on an assignment-related basis, and the physician assistant may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made payment for a service in excess of these limits, the physician assistant must refund the full amount of the impermissible charge to the beneficiary.

* * * * *

■ 26. Amend § 410.75 by revising paragraph (e)(2) to read as follows:

§ 410.75 Nurse practitioners' services.

* * * * *

(e) * * *

(2) The services of a nurse practitioner are provided on an assignment-related basis, and the nurse practitioner may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made payment for a service in excess of these limits, the nurse practitioner must refund the full amount of the impermissible charge to the beneficiary.

* * * * *

■ 27. Amend § 410.76 by revising paragraph (e)(2) to read as follows:

§ 410.76 Clinical nurse specialists' services.

* * * * *

(e) * * *

(2) The services of a clinical nurse specialist are provided on an assignment-related basis, and the clinical nurse specialist may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made payment for a service in excess of these limits, the clinical nurse specialist must refund the full amount of the impermissible charge to the beneficiary.

* * * * *

■ 28. Amend § 410.77 by revising paragraph (d)(2) to read as follows:

§ 410.77 Certified nurse-midwives' services: Qualifications and conditions.

* * * * *

(d) * * *

(2) The services of a certified nurse-midwife are provided on an assignment-related basis, and the certified nurse-midwife may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. If a beneficiary has made

payment for a service in excess of these limits, the certified nurse-midwife must refund the full amount of the impermissible charge to the beneficiary.

* * * * *

■ 29. Amend 410.78 by revising paragraph (a)(3) and adding paragraphs (b)(3)(xiii) and (xiv) and (b)(4)(iv)(D) to read as follows:

§ 410.78 Telehealth services.

(a) * * *

(3) *Interactive telecommunications system* means, except as otherwise provided in this paragraph, multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. For services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder to a patient in their home, interactive telecommunications may include two-way, real-time audio-only communication technology if the distant site physician or practitioner is technically capable to use an interactive telecommunications system as defined in the previous sentence, but the patient is not capable of, or does not consent to, the use of video technology. A modifier designated by CMS must be appended to the claim for services described in this paragraph to verify that these conditions have been met.

* * * * *

(b) * * *

(3) * * *

(xiii) A rural emergency hospital (as defined in section 1861(kkk)(2) of the Act), for services furnished on or after January 1, 2023.

(xiv) The home of a beneficiary for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder for services furnished on or after the first day after the end of the PHE as defined in our regulation at § 400.200 except as otherwise provided in this paragraph. Payment will not be made for a telehealth service furnished under this paragraph unless the following conditions are met:

(A) The physician or practitioner has furnished an item or service in-person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months prior to the initial telehealth service;

(B) The physician or practitioner has furnished an item or service in-person, without the use of telehealth, at least once within 12 months of each subsequent telehealth service described in this paragraph, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens associated with an in-person service outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reason(s) for this decision in the patient's medical record.

(C) The requirements of paragraphs (b)(3)(xiv)(A) and (B) may be met by another physician or practitioner of the same specialty and subspecialty in the same group as the physician or practitioner who furnishes the telehealth service, if the physician or practitioner who furnishes the telehealth service described under this paragraph is not available.

(4) * * *

(iv) * * *

(D) Services furnished on or after the first day after the end of the PHE as defined in our regulation at § 400.200 for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder. Payment will not be made for a telehealth service furnished under this paragraph unless the physician or practitioner has furnished an item or service in person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months prior to the initial telehealth service and within 6 months of any subsequent telehealth service.

* * * * *

■ 30. Amend § 410.79 by revising paragraphs (c)(1)(ii) and (e)(3)(v)(C) to read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

(c) * * *

(1) * * *

(ii) An MDPP beneficiary is eligible for the first ongoing maintenance session interval only if the beneficiary:

(A) Starts his or her first core session on or before December 31, 2021;

(B) Attends at least one in-person core maintenance session during the final core maintenance session interval; and

(C) Achieves or maintains the required minimum weight loss at a minimum of one in-person core maintenance session during the final core maintenance session interval.

* * * * *

(e) * * *

(3) * * *

(v) * * *

(C) Beneficiaries who began the set of MDPP services between January 1, 2021 and December 31, 2021 and who are in the second year of the set of MDPP services as of the start of an applicable 1135 waiver event, whose in-person sessions are suspended due to the applicable 1135 waiver event, and who elect not to continue with MDPP services virtually can elect to attend ongoing maintenance sessions; and may restart the ongoing maintenance session interval in which they were participating at the start of the applicable 1135 waiver event or may resume with the most recent attendance session of record.

* * * * *

■ 31. Amend § 410.105 by revising paragraph (d)(3)(ii) and adding paragraphs (d)(3)(iii) and (iv) to read as follows:

§ 410.105 Requirements for coverage of CORF services.

* * * * *

(d) * * *

(3) * * *

(ii) Except as provided in paragraph (d)(3)(iii) of this section, furnishes a portion of a service, or in the case of a 15-minute (or other time interval) timed code, a portion of a unit of service, separately from the part furnished by the physical or occupational therapist such that the minutes for that portion of a service (or unit of a service) exceed 10 percent of the total time for that service (or unit of a service).

(iii) Paragraph (d)(3)(ii) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day when the physical or occupational therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the physical therapist assistant or occupational therapy assistant.

(iv) Where there are two remaining 15-minute units to bill of the same service and the physical therapist and the physical therapist assistant or the occupational therapist and the occupational therapy assistant, as applicable, each provided between 9 and 14 minutes, with a total time of at least 23 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the physical therapist assistant or occupational therapy assistant and one unit is billed without the prescribed modifier for the service provided by the

physical therapist or occupational therapist.

■ 32. Amend § 410.130 by revising the definition of ''Chronic renal insufficiency'' and removing the definition of ''Treating physician''.

The revision reads as follows:

§ 410.130 Definitions.

* * * * *

Chronic renal insufficiency means the stage of renal disease associated with a reduction in renal function not severe enough to require dialysis or transplantation (glomerular filtration rate [GFR] 15–59 ml/min/1.73m ^{2}).

* * * * *

■ 33. Amend § 410.132 by revising paragraphs (a), (b)(5), and (c) to read as follows:

§ 410.132 Medical nutrition therapy.

(a) *Conditions for coverage of MNT services.* Medicare Part B pays for MNT services provided by a registered dietitian or nutrition professional as defined in § 410.134 when the beneficiary is referred for the service by a physician.

(b) * * *

(5) An exception to the maximum number of hours in paragraphs (b)(2), (3), and (4) of this section may be made when a physician determines that there is a change of diagnosis, medical condition, or treatment regimen related to diabetes or renal disease that requires a change in MNT during an episode of care.

(c) *Referrals.* Referral may only be made by a physician when the beneficiary has been diagnosed with diabetes or renal disease as defined in this subpart with documentation noted by a referring physician in the beneficiary's medical record.

■ 34. Amend § 410.150 by revising paragraph (b)(15) to read as follows:

§ 410.150 To whom payment is made.

* * * * *

(b) * * *

(15)(i) Prior to January 1, 2022, to the qualified employer of a physician assistant for professional services furnished by the physician assistant and for services and supplies provided incident to his or her services. Payment is made to the employer of a physician assistant regardless of whether the physician assistant furnishes services under a W–2, employer-employee employment relationship, or whether the physician assistant is an independent contractor who receives a 1099 reflecting the relationship. Both types of relationships must conform to the appropriate guidelines provided by the Internal Revenue Service. A qualified employer is not a group of physician assistants that incorporate to bill for their services. Payment is made only if no facility or other provider charges or is paid any amount for services furnished by a physician assistant.

(ii) Effective on or after January 1, 2022, payment is made to a physician assistant for professional services furnished by a physician assistant in all settings in both rural and nonrural areas and for services and supplies furnished incident to those services. Payment is made only if no facility or other provider charges, or is paid, any amount for the furnishing of professional services of the physician assistant.

* * * * *

■ 35. Amend § 410.152 by revising paragraphs (l) introductory text and (l)(5) to read as follows:

§ 410.152 Amounts of payment.

* * * * *

(l) *Amount of payment*: Preventive services. Except as provided otherwise in this paragraph, Medicare Part B pays 100 percent of the Medicare payment amount established under the applicable payment methodology for the service furnished by a provider or supplier for the following preventive services:

* * * * *

(5) Colorectal cancer screening tests (excluding barium enemas).

(i) For the colorectal cancer screening tests described in § 410.37(j), Medicare Part B pays at the specified percentage as follows:

(A) 80 percent for CY 2022.

(B) 85 percent for CY 2023 through 2026.

(C) 90 percent for 2027 through 2029.

(D) 100 percent beginning January 1, 2030.

(ii) [Reserved]

* * * * *

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 36. The authority citation for part 411 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn.

■ 37. Amend § 411.351 by revising the definition of ''List of CPT/HCPCS Codes'' to read as follows:

§ 411.351 Definitions.

* * * * *

List of CPT/HCPCS Codes means the list of CPT and HCPCS codes that identifies those items and services that are DHS under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of the Act. It is updated annually and posted on the CMS website at *https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.*

* * * * *

■ 38. Amend § 411.354 by revising paragraphs (c)(2)(ii)(A) through (C) to read as follows:

§ 411.354 Financial relationship, compensation, and ownership or investment interest.

* * * * *

(c) * * *

(2)* * *

(ii) * * *

(A)(*1*) The referring physician (or immediate family member) receives aggregate compensation from the person or entity in the chain with which the physician (or immediate family member) has a direct financial relationship that varies with the volume or value of referrals or other business generated by the referring physician for the entity furnishing the DHS; and

(*2*) The amount of compensation that the physician (or immediate family member) receives per individual unit—

(*i*) Is not fair market value for items or services actually provided;

(*ii*) Could increase as the number or value of the physician's referrals to the entity furnishing DHS increases, or could decrease as the number or value of the physician's referrals to the entity decreases;

(*iii*) Could increase as the amount or value of the other business generated by the physician for the entity furnishing DHS increases, or could decrease as the amount or value of the other business generated by the physician for the entity furnishing DHS decreases; or

(*iv*) Is payment for the lease of office space or equipment or for the use of premises or equipment.

(B) For purposes of applying paragraph (c)(2)(ii)(A)(*2*) of this section, the individual unit is:

(*1*) Item, if the physician (or immediately family member) is compensated solely per item provided.

(*2*) Service, if the physician (or immediate family member) is compensated solely per service provided, which includes arrangements where the ''service'' provided includes both items and services.

(*3*) Time, if the conditions of paragraph (c)(2)(ii)(B)(1) or (*2*) of this section are not met.

(C) If the financial relationship between the physician (or immediate family member) and the person or entity

in the chain with which the referring physician (or immediate family member) has a direct financial relationship is an ownership or investment interest, the nonownership or noninvestment interest closest to the referring physician (or immediate family member) is used to determine whether the aggregate compensation varies with the volume or value of referrals or other business generated by the referring physician for the entity furnishing the DHS and whether the amount of compensation that the physician (or immediate family member) receives per individual unit meets the conditions in paragraph (c)(2)(ii)(A)(*2*) of this section. (For example, if a referring physician has an ownership interest in company A, which owns company B, which has a compensation arrangement with company C, which has a compensation arrangement with entity D that furnishes DHS, we would look to the aggregate compensation between company B and company C for purposes of this paragraph (c)(2)(ii).

* * * * *

■ 39. Amend § 411.355 by revising paragraph (h) to read as follows:

§ 411.355 General exceptions to the referral prohibition related to both ownership/investment and compensation.

* * * * *

(h) *Preventive screening tests and vaccines.* (1) Preventive screening tests and vaccines that meet the following conditions:

(i) The preventive screening test or vaccine is listed on the List of CPT/HCPCS Codes as a code to which the exception in this paragraph is applicable.

(ii) The preventive screening test or vaccine is covered by Medicare.

(iii) The preventive screening test or vaccine is subject to a CMS-mandated frequency limit.

(2) During such period as the vaccine is not subject to a CMS-mandated frequency limit, paragraph (h)(1)(iii) of this section does not apply to a COVID–19 vaccine identified on the List of CPT/HCPCS Codes as a code to which the exception in this paragraph is applicable.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 40. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(l).

■ 41. Amend § 414.64 by revising paragraph (a) to read as follows:

§ 414.64 Payment for medical nutrition therapy.

(a) *Payment under the physician fee schedule.* Medicare payment for medical nutrition therapy is made under the physician fee schedule in accordance with subpart B of this part. Payment to nonphysician professionals, as specified in paragraph (b) of this section, is 80 percent (or 100 percent if such services are recommended with a grade of A or B by the United States Preventive Services Task Force for any indication or population and are appropriate for the individual) of the lesser of the actual charges or 85 percent of the physician fee schedule amount.

* * * * *

■ 42. Amend § 414.84—
■ a. By revising paragraphs (b)(1)(i);
■ b. In paragraph (b)(1)(ii), by removing the reference ''CY 2018'' and adding in its place the reference ''CY 2022'';
■ c. By revising paragraph (b)(2)(i);
■ d. In paragraph (b)(2)(ii), by removing the reference CY 2018'' and adding in its place the reference ''CY 2022'';
■ e. By revising paragraph (b)(3)(i);
■ f. In paragraph (b)(3)(ii), by removing the reference ''CY 2018'' and adding in its place the reference ''CY 2022'';
■ g. By revising paragraph (b)(4)(i)(A);
■ h. In paragraph (b)(4)(i)(B), by removing the reference ''CY 2018'' and adding in its place the reference ''CY 2022'';
■ i. By revising paragraph (b)(4)(ii)(A);
■ h. In paragraph (b)(4)(ii)(B), by removing the reference ''CY 2018'' and adding in its place the reference ''CY 2022''; and
■ j. By revising paragraphs (b)(5), (b)(6)(i), (b)(7)(i) and (ii), and (c).

The revisions read as follows:

§ 414.84 Payment for MDPP Services.

* * * * *

(b) * * *

(1) * * *

(i) For a first core session furnished January 1, 2022, through December 31, 2022 the amount is $35.

* * * * *

(2) * * *

(i) For the fourth core session furnished January 1, 2022, through December 31, 2022 the amount is $105.

* * * * *

(3) * * *

(i) For the ninth core session furnished January 1, 2022, through December 31, 2022 the amount is $175.

* * * * *

(4) * * *

(i) * * *

(A) For a second core maintenance session January 1, 2022, through December 31, 2022 the amount is $93.

* * * * *

(ii) * * *

(A) For a second core maintenance session January 1, 2022, through December 31, 2022 the amount is $75.

* * * * *

(5) *Performance Goal 5: Attends two ongoing maintenance sessions and maintains the required minimum weight loss during an ongoing maintenance session interval.* For an MDPP beneficiary who attends his or her first core session on or before December 31, 2021, CMS makes a performance payment to an MDPP supplier if an MDPP beneficiary attends two ongoing maintenance sessions during an ongoing maintenance session interval, achieves attendance at that second ongoing maintenance session upon attendance at an ongoing maintenance session furnished by that supplier, and achieves or maintains the required minimum weight loss as measured in-person during an ongoing maintenance session furnished during the applicable ongoing maintenance session interval. CMS makes this performance payment to an MDPP supplier only once per MDPP beneficiary per ongoing maintenance session interval. The amount of this performance payment is determined as follows:

(i) For a second ongoing maintenance session furnished in interval 1 (months 13–15 of the MDPP services period), January 1, 2022, through December 31, 2022, the amount is $52.

(ii) For a second ongoing maintenance session furnished in interval 2 (months 16–18 of the MDPP services period), January 1, 2022, through December 31, 2022, the amount is $52.

(iii) For a second ongoing maintenance session furnished in interval 3 (months 19–21 of the MDPP services period), January 1, 2022, through December 31, 2022, the amount is $53.

(iv) For a second ongoing maintenance session furnished in interval 4 (months 22–24 of the MDPP services period), January 1, 2022, through December 31, 2022 the amount is $53.

(v) For a second ongoing maintenance session furnished during a subsequent year. The performance payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

(6) * * *

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2022, through December 31, 2022, the amount is $169.

* * * * *

(7) * * *

(i) For a core session or core maintenance session, as applicable,

furnished January 1, 2022, through December 31, 2022, the amount is $35.

(ii) For a core session or core maintenance session, as applicable, furnished during a calendar year subsequent to CY 2018. The performance payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

(c) *Bridge payment.* CMS makes a bridge payment to an MDPP supplier only for a core session or core maintenance session furnished to an MDPP beneficiary who has previously received MDPP services from a different MDPP supplier. An MDPP supplier that has previously been paid either a bridge payment or a performance payment for an MDPP beneficiary is not eligible to be paid a bridge payment for that beneficiary. A bridge payment is made only on an assignment-related basis in accordance with § 424.55 of this subchapter, and MDPP suppliers must accept the Medicare allowed charge as payment in full and may not bill or collect from the beneficiary any amount. CMS will make a bridge payment only to an MDPP supplier that complies with all applicable enrollment and program requirements, and only for MDPP services furnished by an eligible coach, on or after his or her coach eligibility start date and, if applicable, before his or her coach eligibility end date. As a condition of payment, the MDPP supplier must report the NPI of the coach who furnished the session on the claim for the MDPP session. The amount of the bridge payment is determined as follows:

(1) For core session or core maintenance session, as applicable, furnished January 1, 2022, through December 31, 2022, the amount is $35.

(2) For core session and core maintenance session, as applicable, furnished during a calendar year subsequent to CY 2022. The bridge payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

* * * * *

■ 43. Amend § 414.626 by revising paragraphs (b)(1) and (f) to read as follows:

§ 414.626 Data reporting by ground ambulance organizations.

* * * * *

(b) * * *

(1) Within 30 days of the date that CMS notifies a ground ambulance organization under paragraph (c)(3) of this section that it has selected the ground ambulance organization to report data under this section, the ground ambulance organization must select a data collection period that corresponds with its annual accounting period and provide the start date of that data collection period to CMS or its contractor.

* * * * *

(f) *Public availability of data.* Beginning in 2024, and at least once every 2 years thereafter, CMS will post on its website data that it collected under this section, including but not limited to summary statistics and ground ambulance organization characteristics.

* * * * *

■ 44. Amend § 414.802 by revising the definition of ''Drug'' to read as follows:

§ 414.802 Definitions.

* * * * *

Drug means a drug or a biological, and for purposes of applying section 1847A(f) of the Act, includes an item, service, supply, or product that is payable under Medicare Part B as a drug or biological.

* * * * *

■ 45. Section 414.806 is revised to read as follows:

§ 414.806 Penalties associated with misrepresentation and the failure to submit timely and accurate ASP data.

(a) *Misrepresentation.* Section 1847A(d)(4)(A) of the Act specifies the penalties associated with misrepresentations in the reporting of the manufacturer's average sales price for a drug as defined at § 414.802.

(b) *Failure to provide timely information or the submission of false information.* (1) For a manufacturer that has entered into and has in effect a rebate agreement under section 1927 of the Act, section 1927(b)(3)(C) of the Act specifies the penalties associated with a manufacturer's failure to submit timely information or the submission of false information.

(2) For a manufacturer that has not entered into and does not have in effect a rebate agreement under section 1927 of the Act, sections 1847A(d)(4)(B) and (C) of the Act specify the penalties associated with a manufacturer's failure to submit timely information or the submission of false information.

■ 46. Amend § 414.904 by adding paragraph (d)(4) to read as follows:

§ 414.904 Average sales price as the basis for payment.

* * * * *

(d) * * *

(4) *Payment adjustment for certain drugs for which there is a self-administered version*—(i) *In general.* Except as provided in paragraphs (d)(4)(ii) and (iii) of this section, if the Inspector General identifies a drug or biological product in a study described in section 1847A(g)(1) of the Act, the Secretary must apply the payment limit for the applicable billing and payment code as specified in paragraph (d)(4)(iv) of this section, beginning with the first day of the second quarter after such study is publicly available. The methodology described in this paragraph will be recalculated each quarter thereafter, except when conditions described in paragraph (d)(4)(ii) are met.

(ii) *Exception.* The adjustment described in paragraph (d)(4)(i) of this section does not apply to the payment limit for a billing and payment code for a quarter if, at the time that ASP calculations are finalized for such quarter, the drug in the dosage form described by the billing and payment code is included by the FDA on the drug shortage list in effect under section 506E of the Federal Food, Drug, and Cosmetic Act.

(iii) *Special rule for certain billing and payment codes.* Effective July 1, 2021, for a billing and payment code described under section 1847A(g)(3) of the Act, the payment limit for the applicable billing and payment code must be determined as described in paragraph (d)(4)(iv) of this section, and the exception specified at paragraph (d)(4)(ii) of this section does not apply.

(iv) *Lesser-of methodology.* For purposes of this section, the payment limit is the lesser of:

(A) The payment limit determined under section 1847A of the Act for such billing and payment code if each National Drug Code for such product so identified under section 1847A(g)(1) of the Act were excluded from such determination; and

(B) The payment limit otherwise determined under section 1847A of the Act for such billing and payment code without application of section 1847A(g) of the Act.

(v) *NDC changes.* For an Inspector General-identified National Drug Code, as described under section 1847A(g)(1) or (3) of the Act, for which the manufacturer has redesignated the National Drug Code (without changes to the dosage form), the application of the lesser-of methodology described in this paragraph must use manufacturer-reported ASP data associated with the redesignated National Drug Code in the same manner as the one originally identified by the Inspector General.

* * * * *

■ 47. Amend § 414.1300 by revising paragraphs (a)(2) and (3) to read as follows:

§ 414.1300 Basis and scope.

(a) * * *

(2) Section 1848(k)—Quality Reporting System.

(3) Section 1848(m)—Incentive Payments for Quality Reporting.

* * * * *

■ 48. Amend § 414.1305—

■ a. By revising the definitions of ''Collection type'' and ''Meaningful EHR user for MIPS'';

■ b. In the definition of ''MIPS determination period'', by revising paragraph (2);

■ c. In the definition of ''MIPS eligible clinician'', by revising the introductory text, paragraph (2) introductory text, and adding paragraph (3);

■ d. By adding the definitions of ''Multispecialty group'', ''MVP participant'', ''Population health measure'', ''QCDR measure'', ''Single specialty group'', ''Special status'' and ''Subgroup'' in alphabetical order; and

■ e. By revising the definition of ''Submission type''.

The revisions and additions read as follows:

§ 414.1305 Definitions.

* * * * *

Collection type means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS survey; and administrative claims measures.

(1) For the CY 2021 through CY 2024 performance periods/2023 through 2026 MIPS payment years, collection types include CMS Web Interface measures for APM Entities reporting through the APM Performance Pathway in accordance with § 414.1367.

(2) [Reserved]

* * * * *

Meaningful EHR user for MIPS means a MIPS eligible clinician who possesses CEHRT, uses the functionality of CEHRT, reports on applicable objectives and measures specified for the Promoting Interoperability performance category for a performance period in the form and manner specified by CMS, does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, and engages in activities related to supporting providers with the performance of CEHRT.

* * * * *

MIPS determination period means:

* * *

(2) Subject to § 414.1310(b)(1)(iii), an individual eligible clinician, group, or APM Entity group that is identified as not exceeding the low-volume threshold or as having special status, as applicable, during the first segment of the MIPS determination period will be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. An individual eligible clinician, group, or APM Entity group for which the unique billing TIN and NPI combination is established during the second segment of the MIPS determination period will be assessed based solely on the results of such segment.

MIPS eligible clinician as identified by a unique billing TIN and NPI combination used to assess performance, means any of the following (except as excluded under § 414.1310(b)):

* * * * *

(2) For the 2021 through 2023 MIPS payment years:

* * * * *

(3) For the 2024 MIPS payment year and future years:

(i) A clinician described in paragraph (2) of this definition;

(ii) A clinical social worker (as defined in section 1861(hh)(1) of the Act);

(ii) A certified nurse midwife (as defined in section 1861(gg)(2) of the Act); and

(vii) A group that includes such clinicians.

* * * * *

Multispecialty group means a group that consists of two or more specialty types.

MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2026 performance period/2028 MIPS payment year and future years, MVP Participant means an individual MIPS eligible clinician, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

* * * * *

Population health measure means a quality measure that indicates the quality of a population or cohort's overall health and well-being, such as access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services.

* * * * *

QCDR measure means a quality measure that is submitted by a QCDR and approved by CMS under § 414.1400. QCDR measures consist of:

(1) Measures that are not included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year; and

(2) Measures that are included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year, but have undergone substantive changes, as determined by CMS.

* * * * *

Single specialty group means a group that consists of one specialty type.

* * * * *

Special status means that a MIPS eligible clinician:

(1) Meets the definition of an ASC-based MIPS eligible clinician, facility-based MIPS eligible clinician, hospital-based MIPS eligible clinician, non-patient facing MIPS eligible clinician, or is in a small practice; or

(2) Is located in an HPSA or rural area.

Subgroup means a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, subgroup identifier, and each eligible clinician's NPI.

Submission type means the mechanism by which the submitter type submits data to CMS, including, but not limited to:

(1) Direct;

(2) Log in and upload;

(3) Log in and attest;

(4) Medicare Part B claims; and

(5) CMS Web Interface (except as provided in paragraph (5)(i) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years).

(i) For the CY 2021 through CY 2024 performance periods/2023 through 2026 MIPS payment years, submission types include the CMS Web Interface for APM Entities reporting through the APM Performance Pathway in accordance with § 414.1367.

(ii) [Reserved]

* * * * *

■ 49. Amend § 414.1310 by revising paragraph (e)(1) to read as follows:

§ 414.1310 Applicability.

* * * * *

(e) * * *

(1) Except as provided under §§ 414.1315(a)(2), 414.1317(b), 414.1318(b), and 414.1370(f)(2) each MIPS eligible clinician in the group receives a final score based on the group's combined performance assessment.

* * * * *

■ 50. Amend § 414.1317 by revising paragraph (b)(2) to read as follows:

§ 414.1317 APM Entity groups.

* * * * *

(b) * * *

(2) *Performance category weights.* The cost performance category weight is zero percent of the final score for an APM Entity. The performance category reweighting scenarios under § 414.1380(c)(2) apply to an APM Entity.

* * * * *

■ 51. Section 414.1318 is added to subpart O to read as follows:

§ 414.1318 Subgroups.

(a) *Eligibility and special status*—(1) *General.* Except as provided under paragraph (a)(2) of this section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for subgroups are determined at the group level in accordance with §§ 414.1305 and 414.1310.

(2) *Exclusions.* An individual eligible clinician or group that elects to participate in MIPS as a MIPS eligible clinician in accordance with § 414.1310(b)(1)(iii)(A) or (b)(2) is not eligible to participate in a subgroup.

(b) *Final score.* Except as provided under § 414.1317(b), each MIPS eligible clinician in the subgroup receives a final score based on the subgroup's combined performance assessment.

(c) *Subgroup reporting requirements.* For individual eligible clinicians to participate in MIPS as a subgroup, all of the following requirements must be met:

(1) Individual eligible clinicians that elect to participate in MIPS as a subgroup must aggregate their quality and improvement activities performance data across the subgroup's identifier.

(2) Individual eligible clinicians that elect to participate in MIPS as a subgroup will have their performance assessed at the subgroup level across all the MIPS performance categories based on an MVP in accordance with § 414.1365 and on the APM Performance Pathway in accordance with § 414.1367, as applicable. Subgroups that are MVP Participants must adhere to an election process described in § 414.1365(b).

■ 52. Amend § 414.1320 by—

■ a. Redesignating paragraphs (d) through (g) as paragraphs (e) through (h), respectively; and

■ b. Adding a new paragraph (d).

The addition reads as follows:

§ 414.1320 MIPS performance period.

* * * * *

(d) For purposes of the CY 2020 performance period/2022 MIPS payment year, the performance period for:

(1) The quality and cost performance categories are the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year.

(2) The improvement activities performance categories are a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

* * * * *

■ 53. Amend § 414.1325 by revising paragraph (c)(1) to read follows:

§ 414.1325 Data submission requirements.

* * * * *

(c) * * *

(1) For the quality performance category, the direct; login and upload; Medicare Part B claims (beginning with the CY 2019 MIPS performance period/2021 MIPS payment year, for small practices only); and CMS Web Interface (for groups consisting of 25 or more eligible clinicians, a third party intermediary submitting on behalf of a group) submission type.

* * * * *

■ 54. Amend § 414.1340 revising paragraphs (a)(3) and (b)(3) to read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

(a) * * *

(3) At least 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2022, 2023, 2024, and 2025.

* * * * *

(b) * * *

(3) At least 70 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment years 2022, 2023, 2024, and 2025.

* * * * *

■ 55. Amend § 414.1350 by revising paragraph (c)(4) and adding paragraph (c)(6) to read as follows:

§ 414.1350 Cost performance category.

* * * * *

(c) * * *

(4) For the procedural episode-based measures specified beginning with the CY 2019 performance period/2021 MIPS payment year, the case minimum is 10, unless otherwise specified for individual measures. Beginning with the CY 2022 performance period/2024 MIPS payment year, the case minimum for Colon and Rectal Resection procedural episode-based measure is 20 episodes.

* * * * *

(6) For the chronic condition episode-based measures specified beginning with the CY 2022 performance period/2024 MIPS payment year, the case minimum is 20.

* * * * *

■ 56. Amend § 414.1360 by revising paragraph (a)(2) to read as follows:

§ 414.1360 Data submission criteria for the improvement activities performance category.

(a) * * *

(2) *Groups and virtual groups.* Beginning with the 2022 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group's TIN or virtual group's TINs or that are part of the subgroup, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance year.

* * * * *

■ 57. Section 414.1365 is added to subpart O to read as follows:

§ 414.1365 MIPS Value Pathways.

(a) *General.* (1) Beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, CMS uses MVPs included in the MIPS final inventory of MVPs established by CMS through rulemaking to assess performance for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

(2) [Reserved]

(b) *MVP/Subgroup registration.* (1) To report an MVP, an MVP Participant must register for the MVP, and if applicable, as a subgroup during a period that begins on April 1 and ends on November 30 of the applicable CY performance period or a later date specified by CMS. To report the CAHPS for MIPS survey associated with an MVP, a group, subgroup or APM Entity must complete their registration by June 30 of such performance period or a later date specified by CMS.

(2) At the time of registration, the MVP Participant must submit the following information, as applicable:

(i) Each MVP Participant must select an MVP, 1 population health measure included in the MVP, and any outcomes-based administrative claims measure on which the MVP Participant intends to be scored.

(ii) Each subgroup must submit a list of each TIN/NPI associated with the subgroup and a plain language name for the subgroup.

(c) *MVP reporting requirements*—(1) Quality. Except as provided in paragraph (c)(1)(i) of this section, an MVP Participant must select and report, if applicable, 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure), included in the MVP, excluding the population health measure required under paragraph (c)(4)(ii) of this section.

(i) Paragraph (c)(1) introductory text of this section does not apply to a small practice that reports on an MVP that includes fewer than 4 Medicare Part B claims measures, provided that the small practice reports each such measure that is applicable.

(ii) [Reserved]

(2) *Cost.* An MVP Participant is scored on the cost measures included in the MVP that they select and report.

(3) *Improvement activities.* An MVP Participant who reports an MVP, must report one of the following:

(i) Two medium-weighted improvement activities;

(ii) One high-weighted improvement activity;

(iii) Participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

(4) *Foundational layer*—(i) Promoting interoperability. An MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described at § 414.1375(b).

(A) For the CY 2023 and 2024 performance periods/2025 and 2026 MIPS payment years, an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category.

(B) [Reserved]

(ii) *Population health measures.* Each MVP Participant is scored on 1 population health measure in accordance with paragraph (d)(1) of this section.

(d) *MVP scoring*—(1) General. An MVP Participant that is not an APM Entity is scored on measures and activities included in the MVP in accordance with paragraphs (d)(1) through (3) of this section. An MVP Participant that is an APM Entity is scored on measures and activities included in the MVP in accordance with § 414.1317(b).

(2) *Performance standards.* Unless otherwise indicated in this paragraph (d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP.

(3) *Performance categories.* An MVP Participant is scored under MIPS in four performance categories.

(i) *Quality performance category.* Except as provided in paragraphs (d)(3)(i)(A)(1) and (d)(3)(i)(B) of this section, the quality performance category score for MVP Participants is calculated in accordance with § 414.1380(b)(1) based on measures included in the MVP.

(A) *Population health measures.* Except as provided in paragraph (d)(3)(i)(A)(*1*) of this section, each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP participant's total measure achievement points and total available measure achievement points.

(*1*) Subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points.

(*2*) [Reserved]

(B) *Outcomes-based administrative claims measures.* MVP Participants receive zero measure achievement points for each selected outcomes-based administrative claims measure that does not have a benchmark or meet the case minimum requirement.

(ii) *Cost performance category.* The cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report.

(iii) *Improvement activities performance category.* The improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. MVP Participants will receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

(iv) *Promoting interoperability performance category.* The Promoting Interoperability performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(4), except as provided in paragraph (d)(3)(iv)(A) of this section.

(A) If a subgroup does not submit its affiliated group's data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

(B) [Reserved]

(e) *Final score calculation.* The final score is calculated for an MVP Participant using the methodology at § 414.1380(c), unless otherwise indicated in this paragraph (e).

(1) *MVP performance category weights.* For an MVP Participant that is not an APM Entity, the final score is calculated using the performance category weights described at § 414.1380(c)(1). For an MVP Participant that is an APM Entity, the final score is calculated using the performance category weights described at § 414.1317(b).

(2) *Reweighting MVP performance categories*—(i) General reweighting. For an MVP Participant that is not an APM Entity, in accordance with paragraph (e)(2)(iii) of this section, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in the circumstances described at § 414.1380(c)(2)(i)(A)(2) through (9) and § 414.1380(c)(2)(i)(C). For an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

(ii) *Subgroups.* For an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. In addition, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the following circumstances independent of the affiliated group:

(A) A subgroup may submit an application to CMS demonstrating that it was subject to extreme and uncontrollable circumstances and receive reweighting in accordance with § 414.1380(c)(2)(i)(A)(6) and (c)(2)(i)(C)(2). In the event that a

subgroup submits data for a performance category, the scoring weight described at § 414.1380(c)(1) would be applied and its weight would not be redistributed.

(B) A subgroup will receive reweighting if CMS determines, based on information known to the agency prior to the beginning of the relevant MIPS payment year, that data for the subgroup are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the subgroup and its agents, in accordance with § 414.1380(c)(2)(i)(A)(9) and (c)(2)(i)(C)(10).

(iii) *Reweighting scenarios.* For an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in accordance with § 414.1380(c)(2)(ii). For an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

(3) *Facility-based scoring.* If an MVP Participant, that is not an APM Entity, is eligible for facility-based scoring, a facility-based score also will be calculated in accordance with § 414.1380(e).

(4) *Complex patient bonus.* A complex patient bonus will be added to the final score for an MVP Participant in accordance with § 414.1380(c)(3).

■ 58. Amend § 414.1375—
■ a. By revising paragraph (b)(2)(ii);
■ b. By revising the paragraph (b)(3) subject heading;
■ c. By revising paragraph (b)(3)(ii) introductory text; and
■ c. Adding paragraph (b)(3)(iii).

The revisions and addition read as follows:

§ 414.1375 Promoting Interoperability (PI) performance category.

* * * * *

(b) * * *

(2) * * *

(ii) Beginning with the 2021 MIPS payment year:

(A) Report that the MIPS eligible clinician completed the actions included in the Security Risk Analysis measure during the year in which the performance period occurs;

(B) For each required measure, as applicable, report the numerator (of at least one) and denominator, or yes/no statement, or an exclusion for each measure that includes an option for an exclusion; and

(C) Beginning with the 2024 MIPS payment year, report that the MIPS eligible clinician completed the actions included in the SAFER Guides measure during the year in which the performance period occurs.

(3) *Engaging in activities related to supporting providers with the performance of CEHRT; support for health information exchange and the prevention of information blocking; actions to limit or restrict the compatibility or interoperability of CEHRT.* * * *

* * * * *

(ii) *Support for health information exchange and the prevention of information blocking.* For the 2019, 2020, 2021, 2022, and 2023 MIPS payment years, the MIPS eligible clinician must attest to CMS that he or she—

* * * * *

(iii) *Actions to limit or restrict the compatibility or interoperability of CEHRT.* Beginning with the 2024 MIPS payment year, the MIPS eligible clinician must attest to CMS that he or she—

(A) Did not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology.

(B) [Reserved]

■ 59. Amend § 414.1380 by—
■ a. Revising paragraphs (b)(1)(i) introductory text and(b)(1)(i)(A)(*1*);
■ b. Adding paragraphs (b)(1)(i)(A)(*3*) and (b)(1)(i)(C);
■ c. Revising paragraphs (b)(1)(iii), (b)(1)(v)(A) introductory text, and (b)(1)(v)(B) introductory text;
■ d. Adding paragraph (b)(1)(v)(B)(*1*)(*iii*);
■ e. Revising paragraphs (b)(1)(vi)(C) introductory text, (b)(1)(vi)(C)(*4*), (b)(1)(vi)(E), (b)(1)(vii) introductory text, (b)(1)(vii)(A), (b)(2)(iii) introductory text, and (b)(2)(v) introductory text;
■ f. Adding paragraphs (b)(2)(v)(A) and (B);
■ g. Revising paragraph (b)(4)(ii) introductory text and (b)(4)(ii)(C);
■ h. Revising the table in paragraph (c) introductory text;
■ i. Revising paragraph (c)(2)(i)(A)(*4*);
■ j. Removing and reserving paragraph (c)(2)(i)(A)(*5*);
■ k. Revising paragraphs (c)(2)(i)(C)(*9*), (c)(2)(ii)(A), and (c)(2)(ii)(F);
■ l. Adding paragraph (c)(2)(ii)(G); and
■ m. Revising paragraphs (c)(3) and (e)(6)(iv) through (vi).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(i) *Measure achievement points.* For the CY 2017 through 2021 performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340 and for each administrative claims-based measure that has a benchmark at paragraph (b)(1)(ii) of this section and meets the case minimum requirement at paragraph (b)(1)(iii) of this section. Except as provided under paragraph (b)(1)(i)(C) of this section, beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive between 1 and 10 measure achievement points (including partial points) for each such measure. The number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points. Beginning with the CY 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

(A) * * *

(*1*) Except as provided in paragraphs (b)(1)(i)(A)(*2*) and (*3*) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement. Beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians other than small practices receive 0 measure achievement points

for each such measure, and small practices receive 3 measure achievement points for each such measure.

* * * * *

(*3*) Beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive 7 measure achievement points for each submitted measure in its first year in MIPS and 5 measure achievement points for each submitted measure in its second year in MIPS that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement.

* * * * *

(C) *New measures.* Beginning with the CY 2023 performance period/2025 MIPS payment year, for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340, a MIPS eligible clinician receives between 7 and 10 measure achievement points (including partial points) for each such measure in its first year in MIPS and between 5 and 10 measure achievement points for each such measure in its second year in MIPS.

* * * * *

(iii) *Minimum case requirements.* Except as otherwise specified in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

(v) * * *

(A) *High priority measures.* Subject to paragraph (b)(1)(v)(A)(*1*) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure and 1 measure bonus point for each other high priority measure. Beginning with the 2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures.

* * * * *

(B) *End-to-end electronic reporting.* Subject to paragraph (b)(1)(v)(B)(*1*) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 1 measure bonus point for each measure (except claims-based measures) submitted with end-to-end electronic reporting for a quality measure under certain criteria determined by the Secretary.

(*1*) * * *

(*iii*) Beginning in the 2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus for submitting using end-to-end electronic reporting.

* * * * *

(vi) * * *

(C) The improvement percent score is assessed at the performance category level for the quality performance category and included in the calculation of the quality performance category score as described in paragraph (b)(1)(vii) of this section.

* * * * *

(*4*) Beginning with the CY 2018 performance period/2020 MIPS payment year, we will assume a quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

* * * * *

(E) For the purpose of improvement scoring methodology, the term ''improvement percent score'' means the score that represents improvement for the purposes of calculating the quality performance category score as described in paragraph (b)(1)(vii) of this section.

* * * * *

(vii) *Quality performance category score.* A MIPS eligible clinician's quality performance category score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) of this section. The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) of this section is added to that result. The quality performance category score cannot exceed 100 percentage points.

(A) For each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points. For purposes of this paragraph (b)(1)(vii)(A), ''significant changes or errors'' means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes or inclusion of inactive or inaccurate codes, or changes to clinical guidelines or measure specifications. CMS will publish on the CMS website a list of all measures scored under this paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than the data submission deadline at § 414.1325(e)(1).

* * * * *

(2) * * *

(iii) The cost performance category score is the sum of the following, not to exceed 100 percent:

* * * * *

(v) A cost performance category score is not calculated if a MIPS eligible clinician or group is not attributed any cost measures for the performance period because the clinician or group has not met the minimum case volume specified by CMS for any of the cost measures or a benchmark has not been created for any of the cost measures that would otherwise be attributed to the clinician or group.

(A) Beginning with the 2024 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes during the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician's or group's cost performance category score. For purposes of this paragraph (b)(2)(v)(A), ''significant changes'' are changes external to the care provided, and that CMS determines may lead to misleading or inaccurate results. Significant changes include, but are not limited to, rapid or unprecedented changes to service utilization, and will be empirically assessed by CMS to determine the extent to which the changes impact the calculation of a cost measure score that reflects clinician performance.

(B) [Reserved]

* * * * *

(4) * * *

(ii) Beginning with the 2019 performance period/2021 MIPS payment year, a MIPS eligible clinician's Promoting Interoperability performance category score equals the sum of the scores for each of the required measures and any applicable bonus scores, not to exceed 100 points.

* * * * *

(C) Each optional measure is worth five or ten bonus points, as specified by CMS.

* * * * *

(c) * * *

TABLE 1 TO PARAGRAPH (c) INTRODUCTORY TEXT

For the 2019 MIPS payment year:
Final score = [(quality performance category score × quality performance category weight) + (cost performance category score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)], not to exceed 100 points.
For the 2020 MIPS payment year:
Final score = [(quality performance category score × quality performance category weight) + (cost performance category score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)] × 100 + [the complex patient bonus + the small practice bonus], not to exceed 100 points.
Beginning with the 2021 MIPS payment year:
Final score = [(quality performance category score × quality performance category weight) + (cost performance category score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)] × 100 + the complex patient bonus, not to exceed 100 points.

* * * * *

(2) * * *

(i) * * *

(A) * * *

(*4*) *For the Promoting Interoperability performance category:* (*i*) For the 2021 through 2024 MIPS payment years, the MIPS eligible clinician is a physical therapist, occupational therapist, clinical psychologist, qualified audiologist, qualified speech-language pathologist, or a registered dietitian or nutrition professional. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(*ii*) For the 2019 through 2024 MIPS payment years, the MIPS eligible clinician is a nurse practitioner, physician assistant, clinical nurse specialist, or certified registered nurse anesthetist. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(*iii*) For the 2024 MIPS payment year, the MIPS eligible clinician is a clinical social worker. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

* * * * *

(C) * * *

(*9*) For the 2020 MIPS payment year through the 2023 MIPS payment year the MIPS eligible clinician demonstrates through an application submitted to CMS that they are in a small practice as defined in § 414.1305, and overwhelming barriers prevent them from complying with the requirements for the Promoting Interoperability performance category. Beginning with the 2024 MIPS payment year the MIPS eligible clinician is in a small practice as defined in § 414.1305.

* * * * *

(ii) * * *

(A) For the 2019 MIPS payment year:

TABLE 2 TO PARAGRAPH (c)(2)(ii)(A)

Performance category (%)	Weighting for the 2019 MIPS payment year (%)	Reweight scenario if no promoting interoperability performance category score (%)	Reweight scenario if no quality performance category score (%)	Reweight scenario if no improvement activities performance category score (%)
Quality	60	85	0	75
Cost	0	0	0	0
Improvement Activities	15	15	50	0
Promoting Interoperability	25	0	50	25

* * * * *

(F) Except as provided in paragraph (c)(2)(ii)(G) of this section, beginning with the 2024 MIPS payment year:

TABLE 7 TO PARAGRAPH (c)(2)(ii)(F)

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting interoperability (%)
No Reweighting Needed:				
Scores for all four performance categories	30	30	15	25
No Cost	55	0	15	30

TABLE 7 TO PARAGRAPH (c)(2)(ii)(F)—Continued

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting interoperability (%)
No Promoting Interoperability	55	30	15	0
No Quality	0	30	15	55
No Improvement Activities	45	30	0	25
No Cost and no Promoting Interoperability	85	0	15	0
No Cost and no Quality	0	0	15	85
No Cost and no Improvement Activities	70	0	0	30
No Promoting Interoperability and no Quality	0	50	50	0
No Promoting Interoperability and no Improvement Activities	70	30	0	0
No Quality and no Improvement Activities	0	30	0	70

(G) For small practices beginning with the 2024 MIPS payment year:

TABLE 8 TO PARAGRAPH (c)(2)(ii)(G)

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting interoperability (%)
No Reweighting Needed:				
Scores for all four performance categories	30	30	15	25
No Cost	55	0	15	30
No Promoting Interoperability	40	30	30	0

* * * * *

(3) *Complex patient bonus.* For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, provided that a MIPS eligible clinician, group, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as stated in paragraphs (c)(3)(i) through (iv) of this section. Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii) of this section.

(i) For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, for MIPS eligible clinicians and groups, the complex patient bonus is calculated as follows: [The average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group] + [the dual eligible ratio × 5].

(ii) For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, for APM Entities and virtual groups, the complex patient bonus is calculated as follows: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM Entity or virtual group, respectively] + [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM Entity or virtual group, respectively, × 5].

(iii) For the 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, the complex patient bonus cannot exceed 5.0 except as provided in paragraph (c)(3)(iv) of this section.

(iv) For the 2022 and 2023 MIPS payment years and associated performance periods, the complex patient bonus is calculated pursuant to paragraphs (c)(3)(i) and (ii) of this section, and the resulting numerical value is then multiplied by 2.0. The complex patient bonus cannot exceed 10.0.

(v) Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM Entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. To determine the median for the respective risk indicator (HCC and dual proportion), risk indicators associated with the final score assigned to a clinician from the most recent prior performance period, for all those who have submitted data for at least one MIPS performance category or are facility-based, are used.

(vi) Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific

risk indicators: Medical complex patient bonus component = 1.5 + 4 * associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component = 1.5 + 4 * associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation.

(vii) Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for APM Entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM Entity or virtual group, respectively; social complex patient bonus component = 1.5 + 4 * the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM Entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation.

(viii) Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

* * * * *

(e) * * *

(6) * * *

(iv) *Quality.* The quality performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS quality performance category score for those MIPS-eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. A clinician or group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS quality performance category

(v) *Cost.* The cost performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS cost performance category score for those MIPS eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. A clinician or group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS cost performance category.

(A) *Other cost measures.* MIPS eligible clinicians who are scored under facility-based measurement are not scored on cost measures described in paragraph (b)(2) of this section.

(B) [Reserved]

(vi) *Use of score from facility-based measurement.* The MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology described in paragraph (e)(6) of this section unless:

(A) For the CY 2019 MIPS performance period/2021 MIPS payment year, through the CY 2021 MIPS performance period/2023 MIPS payment year, a clinician or group receives a higher combined MIPS quality and cost performance category score through another MIPS submission.

(B) Beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, a clinician or group receives a higher MIPS final score through another MIPS submission.

■ 60. Amend § 414.1395 by revising paragraph (c) to read as follows:

§ 414.1395 Public reporting.

* * * * *

(c) *New measures and activities.* (1) CMS does not publicly report any data on new quality or cost measure for the first 2 years in which it is in the program, after which CMS evaluates the measure to determine whether it is suitable for public reporting under paragraph (b) of this section.

(2) CMS does not publicly report any MVP data on new improvement activity or Promoting Interoperability measure, objective, or activity included in an MVP for the first year in which it is included in the MVP.

* * * * *

■ 61. Revise § 414.1400 to read as follows:

§ 414.1400 Third party intermediaries.

(a) *General.* (1) MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity by any of the following third party intermediaries:

(i) QCDR;

(ii) Qualified registry;

(iii) Health IT vendor; or

(iv) CMS-approved survey vendor.

(2) Third party intermediary approval criteria—

(i) To be approved as a third party intermediary, an entity must agree to meet the applicable requirements of this section, including, but not limited to, the following:

(A) A third party intermediary's principle place of business and retention of any data must be based in the U.S.

(B) If the data is derived from CEHRT, a QCDR, qualified registry, or health IT vendor must be able to indicate its data source.

(C) All data must be submitted in the form and manner specified by CMS.

(D) If the clinician chooses to opt-in in accordance with § 414.1310, the third party intermediary must be able to transmit that decision to CMS.

(E) The third party intermediary must provide services throughout the entire performance period and applicable data submission period.

(F) Prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM Entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved a transition plan.

(ii) The determination of whether to approve an entity as a third party intermediary for a MIPS payment year may take into account:

(A) Whether the entity failed to comply with the requirements of this section for any prior MIPS payment year for which it was approved as third party intermediary; and

(B) Whether the entity provided inaccurate information regarding the

requirements of this subpart to any eligible clinician.

(iii) Beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner, and at the times, specified by CMS.

(3) All data submitted to CMS by a third party intermediary on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must be certified by the third party intermediary as true, accurate, and complete to the best of its knowledge. Such certification must be made in a form and manner and at such time as specified by CMS.

(b) *Additional requirements for QCDRs and qualified registries*—(1) General. (i) Beginning with the CY 2021 performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories:

(A) Quality, except:

(1) The CAHPS for MIPS survey; and

(2) For qualified registries, QCDR measures;

(B) Improvement activities; and

(C) Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless the third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4)(i) through (iii) or (c)(2)(i)(C)(1) through (7) or (c)(2)(i)(C)(9).

(ii) Beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP.

(2) *Self-nomination.* For the CY 2018 and 2019 performance periods/2020 and 2021 MIPS payment years, entities seeking to qualify as a QCDR or qualified registry must self-nominate September 1 until November 1 of the CY preceding the applicable performance period. For the CY 2020 performance period/2022 MIPS payment year and future years, entities seeking to qualify as a QCDR or qualified registry must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking to qualify as a QCDR or qualified registry for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review process. For the CY 2019 performance period/2021 MIPS payment year and future years, existing QCDRs and qualified registries that are in good standing may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period.

(3) *Conditions for approval.* (i) Beginning with the CY 2020 performance period/2022 MIPS payment year, the QCDR or qualified registry must have at least 25 participants by January 1 of the year prior to the applicable performance period.

(ii) If an entity seeking to qualify as a QCDR or qualified registry uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period.

(iii) Beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR or qualified registry. Exceptions to this requirement may occur if the QCDR or qualified registry submits notification to CMS within the performance period promptly within the month of realization of the impending deficiency and provides sufficient rationale as to why they do not believe they would be able to meet this requirement (for example, if the QCDR does not receive the data from their clinician until the end of the performance period).

(iv) Beginning with the CY 2023 performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination for CMS' approval and may not change the plan once approved without the prior approval of the agency.

(v) Beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct annual data validation audits in accordance with this paragraph (b)(3)(v).

(A) The QCDR or qualified registry must conduct data validation for the payment year prior to submitting any data for that payment year to CMS for purposes of the MIPS program.

(B) The QCDR or qualified registry must conduct data validation on data for each performance category for which it will submit data, including if applicable the Quality, Improvement Activities, and Promoting Interoperability performance categories.

(C) The QCDR or qualified registry must conduct data validation on data for each submitter type for which it will submit data, including MIPS eligible clinicians, groups, virtual groups, subgroups, APM entities, voluntary participants, and opt-in participants, if applicable.

(D) The QCDR or qualified registry must use clinical documentation (provided by the clinicians they are submitting data for) to validate that the action or outcome measured actually occurred or was performed.

(E) The QCDR or qualified registry must conduct each data validation audit using a sampling methodology that meets the following requirements:

(1) Uses a sample size of at least 3 percent of the TIN/NPIs for which the QCDR or qualified registry will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the QCDR or qualified registry must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the QCDR or qualified registry may use a sample size of 50 TIN/NPIs.

(2) Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.

(F) Each QCDR or qualified registry data validation audit must include the following:

(1) Verification of the eligibility status of each eligible clinician, group, virtual group, subgroup, opt-in participant, and voluntary participant.

(2) Verification of the accuracy of TINs and NPIs.

(3) Calculation of reporting and performance rates.

(4) Verification that only the MIPS quality measures and QCDR measures, as applicable, that are relevant to the performance period will be used for MIPS submission.

(G) In a form and manner and by a deadline specified by CMS, the QCDR or qualified registry must report the results of each data validation audit, including the overall data deficiencies or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or

error, and, how and when each deficiency or data error type was corrected.

