FEDERAL REGISTER

Vol. 87 Wednesday
No. 153 August 10, 2022

Pages 48601–49504

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 87 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Presidential Documents

Title 3—

The President

Proclamation 10428 of August 5, 2022

National Health Center Week, 2022

By the President of the United States of America

A Proclamation

Over half a century ago, President Lyndon B. Johnson piloted a program to deliver affordable primary health care to Americans who needed it most. He helped establish community health centers in underserved areas, making medical services accessible to people irrespective of their age, geography, or economic status. President Johnson's philosophy was simple: in a ''Great Society,'' no one is left behind. Today, that ideal lives on. Health centers provide quality medical, dental, and behavioral health care services to more than 30 million Americans each year, and they remain a cornerstone of our public health system. During National Health Center Week, we celebrate the vital role these health centers play in safeguarding the well-being of Americans and honor the heroic staff who keep these facilities running.

Health care is a right, not a privilege. Yet many people still struggle to obtain the medical services they need. Nearly 4 million Americans remain locked out of Medicaid expansion, and millions more find it difficult to afford prescription drugs, mental health services, and preventive screenings. Access to care is also often unequal—Black and Brown Americans, rural residents, American Indian and Alaska Native Tribes, and low-income families consistently report lower rates of coverage and lesser access to primary care. Federally funded health centers meet these challenges head-on by providing medical services—particularly to communities of color, rural communities, and individuals living in poverty—through nearly 1,400 community-based organizations operating over 14,000 service delivery sites. Given that clinics operate under a patient-majority governing board, health centers ensure that decisions are being directly informed and made by those being served.

Since taking office, my Administration has strengthened our Nation's health center network. Last year, we invested $7.6 billion in American Rescue Plan funds to strengthen the health center workforce, renovate facilities, and equip them with essential COVID–19 medical supplies. We also allotted $400 million from the American Rescue Plan to create a partnership between the Centers for Disease Control and Prevention and AmeriCorps to train the next generation of public health workers, including in community health centers. We prevented sickness and treated illness for millions of Americans. We helped pay salaries for over 272,000 full-time health care workers and supporting staff.

Health centers are central to many of my Administration's priorities. From reducing the cancer death rate by ensuring equitable access to cancer screenings and preventive care to helping Americans live healthier lives through new digital health technologies—we will ensure that health centers are equipped for the future of health care. I remain committed to working with the Congress to double the size of the Health Center Program, to putting even more Americans to work in these centers across our country, and to ensuring that each of us can access health care at an affordable price.

During National Health Center Week, let us recognize our health centers and staff for their outstanding contributions to communities across America.

Let us thank them for their dedication, their service, and their commitment to a stronger, healthier, and more equitable health system.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim the week of August 7 through August 13, 2022, as National Health Center Week.

IN WITNESS WHEREOF, I have hereunto set my hand this fifth day of August, in the year of our Lord two thousand twenty-two, and of the Independence of the United States of America the two hundred and forty-seventh.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 60 and 63

[EPA–HQ–OAR–2008–0708; FRL–5300.3–01–OAR]

RIN 2060–AV76

National Emission Standards for Hazardous Air Pollutants for Reciprocating Internal Combustion Engines; New Source Performance Standards for Stationary Internal Combustion Engines; Court Vacatur

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is amending the Code of Federal Regulations (CFR) to reflect a 2015 court decision regarding the National Emission Standards for Hazardous Air Pollutants (NESHAP) for Stationary Reciprocating Internal Combustion Engines (RICE) and the New Source Performance Standards (NSPS) for Stationary Internal Combustion Engines (ICE). The court vacated provisions in the regulations specifying that emergency engines could operate for emergency demand response or during periods where there is a deviation of voltage or frequency. This ministerial rule revises the RICE NESHAP and ICE NSPS to conform to the court's decision.

DATES: This final rule is effective on August 10, 2022.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OAR–2008–0708. All documents in the docket are listed in *https://www.regulations.gov/.* Although listed, some information is not publicly available, *e.g.,* Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. With the exception of such material, publicly available docket materials are available electronically in *https://www.regulations.gov/* or in hard copy at the EPA Docket Center, Room 3334, WJC West Building, 1301 Constitution Avenue NW, Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the EPA Docket Center is (202) 566–1742. For further information and updates on EPA Docket Center services and current status, please visit us online at *https://www.epa.gov/dockets/.*

FOR FURTHER INFORMATION CONTACT: For questions about this action, contact Melanie King, Sector Policies and Programs Division (D243–01), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–2469; and email address: *king.melanie@epa.gov.*

SUPPLEMENTARY INFORMATION:

Organization of this document. The information in this preamble is organized as follows:

I. Why is the EPA issuing this final rule?

This action amends the CFR to reflect the 2015 court decision in *Delaware Department of Natural Resources and Environmental Control* v. *EPA,* 785 F.3d 1 (D.C. Cir. 2015) as amended (July 21, 2015), vacating 40 CFR 60.4211(f)(2)(ii) and (iii), 60.4243(d)(2)(ii) and (iii), and 63.6640(f)(2)(ii) and (iii). Section 553 of the Administrative Procedure Act, 5 U.S.C. 553(b)(3)(B) provides that, when an agency for good cause finds that notice and public procedures are impracticable, unnecessary, or contrary to the public interest, the agency may issue a rule without providing notice and an opportunity for public comment. The EPA has determined that there is good cause for amending these provisions without prior proposal and opportunity for public procedures because the correction of the CFR is a ministerial act to effectuate the court order and public notice and comment is unnecessary and would serve no useful purpose. Removal of the vacated paragraphs in the RICE NESHAP (40 CFR part 63 subpart ZZZZ) at 63.6640(f)(2)(ii) and (iii), the Compression Ignition (CI) ICE NSPS (40 CFR part 60 subpart IIII) at 40 CFR 60.4211(f)(2)(ii) and (iii), and the Spark Ignition (SI) ICE NSPS (40 CFR part 60 subpart JJJJ) at 60.4243(d)(2)(ii) and (iii) has no legal effect beyond fulfilling the court's vacatur in *Delaware* v. *EPA* and is ministerial in nature. The court issued the mandate for its decision on May 4, 2016, at which point the vacatur became effective.

II. Background

The RICE NESHAP and ICE NSPS include a subcategory for emergency engines and specify that to be classified as an emergency engine, an engine must meet certain limitations on its hours of operation in non-emergency situations. The existing regulations provide that hours of operation in non-emergency situations are limited to 100 hours per year and only allowed for specific purposes. On January 30, 2013, the EPA finalized amendments to the RICE NESHAP and ICE NSPS specifying that the non-emergency situations in which emergency engines could be operated included (1) for emergency demand response during periods in which the Reliability Coordinator under the North American Electric Reliability

Corporation (NERC) Reliability Standard EOP–002–3, Capacity and Energy Emergencies, or other authorized entity as determined by the Reliability Coordinator, has declared an Energy Emergency Alert Level 2 as defined in the NERC Reliability Standard EOP–002–3 and (2) periods where there is a deviation of voltage or frequency of 5 percent or greater below standard voltage or frequency. 78 FR 6674, January 30, 2013. The state of Delaware and other industry and environmental groups filed petitions seeking judicial review of the provisions specifying that emergency engines could operate for emergency demand response and during voltage or frequency deviations. In response to these petitions, the U.S. Court of Appeals for the District of Columbia Circuit vacated those provisions in the RICE NESHAP and ICE NSPS in 2015. The court held that the EPA acted arbitrarily and capriciously when it modified the RICE NESHAP and ICE NSPS to specify that emergency engines could operate for up to 100 hours per year for emergency demand response. The court granted the EPA's motion to stay issuance of its mandate until May 2016 to allow engine owners to take the necessary measures to bring their engines into compliance with the regulations. Upon issuance of the court's mandate, the vacated provisions ceased to have any legal effect, and engines that were operating for any number of hours per year for the circumstances described in the vacated provisions were required to cease operation under such circumstances or comply with the emission standards and other applicable requirements for non-emergency engines. The EPA issued a guidance memorandum explaining the effect of the vacatur [1] and is now amending the RICE NESHAP and ICE NSPS to reflect the court decision.

III. Which provisions are being amended?

This final rule amends the RICE NESHAP by removing paragraphs 40 CFR 63.6640(f)(2)(ii) and (iii), the CI ICE NSPS by removing paragraphs 40 CFR 60.4211(f)(2)(ii) and (iii), and the SI ICE NSPS by removing paragraphs 40 CFR 60.4243(d)(2)(ii) and (iii), all of which were vacated by the *Delaware* v. *EPA* decision. The removal of the vacated paragraphs also necessitates revisions to other paragraphs in the ICE NSPS and RICE NESHAP that contained references to the vacated paragraphs or referenced operation of engines categorized as emergency engines for the purpose of emergency demand response, which can no longer occur due to the vacatur. A list of these revisions is provided below.

- *40 CFR 60.4211(f):* Remove ''emergency demand response'' from the paragraph (f) introductory text and the paragraph (f)(3) introductory text since operation for emergency demand response is no longer allowed for emergency engines; remove reference to the vacated paragraphs (f)(2)(ii) and (iii) from the paragraph (f)(2) introductory text.
- *40 CFR 60.4214(d):* Remove the reference in the paragraph (d) introductory text to operating for the purposes specified in the vacated paragraphs 40 CFR 60.4211(f)(2)(ii) and (iii); remove paragraphs (v) and (vi) which required reporting of operation and contractual obligation for the purposes specified in the vacated paragraphs.
- *40 CFR 60.4219:* Revise definition for ''emergency stationary internal combustion engine'' to remove reference to the vacated paragraphs 40 CFR 60.4211(f)(2)(ii) and (iii) in paragraph (3) of the definition.
- *40 CFR 60.4243(d):* Remove ''emergency demand response'' from the paragraph (d) introductory text and the paragraph (d)(3) introductory text since operation for emergency demand response is no longer allowed for emergency engines; remove reference to the vacated paragraphs (d)(2)(ii) and (iii) from the paragraph (d)(2) introductory text.
- *40 CFR 60.4245(e):* Remove the reference in the paragraph (e) introductory text to operating for the purposes specified in the vacated paragraphs 40 CFR 60.4243(d)(2)(ii) and (iii); remove paragraphs (v) and (vi) which required reporting of operation and contractual obligation for the purposes specified in the vacated paragraphs.
- *40 CFR 60.4248:* Revise definition for ''emergency stationary internal combustion engine'' to remove reference to the vacated paragraphs 40 CFR 60.4243(d)(2)(ii) and (iii) in paragraph (3) of the definition.
- *40 CFR 63.6585:* Remove reference to operation and contractual obligation for the purposes specified in the vacated paragraphs 40 CFR 63.6640(f)(2)(ii) and (iii).
- *40 CFR 63.6590:* Remove references in paragraphs (b)(1)(i) and (b)(3)(iii) to operation and contractual obligation for the purposes specified in the vacated paragraphs 40 CFR 63.6640(f)(2)(ii) and (iii).
- *40 CFR 63.6604:* Remove reference in paragraph (b) to operation and contractual obligation for the purposes specified in the vacated paragraphs 40 CFR 63.6640(f)(2)(ii) and (iii); remove paragraph (c) since it only applied to an emergency engine that operates or is contractually obligated to be available for the purposes specified in the vacated paragraphs 40 CFR 63.6640(f)(2)(ii) and (iii) and there would no longer be any emergency engines meeting that criteria since operation for those purposes is no longer allowed for emergency engines.
- *40 CFR 63.6640:* Remove ''emergency demand response'' from the paragraph (f) introductory text, the paragraph (f)(3) introductory text, and the paragraph (f)(4) introductory text since operation for emergency demand response is no longer allowed for emergency engines; remove reference to the vacated paragraphs (f)(2)(ii) and (iii) from the paragraph (f)(2) introductory text.
- *40 CFR 63.6650:* Remove the reference in the paragraph (h) introductory text to operating for the purposes specified in the vacated paragraphs 40 CFR 63.6640(f)(2)(ii) and (iii); remove paragraphs (v) and (vi) which required reporting of operation and contractual obligation for the purposes specified in the vacated paragraphs.
- *40 CFR 63.6655:* Remove reference in paragraph (f) to the vacated paragraphs 40 CFR 63.6640(f)(2)(ii) and (iii).
- *40 CFR 63.6675:* Revise definition for ''emergency stationary RICE'' to remove reference to the vacated paragraphs 40 CFR 63.6640(f)(2)(ii) and (iii) in paragraph (3) of the definition.
- *Table 7 to subpart ZZZZ:* Remove reference in item 4 to operating for the purposes specified in the vacated paragraphs 40 CFR 63.6640(f)(2)(ii) and (iii).

As explained above, removal of these provisions corrects the CFR to conform to the court's decision in *Delaware* v. *EPA* and is ministerial in nature and neither imposes or removes any new requirements.

IV. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

[1] *Guidance on Vacatur of RICE NESHAP and NSPS Provisions for Emergency Engines.* Peter Tsirigotis, OAQPS to EPA Regional Air Enforcement Managers and Regional Air Directors. April 15, 2016. *https://www.epa.gov/sites/default/files/2016-06/documents/ricevacaturguidance041516.pdf.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was, therefore, not submitted to the Office of Management and Budget (OMB) for review.

B. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. In making this determination, EPA concludes that the impact of concern for this rule is any significant adverse economic impact on small entities and that the agency is certifying that this rule will not have a significant economic impact on a substantial number of small entities because the rule has no net burden on the small entities subject to the rule. This action is ministerial in nature as it codifies a court-issued mandate vacating regulatory provisions. We have therefore concluded that this action will have no net regulatory burden for all directly regulated small entities.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538. The action imposes no enforceable duty on any state, local, or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175. This action presents no additional burden on implementing authorities beyond existing requirements. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this action is not subject to Executive Order 12898 (59 FR 7629, February 16, 1994) because it does not establish an environmental health or safety standard. This regulatory action is ministerial in nature as it codifies a court issued mandate vacating regulatory provisions and does not have any impact on human health or the environment.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. The CRA allows the issuing agency to make a rule effective sooner than otherwise provided by the CRA if the agency makes a good cause finding that notice and comment rulemaking procedures are impracticable, unnecessary, or contrary to the public interest (5 U.S.C. 808(2)). The EPA has made a good cause finding for this rule in section I of this preamble, including the basis for that finding.

List of Subjects

40 CFR Part 60

Environmental protection, Administrative practice and procedure, Air pollution control, Reporting and recordkeeping requirements.

40 CFR Part 63

Environmental protection, Administrative practice and procedure, Air pollution control, Reporting and recordkeeping requirements.

Michael S. Regan,

Administrator.

For the reasons set forth in the preamble, 40 CFR parts 60 and 63 are amended as follows:

PART 60—STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

■ 1. The authority citation for part 60 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.* 42 U.S.C. 7401–7601.

Subpart IIII—Standards of Performance for Stationary Compression Ignition Internal Combustion Engines

■ 2. In § 60.4211:

■ a. Revise paragraphs (f) introductory text and (f)(2) introductory text;

■ b. Remove and reserve paragraphs (f)(2)(ii) and (iii); and

■ c. Revise paragraph (f)(3) introductory text.

The revisions read as follows:

§ 60.4211 What are my compliance requirements if I am an owner or operator of a stationary CI internal combustion engine?

* * * * *

(f) If you own or operate an emergency stationary ICE, you must operate the emergency stationary ICE according to the requirements in paragraphs (f)(1) through (3) of this section. In order for the engine to be considered an emergency stationary ICE under this subpart, any operation other than emergency operation, maintenance and testing, and operation in non-emergency situations for 50 hours per year, as described in paragraphs (f)(1) through (3), is prohibited. If you do not operate the engine according to the requirements in paragraphs (f)(1) through (3), the engine will not be considered an emergency engine under this subpart and must meet all requirements for non-emergency engines.

* * * * *

(2) You may operate your emergency stationary ICE for the purpose specified in paragraph (f)(2)(i) of this section for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by paragraph (f)(3) of this section counts as part of the 100

hours per calendar year allowed by this paragraph (f)(2).

* * * * *

(3) Emergency stationary ICE may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted as part of the 100 hours per calendar year for maintenance and testing provided in paragraph (f)(2) of this section. Except as provided in paragraph (f)(3)(i) of this section, the 50 hours per calendar year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

* * * * *

■ 3. Section 60.4214 is amended by revising paragraph (d) introductory text and removing and reserving paragraphs (d)(1)(v) and (vi).

The revision reads as follows:

§ 60.4214 What are my notification, reporting, and recordkeeping requirements if I am an owner or operator of a stationary CI internal combustion engine?

* * * * *

(d) If you own or operate an emergency stationary CI ICE with a maximum engine power more than 100 HP that operates for the purpose specified in § 60.4211(f)(3)(i), you must submit an annual report according to the requirements in paragraphs (d)(1) through (3) of this section.

* * * * *

■ 4. Section 60.4219 is amended by revising the definition ''Emergency stationary internal combustion engine'' to read as follows:

§ 60.4219 What definitions apply to this subpart?

* * * * *

Emergency stationary internal combustion engine means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary ICE must comply with the requirements specified in § 60.4211(f) in order to be considered emergency stationary ICE. If the engine does not comply with the requirements specified in § 60.4211(f), then it is not considered to be an emergency stationary ICE under this subpart.

(1) The stationary ICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary ICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary ICE used to pump water in the case of fire or flood, etc.

(2) The stationary ICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in § 60.4211(f).

(3) The stationary ICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in § 60.4211(f)(3)(i).

* * * * *

Subpart JJJJ—Standards of Performance for Stationary Spark Ignition Internal Combustion Engines

■ 5. In § 60.4243:

■ a. Revise paragraphs (d) introductory text and (d)(2) introductory text;

■ b. Remove and reserve paragraphs (d)(2)(ii) and (iii); and

■ c. Revise paragraph (d)(3) introductory text.

The revisions read as follows:

§ 60.4243 What are my compliance requirements if I am an owner or operator of a stationary SI internal combustion engine?

* * * * *

(d) If you own or operate an emergency stationary ICE, you must operate the emergency stationary ICE according to the requirements in paragraphs (d)(1) through (3) of this section. In order for the engine to be considered an emergency stationary ICE under this subpart, any operation other than emergency operation, maintenance and testing, and operation in non-emergency situations for 50 hours per year, as described in paragraphs (d)(1) through (3), is prohibited. If you do not operate the engine according to the requirements in paragraphs (d)(1) through (3), the engine will not be considered an emergency engine under this subpart and must meet all requirements for non-emergency engines.

* * * * *

(2) You may operate your emergency stationary ICE for the purpose specified in paragraph (d)(2)(i) of this section for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by paragraph (d)(3) of this section counts as part of the 100 hours per calendar year allowed by this paragraph (d)(2).

* * * * *

(3) Emergency stationary ICE may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted as part of the 100 hours per calendar year for maintenance and testing provided in paragraph (d)(2) of this section. Except as provided in paragraph (d)(3)(i) of this section, the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

* * * * *

■ 6. Section 60.4245 is amended by revising paragraph (e) introductory text and removing and reserving paragraphs (e)(1)(v) and (vi).

The revision reads as follows:

§ 60.4245 What are my notification, reporting, and recordkeeping requirements if I am an owner or operator of a stationary SI internal combustion engine?

* * * * *

(e) If you own or operate an emergency stationary SI ICE with a maximum engine power more than 100 HP that operates for the purpose specified in § 60.4243(d)(3)(i), you must submit an annual report according to the requirements in paragraphs (e)(1) through (3) of this section.

* * * * *

■ 7. Section 60.4248 is amended by revising the definition ''Emergency stationary internal combustion engine'' to read as follows:

§ 60.4248 What definitions apply to this subpart?

* * * * *

Emergency stationary internal combustion engine means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary ICE must comply with the requirements specified in § 60.4243(d) in order to be considered emergency stationary ICE. If the engine does not comply with the requirements specified in § 60.4243(d), then it is not considered to be an emergency stationary ICE under this subpart.

(1) The stationary ICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary ICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is

interrupted, or stationary ICE used to pump water in the case of fire or flood, etc.

(2) The stationary ICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in § 60.4243(d).

(3) The stationary ICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in § 60.4243(d)(3)(i).

* * * * *

PART 63—NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS FOR SOURCE CATEGORIES

■ 8. The authority citation for part 63 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart ZZZZ—National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines

■ 9. Section 63.6585 is amended by revising paragraphs (f)(1) through (3) to read as follows:

§ 63.6585 Am I subject to this subpart?

* * * * *

(f) * * *

(1) Existing residential emergency stationary RICE located at an area source of HAP emissions that do not operate for the purpose specified in § 63.6640(f)(4)(ii).

(2) Existing commercial emergency stationary RICE located at an area source of HAP emissions that do not operate for the purpose specified in § 63.6640(f)(4)(ii).

(3) Existing institutional emergency stationary RICE located at an area source of HAP emissions that do not operate for the purpose specified in § 63.6640(f)(4)(ii).

■ 10. Section 63.6590 is amended by revising paragraphs (b)(1)(i) and (b)(3)(iii) to read as follows:

§ 63.6590 What parts of my plant does this subpart cover?

* * * * *

(b) * * *

(1) * * *

(i) The stationary RICE is a new or reconstructed emergency stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions.

* * * * *

(3) * * *

(iii) Existing emergency stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions.

* * * * *

■ 11. Section 63.6604 is amended by revising paragraph (b) and removing and reserving paragraph (c).

The revision reads as follows:

§ 63.6604 What fuel requirements must I meet if I own or operate a stationary CI RICE?

* * * * *

(b) Beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in § 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

* * * * *

■ 12. In § 63.6640:

■ a. Revise paragraphs (f) introductory text and (f)(2) introductory text;

■ c. Remove and reserve paragraphs (f)(2)(ii) and (iii); and

■ d. Revise paragraph (f)(3) and paragraph (f)(4) introductory text.

The revisions read as follows:

§ 63.6640 How do I demonstrate continuous compliance with the emission limitations, operating limitations, and other requirements?

* * * * *

(f) If you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in paragraphs (f)(1) through (4) of this section. In order for the engine to be considered an emergency stationary RICE under this subpart, any operation other than emergency operation, maintenance and testing, and operation in non-emergency situations for 50 hours per year, as described in paragraphs (f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in paragraphs (f)(1) through (4), the engine will not be considered an emergency engine under this subpart and must meet all requirements for non-emergency engines.

* * * * *

(2) You may operate your emergency stationary RICE for the purpose specified in paragraph (f)(2)(i) of this section for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by paragraphs (f)(3) and (4) of this section counts as part of the 100 hours per calendar year allowed by this paragraph (f)(2).

* * * * *

(3) Emergency stationary RICE located at major sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted as part of the 100 hours per calendar year for maintenance and testing provided in paragraph (f)(2) of this section. The 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to supply power to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

(4) Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted as part of the 100 hours per calendar year for maintenance and testing provided in paragraph (f)(2) of this section. Except as provided in paragraphs (f)(4)(i) and (ii) of this section, the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

* * * * *

■ 13. Section 63.6650 is amended by revising paragraph (h) introductory text and removing and reserving paragraphs (h)(1)(v) and (vi).

The revision reads as follows:

§ 63.6650 What reports must I submit and when?

* * * * *

(h) If you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in § 63.6640(f)(4)(ii), you must submit an annual report according to the requirements in paragraphs (h)(1) through (3) of this section.

* * * * *

■ 14. Section 63.6655 is amended by revising paragraph (f) introductory text to read as follows:

§ 63.6655 What records must I keep?

* * * * *

(f) If you own or operate any of the stationary RICE in paragraphs (f)(1) through (2) of this section, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The

owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engine is used for the purpose specified in § 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

* * * * *

■ 15. Section 63.6675 is amended by revising the definition ''Emergency stationary RICE'' to read as follows:

§ 63.6675 What definitions apply to this subpart?

* * * * *

Emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in § 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in § 63.6640(f), then it is not considered to be an emergency stationary RICE under this subpart.

(1) The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

(2) The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in § 63.6640(f).

(3) The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in § 63.6640(f)(4)(i) or (ii).

* * * * *

■ 16. Table 7 to subpart ZZZZ of part 63 is revised to read as follows:

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in § 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
1. Existing non-emergency, non-black start stationary RICE 100≤HP≤500 located at a major source of HAP; existing non-emergency, non-black start stationary CI RICE >500 HP located at a major source of HAP; existing non-emergency 4SRB stationary RICE >500 HP located at a major source of HAP; existing non-emergency, non-black start stationary CI RICE >300 HP located at an area source of HAP; new or reconstructed non-emergency stationary RICE >500 HP located at a major source of HAP; and new or reconstructed non-emergency 4SLB stationary RICE 250≤HP≤500 located at a major source of HAP.	Compliance report	a. If there are no deviations from any emission limitations or operating limitations that apply to you, a statement that there were no deviations from the emission limitations or operating limitations during the reporting period. If there were no periods during which the CMS, including CEMS and CPMS, was out-of-control, as specified in § 63.8(c)(7), a statement that there were not periods during which the CMS was out-of-control during the reporting period; or	i. Semiannually according to the requirements in § 63.6650(b)(1)–(5) for engines that are not limited use stationary RICE subject to numerical emission limitations; and ii. Annually according to the requirements in § 63.6650(b)(6)–(9) for engines that are limited use stationary RICE subject to numerical emission limitations.
		b. If you had a deviation from any emission limitation or operating limitation during the reporting period, the information in § 63.6650(d). If there were periods during which the CMS, including CEMS and CPMS, was out-of-control, as specified in § 63.8(c)(7), the information in § 63.6650(e); or	i. Semiannually according to the requirements in § 63.6650(b).
		c. If you had a malfunction during the reporting period, the information in § 63.6650(c)(4)	i. Semiannually according to the requirements in § 63.6650(b).
2. New or reconstructed non-emergency stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis.	Report	a. The fuel flow rate of each fuel and the heating values that were used in your calculations, and you must demonstrate that the percentage of heat input provided by landfill gas or digester gas, is equivalent to 10 percent or more of the gross heat input on an annual basis; and	i. Annually, according to the requirements in § 63.6650.
		b. The operating limits provided in your federally enforceable permit, and any deviations from these limits; and	i. See item 2.a.i.
		c. Any problems or errors suspected with the meters.	i. See item 2.a.i.
3. Existing non-emergency, non-black start 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that are not remote stationary RICE and that operate more than 24 hours per calendar year.	Compliance report	a. The results of the annual compliance demonstration, if conducted during the reporting period.	i. Semiannually according to the requirements in § 63.6650(b)(1)–(5).
4. Emergency stationary RICE that operate for the purposes specified in § 63.6640(f)(4)(ii).	Report	a. The information in § 63.6650(h)(1)	i. annually according to the requirements in § 63.6650(h)(2)–(3).

BILLING CODE 6560–50–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

42 CFR Parts 410 and 414

[CMS–6087–N]

Medicare Program; Suspension of Required Prior Authorization for Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Items Under Certain Circumstances

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services, (HHS).

ACTION: Suspension of prior authorization requirements for specified orthoses prescribed and furnished urgently or under special circumstances.

SUMMARY: This document announces the suspension of prior authorization for specified orthoses items on the Required Prior Authorization List that require prior authorization as a condition of payment under certain circumstances when reported with certain modifiers. Items subject to face-to-face encounter and written order prior to delivery requirements are not impacted by this document.

DATES: The suspension of the prior authorization requirement discussed in this document took effect on April 13, 2022, when CMS published an announcement on its website.

FOR FURTHER INFORMATION CONTACT: Emily Calvert, (410) 786–4277.

SUPPLEMENTARY INFORMATION:

I. Background

In the December 30, 2015, final rule (80 FR 81674) titled, ''Medicare Program; Prior Authorization Process for Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies,'' we implemented section 1834(a)(15) of the Act by establishing an initial Master List (called the Master List of Items Frequently Subject to Unnecessary Utilization) of certain DMEPOS that the Secretary determined, on the basis of prior payment experience, are frequently subject to unnecessary utilization and by establishing a prior authorization process for these items.

In the November 8, 2019, **Federal Register** (84 FR 60648), we published a final rule titled, ''Medicare Program; End-Stage Renal Disease Prospective Payment System, Payment for Renal Dialysis Services Furnished to Individuals with Acute Kidney Injury, End-Stage Renal Disease Quality Incentive Program, Durable Medical Equipment, Prosthetics, Orthotics and Supplies (DMEPOS) Fee Schedule Amounts, DMEPOS Competitive Bidding Program (CBP) Amendments, Standard Elements for a DMEPOS Order, and Master List of DMEPOS Items Potentially Subject to a Face-to-Face Encounter and Written Order Prior to Delivery and/or Prior Authorization Requirements.'' Through this November 2019 final rule, we harmonized the lists of DMEPOS items created by former rules and established one ''Master List of DMEPOS Items Potentially Subject to Face-To-Face Encounter and Written Orders Prior to Delivery and/or Prior Authorization Requirements'' (the ''Master List''). The November 2019 final rule was effective January 1, 2020.

In January 13, 2022, **Federal Register** (87 FR 2051), we published a document, titled, ''Medicare Program; Updates to Lists Related to Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Conditions of Payment.'' Through the January 2022 **Federal Register** document, we updated the Master List and selected certain lower limb orthoses, lumbar sacral orthoses, and power mobility devices to be subject to required prior authorization. The January 2022 **Federal Register** document was effective April 13, 2022.

II. Provisions of the Document

In accordance with 42 CFR 414.234(f), CMS may suspend DMEPOS prior authorization requirement generally or for a particular item or items at any time and without undertaking rulemaking. Due to the need for certain patients to receive an orthoses item that may otherwise be subject to prior authorization when the 2-day expedited review would delay care and risk the health or life of the beneficiary, we are suspending prior authorization requirements indefinitely, under these limited circumstances:

- Claims for HCPCS codes L0648, L0650, L1832, L1833, and L1851 that are billed using modifier ST, indicating that the item was furnished urgently.
- Claims for HCPCS codes L0648, L0650, L1833, and L1851 billed with modifiers KV, J5, or J4, by suppliers furnishing these items under a competitive bidding program exception (as described in 42 CFR 414.404(b)), to convey that the DMEPOS item is needed immediately either because it is being furnished by a physician or treating practitioner during an office visit where the physician or treating practitioner determines that the brace is needed immediately due to medical necessity or because it is being furnished by an occupational therapist or physical therapist who determines that the brace needs to be furnished as part of a therapy session(s).

Prior authorization will continue for these orthoses items (HCPCS L0648, L0650, L1832, L1833, and L1851) when furnished under circumstances not covered in this update, as well as all other items on the Required Prior Authorization List, available at *https://www.cms.gov/Research-Statistics-Data-and-Systems/Monitoring-Programs/Medicare-FFS-Compliance-Programs/DMEPOS/Downloads/DMEPOS_PA_Required-Prior-Authorization-List.pdf.*

The Administrator of the Centers for Medicare & Medicaid Services (CMS), Chiquita Brooks-LaSure, having reviewed and approved this document, authorizes Lynette Wilson, who is the Federal Register Liaison, to electronically sign this document for purposes of publication in the **Federal Register**.

Dated: August 5, 2022.

Lynette Wilson,

Federal Register Liaison, Centers for Medicare & Medicaid Services.

[CMS–5537–N]

Medicare Program; Alternative Payment Model (APM) Incentive Payment Advisory for Clinicians—Request for Current Billing Information for Qualifying APM Participants

AGENCY: Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

ACTION: Payment advisory.

SUMMARY: This advisory is to alert certain clinicians who are Qualifying APM participants (QPs) and eligible to receive an Alternative Payment Model (APM) Incentive Payment that CMS does not have the current billing information needed to disburse the payment. This advisory provides information to these clinicians on how to update their billing information to receive this payment.

DATES: Updated billing information must be received no later than November 1, 2022 (see **SUPPLEMENTARY INFORMATION** for details).

FOR FURTHER INFORMATION CONTACT: Tanya Dorm, (410) 786–2216.

SUPPLEMENTARY INFORMATION:

I. Background

Under the Medicare Quality Payment Program, an eligible clinician who participates in an Advanced Alternative Payment Model (APM) and meets the applicable payment amount or patient count thresholds for a performance year is a Qualifying APM Participant (QP) for that year. For payment years 2019 through 2024, an eligible clinician who is a QP for a year based on their performance in a QP Performance Period earns a 5-percent lump sum APM Incentive Payment that is paid in a payment year that occurs 2 years after the QP Performance Period. The amount of the APM Incentive Payment is equal to 5 percent of the estimated aggregate paid amounts for covered professional services furnished by the QP during the calendar year immediately preceding the payment year.

II. Provisions of the Advisory

The Centers for Medicare & Medicaid Services (CMS) has identified those eligible clinicians who earned an APM Incentive Payment in CY 2022 based on their CY 2020 QP status.

When we disbursed the CY 2022 APM Incentive Payments, we were unable to verify current Medicare billing information for some QPs and therefore unable to issue the payment. In order to properly disburse the APM Incentive Payment, CMS is requesting assistance in identifying current Medicare billing information for these QPs in accordance with 42 CFR 414.1450(c)(8).

We have compiled a list of QPs we have identified as having unverified billing information. These QPs, and any others who anticipated receiving an APM Incentive Payment but have not, should follow the instructions to provide CMS with updated billing information at the following web address: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1968/2022%20QP%20Notice%20for%20APM%20Incentive%20Payment%20Zip%20File.zip.*

If you have any questions concerning submission of information through the website, please contact the Quality Payment Program Help Desk at 1–866–288–8292.

All submissions must be received no later than November 1, 2022. After that time, any claims by a QP to an APM Incentive Payment will be forfeited for the CY 2022 payment year. To make sure we have received all updated billing forms, we will process remaining CY 2022 APM Incentive Payments during one payment cycle in the beginning of 2023, based on updated billing information for QPs received by November 1, 2022. Payment processing occurs one time after all forms have been received.

The Administrator of the Centers for Medicare & Medicaid Services (CMS), Chiquita Brooks-LaSure, having reviewed and approved this document, authorizes Lynette Wilson, who is the Federal Register Liaison, to electronically sign this document for purposes of publication in the **Federal Register**.

Dated: August 5, 2022.

Lynette Wilson,

Federal Register Liaison, Centers for Medicare & Medicaid Services.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 622

[Docket No. 100217095–2081–04; RTID 0648–XC199]

Reef Fish Fishery of the Gulf of Mexico; 2022 Recreational Accountability Measure and Closure for Gulf of Mexico Red Grouper

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS implements an accountability measure (AM) for the red grouper recreational sector in the exclusive economic zone (EEZ) of the Gulf of Mexico (Gulf) for the 2022 fishing year through this temporary rule. NMFS has projected that the 2022 recreational annual catch target (ACT) for Gulf red grouper will have been reached by August 30, 2022. Therefore, NMFS closes the recreational sector for Gulf red grouper on August 30, 2022, and it will remain closed through the end of the fishing year on December 31, 2022. This closure is necessary to protect the Gulf red grouper resource.

DATES: This temporary rule is effective from 12:01 a.m., local time, on August 30, 2022, until 12:01 a.m., local time, on January 1, 2023.

FOR FURTHER INFORMATION CONTACT: Dan Luers, NMFS Southeast Regional Office, telephone: 727–551–5719, email: *daniel.luers@noaa.gov.*

SUPPLEMENTARY INFORMATION: NMFS manages the Gulf reef fish fishery, which includes red grouper, under the Fishery Management Plan for the Reef Fish Resources of the Gulf of Mexico (FMP). The FMP was prepared by the Gulf of Mexico Fishery Management Council and is implemented by NMFS under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) through regulations at 50 CFR part 622. All red grouper weights discussed in this temporary rule are in gutted weight.

Following a recent red grouper stock assessment, NMFS implemented Amendment 53 to the Reef Fish FMP (87 FR 25573, May 2, 2022), which modified the allocation between the commercial and recreational sectors, and the sector catch limits. The new assessment incorporated updated historical recreational landings estimates calibrated to the Marine Recreational Information Program (MRIP) Fishing Effort Survey (FES), the current method for estimating recreational effort. The previous recreational catch limits were based on an assessment that incorporated the historical recreational landings estimates generated using the prior (MRIP) Coastal Household Telephone Survey (CHTS), which produced significantly lower estimates of recreational effort. Under Amendment 53, the recreational annual catch limit (ACL) is 1.73 million lb (0.78 million kg) and the recreational ACT is 1.57 million lb (0.71 kg)(in MRIP FES units). Subsequent to the Amendment 53 final rule, NMFS implemented a final rule for a framework action under the FMP (87 FR 40742, July 8, 2022) which further revised the red grouper recreational ACL to 2.02 million lb (0.92 million kg) and the ACT to 1.84 million lb (0.83 million kg). This rule is effective August 8, 2022.

The Gulf red grouper recreational ACL was exceeded in 2021 by approximately 0.72 million lb (0.33 million kg) or 72 percent of the recreational ACL. As specified in 50 CFR 622.41(e)(2)(ii), in the year following a recreational ACL overage, NMFS is required to maintain the red grouper ACT in that following fishing year at the level of the prior year's ACT, unless the best scientific information available determines that maintaining

the prior year's ACT is unnecessary. In addition, NMFS is required to reduce the length of that following year's recreational fishing season to ensure that the recreational ACT is not exceeded in that following year.

Although the regulations refer to maintaining the prior year's ACT, the 2021 ACT is not consistent with catch limits established in Amendment 53 and the 2022 red grouper framework action because it was derived from an assessment that used the outdated MRIP CHTS historical recreational landings estimates and the prior commercial-recreational allocation. In addition, as explained in the final rule implementing Amendment 53, the 2021 ACT, which is 0.92 million lb (0.42 million kg) in MRIP CHTS units, would be 1.93 million lb (0.88 million kg) in MRIP FES units (87 FR at 25574). This is greater than the current 2022 ACT of 1.84 million lb (0.83 million kg), and implementing a closure based on the greater ACT would increase the likelihood of exceeding the 2022 recreational ACL. Therefore, this closure is based on the projection of when the newly implemented ACT for 2022 will be reached. Based on data from January–April 2022, and on the average harvest rates for the 2020 and 2021 recreational fishing years, NMFS projects that the 2022 recreational ACT for Gulf red grouper will be reached as of August 30, 2022. NMFS used a 2-year average for the projected harvest rates because NMFS determined that it is most representative of current conditions. The catch rate in 2021 was higher than the catch rate in 2020. However, the harvest of red grouper from January through April of 2022 was lower than in 2021, and the price of fuel may be contributing to less boating/fishing activity to date in 2022. Accordingly, this temporary rule closes the recreational sector for Gulf red grouper effective at 12:01 a.m., local time, on August 30, 2022, through the end of the fishing year on December 31, 2022.

During the recreational closure, the bag and possession limits for red grouper in or from the Gulf EEZ are zero. The prohibition on possession of Gulf red grouper also applies in Gulf state waters for any vessel issued a valid Federal charter vessel/headboat permit for Gulf reef fish.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR 622.41(e)(2)(i), which was issued pursuant to section 304(b) of the Magnuson-Stevens Act, and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment is unnecessary and contrary to the public interest. Such procedures are unnecessary because the regulations associated with the closure of the red grouper recreational sector at 50 CFR 622.41(e)(2)(i) have already been subject to notice and public comment, and all that remains is to notify the public of the closure. Prior notice and opportunity for public comment are contrary to the public interest because there is a need to immediately implement this action to protect the red grouper stock. Prior notice and opportunity for public comment would require time and could result in a harvest well in excess of the established ACT and ACL.

For the aforementioned reasons, the Assistant Administrator also finds good cause to waive the 30-day delay in the effectiveness of this action under 5 U.S.C. 553(d)(3).

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 5, 2022.

Jennifer M. Wallace,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 220223–0054; RTID 0648–XC235]

Fisheries of the Exclusive Economic Zone Off Alaska; Blackspotted and Rougheye Rockfish in the Central Aleutian and Western Aleutian Districts of the Bering Sea and Aleutian Islands Management Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting retention of blackspotted and rougheye rockfish in the Central Aleutian and Western Aleutian districts (CAI/WAI) of the Bering Sea and Aleutian Islands management area (BSAI). This action is necessary because the 2022 blackspotted and rougheye rockfish total allowable catch (TAC) in the CAI/WAI of the BSAI has been reached.

DATES: Effective 1200 hours, Alaska local time (A.l.t.), August 6, 2022, through 2400 hours, A.l.t., December 31, 2022.

FOR FURTHER INFORMATION CONTACT: Steve Whitney, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2022 blackspotted and rougheye rockfish TAC in the CAI/WAI of the BSAI is 177 metric tons (mt) as established by the final 2022 and 2023 harvest specifications for groundfish in the BSAI (87 FR 11626, March 2, 2022) and inseason action (87 FR 43220, July 20,2022). In accordance with § 679.20(d)(2), the Administrator, Alaska Region, NMFS (Regional Administrator), has determined that the 2022 blackspotted and rougheye rockfish TAC in the CAI/WAI of the BSAI has been reached. Therefore, NMFS is requiring that blackspotted and rougheye rockfish in the CAI/WAI of the BSAI be treated in the same manner as a prohibited species, as described under § 679.21(a), for the remainder of the year, except blackspotted and rougheye rockfish species in the CAI/WAI caught by catcher vessels using hook-and-line, pot, or jig gear as described in § 679.20(j).

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR part 679, which was issued pursuant to section 304(b), and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be impracticable and contrary to the public interest, as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the prohibited retention of blackspotted and rougheye rockfish in the CAI/WAI of the BSAI. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data

only became available as of August 4, 2022.

The Assistant Administrator for Fisheries, NOAA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 5, 2022.

Jennifer M. Wallace,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

National Indian Gaming Commission

25 CFR Parts 502, 556, and 558

RIN 3141–AA32

Definitions; Background Investigation for Primary Management Officials and Key Employees; Gaming Licenses for Primary Management Officials and Key Employees

AGENCY: National Indian Gaming Commission, Department of the Interior.

ACTION: Proposed rule.

SUMMARY: The National Indian Gaming Commission proposes to amend its regulations to add definitions, amend existing definitions, and amend requirements for conducting background investigations and issuing licenses. Proposed amendments include adding general managers and other persons with similar management responsibility to the primary management official definition; limiting the definition to those with duties similar to those of a chief financial officer rather than persons who have financial management responsibility; and limiting primary management officials to employed management officials designated by Tribes instead of any person so designated. The proposed amendments to the key employee definition consolidate certain of its subsections; include gaming operation employees authorized for unescorted access to secured areas that are designated as such by Tribal gaming regulatory authorities; remove compensation as determinative factor with the exception of the four most highly compensated persons in the gaming operation; and allow Tribes to designate any other employee of the gaming enterprise as a key employee instead of ''any other person.'' Other proposed amendments incorporate the addition definitions for Gaming Enterprise and Tribal Gaming Regulatory Authority and clarify licensing application and background investigation retention. Specifically, the proposed amendments focus on licensing of primary management officials and key employees instead of employment of them; adding notification requirements for licensing revocation decisions; specifying retention requirements of information and documentation post termination; and changing the vesting of a right to a hearing to reflect Tribal law and policy.

DATES: Written comments on this proposed rule must be received on or before September 9, 2022.

ADDRESSES: You may submit comments by any one of the following methods, however, please note that comments sent by electronic mail are strongly encouraged.

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Email comments to: information@nigc.gov.*

FOR FURTHER INFORMATION CONTACT: Michael Hoenig at (202) 420–9241.

SUPPLEMENTARY INFORMATION:

I. Background and Development of the Rule

A. Background

The Indian Gaming Regulatory Act (IGRA or Act), Public Law 100–497, 25 U.S.C. 2701 *et seq.,* was signed into law on October 17, 1988. The Act established the National Indian Gaming Commission (''NIGC'' or ''Commission'') and set out a comprehensive framework for the regulation of gaming on Indian lands. IGRA requires that Tribal gaming ordinances provide ''an adequate system which ensures that background investigations are conducted on the primary management officials and key employees of the gaming enterprise and (ii) includes—(I) [T]ribal licenses for primary management officials and key employees of the gaming enterprise . . .; (II) a standard whereby any person whose prior activities, criminal record, if any, or reputation, habits and associations pose a threat to the public interest or to the effective regulation of gaming, or create or enhance the dangers of unsuitable, unfair, or illegal practices and methods and activities in the conduct of gaming shall not be eligible for employment; and (III) notification by the Indian Tribe to the Commission of the results of such background check before the issuance of any of such licenses.''

The Commission first defined ''key employee'' and ''primary management official'' in April of 1992 (57 FR 123802–01). As mandated by IGRA, applicants for key employee and primary management official positions are subject to a background investigation as a condition of licensure. In 2009, the Commission expanded these definitions to permit Tribes to designate other persons as key employees or primary management officials (74 FR 36926). The U.S. Department of Justice, Federal Bureau of Investigation (FBI) took issue with this expansion, denying the processing of criminal history record information (CHRI) for the expanded positions' background investigations. This proposed rule rectifies that issue in part 502, limiting Tribal designations to ''[a]ny other employee of the gaming enterprise designated by the Tribe as a key employee'' and ''[a]ny other employed management official of the gaming enterprise designated by the Tribe as a primary management official.''

Background investigation and licensing regulations for key employees and primary management officials were initially issued by the Commission in January of 1993 (58 FR 5802–01) in parts 556 and 558, respectively. The Commission updated these regulations in 2013 to streamline the submission of documents; to ensure that two notifications are submitted to the Commission in compliance with IGRA; and to clarify the regulations regarding the issuance of temporary and permanent gaming licenses (78 FR 5276–01). As for part 556, this proposed rule incorporates the Gaming Enterprise definition, as needed, and modernizes the licensing application and background investigation retention requirements. And for part 558, the proposed rule emphasizes primary management official and key employee licensing rather than their employment; adds notification requirements for licensing revocation decisions; details the retention requirements of information and documentation related to key employees and primary management officials after their

employment ceases; and updates the vesting of a right to a hearing to include the requirements of Tribal law and policy.

B. Development of the Rule

On, June 9, 2021, the National Indian Gaming Commission sent a Notice of Consultation announcing that the Agency intended to consult on a number of topics, including proposed changes to the key employee and primary management definitions and the backgrounding and licensing regulations. Prior to consultation, the Commission released proposed discussion drafts of the regulations for review. The proposed amendments to these regulations were intended to: address FBI's concerns regarding the key employee and primary management official definitions; include gaming operation employees with unescorted access to secured areas as key employees; combine certain subsections of the key employee definition; add general managers and similar positions to the primary management official definition; and update licensing application and background investigation retention requirements. The Commission held two virtual consultation sessions in July of 2021 to receive Tribal input on the possible changes.

The Commission reviewed all comments received as part of the consultation process. Several comments were concerned that defining a key employee as a ''Custodian of gambling device or system records'' would make TGRA personnel key employees. To address this concern, the Commission is proposing to limit the definition to persons who perform that function ''for the gaming operation.'' It is not the Commission's intent to capture TGRA employees or non-gaming operation personnel in the definition. A similar comment sought clarification as to whether ''[a]ny person authorized by the gaming operation for unescorted access to secured areas'' includes TGRA personnel. Again, it does not as in most cases the TGRA, not the gaming operation, authorizes TGRA personnel's access to restricted areas. However, under provision § 502.14(d)—''[a]ny other employee of the gaming enterprise designated by the Tribe as a key employee''—A Tribe may, at its discretion, designate TGRA personnel as key employees through its gaming ordinance, since the ''Gaming Enterprise'' definition includes ''the entities through which a Tribe conducts, regulates, and secures its gaming . . . .'' Likewise, if it so chooses, a Tribe may deem TGRA supervisory personnel as primary management officials under § 502.19(e)—''[a]ny other employed management official of the gaming enterprise designated by the Tribe as a primary management official.'' The intent of both proposed provisions is to provide maximum flexibility to Tribes.

II. Regulatory Matters

Unfunded Mandate Reform Act

The Commission, as an independent regulatory agency, is exempt from compliance with the Unfunded Mandates Reform Act, 2 U.S.C. 1502(1); 2 U.S.C. 658(1).

Takings

In accordance with Executive Order 12630, the Commission has determined that the rule does not have significant takings implications. A takings implication assessment is not required.

Civil Justice Reform

In accordance with Executive Order 12988, the Commission has determined that the rule does not unduly burden the judicial system and meets the requirements of sections 3(a) and 3(b)(2) of the Order.

National Environmental Policy Act

The Commission has determined that the rule does not constitute a major federal action significantly affecting the quality of the human environment and that no detailed statement is required pursuant to the National Environmental Policy Act of 1969, 42 U.S.C. 4321, *et seq.*

Paperwork Reduction Act

The information collection requirements contained in this rule were previously approved by the Office of Management and Budget as required by 44 U.S.C. 3501, *et seq.,* and assigned OMB Control Number 3141–0003.

Tribal Consultation

The National Indian Gaming Commission is committed to fulfilling its Tribal consultation obligations—whether directed by statute or administrative action such as Executive Order (E.O.) 13175 (Consultation and Coordination with Indian Tribal Governments)—by adhering to the consultation framework described in its Consultation Policy published July 15, 2013. The NIGC's consultation policy specifies that it will consult with Tribes on Commission Action with Tribal Implications, which is defined as: Any Commission regulation, rulemaking, policy, guidance, legislative proposal, or operational activity that may have a substantial direct effect on an Indian Tribe on matters including, but not limited to the ability of an Indian Tribe to regulate its Indian gaming; an Indian Tribe's formal relationship with the Commission; or the consideration of the Commission's trust responsibilities to Indian Tribes.

Pursuant to this policy, on June 9, 2021, the National Indian Gaming Commission sent a Notice of Consultation announcing that the Agency intended to consult on a number of topics, including proposed changes to the key employee and primary management official regulatory definitions as well as the background and licensing regulations. Consultations with Tribes were held on July 27 and 28, 2021.

List of Subjects in 25 CFR Parts 502, 556, and 558

Gambling, Indian lands.

Therefore, for reasons stated in the preamble, 25 CFR parts 502, 556, and 558 are amended as follows:

PART 502—DEFINITIONS

■ 1. The authority citation for part 502 continues to read as follows:

Authority: 25 U.S.C. 2701 *et seq.*

■ 2. Revise § 502.14 to read as follows:

§ 502.14 Key employee.

Key employee means:

(a) Any person who performs one or more of the following functions for the gaming operation:

(1) Bingo caller;

(2) Counting room supervisor;

(3) Chief of security;

(4) Floor manager;

(5) Pit boss;

(6) Dealer;

(7) Croupier;

(8) Approver of credit;

(9) Custodian of gaming systems as defined in 25 CFR 547.2 and similar class III systems, gaming cash or gaming cash equivalents, or gaming system records;

(10) Custodian of surveillance systems or surveillance system records.

(b) Any person authorized by the gaming operation for unescorted access to restricted areas designated as restricted areas by the TGRA;

(c) If not otherwise licensed as a key employee or primary management official, the four persons most highly compensated persons by the gaming operation.

(d) Any other employee of the gaming enterprise designated by the Tribe as a key employee in its gaming ordinance.

■ 3. Revise § 502.19 to read as follows:

§ 502.19 Primary management official.

Primary management official means:

(a) Any person having management responsibility for a management contract;

(b) Any person who has authority:

(1) To hire and fire employees of the gaming operation; or

(2) To establish policy for the gaming operation; or

(3) To supervise a key employee of the gaming operation.

(c) The chief financial officer or a position with duties similar to a chief financial officer.

(d) The general manager or a position with duties similar to a general manager.

(e) Any other employed management official of the gaming enterprise designated by the Tribe as a primary management official in its gaming ordinance.

■ 4. Add §§ 502.25 and 502.26 to read as follows:

§ 502.25 Gaming Enterprise.

Gaming Enterprise means the entities through which a Tribe conducts, regulates, and secures gaming on Indian lands within such Tribe's jurisdiction pursuant to the Indian Gaming Regulatory Act.

§ 502.26 Tribal Gaming Regulatory Authority (TGRA).

Tribal Gaming Regulatory Authority (TGRA) means the governmental entity authorized by Tribal law to regulate gaming conducted pursuant to the Indian Gaming Regulatory Act.

PART 556—BACKGROUND INVESTIGATIONS FOR PRIMARY MANAGEMENT OFFICIALS AND KEY EMPLOYEES

■ 5. The authority citation for part 556 is revised to read as follows:

Authority: 25 U.S.C. 2706, 2710.

■ 6. Amend § 556.4 by revising the first sentence of the introductory text to read as follows:

§ 556.4 Background investigations.

A Tribe shall perform a background investigation for each primary management official and for each key employee of the gaming enterprise.

* * *

* * * * *

■ 7. Amend § 556.6 by revising the first sentence of paragraph (a) to read as follows:

§ 556.6 Report to the Commission.

(a) When a Tribe licenses a primary management official or a key employee, the Tribe shall maintain the information listed under § 556.4(a)(1) through (14).

* * *

* * * * *

■ 8. Revise § 556.8 to read as follows:

§ 556.8 Compliance with this part.

All Tribal gaming ordinances and ordinance amendments approved by the Chair prior to [EFFECTIVE DATE OF FINAL RULE] do not need to be amended to comply with this part. All future ordinance submissions, however, must comply.

PART 558—GAMING LICENSES FOR KEY EMPLOYEES AND PRIMARY MANAGEMENT OFFICIALS

■ 9. The authority citation for part 558 continues to read as follows:

Authority: 25 U.S.C. 2706, 2710, 2712.

■ 10. Revise § 558.3 to read as follows:

§ 558.3 Notification to NIGC of license decisions and retention obligations.

(a) After a Tribe has provided a notice of results of the background check to the Commission, a Tribe may license a primary management official or key employee.

(b) Within 30 days after the issuance of the license, a Tribe shall notify the Commission of its issuance.

(c) A key employee or primary management official who does not have a license after ninety (90) days shall not be permitted to perform the duties, functions, and/or responsibilities of a key employee or primary management official until so licensed.

(d) If a Tribe does not license an applicant—

(1) The Tribe shall notify the Commission; and

(2) Shall forward copies of its eligibility determination and notice of results, under § 556.6(b)(2) of this chapter, to the Commission for inclusion in the Indian Gaming Individuals Record System.

(e) If a Tribe revokes a key employee or primary management official's license—

(1) The Tribe shall notify the Commission; and

(2) Shall forward copies of its license revocation decision and a summary of the evidence it relied upon to the Commission for inclusion in the Indian Gaming Individuals Record System.

(f) A Tribe shall retain the following for inspection by the Chair or their designee for no less than three years from the date of termination of employment:

(1) The information listed under § 556.4(a)(1) through (14) of this chapter;

(2) Investigative reports, as defined in § 556.6(b) of this chapter;

(3) Eligibility determinations, as defined in § 556.5 of this chapter;

(4) Privacy Act notice, as defined in § 556.2 of this chapter; and

(5) False Statement notice, as defined in § 556.3 of this chapter.

■ 11. Revise § 558.4 to read as follows:

§ 558.4 Notice of information impacting eligibility and licensee's right to a hearing.

(a) If, after the issuance of a gaming license pursuant to § 558.3, the Commission receives reliable information indicating that a key employee or a primary management official is not eligible for a license under § 556.5 of this chapter, the Commission shall notify the issuing Tribe of the information.

(b) Upon receipt of such notification under paragraph (a) of this section, a Tribe shall immediately suspend the license and shall provide the licensee with written notice of suspension and proposed revocation.

(c) A Tribe shall notify the licensee of a time and a place for a hearing on the proposed revocation of a license.

(d) The right to a revocation hearing shall vest upon receipt of a license or at such earlier time as is determined by Tribal law, regulation, and/or policy.

(e) After a revocation hearing, a Tribe shall decide to revoke or to reinstate a gaming license. A Tribe shall notify the Commission of its decision within 45 days of receiving notification from the Commission pursuant to paragraph (a) of this section.

■ 12. Revise § 558.6 to read as follows:

§ 558.6 Compliance with this part.

All Tribal gaming ordinances and ordinance amendments that have been approved by the Chair prior to [EFFECTIVE DATE OF FINAL RULE] do not need to be amended to comply with this section. All future ordinance submissions, however, must comply.

Dated: August 2, 2022.

E. Sequoyah Simermeyer,

Chairman.

Jeannie Hovland,

Vice Chair.

[FR Doc. 2022–16977 Filed 8–9–22; 8:45 am]

BILLING CODE 7565–01–M

DEPARTMENT OF THE INTERIOR

National Indian Gaming Commission

25 CFR Part 585

RIN 3141–AA75

Appeals to the Commission

AGENCY: National Indian Gaming Commission, Department of the Interior.

ACTION: Proposed rule.

SUMMARY: The National Indian Gaming Commission proposes to amend its regulations to add a settlement process for appeals proceedings on written submissions to the Commission.

DATES: Written comments on this proposed rule must be received on or before September 9, 2022.

ADDRESSES: You may submit comments by any one of the following methods, however, please note that comments sent by electronic mail are strongly encouraged.

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Email comments to: information@nigc.gov.*
- *Mail comments to:* National Indian Gaming Commission, 1849 C Street NW, MS 1621, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Michael Hoenig at (202) 420–9241 (this number is not toll free).

SUPPLEMENTARY INFORMATION:

I. Background and Development of the Rule

A. Background

The Indian Gaming Regulatory Act (IGRA or Act), Public Law 100–497, 25 U.S.C. 2701 *et seq.,* was signed into law on October 17, 1988. The Act established the National Indian Gaming Commission (''NIGC'' or ''Commission'') and set out a comprehensive framework for the regulation of gaming on Indian lands. IGRA, in several instances, requires that the Commission provide an opportunity for a hearing before it on: proposed fines, temporary closure orders, and removals of a certificate of self-regulation. Also through regulatory action, the Commission has afforded appeals before it for: notice of violations, modified and voided management contracts, and notices of late fees and late fee assessments. As to all these areas, part 585 of NIGC regulations offers appeals to the Commission on written submissions.

The Commission comprehensively updated the appeals regulations in 2012, consolidating them in one subchapter. (77 FR 58941–01). This proposed rule augments the appeals regulations by inserting a comprehensive settlement procedure for appeals under part 585, rectifying its absence in the current regulations.

B. Development of the Rule

On June 9, 2021, the National Indian Gaming Commission sent a Notice of Consultation announcing that the Agency intended to consult on a number of topics, including proposed changes to the appeals regulations in part 585. Prior to consultation, the Commission sent another Notice of Consultation, dated September 13, 2021, and released a proposed discussion draft of the regulations for review. The proposed amendments to these regulations were intended to solicit Tribes' views on: (1) the Commission inviting, directing or granting leave to the Chair to file or respond to motions and (2) supplying a settlement procedure for appeals to the Commission on written submissions. The Commission held three virtual consultation sessions in September and October of 2021 to receive Tribal input on the possible changes. The Commission reviewed all comments received as part of the consultation process.

Commenters at the consultation phase requested the addition of language to the settlement procedures specifying that ''the NIGC will consider any and all such requests to enter into settlement negotiations in good faith.'' The Commission declines to add this language. It is unclear whether this comment is directed to the full Commission, who will decide whether to grant a stay of proceedings for the purposes of settlement negotiations between the Chair and the other party, or whether this comment is directed at the Chair. In any event, in the context of agency adjudications, the U.S. Supreme Court found that agency members are presumed to act in good faith, with honesty and integrity. *See Withrow* v. *Larkin,* 421 U.S. 35, 47 (1975). Therefore, the addition is unnecessary.

Additionally, based on comments received, the Commission omitted the proposed change permitting the Chair to respond to motions. Instead, the Commission proposes to limit the motions that may be filed in proceedings before the Commission to those listed in the regulation and prohibit the Chair from responding.

II. Regulatory Matters

Unfunded Mandate Reform Act

The Commission, as an independent regulatory agency, is exempt from compliance with the Unfunded Mandates Reform Act, 2 U.S.C. 1502(1); 2 U.S.C. 658(1).

Takings

In accordance with Executive Order 12630, the Commission has determined that the rule does not have significant takings implications. A takings implication assessment is not required.

Civil Justice Reform

In accordance with Executive Order 12988, the Commission has determined that the rule does not unduly burden the judicial system and meets the requirements of sections 3(a) and 3(b)(2) of the Order.

National Environmental Policy Act

The Commission has determined that the rule does not constitute a major federal action significantly affecting the quality of the human environment and that no detailed statement is required pursuant to the National Environmental Policy Act of 1969, 42 U.S.C. 4321, *et seq.*

Paperwork Reduction Act

The information collection requirements contained in this rule were previously approved by the Office of Management and Budget as required by 44 U.S.C. 3501, *et seq.,* and assigned OMB Control Number 3141–0003.

Tribal Consultation

The National Indian Gaming Commission is committed to fulfilling its Tribal consultation obligations—whether directed by statute or administrative action such as Executive Order (E.O.) 13175 (Consultation and Coordination with Indian Tribal Governments)—by adhering to the consultation framework described in its Consultation Policy published July 15, 2013. The NIGC's consultation policy specifies that it will consult with Tribes on Commission Action with Tribal Implications, which is defined as: Any Commission regulation, rulemaking, policy, guidance, legislative proposal, or operational activity that may have a substantial direct effect on an Indian Tribe on matters including, but not limited to the ability of an Indian Tribe to regulate its Indian gaming; an Indian Tribe's formal relationship with the Commission; or the consideration of the Commission's trust responsibilities to Indian Tribes.

Pursuant to this policy, on June 9 and September 13, 2021, the National Indian Gaming Commission sent Notices of Consultation announcing that the Agency intended to consult on a number of topics, including proposed changes to the appeals regulations. The Commission held three virtual consultation sessions in September and October of 2021 to receive Tribal input on the possible changes.

List of Subjects in 25 CFR Part 585

Administrative practice and procedure, Appeals gambling, Indian-lands, Reporting and recordkeeping requirements.

Therefore, for reasons stated in the preamble, 25 CFR part 585 is amended as follows:

PART 585—APPEALS TO THE COMMISSION ON WRITTEN SUBMISSIONS OF NOTICES OF VIOLATION, PROPOSED CIVIL FINE ASSESSMENTS, ORDERS OF TEMPORARY CLOSURE, THE CHAIR'S DECISIONS TO VOID OR MODIFY MANAGEMENT CONTRACTS, THE COMMISSION'S PROPOSALS TO REMOVE A CERTIFICATE OF SELF–REGULATION, AND NOTICES OF LATE FEES AND LATE FEE ASSESSMENTS

■ 1. The authority citation for part 585 continues to read as follows:

Authority: 25 U.S.C. 2706, 2710, 2711, 2713, 2715, 2717.

■ 2. Revise § 585.4 to read as follows:

§ 585.4 Are motions permitted?

(a) Only motions for extension of time under § 580.4(f) of this subchapter, motions to supplement the record under § 581.5 of this subchapter, motions to intervene under § 585.5, and motions for reconsideration under § 581.6 of this subchapter, are permitted.

(b) The Chair shall not, either individually or through counsel, respond to motions.

■ 3. Add § 585.8 to read as follows:

§ 585.8 What is the process for pursuing settlement in an appeal to the Commission?

(a) *General.* At any time after the commencement of a proceeding, but before the date scheduled for the Commission to issue a final decision under § 585.7, the parties may jointly move to stay the proceeding for a reasonable time to permit negotiation of a settlement or an agreement disposing of the whole or any part of the proceeding.

(b) *Content.* Any agreement disposing of the whole or any part of a proceeding shall also provide:

(1) A waiver of any further proceedings before the Commission regarding the specific matter(s) settled under the agreement; and

(2) That the agreement shall constitute dismissal of the appeal of the specific matter(s) settled, a final order of the Commission, and final agency action.

(c) *Submission.* Before the expiration of the time granted for negotiations, the parties or their authorized representatives may:

(1) Notify the Commission that the parties have reached a full or partial settlement and have agreed to dismissal of all or part of the action, subject to compliance with the terms of the settlement agreement; or

(2) Inform the Commission that an agreement cannot be reached.

(d) *Disposition.* If the parties enter into a full or partial settlement agreement, it shall constitute: full or partial dismissal of the appeal, as applicable; a final order of the Commission; and final agency action.

Dated: August 2, 2022.

E. Sequoyah Simermeyer,

Chairman.

Jeannie Hovland,

Vice Chair.

BILLING CODE 7565–01–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

RIN 0648–BI18

Fisheries of the Northeastern United States; Amendment 20 to the Atlantic Surfclam and Ocean Quahog Fishery Management Plan

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of availability of proposed fishery management plan amendment; request for comments.

SUMMARY: NMFS announces that the Mid-Atlantic Fishery Management Council has submitted Amendment 20 to the Atlantic Surfclam and Ocean Quahog Fishery Management Plan for review and approval by the Secretary of Commerce. We are requesting comments from the public on the amendment. Amendment 20, also known as the Excessive Shares Amendment, would establish limits to the amount of surfclam or ocean quahog individual transferable quota share or annual allocation in the form of cage tags that an individual or their family members could hold.

DATES: Comments must be received on or before October 11, 2022.

ADDRESSES: You may submit comments on this document, identified by NOAA–NMFS–2020–0112, by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to *https://www.regulations.gov* and enter NOAA–NMFS–2020–0112 in the Search box. Click the ''Comment'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit written comments to Michael Pentony, Regional Administrator, NMFS, Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope: ''Comments on Surfclam/Ocean Quahog Excessive Shares Amendment.''

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

Copies of Amendment 20, including the draft Environmental Assessment (EA), are available on request from the Mid-Atlantic Fishery Management Council, 800 North State Street, Suite 201, Dover, DE 19901. These documents are also accessible via the internet at *https://www.mafmc.org.*

FOR FURTHER INFORMATION CONTACT: Douglas Potts, Fishery Policy Analyst, 978–281–9341.

SUPPLEMENTARY INFORMATION: We are soliciting public comments on Amendment 20, also known as the Excessive Shares Amendment, and its incorporated documents through the end of the comment period stated in this notice of availability. We will soon publish a proposed rule that would implement the amendment's management measures in the **Federal Register** for public comment, allowing for NMFS's evaluation of the proposed rule under the procedures of the Magnuson-Stevens Fishery Conservation and Management Act. Public comments on the proposed rule must be received by the end of the comment period provided in this notice of availability to be considered in the approval/disapproval decision on the amendment. All comments received by October 11, 2022, whether specifically directed to the amendment or the proposed rule will be considered in the approval/disapproval decision on the amendment. To be considered, comments must be received by close of business on the last day of the comment period. Comments received after that date will not be considered in the decision to approve or disapprove Amendment 20, including those

postmarked or otherwise transmitted by the last day of the comment period.

The Mid-Atlantic Fishery Management Council developed this amendment to limit the amount of surfclam or ocean quahog individual transferable quota (ITQ) share or annual allocation in the form of cage tags that an individual or their family members could hold. The Amendment would prohibit an ITQ shareholder, including business owners and their immediate family members, from acquiring ownership of more than 35 percent of the surfclam quota or 40 percent of the ocean quahog quota. A separate, higher cap would be established for the maximum amount of available cage tags that an ITQ permit holder may acquire through leasing or other transactions during the course of an individual fishing year of 65 percent for surfclam tags and 70 percent for ocean quahog tags.

Additional details of the proposed measures are available in the amendment document and the proposed rule.

(Authority: 16 U.S.C. 1801 *et seq.*)

Dated: August 5, 2022.

Jennifer M. Wallace,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. APHIS–2021–0066]

Addition of the Kingdom of Lesotho, the Republic of Benin, and the Republic of Botswana to the List of Regions Affected With Highly Pathogenic Avian Influenza

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice.

SUMMARY: We are advising the public that we added the Kingdom of Lesotho, the Republic of Benin, and the Republic of Botswana to the list of regions that the Animal and Plant Health Inspection Service considers to be affected by highly pathogenic avian influenza (HPAI). These actions follow our imposition of HPAI-related restrictions on avian commodities originating from or transiting the Kingdom of Lesotho, the Republic of Benin, and the Republic of Botswana, as a result of the confirmation of HPAI in the Kingdom of Lesotho, the Republic of Benin, and the Republic of Botswana.

DATES: The Kingdom of Lesotho, the Republic of Benin, and the Republic of Botswana were added to the list of regions APHIS considers to be affected with HPAI, effective respectively on June 8, 2021; August 26, 2021; and September 10, 2021.

FOR FURTHER INFORMATION CONTACT: For further information regarding HPAI in the Kingdom of Lesotho and the Republic of Benin, contact Dr. John Grabau, APHIS Veterinary Services, Regionalization Evaluation Services, Strategy and Policy, 920 Main Campus Drive, Venture II, Raleigh, NC 27606; phone: (919) 855–7738; email: *AskRegionalization@usda.gov.* For further information regarding HPAI in the Republic of Botswana, contact Dr. C. Aaron Monroy, APHIS Veterinary Services, Regionalization Evaluation Services, Strategy and Policy, 920 Main Campus Drive, Venture II, Raleigh, NC 27606; phone: (919) 855–7207; email: *AskRegionalization@usda.gov.*

SUPPLEMENTARY INFORMATION: The regulations in 9 CFR part 94 (referred to below as the regulations) govern the importation of certain animals and animal products into the United States to prevent the introduction of various animal diseases, including Newcastle disease and highly pathogenic avian influenza (HPAI). The regulations prohibit or restrict the importation of live poultry, poultry meat, and other poultry products from regions where these diseases are considered to exist.

Section 94.6 of the regulations contains requirements governing the importation into the United States of carcasses, meat, parts or products of carcasses, and eggs (other than hatching eggs) of poultry, game birds, or other birds from regions of the world where HPAI exists or is reasonably believed to exist. HPAI is an extremely infectious and potentially fatal form of avian influenza in birds and poultry that, once established, can spread rapidly from flock to flock. The Animal and Plant Health Inspection Service (APHIS) maintains a list of restricted regions it considers affected with HPAI of any subtype on the APHIS website at *https://www.aphis.usda.gov/aphis/ourfocus/animalhealth/animal-and-animal-product-import-information/animal-health-status-of-regions.*

APHIS receives notice of HPAI outbreaks from veterinary officials of the exporting country, from the World Organization for Animal Health (WOAH),[1] or from other sources the Administrator determines to be reliable.

On May 31, 2021, the veterinary authorities of the Kingdom of Lesotho reported to the WOAH an HPAI occurrence in that country. On June 8, 2021, after confirming that the HPAI occurred in commercial birds or poultry, APHIS added the Kingdom of Lesotho to the list of regions where HPAI exists. On that same day, APHIS issued an import alert notifying stakeholders that APHIS imposed restrictions on the importation of poultry, commercial birds, other types of birds (research, performing), ratites, any avian hatching eggs, unprocessed avian products and byproducts, and certain fresh poultry products from the Kingdom of Lesotho to mitigate risk of HPAI introduction into the United States.

On August 20, 2021, the veterinary authorities of the Republic of Benin reported to the WOAH an HPAI occurrence in that country. On August 26, 2021, after confirming that the HPAI occurred in commercial birds or poultry, APHIS added the Republic of Benin to the list of regions where HPAI exists. On that same day, APHIS issued an import alert notifying stakeholders that APHIS imposed restrictions on the importation of poultry, commercial birds, other types of birds (research, performing), ratites, any avian hatching eggs, unprocessed avian products and byproducts, and certain fresh poultry products from the Republic of Benin to mitigate risk of HPAI introduction into the United States.

On September 6, 2021, the veterinary authorities of the Republic of Botswana reported to the WOAH an HPAI occurrence in that country. On September 10, 2021, after confirming that the HPAI occurred in commercial birds or poultry, APHIS added the Republic of Botswana to the list of regions where HPAI exists. On that same day, APHIS issued an import alert notifying stakeholders that APHIS imposed restrictions on the importation of poultry, commercial birds, other types of birds (research, performing), ratites, any avian hatching eggs, unprocessed avian products and byproducts, and certain fresh poultry products from the Republic of Botswana to mitigate risk of HPAI introduction into the United States.

With the publication of this notice, we are informing the public that we added: The Kingdom of Lesotho to the list of regions APHIS considers affected with HPAI of any subtype, effective June 8, 2021; the Republic of Benin to the list of regions APHIS considers affected with HPAI of any subtype, effective August 26, 2021; and the Republic of Botswana to the list of regions APHIS considers affected with HPAI of any subtype, effective September 10, 2021.

[1] The World Organization for Animal Health internationally follows a British English spelling of ''organisation'' in its name; it was formerly the Office International des Epizooties, or OIE, but on May 28, 2022, the Organization announced that the acronym was changed from OIE to WOAH.

This notice serves as an official record and public notification of these actions.

Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this action as not a major rule, as defined by 5 U.S.C. 804(2).

Authority: 7 U.S.C. 1633, 7701–7772, 7781–7786, and 8301–8317; 21 U.S.C. 136 and 136a; 31 U.S.C. 9701; 7 CFR 2.22, 2.80, and 371.4.

Done in Washington, DC, this 4th day of August 2022.

Anthony Shea,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410–34–P

COMMISSION ON CIVIL RIGHTS

Agenda and Notice of a Public Meeting of the Maine Advisory Committee

AGENCY: Commission on Civil Rights.

ACTION: Announcement of a public meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA), that the Maine State Advisory Committee to the Commission will hold a virtual meeting for project planning on Thursday, September 8, 2022, at 12:00 p.m. (ET).

DATES: Thursday, September 8, 2022, at 12:00 p.m. (ET).

Public Web Conference Registration Link (video and audio): https://tinyurl.com/2p8uuzvu; password, if needed: USCCR–ME.

If Joining by Phone Only, Dial: 1–551–285–1373; Meeting ID: 161 025 9350#.

FOR FURTHER INFORMATION CONTACT: Liliana Schiller at *lschiller@usccr.gov* or 312–353–8311.

SUPPLEMENTARY INFORMATION: These meetings are available to the public through the WebEx link above. If joining only via phone, callers can expect to incur charges for calls they initiate over wireless lines, and the Commission will not refund any incurred charges. Individuals who are deaf, deafblind and hard of hearing. may also follow the proceedings by first calling the Federal Relay Service at 1–800–877–8339 and providing the Service with the call-in number found through registering at the web link provided for these meetings.

Members of the public are entitled to make comments during the open period at the end of the meetings. Members of the public may also submit written comments; the comments must be received in the Regional Programs Unit within 30 days following the meeting. Written comments may be emailed to Liliana Schiller at *lschiller@usccr.gov.* Persons who desire additional information may contact the Regional Programs Unit at (202) 539–8246. Records and documents discussed during the meetings will be available for public viewing as they become available at *www.facadatabase.gov.* Persons interested in the work of this advisory committee are advised to go to the Commission's website, *www.usccr.gov,* or to contact the Regional Programs Unit at the above phone number or email address.

Agenda

Thursday, September 8, 2022, at 12 p.m. ET

I. Welcome & Roll Call
II. Approval of Minutes: July 18, 2022
III. Administrative Announcements
IV. Standing Meetings: 2nd Thursdays, From August thru December 2022; 12 p.m. ET
IV. Discussion: Project Proposal & Next Steps
  a. Update on Proposal
  b. Date of Briefing #1: October 20, 2022, Thursday; 12:00 p.m. ET
  c. Planning for Briefings
  d. Monday.com Panelist Recommendation Board
V. Public Comment
VI. Adjournment

Dated: August 5, 2022.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Wyoming Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of virtual business meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act, that the Wyoming Advisory Committee (Committee) to the U.S. Commission on Civil Rights will hold a virtual business meeting via Webex at 2:00 p.m. MT on Tuesday, September 27, 2022, to discuss the civil rights implications of housing discrimination in the state.

DATES: The meeting will take place on Tuesday, September 27, 2022, from 2:00 p.m.–3:30 p.m. MT.

Link To Join (Audio/Visual): https://tinyurl.com/tnh8dftp.

Telephone (Audio Only): Dial (800) 360–9505 USA Toll Free; Access Code: 2761 055 5065.

FOR FURTHER INFORMATION CONTACT: Kayla Fajota, DFO, at *kfajota@usccr.gov* or (434) 515–2395.

SUPPLEMENTARY INFORMATION: Committee meetings are available to the public through the conference link above. Any interested member of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Individuals who are deaf, deafblind, and hard of hearing may also follow the proceedings by first calling the Federal Relay Service at (800) 877–8339 and providing the Service with the conference details found through registering at the web link above. To request additional accommodations, please email *kfajota@usccr.gov* at least ten (10) days prior to the meeting.

Members of the public are also entitled to submit written comments; the comments must be received in the regional office within 30 days following the meeting. Written comments may be emailed to Liliana Schiller at *lschiller@usccr.gov.* Persons who desire additional information may contact the Regional Programs Coordination Unit at (312) 353–8311.

Records generated from this meeting may be inspected and reproduced at the Regional Programs Coordination Unit Office, as they become available, both before and after the meeting. Records of the meeting will be available via *www.facadatabase.gov* under the Commission on Civil Rights, Wyoming Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at the above phone number.

Agenda

I. Welcome & Roll Call
II. Discussion: Housing Discrimination
III. Next Steps
IV. Public Comment
V. Adjournment

Dated: Friday, August 5, 2022.

BILLING CODE 6335–01–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–979]

Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Amended Final Results of Antidumping Duty Administrative Review, 2019–2020

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) is amending the final results of the administrative review of the antidumping duty (AD) order on crystalline silicon photovoltaic cells, whether or not assembled into modules, from the People's Republic of China (China) to correct a ministerial error. The period of review is December 1, 2019, through November 30, 2020.

DATES: Applicable August 10, 2022.

FOR FURTHER INFORMATION CONTACT: Jeffrey Pedersen, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2769.

SUPPLEMENTARY INFORMATION:

Background

On June 28, 2022, Commerce published in the **Federal Register** the final results of the 2019–2020 administrative review of the AD order on crystalline silicon photovoltaic cells, whether or not assembled into modules, from China.[1] On July 5, 2022, the American Alliance for Solar Manufacturing (the petitioner) alleged that Commerce made a ministerial error in its calculations in the final results of review.[2] On July 11, 2022, Risen [3] rebutted the petitioner's ministerial error comments.[4]

Legal Framework

Pursuant to 19 CFR 351.224(e), Commerce will analyze any ministerial error comments received and, if appropriate, correct any ministerial error by amending the final results of review. According to section 751(h) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.224(f), a ministerial error is an error ''in addition, subtraction, or other arithmetic function, clerical errors resulting from inaccurate copying, duplication, or the like, and any other type of unintentional error which {Commerce} considers ministerial.''

Ministerial Error

After analyzing interested parties' comments, we have determined that we made a ministerial error in the final results by inadvertently using the incorrect average unit value for the Malaysian Harmonized Tariff Schedule subheading that we selcted to value the mandatory respondents' aluminum frames, profiles, keys, and extrusions. For details regarding the ministerial error, *see* the Ministerial Error Memorandum.[5]

Accordingly, we are amending our calculations of the mandatory respondents' dumping margins in the final results to reflect our correction of this error.[6] Because the dumping margins of the non-individually examined respondents to which we granted a separate rate are based on the weighted-average dumping margins that we calculated for the mandatory respondents, we also have amended the dumping margin that we assigned to these non-individually examined respondents.[7]

Amended Final Results

After correcting the ministerial error referenced above, we have determined that the following weighted-average dumping margins exist for the period of review, December 1, 2019 through November 30, 2020:

Producers/exporters	Weighted-average dumping margin (percent)
Jinko Solar Import and Export Co., Ltd./Jinko Solar Co., Ltd./JinkoSolar Technology (Haining) Co., Ltd./Yuhuan Jinko Solar Co., Ltd./Zhejiang Jinko Solar Co., Ltd./Jiangsu Jinko Tiansheng Solar Co., Ltd./JinkoSolar (Chuzhou) Co., Ltd./JinkoSolar (Yiwu) Co., Ltd./JinkoSolar (Shangrao) Co., Ltd	20.99
Risen Energy Co. Ltd./Risen (Wuhai) New Energy Co., Ltd./Zhejiang Twinsel Electronic Technology Co., Ltd./Risen (Luoyang) New Energy Co., Ltd./Jiujiang Shengzhao Xinye Technology Co., Ltd./Jiujiang Shengzhao Xinye Trade Co., Ltd./Ruichang Branch/Risen Energy (HongKong) Co., Ltd./Risen Energy (Changzhou) Co., Ltd./Risen Energy (YIWU) Co., Ltd	12.24
Review-Specific Rate Applicable to the Following Non-Examined Companies	
Anji DaSol Solar Energy Science & Technology Co., Ltd	14.79
BYD (Shangluo) Industrial Co., Ltd	14.79

[1] *See Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China: Final Results of Antidumping Duty Administrative Review and Final Determination of No Shipments; 2019–2020,* 87 FR 38379 (June 28, 2022) (*Final Results*).

[2] *See* Petitioner's Letter ''Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Ministerial Error Allegation'' dated July 5, 2022.

[3] Risen refers to the single entity comprising the following companies: Risen Energy Co. Ltd.; Risen (Wuhai) New Energy Co., Ltd.; Zhejiang Twinsel Electronic Technology Co., Ltd.; Risen (Luoyang) New Energy Co., Ltd.; Jiujiang Shengzhao Xinye Technology Co., Ltd.; Jiujiang Shengzhao Xinye Trade Co., Ltd.; Ruichang Branch (Ruichang Branch), Risen Energy (HongKong) Co., Ltd.; Risen Energy (Changzhou) Co., Ltd.; and Risen Energy (YIWU) Co., Ltd.

[4] *See* Risen's Letter ''Crystalline Silicon Photovoltaic Cells from the People's Republic of China: Reply Ministerial Error Comments'' dated July 11, 2022.

[5] *See* Memorandum, ''2019–2020 Administrative Review of the Antidumping Duty Order on Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Ministerial Error Allegation in the Final Results,'' dated concurrently with this notice (Ministerial Error Memorandum).

[6] *See* Memorandum, ''Antidumping Duty Administrative Review of Certain Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Amended Final Results Analysis Memorandum—Jinko,'' dated concurrently with this notice; *see also* Memorandum, ''Antidumping Duty Administrative Review of Certain Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Amended Final Results Analysis Memorandum—Risen,'' dated concurrently with this notice.

[7] *See* Memorandum, ''2019–2020 Administrative Review of the Antidumping Duty Order on Crystalline Silicon Photovoltaic Cells, Whether or not Assembled into Modules, from the People's Republic of China: Calculation of the Dumping Margin for Respondents Not Selected for Individual Examination for the Amended Final Results,'' dated concurrently with this notice.

Producers/exporters	Weighted-average dumping margin (percent)
Chint Solar (Zhejiang) Co., Ltd., Chint New Energy Technology (Haining) Co., Ltd., Chint Solar (Jiuquan) Co., Ltd., Chint Solar (Hong Kong) Company Limited	14.79
JA Solar Technology Yangzhou Co., Ltd	14.79
LONGi Solar Technology Co., Ltd	14.79
Shanghai JA Solar Technology Co., Ltd	14.79
Shenzhen Topray Solar Co., Ltd	14.79
Wuxi Suntech Power Co., Ltd	14.79
Wuxi Tianran Photovoltaic Co., Ltd	14.79
Xiamen Yiyusheng Solar Co., Ltd	14.79
Zhejiang Aiko Solar Energy Technology Co., Ltd	14.79

Disclosure

Pursuant to 19 CFR 351.224(b), within five days of the publication of this notice in the **Federal Register**, we will disclose to the parties to this proceeding, the calculations that we performed for these amended final results of review.

Assessment Rates

Pursuant to section 751(a)(2)(C) of the Act and 19 CFR 351.212(b)(1), Commerce has determined, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise covered by the amended final results of review. Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of these amended final results of review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Where a mandatory respondent's weighted-average dumping margin is zero or *de minimis,* or where an importer-specific *ad valorem* or per-unit dumping margin is zero or *de minimis,* Commerce will instruct CBP to liquidate appropriate entries without regard to antidumping duties.[8] For U.S. entries that were not reported in a mandatory respondent's U.S. sales data, but that were entered under the case number of that respondent (*i.e.,* at the individually-examined exporter's cash deposit rate), Commerce will instruct CBP to liquidate such entries at the cash deposit rate for the China-wide entity (*i.e.,* 238.95 percent).

We calculated importer or customer-specific *ad valorem* assessment rates for the mandatory respondents by dividing the total amount of dumping duties for reviewed sales of subject merchandise imported by an importer, or for reviewed sales of subject merchandise to a customer, as appropriate, by the total sales value of those transactions.

For the companies not individually examined in this administrative review that qualified for a separate rate, the assessment rate will be equal to the weight average of the weighted-average dumping margins calculated for the mandatory respondents in these amended final results of review.

Cash Deposit Requirements

The following cash deposit requirements will be effective for shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice of the amended final results of review in the **Federal Register**, as provided by section 751(a)(2)(C) of the Act: (1) for the companies listed in the table above, the cash deposit rate will be equal to the weighted-average dumping margin listed for the company in the table; (2) for previously investigated or reviewed China and non-China exporters that are not under review in this segment of the proceeding that have a separate rate, the cash deposit rate will continue to be their existing exporter-specific rate; (3) for all China exporters of subject merchandise that do not have a separate rate, their cash deposit rate will be the cash deposit rate previously established for the China-wide entity, which is 238.95 percent; and (4) for all non-China exporters of subject merchandise that do not have a separate rate, the cash deposit rate will be the cash deposit rate applicable to the China exporter that supplied the non-China exporter.

These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification Regarding Administrative Protective Order

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

We are issuing and publishing this notice in accordance with sections 751(h) and 777(i)(1) of the Act, and 19 CFR 351.224(e).

Dated: August 3, 2022.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Manufacturing Extension Partnership Advisory Board

AGENCY: National Institute of Standards and Technology, Commerce.

ACTION: Notice of open meeting.

SUMMARY: The National Institute of Standards and Technology (NIST) announces that the Manufacturing Extension Partnership (MEP) Advisory Board will hold an open meeting on Tuesday, September 20, 2022.

DATES: The meeting will be held on Tuesday, September 20, 2022, from 12:30 p.m. to 6:00 p.m. Central time.

ADDRESSES: The meeting will be held at the InterContinental Chicago Magnificent Mile, 505 Michigan Avenue, Chicago, IL 60611. Please note admittance instructions in the **SUPPLEMENTARY INFORMATION** section below. Interested parties should be sure to check the NIST MEP Advisory Board website for the most up-to-date information at *http://www.nist.gov/mep/about/advisory-board.cfm.*

FOR FURTHER INFORMATION CONTACT: Cheryl L. Gendron, Hollings Manufacturing Extension Partnership Program, National Institute of Standards and Technology, 100 Bureau Drive, Mail Stop 4800, Gaithersburg, Maryland 20899–4800; telephone number (301) 975–2785; email: *cheryl.gendron@nist.gov.*

SUPPLEMENTARY INFORMATION: The MEP Advisory Board is authorized under 15 U.S.C 278k(m), in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. app. The Hollings Manufacturing Extension Partnership Program (Program) is a unique program consisting of Centers in all 50 states and Puerto Rico with partnerships at the federal, state and local levels. By statute, the MEP Advisory Board provides the NIST Director with: (1) advice on the activities, plans and policies of the Program; (2) assessments of the soundness of the plans and strategies of the Program; and (3) assessments of current performance against the plans of the Program.

Background information on the MEP Advisory Board is available at *http://www.nist.gov/mep/about/advisory-board.cfm.*

Pursuant to the Federal Advisory Committee Act, as amended, 5 U.S.C. app., notice is hereby given that the MEP Advisory Board will hold an open meeting on Tuesday, September 20, 2022, from 12:30 p.m. to 6:00 p.m. Central time. The meeting agenda will include an update on the MEP programmatic operations, as well as provide guidance and advice on current activities related to both the current MEP National Network™ 2017–2022 Strategic Plan and upcoming MEP National Network 2023–2028 Strategic Plan. The agenda may change to accommodate Board business. The final agenda will be posted on the MEP Advisory Board website at *http://www.nist.gov/mep/about/advisory-board.cfm.* Individuals and representatives of organizations who would like to offer comments and suggestions related to the MEP Advisory Board's business are invited to request a place on the agenda. Approximately 15 minutes will be reserved for public comments at the end of the meeting. Speaking times will be assigned on a first-come, first-served basis. The amount of time per speaker will be determined by the number of requests received but is likely to be no more than three to five minutes each. Requests must be submitted by email to *cheryl.gendron@nist.gov* and must be received by September 14, 2022, to be considered. The exact time for public comments will be included in the final agenda that will be posted on the MEP Advisory Board website at *http://www.nist.gov/mep/about/advisory-board.cfm.* Questions from the public will not be considered during this period. Speakers who wish to expand upon their oral statements, those who wished to speak but could not be accommodated on the agenda or those who are/were unable to attend the meeting are invited to submit written statements electronically by email to *cheryl.gendron@nist.gov.*

Admittance Instructions: Anyone wishing to attend the MEP Advisory Board meeting must submit their name, organization, email address and phone number to Cheryl Gendron (*Cheryl.Gendron@nist.gov* or 301–975–2785) no later than Wednesday, September 14, 2022, 5:00 p.m. Eastern time.

Alicia Chambers,

NIST Executive Secretariat.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XC114]

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to In-Water Construction at Two Ferry Facilities on Bainbridge Island, Washington

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; proposed incidental harassment authorization (IHA); request for comments on proposed authorization and possible renewal.

SUMMARY: NMFS has received a request from the Washington State Department of Transportation Ferries Division (WSDOT) for authorization to take marine mammals incidental to two in-water construction projects on Bainbridge Island, Washington: the Bainbridge Island Ferry Terminal Overhead Loading Replacement Project and Eagle Harbor Maintenance Facility Slip F Improvement Project. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is requesting comments on its proposal to issue an IHA to incidentally take marine mammals during the specified activities. NMFS is also requesting comments on a possible one-time, one-year renewal that could be issued under certain circumstances and if all requirements are met, as described in Request for Public Comments at the end of this notice. NMFS will consider public comments prior to making any final decision on the issuance of the requested MMPA authorization and agency responses will be summarized in the final notice of our decision.

DATES: Comments and information must be received no later than September 9, 2022.

ADDRESSES: Comments should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service and should be submitted via email to *ITP.Fowler@noaa.gov.*

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments, including all attachments, must not exceed a 25-megabyte file size. All comments received are a part of the public record and will generally be posted online at

www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-marine-mammal-protection-act without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Amy Fowler, Office of Protected Resources, NMFS, (301) 427–8401. Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities.* In case of problems accessing these documents, please call the contact listed above.

SUPPLEMENTARY INFORMATION:

Background

The MMPA prohibits the ''take'' of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are proposed or, if the taking is limited to harassment, a notice of a proposed incidental harassment authorization is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking and other ''means of effecting the least practicable adverse impact'' on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stocks for taking for certain subsistence uses (referred to in shorthand as ''mitigation''); and requirements pertaining to the mitigation, monitoring and reporting of the takings are set forth. The definitions of all applicable MMPA statutory terms cited above are included in the relevant sections below.

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (*i.e.,* the issuance of an IHA) with respect to potential impacts on the human environment.

This action is consistent with categories of activities identified in Categorical Exclusion B4 (IHAs with no anticipated serious injury or mortality) of the Companion Manual for NOAA Administrative Order 216–6A, which do not individually or cumulatively have the potential for significant impacts on the quality of the human environment and for which we have not identified any extraordinary circumstances that would preclude this categorical exclusion. Accordingly, NMFS has preliminarily determined that the issuance of the proposed IHA qualifies to be categorically excluded from further NEPA review.

We will review all comments submitted in response to this notice prior to concluding our NEPA process or making a final decision on the IHA request.

Summary of Request

On February 15, 2022, NMFS received a request from WSDOT for an IHA to take marine mammals incidental to the Bainbridge Island Ferry Terminal Overhead Loading Replacement Project (the Bainbridge Project) and Eagle Harbor Maintenance Facility Slip F Improvement Projects (the Eagle Harbor Project) in Bainbridge Island, Washington. The application was deemed adequate and complete on July 25, 2022. WSDOT's request is for take of 12 species of marine mammal by Level B harassment and, for a subset of these species (harbor seal (*Phoca vitulina*), harbor porpoise (*Phocoena phocoena*), and Dall's porpoise (*Phocoenoides dalli*)), Level A harassment. Neither WSDOT nor NMFS expect serious injury or mortality to result from this activity and, therefore, an IHA is appropriate.

Description of Proposed Activity

Overview

The Washington State Department of Transportation (WSDOT) Ferries Division (WSF) operates and maintains 19 ferry terminals and one maintenance facility, all of which are located in either Puget Sound or the San Juan Islands. Two projects are proposed to be conducted: replacement of the Bainbridge Island Ferry Terminal overhead loading structure, and improvement of the Eagle Harbor Maintenance Facility Slip F. Both of the projects are located within Eagle Harbor on Bainbridge Island, Washington, would be completed within the same in-water work season, would have overlapping ensonified areas, and use the same datasets to estimate marine mammal takes. Therefore, WSDOT has submitted one application for a single IHA to cover both projects.

The purpose of the Bainbridge Project is to replace the seismically vulnerable timber trestle and fixed steel portions of the overhead loading structure at the Bainbridge Island Ferry Terminal. The purpose of the Eagle Harbor Project is to improve the maintenance efficiency of the facility. The facility has six vessel slips whose purpose is to maintain the Washington State Ferry (WSF) system's vessels.

Dates and Duration

Due to in-water work timing restrictions established by NMFS and the U.S. Army Corps of Engineers, construction in the projects area is limited each year from August 1 through February 15. Both the Bainbridge Project and the Eagle Harbor Project would be constructed during the August 1, 2022 to February 15, 2023 in-water work season. For the Bainbridge Project, in-water construction is expected to occur on up to 57 days (Table 1). For the Eagle Harbor Project, in-water construction is expected to occur on up to 31 days (Table 2).

Specific Geographic Region

Both projects are located within Eagle Harbor on Bainbridge Island, Washington, approximately 9 miles (mi; 14.5 kilometers (km)) west of Seattle, Washington. The Eagle Harbor Maintenance Facility is approximately ¼ mi (0.4 km) southwest of the Bainbridge Island Ferry Terminal. Eagle Harbor contains a mix of commercial docks, public marinas, private docks, and undeveloped waterfront properties. The harbor extends 2 mi (1.2 km) west from the mouth of the harbor, which is approximately 900 feet (ft; 274.3 meters (m)) wide and is bounded by Wing Point to the north and Bill Point to the south. A large underwater sand bar extends to the southeast from Wing Point. Water depths within Eagle Harbor range are up to 50 ft (15.2 m) but outside the harbor, water depths between Bainbridge Island and Seattle can be over 700 ft (213.4 m).

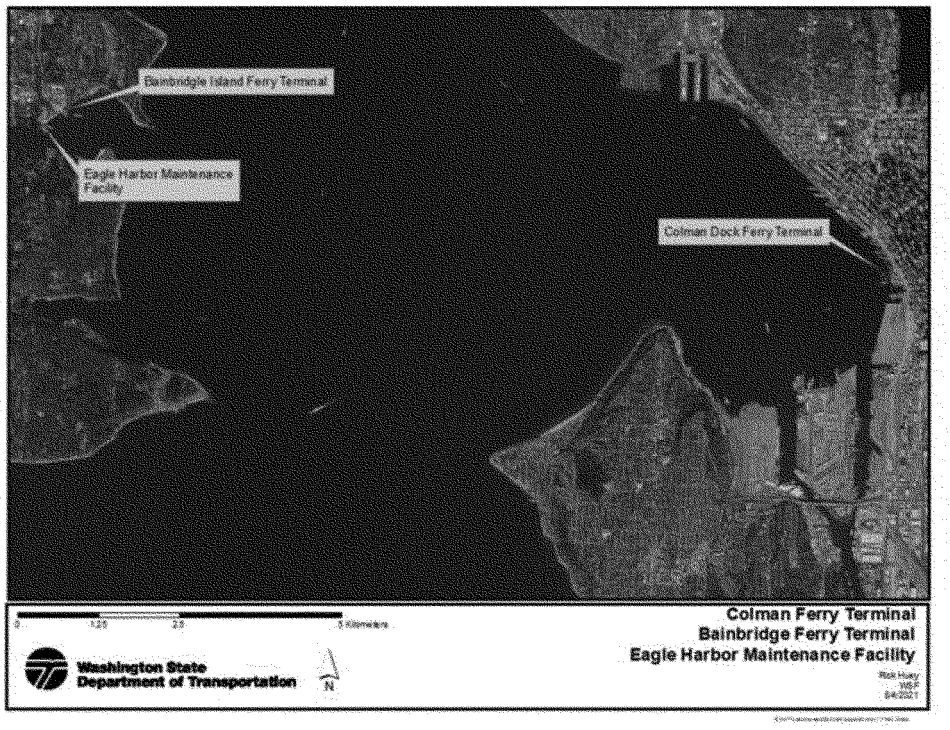

Figure 1. Location of Bainbridge Island Ferry Terminal and Eagle Harbor Maintenance Facility in Puget Sound

Detailed Description of Specific Activity

Bainbridge Project

The existing overhead loading fixed walkway at the Bainbridge Island Ferry Terminal consists of two major components: a timber trestle, constructed in 1972, which is approximately 345 ft (105.2 m) long and supported on timber batter piles; and a steel truss, constructed in 1988, which is approximately 78 ft (23.8 m) long and supported on a concrete shaft at each end. The walkway is elevated approximately 40 ft (12.2 m) above ground.

The proposed project elements for the Bainbridge Project include:

1. *Installation of temporary work platforms:* two temporary work platforms would support construction equipment. A total of 31 24-inch (in) steel pipe piles would support the structures, which would be installed first using a vibratory hammer to within 5 ft (1.5 m) of tip elevation, and then driven with an impact hammer to verify bearing capacity.

2. *Installation of temporary walkway:* a temporary walkway would be constructed to maintain overhead loading operations while the new walkway is constructed. This would allow the inshore portion of the existing walkway to be demolished so the new walkway can be constructed. The offshore portion of the existing walkway would remain to allow passenger loading until the new walkway is completed. The temporary walkway would be supported on four 24-inch diameter steel piles, which would be installed first using a vibratory hammer to within 5 ft (1.5 m) of tip elevation, and then driven with an impact hammer to verify bearing capacity.

3. *Installation of new permanent walkway:* the new walkway would be supported by 14 30-in and 12 36-in steel pipe piles, which would be installed first using a vibratory hammer to within 5 ft (1.5 m) of tip elevation, and then driven with an impact hammer to verify bearing capacity.

4. *Removal of existing overhead loading walkway:* the existing overhead loading walkway, including 76 creosote-treated 12-in timber piles and one 4.5 ft (1.4 m) diameter concrete drill shaft, would be removed. The piles would be removed using a vibratory hammer and the concrete drill shaft would be removed by cutting it with a saw at the mudline.

5. *Removal of temporary walkway and work platform:* after the new walkway is constructed, all piles associated with the temporary walkway and work platform would be removed with a vibratory hammer.

The construction schedule would be coordinated to allow work to occur around ferry boats that may be present in the Bainbridge Island Ferry Terminal slips.

TABLE 1—PROPOSED PILE DRIVING FOR THE BAINBRIDGE PROJECT

Project element	Pile size and type	Install or remove	Method	Number of piles	Duration per pile (minutes)	Piles per day	Duration (days)
Temporary work platform and temporary walkway.	24-in Steel	Install	Vibratory	39	30	4	10
			Impact	39	30	4	10
		Remove	Vibratory	39	30	4	10
New Overhead Loading Structure.	24-in Steel	Install	Vibratory	6	30	2	3
			Impact	6	30	2	3
	30-in Steel	Install	Vibratory	4	30	2	2
			Impact	4	30	2	2
	36-in Steel	Install	Vibratory	12	30	2	6
			Impact	12	30	2	6
Old Overhead Loading Structure Removal.	12-in Timber	Remove	Vibratory	76	15	15	5
Total Temporary Piles Installed and Removed				39			
Total Permanent Piles Installed				26			
Total Timber Piles Removed				76			
Total Duration (days)							57

Eagle Harbor Project

The last seven vessels built for the WSF fleet have evacuation slides on the passenger deck. These require the use of a vehicle drive-on slip to allow changing out these slides. Currently, only two of the six slips are vehicle drive-on slips. This results in delays when more than two vessels are undergoing maintenance. A new vehicle drive-on slip would be constructed to reduce maintenance delays, and provide more flexibility in accomplishing the various maintenance activities on the vessels that is crucial to making the WSF system as reliable as possible.

The proposed project elements for the Eagle Harbor Project include:

1. *Trestle and transfer span:* The vehicle transfer span is the link for vehicles to load and unload from the fixed trestle to the vehicle deck of the ferry vessel. At Eagle Harbor, the existing Slip F gangplank system would be replaced with a new pile supported trestle and a transfer span adjustable with a mechanical system. The new trestle would be approximately 15-ft (4.6 m) wide and 80 ft (24.4 m) long, and will be supported by nine 24-in steel pipe piles and two 36-in steel pipe piles which would each be installed first using a vibratory hammer to within 5 ft (1.5 m) of tip elevation, and then driven with an impact hammer to verify bearing capacity.

2. *Wingwalls and dolphins:* The existing pair of timber dolphins would be replaced with a new pair of steel wingwalls. Two new fixed pile dolphins would be constructed adjacent to the Trask Pier. The wingwalls design would consist of four 36-inch diameter steel reaction piles and two 36-inch diameter fender piles. Two fixed dolphins would be constructed adjacent to the Trask Pier to provide protection to the pier and mooring lines for tie-up. The dolphin design would consist of four 30-inch diameter steel reaction piles and one 36-inch diameter fender pile. Wingwall and dolphin piles would be installed using a vibratory hammer only.

3. *Removal of timber walkway, timber dolphins, and U-float:* the project would also include the removal of a currently existing timber walkway/trestle, four timber pile dolphins, and a U-float. The timber trestle removal includes 52 12-inch diameter timber piles, the four dolphins include a total of 134 12-inch diameter timber piles, and the U-float consists of four 18-inch diameter steel piles, all of which would be removed using a vibratory hammer.

TABLE 2—PROPOSED PILE DRIVING FOR THE EAGLE HARBOR PROJECT

Project element	Pile size and type	Install or remove	Method	Number of piles	Duration per pile (minutes)	Duration (hours)	Rate per day	Duration (days)
Timber Walkway Pile Removal.	12-in Timber	Remove	Vibratory	52	15	13	15	4
Timber Dolphin Removal.	12-in Timber	Remove	Vibratory	134	15	33.5	15	9
Temporary Relocated Float.	18-in Steel	Install	Vibratory	4	30	4	4	1
		Remove		4	30	3	4	1
U-Float Removal	18-in Steel	Remove	Vibratory	4	30	4	4	1
Trestle and Transfer Span.	24-in Steel	Install	Vibratory	9	30	4.5	4	3
			Impact	9	30	4.5	3	3
	36-inSteel	Install	Vibratory	2	30	1	4	1
			Impact	2	30	1	3	1

	36-in Steel	Install	Vibratory	2	30	1	4	1
Total Piles Removed				194				
Total Piles Installed				38				
Total Duration (days)								31

Proposed mitigation, monitoring, and reporting measures are described in detail later in this document (please see Proposed Mitigation and Proposed Monitoring and Reporting).

Description of Marine Mammals in the Area of Specified Activities

Sections 3 and 4 of the application summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history of the potentially affected species. NMFS fully considered all of this information, and we refer the reader to these descriptions, incorporated here by reference, instead of reprinting the information. Additional information regarding population trends and threats may be found in NMFS' Stock Assessment Reports (SARs; *www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*) and more general information about these species (*e.g.,* physical and behavioral descriptions) may be found on NMFS' website (*https://www.fisheries.noaa.gov/find-species).*

Table 3 lists all species or stocks for which take is expected and proposed to be authorized for this activity, and summarizes information related to the population or stock, including regulatory status under the MMPA and Endangered Species Act (ESA) and potential biological removal (PBR), where known. PBR is defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population (as described in NMFS' SARs). While no serious injury or mortality is anticipated or authorized here, PBR and annual serious injury and mortality from anthropogenic sources are included here as gross indicators of the status of the species and other threats.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study or survey area. NMFS' stock abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprises that stock. For some species, this geographic area may extend beyond U.S. waters. All managed stocks in this region are assessed in NMFS' U.S. Pacific and Alaska SARs. All values presented in Table 3 are the most recent available at the time of publication and are available in the 2020 SARs (Carretta *et al.,* 2021, Muto *et al.,* 2021) and draft 2021 SARs (available online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/draft-marine-mammal-stock-assessment-reports*).

TABLE 3—SPECIES LIKELY IMPACTED BY THE SPECIFIED ACTIVITIES

Common name	Scientific name	Stock	ESA/MMPA status; strategic (Y/N) [1]	Stock abundance (CV, N_{min}, most recent abundance survey) [2]	PBR	Annual M/SI [3]
Order Cetartiodactyla—Cetacea—Superfamily Mysticeti (baleen whales)						
Family Eschrichtiidae:						
Gray whale	*Eschrichtius robustus*	Eastern N Pacific	-, -, N	26,960 (0.05, 25,849, 2016).	801	131
Family Balaenopteridae (rorquals):

Superfamily Odontoceti (toothed whales, dolphins, and porpoises)						
Family Delphinidae:						
Long-Beaked Common Dolphin.	*Delphinus capensis*	California	-, -, N	83,379 (0.216, 69,636, 2018).	668	≥29.7
Bottlenose Dolphin	*Tursiops truncatus*	California Coastal	-, -, N	453 (0.06, 346, 2011)	2.7	≥2.0
Pacific White-Sided Dolphin.	*Lagenorhynchus obliquidens*	California/Oregon/Washington.	-, -, N	34,999 (0.222, 29,090, 2018).	279	7
Killer Whale	*Orcinus orca*	West Coast Transient	-, -, N	349 [4] (N/A, 349, 2018)	3.5	0.4
Family Phocoenidae (porpoises):						
Harbor Porpoise	*Phocoena phocoena*	Washington Inland Waters	-, -, N	11,233 (0.37, 8,308, 2015).	66	≥7.2
Dall's Porpoise	*Phocoenoides dalli*	California/Oregon/Washington.	-, -, N	16,498 (0.61, 10,286, 2019).	99	≥0.66

TABLE 3—SPECIES LIKELY IMPACTED BY THE SPECIFIED ACTIVITIES—Continued

Common name	Scientific name	Stock	ESA/MMPA status; strategic (Y/N) [1]	Stock abundance (CV, N_{min}, most recent abundance survey) [2]	PBR	Annual M/SI [3]
Order Carnivora—Superfamily Pinnipedia						
Family Otariidae (eared seals and sea lions):						
California Sea Lion	*Zalophus californianus*	U.S.	-, -, N	257,606 (N/A, 233,515, 2014).	14,011	>320
Steller Sea Lion	*Eumetopias jubatus*	Eastern	-, -, N	43,201 [5] (see SAR, 43,201, 2017).	2,592	112
Family Phocidae (earless seals):						
Harbor Seal	*Phoca vitulina*	Washington Northern Inland Waters.	-, -, N	11,036 [6] (UNK, UNK, 1999).	UND	9.8
Northern Elephant Seal	*Mirounga angustirostris*	California Breeding	-, -, N	187,386 (N/A, 85,369, 2013).	5,122	13.7

[1] *ESA status:* Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

[2] NMFS marine mammal stock assessment reports online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessment-reports-region.* CV is coefficient of variation; Nmin is the minimum estimate of stock abundance.

[3] These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, ship strike). Annual mortality/serious injury (M/SI) often cannot be determined precisely and is in some cases presented as a minimum value or range.

[4] Based on counts of individual animals identified from photo-identification catalogues. Surveys for abundance estimates of these stocks are conducted infrequently.

[5] Best estimate of pup and non-pup counts, which have not been corrected to account for animals at sea during abundance surveys.

[6] The abundance estimate for this stock is greater than eight years old and is therefore not considered current. PBR is considered undetermined for this stock, as there is no current minimum abundance estimate for use in calculation. We nevertheless present the most recent abundance estimates, as these represent the best available information for use in this document.

As indicated above, all 12 species (with 12 managed stocks) in Table 3 temporally and spatially co-occur with the activity to the degree that take is reasonably likely to occur. While humpback whales (*Megaptera novaeangliae*) and killer whales from the Southern Resident stock are known to occur in Puget Sound, in consideration of the proposed requirements described in the Proposed Mitigation and Proposed Monitoring and Reporting sections of this notice, WSDOT has determined that take of these species is unlikely to occur and has therefore not requested take of humpback whales or Southern Resident killer whales. NMFS has concurred with this determination and no take of these species is anticipated or proposed to be authorized.

Gray Whale

Gray whales generally spend the summer and fall in Arctic feeding grounds and winter to early spring in Mexican breeding areas. Between October and February, the species migrates south along the U.S. West Coast, returning north between February and July (Carretta *et al.,* 2021). A subpopulation of the Eastern North Pacific stock, referred to as the Pacific Coast Feeding Group (PCFG), remains along the Washington and Oregon coast to feed for extended periods while the rest of the stock continues along their migratory path (Calambokidis *et al.,* 2018). Occurrence of gray whales in Puget Sound has been steadily increasing in recent years and is generally highest between February and May. Most gray whales remain further north in Puget Sound, concentrating in the waters around Whidbey Island, but some venture south, including into Elliott Bay near WSDOT's proposed activities (Orca Network, 2021). During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a total of 4 gray whales were observed, with a maximum of 1 individual observed on a single day.

Biologically Important Areas (BIAs) for feeding gray whales along the coasts of Washington, Oregon, and California have been identified, including northern Puget Sound, Northwestern Washington, and Grays Harbor in Washington, Depoe Bay and Cape Blanco and Orford Reef in Oregon, and Point St. George in California; most of these areas are of importance from late spring through early fall (Calambokidis *et al.,* 2015). BIAs have also been identified for migrating gray whales along the entire coasts of Washington (including the inland waters of Puget Sound), Oregon, and California; although most whales travel within 10 km from shore, the BIAs were extended out to 47 km from the coastline (Calambokidis *et al.,* 2015).

On May 30, 2019, NMFS declared an unusual mortality event (UME) for gray whales after elevated numbers of strandings occurred along the U.S. west coast. As of January 7, 2022, a total of 502 stranded gray whales have been reported, including 256 in the United States (117 in Alaska, 56 in Washington, 12 in Oregon, and 71 in California), 225 in Mexico, and 21 in Canada. Full or partial necropsy examinations were conducted on a subset of the whales. Preliminary findings in several of the whales have shown evidence of emaciation. These findings are not consistent across all of the whales examined, so more research is needed. The UME is ongoing, and NMFS continues to investigate the cause(s). Additional information about the UME is available at *https://www.fisheries.noaa.gov/national/marine-life-distress/2019-2020-gray-whale-unusual-mortality-event-along-west-coast.*

Minke Whale

The International Whaling Commission (IWC) recognizes three stocks of minke whales in the North Pacific: The Sea of Japan/East China Sea, the rest of the western Pacific west of 180° N, and the remainder of the Pacific (Donovan 1991). Minke whales are relatively common in the Bering and Chukchi seas and in the Gulf of Alaska, but are not considered abundant in any other part of the eastern Pacific (Brueggeman *et al.,* 1990). In the far north, minke whales are thought to be migratory, but they are believed to be year-round residents in coastal waters off the west coast of the United States (Dorsey *et al.,* 1990).

Minke whales are reported in Washington inland waters year-round, although few are reported in the winter (*i.e.,* during the anticipated in-water work window for these projects;

Calambokidis and Baird 1994). They are relatively common in the San Juan Islands and Strait of Juan de Fuca (especially around several of the banks in both the central and eastern Strait), but are relatively rare in Puget Sound and the Orca Network has no sighting records of minke whales in the project areas. During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a single minke whale was observed.

Long-Beaked Common Dolphin

Long-beaked common dolphins are commonly found along the U.S. West Coast, from Baja California, Mexico (including the Gulf of California), northward to about central California (Carretta *et al.,* 2020). The Salish Sea is not considered part of their typical range (Carretta *et al.,* 2020), but there have been reports of long-beaked common dolphins in inland waters. Two individual common dolphins were observed in August and September of 2011 (Whale Museum, 2015). The first record of a pod of long-beaked common dolphins in this area came in the summer of 2016. Beginning on June 16, 2016 long-beaked common dolphins were observed near Victoria, B.C. Over the following weeks, a pod of 15 to 20 (including a calf) was observed in central and southern Puget Sound. They were positively identified as long-beaked common dolphins (Orca Network 2016). Two long-beaked common dolphins were observed by Washington State Department of Transportation (WSDOT) marine mammal monitors during construction at Washington State Ferries Multimodal Project at Colman Dock in Seattle during the 2017–18 construction window (WSDOT 2019).

Bottlenose Dolphin

Bottlenose dolphins are distributed worldwide from approximately 45° N to 45° S. Bottlenose dolphins inhabiting west coast U.S. waters are considered to be in either the California coastal stock, which ranges from Mexico to the San Francisco area within approximately 1 kilometer of shore, or the California/Oregon/Washington offshore stock, which is most commonly found along the California coast, northward to about the Oregon border. NMFS offshore surveys from 1991 to 2014 resulted in no sightings during study transects off the Oregon or Washington coasts (Carretta *et al.,* 2019). In September 2017, however, multiple sightings of a bottlenose dolphin throughout the Puget Sound and in Elliott Bay were reported to Cascadia Research Collective and Orca Network. One of the individuals was identified as belonging to the California coastal stock (Cascadia Research Collective, 2017). Bottlenose dolphins are considered rare in Puget Sound but occasional sightings have continued since the initial reports in 2017 (Orca Network, 2021). During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a total of 6 bottlenose dolphins were observed, with a maximum of 2 individuals observed on a single day.

Pacific White-Sided Dolphin

The Pacific white-sided dolphin is found in cool temperate waters of the North Pacific from the southern Gulf of California to Alaska. Across the North Pacific, it appears to have a relatively narrow distribution between 38° N and 47° N (Brownell *et al.,* 1999). In the eastern North Pacific Ocean, the Pacific white-sided dolphin is one of the most common cetacean species, occurring primarily in shelf and slope waters (Green *et al.,* 1993; Barlow 2003, 2010). It is known to occur close to shore in certain regions, including (seasonally) southern California (Brownell *et al.,* 1999). Results of aerial and shipboard surveys strongly suggest seasonal north-south movements of the species between California and Oregon/Washington; the movements apparently are related to oceanographic influences, particularly water temperature (Green *et al.,* 1993; Forney and Barlow 1998; Buchanan *et al.,* 2001). During winter, this species is most abundant in California slope and offshore areas; as northern waters begin to warm in the spring, it appears to move north to slope and offshore waters off Oregon/Washington (Green *et al.,* 1992, 1993; Forney 1994; Forney *et al.,* 1995; Buchanan *et al.,* 2001; Barlow 2003). The highest encounter rates off Oregon and Washington have been reported during March-May in slope and offshore waters (Green *et al.,* 1992). Large groups of Pacific white-sided dolphins have been observed in San Juan Channel (Orca Network 2012), north of Puget Sound, and may rarely occur in Central Puget Sound. During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a total of 2 Pacific white-sided dolphins were observed on one day of construction.

Killer Whale

There are three distinct ecotypes, or forms, of killer whales recognized in the north Pacific: resident, transient, and offshore. The three ecotypes differ morphologically, ecologically, behaviorally, and genetically. Resident killer whales exclusively prey upon fish, with a clear preference for salmon (Ford and Ellis 2006; Hanson *et al.,* 2010; Ford *et al.,* 2016), while transient killer whales exclusively prey upon marine mammals (Caretta *et al.,* 2019). Less is known about offshore killer whales, but they are believed to consume primarily fish, including several species of shark (Dahlheim *et al.,* 2008). Currently, there are eight killer whale stocks recognized in the U.S. Pacific (Carretta *et al.,* 2021; Muto *et al.,* 2021). Of those, individuals from the West Coast Transient stock may occur in the project areas and be taken incidental to WSDOT's proposed activities.

Within Puget Sound, transient killer whales primarily hunt pinnipeds and porpoises, though some groups will occasionally target larger whales. The West Coast Transient stock of killer whales occurs from California through southeast Alaska (Muto *et al.,* 2021). The seasonal movements of transients are largely unpredictable, although there is a tendency to investigate harbor seal haulouts off Vancouver Island more frequently during the pupping season in August and September (Baird 1994; Ford 2014). Transient killer whales have been observed in central Puget Sound in all months (Orca Network 2021). During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a total of 47 transient killer whales were observed, with a maximum of 20 individuals observed on a single day.

Harbor Porpoise

In the eastern North Pacific Ocean, harbor porpoise are found in coastal and inland waters from Point Barrow, along the Alaskan coast, and down the west coast of North America to Point Conception, California (Gaskin 1984). Harbor porpoise are known to occur year-round in the inland trans-boundary waters of Washington and British Columbia, Canada (Osborne *et al.,* 1988), and along the Oregon/Washington coast (Barlow 1988, Barlow *et al.,* 1988, Green *et al.,* 1992). There was a significant decline in harbor porpoise sightings within southern Puget Sound between the 1940s and 1990s but sightings have increased seasonally in the last 10 years (Carretta *et al.,* 2019). Annual winter aerial surveys conducted by the Washington Department of Fish and Wildlife from 1995 to 2015 revealed an increasing trend in harbor porpoise in Washington

inland waters, including the return of harbor porpoise to Puget Sound. The data suggest that harbor porpoise were already present in Juan de Fuca, Georgia Straits, and the San Juan Islands from the mid-1990s to mid-2000s, and then expanded into Puget Sound and Hood Canal from the mid-2000s to 2015, areas they had used historically but abandoned. Changes in fishery-related entanglement was suspected as the cause of their previous decline and more recent recovery, including a return to Puget Sound (Evenson *et al.,* 2016). Seasonal surveys conducted in spring, summer, and fall 2013–2015 in Puget Sound and Hood Canal documented substantial numbers of harbor porpoise in Puget Sound. Observed porpoise numbers were twice as high in spring as in fall or summer, indicating a seasonal shift in distribution of harbor porpoise (Smultea 2015). The reasons for the seasonal shift and for the increase in sightings is unknown. During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a total of 413 harbor porpoises were observed, with a maximum of 40 individuals observed on a single day.

Dall's Porpoise

Dall's porpoises are endemic to temperate waters of the North Pacific Ocean. Off the U.S. West Coast, they are commonly seen in shelf, slope, and offshore waters (Morejohn 1979). Sighting patterns from aerial and shipboard surveys conducted in California, Oregon, and Washington (Green *et al.,* 1992, 1993; Forney and Barlow 1998; Barlow 2016) suggest that north-south movement between these states occurs as oceanographic conditions change, both on seasonal and inter-annual time scales. Dall's porpoise are considered rare in Puget Sound. During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a total of 8 Dall's porpoises were observed, with a maximum of 5 individuals observed on a single day.

California Sea Lion

The California sea lion is the most frequently sighted pinniped found in Washington waters and uses haul-out sites along the outer coast, Strait of Juan de Fuca, and in Puget Sound. Haul-out sites are located on jetties, offshore rocks and islands, log booms, marina docks, and navigation buoys. This species also may be frequently seen resting in the water, rafted together in groups in Puget Sound. Only male California sea lions migrate into Pacific Northwest waters, with females remaining in waters near their breeding rookeries off the coast of California and Mexico. The California sea lion was considered rare in Washington waters prior to the 1950s. More recently, peak numbers of 3,000 to 5,000 animals move into the Salish Sea during the fall and remain until late spring, when most return to breeding rookeries in California and Mexico (Jeffries *et al.,* 2000).

California sea lions are often observed in the area of potential effects and are known to be comfortable and seemingly curious around human activities. The nearest documented California sea lion haulout is 2.3 mi (3.7 km) southeast of the project sites on Blakely Rocks. Jeffries *et al.* (2000) estimated less than 100 California sea lions occupy the Blakely Rocks haulout site. California sea lions are not commonly observed in Eagle Harbor but are regularly observed in Elliott Bay, especially around two navigational buoys near Alki Point, at the southwest edge of Elliott Bay. During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a maximum of 38 California sea lions were observed on a single day.

Steller Sea Lion

Steller sea lions range along the North Pacific Rim from northern Japan to California (Loughlin *et al.,* 1984). There are two separate stocks of Steller sea lions, the Eastern U.S. stock, which occurs east of Cape Suckling, Alaska (144° W), and the Western U.S. stock, which occurs west of that point. Only the Western stock of Steller sea lions, which is designated as the Western DPS of Steller sea lions, is listed as endangered under the ESA (78 FR 66139; November 4, 2013). Unlike the Western U.S. stock of Steller sea lions, there has been a sustained and robust increase in abundance of the Eastern U.S. stock throughout its breeding range. The eastern stock of Steller sea lions has historically bred on rookeries located in Southeast Alaska, British Columbia, Oregon, and California. However, within the last several years a new rookery has become established on the outer Washington coast (at the Carroll Island and Sea Lion Rock complex), with more than 100 pups born there in 2015 (Muto *et al.,* 2020).

Steller sea lions use haul-out locations in Puget Sound, and may occur at the same haul-outs as California sea lions, but are considered rare visitors to the waters around Bainbridge Island. Few Steller sea lions have been observed during monitoring of recent construction projects in the Seattle area; typically fewer than 5 total observations per year (*e.g.,* Anchor QEA 2018, 2019). During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a total of 100 Steller sea lions were observed, with a maximum of 10 Steller sea lions observed on a single day.

Harbor Seal

Harbor seals inhabit coastal and estuarine waters off Baja California, north along the western coasts of the continental U.S., British Columbia, and Southeast Alaska, west through the Gulf of Alaska and Aleutian Islands, and in the Bering Sea north to Cape Newenham and the Pribilof Islands (Carretta *et al.,* 2014). They haul out on rocks, reefs, beaches, and drifting glacial ice and feed in marine, estuarine, and occasionally fresh waters. Harbor seals generally are non-migratory, with local movements associated with such factors as tides, weather, season, food availability, and reproduction (Scheffer and Slipp 1944; Fisher 1952; Bigg 1969, 1981). Within U.S. west coast waters, five stocks of harbor seals are recognized: (1) Southern Puget Sound (south of the Tacoma Narrows Bridge); (2) Washington Northern Inland Waters (including Puget Sound north of the Tacoma Narrows Bridge, the San Juan Islands, and the Strait of Juan de Fuca); (3) Hood Canal; (4) Oregon/Washington Coast; and (5) California. Harbor seals in the project areas would be from the Washington Northern Inland Waters stock.

Harbor seals are the only pinniped species that occurs year-round and breeds in Washington waters (Jeffries *et al.,* 2000). Pupping seasons vary by geographic region, with pups born in coastal estuaries (Columbia River, Willapa Bay, and Grays Harbor) from mid-April through June; Olympic Peninsula coast from May through July; San Juan Islands and eastern bays of Puget Sound from June through August; southern Puget Sound from mid-July through September; and Hood Canal from August through January (Jeffries *et al.,* 2000). The most recent estimate for the Washington Northern Inland Waters Stock is 11,036 based on surveys conducted in 1999. There are no current estimates of abundance for this stock but the population is thought to be stable (Carretta *et al.,* 2014).

There is one documented harbor seal haulout area near Bainbridge Island at Blakely Rocks, approximately 2.3 mi (3.7 km) southeast of the project sites. The haulout, which is estimated at less

than 100 animals, consists of intertidal rocks and reef areas (Jefferies *et al.,* 2000). Harbor seals are a commonly observed marine mammal in the area of potential effects and are known to be comfortable and seemingly curious around human activities. Observations of harbor seals were reported during many recent construction projects along the Seattle waterfront. During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a maximum of 43 harbor seals were observed on a single day.

Northern Elephant Seal

Northern elephant seals breed and give birth in California (U.S.) and Baja California (Mexico), primarily on offshore islands (Stewart *et al.,* 1994), from December to March (NOAA 2015). Males migrate to the Gulf of Alaska and western Aleutian Islands along the continental shelf to feed on benthic prey, while females migrate to pelagic areas in the Gulf of Alaska and the central North Pacific Ocean to feed on pelagic prey (Le Boeuf *et al.,* 2000). Adults return to land between March and August to molt, with males returning later than females. Adults return to their feeding areas again between their spring/summer molting and their winter breeding seasons (Carretta *et al.,* 2015).

During 372 total days of construction at the Washington State Ferries Multimodal Project at Colman Dock in Seattle between 2017 and 2021, a single northern elephant seal was observed. Elephant seals are generally considered rare in Puget Sound. However, a female elephant seal has been reported hauled-out in Mutiny Bay on Whidbey Island periodically since 2010. She was observed alone for her first three visits to the area, but in March 2015, she was seen with a pup. Since then, she has produced two more pups, born in 2018 and 2020. Northern elephant seals generally give birth in January but this individual has repeatedly given birth in March. She typically returns to Mutiny Bay in April and May to molt. Her pups have also repeatedly returned to haul-out on nearby beaches (Orca Network 2020).

Marine Mammal Hearing

Hearing is the most important sensory modality for marine mammals underwater, and exposure to anthropogenic sound can have deleterious effects. To appropriately assess the potential effects of exposure to sound, it is necessary to understand the frequency ranges marine mammals are able to hear. Not all marine mammal species have equal hearing capabilities (*e.g.,* Richardson *et al.,* 1995; Wartzok and Ketten, 1999; Au and Hastings, 2008). To reflect this, Southall *et al.* (2007, 2019) recommended that marine mammals be divided into hearing groups based on directly measured (behavioral or auditory evoked potential techniques) or estimated hearing ranges (behavioral response data, anatomical modeling, etc.). Note that no direct measurements of hearing ability have been successfully completed for mysticetes (*i.e.,* low-frequency cetaceans). Subsequently, NMFS (2018) described generalized hearing ranges for these marine mammal hearing groups. Generalized hearing ranges were chosen based on the approximately 65 decibel (dB) threshold from the normalized composite audiograms, with the exception for lower limits for low-frequency cetaceans where the lower bound was deemed to be biologically implausible and the lower bound from Southall *et al.* (2007) retained. Marine mammal hearing groups and their associated hearing ranges are provided in Table 4.

TABLE 4—MARINE MAMMAL HEARING GROUPS (NMFS, 2018)

Hearing group	Generalized hearing range *
Low-frequency (LF) cetaceans (baleen whales)	7 Hz to 35 kHz.
Mid-frequency (MF) cetaceans (dolphins, toothed whales, beaked whales, bottlenose whales)	150 Hz to 160 kHz.
High-frequency (HF) cetaceans (true porpoises, *Kogia,* river dolphins, Cephalorhynchid, *Lagenorhynchus cruciger* & *L. australis*).	275 Hz to 160 kHz.
Phocid pinnipeds (PW) (underwater) (true seals)	50 Hz to 86 kHz.
Otariid pinnipeds (OW) (underwater) (sea lions and fur seals)	60 Hz to 39 kHz.

* Represents the generalized hearing range for the entire group as a composite (*i.e.,* all species within the group), where individual species' hearing ranges are typically not as broad. Generalized hearing range chosen based on ~65 dB threshold from normalized composite audiogram, with the exception for lower limits for LF cetaceans (Southall *et al.* 2007) and PW pinniped (approximation).

The pinniped functional hearing group was modified from Southall *et al.* (2007) on the basis of data indicating that phocid species have consistently demonstrated an extended frequency range of hearing compared to otariids, especially in the higher frequency range (Hemilä *et al.,* 2006; Kastelein *et al.,* 2009; Reichmuth and Holt, 2013).

For more detail concerning these groups and associated frequency ranges, please see NMFS (2018) for a review of available information.

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

This section includes a discussion of the ways that components of the specified activity may impact marine mammals and their habitat. The Estimated Take section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken by this activity. The Negligible Impact Analysis and Determination section considers the content of this section, the Estimated Take section, and the Proposed Mitigation section, to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and whether those impacts are reasonably expected to, or reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

Acoustic effects on marine mammals during the specified activities can occur from impact pile driving and vibratory driving and removal. The effects of underwater noise from WSDOT's proposed activities have the potential to result in Level A or Level B harassment of marine mammals in the action areas.

Description of Sound Sources

The marine soundscape is comprised of both ambient and anthropogenic sounds. Ambient sound is defined as the all-encompassing sound in a given place and is usually a composite of sound from many sources both near and far (ANSI 1995). The sound level of an area is defined by the total acoustical energy being generated by known and unknown sources. These sources may include physical (*e.g.,* waves, wind, precipitation, earthquakes, ice, atmospheric sound), biological (*e.g.,*

sounds produced by marine mammals, fish, and invertebrates), and anthropogenic sound (*e.g.,* vessels, dredging, aircraft, construction).

The sum of the various natural and anthropogenic sound sources at any given location and time—which comprise ''ambient'' or ''background'' sound—depends not only on the source levels (as determined by current weather conditions and levels of biological and shipping activity) but also on the ability of sound to propagate through the environment. In turn, sound propagation is dependent on the spatially and temporally varying properties of the water column and sea floor, and is frequency-dependent. As a result of the dependence on a large number of varying factors, ambient sound levels can be expected to vary widely over both coarse and fine spatial and temporal scales. Sound levels at a given frequency and location can vary by 10–20 decibels (dB) from day to day (Richardson *et al.,* 1995). The result is that, depending on the source type and its intensity, sound from the specified activities may be a negligible addition to the local environment or could form a distinctive signal that may affect marine mammals.

In-water construction activities associated with the projects would include impact and vibratory pile driving and removal. The sounds produced by these activities fall into one of two general sound types: impulsive and non-impulsive. Impulsive sounds (*e.g.,* explosions, sonic booms, impact pile driving) are typically transient, brief (less than 1 second), broadband, and consist of high peak sound pressure with rapid rise time and rapid decay (ANSI, 1986; NIOSH, 1998; NMFS, 2018). Non-impulsive sounds (*e.g.,* machinery operations such as drilling or dredging, vibratory pile driving, underwater chainsaws, and active sonar systems) can be broadband, narrowband or tonal, brief or prolonged (continuous or intermittent), and typically do not have the high peak sound pressure with raid rise/decay time that impulsive sounds do (ANSI 1995; NIOSH 1998; NMFS 2018). The distinction between these two sound types is important because they have differing potential to cause physical effects, particularly with regard to hearing (*e.g.,* Ward 1997 in Southall *et al.,* 2007).

Two types of hammers would be used on these projects, impact and vibratory. Impact hammers operate by repeatedly dropping and/or pushing a heavy piston onto a pile to drive the pile into the substrate. Sound generated by impact hammers is considered impulsive. Vibratory hammers install piles by vibrating them and allowing the weight of the hammer to push them into the sediment. Vibratory hammers produce non-impulsive, continuous sounds. Vibratory hammering generally produces SPLs 10 to 20 dB lower than impact pile driving of the same-sized pile (Oestman *et al.,* 2009). Rise time is slower, reducing the probability and severity of injury, and sound energy is distributed over a greater amount of time (Nedwell and Edwards, 2002; Carlson *et al.,* 2005).

The likely or possible impacts of WSDOT's proposed activities on marine mammals could be generated from both non-acoustic and acoustic stressors. Potential non-acoustic stressors include the physical presence of the equipment, vessels, and personnel; however, we expect that any animals that approach the project site(s) close enough to be harassed due to the presence of equipment or personnel would be within the Level B harassment zones from pile driving and would already be subject to harassment from the in-water activities. Therefore, any impacts to marine mammals are expected to primarily be acoustic in nature. Acoustic stressors are generated by heavy equipment operation during pile installation and removal (*i.e.,* impact and vibratory pile driving and removal).

Acoustic Impacts

The introduction of anthropogenic noise into the aquatic environment from pile driving equipment is the primary means by which marine mammals may be harassed from WSDOT's specified activities. In general, animals exposed to natural or anthropogenic sound may experience physical and psychological effects, ranging in magnitude from none to severe (Southall *et al.,* 2007). Generally, exposure to pile driving and removal and other construction noise has the potential to result in auditory threshold shifts and behavioral reactions (*e.g.,* avoidance, temporary cessation of foraging and vocalizing, changes in dive behavior). Exposure to anthropogenic noise can also lead to non-observable physiological responses such as an increase in stress hormones. Additional noise in a marine mammal's habitat can mask acoustic cues used by marine mammals to carry out daily functions such as communication and predator and prey detection. The effects of pile driving and demolition noise on marine mammals are dependent on several factors, including, but not limited to, sound type (*e.g.,* impulsive vs. non-impulsive), the species, age and sex class (*e.g.,* adult male vs. mother with calf), duration of exposure, the distance between the pile and the animal, received levels, behavior at time of exposure, and previous history with exposure (Wartzok *et al.,* 2004; Southall *et al.,* 2007). Here we discuss physical auditory effects (threshold shifts) followed by behavioral effects and potential impacts on habitat. No physiological effects other than PTS are anticipated or proposed to be authorized, and therefore are not discussed further.

NMFS defines a noise-induced threshold shift (TS) as a change, usually an increase, in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS, 2018). The amount of threshold shift is customarily expressed in dB. A TS can be permanent or temporary. As described in NMFS (2018), there are numerous factors to consider when examining the consequence of TS, including, but not limited to, the signal temporal pattern (*e.g.,* impulsive or non-impulsive), likelihood an individual would be exposed for a long enough duration or to a high enough level to induce a TS, the magnitude of the TS, time to recovery (seconds to minutes or hours to days), the frequency range of the exposure (*i.e.,* spectral content), the hearing and vocalization frequency range of the exposed species relative to the signal's frequency spectrum (*i.e.,* how animal uses sound within the frequency band of the signal; *e.g.,* Kastelein *et al.,* 2014), and the overlap between the animal and the source (*e.g.,* spatial, temporal, and spectral).

Permanent Threshold Shift (PTS)—NMFS defines PTS as a permanent, irreversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS 2018). Available data from humans and other terrestrial mammals indicate that a 40 dB threshold shift approximates PTS onset (see Ward *et al.,* 1958, 1959; Ward, 1960; Kryter *et al.,* 1966; Miller, 1974; Ahroon *et al.,* 1996; Henderson *et al.,* 2008). PTS levels for marine mammals are estimates, because there are limited empirical data measuring PTS in marine mammals (*e.g.,* Kastak *et al.,* 2008), largely due to the fact that, for various ethical reasons, experiments involving anthropogenic noise exposure at levels inducing PTS are not typically pursued or authorized (NMFS, 2018).

Temporary Threshold Shift (TTS)—TTS is a temporary, reversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a

previously established reference level (NMFS, 2018). Based on data from cetacean TTS measurements (see Southall *et al.,* 2007), a TTS of 6 dB is considered the minimum threshold shift clearly larger than any day-to-day or session-to-session variation in a subject's normal hearing ability (Schlundt *et al.,* 2000; Finneran *et al.,* 2000, 2002). As described in Finneran (2016), marine mammal studies have shown the amount of TTS increases with cumulative sound exposure level (SEL_{cum}) in an accelerating fashion: At low exposures with lower SEL_{cum}, the amount of TTS is typically small and the growth curves have shallow slopes. At exposures with higher SEL_{cum}, the growth curves become steeper and approach linear relationships with the noise SEL.

Depending on the degree (elevation of threshold in dB), duration (*i.e.,* recovery time), and frequency range of TTS, and the context in which it is experienced, TTS can have effects on marine mammals ranging from discountable to serious (similar to those discussed in auditory masking, below). For example, a marine mammal may be able to readily compensate for a brief, relatively small amount of TTS in a non-critical frequency range that takes place during a time when the animal is traveling through the open ocean, where ambient noise is lower and there are not as many competing sounds present. Alternatively, a larger amount and longer duration of TTS sustained during time when communication is critical for successful mother/calf interactions could have more serious impacts. We note that reduced hearing sensitivity as a simple function of aging has been observed in marine mammals, as well as humans and other taxa (Southall *et al.,* 2007), so we can infer that strategies exist for coping with this condition to some degree, though likely not without cost.

Currently, TTS data only exist for four species of cetaceans (bottlenose dolphin, beluga whale (*Delphinapterus leucas*), harbor porpoise, and Yangtze finless porpoise (*Neophocoena asiaeorientalis*)) and five species of pinnipeds exposed to a limited number of sound sources (*i.e.,* mostly tones and octave-band noise) in laboratory settings (Finneran, 2015). TTS was not observed in trained spotted (*Phoca largha*) and ringed (*Pusa hispida*) seals exposed to impulsive noise at levels matching previous predictions of TTS onset (Reichmuth *et al.,* 2016). In general, harbor seals and harbor porpoises have a lower TTS onset than other measured pinniped or cetacean species (Finneran, 2015). The potential for TTS from impact pile driving exists. After exposure to playbacks of impact pile driving sounds (rate 2,760 strikes/hour) in captivity, mean TTS increased from 0 dB after 15 minute exposure to 5 dB after 360 minute exposure; recovery occurred within 60 minutes (Kastelein *et al.,* 2016). Additionally, the existing marine mammal TTS data come from a limited number of individuals within these species. No data are available on noise-induced hearing loss for mysticetes. Nonetheless, what we considered is the best available science. For summaries of data on TTS in marine mammals or for further discussion of TTS onset thresholds, please see Southall *et al.* (2007), Finneran and Jenkins (2012), Finneran (2015), and Table 5 in NMFS (2018).

WSDOT proposes to use impact pile driving to install some piles for these projects. There would likely be pauses in activities producing the sound (*e.g.,* impact pile driving) during each day. Given these pauses and the fact that many marine mammals are likely moving through the project areas and not remaining for extended periods of time, the potential for TS declines.

Behavioral Harassment—Exposure to noise from pile driving and removal also has the potential to behaviorally disturb marine mammals. Available studies show wide variation in response to underwater sound; therefore, it is difficult to predict specifically how any given sound in a particular instance might affect marine mammals perceiving the signal. If a marine mammal does react briefly to an underwater sound by changing its behavior or moving a small distance, the impacts of the change are unlikely to be significant to the individual, let alone the stock or population. However, if a sound source displaces marine mammals from an important feeding or breeding area for a prolonged period, impacts on individuals and populations could be significant (*e.g.,* Lusseau and Bejder, 2007; Weilgart, 2007; NRC, 2005).

Disturbance may result in changing durations of surfacing and dives, number of blows per surfacing, or moving direction and/or speed; reduced/increased vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); visible startle response or aggressive behavior (such as tail/fluke slapping or jaw clapping); or avoidance of areas where sound sources are located. Pinnipeds may increase their haul-out time, possibly to avoid in-water disturbance (Thorson and Reyff, 2006). Behavioral responses to sound are highly variable and context-specific and any reactions depend on numerous intrinsic and extrinsic factors (*e.g.,* species, state of maturity, experience, current activity, reproductive state, auditory sensitivity, time of day), as well as the interplay between factors (*e.g.,* Richardson *et al.,* 1995; Wartzok *et al.,* 2004; Southall *et al.,* 2007; Weilgart, 2007; Archer *et al.,* 2010). Behavioral reactions can vary not only among individuals but also within an individual, depending on previous experience with a sound source, context, and numerous other factors (Ellison *et al.,* 2012), and can vary depending on characteristics associated with the sound source (*e.g.,* whether it is moving or stationary, number of sources, distance from the source). In general, pinnipeds seem more tolerant of, or at least habituate more quickly to, potentially disturbing underwater sound than do cetaceans, and generally seem to be less responsive to exposure to industrial sound than most cetaceans. Please see Appendices B and C of Southall *et al.* (2007) for a review of studies involving marine mammal behavioral responses to sound.

Disruption of feeding behavior can be difficult to correlate with anthropogenic sound exposure, so it is usually inferred by observed displacement from known foraging areas, the appearance of secondary indicators (*e.g.,* bubble nets or sediment plumes), or changes in dive behavior. As for other types of behavioral response, the frequency, duration, and temporal pattern of signal presentation, as well as differences in species sensitivity, are likely contributing factors to differences in response in any given circumstance (*e.g.,* Croll *et al.,* 2001; Nowacek *et al.,* 2004; Madsen *et al.,* 2006; Yazvenko *et al.,* 2007). A determination of whether foraging disruptions incur fitness consequences would require information on or estimates of the energetic requirements of the affected individuals and the relationship between prey availability, foraging effort and success, and the life history stage of the animal.

In 2016, the Alaska Department of Transportation and Public Facilities (ADOT&PF) documented observations of marine mammals during construction activities (*i.e.,* pile driving) at the Kodiak Ferry Dock (see 80 FR 60636, October 7, 2015). In the marine mammal monitoring report for that project (ABR 2016), 1,281 Steller sea lions were observed within the Level B disturbance zone during pile driving or drilling (*i.e.,* documented as Level B harassment take). Of these, 19 individuals demonstrated an alert behavior, 7 were fleeing, and 19 swam away from the

project site. All other animals (98 percent) were engaged in activities such as milling, foraging, or fighting and did not change their behavior. In addition, two sea lions approached within 20 m of active vibratory pile driving activities. Three harbor seals were observed within the disturbance zone during pile driving activities; none of them displayed disturbance behaviors. Fifteen killer whales and three harbor porpoise were also observed within the Level B harassment zone during pile driving. The killer whales were travelling or milling while all harbor porpoises were travelling. No signs of disturbance were noted for either of these species. Given the similarities in species, activities, and habitat (*e.g.,* cool-temperate waters, industrialized area), we expect similar behavioral responses from the same and similar species affected by WSDOT's specified activities. That is, disturbance, if any, is likely to be temporary and localized (*e.g.,* small area movements).

Stress responses—An animal's perception of a threat may be sufficient to trigger stress responses consisting of some combination of behavioral responses, autonomic nervous system responses, neuroendocrine responses, or immune responses (*e.g.,* Seyle 1950; Moberg 2000). In many cases, an animal's first and sometimes most economical (in terms of energetic costs) response is behavioral avoidance of the potential stressor. Autonomic nervous system responses to stress typically involve changes in heart rate, blood pressure, and gastrointestinal activity. These responses have a relatively short duration and may or may not have a significant long-term effect on an animal's fitness.

Neuroendocrine stress responses often involve the hypothalamus-pituitary-adrenal system. Virtually all neuroendocrine functions that are affected by stress—including immune competence, reproduction, metabolism, and behavior—are regulated by pituitary hormones. Stress-induced changes in the secretion of pituitary hormones have been implicated in failed reproduction, altered metabolism, reduced immune competence, and behavioral disturbance (*e.g.,* Moberg 1987; Blecha 2000). Increases in the circulation of glucocorticoids are also equated with stress (Romano *et al.,* 2004).

The primary distinction between stress (which is adaptive and does not normally place an animal at risk) and ''distress'' is the cost of the response. During a stress response, an animal uses glycogen stores that can be quickly replenished once the stress is alleviated. In such circumstances, the cost of the stress response would not pose serious fitness consequences. However, when an animal does not have sufficient energy reserves to satisfy the energetic costs of a stress response, energy resources must be diverted from other functions. This state of distress will last until the animal replenishes its energetic reserves sufficient to restore normal function.

Relationships between these physiological mechanisms, animal behavior, and the costs of stress responses are well-studied through controlled experiments and for both laboratory and free-ranging animals (*e.g.,* Holberton *et al.,* 1996; Hood *et al.,* 1998; Jessop *et al.,* 2003; Krausman *et al.,* 2004; Lankford *et al.,* 2005). Stress responses due to exposure to anthropogenic sounds or other stressors and their effects on marine mammals have also been reviewed (Fair and Becker 2000; Romano *et al.,* 2002b) and, more rarely, studied in wild populations (*e.g.,* Romano *et al.,* 2002a). For example, Rolland *et al.* (2012) found that noise reduction from reduced ship traffic in the Bay of Fundy was associated with decreased stress in North Atlantic right whales. These and other studies lead to a reasonable expectation that some marine mammals will experience physiological stress responses upon exposure to acoustic stressors and that it is possible that some of these would be classified as ''distress.'' In addition, any animal experiencing TTS would likely also experience stress responses (NRC, 2003), however distress is an unlikely result of these projects based on observations of marine mammals during previous, similar projects in the area.

Masking—Sound can disrupt behavior through masking, or interfering with, an animal's ability to detect, recognize, or discriminate between acoustic signals of interest (*e.g.,* those used for intraspecific communication and social interactions, prey detection, predator avoidance, navigation) (Richardson *et al.,* 1995). Masking occurs when the receipt of a sound is interfered with by another coincident sound at similar frequencies and at similar or higher intensity, and may occur whether the sound is natural (*e.g.,* snapping shrimp, wind, waves, precipitation) or anthropogenic (*e.g.,* pile driving, shipping, sonar, seismic exploration) in origin. The ability of a noise source to mask biologically important sounds depends on the characteristics of both the noise source and the signal of interest (*e.g.,* signal-to-noise ratio, temporal variability, direction), in relation to each other and to an animal's hearing abilities (*e.g.,* sensitivity, frequency range, critical ratios, frequency discrimination, directional discrimination, age or TTS hearing loss), and existing ambient noise and propagation conditions. Masking of natural sounds can result when human activities produce high levels of background sound at frequencies important to marine mammals. Conversely, if the background level of underwater sound is high (*e.g.,* on a day with strong wind and high waves), an anthropogenic sound source would not be detectable as far away as would be possible under quieter conditions and would itself be masked. The Puget Sound area contains active commercial shipping, ferry operations, and commercial fishing as well as numerous recreational and other commercial vessels, and background sound levels in the area are already elevated.

Airborne Acoustic Effects—Pinnipeds that occur near the project site could be exposed to airborne sounds associated with pile driving and removal that have the potential to cause behavioral harassment, depending on their distance from pile driving activities. Cetaceans are not expected to be exposed to airborne sounds that would result in harassment as defined under the MMPA.

Airborne noise would primarily be an issue for pinnipeds that are swimming or hauled out near the project site within the range of noise levels elevated above the acoustic criteria. We recognize that pinnipeds in the water could be exposed to airborne sound that may result in behavioral harassment when looking with their heads above water. Most likely, airborne sound would cause behavioral responses similar to those discussed above in relation to underwater sound. For instance, anthropogenic sound could cause hauled-out pinnipeds to exhibit changes in their normal behavior, such as reduction in vocalizations, or cause them to temporarily abandon the area and move further from the source. However, these animals would likely previously have been 'taken' because of exposure to underwater sound above the behavioral harassment thresholds, which are generally larger than those associated with airborne sound. There are no haulouts near the project sites. Thus, the behavioral harassment of these animals is already accounted for in these estimates of potential take. Therefore, we do not believe that authorization of incidental take resulting from airborne sound for pinnipeds is warranted, and airborne sound is not discussed further here.

Marine Mammal Habitat Effects

WSDOT's proposed construction activities could have localized, temporary impacts on marine mammal habitat, including prey, by increasing in-water sound pressure levels and slightly decreasing water quality. Increased noise levels may affect acoustic habitat (see masking discussion above) and adversely affect marine mammal prey in the vicinity of the project areas (see discussion below). During impact and vibratory pile driving or removal, elevated levels of underwater noise would ensonify the project areas where both fishes and mammals occur and could affect foraging success. Additionally, marine mammals may avoid the area during construction, however, displacement due to noise is expected to be temporary and is not expected to result in long-term effects to the individuals or populations. Construction activities are of short duration and would likely have temporary impacts on marine mammal habitat through increases in underwater and airborne sound.

A temporary and localized increase in turbidity near the seafloor would occur in the immediate area surrounding the area where piles are installed or removed. In general, turbidity associated with pile installation is localized to about a 25-ft (7.6-m) radius around the pile (Everitt *et al.,* 1980). The sediments of the project site will settle out rapidly when disturbed. Cetaceans are not expected to be close enough to the pile driving areas to experience effects of turbidity, and any pinnipeds could avoid localized areas of turbidity. Local currents are anticipated to disburse any additional suspended sediments produced by project activities at moderate to rapid rates depending on tidal stage. Therefore, we expect the impact from increased turbidity levels to be discountable to marine mammals and do not discuss it further.

In-Water Construction Effects on Potential Foraging Habitat

The area likely impacted by the project is relatively small compared to the available habitat in Puget Sound. The area is highly influenced by anthropogenic activities. The total seafloor area affected by pile installation and removal is a small area compared to the vast foraging area available to marine mammals in the area. At best, the impact area provides marginal foraging habitat for marine mammals and fishes. Furthermore, pile driving and removal at the project site would not obstruct long-term movements or migration of marine mammals.

Avoidance by potential prey (*i.e.,* fish or, in the case of transient killer whales, other marine mammals) of the immediate area due to the temporary loss of this foraging habitat is also possible. The duration of fish and marine mammal avoidance of this area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution, and behavior is anticipated. Any behavioral avoidance by fish or marine mammals of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity.

In-Water Construction Effects on Potential Prey—Sound may affect marine mammals through impacts on the abundance, behavior, or distribution of prey species (*e.g.,* crustaceans, cephalopods, fish, zooplankton, other marine mammals). Marine mammal prey varies by species, season, and location. Here, we describe studies regarding the effects of noise on known marine mammal prey other than other marine mammals (which have been discussed earlier).

Fish utilize the soundscape and components of sound in their environment to perform important functions such as foraging, predator avoidance, mating, and spawning (*e.g.,* Zelick and Mann, 1999; Fay, 2009). Depending on their hearing anatomy and peripheral sensory structures, which vary among species, fishes hear sounds using pressure and particle motion sensitivity capabilities and detect the motion of surrounding water (Fay *et al.,* 2008). The potential effects of noise on fishes depends on the overlapping frequency range, distance from the sound source, water depth of exposure, and species-specific hearing sensitivity, anatomy, and physiology. Key impacts to fishes may include behavioral responses, hearing damage, barotrauma (pressure-related injuries), and mortality.

Fish react to sounds which are especially strong and/or intermittent low-frequency sounds, and behavioral responses such as flight or avoidance are the most likely effects. Short duration, sharp sounds can cause overt or subtle changes in fish behavior and local distribution. The reaction of fish to noise depends on the physiological state of the fish, past exposures, motivation (*e.g.,* feeding, spawning, migration), and other environmental factors. Hastings and Popper (2005) identified several studies that suggest fish may relocate to avoid certain areas of sound energy. Additional studies have documented effects of pile driving on fish; several are based on studies in support of large, multiyear bridge construction projects (*e.g.,* Scholik and Yan, 2001, 2002; Popper and Hastings, 2009). Several studies have demonstrated that impulse sounds might affect the distribution and behavior of some fishes, potentially impacting foraging opportunities or increasing energetic costs (*e.g.,* Fewtrell and McCauley, 2012; Pearson *et al.,* 1992; Skalski *et al.,* 1992; Santulli *et al.,* 1999; Paxton *et al.,* 2017). However, some studies have shown no or slight reaction to impulse sounds (*e.g.,* Pena *et al.,* 2013; Wardle *et al.,* 2001; Jorgenson and Gyselman, 2009; Popper *et al.,* 2015).

SPLs of sufficient strength have been known to cause injury to fish and fish mortality. However, in most fish species, hair cells in the ear continuously regenerate and loss of auditory function likely is restored when damaged cells are replaced with new cells. Halvorsen *et al.* (2012a) showed that a TTS of 4–6 dB was recoverable within 24 hours for one species. Impacts would be most severe when the individual fish is close to the source and when the duration of exposure is long. Injury caused by barotrauma can range from slight to severe and can cause death, and is most likely for fish with swim bladders. Barotrauma injuries have been documented during controlled exposure to impact pile driving (Halvorsen *et al.,* 2012b; Casper *et al.,* 2013).

The most likely impact to fishes from pile driving and removal and construction activities at the project areas would be temporary behavioral avoidance of the area. The duration of fish avoidance of this area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution, and behavior is anticipated.

Construction activities, in the form of increased turbidity, have the potential to adversely affect forage fish in the project areas. Forage fish form a significant prey base for many marine mammal species that occur in the project areas. Increased turbidity is expected to occur in the immediate vicinity (on the order of 10 ft (3 m) or less) of construction activities. However, suspended sediments and particulates are expected to dissipate quickly within a single tidal cycle. Given the limited area affected and high tidal dilution rates any effects on forage fish are expected to be minor or negligible. Finally, exposure to turbid waters from construction activities is not expected to be different from the current exposure; fish and marine mammals in Eagle Harbor are routinely exposed to substantial levels of suspended

sediment from natural and anthropogenic sources.

In summary, given the short daily duration of sound associated with individual pile driving events and the relatively small areas being affected, pile driving activities associated with the proposed actions are not likely to have a permanent, adverse effect on any fish habitat, or populations of fish species. Any behavioral avoidance by fish of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity. Thus, we conclude that impacts of the specified activities are not likely to have more than short-term adverse effects on any prey habitat or populations of prey species. Further, any impacts to marine mammal habitat are not expected to result in significant or long-term consequences for individual marine mammals, or to contribute to adverse impacts on their populations.

Estimated Take

This section provides an estimate of the number of incidental takes proposed for authorization through this IHA, which will inform both NMFS' consideration of ''small numbers'' and the negligible impact determinations.

Harassment is the only type of take expected to result from these activities. Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines ''harassment'' as any act of pursuit, torment, or annoyance, which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Authorized takes would primarily be by Level B harassment (in the form of behavioral disturbance and TTS), as use of the acoustic sources (*i.e.,* vibratory or impact pile driving and removal) have the potential to result in disruption of behavioral patterns and cause a temporary loss in hearing sensitivity for individual marine mammals. There is also some potential for auditory injury (Level A harassment) to result for porpoises and harbor seals because predicted auditory injury zones are larger. The proposed mitigation and monitoring measures are expected to minimize the severity of the taking to the extent practicable.

As described previously, no serious injury or mortality is anticipated or proposed to be authorized for this activity. Below we describe how the proposed take numbers are estimated.

For acoustic impacts, generally speaking, we estimate take by considering: (1) Acoustic thresholds above which NMFS believes the best available science indicates marine mammals will be behaviorally harassed or incur some degree of permanent hearing impairment; (2) the area or volume of water that will be ensonified above these levels in a day; (3) the density or occurrence of marine mammals within these ensonified areas; and, (4) the number of days of activities. We note that while these factors can contribute to a basic calculation to provide an initial prediction of potential takes, additional information that can qualitatively inform take estimates is also sometimes available (*e.g.,* previous monitoring results or average group size). Below, we describe the factors considered here in more detail and present the proposed take estimates.

Acoustic Thresholds

NMFS recommends the use of acoustic thresholds that identify the received level of underwater sound above which exposed marine mammals would be reasonably expected to be behaviorally harassed (equated to Level B harassment) or to incur PTS of some degree (equated to Level A harassment).

Level B Harassment—Though significantly driven by received level, the onset of behavioral disturbance from anthropogenic noise exposure is also informed to varying degrees by other factors related to the source or exposure context (*e.g.,* frequency, predictability, duty cycle, duration of the exposure, signal-to-noise ratio, distance to the source), the environment (*e.g.,* bathymetry, other noises in the area, predators in the area), and the receiving animals (hearing, motivation, experience, demography, life stage, depth) and can be difficult to predict (*e.g.,* Southall *et al.,* 2007, 2021, Ellison *et al.,* 2012). Based on what the available science indicates and the practical need to use a threshold based on a metric that is both predictable and measurable for most activities, NMFS typically uses a generalized acoustic threshold based on received level to estimate the onset of behavioral harassment. NMFS generally predicts that marine mammals are likely to be behaviorally harassed in a manner considered to be Level B harassment when exposed to underwater anthropogenic noise above root-mean-squared pressure received levels (rms SPL) of 120 dB (referenced to 1 micropascal (re 1 μPa)) for continuous (*e.g.,* vibratory pile-driving, drilling) and above rms SPL 160 dB re 1 μPa for non-explosive impulsive (*e.g.,* seismic airguns) or intermittent (*e.g.,* scientific sonar) sources.

WSDOT's proposed activities includes the use of continuous (vibratory hammer) and impulsive (impact hammer) sources, and therefore the 120 and 160 dB re 1 μPa (rms) thresholds are applicable.

Level A harassment—NMFS' Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing (Version 2.0) (Technical Guidance, 2018) identifies dual criteria to assess auditory injury (Level A harassment) to five different marine mammal groups (based on hearing sensitivity) as a result of exposure to noise from two different types of sources (impulsive or non-impulsive). WSDOT's activities include the use of impulsive (impact hammer) and non-impulsive (vibratory hammer) sources.

These thresholds are provided in the table below. The references, analysis, and methodology used in the development of the thresholds are described in NMFS' 2018 Technical Guidance, which may be accessed at: *www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance.*

TABLE 5—THRESHOLDS IDENTIFYING THE ONSET OF PERMANENT THRESHOLD SHIFT

Hearing group	PTS onset acoustic thresholds * (received level)	
	Impulsive	Non-impulsive
Low-Frequency (LF) Cetaceans	*Cell 1:* $L_{pk,flat}$: 219 dB; $L_{E,LF,24h}$: 183 dB	*Cell 2:* $L_{E,LF,24h}$: 199 dB.
Mid-Frequency (MF) Cetaceans	*Cell 3:* $L_{pk,flat}$: 230 dB; $L_{E,MF,24h}$: 185 dB	*Cell 4:* $L_{E,MF,24h}$: 198 dB.
High-Frequency (HF) Cetaceans	*Cell 5:* $L_{pk,flat}$: 202 dB; $L_{E,HF,24h}$: 155 dB	*Cell 6:* $L_{E,HF,24h}$: 173 dB.
Phocid Pinnipeds (PW) (Underwater)	*Cell 7:* $L_{pk,flat}$: 218 dB; $L_{E,PW,24h}$: 185 dB	*Cell 8:* $L_{E,PW,24h}$: 201 dB.

TABLE 5—THRESHOLDS IDENTIFYING THE ONSET OF PERMANENT THRESHOLD SHIFT—Continued

Hearing group	PTS onset acoustic thresholds * (received level)	
	Impulsive	Non-impulsive
Otariid Pinnipeds (OW) (Underwater)	*Cell 9:* $L_{pk,flat}$*:* 232 dB; $L_{E,OW,24h}$*:* 203 dB	*Cell 10:* $L_{E,OW,24h}$*:* 219 dB.

* Dual metric acoustic thresholds for impulsive sounds: Use whichever results in the largest isopleth for calculating PTS onset. If a non-impulsive sound has the potential of exceeding the peak sound pressure level thresholds associated with impulsive sounds, these thresholds should also be considered.

Note: Peak sound pressure (L_{pk}) has a reference value of 1 µPa, and cumulative sound exposure level (L_E) has a reference value of 1µPa²s. In this Table, thresholds are abbreviated to reflect American National Standards Institute standards (ANSI, 2013). However, ANSI defines peak sound pressure as incorporating frequency weighting, which is not the intent for this Technical Guidance. Hence, the subscript ''flat'' is being included to indicate peak sound pressure should be flat weighted or unweighted within the generalized hearing range. The subscript associated with cumulative sound exposure level thresholds indicates the designated marine mammal auditory weighting function (LF, MF, and HF cetaceans, and PW and OW pinnipeds) and that the recommended accumulation period is 24 hours. The cumulative sound exposure level thresholds could be exceeded in a multitude of ways (*i.e.,* varying exposure levels and durations, duty cycle). When possible, it is valuable for action proponents to indicate the conditions under which these acoustic thresholds will be exceeded.

Ensonified Area

Here, we describe operational and environmental parameters of the activity that are used in estimating the area ensonified above the acoustic thresholds, including source levels and transmission loss coefficient.

The sound field in the project areas is the existing background noise plus additional construction noise from the proposed project. Marine mammals are expected to be affected by sound generated by the primary components of the project (*i.e.,* impact and vibratory pile driving).

In order to calculate distances to the Level A harassment and Level B harassment thresholds for the methods and piles being used in these projects, NMFS used acoustic monitoring data from previous pile driving at the Bainbridge Island Ferry Terminal (impact installation of 24-in steel piles) and Eagle Harbor Maintenance Facility (impact installation of 30-in steel piles), as well as pile driving at other locations within Puget Sound to develop source levels for the various pile types, sizes, and methods for the two projects (Table 6). A source level for vibratory driving of 18-in steel piles is not available so it is conservatively assumed to be equivalent to the source level for 24-in steel piles.

TABLE 6—EXPECTED PROJECT SOUND SOURCE LEVELS

Pile type and size (in)	Method	Source level (dB re 1 µPa)	Source level measurement distance (m)	Reference
12-in timber	Vibratory removal	152 dB rms	10	Greenbusch Group (2018).
18-in and 24-in steel	Vibratory installation and removal.	166 dB rms	10	WSDOT (2020) [1].
30-in steel	Vibratory installation and removal.	176 dB rms	6	WSDOT (2020) [1].
36-in steel	Vibratory installation	184 dB rms	10	WSDOT (2020) [1].
24-in steel	Impact installation	206 dB peak; 179 dB SEL; 195 dB rms.	10	WSDOT (2020) [1].
30-in steel	Impact installation	194 dB peak; 182 dB SEL; 184 dB rms.	10	WSDOT (2020) [1].
36-in steel	Impact installation	205 dB peak; 178 dB SEL; 191 dB rms.	10	WSDOT (2020) [1].

[1] WSDOT Biological Assessment Manual Table 7–15.

Level B Harassment Zones

Transmission loss (TL) is the decrease in acoustic intensity as an acoustic pressure wave propagates out from a source. TL parameters vary with frequency, temperature, sea conditions, current, source and receiver depth, water depth, water chemistry, and bottom composition and topography. The general formula for underwater TL is:

TL = B * Log10 (R1/R2)

Where:

TL = transmission loss in dB

B = transmission loss coefficient; for practical spreading equals 15

R1 = the distance of the modeled SPL from the driven pile, and

R2 = the distance from the driven pile of the initial measurement

The recommended TL coefficient for most nearshore environments is the practical spreading value of 15. This value results in an expected propagation environment that would lie between spherical and cylindrical spreading loss conditions, which is the most appropriate assumption for WSDOT's proposed activities in the absence of specific modelling. The Level B harassment zones for WSDOT's proposed activities are shown in Table 7.

Level A Harassment Zones

The ensonified area associated with Level A harassment is more technically challenging to predict due to the need to account for a duration component. Therefore, NMFS developed an optional User Spreadsheet tool to accompany the Technical Guidance that can be used to relatively simply predict an isopleth distance for use in conjunction with marine mammal density or occurrence to help predict potential takes. We note that because of some of the assumptions included in the methods underlying this optional tool, we anticipate that the resulting isopleth estimates are typically

going to be overestimates of some degree, which may result in an overestimate of potential take by Level A harassment. However, this optional tool offers the best way to estimate isopleth distances when more sophisticated modeling methods are not available or practical. For stationary sources such as pile installation and removal, the optional User Spreadsheet tool predicts the distance at which, if a marine mammal remained at that distance for the duration of the activity, it would be expected to incur PTS. The isopleths generated by the User Spreadsheet used the same TL coefficient as the Level B harassment zone calculations (*i.e.,* the practical spreading value of 15). Inputs used in the User Spreadsheet (*e.g.,* number of piles per day, duration and/or strikes per pile) are presented in Tables 1 and 2, and the resulting isopleths are reported below in Table 7.

TABLE 7—LEVEL A HARASSMENT AND LEVEL B HARASSMENT ZONES

Pile size/type	Pile driving method	Level A harassment zone (m)					Level B harassment zone (m)
		LF cetaceans	MF cetaceans	HF cetaceans	Phocids	Otariids	
12-in timber	Vibratory removal.	4.1	0.4	6.1	2.5	0.2	[a] 1,360
18-in steel	Vibratory installation/removal.	23.4	2.1	34.5	14.2	1.0	[a] 11,659
24-in steel	Vibratory installation/removal.	27.1	2.4	40.1	16.5	1.2	[a] 11,659
30-in steel	Vibratory installation/removal.	65.1	5.8	96.2	39.5	2.8	[a b] 32,470
36-in steel	Vibratory installation.	485.1	43.0	717.2	294.9	20.7	[a b] 184,785
24-in steel	Impact installation.	784.8	27.9	934.8	420.0	30.6	[c] 2,154
30-in steel	Impact installation.	1,359.6	48.4	1,619.5	727.6	53.0	[c] 2,154398
36-in steel	Impact installation.	795.9	28.3	948.0	425.9	31.0	[c] 2,1541,166

[a] Distance to 120 dB rms threshold.
[b] Distance to Level B harassment threshold without obstruction; however for these projects, 13,345 m is the maximum in-water distance until land is reached.
[c] Distance to 160 dB rms threshold.

Marine Mammal Occurrence and Take Calculation and Estimation

In this section we provide information about the occurrence of marine mammals, including density or other relevant information, that will inform the quantitative estimate of the take that is reasonably likely to occur and proposed for authorization. Unless otherwise specified, the term ''pile driving'' in this section, and all following sections, may refer to either pile installation or removal. WSDOT first estimated take for both projects using the areas ensonified above the Level B harassment threshold and density estimates for marine mammals in Puget Sound. Density estimates for all species except harbor porpoises were from the U.S. Navy's Marine Species Density Database (MSDD) for the Northwest Training and Testing (NWTT) Study Area (U.S. Navy, 2019). For harbor porpoises, WSDOT used the density estimate from Evenson (2016) as it was considered more conservative than the density estimate for harbor porpoises from the NWTT MSDD. However, for all species except harbor seals and harbor porpoises, WSDOT did not consider the resulting take estimates to be realistic (*i.e.,* either over- or underestimated take). Instead, WSDOT compiled monitoring results from pile driving between August 2017 and February 2021 at the Seattle Ferry Terminal Multimodal Project at Colman Dock (WSDOT 2021) (Table 8). Because the Level B harassment zones from vibratory pile driving at Colman Dock extended to or near the Bainbridge Island shoreline, and because the Level B harassment zones from vibratory pile driving at the Bainbridge Ferry Terminal and Eagle Harbor Maintenance Facility extend to the shoreline, WSDOT considered the monitoring results from the Seattle Multimodal Project to be the most relevant and comprehensive sightings data available for the project areas. Based on the Seattle Multimodal Project monitoring results, WSDOT used their best professional judgement to estimate the number of marine mammals that may be taken incidental to the proposed activities.

NMFS has carefully reviewed WSDOT's analysis and concludes that it represents an appropriate and accurate method for estimating incidental take caused by WSDOT's activities.

TABLE 8—MARINE MAMMAL DENSITY AND SIGHTINGS

Species	Density/km^2	Sightings total	Average sightings/day (372 days)	Maximum one-day sightings	Take requested
Harbor Seal	3.91	1,939	5.21	43	Yes.
Northern Elephant Seal	[1] 0.0	1	0.003	1	Yes.
California Sea Lion	0.0152–0.2211	2,625	7.05	38	Yes.
Steller Sea Lion	0.0010–0.0478	100	0.27	10	Yes.
Unidentified pinniped	N/A	118	N/A	9	N/A.
Killer Whale Southern Resident	0.000009–0.007828	297	0.80	26	No.
Killer Whale Transient	0.001582–0.002373	47	0.13	20	Yes.

TABLE 8—MARINE MAMMAL DENSITY AND SIGHTINGS—Continued

Species	Density/km²	Sightings total	Average sightings/day (372 days)	Maximum one-day sightings	Take requested
Gray Whale	0.000086	4	0.011	1	Yes.
Minke Whale	0.00045	1	0.003	1	Yes.
Unidentified large whale	N/A	2	N/A	1	N/A.
Unidentified small whale	N/A	10	N/A	9	N/A.
Harbor Porpoise	0.58	413	1.11	40	Yes.
Dall's Porpoise	0.00045	8	0.02	5	Yes.
Pacific White-sided Dolphin	0.0	2	0.005	2	Yes.
Long-beaked Common Dolphin	0.0	2	0.005	1	Yes.
Common Bottlenose Dolphin	0.0	6	0.02	2	Yes.
Unidentified dolphin/porpoise	N/A	42	N/A	5	N/A.

Gray Whale

WSDOT estimated that up to 20 gray whales could be taken by Level B harassment from each project, for a total of 40 takes of gray whales by Level B harassment. In consideration of the infrequent occurrence of gray whales in the project areas, the proposed mitigation and monitoring measures that WSDOT would be required to comply with, including marine mammal monitoring and coordination with Orca Network that would alert WSDOT to the presence of large whales in the project area (see Proposed Mitigation), and given the size and visibility of gray whales, WSDOT would be able to detect gray whales and stop work before gray whales could enter the Level A harassment zones. Therefore, it is unlikely that any gray whales would be taken by Level A harassment. No take of gray whales by Level A harassment is requested or proposed to be authorized.

Minke Whale

WSDOT estimated that up to 20 minke whales could be taken by Level B harassment from each project, for a total of 40 takes of minke whales by Level B harassment. Like gray whales, in consideration of the infrequent occurrence of minke whales in the project areas, the proposed mitigation and monitoring measures that WSDOT would be required to comply with, including marine mammal monitoring and coordination with Orca Network (see Proposed Mitigation), and given the size and visibility of minke whales, WSDOT would be able to detect minke whales and stop work before minke whales could enter the Level A harassment zones. Therefore, it is unlikely that any minke whales would be taken by Level A harassment. No take of minke whales by Level A harassment is requested or proposed to be authorized.

Long-Beaked Common Dolphin

WSDOT estimated that up to 20 long-beaked common dolphins could be taken by Level B harassment from each project, for a total of 40 takes of long-beaked common dolphins by Level B harassment. The Level A harassment zones for mid-frequency cetaceans are all less than 50 m. Given the visibility of long-beaked common dolphins, WSDOT would be able to cease pile driving before long-beaked common dolphins could enter the Level A harassment zone. No take of long-beaked common dolphins by Level A harassment is requested or proposed to be authorized.

Bottlenose Dolphin

WSDOT estimated that up to 20 bottlenose dolphins could be taken by Level B harassment from each project, for a total of 40 takes of bottlenose dolphins by Level B harassment. The Level A harassment zones for mid-frequency cetaceans are all less than 50 m. Given the visibility of bottlenose dolphins, WSDOT would be able to cease pile driving before bottlenose dolphins could enter the Level A harassment zone. No take of bottlenose dolphins by Level A harassment is requested or proposed to be authorized.

Pacific White-Sided Dolphin

WSDOT estimated that up to 20 Pacific white-sided dolphins could be taken by Level B harassment from each project, for a total of 40 takes of Pacific white-sided dolphins by Level B harassment. The Level A harassment zones for mid-frequency cetaceans are all less than 50 m. Given the visibility of long-beaked common dolphins, WSDOT would be able to cease pile driving before long-beaked common dolphins could enter the Level A harassment zone. No take of long-beaked common dolphins by Level A harassment is requested or proposed to be authorized.

Killer Whale (Transient)

WSDOT estimated that up to 60 transient killer whales could be taken by Level B harassment from each project, for a total of 120 takes of killer whales by Level B harassment. The Level A harassment zones for mid-frequency cetaceans are all less than 50 m. Given the visibility of killer whales, WSDOT would be able to cease pile driving before killer whales could enter the Level A harassment zone. No take of killer whales by Level A harassment is requested or proposed to be authorized.

As stated above, no take of Southern Resident killer whales is expected or proposed to be authorized.

Harbor Porpoise

To estimate the number of harbor porpoises that may be taken by Level B harassment from the two projects, WSDOT calculated the area ensonified above the Level B harassment threshold for each pile size, type, and method for both projects. WSDOT then multiplied the estimated density of harbor porpoises in the area (0.58 per km²; Evenson 2016) by the ensonified area and the expected days of work for each project element (Table 9).

TABLE 9—ESTIMATED TAKE OF HARBOR PORPOISES BY LEVEL B HARASSMENT

Pile size, type, and method	Bainbridge ensonified area (km^2)	Bainbridge days of work	Eagle Harbor ensonified area (km^2)	Eagle Harbor days of work	Bainbridge takes by Level B harassment by pile size, type, and method	Eagle Harbor takes by Level B harassment by pile size, type, and method
12-in timber vibratory	0.5	5	0.8	13	3	6
18-in steel vibratory	N/A	0	23.2	3	0	27
24-in steel vibratory	2.3	2	23.2	3	3	40
30-in steel vibratory	2.3	23	23.2	4	320	53
36-in steel vibratory	2.3	6	23.2	4	84	53
24-in steel impact	0.9	13	0.87	3	17	2
30-in steel impact	0.4	2	N/A	0	3	0
36-in steel impact	0.9	6	0.87	1	8	1
Total					298	183

The areas ensonified above the Level A harassment threshold for high-frequency cetaceans has been omitted from the areas ensonified above the Level B harassment threshold presented in Table 9. For impact installation of 30-in steel piles, the Level A harassment zone for high-frequency cetaceans is approximately 1,620 m. To estimate the number of harbor porpoises that may be present within the Level A harassment zone, WSDOT used the average sightings rate from the Seattle Multimodal Project at Colman Dock (0.691 harbor porpoises per day; Table 8) multiplied by the days of impact pile driving expected for each project (27 days for the Bainbridge Project and 8 days for the Eagle Harbor Project) to estimate that 19 and 6 harbor porpoises may be taken by Level A harassment from the Bainbridge Project and Eagle Harbor Project, respectively, for a total of 25 takes of harbor seals by Level A harassment.

Dall's Porpoise

WSDOT estimated that up to 20 Dall's porpoises could be taken by Level B harassment from each project, for a total of 40 takes of Dall's porpoises by Level B harassment.

For impact installation of 30-in steel piles, the Level A harassment zone for high-frequency cetaceans is approximately 1,620 m. Dall's porpoises are considered rare in the project area and are unlikely to be present within the Level A harassment zones but WSDOT conservatively estimates that no more than 5 Dall's porpoises could enter the Level A harassment zones of each project, for a total of 10 takes of Dall's porpoises by Level A harassment.

California Sea Lion

Over the course of 372 days of monitoring for the Seattle Multimodal Project at Colman Dock, the average number of California sea lions observed per day was 7.05 (Table 8). WSDOT used that average sightings rate multiplied by the days of work for each project (57 days for the Bainbridge Project and 31 days for the Eagle Harbor Project) to estimate that 402 and 219 California sea lions may be taken by Level B harassment from the Bainbridge Project and Eagle Harbor Project, respectively, for a total of 621 takes of California sea lions by Level B harassment.

The largest Level A harassment zone for otariid pinnipeds is 53 m. WSDOT would be required to implement a 60 m shutdown zone for otariids for all pile driving activities. At that close range, WSDOT would be able to detect California sea lions and implement the required shutdown measures before California sea lions could enter the Level A harassment zone. Therefore, no takes of California sea lions by Level A harassment are requested or proposed to be authorized.

Steller Sea Lion

WSDOT estimated that 180 Steller sea lions could be taken by Level B harassment from each project, for a total of 360 takes of Steller sea lions by Level B harassment. The largest Level A harassment zone for otariid pinnipeds is 53 m. WSDOT would be required to implement a 60 m shutdown zone for otariids for all pile driving activities. At that close range, WSDOT would be able to detect Steller sea lions and implement the required shutdown measures before Steller sea lions could enter the Level A harassment zone. Therefore, no takes of Steller sea lions by Level A harassment are requested or proposed to be authorized.

Harbor Seal

To estimate the number of harbor seals that may be taken by Level B harassment from the two projects, WSDOT calculated the area ensonified above the Level B harassment threshold for each pile size, type, and method for both projects. WSDOT then multiplied the estimated density of harbor seals in the area (3.91 per km^2; Navy 2019) by the ensonified area and the expected days of work for each project element (Table 10). In total, WSDOT estimates that 3,450 harbor seals may be taken by Level B harassment.

TABLE 10—ESTIMATED TAKE OF HARBOR SEALS BY LEVEL B HARASSMENT

Pile size, type, and method	Bainbridge ensonified area (km^2)	Bainbridge days of work	Eagle Harbor ensonified area (km^2)	Eagle Harbor days of work	Bainbridge takes by pile size, type, and method	Eagle Harbor takes by pile size, type, and method
12-in timber vibratory	1.5	5	1.6	13	30	81
18-in steel vibratory	N/A	0	24.1	3	0	188

30-in steel impact	1.3	2	N/A	0	10	0
36-in steel impact	2.0	6	1.66	1	47	7
Total					2,117	1,333

The areas ensonified above the Level A harassment threshold for high-frequency cetaceans has been omitted from the areas ensonified above the Level B harassment threshold presented in Table 10. For impact installation of 30-in steel piles, the Level A harassment zone for phocid pinnipeds is approximately 728 m. To estimate the number of harbor seals that may be present within the Level A harassment zone, WSDOT used the average sightings rate from the Seattle Multimodal Project at Colman Dock (5.21 harbor seals per day; Table 8) multiplied by the days of impact pile driving expected for each project (27 days for the Bainbridge Project and 8 days for the Eagle Harbor Project) to estimate that 141 and 42 harbor seals may be taken by Level A harassment from the Bainbridge Project and Eagle Harbor Project, respectively, for a total of 183 takes of harbor seals by Level A harassment.

Northern Elephant Seal

Individual elephant seals have occasionally been reported in central Puget Sound (*e.g.,* Orca Network, 2020) but are considered rare in the project areas. WSDOT estimated that up to 10 northern elephant seals could be taken by Level B harassment from each project, for a total of 20 takes of northern elephant seals by Level B harassment. The largest Level A harassment zone (728 m) occurs during impact installation of 30-in steel pipe piles (Table 7). It is unlikely that northern elephant seals would be found within this zone, and even more unlikely that northern elephant seals would be found within the Level A harassment zones for vibratory pile driving (up to 295 m). However, even if northern elephant seals were encountered in the project areas, at that close range, WSDOT would be able to detect them and implement the required shutdown measures before any northern elephant seals could enter the Level A harassment zones. Therefore, no take of northern elephant seals by Level A harassment is requested or proposed to be authorized.

Proposed Mitigation

In order to issue an IHA under section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to the activity, and other means of effecting the least practicable impact on the species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stock for taking for certain subsistence uses (latter not applicable for this action). NMFS regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting the activity or other means of effecting the least practicable adverse impact upon the affected species or stocks, and their habitat (50 CFR 216.104(a)(11)).

In evaluating how mitigation may or may not be appropriate to ensure the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses where applicable, NMFS considers two primary factors:

(1) The manner in which, and the degree to which, the successful implementation of the measure(s) is expected to reduce impacts to marine mammals, marine mammal species or stocks, and their habitat. This considers the nature of the potential adverse impact being mitigated (likelihood, scope, range). It further considers the likelihood that the measure will be effective if implemented (probability of accomplishing the mitigating result if implemented as planned), the likelihood of effective implementation (probability implemented as planned); and

(2) The practicability of the measures for applicant implementation, which may consider such things as cost and impact on operations.

Shutdown Zones

Before the commencement of in-water construction activities, WSDOT would establish shutdown zones for all activities. The purpose of a shutdown zone is generally to define an area within which shutdown of the activity would occur upon sighting of a marine mammal (or in anticipation of an animal entering the defined area). Pile driving would also not commence until all marine mammals are clear of their respective shutdown zones. Shutdown zones are established in consideration of the Level A harassment zones and therefore typically vary based on the activity type and marine mammal hearing group. However, rather than establishing different shutdown zones for each hearing group for each project element, WSDOT proposed to simplify the shutdown zones and implement only 1 or 2 shutdown zones for each hearing group across all project elements (Table 14). For example, the 720 m shutdown zone proposed to be implemented for low-frequency and high-frequency cetaceans for all vibratory pile driving activities encompasses both the largest Level A harassment zone for high-frequency cetaceans (717.2 m; see Table 7) and the largest Level A harassment zone for low-frequency cetaceans (485.1 m; see Table 7). This conservatively protects animals in both hearing groups, simplifies analysis and monitoring, and presents minimal risks to implementing the project, as marine mammals in these hearing groups are unlikely to be present within 720 m of the construction site during pile driving activities. For impact pile driving, WSDOT proposes to retain the 720 m shutdown zone for high-frequency cetaceans but increase the shutdown zone for low-frequency cetaceans to 2,175 m which encompasses the largest Level B harassment zone for impact pile driving, and is also the proposed shutdown zone for preventing take of unauthorized species (*e.g.,* Southern Resident killer whales, humpback whales) (Table 14). The Level A harassment zones for high-frequency cetaceans from impact pile driving are all greater than 720 m (Table 7), thus any high-frequency cetacean that enters the Level A harassment zone beyond 720 m would be recorded as taken by Level A harassment.

At minimum, the shutdown zone for all hearing groups and all activities would be 10 m. For in-water heavy machinery work other than pile driving (*e.g.,* standard barges, *etc.*), if a marine mammal comes within 10 m, operations would cease and vessels would reduce speed to the minimum level required to maintain steerage and safe working conditions. This type of work could include, for example, the movement of the barge to the pile location or positioning of the pile on the substrate via a crane.

WSDOT would also establish shutdown zones for all marine mammals for which take has not been authorized or for which incidental take has been authorized but the authorized number of takes has been met. These zones are equivalent to the Level B harassment zones for each activity (see Table 14).

WSDOT would also implement shutdown measures for Southern Resident killer whales and humpback whales. If Southern Resident killer whales or humpback whales are sighted within the vicinity of the project areas and are approaching the Level B harassment zone (see Table 14), WSDOT would shut down the pile driving equipment to avoid possible take of these species. If a killer whale

approaches the Level B harassment zone during pile driving, and it is unknown whether it is a Southern Resident killer whale or a transient killer whale, it would be assumed to be a Southern Resident killer whale and WSDOT would implement the shutdown measure.

If a Southern Resident killer whale, unidentified killer whale, or humpback whale enters the Level B harassment zone undetected, in-water pile driving would be suspended until the whale exits the Level B harassment zone, or 15 minutes have elapsed with no sighting of the animal, to avoid further Level B harassment.

TABLE 14—SHUTDOWN ZONES FOR PIER 58 RECONSTRUCTION

Pile type and method	Shutdown zone (m)					
	LF cetacean	MF cetacean	HF cetacean	Phocids	Otariids	Southern resident killer whales, humpback whales, and other unauthorized species
12-in timber vibratory	720	60	720	60	60	2,175
18-in steel vibratory	720	60	720	60	60	[a] 13,345
24-in steel vibratory	720	60	720	60	60	[a] 13,345
30-in steel vibratory	720	60	720	60	60	[a] 13,345
36-in steel vibratory	720	60	720	60	60	[a] 13,345
24-in steel impact	2,175	60	720	60	60	2,175
30-in steel impact	2,175	60	720	60	60	2,175
36-in steel impact	2,175	60	720	60	60	2,175

[a] 13,345 m is the maximum distance sound can travel before reaching land.

Protected Species Observers

The placement of protected species observers (PSOs) during all pile driving activities (described in the Proposed Monitoring and Reporting section) would ensure that the entire shutdown zone is visible. Should environmental conditions deteriorate such that the entire shutdown zone would not be visible (*e.g.,* fog, heavy rain), pile driving would be delayed until the PSO is confident marine mammals within the shutdown zone could be detected.

Monitoring for Level A and Level B Harassment

PSOs would monitor the Level B harassment zones to the extent practicable, and all of the Level A harassment zones. Monitoring zones provide utility for observing by establishing monitoring protocols for areas adjacent to the shutdown zones. Monitoring zones enable observers to be aware of and communicate the presence of marine mammals in the project areas outside the shutdown zones and thus prepare for a potential cessation of activity should the animal enter the shutdown zone.

Pre-Activity Monitoring

Prior to the start of daily in-water construction activity, or whenever a break in pile driving of 30 minutes or longer occurs, PSOs would observe the shutdown and monitoring zones for a period of 30 minutes. The shutdown zone would be considered cleared when a marine mammal has not been observed within the zone for that 30-minute period. If a marine mammal is observed within the shutdown zones listed in Table 14, pile driving activity would be delayed or halted. If pile driving is delayed or halted due to the presence of a marine mammal, the activity would not commence or resume until either the animal has voluntarily exited and been visually confirmed beyond the shutdown zones or 15 minutes have passed without re-detection of the animal. When a marine mammal for which Level B harassment take is authorized is present in the Level B harassment zone, activities would begin and Level B harassment take would be recorded. If work ceases for more than 30 minutes, the pre-activity monitoring of the shutdown zones would commence. A determination that the shutdown zone is clear must be made during a period of good visibility (*i.e.,* the entire shutdown zone and surrounding waters must be visible to the naked eye).

Coordination With Local Marine Mammal Research Network

Prior to the start of pile driving for the day, the PSOs would contact the Orca Network to find out the location of the nearest marine mammal sightings. The Local Marine Mammal Research Network consists of a list of over 600 (and growing) residents, scientists, and government agency personnel in the United States and Canada. Sightings are called or emailed into the Orca Network and immediately distributed to other sighting networks including: the NMFS Northwest Fisheries Science Center, the Center for Whale Research, Cascadia Research, the Whale Museum Hotline, and the British Columbia Sightings Network.

Sightings information collected by the Orca Network includes detection by hydrophone. The SeaSound Remote Sensing Network is a system of interconnected hydrophones installed in the marine environment of Haro Strait (west side of San Juan Island) to study orca communication, in-water noise, bottom fish ecology, and local climatic conditions. A hydrophone at the Port Townsend Marine Science Center measures average in-water sound levels and automatically detects unusual sounds. These passive acoustic devices allow researchers to hear when different marine mammals come into the region. This acoustic network, combined with the volunteer visual sighting network allows researchers to document presence and location of various marine mammal species.

Soft Start

Soft-start procedures are used to provide additional protection to marine mammals by providing warning and/or giving marine mammals a chance to leave the area prior to the hammer operating at full capacity. For impact pile driving, contractors would be required to provide an initial set of three strikes from the hammer at reduced energy, followed by a 30-second waiting period, then two subsequent reduced-

energy strike sets. Soft start would be implemented at the start of each day's impact pile driving and at any time following cessation of impact pile driving for a period of 30 minutes or longer.

Bubble Curtain

A bubble curtain would be employed during impact installation or proofing of steel piles, unless the piles are driven in the dry, or water is less than 3 ft (0.9 m) in depth. A noise attenuation device would not be required during vibratory pile driving. If a bubble curtain or similar measure is used, it would distribute air bubbles around 100 percent of the piling perimeter for the full depth of the water column. Any other attenuation measure would be required to provide 100 percent coverage in the water column for the full depth of the pile. The lowest bubble ring would be in contact with the mudline for the full circumference of the ring. The weights attached to the bottom ring would ensure 100 percent mudline contact. No parts of the ring or other objects would prevent full mudline contact.

Based on our evaluation of the WSDOT's proposed measures, as well as other measures considered by NMFS, NMFS has preliminarily determined that the proposed mitigation measures provide the means of effecting the least practicable impact on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Proposed Monitoring and Reporting

In order to issue an IHA for an activity, section 101(a)(5)(D) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of such taking. The MMPA implementing regulations at 50 CFR 216.104(a)(13) indicate that requests for authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present while conducting the activities. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

- Occurrence of marine mammal species or stocks in the area in which take is anticipated (*e.g.,* presence, abundance, distribution, density);
- Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) action or environment (*e.g.,* source characterization, propagation, ambient noise); (2) affected species (*e.g.,* life history, dive patterns); (3) co-occurrence of marine mammal species with the action; or (4) biological or behavioral context of exposure (*e.g.,* age, calving or feeding areas);
- Individual marine mammal responses (behavioral or physiological) to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors;
- How anticipated responses to stressors impact either: (1) long-term fitness and survival of individual marine mammals; or (2) populations, species, or stocks;
- Effects on marine mammal habitat (*e.g.,* marine mammal prey species, acoustic habitat, or other important physical components of marine mammal habitat); and
- Mitigation and monitoring effectiveness.

Visual Monitoring

Marine mammal monitoring during pile driving activities would be conducted by PSOs meeting NMFS' standards and in a manner consistent with the following:

- Independent PSOs (*i.e.,* not construction personnel) who have no other assigned tasks during monitoring periods would be used;
- At least one PSO would have prior experience performing the duties of a PSO during construction activity pursuant to a NMFS-issued incidental take authorization;
- Other PSOs may substitute education (degree in biological science or related field) or training for experience; and
- Where a team of three or more PSOs is required, a lead observer or monitoring coordinator would be designated. The lead observer would be required to have prior experience working as a marine mammal observer during construction.

PSOs would have the following additional qualifications:

- Ability to conduct field observations and collect data according to assigned protocols;
- Experience or training in the field identification of marine mammals, including the identification of behaviors;
- Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;
- Writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates, times, and reason for implementation of mitigation (or why mitigation was not implemented when required); and marine mammal behavior; and
- Ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.

During impact driving of all steel piles, and during vibratory removal of timber piles, WSDOT would have three PSOs stationed to monitor the project area: one at the construction site, one across Eagle Harbor looking toward the construction site, and one on board the Seattle-Bainbridge ferry. For vibratory driving of all steel piles, WSDOT would have five PSOs to monitor the project area: three at the locations described for impact pile driving, with one additional PSO stationed on the Seattle waterfront and one stationed on Alki Beach looking west toward Bainbridge Island.

Monitoring would be conducted 30 minutes before, during, and 30 minutes after all in water construction activities. In addition, observers would record all incidents of marine mammal occurrence, regardless of distance from activity, and would document any behavioral reactions in concert with distance from piles being driven or removed. Pile driving activities include the time to install or remove a single pile or series of piles, as long as the time elapsed between uses of the pile driving equipment is no more than 30 minutes.

Reporting

A draft marine mammal monitoring report would be submitted to NMFS within 90 days after the completion of pile driving activities, or 60 days prior to a requested date of issuance of any future IHAs for the project, or other projects at the same location, whichever comes first. The marine mammal report would include an overall description of work completed, a narrative regarding marine mammal sightings, and associated PSO data sheets. Specifically, the report would include:

- Dates and times (begin and end) of all marine mammal monitoring;
- Construction activities occurring during each daily observation period, including: (a) How many and what type of piles were driven or removed and the

method (*i.e.,* impact or vibratory); and (b) the total duration of time for each pile (vibratory driving) number of strikes for each pile (impact driving);

- PSO locations during marine mammal monitoring; and
- Environmental conditions during monitoring periods (at beginning and end of PSO shift and whenever conditions change significantly), including Beaufort sea state and any other relevant weather conditions including cloud cover, fog, sun glare, and overall visibility to the horizon, and estimated observable distance.

For each observation of a marine mammal, the following would be reported:

- Name of PSO who sighted the animal(s) and PSO location and activity at time of sighting;
- Time of sighting;
- Identification of the animal(s) (*e.g.,* genus/species, lowest possible taxonomic level, or unidentified), PSO confidence in identification, and the composition of the group if there is a mix of species;
- Distance and location of each observed marine mammal relative to the pile being driven or hole being drilled for each sighting;
- Estimated number of animals (min/max/best estimate);
- Estimated number of animals by cohort (adults, juveniles, neonates, group composition, etc.);
- Description of any marine mammal behavioral observations (*e.g.,* observed behaviors such as feeding or traveling), including an assessment of behavioral responses thought to have resulted from the activity (*e.g.,* no response or changes in behavioral state such as ceasing feeding, changing direction, flushing, or breaching);
- Number of marine mammals detected within the harassment zones, by species; and
- Detailed information about implementation of any mitigation (*e.g.,* shutdowns and delays), a description of specified actions that ensued, and resulting changes in behavior of the animal(s), if any.

If no comments are received from NMFS within 30 days, the draft reports would constitute the final reports. If comments are received, a final report addressing NMFS' comments would be required to be submitted within 30 days after receipt of comments. All PSO datasheets and/or raw sighting data would be submitted with the draft marine mammal report.

In the event that personnel involved in the construction activities discover an injured or dead marine mammal, WSDOT would report the incident to the Office of Protected Resources (OPR) (*PR.ITP.MonitoringReports@noaa.gov*), NMFS and to the West Coast Region (WCR) regional stranding coordinator as soon as feasible. If the death or injury was clearly caused by the specified activity, WSDOT would immediately cease the specified activities until NMFS is able to review the circumstances of the incident and determine what, if any, additional measures are appropriate to ensure compliance with the terms of the IHAs. WSDOT would not resume their activities until notified by NMFS.

The report would include the following information:

1. Time, date, and location (latitude/longitude) of the first discovery (and updated location information if known and applicable);
2. Species identification (if known) or description of the animal(s) involved;
3. Condition of the animal(s) (including carcass condition if the animal is dead);
4. Observed behaviors of the animal(s), if alive;
5. If available, photographs or video footage of the animal(s); and
6. General circumstances under which the animal was discovered.

Negligible Impact Analysis and Determination

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.,* population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be ''taken'' through harassment, NMFS considers other factors, such as the likely nature of any impacts or responses (*e.g.,* intensity, duration), the context of any impacts or responses (*e.g.,* critical reproductive time or location, foraging impacts affecting energetics), as well as effects on habitat, and the likely effectiveness of the mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS' implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the baseline (*e.g.,* as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of human-caused mortality, or ambient noise levels).

Pile driving activities from the Bainbridge and Eagle Harbor Projects have the potential to disturb or displace marine mammals. Specifically, the project activities may result in take, in the form of Level A and Level B harassment, from underwater sounds generated from pile driving. Potential takes could occur if individuals are present in the ensonified zone when these activities are underway.

The takes from Level A and Level B harassment would be due to potential behavioral disturbance, TTS, and PTS. No serious injury or mortality is anticipated given the nature of the activities and measures designed to minimize the possibility of injury to marine mammals. The potential for harassment is minimized through the construction method and the implementation of the planned mitigation measures (see Proposed Mitigation section).

To avoid repetition, the majority of our analysis applies to all the species listed in Table 3, given that the anticipated effects of these projects on different marine mammal stocks are expected to be relatively similar in nature. Where there are special circumstances for a species or stock (*e.g.,* gray whales), they are included as a separate subsection below.

NMFS has identified key factors which may be employed to assess the level of analysis necessary to conclude whether potential impacts associated with a specified activity should be considered negligible. These include (but are not limited to) the type and magnitude of taking, the amount and importance of the available habitat for the species or stock that is affected, the duration of the anticipated effect to the species or stock, and the status of the species or stock. The following factors support negligible impact determinations for all affected stocks.

Take by Level A harassment is proposed for three species (harbor seals, harbor porpoise, and Dall's porpoise) to account for the possibility that an animal could enter a Level A harassment zone prior to detection, and remain within that zone for a duration long enough to incur PTS. Any take by Level A harassment is expected to arise from, at most, a small degree of PTS, *i.e.,* minor degradation of hearing capabilities within regions of hearing that align most completely with the

energy produced by impact pile driving (*i.e.,* the low-frequency region below 2 kilohertz (kHz)), not severe hearing impairment or impairment within the ranges of greatest hearing sensitivity. Animals would need to be exposed to higher levels and/or longer duration than are expected to occur here in order to incur any more than a small degree of PTS. Two of the 3 species for which Level A harassment is proposed to be authorized are high-frequency cetaceans (harbor porpoise and Dall's porpoise), and the hearing ability of the third species for which Level A harassment is proposed to be authorized (harbor seal) below 2 kHz is also poor (NMFS, 2018). Given the hearing ranges of these three species, PTS incurred at the low frequencies of pile driving noise would not interfere either with conspecific communication or echolocation, and therefore would not be expected to impact on the survival or reproductive abilities of the affected individuals, let alone the stock or population.

As described above, NMFS expects that marine mammals would likely move away from an aversive stimulus, especially at levels that would be expected to result in PTS, given sufficient notice through use of soft start. WSDOT would also be required to shut down pile driving activities if marine mammals approach within hearing group-specific zones (see Table 14), further minimizing the likelihood and degree of PTS that would be incurred. Even absent mitigation, no serious injury or mortality from construction activities is anticipated or proposed to be authorized.

Effects on individuals that are taken by Level B harassment in the form of behavioral disruption, on the basis of reports in the literature as well as monitoring from other similar activities, will likely be limited to reactions such as avoidance, increased swimming speeds, increased surfacing time, or decreased foraging (if such activity were occurring) (*e.g.,* Thorson and Reyff 2006). Most likely, individuals would simply move away from the sound source and temporarily avoid the area where pile driving is occurring. If sound produced by project activities is sufficiently disturbing, animals are likely to simply avoid the area while the activities are occurring, particularly as the project is located in a busy harbor with high amounts of vessel traffic, including large ferry boats. We expect that any avoidance of the project areas by marine mammals would be temporary in nature and that any marine mammals that avoid the project areas during construction would not be permanently displaced. Short-term avoidance of the project areas and energetic impacts of interrupted foraging or other important behaviors is unlikely to affect the reproduction or survival of individual marine mammals, and the effects of behavioral disturbance on individuals is not likely to accrue in a manner that would affect the rates of recruitment or survival of any affected stock.

Additionally, and as noted previously, some subset of the individuals that are behaviorally harassed could also simultaneously incur some small degree of TTS for a short duration of time. However, since the hearing sensitivity of individuals that incur TTS is expected to recover completely within minutes to hours, it is unlikely that the brief hearing impairment would affect the individual's long-term ability to forage and communicate with conspecifics, and would therefore not likely impact reproduction or survival of any individual marine mammal, let alone adversely affect rates of recruitment or survival of the species or stock.

The projects are also not expected to have significant adverse effects on affected marine mammals' habitats. The project activities will not modify existing marine mammal habitat for a significant amount of time. The activities may cause some fish to leave the area of disturbance, thus temporarily impacting marine mammals' foraging opportunities in a limited portion of the foraging range; but, because of the short duration of the activities and the relatively small area of the habitat that may be affected (with no known particular importance to marine mammals), the impacts to marine mammal habitat are not expected to cause significant or long-term negative consequences. Aside from the biologically important area (BIA) for gray whales described below, there are no known areas of importance for other marine mammals, such as feeding or pupping areas, in the project area.

For all species and stocks, take would occur within a limited, relatively confined area (Eagle Harbor within central Puget Sound) of the stocks' ranges. Given the availability of suitable habitat nearby, any displacement of marine mammals from the project areas is not expected to affect marine mammals' fitness, survival, and reproduction due to the limited geographic area that will be affected in comparison to the much larger habitat for marine mammals in Puget Sound. Level A harassment and Level B harassment will be reduced to the level of least practicable adverse impact to the marine mammal species or stocks and their habitat through use of mitigation measures described herein. Some individual marine mammals in the project areas may be present and be subject to repeated exposure to sound from pile driving on multiple days. However, these individuals would likely return to normal behavior during gaps in pile driving activity. Eagle Harbor is a busy harbor and monitoring reports from previous in-water pile driving activities along the nearby Seattle waterfront (*e.g.,* WSDOT, 2022) indicate that marine mammals continue to remain in the greater project area throughout pile driving activities. Therefore, any behavioral effects of repeated or long duration exposures are not expected to negatively affect survival or reproductive success of any individuals. Thus, even repeated Level B harassment of some small subset of an overall stock is unlikely to result in any effects on rates of reproduction and survival of the stock.

Gray Whales

Puget Sound is part of a BIA for migrating gray whales (Calambokidis *et al.,* 2015). While Eagle Harbor is included in the BIA, gray whales typically remain further north in Puget Sound, primarily in the waters around Whidbey Island (Calambokidis *et al.,* 2018). Gray whales are rarely observed in central Puget Sound, and have never been documented inside Eagle Harbor. Therefore, even though the project areas overlap with the BIA, the infrequent occurrence of gray whales suggests that the projects would have minimal, if any, impact on the migration of gray whales in the BIA, and would therefore not affect reproduction or survival.

There is an ongoing UME for gray whales (see the Description of Marine Mammals in the Area of Specified Activities section of this notice). However, we do not expect the takes estimated to occur and proposed for authorization to exacerbate or compound upon this ongoing UME. As noted previously, no Level A harassment, serious injury, or mortality of gray whales is expected or authorized, and any Level B harassment takes of gray whales would most likely be in the form of behavioral disturbance. Preliminary findings from necropsied gray whales that are considered part of the ongoing UME have shown evidence of emaciation, suggesting that impacts to feeding would be of most concern. However, the project areas have not been identified as important for feeding of gray whales. Additionally, the project areas are not considered important for breeding gray whales. Therefore the projects are unlikely to disrupt any

critical behaviors (*e.g.,* feeding, mating) or have any effect on the reproduction or survival of gray whales, even in light of the ongoing UME.

In summary and as described above, the following factors primarily support our preliminary determination that the impacts resulting from these activities are not expected to adversely affect any of the species or stocks through effects on annual rates of recruitment or survival:

- No mortality or serious injury is anticipated or proposed to be authorized for either project;
- Level A harassment is not anticipated or proposed to be authorized for 9 of the 12 species. For the other three species, Level A harassment would be in the form of a slight degree of PTS;
- Level B harassment would be in the form of behavioral disturbance, primarily resulting in avoidance of the project areas around where impact or vibratory pile driving is occurring, and some low-level TTS that may limit the detection of acoustic cues for relatively brief amounts of time in relatively confined footprint of the activities;
- Nearby areas of similar habitat value within Puget Sound are available for marine mammals that may temporarily vacate the project areas during construction activities for both projects;
- Effects on species that serve as prey for marine mammals from the activities are expected to be short-term and, therefore, any associated impacts on marine mammal feeding are not expected to result in significant or long-term consequences for individuals, or to accrue to adverse impacts on their populations from either project;
- The number of anticipated takes by Level B harassment is relatively low for all stocks for both projects;
- The ensonifed areas from both projects are very small relative to the overall habitat ranges of all species and stocks, and will not adversely affect ESA-designated critical habitat, or cause more than minor impacts in any BIAS or any other areas of known biological importance;
- The lack of anticipated significant or long-term negative effects to marine mammal habitat from either project;
- The efficacy of the mitigation measures in reducing the effects of the specified activities on all species and stocks for both projects; and
- Monitoring reports from similar work in Puget Sound that have documented little to no effect on individuals of the same species that could be impacted by the specified activities from both projects.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed monitoring and mitigation measures, NMFS preliminarily finds that the total marine mammal take from the proposed activity will have a negligible impact on all affected marine mammal species or stocks.

Small Numbers

As noted above, only small numbers of incidental take may be authorized under sections 101(a)(5)(A) and (D) of the MMPA for specified activities other than military readiness activities. The MMPA does not define small numbers and so, in practice, where estimated numbers are available, NMFS compares the number of individuals taken to the most appropriate estimation of abundance of the relevant species or stock in our determination of whether an authorization is limited to small numbers of marine mammals. When the predicted number of individuals to be taken is fewer than one-third of the species or stock abundance, the take is considered to be of small numbers. Additionally, other qualitative factors may be considered in the analysis, such as the temporal or spatial scale of the activities.

For all species and stocks other than killer whales from the West Coast Transient stock, the proposed take is below one-third of the stock abundance. The proposed take of transient killer whales, as a proportion of the stock abundance is 34.4 percent, if all takes are assumed to occur for unique individuals. In reality, it is unlikely that all takes would occur to different individuals. The project area represents a small portion of the stock's overall range (from Alaska to California (Muto *et al.,* 2019)) and based on sightings reports from the Orca Network, it is reasonable to expect that the same individual transient killer whales would be present within the project area on multiple days during the proposed activities. Therefore, it is more likely that there will be multiple takes of a smaller number of individuals within the project area, such that the number of individuals taken would be less than one third of the population.

Based on the analysis contained herein of the proposed activity (including the proposed mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS preliminarily finds that small numbers of marine mammals would be taken relative to the population size of the affected species or stocks.

Unmitigable Adverse Impact Analysis and Determination

There are no relevant subsistence uses of the affected marine mammal stocks or species implicated by this action. Therefore, NMFS has determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act

Section 7(a)(2) of the Endangered Species Act of 1973 (ESA: 16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of IHAs, NMFS consults internally whenever we propose to authorize take for endangered or threatened species.

No incidental take of ESA-listed species is proposed for authorization or expected to result from this activity. Therefore, NMFS has determined that formal consultation under section 7 of the ESA is not required for this action.

Proposed Authorization

As a result of these preliminary determinations, NMFS proposes to issue an IHA to WSDOT for conducting the Bainbridge Island Ferry Terminal Overhead Loading Replacement Project and Eagle Harbor Maintenance Facility Slip F Improvement Project in Bainbridge Island, Washington during the August 2022 to February 2023 in-water work season, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated. A draft of the proposed IHA can be found at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities.*

Request for Public Comments

We request comment on our analyses, the proposed authorization, and any other aspect of this notice of proposed IHA for the proposed Bainbridge Island Ferry Terminal Overhead Loading Replacement Project and Eagle Harbor Maintenance Facility Slip F Improvement Project. We also request comment on the potential renewal of this proposed IHA as described in the paragraph below. Please include with your comments any supporting data or literature citations to help inform

decisions on the request for this IHA or a subsequent renewal IHA.

On a case-by-case basis, NMFS may issue a one-time, one-year renewal IHA following notice to the public providing an additional 15 days for public comments when (1) up to another year of identical or nearly identical activities as described in the Description of Proposed Activities section of this notice is planned or (2) the activities as described in the Description of Proposed Activities section of this notice would not be completed by the time the IHA expires and a renewal would allow for completion of the activities beyond that described in the *Dates and Duration* section of this notice, provided all of the following conditions are met:

- A request for renewal is received no later than 60 days prior to the needed renewal IHA effective date (recognizing that the renewal IHA expiration date cannot extend beyond one year from expiration of the initial IHA).
- The request for renewal must include the following:

(1) An explanation that the activities to be conducted under the requested renewal IHA are identical to the activities analyzed under the initial IHA, are a subset of the activities, or include changes so minor (*e.g.,* reduction in pile size) that the changes do not affect the previous analyses, mitigation and monitoring requirements, or take estimates (with the exception of reducing the type or amount of take).

(2) A preliminary monitoring report showing the results of the required monitoring to date and an explanation showing that the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized.

Upon review of the request for renewal, the status of the affected species or stocks, and any other pertinent information, NMFS determines that there are no more than minor changes in the activities, the mitigation and monitoring measures will remain the same and appropriate, and the findings in the initial IHA remain valid.

Dated: August 4, 2022.

Kimberly Damon-Randall,

Director, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XC222]

Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) Coastal Pelagic Species Advisory Subpanel will hold one public meeting.

DATES: The meeting will be held Thursday, September 1, 2022, from 12 p.m. to 2 p.m. Pacific Daylight Time or until business for the day has been completed.

ADDRESSES: This meeting will be held online. Specific meeting information, including directions on how to join the meeting and system requirements will be provided in the meeting announcement on the Pacific Council's website (see *www.pcouncil.org*). You may send an email to Mr. Kris Kleinschmidt (*kris.kleinschmidt@noaa.gov*) or contact him at (503) 820–2412 for technical assistance.

Council address: Pacific Fishery Management Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220–1384.

FOR FURTHER INFORMATION CONTACT: Jessi Doerpinghaus, Staff Officer, Pacific Council; telephone: (503) 820–2415.

SUPPLEMENTARY INFORMATION: The primary purpose of this online meeting is to discuss and potentially develop work products and recommendations for the Pacific Council's September 2022 meeting. Topics will include changes to Council Operating Procedure 23, ecosystem initiatives, and Council processes and efficiencies. Other items on the Pacific Council's September agenda may be discussed as well. The meeting agenda will be available on the Pacific Council's website in advance of the meeting.

Although non-emergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt (*kris.kleinschmidt@noaa.gov;* (503) 820–2412) at least 10 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 4, 2022.

Rey Israel Marquez,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Pribilof Islands, Taking for Subsistence Purposes

AGENCY: National Oceanic & Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before October 11, 2022.

ADDRESSES: Interested persons are invited to submit written comments to Adrienne Thomas, NOAA PRA Officer, at *NOAA.PRA@noaa.gov.* Please reference OMB Control Number 0648–0699 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Michael T. Williams, Pribilof Islands Program Manager, 222 W 7th Ave., Anchorage,

AK 99513, (907) 271–5117, *Michael.Williams@noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for revision and extension of a currently approved collection. The subsistence use of northern fur seals is cooperatively managed by the National Oceanic and Atmospheric Administration's (NOAA) National Marine Fisheries Service (NMFS) and the Tribal Governments of St. Paul and St. George Islands under § 119 of the Marine Mammal Protection Act, 16 U.S.C. 1388 (MMPA) and governed by regulations found in 50 CFR part 216 subpart F, Taking for Subsistence Purposes under the Fur Seal Act (16 U.S.C. 1155). The regulations, laws, and cooperative agreements are focused on conserving northern fur seals through cooperative effort and consultation regarding effective management of human activities related to the subsistence harvests of northern fur seals and Steller sea lions. In 2014, NMFS obtained a collection of information control number (79 FR 65327; November 4, 2014), reviewed the control number in 2017 (82 FR 51218; November 3, 2017), updated the control number in 2019 (84 FR 52372; October 2, 2019, and corrected in 2020 (85 FR 15948; March 20, 2020).

This an information collection for the annual subsistence use male northern fur seals by Alaska Natives (Pribilovians) residing in the communities of St. Paul and St. George, Alaska (Pribilof Islands) under 50 CFR 216 part 216 subpart F. NMFS established regulations regarding the maximum levels for the annual subsistence needs of the Pribilovians after direct consultation with the Tribal Governments of St. Paul and St. George Islands in Alaska and their respective local Native corporations (Tanadgusix and Tanaq). NMFS regulation creates independent northern fur seal subsistence seasons on St. Paul and St. George islands to include male fur seals less than 7 years old, limits on accidental mortality of female northern fur seals, monitoring and reporting through co-management processes established under their respective cooperative agreements. The regulations at 50 CFR 216.72 state that Pribilovians are responsible for reporting their subsistence needs and actual level of subsistence take. NMFS receives electronic copies of the northern fur seal subsistence use reports from the tribal governments of St. Paul and St. George annually. NMFS subsequently posts these reports online (*https://www.fisheries.noaa.gov/alaska/marine-mammal-protection/northern-fur-seal-subsistence-harvest-estimates-and-reports*) and includes the relevant data in the annual Alaska Marine Mammal Stock Assessment Report.

The only change requested to the collection of information at this time is the changing of the collection title from ''Annual Northern Seal Subsistence Harvest Reporting'' to ''Pribilof Islands, Taking for Subsistence Purposes.''

II. Method of Collection

NMFS receives electronic copies of the northern fur seal subsistence use reports from the tribal governments of St. Paul and St. George annually via email.

III. Data

OMB Control Number: 0648–0699.

Form Number(s): None.

Type of Review: Regular submission (revision of a current information collection).

Affected Public: Individuals or households, and State, Local or Tribal Government.

Estimated Number of Respondents: 2.

Estimated Time per Response: Subsistence use report submitted via email estimated to take 40 hours per response for each respondent. The St. George Island Traditional Council submits two reports annually and the Aleut Community of St. Paul Island submits three reports annually.

Estimated Total Annual Burden Hours: 200 hours.

Estimated Total Annual Cost to Public: $80.

Respondent's Obligation: Required to Obtain or Retain Benefits.

Legal Authority: Fur Seal Act (16 U.S.C. 1155).

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Chief Information Officer, Commerce Department.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XC256]

Marine Mammals; File No. 26678

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that the Matson Laboratory (Carolyn Nistler, Responsible Party), 135 Wooden Shoe Lane, Manhattan, MT 59741, has applied in due form for a permit to import, export, and receive marine mammal parts for scientific research.

DATES: Written, telefaxed, or email comments must be received on or before September 9, 2022.

ADDRESSES: The application and related documents are available for review by selecting ''Records Open for Public Comment'' from the ''Features'' box on the Applications and Permits for Protected Species (APPS) home page, *https://apps.nmfs.noaa.gov,* and then selecting File No. 26678 from the list of available applications. These documents are also available upon written request via email to *NMFS.Pr1Comments@noaa.gov.*

Written comments on this application should be submitted via email to *NMFS.Pr1Comments@noaa.gov.* Please include File No. 26678 in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request via email to *NMFS.Pr1Comments@noaa.gov.* The request should set forth

the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Jennifer Skidmore or Shasta McClenahan, Ph.D., (301) 427–8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*), the regulations governing the taking and importing of marine mammals (50 CFR part 216), the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226), and the Fur Seal Act of 1966, as amended (16 U.S.C. 1151 *et seq.*).

The applicant proposes to receive, import, and export teeth from marine mammal species to perform age analysis including 500 harbor seals (*Phoca vitulina*), 1,000 each of bearded (*Erignathus barbatus*) and spotted seals (*P. largha*), 2,000 ringed seals (*P. hispida*), 500 unidentified pinnipeds (species other than those already mentioned, excluding walrus), and 300 unidentified cetaceans. Sources of foreign and domestic teeth may include subsistence harvests, other authorized researchers or curated collections, law enforcement, and foreign stranded animals. No live animal takes are requested. The requested duration of the permit is five years.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of the application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: August 5, 2022.

Julia M. Harrison,

Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) Groundfish Advisory Subpanel (GAP) will hold an online meeting, which is open to the public.

DATES: The meeting will be held Thursday, August 25, 2022, from 9 a.m. to 4 p.m., Pacific Time, or until business for each day is completed.

ADDRESSES: This meeting will be held online. Specific meeting information, including directions on how to join the meeting and system requirements will be provided in the meeting announcement on the Pacific Council's website (see *www.pcouncil.org*). You may send an email to Mr. Kris Kleinschmidt (*kris.kleinschmidt@noaa.gov*) or contact him at (503) 820–2412 for technical assistance.

Council address: Pacific Fishery Management Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220–1384.

FOR FURTHER INFORMATION CONTACT: Brett Wiedoff, Staff Officer, Pacific Council; telephone: (503) 820–2424.

SUPPLEMENTARY INFORMATION: The primary purpose of this meeting is for the GAP to receive information about potential fishery management changes regarding non-trawl rockfish conservation area management and to begin reviewing materials and preparing recommendations on groundfish matters for the September 2022 Pacific Council meeting. The GAP may also discuss other items on the Pacific Council's September agenda, particularly Pacific halibut, ecosystem, and administrative matters.

Although non-emergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt (*kris.kleinschmidt@noaa.gov;* (503) 820–2412) at least 10 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 4, 2022.

Nominations to the American Fisheries Advisory Committee

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Notice; request for nominations.

SUMMARY: Nominations are being sought for appointment by the Secretary of Commerce (Secretary) to serve on the American Fisheries Advisory Committee (Committee). The Committee is responsible for making recommendations to the Secretary for financial assistance awards under the Saltonstall-Kennedy (S–K) Grant Competition under the Department of Commerce. The Committee will also make recommendations to the Secretary to assist in the development of the annual Notice of Funding Opportunities (NoFO) for submission to the S–K Grant Competition. This may include identifying the needs of the fishing communities (program priorities), establishing individual award funding limits, specifying the application review criteria and selection processes, and other sections of the NoFO as appropriate and allowable. Nominees should have demonstrable experience in one or more of the following areas of expertise, and in as many seafood species as possible: seafood harvesting or processing; recreational or commercial fishing; growing seafood; fisheries science; and/or food distribution, marketing, retail, or food service. Nominees must be able to fulfill the time commitments required for up to two annual meetings. It is anticipated that meetings will be in person, rotating

between regions and possibly lasting up to four business days, subject to the time needs of each meeting. Individuals selected to initially serve on the Committee will serve staggered terms of two, three, and four years. Terms of all future Committee members will be for three years and may not exceed more than two consecutive terms if re-appointed.

DATES: Nominations must have an email date stamp on or before September 24, 2022.

ADDRESSES: Nominations should be submitted by email to: *nmfs.afac.nominations@noaa.gov,* or by mail to: Clifford Cosgrove, Saltonstall-Kennedy National Program Manager, NMFS Office of Management and Budget, 1315 East-West Highway, Rm #14456, Silver Spring, MD 20910.

FOR FURTHER INFORMATION CONTACT: Please visit *https://www.fisheries.noaa.gov/national/funding-and-financial-services/saltonstall-kennedy-research-and-development-program,* or contact Cliff Cosgrove, Saltonstall-Kennedy National Program Manager, NMFS Office of Management and Budget, by phone, at (301)427–8736, or email, at: *nmfs.afac.nominations@noaa.gov.*

SUPPLEMENTARY INFORMATION: The Committee was created from Public Law 117–121 signed on May 12, 2022. The Committee meets no more than twice annually and membership is comprised of 22 individuals appointed by the Secretary with the following geographic representation: Region 1 consisting of Alaska, Hawaii, the Commonwealth of the Northern Mariana Islands, and the Territories of Guam and American Samoa; Region 2 consisting of Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut; Region 3 consisting of Texas, Alabama, Louisiana, Mississippi, Florida, Arkansas, Puerto Rico, and the Territory of the Virgin Islands of the United States; Region 4 consisting of California, Washington, Oregon, and Idaho; Region 5 consisting of New Jersey, New York, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia; and Region 6 consisting of Michigan, Minnesota, Wisconsin, Illinois, Indiana, Ohio, and Pennsylvania. Membership for each region will be composed of highly qualified, diverse individuals with experience in one or more of the following areas of expertise, and in as many seafood species as possible: seafood harvesting or processing; recreational or commercial fishing; growing seafood; fisheries science; and/or food distribution, marketing, retail, or food service.

Four at-large members shall also be appointed by the Secretary as follows: one individual with experience in food distribution, marketing, retail, or food service; one individual with experience in the recreational fishing industry supply chain, such as fishers, manufacturers, retailers, and distributors; one individual with experience in the commercial fishing industry supply chain, such as fishers, manufacturers, retailers, and distributors; and one individual who is an employee of NMFS with expertise in fisheries research.

Committee membership is voluntary and, except for reimbursable travel and related expenses per federal travel regulations, service is without compensation.

Each nominee must submit a cover letter and a resume/curriculum vitae (CV) in PDF format. The cover letter shall include a brief statement as to their interest in serving on the Committee and their qualifications. The resume/CV shall detail the applicant's contact information (address, telephone number, email address) and specific qualifications/experience/expertise as referenced in Public Law 117–121. Any applicants selected for Committee membership shall be required to complete a financial disclosure/conflict of interest form. The first Committee meeting will take place within the first two weeks of December 2022.

Nominations shall be submitted by email to *nmfs.afac.nominations@noaa.gov,* and must be received by September 24, 2022 to be considered. The full text of Public Law 117–121 and other relevant documents can be viewed at the following link: *https://www.fisheries.noaa.gov/national/funding-and-financial-services/saltonstall-kennedy-research-and-development-program*

Dated: August 3, 2022.

Daniel A. Namur,

Financial Assistance Division Chief, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF EDUCATION

National Advisory Council on Indian Education (NACIE); Meeting

AGENCY: National Advisory Council on Indian Education (NACIE), U.S. Department of Education.

ACTION: Notice of an open meeting.

SUMMARY: This notice sets forth the agenda, time, and instructions to access or participate in the August 24, 2022, virtual meeting of NACIE. This notice provides information about the meeting to members of the public who may be interested in attending the meeting and how to provide written comment for the meeting. Notice of this meeting is required by Section 10(a)(2) of the Federal Advisory Committee Act (FACA).

DATES: The NACIE open virtual meeting will be held on August 24, 2022 from 1:00–4:30 p.m. (EST).

FOR FURTHER INFORMATION CONTACT: Donna Sabis-Burns, Designated Federal Official, Office of Elementary and Secondary Education (OESE)/Office of Indian Education (OIE), U.S. Department of Education, 400 Maryland Avenue SW, Washington, DC 20202. Telephone: 202–213–9014, Email: *Donna.Sabis-Burns@ed.gov*.

SUPPLEMENTARY INFORMATION:

Statutory Authority and Function: NACIE is authorized by Section 6141 of the Elementary and Secondary Education Act of 1965 (ESEA), as amended (20 U.S.C. 7471). The work of NACIE was expanded per Executive Order 14049. In accordance with Section 6141 of the ESEA, NACIE shall advise the Secretary of Education and the Secretary of Interior on the funding and administration (including the development of regulations and administrative policies and practices) of any program, including any program established under Title VI, Part A of the ESEA, with respect to which the Secretary of Education has jurisdiction and (1) that includes Indian children or adults as participants or (2) that may benefit Indian children or adults. Also in accordance with Section 6141 of the ESEA, NACIE shall make recommendations to the Secretary of Education for filling the position of Director of Indian Education whenever a vacancy occurs and shall submit to the Congress, no later than June 30 of each year, a report on its activities that includes recommendations that are considered appropriate for the improvement of Federal education programs that include Indian children or adults as participants or that may benefit Indian children or adults, and recommendations concerning the funding of any such program. In accordance with Section 3 of Executive Order 14049, NACIE shall advise the Co-Chairs of the White House Initiative on Advancing Educational Equity, Excellence and Economic Opportunity for Native Americans and Strengthening Tribal Colleges and Universities (Initiative), in consultation with the Initiative, on (1) what is needed for the development, implementation, and

coordination of educational programs and initiatives to improve educational opportunities and outcomes for Native Americans, (2) how to promote career pathways for in-demand jobs for Native American students, including registered apprenticeships as well as internships, fellowships, mentorships, and work-based learning initiatives, (3) ways to strengthen Tribal Colleges and Universities and increase their participation in agency programs, (4) how to increase public awareness of and generate solutions for the educational and training challenges and equity disparities that Native American students face and the causes of these challenges and disparities, (5) approaches to establish local and national partnerships with public, private, philanthropic, and nonprofit stakeholders to advance the policy set forth in Section 1 of Executive Order 14049, consistent with applicable law, and (6) actions for promoting, improving, and expanding educational opportunities for Native languages, traditions, and practices to be sustained through culturally responsive education. Also, in accordance with Section 3 of Executive Order 14049, NACIE and the Executive Director of the Initiative (Executive Director) shall, as appropriate and consistent with applicable law, facilitate frequent collaborations between the Initiative and Tribal Nations, Alaska Native Entities, and other Tribal organizations. Finally, in accordance with Section 3 of Executive Order 14049, NACIE shall consult with the Executive Director so that the Executive Director can address NACIE's efforts pursuant to Section 3(a) of Executive Order 14019 in the annual report of the Initiative submitted to the President.

Meeting Agenda: The purpose of this meeting is to convene NACIE to conduct the following business: (1) discussion, deliberation, and approval of the 2022 Annual Report to Congress, (2) for the Office of Indian Education (OIE) to conduct an overview and seek recommendations related to the activities of the OIE, and (3) for the Initiative to seek recommendations from NACIE.

Instructions for Accessing the Meeting: Members of the public may access the NACIE meeting via teleconference and the web. Up to 350 lines will be available on a first come, first serve basis for those who wish to join via teleconference. The dial-in listen only phone number for the meeting is 1–669–254–5252, Meeting ID: 161 715 5166. The web link to register to access the meeting via *Zoom.gov* is *https://www.zoomgov.com/meeting/register/vJIsceCuqjMuGJyzwCIWSDTJ0q5S1djwrsE.*

Public Comment: Members of the public interested in submitting written comments may do so via email to Donna Sabis-Burns at *donna.sabis-burns@ed.gov* by 11:59 p.m. on August 14, 2022. Please note, written comments should pertain to the work of NACIE.

Reasonable Accommodations: The virtual meeting is accessible to individuals with disabilities. If you will need an auxiliary aid or service for the meeting (*e.g.,* interpreting service, assistive listening device, or materials in an alternate format), notify the contact person listed in this notice no later than August 19, 2022. Although we will attempt to meet a request received after that date, we may not be able to make available the requested auxiliary aid or service because of insufficient time to arrange it.

Access to Records of the Meeting: The Department will post the official open meeting report of this meeting on the OESE website, *https://oese.ed.gov/offices/office-of-indian-education/national-advisory-council-on-indian-education-oie/*, 21 days after the meeting. Pursuant to the FACA, the public may also inspect NACIE records at the Office of Indian Education, United States Department of Education, 400 Maryland Avenue SW, Washington, DC 20202, Monday–Friday, 8:30 a.m. to 5:00 p.m. Eastern Standard Time. Please email Donna Sabis-Burns at *Donna.Sabis-Burns@ed.gov* to schedule an appointment.

Electronic Access to this Document: The official version of this document is the document published in the **Federal Register**. Free internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the site. You also may access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Authority: Section 6141 of the ESEA, as amended (20 U.S.C. 7471).

Ruth Ryder,

Deputy Assistant Secretary for Policy and Programs, Office of Elementary and Secondary Education.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

[OE Docket No. PP–334–1]

Application To Amend Presidential Permit; Energia Sierra Juarez U.S. Transmission, LLC

AGENCY: Office of Electricity, Department of Energy.

ACTION: Notice of application.

SUMMARY: Energia Sierra Juarez U.S. Transmission, LLC (the Applicant or ESJ) has filed an application to amend Presidential Permit No. PP–334–1. ESJ is requesting the amendment to increase the rate of electric transmission of the previously permitted facilities.

DATES: Comments, protests, or motions to intervene must be submitted on or before September 9, 2022.

ADDRESSES: Comments or motions to intervene should be addressed to Christopher Lawrence, *Christopher.Lawrence@hq.doe.gov* OE–20, 1000 Independence Ave. SW, Washington, DC 20585

FOR FURTHER INFORMATION CONTACT: Christopher Lawrence (Program Office) at (202) 586–5260 or by email to *Christopher.Lawrence@hq.doe.gov,* or James Ralph (Attorney-Adviser) at (240) 474–1140 or by email to *James.Ralph@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: The construction, operation, maintenance, and connection of facilities at the international border of the United States for the transmission of electric energy between the United States and a foreign country is prohibited in the absence of a Presidential permit issued pursuant to Executive Order (E.O.) 10485, as amended by E.O. 12038.

On May 18, 2022, ESJ filed an application with the Office of Electricity of the Department of Energy (DOE), as required by regulations at 10 CFR 205.320 *et seq.,* requesting that DOE amend Presidential Permit No. PP–334 to increase the rate of transmission over ESJ's operating electric power generation tie line (ESJ Tie Line).

On August 31, 2012, DOE issued Presidential Permit No. PP–334, authorizing ESJ to construct, operate, maintain, and connect the ESJ Project

(Project). As described in PP–334, the Project is a double-circuit 230-kV electric transmission line originating at San Diego Gas and Electric Company's planned East County (ECO) Substation in San Diego County, interconnecting with the Imperial Valley-Miguel segment of the Southwest Powerlink, extending approximately 0.65 miles southward, crossing the U.S.-Mexico border near Jacumba, California. At the border, the ESJ Tie Line transitions to a generation tie line constructed and operated by Energia Sierra Juarez, S. de R. L. de C.V. (ESJ Mexico), a Mexican affiliate of ESJ, which extends approximately 1 mile farther south to an interconnection point for a wind generating facility in Mexico (ESJ Wind Project) owned and operated by ESJ Mexico.

The ESJ Tie Line commenced commercial operation in June of 2015, and ESJ has been operating the ESJ Tie Line in accordance with PP–334 since that time to transmit power from the initial phase of the ESJ Wind Project generating facilities in Mexico to the electric grid in California at the ECO Substation. The ESJ Tie Line has the thermal capacity to transmit up to 1250 megawatts (MW of electricity, corresponding to the total potential generating capacity of the ESJ Wind Project. The ESJ Wind Project was to be developed in several phases. At the time PP–334 was issued in 2012, the California Independent System Operator (CAISO) had completed a generation interconnection study only for the first 400 MW of generation from the ESJ Wind Project. As a result, PP–334 included a provision limiting the maximum non-simultaneous rate of transmission over the ESJ Tie Line to 400 MW.

Article 4 of PP–334 stated that ESJ may apply for a modification to the permit to increase the authorized rate of transmission at such time as CAISO completes interconnection studies for power generated by the ESJ Wind Project greater than 400 MW.

In accordance with Article 4 of PP–334, ESJ is now requesting a modification to the permit to increase the maximum authorized rate of transmission over the ESJ Tie Line to 700 MW based on the CAISO interconnection study for Cimarron Wind, which is expected to add another 300 MW of generation. The proposed increase in the rate of transmission requires no physical modifications to the ESJ Tie Line.

Procedural Matters: Any person may comment on this application by filing such comment at the address provided above. Each comment should be clearly marked with OE Docket No. PP–334–1. Consideration of comments is limited to those addressing the subject of the proposed amendment. Any person seeking to become a party to this proceeding must file a motion to intervene at the address provided above in accordance with Rule 214 of FERC's Rules of Practice and Procedure (18 CFR 385.214). Two copies of each comment or motion to intervene should be filed with DOE on or before the date listed above.

Additional copies of such comments and motions to intervene also should be filed directly with: Emily C. Shults, Senior Vice President—Development, Energia Sierra Juarez U.S., LLC, 488 8th Avenue, San Diego, CA 92101, *eshults@sempraglobal.com,* and

Eric J. Murdock, Partner, Hunter Andrews Kurth LLP, N 2200 Pennsylvania Ave. NW, Washington, DC 20037, *emurdock@hunton.com.*

Before a Presidential permit may be issued or amended, DOE must determine that the proposed action is in the public interest. In making that determination, DOE may consider the environmental impacts of the proposed action (*i.e.,* granting the Presidential permit or amendment, with any conditions and limitations, or denying the permit), determine the proposed project's impact on electric reliability by ascertaining whether the proposed project would adversely affect the operation of the U.S. electric power supply system under normal and contingency conditions, and weigh any other factors that it may also deem relevant to the public interest. DOE also must obtain the favorable recommendation of the Secretary of State and the Secretary of Defense before taking final action on a Presidential permit application.

This application may be reviewed or downloaded electronically at *https://www.energy.gov/oe/pending-applications.*

Signed in Washington, DC, on August 5, 2022.

Christopher Lawrence,

Management and Program Analyst, Electricity Delivery Division, Office of Electricity.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2290–124]

Pacific Gas and Electric Company; Notice of Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Temporary variance of license requirement.

b. *Project No.:* 2290–124.

c. *Date Filed:* July 28, 2022.

d. *Applicant:* Southern California Edison Company (licensee).

e. *Name of Project:* Kern River No. 3 Hydroelectric Project.

f. *Location:* Kern River in Kern and Tulare counties, California.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* James Buerkle, Southern California Edison Company, (909) 394–8983.

i. *FERC Contact:* Robert Ballantine, (202) 502–6289, *robert.ballantine@ferc.gov.*

j. Deadline for filing comments, motions to intervene, and protests is 30 days from the issuance of this notice by the Commission (September 2, 2022).

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852. The first page of any filing should include docket number P–2290–124. Comments emailed to Commission staff are not

considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The California Department of Fish and Wildlife has notified Southern California Edison Company that operation at the Kern River Planting Base (hatchery) has temporarily changed and flow that is diverted at the Fairfield Dam to provide 35 cubic feet per second is not needed until improvements at the hatchery are completed. The licensee is requesting a variance to continue to divert 10 cubic feet per second through the hatchery supply line for fire suppression at the KR3 Powerhouse and to maintain water in the flowline to protect the water conveyance features. If granted, the variance would last until such time that the California Department of Fish and Wildlife completes repairs and requests Southern California Edison Company to provide the full 35 cfs flow to the hatchery.

l. *Locations of the Application:* The Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's website at *http://www.ferc.gov/docs-filing/elibrary.asp*. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. Agencies may obtain copies of the application directly from the applicant. At this time, the Commission has suspended access to the Commission's Public Reference Room due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at *FERCOnlineSupport@ferc.gov* or call toll free, (866) 208–3676 or TTY, (202) 502–8659.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Responsive Documents:* All filings must (1) bear in all capital letters the title ''COMMENTS'', ''PROTEST'', or ''MOTION TO INTERVENE'' as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. A copy of all other filings in reference to this application must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 385.2010.

Dated: August 3, 2022.

Kimberly D. Bose,

Secretary.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: August 4, 2022.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 1218–050]

Georgia Power Company; Notice of Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Request for temporary variance of Article 401.

b. *Project No:* 1218–050.

c. *Date Filed:* July 27, 2022.

d. *Applicant:* Georgia Power Company (licensee).

e. *Name of Project:* Flint River Hydroelectric Project.

f. *Location:* The project is located on the Flint River, near the City of Albany, in Lee and Dougherty counties, Georgia. The project does not occupy federally owned lands.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791a–825r.

h. *Applicant Contact:* Melissa Crabbe, Southern Company, 241 Ralph McGill Boulevard, NE BIN 10193, Atlanta, GA 30308–3374, (404) 506–7273, *mccrabbe@southernco.com.*

i. *FERC Contact:* Jeremy Jessup, (202) 502–6779, *Jeremy.Jessup@ferc.gov*.

j. *Deadline for filing comments, motions to intervene, and protests:* September 2, 2022.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp*. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp*. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include the docket number P–1218–050. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The applicant proposes a temporary variance from the target water surface elevation requirements of Article 401 of the license (181.8 ± 0.5 feet Plant Datum which is 0.37 foot above mean sea level) to facilitate a scheduled a drawdown of the project impoundment, Lake Worth. The purpose of the drawdown is to provide for installation of new shoreline structures and maintenance of existing shoreline structures. The licensee will lower Lake Worth approximately 3.5 feet from the lower limit of the normal target elevation range, 181.3 feet, to an elevation of 177.8 ± 0.5 feet. The drawdown is scheduled to begin on September 27, 2022, and the licensee proposes to utilize a drawdown rate of one half-foot per day. The licensee anticipates reaching the target drawdown elevation of 177.8 feet on October 3, 2022 and remain at the target drawdown elevation for four weeks. The licensee plans to begin refilling Lake Worth on November 1, 2022. The licensee states that the completion of refilling the reservoir would be dependent on precipitation and the releases from the upstream Lake Blackshear Hydroelectric Project No. 659. The licensee will continue to operate to comply with Article 401 run-of-river operations requirement when it reaches the target drawdown elevation of 177.8 feet.

l. *Locations of the Application:* This filing may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov,* for TTY, call (202) 502–8659. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents:* Any filing must (1) bear in all capital letters the title ''COMMENTS'', ''PROTEST'', or ''MOTION TO INTERVENE'' as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Dated: August 3, 2022.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 1892–030; Project No. 1855–050; Project No. 1904–078]

Great River Hydro, LLC; Notice of Settlement Agreement and Soliciting Comments

Take notice that the following settlement agreement has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Settlement Agreement.

b. *Project Nos.:* 1892–030, 1855–050, and 1904–078.

c. *Date filed:* August 3, 2022.

d. *Applicant:* Great River Hydro, LLC (Great River).

e. *Name of Projects:* Wilder Hydroelectric Project, Bellows Falls Hydroelectric Project, and Vernon Hydroelectric Project (collectively, projects).

f. *Location:* The existing projects are located on the Connecticut River in the counties of Orange, Windham, and Windsor, Vermont and Sullivan, Cheshire, and Grafton, New Hampshire. The projects do not affect federal land.

g. *Filed Pursuant to:* Rule 602 of the Commission's Rules of Practice and Procedure, 18 CFR 385.602.

h. *Applicant Contact:* John Ragonese, FERC License Manager, Great River Hydro, LLC, 40 Pleasant Street, Suite 202, Portsmouth, NH 03801; (603) 498–2851 or *jragonese@greatriverhydro.com*.

i. *FERC Contact:* Steve Kartalia, (202) 502–6131 or *stephen.kartalia@ferc.gov.*

j. *Deadline for filing comments:* September 2, 2022. Reply comments due September 17, 2022.

The Commission strongly encourages electronic filing. Please file comments using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp*. Commenters can submit brief comments up to 6,000 characters,

without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket numbers P–1892–030, P–1855–050, and P–1904–078.

The Commission's Rules of Practice require all intervenors filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. Great River filed the Settlement Agreement on behalf of itself, the U.S. Fish and Wildlife Service, the New Hampshire Fish and Game Department, and the Vermont Fish and Wildlife Department. The purpose of the Settlement Agreement is to resolve, among the signatories, issues related to fish passage associated with the issuance of any new licenses and fishway prescriptions under Section 18 of the FPA for the projects. Specifically, the Settlement Agreement includes proposed upstream and downstream fish passage facilities, fish passage studies, and fish passage operational measures. Great River requests that the Commission consider the Settlement Agreement in its environmental analyses of the proposed relicense applications, and incorporate the proposed measures into any new licenses issued.

l. A copy of the settlement agreement may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number, excluding the last three digits, in the docket number field to access the document (*i.e.,* P–1892, P–1855, and P–1904). At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact FERC Online Support.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

Description: § 4(d) Rate Filing: Negotiated Rate Agreement Update (SoCal August 2022) to be effective 8/3/2022.
Filed Date: 8/3/22.
Accession Number: 20220803–5037.
Comment Date: 5 p.m. ET 8/15/22.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

Filings in Existing Proceedings

Docket Numbers: RP21–993–000.
Applicants: Cove Point LNG, LP.
Description: Report Filing: Cove Point—2022 Report of Operational Sales and Purchases of Gas to be effective N/A.
Filed Date: 7/29/22.
Accession Number: 20220729–5055.
Comment Date: 5 p.m. ET 8/10/22.

Any person desiring to protest in any the above proceedings must file in accordance with Rule 211 of the Commission's Regulations (18 CFR 385.211) on or before 5:00 p.m. Eastern time on the specified comment date.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: August 4, 2022.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 298–083]

Southern California Edison Company; Notice of Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Temporary variance of license flow requirements.

b. *Project No.:* 298–083.

c. *Date Filed:* July 20, 2022.

d. *Applicant:* Southern California Edison Company (licensee).

e. *Name of Project:* Kaweah Project.

f. *Location:* The project is located on the East Fork, Marble Fork, and Middle Fork of the Kaweah River in Tulare County, California, and occupies lands of the United States administered by the Bureau of Land Management.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Mr. Wayne Allen, Southern California Edison Company, 1515 Walnut Grove Avenue, Rosemead, California 91770; (626) 302–9741; *wayne.allen@sce.com.*

i. *FERC Contact:* Joy Kurtz, (202) 502–6760, *joy.kurtz@ferc.gov.*

j. Deadline for filing comments, motions to intervene, and protests is September 2, 2022.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852. The first page of any filing should include docket number P–298–083. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The licensee requests Commission approval through the end of 2022 for a temporary variance of the minimum flow requirements below the Kaweah No. 1 and No. 2 diversions, as required by Article 405 of the project license. The licensee states that the projected runoff is extremely low, and current runoff in the Kaweah River and East Fork Kaweah River is at the lowest level in 20 years. Being that the licensee cannot accurately forecast long-term runoff during this extreme drought event, it is proactively requesting the temporary variance to allow it to balance available instream flow with its contractual water rights obligations, should it become necessary. Should drought conditions persist and the temporary variance is implemented, the licensee would deliver the minimum amount of water necessary through the respective diversion in order to meet its contractual water rights obligations; the licensee would not generate at the respective powerhouse(s) during implementation of the variance. The licensee would only implement the variance in the event that low inflow into the diversion dam(s) impairs the ability to meet both minimum instream flow releases and domestic water supply requirements. Additionally, the licensee proposes to monitor and report flow conditions to U.S. Fish and Wildlife Service and California Department of Fish and Wildlife during the temporary variance.

l. *Locations of the Application:* The Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's website at *http://www.ferc.gov/docs-filing/elibrary.asp.* Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Responsive Documents:* All filings must (1) bear in all capital letters the title ''COMMENTS'', ''PROTEST'', or ''MOTION TO INTERVENE'' as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. A copy of all other filings in reference to this application must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 385.2010.

Dated: August 3, 2022.

Kimberly Bose,

Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OGC–2022–0683; FRL–10129–01–OGC]

Proposed Settlement, Clean Water Act Claim

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of proposed settlement; request for public comment.

SUMMARY: In accordance with the Environmental Protection Agency (EPA) Administrator's March 18, 2022, memorandum regarding ''Consent Decrees and Settlement Agreements to resolve Environmental Claims Against the Agency,'' notice is hereby given of a proposed settlement in *Northwest Environmental Advocates, et al.,* v. *US EPA,* No. 1:13–cv–263 (D. Idaho). On September 24, 2013, the Northwest Environmental Advocates and the Idaho Conservation League (collectively ''Plaintiffs'') filed an amended complaint against the EPA alleging, among other things, that the Agency had failed to complete its mandatory duty under the Clean Water Act (''CWA'') to prepare and publish proposed water quality standards for mercury pollution

to protect aquatic life following its disapproval of related water quality standard revisions by the State in 2008. On July 19, 2021, the Court issued a ruling concluding that, under the circumstances of this case, EPA's disapproval created a mandatory duty for the Agency to promulgate new criteria for the State. Having ruled against EPA on liability, the Court directed the parties to file briefs regarding an appropriate remedy. EPA seeks public input on a proposed stipulated order on remedy (''Proposed Order'') prior to its final decision-making to settle the remedy portion of the litigation.

DATES: Written comments on the Proposed Order must be received by September 9, 2022.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–HQ–OGC–2022–0683 online at *https://www.regulations.gov* (EPA's preferred method). Follow the online instructions for submitting comments.

Instructions: All submissions received must include the Docket ID number for this action. Comments received may be posted without change to *https://www.regulations.gov,* including any personal information provided. For detailed instructions on sending comments, see the ''Additional Information About Commenting on the Proposed Settlement'' heading under the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Thomas Glazer, Water Law Office (2355A), Office of General Counsel, U.S. Environmental Protection Agency; telephone: (202) 564–0908; email address: *glazer.thomas@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Additional Information About the Proposed Settlement

On June 15, 2013, Plaintiffs filed suit in the Federal district court for the District of Idaho against the Fish and Wildlife Service and the National Marine Fisheries Service (collectively, ''the Services''). The complaint alleged that the Services unreasonably delayed or unlawfully withheld completion of Endangered Species Act (''ESA'') consultation with EPA regarding new and revised water quality standards that were submitted in 1996 and/or 1997. On September 24, 2013, Plaintiffs filed an amended complaint adding various CWA and ESA claims against EPA regarding dozens of Idaho water quality standard submissions dating back to 1994. Broadly speaking, Plaintiffs' claims fell into two categories: claims that EPA failed to consult with the Services on various water quality standard approval actions and claims that EPA failed to complete its mandatory duties under the CWA with respect to various new and revised water quality standards adopted by the State. In April 2015, the Services entered a stipulated dismissal with Plaintiffs by which they agreed to complete certain ESA obligations. This left EPA as the sole defendant in the case.

On February 28, 2019, the Court partially granted EPA's motion to dismiss a number of claims on statute of limitations grounds. On January 21, 2021, the Court entered a stipulated order of partial dismissal, which resolved all but one remaining claim against EPA: that EPA failed to act under section 303(c)(4) of the CWA to promulgate aquatic life mercury criteria following EPA's December 12, 2008, disapproval of State revisions to its existing mercury criteria. On July 19, 2021, the Court held that, under the circumstances of this case, EPA's disapproval created a mandatory duty for the Agency to promulgate new criteria for the State. *See Nw. Env't Advocs.* v. *United States Env't Prot. Agency,* 549 F. Supp. 3d 1218 (D. Idaho 2021).

The parties have negotiated a settlement framework regarding an appropriate remedy in the form of a stipulated order on remedy. Pursuant to the agreed-upon terms, EPA would sign for publication in the **Federal Register** proposed aquatic life mercury criteria for the State of Idaho within 18 months of entry of the Proposed Order with the Court. EPA would have nine months after publication to (1) determine whether ESA section 7 consultation with the Services is required and (2) initiate any such consultation. If consultation occurs, EPA would have to finalize the criteria within eight months of the conclusion of that consultation. Alternatively, if EPA determines that consultation is not required, EPA would have to notify the Plaintiffs and finalize the criteria within eight months of that determination. As part of the agreement, EPA would include in its proposal water column concentrations, or default water column values that can be modified on a case-by-case basis, if EPA determines there are sufficient data available to support this form of criteria. If EPA declines to propose water column concentrations or default water column values, then it would explain and take comment on its reasoning for not doing so. EPA's commitment to promulgate these criteria will be null and void if the State adopts and EPA approves new aquatic life mercury criteria.

For a period of thirty (30) days following the date of publication of this notice, EPA will accept written comments relating to the Proposed Order from persons who are not parties to the litigation. EPA also may hold a public hearing on whether to enter into the Proposed Order. EPA or the Department of Justice may withdraw or withhold consent to the Proposed Order if the comments received disclose facts or considerations that indicate that such consent is inappropriate, improper, inadequate, or inconsistent with the requirements of the Clean Water Act.

II. Additional Information About Commenting on the Proposed Settlement

A. How can I get a copy of the proposed settlement?

The official public docket for this action (identified by Docket ID No. EPA–HQ–OGC–2022–0683) contains a copy of the Proposed Order. The official public docket is available for public viewing at the Office of Environmental Information (OEI) Docket in the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OEI Docket is (202) 566–1752.

The electronic version of the public docket for this action contains a copy of the Proposed Order and is available through *https://www.regulations.gov.* You may use *https://www.regulations.gov* to submit or view public comments, access the index listing of the contents of the official public docket, and access those documents in the public docket that are available electronically. Once in the system, key in the appropriate docket identification number then select ''search.''

B. How and to whom do I submit comments?

Submit your comments, identified by Docket ID No. EPA–HQ–OGC–2022–0683 via *https://www.regulations.gov.* Once submitted, comments cannot be edited or removed from this docket. EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other

information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* For additional information about submitting information identified as CBI, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

If you submit an electronic comment, EPA recommends that you include your name, mailing address, and an email address or other contact information in the body of your comment. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. Any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket and made available in EPA's electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

Use of the *https://www.regulations.gov* website to submit comments to EPA electronically is EPA's preferred method for receiving comments. The electronic public docket system is an ''anonymous access'' system, which means EPA will not know your identity, email address, or other contact information unless you provide it in the body of your comment.

Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked ''late.'' EPA is not required to consider these late comments.

Steven Neugeboren,

Associate General Counsel.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–1192; FR ID 100000]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

DATES: Written PRA comments should be submitted on or before October 11, 2022. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicole Ongele, FCC, via email *PRA@fcc.gov* and to *nicole.ongele@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Nicole Ongele, (202) 418–2991.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–1192.

Title: Survey of Urban Rates, DA 13–598.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit.

Number of Respondents and Responses: 2,275 respondents; 2,275 responses.

Estimated Time per Response: 3 hours.

Frequency of Response: Annual reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 254(b).

Total Annual Burden: 6,825 hours.

Total Annual Cost: No cost.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: The Commission is not requesting that respondents submit confidential information to the Commission. Also, respondents may request materials or information submitted to the Commission be withheld from public inspection under 47 CFR 0.459 of the Commission's rules.

Needs and Uses: In April 2013, the Wireline Competition Bureau of the Federal Communications Commission adopted an Order (Order), in WC Docket No. 10–90; DA 13–598, 78 FR 29063, Connect America Fund. The Order adopted the form and content for a survey of urban rates for fixed voice and fixed broadband residential services for purposes of implementing various reforms adopted as part of the USF/ICC Transformation Order, 76 FR 73830, November 29, 2011. The information collected in this survey will be used to help ensure that universal service support recipients offering fixed voice and broadband services do so at reasonably comparable rates to those in urban areas. The comparability requirements are important components of the Commission's overall effort to improve accountability for the use of universal service funding. The comparability requirements will ensure that rates are reasonably comparable for voice as well as broadband service, between urban and rural, insular, and high cost areas. Rates must be reasonably comparable so that consumers in rural, insular, and high cost areas have meaningful access to these services. This Order requires a statistically valid sample of urban providers to complete a survey with information regarding the types and prices of their offerings. The Commission conducts this survey through an online reporting form accessible to those urban providers of fixed voice and broadband services that are chosen to participate.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

BILLING CODE P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Award of a Single-Source Cooperative Agreement To Fund India Council of Medical Research (ICMR) and ICMR Institutions: National Institute of Virology (NIV), Pune and National Institute of Epidemiology (NIE), Chennai; Cancellation

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice; cancellation.

SUMMARY: On June 15, 2022, the Centers for Disease Control and Prevention (CDC) in the Department of Health and Human Services (HHS) published a document in the **Federal Register** concerning a notice of award to fund the ICMR Institutions: National Institute of Virology (NIV), Pune and National Institute of Epidemiology (NIE), Chennai. Those awards are cancelled in their entirety.

FOR FURTHER INFORMATION CONTACT: Shana Eatman, Centers for Disease Control and Prevention, 1825 Century Center, MS V18–3, Atlanta, GA 30345, Telephone: 770–488–3933, email: *DGHPNOFOs@cdc.gov*

SUPPLEMENTARY INFORMATION: On June 15, 2022, CDC published a document announcing a notice of award of a single-source cooperative agreement to fund India Council of Medical Research (ICMR) and ICMR institutions: National Institute of Virology (NIV), Pune and National Institute of Epidemiology (NIE), Chennai (87 FR 36133). On July 1, 2022, CDC published another document that announced a corrected funding amount to that amount published on June 15, 2022 (87 FR 39521).

This document announces a cancellation of the notice of award to fund the ICMR Institutions: NIV, Pune and NIE, Chennai. These awards are cancelled in their entirety. CDC still plans to fund the ICMR in the amount of $24,495,000 with an expected total funding of approximately $122,475,000.

Amount of Award: $24,495,000 in Federal Fiscal Year (FFY) 2022, with a total estimated $122,475,000 for the 5-year period of performance, subject to availability of funds. Please note, the Notice of Funding Opportunity funding strategy is as follows: $1,980,000 for Core Component 1, and $22,515,000 in Approved but Unfunded (ABU) Components for the recipient.

Dated: August 5, 2022.

Terrance Perry,

Chief Grants Management Officer, Centers for Disease Control and Prevention.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS–7068–N]

Announcement of the Advisory Panel on Outreach and Education (APOE) September 15, 2022 Virtual Meeting

AGENCY: Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: This notice announces the next meeting of the APOE (the Panel) in accordance with the Federal Advisory Committee Act. The Panel advises and

makes recommendations to the Secretary of the U.S. Department of Health and Human Services (HHS) (the Secretary) and the Administrator of the Centers for Medicare & Medicaid Services (CMS) on opportunities to enhance the effectiveness of consumer education strategies concerning the Health Insurance Marketplace®, Medicare, Medicaid, and the Children's Health Insurance Program (CHIP). This meeting is open to the public.

DATES:

Meeting Date: Thursday, September 15, 2022 from 12:00 p.m to 5:00 p.m. eastern daylight time (e.d.t).

Deadline for Meeting Registration, Presentations, Special Accommodations, and Comments: Thursday, September 8, 2022 5:00 p.m. (e.d.t).

ADDRESSES:

Meeting Location: Virtual. All those who RSVP will receive the link to attend.

Presentations and Written Comments: Presentations and written comments should be submitted to: Walt Gutowski, Designated Federal Official (DFO), Office of Communications, Centers for Medicare & Medicaid Services, 200 Independence Avenue SW, Mailstop 325G HHH, Washington, DC 20201, 202–690–5742, or via email at *APOE@cms.hhs.gov.*

Registration: Persons wishing to attend this meeting must register at the website *https://www.eventbrite.com/e/apoe-september-15-2022-virtual-meeting-tickets-380357628907* or by contacting the DFO listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice, by the date listed in the **DATES** section of this notice. Individuals requiring sign language interpretation or other special accommodations should contact the DFO at the address listed in this section of this notice by the date listed in the **DATES** section of this notice.

FOR FURTHER INFORMATION CONTACT: Walt Gutowski, Designated Federal Official, Office of Communications, 200 Independence Avenue SW, Mailstop 325G HHH, Washington, DC 20201, 202–690–5742, or via email at *APOE@cms.hhs.gov.*

Additional information about the APOE is available at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/APOE* Press inquiries are handled through the CMS Press Office at (202) 690–6145.

SUPPLEMENTARY INFORMATION:

I. Background and Charter Renewal Information

A. Background

The Advisory Panel for Outreach and Education (APOE) (the Panel) is governed by the provisions of the Federal Advisory Committee Act (FACA) (Pub. L. 92–463), as amended (5 U.S.C. appendix 2), which sets forth standards for the formation and use of federal advisory committees. The Panel is authorized by section 1114(f) of the Social Security Act (the Act) (42 U.S.C. 1314(f)) and section 222 of the Public Health Service Act (42 U.S.C. 217a).

The Secretary of the U.S. Department of Health and Human Services (HHS) (the Secretary) signed the charter establishing the Citizen's Advisory Panel on Medicare Education [1] (the predecessor to the APOE) on January 21, 1999 (64 FR 7899) to advise and make recommendations to the Secretary and the Administrator of the Centers for Medicare & Medicaid Services (CMS) on the effective implementation of national Medicare education programs, including with respect to the Medicare+Choice (M+C) program added by the Balanced Budget Act of 1997 (Pub. L. 105–33).

The Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173) expanded the existing health plan options and benefits available under the M+C program and renamed it the Medicare Advantage (MA) program. CMS has had substantial responsibilities to provide information to Medicare beneficiaries about the range of health plan options available and better tools to evaluate these options. The successful MA program implementation required CMS to consider the views and policy input from a variety of private sector constituents and to develop a broad range of public-private partnerships.

In addition, Title I of the MMA authorized the Secretary and the Administrator of CMS (by delegation) to establish the Medicare prescription drug benefit. The drug benefit allows beneficiaries to obtain qualified prescription drug coverage. In order to effectively administer the MA program and the Medicare prescription drug benefit, we have substantial responsibilities to provide information to Medicare beneficiaries about the range of health plan options and benefits available, and to develop better tools to evaluate these plans and benefits.

The Patient Protection and Affordable Care Act (Pub. L. 111–148) and Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) (collectively referred to as the Affordable Care Act) expanded the availability of other options for health care coverage and enacted a number of changes to Medicare as well as to Medicaid and CHIP. Qualified individuals and qualified employers are now able to purchase private health insurance coverage through a competitive marketplace, called an Affordable Insurance Exchange (also called Health Insurance Marketplace® or Marketplace® [2]). In order to effectively implement and administer these changes, we must provide information to consumers, providers, and other stakeholders through education and outreach programs regarding how existing programs will change and the expanded range of health coverage options available, including private health insurance coverage through the Marketplace®. The APOE (the Panel) allows us to consider a broad range of views and information from interested audiences in connection with this effort and to identify opportunities to enhance the effectiveness of education strategies concerning the Affordable Care Act.

The scope of this Panel also includes advising on issues pertaining to the education of providers and stakeholders with respect to the Affordable Care Act and certain provisions of the Health Information Technology for Economic and Clinical Health (HITECH) Act enacted as part of the American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111–5).

On January 21, 2011, the Panel's charter was renewed and the Panel was renamed the Advisory Panel for Outreach and Education. The Panel's charter was most recently renewed on January 19, 2021, and will terminate on January 19, 2023 unless renewed by appropriate action.

B. Charter Renewal

In accordance with the January 19, 2021 charter, the APOE will advise HHS and CMS on developing and implementing education programs that support individuals who are enrolled in or eligible for Medicare, Medicaid, CHIP, or coverage available through the Health Insurance Marketplace® and other CMS programs. The scope of this FACA group also includes advising on

[1] We note that the Citizen's Advisory Panel on Medicare Education is also referred to as the Advisory Panel on Medicare Education (65 FR 4617). The name was updated in the Second Amended Charter approved on July 24, 2000.

[2] Health Insurance Marketplace® and Marketplace® are service marks of the U.S. Department of Health and Human Services.

education of providers and stakeholders with respect to health care reform and certain provisions of the HITECH Act enacted as part of the ARRA.

The charter will terminate on January 19, 2023, unless renewed by appropriate action. The APOE was chartered under 42 U.S.C. 217a, section 222 of the Public Health Service Act, as amended. The APOE is governed by provisions of Pub. L. 92–463, as amended (5 U.S.C. Appendix 2), which sets forth standards for the formation and use of advisory committees.

In accordance with the renewed charter, the APOE will advise the Secretary and the CMS Administrator concerning optimal strategies for the following:

- Developing and implementing education and outreach programs for individuals enrolled in, or eligible for, Medicare, Medicaid, the CHIP, and coverage available through the Health Insurance Marketplace® and other CMS programs.
- Enhancing the federal government's effectiveness in informing Medicare, Medicaid, CHIP, or the Health Insurance Marketplace® consumers, issuers, providers, and stakeholders, pursuant to education and outreach programs of issues regarding these programs, including the appropriate use of public-private partnerships to leverage the resources of the private sector in educating beneficiaries, providers, partners and stakeholders.
- Expanding outreach to minority and underserved communities, including racial and ethnic minorities, in the context of Medicare, Medicaid, CHIP, and the Health Insurance Marketplace® education programs and other CMS programs as designated.
- Assembling and sharing an information base of ''best practices'' for helping consumers evaluate health coverage options.
- Building and leveraging existing community infrastructures for information, counseling, and assistance.
- Drawing the program link between outreach and education, promoting consumer understanding of health care coverage choices, and facilitating consumer selection/enrollment, which in turn support the overarching goal of improved access to quality care, including prevention services, envisioned under the Affordable Care Act.

The current members of the Panel as of June 23, 2022, are as follows:

- Julie Carter, Senior Federal Policy Associate, Medicare Rights Center.
- Scott Ferguson, Psychotherapist, Scott Ferguson Psychotherapy.
- Jean-Venable Robertson Goode, Professor, Department of Pharmacotherapy and Outcomes Science, School of Pharmacy, Virginia Commonwealth University.
- Ted Henson, Director of Health Center Performance and Innovation, National Association of Community Health Centers.
- Joan Ilardo, Director of Research Initiatives, Michigan State University, College of Human Medicine.
- Daisy Kim, Policy Manager, Asian & Pacific Islander American Health Forum.
- Cheri Lattimer, Executive Director, National Transitions of Care Coalition.
- Cori McMahon, Vice President, Tridiuum.
- Alan Meade, Director of Rehabilitation Services, Holston Medical Group.
- Neil Meltzer, President and CEO, LifeBridge Health.
- Michael Minor, National Director, H.O.P.E. HHS Partnership, National Baptist Convention USA, Incorporated.
- Jina Ragland, Associate State Director of Advocacy and Outreach, AARP Nebraska.
- Morgan Reed, Executive Director, Association for Competitive Technology.
- Carrie Rogers, Associate Director, Community Catalyst.
- Margot Savoy, Senior Vice President, American Academy of Family Physicians.
- Congresswoman Allyson Schwartz, Senior Advisor, FTI Consulting.
- Matthew Snider, JD, Senior Policy Analyst, Unidos US.
- Tia Whitaker, Statewide Director, Outreach and Enrollment, Pennsylvania Association of Community Health Centers.

II. Provisions of This Notice

In accordance with section 10(a) of the FACA, this notice announces a meeting of the APOE. The agenda for the September 15, 2022 meeting will include the following:

- Welcome and listening session with CMS leadership
- Recap of the previous (June 23, 2022) meeting
- CMS programs, initiatives, and priorities
- An opportunity for public comment
- Meeting summary, review of recommendations, and next steps

Individuals or organizations that wish to make a 5-minute oral presentation on an agenda topic should submit a written copy of the oral presentation to the DFO at the address listed in the **ADDRESSES** section of this notice by the date listed in the **DATES** section of this notice. The number of oral presentations may be limited by the time available. Individuals not wishing to make an oral presentation may submit written comments to the DFO at the address listed in the **ADDRESSES** section of this notice by the date listed in the **DATES** section of this notice.

III. Meeting Participation

The meeting is open to the public, but attendance is limited to registered participants. Persons wishing to attend this meeting must register at the website *https://www.eventbrite.com/e/apoe-september-15-2022-virtual-meeting-tickets-380357628907* or contact the DFO at the address or number listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice by the date specified in the **DATES** section of this notice. This meeting will be held virtually. Individuals who are not registered in advance will be unable to attend the meeting.

IV. Collection of Information

This document does not impose information collection requirements, that is, reporting, recordkeeping, or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

The Administrator of the Centers for Medicare & Medicaid Services (CMS), Chiquita Brooks-LaSure, having reviewed and approved this document, authorizes Lynette Wilson, who is the Federal Register Liaison, to electronically sign this document for purposes of publication in the **Federal Register**.

Dated: August 5, 2022.

Lynette Wilson,

Federal Register Liaison, Centers for Medicare & Medicaid Services.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2016–N–2683]

Agency Information Collection Activities; Proposed Collection; Comment Request; Data To Support Social and Behavioral Research as Used by the Food and Drug Administration

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on a generic clearance to collect information to support social and behavioral research used by FDA about drug products.

DATES: Either electronic or written comments on the collection of information must be submitted by October 11, 2022.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of October 11, 2022. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include Docket No. FDA–2016–N–2683 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; Data To Support Social and Behavioral Research as Used by the Food and Drug Administration.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: JonnaLynn Capezzuto, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–3794, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Data To Support Social and Behavioral Research as Used by the Food and Drug Administration

OMB Control Number 0910–0847—Extension

This information collection is intended to support FDA-conducted research. Understanding patients, consumers, and healthcare professionals' perceptions and behaviors plays an important role in improving FDA's regulatory decision-making processes and communications that affect various stakeholders. FDA uses the following methods to achieve these goals: (1) individual indepth interviews, (2) general public focus group interviews, (3) intercept interviews, (4) self-administered surveys, (5) gatekeeper surveys, and (6) focus group interviews. These methods serve the narrowly defined need for direct and informal opinion on a specific topic and serve as a qualitative and quantitative research tool having two major purposes:

- Obtaining useful information for the development of variables and measures for formulating the basic objectives of social and behavioral research and
- successfully communicating and addressing behavioral changes with intended audiences to assess the potential effectiveness of FDA communications, behavioral interventions, and other materials.

While FDA will use these methods to test and refine its ideas and help develop communication and behavioral strategies research, the Agency will generally conduct further research before making important decisions (such as adopting new policies and allocating or redirecting significant resources to support these policies).

FDA's Center for Drug Evaluation and Research, Center for Biologics Evaluation and Research, Office of the Commissioner, and any other Centers will use this mechanism to test communications and social and behavioral methods about regulated drug products on a variety of subjects related to consumer, patient, or healthcare professional perceptions, beliefs, attitudes, behaviors, and use of drug and biological products and related materials. These subjects include social and behavioral research, decision-making processes, and communication and behavioral change strategies.

Annually, FDA projects about 25 social and behavioral studies using the variety of test methods listed in this document. FDA is revising this burden to account for the number of studies we have received in the last 3 years and to better reflect the scope of the information collection.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average time per response (in hours)	Total hours
Interviews and Surveys	7,298	15	109,470	0.25 (15 minutes)	27,368

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Based on a review of the information collection since our last request for OMB approval, our burden estimate for this information collection reflects an overall increase of 35,886 responses with a corresponding increase of 8,972 hours. We attribute this adjustment to an increase in the funding in specific areas, particularly substance abuse (for example, opioids and stimulants) and COVID–19.

Dated: August 5, 2022.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2013–N–1393]

Agency Information Collection Activities; Proposed Collection; Comment Request; Patent Term Restoration; Due Diligence Petitions; Filing, Format, and Content of Petitions

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on information collection provisions found in our Patent Term Restoration regulations.

DATES: Either electronic or written comments on the collection of information must be submitted by October 11, 2022.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of October 11, 2022. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the

manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2013–N–1393 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; Patent Term Restoration; Due Diligence Petitions; Filing, Format, and Content of Petitions.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Rachel Showalter, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 240–994–7399, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Patent Term Restoration; Due Diligence Petitions; Filing, Format, and Content of Petitions—21 CFR Part 60

OMB Control Number 0910–0233—Extension

This information collection supports Agency regulations. FDA's patent extension activities are conducted under the authority of section 505(j) of the Federal, Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 355(j)) and the Generic Animal Drug and Patent Term Restoration Act of 1988 ((Pub. L. 100–670) (21 U.S.C. 301 et seq)). The regulations are codified in part 60 (21 CFR part 60), Patent Term Restoration. New human drug, animal drug, human biological, medical device, food additive, or color additive products regulated by FDA must undergo FDA safety, or safety and effectiveness review before marketing is permitted. If the product is covered by a patent, part of the patent's term may be consumed during this review, which diminishes the value of the patent.

In enacting section 505(j) of the FD&C Act and the Generic Animal Drug and Patent Term Restoration Act of 1988, Congress sought to encourage development of new, safer, and more effective medical and food additive products. It did so by authorizing the U.S. Patent and Trademark Office (USPTO) to extend the patent term by a portion of the time during which FDA's safety and effectiveness review prevented marketing of the product. The length of the patent term extension is generally limited to a maximum of 5 years and is calculated by USPTO based on a statutory formula. When a patent holder submits an application for patent term extension to USPTO, USPTO requests information from FDA, including the length of the regulatory review period for the patented product. If USPTO concludes that the product is eligible for patent term extension, FDA publishes a notice that describes the length of the regulatory review period and the dates used to calculate that period. Interested parties may request, under § 60.24, revision of the length of the regulatory review period, or may petition under § 60.30 to reduce the regulatory review period by any time where marketing approval was not pursued with ''due diligence.''

Section 60.36(a) defines *due diligence* as ''that degree of attention, continuous directed effort, and timeliness as may reasonably be expected from, and are ordinarily exercised by, a person during a regulatory review period.'' As provided in § 60.30(c), a *due diligence* petition ''shall set forth sufficient facts, including dates if possible, to merit an

investigation by FDA of whether the applicant acted with due diligence.'' Upon receipt of a *due diligence* petition, FDA reviews the petition and evaluates whether any change in the regulatory review period is necessary. If so, the corrected regulatory review period is published in the **Federal Register**. A *due diligence* petitioner not satisfied with FDA's decision regarding the petition may, under § 60.40, request an informal hearing for reconsideration of the *due diligence* determination. Petitioners are likely to include persons or organizations having knowledge that FDA's marketing permission for that product was not actively pursued throughout the regulatory review period. The information collection for which an extension of approval is being sought is the use of the statutorily created *due diligence* petition.

During the calendar years 2019 through 2022, 15 requests for revision of the regulatory review period were submitted under § 60.24(a). In addition, a total of one *due diligence* petition was submitted under § 60.30. There have been no requests for hearings under § 60.40; however, for purposes of this information collection approval, we estimate that we may receive one submission annually.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

21 CFR part 60—patent term restoration	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
60.24; revision of regulatory review period determinations	4	3.75	15	100	1,500
60.30; due diligence petitions	1	1	1	50	50
60.40; due diligence hearings	1	1	1	10	10
Total					1,560

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Our estimated burden for the information collection reflects a small decrease (-1 response) associated with submissions received under § 60.24 in previous years.

Dated: August 4, 2022.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2013–N–1588]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Exemptions From Substantial Equivalence Requirements for Tobacco Products

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by September 9, 2022.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. The OMB control number for this information collection is 0910–0684. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Rachel Showalter, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 240–994–7399, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Exemptions From Substantial Equivalence Requirements for Tobacco Products

OMB Control Number 0910–0684—Revision

On June 22, 2009, the Family Smoking Prevention and Tobacco Control Act (Tobacco Control Act) (Pub. L. 111–31) was signed into law. The Tobacco Control Act amended the Federal Food, Drug, and Cosmetic Act (FD&C Act) by adding a chapter granting FDA important authority to regulate the manufacture, marketing, and distribution of tobacco products to protect the public health generally and to reduce tobacco use by minors.

The Consolidated Appropriations Act of 2022 (Pub. L. 117–103) (the Appropriations Act), enacted on March 15, 2022, amended the definition of the term ''tobacco product'' in section 201(rr) of the FD&C Act (21 U.S.C. 321(rr)) to include products that contain nicotine from any source. As a result, non-tobacco nicotine (NTN) products that were not previously subject to the FD&C Act (*e.g.,* products containing synthetic nicotine) are now subject to all of the tobacco product provisions in the FD&C Act beginning on April 14, 2022, including the requirement of premarket review for new tobacco products.

The FD&C Act, as amended by the Tobacco Control Act, requires that before a new tobacco product may be introduced or delivered for introduction into interstate commerce, the new tobacco product must undergo premarket review by FDA. FDA must issue an order authorizing the commercial distribution of the new tobacco product or find the product exempt from the requirements of substantial equivalence under section 910(a)(2)(A) of the FD&C Act (21 U.S.C. 387j(a)(2)(A)), before the product may be introduced into commercial distribution.

FDA has established a pathway for manufacturers to request exemptions from the substantial equivalence requirements of the FD&C Act in § 1107.1 (21 CFR 1107.1) of the Agency's regulations. As described in § 1107.1(a), FDA may exempt tobacco products that are modified by adding or deleting a tobacco additive, or

increasing or decreasing the quantity of an existing tobacco additive, from the requirement of demonstrating substantial equivalence if the Agency determines that: (1) the modification would be a minor modification of a tobacco product that can be sold under the FD&C Act; (2) a report demonstrating substantial equivalence is not necessary to ensure that permitting the tobacco product to be marketed would be appropriate for the protection of public health; and (3) an exemption is otherwise appropriate.

Section 1107.1(b) states that a request for exemption under section 905(j)(3) of the FD&C Act (21 U.S.C. 387e(j)(3)) may be made only by the manufacturer of a legally marketed tobacco product for a minor modification to that tobacco product and that the manufacturer must submit the request and all information supporting it to FDA. The request must be made in an electronic format that FDA can process, review, and archive (or a written request must be made by the manufacturer explaining in detail why the manufacturer cannot submit the request in an electronic format and requesting an alternative means of submission to the electronic format).

An exemption request must contain: (1) the manufacturer's address and contact information; (2) identification of the tobacco product(s); (3) a detailed explanation of the purpose for the modification; (4) a detailed description of the modification, including a statement as to whether the modification involves adding or deleting a tobacco additive, or increasing or decreasing the quantity of the existing tobacco additive; (5) a detailed explanation of why the modification is a minor modification of a tobacco product that can be sold under the FD&C Act; (6) a detailed explanation of why a report under section 905(j)(1) of the FD&C Act intended to demonstrate substantial equivalence is not necessary to ensure that permitting the tobacco product to be marketed would be appropriate for protection of the public health; (7) a certification (*i.e.,* a signed statement by a responsible official of the company) summarizing the supporting evidence and providing the rationale for the official's determination that the modification does not increase the tobacco product's appeal to or use by minors, toxicity, addictiveness, or abuse liability; (8) other information justifying an exemption; and (9) an environmental assessment (EA) under part 25 (21 CFR part 25; 42 U.S.C. 4332(2)) prepared in accordance with the requirements of § 25.40 (21 CFR 25.40)).

The National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4347) states national environmental objectives and imposes upon each Federal Agency the duty to consider the environmental effects of its actions. Section 102(2)(C) of NEPA requires the preparation of an environmental impact statement for every major Federal action that will significantly affect the quality of the human environment.

The FDA NEPA regulations are contained in part 25. All applications for exemption from substantial equivalence require the submission of an EA. An EA provides information that is used to determine whether an FDA action could result in a significant environmental impact. Section 25.40(a) and (c) specifies the content requirements for EAs for non-excluded actions.

The information required by § 1107.1(b) is submitted to FDA so FDA can determine whether an exemption from substantial equivalence to the product is appropriate for the protection of the public health. Section 1107.1(c) states that FDA will review the information submitted and determine whether to grant or deny an exemption based on whether the criteria in section 905(j)(3) of the FD&C Act are met. FDA may request additional information if necessary, to make a determination and may consider the exemption request withdrawn if the information is not provided within the requested timeframe.

This collection of information also contains a requirement that a manufacturer submit a report (referred to as an ''abbreviated report'') at least 90 days prior to making an introduction or delivery for introduction into interstate commerce for commercial distribution of a tobacco product. Section 905(j)(1)(A)(ii) of the FD&C Act states that if an exemption has been requested and granted, the manufacturer must submit to FDA a report that demonstrates that the tobacco product is modified within the meaning of section 905(j)(3), the modifications are to a product that is commercially marketed and in compliance with the requirements of the FD&C Act, and all the modifications are covered by exemptions granted by the Secretary under section 905(j)(3).

Description of Respondents: The respondents to this collection of information are tobacco product manufacturers defined as any person, including any repacker or relabeler, who: (1) manufactures, fabricates, assembles, processes, or labels a tobacco product; or (2) imports a finished tobacco product for sale or distribution in the United States.

Section 1107.1(b) requires that the exemption request and supporting information be submitted in an electronic format that FDA can process, review, and archive. The exemption request and supporting information must be legible and in English. These requirements ensure that FDA can review the exemption request expeditiously and appropriately. FDA provides information on its website on how manufactures may provide electronic submissions and regulatory correspondence, such as the exemption request and supporting information, as well as the abbreviated report, to FDA (*e.g.,* information on electronic media and methods of transmission). Steps on how to prepare and the recommended structure of an exemption request and abbreviated report can be found at: *https://www.fda.gov/tobacco-products/market-and-distribute-tobacco-product/exemption-substantial-equivalence.* Information on how to submit exemption requests and abbreviated reports to the CTP Portal can be found here: *https://www.fda.gov/tobacco-products/manufacturing/submit-documents-ctp-portal.*

FDA does not anticipate any need to submit an exemption request or supporting information in a non-electronic format. However, a company that is not able to submit the documentation in an electronic format may submit a written request to the Center for Tobacco Products document control center (*https://www.fda.gov/tobacco-products/about-center-tobacco-products-ctp/contact-ctp*).

In the **Federal Register** of February 25, 2022 (87 FR 10797), FDA published a 60-day notice requesting public comment on the proposed collection of information. One comment responsive to the four information collection topics solicited was received. The comment stated that the Agency should consider making the exemption request pathway (section 905(j)(3) of the FD&C Act) more flexible for new products, devices, and technology innovations.

FDA appreciates the comment and notes that although we may consider the comment, these types of actions may necessitate guidance (as noted in the comment). Currently, we believe that the exemption pathway is providing applicants an efficient pathway to make additive changes to their products and receive a marketing order. If the Agency decides to consider revising the suggested actions, these types of actions would need to be done pursuant to separate notice and comment procedures.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

21 CFR section and/or activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
§ 1107.1(b); Optional preparation of tobacco product exemption from substantial equivalence request; and § 25.40; Preparation of an environmental assessment	812	1	812	24	19,488
§ 1107.1(c); Preparation of additional information for tobacco product exemption from substantial equivalence request	150	1	150	3	450
Abbreviated report submitted to demonstrate: tobacco product is modified under section 905(j)(3) of the FD&C Act, modifications are to a product that is commercially marketed and compliant, and modifications covered by exemptions granted by Secretary under section 905(j)(3)	1,217	1	1,217	2	2,434
Total					22,372

[1]There are no capital costs or operating and maintenance costs associated with this collection of information.

FDA estimates that we will receive 812 exemption requests under § 1107.1(b) for 24 hours per response including EA for a total of 19,488 hours. Since an EA is required for each § 1107.1(b) (Optional Preparation of Tobacco Product Exemption From Substantial Equivalence Request), the burden per response for EAs (12 hours) has been combined with the 12 hours for an exemption request for a total of 24 hours per response.

FDA further estimates, that we will receive 150 submissions requiring additional information in support of the initial exemption request, and it is expected that it will take an average of 3 hours to prepare the additional information for a total of 450 hours.

FDA estimates that 1,217 respondents will prepare 1,217 responses and each response will take approximately 2 hours to prepare an abbreviated report, as required by section 905(j)(1)(A)(ii), for a total of 2,434 hours. The estimates reflect a decrease of 1,217 hours to account for a reduction in average response time for preparing an abbreviated report. FDA provides a recommended format for applicants in the exemption order letter that significantly reduces the burden hours for preparing the abbreviated report. Therefore, FDA now estimates that the hours for the collection of information associated with exemptions from substantial equivalence requirements total 22,372 hours.

Although there may be year-to-year variability in the absolute number of exemption requests submitted, FDA considers any trends in our analysis, and the overall number of extension requests from manufacturers of tobacco products has remained consistent. Additionally, although manufacturers of NTN products are now subject to all of the tobacco product provisions in the FD&C Act, including the need to submit premarket submissions to FDA and obtain authorization from the Agency to market their product, FDA expects to receive premarket tobacco product applications for most currently marketed NTN products. FDA does not expect to receive many exemption requests for currently marketed NTN products. Thus, no additional adjustments to the number of respondents in our burden estimate are needed for NTN products as the current estimate accounts for some year-to-year variability in the absolute number of exemption requests submitted.

Dated: August 4, 2022.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2004–N–0451]

Food and Drug Administration Modernization Act of 1997: Modifications to the List of Recognized Standards, Recognition List Number: 058

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing a publication containing modifications the Agency is making to the list of standards FDA recognizes for use in premarket reviews (FDA Recognized Consensus Standards). This publication, entitled ''Modifications to the List of Recognized Standards, Recognition List Number: 058'' (Recognition List Number: 058), will assist manufacturers who elect to declare conformity with consensus standards to meet certain requirements for medical devices.

DATES: Either electronic or written comments can be submitted on the notice at any time. These modifications to the list of recognized standards are applicable August 10, 2022.

ADDRESSES: You may submit comments on the current list of FDA Recognized Consensus Standards at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your

comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2004–N–0451 for ''Food and Drug Administration Modernization Act of 1997: Modifications to the List of Recognized Standards, Recognition List Number: 058.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500. FDA will consider any comments received in determining whether to amend the current listing of modifications to the list of recognized standards, Recognition List Number: 058.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

An electronic copy of Recognition List Number: 058 is available on the internet at *https://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/Standards/ucm123792.htm.* See section IV for electronic access to the searchable database for the current list of FDA-recognized consensus standards, including Recognition List Number: 058 modifications and other standards-related information. Submit written requests for a single hard copy of the document entitled ''Modifications to the List of Recognized Standards, Recognition List Number: 058'' to Jianchao Zeng, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5572, Silver Spring, MD 20993, 301–796–6580. Send one self-addressed adhesive label to assist that office in processing your request, or Fax your request to 301–847–8144.

FOR FURTHER INFORMATION CONTACT: Jianchao Zeng, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5572, Silver Spring, MD 20993, 301–796–6580, *CDRHStandardsStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 204 of the Food and Drug Administration Modernization Act of 1997 (Pub. L. 105–115) amended section 514 of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 360d). Amended section 514 of the FD&C Act allows FDA to recognize consensus standards developed by international and national organizations for use in satisfying portions of device premarket review submissions or other requirements.

In the **Federal Register** of September 14, 2018 (83 FR 46738), FDA announced the availability of a guidance entitled ''Appropriate Use of Voluntary Consensus Standards in Premarket Submissions for Medical Devices.'' The guidance describes how FDA has implemented its standards recognition program and is available at *https://www.fda.gov/regulatory-information/search-fda-guidance-documents/appropriate-use-voluntary-consensus-standards-premarket-submissions-medical-devices.* Modifications to the initial list of recognized standards, as published in the **Federal Register**, can be accessed at *https://www.fda.gov/medical-devices/standards-and-conformity-assessment-program/federal-register-documents.*

These notices describe the addition, withdrawal, and revision of certain standards recognized by FDA. The Agency maintains on its website HTML and PDF versions of the list of FDA Recognized Consensus Standards, available at *https://www.fda.gov/medical-devices/standards-and-conformity-assessment-program/federal-register-documents.* Additional information on the Agency's Standards and Conformity Assessment Program is available at *https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/standards-and-conformity-assessment-program.*

II. Modifications to the List of Recognized Standards, Recognition List Number: 058

FDA is announcing the addition, withdrawal, correction, and revision of certain consensus standards the Agency is recognizing for use in premarket submissions and other requirements for devices. FDA is incorporating these modifications to the list of FDA Recognized Consensus Standards in the Agency's searchable database. FDA is using the term ''Recognition List Number: 058'' to identify the current modifications.

In table 1, FDA describes the following modifications: (1) the withdrawal of standards and their replacement by others, if applicable; (2) the correction of errors made by FDA in listing previously recognized standards; and (3) the changes to the supplementary information sheets of recognized standards that describe revisions to the applicability of the standards.

In section III, FDA lists modifications the Agency is making that involve new entries and consensus standards added as modifications to the list of recognized standards under Recognition List Number: 058.

TABLE 1—MODIFICATIONS TO THE LIST OF RECOGNIZED STANDARDS

Old recognition No.	Replacement recognition No.	Title of standard [1]	Change
		A. Anesthesiology	
		No new entries at this time.	
		B. Biocompatibility	
2–174	2–296	ISO 10993–10 Fourth edition 2021–11 Biological evaluation of medical devices—Part 10: Tests for skin sensitization.	Withdrawn and replaced with newer version.
		C. Cardiovascular	
3–116	3–181	ISO 25539–2 Third edition 2020–09 Cardiovascular implants—Endovascular devices—Part 2: Vascular stents.	Withdraw and replaced with newer version.
3–137	3–182	ASTM F3036–21 Standard Guide for Testing Absorbable Stents	Withdrawn and replaced with newer version.
		D. Dental/Ear, Nose, and Throat (ENT)	
4–236	4–293	ANSI/ADA Standard No. 119–2021 Manual Toothbrushes	Withdrawn and replaced with newer version.
		E. General I (Quality Systems/Risk Management) (QS/RM)	
		No new entries at this time.	
		F. General II (Electrical Safety/Electromagnetic Compatibility) (ES/EMC)	
19–4	19–46	ANSI/AAMI ES60601–1:2005/(R)2012 and A1:2012, C1:2009/(R)2012 and A2:2010/(R)2012 (Consolidated Text) Medical electrical equipment—Part 1: General requirements for basic safety and essential performance (IEC 60601–1:2005, MOD) [Including Amendment 2 (2021)].	Withdrawn and replaced with newer version.
19–16	19–47	ANSI/AAMI HA60601–1–11:2015 Medical Electrical Equipment—Part 1–11: General requirements for basic safety and essential performance—Collateral Standard: Requirements for medical electrical equipment and medical electrical equipment and medical electrical systems used in the home healthcare environment (IEC 60601–1–11:2015 MOD) [Including AMD 1:2021].	Withdrawn and replaced with newer version.
19–30	19–45	AIM Standard 7351731 Rev. 3.00 2021–06–04 Medical Electrical Equipment and System Electromagnetic Immunity Test for Exposure to Radio Frequency Identification Readers—An AIM Standard.	Withdrawn and replaced with newer version.
		G. General Hospital/General Plastic Surgery (GH/GPS)	
6–174	6–475	ISO 11608–4:2022 Needle-based injection systems for medical use—Requirements and test methods—Part 4: Needle-based injection systems containing electronics.	Withdrawn and replaced with newer version.
6–275	6–476	ISO 11608–2:2022 Needle-based injection systems for medical use—Requirements and test methods—Part 2: Double-ended pen needles.	Withdrawn and replaced with newer version.
6–294	6–477	ISO 11608–3:2022 Needle-based injection systems for medical use—Requirements and test methods—Part 3: Containers and integrated fluid path.	Withdrawn and replaced with newer version.
6–341	6–478	ISO 11608–1:2022 Needle-based injection systems for medical use—Requirements and test methods—Part 1: Needle-based injection systems.	Withdrawn and replaced with newer version.
6–377	6–479	ISO 11608–5:2022 Needle-based injection systems for medical use—Requirements and test methods—Part 5: Automated functions.	Withdrawn and replaced with newer version.
		H. In Vitro Diagnostics (IVD)	
7–303	.....	CLSI M60 2nd Edition Performance Standards for Antifungal Susceptibility Testing of Yeast.	Extent of recognition.
		I. Materials	
8–336	8–583	ASTM F562–22 Standard Specification for Wrought 35Cobalt-35Nickel-20Chromium-10Molybdenum Alloy for Surgical Implant Applications (UNS R30035).	Withdrawn and replaced with newer version.
8–347	8–584	ASTM F2146–22 Standard Specification for Wrought Titanium-3Aluminum-2.5Vanadium Alloy Seamless Tubing for Surgical Implant Applications (UNS R56320).	Withdrawn and replaced with newer version.

TABLE 1—MODIFICATIONS TO THE LIST OF RECOGNIZED STANDARDS—Continued

Old recognition No.	Replacement recognition No.	Title of standard [1]	Change
8–354	8–585	ASTM F1377–21 Standard Specification for Cobalt-28Chromium-6Molybdenum Powder for Medical Devices (UNS R30075, UNS R31537, and UNS R31538).	Withdrawn and replaced with newer version.
8–362	8–586	ASTM F2989–21 Standard Specification for Metal Injection Molded Unalloyed Titanium Components for Surgical Implant Applications.	Withdrawn and replaced with newer version.
8–447	8–587	ISO 5832–3 Fifth Edition 2021–11 Implants for surgery—Metallic materials—Part 3: Wrought titanium 6-aluminium 4-vanadium alloy.	Withdrawn and replaced with newer version.
8–469	8–588	ASTM F560–22 Standard Specification for Unalloyed Tantalum for Surgical Implant Applications (UNS R05200, UNS R05400).	Withdrawn and replaced with newer version.
8–471	8–589	ASTM F1925–22 Standard Specification for Semi-Crystalline Poly(lactide) Polymer and Copolymer Resins for Surgical Implants.	Withdrawn and replaced with newer version.

IV. List of Recognized Standards

FDA maintains the current list of FDA Recognized Consensus Standards in a searchable database that may be accessed at *https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfStandards/search.cfm.* Such standards are those that FDA has recognized by notice published in the **Federal Register** or that FDA has decided to recognize but for which recognition is pending (because a periodic notice has not yet appeared in the **Federal Register**). FDA will announce additional modifications and revisions to the list of recognized consensus standards, as needed, in the **Federal Register** once a year, or more often if necessary.

V. Recommendation of Standards for Recognition by FDA

Any person may recommend consensus standards as candidates for recognition under section 514 of the FD&C Act by submitting such recommendations, with reasons for the recommendation, to *CDRHStandardsStaff@fda.hhs.gov.* To be considered, such recommendations should contain, at a minimum, the information available at *https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/standards-and-conformity-assessment-program#process.*

Dated: August 4, 2022.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2012–N–0961]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Environmental Impact Considerations

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by September 9, 2022.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently Under Review—Open for Public Comments'' or by using the search function. The OMB control number for this information collection is 0910–0322. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Amber Sanford, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–8867, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Environmental Impact Considerations

OMB Control Number 0910–0322—Revision

This information collection helps support implementation of the National Environmental Policy Act (NEPA), consistent with FDA's authority under the Federal Food, Drug, and Cosmetic Act (FD&C Act) and the Public Health Service Act. All applications or petitions requesting FDA action require the submission of an environmental assessment (EA) or a claim of categorical exclusion (CE). A CE applies to Agency actions that usually have little or no potential to cause significant environmental effects and are excluded from the requirements to prepare an EA or environmental impact statement (EIS). Regulations in part 25 (21 CFR part 25) set forth FDA procedures with regard to NEPA requirements (part 25, subpart A); identify actions that require the preparation of an EA (part 25, subpart B); explain CEs (part 25, subpart C); and discuss the preparation of documents (part 25, subpart D). The regulations also supplement procedural provisions of NEPA that were published by the Council on Environmental Quality (CEQ) in 40 CFR parts 1500 through 1508 and the procedures included in the ''HHS General Administration Manual, part 30: Environmental Protection'' (45 FR 76519 to 76534, November 19, 1980).

In the **Federal Register** of August 25, 2021 (86 FR 47501), we published a 60-day notice requesting public comment on the proposed collection of information. Although one comment was received, it was not responsive to the four collection of information topics solicited. On our own initiative and for efficiency of Agency operations, we are revising the information collection to account for burden that may result from recommendations found in Agency guidance and currently approved in OMB control number 0910–0541. The guidance document entitled, ''Preparing a Claim of Categorical Exclusion or an Environmental Assessment for Submission to the Center for Food Safety and Applied Nutrition'' identifies, interprets, and clarifies existing requirements imposed by applicable statutes and regulations, consistent with the CEQ regulations (40 CFR 1507.3). It consists of recommendations that do not themselves create requirements; rather, they are explanatory guidance for FDA's own procedures in order to ensure full compliance with the purposes and provisions of NEPA. The guidance document is available at *https://www.fda.gov/regulatory-information/search-fda-guidance-documents/guidance-industry-preparing-claim-categorical-exclusion-or-environmental-assessment-submission-cfsan,* and was issued consistent with our Good Guidance Practice regulations in 21 CFR 10.115, which provide for public comment at any time.

We estimate the burden of the information collection as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

21 CFR part 25; activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Section 25.40(c); actions excluded from the requirement to prepare EA or EIS:					
Center for Drug Evaluation and Research (CDER) ..	14	0.9285	13	3,400	44,200
Center for Devices and Radiological Health (CDRH)	0		0		0
Center for Biologics Evaluation and Research (CBER).	4	1	4	3,400	13,600
Center for Veterinary Medicine (CVM)	9	1	9	2,160	19,440
Center for Tobacco Products (CTP)	14	1	14	80	1,120
Center for Food Safety and Applied Nutrition (CFSAN).	57	1	57	180	10,260
Subtotal			97		88,620
Section 25.15(d); actions subject to CE:					
CDER	5,186	4.2273	21,923	8	175,384
CDRH	62	1	62	6	372
CBER	3,575	2	7,150	8	57,200
CVM	114	10	1,140	2,160	3,420
CTP	0		0		0

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]—Continued

21 CFR part 25; activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
CFSAN	51	1	51	8	408
Subtotal			30,326		236,784
Total			30,423		325,404

[1] There are no capital, or operational and maintenance costs associated with the information collection.

CDER:

Under §§ 312.23(a)(7)(iv)(e), 314.50(d)(1)(iii), and 314.94(a)(9)(i) (21 CFR 312.23(a)(7)(iv)(e), 314.50(d)(1)(iii), and 314.94(a)(9)(i)), each investigational new drug application (IND), new drug application (NDA), and abbreviated new drug application (ANDA) must contain a claim for CE under § 25.30 or § 25.31, or an EA under § 25.40.

CDRH:

Under § 814.20(b)(11) (21 CFR 814.20(b)(11)), premarket approvals (PMAs) (original PMAs and supplements) must contain a claim for CE under § 25.30 or § 25.34 or an EA under § 25.40.

CBER:

Under 21 CFR 601.2(a), biologic license applications (BLAs) as well as INDs (§ 312.23), NDAs (§ 314.50), ANDAs (§ 314.94), and PMAs (§ 814.20) must contain either a claim of CE under § 25.30 or § 25.32 or an EA under § 25.40.

CVM:

Under 21 CFR 514.1(b)(14), new animal drug applications (NADAs) and abbreviated new animal drug applications (ANADAs); 21 CFR 514.8(a)(1) supplemental NADAs and ANADAs; 21 CFR 511.1(b)(10) investigational new animal drug applications and generic investigational new animal drug applications, and 21 CFR 571.1(c) food additive petitions must contain a claim for CE under § 25.30 or § 25.32 or an EA under § 25.40.

CTP:

Under sections 905, 910, and 911 of the FD&C Act (21 U.S.C. 387e, 387j, and 387k), product applications and supplements, premarket tobacco applications (PMTAs), substantial equivalences (SEs), exemption from SEs, and modified risk tobacco product applications must contain a claim for a CE or an EA. Upon evaluation, we have concluded that the majority of the EA burden for tobacco products is accounted for in other information collections currently approved by OMB. The burden we attribute to SEs is currently approved in OMB control number 0910–0673; the burden we attribute to PMTAs is currently approved in OMB control number 0910–0768; and the burden we attribute to SE exemptions is currently approved in OMB control number 0910–0684.

CFSAN:

The estimates for respondents and numbers of responses are based on the annualized numbers of petitions and notifications qualifying for CEs listed under § 25.32(i) and (q) that the Agency has received in the past 3 years. To avoid counting the burden attributed to § 25.32(o) as zero, we have estimated the burden for this claim of CE at one respondent making one submission a year for a total of one annual submission. The burden for submitting a claim of CE is captured under § 25.15(a) and (d).

As a result of revising the information collection to include submissions made to CFSAN, it reflects an increase in burden of 108 responses and 10,668 hours annually.

Dated: August 4, 2022.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2013–N–0134]

Agency Information Collection Activities; Proposed Collection; Comment Request; Mammography Quality Standards Act Requirements

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on information collection associated with the Mammography Quality Standards Act.

DATES: Either electronic or written comments on the collection of information must be submitted by October 11, 2022.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of October 11, 2022. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the

manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2013–N–0134 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; Mammography Quality Standards Act Requirements.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Amber Sanford, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–8867, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Mammography Quality Standards Act Requirements—21 CFR part 900

OMB Control Number 0910–0309—Extension

The Mammography Quality Standards Act (Pub. L. 102–539) requires the establishment of a Federal certification and inspection program for mammography facilities; standards for accreditation and certification bodies for mammography facilities; and standards for mammography equipment, personnel, and practices, including quality assurance. Implementing regulations are found in part 900 (21 CFR part 900). The regulations are intended to assure safe, reliable, and accurate mammography on a nationwide level. Under the regulations, as a first step in becoming certified, mammography facilities must become accredited by an FDA-approved accreditation body (AB). This requires undergoing a review of their clinical images and providing the AB with information showing that they meet the equipment, personnel, quality assurance, and quality control standards, and have a medical reporting and recordkeeping program, a medical outcomes audit program, and a consumer complaint mechanism. On the basis of this accreditation, facilities are then certified by FDA or an FDA-approved State certification agency and must prominently display their certificate. These actions are taken to ensure safe, accurate, and reliable mammography on a nationwide basis.

FDA meets with its National Mammography Quality Assurance Advisory Committee (NMQAAC) for the purposes of advising FDA's mammography program on advances in mammography technology and procedures and on appropriate quality standards for mammography facilities. NMQAAC is made up of representatives of the mammography community, consumer and industry groups, and government. The meetings are open to the public and time is allotted for public statements on issues of concern in the mammography field. The chairperson may also call upon attendees to contribute to the committee discussions.

FDA also regularly meets or holds teleconferences with its approved accreditation bodies and State certification agencies to discuss issues of mutual concern. We also engage with the Conference of State Radiation Program Directors (CRCPD), a professional organization of State agencies concerned with radiation protection. The CRCPD has established a standing Mammography Committee,

which meets with FDA mammography staff at least once a year.

Finally, in recent years, FDA mammography staff have met several times with representatives of manufacturers working on the new applications of digital technology in mammography to resolve problems preventing the making of that technology generally available. FDA mammography staff have also worked with representatives of the manufacturers to develop quality assurance manuals for full field digital mammography units.

We estimate the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN

Activity/21 CFR section/FDA form No.	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours [1]
Notification of intent to become an AB—900.3(b)(1)	0.33	1	0.33	1	1
Application for approval as an AB; full [2]—900.3(b)(3)	0.33	1	0.33	320	106
Application for approval as an AB; limited [3]—900.3(b)(3).	5	1	5	30	150
AB renewal of approval—900.3(c)	1	1	1	15	15
AB application deficiencies—900.3(d)(2)	0.1	1	0.1	30	3
AB resubmission of denied applications—900.3(d)(5)	0.1	1	0.1	30	3
Letter of intent to relinquish accreditation authority—900.3(e).	0.1	1	0.1	1	1
Summary report describing all facility assessments—900.4(f).	330	1	330	7	2,310
AB reporting to FDA; facility [4]—900.4(h)	8,718	1	8,718	1	8,718
AB reporting to FDA; AB [5]—900.4(h)	5	1	5	10	50
AB financial records—900.4(i)(2)	1	1	1	16	16
Former AB new application—900.6(c)(1)	0.1	1	0.1	60	6
Reconsideration of accreditation following appeal—900.15(d)(3)(ii).	1	1	1	2	2
Application for alternative standard—900.18(c)	2	1	2	2	4
Alternative standard amendment—900.18(e)	10	1	10	1	10
Certification agency application—900.21(b)	0.33	1	0.33	320	106
Certification agency application deficiencies—900.21(c)(2).	0.1	1	0.1	30	3
Certification electronic data transmission—900.22(h)	5	200	1,000	0.083 (5 minutes)	83
Changes to standards—900.22(i)	2	1	2	30	60
Certification agency minor deficiencies—900.24(b)	1	1	1	30	30
Appeal of adverse action taken by FDA—900.25(a)	0.2	1	0.2	16	3
Inspection fee exemption—FDA Form 3422	419	1	419	0.25 (15 minutes)	105
Total					11,785

[1] Numbers have been rounded.
[2] One time burden.
[3] Refers to accreditation bodies applying to accredit specific full-field digital mammography units.
[4] Refers to the facility component of the burden for this requirement.
[5] Refers to the AB component of the burden for this requirement.

TABLE 2—ESTIMATED ANNUAL RECORDKEEPING BURDEN

Activity/21 CFR section	Number of recordkeepers	Number of records per recordkeeper	Total annual records	Average burden per recordkeeping	Total hours [1]
AB transfer of facility records—900.3(f)(1)	0.1	1	0.1	0	1
Consumer complaints system; AB—900.4(g)	5	1	5	1	5
Documentation of interpreting physician initial requirements—900.12(a)(1)(i)(B)(2).	87	1	87	8	696
Documentation of interpreting physician personnel requirements—900.12(a)(4).	8,718	4	34,872	1	34,872

Total					238,971

[1] Total hours have been rounded.

TABLE 3—ESTIMATED ANNUAL THIRD-PARTY DISCLOSURE BURDEN

Activity/21 CFR section	Number of respondents	Number of disclosures per respondent	Total annual disclosures	Average burden per disclosure	Total hours [1]
Notification of facilities that AB relinquishes its accreditation—900.3(f)(2).	0.1	1	0.1	200	20
Clinical images; facility [2]—900.4(c), 900.11(b)(1), and 900.11(b)(2).	2,885	1	2,885	1.44	4,154
Clinical images; AB [3]—900.4(c)	5	1	5	416	2,080
Phantom images; facility [2]—900.4(d), 900.11(b)(1), and 900.11(b)(2).	2,885	1	2,885	0.72 (43 minutes)	2,077
Phantom images; AB [3]—900.4(d)	5	1	5	208	1,040
Annual equipment evaluation and survey; facility [2]—900.4(e), 900.11(b)(1), and 900.11(b)(2).	8,718	1	8,718	1	8,718
Annual equipment evaluation and survey; AB [3]—900.4(e).	5	1	5	1,730	8,650
Provisional mammography facility certificate extension application—900.11(b)(3).	0	1	0	0.5 (30 minutes)	1
Mammography facility certificate reinstatement application—900.11(c).	281	1	281	5	1,405
Lay summary of examination—900.12(c)(2)	8,718	5,085	44,331,030	0.083 (5 minutes)	3,679,475
Lay summary of examination; patient refusal [4]—900.12(c)(2).	87	1	87	0.5 (30 minutes)	44
Report of unresolved serious complaints—900.12(h)(4).	20	1	20	1	20
Information regarding compromised quality; facility [2]—900.12(j)(1).	20	1	20	200	4,000
Information regarding compromised quality; AB [3]—900.12(j)(1).	20	1	20	320	6,400
Patient notification of serious risk—900.12(j)(2)	5	1	5	100	500
Reconsideration of accreditation—900.15(c)	5	1	5	2	10
Notification of requirement to correct major deficiencies—900.24(a).	0.4	1	0.4	200	80
Notification of loss of approval; major deficiencies—900.24(a)(2).	0.15	1	0.15	100	15
Notification of probationary status—900.24(b)(1)	0.3	1	0.3	200	60
Notification of loss of approval; minor deficiencies—900.24(b)(3).	0.15	1	0.15	100	15
Total					3,718,764

[1] Total hours have been rounded.
[2] Refers to the facility component of the burden for this requirement.
[3] Refers to the AB component of the burden for this requirement.
[4] Refers to the situation where a patient specifically does not want to receive the lay summary of her exam.

Respondents use the Mammography Program Reporting and Information System to submit information. Our estimated burden for the information collection reflects an overall increase of 28,664 hours and a corresponding increase of 9,137,449 responses/records. We attribute this adjustment to an increase in the number of submissions we received over the last few years. We do not include burden for §§ 900.12(c)(1) and (3), 900.3(f)(1), and 900.24(c) because if a certifying State had its approval withdrawn, FDA would take over certifying authority for the affected facilities. Because FDA already has all the certifying State's electronic records, we assume no additional reporting burden.

Dated: August 4, 2022.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Nursing Research; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Advisory Council for Nursing Research.

The meeting will be open to the public as indicated below, with attendance limited to space available.

Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting. The open session will be videocast and can be accessed from the NIH Videocasting website *https://videocast.nih.gov/watch=45856.*

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Advisory Council for Nursing Research.

Date: September 13, 2022.

Open: 11:00 a.m. to 3:30 p.m.

Agenda: Discussion of Program Policies and Issues.

Place: National Institute of Nursing Research, National Institutes of Health, 6701 Democracy Boulevard, One Democracy Plaza, Bethesda, MD 20892, *https://videocast.nih.gov/watch=45856* (Virtual Meeting).

Closed: 3:30 p.m. to 4:00 p.m.

Agenda: To review and evaluate review of Applications.

Place: National Institute of Nursing Research, National Institutes of Health, 6701 Democracy Boulevard, One Democracy Plaza, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Dr. Elizabeth Tarlov, Ph.D., RN, Director, Division of Extramural Science Programs (DESP), National Institute of Nursing Research, 31 Center Drive, Bethesda, MD 20892, (301) 594–1580, *elizabeth.tarlov@nih.gov.*

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's/Center's home page: *https://www.ninr.nih.gov/aboutninr/nacnr,* where an agenda and any additional information for the meeting will be posted when available.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

HHS Approval of Entities That Certify Medical Review Officers

AGENCY: Substance Abuse and Mental Health Services Administration, HHS.

ACTION: Notice.

SUMMARY: This notice publishes a list of the Department of Health and Human Services (HHS) approved Medical Review Officers certification entities. The HHS Mandatory Guidelines for Federal Workplace Drug Testing Programs (Mandatory Guidelines), effective on October 1, 2017, addresses the role and qualifications of Medical Review Officers (MROs) and HHS approval of entities that certify MROs.

DATES: HHS approval is effective August 10, 2022.

FOR FURTHER INFORMATION CONTACT: Sean J. Belouin, Pharm.D., CAPT, United States Public Health Service, Senior Science Policy Advisor, Substance Abuse and Mental Health Services Administration, 5600 Fishers Lane, Rockville, Maryland 20857; Telephone: (240) 276–2316; Email: *sean.belouin@samhsa.hhs.gov.*

SUPPLEMENTARY INFORMATION: Subpart M—Medical Review Officer (MRO), Section 13.2 of the Mandatory Guidelines, ''How are nationally recognized entities or subspecialty boards that certify MROs approved?'' states as follows: ''All nationally recognized entities or subspecialty boards which seek approval by the Secretary to certify physicians as MROs for federal workplace drug testing programs must submit their qualifications, a sample examination, and other necessary supporting examination materials (*e.g.,* answers, previous examination statistics or other background examination information, if requested). Approval will be based on an objective review of qualifications that include a copy of the MRO applicant application form, documentation that the continuing education courses are accredited by a professional organization, and the delivery method and content of the examination. Each approved MRO certification entity must resubmit their qualifications for approval every two years. The Secretary shall publish at least every two years a notice in the **Federal Register** listing those entities and subspecialty boards that have been approved. This notice is also available on the internet at *http://www.samhsa.gov/workplace/drug-testing.*''

HHS has completed its review of entities that certify MROs, in accordance with requests submitted by such entities to HHS. The Assistant Secretary for Mental Health and Substance Use approves the following MRO certifying entities that offer MRO certification through examination:

American Association of Medical Review Officers (AAMRO), P.O. Box 12873, Research Triangle Park, NC 27709, Phone: (919) 489–5407, Fax: (919) 490–1010, Email: *bbrandon@aamro.com*, Website: *http://www.aamro.com/*.

Medical Review Officer Certification Council (MROCC), 3231 S. Halsted St, #167, Chicago, IL 60608, Phone: (847) 631–0599, Fax: (847) 483–1282, Email: *mrocc@mrocc.org*, Website: *http://www.mrocc.org/*.

MROPREP, 2108 N St, STE N, Sacramento, CA 95816, Phone: (669) 299–5348, Email: *support@mroprep.com*, Website: *https://www.mroprep.com/courses/mrocourse*.

Miriam E. Delphin-Rittmon,

Assistant Secretary for Mental Health and Substance Use.

BILLING CODE 4162–20–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

[OMB Control Number 1615–0113]

Agency Information Collection Activities; Extension, Without Change, of a Currently Approved Collection: MyAppointment

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security.

ACTION: 30-Day notice.

SUMMARY: The Department of Homeland Security (DHS), U.S. Citizenship and Immigration Services (USCIS) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995. The purpose of this notice is to allow an additional 30 days for public comments.

DATES: Comments are encouraged and will be accepted until September 9, 2022.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, must be submitted via the Federal eRulemaking Portal website at *http://www.regulations.gov* under e-Docket ID number USCIS–2009–0024. All submissions received must include the OMB Control Number 1615–0113 in the body of the letter, the agency name and Docket ID USCIS–2009–0024.

FOR FURTHER INFORMATION CONTACT: USCIS, Office of Policy and Strategy, Regulatory Coordination Division, Samantha Deshommes, Chief, Telephone number (240) 721–3000 (This is not a toll-free number; comments are not accepted via telephone message.). Please note contact information provided here is solely for questions regarding this notice. It is not for individual case status inquiries. Applicants seeking information about the status of their individual cases can check Case Status Online, available at

the USCIS website at *http://www.uscis.gov,* or call the USCIS Contact Center at (800) 375–5283; TTY (800) 767–1833.

SUPPLEMENTARY INFORMATION:

Comments

The information collection notice was previously published in the **Federal Register** on May 16, 2022, at 87 FR 29759, allowing for a 60-day public comment period. USCIS did not receive comments in connection with the 60-day notice.

You may access the information collection instrument with instructions, or additional information by visiting the Federal eRulemaking Portal site at: *http://www.regulations.gov* and enter USCIS–2009–0024. in the search box. The comments submitted to USCIS via this method are visible to the Office of Management and Budget and comply with the requirements of 5 CFR 1320.12(c). All submissions will be posted, without change, to the Federal eRulemaking Portal at *http://www.regulations.gov,* and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to consider limiting the amount of personal information that you provide in any voluntary submission you make to DHS. DHS may withhold information provided in comments from public viewing that it determines may impact the privacy of an individual or is offensive. For additional information, please read the Privacy Act notice that is available via the link in the footer of *http://www.regulations.gov.*

Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection Request:* Extension, Without Change, of a Currently Approved Collection.

(2) *Title of the Form/Collection:* MyAppointment.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* No Form Number; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary:* Individuals or households. The MyAppointment system allows an applicant or petitioner to schedule an interview appointment with USCIS through USCIS' internet website.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection MyAppointment is 1,043,319 and the estimated hour burden per response is .1 hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 104,332 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* There is no estimated total annual cost burden associated with this collection of information, all costs are captured in the information collections that require an appointment.

Dated: August 4, 2022.

Samantha L Deshommes,

Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security.

[FR Doc. 2022–17116 Filed 8–9–22; 8:45 am]

BILLING CODE 9111–97–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–R8–ES–2022–0027; FXES11140800000–223–FF08ECAR00]

Endangered and Threatened Wildlife and Plants; Incidental Take Permit Application; Proposed Habitat Conservation Plan Amendment and Associated Documents; County of San Diego, California

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce the receipt of an application for an incidental take permit (ITP) under the Endangered Species Act, and a draft habitat conservation plan amendment, from San Diego Gas & Electric. We have also prepared a draft environmental assessment under the National Environmental Policy Act.

DATES: We will accept comments received or postmarked on or before September 9, 2022.

ADDRESSES:

Obtaining Documents: Electronic copies of the documents this notice announces, along with public comments received, will be available online in Docket No. FWS–R8–ES–2022–0027 at *https://www.regulations.gov.*

Submitting Comments: You may submit comments by one of the following methods:

- *Email: fw8cfwocomments@fws.gov.* Please include ''San Diego Gas & Electric HCP Amendment'' at the beginning of your comments.
- *Hardcopy:* Submit comments by U.S. mail to: Assistant Field Supervisor, Carlsbad Fish and Wildlife Office, U.S. Fish and Wildlife Service, 2177 Salk Avenue, Suite 250, Carlsbad, CA 92008.

FOR FURTHER INFORMATION CONTACT: Mr. Jonathan Snyder, Assistant Field Supervisor, Carlsbad Fish and Wildlife Office (see **ADDRESSES**); telephone: 760–431–9440. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: We, the U.S. Fish and Wildlife Service (Service), have received an application from San Diego Gas & Electric (SDG&E) for an incidental take permit (ITP) through the year 2050 that would cover 41 species, pursuant to section 10(a)(1)(B) of the Endangered Species Act of 1973, as amended (Act; 16 U.S.C. 1531 *et seq.*). SDG&E has prepared the *Public Review Draft San Diego Gas & Electric Company Habitat Conservation Plan Amendment 2022* (HCP amendment), which would amend their 1995 *Subregional Natural Community Conservation Plan and Habitat Conservation Plan* (subregional HCP) pursuant to section 10(a)(1)(B) of the Act. The HCP Amendment includes 41 covered species, and the applicant is requesting the authorization of incidental take of the 25 covered wildlife species that could result from activities covered under the HCP amendment. The HCP amendment

includes a conservation program to avoid, minimize, and mitigate for covered activities.

The HCP amendment also includes an eagle conservation plan (ECP) that SDG&E developed with the Service. The ECP provides the information required by the Bald and Golden Eagle Protection Act (BGEPA; 16 U.S.C. 668 and 50 CFR 22) and the Service's final rule revising the regulations that govern the Service's eagle take permit program (50 CFR 13; 50 CFR 22; and 81 FR 91494, December 16, 2016) to continue including bald eagle (*Haliaeetus leucocephalus*) and golden eagle (*Aquila chrysaetos*) as covered species under the HCP amendment.

In connection with the application, we have prepared a draft environmental assessment (draft EA) under the National Environmental Policy Act of 1967, as amended (42 U.S.C. 4321 *et seq.;* NEPA), and its implementing regulations in the Code of Federal Regulations (CFR) at 40 CFR 1506.6.

We are requesting comments on the permit application and on the draft EA.

Background

Section 9 of the Act and its implementing Federal regulations prohibit the ''take'' of animal species listed as endangered or threatened. Take is defined under the Act as to ''harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in such conduct'' (16 U.S.C. 1538). ''Harm'' includes significant habitat modification or degradation that actually kills or injures listed wildlife by significantly impairing essential behavioral patterns such as breeding, feeding, or sheltering (50 CFR 17.3). However, under section 10(a) of the Act, the Service may issue permits to authorize incidental take of listed species. ''Incidental taking'' is defined as ''any taking otherwise prohibited, if such taking is incidental to, and not the purpose of, the carrying out an otherwise lawful activity'' (50 CFR 17.3). Regulations governing incidental take permits for endangered and threatened species, respectively, are found at 50 CFR 17.22 and 50 CFR 17.32.

Proposed Action

The Service would issue an ITP to SDG&E for the amendment to its subregional HCP for certain covered activities. SDG&E has requested an ITP for 41 covered species, including 25 animals and 16 plants, of which 31 are currently listed as threatened or endangered under the Act. Implementation of the HCP amendment may result in 400 acres (ac) of permanent impacts, 210 ac of temporary impacts, and 210 ac of wildfire fuels management impacts to habitat supporting covered species. The impacts anticipated are in addition to the 400 ac of habitat impacts authorized and mitigated under ITP No. PRT–809637 for the subregional HCP. The original ITP for the subregional HCP was set to expire in 2050, and the ITP for the HCP amendment is anticipated to have the same expiration date.

Plan Area

The HCP amendment plan area has been expanded from that for the subregional HCP to include all of SDG&E's 2,815,930-ac service area in all of San Diego County and portions of Orange and Riverside Counties. The plan area includes all of SDG&E's gas and electric transmission and distribution facilities, rights-of-way, buffer lands, areas owned by SDG&E and/or subject to SDG&E easements, access routes, and those areas acquired as mitigation to offset the impacts resulting from covered activities. The total plan area includes approximately 2,021,745 ac (72 percent) of natural land cover types and 794,185 ac (28 percent) of other land cover types (*e.g.,* agriculture, disturbed habitat, eucalyptus woodland, and urban/developed).

Covered Activities

The proposed section 10 ITP would allow take of covered wildlife species resulting from covered activities in the proposed HCP amendment plan area. SDG&E is requesting incidental take authorization for covered species that could be affected by activities identified in the HCP amendment. The HCP amendment covers all SDG&E operations and maintenance (O&M), minor new construction, and wildfire fuels management that may result in take of covered species in the plan area. O&M activities occur throughout SDG&E's existing network of facilities and would occur at or near the existing facilities. Minor new construction activities include installing new or replacement structures to upgrade facilities or to extend service to new customers. Minor new construction, when in preserves or proposed preserves, is limited to 1.75 acres per project. Impacts greater than 1.75 acres from minor new construction in preserves or proposed preserves would require a minor amendment approved by the Service as described in the HCP amendment. Minor amendments are permissible without amending the underlying section 10(a)(l)(B) permit, provided that the Service determines that the changes do not (1) result in additional incidental take of/impacts to covered species not analyzed in connection with the original HCP amendment; (2) result in operations under the HCP amendment that are significantly different from those analyzed in connection with the original HCP amendment; or (3) have adverse effects on the environment that are new or significantly different from those analyzed in connection with the original HCP amendment.

Covered Species

Covered species are those species addressed in the HCP amendment for which conservation actions will be implemented and for which SDG&E is seeking an ITP. Proposed covered species include the following wildlife species that are listed as threatened (T) or endangered (E) under the Act: San Diego fairy shrimp (*Branchinecta sandiegonensis,* E), Riverside fairy shrimp (*Streptocephalus woottoni,* E), Laguna Mountains skipper (*Pyrgus ruralis lagunae,* E), Hermes copper butterfly (*Lycaena hermes,* T), arroyo toad (*Anaxyrus californicus,* E), California red-legged frog (*Rana draytonii,* E), western snowy plover (Pacific Coast Population Distinct Population Segment (DPS) [*Charadrius nivosus nivosus* (*C. alexandrinus n.*), T], western yellow-billed cuckoo (*Coccyzus americanus occidentalis,* E), southwestern willow flycatcher (*Empidonax traillii extimus,* E), coastal California gnatcatcher (*Polioptila californica californica,* T), light-footed Ridgway's (=clapper) rail [*Rallus obsoletus* (=*longirostris*) *levipes,* E], California least tern [*Sternula antillarum browni* (*Sterna a. b.*), E], least Bell's vireo (*Vireo bellii pusillus,* E), Stephens' kangaroo rat (*Dipodomys stephensi,* T), peninsular bighorn sheep (*Ovis canadensis nelson,* E), and Pacific pocket mouse (*Perognathus longimembris pacificus,* E).

The golden eagle (*Aquila chrysaetos*) and the bald eagle (*Haliaeetus leucocephalus*) are also covered species in the HCP amendment, along with other regionally sensitive wildlife species, including western spadefoot (*Spea hammondii*), western pond turtle (*Actinemys marmorata*), coast horned lizard (*Phrynosoma blainvillii*), tricolored blackbird (*Agelaius tricolor*), burrowing owl (*Athene cunicularia*), coastal cactus wren (*Campylorhynchus brunneicapillus sandiegensis*) and the Belding's savannah sparrow (*Passerculus sandwichensis beldingi*).

The definition of ''take'' in the Act does not apply to plants. However, SDG&E proposes to include federally

listed plant species in recognition of the conservation benefits provided for them under the HCP amendment. For the purposes of the HCP amendment, federally listed plant species are further included to meet regulatory obligations under section 7 of the Act. SDG&E would receive assurances for all species included on the ITP under Service's ''No Surprises'' regulations found at 50 CFR 17.22(b)(5) and 50 CFR 17.32(b)(5). The following federally listed plant species are included as covered species in the HCP amendment: San Diego thorn-mint (*Acanthomintha ilicifolia,* T), San Diego ambrosia (*Ambrosia pumila,* E), Del Mar manzanita (*Arctostaphylos glandulosa* ssp. *crassifolia,* E) Encinitas baccharis (*Baccharis vanessae,* T), thread-leaved brodiaea *(Brodiaea filifolia*), Salt marsh bird's-beak (*Chloropyron maritimum* ssp. *maritimum,* E), Orcutt's spineflower (*Chorizanthe orcuttiana,* E), Otay tarplant (*Deinandra conjugens,* T), San Diego button-celery (*Eryngium aristulatum* var. *parishii,* E), willowy monardella (*Monardella viminea,* E), spreading navarretia (*Navarretia fossalis,* T), California Orcutt grass (*Orcuttia californica,* E), San Diego mesa mint (*Pogogyne abramsii,* E), and Otay Mesa mint (*Pogogyne nudiuscula,* E).

National Environmental Policy Act Compliance

The draft EA was prepared to analyze the impacts of issuing an ITP based on the HCP amendment and to inform the public of the proposed action, alternatives, and associated impacts and disclose any irreversible commitments of resources. The proposed ITP issuance triggers the need for compliance with NEPA. The proposed action presented in the draft EA is compared to the no-action alternative. The no-action alternative represents estimated future conditions to which the proposed action's estimated future conditions can be compared.

Next Steps

We will evaluate the proposed HCP amendment and comments we receive to determine whether the permit application meets the requirements and issuance criteria under section 10(a) of the Act (16 U.S.C. 1531 *et seq.*). We will also evaluate whether issuance of a section 10 ITP would comply with section 7 of the Act by conducting an intra-Service consultation. We will use the results of this consultation, in combination with the above findings, in our final analysis to determine whether or not to issue an ITP. If the requirements and issuance criteria under section 10(a) are met, we will issue the ITP to SDG&E for incidental take of covered species.

Public Comments

If you wish to comment on the permit application, proposed HCP amendment, and associated documents, you may submit comments by any of the methods noted in the **ADDRESSES** section.

Public Availability of Comments

Before including your name, address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority

We provide this notice under section 10 of the Act (16 U.S.C. 1531 *et seq.*) and NEPA regulations (40 CFR 1506.6).

Scott Sobiech,

Field Supervisor, Carlsbad Fish and Wildlife Office, Carlsbad, California.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLNVS01000 L1232.0000.EA0000 LVRDNV080000 241A 20X MO# 4500163715]

Notice of Temporary Closure of Public Lands for the 2022 Rise Lantern Festival in Clark County, Nevada

AGENCY: Bureau of Land Management, Interior.

ACTION: Temporary closure.

SUMMARY: The Las Vegas Field Office announces the temporary closure of certain public lands under its administration in Clark County, NV. This temporary closure is being made in the interest of public safety in relation to the authorized 2022 Rise Lantern Festival. This closure controls access to multiple points of entry to the festival located on the Jean Dry Lake Bed in order to minimize the risk of vehicle collisions with festival participants and workers. The temporary closure also ensures adequate time to conduct clean-up of the festival location.

DATES: The temporary closure will go into effect at 12:01 a.m. on October 7, 2022, and will remain in effect until 11:59 p.m. on October 8, 2022.

ADDRESSES: The temporary closure order and map of the closure area will be posted at the BLM Las Vegas Field Office, 4701 North Torrey Pines Drive, Las Vegas, Nevada 89130 and on the BLM website: *www.blm.gov.* These materials will also be posted at the access point of Jean Dry Lake Bed and the surrounding areas.

FOR FURTHER INFORMATION CONTACT: Kenny Kendrick, Supervisory Resource Management Specialist, (702) 515–5073, or *kkendrick@blm.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The Las Vegas Field Office announces the temporary closures of certain public lands under its administration. This action is being taken to help ensure public safety and prevent unnecessary environmental degradation during the official permitted running of the 2022 Rise Lantern Festival. The public lands affected by this closure are described as follows:

Mount Diablo Meridian, Nevada

T. 24 S., R. 60 E.,
- Secs. 20 and 21, those portions lying easterly and southerly of the easterly and southerly right-of-way boundary of State Route 604;
- Secs. 22 and 27, those portions lying westerly and southerly of the westerly and southerly right-of-way boundary of the Southern Nevada Lightweight Road;
- Sec. 28;
- Sec. 29, those portions lying easterly and southerly of the easterly and southerly right-of-way boundary of the State Route 604;
- Sec. 31, those portions of the E1/2 lying easterly and southerly of the easterly and southerly right-of-way boundary of the State Route 604, excepting NVCC–0000360;
- Sec. 32, those portions lying easterly and southerly of the easterly and southerly right-of-way boundary of the State Route 604;
- Secs. 33 and 34.

T. 25 S., R. 60 E.,
- Sec. 2, W1/2;
- Secs. 3 thru 5;
- Sec. 6, those portions lying easterly and southerly of the easterly and southerly right-of-way boundary of the State Route 604, excepting NVCC–0000360;
- Sec. 7, excepting NVCC–0000360;
- Secs. 8 thru 10;
- Sec. 11, W1/2;
- Sec. 14, W1/2;
- Secs. 15 thru 17.

The area described contains 12,030 acres, more or less, according to the BLM National PLSS CadNSDI and the official plats of the surveys of the said lands, on file with the BLM.

The temporary closures will be posted to roads leading into the public lands to notify the public of the closures for the event. The closure area includes the Jean Dry Lake Bed and is bordered by Hidden Valley to the east, Sheep Mountain to the southwest, and the right-of-way boundary of State Route 604. Under the authority of Section 303(a) of the Federal Lands Policy and Management Act of 1976 (43 U.S.C. 1733(a)), 43 CFR 8360.0–7 and 43 CFR 8364.1, the BLM will enforce the following rules in the area described above:

The entire area as listed in the legal description above is closed to all vehicles and personnel except law enforcement, emergency vehicles, event personnel, event participants, and spectators. Access routes leading to the closed area will be signed to indicate a closure ahead. No vehicle stopping or parking in the closed area except for designated parking areas will be permitted. Event participants and spectators are required to remain within designated areas only.

The following restrictions will be in effect for the duration of the closure to ensure public safety of participants and spectators. Unless otherwise authorized, the following activities within the closure area are prohibited:

- Camping.
- Possession and/or consuming any alcoholic beverage, unless the person has reached the age of 21 years.
- Discharging or use of firearms or other weapons.
- Possession and/or discharging of fireworks.
- Allowing any pet or other animal in a person's care to be unrestrained at any time. Animals must be on a leash or other restraint no longer than 3 feet.
- Operation of any vehicle including any off-highway vehicle (OHV) and golf carts within the closure area, except along designated event routes to and from entrance/exit points and parking areas, or designated event vehicles and official vehicles.
- Parking any vehicle in violation of posted restrictions, or in such a manner as to obstruct or impede normal or emergency traffic movement or the parking of other vehicles, create a safety hazard, or endanger any person, property, or feature. Vehicles so parked are subject to citation, removal, and impoundment at the owner's expense.
- Operating a vehicle through, around, or beyond a restrictive sign, recognizable barricade, fence, or traffic control barrier or device.

Signs and maps directing the public to designated spectator areas will be provided by the event sponsor.

Exceptions: Temporary closure restrictions do not apply to BLM employees, contractors, or agents engaged in official duties; any Federal, State, or local officer; member of an organized rescue or firefighting force engaged in fire, emergency, or law enforcement activities; public utility employees engaged in emergency repairs; or vehicles owned by or contracted by the United States, the State of Nevada, or Clark County. The closure restrictions also do not apply to vehicles under permit for operation by event staff, contractors, and festival participants. Authorized users must have in their possession a written permit or contract from the BLM, signed by the authorized officer.

Enforcement: Any person who violates this temporary closure may be tried before a United States Magistrate and fined in accordance with 18 U.S.C. 3571, imprisoned no more than 12 months under 43 U.S.C. 1733(a) and 43 CFR 8360.0–7, or both. In accordance with 43 CFR 8365.1–7, State or local officials may also impose penalties for violations of Nevada law.

(Authority: 43 CFR 8360.0–7 and 8364.1)

Shonna Dooman,

Field Manager—Las Vegas Field Office.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NRNHL–DTS#–34306; PPWOCRADI0, PCU00RP14.R50000]

National Register of Historic Places; Notification of Pending Nominations and Related Actions

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: The National Park Service is soliciting electronic comments on the significance of properties nominated before July 30, 2022, for listing or related actions in the National Register of Historic Places.

DATES: Comments should be submitted electronically by August 25, 2022.

ADDRESSES: Comments are encouraged to be submitted electronically to *National_Register_Submissions@nps.gov* with the subject line ''Public Comment on <property or proposed district name, (County) State>.'' If you have no access to email you may send them via U.S. Postal Service and all other carriers to the National Register of Historic Places, National Park Service, 1849 C Street NW, MS 7228, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Sherry A. Frear, Chief, National Register of Historic Places/National Historic Landmarks Program, 1849 C Street NW, MS 7228, Washington, DC 20240, *sherry_frear@nps.gov,* 202–913–3763.

SUPPLEMENTARY INFORMATION: The properties listed in this notice are being considered for listing or related actions in the National Register of Historic Places. Nominations for their consideration were received by the National Park Service before July 30, 2022. Pursuant to Section 60.13 of 36 CFR part 60, comments are being accepted concerning the significance of the nominated properties under the National Register criteria for evaluation.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

BILLING CODE 4312–52–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1298]

Certain Networking Devices, Computers, and Components Thereof and Systems Containing the Same; Notice of a Commission Determination Not To Review an Initial Determination Terminating the Investigation for Good Cause; Denial of Motion To Strike as Moot; Termination of the Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission (''Commission'') has determined not to review an initial determination (''ID'') (Order No. 15) of the presiding chief administrative law judge (''CALJ''), terminating the investigation for good cause. The investigation is terminated.

FOR FURTHER INFORMATION CONTACT: Benjamin S. Richards, Esq., Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 708–5453. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on February 18, 2022, based on a complaint filed by Proven Networks, LLC of Los Angeles, CA (''Proven''). 87

FR 9382 (Feb. 18, 2022). The complaint, as supplemented, alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain networking devices, computers, and components thereof and systems containing the same by reason of infringement of claims 1–37 of U.S. Patent No. 8,687,573. *Id.* The complaint further alleges that a domestic industry exists. *Id.* The Commission's notice of investigation named as respondent NetApp, Inc. of San Jose, CA (''NetApp''). *Id.* The Office of Unfair Import Investigations is not participating in the investigation. *Id.*

On May 5, 2022, NetApp moved, ''[p]ursuant to Commission Rule 210.21(a) [19 CFR 210.21(a)] . . . for termination of the instant investigation based on [Proven's] clear and unequivocal waiver of the sole basis on which Proven alleges it satisfies the domestic industry requirement.'' *Certain Networking Devices, Computers, and Components Thereof and Sys. Containing the Same,* Inv. No. 337–TA–1298, Respondent's Mot. to Terminate Based on Waiver of Domestic Indus., 1 (May 5, 2022). Proven filed a response in opposition to the motion to terminate on May 16, 2022. The CALJ held oral argument on the motion on June 1, 2022. At the outset of the argument, the CALJ characterized the pending motion as one ''to terminate the investigation for good cause.'' Tr. at 4 (EDIS Doc. ID 772805).

On July 5, 2022, the CALJ issued the subject ID granting NetApp's motion and terminating the investigation in its entirety. The ID relies on the ''good cause'' language of Commission Rule 210.21(a)(1) as the basis for granting the motion. ID at 4, 12. Substantively, the ID finds that ''Proven expressly waived its ability to rely on [third-party] Extreme's products and activities to demonstrate a domestic industry in this investigation,'' and that ''[w]ithout the ability to rely on Extreme's products and services, Proven cannot satisfy the domestic industry requirement of section 337 and no violation of section 337 can be found.'' ID at 12. The Commission has determined not to review the subject ID.

The Commission has also determined to deny as moot a motion filed by NetApp to strike Proven's untimely petition for review. Proven filed an untimely petition for review of the ID, which NetApp moved to strike. Proven's request that its petition for review be received out of time was denied by the Chair. *See* EDIS Doc. ID 776332 (July 27, 2022). As such, Proven's petition for review is not on the record and therefore NetApp's motion to strike the petition from the record is moot.

The investigation is hereby terminated in its entirety.

The Commission vote for this determination took place on August 4, 2022.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: August 5, 2022.

Katherine Hiner,

Acting Secretary to the Commission.

[FR Doc. 2022–17196 Filed 8–9–22; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–668–669 and 731–TA–1565–1566 (Final)]

Urea Ammonium Nitrate Solutions From Russia and Trinidad and Tobago

Determinations

On the basis of the record [1] developed in the subject investigations, the United States International Trade Commission (''Commission'') determines, pursuant to the Tariff Act of 1930 (''the Act''), that an industry in the United States is not materially injured or threatened with material injury by reason of imports of urea ammonium nitrate solutions from Russia and Trinidad and Tobago, provided for in subheading 3102.80.00 of the Harmonized Tariff Schedule of the United States, that have been found by the U.S. Department of Commerce (''Commerce'') to be subsidized by the governments of Russia and Trinidad and Tobago and to be sold in the United States at less than fair value (''LTFV'').[2]

Background

The Commission instituted these investigations effective June 30, 2021, following receipt of petitions filed with the Commission and Commerce by CF Industries Nitrogen, LLC and its subsidiaries, Terra Nitrogen, Limited Partnership and Terra International (Oklahoma) LLC, all of Deerfield, Illinois. The final phase of the investigations was scheduled by the Commission following notification of preliminary determinations by Commerce that imports of urea ammonium nitrate solutions from Russia and Trinidad and Tobago were subsidized within the meaning of section 703(b) of the Act (19 U.S.C. 1671b(b)) and sold at LTFV within the meaning of 733(b) of the Act (19 U.S.C. 1673b(b)). Notice of the scheduling of the final phase of the Commission's investigations and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** on February 23, 2022 (87 FR 10241). The Commission conducted its hearing on June 16, 2022. All persons who requested the opportunity were permitted to participate.

The Commission made these determinations pursuant to §§ 705(b) and 735(b) of the Act (19 U.S.C. 1671d(b) and 19 U.S.C. 1673d(b)). It completed and filed its determinations in these investigations on August 4, 2022. The views of the Commission are contained in USITC Publication 5338 (August 2022), entitled *Urea Ammonium Nitrate Solutions from Russia and Trinidad and Tobago: Investigation Nos. 701–TA–668–669 and 731–TA–1565–1566 (Final).*

By order of the Commission.

Issued: August 5, 2022.

Katherine Hiner,

Acting Secretary to the Commission.

granting a joint motion to terminate the investigation in its entirety based on settlement. The investigation is terminated.

FOR FURTHER INFORMATION CONTACT: Megan M. Valentine, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 708–2301. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: On November 4, 2021, the Commission instituted this investigation based on a complaint filed on behalf of Honeywell International Inc., Hand Held Products, Inc., and Metrologic Instruments, Inc. (collectively, ''Complainants''), all of Charlotte, North Carolina. 86 FR 60915 (Nov. 4, 2021). The complaint alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain bar code scanners, mobile computers with bar code scanning capabilities, scan engines, and components thereof that infringe one of more claims of U.S. Patent Nos. 8,794,520 (''the '520 patent''); 7,568,628 (''the '628 patent''); 7,770,799 (''the '799 patent''); 9,576,169 (''the '169 patent''); and 10,721,429 (''the '429 patent''). *Id.* The complaint also alleges that a domestic industry exists or is in the process of being established. *Id.* The Commission's notice of investigation named Zebra Technologies Corporation of Lincolnshire, Illinois and Symbol Technologies, Inc. of Holtsville, New York (collectively, ''Respondents'') as respondents. *Id.* The Office of Unfair Import Investigations is participating in this investigation. *Id.*

The Commission previously terminated the investigation as to the '520 patent and certain claims of the '628, '799, '169, and '429 patents. Order No. 13 (Apr. 7, 2022), *unreviewed by* Notice (Apr. 25, 2022); Order No. 19 (May 27, 2022), *unreviewed by* Notice (June 13, 2022).

On July 11, 2022, Complainants and Respondents filed a joint motion to terminate the investigation based on a license and settlement agreement between the parties. No opposition to the motion was filed.

On July 12, 2022, the ALJ issued the subject ID (Order No. 23), granting the joint motion to terminate the investigation based on settlement. The ID finds that the motion for termination satisfies Commission Rule 210.21(b) (19 CFR 210.21(b), and that no extraordinary circumstances exist that would prevent the requested termination. No petitions for review were filed.

The Commission has determined not to review the subject ID. The investigation is terminated in its entirety.

The Commission vote for this determination took place on August 4, 2022.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: August 4, 2022.

Katherine Hiner,

Acting Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Inv. No. 337–TA–1283]

Certain Composite Baseball and Softball Bats and Components Thereof Notice of a Commission Determination Not To Review an Initial Determination Terminating the Investigation With Respect to the Last Active Respondent Based on Settlement; Request for Briefing on Remedy, Bond, and the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission (the ''Commission'') has determined not to review an initial determination (''ID'') (Order No. 23) issued by the presiding administrative law judge (''ALJ'') terminating the investigation with respect to Juno Athletics LLC (''Juno''), the last active respondent, based on settlement. Juno is hereby terminated from this investigation. The Commission requests written submissions from the parties, interested government agencies, and interested persons on issues of remedy, bonding, and the public interest with respect to the respondent found in default.

FOR FURTHER INFORMATION CONTACT: Carl P. Bretscher, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2382. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket system (''EDIS'') at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal, telephone (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on November 2, 2021, based on a complaint filed and supplemented by Easton Diamond Sports, LLC of Thousand Oaks, California (''Easton''). 86 FR 60468–469 (Nov. 2, 2021). The complaint alleges a violation of section 337 of the Tariff Act, as amended, 19 U.S.C. 1337, based on the importation, sale for importation, or sale in the United States after importation of certain composite baseball and softball bats and components thereof by reason of infringement of one or more asserted claims of U.S. Patent No. 6,997,826. *Id.* The complaint further alleges the existence of a domestic industry. *Id.* The Commission's notice of investigation names Juno of Aventura, Florida; Monsta Athletics LLC of Calimesa, California (''Monsta''); and Proton Sports Inc. of Scottsdale, Arizona (''Proton'') as respondents. *Id.* at 60469. The Office of Unfair Import Investigations is not a party to this investigation. *Id.*

On January 25, 2022, the Commission amended the complaint and notice of investigation to add TianChang Zhengmu Aluminum Technology Co., Ltd. of Tianching City, China (''TZA'') as a respondent. Order No. 8 (Dec. 28, 2021), *unreviewed by* Comm'n Notice (Jan. 25, 2022).

On February 16, 2022, the Commission terminated TZA from the investigation based on withdrawal of the complaint. Order No. 11 (Jan. 28, 2022), *unreviewed by* Comm'n Notice (Feb. 16, 2022).

On April 12, 2022, the Commission found respondent Proton in default. Order No. 13 (March 30, 2022), *unreviewed by* Comm'n Notice (April 12, 2022).

On July 25, 2022, the Commission terminated Monsta from the investigation based on withdrawal of the complaint. Order No. 21 (June 27, 2022), *unreviewed by* Comm'n Notice (July 25, 2022).

On July 8, 2022, Easton and Juno filed a joint motion to terminate the investigation with respect to Juno based on a settlement agreement. Easton further requested issuance of a limited exclusion order (''LEO'') against the defaulting respondent, Proton. Joint Motion to Terminate the Investigation as to Respondent Juno Athletics LLC Based on Settlement and Motion to Stay the Investigation as to Juno Athletics LLC at 3 (July 11, 2022).

On July 11, 2022, the presiding ALJ issued the subject ID granting the motion to terminate the investigation with respect to Juno. Order No. 23 (July 11, 2022). The subject ID finds that the joint motion complies with the requirements of Commission Rule 210.21(a), (b) (19 CFR 210.21(a), (b)), in that the settlement agreement completely resolves the dispute between Easton and Juno, and there are no other agreements, oral or written, express or implied, between the parties regarding the subject matter of the investigation. The ID also finds that terminating Juno serves the public interest by avoiding litigation and conserving public and private resources. The ID further finds that terminating Juno is not contrary to the public health and welfare, competitive conditions in the U.S. economy, the production of like or directly competitive articles in the United States, or U.S. consumers. The ID also finds there are no extraordinary circumstances that weigh against termination. No party filed a petition for review of the subject ID.

Upon review of the subject ID, the Commission has determined not to review, and thereby adopts, the subject ID. The investigation is hereby terminated with respect to Juno.

As Juno was the last active respondent in this investigation, only Proton, who was previously found in default, remains. As noted above, Easton seeks an LEO against Proton.

In connection with the final disposition of this investigation, the statute authorizes issuance of an order that could result in the exclusion of the subject articles from entry into the United States. Accordingly, the Commission is interested in receiving written submissions that address the form of remedy, if any, that should be ordered. If a party seeks exclusion of an article from entry into the United States for purposes other than entry for consumption, the party should so indicate and provide information establishing that activities involving other types of entry either are adversely affecting it or likely to do so. For background, see *Certain Devices for Connecting Computers via Telephone Lines,* Inv. No. 337–TA–360, USITC Pub. No. 2843, Comm'n Op. at 7–10 (December 1994).

The statute requires the Commission to consider the effects of any remedy upon the public interest. The public interest factors the Commission will consider include the effect that an exclusion order and/or cease-and-desist order would have on: (1) the public health and welfare; (2) competitive conditions in the U.S. economy; (3) U.S. production of articles that are like or directly competitive with those that are subject to investigation; and (4) U.S. consumers. The Commission is therefore interested in receiving written submissions that address the aforementioned public interest factors in the context of this investigation.

If the Commission orders some form of remedy, the U.S. Trade Representative, as delegated by the President, has 60 days to approve, disapprove, or take no action on the Commission's action. *See* Presidential Memorandum of July 21, 2005. 70 FR 43251 (July 26, 2005). During this period, the subject articles would be entitled to enter the United States under bond, in an amount determined by the Commission and prescribed by the Secretary of the Treasury. The Commission is therefore interested in receiving submissions concerning the amount of the bond that should be imposed if a remedy is ordered.

Written Submissions: Parties to this investigation, interested government agencies, and any other interested parties are requested to file written submissions on the issues of remedy, the public interest, and bonding.

In its initial submission, Complainant is requested to identify the remedy sought and to submit proposed remedial orders for the Commission's consideration. Complainant is also requested to provide the HTSUS subheadings under which the accused products are imported. Complainant is further requested to supply the names of known importers of a respondent's products at issue in this investigation. Complainant is also requested to identify and explain, from the record, articles that it contends are ''components of'' the subject products, and thus potentially covered by the proposed remedial orders, if imported separately from the subject products. *See* 86 FR 60468–469. Failure to provide this information may result in waiver of any remedy directed to ''components of'' the subject products, in the event any violation may be found.

The parties' written submissions and proposed remedial orders must be filed no later than the close of business on August 26, 2022. Reply submissions must be filed no later than the close of business on September 5, 2022. Opening submissions are limited to 30 pages. Reply submissions are limited to 25 pages. No further submissions on any of these issues will be permitted unless otherwise ordered by the Commission.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above. The Commission's paper filing requirements in 19 CFR 210.4(f) are currently waived. 85 FR 15798 (Mar. 19, 2020). Submissions should refer to the investigation number (''Inv. No. 337–TA–1283'') in a prominent place on the cover page and/or first page. (*See* Handbook for Electronic Filing Procedures, *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf.*) Persons with questions regarding filing should contact the Secretary (202–205–2000).

Any person desiring to submit a document to the Commission in confidence must request confidential treatment by marking each document with a header indicating that the document contains confidential information. This marking will be deemed to satisfy the request procedure set forth in Commission Rules 201.6(b) and 210.5(e)(2) (19 CFR 201.6(b), 210.5(e)(2)). Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this Investigation may be disclosed to and used: (i) By the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements. All non-confidential

written submissions will be available for public inspection at the Office of the Secretary and on EDIS.

The Commission voted to approve this determination on August 4, 2022.

The authority for the Commission's determinations is contained in Section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: August 4, 2022.

Katherine Hiner,

Acting Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1041]

Importer of Controlled Substances Application: Lipomed

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Lipomed has applied to be registered as an importer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before September 9, 2022. Such persons may also file a written request for a hearing on the application on or before September 9, 2022.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment. All requests for a hearing must be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrissette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrissette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrissette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on June 13, 2022, Lipomed, 150 Cambridgepark Drive, Suite 705, Cambridge, Massachusetts 02140, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
2-(ethylamino)-2-(3-methoxyphenyl)cyclohexan-1-one (methoxetamine)	7286	I

The company plans to import analytical reference standards for distribution to its customers for research and analytical purposes. No other activity for this drug code is authorized for this registration.

Approval of permit applications will occur only when the registrant's business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or non-approved finished dosage forms for commercial sale.

Kristi O'Malley,

Assistant Administrator.

Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.33(a), this is notice that on May 9, 2022, Cambrex Charles City, 1205 11th Street, Charles City, Iowa 50616–3466, applied to be registered as a bulk manufacturer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
Gamma Hydroxybutyric Acid.	2010	I
Tetrahydrocannabinols	7370	I
Amphetamine	1100	II
Lisdexamfetamine	1205	II
Methylphenidate	1724	II
ANPP (4-Anilino-N-phenethyl-4-piperidine).	8333	II
Phenylacetone	8501	II
Codeine	9050	II
Oxycodone	9143	II
Hydromorphone	9150	II
Hydrocodone	9193	II
Methadone	9250	II
Morphine	9300	II
Oripavine	9330	II

Controlled substance	Drug code	Schedule
Thebaine	9333	II
Opium extracts	9610	II
Opium fluid extract	9620	II
Opium tincture	9630	II
Opium, powdered	9639	II
Oxymorphone	9652	II
Noroxymorphone	9668	II
Fentanyl	9801	II

The company plans to manufacture the listed controlled substances in bulk for conversion to other controlled substances and sales to its customers for dosage form development, clinical trials and use in stability qualification studies.

In reference to drug codes 7360 (Marihuana), and 7370 (Tetrahydrocannabinols), the company plans to bulk manufacture these drugs as synthetic. No other activities for these drug codes are authorized for this registration.

Kristi O'Malley,

Assistant Administrator.

BILLING CODE P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Amendment to Consent Decree Under the Clean Water Act

On August 5, 2022, the Department of Justice lodged a proposed third amendment to a consent decree with the United States District Court for the Eastern District of Missouri in the lawsuit entitled in *United States, et al.* v. *Metropolitan St. Louis Sewer District,* Civil Action No. 4:07–CV–01120.

Under the original 2012 consent decree, the Metropolitan St. Louis Sewer District (''MSD'') agreed to undertake numerous measures to come into compliance with the Clean Water Act, including constructing three combined sewer overflow (''CSO'') storage tunnels. MSD still is in the process of complying with the 2012 decree. The proposed amendment would allow MSD to replace two of these CSO storage tunnels with one larger CSO storage tunnel to accommodate overflows from all of the outfalls related to the original two CSO storage tunnels.

The publication of this notice opens a period of public comment on the proposed amendment. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States, et al.* v. *Metropolitan St. Louis Sewer District,* D.J. Ref. No. 90–5–1–1–08111. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	*Send them to:*
By email	*pubcomment-ees.enrd@usdoj.gov.*
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

During the public comment period, the proposed amendment may be examined and downloaded at this Department of Justice website: *http://www.justice.gov/enrd/consent-decrees.* We will provide a paper copy of the proposed amendment upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Please enclose a check in the amount of $3.25 (25 cents per page reproduction cost) payable to the United States Treasury.

Susan M. Akers,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. OSHA–2022–0002]

National Advisory Committee on Occupational Safety and Health (NACOSH): Notice of Meeting

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice of NACOSH meeting.

SUMMARY: The National Advisory Committee on Occupational Safety and Health (NACOSH) will meet on September 13, 2022. In conjunction with the committee meeting, the NACOSH Heat Injury and Illness Prevention Work Group will meet separately on September 12, 2022.

DATES:

NACOSH Work Group meeting: The NACOSH Heat Injury and Illness Prevention Work Group (Heat Work Group) will meet from 1:00 p.m. to 2:00 p.m., ET, Monday, September 12, 2022.

NACOSH meeting: NACOSH will meet from 10:00 a.m. to 4:30 p.m., ET, Tuesday, September 13, 2022.

ADDRESSES:

Submission of comments and requests to speak: Submit comments and requests to speak at the NACOSH meeting by September 6, 2022, identified by the docket number for this **Federal Register** notice (Docket No. OSHA–2022–0002), using the following method:

Electronically: Comments and requests to speak, including attachments, must be submitted electronically at *www.regulations.gov,* the Federal eRulemaking Portal. Follow the online instructions for submitting comments.

Requests for special accommodations: Submit requests for special accommodations for this NACOSH meeting by September 6, 2022, to Ms. Carla Marcellus, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor; telephone: (202) 693–1865; email: *marcellus.carla@dol.gov.*

Instructions: All submissions must include the agency name and the OSHA docket number for this **Federal Register** notice (Docket No. OSHA–2022–0002). OSHA will place comments and requests to speak, including personal information, in the public docket, which may be available online. Therefore, OSHA cautions interested parties about submitting personal information such as Social Security numbers and birthdates.

Docket: To read or download documents in the public docket for this NACOSH meeting, go to *www.regulations.gov.* All documents in the public docket are listed in the index; however, some documents (*e.g.,* copyrighted material) are not publicly available to read or download through *www.regulations.gov.* All submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. Contact the OSHA Docket Office at (202) 693–2350 (TTY (877) 889–5627) for assistance in locating docket submissions.

Participation in the NACOSH Heat Work Group meeting: Members of the public may attend the NACOSH Heat Work Group meeting. However, any participation by the public will be in listen-only mode. OSHA is not receiving public comments or requests to speak at the Heat Work Group meeting.

FOR FURTHER INFORMATION CONTACT:

For press inquiries: Mr. Frank Meilinger, Director, OSHA Office of Communications, U.S. Department of Labor; telephone: (202) 693–1999; email: *meilinger.francis2@dol.gov.*

For general information about NACOSH: Ms. Lisa Long, Acting Deputy Director, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor; telephone: (202) 693–2409; email: *long.lisa@dol.gov.*

Telecommunication requirements: For additional information about the telecommunication requirements for the meeting, please contact Ms. Carla Marcellus, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor; telephone: (202) 693–1865; email: *marcellus.carla@dol.gov.*

For copies of this Federal Register Notice: Electronic copies of this **Federal**

Register notice are available at *www.regulations.gov.* This notice, as well as news releases and other relevant information, are also available at OSHA's web page at *www.osha.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

NACOSH was established by Section 7(a) of the Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651, 656) to advise, consult with, and make recommendations to the Secretary of Labor and the Secretary of Health and Human Services on matters relating to the administration of the OSH Act. NACOSH is a continuing advisory committee of indefinite duration.

NACOSH operates in accordance with the Federal Advisory Committee Act (FACA) (5 U.S.C. App. 2), its implementing regulations (41 CFR part 102–3), and OSHA's regulations on NACOSH (29 CFR 1912.5 and 29 CFR part 1912a).

The establishment of subcommittees and subgroups, such as the NACOSH Heat Work Group, is contemplated by both the FACA's implementing regulations and OSHA's regulations on NACOSH (see, *e.g.,* 41 CFR 102–3.135; 29 CFR 1912a.13). The Heat Work Group will operate in accordance with the FACA and these regulations.

II. Meeting Information

NACOSH Meeting

NACOSH will meet from 10:00 a.m. to 4:30 p.m., ET, Tuesday, September 13, 2022. The meeting is open to the public.

Meeting agenda: The tentative agenda for this meeting includes:

- Updates from NIOSH, OSHA's Directorate of Standards and Guidance
- Safety and Health Management Systems and establishing safety as a core value;
- Special emphasis groups;
- OSHA's Whistleblower Protection Program; and
- Report from NACOSH Heat Work Group.

NACOSH Workgroup Meetings

In conjunction with the NACOSH meeting, the NACOSH Heat Illness and Injury Prevention Work Group (Heat Work Group) will meet from 1:00 p.m. to 2:00 p.m., ET on September 12, 2022.

Public attendance at the NACOSH Committee and Workgroup meetings will be virtual only. Meeting information will be posted in the Docket (Docket No. OSHA–2022–0002) and on the NACOSH web page, *https://www.osha.gov/advisorycommittee/nacosh,* prior to the meeting.

Authority and Signature

James S. Frederick, Deputy Assistant Secretary of Labor for Occupational Safety and Health, authorized the preparation of this notice under the authority granted by 29 U.S.C. 655(b)(1) and 656(b), 5 U.S.C. App. 2, 29 CFR parts 1912 and 1912a, and Secretary of Labor's Order No. 8–2020 (85 FR 58393).

Signed at Washington, DC.

James S. Frederick,

Deputy Assistant Secretary for Occupational Safety and Health.

[FR Doc. 2022–17121 Filed 8–9–22; 8:45 am]

BILLING CODE 4510–26–P

NUCLEAR REGULATORY COMMISSION

698th Meeting of the Advisory Committee on Reactor Safeguards (ACRS)

In accordance with the purposes of Sections 29 and 182b of the Atomic Energy Act (42 U.S.C. 2039, 2232(b)), the Advisory Committee on Reactor Safeguards (ACRS) will hold meetings on September 7–9, 2022. The Committee will be conducting meetings that will include some Members being physically present at the NRC while other Members participate remotely. Interested members of the public are encouraged to participate remotely in any open sessions via MSTeams or via phone at 301–576–2978, passcode 250611443#. A more detailed agenda including the MSTeams link may be found at the ACRS public website at *https://www.nrc.gov/reading-rm/doc-collections/acrs/agenda/index.html.* If you would like the MSTeams link forwarded to you, please contact the Designated Federal Officer as follows: *Quynh.Nguyen@nrc.gov* or *Lawrence.Burkhart@nrc.gov.*

Wednesday, September 7, 2022

1:30 p.m.–1:35 p.m.: Opening Remarks by the ACRS Chairman (Open)—The ACRS Chairman will make opening remarks regarding the conduct of the meeting.

1:35 p.m.–3:30 p.m.: Proposed New Regulatory Guide (RG) 1.250, ''Dedication of Commercial-grade Digital I&C Items for Nuclear Power Plants'' (Open)—The Committee will have presentations and discussion with representatives from the NRC staff and Nuclear Energy Institute regarding the subject topic.

3:30 p.m.–4:30 p.m.: Committee Deliberation on Proposed New RG 1.250 (Open)—The Committee will deliberate regarding the subject topic.

4:30 p.m.–6:00 p.m.: SHINE Memoranda Review and Deliberation/Report Preparation (Open/Closed)—The Committee will deliberate regarding the subject topic and will continue its discussion of proposed ACRS reports. [NOTE: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

Thursday, September 8, 2022

1:30 p.m.–5:30 p.m.: NuScale Topical Report on Emergency Planning Zone Plume (Open/Closed)—The Committee will have presentations and discussion with representatives from the NRC staff and NuScale regarding the subject topic. [NOTE: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

Friday, September 9, 2022

8:30 a.m.–1:00 p.m.: Future ACRS Activities/Report of the Planning and Procedures Subcommittee and Reconciliation of ACRS Comments and Recommendations/Preparation of Reports/SHINE Memoranda Review and Deliberation (Open/Closed)—The Committee will hear discussion of the recommendations of the Planning and Procedures Subcommittee regarding items proposed for consideration by the Full Committee during future ACRS meetings, and/or proceed to preparation of reports as determined by the Chairman. [NOTE: Pursuant to 5 U.S.C. 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]. [NOTE: Pursuant to 5 U.S.C. 552b(c)(2) and (6), a portion of this meeting may be closed to discuss organizational and personnel matters that relate solely to internal personnel rules and practices of the ACRS, and information the release of which would constitute a clearly unwarranted invasion of personal privacy.]

1:00 p.m.–5:00 p.m.: SHINE Technical Specifications and Cyber Security/Report Preparation (Open/Closed)—The Committee will have presentations and discussion with representatives from the NRC staff and SHINE regarding the subject topic and will continue its discussion of proposed ACRS reports. [NOTE: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

5:00 p.m.–6:00 p.m.: SHINE Memoranda Review and Deliberations/Preparation of Reports (Open/Closed)—The Committee will deliberate regarding

the subject topic and will continue its discussion of proposed ACRS reports. [NOTE: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

Procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on June 13, 2019 (84 FR 27662). In accordance with those procedures, oral or written views may be presented by members of the public, including representatives of the nuclear industry. Persons desiring to make oral statements should notify Quynh Nguyen, Cognizant ACRS Staff and the Designated Federal Officer (Telephone: 301–415–5844, Email: *Quynh.Nguyen@nrc.gov*), 5 days before the meeting, if possible, so that appropriate arrangements can be made to allow necessary time during the meeting for such statements. In view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with the cognizant ACRS staff if such rescheduling would result in major inconvenience.

An electronic copy of each presentation should be emailed to the cognizant ACRS staff at least one day before the meeting.

In accordance with Subsection 10(d) of Public Law 92–463 and 5 U.S.C. 552b(c), certain portions of this meeting may be closed, as specifically noted above. Use of still, motion picture, and television cameras during the meeting may be limited to selected portions of the meeting as determined by the Chairman. Electronic recordings will be permitted only during the open portions of the meeting.

ACRS meeting agendas, meeting transcripts, and letter reports are available through the NRC Public Document Room (PDR) at *pdr.resource@nrc.gov,* or by calling the PDR at 1–800–397–4209, or from the Publicly Available Records System component of NRC's Agencywide Documents Access and Management System, which is accessible from the NRC website at *https://www.nrc.gov/reading-rm/adams.html* or *https://www.nrc.gov/reading-rm/doc-collections/#ACRS/.*

Dated: August 5, 2022.

Russell E. Chazell,

Federal Advisory Committee Management Officer, Office of the Secretary.

[FR Doc. 2022–17161 Filed 8–9–22; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2021–0044]

Information Collection: NRC Forms 541 and 541A, Uniform Low-Level Radioactive Waste Manifest Container and Waste Description and Continuation Page

AGENCY: Nuclear Regulatory Commission.

ACTION: Renewal of existing information collection; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) invites public comment on the renewal of Office of Management and Budget (OMB) approval for an existing collection of information. The information collection is entitled, ''NRC Forms 541 and 541A, Uniform Low-Level Radioactive Waste Manifest Container and Waste Description and Continuation Page.''

DATES: Submit comments by October 11, 2022. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received on or before this date.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2021–0044. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* David C. Cullison, Office of the Chief Information Officer, Mail Stop: T–6 A10M, U.S. NRC, Washington, DC 20555–0001.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: David C. Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2021–0044 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2021–0044. A copy of the collection of information and related instructions may be obtained without charge by accessing Docket ID NRC–2021–0044 on this website.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *PDR.Resource@nrc.gov.* A copy of the NRC Forms 541 and 541A and related instructions may be obtained without charge by accessing ADAMS Accession Nos. ML22132A252, ML22132A253, and ML20178A433, respectively. The draft supporting statement is available in ADAMS under Accession No. ML22132A251.
- *NRC's PDR:* You may examine and purchase copies of public documents, by appointment, at the NRC's PDR, Room P1 B35, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. Eastern Time (ET), Monday through Friday, except Federal holidays.
- *NRC's Clearance Officer:* A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, David C. Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2021–0044 in your comment submission.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. All comment submissions are posted at *https://www.regulations.gov* and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the OMB, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the NRC is requesting public comment on its intention to request the OMB's approval for the information collection summarized below.

1. *The title of the information collection:* NRC Forms 541 and 541A, Uniform Low-Level Radioactive Waste Manifest Container and Waste Description and Continuation Page.

2. *OMB approval number:* 3150–0166.

3. *Type of submission:* Extension.

4. *The form number, if applicable:* NRC Forms 541 and 541A.

5. *How often the collection is required or requested:* NRC Form 541 and 541A, or the Agreement State equivalent forms, are used by low-level radioactive waste (LLW) shippers when LLW is shipped. NRC Form 541/541A, combined with NRC Forms 540/540A and 542/542A, are collectively referred to as the Uniform Low-Level Radioactive Waste Manifest forms. The disposal facilities and their Agreement State regulators, where applicable, use the information found on the forms to ensure waste disposal meets the requirements in part 61 of title 10 of the *Code of Federal Regulations* (10 CFR) for the protection of the public and environment. The NRC does not collect or retain data on the forms and the forms are not sent to or received by the NRC. NRC Form 541/541A and NRC Form 542/542A are (1) mailed or electronically transferred to the intended consignee prior to the shipment arriving at the consignee or (2) delivered with the waste to the consignee. NRC Form 540 and 540A are required to be with the shipment regardless of which of the above methods is chosen.

6. *Who will be required or asked to respond:* NRC Form 541 and continuation Form 541A are completed by generators, collectors, and processors of LLW intended for ultimate disposal at a licensed land disposal facility.

7. *The estimated number of annual responses:* 4,616.

8. *The estimated number of annual respondents:* 712.

9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 15,233.

10. *Abstract:* The completed NRC Form 541 contains information needed to satisfy the waste manifesting requirements of the NRC's 10 CFR part 20. NUREG/BR–0204, Rev. 3, contains instructions for completing NRC Forms 540, 540A, 541, 541A, 542, and 542A. The forms were originally developed by the NRC at the request of low-level waste industry groups. The forms are intended to provide uniformity and efficiency in the collection of information contained in manifests which are required to control transfers of LLW intended for disposal at a land disposal facility. However, as stated in 10 CFR part 20, appendix G, ''Licensees need not use originals of these NRC Forms as long as any substitute forms are equivalent to the original documentation in respect to content, clarity, size, and location of information. . . .''

The NRC previously noticed the availability of revisions to the Uniform Low-Level Radioactive Waste Manifest Forms in the **Federal Register** on June 25, 2021 (86 FR 33783). The information collection contained in the current extension request does not include any material changes to the forms, except for: (1) changes to the Paperwork Reduction Act statement to indicate that licensees may use equivalent forms, and (2) the deletion of the expiration date.

III. Specific Requests for Comments

The NRC is seeking comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility? Please explain your answer.

2. Is the estimate of the number of annual responses, the number of annual respondents, and the burden of the information collection accurate? Please explain your answer.

3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?

4. How can the burden of the information collection on respondents be minimized, including the use of automated collection techniques or other forms of information technology?

Dated: August 5, 2022.

For the Nuclear Regulatory Commission.

David C. Cullison,

NRC Clearance Officer, Office of the Chief Information Officer.

[FR Doc. 2022–17168 Filed 8–9–22; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2022–0069]

Information Collection: Physical Protection of Category 1 and Category 2 Quantities of Radioactive Material

AGENCY: Nuclear Regulatory Commission.

ACTION: Renewal of existing information collection; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) invites public comment on the renewal of Office of Management and Budget (OMB) approval for an existing collection of information. The information collection is entitled, ''Physical Protection of Category 1 and Category 2 Quantities of Radioactive Material.''

DATES: Submit comments by October 11, 2022. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received on or before this date.

ADDRESSES: You may submit comments by any of the following methods (unless this document describes a different method for submitting comments on a specific subject); however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2022–0069. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* David C. Cullison, Office of the Chief Information Officer, Mail Stop: T–6 A10M, U.S. NRC, Washington, DC 20555–0001.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the

SUPPLEMENTARY INFORMATION section of this document.

FOR FURTHER INFORMATION CONTACT: David C. Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2022–0069 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2022–0069. A copy of the collection of information and related instructions may be obtained without charge by accessing Docket ID NRC–2022–0069 on this website.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The draft supporting statement, burden spreadsheet, and NRC Form 755 are available in ADAMS under Accession No. ML22136A268, ML22136A213, and ML22136A264.
- *NRC's PDR:* You may examine and purchase copies of public documents, by appointment, at the NRC's PDR, Room P1 B35, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. Eastern Time (ET), Monday through Friday, except Federal holidays.
- *NRC's Clearance Officer:* A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, David C. Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2022–0069 in your comment submission.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. All comment submissions are posted at *https://www.regulations.gov* and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the OMB, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the NRC is requesting public comment on its intention to request the OMB's approval for the information collection summarized below.

1. *The title of the information collection:* 10 CFR part 37, Physical Protection of Category 1 and Category 2 Quantities of Radioactive Material.
2. *OMB approval number:* 3150–0214.
3. *Type of submission:* Extension.
4. *The form number, if applicable:* NRC Form 755, ''Advance Notification to the NRC of Shipments of Category 1 Quantities of Radioactive Material.''
5. *How often the collection is required or requested:* One time for initial compliance notifications and fingerprints for the reviewing officials; and as needed for implementation notifications, event notifications, notifications of shipments of radioactive material, and fingerprinting of new employees.
6. *Who will be required or asked to respond:* Licensees that are authorized to possess and use category 1 or category 2 quantities of radioactive material.
7. *The estimated number of annual responses:* 101,479 Responses (4,704 Reporting + 1,400 Recordkeeping + 95,375 Third-Party Disclosure).
8. *The estimated number of annual respondents:* 5,600 Respondents (1,140 Agreement State Licensees + 260 NRC licensees + 4,200 Individuals making personal history disclosures under 37.23(d)).
9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 74,043 Hours (1,557 Reporting + 23,989 Recordkeeping + 48,497 Third-Party Disclosure).
10. *Abstract:* Part 37 of title 10 of the *Code of Federal Regulations* (10 CFR), contains security requirements for the use of category 1 and category 2 quantities of radioactive material. Licensees are required to: (1) Develop procedures for the implementation of the security provisions; (2) develop a security plan that describes how security is being implemented; (3) implement security measures for the protection of the radioactive material; (4) conduct training on the procedures and security plan; (5) conduct background investigations for those individuals permitted unescorted access to category 1 or category 2 quantities of radioactive material; (6) coordinate with Local Law Enforcement Agencies (LLEAs) so the LLEAs would be better prepared to respond in an emergency; and (7) conduct coordination activities before shipping category 2 radioactive material, and preplanning and coordination activities before shipping category 1 radioactive material. Licensees are required to promptly report any attempted or actual theft or diversion of the radioactive material. Licensees are required to keep copies of the security plan, procedures, background investigation records, training records, and documentation associated with implementation of the security program. The NRC uses the information required by 10 CFR part 37 to fulfill its responsibilities to respond to, investigate, and correct situations that have the potential to adversely affect public health and safety or the common defense and security.

III. Specific Requests for Comments

The NRC is seeking comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility? Please explain your answer.
2. Is the estimate of the burden of the information collection accurate? Please explain your answer.
3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?
4. How can the burden of the information collection on respondents be minimized, including the use of

automated collection techniques or other forms of information technology?

Dated: August 5, 2022.

For the Nuclear Regulatory Commission.

David C. Cullison,

NRC Clearance Officer, Office of the Chief Information Officer.

NUCLEAR REGULATORY COMMISSION

[NRC–2021–0045]

Information Collection: NRC Forms 542 and 542A, Uniform Low-Level Radioactive Waste Manifest Index and Regional Compact Tabulation and Continuation Page

AGENCY: Nuclear Regulatory Commission.

ACTION: Renewal of existing information collection; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) invites public comment on the renewal of Office of Management and Budget (OMB) approval for an existing collection of information. The information collection is entitled, ''NRC Forms 542 and 542A, Uniform Low-Level Radioactive Waste Manifest Index and Regional Compact Tabulation and Continuation Page.''

DATES: Submit comments by October 11, 2022. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received on or before this date.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2021–0045. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* David C. Cullison, Office of the Chief Information Officer, Mail Stop: T–6 A10M, U.S. NRC, Washington, DC 20555–0001.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: David C. Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2021–0045 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2021–0045. A copy of the collection of information and related instructions may be obtained without charge by accessing Docket ID NRC–2021–0045 on this website.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *PDR.Resource@nrc.gov.* A copy of the NRC Forms 542 and 542A and related instructions may be obtained without charge by accessing ADAMS Accession Nos. ML22132A261, ML22132A262, and ML20178A433, respectively. The draft supporting statement is available in ADAMS under Accession No. ML22132A260.
- *NRC's PDR:* You may examine and purchase copies of public documents, by appointment, at the NRC's PDR, Room P1 B35, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. Eastern Time (ET), Monday through Friday, except Federal holidays.
- *NRC's Clearance Officer:* A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, David C. Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2021–0045 in your comment submission.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. All comment submissions are posted at *https://www.regulations.gov* and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the OMB, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the NRC is requesting public comment on its intention to request the OMB's approval for the information collection summarized below.

1. *The title of the information collection:* NRC Forms 542 and 542A, Uniform Low-Level Radioactive Waste Manifest Index and Regional Compact Tabulation and Continuation Page.

2. *OMB approval number:* 3150–0165.

3. *Type of submission:* Extension.

4. *The form number, if applicable:* NRC Forms 542 and 542A.

5. *How often the collection is required or requested:* NRC Form 542 and 542A, or the Agreement State equivalent forms, are used by low-level radioactive waste (LLW) collectors and processors that are shipping LLW attributed to others for disposal at a licensed land disposal facility. NRC Form 542/542A, combined with NRC Forms 540/540A and 541/541A, are collectively referred to as the Uniform Low-Level Radioactive Waste Manifest forms. The disposal facilities and their Agreement State regulators, where applicable, use the information found on the forms to ensure waste disposal meets the requirements in Part 61 of title 10 of the *Code of Federal Regulations* (10 CFR) for the protection of the public and environment. The NRC does not collect

or retain data on the forms and the forms are not sent to or received by the NRC. NRC Form 541/541A and NRC Form 542/542A are (1) mailed or electronically transferred to the intended consignee prior to the shipment arriving at the consignee or (2) delivered with the waste to the consignee. NRC Form 540 and 540A are required to be with the shipment regardless of which of the above methods is chosen.

6. *Who will be required or asked to respond:* NRC Form 542 and continuation Form 542A are completed by collectors and processors of LLW intended for ultimate disposal at a licensed land disposal facility.

7. *The estimated number of annual responses:* 623.

8. *The estimated number of annual respondents:* 71.

9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 467.

10. *Abstract:* The NRC Form 542, completed by LLW collectors and processors, contains information needed to satisfy the waste manifesting requirements of the NRC's 10 CFR part 20 and information on the attribution of the waste. Each waste container shipped from a waste collector or processor may contain waste from several different generators. Tracking the identity of the original waste generator becomes more complicated when the waste forms, dimensions, or packaging are changed by the waste processor. These forms are used to attribute the waste to the original generator for regional waste compact tabulation. The information provided on the NRC Form 542 permits the States and Compacts to know the original generators of LLW, as authorized by the Low-Level Radioactive Waste Policy Amendments Act of 1985, so they can ensure that waste is disposed of in the appropriate Compact.

NUREG/BR–0204, Rev. 3, contains instructions for completing NRC Forms 540, 540A, 541, 541A, 542, and 542A. The forms were originally developed by the NRC at the request of low-level waste industry groups. The forms are intended to provide uniformity and efficiency in the collection of information contained in manifests which are required to control transfers of LLW intended for disposal at a land disposal facility. However, as stated in 10 CFR part 20, Appendix G, ''Licensees need not use originals of these NRC Forms as long as any substitute forms are equivalent to the original documentation in respect to content, clarity, size, and location of information. . . .''

The NRC previously noticed the availability of revisions to the Uniform Low-Level Radioactive Waste Manifest Forms in the **Federal Register** on June 25, 2021 (86 FR 33783). The information collection contained in the current extension request does not include any material changes to the forms, except for: (1) changes to the Paperwork Reduction Act statement to indicate that licensees may use equivalent forms, and (2) the deletion of the expiration date.

III. Specific Requests for Comments

The NRC is seeking comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility? Please explain your answer.

2. Is the estimate of the number of annual responses, the number of annual respondents, and the burden of the information collection accurate? Please explain your answer.

3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?

4. How can the burden of the information collection on respondents be minimized, including the use of automated collection techniques or other forms of information technology?

Dated: August 5, 2022.

For the Nuclear Regulatory Commission.

David C. Cullison,

NRC Clearance Officer, Office of the Chief Information Officer.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2021–0043]

Information Collection: NRC Forms 540 and 540A, Uniform Low-Level Radioactive Waste Manifest (Shipping Paper) and Continuation Page

AGENCY: Nuclear Regulatory Commission.

ACTION: Renewal of existing information collection; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) invites public comment on the renewal of Office of Management and Budget (OMB) approval for an existing collection of information. The information collection is entitled, ''NRC Forms 540 and 540A, Uniform Low-Level Radioactive Waste Manifest (Shipping Paper) and Continuation Page.''

DATES: Submit comments by October 11, 2022. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received on or before this date.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2021–0043. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* David C. Cullison, Office of the Chief Information Officer, Mail Stop: T–6 A10M, U.S. NRC, Washington, DC 20555–0001.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: David Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2021–0043 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2021–0043. A copy of the collection of information and related instructions may be obtained without charge by accessing Docket ID NRC–2021–0043 on this website.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–

415–4737, or by email to *PDR.Resource@nrc.gov.* A copy of the NRC Forms 540 and 540A and related instructions may be obtained without charge by accessing ADAMS Accession Nos. ML22132A240, ML22132A241, and ML20178A433, respectively. The draft supporting statement is available in ADAMS under Accession No. ML22132A239.

• *NRC's PDR:* You may examine and purchase copies of public documents, by appointment, at the NRC's PDR, Room P1 B35, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. Eastern Time (ET), Monday through Friday, except Federal holidays.

• *NRC's Clearance Officer:* A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, David Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2021–0043 in your comment submission.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. All comment submissions are posted at *https://www.regulations.gov* and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the OMB, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the NRC is requesting public comment on its intention to request the OMB's approval for the information collection summarized below.

1. *The title of the information collection:* NRC Forms 540 and 540A, Uniform Low-Level Radioactive Waste Manifest (Shipping Paper) and Continuation Page.

2. *OMB approval number:* 3150–0164.

3. *Type of submission:* Extension.

4. *The form number, if applicable:* NRC Forms 540 and 540A.

5. *How often the collection is required or requested:* NRC Form 540 and 540A, or the Agreement State equivalent forms, are used by low-level radioactive waste (LLW) shippers when LLW is shipped. NRC Form 540/540A, combined with NRC Forms 541/541A and 542/542A, are collectively referred to as the Uniform Low-Level Radioactive Waste Manifest forms. The disposal facilities and their Agreement State regulators, where applicable, use the information found on the forms to ensure waste disposal meets the requirements in part 61 of title 10 of the *Code of Federal Regulations* (10 CFR) for the protection of the public and environment. The NRC does not collect or retain data on the forms and the forms are not sent to or received by the NRC. NRC Form 541/541A and NRC Form 542/542A are (1) mailed or electronically transferred to the intended consignee prior to the shipment arriving at the consignee or (2) delivered with the waste to the consignee. NRC Form 540 and 540A are required to be with the shipment regardless of which of the above methods is chosen.

6. *Who will be required or asked to respond:* NRC Form 540 and continuation Form 540A are completed by generators, collectors, and processors of LLW intended for ultimate disposal at a licensed land disposal facility.

7. *The estimated number of annual responses:* 4,616.

8. *The estimated number of annual respondents:* 712.

9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 3,462.

10. *Abstract:* The completed NRC Form 540 contains information needed to satisfy the Department of Transportation shipping paper requirements in 49 CFR part 172 and the waste manifesting requirements of the NRC's 10 CFR part 20. NUREG/BR–0204, Rev. 3, contains instructions for completing NRC Forms 540, 540A, 541, 541A, 542, and 542A. The forms were originally developed by the NRC at the request of low-level waste industry groups. The forms are intended to provide uniformity and efficiency in the collection of information contained in manifests which are required to control transfers of LLW intended for disposal at a land disposal facility. However, as stated in 10 CFR part 20, appendix G, ''Licensees need not use originals of these NRC Forms as long as any substitute forms are equivalent to the original documentation in respect to content, clarity, size, and location of information . . .''

The NRC previously noticed the availability of revisions to the Uniform Low-Level Radioactive Waste Manifest Forms in the **Federal Register** on June 25, 2021 (86 FR 33783). The information collection contained in the current extension request does not include any material changes to the forms, except for: (1) changes to the Paperwork Reduction Act statement to indicate that licensees may use equivalent forms, and (2) the deletion of the expiration date.

III. Specific Requests for Comments

The NRC is seeking comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility? Please explain your answer.

2. Is the estimate of the number of annual responses, the number of annual respondents, and the burden of the information collection accurate? Please explain your answer.

3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?

4. How can the burden of the information collection on respondents be minimized, including the use of automated collection techniques or other forms of information technology?

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–95419; File No. SR–PEARL–2022–30]

Self-Regulatory Organizations; MIAX PEARL, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the MIAX PEARL Options Fee Schedule To Remove Certain Credits and Increase Trading Permit Fees

August 4, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b-4 thereunder,[2] notice is hereby given that on July 26, 2022, MIAX PEARL, LLC (''MIAX Pearl'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX Pearl Options Fee Schedule (the ''Fee Schedule'') to amend its monthly Trading Permit [3] fees for Members [4] and no longer provide two monthly credits associated with Trading Permit and non-transaction fees.

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings/pearl* at MIAX Pearl's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange commenced operations in February 2017 [5] and adopted its initial fee schedule that waived fees for Trading Permits to trade on the Exchange.[6] Although the fee was waived, an initial fee structure was put in place in communicate our intent to charge a fee in the future. As a new exchange entrant, the Exchange chose to offer Trading Permits free of charge to encourage market participants to trade on the Exchange and experience, among things, the quality of the Exchange's technology and trading functionality. This practice is not uncommon. Newly-opened exchanges often do not charge fees or charge lower fees for certain services such as memberships to attract order flow to an exchange, and later amend their fees to reflect the true value of those services, absorbing all costs to provide those services in the meantime. Allowing new exchange entrants time to build and sustain market share through various pricing incentives before increasing non-transaction fees encourages market entry and promotes competition. It also enables these new exchanges to mature their markets and allow market participants to trade on the new exchanges without fees serving as a potential barrier to attracting memberships and order flow.[7]

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The term ''Trading Permit'' means a permit issued by the Exchange that confers the ability to transact on the Exchange. *See* Exchange Rule 100.

[4] The term ''Member'' means an individual or organization that is registered with the Exchange pursuant to Chapter II of Exchange Rules for purposes of trading on the Exchange as an ''Electronic Exchange Member'' or ''Market Maker.'' Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100 and the Definitions Section of the Fee Schedule.

[5] *See* MIAX PEARL Successfully Launches Trading Operations, dated February 6, 2017, *available at https://www.miaxoptions.com/sites/default/files/alert-files/MIAX_Press_Release_02062017.pdf.*

[6] *See* Securities Exchange Act Release No. 80061 (February 17, 2017), 82 FR 11676 (February 24, 2017) (SR–PEARL–2017–10).

[7] *See* Securities Exchange Act Release No. 94894 (May 11, 2022), 87 FR 29987 (May 17, 2022) (SR–BOX–2022–17) (stating, ''[t]he Exchange established this lower (when compared to other options exchanges in the industry) Participant Fee in order to encourage market participants to become Participants of BOX. . .''). *See also* Securities Exchange Act Release No. 90076 (October 2, 2020), 85 FR 63620 (October 8, 2020) (SR–MEMX–2020–10) (''MEMX Membership Fee Proposal'') (proposing to adopt the initial fee schedule and stating that ''[u]nder the initial proposed Fee Schedule, the Exchange proposes to make clear that it does not charge any fees for membership, market data products, physical connectivity or application sessions.''). MEMX has seen its market share increase and recently proposed to adopt a membership fee and fees for connectivity. *See* Securities Exchange Act Release Nos. 93927

Later in 2018, as the Exchange's market share increased,[8] it adopted a nominal fee for Trading Permits along with a tiered-volume based fee credit, known as the Trading Permit Fee Credit, and a Monthly Volume Credit.[9] The Exchange has not amended its Trading Permit fees since the fees were first adopted in 2018. The Exchange established the Trading Permit Fee Credit to continue to attract order flow and increase membership by lowering the costs for Members that connect via the MEO Interface [10] and FIX Interface.[11]

The lower Trading Permit Fees, Trading Permit Fee Credit and Monthly Volume Credit have served their purpose of incentivizing market participants to trade on the Exchange as the Exchange's market share continues to grow and increase since the fee and credits were established.[12] Therefore, the Exchange now proposes to amend the monthly Trading Permit fees for Members and to no longer provide two monthly credits associated with Trading Permit and non-transaction fees. The proposed changes are designed to update the Exchange's Trading Permit fees to reflect their current value based on the Exchange's market share and ability to deliver value to its customers through improved liquidity, enhanced functionality, and resilient trading technology, rather than their value when MIAX Pearl was a new options exchange entrant seeking to establish itself in a highly competitive space over five years ago. The Exchange reviewed similar fees charged by other options exchanges when considering the proposed fee levels as well as the impact on current Members and whether the proposed fee levels would continue to enable the Exchange to attract new Members and retain existing Members. The Exchange notes that it also socialized the proposed fee increases with current Members prior to first implementing the changes. During this process, the Exchange decided on price levels that it believes would aid and improve its competitive footing and some Members informed the Exchange that they anticipated a potential increase due to the lower rates the Exchange historically charged and the resiliency and performance of its trading platform. Each of these changes are described below.

Background

A Trading Permit confers the right to transact on the Exchange [13] and are available to all Members. The Exchange notes that requiring a Trading Permit to trade on the Exchange and charging a monthly fee for such is comparable to other monthly membership requirements and associated fees charged by other exchanges and is described further below. Trading Permits, like membership fees, grant access and allow Members to be active on the Exchange, thus providing the ability to submit orders and trade on the Exchange, in the manner consistent with the membership type. Without a Trading Permit, or ''membership'' as referred to by other exchanges, a Member cannot directly trade on the Exchange. Therefore, a Trading Permit is a means to directly access the Exchange, which offers meaningful value. The Exchange has not amended its Trading Permit fees since the fees were first adopted in 2018.[14]

Removal of Monthly Trading Permit Fee Credits

Monthly Volume Credit

The Exchange proposes to amend the Definitions section of the Fee Schedule to delete the definition and remove the credits applicable to the Monthly Volume Credit for Members. The Exchange established the Monthly Volume Credit in 2018 [15] to encourage Members to send increased Priority Customer [16] order flow to the Exchange, which the Exchange applied as a metric to the assessment of non-transaction fees for that Member. Prior to and during periods when this proposal was not in effect, the Exchange applied a different Monthly Volume Credit depending on whether the Member connects to the Exchange via the FIX or MEO Interface. Prior to and during periods when this proposal was not in effect, the Exchange assessed the Monthly Volume Credit to each Member that has executed Priority Customer volume along with that of its affiliates,[17] not including Excluded Contracts,[18] of at least 0.30% of MIAX Pearl-listed Total Consolidated Volume (''TCV''),[19] as set forth in the following table:

(January 7, 2022), 87 FR 2191 (January 13, 2022) (SR–MEMX–2021–19) (proposing to adopt membership fees); *and* 95299 (July 15, 2022), 87 FR 43563 (July 21, 2022) (SR–MEMX–2022–17) (proposing to adopt fees for connectivity). *See also, e.g.,* Securities Exchange Act Release No. 88211 (February 14, 2020), 85 FR 9847 (February 20, 2020) (SR–NYSENAT–2020–05), *available at https://www.nyse.com/publicdocs/nyse/markets/nyse-national/rulefilings/filings/2020/SR-NYSENat-2020-05.pdf* (initiating market data fees for the NYSE National exchange after initially setting such fees at zero).

[8] The Exchange experienced a monthly average trading volume of 3.94% for the month of March 2018. *See* Market at a Glance, *available at www.miaxoptions.com* (last visited (June 22, 2022).

[9] *See* Securities Exchange Act Release No. 82867 (March 13, 2018), 83 FR 12044 (March 19, 2018) (SR–PEARL–2018–07).

[10] ''MEO Interface'' or ''MEO'' means a binary order interface for certain order types as set forth in Rule 516 into the MIAX Pearl System. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[11] ''FIX Interface'' means the Financial Information Exchange interface for certain order types as set forth in Exchange Rule 516. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[12] The Exchange experienced a monthly average trading volume of 4.92% for the month of June 2022. *See* Market at a Glance, *supra* note 8.

[13] *See* Exchange Rule 200(a).

[14] *See supra* note 9.

[15] *See* Market at a Glance, *supra* note 8.

[16] The term ''Priority Customer'' means a person or entity that (i) is not a broker or dealer in securities, and (ii) does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial accounts(s). The number of orders shall be counted in accordance with Interpretation and Policy .01 of Exchange Rule 100. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100, including Interpretation and Policy .01.

[17] ''Affiliate'' means (i) an affiliate of a Member of at least 75% common ownership between the firms as reflected on each firm's Form BD, Schedule A, or (ii) the Appointed Market Maker of an Appointed EEM (or, conversely, the Appointed EEM of an Appointed Market Maker). An ''Appointed Market Maker'' is a MIAX Pearl Market Maker (who does not otherwise have a corporate affiliation based upon common ownership with an EEM) that has been appointed by an EEM and an ''Appointed EEM'' is an EEM (who does not otherwise have a corporate affiliation based upon common ownership with a MIAX Pearl Market Maker) that has been appointed by a MIAX Pearl Market Maker, pursuant to the following process. A MIAX Pearl Market Maker appoints an EEM and an EEM appoints a MIAX Pearl Market Maker, for the purposes of the Fee Schedule, by each completing and sending an executed Volume Aggregation Request Form by email to *membership@miaxoptions.com* no later than 2 business days prior to the first business day of the month in which the designation is to become effective. Transmittal of a validly completed and executed form to the Exchange along with the Exchange's acknowledgement of the effective designation to each of the Market Maker and EEM will be viewed as acceptance of the appointment. The Exchange will only recognize one designation per Member. A Member may make a designation not more than once every 12 months (from the date of its most recent designation), which designation shall remain in effect unless or until the Exchange receives written notice submitted 2 business days prior to the first business day of the month from either Member indicating that the appointment has been terminated. Designations will become operative on the first business day of the effective month and may not be terminated prior to the end of the month. Execution data and reports will be provided to both parties. *See* the Definitions Section of the Fee Schedule.

[18] ''Excluded Contracts'' means any contracts routed to an away market for execution. *See* the Definitions Section of the Fee Schedule.

[19] ''TCV'' means total consolidated volume calculated as the total national volume in those classes listed on MIAX Pearl for the month for which the fees apply, excluding consolidated volume executed during the period of time in which the Exchange experiences an Exchange System Disruption (solely in the option classes of the affected Matching Engine). *See* the Definitions Section of the Fee Schedule.

Type of member connection	Monthly volume credit
Member that connects via the FIX Interface	$250
Member that connects via the MEO Interface	1,000

If a Member connects via both the MEO Interface and FIX Interface and qualifies for the Monthly Volume Credit based upon its Priority Customer volume, the greater Monthly Volume Credit shall apply to such Member. Prior to and during periods when this proposal was not in effect, the Monthly Volume Credit was a single, once-per-month credit towards the aggregate monthly total of non-transaction fees assessable to a Member.

The Exchange proposes an amendment to the Definitions section of the Fee Schedule to delete the definition and remove the Monthly Volume Credit. The Exchange established the Monthly Volume Credit when it first launched operations to encourage members to increase their order flow by providing a credit to those that exceeded a volume threshold. The Exchange believes that the Exchange's existing Priority Customer rebates and fees will continue to allow the Exchange to remain highly competitive and continue to attract order flow and maintain market share even without the Monthly Volume Credit.

Trading Permit Fee Credit

The Exchange proposes to amend Section (3)(b) of the Fee Schedule to remove the Trading Permit fee credit that is denoted in footnote ''*'' below the Trading Permit fee table. Prior to and during periods when this proposal was not in effect, the Trading Permit fee credit was applicable to Members that connected via both the MEO and FIX Interfaces. Members who connect via both the MEO and FIX Interfaces are assessed the rates for both types of Trading Permits, but these Members received a $100 monthly credit towards the Trading Permit fees applicable to the MEO Interface prior to and during periods when this proposal was not in effect. The Exchange proposes to remove the Trading Permit fee credit and delete footnote ''*'' from Section (3)(b) of the Fee Schedule.

The Exchange established the Trading Permit fee credit when it first launched operations to attract order flow and increase membership by lowering the costs for Members that connect via the MEO Interface and FIX Interface. The Trading Permit fee credit has achieved its purpose and the Exchange now believes that it is appropriate to remove this credit in light of the current operating conditions and membership population on the Exchange.

Amendments to Monthly Trading Permit Fees

The Exchange proposes to amend the Fee Schedule to amend the fees for Trading Permits. As a self-regulatory organization, the Exchange's membership department reviews applicants to ensure that each application complies with Exchange Rule 200 as well as other requirements for membership.[20] Applicants must meet the Exchange's qualification criteria prior to approval. The new member review includes, but is not limited to, the registration and qualification of associated persons, financial health of the proposed member, the validity of the required clearing relationship, and the history of disciplinary matters. Approved new Members are required to comply with Exchange's By-Laws and Rules and are subject to regulation by the Exchange. The Exchange also has ongoing regulatory responsibilities over its Members.

The Exchange believes that there are many factors that may cause a market participant to decide to become a member of a particular exchange. Among various factors, the Exchange believes market participants consider: (i) an exchange's available liquidity in options series; (ii) trading functionality, latency, reliability, throughout, access to liquidity, and determinism offered on a particular market; (iii) product offerings; (iv) customer service on an exchange; and (v) transactional pricing. The Exchange believes that the decision to become a member of an exchange, particularly as a registered market maker, is a complex one that is not solely based on non-transactional costs assessed by an exchange. Market participants weigh the tradeoff between where they choose to deploy liquidity versus where trading opportunities exist. Of course, the cost of membership may factor into a decision to become a member of a certain exchange, but the Exchange believes it is by no means the only factor when comparing exchanges.

The Exchange assesses Trading Permit fees based upon the monthly total volume executed by the Member and its Affiliates on the Exchange across all origin types, not including Excluded Contracts, as compared to the total TCV in all MIAX Pearl-listed options. The Exchange adopted a tier-based fee structure based upon the volume-based tiers detailed in the definition of ''Non-Transaction Fees Volume-Based Tiers'' [21] in the Definitions section of the Fee Schedule. The Exchange also assesses Trading Permit fees based upon the type of interface used by the Member to connect to the Exchange—the FIX Interface and/or the MEO Interface.

The Exchange has two types of Members, Electronic Exchange Members [22] (''EEMs'') and Market Makers.[23] The Exchange currently charges monthly fees for Trading Permits pursuant to Exchange Rule 200(f), which varies based on the interface used by the Member and the Member's monthly trading volumes. The Exchange provides two interfaces to access the MIAX Pearl System,[24] the FIX Interface and MEO Interface, and all Members are able to use either interface based on their business models and needs. The FIX Interface is the industry-wide uniform message format and provides lower bandwidth, less capacity, and fewer Exchange resources. EEMs, who are primarily order flow providers, are the only users of the FIX Interface.[25] No Market Maker uses the FIX Interface. Meanwhile, the MEO Interface is the more robust interface offering lower latency and higher throughput. Market Makers only use the MEO Interface.

Today, seven (7) Members that are registered solely as EEMs elect to utilize the MEO Interface. Based on their own business decisions and needs, some EEMs may elect to utilize the MEO Interface today due to its lower latency

[20] The Exchange's Membership Department must ensure, among other things, that an applicant is not statutorily disqualified.

[21] *See* the Definitions Section of the Fee Schedule for the monthly volume thresholds associated with each Tier.

[22] The term ''Electronic Exchange Member'' or ''EEM'' means the holder of a Trading Permit who is a Member representing as agent Public Customer Orders or Non-Customer Orders on the Exchange and those non-Market Maker Members conducting proprietary trading. Electronic Exchange Members are deemed ''members'' under the Exchange Act. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[23] The term ''Market Maker'' or ''MM'' means a Member registered with the Exchange for the purpose of making markets in options contracts traded on the Exchange and that is vested with the rights and responsibilities specified in Chapter VI of the Exchange Rules. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[24] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See* Exchange Rule 100.

[25] The Exchange does not propose to amend the fees for EEM Clearing Firms, which is set at $250 per month and not based on the amount of volume conducted on the Exchange. The term ''EEM Clearing Firm'' means an EEM that solely clears transactions on the Exchange and does not connect to the Exchange via either the FIX Interface or MEO Interface. *See* the Definitions Section of the Fee Schedule.

and higher throughput. Also, six (6) Members are registered as both an EEM and Market Maker. These Members may choose to utilize only the MEO Interface for acting as either EEM or Market Maker, not only based on their own business needs, but also as a means to streamline and simplify their architecture between them and the Exchange. Each of these Members are able to utilize the FIX Interface for their EEM activities and avail themselves to the lower rates if they believe the FIX Interface is aligned with their business needs.

Market Makers only use the MEO Interface because it provides functionality that is designed to assist Market Makers in satisfying their market making obligations. The Exchange offers three time-in-force modifiers: [26] Day Limit (''Day''), Immediate-Or-Cancel (''IOC''), and Good 'Til Cancelled (''GTC'').[27] While all order types are available for use on either interface, only the time-in-force modifiers of IOC and Day are available on the MEO Interface.[28] Market Makers utilize the time-in-force of Day on orders to be posted on the MIAX Pearl Options Book [29] and to meet Market Makers' continuous quoting obligations under Exchange Rule 605(d).[30] Other Market Makers that primarily remove liquidity tend to be more latency sensitive and utilize the time-in-force of IOC on orders when looking to remove liquidity from the MIAX Pearl Options Book. The MEO Interface allows the submission of Cancel-Replacement orders,[31] which allow for the immediate cancellation of a previously received order and the replacement of that order with a new order with new terms and conditions.[32] Cancel-Replacement orders are primarily used by Market Makers as part of their continuous quoting obligations. Market Makers only use the MEO Interface due to its lower latency, higher throughput, available time-in-force instructions and order types that assist them in satisfying their market making obligations. Market Makers do not use the FIX Interface due to the unavailability of the above functionality. While EEMs primarily use the FIX Interface, certain EEMs chose to use the MEO interface due to its enhanced functionality and based on their own business models.

Current Trading Permit Fees. Prior to and during periods when this proposal was not in effect, each Member who connected to the System via the FIX Interface was assessed the following monthly Trading Permit fees:

(i) if its volume falls within the parameters of Tier 1 of the Non-Transaction Fees Volume-Based Tiers, or volume up to 0.30%, $250;

(ii) if its volume falls within the parameters of Tier 2 of the Non-Transaction Fees Volume-Based Tiers, or volume above 0.30% up to 0.60%, $350; and

(iii) if its volume falls within the parameters of Tier 3 of the Non-Transaction Fees Volume-Based Tiers, or volume above 0.60%, $450.

Each Member who connected to the System via the MEO Interface was assessed the following monthly Trading Permit fees:

(i) if its volume falls within the parameters of Tier 1 of the Non-Transaction Fees Volume-Based Tiers, or volume up to 0.30%, $300;

(ii) if its volume falls within the parameters of Tier 2 of the Non-Transaction Fees Volume-Based Tiers, or volume above 0.30% up to 0.60%, $400; and

(iii) if its volume falls within the parameters of Tier 3 of the Non-Transaction Fees Volume-Based Tiers, or volume above 0.60%, $500.

Proposed Trading Permit Fees. The pull on Exchange resources associated with providing ongoing Member support, onboarding/off boarding technology requests, monitoring, reporting, and the surveillance and retention of increased message traffic due to increased trading volumes continue to increase since Trading Permit fees were first adopted in 2018.[33] The Exchange proposes to amend its Trading Permit fees as follows. Each Member who connects to the System via the FIX Interface will be assessed the following monthly Trading Permit fees:

(i) if its volume falls within the parameters of Tier 1 of the Non-Transaction Fees Volume-Based Tiers, $500;

(ii) if its volume falls within the parameters of Tier 2 of the Non-Transaction Fees Volume-Based Tiers, $1,000; and

(iii) if its volume falls within the parameters of Tier 3 of the Non-Transaction Fees Volume-Based Tiers, $1,500.

Each Member who connects to the System via the MEO Interface will be assessed the following monthly Trading Permit fees:

(i) if its volume falls within the parameters of Tier 1 of the Non-Transaction Fees Volume-Based Tiers, $2,500;

(ii) if its volume falls within the parameters of Tier 2 of the Non-Transaction Fees Volume-Based Tiers, $4,000; and

(iii) if its volume falls within the parameters of Tier 3 of the Non-Transaction Fees Volume-Based Tiers, $6,000.

As discussed above, both the MEO Interface and FIX Interface are available to all Members and each Member may choose which interface to utilize based on their own business needs. The MEO Interface is primarily used by Market Makers due to its robustness, lower latency, and higher throughput [34] and, as discussed below, utilizes greater Exchange resources due to the increased volume of message traffic that travels through the MEO interface. Trading Permit fees for Members who connect through the MEO Interface are, therefore, higher than the Trading Permit fees for Members who connect through the FIX Interface. The FIX Interface provides lower capacity and bandwidth and, therefore, utilizes less Exchange resources. The FIX Interface is primarily used by order flow providers who tend to be less latency sensitive and submit less orders and messages than Market Makers.

The Exchange has not amended its Trading Permit fees since the fees were first adopted in 2018.[35] The Exchange notes that its affiliates, Miami International Securities Exchange, LLC (''MIAX'') and MIAX Emerald, LLC (''MIAX Emerald''), charge EEMs a similar, fixed flat trading permit fee of

[26] *See* MIAX Pearl Options Exchange User Manual, Section 6, Order Types, *available at https://www.miaxoptions.com/exchange-functionality/pearl* (last visited June 30, 2022).

[27] *See, e.g.,* Exchange Rule 516.

[28] *See* preamble to Exchange Rule 516 (noting that not all order types and modifiers are available for use on each of the MEO Interface and the FIX Interface). *See also* Section 4.1.1.2 of the MEO Interface Specification, *available at https://www.miaxoptions.com/sites/default/files/page-files/MIAX_Express_Orders_MEO_v2.0.pdf* (indicating that the time-in-force instructions of IOC and Day are available on the MEO interface).

[29] The term ''Book'' means the electronic book of buy and sell orders and quotes maintained by the System. *See* Exchange Rule 100.

[30] Only the time-in-force modifiers of IOC and Day are available on the MEO Interface. *See* Exchange Rule 516 (noting that not all order types and modifiers are available for use on each of the MEO Interface and the FIX Interface). *See also* MIAX Pearl Options Exchange MEO Interface Specification, Section 4.1.1.2, *available at https://www.miaxoptions.com/sites/default/files/page-files/MIAX_Express_Orders_MEO_v2.0.pdf* (indicating that the time-in-force instructions of IOC and Day are available on the MEO interface).

[33] *See supra* note 9.

[34] Certain EEMs also choose to use the MEO interface due to its enhanced functionality and based on their own business models.

[35] *Id.*

$1,500,[36] which equals the top tier proposed herein for users of the FIX Interface and also entirely consists of EEMs. MIAX and MIAX Emerald also charge tiered trading permit fees to Market Makers as the Exchange proposes herein for users of the MEO Interface, which also primarily consists of Market Makers. However, the Exchange's proposed fees for users of the MEO Interface range from $2,500 to $6,000 while the fees on MIAX and MIAX Emerald range from $7,000 to $22,000. The Exchange also proposes to base its pricing on trading volume while MIAX and MIAX Emerald base their trading permit fees on number of options classes assigned to the Market Maker or the percentage of volume in option classes.[37] This is due to the difference in options assignments between the Exchange, and MIAX and MIAX Emerald. On MIAX and MIAX Emerald, Market Makers are assigned by options class, and are required to quote nearly all options in the class. On the Exchange, Market Makers are assigned by series, not class, and, therefore, trading volume is the more equitable and metric by which to gauge their use of the Exchange systems and related Trading Permit Fee.

As illustrated by the table below, the Exchange notes that the proposed fees for the Exchange's Trading Permits are in line with, or cheaper than, the similar trading permit and membership fees charged by other options exchanges. The below table also illustrates how the Exchange has historically undercharged for membership via Trading Permits as compared to other options exchanges. The Exchange believes other exchanges' membership and trading permit fees are useful examples of alternative approaches to providing and charging for membership and provides the below table for comparison purposes only to show how the Exchange's proposed fees compare to fees currently charged by other options exchanges for similar membership.

Exchange	Monthly membership/trading permit fee
MIAX Pearl Options (as proposed)	Trading Permit access via FIX Interface: Tier 1: $500. Tier 2: $1,000. Tier 3: $1,500. Trading Permit access via MEO Interface: Tier 1: $2,500. Tier 2: $4,000. Tier 3: $6,000.
BOX Options Exchange LLC ("BOX") [38].	Participant Fee: $1,500. Electronic Market Maker Trading Permit Fees: Tier 1 (up to and including 10 classes): $4,000. Tier 2 (up to and including 40 classes): $6,000. Tier 3 (up to and including 100 classes): $8,000. Tier 1 (over 100 classes): $10,000.
NYSE Arca, Inc. ("NYSE Arca") [39]	Options Trading Permits: Office and Clearing Firms: $1,000. Market Makers: 1st OTP—$8,000 for up to 60 plus the bottom 45% of option issues. 2nd OTP—Additional $6,000 for up to 150 plus the bottom 45% of option issues. 3rd OTP—Additional $5,000 for up to 500 plus the bottom 45% of option issues. 4th OTP—Additional $4,000 for up to 1,100 plus the bottom 45% of option issues. 5th OTP—Additional $3,000 for all option issues. 6th–9th OTP—Additional $2,000. 10th or more OTPs—$500 for all options issues.
NYSE American, LLC ("NYSE American") [40].	ATP Trading Permits: Clearing Member: $1,000. Order Flow Provider: $1,000. Market Makers: $8,000 for up to 60 plus the bottom 45% of option issues. Additional $6,000 for up to 150 plus the bottom 45% of option issues. Additional $5,000 for up to 500 plus the bottom 45% of option issues. Additional $4,000 for up to 1,100 plus the bottom 45% of option issues. Additional $3,000 for all option issues. Additional $2,000 for 6th to 9th ATPs (plus additional fee for premium products).
Nasdaq PHLX LLC ("Nasdaq PHLX") [41].	Streaming Quote Trader ("SQT") permit fees: Tier 1 (up to 200 option classes): $0.00. Tier 2 (up to 400 option classes): $2,200. Tier 3 (up to 600 option classes): $3,200. Tier 4 (up to 800 option classes): $4,200. Tier 5 (up to 1,000 option classes): $5,200. Tier 6 (up to 1,200 option classes): $6,200. Tier 7 (all option classes): $7,200. Remote Market Maker Organization ("RMMO") permit fees: Tier 1 (less than 100 option classes): $5,000. Tier 2 (more than 100 and less than 999 option classes): $8,000. Tier 3 (1,000 or more option classes): $11,000.
Nasdaq ISE LLC ("Nasdaq ISE") [42]	Access Fees:

[36] *See* the MIAX Fee Schedule, Section 3)b) and MIAX Emerald Fee Schedule, Section 3)b), *available at https://www.miaxoptions.com/fees* (last visited June 30, 2022).

[37] Both MIAX and MIAX Emerald charge Market Makers a monthly fee of $7,000 for up to 10 classes or up to 20% of classes assigned by volume, $12,000 for up to 40 classes or up to 35% of classes assigned by volume, $17,000 for up to 100 classes or up to 50% of classes assigned by volume, or $22,000 for over 100 classes or over 50% of classes assigned by volume up to all classes listed on MIAX or MIAX Emerald, as applicable. *Id.*

Exchange	Monthly membership/trading permit fee
Cboe Exchange, Inc. ("Cboe") [43] ...	Electronic Access Members ("EAMs"): $500. Primary Market Maker: $5,000 per membership. Competitive Market Maker: $2,500 per membership. Electronic Trading Permit Fees: Market Maker: $5,000. Electronic Access Permit: $3,000. Clearing TPH Permit: $2,000.
Cboe C2 Exchange, Inc. ("Cboe C2") [44].	Access Permit Fees for Market Makers: $5,000. Electronic Access Permits: $1,000.
Cboe BZX Exchange, Inc. ("Cboe BZX Optis") [45].	$500 where member has an ADV < 5,000 contracts traded. [46] $1,000 where member has an ADV ≥ 5,000 contracts traded.

Implementation and Procedural History

The proposed rule change will be immediately effective. The Exchange initially filed this proposal on July 1, 2021, with the proposed fees being immediately effective.[47] Between August 2021 and February 2022, the Exchange withdrew and refiled the proposed rule change, each time to meaningfully attempt to provide additional justification for the proposed fee changes, provide enhanced details regarding the Exchange's cost methodology, and address questions contained in the Commission's suspension orders.[48] The Commission received one comment letter on the filings.[49] The Commission again suspended the proposed fees on February 18, 2022.[50] The Commission received one comment letter on that filing.[51] The Exchange then provided Trading Permits at the lower rates for the month of March 2022 and absorbed all associated costs with the lower rates.

On March 30, 2022, the Exchange withdrew the proposed rule change that was previously suspended by the Commission on February 18, 2022. After providing Trading Permits at the lower rates for the month of March 2022, on March 30, 2022, the Exchange submitted a revised proposal for effectiveness beginning April 1, 2022.[52] This revised proposal argued that the proposed fees were constrained by competition based on a similar filing for permit/membership fees by MEMX LLC ("MEMX").[53] The Commission received one comment letter on that filing.[54] The Exchange withdrew this revised proposal and submitted a further revised filing providing additional support for its competition based

[38] *See* BOX fee schedule, Section 1, *available at https://boxexchange.com/assets/BOX-Fee-Schedule-as-of-June-1-2022-1.pdf* (last visited June 29, 2022). BOX's Participant Fee is the analog to the Exchange's Trading Permit fee for Members who use the FIX interface. BOX's Electronic Market Maker Trading Permit fee is the analog for the Exchange's Trading Permit fee for Members who use the MEO interface. BOX had an average daily market share of 6.26% as of June 30, 2022. *See* Market at a Glance, *supra* note 8.

[39] *See* NYSE Arca Options Fees and Charges, OTP Trading Participant Rights, p.1, *available at https://www.nyse.com/publicdocs/nyse/markets/arca-options/NYSE_Arca_Options_Fee_Schedule.pdf* (last visited July 12, 2022). NYSE Arca recently increased this Options Trading Permit Fees approximately 45%. *See* Securities Exchange Act Release No. 95142 (June 23, 2022), 87 FR 38786 (June 29, 2022) (SR–NYSEArca–2022–36). Under the new fee structure, it effectively costs a Market Maker $26,000 per month to trade all options issues on NYSE Arca. NYSE Arca's Options Trading Permit fee is the analog to the Exchange's Trading Permit fee for Members who use the FIX interface. NYSE Arca's Options Trading Permit fee for Market Makers is the analog for the Exchange's Trading Permit fee for Members who use the MEO interface.

[40] *See* NYSE American Options Fee Schedule, Section III, Monthly Trading Permit, Rights, Floor Access and Premium Product Fees, p. 23–24, *available at https://www.nyse.com/publicdocs/nyse/markets/american-options/NYSE_American_Options_Fee_Schedule.pdf* (last visited May 16, 2022). Under this fee structure, it effectively costs a Market Maker $26,000 per month to trade all options issues on NYSE American. NYSE American's ATP Trading Permit fee for Clearing Members and Order Flow Providers is the analog for the Exchange's Trading Permit fee for Members that use the FIX interface. NYSE American's ATP Trading Permit fee for Market Makers is the analog for the Exchange's Trading Permit fee for Members that use the MEO interface.

[41] *See* Nasdaq PHLX Options 7 Pricing Schedule, Section 8. Membership Fees, *available at https://listingcenter.nasdaq.com/rulebook/phlx/rules/Phlx%20Options%207* (last visited May 16, 2022). Nasdaq PHLX Options' SQT and RMMO fees is the analog to the Exchange's Trading Permit fee for Members that use the MEO Interface.

[42] *See* Nasdaq ISE Options 7 Pricing Schedule, Section 8.A. Access Services, *available at https://listingcenter.nasdaq.com/rulebook/ise/rules/ISE%20Options%207* (last visited May 16, 2022). Nasdaq ISE Options' EAM Access Fee is the analog to the Exchange's Trading Permit fee for Members that use the FIX Interface. Nasdaq ISE Options' Primary and Competitive Market Maker Access Fees are the analog to the Exchange's Trading Permit fee for Members that use the MEO Interface.

[43] *See* Cboe Fee Schedule, Electronic Trading Permit Fees, *available at https://cdn.cboe.com/resources/membership/Cboe_FeeSchedule.pdf* (last visited June 30, 2022). Cboe's Electronic Access Permit fee and Clearing TPH fee are the analog to the Exchange's Trading Permit fee for Members that use the FIX Interface. Cboe's Market Maker Permit fee is the analog to the Exchange's Trading Permit fee for Members that use the MEO Interface.

[44] *See* Cboe C2 Fee Schedule, Access Fees, *available at https://www.cboe.com/us/options/membership/fee_schedule/ctwo/* (last visited June 30, 2022). C2's Market Maker Access Permit fee is the analog to the Exchange's Trading Permit fee for Members that use the MEO Interface. C2's Electronic Access Permit fee is the analog to the Exchange's Trading Permit fee for Members that use the FIX Interface.

[45] *See* ''Membership Fees'' section of the Cboe BZX Options Fee Schedule, *available at https://www.cboe.com/us/options/membership/fee_schedule/bzx* (last visited June 30, 2022). The Exchange understands Cboe BZX Options charges the same Membership Fee to all of its Options Members.

[46] Under the Exchange's tiered structure, a Member may trade approximately 106,000 more contracts on the Exchange than on Cboe BZX Options and continue to qualify for the Exchange's lowest tier. For example, a Member would qualify for Tier 1 of the Exchange's tiered pricing structure where that Member's total volume as a percentage of TCV is between 0.00% and 0.30%. Assuming an average of 37 million contracts are traded each day during a month, that Member would qualify for Tier 1 where that Member traded less than 111,000 contracts that day and be charged $500, the same fee as Cboe BZX Options, where that Member connects via the FIX Interface. On Cboe BZX Options, the Exchange understands that same member would no longer qualify for their lowest tier when their ADV equals or exceeds 5,000 contracts and be charged a fee of $1,000 for that month.

justification on May 17, 2022.[55] In response to feedback from Commission Staff, the Exchange then withdrew that revised proposal and submitted a further revised proposal to provide additional support for the proposed fee change and to enhance its competition based justification on July 12, 2022.[56] Again, in response to feedback from Commission Staff, the Exchange withdrew that revised proposal and submitted this further revised proposal to provide additional support for the proposed fee change and to enhance its competition based justification on July 26, 2022.

2. Statutory Basis

The Exchange believes that its proposal to amend its Fee Schedule is consistent with Section 6(b) of the Act[57] in general, and furthers the objectives of Section 6(b)(4) of the Act[58] in particular, in that it is an equitable allocation of reasonable dues, fees and other charges among its members and issuers and other persons using its facilities. The Exchange also believes the proposal furthers the objectives of Section 6(b)(5) of the Act in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest and is not designed to permit unfair discrimination between customers, issuers, brokers and dealers.

The proposed changes to the Fee Schedule are reasonable in several respects. As a threshold matter, the Exchange is subject to significant competitive forces in the market for order flow, which constrains its pricing determinations. The fact that the market for order flow is competitive has long been recognized by the courts. *In NetCoalition* v. *Securities and Exchange Commission*, the D.C. Circuit stated, ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers' . . . .'' [59]

The Commission and the courts have repeatedly expressed their preference for competition over regulatory intervention to determine prices, products, and services in the securities markets. In Regulation NMS, while adopting a series of steps to improve the current market model, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [60]

Congress directed the Commission to ''rely 'on competition, whenever possible, in meeting its regulatory responsibilities for overseeing the SROs and the national market system.' '' [61] As a result, the Commission has historically relied on competitive forces to determine whether a fee proposal is equitable, fair, reasonable, and not unreasonably or unfairly discriminatory. ''If competitive forces are operative, the self-interest of the exchanges themselves will work powerfully to constrain unreasonable or unfair behavior.'' [62] Accordingly, ''the existence of significant competition provides a substantial basis for finding that the terms of an exchange's fee proposal are equitable, fair, reasonable, and not unreasonably or unfairly discriminatory.'' [63]

In its 2019 guidance on fee proposals, Commission staff indicated that they would look at factors beyond the competitive environment, such as cost, only if a ''proposal lacks persuasive evidence that the proposed fee is constrained by significant competitive forces.'' [64] The Commission staff further indicated in its 2019 guidance that an exchange can demonstrate competitive forces exist by showing that ''substantially similar but not identical'' substitutable products or services exist and that ''elasticity of demand'' may be evidence that competitive forces exist.[65]

The Exchange believes that there are many factors that may cause a market participant to decide to become a member of a particular exchange including: (i) an exchange's available liquidity in options series; (ii) trading functionality offered on a particular market; (iii) product offerings; (iv) customer service on an exchange; and (v) transactional pricing. As discussed above, the Exchange believes that the decision to become a member of an exchange, particularly as a registered market maker, is a complex one that is not solely based on non-transactional costs assessed by an exchange. Market participants weigh the tradeoff between where they choose to deploy liquidity versus where trading opportunities exist. Of course, the cost of membership, ports and market data may factor into a decision to become a member of a certain exchange, but the Exchange believes it is by no means the only factor when comparing exchanges. In general, there are a number of factors that market participants may consider when deciding to become a member of the Exchange or any other options exchange.

Market Makers

Market makers play an important role on options exchanges as they provide liquidity. In options markets, registered market makers are assigned options series[66] and are required to quote in those options series for a specified time period during the day.[67] Typically, a lead or primary market maker[68] will be required to quote for a longer period of time during the day as compared to other market makers registered on an exchange.[69] Additionally, market makers are typically required to quote within a certain width on options markets.[70] Greater liquidity on options

markets benefits all market participants by providing more trading opportunities and attracting greater participation by market makers. An increase in the activity of market makers in turn facilitates tighter spreads. Market participants are attracted to options markets that have ample liquidity and tighter spreads in options series.

Trading Functionality

An exchange's trading functionality attracts market participants who may elect, for example, to submit an order into a price improving auction,[71] enter a complex order,[72] or utilize a particular order type.[73] Different options exchanges offer different trading functionality to their members. For example, with respect to priority and allocation of an order book, some options exchanges have price/time allocation,[74] some have a size pro-rata allocation,[75] while other exchanges offer both allocation models.[76] The allocation methodology on a particular options exchange's order book may attract certain market participants. Also, the manner in which some options markets structure their solicitation auction,[77] or opening process,[78] may be attractive to certain market participants. Finally, some exchanges have trading floors [79] which may accommodate trading for certain market participants or trading firms.[80]

Product Offerings

Introducing new and innovative products to the marketplace designed to meet customer demands may attract market participants to a particular options venue. New products in the options industry may allow market participants greater trading and hedging opportunities, as well as new avenues to manage risks. The listing of new options products enhances competition among market participants by providing investors with additional investment vehicles, as well as competitive alternatives, to existing investment products. An exchange's proprietary product offering may attract order flow to a particular exchange to trade a particular options product.[81]

Transaction Pricing

The pricing available on a particular exchange may impact a market participant's decision to submit order flow to a particular options venue. The options industry is competitive. Clear substitutes to the Exchange exist in the market for options security transaction services; the Exchange is only one of sixteen options exchanges to which market participants may direct their order flow and memberships. Within this environment, market participants can freely, and often do, shift their order flow and memberships among the Exchange and competing venues in response to changes in their respective pricing schedules.

* * * * *

The Exchange believes the fees in this case are reasonable and constrained by competitive forces. Evidence is set forth below showing that substitutable products and elasticity of demand exist when it comes to purchasing a Trading Permit or membership on an exchange.

Trading Permit Fee Increase

Trading Permit and Similar Membership Fees Are Constrained by Competition

The Exchange's Trading Permit Fees are subject to significant competitive forces as evidenced by available substitutes and elasticity of demand. As discussed above, the Exchange believes that there are many factors that may cause a market participant to decide to become a member of a particular exchange including: (i) an exchange's available liquidity in options series; (ii) trading functionality, latency, reliability, throughout, access to liquidity, and determinism offered on a particular market; (iii) product offerings; (iv) customer service on an exchange; and (v) transactional pricing. The Exchange believes that the decision to become a member of an exchange is a complex one that is not solely based on non-transactional costs assessed by an exchange.

The Exchange believes that there is value in being a Member of the Exchange and retaining that Membership as the Exchange's market share has grown. Exchanges compete with each other for memberships and must consider this competitive dynamic when setting fees for memberships, such as Trading Permits. In this case, the proposed Trading Permit fees are reasonable and constrained by competition because, as illustrated by the above table, they are in the range of similar types of membership fees charged to analogous categories of market participants by other exchanges, including those with similar market share.[82] The proposed monthly Trading Permit fees are also lower than or comparable to the membership and trading permit fees imposed by several other national securities exchanges that charge such fees.[83] Should the Exchange seek to adopt Trading Permit Fees that are higher than that of other exchanges, it would risk losing Members and having them potentially connect to the Exchange via other means. Becoming a member of the exchange does not ''lock'' a potential member into a market or diminish the overall competition for exchange services. The decision to become a member of an exchange is made at the beginning of the relationship, and is no less subject to competition than trading fees or market data.

Availability of Substitutes. The Commission staff indicated in its 2019 guidance that an exchange can demonstrate competitive forces exist by showing that ''substantially similar but not identical'' substitutable products or services exist.[84] That is clearly the case here. No broker-dealer is required to become a Member of the Exchange. Instead, many market participants waited for the Exchange to grow to a certain percentage of market share before they decided to become an Exchange Member. In addition, many market participants still have not joined the Exchange despite the Exchange's growth in recent years to consistently be

[79] Today, Phlx, Cboe, BOX, NYSE Arca, and NYSE American LLC have a trading floor. Trading floors require an on-floor presence to execute options transactions.

[80] There are certain features of open outcry trading that are difficult to replicate in an electronic trading environment. The Exchange has observed, and understands from various market participants, that they have had difficulty executing certain orders, such as larger orders and high-risk and complicated strategies, in an all-electronic trading configuration without the element of human interaction to negotiate pricing for these orders.

[81] *See, e.g.,* options on the Nasdaq-100 Index® available on ISE, GEMX and Phlx and Cboe's Market Volatility Index®. Currently, the Exchange does not list any proprietary products.

approximately 4–5% of the overall equity options market share. To illustrate, the Exchange currently has 41 Members.[85] However, based on publicly available information regarding a sample of the Exchange's competitors, NYSE American Options has 75 members, NYSE Arca Options has 71 members, and Cboe has 94 members.[86] Accordingly, the vigorous competition among national securities exchanges provides many alternatives for firms to voluntarily decide whether membership to the Exchange is appropriate and worthwhile, and no broker-dealer is required to become a member of the Exchange. Specifically, neither the trade-through requirements under Regulation NMS nor broker-dealers' best execution obligations require a broker-dealer to become a member of every exchange.

The Exchange acknowledges that competitive forces may compel certain broker-dealers to be members of all equity options exchanges based on their business models. These broker-dealers may engage in latency sensitive trading strategies that benefit from being a member and connecting directly to an exchange based on the business model they choose to employ. Competitive forces that may drive certain broker-dealers to become members of each exchange based on their business models is not unique to the options market. This dynamic also exists in equities and acknowledged by MEMX and considered by the Commission in a recent MEMX proposal to adopt a monthly membership fee.[87] However, the Exchange believes that the proposed fees are reasonable, equitably allocated and not unfairly discriminatory, even for a broker-dealer that deems it necessary to join the Exchange for business purposes, as those business reasons should presumably result in revenue capable of covering the proposed fees, just as one may do when considering whether to become an member of an equity exchange.

Other broker-dealers may not find a need in becoming a member of all or some exchanges. There is no requirement, regulatory or otherwise, that any broker-dealer connect to and access any (or all of) the available options exchanges. One other exchange recently noted in a proposal to amend their own trading permit fees that of the 62 market making firms that are registered as Market Makers across Cboe, MIAX, and BOX, 42 firms access only one of the three exchanges.[88] Further, the Exchange and its affiliates, MIAX and MIAX Emerald, have a total of 47 members. Of those 47 total members, 35 are members of all three exchanges, four are members of only two (2) exchanges, and eight (8) are members of only one exchange. Of those that are Market Makers today on the Exchange, two (2) are not registered as Market Makers on MIAX and one (1) is not registered as a Market Maker on MIAX Emerald. Broken down even further, of those Market Makers that use the MEO Interface and reached the Exchange's top tier for the Trading Permit fee for June 2022, one (1) Market Maker was only a Member of the Exchange and not its two affiliates, MIAX and MIAX Emerald. The above data evidences that a Market Maker need not be a Member of all options exchanges, let alone the Exchange and its two affiliates, and market makers elect to do so based on their own business decisions and need to directly access each exchange's liquidity pool.

The Exchange also is not aware of any reason why a Market Maker could not cease being a permit holder in response to price increases that it deems unreasonable from its own business perspective. The Exchange does not assess any termination fee for a Member to drop its Trading Permit, nor is the Exchange aware of any other costs that would be incurred by a Market Maker to do so. Further, a broker-dealer may employ a business model that is not latency sensitive, such as one that only enters resting liquidity and, therefore, may not find interest in exchange membership. Exchange membership may also not be useful for order routing firms that seek to route orders to an exchange through another means, described below, solely as part of their best execution obligations or to comply with the trade-through requirements under Chapter XIV of the Exchange's Rules. Such broker-dealers may utilize various existing substitutes to access an exchange. For example, in lieu of becoming a member at each options exchange, a market participant may join one exchange and elect to have their orders routed in the event that a better price is available on an away market, including the Exchange. Nothing in the Order Protection Rule requires a firm to become a Member at the Exchange, or any other options exchange.[89] Further, if the Exchange is not at the NBBO, the Exchange will route an order to an away market that is at the NBBO to prevent a trade-through and also ensure that the order was executed at a superior price.[90]

Some other broker-dealers may not deem it necessary to be a Member of the Exchange and may elect to access the Exchange through other means. As a substitute for joining an exchange, a third-party may be utilized to execute an order on an exchange. For example, a third-party broker-dealer Member of the Exchange may be utilized by a retail investor to submit orders into an exchange. An institutional investor may utilize a broker-dealer, a service bureau,[91] or request sponsored access [92] through a member of an exchange in order to submit an order directly to an options exchange.[93] A market participant may either pay the costs associated with becoming a member of an exchange or, in the alternative, a market participant may elect to pay commissions to a broker-dealer, pay fees to a service bureau to submit trades, or pay a member to sponsor the market participant in order to submit trades directly to an exchange.[94] Market

[87] *See* MEMX Membership Fee Proposal, *supra* note 7.

[88] *See* Securities Exchange Act Release No. 94894 (May 11, 2022), 87 FR 29987 (May 17, 2022) (SR–BOX–2022–17) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change to Amend the Fee Schedule on the BOX Options Market LLC Facility To Adopt Electronic Market Maker Trading Permit Fees). The Exchange believes that BOX's observation demonstrates that market making firms can, and do, select which exchanges they wish to access, and, accordingly, options exchanges must take competitive considerations into account when setting fees for such access.

[89] *See* Options Order Protection and Locked/Crossed Market Plan (August 14, 2009), *available at https://www.theocc.com/getmedia/7fc629d9-4e54-4b99-9f11-c0e4db1a2266/options_order_protection_plan.pdf.*

[90] Exchange Members may elect to not route their orders by marking an order as ''do-not-route.'' In this case, the order would not be routed.

[91] Service bureaus provide access to market participants to submit and execute orders on an exchange. On the Exchange, a Service Bureau may be a Member. Some Members utilize a Service Bureau for connectivity and that Service Bureau may not be a Member. Some market participants utilize a Service Bureau who is a Member to submit orders.

[92] Sponsored Access is an arrangement whereby a member permits its customers to enter orders into an exchange's system that bypass the member's trading system and are routed directly to the Exchange, including routing through a service bureau or other third-party technology provider.

[93] This may include utilizing a Floor Broker and submitting the trade to one of the five options trading floors.

[94] The Exchange notes that it does not have insight into the economics of such a relationship where a broker-dealer utilizes another entity to access the Exchanges. It is presumed that a third-party that provides access to an exchange does so

participants may elect any of the above substitute models and weigh the varying costs when determining how to submit trades to an exchange. Depending on the number of orders to be submitted, technology, ability to control submission of orders, and projected revenues, a market participant may determine one model is more cost efficient as compared to the alternatives. The above examples clearly demonstrate competitive forces exist by the availability of ''substantially similar but not identical'' substitutable products or services to becoming a Member of the Exchange. Also, based on the disparity in amount of memberships among exchanges detailed above, numerous market participants take advantage of these substitutes to send order flow to the Exchange in lieu of becoming a Member.

Elasticity of Demand. The Exchange notes it is not aware of any reason why Members could not simply drop their access to an exchange (or not initially access an exchange) if an exchange were to establish prices for its non-transaction fees that, in the determination of such Member, did not make business or economic sense for such Member to access such exchange. The Exchange again notes that Members are not required by rule, regulation, or competitive forces to be a Member on the Exchange.

Elasticity of demand for Exchange Membership exists when it comes to purchasing a Trading Permit and, as evidenced by the below data, Members have terminated their memberships since the proposed fees were first in effect. First, and most notably, the Exchange has not seen an increase in memberships since it first adopted the proposed fee increase. In fact, three Members terminated their memberships in the time since the proposed fee increase first went into effect. In June 2021, the month immediately preceding the initial implementation of this proposed fee change, the Exchange had 20 users of the MEO Interface and 28 users of the FIX Interface. These numbers remained stagnant until August 2021, where one Member that utilized the MEO Interface ceased utilizing the MEO Interface and again in December 2021 where one Member that utilized the FIX Interface ceased utilizing the FIX Interface. These numbers again remained stagnant until March 2022, where another Member that utilized the FIX Interface ceased utilizing the FIX Interface. This resulted in 19 users of the MEO Interface and 26 users of the FIX Interface. Further, other exchanges have also experienced termination of memberships if their members deem permit or membership fees to be unreasonable or excessive. For example, the Exchange notes that a BOX participant modified its access to BOX in connection with the implementation of a proposed change to BOX's permit fees.[95] The absence of new memberships coupled with the termination of two memberships on the Exchange, as well as similar membership changes on another options exchange in relation to a trading permit fee increase, clearly shows that elasticity of demand exists.

Also, the Exchange has not experienced any Member decreasing their trading activity on the Exchange in order to move to a lower tier and be charged the corresponding lower fee. In fact, between June 2021 and July 2021, one Member that utilizes the MEO Interface moved up from Tier 1 to Tier 3 due to increasing their trading volume on the Exchange. This occurred again between January 2022 and February 2022, where another Member that utilizes the MEO Interface moved up from Tier 1 to Tier 2 also due to increasing their trading volume on the Exchange.

The Exchange has not experienced a net decrease in Members due to the fee increase, because the Exchange believes numerous considerations are taken into account when deciding to be a member of an exchange, including, but not limited to: (i) an exchange's available liquidity in options series; (ii) trading functionality, latency, reliability, throughout, access to liquidity, and determinism offered on a particular market; (iii) product offerings; (iv) customer service on an exchange; and (v) transactional pricing when socializing the change. Fees are not the sole consideration. As stated above, the Exchange socialized the proposed fee increase with Members prior to first implementing the change. During that process, some Members stated that they anticipated a potential increase due to the lower rates the Exchange historically charged.

The Proposed Fees Are Reasonable and Constrained by Similar Fees Charged by Other Options Exchanges

The proposed fees for the Exchange's Trading Permits are in line with, or cheaper than, the similar trading permit and membership fees charged by other options exchanges with similar market share. The Exchange believes other exchanges' membership and trading permit fees, even those of its affiliates, are useful examples of alternative approaches to charging for memberships and how such fees are constrained by like fees charged by other exchanges.

Again, the Exchange has not amended its Trading Permit fees since the fees were first adopted in 2018.[96] As described above, the Exchange's proposed fee increase results in fees that remain lower than those of its affiliates, MIAX and MIAX Emerald. First, MIAX and MIAX Emerald charge EEMs a similar, fixed flat trading permit fee of $1,500,[97] which equals the top tier proposed herein for users of the FIX Interface and also primarily consists of EEMs. Members that do not qualify for the top tier on the Exchange would pay a lower Trading Permit Fee than they would on MIAX or MIAX Emerald. Like the Exchange currently employs for MEO Interface, which is primarily used by Market Makers, MIAX and MIAX Emerald charge tiered trading permit fees to Market Makers. However, the Exchange's proposed fees for users of the MEO Interface are lower and range from $2,500 to $6,000, while the Trading Permit fees on MIAX and MIAX Emerald range from $7,000 to $22,000.

The below discussion illustrates how the Exchange has historically undercharged for access via Trading Permits as compared to other options exchanges. As discussed further above, the Exchange chose to charge less than other options exchanges to attract memberships and order flow as a new options exchange entrant. The Exchange now seeks to increase its Trading Permit Fees due to the maturity of its market while keeping in mind the competitive constraints based on similar fees by other options exchanges.

The proposed Trading Permit Fees compare favorably with those of other options exchanges. The Exchange proposes to charge users of the FIX Interface monthly fees ranging from

on behalf of multiple broker-dealers and provides access to multiple exchanges. It is also presumed that any increased volume that might cause such third party to achieve a higher Trading Permit pricing tier maybe offset through achieving a higher rebate on the Exchange or other economic arrangement between the parties.

[95] According to BOX, a Market Maker on BOX terminated its status as a Market Maker in response to BOX's proposed modification of Market Maker trading permit fees. *See* Securities Exchange Act Release No. 94894 (May 11, 2022), 87 FR 29987 (May 17, 2022) (SR–BOX–2022–17). BOX noted, and the Exchange agrees, that this Market Maker's decision demonstrates that Market Makers can, and do, alter their membership status if they deem permit fees at an exchange to be unsuitable for their business needs, thus demonstrating the competitive environment for Market Maker permit fees and the constraints on options exchanges when setting Market Maker permit fees.

[96] *See supra* note 9.

[97] *See* the MIAX Fee Schedule, Section (3)(b) and MIAX Emerald Fee Schedule, Section (3)(b), *available at https://www.miaxoptions.com/fees* (last visited June 30, 2022).

$500 to $1,500 based on trading volume. Users of the FIX Interface are primarily EEMs, which generally consist of order flow providers. Cboe charges monthly electronic trading permit fees based on the category of participant, such as $3,000 for Electronic Access Permit holders and $2,000 for Clearing TPH Permit holders (the Exchange notes that it only charges $250 per month for EEM Clearing Firms). Cboe's Electronic Access Permit fee is the analog to the Exchange's Trading Permit fee for Members that use the FIX Interface and is higher than the Exchange's proposed highest tier.

The Exchange's proposed monthly Trading Permit Fees for users of the MEO Interface, which are primarily Market Makers, range from $2,500 to $6,000 based on trading volume. Basing such fees on trading volume is analogous to other options exchanges that base their similar fees charged to Market Makers based on the number of options classes assigned. For example, NYSE Arca charges Market Makers a base fee of $8,000 and charges additional fees ranging from $500 to $6,000 on top of the base fee and depending on the options issues assigned, could result in monthly options trading permit fees ranging from $8,000 to $26,000 (or higher), which is higher than the Exchange's highest proposed tier of $6,000. NYSE American charges electronic Market Makers a base fee of $8,000 and charges additional fees ranging from $500 to $6,000 on top of the base fee and depending on the options issues assigned, which could result in monthly options trading permit fees ranging from $8,000 to $26,000 (or higher), also higher than the Exchange's highest proposed tier of $6,000.

The proposed Trading Permit Fee also compares favorably with those of other options exchanges with similar market share. Under the Exchange's tiered structure, a Member may trade approximately 106,000 more ADV contracts on the Exchange than on Cboe BZX Options [98] and continue to qualify for the Exchange's lowest Tier. For example, a Member would qualify for Tier 1 of the Exchange's tiered pricing structure where that Member's total volume as a percentage of TCV is between 0.00% and 0.30%. Assuming an average of 37 million contracts are traded each day during a month that Member would qualify for Tier 1 where that Member traded less than an ADV of 111,000 contracts and be charged $500 for the month, the same fee as Cboe BZX Options, where that Member connects via FIX.[99] On Cboe BZX Options, the Exchange understands that same member would no longer qualify for their lowest tier when their ADV equals or exceeds 5,000 contracts and be charged a fee of $1,000 for that month.[100]

Like the Exchange, BOX also employs a tier pricing structure for market maker trading permit fees charging $4,000 to $10,000 per month based on options classes traded.[101] BOX's pricing structure is the analog for the Exchange's Trading Permit Fees for users of the MEO Interface as that interface is primarily used by Market Makers. BOX's lowest tier only equals the Exchange's second tier for the MEO interface and its third and fourth tier exceed the Exchange's highest tier.

The Proposed Fees Are Equitable and Not Unfairly Discriminatory

The Exchange believes that the proposed monthly Trading Permit fees are not unfairly discriminatory because they would be assessed equally across all Members or firms that seek to become Members. The Exchange first adopted its tiered pricing structure in 2018 and has not amended the volume requirement since, nor does it propose to do so herein. Nonetheless, the Exchange continues to believe the tiered pricing structure remains not unfairly discriminatory because it is based on the amount of trading a Member conducts on the Exchange, related use of Exchange services, and the value of the Exchange's technology offering. In other words, the more a firm uses the Exchange's system, the more that firm will pay than others that use the system less. The proposed fees also remain not unfairly discriminatory because they continue to be based on the type of interface utilized and the value drawn from the use of that interface.

The tiered pricing structure remains not unfairly discriminatory because it is based on the amount of trading a Member conducts on the Exchange, related use of Exchange services, and the value of the Exchange's technology offering. The Exchange offers a premium System network, connectivity, and a highly deterministic trading environment, the cost of which per tier is in relation to the value it provides. The Exchange is recognized as a leader in network monitoring, determinism, risk protections, and network stability. For example, the Exchange experiences approximately a 95% determinism rate, system throughput of approximately 10.8 million quotes per second and average round trip latency rate of approximately 30.76 microseconds for a single quote. The Exchange provides a highly resilient trading platform that experienced 99.9999% of uptime since its inception over 5 years ago. The Exchange provides extreme performance and radical scalability designed to match the unique needs of trading differing asset class/market model combinations.

Again, Exchange systems offer two customer interfaces, FIX Interface gateway for orders, and ultra-low latency MEO Interface and data feeds with best-in-class wire order determinism. The Exchange also offers automated continuous testing to ensure high reliability, advanced monitoring and systems security, and employs a software architecture that results in minimizing the demands on power, space, and cooling while allowing for rapid scalability, resiliency and fault isolation. The Exchange also provides latency equalized cross-connects in the primary data center ensures fair and cost efficient access to the Exchange's Systems.

The tiered pricing structure represent the value of the Exchange's industry leading technology platform and is based on how frequently a Member trades on the Exchange. The more use, the more value a Member is extolling from the Exchange. The Exchange believes that a Member that qualifies for the first tier should not be charged the same as a Member that qualifies for the highest tier because the Member that qualifies for the first tier uses the Exchange less than the Member that qualifies for the highest tier. Members that qualify for the lowest tier tend to connect to the Exchange as part of their best execution obligations and generally tend to send the least amount of orders and messages over those connections.[102]

[98] Cboe BZX Options had an average daily market share of 7.95% as of June 23, 2022. *See* ''Market at a Glance'', *available at https://www.miaxoptions.com/* (last visited June 23, 2022).

[99] *See* ''Membership Fees'' section of the Cboe BZX Options Fee Schedule, *available at https://www.cboe.com/us/options/membership/fee_schedule/bzx* (last visited April 13, 2022). The Exchange understands Cboe BZX Options charges the same Membership Fee to all of its Options Members.

[100] The Exchange proposes to also charge a fee of $1,000 per month to Members that qualify for Tier 2, the same as BZX's highest tier. The Exchange acknowledges that the Exchange's Trading Permit fee would be higher than BZX where a Member qualifies for Tier 3.

[101] *See* Securities Exchange Act Release No. 94894 (May 11, 2022), 87 FR 29987 (May 17, 2022) (SR–BOX–2022–17).

[102] An EEM may satisfy its best execution obligations by using the FIX Interface, limiting their costs. Those EEMs that choose to use the MEO Interface do so for reasons other than best execution, such as the enhanced functionality provided by the MEO Interface, and the proposed fees would not serve as a barrier to satisfying best execution.

Those Members generally send fewer orders and messages to the Exchange resulting in less use of the Exchange resources. Therefore, the Trading Permit fees for those Members should rightfully be lower than others that trade on the Exchange for other reasons, such as a low-latency trading strategies that requires sending more orders and messages which, therefore, utilize a greater amount or Exchange resources and extoll great value from their use of the Exchange's industry leading technology offering.

Next, the existing tiered pricing structure remains not unfairly discriminatory because it continues to be based on the type of interface utilized and the value drawn from the use of that interface. As discussed above, both the MEO Interface and FIX Interface continue to be available to all Members and each Member may choose which interface to utilize based on their own business needs. The FIX Interface is the industry-wide uniform message format and provides lower bandwidth, less capacity, and fewer Exchange resources. EEMs, who are primarily order flow providers, are the primary users of the FIX Interface. Meanwhile, the MEO Interface is the more robust interface offering lower latency and higher throughput. Market Makers primarily use the MEO Interface due to its functionality, robustness, lower latency, and higher throughput and utilizes greater Exchange resources due to the increased volume of message traffic that travel through the MEO Interface.

As stated above, the Exchange offers three time-in-force modifiers: Day, IOC, and GTC. While all order types are available for use on either interface, only the time-in-force modifiers of IOC and Day are available on the MEO Interface. Market Makers utilize the time-in-force of Day on orders to be posted on the MIAX Pearl Options Book and to meet Market Makers' continuous quoting obligations under Exchange Rule 605(d). Other Market Makers, and certain EEMs, that primarily remove liquidity tend to be more latency sensitive and utilize the time-in-force of IOC on orders when looking to remove liquidity from the MIAX Pearl Options Book. The MEO Interface allows the submission of Cancel-Replacement orders, which allow for the immediate cancellation of a previously received order and the replacement of that order with a new order with new terms and conditions. Cancel-Replacement orders are primarily used by Market Makers as part of their continuous quoting obligations. Market Makers, and certain EEMs, are the primary users of the MEO Interface due to its lower latency, higher throughput, available time-in-force instructions and order types that assist them in satisfying their market making obligations. The Exchange also offers its Aggregate Risk Manager (''ARM'') over the MEO Interface and it is available to both EEMs and Market Makers.[103]

The FIX Interface provides lower capacity and bandwidth and, therefore, utilizes less Exchange resources. The FIX Interface is primarily used by EEMs, who tend to be less latency sensitive and submit less orders and messages than Market Makers. The FIX Interface provides EEMs all the functionality necessary for them to satisfy their best execution obligations. However, EEMs may choose to use the MEO Interface due to its lower latency, higher throughput, available functionality based on their business needs if they choose.

The Exchange notes that while Market Maker users of the MEO Interface continue to account for a vast majority of the increased System usage placed on the Exchange, Market Makers continue to be valuable market participants on the exchanges as the options market is a quote driven industry. The Exchange recognizes the value that Market Makers bring to the Exchange. The Exchange proposes higher, separate fees for users of the MEO Interface that are more aligned with the costs and resources that Market Makers continue to place on the Exchange and its systems.

The Exchange notes that Market Makers are the predominant users of the MEO Interface and consume the most bandwidth and resources of the network, transact the vast majority of the volume on the Exchange, and require the high touch network support services provided by the Exchange and its staff. The Exchange notes that users of the FIX Interface, *i.e.,* non-Market Makers, take up significantly less Exchange resources as discussed further below. Further, the Exchange notes that MEO users account for greater than 99% of message traffic over the network, while FIX users account for less than 1% of message traffic over the network. In the Exchange's experience, most Exchange Members do not have a business need for the high performance network solutions, like MEO, required by Market Makers and certain EEMs.

Over the period from March 2022 through May 2022, the Exchange processed 1.3 billion messages via the FIX Interface (0.33% of total messages received). Over that same time period, the Exchange processed 386.1 billion messages (99.67% of total messages received) over the MEO Interface. This marked difference between the number of FIX and MEO messages processed, when mapped to servers, software, storage, and networking results in a much higher allocation of total resources to support the MEO Interface. For one, the Exchange expends greater resources to maintain the resilience of the MEO Interface to ensure its ongoing operation in accordance with Regulation SCI. Another, the Exchange must expand its storage capacity to retain these increased messages in compliance with its record keeping obligations. The Exchange must also expend additional resources to surveil and ensure proper regulatory oversight of this increased message traffic. These pulls on Exchange resources have only increased since it first adopted the Trading Permit fee in March of 2018 [104] when the Exchange's trading volume for that month averaged 3.94%.[105] Today, the Exchange's average daily trading volume for June 2022 is 4.92%.[106] This additional volume increases the pull on Exchange resources necessary to surveil and regulate its market while also procuring additional capacity to store and monitor those messages in compliance with its record keeping obligations under the Exchange Act.

Users of the MEO Interface, therefore, receive greater value than Users of the FIX Interface due to its higher throughput, lower latency, and available functionality. As the above data shows, the Exchange also expends much more resources to support the MEO Interface than it does to support the FIX Interface. The existing tiered pricing structure is designed to account for these facts. Trading Permit fees for Members who connect through the MEO Interface are, therefore, higher than the Trading Permit fees for Members who connect through the FIX Interface. The tiered pricing structure also accounts for the corresponding use of the MEO and FIX Interfaces and charges more for those that use either interface more in terms of trading volume and proportionate pull on Exchange resources. Therefore, the proposed monthly Trading Permit fees are not unfairly discriminatory because they would be assessed equally across all Members based on the type of interface and related usage of Exchange resources.

The tiered pricing structure has been in place since 2018 [107] and similar

[103] *See* Exchange Rules 517(A) (Aggregated Risk Manager for EEMs) *and* 517B (Aggregate Risk Manager for Market Makers).

[104] *See supra* note 9.

[105] *See* Market at a Glance, *supra* note 8.

[106] *Id.*

[107] *See supra* note 9.

membership pricing structures utilized by other options exchanges assess permit fees at different rates, based upon a member's participation on that exchange,[108] and, as such, this concept is not new or novel. The Exchange also notes the some options exchanges employ a tiered pricing structure for membership fees based on options assigned or traded while the Exchange employs a tier pricing structure based on trading volume. The Exchange believes both are analogous and lead to the same result. Also see the BZX example explained above.

The proposed fees are equitable and not unfairly discriminatory as the fees apply equally to all Members. As such, all similarly situated Members, with the same trading volume, will be subject to the same Trading Permit fee. The Exchange also believes that assessing lower fees to Members with less trading volume is reasonable and appropriate as it will allow the Exchange to retain and attract smaller-scale Members, which are an integral component of the options industry marketplace. Since these smaller Members utilize less bandwidth and capacity on the Exchange's network due to the lower trading volume, the Exchange believes it is reasonable and appropriate to offer Members a lower fee. Furthermore, the Exchange tiered pricing is beneficial and valued by smaller Market Makers who provide liquidity in less liquid options classes. The Exchange fears that without its tiered pricing structure, smaller Market Makers would discontinue their membership and cease providing much needed liquidity in less liquid options classes to the detriment of all market participants. The Exchange must, therefore, consider Members' ability to discontinue their memberships when considering any potential changes to its tiered volume requirements and that Members' ability to transition to another exchange they view offers more attractive volume thresholds and pricing. The proposed fees, therefore, represent the equitable allocation of reasonable dues, fees and other charges because the fees are generally lower than other exchanges and the proposed tiered fees are similar to other tiered pricing structures on other options exchanges.[109]

Removal of Monthly Volume Credit and Trading Permit Fee Credit

The Exchange believes its proposal to remove the Monthly Volume Credit is reasonable, equitable and not unfairly discriminatory because all market participants will no longer be offered the ability to achieve the extra credits associated with the Monthly Volume Credit for submitting Priority Customer volume to the Exchange and access to the Exchange is offered on terms that are not unfairly discriminatory. The Exchange believes it is equitable and not unfairly discriminatory to remove the Monthly Volume Credit from the Fee Schedule for business and competitive reasons. The Exchange established the Monthly Volume Credit when it first launched operations to encourage Members to increase their order flow by providing a credit to those that exceeded a volume threshold. The Exchange believes that the Exchange's existing Priority Customer rebates and fees will continue to allow the Exchange to remain highly competitive and continue to attract order flow and maintain market share even without the Monthly Volume Credit.[110]

The Exchange believes its proposal to remove the Trading Permit fee credit for Members that connect via both the MEO Interface and FIX Interface is reasonable, equitable and not unfairly discriminatory because all market participants will no longer be offered the ability to receive the credit and access to the Exchange is offered on terms that are not unfairly discriminatory. The Exchange believes it is equitable and not unfairly discriminatory to remove the Trading Permit fee credit for business and competitive reasons. The Exchange established the Trading Permit fee credit to lower the costs for Members that connect via the MEO Interface and/or FIX Interface as a means to attract order flow and memberships after the Exchange first launched operations. The Exchange now believes that it is appropriate to remove this credit in light of the current operating conditions and membership on the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act, [111] the Exchange believes that the proposed rule change would not impose any burden on intermarket or intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intra-Market Competition

The Exchange believes the removal of the Monthly Volume Credit and Trading Permit fee credit will not place certain market participants at a relative disadvantage to other market participants because, in order to attract order flow when the Exchange first launched operations, the Exchange established these credits to lower the initial fixed cost for Members. The Exchange now believes that it is appropriate to remove this credit in light of the current operating conditions, including the Exchange's overall membership and the current type and amount of volume executed on the Exchange. The Exchange believes that the Exchange's rebates and fees will still allow the Exchange to remain highly competitive such that the Exchange should continue to attract order flow and maintain market share.

As described above, the Exchange's proposed Trading Permit fees are lower than or similar to the cost of membership and trading permits on other exchanges,[112] and therefore, may stimulate intramarket competition by attracting additional firms to become Members on the Exchange or at least should not deter interested participants from joining the Exchange. In addition, membership and trading permit fees are subject to competition from other exchanges. Accordingly, if the changes proposed herein are unattractive to market participants, it is likely the Exchange will see a decline in membership as a result. As stated above, the number of FIX and MEO Interface users remained stagnant until August 2021, where one Member that utilized the MEO Interface ceased utilizing that interface and again in December 2021, where one Member that utilized the FIX Interface ceased utilizing that interface.

The Exchange also does not believe charging different fees for MEO and FIX

[108] *See e.g.,* Securities Exchange Act Release No. 94894 (May 11, 2022), 87 FR 29987 (May 17, 2022) (SR–BOX–2022–17). NYSE Arca Options Fees and Charges, p.1 (assessing market makers $6,000 for up to 175 option issues, an additional $5,000 for up to 350 option issues, an additional $4,000 for up to 1,000 option issues, an additional $3,000 for all option issues on the exchange, and an additional $1,000 for the fifth trading permit and for each trading permit thereafter); NYSE American Options Fee Schedule, p. 23 (assessing market makers $8,000 for up to 60 plus the bottom 45% of option issues, an additional $6,000 for up to 150 plus the bottom 45% of option issues, an additional $5,000 for up to 500 plus the bottom 45% of option issues, and additional $4,000 for up to 1,100 plus the bottom 45% of option issues, an additional $3,000 for all issues traded on the exchange, and an additional $2,000 for 6th to 9th ATPs; plus an addition fee for premium products). See also BZX Options assesses the Participant Fee, which is a membership fee, according to a member's ADV. See Cboe BZX Options Exchange Fee Schedule under ''Membership Fees''. The Participant Fee is $500 if the member ADV is less than 5000 contracts and $1,000 if the member ADV is equal to or greater than 5,000 contracts.

[109] The Exchange does not charge a separate fee to Market Makers for options assignments.

[110] *See* the Exchange's Fee Schedule *available at https://www.miaxoptions.com/sites/default/files/fee_schedule-files/MIAX_Pearl_Options_Fee_Schedule_07122022.pdf.*

[111] 15 U.S.C. 78f(8).

[112] *See supra* notes 38–46.

Interface users and basing the amount of such fees on trading volume would impose any burden on intermarket or intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. As discussed above, the FIX Interface is the uniform industry message protocol used by most exchanges and provides lower throughput and bandwidth than the MEO Interface. Users are free to use either interface based on their business need and the pricing structure is aligned with the interface used, its pull on Exchange resources, and the Member's monthly trading volume. The tiered pricing structure is based on the type of interface and trading volume in place on the Exchange today and the Exchange does not propose to amend the volume requirements associated with each Tier. Rather, it is simply seeking to amend the associated fees. Basing such fees on trading volume would may also stimulate intramarket competition because it is analogous to other exchanges that base like fees on options classes traded or assigned. A Member may cease being a Member if they believe the tiered structure is not appropriate or that another exchange presents a better value. Likewise, a market participant that is not already a Member may cease membership on another exchange or become a Member of MIAX Pearl where they deem the Exchange's Trading Permit fee to be a better value based on its trading activity and business needs.

Inter-Market Competition

The Exchange operates in a highly competitive market in which market participants can readily favor one of the 15 competing options venues if they deem fee levels at a particular venue to be excessive. Based on publicly-available information, and excluding index-based options, no single exchange has more than approximately 16% market share. Therefore, no exchange possesses significant pricing power regarding memberships or in the execution of multiply-listed equity and ETF options order flow. Over the course of 2021 and 2022, the Exchange's market share has fluctuated between approximately 3–6% of the U.S. equity options industry.[113] The Exchange is not aware of any evidence that a market share of approximately 3–6% provides the Exchange with anti-competitive pricing power when it comes to competition for memberships. The Exchange believes that the ever-shifting market share among exchanges from month to month demonstrates that market participants can discontinue memberships in response to fee changes. In such an environment, the Exchange must continually adjust its fees to remain competitive with other exchanges and to attract and retain memberships on the Exchange.

The proposed fee change will not impact intermarket competition because it will apply to all Members equally. Also, Members are free to use either the FIX or MEO Interface and may choose the interface that better meets their business needs based on their trading models and behavior. The Exchange operates in a highly competitive market in which market participants can determine whether or not to join the Exchange based on the value received compared to the cost of joining and maintaining membership on the Exchange.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange responded to comment letters in a prior proposal.[114]

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[115] and Rule 19b–4(f)(2)[116] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–PEARL–2022–30 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–PEARL–2022–30. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–PEARL–2022–30 and should be submitted on or before August 31, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[117]

J. Matthew DeLesDernier,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–95424; File No. SR–NYSEAMER–2022–19]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of Proposed Rule Change, as Modified by Amendment No. 1, To Add Subparagraph (f)(4) Regarding Directed Orders to NYSE American Rule 7.31E

August 4, 2022.

I. Introduction

On April 20, 2022, NYSE American LLC (''NYSE American'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to introduce Directed Orders. The proposed rule change was published for comment in the **Federal Register** on May 3, 2022.[3] On June 16, 2022, the Commission extended to August 7, 2022, the time period in which to approve the proposal, disapprove the proposal, or institute proceedings to determine whether to approve or disapprove the proposal.[4] On July 28, 2022, the Exchange filed Amendment No. 1 to the proposed rule change with the Commission and submitted Amendment No. 1 for inclusion in the public comment file.[5] The Commission is publishing notice of the filing of Amendment No. 1 to solicit comment from interested persons, and is approving the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.[6]

[4] *See* Securities Exchange Act Release No. 95117 (June 16, 2022), 87 FR 37543 (June 23, 2022).

[5] In Amendment No. 1, the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. *See* Letter from Martha Redding, Associate General Counsel, NYSE American LLC, to Secretary, Commission (July 28, 2022). Amendment No. 1 is available at *https://www.sec.gov/comments/sr-nyseamer-2022-19/srnyseamer202219-20135100-306080.pdf.*

[6] The Commission received one comment letter that is not germane to the proposal. *See https://www.sec.gov/comments/sr-nyseamer-2022-19/srnyseamer202219-289426.htm.*

II. Self-Regulatory Organization's Description of the Proposal, as Modified by Amendment No. 1

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 7.31E (Orders and Modifiers) to add new subparagraph (f)(4) to provide for Directed Orders and to make other conforming changes to its Rules in connection with the addition of this new order type on the Exchange. The Directed Order, as further defined below, would be an order sent to the Exchange to be routed directly to an alternative trading system (''ATS'') specified by an ATP Holder.[7]

The Exchange proposes to add Rule 7.31E(f)(4), which would define a Directed Order as a Limit Order with instructions to route on arrival at its limit price to a specified ATS with which the Exchange maintains an electronic linkage. Proposed Rule 7.31E(f)(4) would further provide that Directed Orders would be available for all securities eligible to trade on the Exchange. Proposed Rule 7.31E(f)(4) would also provide that a Directed Order would not be assigned a working time or interact with interest on the Exchange Book. The Exchange also proposes to provide in Rule 7.31E(f)(4) that the ATS to which a Directed Order is routed would be responsible for validating whether the order is eligible to be accepted, and if such ATS determines to reject the order, the order would be cancelled.

Proposed Rule 7.31E(f)(4)(A) would provide that a Directed Order must be designated for the Exchange's Core Trading Session, as defined in Rule 7.34E(a)(2).[8]

Proposed Rule 7.31E(f)(4)(A) would further provide that a Directed Order must be designated with a Time in Force modifier of IOC [9] or Day [10] and would be routed to the specified ATS with such modifier. The Exchange proposes that a Directed Order designated IOC would be traded in whole or in part on the ATS to which it is routed after receipt of the order, and any untraded quantity would be cancelled. The Exchange proposes that a Directed Order designated Day would expire at the end of the Core Trading Session on the day it is entered. Proposed Rule 7.31E(f)(1)(A) would also provide that a Directed Order may not be designated with any other modifiers defined in Rule 7.31E.

Proposed Rule 7.31E(f)(4)(B) would provide that a Directed Order in a security that is having its initial listing on the Exchange would be rejected if received before the IPO Auction concludes.

Proposed Rule 7.31E(f)(4)(C) would provide that, during a trading halt or pause, an incoming Directed Order would be rejected.

Proposed Rule 7.31E(f)(4)(D) would provide that a request to cancel a Directed Order designated Day would be routed to the ATS to which the order was routed.

The Exchange also proposes a conforming change to Rule 7.19E (Pre-Trade Risk Controls). The Exchange proposes to modify Rule 7.19E(a)(5), which sets forth the definition of Gross Credit Risk Limit and currently provides that unexecuted orders in the Exchange Book, orders routed on arrival pursuant to Rule 7.37E(a)(1), and executed orders are included for purposes of calculating the Gross Credit Risk Limit. The Exchange proposes to modify Rule 7.19E(a)(5) to specify that orders routed on arrival pursuant to Rule 7.31E(f)(4) would also be included for purposes of the Gross Credit Risk Limit calculation.

The Exchange believes that the proposed rule change would facilitate additional trading opportunities by

[7] Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement.

[8] Because the Exchange proposes that Directed Orders may only be designated for the Core Trading Session, the Exchange also proposes conforming changes to Rule 7.34E (Trading Sessions). Specifically, the Exchange proposes to modify Rule 7.34E(c)(1)(E) to provide that Directed Orders designated for the Early Trading Session would be rejected and Rule 7.34E(c)(3)(C) to provide that Directed Orders designated for the Late Trading Session would be rejected. The Exchange also proposes an additional change to correct a typographical error in Rule 7.34E(c)(1), to update the reference to ''paragraphs (c)(1)(A)–(E)'' to ''paragraphs (c)(1)(A)–(F)'' to accurately reflect the number of subparagraphs under Rule 7.34E(c)(1).

[9] *See* Rule 7.31E(b)(2), which provides that a Limit Order may be designated with an Immediate-or-Cancel (''IOC'') modifier.

[10] *See* Rule 7.31E(b)(1), which provides that orders may be designated with a Day modifier, and that an order to buy or sell designated Day, if not traded, will expire at the end of the designated session on the day on which it was entered.

offering ATP Holders the ability to designate orders submitted to the Exchange to be routed to an ATS of their choosing for execution. The Exchange believes the proposed change would encourage ATP Holders to utilize the Exchange as a venue for order entry and further believes that the proposed change could create efficiencies for ATP Holders by enabling them to send orders that they wish to route to an alternate destination through the Exchange, thereby enabling them to leverage order entry protocols and specifications already configured for their interactions with the Exchange. The Exchange notes that the Directed Order, as proposed, would operate similarly to the Primary Only Order already offered by the Exchange, which is an order that is routed directly to the primary listing market on arrival, without being assigned a working time or interacting with interest on the Exchange Book.[11] The Exchange also believes that the Directed Order would offer ATP Holders functionality akin to order types and routing options that currently exist on other equities exchanges.[12]

Because of the technology changes associated with this proposed rule change, the Exchange will announce the implementation date by Trader Update.[13] Subject to effectiveness of this proposed rule change, the Exchange anticipates that the proposed change will be implemented in the third quarter of 2022.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934,[14] in general, and furthers the objectives of Section 6(b)(5),[15] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to remove impediments to and perfect the mechanism of a free and open market and promote just and equitable principles of trade because the Directed Order would offer ATP Holders access to additional trading opportunities by permitting them to designate orders submitted to the Exchange to be routed directly to a specified ATS for execution. The Exchange further believes that the proposed change would remove impediments to and perfect the mechanism of a free and open market by offering ATP Holders the option to send orders that they wish to route to an alternate destination for execution through the Exchange, which would create efficiencies to the extent ATP Holders are able to leverage existing protocols and specifications. Finally, the Exchange notes that the proposed functionality is not novel, as both the Exchange and other exchanges offer their members functionality whereby an exchange routes orders on behalf of a member to a specified trading center without such order interacting with the exchange's book.[16]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rules governing Directed Orders would promote competition because they would provide for an order type on the Exchange that would facilitate additional trading opportunities for market participants. The Exchange further believes that the proposed rules would allow it to offer ATP Holders functionality similar to order types and routing options that exist on other equities exchanges, thereby enabling the Exchange to compete with such exchanges.[17]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Discussion and Commission Findings

After careful review of the proposal, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.[18] In particular, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with Section 6(b)(5) of the Act,[19] which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to

[11] *See* Rule 7.31E(f)(1). NYSE American also offers variations of the Primary Only Order, including the Primary Only Until 9:45 Order, which is a Limit or Inside Limit Order that, on arrival and until 9:45 a.m. Eastern Time, routes to the primary listing market, and the Primary Only Until 3:55 Order, which is a Limit or Inside Limit Order entered on the Exchange until 3:55 p.m. Eastern Time, after which time the order is cancelled on the Exchange and routed to the primary listing market. *See* Rules 7.31E(f)(2) and (f)(3). The Exchange's affiliated exchanges NYSE Arca, Inc. (''NYSE Arca''), NYSE Chicago, Inc. (''NYSE Chicago''), and NYSE National, Inc. (''NYSE National'') (collectively, the ''Affiliated Exchanges'') also offer the Primary Only Order and variations thereof. *See* NYSE Arca Rules 7.31–E(f)(1)–(f)(3); NYSE Chicago Rules 7.31(f)(1)–(f)(3); NYSE National Rules 7.31(f)(1)–(f)(3).

[12] *See, e.g.,* Nasdaq Stock Market LLC (''Nasdaq''), Equity 4, Equity Trading Rules, Rule 4758(a)(ix) (defining the Nasdaq Directed Order as an order designed to use a routing strategy under which the order is directed to an automated trading center other than Nasdaq, as directed by the entering party, without checking the Nasdaq Book); Cboe EDGX Exchange, Inc. (''EDGX'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGX system and is immediately routed by EDGX to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe EDGA Exchange, Inc. (''EDGA'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGA system and is immediately routed by EDGA to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe BZX Exchange, Inc. (''BZX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BZX system and be sent to a specified away trading center); Cboe BYX Exchange, Inc. (''BYX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BYX system and be sent to a specified away trading center). The Exchange also believes that the Directed Order would provide functionality similar to the C–LNK routing strategy formerly offered by EDGA, in which C–LNK orders bypassed EDGA's local book and routed directly to a specified Single Dealer Platform destination. *See* Securities Exchange Act Release No. 82904 (March 20, 2018), 83 FR 12995 (March 26, 2018) (SR–CboeEDGA–2018–004) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Expand an Offering Known a Cboe Connect To Provide Connectivity to Single-Dealer Platforms Connected to the Exchange's Network and To Propose a Per Share Executed Fee for Such Service).

[13] The Exchange will also provide information regarding the ATS(s) to which a Directed Order may be designated to route by Trader Update.

remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest, and that the rules of a national securities exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Commission finds that the proposed rule change is reasonably designed to remove impediments to and perfect the mechanism of a free and open market and a national market system because it would provide ATP Holders with additional trading opportunities by providing them with the option to designate orders to be routed by the Exchange directly to a specified ATS for execution. The use of Directed Orders would be voluntary, and the Exchange represents that it would not direct orders to any ATSs with which the Exchange has a financial relationship. The Commission also believes that the proposed rule change would not permit unfair discrimination among customers, brokers, or dealers because Directed Orders will be available to all ATP Holders on an equal basis. Finally, the Commission believes that the proposed changes to Exchange Rule 7.19E(a)(5) will ensure that Directed Orders are included in the calculation of Gross Credit Risk Limit.

IV. Solicitation of Comments on Amendment No. 1 to the Proposed Rule Change

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEAMER–2022–19 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEAMER–2022–19. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEAMER–2022–19 and should be submitted on or before August 31, 2022.

V. Accelerated Approval of Amendment No. 1

As noted above,[20] in Amendment No. 1, as compared to the original proposal,[21] the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. The Commission finds that Amendment No. 1 to the proposal raises no novel regulatory issues, that it is reasonably designed to protect investors and the public interest, and that it is consistent with the requirements of the Act. Accordingly, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,[22] to approve the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[23] that the proposed rule change (SR–NYSEAMER–2022–19), as modified by Amendment No. 1, be, and hereby is, approved on an accelerated basis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[24]

J. Matthew DeLesDernier,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–95426; File No. SR–NYSENAT–2022–06]

Self-Regulatory Organizations; NYSE National, Inc.; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of Proposed Rule Change, as Modified by Amendment No. 1, To Add Subparagraph (f)(4) Regarding Directed Orders to NYSE National Rule 7.31

August 4, 2022.

I. Introduction

On April 20, 2022, NYSE National, Inc. (''NYSE National'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to introduce Directed Orders. The proposed rule change was published for comment in the **Federal Register** on May 4, 2022.[3] On June 16, 2022, the Commission extended to August 8, 2022, the time period in which to approve the proposal, disapprove the proposal, or institute proceedings to determine whether to approve or disapprove the proposal.[4] On July 28, 2022, the Exchange filed Amendment No. 1 to the proposed rule change with the Commission and submitted Amendment No. 1 for inclusion in the public comment file.[5]

[4] *See* Securities Exchange Act Release No. 95114 (June 16, 2022), 87 FR 37538 (June 23, 2022).

[5] In Amendment No. 1, the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. *See* Letter from Martha Redding, Associate General Counsel, NYSE National, Inc., to Secretary, Commission (July 28, 2022). Amendment No. 1 is available at *https://www.sec.gov/comments/sr-nysenat-2022-06/srnysenat202206-20135098-306078.pdf.*

The Commission has received no comment letters on the proposed rule change. The Commission is publishing notice of the filing of Amendment No. 1 to solicit comment from interested persons, and is approving the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

II. Self-Regulatory Organization's Description of the Proposal, as Modified by Amendment No. 1

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 7.31 (Orders and Modifiers) to add new subparagraph (f)(4) to provide for Directed Orders and to make other conforming changes to its Rules in connection with the addition of this new order type on the Exchange. The Directed Order, as further defined below, would be an order sent to the Exchange to be routed directly to an alternative trading system (''ATS'') specified by an ETP Holder.[6]

The Exchange proposes to add Rule 7.31(f)(4), which would define a Directed Order as a Limit Order with instructions to route on arrival at its limit price to a specified ATS with which the Exchange maintains an electronic linkage. Proposed Rule 7.31(f)(4) would also provide that Directed Orders would be available for all securities eligible to trade on the Exchange and would not be assigned a working time or interact with interest on the Exchange Book. The Exchange also proposes to provide in Rule 7.31(f)(4) that the ATS to which a Directed Order is routed would be responsible for validating whether the order is eligible to be accepted, and if such ATS determines to reject the order, the order would be cancelled.

Proposed Rule 7.31(f)(4)(A) would provide that a Directed Order must be designated for the Exchange's Core Trading Session, as defined in Rule 7.34(a)(2).[7]

Proposed Rule 7.31(f)(4)(A) would further provide that a Directed Order must be designated with a Time in Force modifier of IOC[8] or Day[9] and would be routed to the specified ATS with such modifier. The Exchange proposes that a Directed Order designated IOC would be traded in whole or in part on the ATS to which it is routed after receipt of the order, and any untraded quantity would be cancelled. The Exchange proposes that a Directed Order designated Day would expire at the end of the Core Trading Session on the day it is entered. Proposed Rule 7.31(f)(1)(A) would also provide that a Directed Order may not be designated with any other modifiers defined in Rule 7.31.

Proposed Rule 7.31(f)(4)(B) would provide that, during a trading halt or pause, an incoming Directed Order would be rejected.

Proposed Rule 7.31(f)(4)(C) would provide that a request to cancel a Directed Order designated Day would be routed to the ATS to which the order was routed.

The Exchange also proposes a conforming change to Rule 7.19 (Pre-Trade Risk Controls). The Exchange proposes to modify Rule 7.19(a)(5), which sets forth the definition of Gross Credit Risk Limit and currently provides that unexecuted orders in the Exchange Book, orders routed on arrival pursuant to Rule 7.37(a)(1), and executed orders are included for purposes of calculating the Gross Credit Risk Limit. The Exchange proposes to modify Rule 7.19(a)(5) to specify that orders routed on arrival pursuant to Rule 7.31(f)(4) would also be included for purposes of the Gross Credit Risk Limit calculation.

The Exchange believes that the proposed rule change would facilitate additional trading opportunities by offering ETP Holders the ability to designate orders submitted to the Exchange to be routed to an ATS of their choosing for execution. The Exchange believes the proposed change would encourage ETP Holders to utilize the Exchange as a venue for order entry and further believes that the proposed change could create efficiencies for ETP Holders by enabling them to send orders that they wish to route to an alternate destination through the Exchange, thereby enabling them to leverage order entry protocols and specifications already configured for their interactions with the Exchange. The Exchange notes that the Directed Order, as proposed, would operate similarly to the Primary Only Order already offered by the Exchange, which is an order that is routed directly to the primary listing market on arrival, without being assigned a working time or interacting with interest on the Exchange Book.[10] The Exchange also believes that the Directed Order would offer ETP Holders functionality akin to order types and routing options that currently exist on other equities exchanges.[11]

[6] Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement.

[7] Because the Exchange proposes that Directed Orders may only be designated for the Core Trading Session, the Exchange also proposes conforming changes to Rule 7.34 (Trading Sessions). Specifically, the Exchange proposes to modify Rule 7.34(c)(1)(E) to provide that Directed Orders designated for the Early Trading Session would be rejected and Rule 7.34(c)(3)(C) to provide that Directed Orders designated for the Late Trading Session would be rejected.

[8] *See* Rule 7.31(b)(2), which provides that a Limit Order may be designated with an Immediate-or-Cancel (''IOC'') modifier.

[9] *See* Rule 7.31(b)(1), which provides that orders may be designated with a Day modifier, and that an order to buy or sell designated Day, if not traded, will expire at the end of the designated session on the day on which it was entered.

[10] *See* Rule 7.31(f)(1). NYSE National also offers variations of the Primary Only Order, including the Primary Only Until 9:45 Order, which is a Limit or Inside Limit Order that, on arrival and until 9:45 a.m. Eastern Time, routes to the primary listing market, and the Primary Only Until 3:55 Order, which is a Limit or Inside Limit Order entered on the Exchange until 3:55 p.m. Eastern Time, after which time the order is cancelled on the Exchange and routed to the primary listing market. *See* Rules 7.31(f)(2) and (f)(3). The Exchange's affiliated exchanges NYSE American LLC (''NYSE American''), NYSE Arca, Inc. (''NYSE Arca''), and NYSE Chicago, Inc. (''NYSE Chicago'') (collectively, the ''Affiliated Exchanges'') also offer the Primary Only Order and variations thereof. *See* NYSE American Rules 7.31E(f)(1)–(f)(3); NYSE Arca Rules 7.31–E(f)(1)–(f)(3); NYSE Chicago Rules 7.31(f)(1)–(f)(3).

[11] *See, e.g.,* Nasdaq Stock Market LLC (''Nasdaq''), Equity 4, Equity Trading Rules, Rule 4758(a)(ix) (defining the Nasdaq Directed Order as an order designed to use a routing strategy under which the order is directed to an automated trading center other than Nasdaq, as directed by the entering party, without checking the Nasdaq Book); Cboe EDGX Exchange, Inc. (''EDGX'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGX system and is immediately routed by EDGX to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe EDGA Exchange, Inc. (''EDGA'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGA system and is immediately routed by EDGA to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe BZX Exchange, Inc. (''BZX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BZX system and be sent to a specified away trading center); Cboe BYX Exchange, Inc. (''BYX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under

Continued

Because of the technology changes associated with this proposed rule change, the Exchange will announce the implementation date by Trader Update.[12] Subject to effectiveness of this proposed rule change, the Exchange anticipates that the proposed change will be implemented in the third quarter of 2022.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934,[13] in general, and furthers the objectives of Section 6(b)(5),[14] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to remove impediments to and perfect the mechanism of a free and open market and promote just and equitable principles of trade because the Directed Order would offer ETP Holders access to additional trading opportunities by permitting them to designate orders submitted to the Exchange to be routed directly to a specified ATS for execution. The Exchange further believes that the proposed change would remove impediments to and perfect the mechanism of a free and open market by offering ETP Holders the option to send orders that they wish to route to an alternate destination for execution through the Exchange, which would create efficiencies to the extent ETP Holders are able to leverage existing protocols and specifications. Finally, the Exchange notes that the proposed functionality is not novel, as both the Exchange and other exchanges offer their members functionality whereby an exchange routes orders on behalf of a member to a specified trading center without such order interacting with the exchange's book.[15]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rules governing Directed Orders would promote competition because they would provide for an order type on the Exchange that would facilitate additional trading opportunities for market participants. The Exchange further believes that the proposed rules would allow it to offer its ETP Holders functionality similar to order types and routing options that exist on other equities exchanges, thereby enabling the Exchange to compete with such exchanges.[16]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Discussion and Commission Findings

After careful review of the proposal, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.[17] In particular, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with Section 6(b)(5) of the Act,[18] which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest, and that the rules of a national securities exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Commission finds that the proposed rule change is reasonably designed to remove impediments to and perfect the mechanism of a free and open market and a national market system because it would provide Participants with additional trading opportunities by providing them with the option to designate orders to be routed by the Exchange directly to a specified ATS for execution. The use of Directed Orders would be voluntary, and the Exchange represents that it would not direct orders to any ATSs with which the Exchange has a financial relationship. The Commission also believes that the proposed rule change would not permit unfair discrimination among customers, brokers, or dealers because Directed Orders will be available to all ETP Holders on an equal basis. Finally, the Commission believes that the proposed changes to Exchange Rule 7.19(a)(5) will ensure that Directed Orders are included in the calculation of Gross Credit Risk Limit.

IV. Solicitation of Comments on Amendment No. 1 to the Proposed Rule Change

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSENAT–2022–06 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSENAT–2022–06. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule

which an ISO order would bypass the BYX system and be sent to a specified away trading center). The Exchange also believes that the Directed Order would provide functionality similar to the C–LNK routing strategy formerly offered by EDGA, in which C–LNK orders bypassed EDGA's local book and routed directly to a specified Single Dealer Platform destination. *See* Securities Exchange Act Release No. 82904 (March 20, 2018), 83 FR 12995 (March 26, 2018) (SR-CboeEDGA–2018–004) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Expand an Offering Known a Cboe Connect To Provide Connectivity to Single-Dealer Platforms Connected to the Exchange's Network and To Propose a Per Share Executed Fee for Such Service).

[12] The Exchange will also provide information regarding the ATS(s) to which a Directed Order may be designated to route by Trader Update.

change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSENAT–2022–06 and should be submitted on or before August 31, 2022.

V. Accelerated Approval of Amendment No. 1

As noted above,[19] in Amendment No. 1, as compared to the original proposal,[20] the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. The Commission finds that Amendment No. 1 to the proposal raises no novel regulatory issues, that it is reasonably designed to protect investors and the public interest, and that it is consistent with the requirements of the Act. Accordingly, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,[21] to approve the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[22] that the proposed rule change (SR–NYSENAT–2022–06), as modified by Amendment No. 1, be, and hereby is, approved on an accelerated basis.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 34662; File No. 812–14387]

CION Investment Corporation, et al

August 4, 2022.

AGENCY: Securities and Exchange Commission (''Commission'' or ''SEC'').

ACTION: Notice.

Notice of application for an order (''Order'') under sections 17(d) and 57(i) of the Investment Company Act of 1940 (the ''Act'') and rule 17d–1 under the Act to permit certain joint transactions otherwise prohibited by sections 17(d) and 57(a)(4) of the Act and rule 17d–1 under the Act.

SUMMARY OF APPLICATION: Applicants request an order to permit certain business development companies (''BDCs'') and closed-end management investment companies to co-invest in portfolio companies with each other and with certain affiliated investment entities.

APPLICANTS: CION Investment Corporation, CION Investment Management, LLC, CION Investment Partners I, L.P. and CION Management, LLC.

FILING DATES: The application was filed on November 14, 2014, and amended on June 9, 2015, September 23, 2015, January 22, 2016, April 26, 2016, February 27, 2019, July 24, 2019, October 23, 2019, January 27, 2020, May 29, 2020, September 24, 2020, February 18, 2022, May 19, 2022 and July 13, 2022.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC's Secretary at *Secretarys-Office@sec.gov* and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below.

Hearing requests should be received by the Commission by 5:30 p.m. on August 29, 2022, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary at *Secretarys-Office@sec.gov.*

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: *Legal@cioninvestments.com.*

FOR FURTHER INFORMATION CONTACT: Asen Parachkevov, Senior Counsel, or Trace Rakestraw, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' thirteenth amended and restated application, dated July 13, 2022, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system. The SEC's EDGAR system may be searched at, at *http://www.sec.gov/edgar/searchedgar/legacy/companysearch.html.* You may also call the SEC's Public Reference Room at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

J. Matthew DeLesDernier,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–95420; File No. SR–MEMX–2022–19]

Self-Regulatory Organizations; MEMX LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Exchange's Fee Schedule To Adopt Market Data Fees

August 4, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 22, 2022, MEMX LLC (''MEMX'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing with the Commission a proposed rule change to amend the Exchange's fee schedule applicable to Members [3] and non-Members (the ''Fee Schedule'') pursuant to Exchange Rules 15.1(a) and (c). The Exchange proposes to implement the changes to the Fee Schedule pursuant to this proposal immediately.

The Exchange previously filed the proposal on March 24, 2022 (SR–MEMX–2022–03) (the ''Initial Proposal''). The Exchange withdrew the Initial Proposal and replaced the proposal with SR–MEMX–2022–14 (the ''Second Proposal''). The Exchange has withdrawn the Second Proposal and is replacing it with the current filing (SR–MEMX–2022–19). The text of the proposed rule change is provided in Exhibit 5.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Background

The purpose of the proposed rule change is to amend the Fee Schedule to adopt fees the Exchange will charge to Members and non-Members for each of its three proprietary market data feeds, namely MEMOIR Depth, MEMOIR Top, and MEMOIR Last Sale (collectively, the ''Exchange Data Feeds''). As set forth below, the Exchange believes that the proposed fees are fair and reasonable and has based its proposal on the fact that competitive forces exist with respect to the Exchange Data Feeds, the fact that the Exchange Data Feeds are optional data products for which there are substitutes, and a comparison to competitor pricing. The Exchange is proposing to implement the proposed fees immediately.

Before setting forth the additional details regarding the proposal, immediately below is a description of the proposed fees.

Proposed Market Data Pricing

The Exchange offers three separate data feeds to subscribers—MEMOIR Depth, MEMOIR Top and MEMOIR Last Sale. The Exchange notes that there is no requirement that any Firm subscribe to a particular Exchange Data Feed or any Exchange Data Feed whatsoever, but instead, a Firm may choose to maintain subscriptions to those Exchange Data Feeds they deem appropriate based on their business model. The proposed fee will not apply differently based upon the size or type of Firm, but rather based upon the subscriptions a Firm has to Exchange Data Feeds and their use thereof, which are in turn based upon factors deemed relevant by each Firm. The proposed pricing for each of the Exchange Data Feeds is set forth below.

MEMOIR Depth

The MEMOIR Depth feed is a MEMX-only market data feed that contains all displayed orders for securities trading on the Exchange (*i.e.,* top and depth-of-book order data), order executions (*i.e.,* last sale data), order cancellations, order modifications, order identification numbers, and administrative messages.[4] The Exchange proposes to charge each of the fees set forth below for MEMOIR Depth.

1. *Internal Distribution Fee.* For the receipt of access to the MEMOIR Depth feed, the Exchange proposes to charge $1,500 per month. This proposed access fee would be charged to any data recipient that receives a data feed of the MEMOIR Depth feed for purposes of internal distribution (*i.e.,* an ''Internal Distributor''). The Exchange proposes to define an Internal Distributor as ''a Distributor that receives an Exchange Data product and then distributes that data to one or more data recipients within the Distributor's own organization.'' [5] The proposed access fee for internal distribution will be charged only once per month per subscribing entity (''Firm''). The Exchange notes that it has proposed to use the phrase ''own organization'' in the definition of Internal Distributor and External Distributor because a Firm will be permitted to share data received from an Exchange Data product to other legal entities affiliated with the Firm that have been disclosed to the Exchange without such distribution being considered external to a third party. For instance, if a company has multiple affiliated broker-dealers under the same holding company, that company could have one of the broker-dealers or a non-broker-dealer affiliate subscribe to an Exchange Data product and then share the data with other affiliates that have a need for the data. This sharing with affiliates would not be considered external distribution to a third party but instead would be considered internal distribution to data recipients within the Distributor's own organization.

2. *External Distribution Fee.* For redistribution of the MEMOIR Depth feed, the Exchange proposes to establish an access fee of $2,500 per month. The proposed redistribution fee would be charged to any External Distributor of the MEMOIR Depth feed, which would be defined to mean ''a Distributor that receives an Exchange Data product and then distributes that data to a third party or one or more data recipients outside the Distributor's own organization.'' [6] The proposed access fee for external distribution will be charged only once per month per Firm. As noted above, while a Firm will be permitted to share data received from an Exchange Data product to other legal entities affiliated with the Firm that have been disclosed to the Exchange without such distribution being considered external to a third party, if a Firm distributes data received from an Exchange Data product to an unaffiliated third party that would be considered distribution to data recipients outside the Distributor's own organization and the access fee for external distribution would apply.

3. *Non-Display Use Fees.* The Exchange proposes to establish separate non-display fees for usage by Trading Platforms and other Users (*i.e.,* not by Trading Platforms).[7] Non-Display Usage

[3] *See* Exchange Rule 1.5(p).

[4] *See* MEMX Rule 13.8(a).

[5] *See* Market Data Definitions under the proposed MEMX Fee Schedule. The Exchange also proposes to adopt a definition for ''Distributor'', which would mean any entity that receives an Exchange Data product directly from the Exchange or indirectly through another entity and then distributes internally or externally to a third party.

[6] *See* Market Data Definitions under the proposed MEMX Fee Schedule.

[7] The Exchange proposes to define a Trading Platform as ''any execution platform operated as or by a registered National Securities Exchange (as defined in Section 3(a)(1) of the Exchange Act), an Alternative Trading System (as defined in Rule 300(a) of Regulation ATS), or an Electronic

would be defined to mean ''any method of accessing an Exchange Data product that involves access or use by a machine or automated device without access or use of a display by a natural person or persons.'' [8] For Non-Display Usage of the MEMOIR Depth feed not by Trading Platforms, the Exchange proposes to establish a fee of $1,500 per month.[9] For Non-Display Usage of the MEMOIR Depth feed by Trading Platforms, the Exchange proposes to establish a fee of $4,000 per month. The proposed fees for Non-Display Usage will be charged only once per category per Firm.[10] In other words, with respect to Non-Display Usage Fees, a Firm that uses MEMOIR Depth for non-display purposes but does not operate a Trading Platform would pay $1,500 per month, a Firm that uses MEMOIR Depth in connection with the operation of one or more Trading Platforms (but not for other purposes) would pay $4,000 per month, and a Firm that uses MEMOIR Depth for non-display purposes other than operating a Trading Platform and for the operation of one or more Trading Platforms would pay $5,500 per month.

4. *User Fees.* The Exchange proposes to charge a Professional User Fee (per User) of $30 per month and a Non-Professional User Fee (per User) of $3 per month. The proposed User fees would apply to each person that has access to the MEMOIR Depth feed for displayed usage. Thus, each Distributor's count will include every individual that accesses the data regardless of the purpose for which the individual uses the data. Internal Distributors and External Distributors of the MEMX Depth feed must report all Professional and Non-Professional Users in accordance with the following:

• In connection with a Distributor's distribution of the MEMOIR Depth feed, the Distributor must count as one User each unique User that the Distributor has entitled to have access to the MEMOIR Depth feed.

• Distributors must report each unique individual person who receives access through multiple devices or multiple methods (*e.g.,* a single User has multiple passwords and user identifications) as one User.

• If a Distributor entitles one or more individuals to use the same device, the Distributor must include only the individuals, and not the device, in the count. Thus, Distributors would not be required to report User device counts associated with a User's display use of the data feed.

5. *Enterprise Fee.* Other than the Digital Media Enterprise Fee described below, the Exchange is not proposing to adopt an Enterprise Fee for the MEMOIR Depth feed at this time.

6. *Digital Media Enterprise Fee.* As an alternative to User fees, a recipient Firm may purchase a monthly Digital Media Enterprise license to receive MEMOIR Depth for distribution to an unlimited number of Users for viewing via television, websites, and mobile devices for informational and non-trading purposes only. The Exchange proposes to establish a fee of $5,000 per month for a Digital Media Enterprise license to the MEMOIR Depth feed.

MEMOIR Top

The MEMOIR Top feed is a MEMX-only market data feed that contains top of book quotations based on equity orders entered into the System as well as administrative messages.[11]

The Exchange proposes to charge each of the fees set forth below for MEMOIR Top.

1. *Internal Distribution Fee.* For the receipt of access to the MEMOIR Top feed, the Exchange proposes to charge $750 per month. This proposed access fee would be charged to any data recipient that receives a data feed of the MEMOIR Top feed for purposes of internal distribution (*i.e.,* an Internal Distributor). The proposed access fee for internal distribution will be charged only once per month per Firm.

2. *External Distribution Fee.* For redistribution of the MEMOIR Top feed, the Exchange proposes to establish an access fee of $2,000 per month. The proposed redistribution fee would be charged to any External Distributor of the MEMOIR Top feed. The proposed access fee for external distribution will be charged only once per month per Firm.

3. *Non-Display Use Fees.* The Exchange does not propose to establish non-display fees for usage by Trading Platforms or other Users with respect to MEMOIR Top.

4. *User Fees.* The Exchange proposes to charge a Professional User Fee (per User) of $0.01 per month and a Non-Professional User Fee (per User) of $0.01 per month. The proposed User fees would apply to each person that has access to the MEMOIR Top feed that is provided by an External Distributor for displayed usage. The Exchange does not propose any per User fees for internal distribution of the MEMOIR Top feed. Each External Distributor's count will include every individual that accesses the data regardless of the purpose for which the individual uses the data. External Distributors of the MEMOIR Top feed must report all Professional and Non-Professional Users [12] in accordance with the following:

• In connection with an External Distributor's distribution of the MEMOIR Top feed, the Distributor must count as one User each unique User that the Distributor has entitled to have access to the MEMOIR Top feed.

• External Distributors must report each unique individual person who receives access through multiple devices or multiple methods (*e.g.,* a single User has multiple passwords and user identifications) as one User.

• If an External Distributor entitles one or more individuals to use the same device, the Distributor must include only the individuals, and not the device, in the count. Thus, Distributors would not be required to report User device counts associated with a User's display use of the data feed.

5. *Enterprise Fee.* As an alternative to User fees, a recipient Firm may purchase a monthly Enterprise license to receive MEMOIR Top for distribution to an unlimited number of Professional and Non-Professional Users. The Exchange proposes to establish a fee of $10,000 per month for an Enterprise license to the MEMOIR Top feed.

6. *Digital Media Enterprise Fee.* As an alternative to User fees, a recipient Firm may purchase a monthly Digital Media Enterprise license to receive MEMOIR Top for distribution to an unlimited number of Users for viewing via television, websites, and mobile devices

Communications Network (as defined in Rule 600(b)(23) of Regulation NMS).'' *See* Market Data Definitions under the proposed MEMX Fee Schedule.

[8] *See* Market Data Definitions under the proposed MEMX Fee Schedule.

[9] Non-Display Usage not by Trading Platforms would include trading uses such as high frequency or algorithmic trading as well as any trading in any asset class, automated order or quote generation and/or order pegging, price referencing for smart order routing, operations control programs, investment analysis, order verification, surveillance programs, risk management, compliance, and portfolio management.

[10] The Exchange proposes to adopt note 1 to the proposed Market Data fees table, which would make clear to subscribers that use of the data for multiple non-display purposes or operate more than one Trading Platform would only be charged once per category per month. Thus, the footnote makes clear that each fee applicable to Non-Display Usage is charged per subscriber (*e.g.,* a Firm) and that each of the fees represents the maximum charge per month per subscriber regardless of the number of non-display uses and/or Trading Platforms operated by the subscriber, as applicable.

[11] *See* MEMX Rule 13.8(b).

[12] The Exchange notes that while it is not differentiating Professional and Non-Professional Users based on fees (in that it is proposing the same fee for such Users) for this data feed, and thus will not audit Firms based on this distinction, it will request reporting of each distinct category for informational purposes.

for informational and non-trading purposes only. The Exchange proposes to establish a fee of $2,000 per month for a Digital Media Enterprise license to the MEMOIR Top feed.

MEMOIR Last Sale

The MEMOIR Last Sale feed is a MEMX-only market data feed that contains only execution information based on equity orders entered into the System as well as administrative messages.[13] The Exchange proposes to charge each of the fees set forth below for MEMOIR Last Sale.

1. *Internal Distribution Fee.* For the receipt of access to the MEMOIR Last Sale feed, the Exchange proposes to charge $500 per month. This proposed access fee would be charged to any data recipient that receives a data feed of the MEMOIR Last Sale feed for purposes of internal distribution (*i.e.,* an Internal Distributor). The proposed access fee for internal distribution will be charged only once per month per Firm.

2. *External Distribution Fee.* For redistribution of the MEMOIR Last Sale feed, the Exchange proposes to establish an access fee of $2,000 per month. The proposed redistribution fee would be charged to any External Distributor of the MEMOIR Last Sale feed. The proposed access fee for external distribution will be charged only once per month per Firm.

3. *Non-Display Use Fees.* The Exchange does not propose to establish separate non-display fees for usage by Trading Platforms or other Users with respect to MEMOIR Last Sale.

4. *User Fees.* The Exchange proposes to charge a Professional User Fee (per User) of $0.01 per month and a Non-Professional User Fee (per User) of $0.01 per month. The proposed User fees would apply to each person that has access to the MEMOIR Last Sale feed that is provided by an External Distributor for displayed usage. The Exchange does not propose any per User fees for internal distribution of the MEMOIR Last Sale feed. Each External Distributor's count will include every individual that accesses the data regardless of the purpose for which the individual uses the data. External Distributors of the MEMOIR Last Sale feed must report all Professional and Non-Professional Users [14] in accordance with the following:

- In connection with an External Distributor's distribution of the MEMOIR Last Sale feed, the Distributor must count as one User each unique User that the Distributor has entitled to have access to the MEMOIR Last Sale feed.
- External Distributors must report each unique individual person who receives access through multiple devices or multiple methods (*e.g.,* a single User has multiple passwords and user identifications) as one User.
- If an External Distributor entitles one or more individuals to use the same device, the Distributor must include only the individuals, and not the device, in the count. Thus, Distributors would not be required to report User device counts associated with a User's display use of the data feed.

5. *Enterprise Fee.* As an alternative to User fees, a recipient Firm may purchase a monthly Enterprise license to receive MEMOIR Last Sale for distribution to an unlimited number of Professional and Non-Professional Users. The Exchange proposes to establish a fee of $10,000 per month per Firm for an Enterprise license to the MEMOIR Last Sale feed.

6. *Digital Media Enterprise Fee.* As an alternative to User fees, a recipient Firm may purchase a monthly Digital Media Enterprise license to receive MEMOIR Last Sale for distribution to an unlimited number of Users for viewing via television, websites, and mobile devices for informational and non-trading purposes only. The Exchange proposes to establish a fee of $2,000 per month per Firm for a Digital Media Enterprise license to the MEMOIR Last Sale feed.

Additional Discussion—Competitive Forces and Availability of Substitutes

The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [15] As the Commission itself recognized, the market for trading services in NMS stocks has become ''more fragmented and competitive.'' [16] Indeed, equity trading is currently dispersed across 16 exchanges,[17] 31 alternative trading systems,[18] and numerous broker-dealer internalizers and wholesalers, all competing for order flow. While the competitive environment described above and the Commission's statements related thereto are primarily regarding market share and trading volumes, and not market data specifically, the Exchange believes that competition does constrain the Exchange's ability to set market data prices, as described below.

The recent growth of MEMX's market share demonstrates the competitive marketplace in which the Exchange operates. The Exchange launched in September 2020 and slowly grew over the next several months as it completed its staged rollout intended to ensure market stability. In January 2021, the Exchange averaged approximately 0.6% of consolidated trading volume. [19] The Exchange experienced significant growth every month from February 2021 to December 2021 and ended 2021 with market share of approximately 4.2% of consolidated volume; MEMX has maintained a similar market share percentage in 2022, with approximately 3.95% market share through the first half of the year.[20]

As the Exchange's transaction market share has increased, so has the value of its market data. In addition to achieving approximately 4% of consolidated volume, the Exchange's NBBO Quote Market Share (*i.e.,* the notional value displayed at the inside national best bid or offer, or ''NBBO'', as a percentage of overall notional value at the NBBO) is comparable to that of Cboe BZX Exchange, Inc. (''BZX'') and the New York Stock Exchange (''NYSE''), and higher than that of Cboe EDGX Exchange. Inc.[21] The Exchange determined the level of the fees to charge for the Exchange Data Feeds

[19] Market share percentage calculated as of June 30, 2022. The Exchange receives and processes data made available through consolidated data feeds (*i.e.,* CTS and UTDF).

[20] *See id.*

[21] *See* Cboe Global Markets NBBO Quote Market Share Statistics, available at: *https://www.cboe.com/us/equities/market_statistics/.* In June 2022, NBBO Quote Market Share of the largest six equities exchanges was as follows: NYSE Arca 18.54%, Nasdaq 17.76%, NYSE 11.47%, BZX 11.4%, MEMX 10.06%, EDGX 8.92%. The remaining ten equities exchanges have NBBO Quote Market Share below 5%.

based on the Exchange's belief in the value of the Exchange's market data. In particular, as noted elsewhere in this proposal, the proposed fee structure is comparable to that of BZX and the proposed fees themselves are equal to or in many cases lower than BZX. Thus, as the Exchange has similar market quality to BZX and other larger maker/taker exchanges and has priced its data at a significant discount to those markets, the Exchange believes it is starting from a place of general acceptability to industry participants.

As noted above, in less than two years, MEMX has grown from 0% to approximately 4% market share of consolidated trading volume. During that same period, the Exchange has had a steady increase in the number of subscribers to Exchange Data Feeds. As a new entrant into the exchange industry, the Exchange is particularly subject to competitive forces as it works to attract new Members and trading volume and maintain participation from existing participants. While the Exchange has been able to rapidly grow its market share since its launch in September 2020, MEMX operates only a single U.S. equities exchange with market share that remains significantly lower than the market share of the largest exchange groups. As noted above, until April of this year, MEMX did not charge fees for market data provided by the Exchange. The objective of this approach was to eliminate any fee-based barriers for Members when MEMX launched as a national securities exchange in 2020, which the Exchange believes has been helpful in its ability to attract order flow as a new exchange. The Exchange also did not initially charge for market data because MEMX believes that any exchange should first deliver meaningful value to Members and other market participants before charging fees for its products and services. The Exchange believes that its proposed approach to market data fees is reasonable based on the existence of competition, the existence of substitutes, and a comparison to competitors.

The Exchange is not required to make the Exchange Data Feeds available or to offer any specific pricing alternatives to any customers, nor is any firm required to purchase the Exchange Data Feeds. Firms that choose to subscribe to the Exchange Data Feeds do so for the primary goals of using it to increase their revenues, reduce their expenses, and in some instances to compete directly with the Exchange (including for order flow). Those firms are able to determine for themselves whether or not the Exchange Data Feeds or any other similar products are attractively priced.

Because the Exchange Data Feeds have not been previously subject to fees, the Exchange did not know the impact of the proposed fees on data recipients at the time of the Initial Proposal but expected that subscribers may choose to reduce or eliminate their use of MEMX data. The Exchange now has additional data regarding the impact of fees for Exchange Data Feeds. Specifically, current subscribers to the Exchange Data Feeds have indeed changed their behavior in response to the imposition of fees as predicted in the Initial Proposal. Following the date that fees for the Exchange Data Feeds were officially announced, fifteen (15) out of seventy-nine (79) subscribers, representing 19% of the subscribers to such data feeds, modified or canceled their subscriptions before the fees went into effect. In each instance, the subscriber told the Exchange that the reason for modifying or cancelling its subscription was the imminent imposition of fees. These modifications and cancellations are evidence that subscribing to the Exchange Data Feeds is discretionary, that each customer makes the decision whether to subscribe based on its own analysis of the benefits and costs to itself, and that customers can and do make those decisions quickly based on reactions to fee changes. Prior to the imposition of fees, four (4) customers (or 5% of market data subscribers) informed the Exchange that if the Exchange imposes the fees as proposed, such customers will limit their subscription the MEMOIR Top feed and/or the MEMOIR Last Sale feed, rather than the MEMOIR Depth feed, which is more expensive under the proposed fees. Notably, three (3) of these customers are active trading participants on the Exchange and have continued to participate on the Exchange without use of the Exchange's MEMOIR Depth feed. In addition, eleven (11) customers of the Exchange that were subscribed to receive Exchange Data Feeds have cancelled their subscriptions to such data feeds entirely (representing approximately 14% of market data subscribers). Five (5) of the eleven (11) customers that have cancelled all subscriptions to Exchange Data Feeds actively trade on the Exchange and have informed the Exchange that they will rely instead on consolidated data distributed pursuant to NMS Plans (*i.e.,* ''SIP data'') to participate on the Exchange. This is clear evidence that the availability of these substitute products constrains the Exchange's ability to charge supra-competitive prices for the Exchange Data Feeds.[22]

The Exchange intentionally adopted fees that it believed were reasonable and would not result in the Exchange losing market share. In fact, despite the modifications and cancellations described above, the Exchange has not lost market share from such market participants. Rather, their participation has remained similar to that on the Exchange prior to the imposition of fees and resulting changes to their market data subscriptions. However, the Exchange continues to believe that a data recipient that chose to discontinue subscribing to the Exchange's Data Feeds could also choose to shift order flow away from the Exchange and, given the current competitive environment, if data recipients had both discontinued the product and shifted order flow away from the Exchange, the Exchange would have had to reevaluate the fees and file a separate proposed rule change to amend its fees. The Exchange believes that the majority of data subscribers have maintained both their subscriptions to Exchange Data Feeds and their market share on the Exchange due to the overall reasonability of the proposed fees.

Had the proposed fees for the Exchange Data Feeds instead been unreasonable, the Exchange believes it would have seen additional modifications or cancellations to subscriptions to the Exchange Data Feeds and this may have further resulted in a loss of market share. As the Exchange has intentionally avoided imposing unreasonable fees, consistent with its obligations as a registered national securities exchange, the Exchange cannot present statistical evidence to support its understanding of how market participants would have reacted to the imposition of such fees. Indeed, adopting fees that are unreasonable in order to prove that the Exchange's market data is subject to competitive forces, would contradict the Exchange's responsibilities under Section 6(b)(4) of the Exchange Act, and would have the paradoxical effect of weakening competition in the market by harming the competitive standing of a new exchange entrant that has actively sought to increase competition among U.S. equities exchanges.

[22] The Exchange notes that the remaining customers that modified or cancelled their subscriptions to the Exchange Data Feeds (seven customers total) are not trading participants on the Exchange and likely subscribed to the Exchange Data Feeds initially because they were free but determined to cancel such subscriptions now that the Exchange is charging market data fees.

Additional Discussion—Comparison With Other Exchanges

The proposed fee structure is not novel but is instead comparable to the fee structure currently in place for the equities exchanges operated by Cboe Global Markets, Inc., in particular BZX.[23] As noted above, in January 2022, MEMX had 4.2% market share; for that same month, BZX had 5.5% market share.[24] The Exchange is proposing fees for its Exchange Data Feeds that are similar in structure to BZX and rates that are equal to, or in most cases lower, than the rates data recipients pay for comparable data feeds from BZX.[25] The Exchange notes that other competitors maintain fees applicable to market data that are considerably higher than those proposed by the Exchange, including NYSE Arca[26] and Nasdaq.[27] However, the Exchange has focused its comparison on BZX because it is the closest market in terms of market share and offers market data at prices lower than several other incumbent exchanges.[28]

The fees for the BZX Depth feed—which like the MEMOIR Depth feed, includes top of book, depth of book, trades, and security status messages—consist of an internal distributor access fee of $1,500 per month (the same as the Exchange's proposed rate), an external distributor access fee of $5,000 per month (two times the Exchange's proposed rate), a non-display usage fee for non-Trading Platforms of $2,000 per month ($500 more than the Exchange's proposed rate), a non-display usage fee for Trading Platforms of $5,000 per month ($1,000 more than the Exchange's proposed rate), a Professional User fee (per User) of $40 per month ($10 more than the Exchange's proposed rate), and a Non-Professional User fee (per User) of $5 per month ($2 more than the Exchange's proposed rate).[29]

The comparisons of the MEMOIR Last Sale feed and MEMOIR Top feed to the BZX Last Sale feed and BZX Top feed, respectively, are similar in that BZX generally maintains the same fee structure proposed by the Exchange and BZX charges fees that are comparable to, but in most cases higher than, the Exchange's proposed fees. Notably, the User fees proposed by the Exchange for External Distributors of MEMOIR Last Sale and MEMOIR Top ($0.01 for both Professional Users and Non-Professional Users) are considerably lower than those charged by BZX for BZX Top and BZX Last Sale ($4 for Professional Users and $0.10 for Non-Professional Users).

By charging the same low rate for all Users of MEMOIR Top and MEMOIR Last Sale the Exchange believes it is proposing a structure that is not only lower cost but that will also simplify reporting for subscribers who externally distribute these data feeds to Users, as the Exchange believes that categorization of Users as Professional and Non-Professional is not meaningful for these products and requiring such categorization would expose Firms to unnecessary audit risk of paying more for mis-categorization. However, the Exchange does not believe this is equally true for MEMOIR Depth, as most individual Users of MEMOIR Depth are likely to be Professional Users and the Exchange has proposed pricing for such Users that the Exchange believes is reasonable given the value to Professional Users (*i.e.,* since Professional Users use data to participate in the markets as part of their full-time profession and earn compensation based on their employment). While the Exchange would prefer the simplicity of a single fee, similar to that imposed for Professional Users and Non-Professional Users, as that would reduce audit risk and simplify reporting, the proposed fee for Professional Users if also applied to Non-Professional Users would be significantly higher than other exchanges charge. The Exchange reiterates that it does not anticipate many Non-Professional Users to subscribe to MEMOIR Depth. In fact, the Exchange is only aware of a single Non-Professional User (*i.e.,* one User) that is reported to receive MEMOIR Depth.

Additional Discussion

In general, the Exchange believes that exchanges, in setting fees of all types, should meet very high standards of transparency to demonstrate why each new fee or fee increase meets the Exchange Act requirements that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among members and markets. Accordingly, in proposing to charge fees for market data,

[23] *See* BZX Fee Schedule, available at: *https://www.cboe.com/us/equities/membership/fee_schedule/bzx/.*

[24] *See* Cboe Global Markets, U.S. Equities Market Volume Summary, available at *http://markets.cboe.com/us/equities/market_share/.*

[25] The Exchange notes that although no fee proposed by the Exchange is higher than the fee charged for BZX for a comparable data product, under certain fact patterns a BZX data recipient could pay a lower rate than that charged by the Exchange. For instance, while the Exchange has proposed to adopt identical fees to those charged for internal distribution of MEMOIR Top as compared to BZX Top ($750 per month) and for internal distribution of MEMOIR Last Sale as compared to BZX Last Sale ($500 per month), BZX permits a data recipient who takes both feeds to pay only one fee and, upon request, to receive the other data feed free of charge. *See* BZX Fee Schedule, Market Data Fees, BZX Depth, available at: *https://www.cboe.com/us/equities/membership/fee_schedule/bzx/.* Because the Exchange has not proposed such a discount, a data recipient taking both MEMOIR TOP and MEMOIR Last Sale would pay more ($1,250 per month) than they would to take comparable data feeds from BZX ($750 per month).

[26] Fees for the NYSE Arca Integrated Feed, which is the comparable product to MEMOIR Depth, are $3,000 for access (internal use) and $3,750 for redistribution (external distribution), compared to the Exchange's proposed fees of $1,500 and $2,500, respectively. In addition, for its Integrated Feed, NYSE Arca charges for three different categories of non-display usage, each of which is $10,500 and each of which can be charged to the same firm more than one time (*e.g.,* a customer operating a Trading Platform would pay $10,500 compared to the Exchange's proposed fee of $4,000 but would also pay for each Trading Platform, up to three, if they operate more than one, instead of the single fee proposed by the Exchange; if that customer also uses the data for the other categories of non-display usage they would also pay $10,500 for each other category of usage, whereas the Exchange would only charge $1,500 for any non-display usage other than operating a Trading Platform). Finally, the NYSE Arca Integrated Feed user fee for pro devices is $60 compared to the proposed Professional User fee of $30 for MEMOIR Depth and the NYSE Arca Integrated user fee for non-pro devices is $20 compared to the proposed Non-Professional User fee of $3 for MEMOIR Depth. *See* NYSE Proprietary Market Data Pricing list, available at: *https://www.nyse.com/publicdocs/nyse/data/NYSE_Market_Data_Pricing.pdf.*

[27] Fees for the Nasdaq TotalView data feed, which is the comparable product to MEMOIR Depth, are $1,500 for access (internal use) and $3,750 for redistribution (external distribution), compared to the Exchange's proposed fees of $1,500 and $2,500, respectively. In addition, for TotalView, Nasdaq charges Trading Platforms $5,000 compared to the Exchange's proposal of $4,000, and, like NYSE Arca, charges customers per Trading Platform, up to three, if they operate more than one, instead of the single fee proposed by the Exchange. Nasdaq also requires users to report and pay usage fees for non-display access at levels of from $375 per subscriber for smaller firms with 39 or fewer subscribers to $75,000 per firm for a larger firm with over 250 subscribers. The Exchange does not require counting of devices or users for non-display purposes and instead has proposed flat fee of $1,500 for non-display usage not by Trading Platforms. Finally, the Nasdaq TotalView user fee for professional subscribers is $76 compared to the proposed Professional User fee of $30 for MEMOIR Depth and the Nasdaq TotalView user fee for non-professional subscribers is $15 compared to the proposed Non-Professional User fee of $3 for MEMOIR Depth. *See* Nasdaq Global Data Products pricing list, available at: *http://www.nasdaqtrader.com/TraderB.aspx?id=MDDPricingALLN.*

[28] *See supra* notes 26 and 27.

[29] *See* BZX Fee Schedule, Market Data Fees, BZX Depth, available at: *https://www.cboe.com/us/equities/membership/fee_schedule/bzx/.* The Exchange notes that there are differences between the structure of BZX Depth fees and the proposed fees for MEMOIR Depth, including that the Exchange has proposed a Digital Media Enterprise License for MEMOIR Depth but a comparable license is not available from BZX. Additionally, BZX maintains a general enterprise license for User fees, similar to that proposed by the Exchange for MEMOIR Top and MEMOIR Last Sale, but the Exchange has not proposed adding a general Enterprise license at this time.

the Exchange has sought to be especially diligent in transparently assessing the impact on Members—both generally and in relation to other Members, *i.e.,* to assure the fee will not create a financial burden on any participant and will not have an undue impact in particular on smaller Members and competition among Members in general. The Exchange believes that this level of diligence and transparency is called for by the requirements of Section 19(b)(1) under the Act,[30] and Rule 19b–4 thereunder,[31] with respect to the types of information self-regulatory organizations (''SROs'') should provide when filing fee changes, and Section 6(b) of the Act,[32] which requires, among other things, that exchange fees be reasonable and equitably allocated,[33] not designed to permit unfair discrimination,[34] and that they not impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[35] This rule change proposal addresses those requirements, and the analysis and data in this section are designed to clearly and comprehensively show how they are met.[36]

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b) [37] of the Act in general, and furthers the objectives of Section 6(b)(4) [38] of the Act, in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities. Additionally, the Exchange believes that the proposed fees are consistent with the objectives of Section 6(b)(5) [39] of the Act in that they are designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to a free and open market and national market system, and, in general, to protect investors and the public interest, and, particularly, are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Proposed Rule Change Is Reasonable

In adopting Regulation NMS, the Commission granted SROs and broker-dealers increased authority and flexibility to offer new and unique market data to the public. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [40]

With respect to market data, the decision of the United States Court of Appeals for the District of Columbia Circuit in *NetCoalition* v. *SEC* upheld the Commission's reliance on the existence of competitive market mechanisms to evaluate the reasonableness and fairness of fees for proprietary market data:

In fact, the legislative history indicates that the Congress intended that the market system ''evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed'' and that the SEC wield its regulatory power ''in those situations where competition may not be sufficient,'' such as in the creation of a ''consolidated transactional reporting system.'' [41]

The court agreed with the Commission's conclusion that ''Congress intended that 'competitive forces should dictate the services and practices that constitute the U.S. national market system for trading equity securities.' '' [42]

In this competitive marketplace, the Exchange's executed trading volume has grown from 0% market share to approximately 4% market share in less than two years and the Exchange believes that it is reasonable to begin charging fees for the Exchange Data Feeds. One of the primary objectives of MEMX is to provide competition and to reduce fixed costs imposed upon the industry. Consistent with this objective, the Exchange believes that this proposal reflects a simple, competitive, reasonable, and equitable pricing structure, with fees that are discounted when compared to products and services offered by competitors.[43]

The Exchange is not aware of any evidence that a market share of approximately 4% provides the Exchange with supra-competitive pricing power because, as shown elsewhere, market participants (even those that trade on the Exchange) are not required to subscribe to the Exchange Data Feeds, and if they do so, have a choice with respect to the Exchange Data Feed(s) to which they will subscribe. As noted above, when the Exchange announced that it would charge for the Exchange Data Feeds, 19% of its subscribers either modified or cancelled their subscriptions to Exchange Data Feeds. While some of these subscribers do not actively participate by trading on the Exchange and likely subscribed to the Exchange Data Feeds because they were offered free of charge, several of the subscribers that modified or cancelled their subscriptions are in fact Members that trade on the Exchange. Specifically, five (5) subscribers that actively participate on the Exchange have cancelled all subscriptions to the Exchange Data Feeds and have informed the Exchange that they will instead utilize SIP data to trade on the Exchange. In addition, three (3) subscribers that actively participate on the Exchange have discontinued their subscription to receive the MEMOIR Depth feed and have informed the Exchange that they will instead use the less expensive MEMOIR Top feed to trade on the Exchange (the Exchange notes that two of these subscribers have also maintained their subscriptions to the MEMOIR Last Sale feed).

With regard to reasonableness, the Exchange understands that the Commission has traditionally taken a market-based approach to examine whether the SRO making the proposal was subject to significant competitive forces in setting the terms of the proposal. In looking at this question, consistent with the decisions in

[30] 15 U.S.C. 78s(b)(1).

[31] 17 CFR 240.19b–4.

[32] 15 U.S.C. 78f(b).

[43] *See supra* notes 26–27; *see supra* note 29 and accompanying text.

Susquehanna Int'l Grp., LLC v. *SEC*[44] and *In the Matter of the Application of Securities Industry and Financial Markets Ass'n for Review of Action taken by NYSE Arca, Inc. and Nasdaq Stock Market, LLC,*[45] the Commission considers whether the SRO has provided evidence in its filing that: (i) there are reasonable substitutes for the product or service; (ii) ''platform'' competition constrains the ability to set the fee; and/or (iii) revenue and cost analysis shows the fee would not result in the SRO taking supra-competitive profits. If the SRO demonstrates that the fee is subject to significant competitive forces, the Commission will next consider whether there is any substantial countervailing basis to suggest the fee's terms fail to meet one or more standards under the Exchange Act. If the filing fails to demonstrate that the fee is constrained by competitive forces, the SRO must provide a substantial basis, other than competition, to show that it is consistent with the Exchange Act, which may include production of relevant revenue and cost data pertaining to the product or service.

The Exchange has not previously charged fees for market data but commenced charging in April of this year. As discussed in the purpose section of this proposed rule change, while the Exchange intentionally adopted fees that it believes are reasonable and would not result in a loss of market share, consistent with its obligations as a national securities exchange under Section 6(b)(4) of the Act, the Exchange continues to believe that competitive forces are in effect and that if the proposed fees for the Exchange Data Feeds were unreasonable that the Exchange would lose current or prospective Members and market share.

1. The Proposed Fees Are Constrained by Significant Competitive Forces

a. Exchange Market Data Fees Are Constrained by Competition

The Commission itself has recognized that the market for trading services in NMS stocks has become ''more fragmented and competitive.''[46] The Commission's Division of Trading and Markets has also recognized that with so many ''operating equities exchanges and dozens of ATSs, there is vigorous price competition among the U.S. equity markets and, as a result, [transaction] fees are tailored and frequently modified to attract particular types of order flow, some of which is highly fluid and price sensitive.''[47] Indeed, as noted above, equity trading is currently dispersed across 16 exchanges, 31 alternative trading systems, and numerous broker-dealer internalizers and wholesalers, all competing for order flow. While the competitive environment described above and the Commission's statements related thereto are primarily regarding market share and trading volumes, and not market data specifically, the Exchange believes that competition does constrain the Exchange's ability to set market data prices, as described in this proposal.

Further, low barriers to entry mean that new exchanges like the Exchange may rapidly enter the market and offer competition with the Exchange. Due to the ready availability of substitutes and the low cost to move order flow to those substitute trading venues, an exchange setting market data fees that are not at competitive levels would expect to quickly lose business to competitors with more attractive pricing. Indeed, as described above, at least eight Members trade on the Exchange either by using the lower cost MEMOIR Top feed (some in combination with MEMOIR Last Sale) or without use of any Exchange Data Feed (*i.e.,* using SIP data). Although the various exchanges may differ in their strategies for pricing their market data products and their transaction fees for trades—with some offering low-cost market data with higher trading costs, and others charging more for market data and comparatively less for trading—all exchanges compete for the same pool of customers and must work to demonstrate to such customers that pricing is reasonable. The Exchange believes that the best way to do this is to provide transparency into the costs of producing and maintaining its services.

Commission staff noted in its Fee Guidance that, as an initial step in assessing the reasonableness of a fee, staff considers whether the fee is constrained by significant competitive forces. To determine whether a proposed fee is constrained by significant competitive forces, staff has said that it considers whether the evidence demonstrates that there are reasonable substitutes for the product or service that is the subject of a proposed fee. As noted elsewhere in this proposal, there is no regulatory requirement that any market participant subscribe to any Exchange Data Feeds or a particular Exchange Data Feed. To demonstrate substitutability with tangible evidence, as noted above, five (5) Members that actively trade on the Exchange have determined to the SIPs as a substitute for the Exchange's Data Feeds but have continued trading on the Exchange while three (3) Members that actively trade on the Exchange have determined to use lower cost Exchange Data Feeds (*i.e.,* MEMOIR Top or MEMOIR Top in conjunction with MEMOIR Last Sale) instead of the MEMOIR Depth feed.

The Exchange believes the proposed fees are reasonable because in setting them, the Exchange is constrained by the availability of numerous competitors offering market data products and trading services. Such substitutes need not be identical, but only substantially similar to the product at hand. More specifically, in setting fees for the Exchange Data Feeds, the Exchange is constrained by the fact that, if its pricing is unattractive to customers, customers have their pick of alternative sources of data or a large number of alternative execution venues to use instead of the Exchange. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of competition ensures that the Exchange cannot set unreasonable market data fees without suffering the negative effects of that decision in the fiercely competitive market in which it operates.

b. Exchange Data Feeds Are Optional Market Data Products

Subscribing to the Exchange Data Feeds is entirely optional. The Exchange is not required to make the Exchange Data Feeds available to any customers, nor is any customer required to purchase any Exchange Data Feed. Unlike some other data products (*e.g.,* the consolidated quotation and last-sale information feeds) that firms are required to purchase in order to fulfill regulatory obligations,[48] a customer's decision whether to purchase any Exchange Data Feed is entirely discretionary. Most Firms that choose to subscribe to an Exchange Data Feed do so for the primary goals of using it to

[45] Securities Exchange Act Release No. 84432 (October 16, 2018).

[46] *See* Securities Exchange Act Release No. 51808, 84 FR 5202, 5253 (February 20, 2019) (File No. S7–05–18).

[47] Commission Division of Trading and Markets, Memorandum to EMSAC, dated October 20, 2015, available here: *https://www.sec.gov/spotlight/emsac/memo-maker-taker-feeson-equities-exchanges.pdf.*

[48] The Exchange notes that broker-dealers are not required to purchase proprietary market data to comply with their best execution obligations. *See In the Matter of the Application of Securities Industry and Financial Markets Association for Review of Actions Taken by Self-Regulatory Organizations,* Release Nos. 34–72182; AP–3–15350; AP–3–15351 (May 16, 2014). Similarly, there is no requirement in Regulation NMS or any other rule that proprietary data be utilized for order routing decisions, and some competing exchanges, broker-dealers and ATSs have chosen not to do so.

increase their revenues, reduce their expenses, and in some instances to compete directly with the Exchange for order flow. Such firms are able to determine for themselves whether a particular Exchange Data Feed is necessary for their business needs, and if so, whether or not it is attractively priced. If an Exchange Data Feed does not provide sufficient value to a Firm based on the uses such Firm may have for it, such Firm may simply choose to conduct their business operations in ways that do not use the applicable Exchange Data Feed. Again, the Exchange has demonstrated above that several Members have in fact made this determination and trade on the Exchange without use of Exchange Data Feeds or with use of one or more of the lower cost Exchange Data Feeds and not MEMOIR Depth.

Specifically related to the Exchange Data Feed with the highest rates, the MEMOIR Depth Feed, even if a Firm determines that the fees for such feed are too high, customers can access much of the same data at lower rates by subscribing to the MEMOIR Top feed (which includes best-bid-and-offer information for the Exchange on a real-time basis) and MEMOIR Last Sale (which includes last-sale information for the Exchange on a real-time basis). MEMX top-of-book quotation information and last-sale information is also available on the consolidated SIP feeds.[49] In this way, MEMOIR Top, MEMOIR Last Sale, and SIP data products are all substitutes for a significant portion of the data available on the MEMOIR Depth Feed, and SIP data products are also a substitute for a significant portion of data available on the MEMOIR Top and MEMOIR Last Sale feeds. As shown above, several Members that trade on the Exchange discontinued subscriptions to MEMOIR Depth and instead use MEMOIR Top (or MEMOIR Top combined with MEMOIR Last Sale) as a substitute while others discontinued their subscription to Exchange Data Feeds altogether, using SIP data as a substitute. Furthermore, several exchange competitors of the Exchange have not subscribed to any Exchange Data Feeds for purposes of executing orders on their exchanges, order routing, and regulatory purposes.[50] As such competitors are required by Regulation NMS to honor (*i.e.,* not trade through, lock or cross) protected quotations [51] displayed by the Exchange and by rule they offer routing services including routing to the Exchange,[52] these competitors must have determined it possible to meet these obligations through use of SIP data in lieu of subscribing to any Exchange Data Feed.

The only content available on the MEMOIR Depth Feed that is not available on these other products is the order-by-order look at the MEMX order book, which provides information about depth-of-book on the Exchange. The Exchange has been a vocal advocate in support of the Commission's Market Data Infrastructure Rule, which mandates the creation of a ''SIP Premium'' product that would include depth-of-book information on the consolidated market data feeds.[53] The Exchange has also been a vocal advocate in support of pricing new content for the consolidated market data feeds in a reasonable and competitive manner that would encourage the use of a SIP Premium product and other content to be provided via the SIPs.[54] Future products such as SIP Premium would include not only integrated depth-of-book information from MEMX, but all other exchanges as well, and would further constrain the Exchange's ability to price any Exchange Data Feed, including MEMOIR Depth, at a supra-competitive price. However, even in the absence of such products, the Exchange believes that use of the Exchange Data Feeds is entirely optional, as described above.

Further, in the case of products that are also redistributed through market data vendors such as Bloomberg and Refinitiv, the vendors themselves provide additional price discipline for proprietary data products because they control the primary means of access to certain end users. These vendors impose price discipline based upon their business models. For example, vendors that assess a surcharge on data they sell are able to refuse to offer proprietary products that their end users do not or will not purchase in sufficient numbers. Even in the absence of fees for the Exchange Data Feeds, many major market data vendors have not elected to make available the Exchange Data Feeds and likely will not unless their customers request it, and customers will not elect to pay the proposed fees unless the applicable Exchange Data Feed can provide value by sufficiently increasing revenues or reducing costs to the customer's business in a manner that will offset the fees. All of these factors operate as constraints on pricing proprietary data products.

In setting the proposed fees for the Exchange Data Feeds, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of alternatives to the Exchange and the continued availability of choice between different Exchange Data Feeds, other exchanges' proprietary data products, and the SIPs ensure that the Exchange cannot set unreasonable fees when vendors and subscribers can elect these alternatives or choose not to purchase a specific proprietary data product if the attendant fees are not justified by the returns that any particular vendor or data recipient would achieve through the purchase.

2. The Proposed Fees Are Reasonable

The specific fees that the Exchange proposes for the Exchange Data Feeds are reasonable for the following additional reasons.

Overall. The Exchange believes the proposed fees for the Exchange Data Feeds are reasonable when compared to fees for comparable products, such as the BZX Depth feed, BZX Top feed, and BZX Last Sale feed, compared to which the Exchange's proposed fees are generally lower, as well as other comparable data feeds priced significantly higher than the Exchange's proposed fees for the Exchange Data Feeds.[55] Specifically with respect to the MEMOIR Depth feed, the Exchange believes that the proposed fees for such feed are reasonable because they represent not only the value of the data available from the MEMOIR Top and

[49] Broadly speaking, the self-regulatory organizations (''SROs'') administer the SIPs and set pricing. Each SIP charges its own fees, which are determined by the operating committees of each SIP subject to the SEC rule filing process. While MEMX is a member of the operating committee of each SIP, it has only one vote and does not exercise control over SIP pricing. MEMX also notes that the SIPs charge pursuant to a different pricing structure than the pricing structure proposed by the Exchange in this filing.

[50] *See, e.g.,* NYSE Arca Rule 7.37–E.(d), Order Execution and Routing, and BZX Rule 11.21, each of which discloses the data feeds used by each respective exchange and state that SIP products are used with respect to MEMX.

[51] *See* Rule 600(b)(71) of Regulation NMS, 17 CFR 242.600(b)(17).

[52] See NYSE Arca Rule 7.37–E.(b), describing routing services offered by NYSE Arca; BZX Rule 11.13(b), describing routing services offered by BZX.

[53] *See, e.g.,* Letter from Anders Franzon, General Counsel, MEMX LLC, dated May 26, 2020, regarding proposed Market Data Infrastructure rule, available at: *https://www.sec.gov/comments/s7-03-20/s70320-7235183-217090.pdf.*

[54] *See, e.g.,* Letter from Adrian Griffiths, Head of Market Structure, MEMX LLC, dated November 8, 2021, regarding proposed fees for consolidated data provided pursuant to CTA/CQ/UTP Plans, available at: *https://www.sec.gov/comments/sr-ctacq-2021-03/srctacq202103-9403088-262830.pdf.*

[55] *See supra* notes 26–27; *see supra* note 29 and accompanying text.

MEMOIR Last Sale data feeds, which have lower proposed fees, but also the value of receiving the depth-of-book data on an order-by-order basis. The Exchange believes it is reasonable to have pricing based, in part, upon the amount of information contained in each data feed and the value of that information to market participants. The MEMOIR Top and Last Sale data feeds, as described above, can be utilized to trade on the Exchange but contain less information than that is available on the MEMOIR Depth feed (*i.e.,* even for a subscriber who takes both feeds, such feeds do not contain depth-of-book information). Thus, the Exchange believes it reasonable for the products to be priced as proposed, with MEMOIR Last Sale having the lowest price, MEMOIR Top the next lowest price, and MEMOIR Depth the highest price (and more than MEMOIR Last Sale and MEMOIR Top combined).

Internal Distribution Fees. The Exchange believes that it is reasonable to charge

Fees to access the Exchange Data Feeds for Internal Distribution because of the value of such data to subscribers in their profit-generating activities. The Exchange also believes that the proposed monthly Internal Distribution fees for MEMOIR Depth, MEMOIR Top, and MEMOIR Last Sale are reasonable as they are the same amounts charged by at least one other exchange of comparable size for comparable data products,[56] and are lower than the fees charged by several other exchanges for comparable data products.[57]

External Distribution Fees. The Exchange believes that it is reasonable to charge External Distribution fees for the Exchange Data Feeds because vendors receive value from redistributing the data in their business products provided to their customers. The Exchange believes that charging External Distribution fees is reasonable because the vendors that would be charged such fees profit by re-transmitting the Exchange's market data to their customers. These fees would be charged only once per month to each vendor account that redistributes any Exchange Data Feed, regardless of the number of customers to which that vendor redistributes the data. The Exchange also believes the proposed monthly External Distribution fee for the MEMOIR Depth Feed is reasonable because it is half the amount of the fee charged by at least one other exchange of comparable size for a comparable data product,[58] and significantly less than the amount charged by several other exchanges for comparable data products.[59] Similarly, the Exchange believes the proposed monthly External Distribution fees for the MEMOIR TOP and MEMOIR Last Sale feeds are reasonable because they are discounted compared to same amounts charged by at least one other exchange of comparable size for comparable data products, and significantly less than the amount charged by several other exchanges for comparable data products.[60]

User Fees. The Exchange believes that having separate Professional and Non-Professional User fees for the MEMOIR Depth feed is reasonable because it will make the product more affordable and result in greater availability to Professional and Non-Professional Users. Setting a modest Non-Professional User fee is reasonable because it provides an additional method for Non-Professional Users to access the Exchange Data Feeds by providing the same data that is available to Professional Users. The proposed monthly Professional User fee and monthly Non-Professional User fee are reasonable because they are lower than the fees charged by at least one other exchange of comparable size for comparable data products,[61] and significantly less than the amounts charged by several other exchanges for comparable data products.[62] The Exchange also believes it is reasonable to charge the same low per User fee of $0.01 for both Professional Users and Non-Professional Users receiving the MEMOIR Top and MEMOIR Last Sale feeds, as this is not only pricing such data at a much lower cost than other exchanges charge for comparable data feeds[63] but doing so will also simplify reporting for subscribers who externally distribute these data feeds to Users, as the Exchange believes that categorization of Users as Professional and Non-Professional is not meaningful for these products and that requiring such categorization would expose Firms to unnecessary audit risk of paying more for mis-categorization. The Exchange also believes that the proposal to require reporting of individual Users, but not devices, is reasonable as this too will eliminate unnecessary audit risk that can arise when recipients are required to apply complex counting rules such as whether or not to count devices or whether an individual accessing the same data through multiple devices should be counted once or multiple times.

Non-Display Use Fees. The Exchange believes the proposed Non-Display Usage fees for the MEMOIR Depth feed are reasonable, because they reflect the value of the data to the data recipients in their profit-generating activities and do not impose the burden of counting non-display devices.

The Exchange believes that the proposed Non-Display Usage fees reflect the significant value of the non-display data use to data recipients, which purchase such data on an entirely voluntary basis. Non-display data can be used by data recipients for a wide variety of profit-generating purposes, including proprietary and agency trading and smart order routing, as well as by data recipients that operate Trading Platforms that compete directly with the Exchange for order flow. The data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. Although some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce a recipient's costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting recipients. The Exchange believes that charging for non-trading uses is reasonable because data recipients can derive substantial value from such uses, for example, by automating tasks so that can be performed more quickly and accurately and less expensively than if they were performed manually.

Previously, the non-display use data pricing policies of many exchanges required customers to count, and the exchanges to audit the count of, the number of non-display devices used by

[63] *See id.*

a customer. As non-display use grew more prevalent and varied, however, exchanges received an increasing number of complaints about the impracticality and administrative burden associated with that approach. In response, several exchanges developed a non-display use pricing structure that does not require non-display devices to be counted or those counts to be audited, and instead categorizes different types of use. The Exchange proposes to distinguish between non-display use for the operation of a Trading Platform and other non-display use, which is similar to exchanges such as BZX and EDGX,[64] while other exchanges maintain additional categories and in many cases charge multiple times for different types of non-display use or the operation of multiple Trading Platforms.[65]

The Exchange believes that it is reasonable to segment the fee for non-display use into these two categories. As noted above, the uses to which customers can put the MEMOIR Depth feed are numerous and varied, and the Exchange believes that charging separate fees for these separate categories of use is reasonable because it reflects the actual value the customer derives from the data, based upon how the customer makes use of the data.

The Exchange believes that the proposed fees for non-display use other than operation of a Trading Platform is reasonable. These fees are comparable to, and lower than, the fees charged by at least one other exchange of comparable size for a comparable data product,[66] and significantly less than the amounts charged by several other exchanges for comparable data products.[67] The Exchange believes that the proposed fees directly and appropriately reflect the significant value of using data on a non-display basis in a wide range of computer-automated functions relating to both trading and non-trading activities and that the number and range of these functions continue to grow through innovation and technology developments. Further, in contrast to non-display use for operation of a Trading Platform, discussed below, the Exchange benefits from and wants to encourage other non-display use by market participants (including the fact that the Exchange receives orders resulting from algorithms and routers as well as more broadly beneficial uses such as risk management and compliance).

The Exchange also believes, regarding non-display use for operation of a Trading Platform, it is reasonable to charge a higher monthly fee than for other non-display use because such use of the Exchange's data is directly in competition with the Exchange and the Exchange should be permitted to recoup some of its lost trading revenue by charging for the data that makes such competition possible. The Exchange also believes that it is reasonable to charge the proposed fees for non-display use for operation of a Trading Platform because the proposed fees are comparable to, and lower than, the fees charged at least one other exchange of comparable size for a comparable data product,[68] and significantly less than the amounts charged by several other exchanges for comparable data products, which also charge per Trading Platform operated by a data subscriber subject to a cap in most cases, rather than charging per Firm, as proposed by the Exchange.[69]

The proposed Non-Display Usage fees for the Exchange Data Feeds are also reasonable because they take into account the extra value of receiving the data for Non-Display Usage that includes a rich set of information including top of book quotations, depth-of-book quotations, executions and other information. The Exchange believes that the proposed fees directly and appropriately reflect the significant value of using the MEMOIR Depth feed on a non-display basis in a wide range of computer-automated functions relating to both trading and non-trading activities and that the number and range of these functions continue to grow through innovation and technology developments.[70]

For all of the foregoing reasons, the Exchange believes that the proposed fees for the Exchange Data Feeds are reasonable.

The Proposed Fees Are Equitably Allocated

The Exchange believes the proposed fees for the Exchange Data Feeds are allocated fairly and equitably among the various categories of users of the feeds, and any differences among categories of users are justified and appropriate.

Overall. The Exchange believes that the proposed fees are equitably allocated because they will apply uniformly to all data recipients that choose to subscribe to the Exchange Data Feeds. Any subscriber or vendor that chooses to subscribe to one or more Exchange Data Feeds is subject to the same Fee Schedule, regardless of what type of business they operate, and the decision to subscribe to one or more Exchange Data Feeds is based on objective differences in usage of Exchange Data Feeds among different Firms, which are still ultimately in the control of any particular Firm. The Exchange believes the proposed pricing between Exchange Data Feeds is equitably allocated because it is based, in part, upon the amount of information contained in each data feed and the value of that information to market participants. The MEMOIR Top and Last Sale data feeds, as described above, can be utilized to trade on the Exchange but contain less information than that is available on the MEMOIR Depth feed (*i.e.,* even for a subscriber who takes both feeds, such feeds do not contain depth-of-book information). Thus, the Exchange believes it is an equitable allocation of fees for the products to be priced as proposed, with MEMOIR Last Sale having the lowest price, MEMOIR Top the next lowest price, and MEMOIR Depth the highest price (and more than MEMOIR Last Sale and MEMOIR Top combined).

Internal Distribution Fee. The Exchange believes the proposed monthly fees for Internal Distribution of the Exchange Data Feeds are equitably allocated because they would be charged on an equal basis to all data recipients that receive the Exchange Data Feeds for internal distribution, regardless of what type of business they operate.

External Distribution Fees. The Exchange believes the proposed monthly fees for External Distribution of the Exchange Data Feeds are equitably allocated because they would be

[69] *See supra* notes 26–27.

[70] *See also* Exchange Act Release No. 69157, March 18, 2013, 78 FR 17946, 17949 (March 25, 2013) (SR–CTA/CQ–2013–01) (''[D]ata feeds have become more valuable, as recipients now use them to perform a far larger array of non-display functions. Some firms even base their business models on the incorporation of data feeds into black boxes and application programming interfaces that apply trading algorithms to the data, but that do not require widespread data access by the firm's employees. As a result, these firms pay little for data usage beyond access fees, yet their data access and usage is critical to their businesses.''

charged on an equal basis to all data recipients that receive the Exchange Data Feeds that choose to redistribute the feeds externally. The Exchange also believes that the proposed monthly fees for External Distribution are equitably allocated when compared to lower proposed fees for Internal Distribution because data recipients that are externally distributing Exchange Data Feeds are able to monetize such distribution and spread such costs amongst multiple third party data recipients, whereas the Internal Distribution fee is applicable to use by a single data recipient (and its affiliates).

User Fees. The Exchange believes that the fee structure differentiating Professional User fees from Non-Professional User fees for display use of the MEMOIR Depth feed is equitable. This structure has long been used by other exchanges and the SIPs to reduce the price of data to Non-Professional Users and make it more broadly available.[71] Offering the MEMOIR Depth feed to Non-Professional Users at a lower cost than Professional Users results in greater equity among data recipients, as Professional Users are categorized as such based on their employment and participation in financial markets, and thus, are compensated to participate in the markets. While Non-Professional Users too can receive significant financial benefits through their participation in the markets, the Exchange believes it is reasonable to charge more to those Users who are more directly engaged in the markets. The Exchange also believes it may be unreasonable to charge a Non-Professional User the same fee that it has proposed for Professional Users, as this fee would be higher than any other U.S. equities exchange charges to Non-Professional Users for receipt of a comparable data product. These User fees would be charged uniformly to all individuals that have access to the MEMOIR Depth feed based on the category of User. The Exchange also believes the proposed User fees for MEMOIR Top and MEMOIR Last Sale are equitable because the Exchange has proposed to charge Professional Users and Non-Professional Users the same low rate of $0.01 per month.

Non-Display Use Fees. The Exchange believes the proposed Non-Display Usage fees are equitably allocated because they would require subscribers to pay fees only for the uses they actually make of the data. As noted above, non-display data can be used by data recipients for a wide variety of profit-generating purposes (including trading and order routing) as well as purposes that do not directly generate revenues (such as risk management and compliance) but nonetheless substantially reduce the recipient's costs by automating certain functions. The Exchange believes that it is equitable to charge non-display data subscribers that use data for purposes other than operation of a Trading Platform as proposed because all such subscribers would have the ability to use such data for as many non-display uses as they wish for one low fee. As noted above, this structure is comparable to that in place for the BZX Depth feed but several other exchanges charge multiple non-display fees to the same client to the extent they use a data feed in several different trading platforms or for several types of non-display use.[72]

The Exchange also believes, regarding non-display use for operation of a Trading Platform, it is equitable to charge a higher rate for each Firm operating a Trading Platform (as compared to other Non-Display Usage not by Trading Platforms) because such use of the data is directly in competition with the Exchange and the Exchange should be permitted to recoup some of its lost trading revenue by charging for the data that makes such competition possible. Further, in contrast to non-display use for operation of a Trading Platform, the Exchange benefits from and wants to encourage other non-display use by market participants (including the fact that the Exchange receives orders resulting from algorithms and routers as well as more broadly beneficial uses such as risk management and compliance). The Exchange believes that it is equitable to charge a single fee per Firm rather than multiple fees for a Firm that operates more than one Trading Platform because operators of Trading Platforms are many times viewed as a single competing venue or group, even if there are multiple liquidity pools operated by the same competitor.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the Exchange Data Feeds are equitably allocated.

The Proposed Fees Are Not Unfairly Discriminatory

The Exchange believes the proposed fees for the Exchange Data Feeds are not unfairly discriminatory because any differences in the application of the fees are based on meaningful distinctions between customers, and those meaningful distinctions are not unfairly discriminatory between customers.

Overall. The Exchange believes that the proposed fees are not unfairly discriminatory because they would apply to all data recipients that choose to subscribe to the same Exchange Data Feed(s). Any vendor or subscriber that chooses to subscribe to the Exchange Data Feeds is subject to the same Fee Schedule, regardless of what type of business they operate. Because the proposed fees for MEMOIR Depth are higher, vendors and subscribers seeking lower cost options may instead choose to receive data from the SIPs or through the MEMOIR Top and/or MEMOIR Last Sale feed for a lower cost. Alternatively, vendors and subscribers can choose to pay for the MEMOIR Depth feed in order to receive data in a single feed with depth-of-book information if such information is valuable to such vendors or subscribers. The Exchange notes that vendors or subscribers can also choose to subscribe to a combination of data feeds for redundancy purposes or to use different feeds for different purposes. In sum, each vendor or subscriber has the ability to choose the best business solution for itself. The Exchange does not believe it is unfairly discriminatory to base pricing upon the amount of information contained in each data feed and the value of that information to market participants. As described above, the MEMOIR Top and Last Sale data feeds, can be utilized to trade on the Exchange but contain less information than that is available on the MEMOIR Depth feed (*i.e.,* even for a subscriber who takes both feeds, such feeds do not contain depth-of-book information). Thus, the Exchange believes it is not unfairly discriminatory for the products to be priced as proposed, with MEMOIR Last Sale having the lowest price, MEMOIR Top the next lowest price, and MEMOIR Depth the highest price (and more than MEMOIR Last Sale and MEMOIR Top combined).

Internal Distribution Fees. The Exchange believes the proposed monthly fees for Internal Distribution of the Exchange Data Feeds are not unfairly discriminatory because they would be charged on an equal basis to all data recipients that receive the same Exchange Data Feed(s) for internal

[71] *See, e.g.,* Securities Exchange Act Release No. 59544 (March 9, 2009), 74 FR 11162 (March 16, 2009) (SR–NYSE–2008–131) (establishing the $15 Non-Professional User Fee (Per User) for NYSE OpenBook); Securities Exchange Act Release No. 20002, File No. S7–433 (July 22, 1983), 48 FR 34552 (July 29, 1983) (establishing Non-Professional fees for CTA data); NASDAQ BX Equity 7 Pricing Schedule, Section 123.

[72] *See supra,* notes 26–27.

distribution, regardless of what type of business they operate.

External Distribution Fees. The Exchange believes the proposed monthly fees for redistributing the Exchange Data Feeds are not unfairly discriminatory because they would be charged on an equal basis to all data recipients that receive the same Exchange Data Feed(s) that choose to redistribute the feed(s) externally. The Exchange also believes that having higher monthly fees for External Distribution than Internal Distribution is not unfairly discriminatory because data recipients that are externally distributing Exchange Data Feeds are able to monetize such distribution and spread such costs amongst multiple third party data recipients, whereas the Internal Distribution fee is applicable to use by a single data recipient (and its affiliates).

User Fees. The Exchange believes that the fee structure differentiating Professional User fees from Non-Professional User fees for display use of the MEMOIR Depth feed is not unfairly discriminatory. This structure has long been used by other exchanges and the SIPs to reduce the price of data to Non-Professional Users and make it more broadly available.[73] Offering the Exchange Data Feeds to Non-Professional Users with the same data as is available to Professional Users results in greater equity among data recipients. These User fees would be charged uniformly to all individuals that have access to the Exchange Data Feeds based on the category of User. The Exchange also believes the proposed User fees for MEMOIR Top and MEMOIR Last Sale are not unfairly discriminatory because the Exchange has proposed to charge Professional Users and Non-Professional Users the same low rate of $0.01 per month.

Non-Display Use Fees. The Exchange believes the proposed Non-Display Usage fees for the MEMOIR Depth feed are not unfairly discriminatory because they would require subscribers for non-display use to pay fees depending on their use of the data, either for operation of a Trading Platform or not, but would not impose multiple fees to the extent a Firm operates multiple Trading Platforms or has multiple different types of non-display use. As noted above, non-display data can be used by data recipients for a wide variety of profit-generating purposes as well as purposes that do not directly generate revenues but nonetheless substantially reduce the recipient's costs by automating certain functions. This segmented fee structure is not unfairly discriminatory because no subscriber of non-display data would be charged a fee for a category of use in which it did not actually engage.

The Exchange also believes that, regarding non-display use for operation of a Trading Platform, it is not unreasonably discriminatory to charge a higher fee for each Firm operating a Trading Platform (as compared to other Non-Display Usage not by Trading Platforms) because such use of the data is directly in competition with the Exchange and the Exchange should be permitted to recoup some of its lost trading revenue by charging for the data that makes such competition possible. The Exchange believes that it is not unreasonably discriminatory to charge a single fee for an operator of Trading Platforms that operates more than one Trading Platform because operators of Trading Platforms are many times viewed as a single competing venue or group, even if there a multiple liquidity pools operated by the same competitor. The Exchange again notes that certain competitors to the Exchange charge for non-display usage per Trading Platform,[74] in contrast to the Exchange's proposal. In turn, to the extent they subscribe to Exchange Data Feeds, these same competitors will benefit from the Exchange's pricing model to the extent they operate multiple Trading Platforms (as most do) by paying a single fee rather than paying for each Trading Platform that they operate that consumes Exchange Data Feeds.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the Exchange Data Feeds are not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[75] the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intra-Market Competition

The Exchange does not believe that the proposed rule change would place certain market participants at the Exchange at a relative disadvantage compared to other market participants or affect the ability of such market participants to compete. Since the pricing for the Exchange Data Feeds was announced by the Exchange, the Exchange has received no official complaints from Members, non-Members, or third-parties that redistribute the Exchange Data Feeds, that the Exchange's fees or the proposed fees for Exchange Data Feeds would negatively impact their abilities to compete with other market participants or that they are placed at a disadvantage relative to others. The Exchange does not believe that the proposed fees for Exchange Data Feeds place certain market participants at a relative disadvantage to other market participants because, as noted above, the proposed fees are associated with usage of Exchange Data Feeds by each market participant based on the type of business they operate, and the decision to subscribe to one or more Exchange Data Feeds is based on objective differences in usage of Exchange Data Feeds among different Firms, which are still ultimately in the control of any particular Firm, and such fees do not impose a barrier to entry to smaller participants. Accordingly, the proposed fees for Exchange Data Feeds do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation of the proposed fees reflects the types of Exchange Data Feeds consumed by various market participants and their usage thereof.

As noted above, the current subscribers to the Exchange Data Feeds began changing their behavior in response to the imposition of fees as predicted in the Initial Proposal and as described herein. Following the date that fees for the Exchange Data Feeds were officially announced, fifteen (15) out of seventy-nine (79) subscribers, representing 19% of the subscribers to such data feeds, modified or canceled their subscriptions before the fees went into effect. In each instance, the subscriber told the Exchange that the reason for modifying or cancelling its subscription was the imminent imposition of fees. These modifications and cancellations are evidence that subscribing to the Exchange Data Feeds is discretionary, that each customer makes the decision whether to subscribe based on its own analysis of the benefits and costs to itself, and that customers can and do make those decisions quickly based on reactions to fee changes. Prior to the imposition of fees, four (4) customers (or 5% of market data subscribers) informed the Exchange that if the Exchange imposes the fees as proposed, such customers will limit their subscription the MEMOIR Top feed and/or the MEMOIR Last Sale feed, rather than the MEMOIR Depth feed, which is more expensive under the proposed fees. Notably, three (3) of these customers are active trading

[73] *See supra* note 71.

[74] *See supra* notes 26–27.

[75] 15 U.S.C. 78f(b)(8).

participants on the Exchange and have continued to participate on the Exchange without use of the Exchange's MEMOIR Depth feed. In addition, eleven (11) customers of the Exchange that were subscribed to receive Exchange Data Feeds have cancelled their subscriptions to such data feeds entirely (representing approximately 14% of market data subscribers). Five (5) of the eleven (11) customers that have cancelled all subscriptions to Exchange Data Feeds actively trade on the Exchange and have informed the Exchange that they will rely instead on SIP data to participate on the Exchange. This is clear evidence that the availability of these substitute products constrains the Exchange's ability to charge supra-competitive prices for the Exchange Data Feeds. The Exchange notes that the remaining customers that modified or cancelled their subscriptions to the Exchange Data Feeds (seven customers total) are not trading participants on the Exchange and likely subscribed to the Exchange Data Feeds initially because they were free but determined to cancel such subscriptions now that the Exchange is charging market data fees.

Inter-Market Competition

The Exchange does not believe the proposed fees place an undue burden on competition on other SROs that is not necessary or appropriate. In particular, market participants are not forced to subscribe to any of the Exchange Data Feeds, as described above. Additionally, other exchanges have similar market data fees in place for their participants, but with higher rates to connect.[76] The Exchange is also unaware of any assertion that the proposed fees for Exchange Data Feeds would somehow unduly impair its competition with other exchanges.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act[77] and Rule 19b–4(f)(2)[78] thereunder.

[76] *See supra* notes 26–27; *see supra* note 29 and accompanying text.

[77] 15 U.S.C. 78s(b)(3)(A)(ii).

[78] 17 CFR 240.19b–4(f)(2).

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–MEMX–2022–19 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–MEMX–2022–19. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–MEMX–2022–19 and should be submitted on or before August 31, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[79]

J. Matthew DeLesDernier,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 34663; File No. 812–15342]

New Mountain Capital, L.L.C., et al.

August 4, 2022.

AGENCY: Securities and Exchange Commission (''Commission'' or ''SEC'').

ACTION: Notice.

Notice of application for an order (''Order'') under sections 17(d) and 57(i) of the Investment Company Act of 1940 (the ''Act'') and rule 17d–1 under the Act to permit certain joint transactions otherwise prohibited by sections 17(d) and 57(a)(4) of the Act and rule 17d–1 under the Act.

SUMMARY OF APPLICATION: Applicants request an order to amend a previous order granted by the Commission that permits certain business development companies (''BDCs'') and closed-end management investment companies to co-invest in portfolio companies with each other and with certain affiliated investment entities.

APPLICANTS: New Mountain Capital, L.L.C., New Mountain CLO 1, Ltd., New Mountain CLO 2, Ltd., New Mountain CLO 3, Ltd., New Mountain CLO 4, Ltd., New Mountain CLO 5, Ltd., New Mountain Credit CLO Advisers, L.L.C., New Mountain Finance Advisers BDC, L.L.C., New Mountain Finance Corporation, New Mountain Finance DB, L.L.C., New Mountain Finance Holdings, L.L.C., New Mountain Finance SBIC II, L.P., New Mountain Finance SBIC, L.P., New Mountain Finance Servicing, L.L.C., New Mountain Guardian II Master Fund–A, L.P., New Mountain Guardian II Master Fund–B, L.P., New Mountain Guardian III BDC, L.L.C., New Mountain Guardian III OEC, Inc., New Mountain Guardian

III SPV, L.L.C., New Mountain Guardian IV BDC, L.L.C., New Mountain Guardian Partners II, L.P., New Mountain Net Lease Corporation, New Mountain Net lease Partners II, L.P., New Mountain Net Lease Partners, L.P., New Mountain Partners VI, L.P., New Mountain Strategic Equity Fund I, L.P., New Mountain Strategic Equity Fund II, L.P., NMF Ancora Holdings, Inc., NMF HB, Inc., NMF OEC, Inc., NMF Permian Holdings L.L.C., NMF Pioneer, Inc., NMF QID NGL Holdings, Inc., NMF SLF I SPV, L.L.C., NMF SLF I, Inc., NMF TRM, L.L.C., and NMF YP Holdings, Inc.

FILING DATES: The application was filed on May 24, 2022, and amended on June 22, 2022.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC's Secretary at *Secretarys-Office@sec.gov* and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on, August 29, 2022, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary at *Secretarys-Office@sec.gov.*

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: Robert A. Hamwee, Chief Executive Officer, New Mountain Finance Corporation, at *RHamwee@newmountaincapital.com,* and Steven B. Boehm, Esq., Payam Siadatpour, Esq., and Anne G. Oberndorf, Esq., Eversheds Sutherland (US) LLP, at *anneoberndorf@eversheds-sutherland.us.*

FOR FURTHER INFORMATION CONTACT: Kieran G. Brown, Senior Counsel, or Terri Jordan, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' first amended and restated application, dated June 22, 2022, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system. The SEC's EDGAR system may be searched at, *http://www.sec.gov/edgar/searchedgar/legacy/companysearch.html.* You may also call the SEC's Public Reference Room at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

J. Matthew DeLesDernier,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–95425; File No. SR–NYSECHX–2022–06]

Self-Regulatory Organizations; NYSE Chicago, Inc.; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of Proposed Rule Change, as Modified by Amendment No. 1, To Add Subparagraph (f)(4) Regarding Directed Orders to NYSE Chicago Rule 7.31

August 4, 2022.

I. Introduction

On April 20, 2022, the NYSE Chicago, Inc. (''NYSE Chicago'' or the ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] a proposed rule change to introduce Directed Orders. The proposed rule change was published for comment in the **Federal Register** on May 3, 2022.[3] On June 16, 2022, the Commission extended to August 7, 2022, the time period in which to approve the proposal, disapprove the proposal, or institute proceedings to determine whether to approve or disapprove the proposal.[4] On July 28, 2022, the Exchange filed Amendment No. 1 to the proposed rule change with the Commission and submitted Amendment No. 1 for inclusion in the public comment file.[5] The Commission has received no comment letters on the proposed rule change. The Commission is publishing notice of the filing of Amendment No. 1 to solicit comment from interested persons, and is approving the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

II. Self-Regulatory Organization's Description of the Proposal, as Modified by Amendment No. 1

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 7.31 (Orders and Modifiers) to add new subparagraph (f)(4) to provide for Directed Orders and to make other conforming changes to its Rules in connection with the addition of this new order type on the Exchange. The Directed Order, as further defined below, would be an order sent to the Exchange to be routed directly to an alternative trading system (''ATS'') specified by a Participant.[6]

The Exchange proposes to add Rule 7.31(f)(4), which would define a Directed Order as a Limit Order with instructions to route on arrival at its limit price to a specified ATS with which the Exchange maintains an electronic linkage. Proposed Rule 7.31(f)(4) would further provide that Directed Orders would be available for all securities eligible to trade on the Exchange. Proposed Rule 7.31(f)(4) would also provide that a Directed

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 94837 (May 3, 2022), 87 FR 27681 (May 9, 2022) (SR–NYSECHX–2022–06) (''Notice'').

[4] *See* Securities Exchange Act Release No. 95119 (June 16, 2022), 87 FR 37538 (June 23, 2022).

[5] In Amendment No. 1, the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. *See* Letter from Martha Redding, Associate General Counsel, NYSE Chicago, Inc., to Secretary, Commission (July 28, 2022). Amendment No. 1 is available at *https://www.sec.gov/comments/sr-nysechx-2022-06/srnysechx202206-20135097-306077.pdf.*

[6] Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement.

Order would not be assigned a working time or interact with interest on the Exchange Book. The Exchange also proposes to provide in Rule 7.31(f)(4) that the ATS to which a Directed Order is routed would be responsible for validating whether the order is eligible to be accepted, and if such ATS determines to reject the order, the order would be cancelled.

Proposed Rule 7.31(f)(4)(A) would provide that a Directed Order must be designated for the Exchange's Core Trading Session, as defined in Rule 7.34(a)(2).[7]

Proposed Rule 7.31(f)(4)(A) would further provide that a Directed Order must be designated with a Time in Force modifier of IOC[8] or Day[9] and would be routed to the specified ATS with such modifier. The Exchange proposes that a Directed Order designated IOC would be traded in whole or in part on the ATS to which it is routed after receipt of the order, and any untraded quantity would be cancelled. The Exchange proposes that a Directed Order designated Day would expire at the end of the Core Trading Session on the day it is entered. Proposed Rule 7.31(f)(1)(A) would also provide that a Directed Order may not be designated with any other modifiers defined in Rule 7.31.

Proposed Rule 7.31(f)(4)(B) would provide that, during a trading halt or pause, an incoming Directed Order would be rejected.

Proposed Rule 7.31(f)(4)(C) would provide that a request to cancel a Directed Order designated Day would be routed to the ATS to which the order was routed.

The Exchange also proposes the following conforming changes to Rule 7.19 (Pre-Trade Risk Controls) and Article 17, Rule 5 (Brokerplex).

- The Exchange proposes to modify Rule 7.19(a)(5), which sets forth the definition of Gross Credit Risk Limit and currently provides that unexecuted orders in the Exchange Book, orders routed on arrival pursuant to Rule 7.37(a)(1), and executed orders are included for purposes of calculating the Gross Credit Risk Limit. The Exchange proposes to modify Rule 7.19(a)(5) to specify that orders routed on arrival pursuant to Rule 7.31(f)(4) would also be included for purposes of the Gross Credit Risk Limit calculation.
- The Exchange proposes to modify Article 17, Rule 5, which describes the Brokerplex system used by Institutional Brokers (''IBs''). Specifically, the Exchange proposes to modify Rule 5(c)(1), which enumerates the order types and modifiers defined in Rule 7.31 that are not available via Brokerplex, to include Directed Orders because the order type will not be available to IBs.

The Exchange believes that the proposed rule change would facilitate additional trading opportunities by offering Participants the ability to designate orders submitted to the Exchange to be routed to an ATS of their choosing for execution. The Exchange believes the proposed change would encourage Participants to utilize the Exchange as a venue for order entry and further believes that the proposed change could create efficiencies for Participants by enabling them to send orders that they wish to route to an alternate destination through the Exchange, thereby enabling them to leverage order entry protocols and specifications already configured for their interactions with the Exchange. The Exchange notes that the Directed Order, as proposed, would operate similarly to the Primary Only Order already offered by the Exchange, which is an order that is routed directly to the primary listing market on arrival, without being assigned a working time or interacting with interest on the Exchange Book.[10] The Exchange also believes that the Directed Order would offer its Participants functionality akin to order types and routing options that currently exist on other equities exchanges.[11]

Because of the technology changes associated with this proposed rule change, the Exchange will announce the implementation date by Trader Update.[12] Subject to effectiveness of this proposed rule change, the Exchange anticipates that the proposed change will be implemented in the third quarter of 2022.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934,[13] in general, and furthers the objectives of Section 6(b)(5),[14] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and

[7] Because the Exchange proposes that Directed Orders may only be designated for the Core Trading Session, the Exchange also proposes conforming changes to Rule 7.34 (Trading Sessions). Specifically, the Exchange proposes to modify Rule 7.34(c)(1)(E) to provide that Directed Orders designated for the Early Trading Session would be rejected and Rule 7.34(c)(3)(C) to provide that Directed Orders designated for the Late Trading Session would be rejected. The Exchange also proposes an additional change to correct a typographical error in Rule 7.34(c)(1), to update the reference to ''paragraphs (c)(1)(A)–(E)'' to ''paragraphs (c)(1)(A)–(F)'' to accurately reflect the number of subparagraphs under Rule 7.34(c)(1).

[8] *See* Rule 7.31(b)(2), which provides that a Limit Order may be designated with an Immediate-or-Cancel (''IOC'') modifier.

[9] *See* Rule 7.31(b)(1), which provides that orders may be designated with a Day modifier, and that an order to buy or sell designated Day, if not traded, will expire at the end of the designated session on the day on which it was entered.

[10] *See* Rule 7.31(f)(1). NYSE Chicago also offers variations of the Primary Only Order, including the Primary Only Until 9:45 Order, which is a Limit or Inside Limit Order that, on arrival and until 9:45 a.m. Eastern Time, routes to the primary listing market, and the Primary Only Until 3:55 Order, which is a Limit or Inside Limit Order entered on the Exchange until 3:55 p.m. Eastern Time, after which time the order is cancelled on the Exchange and routed to the primary listing market. *See* Rules 7.31(f)(2) and (f)(3). The Exchange's affiliated exchanges NYSE American LLC (''NYSE American''), NYSE Arca, Inc. (''NYSE Arca''), and NYSE National, Inc. (''NYSE National'') (collectively, the ''Affiliated Exchanges'') also offer the Primary Only Order and variations thereof. *See* NYSE American Rules 7.31E(f)(1)–;(f)(3); NYSE Arca Rules 7.31–E(f)(1)–;(f)(3); NYSE National Rules 7.31(f)(1)–;(f)(3).

[11] *See, e.g.,* Nasdaq Stock Market LLC (''Nasdaq''), Equity 4, Equity Trading Rules, Rule 4758(a)(ix) (defining the Nasdaq Directed Order as an order designed to use a routing strategy under which the order is directed to an automated trading center other than Nasdaq, as directed by the entering party, without checking the Nasdaq Book); Cboe EDGX Exchange, Inc. (''EDGX'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGX system and is immediately routed by EDGX to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe EDGA Exchange, Inc. (''EDGA'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGA system and is immediately routed by EDGA to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe BZX Exchange, Inc. (''BZX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BZX system and be sent to a specified away trading center); Cboe BYX Exchange, Inc. (''BYX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BYX system and be sent to a specified away trading center). The Exchange also believes that the Directed Order would provide functionality similar to the C–LNK routing strategy formerly offered by EDGA, in which C–LNK orders bypassed EDGA's local book and routed directly to a specified Single Dealer Platform destination. *See* Securities Exchange Act Release No. 82904 (March 20, 2018), 83 FR 12995 (March 26, 2018) (SR–CboeEDGA–2018–004) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Expand an Offering Known a Cboe Connect To Provide Connectivity to Single-Dealer Platforms Connected to the Exchange's Network and To Propose a Per Share Executed Fee for Such Service).

[12] The Exchange will also provide information regarding the ATS(s) to which a Directed Order may be designated to route by Trader Update.

[13] 15 U.S.C. 78f(b).

[14] 15 U.S.C. 78f(b)(5).

coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to remove impediments to and perfect the mechanism of a free and open market and promote just and equitable principles of trade because the Directed Order would offer Participants access to additional trading opportunities by permitting them to designate orders submitted to the Exchange to be routed directly to a specified ATS for execution. The Exchange further believes that the proposed change would remove impediments to and perfect the mechanism of a free and open market by offering Participants the option to send orders that they wish to route to an alternate destination for execution through the Exchange, which would create efficiencies to the extent Participants are able to leverage existing protocols and specifications. Finally, the Exchange notes that the proposed functionality is not novel, as both the Exchange and other exchanges offer their members functionality whereby an exchange routes orders on behalf of a member to a specified trading center without such order interacting with the exchange's book.[15]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rules governing Directed Orders would promote competition because they would provide for an order type on the Exchange that would facilitate additional trading opportunities for market participants. The Exchange further believes that the proposed rules would allow it to offer Participants functionality similar to order types and routing options that exist on other equities exchanges, thereby enabling the Exchange to compete with such exchanges.[16]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Discussion and Commission Findings

After careful review of the proposal, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.[17] In particular, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with Section 6(b)(5) of the Act,[18] which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest, and that the rules of a national securities exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Commission finds that the proposed rule change is reasonably designed to remove impediments to and perfect the mechanism of a free and open market and a national market system because it would provide Participants with additional trading opportunities by providing them with the option to designate orders to be routed by the Exchange directly to a specified ATS for execution. The use of Directed Orders would be voluntary, and the Exchange represents that it would not direct orders to any ATSs with which the Exchange has a financial relationship. The Commission also believes that the proposed rule change would not permit unfair discrimination among customers, brokers, or dealers because Directed Orders will be available to all Participants on an equal basis. Finally, the Commission believes that the proposed changes to Exchange Rule 7.19(a)(5) will ensure that Directed Orders are included in the calculation of Gross Credit Risk Limit.

IV. Solicitation of Comments on Amendment No. 1 to the Proposed Rule Change

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NYSECHX–2022–06 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSECHX–2022–06. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSECHX–2022–06 and should be submitted on or before August 31, 2022.

[15] *See* notes 10 & 11, *supra.*

[16] *See* note 11, *supra.*

[17] In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[18] 15 U.S.C. 78f(b)(5).

V. Accelerated Approval of Amendment No. 1

As noted above,[19] in Amendment No. 1, as compared to the original proposal,[20] the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. The Commission finds that Amendment No. 1 to the proposal raises no novel regulatory issues, that it is reasonably designed to protect investors and the public interest, and that it is consistent with the requirements of the Act. Accordingly, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,[21] to approve the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[22] that the proposed rule change (SR–NYSECHX–2022–06), as modified by Amendment No. 1, be, and hereby is, approved on an accelerated basis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[23]

J. Matthew DeLesDernier,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–95422; File No. SR–CboeBZX–2022–006]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Designation of a Longer Period for Commission Action on Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change To List and Trade Shares of the WisdomTree Bitcoin Trust Under BZX Rule 14.11(e)(4), Commodity-Based Trust Shares

August 4, 2022.

On January 25, 2022, Cboe BZX Exchange, Inc. (''BZX'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to list and trade shares of the WisdomTree Bitcoin Trust under BZX Rule 14.11(e)(4), Commodity-Based Trust Shares. The proposed rule change was published for comment in the **Federal Register** on February 14, 2022.[3]

On March 18, 2022, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] On May 13, 2022, the Commission instituted proceedings under Section 19(b)(2)(B) of the Act [6] to determine whether to approve or disapprove the proposed rule change.[7] The Commission has received no comments on the proposed rule change.

Section 19(b)(2) of the Act [8] provides that, after initiating proceedings, the Commission shall issue an order approving or disapproving the proposed rule change not later than 180 days after the date of publication of notice of filing of the proposed rule change. The Commission may extend the period for issuing an order approving or disapproving the proposed rule change, however, by not more than 60 days if the Commission determines that a longer period is appropriate and publishes the reasons for such determination. The proposed rule change was published for comment in the **Federal Register** on February 14, 2022.[9] The 180th day after publication of the proposed rule change is August 13, 2022. The Commission is extending the time period for approving or disapproving the proposed rule change for an additional 60 days.

The Commission finds that it is appropriate to designate a longer period within which to issue an order approving or disapproving the proposed rule change so that it has sufficient time to consider the proposed rule change and the issues raised therein. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[10] designates October 12, 2022, as the date by which the Commission shall either approve or disapprove the proposed rule change (File No. SR–CboeBZX–2022–006).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[11]

J. Matthew DeLesDernier,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–95428; File No. SR–NYSEARCA–2022–25]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of Proposed Rule Change, as Modified by Amendment No. 1, To Add Subparagraph (f)(4) Regarding Directed Orders to NYSE Arca Rule 7.31–E

August 4, 2022.

I. Introduction

On April 20, 2022, NYSE Arca, Inc. (''NYSE Arca'' or the ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to introduce Directed Orders. The proposed rule change was published for comment in the **Federal Register** on May 4, 2022.[3] On June 16, 2022, the Commission extended to August 8, 2022, the time period in which to approve the proposal, disapprove the proposal, or institute proceedings to determine whether to approve or disapprove the proposal.[4] On July 28, 2022, the Exchange filed Amendment No. 1 to the proposed rule change with the Commission and submitted Amendment No. 1 for inclusion in the public comment file.[5]

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 94843 (May 4, 2022), 87 FR 28081 (May 10, 2022) (SR–NYSEARCA–2022–25) (''Notice'').

[4] *See* Securities Exchange Act Release No. 95116 (June 16, 2022), 87 FR 37543 (June 23, 2022).

[5] In Amendment No. 1, the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. *See* Letter from Martha Redding, Associate General Counsel, NYSE Arca, Inc., to Secretary, Commission

The Commission is publishing notice of the filing of Amendment No. 1 to solicit comment from interested persons, and is approving the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.[6]

II. Self-Regulatory Organization's Description of the Proposal, as Modified by Amendment No. 1

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 7.31–E (Orders and Modifiers) to add new subparagraph (f)(4) to provide for Directed Orders and to make other conforming changes to its Rules in connection with the addition of this new order type on the Exchange. The Directed Order, as further defined below, would be an order sent to the Exchange to be routed directly to an alternative trading system (''ATS'') specified by an ETP Holder.[7]

The Exchange proposes to add Rule 7.31–E(f)(4), which would define a Directed Order as a Limit Order with instructions to route on arrival at its limit price to a specified ATS with which the Exchange maintains an electronic linkage. Proposed Rule 7.31–E(f)(4) would further provide that Directed Orders would be available for all securities eligible to trade on the Exchange. Proposed Rule 7.31–E(f)(4) would also provide that a Directed Order would not be assigned a working time or interact with interest on the NYSE Arca Book. The Exchange also proposes to provide in Rule 7.31–E(f)(4) that the ATS to which a Directed Order is routed would be responsible for validating whether the order is eligible to be accepted, and if such ATS determines to reject the order, the order would be cancelled.

Proposed Rule 7.31–E(f)(4)(A) would provide that a Directed Order must be designated for the Exchange's Core Trading Session, as defined in Rule 7.34–E(a)(2).[8]

Proposed Rule 7.31–E(f)(4)(A) would further provide that a Directed Order must be designated with a Time in Force modifier of IOC[9] or Day[10] and would be routed to the specified ATS with such modifier. The Exchange proposes that a Directed Order designated IOC would be traded in whole or in part on the ATS to which it is routed after receipt of the order, and any untraded quantity would be cancelled. The Exchange proposes that a Directed Order designated Day would expire at the end of the Core Trading Session on the day it is entered. Proposed Rule 7.31–E(f)(1)(A) would also provide that a Directed Order may not be designated with any other modifiers defined in Rule 7.31–E.

Proposed Rule 7.31–E(f)(4)(B) would provide that a Directed Order in a security that is having its initial listing on the Exchange would be rejected if received before the IPO Auction concludes.

Proposed Rule 7.31–E(f)(4)(C) would provide that, during a trading halt or pause, an incoming Directed Order would be rejected.

Proposed Rule 7.31–E(f)(4)(D) would provide that a request to cancel a Directed Order designated Day would be routed to the ATS to which the order was routed.

The Exchange also proposes a conforming change to Rule 7.19–E (Pre-Trade Risk Controls). The Exchange proposes to modify Rule 7.19–E(a)(5), which sets forth the definition of Gross Credit Risk Limit and currently provides that unexecuted orders in the NYSE Arca Book, orders routed on arrival pursuant to Rule 7.37–E(a)(1), and executed orders are included for purposes of calculating the Gross Credit Risk Limit. The Exchange proposes to modify Rule 7.19–E(a)(5) to specify that orders routed on arrival pursuant to Rule 7.31–E(f)(4) would also be included for purposes of the Gross Credit Risk Limit calculation.

The Exchange believes that the proposed rule change would facilitate additional trading opportunities by offering ETP Holders the ability to designate orders submitted to the Exchange to be routed to an ATS of their choosing for execution. The Exchange believes the proposed change would encourage ETP Holders to utilize the Exchange as a venue for order entry and further believes that the proposed change could create efficiencies for ETP Holders by enabling them to send orders that they wish to route to an alternate destination through the Exchange, thereby enabling them to leverage order entry protocols and specifications already configured for their interactions with the Exchange. The Exchange notes that the Directed Order, as proposed, would operate similarly to the Primary Only Order already offered by the Exchange, which is an order that is routed directly to the primary listing market on arrival, without being assigned a working time or interacting with interest on the NYSE Arca Book.[11] The Exchange also believes that the Directed Order would offer ETP Holders functionality akin to order types and routing options that currently exist on other equities exchanges.[12]

(July 28, 2022). Amendment No. 1 is available at *https://www.sec.gov/comments/sr-nysearca-2022-25/srnysearca202225-20135099-306079.pdf.*

[6] The Commission received one comment letter that is not germane to the proposal. *See https://www.sec.gov/comments/sr-nysearca-2022-25/srnysearca202225-289416.htm.*

[7] Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement.

[8] Because the Exchange proposes that Directed Orders may only be designated for the Core Trading Session, the Exchange also proposes conforming changes to Rule 7.34–E (Trading Sessions). Specifically, the Exchange proposes to modify Rule 7.34–E(c)(1)(E) to provide that Directed Orders designated for the Early Trading Session would be rejected and Rule 7.34–E(c)(3)(C) to provide that Directed Orders designated for the Late Trading Session would be rejected.

[9] *See* Rule 7.31–E(b)(2), which provides that a Limit Order may be designated with an Immediate-or-Cancel (''IOC'') modifier.

[10] *See* Rule 7.31–E(b)(1), which provides that orders may be designated with a Day modifier, and that an order to buy or sell designated Day, if not traded, will expire at the end of the designated session on the day on which it was entered.

[11] *See* Rule 7.31–E(f)(1). NYSE Arca also offers variations of the Primary Only Order, including the Primary Only Until 9:45 Order, which is a Limit or Inside Limit Order that, on arrival and until 9:45 a.m. Eastern Time, routes to the primary listing market, and the Primary Only Until 3:55 Order, which is a Limit or Inside Limit Order entered on the Exchange until 3:55 p.m. Eastern Time, after which time the order is cancelled on the Exchange and routed to the primary listing market. *See* Rules 7.31–E(f)(2) and (f)(3). The Exchange's affiliated exchanges NYSE American LLC (''NYSE American''), NYSE Chicago, Inc. (''NYSE Chicago''), and NYSE National, Inc. (''NYSE National'') (collectively, the ''Affiliated Exchanges'') also offer the Primary Only Order and variations thereof. *See* NYSE American Rules 7.31E(f)(1)—(f)(3); NYSE Chicago Rules 7.31(f)(1)—(f)(3); NYSE National Rules 7.31(f)(1)—(f)(3).

[12] *See, e.g.,* Nasdaq Stock Market LLC (''Nasdaq''), Equity 4, Equity Trading Rules, Rule 4758(a)(ix) (defining the Nasdaq Directed Order as an order designed to use a routing strategy under which the order is directed to an automated trading center other than Nasdaq, as directed by the entering party, without checking the Nasdaq Book); Cboe EDGX Exchange, Inc. (''EDGX'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGX system and is immediately routed by EDGX to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe EDGA Exchange, Inc. (''EDGA'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGA system

Continued

Because of the technology changes associated with this proposed rule change, the Exchange will announce the implementation date by Trader Update.[13] Subject to effectiveness of this proposed rule change, the Exchange anticipates that the proposed change will be implemented in the third quarter of 2022.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934,[14] in general, and furthers the objectives of Section 6(b)(5),[15] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to remove impediments to and perfect the mechanism of a free and open market and promote just and equitable principles of trade because the Directed Order would offer ETP Holders access to additional trading opportunities by permitting them to designate orders submitted to the Exchange to be routed directly to a specified ATS for execution. The Exchange further believes that the proposed change would remove impediments to and perfect the mechanism of a free and open market by offering ETP Holders the option to send orders that they wish to route to an alternate destination for execution through the Exchange, which would create efficiencies to the extent ETP Holders are able to leverage existing protocols and specifications. Finally, the Exchange notes that the proposed functionality is not novel, as both the Exchange and other exchanges offer their members functionality whereby an exchange routes orders on behalf of a member to a specified trading center without such order interacting with the exchange's book.[16]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rules governing Directed Orders would promote competition because they would provide for an order type on the Exchange that would facilitate additional trading opportunities for market participants. The Exchange further believes that the proposed rules would allow it to offer ETP Holders functionality similar to order types and routing options that exist on other equities exchanges, thereby enabling the Exchange to compete with such exchanges.[17]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Discussion and Commission Findings

After careful review of the proposal, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.[18] In particular, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with Section 6(b)(5) of the Act,[19] which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest, and that the rules of a national securities exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Commission finds that the proposed rule change is reasonably designed to remove impediments to and perfect the mechanism of a free and open market and a national market system because it would provide ETP Holders with additional trading opportunities by providing them with the option to designate orders to be routed by the Exchange directly to a specified ATS for execution. The use of Directed Orders would be voluntary, and the Exchange represents that it would not direct orders to any ATSs with which the Exchange has a financial relationship. The Commission also believes that the proposed rule change would not permit unfair discrimination among customers, brokers, or dealers because Directed Orders will be available to all ETP Holders on an equal basis. Finally, the Commission believes that the proposed changes to Exchange Rule 7.19–E(a)(5) will ensure that Directed Orders are included in the calculation of Gross Credit Risk Limit.

IV. Solicitation of Comments on Amendment No. 1 to the Proposed Rule Change

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEARCA–2022–25 on the subject line.

and is immediately routed by EDGA to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe BZX Exchange, Inc. (''BZX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BZX system and be sent to a specified away trading center); Cboe BYX Exchange, Inc. (''BYX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BYX system and be sent to a specified away trading center). The Exchange also believes that the Directed Order would provide functionality similar to the C–LNK routing strategy formerly offered by EDGA, in which C–LNK orders bypassed EDGA's local book and routed directly to a specified Single Dealer Platform destination. *See* Securities Exchange Act Release No. 82904 (March 20, 2018), 83 FR 12995 (March 26, 2018) (SR–CboeEDGA–2018–004) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Expand an Offering Known a Cboe Connect To Provide Connectivity to Single-Dealer Platforms Connected to the Exchange's Network and To Propose a Per Share Executed Fee for Such Service).

[13] The Exchange will also provide information regarding the ATS(s) to which a Directed Order may be designated to route by Trader Update.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEARCA–2022–25. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEARCA–2022–25 and should be submitted on or before August 31, 2022.

V. Accelerated Approval of Amendment No. 1

As noted above,[20] in Amendment No. 1, as compared to the original proposal,[21] the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. The Commission finds that Amendment No. 1 to the proposal raises no novel regulatory issues, that it is reasonably designed to protect investors and the public interest, and that it is consistent with the requirements of the Act. Accordingly, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,[22] to approve the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[23] that the proposed rule change (SR–NYSEARCA–2022–25), as modified by Amendment No. 1, be, and hereby is, approved on an accelerated basis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[24]

J. Matthew DeLesDernier,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–95423; File No. SR–NYSE–2022–20]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of Proposed Rule Change, as Modified by Amendment No. 1, To Add Subparagraph (f)(1) Regarding Directed Orders to NYSE Rule 7.31

August 4, 2022.

I. Introduction

On April 20, 2022, New York Stock Exchange, Inc. (''NYSE'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to introduce Directed Orders. The proposed rule change was published for comment in the **Federal Register** on May 3, 2022.[3] On June 16, 2022, the Commission extended to August 7, 2022, the time period in which to approve the proposal, disapprove the proposal, or institute proceedings to determine whether to approve or disapprove the proposal.[4] On July 28, 2022, the Exchange filed Amendment No. 1 to the proposed rule change with the Commission and submitted Amendment No. 1 for inclusion in the public comment file.[5] The Commission is publishing notice of the filing of Amendment No. 1 to solicit comment from interested persons, and is approving the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.[6]

II. Self-Regulatory Organization's Description of the Proposal, as Modified by Amendment No. 1

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 7.31 (Orders and Modifiers) to designate subparagraph (f) as describing orders with specific routing instructions and to add new subparagraph (f)(1) to provide for Directed Orders. The Exchange also proposes to make other conforming changes to its Rules in connection with the addition of this new order type on the Exchange. The Directed Order, as further defined below, would be an order sent to the Exchange to be routed directly to an alternative trading system (''ATS'') specified by a member organization.[7]

The Exchange proposes to rename Rule 7.31(f), which is currently designated as Reserved, to ''Orders with Specific Routing Instructions.'' The Exchange also proposes to add Rule 7.31(f)(1), which would define a Directed Order as a Limit Order with instructions to route on arrival at its

[4] *See* Securities Exchange Act Release No. 95118 (June 16, 2022), 87 FR 37539 (June 23, 3022).

[5] In Amendment No. 1, the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. *See* Letter from Martha Redding, Associate General Counsel, NYSE LLC, to Secretary, Commission (July 28, 2022). Amendment No. 1 is available at *https://www.sec.gov/comments/sr-nyse-2022-20/srnyse202220-20135101-306081.pdf.*

[6] The Commission received one comment letter that is not germane to the proposal. *See https://www.sec.gov/comments/sr-nyse-2022-20/srnyse202220-289428.htm.*

[7] Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement.

limit price to a specified ATS with which the Exchange maintains an electronic linkage. Proposed Rule 7.31(f)(1) would further provide that Directed Orders would be available for all securities eligible to trade on the Exchange. Proposed Rule 7.31(f)(1) would also provide that a Directed Order would not be assigned a working time or interact with interest on the Exchange Book. The Exchange also proposes to provide in Rule 7.31(f)(1) that the ATS to which a Directed Order is routed would be responsible for validating whether the order is eligible to be accepted, and if such ATS determines to reject the order, the order would be cancelled.

Proposed Rule 7.31(f)(1)(A) would provide that a Directed Order must be designated for the Exchange's Core Trading Session, as defined in Rule 7.34(a)(2).[8]

Proposed Rule 7.31(f)(1)(A) would further provide that a Directed Order must be designated with a Time in Force modifier of IOC[9] or Day[10] and would be routed to the specified ATS with such modifier. The Exchange proposes that a Directed Order designated IOC would be traded in whole or in part on the ATS to which it is routed after receipt of the order, and any untraded quantity would be cancelled. The Exchange proposes that a Directed Order designated Day would expire at the end of the Core Trading Session on the day it is entered. Proposed Rule 7.31(f)(1)(A) would also provide that a Directed Order may not be designated with any other modifiers defined in Rule 7.31.

Proposed Rule 7.31(f)(1)(B) would provide that a Directed Order in a security to be opened in an initial public offering (''IPO'') or a Direct Listing would be rejected if received before the IPO Auction or Direct Listing Auction concludes.

Proposed Rule 7.31(f)(1)(C) would provide that, during a trading halt or pause, an incoming Directed Order would be rejected.

Proposed Rule 7.31(f)(1)(D) would provide that a request to cancel a Directed Order designated Day would be routed to the ATS to which the order was routed.

The Exchange also proposes the following conforming changes to Rule 7.19 (Pre-Trade Risk Controls) and Rule 104 (Dealings and Responsibilities of DMMs):

- The Exchange proposes to modify Rule 7.19(a)(5), which sets forth the definition of Gross Credit Risk Limit and currently provides that unexecuted orders in the Exchange Book, orders routed on arrival pursuant to Rule 7.37(a)(1), and executed orders are included for purposes of calculating the Gross Credit Risk Limit. The Exchange proposes to modify Rule 7.19(a)(5) to specify that orders routed on arrival pursuant to Rule 7.31(f)(1) would also be included for purposes of the Gross Credit Risk Limit calculation.
- The Exchange proposes to modify Rule 104(b)(6), which specifies the orders and modifiers that DMM units are not permitted to enter. The Exchange proposes to add Directed Orders to Rule 104(b)(6) as an order type that DMM units may not enter.

The Exchange believes that the proposed rule change would facilitate additional trading opportunities by offering member organizations the ability to designate orders submitted to the Exchange to be routed to an ATS of their choosing for execution. The Exchange believes the proposed change would encourage member organizations to utilize the Exchange as a venue for order entry and further believes that the proposed change could create efficiencies for member organizations by enabling them to send orders that they wish to route to an alternate destination through the Exchange, thereby enabling them to leverage order entry protocols and specifications already configured for their interactions with the Exchange. The Exchange notes that the Directed Order, as proposed, would operate similarly to the Primary Only Order already offered by NYSE American LLC (''NYSE American''), NYSE Arca, Inc. (''NYSE Arca''), NYSE Chicago, Inc. (''NYSE Chicago''), and NYSE National, Inc. (''NYSE National'') (collectively, the ''Affiliated Exchanges''). On the Affiliated Exchanges, a Primary Only Order is an order that is routed directly to the primary listing market on arrival, without being assigned a working time or interacting with interest on the order book of the exchange to which it was submitted.[11] The Exchange also believes that the Directed Order would offer member organizations functionality akin to order types and routing options that currently exist on other equities exchanges.[12]

Because of the technology changes associated with this proposed rule change, the Exchange will announce the implementation date by Trader Update.[13] Subject to effectiveness of this proposed rule change, the Exchange anticipates that the proposed change will be implemented in the third quarter of 2022.

---

[8] Because the Exchange proposes that Directed Orders may only be designated for the Core Trading Session, the Exchange also proposes conforming changes to Rule 7.34 (Trading Sessions). Specifically, the Exchange proposes to add Rule 7.34(c)(1)(E) to provide that Directed Orders designated for the Early Trading Session would be rejected. The Exchange also proposes to update Rule 7.34(c)(1) to refer to ''paragraphs (c)(1)(A)–(E)'' to reflect the addition of subparagraph (E).

[9] *See* Rule 7.31(b)(2), which provides that a Limit Order may be designated with an Immediate-or-Cancel (''IOC'') modifier.

[10] *See* Rule 7.31(b)(1), which provides that orders may be designated with a Day modifier, and that an order to buy or sell designated Day, if not traded, will expire at the end of the designated session on the day on which it was entered.

[11] *See* NYSE American Rule 7.31E(f)(1); NYSE Arca Rule 7.31–E(f)(1); NYSE Chicago Rule 7.31(f)(1); NYSE National Rule 7.31(f)(1). The Affiliated Exchanges also offer variations of the Primary Only Order, including the Primary Only Until 9:45 Order, which is a Limit or Inside Limit Order that, on arrival and until 9:45 a.m. Eastern Time, routes to the primary listing market, and the Primary Only Until 3:55 Order, which is a Limit or Inside Limit Order entered on the Exchange until 3:55 p.m. Eastern Time, after which time the order is cancelled on the Exchange and routed to the primary listing market. *See* NYSE American Rules 7.31E(f)(2) and (f)(3); NYSE Arca Rules 7.31–E(f)(2) and (f)(3); NYSE Chicago Rules 7.31(f)(2) and (f)(3); NYSE National Rules 7.31(f)(2) and (f)(3).

[12] *See, e.g.,* Nasdaq Stock Market LLC (''Nasdaq''), Equity 4, Equity Trading Rules, Rule 4758(a)(ix) (defining the Nasdaq Directed Order as an order designed to use a routing strategy under which the order is directed to an automated trading center other than Nasdaq, as directed by the entering party, without checking the Nasdaq Book); Cboe EDGX Exchange, Inc. (''EDGX'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGX system and is immediately routed by EDGX to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe EDGA Exchange, Inc. (''EDGA'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGA system and is immediately routed by EDGA to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe BZX Exchange, Inc. (''BZX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BZX system and be sent to a specified away trading center); Cboe BYX Exchange, Inc. (''BYX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BYX system and be sent to a specified away trading center). The Exchange also believes that the Directed Order would provide functionality similar to the C–LNK routing strategy formerly offered by EDGA, in which C–LNK orders bypassed EDGA's local book and routed directly to a specified Single Dealer Platform destination. *See* Securities Exchange Act Release No. 82904 (March 20, 2018), 83 FR 12995 (March 26, 2018) (SR–CboeEDGA–2018–004) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Expand an Offering Known a Cboe Connect To Provide Connectivity to Single-Dealer Platforms Connected to the Exchange's Network and To Propose a Per Share Executed Fee for Such Service).

[13] The Exchange will also provide information regarding the ATS(s) to which a Directed Order may be designated to route by Trader Update.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934,[14] in general, and furthers the objectives of Section 6(b)(5),[15] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to remove impediments to and perfect the mechanism of a free and open market and promote just and equitable principles of trade because the Directed Order would offer member organizations access to additional trading opportunities by permitting them to designate orders submitted to the Exchange to be routed directly to a specified ATS for execution. The Exchange further believes that the proposed change would remove impediments to and perfect the mechanism of a free and open market by offering member organizations the option to send orders that they wish to route to an alternate destination for execution through the Exchange, which would create efficiencies to the extent member organizations are able to leverage existing protocols and specifications. Finally, the Exchange notes that the proposed functionality is not novel as the Affiliated Exchanges and other exchanges offer their members functionality whereby an exchange routes orders on behalf of a member to a specified trading center without such order interacting with the Exchange's book.[16]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rules governing Directed Orders would promote competition because they would provide for an order type on the Exchange that would facilitate additional trading opportunities for market participants. The Exchange further believes that the proposed rules would allow it to offer its member organizations functionality similar to order types and routing options that exist on other equities exchanges, thereby enabling the Exchange to compete with such exchanges.[17]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Discussion and Commission Findings

After careful review of the proposal, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.[18] In particular, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with Section 6(b)(5) of the Act,[19] which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest, and that the rules of a national securities exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Commission finds that the proposed rule change is reasonably designed to remove impediments to and perfect the mechanism of a free and open market and a national market system because it would provide exchange members with additional trading opportunities by providing them with the option to designate orders to be routed by the Exchange directly to a specified ATS for execution. The use of Directed Orders would be voluntary, and the Exchange represents that it would not direct orders to any ATSs with which the Exchange has a financial relationship. The Commission also believes that the proposed rule change would not permit unfair discrimination among customers, brokers, or dealers because Directed Orders will be available to all Exchange members on an equal basis. Finally, the Commission believes that the proposed changes to Exchange Rule 7.19(a)(5) will ensure that Directed Orders are included in the calculation of Gross Credit Risk Limit.

IV. Solicitation of Comments on Amendment No. 1 to the Proposed Rule Change

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSE–2022–20 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSE–2022–20. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish

to make available publicly. All submissions should refer to File Number SR–NYSE–2022–20 and should be submitted on or before August 31, 2022.

V. Accelerated Approval of Amendment No. 1

As noted above,[20] in Amendment No. 1, as compared to the original proposal,[21] the Exchange: (i) represents that Directed Orders will not be routed to an ATS with which the Exchange has a financial arrangement; and (ii) updates the anticipated implementation date of the proposed rule change from the second quarter to the third quarter of 2022. The Commission finds that Amendment No. 1 to the proposal raises no novel regulatory issues, that it is reasonably designed to protect investors and the public interest, and that it is consistent with the requirements of the Act. Accordingly, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,[22] to approve the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[23] that the proposed rule change (SR–NYSE–2022–20), as modified by Amendment No. 1, be, and hereby is, approved on an accelerated basis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[24]

J. Matthew DeLesDernier,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 34664; File No. 812–15350]

Runway Growth Finance Corp., et al.

August 4, 2022.

AGENCY: Securities and Exchange Commission (''Commission'' or ''SEC'').

ACTION: Notice.

Notice of application for an order (''Order'') under sections 17(d) and 57(i) of the Investment Company Act of 1940 (the ''Act'') and rule 17d–1 under the Act to permit certain joint transactions otherwise prohibited by sections 17(d) and 57(a)(4) of the Act and rule 17d–1 under the Act.

SUMMARY OF APPLICATION: Applicants request an order to amend a previous order granted by the Commission that permits certain business development companies (''BDCs'') and closed-end management investment companies to co-invest in portfolio companies with each other and with certain affiliated investment entities.

APPLICANTS: Runway Growth Finance Corp., Runway Growth Finance L.P., Runway Growth Capital LLC, RWAY IP Holdings LLC and Runway Growth Finance Opportunities Fund I LP.

FILING DATES: The application was filed on June 15, 2022 and amended on July 29, 2022.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC's Secretary at *Secretarys-Office@sec.gov* and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on August 29, 2022, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary at *Secretarys-Office@sec.gov.*

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: Thomas B. Raterman at *tr@runwaygrowth.com.* Steven B. Boehm, Esq. and Anne G. Oberndorf, Esq., Eversheds Sutherland (US) LLP, at *anneoberndorf@eversheds-sutherland.us.*

FOR FURTHER INFORMATION CONTACT: Bruce R. MacNeil, Senior Counsel, or Kaitlin C. Bottock, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' first amended and restated application, dated July 29, 2022, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system. The SEC's EDGAR system may be searched at, at *http://www.sec.gov/edgar/searchedgar/legacy/companysearch.html.* You may also call the SEC's Public Reference Room at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

J. Matthew DeLesDernier,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–95430; File No. SR–BOX–2022–24)

Self-Regulatory Organizations; BOX Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fee Schedule on the BOX Options Market LLC Facility To Establish Section IV.D.2 (''Strategy QCC Transactions'')

August 4, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on August 1, 2022, BOX Exchange LLC (''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Exchange filed the proposed rule change pursuant to Section 19(b)(3)(A)(ii) of the Act,[3] and Rule 19b–4(f)(2) thereunder,[4] which renders the proposal effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange is filing with the Securities and Exchange Commission (''Commission'') a proposed rule change to amend the Fee Schedule to amend the Fee Schedule for trading on BOX to establish Section IV.D.2 (''Strategy QCC Transactions'') on the BOX Options Market LLC (''BOX'') options facility. While changes to the fee schedule

pursuant to this proposal will be effective upon filing, the changes will become operative on August 1, 2022. The text of the proposed rule change is available from the principal office of the Exchange, at the Commission's Public Reference Room and also on the Exchange's internet website at *http://boxexchange.com.*

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Fee Schedule for trading on BOX to establish Section IV.D.2 (''Strategy QCC Transactions'').

Currently, the transaction fees for Qualified Contingent Cross (''QCC'') Orders, including strategy QCC Orders, are detailed in Section IV.D. in the Fee Schedule. Broker Dealer and Market Maker QCC transactions are assessed $0.17 per contract for both the Agency Order and the Contra Order. Public Customers and Professional Customers are assessed $0.00 for both the Agency Order and the Contra Order and are eligible for a rebate if at least one side of the QCC transaction is a Broker Dealer or Market Maker.[5]

To further incentivize Participants to execute strategy[6] QCC transactions on BOX, the Exchange now proposes to establish Section IV.D.2 that will detail the fees assessed for these transactions.[7] Specifically, the Exchange proposes to assess no fees for strategy QCC transactions which are comprised of an originating order to buy or sell at least 1,000 contracts, or 10,000 mini-option contracts, that is identified as being part of a qualified contingent trade, as that term is defined in IM–7110–2 below, coupled with a contra-side order or orders totaling an equal number of contracts. IM–7110–2 provides a ''qualified contingent trade'' is a transaction consisting of two or more component orders, executed as agent or principal, where: (1) At least one component is an NMS Stock, as defined in Rule 600 of Regulation NMS under the Exchange Act; (2) all components are effected with a product or price contingency that either has been agreed to by all the respective counterparties or arranged for by a broker dealer as principal or agent; (3) the execution of one component is contingent upon the execution of all other components at or near the same time; (4) the specific relationship between the component orders (*e.g.,* the spread between the prices of the component orders) is determined by the time the contingent order is placed; (5) the component orders bear a derivative relationship to one another, represent different classes of shares of the same issuer, or involve the securities of participants in mergers or with intentions to merge that have been announced or cancelled; and (6) the transaction is fully hedged (without regard to any prior existing position) as a result of other components of the contingent trade.[8] Because these transactions will not be assessed a fee, the Exchange proposes that strategy QCC transactions will not be eligible for a QCC Rebate and will not count toward QCC Agency Order volume detailed in Section IV.D.1. The Exchange notes that strategy QCC transactions will continue to count toward Market Maker and Public Customer monthly executed volume on BOX detailed in Section IV.A.1 of the BOX Fee Schedule but will not be eligible for the QCC Rebate in Section IV.D.1 and will not be counted towards the QCC Rebate Tiers.

The proposed change is designed to compete with open outcry fee caps for strategy orders.[9] The Exchange believes that Participants may choose to execute strategy orders that would qualify as strategy QCC Orders either in open outcry or as electronic QCC transactions depending on convenience, fees, and access to Floor Brokers. The Exchange believes that Participants are otherwise indifferent to whether a strategy order is executed in open outcry or electronically. Therefore, the proposed change is designed to further incentivize certain Participants to direct strategy order volume to BOX's electronic QCC mechanism rather than to another exchange's trading floor.

2. Statutory Basis

The Exchange believes that the proposal is consistent with the requirements of Section 6(b) of the Act, in general, and Section 6(b)(4) and 6(b)(5) of the Act,[10] in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other

[5] *See* BOX Fee Schedule, Section IV.D, ''Qualified Contingent Cross (''QCC'') Transactions.''

[6] Strategy orders are defined as one of the following: A ''short stock interest strategy'' is defined as a transaction done to achieve a short stock interest arbitrage involving the purchase, sale, and exercise of in-the-money options of the same class. A ''long stock interest strategy'' is defined as a transaction done to achieve long stock involving the purchase, sale, and exercise of in-the-money options of the same class. A ''merger strategy'' is defined as transactions done to achieve a merger arbitrage involving the purchase, sale and exercise of options of the same class and expiration date, each executed prior to the date on which shareholders of record are required to elect their respective form of consideration, *i.e.,* cash or stock. A ''reversal strategy'' is established by combining a short security position with a short put and a long call position that shares the same strike and expiration. A ''conversion strategy'' is established by combining a long position in the underlying security with a long put and a short call position that shares the same strike and expiration. A ''jelly roll strategy'' is created by entering into two separate positions simultaneously. One position involves buying a put and selling a call with the same strike price and expiration. The second position involves selling a put and buying a call, with the same strike price, but with a different expiration from the first position. A ''box spread strategy'' is a strategy that synthesizes long and short stock positions to create a profit. Specifically, a long call and short put at one strike is combined with a short call and long put at a different strike to create synthetic long and synthetic short stock positions, respectively. A ''dividend strategy'' is defined as a transaction done to achieve a dividend arbitrage involving the purchase, sale and exercise of in-the-money options of the same class, executed the first business day prior to the date on which the underlying stock goes ex-dividend. *See* BOX Fee Schedule, notes 29 and 35.

[7] The Exchange notes that Public Customers and Professional Customers are not charged a fee for QCC Orders. Therefore, the Exchange believes that Public Customers and Professional Customers will not be as incentivized as other Participants by the proposed fees.

[8] BOX Rule 7110(c)(6).

[9] The Exchange's proposal to not assess fees on strategy QCC transactions is similar to Cboe Exchange, Inc. (''CBOE''), which caps open outcry strategy transactions at $0.00. *See* CBOE Fee Schedule, ''QCC Rate Table''; footnote 13. CBOE's fee cap applies to open outcry strategy transactions. Although, the proposed strategy QCC Orders are executed electronically, the Exchange believes that executing strategy orders as QCC orders is an alternative for trading strategy orders in open outcry. As such, the proposed change will allow BOX to compete with other exchanges who offer strategy orders at no cost. BOX notes that other exchanges offer fee caps on open outcry strategy transactions as well. *See generally* NYSE American Options Fee Schedule, Section I(J), ''Options Transaction Fees and Credits'' (Strategy transactions in open outcry and QCC reversal and conversion strategies are capped at $1,000 on the same trading day. The cap is reduced to $200 per trading day for ATP Holders that trade at least 25,000 billable contract sides in qualifying strategy executions) *and* Nasdaq PHLX LLC Rules Options 7, Section 4 (reversal and conversion strategies capped at $200 per day; merger, short stock interest, and box spread strategies capped at $1,000 per day if more than one class of options or $700 per day if in a single class of options; dividend strategies capped at $1,100 per day; all strategies capped at $65,000 per month per member organization).

[10] 15 U.S.C. 78f(b)(4) and (5).

charges among BOX Participants and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

The Exchange notes that it operates in a highly competitive environment. Indeed, there are currently 16 registered options exchanges that trade options. Based on publicly available information, no single options exchange has more than 16% of the market share and currently the Exchange represents only approximately 6% of the market share.[11] The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Particularly, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [12] As stated above, the Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. The proposed fee changes reflect a competitive pricing structure designed to incentivize market participants to direct their order flow to the Exchange.

The Exchange believes the proposed change is reasonable, equitable, and not unfairly discriminatory as there are other exchanges with similar fees or fee caps for strategy orders [13] and the proposed fees are uniformly applicable to all Participants. The Exchange also believes the proposed change would further incentivize certain Participants to execute strategy QCC Orders on BOX and may encourage Participants to aggregate all types of strategy orders (*i.e.* QCC Orders and Qualified Open Outcry (''QOO'') Orders) at BOX as a primary execution venue. The Exchange believes that Participants may consolidate different order types for execution on a single exchange because it increases the volume counted towards volume-based fee incentives, in particular, the Tiered Volume Rebate for Non-Auction Transactions in Section IV.A.1., of BOX's Fee Schedule, which provides Participants with incentives to achieve certain volume thresholds on BOX. To the extent that the proposed change attracts more strategy orders to BOX, some of which may be executed as QCC Orders and others as QOO Orders, this increased order flow may make BOX a more competitive venue for order execution.

The Exchange also believes that the ever-shifting market share among the exchanges from month to month demonstrates that market participants can shift order flow or discontinue or reduce use of certain categories of products, in response to fee changes. Accordingly, competitive forces constrain options exchange transaction fees. Stated otherwise, changes to exchange transaction fees can have a direct effect on the ability of an exchange to compete for order flow. The Exchange believes the proposed change is a reasonable attempt to further incentivize certain Participants to execute strategy orders on BOX and in turn to increase the depth of its market to the benefit of all market participants. The Exchange also notes that Participants may avail themselves to the proposed strategy order pricing or they can opt for similar offerings at several other exchanges.[14]

The Exchange believes that not allowing strategy QCC transactions to be eligible for a rebate is reasonable, equitable and not unfairly discriminatory because, as proposed, a fee is not assessed for these transactions. As such, the Exchange believes that Participants do not require additional incentives to execute these transactions on BOX. The QCC Rebate and Tiers detailed in Section IV.D.1 of the BOX Fee Schedule were designed to reduce the QCC fees assessed to Participants in Section IV.D. The proposal discussed herein is to assess no fee on strategy QCC Orders therefore there is no fee to reduce. Further, the Exchange believes that it is reasonable, equitable and not unfairly discriminatory to not count strategy QCC Order volume towards QCC Tiers because the Exchange does not believe that Participants need additional incentives to transact strategy QCC Orders on BOX.

The Exchange believes that it is reasonable, equitable and not unfairly discriminatory to continue to count strategy QCC transactions toward the Tiered Volume Rebate for Non-Auction Transactions in Section IV.A.1., which provides Participants with incentives to achieve certain volume thresholds on BOX. These volume tiers are designed to reflect a reasonable and competitive pricing structure, to incentivize market participants to direct their order flow to BOX, and to enhance market quality. The Exchange believes that allowing strategy QCC orders to count toward customer volume tiers is equitable and not unfairly discriminatory because BOX has historically aimed to improve markets for investors and develop various features within the market structure for public customer benefit. The Exchange believes further that allowing strategy QCC orders to count toward Market Maker volume tiers is equitable and not unfairly discriminatory because of the significant contribution to overall market quality that Market Makers provide. Specifically, Market Makers provide higher volumes of liquidity which ultimately benefits all Participants trading on BOX.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

The proposed change is designed to attract additional order flow to BOX. The Exchange believes that the proposed change could further incentivize certain market participants to direct their strategy QCC Orders to BOX. As noted herein, the proposed strategy QCC Order fees would be applicable to all similarly situated market participants, and, as such, the proposed change would not impose a disparate burden on competition among Participants on BOX.

Further, the Exchange also does not believe that the proposed fees will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the Act because, as noted above, competing options exchanges currently have similar fees in place in connection with strategy orders.[15] Because competitors are free to modify their own fees or fee caps in response to competing exchanges, BOX believes that the degree to which changes in this market may impose any burden on competition is limited. Further, the Exchange believes that the proposed change could promote competition between BOX and other execution venues, including those that currently offer similar strategy order fees or fee caps. Finally, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues. In such an environment, the

[13] *See supra* note 9.

[14] *See supra* note 9.

[15] *Id.*

Exchange must continually review, and consider adjusting, its fees and credits to remain competitive with other exchanges. For the reasons described above, the Exchange believes that the proposed rule change reflects this competitive environment.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Exchange Act [16] and Rule 19b–4(f)(2) thereunder,[17] because it establishes or changes a due, or fee.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend the rule change if it appears to the Commission that the action is necessary or appropriate in the public interest, for the protection of investors, or would otherwise further the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–BOX–2022–24 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–BOX–2022–24. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–BOX–2022–24, and should be submitted on or before August 31, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[18]

J. Matthew DeLesDernier,

Deputy Secretary.

DEPARTMENT OF STATE

[Public Notice: 11802]

Public Meeting of the U.S. President's Emergency Plan for AIDS Relief (PEPFAR) Scientific Advisory Board

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the U.S. Department of State announces that the PEPFAR Scientific Advisory Board (SAB) will be holding a virtual meeting of the full board. The meeting will be open to the public; a public comment session will be held during the meeting. Pre-registration is required for both public viewing and comment.

DATES: The meeting will be held on Thursday, September 8, 2022, from approximately 8 a.m. to 1 p.m. (EDT) utilizing an online platform. Individuals wishing to view are asked to pre-register at *https://forms.gle/FrENNQyoX8Xav2zp8.*

ADDRESSES: The agenda is briefly summarized below and will also be sent to all registrants. It will also be posted on the PEPFAR SAB web page at *www.state.gov/scientific-advisory-board-pepfar* one week in advance of the meeting, along with instructions on how to access the meeting. Requests to view the meeting must be received no later than August 31, 2022. Requests for reasonable accommodations must be received no later than August 31, 2022. Requests made after August 31, 2022, will be considered but might not be able to be fulfilled.

FOR FURTHER INFORMATION CONTACT: Dr. Sara Klucking, Designated Federal Officer for the SAB, Office of the U.S. Global AIDS Coordinator and Health Diplomacy at *KluckingSR@state.gov* or (202) 615–4350.

SUPPLEMENTARY INFORMATION:

Background: The SAB is established under the general authority of the Secretary of State and the Department of State (''the Department'') as set forth in 22 U.S.C. 2656, and consistent with the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix). The SAB serves the U.S. Global AIDS Coordinator solely in an advisory capacity concerning scientific, implementation, and policy issues related to the global response to HIV/AIDS.

