Permit No. 20648, issued on June 14, 2019 (84 FR 27767), authorizes the permit holder to conduct vessel-based and unmanned aerial surveys on the following species: fin (*Balaenoptera physalus*), humpback (*Megaptera novaeangliae*; range-wide including those from the endangered Mexico Distinct Population Segment), gray (*Eschrichtius robustus*), killer (*Orcinus orca*); minke (*Balaenoptera acutorostrata*), and sperm (*Physeter macrocephalus*) whales, Dall’s (*Hocoenoides dalli*) and harbor porpoises (*Phocoena phocoena*), and Pacific white-sided dolphins (*Lagenorhynchus obliquidens*). Researchers may use the following methods on all or some of the above listed species: observation, photographic identification, photogrammetry, passive acoustic recording, tagging (suction-cup), remote biopsy and other biological sampling (breath/exhaled air, fecal, swabbed and sloughed skin), and sonar for prey mapping. A minor amendment to the permit, which increased the number of takes per animal from two to four, was issued on September 18, 2020. The permit holder is requesting the permit be amended to increase the number of annual biopsy takes of humpback whales authorized from 50 to 75, with a maximum of four biopsy samples per year from the same animal. Samples would be collected a minimum of 30 days apart. No changes to the permitted objectives, methods, or locations are proposed. The permit expires on June 1, 2024.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of this application to the Marine Mammal Commission and its Committee of Scientific Advisors.