(1) QCDRs and qualified registries must conduct validation on the data they intend to submit for the MIPS performance period and provide the results of the executed data validation plan by May 31st of the year following the performance period.

(2) [Reserved]

(vi) Beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with this paragraph (b)(3)(vi).

(A) If a data validation audit under paragraph (b)(3)(v) of this section identifies one or more deficiency or data error, the QCDR or qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

(B) The QCDR or qualified registry must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the submission of data for that MIPS payment year.

(C) The QCDR or qualified registry must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraph (b)(3)(iv)(E) of this section. The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

(D) In a form and manner and by a deadline specified by CMS, the QCDR or qualified registry must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected.

(vii) For the CY 2023 performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the 2019 through 2023 MIPS payment years must submit a participation plan for CMS' approval. The participation plan must include the QCDR and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(viii) Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. This participation plan must include the QCDR's and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(4) *QCDR measures for the quality performance category—(i) QCDR measure self-nomination requirements.* For the CY 2018 performance period/2020 MIPS payment year and future years, at the time of self-nomination an entity seeking to become a QCDR must submit the following information for any measure it intends to submit for the payment year.

(A) For MIPS quality measures, the entity must submit specifications including the MIPS measure IDs and specialty-specific measure sets, as applicable.

(B) For QCDR measures, the entity must submit for CMS-approval measure specifications including: Name/title of measures, NQF number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS approval of any QCDR measure specifications, the entity must publicly post the measure specifications for that QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

(ii) *QCDR measure submission requirements.* A QCDR must include the CMS-assigned QCDR measure ID when submitting data on any QCDR measure to CMS.

(iii) *QCDR measure approval criteria.* (A) QCDR measure requirements for approval are:

(*1*) QCDR measures that are beyond the measure concept phase of development.

(*2*) QCDR measures that address significant variation in performance.

(*3*) Beginning with the CY 2022 performance period/2024 MIPS payment year, all QCDR measures must meet face validity. To be approved for the CY 2023 performance period/2025 MIPS payment year, all QCDR measures must meet face validity for the initial MIPS payment year for which it is approved. For subsequent years after being initially approved, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.

(*i*) To be included in an MVP for the CY 2022 performance period/2024 MIPS payment year and future years, a QCDR measure must be fully tested.

(*ii*) [Reserved]

(**4**) Beginning with the CY 2022 performance period/2023 MIPS payment year, QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period.

(*5*) Beginning with the CY 2020 performance period/2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures or MIPS quality measures in order to be considered for the program in subsequent years. If such areas of duplication are not addressed, CMS may reject the duplicative QCDR measure.

(B) QCDR measure considerations for approval include, but are not limited to:

(*1*) Measures that are outcome-based rather than clinical process measures.

(*2*) Measures that address patient safety and adverse events.

(*3*) Measures that identify appropriate use of diagnosis and therapeutics.

(**4**) Measures that address the domain of care coordination.

( ) Measures that address the domain for patient and caregiver experience.

(*6*) Measures that address efficiency, cost, and resource use.

(*7*) Beginning with the CY 2021 performance period/2023 MIPS payment year -

(*i*) That QCDRs link their QCDR measures as feasible to at least one cost measure, improvement activity, or an MVP at the time of self-nomination.

(*ii*) In cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, CMS would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements and considerations.

(*8*) Beginning with the CY 2020 performance period/2022 MIPS payment year CMS may consider the extent to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS. If CMS determines that a QCDR measure is not available to MIPS eligible clinicians, groups, and virtual groups reporting through other QCDRs, CMS may not approve the measure.

(*9*) Greater consideration is given to measures for which QCDRs:

(i) Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and

(*ii*) Utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint in the CMS Measures Management System to identify measurement gaps prior to measure development.

(*10*) Beginning with the CY 2020 performance period/2022 MIPS payment year, CMS places greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not, may not continue to be approved.

(*i*) Beginning with the CY 2020 performance period/2022 MIPS payment year, in instances where a QCDR believes the low-reported QCDR measure that did not meet benchmarking thresholds is still important and relevant to a specialist's practice, that the QCDR may develop and submit a QCDR measure participation plan for our consideration. This QCDR measure participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

(*ii*) [Reserved]

(C) Beginning with the CY 2021 performance period/2023 MIPS payment year, QCDR measures may be approved for 2 years, at CMS discretion by attaining approval status by meeting QCDR measure considerations and requirements. Upon annual review, CMS may revoke a QCDR measure's second year approval, if the QCDR measure is found to be: Topped out; duplicative of a more robust measure; reflects an outdated clinical guideline; or if the QCDR self-nominating the QCDR measure is no longer in good standing.

(iv) *QCDR measure rejection criteria.* Beginning with the CY 2020 performance period/2022 MIPS payment year, QCDR measure rejection considerations include, but are not limited to:

(A) QCDR measures that are duplicative or identical to other QCDR measures or MIPS quality measures that are currently in the program.

(B) QCDR measures that are duplicative or identical to MIPS quality measures that have been removed from MIPS through rulemaking.

(C) QCDR measures that are duplicative or identical to quality measures used under the legacy Physician Quality Reporting System (PQRS) program, which have been retired.

(D) QCDR measures that meet the topped out definition as described at § 414.1305.

(E) QCDR measures that are process-based, with consideration to whether the removal of the process measure impacts the number of measures available for a specific specialty.

(F) Whether the QCDR measure has potential unintended consequences to a patient's care.

(G) Considerations and evaluation of the measure's performance data, to determine whether performance variance exists.

(H) QCDR measures that split a single clinical practice or action into several QCDR measures.

(I) QCDR measures that are ''check-box'' with no actionable quality action.

(J) QCDR measures that do not meet the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years.

(K) QCDR measures with clinician attribution issues, where the quality action is not under the direct control of the reporting clinician.

(L) QCDR measures that focus on rare events or ''never events'' in the measurement period.

(M) QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period.

(N) If a QCDR measure owner is not approved or is not in good standing, any associated QCDR measures will not be approved.

(c) *Additional requirements for Health IT vendors.* (1) Beginning with the CY 2021 performance period/2023 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:

(i) Health IT vendors that support MVPs must be able to submit data for all of the MIPS performance categories:

(A) Quality, except:

(*1*) The CAHPS for MIPS survey; and

(*2*) QCDR measures;

(B) Improvement activities; and

(C) Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:

(*1*) The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*)(*i*) through (*iii*) or (c)(2)(i)(C)(*1*) through (*7*) or (c)(2)(i)(C)(*9*).

(*2*) [Reserved]

(ii) Health IT vendors that do not support MVPs must be able to submit data for at least one of the MIPS performance categories described in paragraphs (c)(1)(i) of this section.

(iii) Beginning with the CY 2023 performance period/2025 MIPS payment year, Health IT vendors must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data. Health IT vendors may also support the APP.

(2) [Reserved]

(d) *Additional requirements for CMS-approved survey vendors.* (1) CMS-approved survey vendors may submit data on the CAHPS for MIPS survey for the MIPS quality performance category.

(2) Entities seeking to be a CMS-approved survey vendor for any MIPS performance period must submit a survey vendor application to CMS in a form and manner specified by CMS for each MIPS performance period for which it wishes to transmit such data. The application and any supplemental information requested by CMS must be submitted by deadlines specified by CMS. For an entity to be a CMS-approved survey vendor, it must meet the following criteria:

(3) The entity must have sufficient experience, capability, and capacity to accurately report CAHPS data, including:

(i) At least 3 years of experience administering mixed-mode surveys (that is, surveys that employ multiple modes to collect date), including mail survey administration followed by survey administration via Computer Assisted Telephone Interview (CATI);

(ii) At least 3 years of experience administering surveys to a Medicare population;

(iii) At least 3 years of experience administering CAHPS surveys within the past 5 years;

(iv) Experience administering surveys in English and at least one other language for which a translation of the CAHPS for MIPS survey is available;

(v) Use equipment, software, computer programs, systems, and facilities that can verify addresses and phone numbers of sampled beneficiaries, monitor interviewers, collect data via CATI, electronically administer the survey and schedule call-backs to beneficiaries at varying times of the day and week, track fielded surveys, assign final disposition codes to reflect the outcome of data collection of each sampled case, and track cases from mail surveys through telephone follow-up activities; and

(vi) Employment of a program manager, information systems specialist, call center supervisor and mail center supervisor to administer the survey.

(4) The entity has certified that it has the ability to maintain and transmit quality data in a manner that preserves the security and integrity of the data.

(5) The entity has successfully completed, and has required its subcontractors to successfully complete, vendor training(s) administered by CMS or its contractors.

(6) The entity has submitted a quality assurance plan and other materials relevant to survey administration, as determined by CMS, including cover letters, questionnaires and telephone scripts.

(7) The entity has agreed to participate and cooperate, and has required its subcontractors to participate and cooperate, in all oversight activities related to survey administration conducted by CMS or its contractors.

(8) The entity has sent an interim survey data file to CMS that establishes the entity's ability to accurately report CAHPS data.

(e) *Remedial action and termination of third party intermediaries.* (1) If CMS determines that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, has submitted a false certification under paragraph (a)(3) of this section, or has submitted data that are inaccurate, unusable, or otherwise compromised, CMS may take one or more of the following remedial actions after providing written notice to the third party intermediary:

(i) Require the third party intermediary to submit a corrective action plan (CAP) by a date specified by CMS. The CAP must address the following issues, unless different or additional information is specified by CMS:

(A) The issues that contributed to the non-compliance.

(B) The impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program.

(C) The corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future.

(D) The detailed timeline for achieving compliance with the applicable requirements.

(ii) Publicly disclose the entity's data error rate on the CMS website until the data error rate falls below 3 percent.

(2) CMS may immediately or with advance notice terminate the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the following reasons:

(i) CMS has grounds to impose remedial action;

(ii) CMS has not received a CAP within the specified time-period or the CAP is not accepted by CMS; or

(iii) The third party intermediary fails to correct the deficiencies or data errors by the date specified by CMS.

(3) Contains data inaccuracies affecting the third party intermediary's total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

(4) For purposes of this paragraph (e), CMS may determine that submitted data are inaccurate, unusable, or otherwise compromised, including but not limited to, if the submitted data:

(i) Includes, without limitation, TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies.

(ii) [Reserved]

(f) *Auditing of entities submitting MIPS data.* Any third party intermediary must comply with the following procedures as a condition of its qualification and approval to participate in MIPS as a third party intermediary.

(1) The entity must make available to CMS the contact information of each MIPS eligible clinician or group on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician or group's practice phone number, address, and, if available, email.

(2) The entity must retain all data submitted to CMS for purposes of MIPS for 6 years from the end of the MIPS performance period.

(3) For the purposes of auditing, CMS may request any records or data retained for the purposes of MIPS for up to 6 years from the end of the MIPS performance period.

■ 62. Amend § 414.1405 by adding paragraphs (b)(9), (d)(7), and (g) to read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(9) Pursuant to the methodology established at paragraph (g) of this section, the performance threshold for the 2024 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

* * * * *

(d) * * *

(7) The additional performance threshold for the 2024 MIPS payment year is 89 points.

* * * * *

(g) *Performance threshold methodology.* For each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b) of this section.

■ 63. Amend § 414.1430 by—

■ a. Revising paragraph (a)(1)(iii);

■ b. Adding paragraphs (a)(1)(iv);

■ c. Removing the second occurrence of paragraph (a)(2)(ii);

■ d. Adding paragraphs (a)(2)(iii) and (iv); and

■ e. Revising paragraphs (b)(1)(i)(A) and (B) and (b)(2)(i)(A) and (B).

The revisions and additions read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

(a) * * *

(1) * * *

(iii) 2023 and 2024: 50 percent.

(iv) 2025 and later: 75 percent.

(2) * * *

(iii) 2023 and 2024: 50 percent.

(iv) 2025 and later: 75 percent.

* * * * *

(b) * * *

(1) * * *

(i) * * *

(A) 2021 through 2024: 50 percent.

(B) 2025 and later: 75 percent.

* * * * *

(2) * * *

(i) * * *

(A) 2021 through 2024: 35 percent.

(B) 2025 and later: 50 percent.

* * * * *

■ 64. Amend § 414.1450 by revising paragraph (c) introductory text to read as follows:

§ 414.1450 APM incentive payment.

* * * * *

(c) *APM Incentive Payment recipient.* CMS will pay the APM Incentive Payment amount for a payment year to a solvent TIN or TINs associated with the QP, identified based on Medicare Part B claims submitted for covered professional services during the base period or payment year, according to this section. If no TIN or TINs with which the QP has an association can be identified at a step, CMS will move to the next and successive steps listed in paragraphs (c)(1) through (8) of this section until CMS identifies a TIN or TINs with which the QP is associated, and to which CMS will make the APM

Incentive Payment. If more than one TIN is identified at a step, the payment will be proportionately divided among the TINs according to the relative total paid amounts for Part B covered professional services paid to each TIN for services provided during the base year.

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 65. The authority citation for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 66. Section 415.140 is added to subpart D to read as follows:

§ 415.140 Conditions for payment: Split (or shared) visits.

(a) *Definitions.* For purposes of this section, the following definitions apply:

Facility setting for purposes of this section means institutional settings in which payment for services and supplies furnished incident to a physician or practitioner's professional services is prohibited under § 410.26(b)(1) of this subchapter.

Split (or shared) visit means an evaluation and management (E/M) visit in the facility setting that is performed in part by both a physician and a nonphysician practitioner who are in the same group, in accordance with applicable law and regulations such that the service could be could be billed by either the physician or nonphysician practitioner if furnished independently by only one of them.

Substantive portion means more than half of the total time spent by the physician and nonphysician practitioner performing the split (or shared) visit, except as otherwise provided in this paragraph. For visits other than critical care visits furnished in calendar year 2022, *substantive portion* means one of the three key components (history, exam or medical decision-making) or more than half of the total time spent by the physician and nonphysician practitioner performing the split (or shared) visit.

(b) *Conditions of payment.* For purposes of this section, the following conditions of payment apply:

(1) *Substantive portion of split (or shared) visit.* In general, payment is made to the physician or nonphysician practitioner who performs the substantive portion of the split (or shared) visit.

(2) *Medical record documentation.* Documentation in the medical record must identify the physician and nonphysician practitioner who performed the visit. The individual who performed the substantive portion of the visit (and therefore bills for the visit) must sign and date the medical record.

(3) *Claim modifier.* The designated modifier must be included on the claim to identify that the service was a split (or shared) visit.

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

■ 67. The authority citation for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–101 through 1395w–152, and 1395hh.

■ 68. Amend § 423.160 by revising paragraph (a)(5) to read as follows:

§ 423.160 Standards for electronic prescribing.

(a) * * *

(5) Beginning on January 1, 2021, prescribers must, except in the circumstances described in paragraphs (a)(5)(i) through (iv) of this section, conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically using the applicable standards in paragraph (b) of this section. Prescriptions written for a beneficiary in a long-term care facility will not be included in determining compliance until January 1, 2025. Compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a long-term care facility will commence on or after January 1, 2025. Compliance actions against prescribers who do not meet the compliance threshold based on other prescriptions will commence on or after January 1, 2023. Prescribers will be exempt from this requirement in the following situations:

(i) Prescriber and dispensing pharmacy are the same entity.

(ii) Prescriber issues 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using CMS claims data as of December 31st of the preceding year.

(iii) Prescriber has an NCPDP database address in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity.

(iv) Prescriber has received a CMS-approved waiver because the prescriber is unable to conduct electronic prescribing of controlled substances (EPCS) due to circumstances beyond the prescriber's control.

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 69. The authority for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 70. Amend § 424.205 by redesignating paragraphs (b)(5) and (6) as paragraphs (b)(6) and (7), respectively, and adding new paragraph (b)(5).

The addition reads as follows:

§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.

* * * * *

(b) * * *

(5) The Medicare provider enrollment application fee does not apply to all Medicare Diabetes Prevention Program (MDPP) suppliers that submit an enrollment application on or after January 1, 2022.

* * * * *

■ 71. Amend § 424.502 by revising the definition of ''Institutional provider'' to read as follows:

§ 424.502 Definitions.

* * * * *

Institutional provider means any provider or supplier that submits a paper Medicare enrollment application using the CMS–855A, CMS–855B (not including physician and nonphysician practitioner organizations), CMS–855S, or an associated internet-based PECOS enrollment application.

* * * * *

■ 72. Amend § 424.530 by revising paragraphs (a)(2) introductory text and (a)(11)(i) to read as follows:

§ 424.530 Denial of enrollment in the Medicare program.

(a) * * *

(2) *Provider or supplier conduct.* The provider or supplier, or any owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, of the provider or supplier is—

* * * * *

(11) * * *

(i) A physician or other eligible professional's Drug Enforcement Administration (DEA) Certificate of Registration to dispense a controlled substance is currently suspended or revoked or is surrendered in response to an order to show cause;

* * * * *

■ 73. Amend § 424.535 by revising paragraphs (a)(2) introductory text,

(a)(8)(ii), (a)(13)(i), and (e) to read as follows:

§ 424.535 Revocation of enrollment in the Medicare program.

(a) * * *

(2) *Provider or supplier conduct.* The provider or supplier, or any owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, of the provider or supplier is—

* * * * *

(8) * * *

(ii) CMS determines that the provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements. In making this determination, CMS considers, as appropriate or applicable, the following:

(A) The percentage of submitted claims that were denied during the period under consideration.

(B) Whether the provider or supplier has any history of final adverse actions and the nature of any such actions.

(C) The type of billing non-compliance and the specific facts surrounding said non-compliance (to the extent this can be determined).

(D) Any other information regarding the provider or supplier's specific circumstances that CMS deems relevant to its determination.

