Animal and Plant Health Inspection Service

Title: National Animal Health Monitoring System; Bison 2022 Study.

OMB Control Number: 0579–0420.

Summary of Collection: Collection and dissemination of animal health data and information is mandated by 7 U.S.C. 391, the Animal Industry Act of 1884, which established the precursor of the Animal and Plant Health Inspection Service (APHIS), Veterinary Services, the Bureau of Animal Industry. Legal requirements for examining and reporting on animal disease control methods were further mandated by 7 U.S.C. 8308 of the Animal Health Protection Act, “Detection, Control, and Eradication of Diseases and Pests,” May 13, 2002. This collection of bison data is consistent with the APHIS mission of protecting and improving American agriculture’s productivity and competitiveness.

In connection with this mission, the NAHMS program includes periodic national commodity studies to investigate current issues and examine general productivity, health, and management practices used on farms and their economic impact. These non-regulatory, voluntary studies are driven by industry and stakeholder interest.

Need and Use of the Information: APHIS will collect information using several forms. APHIS will use the data collected from the forms to address the following goals. (1) Update knowledge of national and regional health management and production practices and develop estimates for producer, veterinary, and industry reference; (2) Provide factual information on fencing and confinement, processing and marketing, and movement for U.S. bison operations; (3) Detect national and regional trends in disease emergence and movement such as the producer reporting of clinical signs of *Mycoplasma bovis*, malignant catarrhal fever, internal parasitism, and respiratory and enteric disease in bison; (4) Provide information useful to disease-spread models; and (5) Provide information on internal parasitism in bison, on antimicrobial resistance among isolates obtained from feces, and

on pasture forage nutritional quality. Without the information, the ability to respond to domestic and international trade issues involving the health status and production practices of the U.S. bison population would be severely reduced, potentially impacting the global marketability of animals, meat, and byproducts. Disease spread models would not have the necessary parameters to more accurately predict spread of an outbreak.
