

Bishop Creek Project begins diverting or impounding water at five points: Green Creek at Bluff Lake, South Fork Bishop Creek at South Lake, Middle Fork Bishop Creek at Lake Sabrina, McGee Creek at Longley Lake, and Birch Creek at Birch-McGee diversion. Plant No. 2 receives water originating from Longley Lake dam and the upper portions of the Birch Creek watershed. Longley Lake dam discharges water to McGee Creek, where it flows approximately 1 mile before being intercepted by the McGee Creek diversion. Water is then diverted into a series of pipelines and open channels and delivered to Birch Creek.

After entering Birch Creek, the water flows approximately 0.5 mile before being diverted again by the Birch-McGee diversion, where enters a pipe and descends over 1,100 feet in elevation before intercepting the penstock to Plant No. 2. A portion of the water flows down Bishop Creek while another portion is conveyed through a series of pipes and penstocks connecting Plants No. 2, through No. 6. Each powerhouse and intake controls the portion of water entering Bishop Creek and the portion directed into the pipe and penstock conveyances. After Plant No. 6, Bishop Creek flows to the community of Bishop and the Owens Valley. When Plant No. 6 is offline, there is an alternative take-off below Plant No. 5. The regulated reaches between Lake Sabrina and Intake No. 2 and those between South Lake and South Fork diversion experience similar flow fluctuations. The current license requires minimum flow releases into diverted reaches.

SCE proposes to modify resource plans and measures it has implemented under the current license, including: (1) water management; (2) the Stocking Plan; (3) the Wildlife Resource Management Plans; (4) the Botanical Resource Management Plan; and (5) the Historic Properties Management Plan. In addition, SCE proposes to develop and implement the following new plans: (1) a sediment management plan; (2) an invasive species management plan; and (3) a recreation resources management plan.