* * * * *

(13) * * *

(i) A physician or other eligible professional's Drug Enforcement Administration (DEA) Certificate of Registration to dispense a controlled substance is currently suspended or revoked or is surrendered in response to an order to show cause;

* * * * *

(e) *Reversal of revocation.* If the revocation was due to adverse activity (sanction, exclusion, or felony) against the provider's or supplier's owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, the revocation may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that individual within 30 days of the revocation notification.

* * * * *

§ 424.545 [Amended]

■ 74. Amend § 424.545 in paragraph (b) by removing the reference ''§ 405.374'' and adding in its place the reference ''§ 424.546''.

■ 75. Add § 424.546 to read as follows:

§ 424.546 Deactivation rebuttals.

(a) *Rebuttal submittal period.* (1) If a provider or supplier receives written notice from CMS or its contractor that the provider's or supplier's billing privileges are to be or have been deactivated under § 424.540, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to CMS as permitted under § 424.545(b).

(2) CMS may, at its discretion, extend the 15-day time-period referenced in paragraph (a)(1) of this section.

(b) *Rebuttal requirements.* A rebuttal submitted pursuant to this section and § 424.545(b) must:

(1) Be in writing.

(2) Specify the facts or issues about which the provider or supplier disagrees with the deactivation's imposition and/or the effective date, and the reasons for disagreement.

(3) Submit all documentation the provider or supplier wants CMS to consider in its review of the deactivation.

(4) Be submitted in the form of a letter that is signed and dated by the individual supplier (if enrolled as an individual physician or nonphysician practitioner), the authorized official or delegated official (as those terms are defined in 42 CFR 424.502), or a legal representative (as defined in 42 CFR 498.10). If the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier; this statement is sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

(c) *Waiver of rebuttal rights.* The provider's or supplier's failure to submit a rebuttal that is both timely under paragraph (a) of this section and fully compliant with all of the requirements of paragraph (b) of this section constitutes a waiver of all rebuttal rights under this section and § 424.545(b).

(d) *CMS review.* Upon receipt of a timely and compliant deactivation rebuttal, CMS reviews the rebuttal to determine whether the imposition of the deactivation and/or the designated effective date are correct.

(e) *Imposition.* Nothing in this section or in § 424.545(b) requires CMS to delay the imposition of a deactivation pending the completion of the review described in paragraph (d) of this section.

(f) *Initial determination.* A determination made under this section is not an initial determination under § 498.3(b) of this chapter and therefore not appealable.

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 76. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 77. Amend § 425.116 by revising paragraph (c) to read as follows:

§ 425.116 Agreements with ACO participants and ACO providers/suppliers.

* * * * *

(c) *Submission of agreements.* The ACO must submit an executed ACO participant agreement for each ACO participant that it requests to add to its list of ACO participants in accordance with § 425.118. The agreements may be submitted in the form and manner set forth in § 425.204(c)(6) or as otherwise specified by CMS.

■ 78. Amend § 425.204 by revising paragraphs (b), (c)(6), (f)(4)(ii)(A) and (B), (f)(4)(iii) introductory text, and (f)(4)(iii)(A) and adding paragraph (f)(4)(v) to read as follows:

§ 425.204 Content of the application.

* * * * *

(b) *Prior participation.* Upon request by CMS during the application cycle, the ACO must submit information regarding prior participation in the Medicare Shared Savings Program by the ACO, its ACO participants, or its ACO providers/suppliers, including such information as may be necessary for CMS to determine whether to approve an ACO's application in accordance with § 425.224(b).

(c) * * *

(6) Upon request by CMS during the application cycle or at any point during an agreement period, the ACO must submit documents demonstrating that its ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities are required to comply with the requirements of the Shared Savings Program. Upon such a request, the evidence to be submitted must include, without limitation, sample or form agreements and, in the case of ACO participant agreements, the first and signature page(s) of each executed ACO participant agreement.

CMS may request all pages of an executed ACO participant agreement to confirm that it conforms to the sample form agreement submitted by the ACO. The ACO must certify that all of its ACO participant agreements comply with the requirements of this part.

* * * * *

(f) * * *

(4) * * *

(ii) * * *

(A) One-half percent of the total per capita Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries, based on expenditures and the number of assigned beneficiaries for the most recent calendar year for which 12 months of data are available.

(B) One percent of the total Medicare Parts A and B fee-for-service revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available, and based on the ACO's number of assigned beneficiaries for the most recent calendar year for which 12 months of data are available.

(iii) CMS recalculates the ACO's repayment mechanism amount for the second and each subsequent performance year in the agreement period in accordance with paragraph (f)(4)(ii) of this section based on the certified ACO participant list for the relevant performance year, except that the number of assigned beneficiaries used in the calculations is the number of beneficiaries assigned to the ACO at the beginning of the relevant performance year under § 425.400(a)(2)(i) (for ACOs under preliminary prospective assignment with retrospective reconciliation) or § 425.400(a)(3)(i) (for ACOs under prospective assignment).

(A) If the recalculated repayment mechanism amount exceeds the existing repayment mechanism amount by at least $1,000,000, CMS notifies the ACO in writing that the amount of its repayment mechanism must be increased to the recalculated repayment mechanism amount.

* * * * *

(v)(A) An ACO that established a repayment mechanism to support its participation in a two-sided model beginning on July 1, 2019, January 1, 2020, or January 1, 2021, may elect to decrease the amount of its repayment mechanism if the repayment mechanism amount for performance year 2022, as recalculated pursuant to paragraph (f)(4)(iii) of this section, is less than the existing repayment mechanism amount.

(B) CMS will notify the ACO in writing if the ACO may elect to decrease the amount of its repayment mechanism pursuant to this paragraph (f)(4)(v). The ACO must submit such election, and revised repayment mechanism documentation, in a form and manner and by a deadline specified by CMS. CMS will review the revised repayment mechanism documentation and may reject the election if the repayment mechanism documentation does not comply with the requirements of this paragraph (f).

* * * * *

■ 79. Amend § 425.312 by revising paragraph (a)(2)(ii) and adding paragraph (a)(2)(iii) to read as follows:

§ 425.312 Beneficiary notifications.

(a) * * *

(2) * * *

(ii) In the case of an ACO that has selected preliminary prospective assignment with retrospective reconciliation, by the ACO or ACO participant providing each fee-for-service beneficiary with a standardized written notice prior to or at the first primary care visit of the performance year in the form and manner specified by CMS.

(iii) In the case of an ACO that has selected prospective assignment, by the ACO or ACO participant providing each prospectively assigned beneficiary with a standardized written notice prior to or at the first primary care visit of the performance year in the form and manner specified by CMS.

* * * * *

■ 80. Amend § 425.400 by—

■ a. Revising paragraph (c)(1)(v) introductory text;

■ b. Adding paragraph (c)(1)(vi); and

■ c. Revising paragraphs (c)(2)(i) introductory text, (c)(2)(i)(A)(2), and (c)(2)(ii).

The revisions and addition read as follows:

§ 425.400 General.

* * * * *

(c) * * *

(1) * * *

(v) For the performance year starting on January 1, 2021:

* * * * *

(vi) For the performance year starting on January 1, 2022, and subsequent performance years as follows:

(A) CPT codes:

(*1*) 96160 and 96161 (codes for administration of health risk assessment).

(*2*) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(*3*) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

(*4*) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(*5*) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home for claims identified by place of service modifier 12).

(*6*) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(vi)).

(*7*) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(*8*) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(*9*) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(*10*) 99439 (code for non-complex chronic care management).

(*11*) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(*12*) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(*13*) 99495 and 99496 (codes for transitional care management services).

(*14*) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(*1*) G0402 (code for the Welcome to Medicare visit).

(*2*) G0438 and G0439 (codes for the annual wellness visits).

(*3*) G0442 (code for alcohol misuse screening service).

(*4*) G0443 (code for alcohol misuse counseling service).

(*5*) G0444 (code for annual depression screening service).

(*6*) G0463 (code for services furnished in ETA hospitals).

(*7*) G0506 (code for chronic care management).

(*8*) G2010 (code for the remote evaluation of patient video/images).

(*9*) G2012 and G2252 (codes for virtual check-in).

(*10*) G2058 (code for non-complex chronic care management).

(*11*) G2064 and G2065 (codes for principal care management services).

(*12*) G2212 (code for prolonged office or other outpatient visit for the evaluation and management of a patient).

(*13*) G2214 (code for psychiatric collaborative care model).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(vi)(A) of this section or a HCPCS code specified in paragraph (c)(1)(vi)(B) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

(2)(i) Except as otherwise specified in paragraph (c)(2)(i)(A)(2) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any month(s) during the COVID–19 Public Health Emergency defined in § 400.200 of this chapter, in determining beneficiary assignment, we use the primary care service codes identified in paragraph (c)(1) of this section, and additional primary care service codes as follows:

(A) * * *

(2) 99441, 99442, and 99443 (codes for telephone evaluation and management services). These codes are used in determining beneficiary assignment as specified in paragraphs (c)(2)(i) and (ii) of this section and until they are no longer payable under Medicare fee-for-service payment policies as specified under section 1834(m) of the Act and §§ 410.78 and 414.65 of this subchapter.

* * * * *

(ii) Except as otherwise specified in paragraph (c)(2)(i)(A)(2) of this section, the additional primary care service codes specified in paragraph (c)(2)(i) of this section are applicable to all months of the assignment window (as defined in § 425.20), when the assignment window includes any month(s) during the COVID–19 Public Health Emergency defined in § 400.200 of this chapter.

■ 81. Amend § 425.512 by—

■ a. Revising paragraphs (a)(2) and (3);

■ b. Redesignating paragraph (a)(4) as paragraph (a)(5);

■ c. Adding a new paragraph (a)(4);

■ d. Revising newly redesignated paragraph (a)(5); and

■ e. Revising paragraphs (b)(2)(i) and (ii) and (b)(3)(i) and (ii).

The revisions and addition read as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(2) For the first performance year of an ACO's first agreement period under the Shared Savings Program. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter and the case minimum requirement at § 414.1380 of this subchapter on the measures specified in this paragraph (a)(2) for the applicable performance year, the ACO will meet the quality performance standard.

(i) For performance years 2022, 2023, and 2024. The ten CMS Web Interface measures or the three eCQMs/MIPS CQMs, and the CAHPS for MIPS survey.

(ii) For performance year 2025 and subsequent performance years. The three eCQMs/MIPS CQMs and the CAHPS for MIPS survey.

(3) For performance year 2021. (i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this subchapter, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) If an ACO does not report any of the ten CMS Web Interface measures or any of the three eCQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(4) For performance years 2022 and 2023. (i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this subchapter according to the method of submission established by CMS and either:

(A) Achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or

(B) If the ACO reports the three eCQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter and the case minimum requirement at § 414.1380 of this subchapter for all three eCQMs/MIPS CQMs, achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set.

(ii) If an ACO does not report any of the ten CMS Web Interface measures or any of the three eCQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(5) For performance year 2024 and subsequent performance years. (i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this subchapter, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) If an ACO does not report any of the three eCQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(b) * * *

(2) * * *

(i) For performance years 2021, 2022, and 2023, the ACO's minimum quality performance score is set to the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2024 and subsequent performance years, the ACO's minimum quality performance score is set to the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(3) * * *

(i) For performance years 2021, 2022, and 2023, CMS will use the higher of the ACO's quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2024 and subsequent performance years, CMS will use the higher of the ACO's quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category

scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

* * * * *

Xavier Becerra,

Secretary, Department of Health and Human Services.

Note: The following appendices will not appear in the Code of Federal Regulations.

BILLING CODE 4120–01–P

APPENDIX 1: MIPS QUALITY MEASURES

NOTE: Except as otherwise noted in this final rule, previously finalized measures and specialty measure sets will continue to apply for the CY 2022 performance period/2024 MIPS payment year and future years. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table A as follows: NQF # / eCQM NQF #.

TABLE Group A: New Quality Measures Finalized and Not Finalized for the CY 2022 Performance Period/2024 MIPS Payment Year and Future Years

A.1. Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	481
Description:	Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of bladder cancer staging.
Measure Steward:	Oregon Urology
Numerator:	Intravesical Bacillus-Calmette Guerin (BCG) instillation for initial dose or series. BCG is initiated within 6 months of the bladder cancer staging and during the measurement period.
Denominator:	All patients initially diagnosed with T1, Tis or high grade Ta non-muscle invasive bladder cancer and a qualified encounter in the measurement period.
Exclusions:	Denominator Exceptions: Unavailability of BCG Denominator Exclusions: Immunosuppressed patients, includes HIV and immunocompromised state. Immunosuppressive drug therapy. Active Tuberculosis. Mixed histology urothelial cell carcinoma including micropapillary, plasmacytoid, sarcomatoid, adenocarcinoma and squamous disease. Patients who undergo cystectomy, chemotherapy or radiation within 6 months of Bladder Cancer Staging.
Measure Type:	Process
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	eCQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	We proposed this measure because it addresses a gap in care for patients diagnosed with bladder cancer. Treatment at this stage (non-muscle invasive) can help prevent invasion into the muscle layer which leads to potential bladder removal and additional chemotherapy and/or radiation treatment. It was reviewed by the 2016 National Quality Forum (NQF) Measure Application Partnership (MAP) with a recommendation to refine to address concerns what populations would be included or excluded from the measure. The measure was updated according to MAP feedback by redefining the eligible patient population and exclusions. The measure steward indicated that bladder cancer is ranked 10th for new cancer cases in 2020 and is the 9th leading cause of cancer death in the United States. There were an estimated 81,400 new cases in 2020 and 17,980 estimated deaths in 2020. Early detection (discovery of cancer in situ or localized to the primary site) is found in 85 percent of the patients, and with these there is a 5-year survival rate of 95.8 percent for in situ and 69.2 percent for localized. National Comprehensive Cancer Network (NCCN) Guidelines for Bladder Cancer (version 6.2020) defines intravesical Bacillus-Calmette-Guerin (BCG) as Category 1 Treatment for Ta - high grade, T1 and Tis non-muscle invasive bladder cancer. Most public data reflect prophylactic or adjuvant use of intravesical therapy with the goal of preventing recurrence or delaying progression to a higher grade or stage. Intravesical BCG has been shown to be an effective prophylaxis to prevent bladder cancer recurrences following transurethral resection of a bladder tumor (TURBT). The NCCN Bladder Cancer Panel Members recommend BCG as the preferred option over Mitomycin C for adjuvant treatment of high-grade lesions (Ta). BCG is also standard therapy for Primary Tis. Most T1 lesions are high risk and are similarly treated with adjuvant intravesical therapy with BCG being a Category 1 recommendation. (NCCN guidelines 6.2020). Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice. Note: Refer to https://ecqi.healthit.gov/ecqm/ep/2022/cms646v2 for information on this measure.
We received no public comments on this new measure; therefore, we are finalizing the *Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer* measure as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.	

A.2. Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	482
Description:	Percentage of adult hemodialysis patient-months using a catheter continuously for three months or longer for vascular access attributable to an individual practitioner or group practice.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	The numerator is the number of adult patient-months in the denominator who were on maintenance hemodialysis using a catheter continuously for three months or longer as of the last hemodialysis session of the reporting month.
Denominator:	All patients at least 18 years old as of the first day of the reporting month who are determined to be maintenance hemodialysis patients (in-center and home HD) for the complete reporting month under the care of the same practitioner or group partner.
Exclusions:	Exclusions that are implicit in the denominator definition include: • Pediatric patients (<18 years old). • Patients on Peritoneal Dialysis for any portion of the reporting month. • Patient-months where there are more than one MCP provider listed for the month. In addition, patients with a catheter that have limited life expectancy, as defined by the following criteria are excluded: • Patients under hospice care in the current reporting month. • Patients with metastatic cancer in the past 12 months. • Patients with end stage liver disease in the past 12 months. • Patients with coma or anoxic brain injury in the past 12 months
Measure Type:	Intermediate Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	We proposed this measure because it represents an intermediate outcome for maintenance hemodialysis patients and may incentivize clinicians to evaluate their vascular access with potential to reduce infection, mortality, and hospitalization rates. Long-term catheter use is associated with higher mortality rate than use of an arteriovenous fistula. The measure was evaluated by the MAP and it was conditionally supported pending NQF endorsement. While we agreed with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. The measure steward indicated, per their analysis of Consolidated Renal Operations in a Web enabled Network (CROWNWeb) data from January 2016 - December 2016, that the physician-level mean percentage of patient-months with a long-term catheter was 9.7 percent (SD=9.0 percent). Distribution: Min=0 percent, 1st quartile=4.5 percent, median=8.3 percent, 3rd quartile=12.7 percent, Max=100 percent. Reliability testing included 7,921 – 8,508 clinicians per month with moderate inter-unit reliability of 0.602 indicating that 60.2 percent of the variation in the annual long-term catheter rate can be attributed to between-practitioner differences in performance (signal) and about 39.8 percent to the within-practitioner variation (noise). Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=91911.

Comment: One commenter did not support this new measure and said that it had provided previous comments on this measure that the measure exclusions should be expanded to include patients for whom dialysis is part of palliative care, not only those who are receiving hospice care. The exclusions should also include patients who have had multiple previous unsuccessful attempts to establish permanent vascular access (either through placement of an arteriovenous fistula or arteriovenous graft), among other concerns.

Response: We believe this measure is important in addressing patient safety given the increased risk of blood stream infection with use of a central venous catheter, posing significant risks to patient morbidity and mortality. The National Kidney Foundation's Kidney Disease Outcomes Quality Initiative (KDOQI) still considers it reasonable to preferentially utilize AV access over CVC in prevalent HD patients, if possible. Additionally, KDOQI does acknowledge the patients receiving palliative care may be better served by a CVC for shorter-term dialysis, though this measure assesses numerator compliance at three months of continuous use[1] (DOI: https://doi.org/10.1053/j.ajkd.2019.12.001). Additionally, this is a respecified measure that aligns with the measure that is currently being utilized in the End Stage Renal Disease (ESRD) Quality Improvement Program (QIP), which is currently NQF endorsed. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, we are finalizing the *Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate* measure as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

A.3. Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	483
Description:	The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the clinician or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.
Measure Steward:	The American Board of Family Medicine
Numerator:	The target population is all active patients in a practice during the performance reporting period. A patient is defined as active if the patient has had a documented interaction with the practice within 12 months of their birth month within the measurement period. The PCPCM PROM is the same for all patients, regardless of age. Because the PCPCM PROM applies to all patients and is not particular to a clinical encounter, it is administered once a year to each patient during their birth month. The target population is defined the same, regardless of unit of analysis (clinician, practice, or system). The numerator is the sum of all PCPCM PROM scores for active patients. 1. My practice makes it easy for me to get care. 2. My practice is able to provide most of my care. 3. In caring for me, my doctor considers all the factors that affect my health. 4. My practice coordinates the care I get from multiple places. 5. My doctor or practice knows me as a person. 6. My doctor and I have been through a lot together. 7. My doctor or practice stands up for me. 8. The care I get takes into account knowledge of my family. 9. The care I get in this practice is informed by knowledge of my community. 10. Over time, my practice helps me to stay healthy. 11. Over time, my practice helps me to meet my goals.
Denominator:	The denominator is the total number of complete PCPCM PROM instruments received in the reporting period. A completed PROM instrument is defined as a PROM instrument for which the patient has responded to at least 8 of 11 items. The target population is all active patients in a practice during the performance reporting period. A patient is defined as active if the patient has had a documented interaction with the practice within 12 months of their birth month during the measurement period. The PCPCM PROM is the same for all patients, regardless of age. Because the PCPCM PROM applies to all patients and is not particular to a clinical encounter, it is administered once a year to each patient during their birth month. The target population is defined the same, regardless of unit of analysis (clinician, practice, or system).
Exclusions:	None
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Measure Domain:	Person and Caregiver-centered Experience and Outcomes (section 1848(s)(1)(B)(iv) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	For each MIPS eligible clinician, group, subgroup*, virtual group, and APM Entity, a minimum of 30 PCPCM PROM instruments per clinician are needed for submission of this measure. All valid survey results (as defined in the specification) should be included in the aggregate score. For MIPS eligible groups, subgroups*, virtual groups, and APM Entities with 5 or more clinicians, a minimum of 150 PCPCM PROM instruments per TIN for each site/location associated with the clinicians part of the group, subgroups, virtual groups, and APM Entities are needed for submission of this measure. For TINs with a composition of multiple specialty practices at one site/location, a minimum of 150 PCPCM PROM instruments per specialty practice within a TIN are needed for submission of this measure. If the MIPS eligible group, subgroup*, virtual group, and APM Entity with 5 or more clinicians encompasses multiple sites/locations, each site/location would need to meet the PCPCM PROM instruments requirements as stated. *Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.
Rationale:	We proposed this measure because assessment of patient experience of care is a critical element of quality care and captures the voice of the patient which is an important component of delivering high-value primary care. There are currently a limited number of patient experience measures within the MIPS quality measure set. The original measure was evaluated by the NQF MAP and received conditional support pending NQF endorsement. While we agreed with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. Based on research of the available information presented to the MAP, evidence demonstrates a strong connection between patient experience of care and traditional health care outcomes, such as improved intermediate outcomes, greater adherence to recommended treatment, and reduced use of health care services. This measure addresses the Meaningful Measurement Area of Patient's Experience of Care and the MIPS high-priority category of Outcomes. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.
Comment: Commenters supported the addition of the Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) to the MIPS program. The measure brings the patient voice front and center and is a strong, positive move in the measurement of primary care. It is a long-needed advance in the measurement of primary care that is wholistic and personal, not assessing a lab test, a fragment of care. The measure assesses patient experience and should be used across the entire health care industry. The measure provides an easy way to capture the patient experience and relationship. Several commenters preferred this new measure over measure Q321: CAHPS for MIPS Clinician/Group Survey, as it captures patient experience in care more effectively and has a lower burden and cost compared to CAHPS.	

Category	Description
This measure assesses whether the patient's needs, goals, and social systems are being considered when providing care. This measure also aligns with the Vision and Principles of a Quality Measurement Strategy for Primary Care and with the Meaningful Measures Initiative. Commenters believe this new measure addresses an area of care for which there is evidence that improvement results in improved patient outcomes. **Response:** We thank the commenters for supporting the new Patient Reported Outcome Performance Measure (PCPCM PRO-PM) in the MIPS program. **Comment:** One commenter indicated a State agency plans on using this well validated survey tool and encouraged CMS to expand the minimum case requirement as proposed. **Response:** We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. **Comment:** One commenter was supportive of PRO-PMs that are methodologically sound, and evidence based to assess, promote, and reward patient-centered care, but believes this new measure does not meet those criteria and there is a need to see additional data before it is ready for implementation. The commenter was concerned that this measure was poorly specified and did not have data to show that it would lead to improvements in care or clinical outcomes. The measure includes all patients who have completed the survey without any exclusions or risk adjustment, and this would result in a non-representative sample. Also, while the measure intends to establish a benchmark for good, comprehensive primary care, they noted the evidence that this measure will lead to improved outcomes and is actionable at the level of the individual clinician or group, has not been presented. There are no articles cited to support the actions that can be done to improve the scores on individual items. The vast majority of these interventions are at the system level. While the developer presents quite a bit of information regarding the validity and reliability of the PCPCM instrument, the commenter had a number of concerns regarding the face validity of the instrument. The commenter also expressed concerns on how the measure would work in a clinical practice when there are multiple issues to focus on during a patient visit, and therefore, is not certain the measure would apply to internal medicine. **Response:** During National Quality Forum (NQF) Measure Application Partnership (MAP) review, the measure steward indicated that case mix adjustment is being pursued to determine if it would be useful. There is a rank order difference with age, but it did not disadvantage any group. The measure steward also indicates that the measure has been tested in all types of settings among different age groups and it continues to maintain reliability and validity. The measure is validated in multiple languages and addresses the broad community. We believe assessment of patient experience of care is a critical element of quality care and captures the voice of the patient which is an important component of delivering high-value primary care. There are currently a limited number of patient experience measures within the MIPS quality measure set or for inclusion in MIPS Value Pathways (MVP). The PCPCM PRO is received once a year by active patients during the month of their birth. The measure steward indicates that this process allows the instrument to apply to the primary care experience as a whole and feedback affords the opportunity for continuous quality improvement. They also indicate that the 11 constructs assessed by the PCPCM PRO are widely hypothesized to be associated with better personal and population health, equity, quality, and sustainable health care expenditure. Therefore, we believe this measure is valid for reporting within MIPS. Fielding of the PCPCM PROM for reliability and validation was conducted both digitally and at point of care. The measure steward utilized three methods for reliability testing, and a multistep process for validity testing, which resulted in a fully tested measure. Based on the information submitted by the measure steward for this measure, the reliability and validity of the instrument are sufficient (refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650). In a recently submitted manuscript regarding the score validity and reliability of the PCPCM PROM, among 6 practices, there were significant differences (p=0.004) in PCPCM PROM scores with a moderate effect size (at least .5 standard deviation). **Comment:** One commenter opposed inclusion of this measure because the comprehensive set of patient-clinician interaction assessments within the composite measures are too burdensome for physicians and not as meaningful as intended, as stated during ongoing discussions with CMS and a medical society. Another similar commenter supported the development and implementation of PRO-PMs but believes that additional questions and work remain before their widespread use. While the reporting of this measure will be voluntary in MIPS, the commenter believes that additional research and guidance are needed on how PRO-PMs should be integrated into existing programs while minimizing any unintended consequences. **Response:** While we understand the need to reduce clinician reporting burden, we are committed to prioritizing outcome measures that are patient centered and incorporate the patient voice. We are focused on quality measurement to align with what is meaningful to patients and clinicians. **Comment:** One commenter supported the development and implementation of PRO-PMs but believes that additional questions and work remain before their widespread use, such as: the degree to which multiple PRO-PMs could lead to survey fatigue for patients, the potential impact additional PRO-PMs may have on the reporting of well-established measures such as CG-CAHPs, and what level of data collection burden for an individual PRO-PM is acceptable for a hospital or other healthcare providers. While the reporting of this measure will be voluntary in MIPS, the commenter believes that additional research and guidance are needed on how PRO-PMs should be integrated into existing programs while minimizing any unintended consequences. **Response:** While we appreciate the commenter's concerns, as part of the Meaningful Measures Initiative we are committed to prioritizing outcome and patient reported outcome measures and measures that incorporate the patient voice. We believe this empowers patients to make the best-informed decisions about their healthcare. We also believe that by including this patient experience of care measure within the MIPS quality measure set, it provides clinicians with the opportunity to choose patient reported outcome measures that they find meaningful. **Comment:** One commenter recommended that CMS align with the CQMC's input on this measure. **Response:** We continue to make alignment across all programs a priority. While this measure may appear to be similar to the CAHPS Clinician & Group Surveys (CG-CAHPS) included in the CQMC ACO and PCMH / Primary Care Measures set, the measure steward has indicated only one question overlaps. Additionally, the measure steward indicated that CAHPS addresses patient experience, while this measure addresses the relationship with the primary care clinician or practice offering a broader scope and more meaning to both the clinician and the patient. It addresses all areas of primary care, comprehensiveness, community, access, coordination, and behavioral health. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. **Comment:** One commenter believes this measure was incomplete because it lacks fielding materials that all high-stakes surveys should have, including definitions of key terms for patients (for example, the PCPCM does not define what "my practice" or "my doctor" mean—which are the entities that the PCPCM asks patients to rate). Also, the only type of clinician referenced in the PCPCM is "my doctor," which is likely to confuse patients whose primary care clinician is a nurse practitioner. Additionally, the PCPCM has not undergone case-mix adjustment, which is critical to making valid comparisons between clinicians and practices, and this causes results to be invalid. The commenter learned that the PCPCM responses are statistically significantly associated with patient health status, age, and length of relationship with primary care provider. These findings suggest that these variables (at a minimum) be included developing case-mix adjustment for the PCPCM, before the PCPCM can be included in payment programs.	

Category	Description
	Response: There are currently a limited number of patient experience measures within the MIPS quality measure set or for inclusion in MIPS Value Pathways (MVP). This patient-reported outcome-based performance measure addresses the relationship with the primary care clinician or practices offering a broader scope and more meaning to both the clinician and the patient. The measure steward indicated that the 11 constructs assessed by the PCPCM PRO are widely hypothesized to be associated with better personal and population health, equity, quality, and sustainable health care expenditure. It addresses all areas of primary care, comprehensiveness, community, access, coordination, and behavioral health. During the NQF MAP review of the measure, the measure steward indicated that over 10,000 patient comments were utilized in development of the measure. This determined that patients use the term 'Dr.' regardless of the type of clinician seen. In addition, the measure steward indicated that case mix adjustment is being pursued to determine if it would be useful. There is a rank order difference with age, but it did not disadvantage any group. The measure steward also indicated that the measure has been tested in all types of settings among different age groups and it continues to maintain reliability and validity. The measure is validated in multiple languages and addresses the broad community. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. After consideration of public comments, we are finalizing the *Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)* measure as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

A.4. Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	TBD
Description:	Annual risk-standardized rate of acute, unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with heart failure (HF) or cardiomyopathy.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	The outcome for this measure is the number of acute cardiovascular-related admissions per 100 person-years at risk for admission during the measurement year. Time at risk is calculated as the number of days a patient is alive, from the start of the measurement period or first visit, until heart transplantation, LVAD implantation, or home inotropic therapy; enrollment in hospice; death; or the end of the measurement period. Time not considered at risk and excluded: Days spent in a hospital, SNF, or acute rehabilitation facility; 10 days following discharge from a hospital, SNF, or acute rehabilitation facility; and Time during and after LVAD implantation, home inotropic therapy, or heart transplantation. Acute cardiovascular-related admissions are defined using individual ICD-10-CM codes and the Agency for Healthcare Research and Quality's (AHRQ) Clinical Classification Software (CCS) diagnosis categories, which group clinically similar codes together. AHRQ CCS diagnosis categories used to define outcome: 55: Fluid and electrolyte disorders; 96: Heart valve disorders; 97: Peri-; endo-; and myocarditis; cardiomyopathy (except that caused by tuberculosis or sexually transmitted disease); 98: Essential hypertension; 100: Acute myocardial infarction; 102: Nonspecific chest pain; 104: Other and ill-defined heart disease; 105: Conduction disorders; 106: Cardiac dysrhythmias; 107: Cardiac arrest and ventricular fibrillation; 108: Congestive heart failure; non-hypertensive; 110: Occlusion or stenosis of precerebral arteries; 112: Transient cerebral ischemia; 115: Aortic; peripheral; and visceral artery aneurysms; 116: Aortic and peripheral arterial embolism or thrombosis; 157: Acute and unspecified renal failure; 245: Syncope. Subsets of the following AHRQ CCS diagnosis categories used to define outcome: 99: Hypertension with complications and secondary hypertension; 101: Coronary atherosclerosis and other heart disease; 103: Pulmonary heart disease; 109: Acute cerebrovascular disease; 114: Peripheral and visceral atherosclerosis; 117: Other circulatory disease; 130: Pleurisy; pneumothorax; pulmonary collapse; 131: Respiratory failure; insufficiency; arrest (adult); 133: Other lower respiratory disease; 237: Complication of device; implant or graft. The measure has several outcome exclusions: Planned admissions; Admissions from a skilled nursing facility (SNF) or acute rehab facility; Admissions within 10 days of discharge from a hospital, SNF, or acute rehab; Admissions after patient has entered hospice; Admissions before first visit to provider if no prior year visit; Admissions at time of or following: LVAD implantation, home inotropic therapy, or heart transplant.
Denominator:	The measure includes Medicare FFS beneficiaries ≥65 years of age with at least one inpatient principal diagnosis for heart failure/cardiomyopathy, or at least two outpatient or inpatient heart failure/cardiomyopathy diagnoses in any coding position (e.g., primary or secondary position) within the two years prior to the measurement year. • Beneficiaries must be enrolled full-time in Medicare Part A and B during the year prior to measurement and during the measurement period. Additionally, the cohort excludes: Patients with internalized left ventricular assist devices (LVADs); Patients with heart transplants; Patients on home inotropic therapy; Patients on hospice for any reason; Patients with end-stage renal disease (ESRD) – defined as chronic kidney disease stage 5 or on dialysis. Provider types included for measurement (vetted by TEP and Clinician Committee): Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants; Cardiologists: Cardiologists are covered by the measure because they provide overall coordination of care for patients with HF and manage the conditions that put HF patients at risk for admission due to acute cardiovascular-related conditions. Outcome attribution: We begin by assigning each patient to the clinician most responsible for the patient's care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a PCP, a cardiologist, or can be left unassigned. A patient who is eligible for attribution is assigned to a cardiologist if they have 2 or more visits with a single cardiologist, regardless of how many visits that patient has with a PCP. There are two scenarios where a patient can be assigned to a PCP. • First, if the patient has seen the PCP at least once but has no visits with a cardiologist, the patient is assigned to the PCP. • Second, if the patient has seen the PCP more than 2 or more times and has only one visit with a cardiologist, the patient is assigned to the PCP. If the patient has 1 visit each with a cardiologist and a PCP, the patient is assigned to the cardiologist. If the patient has 1 visit with a cardiologist and no visit with a PCP, the patient is assigned to the cardiologist. • Finally, the patient will be unassigned if they had no visits with a PCP or cardiologist. Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN. Patients "follow" their clinician to the TIN designated by the clinician (i.e. they are assigned to their clinician's TIN). Patients unassigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level.
Exclusions:	Numerator Exclusions: The measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of HF patients: Planned admissions (utilizes the adapted planned admission algorithm (PAA) to identify and exclude admissions that are planned); Admissions that likely do not reflect the quality of heart failure management provided by ambulatory clinicians including: Admissions that occur within 10 days of discharge from a hospital, skilled nursing facility, or acute rehabilitation facility ("10-day buffer period"); Admissions that occur while patients are enrolled in Medicare's hospice benefit; Admissions that occur prior to the first visit with the assigned clinician. Admissions on the date or after any of the following: LVAD implantation, home inotropic therapy, or heart transplant (censored at the time of transition to advanced care).

Category	Description
	Denominator Exclusions: The measure excludes: 1. Patients without continuous enrollment in Medicare Parts A and B for the duration of the measurement period. 2. Patients who (or until death), were ever in hospice during the year prior to the measurement year or in hospice at the start of the measurement period. 3. Patients who have had no Evaluation & Management (E&M) visits to a MIPS eligible clinician. 4. Patients who have had a heart transplant, been on home inotropic therapy, or who have had a left ventricular assist device (LVAD) placed.
Measure Type:	Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	Administrative Claims
Measure-Specific Case Minimum/Performance Period:	MIPS eligible clinicians, groups, subgroups*, virtual groups, and APM Entities / 21 case minimum / 1 year performance period (January 1st – December 31st) *Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.
Rationale:	We proposed this administrative claims outcome measure as HF is a leading cause of hospitalization in the United States and a major source of disease burden among the elderly population. Approximately 5.7 million adults in the United States have HF, costing the United States $30.7 billion each year, which includes the cost of health care services, medications for treatment, and missed days of work.[1] The toll on patients is also great, with high rates of hospitalization and mortality; nearly half of people with HF die within 5 years of their diagnosis.[2] Patients with chronic HF are vulnerable to a range of complications that may put them at risk for hospitalization, including worsening of HF symptoms and destabilization due to other conditions, such as respiratory disease or infection. To expand the list of available reporting options for clinicians, we proposed this HF measure for use in the MIPS program, as it is an administrative claims measure, which has no reporting burden. Another version of this measure specified for Accountable Care Organizations (ACOs), "Risk-standardized Acute Admission Rates for Patients with Heart Failure" (ACO-37, NQF ID 2886) was previously used in the CMS Medicare Shared Savings Program, initially for accountability and currently as an informational measure. We used the ACO-37 measure in the Shared Savings Program ACO quality measure set until 2019 and since 2019 has provided ACOs with their performance on the measure in quarterly claims-based reports for ACOs to use in quality improvement activities. The HF measure was evaluated by the NQF MAP who did not recommend for rulemaking with potential for mitigation citing NQF endorsement and an analysis of the appropriateness of the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. While we agreed with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. While the measure raises concerns that the risk adjustment may not adequately account for advanced heart failure stages, based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice and has provided valuable information for other programs. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.

