II. Background

The NRC is an independent agency established by the Energy Reorganization Act of 1974 that began operations in 1975 as a successor to the licensing and regulatory activities of the Atomic Energy Commission. The NRC's

mission is to license and regulate the Nation's civilian use of radioactive materials to provide reasonable assurance of adequate protection of public health and safety and to promote the common defense and security and to protect the environment. Consistent with that mission, the NRC plans to develop strategic goals to address AI in the context of its regulatory activities. For the purposes of the draft AI Strategic Plan, AI refers to a machine-based system that can go beyond defined results and scenarios and has the ability to emulate human-like perception, cognition, planning, learning, communication, or physical action. The draft AI Strategic Plan focuses on a broad spectrum of sub-specialties (e.g., natural language processing, machine learning, deep learning, etc.) which could encompass various algorithms and application examples which the NRC has not previously reviewed and evaluated. The NRC recognizes that AI technological maturity is rapidly evolving and usage is growing; therefore, NRC anticipates increased use of AI in NRC-regulated activities.

III. Discussion

The purpose of the AI Strategic Plan is to ensure the NRC's readiness to review and evaluate the use of AI in NRC-regulated activities. The NRC began actively coordinating across the agency and nuclear industry to better understand activities and plans for the use of AI in FY 2021. The agency: (1) conducted an internal scan to learn the scope of existing NRC projects which may fall within this technical area, (2) issued a **Federal Register** notice (86 FR 20744) to solicit feedback on nuclear industry AI activities, and (3) hosted a series of Data Science and AI Regulatory Applications Public Workshops. These three activities informed the development of the draft AI Strategic Plan. Based on feedback from the Data Science and AI Regulatory Applications Public Workshops, the NRC anticipates that the nuclear industry could begin deploying AI in NRC-regulated activities in the near future.

The draft AI Strategic Plan considers machine learning, natural language processing, robotics process automation, and deep learning to be subsets of AI. In practice, the term AI describes various activities which range from data collection and analyses to support human decisionmaking to fully autonomous systems that can learn without human intervention or oversight. The AI Strategic Plan would contribute to regulatory certainty by ensuring continued NRC readiness to

review the use of AI in NRC-regulated activities.

The draft AI Strategic Plan establishes five strategic goals to ensure the agency’s readiness to review the use of AI in NRC-regulated activities. The five strategic goals are: (1) ensure NRC readiness for regulatory decisionmaking, (2) establish an organizational framework to review AI applications, (3) strengthen and expand AI partnerships, (4) cultivate an AI proficient workforce, and (5) pursue use cases to build an AI foundation across the NRC.

IV. Requested Information and Comments

The NRC is interested in obtaining input from stakeholders, including professional organizations, and interested individuals. The focus of the request is to gather information that will permit the NRC staff to develop and

refine the draft AI Strategic Plan. The NRC welcomes comments from the public on any areas that they believe are relevant to these topics, and is particularly interested in receiving input on the following questions:

1. Are there any specific recommendations or improvements to consider in the development of the AI Strategic Plan?
2. What goals, objectives, or strategies within the NRC’s current strategic plan should be added, enhanced, or modified in the AI Strategic Plan?
3. What are potential near-term, or far-term, AI activities that the NRC should be aware when finalizing and prioritizing the AI Strategic Plan, or associated supporting research?
4. What are potential challenges the NRC should be aware when preparing to review potential use of AI in nuclear applications?

V. Public Meeting Information

The NRC staff will hold a virtual public meeting on August 3, 2022, to receive comments on the draft AI Strategic Plan. A telephone line will also be used for the public to submit oral comments. A court reporter will be recording all comments received during the webinar and the transcript of the meeting will be made publicly available. Additionally, the NRC will discuss the agency’s activities related to the development of the AI Strategic Plan or supporting activities for public input and comment on these activities and will continue to seek the views of stakeholders in identifying opportunities to improve the underlying strategic plan. The date and time for the virtual public meeting is as follows:
