SUPPLEMENTARY INFORMATION:

MSE is a process that allows fishery managers and stakeholders (e.g., industry, scientists, and non-governmental organizations) to assess how well different strategies achieve specified management objectives for a fishery. After several years of work, ICCAT expects to finalize its bluefin tuna MSE in 2022 and anticipates adopting a management procedure in November 2022 to set Total Allowable Catch (TACs) for 2023 and future years for both the western Atlantic and eastern Atlantic and Mediterranean stocks of bluefin tuna. NMFS and the United States more broadly participate in this MSE development process and have been engaging stakeholders and considering their input throughout the process through various means, including consultation with the Advisory Committee to the U.S. Section to ICCAT. The United States also participates in the development of the bluefin tuna MSE through active engagement by U.S. scientists in ICCAT's Standing Committee on Research and Statistics (SCRS).

The May 2 meeting is intended to update stakeholders and solicit their input on the MSE approach being developed by ICCAT. This includes SCRS progress in developing initial candidate management procedures (CMPs) illustrating potential management tradeoffs and the related process by ICCAT to refine management objectives to assist the SCRS in further refining and narrowing those CMPs. This open session Advisory Committee meeting is primarily informational in nature and intended to increase the opportunity for stakeholder awareness and input on the bluefin tuna MSE process. Discussions at the meeting will help to inform U.S. scientists who are participating in the work of the SCRS, and input provided during the meeting will be considered by the United States to assist its preparations for a 9–10 May 2022 meeting of ICCAT's Panel 2 and other ICCAT bluefin tuna MSE meetings planned for 2022.