Comment: One commenter supported this new measure in the MIPS program and its inclusion in proposed MVPs.

Response: We thank the commenter for supporting this new measure.

Comment: One commenter expressed concern that the denominator for this new measure (as well as new measure A.5) identifies provider types included for measurement. Among these provider types, physician assistants (PAs) are listed as examples of primary care providers. The commenter cautioned CMS to not assign PAs one label of provider type as PAs are generalists who work in both primary care and in specialty care. The commenter expressed concern that if PAs are categorized as one of these or another it would not be an accurate or fair depiction of the PA profession. The commenter requested that CMS be vigilant in its descriptions as to not set a precedent of identifying PAs as only primary care providers or only specialists as to result in future interpretations that may limit a PA's ability to practice or report on care they are trained and qualified to provide.

Response: We appreciate the comment that not all PAs practice as primary care providers. According to the 2020 NCCPA annual report (https://www.nccpa.net/wp-content/uploads/2021/07/Statistical-Profile-of-Certified-PAs-2020.pdf), 24.4 percent of certified PA's practice in primary care. The measure includes PAs since they are categorized by CMS as MIPS eligible providers and since they may play key roles in the management of patients with heart failure or cardiomyopathy. Non-physician practitioners may practice in primary care or in internal medicine subspecialties, including cardiology. The inclusion of PAs was vetted with the Clinician Committee during measure development, and the Committee favored including PAs for this measure. The Clinician Committee was a contractor-convened committee comprised of clinicians caring for patients in underserved and rural areas and was used to provide feedback during the measure development process on key methodological and clinical decisions.

Comment: Commenters opposed finalization of measure A.4: Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System.

Key concerns cited by commenters included:

- Attribution of this measures to individual physicians or small group practices is not appropriate. Given that heart failure management benefits from close management by both the cardiologist and the primary care clinician, multiple attribution to all clinicians meeting the attribution criteria would more effectively promote team-based care and care coordination.
- Attribution of the individual provider for complex conditions and complex systems of care, including heart failure patients, is difficult to achieve and does not accurately reflect patient outcomes.
- MIPS participants would not know which patients were assigned to them until well after the reporting period ends (i.e., retrospectively), making it impossible for clinicians and practices to implement near real-time interventions.
- Attribution issues could potentially produce scores that are invalid and unreliable.
- Potential avoidance of patients that more likely to be non-adherent and the possibility of exacerbating disparities in care.
- Whether individual providers or even smaller multi-specialty practices could achieve adequate case minimums to fairly apply a population-level measure.

Category	Description
	• Low reliability minimum sample size and reliability thresholds, and the need for additional risk factors to be evaluated. • More data is needed on socioeconomic stratification and validity issues. • Conceptual language around planned admissions that may involve certain procedures such as revascularization, device implantation and ablation should potentially be carved out and categorized as episodes. • Clarity is needed around the definition of inpatient vs. outpatient providers (e.g., cardiologists). • CMS only submitted face validity testing during the recent NQF review and that should not be considered sufficient. • CMS should consider testing that demonstrates whether this measure attributed to physicians and practices is correlated to other outcome measures such as the hospital wide readmission measure (HWR) or total per capita cost (TPCC) measure. • Dual eligibility should be included in the adjustment since the results demonstrate that it is strongly predictive of an admission. • CMS continues to test social risk factors after assessment of clinical and demographic risk factors, and it is unclear why this multi-step approach is preferable. • All variables that are determined to be predictors that are outside of the control of a group should be included. **Response:** We agree that attribution is challenging, and no attribution algorithm can anticipate every pattern of care; however, CMS, the measure steward, carefully constructed this algorithm with input from a wide array of stakeholders to address as many scenarios as possible. The measure steward's contractor convened and obtained input from a Technical Expert Panel (TEP) and Clinician Committee. Feedback and guidance from the TEP including clinicians, patient advocate, and quality measure experts, as well as from a Clinician Committee comprised of professional society members and clinicians caring for patients from underserved and rural areas was sought and incorporated throughout the measure development to design an attribution algorithm that is both fair and transparent. We took into consideration that there are instances where patients with heart failure are seeing multiple providers who impact the risk of admission. An underlying premise of the approach to attribution, which was supported by the TEP and the Clinician Committee and aligned with the approach used for the multiple chronic conditions measure, is that ideally there is an individual clinician who is taking responsibility for managing and coordinating the care of a heart failure patient. This is an administrative claims measure and attribution for the measure is determined based upon the pattern of office visits with eligible clinicians, which reflect opportunities to deliver high-quality care, rather than based upon the costs of care. The patient is attributed to the individual clinician first. Then, the patient "follows" the individual clinician to the TIN level assignment. The TIN may be comprised of primary care providers, cardiologists, or it may be a multi-specialty TIN. However, the information about the composition of the TIN is not used for attribution. Non-physician practitioners may practice in primary care or in internal medicine subspecialties, including cardiology. Since the measure uses the pattern of outpatient (ambulatory) office visits to determine attribution, it automatically includes providers who see heart failure patients in these outpatient (ambulatory) settings. The measure uses these practice settings to determine which providers are eligible for the measure. In setting a minimum reliability threshold, CMS needed to balance measure reliability with the statutory requirement to make performance measures applicable to the broadest number of providers. We typically set a minimum reliability threshold of 0.4 in the MIPS program for these reasons. At the minimum reliability threshold of 0.4, the measure includes only 23.9 percent of TINs, but it does include 69.8 percent of clinicians (defined by unique NPI/TINs), 88.9 percent of patients, and 91.3 percent of the outcome. Thus, with this threshold many small-volume TINs are excluded since for them the measure would not be reliable. The NQF Admissions/Readmissions Standing Committee evaluated the measure's reliability and validity and the measure passed on both of these criteria. We test the impact of social risk factors after adjustment for demographic and clinical variables because some of the observed relationships between social risk factors and performance on quality measures may be the result of underlying differences in medical complexity, frailty, disability, and/or functional status. The use of the multi-step process allows us to determine whether the association of social risk factors with measure score is independent, or whether it is driven by these underlying and measurable differences in patient risk. This measure is adjusted for the AHRQ SES Index which captures multiple aspects of social deprivation that can impact patients' health and health outcomes, including poverty and median household income; unemployment; education; and housing value and quality. These factors are deeply rooted in societal disparities, and MIPS providers have little influence on their effect. While dual-eligible beneficiaries are likely to have fewer available health/healthcare supports, and may also have other unmeasured social risk factors (for example, low health literacy), we are not adjusting the model for dual eligibility because: adjusting for dual eligibility can mask disparities in care for dual-eligible beneficiaries, the marginal impact of including dual eligibility is attenuated after accounting for demographic, clinical, and frailty risk factors, as well as the AHRQ SES Index, clinicians may have more ability to mitigate social risk associated with dual eligibility, especially if a dual-eligible beneficiary is living in a non-socially deprived community, and TEP members supported including only the AHRQ SES Index in the model. The measure uses a risk standardized rate of cardiovascular-related unplanned hospital admissions. Planned admissions, even if costly, are not included in the measure outcome. Planned admissions are excluded from the outcome because they are unlikely to reflect the quality of ambulatory care and, as noted, may be beneficial in the long term. The measure has been recommended for endorsement by the NQF's Admissions/Readmissions Standing Committee. Although validity could be further demonstrated by testing correlation with a "gold standard" or with a quality measure focused on a similar quality domain, such a gold standard or closely related measure is not yet available. Although the Hospital Wide Readmission measure is an admission-based measure, it does not assess the quality of care for heart failure patients and is not focused on ambulatory providers. Similarly, the cost measure does not assess the quality of ambulatory care provided to heart failure patients. Therefore, this measure will not be finalized for inclusion as work will continue to address commenters' concerns with potential to propose inclusion of this measure in MIPS in future rulemaking. After consideration of the comments received, we are not finalizing the *Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System* measure at this time. We plan to continue to consider how to implement condition-specific measures such as this measure under MIPS. As with all its measures, we will conduct routine maintenance and will carefully consider all comments.

A.5. Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions [1]

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	484
Description:	Annual risk-standardized rate of acute, unplanned hospital admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with multiple chronic conditions (MCCs).
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	"The outcome for this measure is the number of acute, unplanned hospital admissions per 100 person-years at risk for admission during the measurement period. Time Period The outcome includes inpatient admissions to an acute care hospital during the measurement year. Excluded Admissions This measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of MCC patients: 1. Planned hospital admissions. 2. Admissions that occur directly from a skilled nursing facility (SNF) or acute rehabilitation facility. 3. Admissions that occur within a 10-day "buffer period" of time after discharge from a hospital, SNF, or acute rehabilitation facility. 4. Admissions that occur after the patient has entered hospice. 5. Admissions related to complications from procedures or surgeries. 6. Admissions related to accidents or injuries. 7. Admissions that occur prior to the first visit with the assigned clinician or clinician group. To identify planned admissions, the measure adopted an algorithm CORE previously developed for CMS' hospital readmission measures, CMS' Planned Readmission Algorithm Version 4.0. [1,2] In brief, the algorithm uses the procedure codes and principal discharge diagnosis code on each hospital claim to identify planned admissions. A few specific, limited types of care are always considered planned (for example, major organ transplant, rehabilitation, and maintenance chemotherapy). Otherwise, a planned admission is defined as a non-acute admission for a scheduled procedure (for example, total hip replacement or cholecystectomy). Admissions for an acute illness are never considered planned. To identify complications of procedures or surgeries, we use the Agency for Healthcare Research and Quality's (AHRQ's) Clinical Classifications Software (CCS), which clusters diagnoses into clinically meaningful categories using International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) or International Classification of Diseases, Tenth Revision, and Clinical Modification (ICD-10-CM) codes. We exclude the following 23 CCS categories. 1. 145: Intestinal obstruction without hernia 2. 237: Complication of device; implant or graft 3. 238: Complications of surgical procedures or medical care 4. 257: Other aftercare b) Accidents or injuries 5. 2601 E Codes: Cut/pierce 6. 2602 E Codes: Drowning/submersion 7. 2604 E Codes: Fire/burn 8. 2605 E Codes: Firearm 9. 2606 E Codes: Machinery 10. 2607 E Codes: Motor vehicle traffic (MVT) 11. 2608 E Codes: Pedal cyclist; not MVT 12. 2609 E Codes: Pedestrian; not MVT 13. 2610 E Codes: Transport; not MVT 14. 2611 E Codes: Natural/environment 15. 2612 E Codes: Overexertion 16. 2613 E Codes: Poisoning 17. 2614 E Codes: Struck by; against 18. 2615 E Codes: Suffocation 19. 2616 E Codes: Adverse effects of medical care 20. 2618 E Codes: Other specified and classifiable 21. 2619 E Codes: Other specified; NEC 22. 2620 E Codes: Unspecified 23. 2621 E Codes: Place of occurrence Person-time at risk Persons are considered at risk for hospital admission if they are alive, enrolled in Medicare FFS, and not in the hospital during the measurement period. In addition to time spent in the hospital, we also exclude from at-risk time: (1) time spent in a SNF or acute rehabilitation facility; (2) the time within 10 days following discharge from a hospital, SNF, or acute rehabilitation facility; and (3) time after entering hospice care. Category	Description
Denominator:	"Patients included in the measure (target patient population) The cohort is comprised of patients whose combinations of chronic conditions put them at high risk of admission and whose admission rates could be lowered through better care. This definition reflects NQF's "Multiple Chronic Conditions Measurement Framework," which defines patients with MCCs as people "having two or more concurrent chronic conditions that…act together to significantly increase the complexity of management, and affect functional roles and health outcomes, compromise life expectancy, or hinder self-management." [1] The specific inclusion criteria are as follows. • Patient is alive at the start of the measurement period and has two or more of nine chronic disease groups in the year prior to the measurement period. Chronic conditions, except for diabetes, are defined using CMS' Chronic Conditions Data Warehouse (CCW). For diabetes, we used the diabetes cohort definition from the Accountable Care Organization (ACO) diabetes admission measure developed by CORE (v2018a ACO-36) as opposed to the definition used in CCW; CCW includes diagnoses for secondary and drug-induced diabetic conditions that are not the focus of the MIPS MCC admission measure. 1. Acute myocardial infarction (AMI), 2. Alzheimer's disease and related disorders or senile dementia, 3. Atrial fibrillation, 4. Chronic kidney disease (CKD), 5. Chronic obstructive pulmonary disease (COPD) or asthma, 6. Depression, 7. Diabetes, 8. Heart failure, and 9. Stroke or transient ischemic attack (TIA). • Patient is aged ≥65 years at the start of the year prior to the measurement period. • Patient is a Medicare FFS beneficiary with continuous enrollment in Medicare Parts A and B during the year prior to the measurement period. Provider types included for measurement • Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants. • Relevant specialists: Specialists covered by the measure are limited to those who provide overall coordination of care for patients with MCCs and who manage the chronic diseases that put the MCC patients in the measure at risk of admission. These specialists were chosen with input from our Technical Expert Panel (TEP) and include cardiologists, pulmonologists, nephrologists, neurologists, endocrinologists, and hematologists/oncologists. Outcome attribution We begin by assigning each patient to the clinician most responsible for the patient's care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a PCP, a relevant specialist, or can be left unassigned. • A patient who is eligible for attribution can be assigned to a relevant specialist only if the specialist has been identified as "dominant". A specialist is considered "dominant" if they have two or more visits with the patient, as well as at least two more visits than any primary care provider or other relevant specialist. • There are two scenarios where a patient can be assigned to a PCP. First, the patient must have seen at least one PCP. The patient will then be assigned to the PCP with the highest number of visits if there are no relevant specialists who are considered "dominant". Second, if the patient has had more than one visit with a relevant specialist, no "dominant" specialist has been identified, and has two or more visits with a PCP, they will be assigned to that PCP. • Finally, the patient will be unassigned if they only saw non-relevant specialists, if the patient has not seen a PCP and no "dominant" specialist can be identified, or if the patient has not had more than one visit with any individual PCP. Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN. • Patients "follow" their clinician to the TIN designated by the clinician (i.e. they are assigned to their clinician's TIN). Patients unassigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level. Citations 1. National Quality Forum. Multiple Chronic Conditions Measurement Framework. http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=71227. Accessed February 20, 2019."
Exclusions:	Denominator Exclusions: "The cohort excludes the following patients: 1) Patients without continuous enrollment in Medicare Part A or B during the measurement period. 2) Patients who were in hospice at any time during the year prior to the measurement year or at the start of the measurement year. 3) Patients who had no Evaluation & Management (E&M) visits to a MIPS-eligible clinician type. 4) Patients assigned to clinician who achieve QP status and therefore do not participate in MIPS. 5) Patients attributed to hematologists and oncologists. 6) Patients not at risk for hospitalization during the measurement year." Note: Exclusions 1-3 are applied prior to attribution, while exclusions 4-6 are applied after the attribution algorithm is run.
Measure Type:	Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	Administrative Claims

Category	Description
Measure-Specific Case Minimum/Performance Period:	MIPS eligible groups, subgroups*, virtual groups, and APM Entities with at least 16 clinicians / 18 case minimum / 1 year performance period (January 1st – December 31st) *Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.
Rationale:	We proposed this risk-standardized hospital admission rate administrative claims outcome measure as patients with MCCs are at high risk for hospital admission, often for potentially preventable causes, such as exacerbation of pulmonary disease. Evidence from several Medicare demonstration projects suggests that care coordination results in decreased hospital admission rates among high-risk patients. In addition, studies have shown that the types of ambulatory care clinicians this measure targets (for example, primary care providers and specialists caring for patients with MCCs) can influence admission rates through team-based and enhanced access to care, found specifically in the patient-centered medical home (PCMH) model of interventions, and broadly through increased primary care supply and continuity of care. To expand the list of available reporting options for clinicians, we proposed the MCC measure for use in the MIPS program, as it is an administrative claims measure, which has no reporting burden. This measure was evaluated by the NQF MAP in 2019, who did not support for rulemaking with potential for mitigation, including applying the measure to clinician groups, not to individual clinicians, a higher reliability threshold (e.g., 0.7; 3), consideration of patient preference and selection as a method of attribution and NQF endorsement. While we agreed with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. This measure has been submitted for endorsement as part of the fall 2020 NQF cycle. The measure developer indicated the measure will be used for clinician group reporting with a mean reliability score for groups of >15 clinicians with at least 18 MCC patients at 0.873. While the developer indicated that the patient attestation is not yet available for testing, based on research of the available information presented at the MAP, we believe the measure is evidence-based and represents an important clinical practice addressing a large Medicare patient population. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=91911.

Comment: One commenter supported this new measure in the MIPS program.

Response: We thank the commenter for supporting this new measure.

Comment: Several commenters did not support measure A.4: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions.