Agenda: SAB members will be discussing two topics: considerations for PEPFAR implementation of tools for recent HIV infection surveillance and considerations for PEPFAR implementation of the dapivirine vaginal ring. Meeting materials from prior SAB meetings may be accessed here: *www.state.gov/scientific-advisory-board-pepfar.*

Public comment: Members of the public who wish to view the meeting are asked to register directly at the link listed in the **DATES** and **ADDRESSES** section or by sending an email to Dr. Sara Klucking at *KluckingSR@state.gov* not later than August 31, 2022. Individuals are required to provide their name, email address, and organization. Individuals interested in making a public comment at the meeting should indicate interest with their registration. Registered members of the public wishing to make a comment will be permitted to participate in a comment period in accordance with the Chair's instructions. In addition, the Department will consider any written comments provided within 10 days after

the meeting to Dr. Sara Klucking at *KluckingSR@state.gov.*

Sara Klucking,

Director, Office of Research and Science, Office of the U.S. Global AIDS Coordinator and Health Diplomacy, Office of the Secretary of State, Department of State.

[FR Doc. 2022–17085 Filed 8–9–22; 8:45 am]

BILLING CODE 4710–10–P

DEPARTMENT OF STATE

[Public Notice: 11808]

Bureau of Political-Military Affairs; Statutory Debarment Under the Arms Export Control Act and the International Traffic in Arms Regulations

ACTION: Notice.

SUMMARY: Notice is hereby given that the Department of State has imposed statutory debarment under the International Traffic in Arms Regulations (ITAR) on persons convicted of violating, or conspiracy to violate, the Arms Export Control Act (AECA).

DATES: Debarment imposed as of August 10, 2022.

FOR FURTHER INFORMATION CONTACT: Jae E. Shin, Director, Office of Defense Trade Controls Compliance, Bureau of Political-Military Affairs, Department of State. (202) 632–2107.

SUPPLEMENTARY INFORMATION: Section 38(g)(4) of the AECA, 22 U.S.C. 2778(g)(4), restricts the Department of State from issuing licenses for the export of defense articles or defense services where the applicant, or any party to the export, has been convicted of violating the AECA or certain other statutes, enumerated in section 38 of the AECA, subject to a narrowly defined statutory exception. The Department refers to this restriction as a limitation on ''export privileges'' and implements a presumption of denial through section 127.11 of the ITAR.

In addition, section 127.7(b) of the ITAR provides for ''statutory debarment'' of any person who has been convicted of violating or conspiring to violate the AECA. Under this policy, persons subject to statutory debarment are prohibited from participating directly or indirectly in any activities that are regulated by the ITAR.

Statutory debarment is based solely upon conviction in a criminal proceeding, conducted by a United States court, and as such the administrative debarment procedures outlined in part 128 of the ITAR are not applicable.

It is the policy of the Department of State that statutory debarment as described in section 127.7(b) of the ITAR lasts for a three-year period following the date of conviction. Reinstatement from the policy of statutory debarment is not automatic, and in all cases the debarred person must submit a request to the Department of State and be approved for reinstatement from statutory debarment before engaging in any activities subject to the ITAR.

Department of State policy permits debarred persons to apply to the Director, Office of Defense Trade Controls Compliance, for reinstatement beginning one year after the date of the debarment. In response to a request for reinstatement from statutory debarment, the Department may determine either to rescind only the statutory debarment pursuant to section 127.7(b), or to both rescind the statutory debarment pursuant to section 127.7(b) of the ITAR and reinstate export privileges as described in section 127.11 of the ITAR. See 84 FR 7,411 (March 4, 2019) for discussion of the Department's policy regarding actions to both rescind the statutory debarment and reinstate export privileges. The reinstatement of export privileges can be made only after the statutory requirements of section 38(g)(4) of the AECA have been satisfied.

Certain exceptions, known as transaction exceptions, may be made to this debarment determination on a case-by-case basis. However, such an exception would be granted only after a full review of all circumstances, paying particular attention to the following factors: whether an exception is warranted by overriding U.S. foreign policy or national security interests; whether an exception would further law enforcement concerns that are consistent with the foreign policy or national security interests of the United States; or whether other compelling circumstances exist that are consistent with the foreign policy or national security interests of the United States, and that do not conflict with law enforcement concerns. Even if exceptions are granted, the debarment continues until subsequent reinstatement from statutory debarment.

Pursuant to section 38(g)(4) of the AECA and section 127.7(b) and (c)(1) of the ITAR, the following persons, having been convicted in a U.S. District Court, are denied export privileges and are statutorily debarred as of the date of this notice (Name; Date of Judgment; Judicial District; Case No.; Month/Year of Birth):

(1) Awer, Akeem Shonari; February 14, 2020; Southern District of Florida; 1:19–cr–20564; December 1990.

(2) Cabalceta, Oben; September 18, 2019; District of New Jersey; 1:19–cr–00296; May 1965.

(3) Camaj, Rrok Martin; February 28, 2020; Eastern District of Michigan; 2:19–cr–20403; July 1985.

(4) Guerra, Claudia; March 4, 2019; Southern District of Texas; 1:18–cr–00622; January 1992.

(5) Sin, Aydan; a.k.a. Hon Chak Gordon Sin; a.k.a. Andy Sin; a.k.a. Bullion Sin; October 05, 2021; Western District of New York; 1:17–cr–00090; January 1972.

(6) Sobrado, Roger; September 5, 2019; District of New Jersey; 1:18–cr–00615; May 1970.

(7) Wang, Shaohua; a.k.a. Eric Wang; February 3, 2020; Southern District of the California; 3:19–cr–01895; September 1982.

(8) Wang, Ye Sang; a.k.a. Ivy Wang; December 21, 2021; Southern District of California; 3:19–cr–01895; September 1984.

(9) Xie, Tuqiang; a.k.a. Tony Xie; March 30, 2022; Northern District of Illinois; 1:19–cr–00664; March 1962.

(10) Zhang, Jian; December 30, 2020; District of Arizona; 2:18–cr–01236; January 1976.

At the end of the three-year period following the date of this notice, the above-named persons remain debarred unless a request for reinstatement from statutory debarment is approved by the Department of State.

Pursuant to section 120.1(c) of the ITAR, debarred persons are generally ineligible to participate in activities regulated under the ITAR. Also, under section 127.1(d) of the ITAR, any person who has knowledge that another person is ineligible pursuant to section 120.1(c)(2) of the ITAR may not, without disclosure to and written approval from the Directorate of Defense Trade Controls, participate, directly or indirectly, in any ITAR-controlled transaction where such ineligible person may obtain benefit therefrom or have a direct or indirect interest therein.

This notice is provided for purposes of making the public aware that the persons listed above are prohibited from participating directly or indirectly in activities regulated by the ITAR, including any brokering activities and any export from or temporary import into the United States of defense articles, technical data, or defense services in all situations covered by the ITAR. Specific case information may be obtained from the Office of the Clerk for the U.S. District Courts mentioned

above and by citing the court case number where provided.

Kevin E. Bryant,

Acting Director, Office of Directives Management, Department of State.

[Docket No. FMCSA–2013–0122; FMCSA–2013–0123; FMCSA–2013–0125; FMCSA–2014–0102; FMCSA–2014–0107; FMCSA–2015–0327; FMCSA–2015–0328; FMCSA–2015–0329; FMCSA–2017–0057; FMCSA–2017–0059; FMCSA–2017–0060; FMCSA–2018–0139; FMCSA–2019–0109; FMCSA–2019–0111; FMCSA–2020–0024; FMCSA–2020–0025]

Qualification of Drivers; Exemption Applications; Hearing

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions for 40 individuals from the hearing requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) for interstate commercial motor vehicle (CMV) drivers. The exemptions enable these hard of hearing and deaf individuals to continue to operate CMVs in interstate commerce.

DATES: Each group of renewed exemptions were applicable on the dates stated in the discussions below and will expire on the dates provided below. Comments must be received on or before September 9, 2022.

ADDRESSES: You may submit comments identified by the Federal Docket Management System Docket No. FMCSA–2013–0122, Docket No. FMCSA–2013–0123, Docket No. FMCSA–2013–0125, Docket No. FMCSA–2014–0102, Docket No. FMCSA–2014–0107, Docket No. FMCSA–2015–0327, Docket No. FMCSA–2015–0328, Docket No. FMCSA–2015–0329, Docket No. FMCSA–2017–0057, Docket No. FMCSA–2017–0059, Docket No. FMCSA–2017–0060, Docket No. FMCSA–2018–0139, Docket No. FMCSA–2019–0109, Docket No. FMCSA–2019–0111, Docket No. FMCSA–2020–0024, or Docket No. FMCSA–2020–0025 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov/,* insert the docket number, FMCSA–2013–0122, FMCSA–2013–0123, FMCSA–2013–0125, FMCSA–2014–0102, FMCSA–2014–0107, FMCSA–2015–0327, FMCSA–2015–0328, FMCSA–2015–0329, FMCSA–2017–0057, FMCSA–2017–0059, FMCSA–2017–0060, FMCSA–2018–0139, FMCSA–2019–0109, FMCSA–2019–0111, FMCSA–2020–0024, or FMCSA–2020–0025 in the keyword box, and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, and click on the ''Comment'' button. Follow the online instructions for submitting comments.
- *Mail:* Dockets Operations; U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal Holidays.
- *Fax:* (202) 493–2251.

To avoid duplication, please use only one of these four methods. See the ''Public Participation'' portion of the **SUPPLEMENTARY INFORMATION** section for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, (202) 366–4001, *fmcsamedical@dot.gov,* FMCSA, DOT, 1200 New Jersey Avenue SE, Room W64–224, Washington, DC 20590–0001. Office hours are from 8:30 a.m. to 5 p.m., ET, Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Dockets Operations, (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Submitting Comments

If you submit a comment, please include the docket number for this notice (Docket No. FMCSA–2013–0122, Docket No. FMCSA–2013–0123, Docket No. FMCSA–2013–0125, Docket No. FMCSA–2014–0102, Docket No. FMCSA–2014–0107, Docket No. FMCSA–2015–0327, Docket No. FMCSA–2015–0328, Docket No. FMCSA–2015–0329, Docket No. FMCSA–2017–0057, Docket No. FMCSA–2017–0059, Docket No. FMCSA–2017–0060, Docket No. FMCSA–2018–0139, Docket No. FMCSA–2019–0109, Docket No. FMCSA–2019–0111, Docket No. FMCSA–2020–0024, or Docket No. FMCSA–2020–0025), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to *www.regulations.gov/,* insert the docket number, FMCSA–2013–0122, FMCSA–2013–0123, FMCSA–2013–0125, FMCSA–2014–0102, FMCSA–2014–0107, FMCSA–2015–0327, FMCSA–2015–0328, FMCSA–2015–0329, FMCSA–2017–0057, FMCSA–2017–0059, FMCSA–2017–0060, FMCSA–2018–0139, FMCSA–2019–0109, FMCSA–2019–0111, FMCSA–2020–0024, or FMCSA–2020–0025 in the keyword box, and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, click the ''Comment'' button, and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the facility, please enclose a stamped, self-addressed postcard or envelope.

FMCSA will consider all comments and material received during the comment period.

B. Viewing Comments

To view comments go to *www.regulations.gov.* Insert the docket number, FMCSA–2013–0122, FMCSA–2013–0123, FMCSA–2013–0125, FMCSA–2014–0102, FMCSA–2014–0107, FMCSA–2015–0327, FMCSA–2015–0328, FMCSA–2015–0329, FMCSA–2017–0057, FMCSA–2017–0059, FMCSA–2017–0060, FMCSA–2018–0139, FMCSA–2019–0109, FMCSA–2019–0111, FMCSA–2020–0024, or FMCSA–2020–0025 in the keyword box, and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, and click ''Browse Comments.'' If you do not have access to the internet, you may view the docket online by visiting Dockets Operations in Room W12–140

on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

C. Privacy Act

In accordance with 49 U.S.C. 31315(b)(6), DOT solicits comments from the public on the exemption request. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

II. Background

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no longer than a 5-year period if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statute also allows the Agency to renew exemptions at the end of the 5-year period. FMCSA grants medical exemptions from the FMCSRs for a 2-year period to align with the maximum duration of a driver's medical certification.

The physical qualification standard for drivers regarding hearing found in 49 CFR 391.41(b)(11) states that a person is physically qualified to drive a CMV if that person first perceives a forced whispered voice in the better ear at not less than 5 feet with or without the use of a hearing aid or, if tested by use of an audiometric device, does not have an average hearing loss in the better ear greater than 40 decibels at 500 Hz, 1,000 Hz, and 2,000 Hz with or without a hearing aid when the audiometric device is calibrated to American National Standard (formerly ASA Standard) Z24.5–1951.

This standard was adopted in 1970 and was revised in 1971 to allow drivers to be qualified under this standard while wearing a hearing aid, 35 FR 6458, 6463 (Apr. 22, 1970) and 36 FR 12857 (July 3, 1971).

The 40 individuals listed in this notice have requested renewal of their exemptions from the hearing standard in § 391.41(b)(11), in accordance with FMCSA procedures. Accordingly, FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable 2-year period.

III. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The Agency will evaluate any adverse evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b), FMCSA will take immediate steps to revoke the exemption of a driver.

IV. Basis for Renewing Exemptions

In accordance with 49 U.S.C. 31136(e) and 31315(b), each of the 40 applicants has satisfied the renewal conditions for obtaining an exemption from the hearing requirement. The 40 drivers in this notice remain in good standing with the Agency. In addition, for commercial driver's license (CDL) holders, the Commercial Driver's License Information System and the Motor Carrier Management Information System are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver's Licensing Agency. These factors provide an adequate basis for predicting each driver's ability to continue to safely operate a CMV in interstate commerce. Therefore, FMCSA concludes that extending the exemption for each of these drivers for a period of 2 years is likely to achieve a level of safety equal to that existing without the exemption.

In accordance with 49 U.S.C. 31136(e) and 31315(b), the following groups of drivers received renewed exemptions in the month of June and are discussed below.

As of June 17, 2022, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following 23 individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Paul Aseka (TX)
James Bogart (KS)
Thomas Buretz (FL)
Forrest Carroll (OH)
Glenn Ferguson (TX)
Ariel Gonzalez (RI)
Nicholas Green (FL)
Richard Hadlock (IL)
Sean Hunt (SC)
Jesus Javier (NJ)
Larry Lang (TX)
Yoel Lopez-Perez (FL)
Bryan MacFarlane (OH)
Darren Nordquist (WI)
Anthony Panto (NJ)
Ernst Pratt (PA)
Brian Shoup (SC)
William Symonds (IL)
Steven Tipton (IA)
Daniel Tricolici (MA)
Wayne Turner (IL)
Fernando Velasquez (TX)
Scott Weeaks (OK)

The drivers were included in docket number FMCSA–2013–0122, FMCSA–2013–0123, FMCSA–2013–0125, FMCSA–2014–0107, FMCSA–2015–0327, FMCSA–2015–0328, FMCSA–2015–0329, FMCSA–2017–0057, FMCSA–2017–0059, FMCSA–2018–0139, FMCSA–2019–0109, FMCSA–2019–0111, or FMCSA–2020–0024. Their exemptions were applicable as of June 17, 2022 and will expire on June 17, 2024.

As of June 18, 2022, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following seven individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Joshua Affholter (MI)
Gantulga Badarach (IL)
Awash Demoz (MD)
Muhammad Javed (IN)
Charles O'Bryan (NY)
Anna Ruiz (AZ)
Kyle Taylor (GA)

The drivers were included in docket number FMCSA–2020–0025. Their exemptions were applicable as of June 18, 2022 and will expire on June 18, 2024.

As of June 25, 2022, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following three individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Alfredo Ramirez (TX); Julie Ramirez (TX); and Hayden Teesdale (TX).

The drivers were included in docket number FMCSA–2014–0102. Their exemptions were applicable as of June 25, 2022 and will expire on June 25, 2024.

As of June 29, 2022, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following seven individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Leroy Carter (OH)
Robert Cates (NM)
Brodey DiPasquale (MD)
Richard Fisher (PA)
Kimberly Foss (OR)
Marcel Paul (WA)
Jason Winemiller (IL)

The drivers were included in docket number FMCSA–2017–0060. Their

exemptions were applicable as of June 29, 2022 and will expire on June 29, 2024.

V. Conditions and Requirements

The exemptions are extended subject to the following conditions: (1) each driver must report any crashes or accidents as defined in § 390.5; and (2) report all citations and convictions for disqualifying offenses under 49 CFR 383 and 49 CFR 391 to FMCSA; and (3) each driver prohibited from operating a motorcoach or bus with passengers in interstate commerce. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. In addition, the exemption does not exempt the individual from meeting the applicable CDL testing requirements. Each exemption will be valid for 2 years unless rescinded earlier by FMCSA. The exemption will be rescinded if: (1) the person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b).

VI. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

VII. Conclusion

Based upon its evaluation of the 40 exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the hearing requirement in § 391.41(b)(11). In accordance with 49 U.S.C. 31136(e) and 31315(b), each exemption will be valid for 2 years unless revoked earlier by FMCSA.

Larry W. Minor,

Associate Administrator for Policy.

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No. DOT–MARAD–2022–0167]

Request for Comments on the Renewal of a Previously Approved Information Collection: Effective U.S. Control (EUSC)/Parent Company

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Notice and request for comments.

SUMMARY: The Maritime Administration (MARAD) invites public comments on our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The information to be collected will be used to aid in identifying oceangoing vessels that may be both useful and available to the Department of Defense for deploying U.S. military equipment (such as tanks and other tracked and wheeled vehicles) and the full range of supplies (including petroleum products and fuel) necessary to sustain a force in a foreign theater of operations. We are required to publish this notice in the **Federal Register** by the Paperwork Reduction Act of 1995.

DATES: Comments must be submitted on or before October 11, 2022.

ADDRESSES: You may submit comments identified by Docket No. DOT–MARAD–2022–0167 through one of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* Search using the above DOT docket number and follow the online instructions for submitting comments.
- *Fax:* 1–202–493–2251.
- *Mail or Hand Delivery:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except on Federal holidays.

Instructions: All submissions must include the agency name and docket number for this rulemaking.

Note: All comments received will be posted without change to *www.regulations.gov* including any personal information provided.

Comments are invited on: (a) whether the proposed collection of information is necessary for the Department's performance; (b) the accuracy of the estimated burden; (c) ways for the Department to enhance the quality, utility, and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Electronic Access and Filing

A copy of the notice may be viewed online at *www.regulations.gov* using the docket number listed above. A copy of this notice will be placed in the docket. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's website at *www.FederalRegister.gov* and the Government Publishing Office's website at *www.GovInfo.gov.*

FOR FURTHER INFORMATION CONTACT: Katrina McRae, Vessel Transfer Specialist, Office of Sealift Support, U.S. Department of Transportation, Maritime Administration, 1200 New Jersey Avenue SE, Washington, DC 20590, (202) 366–3198, *katrina.mcrae@dot.gov.*

SUPPLEMENTARY INFORMATION:

Title: Effective U.S. Control (EUSC)/Parent Company.

OMB Control Number: 2133–0511.

Type of Request: Renewal of a Previously Approved Information Collection.

Abstract: The Effective U.S. Control (EUSC)/Parent Company collection consists of an inventory of foreign-registered vessels owned by U.S. citizens. Specially, the collection consists of responses from vessel owners verifying or correcting vessel ownership data and characteristics found in commercial publications. The information obtained could be vital in a national or international emergency and is essential to the logistical support planning operations conducted by Maritime Administration officials.

Respondents: U.S. citizens who own foreign-registered vessels.

Affected Public: Business or other for-profit.

Estimated Number of Respondents: 60.

Estimated Number of Responses: 60.

Estimated Hours per Response: 1.

Annual Estimated Total Annual Burden Hours: 60.

Frequency of Response: Annually.

(Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended; and 49 CFR 1.93.)

By Order of the Maritime Administrator.

T. Mitchell Hudson, Jr.,

Secretary, Maritime Administration.

BILLING CODE 4910–81–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2020–0005; Notice 2]

Daimler Trucks North America, LLC, Denial of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Denial of petition.

SUMMARY: Daimler Trucks North America, LLC (DTNA) has determined that certain model year (MY) 2011–2021 Thomas Built Saf-T-Liner HDX school buses do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 222, *School Bus Passenger Seating and Crash Protection.* DTNA filed a noncompliance report dated December 17, 2019, and later amended the report on January 16, 2020. DTNA subsequently petitioned NHTSA on January 16, 2020, (DTNA incorrectly dated their petition January 16, 2019) for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety. This document announces and explains the denial of DTNA's petition.

FOR FURTHER INFORMATION CONTACT: Daniel Lind, Office of Vehicle Safety Compliance, the National Highway Traffic Safety Administration (NHTSA), telephone (202) 366–7235, facsimile (202) 366–3081.

SUPPLEMENTARY INFORMATION:

I. Overview: Following notice from NHTSA of a failed compliance test, DTNA has determined that certain MY 2011–2021 Thomas Built Saf-T-Liner HDX school buses do not fully comply with the requirements of paragraph S5.2.3 of FMVSS No. 222, *School Bus Passenger Seating and Crash Protection* (49 CFR 571.222). DTNA filed a noncompliance report dated December 17, 2019, and later amended its report on January 16, 2020, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports.* DTNA subsequently petitioned NHTSA on January 16, 2020, for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential as it relates to motor vehicle safety. *See* 49 U.S.C. 30118(d), 30120(h); 49 CFR part 556, *Exemption for Inconsequential Defect or Noncompliance.*

Notice of receipt of DTNA's petition was published with a 30-day public comment period, on June 12, 2020, in the **Federal Register** (85 FR 35992). One comment was received. To view the petition and all related documents, members of the public can log onto the Federal Docket Management System (FDMS) website at *https://www.regulations.gov/* and then follow the online search instructions to locate docket number NHTSA–2020–0005.

II. Buses Involved: Approximately 7,601 MY 2011–2021 Thomas Built Saf-T-Liner HDX school buses manufactured between October 21, 2009, and December 16, 2019 (the subject buses), are potentially involved.

III. Noncompliance: DTNA explains in its petition that the noncompliance at issue is that the subject school buses are equipped with a wall-mounted restraining barrier that does not meet the requirements specified in paragraph S5.2.3 of FMVSS No. 222. Specifically, when tested according to the specified test procedure, the restraining barrier did not meet the force/deflection curve or deflection requirements. DTNA contends that the restraining barrier failed to meet these requirements because the upper loading bar contacted the trim panel on the front entry door of the bus, which caused the upper loading bar force to exceed the allowable limit.

IV. Rule Requirements: Paragraph S5.2.3(a) of FMVSS No. 222 includes the requirement relevant to this petition. This requirement states that, ''[w]hen force is applied to the restraining barrier in the same manner as specified in paragraphs S5.1.3.1 through S5.1.3.4 for seating performance tests,'' the restraining barrier ''[f]orce/deflection curve shall fall within the zone specified in Figure 1.''

V. Summary of DTNA's Petition: The views and arguments described in this section, ''V. Summary of DTNA's Petition,'' are the views and arguments presented by DTNA and do not reflect the views of the Agency. In its petition, DTNA describes the subject noncompliance and contends that the noncompliance is inconsequential as it relates to motor vehicle safety.

In its petition, DTNA submits the following views and arguments:

1. *Background and description of the noncompliance:* DTNA states that it modified the restraining barrier design for the subject buses in October 2009, following an update to FMVSS No. 222, that increased the seat back height requirement to 24 inches. DTNA states that, for aesthetic purposes and not for functional or compliance reasons, it similarly chose to adjust the profiles (slope and angle) of the restraining barrier to match the new higher seatback height. To do so, DTNA added approximately 5⁄8 inch of foam padding to each side of the restraining barrier. The foam was added onto the outside of the frame of the barrier, which did not widen the frame structure itself. The additional padding is used for cosmetic purposes (to promote uniformity of design of the seat profiles at that time) and is not needed to provide protection beyond the construction of the restraining barrier itself.

2. *Analysis:* DTNA states that the purpose of the restraining barrier is to provide compartmentalization for occupants of the first row of school bus seats, where there is no seat back in a forward seat to offer protection. FMVSS No. 222 includes a series of performance requirements for school bus frontal barriers which include the distance between the barrier and the seat (S5.2.1), the barrier height and position (S5.2.2), and barrier forward performance (S5.2.3). The purpose of the barrier forward performance requirement at S5.2.3 is to ensure the front barrier can withstand the impact of certain set forces while, at the same time, maintaining component integrity.

3. *The forces measured in testing are a product of the test apparatus that would not occur in the real world.* DTNA states that the effect of the additional foam outside the restraining barrier frame was to slightly widen the restraining barrier. With a wider restraining barrier, the placement of the upper restraining barrier is moved outwards so that it now encounters the door frame trim. Because the restraining barrier is wider, based on its calculated placement per the test procedure, the corresponding length of the upper loading bar becomes longer than that of the prior design. When the upper loading bar is deployed, it contacts the front entrance door trim and causes the upper loading bar to exceed the force limits.

DTNA states that the behavior of the upper loading bar is a product of the test procedure and does not represent the behavior of the barrier in actual use conditions. Prior to the 2009 design change, there was an approximately two-inch gap at the height where the upper loading arm was placed. This prior design met the barrier forward performance requirements. Following the design change in 2009, that space was filled in with soft foam, but the effect of doing so did not have any impact on the performance or integrity of the barrier itself.

DTNA states that it has conducted its own analysis of the restraining barrier performance in the 2009 design tested by the Agency as well as the prior design. The results of that testing

demonstrate that the additional foam creates approximately 11 mm (.43 inches) of interference between the upper loading bar on the right side of the vehicle and the bus entrance door frame. The additional foam was not intended to and does not provide any safety or functional benefit. Even though the prior design of the restraining barrier left a small gap between the bus sidewall and the barrier itself, the barrier was more than sufficient to meet the performance forward requirements. The addition of foam for cosmetic purposes in 2009 does not deter from the safety of the barrier.

DTNA states that removing the additional 5/8 inches of foam padding would eliminate the potential for any interference with the upper loading bar as it then cannot come into physical contact with the doorframe. The previous small gap in space did not expose occupants to an increased risk of harm (as demonstrated by the lack of any reports from the field potentially related to this issue), and the more recent addition of the foam also does not create any safety concerns beyond the operation of the test itself.

4. *The current restraining barrier addresses the unreasonable risk to safety identified by FMVSS No. 222.* DTNA states that the purpose of a restraining barrier is to compartmentalize and contain passengers located in the first row of seats in the event of a crash or sharp deceleration. The forward performance test evaluates the strength of the restraining barrier in a forward impact and to deflect in a controlled manner as it absorbs the energy of the occupant striking the barrier.

DTNA states that the restraining barrier is intended to provide an equivalent level of compartmentalization as the seat back for the rearward seats. The safety benefit of compartmentalization is realized through the height of the restraining barrier (or seatback), and a restraining barrier that is too low could increase the likelihood that, in a forward crash, an occupant could be thrown over the barrier. This view is consistent with the requirement that the height and position of the restraining barrier match or ''coincide'' with that of the seatback. Because FMVSS No. 222 defines the unreasonable risk to safety as the potential for being thrown over the barrier, it is the height and position of the barrier that mitigate against this risk.

DTNA additionally states that, while the surface area of the barrier must at least coincide with the surface area of the seatback, any additional width of the barrier that extends beyond the frame of the barrier is surplus material that does not address the unreasonable risk to safety addressed by the standard. DTNA states that the Agency has previously recognized that a ''restraining barrier must therefore only coincide with or lie outside of the seatback surface required by S5.1.2. If a seat back surface exceeds the size required in Standard 222, the size of the restraining barrier need not coincide.'' (Ltr. from E. Jones, NHTSA, to L. Wort, Ill. Dept. of Transp. (Aug. 11, 1987).)[1] The reverse also holds true. For the subject buses, the surface area of the barrier is larger than that of the seat back and exceeds the area required by S5.2.1. While the restraining barrier surface area can be larger than the seat back, the unreasonable risk to safety is addressed by maximizing the effects of compartmentalization by ensuring the perimeter of the restraining barrier coincides with the surface area of the seatback.

DTNA states that the test procedure considers the need to assess the portion of the barrier that is intended to bear the force of the loading. DTNA believes that when creating the test procedure, the Agency intentionally limited the length of the loading bar to be approximately 4 inches shorter than the width of the seat back or restraining barrier. DTNA says NHTSA declined to reduce the size of the range to two inches because it wanted ''to ensure loads would be transferred to the seat structure without collapse of the seat back'' and to discourage manufacturers from adding a narrow structural member to meet the requirements. *See* 39 FR 27585 (July 30, 1974). In other words, the objective of the forward performance test is to measure the operation and structural integrity of the restraining barrier by ensuring the loads are concentrated in the core of the structure itself and not the periphery of the structure which could cause it to unnecessarily collapse. Thus, the additional foam installed outwards of the restraining barrier frame has no bearing on the forward performance of the restraining barrier.

5. DTNA states that it has corrected this issue in production by adjusting the location of the installation of the barrier by moving it away from the wall by 3/4 inch. Doing so ensures that in any future testing, the loading bar will not encounter the door frame.

6. Finally, DTNA states that it has used this seating design for over a decade. It is not aware of any consumer complaints or reports of accidents or injuries related to the forward displacement of the restraining barrier.

DTNA concludes its petition by again contending that the subject noncompliance is inconsequential as it relates to motor vehicle safety, and requesting that its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and a remedy for the noncompliance, as required by 49 U.S.C. 30120, be granted.

VI. Public Comment: NHTSA received one comment from the general public concerning DTNA's petition. The commenter believed NHTSA should deny DTNA's request on the basis that the subject vehicles failed to meet test requirements. NHTSA appreciates the commenter's input and, for the reasons described below, is denying DTNA's petition.

VII. NHTSA's Analysis

A. General Principles

Congress passed the National Traffic and Motor Vehicle Safety Act of 1966 (the ''Safety Act'') with the express purpose of reducing motor vehicle accidents, deaths, injuries, and property damage. *See* 49 U.S.C. 30101. To this end, the Safety Act empowers the Secretary of Transportation to establish and enforce mandatory Federal Motor Vehicle Safety Standards (FMVSS). *See* 49 U.S.C. 30111. The Secretary has delegated this authority to NHTSA. *See* 49 CFR 1.95.

NHTSA adopts an FMVSS only after it has determined that the performance requirements are objective, practicable, and meet the need for motor vehicle safety. *See* 49 U.S.C. 30111(a). Thus, there is a general presumption that the failure of a motor vehicle or item of motor vehicle equipment to comply with an FMVSS increases the risk to motor vehicle safety beyond the level deemed appropriate by NHTSA. To protect the public from such risks, manufacturers whose products fail to comply with an FMVSS are normally required to conduct a safety recall in which they must notify owners, purchasers, and dealers of the noncompliance and provide a free remedy. *See* 49 U.S.C. 30118–20. However, Congress recognized that, under some limited circumstances, a noncompliance could be ''inconsequential'' to motor vehicle safety. It therefore established a procedure under which NHTSA may consider whether it is appropriate to exempt a manufacturer from its notification and remedy (*i.e.,* recall) obligations. *See* 49 U.S.C. 30118(d), 30120(h). The Agency's regulations

[1] Available at: *https://isearch.nhtsa.gov/gm/87/nht87-2.66.html.*

governing the filing and consideration of petitions for inconsequentiality exemptions are set forth at 49 CFR part 556.

Under the Safety Act and Part 556, inconsequentiality exemptions may be granted only in response to a petition from a manufacturer, and then only after notice in the **Federal Register** and an opportunity for interested members of the public to present information, views, and arguments regarding the petition. In addition to considering public comments, the Agency will draw upon its own understanding of safety-related systems and its experience in deciding the merits of a petition. An absence of opposing argument and data from the public does not require NHTSA to grant a manufacturer's petition.

Neither the Safety Act nor part 556 define the term ''inconsequential.'' Rather, the Agency determines whether a particular noncompliance is inconsequential to motor vehicle safety based upon the specific facts before it in a particular petition. In some instances, NHTSA has determined that a manufacturer met its burden of demonstrating that a noncompliance is inconsequential to safety. For example, a label intended to provide safety advice to an owner or occupant may have a misspelled word, or it may be printed in the wrong format or the wrong type size. Where a manufacturer has shown that the discrepancy with the safety requirement is unlikely to lead to any misunderstanding, NHTSA has granted an inconsequentiality exemption, especially where other sources of correct information are available. *See, e.g.,* General Motors, LLC., Grant of Petition for Decision of Inconsequential Noncompliance, 81 FR 92963 (Dec. 20, 2016).

The burden of establishing the inconsequentiality of a failure to comply with a *performance* requirement in a standard—as opposed to a *labeling* requirement—is more substantial and difficult to meet. Accordingly, the Agency has found very few noncompliances with performance requirements to be inconsequential. Potential performance failures of safety-critical equipment, like seat belts or air bags, are rarely, if ever, found to be inconsequential.

An important issue to consider in determining inconsequentiality based upon NHTSA's prior decisions on noncompliance petitions is the safety risk to individuals who experience the type of event against which the recall would otherwise protect.[2] NHTSA also does not consider the absence of complaints or injuries to be demonstrative on the issue of whether the noncompliance is inconsequential to safety. The Agency has explained that ''the absence of a complaint does not mean there have not been any safety issues, nor does it mean that there will not be safety issues in the future.'' [3] Likewise, ''the fact that in past reported cases good luck and swift reaction have prevented many serious injuries does not mean that good luck will continue to work.'' [4]

Arguments that only a small number of vehicles or items of motor vehicle equipment are affected also have not resulted in granting an inconsequentiality petition.[5] Similarly, NHTSA has rejected petitions based on the assertion that only a small percentage of vehicles or items of equipment are likely to actually exhibit a noncompliance. The percentage of potential occupants that could be adversely affected by a noncompliance does not determine the question of inconsequentiality. Rather, the issue to consider is the outcome to an occupant who is exposed to the consequence of that noncompliance.[6]

[2] *See Gen. Motors, LLC; Grant of Petition for Decision of Inconsequential Noncompliance,* 78 FR 35355 (June 12, 2013) (finding noncompliance had no effect on occupant safety because it had no effect on the proper operation of the occupant classification system and the correct deployment of an air bag); *Osram Sylvania Prods. Inc.; Grant of Petition for Decision of Inconsequential Noncompliance,* 78 FR 46000 (July 30, 2013) (finding occupant using noncompliant light source would not be exposed to significantly greater risk than occupant using similar compliant light source).

[3] *Morgan 3 Wheeler Limited; Denial of Petition for Decision of Inconsequential Noncompliance,* 81 FR 21663, 21666 (Apr. 12, 2016).

[4] *United States* v. *Gen. Motors Corp.,* 565 F.2d 754, 759 (D.C. Cir. 1977) (finding defect poses an unreasonable risk when it ''results in hazards as potentially dangerous as sudden engine fire, and where there is no dispute that at least some such hazards, in this case fires, can definitely be expected to occur in the future'').

[5] *See Mercedes-Benz, U.S.A., L.L.C.; Denial of Application for Decision of Inconsequential Noncompliance,* 66 FR 38342 (July 23, 2001) (rejecting argument that noncompliance was inconsequential because of the small number of vehicles affected); *Aston Martin Lagonda Ltd.; Denial of Petition for Decision of Inconsequential Noncompliance,* 81 FR 41370 (June 24, 2016) (noting that situations involving individuals trapped in motor vehicles—while infrequent—are consequential to safety); *Morgan 3 Wheeler Ltd.; Denial of Petition for Decision of Inconsequential Noncompliance,* 81 FR 21663, 21664 (Apr. 12, 2016) (rejecting argument that petition should be granted because the vehicle was produced in very low numbers and likely to be operated on a limited basis).

[6] *See Gen. Motors Corp.; Ruling on Petition for Determination of Inconsequential Noncompliance,* 69 FR 19897, 19900 (Apr. 14, 2004); *Cosco, Inc.; Denial of Application for Decision of Inconsequential Noncompliance,* 64 FR 29408, 29409 (June 1, 1999).

B. Response to DTNA's Arguments

NHTSA has reviewed DTNA's arguments that the subject noncompliance is inconsequential to motor vehicle safety. DTNA contends that the noncompliance of the passenger side barrier on the subject buses with the barrier forward performance requirements specified in paragraph S5.2.3 of FMVSS No. 222, poses little, if any, risk to motor vehicle safety. NHTSA does not agree. In reaching this conclusion, NHTSA considered the following:

The purpose of FMVSS No. 222 is to reduce the number of deaths and the severity of injuries that result from the impact of school bus occupants against structures within the vehicle during crashes and sudden driving maneuvers (49 CFR 571.222 S2). The requirements of S5.2.3 *Barrier Performance Forward* of FMVSS No. 222, at issue here are specific to the energy a barrier can absorb during an emergency event, and the rate at which such energy can be absorbed. These requirements are threefold: (1) a barrier must be able to absorb a minimum amount of energy within the first 356 mm of deflection,[7] (2) the rate of energy absorption must fall within a specified Force vs Deflection Zone,[8] and (3) the barrier, and its components, must not separate at any attachment point from the vehicle, nor interfere with normal door operation. In the present case, during NHTSA's compliance test of the barrier in question, the rate of energy absorption exceeded the upper limit of the Force vs Deflection Zone before absorbing the minimum required energy, thereby leading to a compliance test failure.

NHTSA does not agree that the 2009 design change to the subject buses did not have any impact on the barrier performance. DTNA states that it adjusted the profiles (slope and angle) of the barrier to match the new higher seatback height, in addition to adding approximately ⅝ inch of foam padding to each side of the barrier. DTNA did not provide evidence demonstrating that, when DTNA was considering the new barrier design, it tested the design or otherwise engaged in analyses to ensure compliance to the existing requirements of FMVSS No. 222. Similarly, DTNA did not provide evidence demonstrating that any testing

[7] The minimum energy required to be absorbed by the barrier is based on the number of designated seating positions, W, of the seat immediately behind the barrier. *See* 49 CFR 571.222 S5.1.3.4, S4.1(a).

[8] *See* 49 CFR 571.222 Figure 1.

or analyses were ever performed that took into account the obstruction between the new barrier design and front entrance door trim combination.[9] As such, NHTSA is not persuaded by DTNA's argument that the design change was only aesthetic and had no impact on the performance of the barrier, as no evidence was provided in support of this claim.

NHTSA also does not agree that the compliance test failure was caused by the upper loading bar contacting the front entrance door trim during the test. The barrier foam thickness is 3.5 inches (88 mm) and extends approximately 2 inches (51 mm) beyond the end of the loading bar. For the loading bar to contact the front entrance door trim, the loading bar would have had to compress 3.5 inches of foam to 0 inches to directly contact the front entrance door trim. Further, the loading bar is mounted to allow up to 30 degrees rotation in the horizontal plane, so that, when the barrier contacted the front entrance door trim and the foam began to compress on that side, the loading bar would rotate about its pivot point and reduce or eliminate any potential overlap between the loading bar and front entrance door trim. NHTSA therefore is not persuaded by DTNA's argument that the upper loading bar made contact with the front entrance door trim during the NHTSA compliance test because DTNA provided no evidence demonstrating how the 3.5 inches of foam could be compressed to 0 inches, and no analysis that accounted for the rotation of the loading bar away from the front entrance door trim.

NHTSA also does not agree with DTNA's argument that ''placement of the [upper loading bar] should be calculated based on the size of the barrier from the frame inwards and not include the surplus material that does not provide structure to the barrier.'' The NHTSA letter of interpretation which DTNA referenced in support of this argument [10] was responding to a question about whether the height of a barrier needed to match the height of the seat immediately behind a barrier, where the seat height was above the minimum required seat height specified in FMVSS No. 222. This letter of interpretation does not support DTNA's petition because energy absorption by the barrier was not at issue in the letter of interpretation. As such, NHTSA is not persuaded by DTNA's argument that the loading bar width should be calculated based on the barrier frame.

NHTSA does not agree with DTNA's argument regarding the length of the loading bar or its contention that ''the objective of the forward performance test is to measure the operation and structural integrity of the restraining barrier by ensuring the loads are concentrated in the core of the structure itself and not the periphery of the structure which could cause it to unnecessarily collapse.'' The history of FMVSS No. 222 and the requirements for the length of the loading bar show that FMVSS No. 222 was initially proposed as a new vehicle safety standard on February 22, 1973 (38 FR 4776). The preamble for this first proposed rule did not include any discussion on the length of the loading bar, and the proposed regulatory text stated that ''[t]he length of a loading bar is 4 inches less than the width of the seat back in each test.'' In response to comments received on the first proposed rule, a second proposed rule was published on July 30, 1974 (39 FR 27585). The preamble for the second proposed rule included a statement on the length of the loading bar, explaining that ''[t]he specified loading bar remains 4 inches shorter than the seat back width, despite several objections, to ensure that loads will be transferred to the seat structure without collapse of the seat back.'' The proposed regulatory text was slightly revised to provide that ''[t]he length of the loading bar is at least 4 inches less than the width of the seat back in each test.'' In response to comments received on the second proposed rule, a third proposed rule was published on April 23, 1975 (40 FR 17855). The preamble of the third proposed rule included a statement on the length of the loading bar, explaining that ''[t]he loading bar specifications have been tightened to require the bar to be 4 inches shorter than the seat back width, rather than 'at least 4 inches' shorter.' '' The proposed regulatory text in the third proposed rule was essentially reverted back to the text in the first proposed rule and provided that ''[t]he length of the loading bar is 4 inches less than the width of the seat back in each test.'' [11] In response to comments received on the third proposed rule, a fourth proposed rule was published on October 8, 1975 (40 FR 47141). The preamble of the fourth proposed rule included the following discussion specifically related to the loading bar length:

> Manufacturers also requested tolerances in positioning of the loading bar at 16 inches above the seating reference point and in the bar's 4-inch length.[12] As has often been stated in NHTSA interpretations on similar issues, such a request reflects a misunderstanding of the legal nature of the safety standards. They are not instructions, but performance levels that vehicles are required by law to be capable of meeting. Any tolerance in this context would be meaningless and misleading, since it would merely have the effect of stating a performance level that the product must meet when tested by the government, at one end or the other of the tolerance gap, but in a confusing manner. Recognizing that no measurement is perfectly precise, a manufacturer's testing should be designed to show, using this case as an example, that if the seat were tested with the loading bar at precisely 16 inches above the seating reference point, and with a bar exactly 4 inches long, the seat would meet the applicable requirements. This may be done in at least two different ways: (1) by using a test procedure that conforms so closely to the specified input measurements (16 inches, 4 inches, etc.)—that no significant differences in results could occur as a result of the differences between the actual input measurements and the specified ones, or (2)—by determining which ''side'' of the specified measurements is adverse to the product tested, and being sure that the actual input measurements deviate from the specified ones on the adverse side.

The proposed regulatory text was unchanged from the third proposed rule. Following public comment on the fourth proposed rule, a final rule was published on January 28, 1976 (41 FR 4018). The preamble of the final rule did not include any further discussion on the length of the loading bar, and the regulatory text remained unchanged from the third proposed rule. No additional rulemakings have impacted the requirement specified in paragraph S5.6 of FMVSS No. 222 regarding the length of the loading bar. Although DTNA states that ''NHTSA declined to reduce the size of the range [from four inches] to two inches because it wanted 'to ensure loads would be transferred to the seat structure without collapse of the seat back' and to discourage manufacturers from adding a narrow structural member to meet the requirements,'' the history of the rulemaking relating to this standard does not support this statement. This

[9] Manufacturers and testing laboratories may perform tests that are either ''in-bus'' or ''outside of bus'' for barrier and seat tests to evaluate barrier/seat performance. In the present case, the interaction between the barrier and the front entrance door trim is at issue, therefore only ''in-bus'' testing with the same relative placement of the barrier to the door trim would be appropriate for comparative purposes.

[10] Available at: *https://isearch.nhtsa.gov/gm/87/nht87-2.66.html.*

[11] The third proposed rule language matches the modern-day requirements specified in FMVSS No. 222 S5.6 (albeit in English units).

[12] In the preamble discussion of the fourth proposed rule for FMVSS No. 222, references to the loading bar being 4 inches long are actually in reference to the length of the loading bar being 4 inches less than the barrier width at the loading bar height.

same history shows that the Agency, at one time, contemplated *increasing* the size of the range at issue in its second proposed rule with the addition of the phrase ''at least,'' [13] but does not suggest that NHTSA ever contemplated *decreasing* the size of the range. Furthermore, although DTNA's argument implies that a *longer* loading bar may not concentrate loads to the barrier structure and may in fact lead to unnecessary collapse at the periphery of the barrier, DTNA provided no analysis or data supporting this claim. As such, NHTSA is not persuaded by DTNA's argument that ''the objective of the forward performance test is to measure the operation and structural integrity of the restraining barrier by ensuring the loads are concentrated in the core of the structure itself and not the periphery of the structure which could cause it to unnecessarily collapse.''

NHTSA's Decision: In consideration of the foregoing, NHTSA has decided that DTNA has not met its burden of persuasion that the subject FMVSS No. 222 noncompliance is inconsequential to motor vehicle safety. Accordingly, DTNA's petition is hereby denied, and DTNA is consequently obligated to provide notification of and free remedy for that noncompliance under 49 U.S.C. 30118 and 30120.

(Authority: 49 U.S.C. 30118, 30120: delegations of authority at 49 CFR 1.95 and 501.8)

Anne L. Collins,

Associate Administrator for Enforcement.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2020–0030; Notice 2]

Collins Bus Corporation, Denial of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Denial of petition.

SUMMARY: Collins Bus Corporation (Collins) has determined that certain model year (MY) 2012 2020 Ford and Chevrolet school buses do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 217, *Bus Emergency Exits and Window Retention and Release.* Collins filed a noncompliance report dated April 15, 2020. Collins subsequently petitioned NHTSA on April 30, 2020, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety. This notice announces the denial of Collins's petition.

FOR FURTHER INFORMATION CONTACT: Daniel Lind, NHTSA, Office of Vehicle Safety Compliance, telephone (202) 366–7235.

SUPPLEMENTARY INFORMATION:

I. Overview: Collins has determined that certain MY 2012–2020 Ford and Chevrolet school buses do not fully comply with the requirements of paragraph S5.5.3(b) of FMVSS No. 217, *Bus Emergency Exits and Window Retention and Release* (49 CFR 571.217). Collins filed a noncompliance report dated April 15, 2020, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports.* Collins subsequently petitioned NHTSA on April 30, 2020, for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential as it relates to motor vehicle safety, pursuant to 49 U.S.C. 30118(d) and 30120(h) and 49 CFR part 556, *Exemption for Inconsequential Defect or Noncompliance.*

Notice of receipt of Collins's petition was published in the **Federal Register** (85 FR 84463) with a 30-day public comment period, on December 28, 2020. No comments were received. To view the petition and all supporting documents, log onto the Federal Docket Management System (FDMS) website at: *http://www.regulations.gov/.* Then follow the online search instructions to locate docket number ''NHTSA–2020–0030.''

II. Buses Involved: Approximately 11,079 MY 2012–2020 Ford and Chevrolet school buses manufactured by Collins, as the final stage manufacturer, between February 2, 2012, and April 3, 2020, are potentially involved:

- Ford TH 400
- Ford Sh416, models SL, SH, DH, DE, TH, and TL
- Chevrolet DE516
- Chevrolet DH516
- Chevrolet DH500
- Ford TL 400
- Ford T24
- Chevrolet DH400

III. Noncompliance: Collins explains that the noncompliance is that the letter height for the operating instructions label describing the motions necessary to unlatch and open the emergency exits in the subject school buses does not fully comply with the requirements set forth in paragraph S5.5.3(b) of FMVSS No. 217. Specifically, the operating instructions describing the motions necessary to unlatch and open the emergency window exits are only eight (8) millimeters in height rather than the required one (1) centimeter.

IV. Rule Requirements: Paragraph S5.5.3(b) of FMVSS No. 217 includes the requirements relevant to this petition. Paragraph S5.5.3(b) requires that concise operating instructions describing the motions necessary to unlatch and open the emergency exit shall be located within 15 centimeters of the release mechanism on the inside surface of the bus. These instructions shall be in letters at least 1 centimeter high and of a color that contrasts with its background.

V. Summary of Collins's Petition: The following views and arguments presented in this section, ''V. Summary of Collins's Petition,'' are the views and arguments provided by Collins and do not reflect the views of the Agency. Collins describes the subject noncompliance and contends that the noncompliance is inconsequential as it relates to motor vehicle safety.

In support of its petition, Collins offers the following reasoning:

1. The Noncompliance is Inconsequential to Motor Vehicle Safety: Collins states that the 2-millimeter deficiency in the letter height is inconsequential to motor vehicle safety. The actual height of the emergency window exit operating instructions letters—eight (8) millimeters—is 80 percent of the height required by FMVSS No. 217 (ten (10) millimeters). NHTSA has previously granted inconsequential noncompliance petitions for labeling defects across various motor vehicle safety standards, including for more significant lettering height deficiencies:

- *Notice Granting Petition by Kia Motors:* Letters as little as 53.1 percent of the minimum height requirement. *See* 69 FR 41333 (July 8, 2004) (Docket No. NHTSA–2004–17439).
- *Notice Granting Petition by General Motors:* Lettering height 76.3 percent of the minimum height requirement. *See* 81 FR 92963 (Docket No. NHTSA–2016–0093).
- *Notice Granting Petition by Hyundai:* Letters as little as 78.1 percent of the minimum height requirement. *See* 69 FR 41568 (Docket No. NHTSA–2004–17439).
- *Notice Granting Petition by Mercedes-Benz:* Letters ''about

[13] For clarity, *increasing* the size of the range at issue (which is the length of the loading bar relative to the width of the barrier) would correspond to a *shorter* loading bar. On the same note, *decreasing* the size of the range, would correspond to a *longer* loading bar.

78[percent] of the minimum height required for such letters.'' Pet. at 3 (emphasis omitted). *See* 67 FR 72026 (Docket No. NHTSA–2002–12544).

2. Further, the instruction label includes the words ''Emergency Exit'' in letters with a height of 11 millimeters, which not only meets but substantially exceeds the 1-centimeter requirement. *See* 67 FR 72026 (noting that some of the letters did meet the minimum height requirements in finding that insufficient height of other letters did not have an adverse effect on vehicle safety).

3. Collins claims that the height discrepancy does not affect the readability of the instructions. *See* 67 FR 72026 (finding that letters which were roughly 78 percent of the required size (which required size was nearly one-third of the relevant one-centimeter letter height requirement at issue here) would not ''degrade the legibility'' of the words); 81 FR 92964 (finding ''the lettering height for the park brake applied indicator 'Park' at 2.44 mm versus the FMVSS No. 135 requirement of 3.2 mm poses little if any risk to motor vehicle safety'').

4. Further, Collins says the discrepancy does not compromise the conspicuity of the instructions. The instructions are not only in a color that sharply contrasts with their background (red) as required by FMVSS No. 217, the letters are additionally in bold and block capital letters, which is not required by the standard but which preserves the 8-millimeter height across the width of the words and increases the visibility of the instructions. *See* 81 FR 92964 (finding the use of all capitalized letters, where not required, provided ''a more pronounced indicator''). And as noted above, some of the words in the instruction label (*i.e.,* ''Emergency Exit'') not only meet but exceed the minimum height requirement, thereby increasing the visibility of the instructions.

5. Collins states that NHTSA has previously granted petitions for inconsequential noncompliance under FMVSS No. 217 for conditions that present a more direct safety risk than the potential safety risk (if any) created here. *See* New Flyer of America, Inc.; Grant of Application for Decision of Inconsequential Noncompliance, 63 FR 32694 (granting petition for inconsequential noncompliance where buses were manufactured with only one emergency exit instead of two); IC Corporation, Grant of Petition for Decision of Inconsequential Noncompliance, 70 FR 24464 (granting petition for inconsequential noncompliance where school buses were manufactured with two emergency doors under the same post and roof bow panel space).

6. Finally, Collins states that the emergency window exit instructions on the affected vehicles meet all other labeling requirements of FMVSS No. 217 and do not affect the actual operation of the emergency window exit, and Collins has not received any complaints regarding the size or visibility of the instructions and is not aware of any injuries associated with the size or visibility of the instructions. Collins has corrected the noncompliance in all buses remaining within its possession.

Collins concludes by again contending that the subject noncompliance is inconsequential as it relates to motor vehicle safety, and that its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and a remedy for the noncompliance, as required by 49 U.S.C. 30120, should be granted.

Collins's complete petition and all supporting documents are available by logging onto the FDMS website at *https://www.regulations.gov* and by following the online search instructions to locate the docket number as listed in the title of this notice.

VII. NHTSA's Analysis:

A. General Principles

Congress passed the National Traffic and Motor Vehicle Safety Act of 1966 (the Safety Act) with the express purpose of reducing motor vehicle accidents, deaths, injuries, and property damage. *See* 49 U.S.C. 30101. To this end, the Safety Act empowers the Secretary of Transportation to establish and enforce mandatory Federal Motor Vehicle Safety Standards (FMVSS). *See* 49 U.S.C. 30111. The Secretary has delegated this authority to NHTSA. *See* 49 CFR 1.95.

NHTSA adopts a FMVSS only after the Agency has determined that the performance requirements are objective and practicable and meet the need for motor vehicle safety. *See* 49 U.S.C. 30111(a). Thus, there is a general presumption that the failure of a motor vehicle or item of motor vehicle equipment to comply with a FMVSS increases the risk to motor vehicle safety beyond the level deemed appropriate by NHTSA through the rulemaking process. To protect the public from such risks, manufacturers whose products fail to comply with a FMVSS are normally required to conduct a safety recall under which they must notify owners, purchasers, and dealers of the noncompliance and provide a free remedy. *See* 49 U.S.C. 30118–30120. However, Congress has recognized that, under some limited circumstances, a noncompliance could be ''inconsequential'' to motor vehicle safety. It therefore established a procedure under which NHTSA may consider whether it is appropriate to exempt a manufacturer from its notification and remedy (*i.e.,* recall) obligations. *See* 49 U.S.C. 30118(d), 30120(h). The Agency's regulations governing the filing and consideration of petitions for inconsequentiality exemptions are set out at 49 CFR part 556.

Under the Safety Act and Part 556, inconsequentiality exemptions may be granted only in response to a petition from a manufacturer, and then only after notice in the **Federal Register** and an opportunity for interested members of the public to present information, views, and arguments on the petition. In addition to considering public comments, the Agency will draw upon its own understanding of safety-related systems and its experience in deciding the merits of a petition. An absence of opposing argument and data from the public does not require NHTSA to grant a manufacturer's petition.

Neither the Safety Act nor Part 556 define the term ''inconsequential.'' Rather, the Agency determines whether a particular noncompliance is inconsequential to motor vehicle safety based upon the specific facts before it in a particular petition. An important issue to consider in determining inconsequentiality based upon NHTSA's prior decisions on noncompliance issues was the safety risk to individuals who experience the type of event against which the recall would otherwise protect.[1] NHTSA also does not consider the absence of complaints or injuries to show that the issue is inconsequential to safety. The Safety Act is preventive, and manufacturers cannot and should not wait for deaths or injuries to occur in their vehicles before they carry out a recall. *See, e.g., United States* v. *Gen. Motors Corp.,* 565 F.2d 754, 759 (D.C. Cir. 1977). Indeed, the very purpose of a recall is to protect individuals from risk. *See id.* ''Most importantly, the

[1] *See Gen. Motors, LLC; Grant of Petition for Decision of Inconsequential Noncompliance,* 78 FR 35355 (June 12, 2013) (finding noncompliance had no effect on occupant safety because it had no effect on the proper operation of the occupant classification system and the correct deployment of an air bag); *Osram Sylvania Prods. Inc.; Grant of Petition for Decision of Inconsequential Noncompliance,* 78 FR 46000 (July 30, 2013) (finding occupant using noncompliant light source would not be exposed to significantly greater risk than occupant using similar compliant light source).

absence of a complaint does not mean there have not been any safety issues, nor does it mean that there will not be safety issues in the future.'' [2] ''[T]he fact that in past reported cases good luck and swift reaction have prevented many serious injuries does not mean that good luck will continue to work.'' [3] Arguments that only a small number of vehicles or items of motor vehicle equipment are affected have also not justified granting an inconsequentiality petition.[4] Similarly, NHTSA has rejected petitions based on the assertion that only a small percentage of vehicles or items of equipment are likely to actually exhibit a noncompliance. The percentage of potential occupants that could be adversely affected by a noncompliance does not determine the question of inconsequentiality. Rather, the issue to consider is the consequence to an occupant who is exposed to the consequence of that noncompliance.[5]

B. Response to Collins's Arguments

NHTSA reviewed Collins's arguments that the subject noncompliance is inconsequential to motor vehicle safety. Collins contends that the letter heights of the operating instructions describing the motions necessary to unlatch and open the emergency window exit not meeting the Emergency Exit Identification requirements as specified in paragraph S5.5.3(b) of FMVSS No. 217, poses little, if any, risk to motor vehicle safety. NHTSA does not agree. NHTSA's decision considered the following:

The purpose of FMVSS No. 217 is to minimize the likelihood of occupants being thrown from the bus and to provide a means of readily accessible emergency egress (*See* 49 CFR 571.217 S2). The Emergency Exit Identification requirements at S5.5.3(b) of FMVSS No. 217, at issue here, are specific to the operating instructions required for emergency exits in school buses. These requirements are fourfold: (1) operating instructions must be ''concise'' and describe ''the motions necessary to unlatch and open the emergency exit,'' (2) operating instructions must ''be located within 15 centimeters of the release mechanism on the inside surface of the bus,'' (3) operating instructions must ''be in letters at least 1 centimeter high,'' and (4) operating instructions must be ''of a color that contrasts with [their] background.''

In the present case, the instruction labels at issue contain the following text: ''EMERGENCY EXIT LIFT HANDLE PUSH WINDOW TO OPEN.'' The labels therefore contain operating instructions (LIFT HANDLE PUSH WINDOW TO OPEN) which concisely describes the motions necessary to unlatch and open the emergency exit. The labels are located within 15 centimeters of the release mechanism on the inside surface of the bus and are of a color that contrasts with their background. However, although the words ''EMERGENCY EXIT'' on the instruction labels meet the minimum letter height requirement, the remaining text containing the actual operating instructions fail to meet the letter height requirement at S5.5.3(b)—the operating instructions do not consist of ''letters at least 1 centimeter high.'' This point is further discussed below.

Regarding Collins's argument that the words ''EMERGENCY EXIT'' have a letter height of 11 mm ''which not only meets but substantially exceeds the 1-centimeter requirement,'' Collins's argument is not compelling in how the difference of 1 mm in the words ''EMERGENCY EXIT'' improves the legibility of the words ''LIFT HANDLE PUSH WINDOW TO OPEN'' having a letter height of only 8 mm, a full 2 mm below the 1-centimeter requirement. Further, NHTSA notes that Collins's statement that 1 mm of letter height is ''substantial'' when above the 1 cm requirement, however ''the 2-millimeter deficiency in the letter height is inconsequential to motor vehicle safety,'' indicates a lack of consistency in Collins's argument. Collins also referenced a previous petition granted by NHTSA in support of this claim, which is addressed below, and which is unrelated to school bus emergency exit identification and operation. As such, NHTSA is not persuaded by Collins's argument that having the words ''EMERGENCY EXIT'' being 1 mm taller than the letter height requirements at S5.5.3(b) mitigates the noncompliance for the operating instructions ''LIFT HANDLE PUSH WINDOW TO OPEN'' being 2 mm shorter than the requirement. Furthermore, NHTSA is not persuaded by Collins's argument that a 2 mm measurement is any less substantial than a 1 mm measurement, as no evidence was provided in support of this claim.

Regarding the readability of the operating instructions, NHTSA does not agree with Collins that the readability of the operating instructions is unaffected by the noncompliance with the letter height requirement. Collins referenced two previous petitions granted by NHTSA in support of this claim, which are addressed below, that are unrelated to school bus emergency exit identification and operation. As such, NHTSA is not persuaded by Collins's argument that the readability of the operating instructions is unaffected by the noncompliance with the letter height requirement, as no evidence was provided in support of this claim.

Regarding the conspicuity of the operating instructions, NHTSA agrees with Collins that the operating instructions are ''in a color that sharply contrasts with their background (red)'' and are ''in bold and block capital letters, which is not required by the standard but which preserves the 8-millimeter height across the width of the words and increases the visibility of the instructions,'' but does not agree with Collins that compliance with the conspicuity requirements for the operating instructions impacts compliance with the letter height requirements for the operating instructions for emergency exits in school buses. Collins referenced a previous petition granted by NHTSA in support of this claim, which is addressed below, that are unrelated to school bus emergency exit identification and operation. As such, NHTSA is not persuaded by Collins's argument that meeting the conspicuity requirements for the operating instructions mitigates the noncompliance with the letter height requirement, as no evidence was provided in support of this claim.

C. Remaining Arguments

Collins referenced six inconsequential noncompliance petitions NHTSA had previously granted to support its petition.

The first petition, from Kia Motors America, Inc., and Kia Motors Corp.

---

[2] *Morgan 3 Wheeler Limited; Denial of Petition for Decision of Inconsequential Noncompliance,* 81 FR 21663, 21666 (Apr. 12, 2016).

[3] *United States* v. *Gen. Motors Corp.,* 565 F.2d 754, 759 (D.C. Cir. 1977) (finding defect poses an unreasonable risk when it ''results in hazards as potentially dangerous as sudden engine fire, and where there is no dispute that at least some such hazards, in this case fires, can definitely be expected to occur in the future'').

[4] *See Mercedes-Benz, U.S.A., L.L.C.; Denial of Application for Decision of Inconsequential Noncompliance,* 66 FR 38342 (July 23, 2001) (rejecting argument that noncompliance was inconsequential because of the small number of vehicles affected); *Aston Martin Lagonda Ltd.; Denial of Petition for Decision of Inconsequential Noncompliance,* 81 FR 41370 (June 24, 2016) (noting that situations involving individuals trapped in motor vehicles—while infrequent—are consequential to safety); *Morgan 3 Wheeler Ltd.; Denial of Petition for Decision of Inconsequential Noncompliance,* 81 FR 21663, 21664 (Apr. 12, 2016) (rejecting argument that petition should be granted because the vehicle was produced in very low numbers and likely to be operated on a limited basis).

[5] *See Gen. Motors Corp.; Ruling on Petition for Determination of Inconsequential Noncompliance,* 69 FR 19897, 19900 (Apr. 14, 2004); *Cosco, Inc.; Denial of Application for Decision of Inconsequential Noncompliance,* 64 FR 29408, 29409 (June 1, 1999).

(Kia) (*See* 69 FR 41333), involved passenger vehicles which did not meet the letter height requirements for brake system warning lights, specifically for the abbreviation ''ABS'' and in some cases the word ''brake,'' as required by FMVSS No. 101, 105, and 135. In this case, these passenger vehicles did not meet the minimum letter height requirement of 3.2 mm. The Agency decided that ''due to the positioning, color, use of the ISO symbol, and combined size of both the lettering and symbols, it is very unlikely that a vehicle user would either fail to see or fail to understand the meaning of the brake or ABS warning light in the affected vehicles'' and granted the petition. NHTSA does not agree that granting this prior petition supports granting Collins's petition here, for four reasons: (1) compliance with FMVSS No. 217 was not at issue, (2) emergency exit identification within the vehicle was not at issue, (3) the warning lights in Kia's petition both ''illuminated in red (brake warning light) or yellow (ABS light)'' and also ''include[d] an International Standards Organization (ISO) symbol combined with the word 'brake' or the abbreviation 'ABS,''' which are two features distinctly different from the emergency exit labels at issue here (which do not illuminate or contain any symbol), and (4) the warning lights in Kia's petition were related to the driver's attention, whereas the emergency exit operating instructions in Collins's petition is for school bus passenger use in the event of an emergency.

The second petition, from General Motors, LLC (GM) (*See* 81 FR 92963), involved passenger vehicles which did not meet the letter height requirements for the park brake telltale (identified by the word ''PARK''), as required by FMVSS No. 101 and 135. In this case, these passenger vehicles did not meet the minimum letter height requirement of 3.2 mm for the word ''PARK.'' The Agency decided that ''[i]llumination of both the 'PARK' indicator combined with the information center statement 'Park Brake Set' provides ample communication to the driver that the parking brake has been applied,'' and granted the petition. NHTSA does not agree that granting this prior petition supports granting Collins's petition here, for five reasons: (1) compliance with FMVSS No. 217 was not at issue, (2) emergency exit identification within the vehicle was not at issue, (3) the park brake telltale lights in GM's petition ''illuminated,'' which is a feature distinctly different from the emergency exit labels at issue here (which do not illuminate), (4) activation of the park brake telltale light in GM's petition would simultaneously activate a second illuminated message, which is a feature distinctly different from the emergency exit labels at issue here (which do not activate a second message), and (5) the park brake telltale lights in GM's petition were related to the driver's attention, whereas the emergency exit operating instructions in Collins's petition is for school bus passenger use in the event of an emergency.

The third petition, from Hyundai Motor Company (Hyundai) (*See* 69 FR 41668), involved passenger vehicles which did not meet the letter height requirements for the abbreviation ''ABS'' and in other cases the word ''brake,'' as required by FMVSS No. 105 and 135. In this case, these passenger vehicles did not meet the minimum letter height requirement of 3.2 mm. The Agency decided that ''[d]ue to the positioning, color, use of the ISO symbol, and combined size of both the lettering and symbols, it is very unlikely that a vehicle user would either fail to see or fail to understand the meaning of the brake or ABS warning light in the affected vehicles,'' and granted the petition. NHTSA does not agree that granting this prior petition supports granting Collins's petition here, for four reasons: (1) compliance with FMVSS No. 217 was not at issue, (2) emergency exit identification within the vehicle was not at issue, (3) the warning lights in Hyundai's petition both ''illuminated'' and also included an ''International Standards Organization (ISO) symbol for the ABS,'' which are two features distinctly different from the emergency exit labels at issue here (which do not illuminate or contain any symbol), and (4) the warning lights in Hyundai's petition were related to the driver's attention, whereas the emergency exit operating instructions in Collins's petition is for school bus passenger use in the event of an emergency.

The fourth petition, from Mercedes-Benz, U.S.A., Inc. (MBUSA) (*See* 67 FR 72026), involved passenger vehicles which did not meet the letter height requirements for the brake warning indicator lamp, as required by FMVSS No. 135. In this case, these passenger vehicles did not meet the minimum letter height requirement of 3.2 mm for the letters ''r,'' ''a,'' and ''e'' in the word ''Brake.'' The Agency decided that ''the Agency does not believe that the noncompliance will degrade the legibility of the brake malfunction telltale, or will have an adverse effect on vehicle safety,'' and granted the petition. NHTSA does not agree that granting this prior petition supports granting Collins's petition here, for six reasons: (1) compliance with FMVSS No. 217 was not at issue, (2) emergency exit identification within the vehicle was not at issue, (3) the brake warning indicator lamp in MBUSA's petition ''illuminated,'' which is a feature distinctly different from the emergency exit labels at issue here (which do not illuminate), (4) activation of the brake warning indicator lamp in MBUSA's petition would simultaneously activate a second illuminated message, which is a feature distinctly different from the emergency exit labels at issue here (which do not activate a second message), (5) activation of the second illuminated message in MBUSA's petition would ''[trigger] an audible signal,'' which is a feature distinctly different from the emergency exit labels at issue here (which do not trigger an audible signal), and (6) the brake warning indicator lamp in MBUSA's petition was related to the driver's attention, whereas the emergency exit operating instructions in Collins's petition is for school bus passenger use in the event of an emergency.

The fifth petition, from New Flyer of America, Inc. (*See* 63 FR 32694), involved transit buses that had only one emergency exit on the right side of the bus instead of two, as required by FMVSS No. 217. In this case, these buses had 3.28 times the required exit area, with two emergency exit windows on the left side, one emergency exit window on the right side and two roof exits. Thus, the buses had the minimum number of emergency exits required by FMVSS No. 217. However, these exits were not distributed properly. Instead of a second emergency exit on the right side, these buses had an additional roof exit. The Agency decided that the additional roof exit provided for an additional level of safety during a rollover event and granted the petition. NHTSA does not agree that the granting of this prior petition supports granting Collins's petition here, because emergency exit identification and operation within the vehicle was not at issue.

The sixth petition, from IC Corporation (IC) (*See* 70 FR 24464), involved school buses where two side emergency exit doors were located opposite each other within the same post and roof bow panel space. IC argued that the requirement prohibiting two exit doors from being located in this manner appeared to be related to the structural integrity of a bus body with this configuration. IC indicated that it had no reports of any structural failures in the area around the emergency doors

but stated that it would extend to owners of the noncompliant vehicles a 15-year warranty for any structural or panel failures related to the location of the doors. NHTSA agreed with IC that, in this case, the noncompliance did not compromise safety in terms of emergency exit capability in proportion to maximum occupant capacity, access to side emergency doors, visibility of the exits, or the ability of bus occupants to exit after an accident. NHTSA does not agree that the granting of this prior petition supports granting Collins's petition here, because emergency exit identification and operation within the vehicle was not at issue.

None of the previous six petitions Collins provided in support of its current petition were related to labeling for emergency egress of school buses. Emergency egress occurs under states of emergency, which may include fire, smoke, panicked children, etc. As such, the dilution of these emergency egress marking requirements in school buses is consequential to motor vehicle safety.

NHTSA's Decision: In consideration of the foregoing, NHTSA has decided that Collins has not met its burden of persuasion that the subject FMVSS No. 217 noncompliance is inconsequential to motor vehicle safety. Accordingly, Collins's petition is hereby denied and Collins is consequently obligated to provide notification of and free remedy for that noncompliance under 49 U.S.C. 30118 and 30120.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2022–0096; Notice 1]

Hercules Tire & Rubber Company, Receipt of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Receipt of petition.

SUMMARY: Hercules Tire & Rubber Company, (Hercules), has determined that certain Hercules Power ST2 radial trailer tires do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 119, *New Pneumatic Tires for Motor Vehicles with a GVWR of More Than 4,536 Kilograms (10,000 Pounds), Specialty Tires, and Tires for Motorcycles.* Hercules filed an original noncompliance report dated December 9, 2021, and amended the report on December 14, 2021, and March 9, 2022. Hercules petitioned NHTSA on December 16, 2021, and amended the petition on March 9, 2022, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety. This document announces receipt of Hercules's petition.

DATES: Send comments on or before September 9, 2022.

ADDRESSES: Interested persons are invited to submit written data, views, and arguments on this petition. Comments must refer to the docket and notice number cited in the title of this notice and may be submitted by any of the following methods:

- *Mail:* Send comments by mail addressed to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver comments by hand to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590. The Docket Section is open on weekdays from 10 a.m. to 5 p.m. except for Federal Holidays.
- *Electronically:* Submit comments electronically by logging onto the Federal Docket Management System (FDMS) website at *https://www.regulations.gov/.* Follow the online instructions for submitting comments.
- Comments may also be faxed to (202) 493–2251.

Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that comments you have submitted by mail were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to *https://www.regulations.gov,* including any personal information provided.

All comments and supporting materials received before the close of business on the closing date indicated above will be filed in the docket and will be considered. All comments and supporting materials received after the closing date will also be filed and will be considered to the fullest extent possible.

When the petition is granted or denied, notice of the decision will also be published in the **Federal Register** pursuant to the authority indicated at the end of this notice.

All comments, background documentation, and supporting materials submitted to the docket may be viewed by anyone at the address and times given above. The documents may also be viewed on the internet at *https://www.regulations.gov* by following the online instructions for accessing the dockets. The docket ID number for this petition is shown in the heading of this notice.

DOT's complete Privacy Act Statement is available for review in a **Federal Register** notice published on April 11, 2000 (65 FR 19477–78).

FOR FURTHER INFORMATION CONTACT: Jayton Lindley, General Engineer, NHTSA, Office of Vehicle Safety Compliance, (325) 655–0547.

SUPPLEMENTARY INFORMATION:

I. Overview: Hercules determined that certain Hercules Power ST2 radial trailer tires do not fully comply with the requirements of paragraph S6.5(b) of FMVSS No. 119, *New Pneumatic Tires for Motor Vehicles with a GVWR of More Than 4,536 Kilograms (10,000 Pounds), Specialty Tires, and Tires for Motorcycles* (49 CFR 571.119).

Hercules filed an original noncompliance report dated December 9, 2021, and amended the report on December 14, 2021, and March 9, 2022, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports.* Hercules petitioned NHTSA on December 16, 2021, and amended its petition on March 9, 2022, for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential as it relates to motor vehicle safety, pursuant to 49 U.S.C. 30118(d) and 30120(h) and 49 CFR part 556, *Exemption for Inconsequential Defect or Noncompliance.*

This notice of receipt of Hercules's petition is published under 49 U.S.C. 30118 and 30120 and does not represent any agency decision or another exercise of judgment concerning the merits of the petition.

II. Vehicles Involved: Approximately 67 Hercules Power ST2 size ST205/75R15 radial trailer tires, manufactured between November 23, 2020, and November 29, 2020, are potentially involved:

III. Noncompliance: Hercules explains that the noncompliance is due to a mold error in which the subject tires contain a tire identification number (TIN) with the second and third numerical symbols in the date code are transposed and therefore, do not meet the requirements of paragraph S6.5(b) of FMVSS No. 139. Specifically, the TIN on the subject tires incorrectly states the date code as ''4280,'' when it should state ''4820.''

IV. Rule Requirements: Paragraph S6.5(b) of FMVSS No. 119 and Part 574.5(b)(3) include the requirements relevant to this petition. FMVSS No. 119 states the TIN must meet the requirements set forth in Part 574. Part 574.5(b)(3), states that the date code portion of the TIN must identify the week and year of manufacture. The first and second symbols of the date code must identify the week of the year by using ''01'' for the first full calendar week in each year, ''02'' for the second full calendar week, and so on. The third and fourth symbols of the date code must identify the last two digits of the year of manufacture.

V. Summary of Hercules's Petition: The following views and arguments presented in this section, ''V. Summary of Hercules's Petition,'' are the views and arguments provided by Hercules. They have not been evaluated by the Agency and do not reflect the views of the Agency. Hercules describes the subject noncompliance and contends that the noncompliance is inconsequential as it relates to motor vehicle safety.

Hercules explains that the subject noncompliance does not result in an increased risk to safety because the incorrect date code (''4280'') indicates that the subject tires were manufactured in the 42nd week of either 1980 or 2080. According to Hercules, ''[t]he only years that a year code of 80 could potentially relate to are 1980, over 40 years ago, or 2080, which is so far into the future to be implausible.'' Hercules claims the subject noncompliance would not cause a consumer to use the tire beyond its recommended maximum service life because a ''consumer would not simply assume that the year code listed on the tire is in fact the correct date and be misled.'' Hercules says that if a consumer did follow the date code listed on the subject tires, ''the guidance provided on NHTSA's website,'' informs consumers that ''tires should be replaced within six to 10 years regardless of treadwear.'' In addition, because the year the date code indicates is implausible if a dealer were to store the subject tires for multiple years before selling them, Hercules believes ''there is no risk of misleading the consumer about the age of the tire.''

Hercules says that while the second and third symbols in the date code were transposed in the TIN, ''all other content within the TIN is accurate and the tires otherwise conform to the performance requirements applicable to specialty trailer tires.'' Hercules states that the subject noncompliance ''affects only the single week of tire production and the condition has been corrected in production.''

Hercules states that granting its petition would be consistent with similar decisions that NHTSA has previously granted for inconsequentiality. Hercules cited the following prior petitions that NHTSA has granted, and that Hercules believes support the granting of its petition:

- Bridgestone Firestone North America Tire, LLC, Grant of Petition for Decision of Inconsequential Noncompliance, 71 FR 4396 (January 26, 2006);
- Bridgestone/Firestone, Inc., Grant of Application for Decision That Noncompliance Is Inconsequential to Motor Vehicle Safety, 66 FR 45076 (August 27, 2001).

Hercules believes that NHTSA's primary concern related to mislabeled or inaccurate TINs is the potential for adverse safety consequences due to consumers using aged tires that are beyond the manufacturer's recommended service life and regardless of the service condition of the tire. *See Cooper Tire & Rubber Company,* 86 FR 47726 (August 26, 2021).

In the event of a recall, Hercules says that it has taken steps so that it would be able to identify the subject tires and notify consumers. Hercules believes that this further supports the granting of its petition because it says NHTSA has stated in prior grants of inconsequentiality petitions that the purpose of a date code is to identify the tire so that, if necessary, the appropriate action can be taken in the interest of public safety—such as a safety recall notice. Hercules says that consumers will be able to register the tire with the noncompliant TIN and Hercules's database will identify the tire ''as having been produced in calendar week 48, calendar year 2020.'' If necessary for a recall, Hercules says it would be able to contact consumers and include the TIN ''as it is listed on the tire sidewall so that consumers could check the recall notification against the tire sidewall for verification purposes.

Hercules concludes by stating its belief that the subject noncompliance is inconsequential as it relates to motor vehicle safety and its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and a remedy for the noncompliance, as required by 49 U.S.C. 30120, should be granted.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, any decision on this petition only applies to the subject tires that Hercules no longer controlled at the time it determined that the noncompliance existed. However, any decision on this petition does not relieve tire distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant tires under their control after tires notified them that the subject noncompliance existed.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

Petition for Exemption From the Federal Motor Vehicle Theft Prevention Standard; Mazda Motor Corporation

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Grant of petition for exemption.

SUMMARY: This document grants in full the Mazda Motor Corporation (Mazda) petition for exemption from the Federal Motor Vehicle Theft Prevention Standard (theft prevention standard) for its confidential vehicle line beginning in model year (MY) 2024. The petition is granted because the agency has determined that the antitheft device to be placed on the line as standard equipment is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of the theft prevention standard. Mazda also requested confidential treatment for specific information in its petition.

Therefore, no confidential information provided for purposes of this notice has been disclosed.

DATES: The exemption granted by this notice is effective beginning with the 2024 model year.

FOR FURTHER INFORMATION CONTACT: Carlita Ballard, Office of International Policy, Fuel Economy, and Consumer Programs, NHTSA, West Building, W43–439, NRM–310, 1200 New Jersey Avenue SE, Washington, DC 20590. Ms. Ballard's phone number is (202) 366–5222. Her fax number is (202) 493–2990.

SUPPLEMENTARY INFORMATION: Under 49 U.S.C. Chapter 331, the Secretary of Transportation (and the National Highway Traffic Safety Administration (NHTSA) by delegation) is required to promulgate a theft prevention standard to provide for the identification of certain motor vehicles and their major replacement parts to impede motor vehicle theft. NHTSA promulgated regulations at 49 CFR part 541 (theft prevention standard) to require parts-marking for specified passenger motor vehicles and light trucks. Pursuant to 49 U.S.C. 33106, manufacturers that are subject to the parts-marking requirements may petition NHTSA, by delegation, for an exemption for a line of passenger motor vehicles equipped with an antitheft device as standard equipment that NHTSA decides is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements. In accordance with this statute, NHTSA promulgated 49 CFR part 543, which establishes the process through which manufacturers may seek an exemption from the theft prevention standard.

49 CFR 543.5 provides general submission requirements for petitions and states that each manufacturer may petition NHTSA for an exemption of one vehicle line per model year. Among other requirements, manufacturers must identify whether the exemption is sought under section 543.6 or section 543.7. Under section 543.6, a manufacturer may request an exemption by providing specific information about the antitheft device, its capabilities, and the reasons the petitioner believes the device to be as effective at reducing and deterring theft as compliance with the parts-marking requirements. Section 543.7 permits a manufacturer to request an exemption under a more streamlined process if the vehicle line is equipped with an antitheft device (an ''immobilizer'') as standard equipment that complies with one of the standards specified in that section.[1]

Section 543.8 establishes requirements for processing petitions for exemption from the theft prevention standard. As stated in section 543.8(a), NHTSA processes any complete exemption petition. If NHTSA receives an incomplete petition, NHTSA will notify the petitioner of the deficiencies. Once NHTSA receives a complete petition the agency will process it and, in accordance with section 543.8(b), will grant the petition if it determines that, based upon substantial evidence, the standard equipment antitheft device is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of part 541.

Section 543.8(c) requires NHTSA to issue its decision either to grant or to deny an exemption petition not later than 120 days after the date on which a complete petition is filed. If NHTSA does not make a decision within the 120-day period, the petition shall be deemed to be approved and the manufacturer shall be exempt from the standard for the line covered by the petition for the subsequent model year.[2] Exemptions granted under part 543 apply only to the vehicle line or lines that are subject to the grant and that are equipped with the antitheft device on which the line's exemption was based, and are effective for the model year beginning after the model year in which NHTSA issues the notice of exemption, unless the notice of exemption specifies a later year.

Sections 543.8(f) and (g) apply to the manner in which NHTSA's decisions on petitions are to be made known. Under section 543.8(f), if the petition is sought under section 543.6, NHTSA publishes a notice of its decision to grant or deny the exemption petition in the **Federal Register** and notifies the petitioner in writing. Under section 543.8(g), if the petition is sought under section 543.7, NHTSA notifies the petitioner in writing of the agency's decision to grant or deny the exemption petition.

This grant of petition for exemption considers Mazda Motor Corporation's (Mazda) petition for its confidential vehicle line beginning in MY 2024.

I. Specific Petition Content Requirements Under 49 CFR 543.6

Pursuant to 49 CFR part 543, *Exemption from Vehicle Theft Prevention,* Mazda petitioned for an exemption for its specified vehicle line from the parts-marking requirements of the theft prevention standard, beginning in MY 2024. Mazda petitioned under 49 CFR 543.6, *Petition: Specific content requirements,* which, as described above, requires manufacturers to provide specific information about the antitheft device installed as standard equipment on all vehicles in the line for which an exemption is sought, the antitheft device's capabilities, and the reasons the petitioner believes the device to be as effective at reducing and deterring theft as compliance with the parts-marking requirements.

More specifically, section 543.6(a)(1) requires petitions to include a statement that an antitheft device will be installed as standard equipment on all vehicles in the line for which the exemption is sought. Under section 543.6(a)(2), each petition must list each component in the antitheft system, and include a diagram showing the location of each of those components within the vehicle. As required by section 543.6(a)(3), each petition must include an explanation of the means and process by which the device is activated and functions, including any aspect of the device designed to: (1) facilitate or encourage its activation by motorists; (2) attract attention to the efforts of an unauthorized person to enter or move a vehicle by means other than a key; (3) prevent defeating or circumventing the device by an unauthorized person attempting to enter a vehicle by means other than a key; (4) prevent the operation of a vehicle which an unauthorized person has entered using means other than a key; and (5) ensure the reliability and durability of the device.[3]

In addition to providing information about the antitheft device and its functionality, petitioners must also submit the reasons for their belief that the antitheft device will be effective in reducing and deterring motor vehicle theft, including any theft data and other

[1] 49 CFR 543.7 specifies that the manufacturer must include a statement that their entire vehicle line is equipped with an immobilizer that meets one of the following standards:

(1) The performance criteria (subsections 8 through 21) of C.R.C, c. 1038.114, *Theft Protection and Rollaway Prevention (in effect March 30, 2011),* as excerpted in appendix A of [part 543];

(2) National Standard of Canada CAN/ULC–S338–98, *Automobile Theft Deterrent Equipment and Systems: Electronic Immobilization* (May 1998);

(3) United Nations Economic Commission for Europe (UN/ECE) Regulation No. 97 (ECE R97), *Uniform Provisions Concerning Approval of Vehicle Alarm System (VAS) and Motor Vehicles with Regard to Their Alarm System (AS)* in effect August 8, 2007; or

(4) UN/ECE Regulation No. 116 (ECE R116), *Uniform Technical Prescriptions Concerning the Protection of Motor Vehicles Against Unauthorized Use* in effect on February 10, 2009.

[2] 49 U.S.C. 33106(d).

[3] 49 CFR 543.6(a)(3).

data that are available to the petitioner and form a basis for that belief,[4] and the reasons for their belief that the agency should determine that the antitheft device is likely to be as effective as compliance with the parts-marking requirements of part 541 in reducing and deterring motor vehicle theft. In support of this belief, the petitioners should include any statistical data that are available to the petitioner and form the basis for the petitioner's belief that a line of passenger motor vehicles equipped with the antitheft device is likely to have a theft rate equal to or less than that of passenger motor vehicles of the same, or a similar, line which have parts marked in compliance with part 541.[5]

The following sections describe Mazda's petition information provided pursuant to 49 CFR part 543, *Exemption from Vehicle Theft Prevention.* To the extent that specific information in Mazda's petition is subject to a properly filed confidentiality request, that information was not disclosed as part of this notice.[6]

II. Mazda's Petition for Exemption

In a petition dated May 19, 2022, Mazda requested an exemption from the parts-marking requirements of the theft prevention standard for its confidential vehicle line beginning with MY 2024.

In its petition, Mazda provided a detailed description and diagram of the identity, design, and location of the components of the antitheft device for the confidential vehicle line. Mazda stated that its MY 2024 confidential vehicle line will be installed with a passive, transponder based, electronic engine immobilizer antitheft device as standard equipment. Key components of its antitheft device will include a powertrain control module (PCM), immobilizer control module, security indicator light, coil antenna, transmitter with transponder key (transponder key), low frequency (LF) antenna, radio frequency (RF) receiver and a low frequency unit (LFU). The device will not provide any visible or audible indication of unauthorized vehicle entry (*i.e.,* flashing lights or horn alarm) as standard equipment; however, Mazda stated that its device will incorporate a security indicator light which will provide a visual confirmation on the protection status of the antitheft device.

Pursuant to section 543.6(a)(3), Mazda explained that there are two methods of initiating the antitheft device operation process. Specifically, Mazda stated that the immobilizer system monitors two codes: (1) the transponder code, which the immobilizer control module checks with the transponder located in the transmitter; and (2) the immobilizer code, which the immobilizer control module checks with the powertrain's electronic control module. Mazda also stated that there are two means of checking the transponder code: (1) when the immobilizer control module communicates with the transmitter which includes a transponder by LF antenna and receives a reply of transmitter in the RF receiver; and (2) when the immobilizer control module communicates with the transponder by coil antenna which is located in the push button start. If the transponder code matches with the immobilizer control module by either method mentioned above, and the ignition is turned to the ON position, the immobilizer control module checks the powertrain's electronic control module with immobilizer code. Mazda further stated that the vehicle's engine can only be started if the immobilizer code matches the code previously programmed into the immobilizer control module. If the immobilizer code does not match, the engine will be disabled. Communications between the immobilizer system control function and the powertrain's electronic control module are encrypted. Mazda also stated that there are more than 15×10^6 different transponder codes, and each transponder is hard coded with a unique code at the time of manufacture.

As required in section 543.6(a)(3)(v), Mazda provided information on the reliability and durability of its proposed device. To ensure reliability and durability of the device, Mazda conducted tests based on its own specified standards. Mazda provided a detailed list of the tests conducted (*i.e.,* low/high temperature exposure operation, high temperature endurance, thermal cycling, thermal shock resistance, thermal shock endurance, humidity temperature cycling, high temperature and humidity endurance, water, dust, vibration, connector and lead/lock strength, chemical resistance, electromagnetic field, power line variations, DC stresses, electrostatic discharge and push button start strength) and stated that it believes the device is reliable and durable since it complied with its own specified requirements for each test. Additionally, Mazda stated that its device is extremely reliable and durable because it is computer-based and does not rely on any mechanical or moving parts. Mazda further stated that any attempt to slam-pull its vehicle's ignition will have no effect on a thief's ability to start the vehicle without the correct code being transmitted to the electronic control modules.

Mazda provided data from the Highway Loss Data Institute (HLDI), National Crime Information Center (NCIC), and Insurance Institute for Highway Safety (IIHS) on the effectiveness of other similar antitheft devices installed on vehicle lines in support of its belief that its device will be at least as effective as those comparable devices. Specifically, Mazda stated that its device was installed on certain MY 1996 Ford vehicles as standard equipment, (*i.e.,* all Ford Mustang GT and Cobra models, Ford Taurus LX, and SHO models and Ford Sable LS models). In MY 1997, Mazda installed its immobilizer device on the entire Ford Mustang vehicle line as standard equipment. When comparing 1995 model year Mustang vehicle thefts (without immobilizers) with MY 1997 Mustang vehicle thefts (with immobilizers), Mazda referenced the National Crime Information Center's (NCIC) theft information which showed that there was a 70% reduction in theft experienced when comparing MY 1997 Mustang vehicle thefts (with immobilizers) to MY 1995 Mustang vehicle thefts (without immobilizers). Mazda recognized that NHTSA requested data for vehicle sets that are as similar as possible to the vehicle for which the petition is written;[7] however, Mazda stated that there is no comparable data for Mazda's SUV before and after the implementation of an immobilizer system, because all of Mazda's similar vehicles have been equipped with a standard immobilizer from the onset of manufacture. In light of these considerations, Mazda stated that the NCIC and HLDI data provided supported its belief that the immobilizer system described in its petition will prove to be as, if not more effective, than the parts marking requirements of part 541 in reducing vehicle theft.

III. Decision To Grant the Petition

Pursuant to 49 U.S.C. 33106 and 49 CFR 543.8(b), the agency grants a petition for exemption from the parts-marking requirements of part 541, either in whole or in part, if it determines that, based upon substantial evidence, the standard equipment antitheft device is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of part 541.

[4] 49 CFR 543.6(a)(4).

[5] 49 CFR 543.6(a)(5).

[6] 49 CFR 512.20(a).

[7] See 85 FR 55368 (Sep. 8, 2020).

NHTSA finds that Mazda has provided adequate reasons for its belief that the antitheft device for its vehicle line is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of the theft prevention standard. This conclusion is based on the information Mazda provided about its antitheft device. NHTSA believes, based on Mazda's supporting evidence, that the antitheft device described for its vehicle line is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of the theft prevention standard.

The agency concludes that Mazda's antitheft device will provide four types of performance features listed in section 543.6(a)(3): promoting activation; preventing defeat or circumvention of the device by unauthorized persons; preventing operation of the vehicle by unauthorized entrants; and ensuring the reliability and durability of the device.

The agency notes that 49 CFR part 541, Appendix A–1, identifies those lines that are exempted from the theft prevention standard for a given model year. 49 CFR 543.8(f) contains publication requirements incident to the disposition of all part 543 petitions. Advanced listing, including the release of future product nameplates, the beginning model year for which the petition is granted and a general description of the antitheft device is necessary in order to notify law enforcement agencies of new vehicle lines exempted from the parts-marking requirements of the theft prevention standard.

If Mazda decides not to use the exemption for its requested vehicle line, the manufacturer must formally notify the agency. If such a decision is made, the line must be fully marked as required by 49 CFR 541.5 and 541.6 (marking of major component parts and replacement parts).

NHTSA notes that if a manufacturer to which an exemption has been granted wishes in the future to modify the device on which the exemption is based, the company may have to submit a petition to modify the exemption. Section 543.8(d) states that a part 543 exemption applies only to vehicles that belong to a line exempted under this part and equipped with the antitheft device on which the line's exemption is based. Further, section 543.10(c)(2) provides for the submission of petitions ''to modify an exemption to permit the use of an antitheft device similar to but differing from the one specified in the exemption.'' [8]

For the foregoing reasons, the agency hereby announces a grant in full of Mazda's petition for exemption for the confidential vehicle line from the parts-marking requirements of 49 CFR part 541, beginning with its MY 2024 vehicles.

Issued under authority delegated in 49 CFR 1.95, 501.5 and 501.8.

Jane H. Doherty,

Director, Office of International Policy, Fuel Economy & Consumer Standards.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2019–0124; Notice 2]

North America Subaru, Inc., Denial of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Denial of petition.

SUMMARY: North America Subaru, Inc., (NASI) on behalf of Subaru Corporation and Subaru of America, Inc. (Subaru) has determined that certain model year (MY) 2016–2020 Subaru Impreza motor vehicles do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 108, *Lamps, Reflective Devices, and Associated Equipment.* Subaru filed a noncompliance report dated October 10, 2019. NASI, on behalf of Subaru, petitioned NHTSA on October 23, 2019, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety. This document announces and explains the denial of NASI's petition.

FOR FURTHER INFORMATION CONTACT: Leroy Angeles, Office of Vehicle Safety Compliance, the National Highway Traffic Safety Administration (NHTSA), (202) 366–5304, *Leroy.Angeles@dot.gov.*

SUPPLEMENTARY INFORMATION:

I. Overview

NASI has determined that certain MY 2016–2020 Subaru Impreza motor vehicles do not fully comply with S8.1.11 and S10.15.6 of FMVSS No. 108, *Lamps, Reflective Devices, and Associated Equipment* (49 CFR 571.108). Subaru filed a noncompliance report dated October 10, 2019, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports.* NASI petitioned NHTSA on October 23, 2019, for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential as it relates to motor vehicle safety, pursuant to 49 U.S.C. 30118(d) and 30120(h) and 49 CFR part 556, *Exemption for Inconsequential Defect or Noncompliance.*

Notice of receipt of NASI's petition was published with a 30-day public comment period, in the **Federal Register** (85 FR 39037, June 29, 2020). One comment was received. To view the petition and all supporting documents log onto the Federal Docket Management System (FDMS) website at *https://www.regulations.gov/.* Then follow the online search instructions to locate docket number ''NHTSA–2019–0124.''

II. Vehicles Involved

Approximately 63,697 MY 2016–2020 Subaru Impreza 4 door and approximately 124,703 Subaru Impreza Station wagon vehicles, totaling 188,400 motor vehicles manufactured between September 23, 2016, and August 7, 2019, are potentially involved.

III. Noncompliance

NASI explains that there are two separate noncompliances associated with the subject vehicles' front combination lamps. First, the front combination lamps contain lower beam headlamps that do not meet the requirements of paragraph S10.15.6, and second, the front combination lamps contain reflex reflectors that do not meet the requirements of paragraph S8.1.11 of FMVSS No. 108. Specifically, when tested, the lower beam in two of four front combination lamps (samples: LH1 and LH4) and the reflex reflector in four of four front combination lamps (samples LH1, LH2, LH3 and LH4) failed to comply at certain test points.

IV. Rule Requirements

S8.1.11 and S10.15.6 of FMVSS No. 108 include the requirements relevant to this petition. 49 CFR 571.108, S8.1.11 requires each reflex reflector be designed to conform to the photometry requirements of Table XVI–a when

[8] The agency wishes to minimize the administrative burden that section 543.10(c)(2) could place on exempted vehicle manufacturers and itself. The agency did not intend in drafting part 543 to require the submission of a modification petition for every change to the components or design of an antitheft device. The significance of many such changes could be de minimis. Therefore, NHTSA suggests that if a manufacturer with an exemption contemplates making any changes, the effects of which might be characterized as de minimis, it should consult the agency before preparing and submitting a petition to modify.

tested according to the procedure of S14.2.3. 49 CFR 571.08, S10.15.6 requires each replaceable bulb headlamp be designed to conform to the photometry requirements of Table XIX for lower beam as specified in Table II–d for the specific headlamp unit and aiming method, when tested according to the procedure of S14.2.5 using any replaceable light source designated for use in the system under test.

V. Summary of NASI's Petition

The following views and arguments presented in this section, ''V. Summary of NASI's Petition,'' are the views and arguments provided by NASI and do not reflect the views of the Agency.

NASI described the subject noncompliance and contended that the noncompliance is inconsequential as it relates to motor vehicle safety.

1. NASI submitted that the nonconformance relating to side reflex reflector photometry is inconsequential as it relates to motor vehicle safety for the following reasons:

a. Real-world testing conducted by NASI showed that noncompliant and compliant reflex reflectors are equally detectable in real-world conditions. NASI included an overview of cognitive performance testing of the compliant and noncompliant reflex reflectors with its petition which can be found in full on the FDMS website.[1] The cognitive performance test set-up simulated a condition typical of a vehicle approaching an unlit, perpendicular vehicle stalled in the driving lane. This test condition simulates a real-world condition where side reflex reflectors would support improved visibility of that vehicle. The test results show that, with respect to light reflectance and their ability to be detected, there is no noticeable difference observable between the fully compliant reflex reflector and the reflex reflector that marginally fails to comply at select test points.

b. At a majority of the test points where the tested reflex reflectors were found to have measured intensities below the required minimum values, the measured values were generally only slightly less than the required minimum. For two of the four lamp assemblies tested, there was one point (point HV) where measured values slightly exceeded the 25% threshold cited by NHTSA and others in the past as being the threshold at which the difference between two lamp intensities of less than 25% cannot be detected reliably by most drivers.[2] The two measured values were below the required minimums by 26.9% (sample LH1) and 27.7% (sample LH4). NASI noted that, on average, for the four samples tested by Calcoast, the HV test point was only 24.8% below the required minimum. We also note, as mentioned above, that the cognitive performance testing conducted by NASI found there to be no noticeable differences in detectability for the compliant and noncompliant reflex reflectors in question.

c. For a dynamic situation, light reflecting at a particular test point will be observed for only a short period of time. Compared to a light source that is constantly illuminated, the intensity originating from a reflex reflector is more fleeting to an observer. Reflex reflector intensity varies significantly depending on the angle of the driver's eyes to the reflector's central axis. Larger angles mean less light will be seen from the reflex reflector. Smaller angles mean more light will be seen from the reflex reflector. As a result, a nonconformity at a given test point for a reflex reflector will generally have a minimal impact on detectability. Thus, minor nonconformances at any one test point should be inconsequential with respect to safety risk.

d. NASI contended that it has been recognized by NHTSA in the past that it is inherently difficult to manufacture all lamps[3] to comply with all test points and that random failures do occur. FMVSS No. 108 requires lighting equipment be designed to conform to relevant requirements as opposed to simply comply with relevant requirements. NASI stated that according to NHTSA,[4] occasional random noncompliances are to be expected in this very complicated design and manufacturing process and it is for this reason that the ''designed to comply''[5] provision is contained in the lighting standard. *See* commentary from the NPRM[6] in which NHTSA proposed to amend FMVSS No. 108 to permit the certification of adaptive driving beam headlighting systems. In that notice, the Agency noted that, historically, there has never been an absolute requirement that every motor vehicle lighting device meets every single photometric test point to comply with FMVSS No. 108.

e. NASI stated that NHTSA has previously granted Subaru[7] and General Motors[8] petitions for inconsequentiality involving side reflex reflectors which were determined to be nonconforming at select test points by varying degrees.

f. NASI claimed that it is not aware of any field or customer complaints related to the performance of the side reflex reflectors contained the subject front combination lamps, nor has it been made aware of any accidents or injuries that have occurred relating to the performance of these lamp assemblies.

2. NASI submitted that the nonconforming condition relating to lower beam photometry is inconsequential as it relates to motor vehicle safety for the following reasons:

a. In compliance testing conducted by CALCOAST–ITL on behalf of NHTSA,[9] two of four front combination lamps tested (samples LH1 and LH4) failed to comply with certain low beam photometry requirements in S10.15.6.

i. Sample LH1:

- Front combination lamp sample LH1 photometry was measured at twenty-four test points. At two of the twenty-four test points, sample LH1 exceeded the maximum allowable luminous intensity values by small amounts (11.4% and 4.7%). At one of the twenty-four test points, sample LH1 was below the minimum acceptable luminous intensity value by 13.0%.
- At 21 of 24 test points, sample LH1 complied with the specified luminous intensity values listed in Table XIX–a (LB2V).

ii. Sample LH4

- Front combination lamp sample LH4 photometry was measured at 24 test points. At two of the twenty-four test points, the sample LH4 exceeded the maximum allowable luminous intensity values by small amounts (16.8% and 19.4%).