Key concerns cited by commenters included:

- Less than desirable reliability thresholds and intraclass correlation coefficients for the minimum sample size/case volume
- Lack of inclusion of socioeconomic risk factors in the risk adjustment model, the adequacy of the risk adjustment model, and that dual eligibility should be included in the risk adjustment model.
- Population health measurement faces numerous challenges, including its concept and definition, reliability and validity, data collection and analysis, and accountability.
- CMS should select either this new measure or continue to pursue the individual condition-based measures rather than include both measures in MIPS, and this measure should not be included as a foundational layer to the program and/or a requirement.
- Lack of evidence to support attributing this measure to practices as evidenced from the NQF involved multiple partners such as a disease management program, health system, and/or hospital.
- Insufficient evidence to apply this measure at the TIN level to support that physicians or practices, in the absence of some coordinated program or payment offset (for example, care management fee), can implement structures or processes that can lead to improved outcomes for these patients. Attribution is also assigned retrospectively.
- Concern that PAs, NPs, and other mid-level providers could be attributed this measure, even if they do not practice in the measured specialties (primary care, cardiology, pulmonology, nephrology, neurology, endocrinology, and hematology/oncology).
- The minimum sample size and reliability threshold remain too low.
- Additional information on the validity of the measure is needed when applied at these levels is needed.
- CMS must ensure that data yields accurate scores.
- Concern related to unplanned admissions.
- Insufficient face validity.

Response: We have addressed the concerns raised on this measure with the measure developer.

- The intent of the MIPS MCC measure is to evaluate performance at the clinician group level so that the group can improve care quality across their practice. We will use the measure for clinician groups of >15 providers with at least 18 MCC patients, aligned with its minimum reliability threshold of 0.4. In setting a minimum reliability threshold, CMS, the measure steward, needed to balance measure reliability with the statutory requirement to make performance measures applicable to the broadest number of providers. However, when the measure is applied to groups of >15 clinicians with at least 18 MCC patients, the mean reliability is 0.873, greatly exceeding this minimum threshold. Beyond care coordination, evidence suggests that greater continuity of care and care comprehensiveness can reduce acute admissions[2]. Hospital admissions which do not reflect the quality of ambulatory care are excluded from the measure outcome (for example, admissions due to accidents or planned admissions). The measure is designed to mitigate concerns about use of retrospective attribution: admissions that occur prior to an initial visit to the clinician are not counted in the outcome and attribution is based on performance year to ensure that providers are not held responsible for patients who do not seek care from them during the measurement year.

We have carefully considered adjustment for social risk factors and this measure is adjusted for AHRQ SES Index and specialist density. While dual-eligible beneficiaries are likely to have fewer available health/healthcare supports and may also have other unmeasured social risk factors (for example, low health literacy), we are not adjusting the model for dual eligibility for several reasons: adjusting for dual eligibility can mask disparities in care for dual-eligible beneficiaries; the marginal impact of including dual eligibility is attenuated after accounting for demographic, clinical, and frailty risk factors, and the AHRQ SES Index and specialist density social risk factors; clinicians may have more ability to mitigate social risk associated with dual eligibility,

Category	Description
	especially if a dual-eligible beneficiary is living in a non-socially deprived community; and TEP members supported including only the AHRQ SES Index and specialist density social risk factors in the model. Finally, this measure was evaluated and endorsed as specified by the NQF. With respect to validity, the measure steward's contractor convened a national Technical Expert Panel (TEP) to seek detailed input from clinicians, patient advocates, and other stakeholders. The TEP guided the development of the attribution algorithm and supported its final version. Administrative data do not allow for the identification of the specialty areas of NPs, PAs, or other non-physician clinicians; these clinicians are included because they play key roles in primary care and specialty practice. Condition-specific measures focus on a narrow cohort, a narrow set of condition-specific outcomes, and a narrow set of providers who primarily manage the patient cohort. In contrast, the MIPS MCC measure is designed to capture a broad set of outcomes reflective of care quality for these complex patients. After consideration of public comments, we are finalizing the *Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions* measure as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

TABLE Group AA: COVID-19 Vaccination by Clinicians

In addition to the new quality measures in Table Group A, we solicited comments on one quality measure for potential future inclusion within MIPS. We refer readers to the CY 2022 PFS proposed rule for our request for information pertaining to the COVID-19 Vaccination by Clinicians measure specifications (86 FR 39393 through 39394; and for reference, available in section IV.A.3.d.(1)(f) of this final rule. Please note that we inadvertently referred to the vaccine as "SARS-CoV-2" and not "COVID-19" throughout Table AA.1 in the CY 2022 PFS proposed rule (86 FR 39603). In order to correctly refer to the vaccine in this final rule, we have updated the references to the vaccine to reflect "COVID-19" throughout Table AA.1.

AA.1. COVID Vaccination by Clinicians

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	TBD
Description:	Percentage of patients aged 18 years and older seen for a visit during the measurement period who have received a COVID-19 vaccination dose OR completed a COVID-19 vaccination series.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Patients who have received a COVID-19 vaccination dose OR completed a COVID-19 vaccination series.
Denominator:	All patients aged 18 years and older seen for a visit during the measurement period.
Exclusions:	Patient received hospice services any time during the measurement period. Exceptions: 1. COVID-19 vaccine dose or full COVID-19 vaccination series was not administered, as documented by clinician, due to patient contraindication. 2. COVID-19 vaccine dose or full COVID-19 vaccination series was not administered, as documented by clinician, due to patient refusal. 3. COVID-19 vaccine dose or full COVID-19 vaccination series was not administered, as documented by clinician, due to vaccine being unavailable.
Measure Type:	Process
Measure Domain:	Community/Population Health (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	We solicited comment on this measure as it represents a promising effort to advance measurement of vaccination for an evolving pandemic. On December 19, 2020, the Advisory Committee on Immunization Practice (ACIP) made an interim recommendation on the use of the Moderna COVID-19 vaccine for people ages 18 and older. Earlier that month, on December 12, ACIP also granted use of the Pfizer-BioNTech COVID-19 vaccine for people ages 16 and older, as an interim recommendation. The benefits of both vaccines were classified as high certainty (Type 1) based on the Grading of Recommendations, Assessment, Development and Evaluation (GRADE) evidence assessment. On February 28, 2021, ACIP issued an interim recommendation for use of the Janssen COVID-19 vaccine in persons aged ≥18 years for the prevention of COVID-19. The benefit for this single dose vaccine was classified as moderate certainty (Type 2) based on the GRADE evidence assessment. Future versions of the measure will be updated as more evidence and guidelines emerge. This measure would add value to the MIPS quality measure set by providing visibility into an important intervention to limit COVID-19 infections. In addition, collecting information on severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) vaccination coverage and providing feedback to clinicians, will facilitate performance benchmarking and drive quality improvement. Vaccination coverage will reduce transmission of COVID-19 and the associated mortality and morbidity. This measure was reviewed by the NQF MAP, who recommended conditional support for future rulemaking contingent on us bringing the measure back to MAP once the specifications are further refined. We are considering an expedited process for this measure recognizing the importance of a vaccine during a public health emergency and are exploring the inclusion of pediatric hospitals within this COVID-19 vaccination measure. Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical topic. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.
While we are not summarizing or responding to specific comments submitted in response to the Request for Information regarding the draft COVID-19 Vaccination by Clinicians measure specifications in this final rule, we thank commenters for the feedback received. We may consider such information to inform future rulemaking.	

TABLE Group B: New Specialty Measures Set Finalized for Addition and Modifications to Previously Finalized Specialty Measures Sets Finalized for the CY 2022 Performance Period/2024 MIPS Payment Year and Future Years

We proposed to add one new specialty measures set: Certified Nurse Midwife. This set is finalized to be added based in part on the finalized expanded definition of the MIPS eligible clinician to include certified nurse midwife under section IV.A.3.a of this final rule. Note: Clinical Social Work is also finalized as a MIPS eligible clinician type under section IV.A.3.a of this final rule. See Table B.7 for the finalized changes to the previously finalized Clinical Social Work specialty set.

We proposed to modify the previously finalized specialty measures sets below based upon review of updates made to existing quality measure specifications, proposed the addition of new measures for inclusion in MIPS, and considered the feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D. In the first column, existing measures with substantive changes described in Table Group D are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a "high priority type" in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table Group B as follows: NQF # / eCQM NQF #.

NOTE:

- In the instance a title and/or measure description had a substantive change finalized in Table Group D, the revised title and/or measure description is reflected in the specialty measure sets located in Table Group B.
- Under Table Group B, we respond to comments that are related to new measures that were proposed for addition to measure sets, and measures that were proposed for removal. Any comments received on previously finalized measures are out of scope and not included in this final rule. Commenters who requested additions or removals of quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.
- Measures that were not finalized for removal in this final rule have been added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for their retention is addressed under Table Group C. For some specialty sets, this resulted in the Removal Table being removed in its entirety in this final rule if no measures proposed for removal were finalized for removal. The Removal Tables were removed from the following specialty sets: Cardiology, Emergency Medicine, Gastroenterology, Nephrology, Radiation Oncology, Ophthalmology, Rheumatology, and Urgent Care.

The definition of high priority at §414.1305 includes an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure.

It should be noted that in the 2021 PFS final rule (85 FR 84870), the CMS Web Interface measures as a collection type would have sunset starting with the CY 2022 performance period; however, in section IV.A.3.d.(1)(d) of this final rule, we finalized to extend the availability of the CMS Web Interface measures as a collection type for the CY 2022 performance period (CY 2024 for APM Entities reporting through the APM Performance Pathway) and sunset the CMS Web Interface measures starting with the CY 2023 performance period (CY 2025 for APM Entities reporting through the APM Performance Pathway). Therefore, we proposed to modify the CMS Web Interface Measure Specifications collection type as outlined in the applicable measures within the B tables. In conjunction with soliciting public comments to extend the availability of the CMS Web Interface measures as a collection type, we solicited public comment on the modifications proposed for the CMS Web Interface Measure Specifications collection type given that the CMS Web Interface Measure Specifications collection type has generally remained the same for three consecutive (CY 2019, CY 2020, and CY 2021) performance periods.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

Minnesota Community Measurement
	N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	**Tobacco Use and Help with Quitting Among Adolescents:** The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance

B.1. Allergy/Immunology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ALLERGY/IMMUNOLOGY SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	444	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Medication Management for People with Asthma**: The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
After consideration of public comments, we are finalizing the above measure for removal from the *Allergy/Immunology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.2. Anesthesiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.2. Anesthesiology

The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- And • Most recent tobacco status is Tobacco Free -- And • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- And • Statin Use Unless Contraindicated	Wisconsin Collaborative for Healthcare Quality

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

American College of Cardiology Foundation

B.5. Certified Nurse Midwife

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, we solicited comments on applicable measures for a Certified Nurse Midwife specialty set, which takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures because Certified Nurse Midwife is finalized for inclusion in the definition of a MIPS eligible clinician type.

B.5. Certified Nurse Midwife

MEASURES FINALIZED FOR **ADDITION** TO THE CERTIFIED NURSE MIDWIFE SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Inclusion**

MEASURES FINALIZED FOR **ADDITION** TO THE DERMATOLOGY SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
*	N/A/ N/A	176	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Tuberculosis Screening Prior to First Course Biologic Therapy:** If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.	American College of Rheumatology	We proposed to include this measure in the Dermatology specialty set as it is clinically relevant to this clinician type. Previous stakeholder feedback resulted in an expanded list of acceptable medications, proposed in Table D.20, which now cover the broader dermatological patient population. With this expansion, and the clinical relevance to this clinician type, we proposed to add to the Dermatology specialty set.
We received no public comments on the measure proposed for addition to this specialty set; therefore, we are finalizing the above measure for addition to the *Dermatology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.									

B.9. Dermatology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR **REMOVAL** FROM THE DERMATOLOGY SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier:** Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
After consideration of public comments, we are finalizing the above measure for removal from the *Dermatology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.10. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

§	N/A / N/A	475	CMS349v4	eCQM Specifications	Process	Community/Population Health	**HIV Screening:** Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for HIV.	Centers for Disease Control and Prevention

B.13. Family Medicine

MEASURES FINALIZED FOR **ADDITION** TO THE FAMILY MEDICINE SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A/ N/A	483	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-centered Experience and Outcomes	**Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM):** The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the provider or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.	The American Board of Family Medicine	We proposed to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. This measure assesses the element of patient experience in care quality within the broad scope of primary care. Capturing the voice of the patient is an important component of delivering high-value primary care which is a focus of family medicine. Therefore, given the expansive purview of this specialty and applicability of this component in improving patient care, we proposed the inclusion of this measure within the Family Medicine specialty set. See Table A.3 for rationale.
Comment: One commenter supported inclusion of the Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) in the Family Medicine set. **Response:** We thank the commenter for supporting the new Patient Reported Outcome Performance Measure (PCPCM PRO-PM) in the Family Medicine set. After consideration of public comments, we are finalizing the above measure for addition to the *Family Medicine Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.									

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE FAMILY MEDICINE SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier:** Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0209 / N/A	342	N/A	MIPS CQMs Specifications	Outcome	Person and Caregiver-Centered Experience and Outcomes	**Pain Brought Under Control Within 48 Hours:** Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.	National Hospice and Palliative Care Organization	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	444	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Medication Management for People with Asthma:** The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
After consideration of public comments, we are finalizing the above measures for removal from the *Family Medicine Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.14. Gastroenterology

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR **REMOVAL** FROM THE GERIATRICS SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GERIATRICS SET								
ote: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality easure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
QF # / CQM QF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal

omment: One commenter stated that the removal of measure Q154: Falls: Risk Assessment would have a detrimental impact on the geriatric population. As an ternative or in addition to measure Q154, the commenter requested that CMS include measure Q318, Falls: Screening for Future Fall Risk in the Geriatrics set. Should easure Q318 also become topped out, the commenter believed this would suggest the need to develop a more rigorous measure of falls risk assessment.

esponse: We agree that falls prevention is an extremely important concept for this patient population and the Geriatric Specialty Set. The removal of measure Q154 does ot preclude clinicians in completing these tasks, however, by removing measures with high performance rates, we are attempting to reduce reporting burden where there little room for improvement. The performance for measure Q154 has an extremely high and unvarying performance rate. This does not allow meaningful benchmarks to e established. In addition, prior to rulemaking we solicit feedback from stakeholders with regards to measures that should be added to or removed from existing specialty ts as well as the development of new specialty sets. We encourage the commenter to submit this comment during the Solicitation for Specialty Sets for potential nplementation in future years. Lastly, we also encourage the commenter to reach out to measure developers/stewards to develop a more rigorous falls risk assessment easure for submission to the Call for Measures for possible future implementation.

fter consideration of public comments, we are finalizing the above measure for removal from the *Geriatrics Specialty Measure Set* as proposed for the CY 2022 erformance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) r any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.17. Hospitalists

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

MEASURES FINALIZED FOR **ADDITION** TO THE INTERNAL MEDICINE SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A/ N/A	483	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-centered Experience and Outcomes	**Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM):** The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the provider or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.	The American Board of Family Medicine	We proposed to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. This measure assesses the element of patient experience in care quality within the broad scope of primary care. Capturing the voice of the patient is an important component of delivering high-value primary care which is a focus of internal medicine. Therefore, given the expansive purview of this specialty and applicability of this component in improving patient care, we proposed the inclusion of this measure within the Internal Medicine specialty set. See Table A.3 for rationale.

Comment: One commenter supported inclusion of the Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) in the Internal Medicine set.

Response: We thank the commenter for supporting the new Patient Reported Outcome Performance Measure (PCPCM PRO-PM) in the Internal Medicine set.

After consideration of public comments, we are finalizing the above measure for addition to the *Internal Medicine Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INTERNAL MEDICINE SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier:** Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0209 / N/A	342	N/A	MIPS CQMs Specifications	Outcome	Person and Caregiver-Centered Experience and Outcomes	**Pain Brought Under Control Within 48 Hours:** Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.	National Hospice and Palliative Care Organization	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	444	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Medication Management for People with Asthma:** The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

After consideration of public comments, we are finalizing the above measures for removal from the *Internal Medicine Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.20. Interventional Radiology

University of Southern California

B.21. Mental/Behavioral Health

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR **REMOVAL** FROM THE MENTAL/BEHAVIORAL HEALTH SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	374	CMS50v10	eCQM Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Closing the Referral Loop: Receipt of Specialist Report:** Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from this specialty set beginning with the 2024 MIPS payment year. Specialty specific coding was not added to this quality measure for the 2022 performance period. In addition, the measure's limited existing mental/behavioral health coding has resulted in limited submissions of this measure historically. Therefore, this measure has minimal eligibility for this clinician type, and we proposed to remove it.
We received no public comments on removing measure Q374 from this specialty set; therefore, we are finalizing the above measure for removal from the *Mental/Behavioral Health Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years. Note: Where applicable, see Table C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.22. Nephrology

MEASURES FINALIZED FOR **ADDITION** TO THE NEPHROLOGY SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A/ N/A	482	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	**Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate**: Percentage of adult hemodialysis patient-months using a catheter continuously for three months or longer for vascular access attributable to an individual practitioner or group practice.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Nephrology specialty set as it is clinically relevant to this clinician type. Given the high rates that patients with kidney diseases are treated and managed within this specialty, we recommended the inclusion of this measure in the Nephrology specialty set. See Table A.2 for rationale.
Comment: One commenter did not support the inclusion of the new measure: Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate in the Nephrology specialty set. See full comment under Table A.2. **Response**: Currently, the Nephrology Specialty Measure Set contains 11 measures allowing clinicians to choose to submit those measures that are meaningful to their scope of care. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. In addition, we encourage the commenter to submit this comment during the Solicitation for Specialty Sets for potential implementation in future years. See full response under Table A.2. After consideration of public comments, we are finalizing the above measure for addition to the *Nephrology Specialty Measure Set* as proposed for the CY 2022 performance period/2024 MIPS payment year and future years.