• At 22 of 24 test points, sample LH4 complied with the specified luminous intensity values listed in Table XIX–a (LB2V).

iii. For both samples LH1 and LH4, test points at which the maximum allowable luminous intensity values were exceeded at test points 1.0 degree and 0.5 degrees up from the horizontal, respectively. These test points, which were taken in the range of 1.5 degrees to 9.9 degrees left of center, are in place to ensure that glare is minimized to oncoming drivers. In the UMTRI report entitled ''Just Noticeable Differences for Low-Beam Headlamp Intensities'' (UMTRl–97–4), testing was conducted to evaluate ''just noticeable differences'' or JNDs for glare intensities of oncoming low-beam headlamps. Specifically, UMTRI looked at whether the 25% rule established by NHTSA for signal lamps would be applicable for the range of intensities relevant to low-beam headlamps. Based on the testing conducted by UMTRI using low-beam headlamps, UMTRI concluded that applying the 25% limit for inconsequential noncompliance to a photometric test point that specifies a maximum for glare protection would be appropriate. Given the UMTRI conclusion, it believes that the small exceedances in maximum intensities for these two test points are inconsequential to safety.

iv. For sample LH1, test point 4.0D 20.0R was the third point which was noncompliant per the measurements taken. This test point measures light intensity down and to the right (4 degrees below the horizontal and 20 degrees to the right of center). The minimum intensity value ensures adequate light down and far right (*e.g.,* sidewalk to the right of the vehicle). Sample LH1's measured light intensity was 13% less than the required value.

Of the four samples tested by Calcoast, only one sample was noncompliant at this test point. This degree of nonconformity was minimal (13% below the required value). When the other three samples were tested, the measured intensities at this test point complied with margins of 47.2%, 27.8% and 2.8%.

For sample LH1, a point within the Zone 10U–90U/90L–90R at 10.00U–7.3R exceeded the maximum permissible intensity threshold by 8.7%. The maximum allowable intensity of 125 candelas in this zone was established to reduce the amount of glare to the driver of the car with the subject headlamp in driving conditions involving poor weather (rain, fog, snow, etc.). The consequence of one of four samples having a measurement of 8.7% above the maximum allowable value is inconsequential given the exceedance is far less than the 25% just noticeable difference.

As discussed previously in its petition, NASI stated that NHTSA has recognized in the past that it is inherently difficult to manufacture all lamps to comply with all test points and that random failures do occur. FMVSS No. 108 requires lighting equipment to be designed to conform to relevant requirements as opposed to simply comply with relevant requirements. Occasional random noncompliances are to be expected.[10] This is why there has never been an absolute requirement that every motor vehicle lighting device meets every single photometric test point to comply with FMVSS No. 108.[11]

Based on the data before it, NASI stated that it believes that the light intensity measured at test point 4.0D 20.0R for one of four samples tested is inconsequential to safety.

b. NASI claimed that it is not aware of any field or customer complaints related to the low-beam performance of the subject front combination lamps, nor has it been made aware of any accidents or injuries that have occurred relating to the performance of these lamp assemblies.

NASI concluded by reiterating that the subject noncompliance is inconsequential as it relates to motor vehicle safety and that its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and a remedy for the noncompliance, as required by 49 U.S.C. 30120, should be granted.

VI. Public Comment

NHTSA received one comment from the public.[12] The commenter stated a belief that NASI provided substantial evidence in support of its position, while also noting an inability to judge the merits of the petition. While the Agency appreciates the commenter's view on this issue, NHTSA finds that the information submitted by NASI does not satisfy its burden of persuasion as discussed below.

VII. NHTSA's Analysis

A. General Principles

The burden of establishing the inconsequentiality of a failure to comply with a *performance requirement* in a standard—as opposed to a *labeling requirement with no performance implications*—is more substantial and difficult to meet. Accordingly, the Agency has not found many such noncompliances inconsequential.[13]

An important issue to consider in determining inconsequentiality is the safety risk to individuals who experience the type of event against which the recall would otherwise protect.[14] The Safety Act is preventive, and manufacturers cannot and should not wait for deaths or injuries to occur in their vehicles before they carry out a recall. *See, e.g., United States* v. *Gen. Motors Corp.,* 565 F.2d 754, 759 (D.C. Cir. 1977). Indeed, the very purpose of a recall is to protect individuals from risk. *See id.* In general, NHTSA does not consider the absence of complaints or injuries to show that the issue is inconsequential to safety. ''Most importantly, the absence of a complaint does not mean there have not been any safety issues, nor does it mean that there will not be safety issues in the future.'' [15] ''[T]he fact that in past reported cases good luck and swift reaction have prevented many serious injuries does not mean that good luck will continue to work.'' [16]

B. NHTSA's Response to NASI's Petition

FMVSS No. 108 establishes the minimum level of performance for lighting and reflective equipment. The petitioner, not NHTSA, has the burden to demonstrate that a noncompliance with the FMVSS is inconsequential to safety. In the past, the Agency has only determined that a noncompliance with photometric requirements to be inconsequential to safety in very limited

[16] *United States* v. *Gen. Motors Corp.,* 565 F.2d 754, 759 (D.C. Cir. 1977) (finding defect poses an unreasonable risk when it ''results in hazards as potentially dangerous as sudden engine fire, and where there is no dispute that at least some such hazards, in this case fires, can definitely be expected to occur in the future'').

circumstances, such as when we have determined the brightness differential would not be noticeable to an observer.

NHTSA's analysis will consider each of the two noncompliances.

The first noncompliance to be considered, 49 CFR 571.108, S8.1.11, concerns the reflex reflector. The purpose of the reflex reflectors, among other things, is to provide conspicuity to vehicles that are not in operation at night. There is a safety need to provide ample conspicuity to vehicles in order to reduce the risk of motor vehicle crashes.

NASI claimed the real-world testing it conducted showed that noncompliant and compliant reflex reflectors are equally detectable in real-world conditions. NHTSA disagrees. In this case, NASI's testing did not have human participants but instead a camera was used to check visibility of a reflex reflector. NHTSA reviewed the submitted study, and determined that there is a clear difference between the compliant and non-compliant reflex reflector. Further, NHTSA's test data along with NASI's in-house failed sample confirms the failures are comparable to each other. In addition, the position of the surrogate vehicle was for only one position and was directly in front of the stimulus vehicle.

NASI claimed that a nonconformity at a given test point for a reflex reflector will generally have a minimal impact on detectability and therefore concluded that minor nonconformances at any one test point should be inconsequential with respect to safety risk. NHTSA disagrees, especially considering that 3 of the 5 required test points were not met. Even if light reflecting at a particular test point will be observed for only a short period of time, since there is a drop in performance over several observable angles, we believe that the detectability of this reflex reflector may be impacted when compared to a compliant reflex reflector. Therefore, we do not agree with NASI's conclusion.

We do not agree that the study referenced by NASI (DOT HS 808 209) adequately supports any conclusion that a 25% deviation from the photometric requirement for a reflex reflector is inconsequential. First, this study does not apply to reflex reflectors. Second, the performance requirements for reflex reflectors are measured in (cd/incident ft-c) or (mcd/lux), whereas the performance requirements for signal lighting assessed in the study are measured in candela (cd). Absent compelling evidence, which NASI has not supplied, the Agency does not believe there is any basis for applying the conclusions of a study limited to one type of lighting equipment and criteria to another form of equipment evaluated by different criteria.

NASI also cites two past petition grants predating DOT HS 808 209; one for Subaru [17] and one for General Motors,[18] where NHTSA concurred with the proposition that a 25% deviation in reflector performance is imperceptible. Since evaluating Subaru's petition almost thirty years ago, NHTSA's line of reasoning on this subject has evolved. In the previous Subaru petition, NHTSA applied rationale related to tail lamps to reflex reflectors. Today, as explained previously in this section, NHTSA recognizes that the photometry criteria evaluated for reflex reflectors is measured in (cd/incident ft-c) or (mcd/lux) whereas tail lamps are measured in candela (cd) and therefore it is not proper to apply the logic of the tail lamp analysis to reflex reflectors, despite the prior grant.[19]

Further, NHTSA does not find the decision issued in the General Motors petition as particularly applicable or persuasive. In that instance, General Motors determined that a noncompliance existed because the installation of an accessory front end cover available at its dealerships masked an existing compliant side marker to the extent that the vehicle with the cover installed did not meet Standard No. 108. Among other things, NHTSA's notice granting GM's petition observed that the Agency would not necessarily have considered the condition caused by the installation of the front-end cover as a non-compliance.

The second noncompliance pertains to the lower beam not meeting the photometric requirements of FMVSS No. 108, S10.15.6. The purpose of the lower beam, among other things, is to provide down-road illumination while not causing glare to other road users. There is an obvious safety need to minimize glare in order to reduce the risk of motor vehicle crashes.

NHTSA does not concur with the conclusion NASI drew from an UMTRI study [20] that exceeding maximum intensities is inconsequential to safety because NHTSA has no glare-specific study indicating that the level of ''glare'' involved here is safe and NASI's petition does not provide any other data establishing that the headlamp noncompliance here has no impact on safety. Furthermore, OVSC reviewed the compliance test data for the samples NHTSA tested and observed that all four samples showed the lower beam to consistently and significantly exceed the maximum photometric requirement at similar test points, prior to a 0.25-degree re-aim allowed by S14.2.5.5 of FMVSS No. 108 for headlamp photometric measurement of all headlamps except a Type F upper beam unit not equipped with a vehicle headlamp aiming device (VHAD). The 0.25-degree re-aim procedure affords manufacturers flexibility in meeting the photometric requirements to allow for variations in readings between laboratories. Given this flexibility is already incorporated into the procedure, NHTSA does not agree that failure to meet the requirements after the re-aim is inconsequential to safety.

With respect to the ''design to conform'' argument that NASI applied to both the lower beam and the reflex reflector, NASI claimed that ''occasional random noncompliances are to be expected'' and that the ''designed to conform'' provision contained in the lighting standard indicates that the Agency does not demand a higher standard of compliance beyond the manufacturer's design intent. NASI cited commentary from NHTSA's NPRM related to amending FMVSS No. 108 to permit the certification of adaptive driving beam (ADB) headlighting systems. However, NHTSA's Final Rule on ADB noted that the ''designed to conform'' language was a product of the technology available back in 1967, and that NHTSA may not come to the same conclusion if it were to revisit the issue today, in light of the fact that lighting equipment design, technology, and manufacturing have evolved and advanced since the late 1960's.[21]

Additionally, NHTSA also finds that, without consideration of the claim that items that must meet FMVSS No. 108 need only be designed to conform, that

[17] *See Subaru of America; Grant of Petition for Determination of Inconsequential Noncompliance;* 56 FR 59971, November 26, 1991.

[18] *See General Motors Corporation; Grant of Petition for Determination of Inconsequential Noncompliance;* 57 FR 45866, October 5, 1992.

[19] NHTSA acknowledges that a petition for failure to meet reflex reflector (luminosity) was granted as recently as 2020; however, the facts of that petition are substantially different in that the actual measured noncompliance was marginal (one test point having a value .05% below the requirement) and the bulk of rationale was based on a theoretical worst case analysis. *See Toyota Motor North America, Inc., Grant of Petition for Decision of Inconsequential Noncompliance;* 85 FR 39679, July 1, 2020.

[20] *See Just Noticeable Differences for Low-Beam Headlamp Intensities* (Sayer, Flannagan, Sivak, Kojima, and Flannagan), Report No. UMTRI–97–4, February 1997.

[21] *Federal Motor Vehicle Safety Standards; Lamps, Reflective Devices, and Associated Equipment, Adaptive Driving Beam Headlamps,* 87 FR 9916, 9940 n.92 February 22, 2022.

design intent is immaterial to the disposition of this petition. NASI's Part 573 filing states that the side reflex reflector production molds were damaged, and the lower beam reflector mold was worn and both conditions caused product performance issues. Therefore, whatever NASI's design intent may have been, the failure to conform in the instant case apparently stems from a systemic production problem that is wholly distinct from whether the components were ''designed to conform.''

NHTSA has consistently held that a lamp's failure to meet performance requirements will not constitute a compliance failure when such failures are random and occasional.[22] However, the test failures for two of the four lower beam functions that NHTSA tested, and four of the four side reflex reflectors that NHTSA tested occurred at around the same test points and photometric values. All of these failures were found to be within 1% to 10% of each other. These data support a pattern of performance that is neither random nor occasional. Based on the pattern of failure established with four samples tested, NHTSA finds that if more lamps were tested, more than an occasional number of failures would be obtained.

VIII. NHTSA's Decision

In consideration of the foregoing, NHTSA has decided that NASI has not met its burden of persuasion that the subject FMVSS No. 108 noncompliance is inconsequential to motor vehicle safety. Accordingly, NASI's petition is hereby denied and NASI is consequently obligated to provide notification of and free remedy for that noncompliance under 49 U.S.C. 30118 and 30120.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

Petition for Exemption from the Federal Motor Vehicle Theft Prevention Standard; Ford Motor Company

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Grant of petition for exemption.

SUMMARY: This document grants in full the Ford Motor Company (Ford) petition for exemption from the Federal Motor Vehicle Theft Prevention Standard (theft prevention standard) for its Bronco vehicle line beginning in model year (MY) 2023. The petition is granted because the agency has determined that the antitheft device to be placed on the line as standard equipment is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of the theft prevention standard. Ford also requested confidential treatment for specific information in its petition. Therefore, no confidential information provided for purposes of this notice has been disclosed.

DATES: The exemption granted by this notice is effective beginning with the 2023 model year.

FOR FURTHER INFORMATION CONTACT: Carlita Ballard, Office of International Policy, Fuel Economy, and Consumer Programs, NHTSA, West Building, W43–439, NRM–310, 1200 New Jersey Avenue SE, Washington, DC 20590. Ms. Ballard's phone number is (202) 366–5222. Her fax number is (202) 493–2990.

SUPPLEMENTARY INFORMATION: Under 49 U.S.C. chapter 331, the Secretary of Transportation (and the National Highway Traffic Safety Administration (NHTSA) by delegation) is required to promulgate a theft prevention standard to provide for the identification of certain motor vehicles and their major replacement parts to impede motor vehicle theft. NHTSA promulgated regulations at 49 CFR part 541 (theft prevention standard) to require parts-marking for specified passenger motor vehicles and light trucks. Pursuant to 49 U.S.C. 33106, manufacturers that are subject to the parts-marking requirements may petition the Secretary of Transportation for an exemption for a line of passenger motor vehicles equipped with an antitheft device as standard equipment that the Secretary decides is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements. In accordance with this statute, NHTSA promulgated 49 CFR part 543, which establishes the process through which manufacturers may seek an exemption from the theft prevention standard.

49 CFR 543.5 provides general submission requirements for petitions and states that each manufacturer may petition NHTSA for an exemption of one vehicle line per model year. Among other requirements, manufacturers must identify whether the exemption is sought under section 543.6 or section 543.7. Under section 543.6, a manufacturer may request an exemption by providing specific information about the antitheft device, its capabilities, and the reasons the petitioner believes the device to be as effective at reducing and deterring theft as compliance with the parts-marking requirements. Section 543.7 permits a manufacturer to request an exemption under a more streamlined process if the vehicle line is equipped with an antitheft device (an ''immobilizer'') as standard equipment that complies with one of the standards specified in that section.[1]

Section 543.8 establishes requirements for processing petitions for exemption from the theft prevention standard. As stated in section 543.8(a), NHTSA processes any complete exemption petition. If NHTSA receives an incomplete petition, NHTSA will notify the petitioner of the deficiencies. Once NHTSA receives a complete petition the agency will process it and, in accordance with section 543.8(b), will grant the petition if it determines that, based upon substantial evidence, the standard equipment antitheft device is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of part 541.

Section 543.8(c) requires NHTSA to issue its decision either to grant or to deny an exemption petition not later than 120 days after the date on which

[1] 49 CFR 543.7 specifies that the manufacturer must include a statement that their entire vehicle line is equipped with an immobilizer that meets one of the following standards:

(1) The performance criteria (subsection 8 through 21) of C.R.C, c. 1038.114, Theft Protection and Rollaway Prevention (in effect March 30, 2011), as excerpted in appendix A of [part 543];

(2) National Standard of Canada CAN/ULC–S338–98, Automobile Theft Deterrent Equipment and Systems: Electronic Immobilization (May 1998);

(3) United Nations Economic Commission for Europe (UN/ECE) Regulation No. 97 (ECE R97), Uniform Provisions Concerning Approval of Vehicle Alarm System (VAS) and Motor Vehicles with Regard to Their Alarm System (AS) in effect August 8, 2007; or

(4) UN/ECE Regulation No. 116 (ECE R116), Uniform Technical Prescriptions Concerning the Protection of Motor Vehicles Against Unauthorized Use in effect on February 10, 2009.

a complete petition is filed. If NHTSA does not make a decision within the 120-day period, the petition shall be deemed to be approved and the manufacturer shall be exempt from the standard for the line covered by the petition for the subsequent model year.[2] Exemptions granted under part 543 apply only to the vehicle line or lines that are subject to the grant and that are equipped with the antitheft device on which the line's exemption was based, and are effective for the model year beginning after the model year in which NHTSA issues the notice of exemption, unless the notice of exemption specifies a later year.

Sections 543.8(f) and (g) apply to the manner in which NHTSA's decisions on petitions are to be made known. Under section 543.8(f), if the petition is sought under section 543.6, NHTSA publishes a notice of its decision to grant or deny the exemption petition in the **Federal Register** and notifies the petitioner in writing. Under section 543.8(g), if the petition is sought under section 543.7, NHTSA notifies the petitioner in writing of the agency's decision to grant or deny the exemption petition.

This grant of petition for exemption considers Ford Motor Corporation's (Ford) petition for its Bronco vehicle line beginning in MY 2023.

I. Specific Petition Content Requirements Under 49 CFR 543.6

Pursuant to 49 CFR part 543, *Exemption from Vehicle Theft Prevention,* Ford petitioned for an exemption for its specified vehicle line from the parts-marking requirements of the theft prevention standard, beginning in MY 2023. Ford petitioned under 49 CFR 543.6, *Petition: Specific content requirements,* which, as described above, requires manufacturers to provide specific information about the antitheft device installed as standard equipment on all vehicles in the line for which an exemption is sought, the antitheft device's capabilities, and the reasons the petitioner believes the device to be as effective at reducing and deterring theft as compliance with the parts-marking requirements.

More specifically, section 543.6(a)(1) requires petitions to include a statement that an antitheft device will be installed as standard equipment on all vehicles in the line for which the exemption is sought. Under section 543.6(a)(2), each petition must list each component in the antitheft system, and include a diagram showing the location of each of those components within the vehicle. As required by section 543.6(a)(3), each petition must include an explanation of the means and process by which the device is activated and functions, including any aspect of the device designed to: (1) facilitate or encourage its activation by motorists; (2) attract attention to the efforts of an unauthorized person to enter or move a vehicle by means other than a key; (3) prevent defeating or circumventing the device by an unauthorized person attempting to enter a vehicle by means other than a key; (4) prevent the operation of a vehicle which an unauthorized person has entered using means other than a key; and (5) ensure the reliability and durability of the device.[3]

In addition to providing information about the antitheft device and its functionality, petitioners must also submit the reasons for their belief that the antitheft device will be effective in reducing and deterring motor vehicle theft, including any theft data and other data that are available to the petitioner and form a basis for that belief,[4] and the reasons for their belief that the agency should determine that the antitheft device is likely to be as effective as compliance with the parts-marking requirements of part 541 in reducing and deterring motor vehicle theft. In support of this belief, the petitioners should include any statistical data that are available to the petitioner and form the basis for the petitioner's belief that a line of passenger motor vehicles equipped with the antitheft device is likely to have a theft rate equal to or less than that of passenger motor vehicles of the same, or a similar, line which have parts marked in compliance with part 541.[5]

The following sections describe Ford's petition information provided pursuant to 49 CFR part 543, *Exemption from Vehicle Theft Prevention.* To the extent that specific information in Ford's petition is subject to a properly filed confidentiality request, that information was not disclosed as part of this notice.[6]

II. Ford's Petition for Exemption

In a petition dated April 7, 2022, Ford requested an exemption from the parts-marking requirements of the theft prevention standard for its Bronco vehicle line beginning with MY 2023.

In its petition, Ford provided a detailed description and diagram of the identity, design, and location of the components of the antitheft device for the Bronco vehicle line. Ford stated that its MY 2023 Bronco vehicle line will be installed with a passive, transponder based, electronic engine immobilizer antitheft device as standard equipment. Specifically, Ford stated that its vehicle line will be installed with the Intelligent Access with Push Button Start (IAwPB). Key components of the IAwPB device will include an Intelligent Access electronic Push-Button Start key fob, keyless ignition system, radio transceiver module, body control module (BCM), powertrain control module (PCM), and an anti-lock braking system module (ABS). Ford also stated that its vehicle line will be equipped with a hood release, counterfeit resistant VIN label, secondary VINs inscribed on the body and a cabin accessible with a valid keycode as standard antitheft features.

Ford further stated that its Bronco vehicle line will also be offered with a perimeter alarm system[7] as optional equipment which will activate a visible and audible alarm whenever unauthorized access is attempted. Some additional features of the antitheft device include: encrypted communication between the transponder, BCM control function and the PCM; ''virtually impossible'' key duplication; and shared security data between the body control module/remote function actuator and the powertrain control module. NHTSA has previously approved the IAwPB antitheft system as standard equipment for the Ford Bronco Sport vehicle line. The IAwPB system is described in the grant of petition for exemption published in the **Federal Register** on August 12, 2020.

Pursuant to section 543.6(a)(3), Ford explained that its system is automatically activated/armed when the ''StartStop'' button is pressed, shutting off the engine. Ford stated that the device is deactivated when a start sequence is completed and engine start is successful. Ford further stated that the vehicle engine can only be started when the key is present in the vehicle

[2] 49 U.S.C. 33106(d).

[3] 49 CFR 543.6(a)(3).

[4] 49 CFR 543.6(a)(4).

[5] 49 CFR 543.6(a)(5).

[6] 49 CFR 512.20(a).

[7] Ford also stated that it will offer an audible and visible alarm as optional equipment on its Bronco line. Per 49 U.S.C. 33106 (b), manufacturers may petition NHTSA for an exemption ''for a line of passenger motor vehicles equipped *as standard equipment* with an antitheft device that [NHTSA] decides is likely to be as effective in reducing and deterring motor vehicle theft as compliance with'' the Theft Prevention Standard (emphasis added). Per 49 U.S.C. 33106(a)(2), ''standard equipment'' means equipment already installed in a motor vehicle when it is delivered from the manufacturer and not an accessory or other item that the first purchaser customarily has the option to have installed. Therefore, for purposes of Ford's petition, NHTSA is only considering the device equipped on the vehicle as standard equipment.

and the ''StartStop'' button inside the vehicle is pressed. Ford stated that when the ''StartStop'' button is pressed, the transceiver module will read a key code and transmit an encrypted message to the control module to determine key validity and engine start by sending a separate encrypted message to the BCM and the PCM. The powertrain will function only if the key code matches the unique identification key code previously programmed into the BCM. Ford stated that the two modules must be matched together in order for the vehicle to start. If the codes do not match, the powertrain engine starter, spark, and fuel will be disabled. Ford further stated that any attempt to operate the vehicle without transmission of the correct code to the electronic control (*i.e.,* short circuiting the ''StartStop'' button) module will be ineffective.

As required in section 543.6(a)(3)(v), Ford provided information on the reliability and durability of its proposed device. To ensure reliability and durability of the device, Ford stated that it conducted tests on the antitheft device which complied with its own specific standards. Additionally, Ford stated that its antitheft device has no moving parts (*i.e.,* BCM, PCM, and electrical components) to perform system functions, which eliminate the possibility of physical damage or deterioration from normal use; and mechanically overriding the device to start the vehicle is also impossible. In further addressing the reliability and durability of its device, Ford stated that its Bronco vehicle line will also be equipped with several other standard antitheft features common to Ford vehicles, (*i.e.,* hood release located inside the vehicle, counterfeit resistant VIN labels, secondary VINs, and cabin accessibility only with the use of a valid key fob).

Ford stated that the antitheft system installed in its 2023 MY Ford Bronco vehicles is similar to the system that was offered in the 2021 MY Ford Bronco Sport vehicles equipped with the IAwPB. The Bronco Sport vehicle line was granted a parts-marking exemption by NHTSA (85 FR 48759, August 12, 2020) beginning with its MY 2021 vehicles.

Ford believes that the Ford Bronco would have a similar theft rate to the Ford Bronco Sport. Ford specifically stated that the Bronco Sport vehicle line is comparable with the Ford Bronco in vehicle segment, size and equipment and since the IAwPB system is the primary theft deterrent on Ford vehicles, Ford believes that the Ford Bronco will likely have a very low theft rate based on the comparable Ford Bronco Sport average theft rate of approximately 0.5/1000. Ford also stated that its Ford Bronco Sport reported theft rates (thefts per thousand vehicles) that are lower than the ''all vehicle theft rate'' in each calendar year published.

III. Decision To Grant the Petition

Pursuant to 49 U.S.C. 33106 and 49 CFR 543.8(b), the agency grants a petition for exemption from the parts-marking requirements of part 541, either in whole or in part, if it determines that, based upon substantial evidence, the standard equipment antitheft device is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of part 541. The agency finds that Ford has provided adequate reasons for its belief that the antitheft device for its vehicle line is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of the theft prevention standard. This conclusion is based on the information Ford provided about its antitheft device. NHTSA believes, based on Ford's supporting evidence, that the antitheft device described for its vehicle line is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of the theft prevention standard.

The agency concludes that Ford's antitheft device will provide four types of performance features listed in section 543.6(a)(3): promoting activation; preventing defeat or circumvention of the device by unauthorized persons; preventing operation of the vehicle by unauthorized entrants; and ensuring the reliability and durability of the device.

The agency notes that 49 CFR part 541, Appendix A–1, identifies those lines that are exempted from the theft prevention standard for a given model year. 49 CFR 543.8(f) contains publication requirements incident to the disposition of all part 543 petitions. Advanced listing, including the release of future product nameplates, the beginning model year for which the petition is granted and a general description of the antitheft device is necessary in order to notify law enforcement agencies of new vehicle lines exempted from the parts-marking requirements of the theft prevention standard.

If Ford decides not to use the exemption for its requested vehicle line, the manufacturer must formally notify the agency. If such a decision is made, the line must be fully marked as required by 49 CFR 541.5 and 541.6 (marking of major component parts and replacement parts).

NHTSA notes that if Ford wishes in the future to modify the device on which this exemption is based, the company may have to submit a petition to modify the exemption. Section 543.8(d) states that a part 543 exemption applies only to vehicles that belong to a line exempted under this part and equipped with the antitheft device on which the line's exemption is based. Further, section 543.10(c)(2) provides for the submission of petitions ''to modify an exemption to permit the use of an antitheft device similar to but differing from the one specified in the exemption.''

The agency wishes to minimize the administrative burden that section 543.10(c)(2) could place on exempted vehicle manufacturers and itself. The agency did not intend in drafting part 543 to require the submission of a modification petition for every change to the components or design of an antitheft device. The significance of many such changes could be de minimis. Therefore, NHTSA suggests that if Ford contemplates making any changes, the effects of which might be characterized as de minimis, it should consult the agency before preparing and submitting a petition to modify.

For the foregoing reasons, the agency hereby grants in full Ford's petition for exemption for the Bronco vehicle line from the parts-marking requirements of 49 CFR part 541, beginning with its MY 2023 vehicles.

Issued under authority delegated in 49 CFR 1.95, 501.5 and 501.8.

Jane H. Doherty,

Director, Office of International Policy, Fuel Economy & Consumer Standards.

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2022–0075]

Pipeline Safety: Request for Special Permit, Natural Gas Pipeline Company of America, LLC

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA); DOT.

ACTION: Notice.

SUMMARY: PHMSA is publishing this notice to solicit public comments on a request for special permit received from

the Natural Gas Pipeline Company of America, LLC (NGPL). The special permit request is seeking relief from compliance with certain requirements in the Federal pipeline safety regulations. At the conclusion of the 30-day comment period, PHMSA will review the comments received from this notice as part of its evaluation to grant or deny the special permit request.

DATES: Submit any comments regarding this special permit request by September 9, 2022.

ADDRESSES: Comments should reference the docket number for this special permit request and may be submitted in the following ways:

- *E-Gov Website: http://www.Regulations.gov.* This site allows the public to enter comments on any **Federal Register** notice issued by any agency.
- *Fax:* 1–202–493–2251.
- *Mail:* Docket Management System: U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Docket Management System: U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays.

Instructions: You should identify the docket number for the special permit request you are commenting on at the beginning of your comments. If you submit your comments by mail, please submit two (2) copies. To receive confirmation that PHMSA has received your comments, please include a self-addressed stamped postcard. Internet users may submit comments at *http://www.Regulations.gov.*

Note: There is a privacy statement published on *http://www.Regulations.gov.* Comments, including any personal information provided, are posted without changes or edits to *http://www.Regulations.gov.*

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this notice contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this notice, it is important that you clearly designate the submitted comments as CBI. Pursuant to 49 Code of Federal Regulations (CFR) 190.343, you may ask PHMSA to give confidential treatment to information you give to the agency by taking the following steps: (1) mark each page of the original document submission containing CBI as ''Confidential''; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information you are submitting is CBI. Unless you are notified otherwise, PHMSA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this notice. Submissions containing CBI should be sent to Kay McIver, DOT, PHMSA–PHP–80, 1200 New Jersey Avenue SE, Washington, DC 20590–0001. Any commentary PHMSA receives that is not specifically designated as CBI will be placed in the public docket for this matter.

Technical: Mr. Steve Nanney by telephone at 713–272–2855, or by email at *steve.nanney@dot.gov.*

SUPPLEMENTARY INFORMATION: PHMSA received a special permit request from NGPL, a subsidiary of Kinder Morgan, Inc., on May 9, 2022, seeking a waiver from the requirements of 49 CFR 192.611(a) and (d): Change in class location: Confirmation or revision of maximum allowable operating pressure, and 49 CFR 192.619(a): Maximum allowable operating pressure: Steel or plastic pipelines.

This special permit is being requested in lieu of pipe replacement, pressure reduction, or new pressure tests for 14 gas transmission pipeline segments totaling 44,905.02 feet (approximately 8.505 miles) of 30-inch diameter pipe on the Louisiana Line #2 Pipeline (Pipeline) located in Montgomery and Liberty Counties, Texas.

The proposed special permit will allow NGPL to operate the Pipeline with original Class 1 pipe in Class 3 locations and to uprate the Pipeline from a current 936 pounds per square inch gauge (psig) maximum allowable operating pressure (MAOP) to a 1,100 psig MAOP. The MAOP uprate is being requested for additional gas flow capacity through the Pipeline. Prior to a 2007 MAOP reduction due to Class 1 to Class 3 location changes, the Pipeline operated at 1,100 psig. The Pipeline was constructed between 1974 and 1978.

The special permit request, proposed special permit with conditions, and draft environmental assessment (DEA) for the above listed NGPL pipeline segments are available for review and public comments in Docket No. PHMSA–2022–0075. PHMSA invites interested persons to review and submit comments on the special permit request and DEA in the docket. Please include any comments on potential safety and environmental impacts that may result if the special permit is granted. Comments may include relevant data.

Before issuing a decision on the special permit request, PHMSA will evaluate all comments received on or before the comments closing date. Comments received after the closing date will be evaluated, if it is possible to do so without incurring additional expense or delay. PHMSA will consider each relevant comment it receives in making its decision to grant or deny this special permit request.

Issued in Washington, DC, on August 5, 2022, under authority delegated in 49 CFR 1.97.

Alan K. Mayberry,

Associate Administrator for Pipeline Safety.

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Actions

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of one or more persons that have been placed on OFAC's List of Specially Designated Nationals and Blocked Persons (SDN List) based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: See **SUPPLEMENTARY INFORMATION** section for effective date(s).

FOR FURTHER INFORMATION CONTACT: OFAC: Andrea Gacki, Director, tel.: 202–622–2490; Associate Director for Global Targeting, tel.: 202–622–2420; Assistant Director for Licensing, tel.: 202–622–2480; Assistant Director for Regulatory Affairs, tel.: 202–622–4855; or the Assistant Director for Sanctions

Compliance & Evaluation, tel.: 202–622–2490.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available on OFAC's website (*https://www.treasury.gov/ofac*).

Notice of OFAC Actions

On August 1, 2022, OFAC determined that the property and interests in property subject to U.S. jurisdiction of the following persons are blocked under the relevant sanctions authorities listed below.

BILLING CODE 4810–AL–P

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

United States Mint

Request for Citizens Coinage Advisory Committee Membership Applications

ACTION: Notice.

Pursuant to United States Code, Title 31, section 5135(b), the United States Mint is accepting applications for appointment to the Citizens Coinage Advisory Committee (CCAC) as the member specially qualified to serve on the CCAC by virtue of their experience in the *medallic arts or sculpture.* The CCAC was established to:

- Advise the Secretary of the Treasury on any theme or design proposals relating to circulating coinage, bullion coinage, Congressional Gold Medals, and national and other medals produced by the United States Mint.
- Advise the Secretary of the Treasury with regard to the events, persons, or places that the CCAC recommends to be commemorated by the issuance of commemorative coins in each of the five calendar years succeeding the year in which a commemorative coin designation is made.
- Make recommendations with respect to the mintage level for any commemorative coin recommended.

Total membership consists of 11 voting members appointed by the Secretary of the Treasury:

- One person specially qualified by virtue of his or her education, training, or experience as nationally or internationally recognized curator in the United States of a numismatic collection;
- One person specially qualified by virtue of his or her experience in the medallic arts or sculpture;
- One person specially qualified by virtue of his or her education, training, or experience in American history;
- One person specially qualified by virtue of his or her education, training, or experience in numismatics;
- Three persons who can represent the interests of the general public in the coinage of the United States; and
- Four persons appointed by the Secretary of the Treasury on the basis of the recommendations by the House and Senate leadership.

Members are appointed for a term of four years. No individual may be appointed to the CCAC while serving as an officer or employee of the Federal Government.

The CCAC is subject to the direction of the Secretary of the Treasury. Meetings of the CCAC are open to the public and are held approximately four to six times per year. The United States Mint is responsible for providing the necessary support, technical services, and advice to the CCAC. CCAC members are not paid for their time or services, but, consistent with Federal Travel Regulations, members are reimbursed for their travel and lodging expenses to attend meetings. Members are Special Government Employees and are subject to the Standards of Ethical Conduct for Employees of the Executive Branch (5 CFR part 2653).

The United States Mint will review all submissions and will forward its recommendations to the Secretary of the Treasury for appointment consideration. Candidates should include specific skills, abilities, talents, and credentials to support their applications. The United States Mint is interested in candidates who, in addition to their experience in the medallic arts or sculpture, have demonstrated interest and a commitment to actively participate in meetings and activities, and a demonstrated understanding of the role of the CCAC and the obligations of a Special Government Employee; possess demonstrated leadership skills in their fields of expertise or discipline; possess a demonstrated desire for public service and have a history of honorable professional and personal conduct, as well as successful standing in their communities; and who are free of professional, political, or financial interests that could negatively affect their ability to provide impartial advice.

Application Deadline: 5:00 p.m. (EDT), September 2, 2022

Receipt of Applications: Any member of the public wishing to be considered for appointment to the CCAC should submit a resume and cover letter describing his or her reasons for seeking and qualifications for membership, by email to *info@ccac.gov,* Attn: Jennifer Warren. The deadline to email submissions is no later than 5:00 p.m. (EDT) on Friday, September 2, 2022.

FOR FURTHER INFORMATION CONTACT: Jennifer Warren, United States Mint Liaison to the CCAC; *jennifer.warren@usmint.treas.gov* or 202–354–7208.

Eric Anderson,

Executive Secretary, United States Mint.

DEPARTMENT OF THE TREASURY

United States Mint

Request for Citizens Coinage Advisory Committee Membership Applications

ACTION: Notice.

SUMMARY: The United States Mint is accepting applications for appointment to the Citizens Coinage Advisory Committee (CCAC) as a member who can represent the interests of the general public in the coinage of the United States.

DATES: The deadline to email submissions is no later than 5:00 p.m. (EDT) on Friday, September 2, 2022.

ADDRESSES: Any member of the public wishing to be considered for appointment to the CCAC should submit a resume and cover letter describing his or her reasons for seeking and qualifications for membership, by email to *info@ccac.gov,* Attn: Jennifer Warren.

FOR FURTHER INFORMATION CONTACT: Jennifer Warren, United States Mint Liaison to the CCAC; *jennifer.warren@usmint.treas.gov* or 202–354–7208.

SUPPLEMENTARY INFORMATION: The CCAC was established to:

- Advise the Secretary of the Treasury on any theme or design proposals relating to circulating coinage, bullion coinage, Congressional Gold Medals, and national and other medals produced by the United States Mint.
- Advise the Secretary of the Treasury with regard to the events, persons, or places that the CCAC recommends to be commemorated by the issuance of commemorative coins in each of the five calendar years succeeding the year in which a commemorative coin designation is made.

• Make recommendations with respect to the mintage level for any commemorative coin recommended.

Total membership consists of 11 voting members appointed by the Secretary of the Treasury:

• One person specially qualified by virtue of his or her education, training, or experience as nationally or internationally recognized curator in the United States of a numismatic collection;

• One person specially qualified by virtue of his or her experience in the medallic arts or sculpture;

• One person specially qualified by virtue of his or her education, training, or experience in American history;

• One person specially qualified by virtue of his or her education, training, or experience in numismatics;

• Three persons who can represent the interests of the general public in the coinage of the United States; and

• Four persons appointed by the Secretary of the Treasury on the basis of the recommendations by the House and Senate leadership.

Members are appointed for a term of four years. No individual may be appointed to the CCAC while serving as an officer or employee of the Federal Government.

The CCAC is subject to the direction of the Secretary of the Treasury. Meetings of the CCAC are open to the public and are held approximately four to six times per year. The United States Mint is responsible for providing the necessary support, technical services, and advice to the CCAC. CCAC members are not paid for their time or services, but, consistent with Federal Travel Regulations, members are reimbursed for their travel and lodging expenses to attend meetings. Members are Special Government Employees and are subject to the Standards of Ethical Conduct for Employees of the Executive Branch (5 CFR part 2653).

The United States Mint will review all submissions and will forward its recommendations to the Secretary of the Treasury for appointment consideration. Candidates should include specific skills, abilities, talents, and credentials to support their applications. The United States Mint is interested in candidates who have demonstrated interest and a commitment to actively participate in meetings and activities, and a demonstrated understanding of the role of the CCAC and the obligations of a Special Government Employee; possess demonstrated leadership skills in their fields of expertise or discipline; possess a demonstrated desire for public service and have a history of honorable professional and personal conduct, as well as successful standing in their communities; and who are free of professional, political, or financial interests that could negatively affect their ability to provide impartial advice.

Authority: 31 U.S.C. 5135(b).

Eric Anderson,

Executive Secretary, United States Mint.

BILLING CODE 4810–37–P

DEPARTMENT OF VETERANS AFFAIRS

Privacy Act of 1974; Matching Program

AGENCY: Department of Veterans Affairs (VA).

ACTION: Notice of a modified matching program.

SUMMARY: The Department of Veterans Affairs (VA) provides notice that it intends to conduct a recurring computer-matching program matching Social Security Administration (SSA) Master Beneficiary Records (MBRs) and the Master Files of Social Security Number (SSN) Holders and SSN Applications (Enumeration System) with VA pension, compensation, and dependency and indemnity compensation (DIC) records. The goal of this match is to identify beneficiaries, who are receiving VA benefits and SSA benefits or earned income, and to reduce or terminate VA benefits, if appropriate. The match will include records of current VA beneficiaries.

DATES: Comments on this matching program must be received no later than 30 days after date of publication in the **Federal Register**]. If no public comment is received during the period allowed for comment or unless otherwise published in the **Federal Register** by VA, the new agreement will become effective a minimum of 30 days after date of publication in the **Federal Register**. If VA receives public comments, VA shall review the comments to determine whether any changes to the notice are necessary. This matching program will be valid for 18 months from the effective date of this notice.

ADDRESSES: Comments may be submitted through *www.Regulations.gov* or mailed to VA Privacy Service, 810 Vermont Avenue NW, (005R1A), Washington, DC 20420. Comments should indicate that they are submitted in response to Verify Unearned Income Information (DIFSLA). Comments received will be available at *regulations.gov* for public viewing, inspection or copies.

FOR FURTHER INFORMATION CONTACT: Victor Hall, (202) 461–9385, *victor.hall2@va.gov,* Pension and Fiduciary Service, Front Office, Pension and Fiduciary Service (21P), Department of Veterans Affairs, 810 Vermont Ave. NW, Washington, DC 20420, (202) 632–8863

SUPPLEMENTARY INFORMATION: VA will use this information to verify the income information submitted by beneficiaries in VA's needs-based benefit programs and adjust VA benefit payments as prescribed by law.

The legal authority to conduct this match is 38 U.S.C. 5106, which requires any Federal department or agency to provide VA such information as VA requests for the purposes of determining eligibility for benefits or verifying other information with respect to payment of benefits.

The VA records involved in the match are in ''Compensation, Pension and Education and Rehabilitation Records—VA (58 VA 21/22/28),'' a system of records which was first published at 41 FR 9294 (March 3, 1976), amended and republished in its entirety at 86 FR 61858(November 8, 2021). The SSA records consist of information from the system of records identified as the SSA MBR, 60–0090, and SSA Enumeration System, 60–0058.

In accordance with the Privacy Act, 5 U.S.C. 552a(o)(2) and (r), copies of the agreement are being sent to both Houses of Congress and to the Office of Management and Budget. This notice is provided in accordance with the provisions of Privacy Act of 1974 as amended by Public Law 100–503.

Participating Agencies: The Social Security Administration (SSA) and Department of Veterans Affairs (VA).

Authority for Conducting the Matching Program: 38 U.S.C 5106 and 38 CFR, chapter 1, part 4 authorize VA to enter into this CMA with SSA.

Purpose(s): To re-establish a CMA with SSA for determining eligibility to continue to receive benefits authorized by the Department of Veterans Affairs (VA).

Categories of Individuals: Veterans and beneficiaries who apply for VA income benefits.

Categories of Records: VA will provide SSA with an electronic file in a format defined by SSA that contains the necessary identifying information for applicable beneficiaries and their dependents. Each VA input file will contain the following variables:

1. Social Security Number for Primary Number Holder
2. Last Name
3. First Name

4. Middle Name/Initial
5. Date of Birth (MMDDCCYY)
6. Sex Code (Blank)
7. VA File Number
8. Agency Code ''VA''
9. Type of Benefit
10. Veteran with Spouse Indicator
11. Payee Number
12. Type of Record
13. Verified Payment Indicator
14. Verification Indicator
15. Processing Code ''212''
16. Verification Account Number (VAN)
17. Blanks, or Multiple Request Code.

SSA will match the file against the Enumeration System and MBR will generate an output file with information on the following variables for each of VA's records containing a verified SSN:

1. Verification Code
2. Death Indicator
3. Filler
4. Type of Benefit—Retirement (R), Disability (D) or Survivor (S)
5. MCB (Monthly Benefit Credited)
6. MBP (Monthly Benefit Payment)
7. Medicare Deduction (SMI–B)
8. Effective Date of Monthly Social Security Payment ''CCYYMM''
9. LAF Code (D = Deferred/withheld money), (E = Monies paid through Railroad Board), (C = Current Pay)
10. Type of Benefit—Retirement (R), Disability (D) or Survivor (S)
11. MCB (Monthly Benefit Credited)
12. MBP (Monthly Benefit Payment)
13. Medicare Deduction (SMI–B)
14. Effective Date of Monthly Social Security Payment ''CCYYMM''
15. LAF Code (D = Deferred/withheld money), (E = Monies paid through Railroad Board), (C = Current Pay)
16. Type of Benefit—Retirement (R), Disability (D) or Survivor (S)
17. MCB (Monthly Benefit Credited)
18. MBP (Monthly Benefit Payment)
19. Medicare Deduction (SMI–B)
20. Effective Date of Monthly Social Security Payment ''CCYYMM''
21. LAF Code (D = Deferred/withheld money), (E = Monies paid through Railroad Board), (C = Current Pay)
22. Filler

''Some terms are repeated.

SYSTEM(S) OF RECORDS: SSA will disclose the necessary benefit information electronically from the files of the MBR, system of records number 60–0090, last fully published at 71 FR 1826 (January 11, 2006), amended at 72 FR 69723 (December 10, 2007), and at 78 FR 40542 (July 5, 2013), 83 FR 31250–31251 (July 3, 2018) and 83 FR 54969 (November 1, 2018). SSA will disclose SSN verification information from the Enumeration System, system of records number 60–0058, last fully published at 75 FR 82121 (December 29, 2010), amended at 78 FR 40542 (July 5, 2013), and at 79 FR 8780 (February 13, 2014), 83 FR 31250–31251 (July 3, 2018), and 83 FR 54969 (November 1, 2018).

VA records involved in this match are in ''VA Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records -VA'' (58 VA 21/22/28), a system of records that was first published at 41 FR 9294 (March 3, 1976), amended at 77 FR 42594 (July 19, 2012), and last amended and republished in its entirety at 84 FR 4138 (February 14, 2019).

Signing Authority

The Senior Agency Official for Privacy, or designee, approved this document and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs. Faith Roy, Acting Deputy Chief Information Security Officer, Office of Information and Technology and VA Chief Privacy Officer, approved this document on July 11, 2022 for publication.

Dated: August 5, 2022

Amy L. Rose,

Program Analyst, VA Privacy Service, Office of Information Security, Office of Information and Technology, Department of Veterans Affairs.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–NEW]

Agency Information Collection Activity Under OMB Review: Authorization To Disclose Personal Information to a Third Party—Education Benefits

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden, and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the newly proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Refer to ''OMB Control No. 2900–NEW.''

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 810 Vermont Ave. NW, Washington, DC 20006, (202) 266–4688 or email *maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–NEW'' in any correspondence.

SUPPLEMENTARY INFORMATION:

Authority: 38 CFR 1.526(a) and 38 CFR 1.576(b).

Title: Authorization to Disclose Personal Information to a Third Party—Education Benefits, VAF 22–10278.

OMB Control Number: 2900–NEW.

Type of Review: New Information Collection (ICR).

Abstract: VA Form 22–10278 is used to release information in its custody or control in the following circumstances: where the individual identifies the particular information and consents to its use; for the purpose for which it was collected or a consistent purpose (*i.e.,* a purpose which the individual might have reasonably expected). By law, VA must have a claimants or beneficiary's written permission (an ''authorization'') to use or give out claim or benefit information for any purpose that is not contained in VA's System of Records, 58VA21/22/28 Compensation, Pension, Education and Veteran Readiness and Employment Records—VA. The claimant or beneficiary may revoke the authorization at any time, except if VA has already acted based on the claimant's permission. This form is designed to permit the beneficiary the opportunity to authorize release of information specific to their claim or benefits to a designated third party. Without this form, such information cannot be released by VA.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 87 FR 12106 on June 6, 2022, on page 34348.

Affected Public: Individuals or Households.

Estimated Annual Burden: 1,667 hours.

Estimated Average Burden Time per Respondent: 5 minutes.

Frequency of Response: Once.

Estimated Number of Respondents: 20,000.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2023 Rates; Quality Programs and Medicare Promoting Interoperability Program Requirements for Eligible Hospitals and Critical Access Hospitals; Costs Incurred for Qualified and Non-Qualified Deferred Compensation Plans; and Changes to Hospital and Critical Access Hospital Conditions of Participation

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule will: revise the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals; make changes relating to Medicare graduate medical education (GME) for teaching hospitals; update the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs). In addition it will establish new requirements and revise existing requirements for eligible hospitals and critical access hospitals (CAHs) participating in the Medicare Promoting Interoperability Program; and update policies for the Hospital Readmissions Reduction Program, Hospital Inpatient Quality Reporting (IQR) Program, Hospital VBP Program, Hospital-Acquired Condition (HAC) Reduction Program, PPS-Exempt Cancer Hospital Reporting (PCHQR) Program, and the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). It will also revise the hospital and critical access hospital (CAH) conditions of participation (CoPs) for infection prevention and control and antibiotic stewardship programs; and codify and clarify policies related to the costs incurred for qualified and non-qualified deferred compensation plans. Lastly, this final rule will provide updates on the Rural Community Hospital Demonstration Program and the Frontier Community Health Integration Project.

DATES: This final rule is effective October 1, 2022.

Tables Available Through the internet on the CMS website

The IPPS tables for this fiscal year (FY) 2023 final rule are available through the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Click on the link on the left side of the screen titled ''FY 2023 IPPS Final rule Home Page'' or ''Acute Inpatient—Files for Download.'' The LTCH PPS tables for this FY 2023 final rule are available through the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html* under the list item for Regulation Number CMS–1771–F. For further details on the contents of the tables referenced in this final rule, we refer readers to section VI. of the Addendum to this FY 2023 IPPS/LTCH PPS final rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites, as previously identified, should contact Michael Treitel, *DAC@cms.hhs.gov*.

Table of Contents

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This FY 2023 IPPS/LTCH PPS final rule makes payment and policy changes under the Medicare inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it makes payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This final rule also makes policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. In this FY 2023 final rule, we are implementing a permanent policy to cap wage index decreases as well as continuing policies to address wage index disparities impacting low wage index hospitals. We also are making changes relating to Medicare graduate medical education (GME) for teaching hospitals and new technology add-on payments.

We are establishing new requirements and revising existing requirements for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

This final rule also acknowledges feedback we received on requests for information on health impacts due to climate change, on overarching principles in measuring healthcare quality disparities in hospital quality programs and value-based purchasing programs, the LTCH QRP, and on advancing the Trusted Exchange Framework and Common Agreement (TEFCA). We thank commenters for their feedback.

Additionally, due to the impact of the COVID–19 PHE on measure data used in the Hospital VBP Program and HAC Reduction Program, we are finalizing our proposals to suppress several measures in both of those programs for purposes of FY 2023 scoring and payment adjustments. For transparency, we will continue to publicly report measure information for all measures, including suppressed measures. In addition to these measure suppressions

for the Hospital VBP Program, we are finalizing our proposal to implement a special scoring methodology for FY 2023 that results in each hospital receiving a value-based incentive payment amount that matches their 2 percent reduction to the base operating MS–DRG payment amount. Similarly, we are finalizing our proposal to suppress all six measures in the HAC Reduction Program for the FY 2023 program year. We are not finalizing our proposal to not calculate measure results or scores for the CMS PSI 90 measure. Although we will not calculate or report the CMS PSI 90 measure results for use in the HAC Reduction Program scoring calculations for the program year, we will still calculate and report CMS PSI 90 that is displayed on the main pages of the Care Compare tool hosted by HHS after confidentially reporting these results to hospitals via hospital-specific reports and a 30-day preview period. Additionally, we will continue to calculate and report measure results for the NHSN CDC HAI measures. For the FY 2023 program year, hospitals participating in the HAC Reduction Program will not be given a Total HAC score, nor will hospitals receive a payment penalty. We are also providing estimated and newly established performance standards for the Hospital VBP Program. For the Hospital Readmissions Reduction Program, we are resuming the use of the one measure (which was previously suppressed for the FY 2023 applicable period) for the FY 2024 applicable period, and incorporating measure updates to the six condition/procedure measures addressed by the Hospital Readmission Reduction Program to account for patient history of COVID–19.

Under various statutory authorities, we either discuss continued program implementation or make changes to the Medicare IPPS, the LTCH PPS, other related payment methodologies and programs for FY 2023 and subsequent fiscal years, and other policies and provisions included in this rule. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).
- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.
- Sections 123(a) and (c) of the BBRA (Public Law (Pub. L.) 106–113) and section 307(b)(1) of the BIPA (Pub. L. 106–554) (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.
- Sections 1814(l), 1820, and 1834(g) of the Act, which specify that payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services and that these payments are generally based on 101 percent of reasonable cost.
- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act.
- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.
- Section 1866(k) of the Act, which provides for the establishment of a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as ''PPS-exempt cancer hospitals.''
- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year.
- Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.
- Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act directs the Secretary to compare hospitals with respect to the number of their Medicare-Medicaid dual-eligible beneficiaries (dual-eligibles) in determining the extent of excess readmissions.
- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for a new uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under section 1886(d)(5)(F) of the Act for DSH (''the empirically justified amount''), and (2) an additional payment for the DSH hospital's proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) a hospital's uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.
- Section 1886(m)(5) of the Act, which requires the Secretary to reduce by two percentage points the annual update to the standard Federal rate for discharges for a long-term care hospital (LTCH) during the rate year for LTCHs that do not submit data in the form, manner, and at a time, specified by the Secretary.
- Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub.

L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2016. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.

- Section 1899B of the Act, as added by section 2(a) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185), which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.
- Section 1861(e) of the Act provides the specific statutory authority for the hospital CoPs; section 1820(e) of the Act provides similar authority for CAHs. The hospital provision at section 1861(e)(9) of the Act authorizes the Secretary to issue regulations the Secretary deems necessary to protect the health and safety of patients receiving services in those facilities; the CAH provision at section 1820(e)(3) of the Act authorizes the Secretary to issue such other criteria as the Secretary may require.

2. Summary of the Major Provisions

The following is a summary of the major provisions in this final rule. In general, these major provisions are being finalized as part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the changes in this final rule is presented in section I.D. of the preamble of this final rule.

a. MS–DRG Documentation and Coding Adjustment

Section 631 of the American Taxpayer Relief Act of 2012 (ATRA, Pub. L. 112–240) amended section 7(b)(1)(B) of Pub. L. 110–90 to require the Secretary to make a recoupment adjustment to the standardized amount of Medicare payments to acute care hospitals to account for changes in MS–DRG documentation and coding that do not reflect real changes in case-mix, totaling $11 billion over a 4-year period of FYs 2014, 2015, 2016, and 2017. The FY 2014 through FY 2017 adjustments represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013. Prior to the ATRA, this amount could not have been recovered under Public Law 110–90. Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.) Therefore, for FY 2023, we are making an adjustment of + 0.5 percent to the standardized amount.

b. Use of FY 2021 Data and Methodology Modifications for the FY 2023 IPPS and LTCH PPS Ratesetting

For the IPPS and LTCH PPS ratesetting, our longstanding goal is always to use the best available data overall. In section I.F. of the preamble of this final rule, we discuss our return to our historical practice of using the most recent data available for purposes of FY 2023 ratesetting, including the FY 2021 MedPAR claims and FY 2020 cost report data, with certain modifications to our usual ratesetting methodologies to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals and LTCHs as compared to FY 2021. As discussed in greater detail in section I.F. of the preamble of this final rule, we believe that it is reasonable to assume that some Medicare beneficiaries will continue to be hospitalized with COVID–19 at IPPS hospitals and LTCHs in FY 2023. Given this expectation, we believe it is appropriate to use FY 2021 data, as the most recent available data during the period of the COVID–19 PHE, for purposes of the FY 2023 IPPS and LTCH PPS ratesetting. However, as also discussed in greater detail in section I.F. of the preamble of this final rule, we believe it is reasonable to assume based on the information available at this time that there will be fewer COVID–19 hospitalizations in FY 2023 than in FY 2021. Therefore, we are finalizing our proposal to use the FY 2021 data for purposes of the FY 2023 IPPS and LTCH PPS ratesetting but with modifications to our usual ratesetting methodologies to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals and LTCHs as compared to FY 2021.

c. Continuation of the Low Wage Index Hospital Policy

To help mitigate wage index disparities between high wage and low wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We also indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. We are finalizing our proposals for the low wage index hospital policy to continue for FY 2023, and to apply this policy in a budget neutral manner by applying an adjustment to the standardized amounts.

d. Permanent Cap on Wage Index Decreases

Consistent with section 1886(d)(3)(E) of the Act, we adjust the IPPS standardized amounts for area differences in hospital wage levels by a factor (established by the Secretary) reflecting the relative hospital wage level in the geographic area of the hospital compared to the national average hospital wage level and update the wage index annually based on a survey of wages and wage-related costs of short-term, acute care hospitals. As described in section III.N. of the preamble of this final rule, we have further considered the comments we received during the FY 2022 rulemaking recommending a permanent 5-percent cap policy to prevent large year-to-year variations in wage index values as a means to reduce overall volatility for hospitals. Under the authority at sections 1886(d)(3)(E) and 1886(d)(5)(I)(i) of the Act, for FY 2023 and subsequent years, we proposed to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline. That is, we proposed that a hospital's wage index for FY 2023 would not be less than 95 percent of its final wage index for FY 2022, and that for subsequent years, a hospital's wage index would not be less than 95 percent of its final wage index for the prior FY. We also proposed to apply the proposed wage index cap policy in a budget neutral manner through a national adjustment to the standardized amount under our authority in sections 1886(d)(3)(E) and 1886(d)(5)(I)(i) of the Act. After consideration of the public comments received, we are finalizing these proposals without modification.

e. Application of the Rural Floor

As discussed in section III.G.1. of the preamble of this final rule, based on the

district court's decision in *Citrus HMA, LLC, d/b/a Seven Rivers Regional Medical Center* v. *Becerra,* No. 1:20–cv–00707 (D.D.C.) (hereafter referred to as *Citrus*) and the comments we received, we are not finalizing our rural floor wage index policy as proposed, which would have excluded § 412.103 hospitals from the calculation of the rural floor and from the calculation of ''the wage index for rural areas in the State in which the county is located'' as referred to in section 1886(d)(8)(C)(iii) of the Act. Rather, we are finalizing a policy that calculates the rural floor as it was calculated before FY 2020. For FY 2023 and subsequent years, we are finalizing a policy to include the wage data of hospitals that have reclassified from urban to rural under section 1886(d)(8)(E) of the Act (as implemented in the regulations at § 412.103) and have no additional form of reclassification (MGCRB or Lugar) in the calculation of the rural floor, and to include the wage data of such hospitals in the calculation of ''the wage index for rural areas in the State in which the county is located'' as referred to in section 1886(d)(8)(C)(iii) of the Act.

f. DSH Payment Adjustment and Additional Payment for Uncompensated Care

Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, Medicare disproportionate share hospitals (DSHs) receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH will receive an additional payment based on its share of the total amount of uncompensated care for all Medicare DSHs for a given time period.

In this final rule, we are updating our estimates of the three factors used to determine uncompensated care payments for FY 2023. We are also continuing to use uninsured estimates produced by CMS' Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA) in conjunction with more recently available data in the calculation of Factor 2. For FY 2023, we are using the 2 most recent years of audited data on uncompensated care costs from Worksheet S–10 of the FY 2018 cost reports and the FY 2019 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals. In addition, for FY 2024 and subsequent fiscal years, we are using a 3-year average of the data on uncompensated care costs from Worksheet S–10 for the 3 most recent fiscal years for which audited data are available. Beginning in FY 2023, we are discontinuing the use of low-income insured days as a proxy for uncompensated care to determine Factor 3 for Indian Health Service (IHS) and Tribal hospitals and hospitals located in Puerto Rico. In addition, we are implementing certain methodological changes for calculating Factor 3 for FY 2023 and subsequent fiscal years.

We recognize that discontinuing the use of the low-income insured days proxy to calculate uncompensated care payments for Indian Health Service (IHS) and Tribal hospitals and hospitals located in Puerto Rico could result in a significant financial disruption for these hospitals. Accordingly, we are using our exceptions and adjustments authority under section 1886(d)(5)(I) of the Act to establish a new supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico, beginning in FY 2023.

As noted in section IV.F. of this final rule, we are not moving forward with the proposed revisions to the regulations relating to the treatment of section 1115 demonstration days for purposes of the DSH adjustment in this final rule. We expect to revisit the issue of section 1115 demonstration days in future rulemaking, and we encourage interested parties to review any future proposal on this issue and to submit their comments at that time.

g. Changes to GME Payments Based on *Milton S. Hershey Medical Center, et al.* v. *Becerra* Litigation

On May 17, 2021, the U.S. District Court for the District of Columbia ruled against CMS's method of calculating direct GME payments to teaching hospitals when those hospitals' weighted full-time equivalent (FTE) counts exceed their direct GME FTE cap. In *Milton S. Hershey Medical Center, et al.* v. *Becerra,* the court ordered CMS to recalculate reimbursement owed, holding that CMS's regulation impermissibly modified the statutory weighting factors. The plaintiffs in these consolidated cases alleged that as far back as 2005, the proportional reduction that CMS applied to the weighted FTE count when the weighted FTE count exceeded the FTE cap conflicted with the Medicare statute, and it was an arbitrary and capricious exercise of agency discretion under the Administrative Procedure Act. The court held that the proportional reduction methodology impermissibly modified the weighting factors statutorily assigned to residents and fellows. The court granted the motion for summary judgment to plaintiffs' motions, denied defendant's, and remanded to the Agency so that it could recalculate plaintiffs' reimbursement payments consistent with the court's opinion.

After reviewing the statutory language regarding the direct GME FTE cap and the court's opinion, we have decided implement a modified policy to be applied prospectively for all teaching hospitals, as well as retroactively to the providers and cost years in Hershey and certain other providers as described in greater detail in section V.F.2. of the preamble of this final rule. The modified policy will address situations for applying the FTE cap when a hospital's weighted FTE count is greater than its FTE cap, but would not reduce the weighting factor of residents that are beyond their initial residency period to an amount less than 0.5. Specifically, effective for cost reporting periods beginning on or after October 1, 2001, we are specifying that if the hospital's unweighted number of FTE residents exceeds the FTE cap, and the number of weighted FTE residents also exceeds that FTE cap, the respective primary care and obstetrics and gynecology weighted FTE counts and other weighted FTE counts are adjusted to make the total weighted FTE count equal the FTE cap. If the number of weighted FTE residents does not exceed that FTE cap, then the allowable weighted FTE count for direct GME payment is the actual weighted FTE count.

h. Reduction of Hospital Payments for Excess Readmissions

We are making changes to policies for the Hospital Readmissions Reduction Program, which was established under section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating MS–DRG payment to account for excess readmissions of selected applicable conditions. For FY 2023, the reduction is based on a hospital's risk-adjusted readmission rate during a multi-year period for acute myocardial infarction (AMI), heart failure (HF), chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG)

surgery.[1] In this FY 2023 IPPS/LTCH PPS final rule, we are discussing the following policies: (1) resuming use of the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) following Pneumonia Hospitalization measure (NQF #0506) for the FY 2024 program year; (2) modification of the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) following Pneumonia Hospitalization measure (NQF #0506) to exclude patients with COVID–19 diagnosis present on admission from the measure numerator (outcome) and denominator (cohort),[2] beginning with the Hospital Specific Reports (HSRs) for the FY 2023 program year; and (3) modification of all six condition/procedure specific measures to include a covariate adjustment for patient history of COVID–19 within 12 months prior to the index admission beginning with the FY 2023 program year. In the FY 2023 IPPS/LTCH PPS proposed rule we also sought comment on updating the Hospital Readmissions Reduction Program to incorporate provider performance for socially at-risk populations.

i. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this final rule, we are finalizing our proposals to: (1) suppress the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) and five Hospital-Acquired Infection (HAI) measures for the FY 2023 program year; and (2) update the baseline periods for certain measures for the FY 2025 program year. We are also finalizing our proposal to revise the scoring and payment methodology for the FY 2023 program year such that hospitals will not receive Total Performance Scores (TPSs). Additionally, we are finalizing our proposal to award each hospital a payment incentive multiplier that results in a value-based incentive payment that is equal to the amount withheld for the fiscal year (2 percent). We note that we are also announcing technical updates to the measures in the Clinical Outcomes Domain.

j. Hospital-Acquired Condition (HAC) Reduction Program

In this FY 2023 IPPS/LTCH PPS final rule we are finalizing several changes to the HAC Reduction Program, which was established under section 1886(p) of the Act, to provide an incentive to hospitals to reduce the incidence of hospital-acquired conditions. We refer readers to the FY 2022 IPPS/LTCH PPS final rule for further details on our measure suppression policy (86 FR 45301 through 45304). In this FY 2023 IPPS/LTCH PPS final rule, we are not finalizing our proposal to not calculate or report measure results for the CMS PSI 90 measure for the FY 2023 HAC Reduction Program. Although we will not calculate or report CMS PSI 90 measure results for use in the HAC Reduction Program scoring calculations for the program year, we will still calculate and report CMS PSI 90 that is displayed on the main pages of the Compare tool hosted by HHS after confidentially reporting these results to hospitals via CMS PSI 90 specific HSRs and a 30-day preview period. We will continue to calculate and report measure results for the NHSN CDC HAI measures.

In this FY 2023 IPPS/LTCH PPS final rule, we are finalizing our proposals to: (1) suppress the CMS PSI 90 measure and the five CDC NHSN HAI measures from the calculation of measure scores and the Total HAC Score, thereby not penalizing any hospital under the HAC Reduction Program FY 2023 program year; (2) suppress CY 2021 CDC NHSN HAI measures data from the FY 2024 HAC Reduction Program Year; (3) update the measure specification to the minimum volume threshold for the CMS PSI 90 measure beginning with the FY 2023 program year; (4) update the measure specifications to risk-adjust for COVID–19 diagnosis in the CMS PSI 90 measure beginning with the FY 2024 HAC Reduction Program Year; and (5) update the NHSN CDC HAI data submission requirements for newly opened hospitals beginning in the FY 2024 HAC Reduction Program.

In this FY 2023 IPPS/LTCH PPS final rule, we acknowledge feedback we received on Requests for Information from stakeholders on two topics: (1) the potential adoption of two digital National Healthcare Safety Network (NHSN) measures: the NHSN Healthcare-associated *Clostridioides difficile* Infection Outcome measure and NHSN Hospital-Onset Bacteremia & Fungemia Outcome measure; and (2) on overarching principles for measuring healthcare quality disparities across CMS Quality Programs. In the FY 2023 IPPS/LTCH PPS proposed rule and this final rule, we also clarified the removal of the no mapped location policy beginning with the FY 2023 program year.

k. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase.

In this FY 2023 IPPS/LTCH PPS final rule, we are finalizing several changes to the Hospital IQR Program. We are adopting 10 new measures: (1) Hospital Commitment to Health Equity beginning with the CY 2023 reporting period/FY 2025 payment determination; (2) Screening for Social Drivers of Health beginning with voluntary reporting for the CY 2023 reporting period and mandatory reporting beginning with the CY 2024 reporting period/FY 2026 payment determination; (3) Screen Positive Rate for Social Drivers of Health beginning with voluntary reporting for the CY 2023 reporting period and mandatory reporting beginning with the CY 2024 reporting period/FY 2026 payment determination; (4) Cesarean Birth electronic clinical quality measure (eCQM) with inclusion in the eCQM measure set beginning with the CY 2023 reporting period/FY 2025 payment determination, and mandatory reporting beginning with the CY 2024 reporting period/FY 2026 payment determination; (5) Severe Obstetric Complications eCQM with inclusion in the eCQM measure set beginning with the CY 2023 reporting period/FY 2025 payment determination, and mandatory reporting beginning with the CY 2024 reporting period/FY 2026 payment determination; (6) Hospital-Harm—Opioid-Related Adverse Events eCQM (NQF #3501e) inclusion in the eCQM measure set beginning with the CY 2024 reporting period/FY 2026 payment determination; (7) Global Malnutrition Composite Score eCQM (NQF #3592e) inclusion in the eCQM measure set beginning with the CY 2024 reporting period/FY 2026 payment determination; (8) Hospital-Level, Risk Standardized Patient-Reported Outcomes Performance Measure Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) (NQF #3559) beginning with two voluntary periods, followed by mandatory reporting for the

[1] We note that in the FY 2023 IPPS/LTCH PPS proposed rule we described the policy for FY 2017 and subsequent years, without reference to flexibility due to the COVID–19 PHE. We have updated this information to describe the policy for FY 2023.

[2] We note that in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28113) we inadvertently omitted reference to removing COVID–19 diagnosed patients from the numerator. We have corrected this omission here.

reporting period which runs from July 1, 2025 through June 30, 2026, impacting the FY 2028 payment determination; (9) Medicare Spending Per Beneficiary (MSPB) Hospital measure (NQF #2158) beginning with the FY 2024 payment determination; and (10) Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary THA/TKA (NQF #1550) beginning with the FY 2024 payment determination. We are refining two current measures beginning with the FY 2024 payment determination: (1) Hospital-Level, Risk-Standardized Payment Associated with an Episode-of-Care for Primary Elective THA/TKA measure; and (2) Excess Days in Acute Care (EDAC) After Hospitalization for Acute Myocardial Infarction (AMI) measure (NQF #2881). In this FY 2023 IPPS/LTCH PPS final rule, we acknowledge feedback we received on the potential future development and inclusion of two National Healthcare Safety Network (NHSN) measures: (1) Healthcare-Associated *Clostridioides difficile* Infection Outcome; and (2) Hospital-Onset Bacteremia & Fungemia Outcome. We thank commenters for their feedback.

We are finalizing changes to current policies related to eCQMs and hybrid measures: (1) Modification of the eCQM reporting and submission requirements to increase the number of eCQMs to be reported beginning with the CY 2024 reporting period/FY 2026 payment determination; (2) removal of the zero denominator declarations and case threshold exemption policies for hybrid measures beginning with the FY 2026 payment determination; (3) adoption of data submission and reporting requirements for patient-reported outcome-based performance measures (PRO–PMs) beginning with the FY 2026 payment determination; and (4) modification of the eCQM validation policy to increase the requirement from 75 percent to 100 percent of requested medical records, beginning with the FY 2025 payment determination.

With respect to public reporting, we are establishing a hospital designation related to maternity care to be publicly-reported on a public-facing website beginning in Fall 2023. In the FY 2023 IPPS/PPS LTCH PPS proposed rule, we sought comments on other potential associated activities regarding this designation (87 FR 28549 through 28550). Additionally, we sought comments on ongoing ways we can advance digital quality measurement and use of Fast Healthcare Interoperability Resources (FHIR) (87 FR 28486 through 28489). We thank commenters for their feedback.

l. PPS-Exempt Cancer Hospital Quality Reporting Program

Section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. There is no financial impact to PCH Medicare payment if a PCH does not participate.

In this FY 2023 IPPS/LTCH PPS final rule, we are finalizing our proposal to adopt a patient safety exception into the measure removal policy. We are also finalizing our proposal to begin public display of the 30-Day Unplanned Readmissions for Cancer Patients measure (NQF #3188) (PCH–36). We are finalizing with modification our proposal to begin public display of the Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life measure (NQF #0210) (PCH–32), the Proportion of Patients Who Died from Cancer Not Admitted to Hospice measure (NQF #0215) (PCH–34), the Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life measure (NQF #0213) (PCH–33), and the Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days measure (NQF #0216) (PCH–35). In addition, along with the Hospital IQR and HAC Reduction Programs, we respond to comments received on our request for comment on the potential adoption of two digital National Healthcare Safety Network (NHSN) measures: the NHSN Healthcare-associated *Clostridioides difficile* Infection Outcome measure and NHSN Hospital-Onset Bacteremia and Fungemia Outcome measure.

m. Medicare Promoting Interoperability Program

For CY 2023, we are finalizing several proposed changes to the Medicare Promoting Interoperability Program. Specifically, we are: (1) requiring the Electronic Prescribing Objective's Query of Prescription Drug Monitoring Program (PDMP) measure while maintaining the associated points at 10 points beginning with the EHR reporting period in CY 2023; (2) expanding the Query of PDMP measure to not only include Schedule II opioids but also Schedule III and IV drugs beginning with the CY 2023 EHR reporting period and are adding exclusions; (3) adding a new Health Information Exchange (HIE) Objective option, the Enabling Exchange under the Trusted Exchange Framework and Common Agreement (TEFCA) measure (requiring a yes/no response), as an optional alternative to fulfill the objective, beginning with the CY 2023 EHR reporting period; (4) modifying the Public Health and Clinical Data Exchange Objective by adding an Antibiotic Use and Antibiotic Resistance (AUR) measure in addition to the current four required measures (Syndromic Surveillance Reporting, Immunization Registry Reporting, Electronic Case Reporting, and Electronic Reportable Laboratory Result Reporting) beginning with the CY 2024 EHR reporting period; (5) consolidating the current options from three to two levels of active engagement for the Public Health and Clinical Data Exchange Objective, requiring the reporting of the active engagement option selected for the measures under the objective beginning with the CY 2023 EHR reporting period, and modifying the amount of time spent at the option 1 level of active engagement (pre-production and validation) to one EHR reporting period beginning with the CY 2024 EHR reporting period; (6) modifying the scoring methodology for the Medicare Promoting Interoperability Program beginning in CY 2023; (7) instituting public reporting of certain Medicare Promoting Interoperability Program data beginning with the CY 2023 EHR reporting period; (8) removing regulation text for the objectives and measures in the Medicare Promoting Interoperability Program from paragraph (e) under 42 CFR 495.24 and adding new paragraph (f) beginning in CY 2023; and (9) adopting two new eCQMs in the Medicare Promoting Interoperability Program's eCQM measure set beginning with the CY 2023 reporting period, two new eCQMs in the Medicare Promoting Interoperability Program's eCQM measure set beginning with the CY 2024 reporting period, and modifying the eCQM data reporting and submission requirements to increase the number of eCQMs required to be reported and the total number of eCQMs to be reported beginning with the CY 2024 reporting period, which is in alignment with the eCQM updates finalized for the Hospital IQR Program.

n. Condition of Participation (CoP) Requirements for Hospitals and CAHs to Continue Reporting Data for COVID–19 and Influenza After the PHE ends as Determined by the Secretary

In this final rule, we are revising the hospital and CAH infection prevention and control CoP requirements to continue COVID–19-related reporting requirements commencing either upon the conclusion of the current COVID–19 PHE declaration or the effective date of

this proposed rule, whichever is later, and lasting until April 30, 2024 (unless the Secretary determines an earlier end date). We have withdrawn our proposal to establish additional data reporting requirements to address future PHEs related to epidemics and infectious diseases.

3. Summary of Costs and Benefits

The following table provides a summary of the costs, savings, and benefits associated with the major provisions described in section I.A.3. of the preamble of this final rule.

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Adjustment for MS-DRG Documentation and Coding Changes	Section 414 of the MACRA replaced the single positive adjustment we intended to make in FY 2018 once the recoupment required by section 631 of the ATRA was complete with a 0.5 percentage point positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percentage point by section 15005 of the 21st Century Cures Act.) For FY 2023, we are making an adjustment of +0.5 percentage point to the standardized amount consistent with the MACRA.
Medicare DSH Payment Adjustment and Additional Payment for Uncompensated Care and Supplemental Payment	For FY 2023, we are updating our estimates of the three factors used to determine uncompensated care payments. We are continuing to use uninsured estimates produced by OACT as part of the development of the NHEA in conjunction with more recently available data in the calculation of Factor 2. For FY 2023, we are using the 2 most recent years of audited data on uncompensated care costs from Worksheet S–10 of the FY 2018 cost reports and the FY 2019 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals. In addition, for FY 2024 and subsequent fiscal years, we will calculate Factor 3 for all eligible hospitals using a 3-year average of the data on uncompensated care costs from Worksheet S-10 for the three most recent fiscal years for which audited data are available. Beginning in FY 2023, we are discontinuing the use of low-income insured days as a proxy for uncompensated care to determine Factor 3 for Indian Health Service (IHS) and Tribal hospitals and hospitals located in Puerto Rico. In addition, we are implementing certain methodological changes for calculating Factor 3 for FY 2023 and subsequent fiscal years. We project that the amount available to distribute as payments for uncompensated care for FY 2023 will decrease by approximately $318 million, as compared to our estimate of the uncompensated care payments that will be distributed in FY 2022. The uncompensated care payments have redistributive effects, based on a hospital's uncompensated care amount relative to the uncompensated care amount for all hospitals that are projected to be eligible to receive Medicare DSH payments, and the calculated payment amount is not directly tied to a hospital's number of discharges. Because we recognize that discontinuing the use of the low-income insured days proxy to calculate uncompensated care payments for IHS and Tribal hospitals and hospitals located in Puerto Rico could result in a significant financial disruption for these hospitals, we are using our exceptions and adjustments authority under section 1886(d)(5)(I) of the Act to establish a new supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico, beginning in FY 2023. This provision is not budget neutral and we estimate the impact of the new payment will increase Medicare spending for FY 2023 by approximately $96 million.
Application of the Rural Floor	Based on the district court's decision in *Citrus HMA, LLC, d/b/a Seven Rivers Regional Medical Center v. Becerra*, and the comments we received, as discussed in section III.G.1. of the preamble of this final rule, we are not finalizing our rural floor wage index policy as proposed, which would have excluded § 412.103 hospitals from the calculation of the rural floor and from the calculation of "the wage index for rural areas in the State in which the county is located" as referred to in section 1886(d)(8)(C)(iii) of the Act. Rather, we are finalizing a policy that calculates the rural floor as it was calculated before FY 2020. For FY 2023 and subsequent years, we

Provision Description	Description of Costs, Transfers, Savings, and Benefits
	are finalizing a policy to include the wage data of hospitals that have reclassified from urban to rural under section 1886(d)(8)(E) of the Act (as implemented in the regulations at § 412.103) and have no additional form of reclassification (MGCRB or Lugar) in the calculation of the rural floor, and to include the wage data of such hospitals in the calculation of "the wage index for rural areas in the State in which the county is located" as referred to in section 1886(d)(8)(C)(iii) of the Act. The law requires that a national budget neutrality adjustment be applied in implementing the rural floor.
Changes to GME Payments Based on *Milton S. Hershey Medical Center, et al. v. Becerra* Litigation	After reviewing the statutory language regarding the direct GME FTE cap and the court's opinion in Milton S. Hershey Medical Center, et al. v. Becerra, we are implementing a modified policy to be applied retroactively for all teaching hospitals, Specifically, effective for cost reporting periods beginning on or after October 1, 2001, we are specifying that if the hospital's unweighted number of FTE residents exceeds the FTE cap, and the number of weighted FTE residents also exceeds that FTE cap, the respective primary care and obstetrics and gynecology weighted FTE counts and other weighted FTE counts are adjusted to make the total weighted FTE count equal the FTE cap. If the number of weighted FTE residents does not exceed that FTE cap, then the allowable weighted FTE count for direct GME payment is the actual weighted FTE count. We estimate the impact of this change for FY 2023 to be approximately $170 million.
Update to the IPPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this final rule, acute care hospitals are estimated to experience an increase of approximately $1.4 billion in FY 2023, primarily driven by: (1) a combined $2.4 billion increase in FY 2023 operating payments, including supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals, as well as changes in uncompensated care payments, and (2) a combined decrease of $ 1.0 billion resulting from estimated changes in new technology add-on payments (including the expiration of payments for technologies that were provided a one-year extension in FY 2022), the change to the GME weighting methodology, the expiration of the temporary changes to the low-volume hospital payment adjustment, and capital payment, as modeled for this final rule.
Update to the LTCH PPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this final rule, based on the best available data for the 339 LTCHs in our database, we estimate that the changes to the payment rates and factors that we present in the preamble of and Addendum to this final rule, which reflect the update to the LTCH PPS standard Federal payment rate for FY 2023, will result in an estimated increase in payments in FY 2023 of approximately $71 million.
Changes to the Hospital Readmissions Reduction Program	For the FY 2023 program year, MS-DRG reductions in payments are based on a hospital's risk-adjusted readmission rate during a multi-year period for acute myocardial infarction (AMI), heart failure (HF), chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG) surgery. Overall, in this rule, we estimate that 2,273 hospitals will have their base operating MS-DRG payments reduced by their determined estimated FY 2023 hospital-specific readmission adjustment. As a result, we estimate that the Hospital Readmissions Reduction Program would save approximately $320 million in FY 2023.
Value-Based Incentive Payments under the Hospital VBP Program	We estimate that there would be no net financial impact to the Hospital VBP Program for the FY 2023 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS-DRG payment amount reductions for that year, as estimated by the Secretary. We are finalizing our proposals which will result in hospitals not receiving a Total Performance Score (TPS) for FY 2023. The estimated amount of base operating MS-DRG payment amount reductions for the FY 2023 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2023 discharges is approximately $1.8 billion.
Changes to the HAC Reduction Program	For the FY 2023 program year, we are finalizing our proposal to suppress all six measures in the HAC Reduction Program. We are not finalizing our proposal to not calculate or report CMS PSI 90 measure results for the FY 2023 HAC Reduction Program. Although we will not use the calculated scores for the CMS PSI 90 measure

Provision Description	Description of Costs, Transfers, Savings, and Benefits
	results to implement the HAC Reduction Program for the program year we will still calculate and report CMS PSI 90 that is displayed on the main pages of the Care Compare tool hosted by HHS after confidentially reporting these results to hospitals via CMS PSI 90 specific HSRs and a 30-day preview period for the NHSN CDC HAI measures. Accordingly, for the FY 2023 HAC Reduction Program, no hospital would receive a payment reduction. As a result, for the FY 2023 program year, we anticipate reductions to the Medicare trust fund that is otherwise estimated at approximately $350 million.
Changes to the Hospital IQR Program	Across 3,150 IPPS hospitals, we estimate that our finalized changes for the Hospital IQR Program in this final rule would result in a total information collection burden increase of 746,300 hours associated with our finalized policies, and updated burden estimates and a total cost increase of approximately $23,437,906 across a 4-year period from the CY 2023 reporting period/FY 2025 payment determination through the CY 2026 reporting period/FY 2028 payment determination.
Changes to the Medicare Promoting Interoperability Program	Across 4,500 eligible hospitals and CAHs, we estimate that our finalized changes for the Medicare Promoting Interoperability Program in this final rule would result in a total information collection burden increase of 5,513 hours associated with our finalized policies, and updated burden estimates and a total cost increase of approximately $233,730 across a 2-year period from the CY 2023 EHR reporting period through the CY 2024 EHR reporting period.
Condition of Participation (CoP) Requirements for Hospitals and CAHs to Continue Reporting Data for COVID-19 and Influenza After the PHE ends as Determined by the Secretary	As detailed in section XII.B.10. of the preamble of this final rule (Collection of Information requirements), we estimate that our changes to the CoPs, which would require hospitals and CAHs to comply with continued COVID-19-related reporting provisions, will result in an estimated burden increase of 483,600 hours based on weekly reporting (52 weeks per year) of the required information by approximately 6,200 hospitals and CAHs and at an average response time of 1.5 hours for a registered nurse with an average hourly salary of $79. This would result in an estimated total of $38,204,400 for weekly reporting (or approximately $6,162 per facility).

[1]For the purpose of modeling the estimated FY 2023 payment adjustment factors that account for the suppression of the pneumonia readmission measure for this final rule, we used the data from the FY 2022 Hospital Readmissions Reduction Program for the five non-suppressed measures (that is, AMI, HF, COPD, THA/TKA, and CABG).

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Act sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these ''subsection (d) hospitals.'' Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for a new additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. In general, to qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment. In addition, certain transformative new devices and certain antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway by demonstrating that, absent an add-on payment, they would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments and, beginning in FY 2023 for IHS and Tribal hospitals and hospitals located in Puerto Rico, the new supplemental payment.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

Under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through FY 2022. For discharges occurring on or after October 1, 2007, but before October 1, 2022, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years). As section 50205 of the Bipartisan Budget Act extended the MDH program through FY 2022 only, for FY 2023, beginning on October 1, 2022, the MDH program will no longer be in effect absent a change in law. Because the MDH program is not authorized by statute beyond September 30, 2022, beginning October 1, 2022, all hospitals that previously qualified for MDH status under section 1886(d)(5)(G) of the Act will no longer have MDH status and will be paid based on the IPPS Federal rate.

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care

institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, effective for LTCH's cost reporting periods beginning in FY 2016 cost reporting period, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS.

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413.

C. Summary of Provisions of Recent Legislation Implemented in This Final Rule

1. The Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10)

Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA, Pub. L. 114–10) specifies a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. These adjustments follow the recoupment adjustment to the standardized amounts under section 1886(d) of the Act based upon the Secretary's estimates for discharges occurring from FYs 2014 through 2017 to fully offset $11 billion, in accordance with section 631 of the ATRA. The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.

D. Issuance of Proposed Rulemaking

In the FY 2023 IPPS/LTCH PPS proposed rule appearing in the May 10, 2022 **Federal Register** (87 FR 28108), we set forth proposed payment and policy changes to the Medicare IPPS for FY 2023 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2023.

The following is a general summary of the changes that we proposed to make.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of the proposed rule, we include the following:

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2023.
- Proposed adjustment to the standardized amounts under section 1886(d) of the Act for FY 2023 in accordance with the amendments made to section 7(b)(1)(B) of Public Law 110–90 by section 414 of the MACRA.
- Proposed recalibration of the MS–DRG relative weights, including a proposed 10-percent cap on decreases in an MS–DRG relative weight from one fiscal year to the next.
- A discussion of the proposed FY 2023 status of new technologies approved for add-on payments for FY 2022, a presentation of our evaluation and analysis of the FY 2023 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by Pub. L. 108–173, obtained in a town hall meeting) for applications not submitted under an alternative pathway, and a discussion of the proposed status of FY 2023 new technology applicants under the alternative pathways for certain medical devices and certain antimicrobial products.
- A proposal to use National Drug Codes (NDCs) to identify cases involving use of therapeutic agents approved for new technology add-on payments.
- A proposal to publicly post online future applications for new technology add-on payments. Specifically, beginning with the FY 2024 application cycle, we proposed to post online the completed application forms and certain related materials and updated application information submitted subsequent to the initial application submission for new technology add-on payments, with the exception of certain cost and volume information and certain additional materials (as discussed more fully in section II.F.9. of the proposed rule), no later than the issuance of the proposed rule.

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble of the proposed rule, we proposed to make revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but were not limited to, the following:

- The proposed FY 2023 wage index update using wage data from cost reporting periods beginning in FY 2019.
- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for FY 2023 based on the 2019 Occupational Mix Survey.
- Proposed application of the rural, imputed and frontier State floors, and continuation of the low wage index hospital policy.
- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.
- Proposed adjustment to the wage index for acute care hospitals for FY 2023 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.
- Proposed permanent cap on annual wage index decreases.
- Proposed labor-related share for the proposed FY 2023 wage index.

3. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section V. of the preamble of the proposed rule, we discuss proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed inpatient hospital update for FY 2023.
- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- Proposed payment adjustment for low-volume hospitals for FY 2023 and subsequent years.
- The statutorily required IME adjustment factor for FY 2023.
- Proposed changes to the methodologies for determining Medicare DSH payments and the additional payments for uncompensated care.
- Proposed new supplemental payment for IHS/Tribal and Puerto Rico hospitals.
- Proposed revisions to the regulations regarding the counting of days associated with section 1115 demonstrations in the Medicaid fraction.
- Discussion of statutory expiration of the MDH program at the end of FY 2022.
- Proposed requirements for payment adjustments under the Hospital Readmissions Reduction Program for FY 2023.
- The provision of estimated and newly established performance standards for the calculation of value-based incentive payments, as well as a proposal to suppress multiple measures and provide net-neutral payment adjustments under the Hospital Value-Based Purchasing Program.
- Proposed requirements for payment adjustments to hospitals under the HAC Reduction Program for FY 2023.
- Discussion of and proposed changes relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2023.
- Proposed GME payment change in response to *Milton S. Hershey Medical Center et al* v. *Becerra* litigation.
- Proposed nursing and allied health education program Medicare Advantage (MA) add-on rates and direct GME MA percent reductions for CYs 2020 and 2021.
- Proposal to allow Medicare GME affiliation agreements within certain rural track full-time equivalent limitations.
- Proposed payment adjustment for certain clinical trial and expanded access use immunotherapy cases.

4. Proposed FY 2023 Policy Governing the IPPS for Capital-Related Costs

In section VI. of the preamble to the proposed rule, we discussed the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2023.

5. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VII. of the preamble of the proposed rule, we discussed the following:

- Proposed changes to payments to certain excluded hospitals for FY 2023.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

6. Proposed Changes to the LTCH PPS

In section VIII. of the preamble of the proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2023.

7. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section IX. of the preamble of the proposed rule, we addressed the following:

- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program.
- Proposed changes to the requirements for the quality reporting program for PPS-exempt cancer hospitals (PCHQR Program).
- For the Long Term Care Hospital Quality Reporting Program (LTCH QRP), we requested information on CMS' overarching principles for measuring healthcare disparities across CMS Quality Programs, including the LTCH QRP. We also requested information on the potential adoption of one future National Healthcare Safety Network (NHSN) digital quality measure (dQM) for the LTCH QRP, as well as quality measure concepts under consideration for future years.
- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

8. Other Proposals and Comment Solicitations Included in the Proposed Rule

Section X. of the preamble to the proposed rule includes the following:

- Proposed codification of policies related to the costs incurred for qualified and non-qualified deferred compensation plans.
- Proposed changes pertaining to the CoPs at 42 CFR part 482 for hospitals, and at 42 CFR part 485, subpart F, for CAHs.
- Solicitation of comments on the appropriateness of payment adjustments that would account for the additional resource costs for hospitals for the procurement of wholly domestically made NIOSH-approved surgical N95 respirators.

9. Other Provisions of the Proposed Rule

Section XI. of the preamble to the proposed rule includes our discussion of the MedPAC Recommendations.

Section XII. of the preamble to the proposed rule included the following:

- A descriptive listing of the public use files associated with the proposed rule.
- The collection of information requirements for entities based on our proposals.
- Information regarding our responses to public comments.

10. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2023 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We proposed to establish the threshold amounts for outlier cases. In addition, in section IV. of the Addendum to the proposed rule, we addressed the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2023 for certain hospitals excluded from the IPPS.

11. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2023 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2023. We are proposed to establish the adjustments for the wage index, labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

12. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact the proposed changes would have on affected acute care hospitals, CAHs, LTCHs and other entities.

13. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provided our recommendations of the appropriate percentage changes for FY 2023 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

14. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2022 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We addressed these recommendations in Appendix B of the proposed rule. For further information relating specifically to the MedPAC March 2022 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's website at *https://www.medpac.gov*.

E. Advancing Health Information Exchange

The Department of Health and Human Services (HHS) has a number of initiatives designed to encourage and support the adoption of interoperable health information technology and to promote nationwide health information exchange to improve health care and patient access to their digital health information.

To further interoperability in post-acute care settings, CMS and the Office of the National Coordinator for Health Information Technology (ONC) participate in the Post-Acute Care Interoperability Workgroup (PACIO) to facilitate collaboration with industry stakeholders to develop Health Level Seven International® (HL7) Fast Healthcare Interoperability Resources® (FHIR) standards. These standards could support the exchange and reuse of patient assessment data derived from the post-acute care (PAC) setting assessment tools, such as Minimum Data Set (MDS), Inpatient Rehabilitation Facility-Patient Assessment Instrument (IRF–PAI), Long Term Care Hospital (LTCH) Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS), Outcome and Assessment Information Set (OASIS), and other sources.[3] [4] The PACIO Project has focused on HL7 FHIR implementation guides for functional status, cognitive status and new use cases on advance directives, re-assessment timepoints, and Speech, Language, Swallowing Cognitive communications and Hearing (SPLASCH).[5] We encourage PAC provider and health information technology (IT) vendor participation as the efforts advance. The CMS Data Element Library (DEL) continues to be updated and serves as a resource for PAC assessment data elements and their associated mappings to health IT standards, such as Logical Observation Identifiers Names and Codes (LOINC) and Systematized Nomenclature of Medicine Clinical Terms (SNOMED).[6] The DEL furthers CMS' goal of data standardization and interoperability. Standards in the DEL can be referenced on the CMS website (*https://del.cms.gov/DELWeb/pubHome*) and in the ONC Interoperability Standards Advisory (ISA). The 2022 ISA is available at *https://www.healthit.gov/isa/sites/isa/files/inline-files/2022-ISA-Reference-Edition.pdf*.

The 21st Century Cures Act (Cures Act) (Pub. L. 114–255, enacted December 13, 2016) required HHS and ONC to take steps further interoperability for providers in settings across the care continuum.[7] Specifically, section 4003(b) of the Cures Act required ONC to take steps to advance interoperability through the development of a a Trusted Exchange Framework and Common Agreement aimed at establishing full network-to-network exchange of health information nationally. On January 18, 2022, ONC announced a significant milestone by releasing the Trusted Exchange Framework [8] and Common Agreement Version 1.[9] The Trusted Exchange Framework is a set of non-binding principles for health information exchange, and the Common Agreement is a contract that advances those principles. The Common Agreement and the incorporated by reference Qualified Health Information Network Technical Framework Version 1 establish the technical infrastructure

[9] Common Agreement for Nationwide Health Information Interoperability Version 1 (Jan. 2022). Available at: *https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf*.

model and governing approach for different health information networks and their users to securely share clinical information with each other, all under commonly agreed to terms. The technical and policy architecture of how exchange occurs under the Common Agreement follows a network-of-networks structure, which allows for connections at different levels and is inclusive of many different types of entities at those different levels, such as health information networks, healthcare practices, hospitals, public health agencies, and Individual Access Services (IAS) Providers.[10] For more information, we refer readers to *https://www.healthit.gov/topic/interoperability/trusted-exchange-framework-and-common-agreement*.

We invite providers to learn more about these important developments and how they are likely to affect LTCHs.

Comment: A commenter expressed support for efforts across HHS to advance health information technology exchange and encouraged use of a standard set of data by providers and health IT vendors, including efforts through the PACIO project. The commenter also noted a recent National Academies report describing technology barriers for PAC settings due to not being eligible for previous incentives to purchase technology certified under the ONC Health IT Certification Program. The commenter supported recommendations in the report for HHS to pursue financial incentives for post-acute care settings to adopt certified health information technology in order to enable health information exchange.

Response: We will take this comment into consideration as we coordinate with Federal partners, including ONC, on interoperability initiatives, and to inform future rulemaking.

F. Use of FY 2021 Data and Methodology Modifications for the FY 2023 IPPS and LTCH PPS Ratesetting

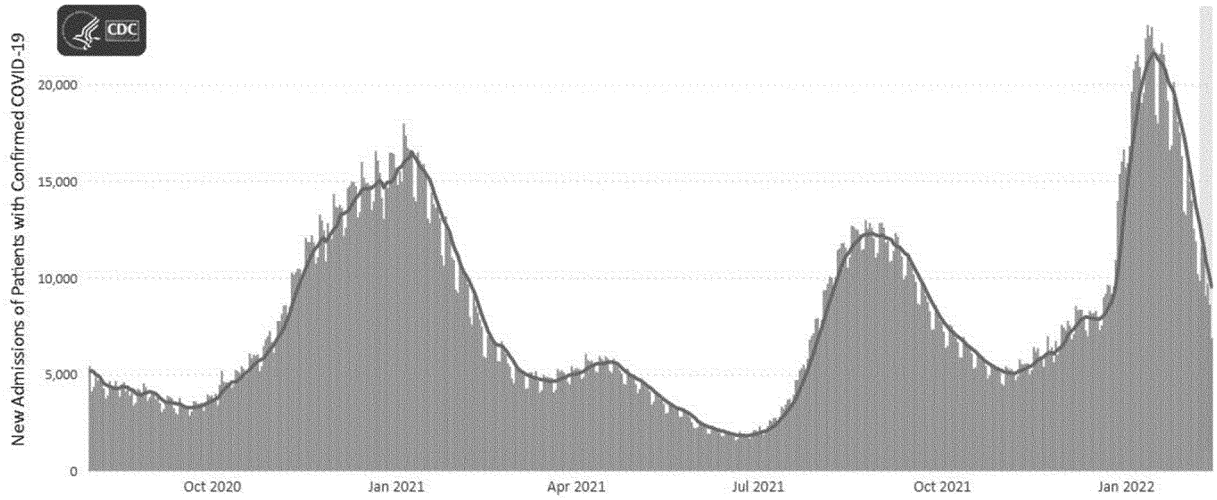
We primarily use two data sources in the IPPS and LTCH PPS ratesetting: claims data and cost report data. The claims data source is the MedPAR file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital bills for discharges in a fiscal year. The cost report data source is the Medicare hospital cost report data files from the most recent quarterly Healthcare Cost Report Information System (HCRIS) release. Our goal is always to use the best available data overall for ratesetting. Ordinarily, the best available MedPAR data is the most recent MedPAR file that contains claims from discharges for the fiscal year that is 2 years prior to the fiscal year that is the subject of the rulemaking. Ordinarily, the best available cost report data is based on the cost reports beginning 3 fiscal years prior to the fiscal year that is the subject of the rulemaking. However, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44789 through 44793), as discussed in more detail below, we finalized our proposal to use FY 2019 data for the FY 2022 ratesetting for circumstances where the FY 2020 data (the most recently available data at the time of rulemaking) was significantly impacted by the COVID–19 PHE.

As we discussed in the FY 2022 IPPS/LTCH PPS final rule, the FY 2020 MedPAR claims file and the FY 2019 HCRIS dataset both contained data that was significantly impacted by the COVID–19 PHE, primarily in that the utilization of services at IPPS hospitals and LTCHs was generally markedly different for certain types of services in FY 2020 than would have been expected in the absence of the PHE. However, the most recent vaccination and hospitalization data from the CDC at the time of development of that rule supported our belief at the time that the risk of COVID–19 in FY 2022 would be significantly lower than the risk of COVID–19 in FY 2020 and there would be fewer COVID–19 hospitalizations for Medicare beneficiaries in FY 2022 than there were in FY 2020. Therefore, we finalized our proposal to use FY 2019 data for the FY 2022 ratesetting for circumstances where the FY 2020 data was significantly impacted by the COVID–19 PHE, based on the belief that FY 2019 data from before the COVID–19 PHE would be a better overall approximation of the FY 2022 inpatient experience at both IPPS hospitals and LTCHs. For example, we used the FY 2019 MedPAR claims data for purposes where we ordinarily would have used the FY 2020 MedPAR claims data. We also used cost report data from the FY 2018 HCRIS file for purposes where we ordinarily would have used the FY 2019 HCRIS file (since the FY 2019 cost report data from HCRIS contained many cost reports ending in FY 2020 based on each hospital's cost reporting period).

Similar to our analysis of the FY 2020 MedPAR claims file and the FY 2019 HCRIS dataset for the FY 2022 IPPS/LTCH PPS rulemaking, in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28123 through 28125) we discussed that the FY 2021 MedPAR claims file and the FY 2020 HCRIS dataset also both contain data that was significantly impacted by the virus that causes COVID–19, primarily in that the utilization of services at IPPS hospitals and LTCHs was again generally markedly different for certain types of services in FY 2021 than would have been expected in the absence of the virus that causes COVID–19. Specifically, the share of admissions at IPPS hospitals and LTCHs for MS–DRGs and MS–LTC–DRGs associated with the treatment of COVID–19 continued to remain significantly higher than levels prior to the COVID–19 PHE. For example, in FY 2019, the share of IPPS cases and LTCH PPS standard Federal payment rate cases grouped to MS–DRG and MS–LTC–DRG 177 (Respiratory infections and inflammations with MCC) was approximately 1 percent and 2 percent, respectively. In comparison, in FY 2021, the share of IPPS cases and LTCH PPS standard Federal payment rate cases grouped to MS–DRG 177 was approximately 6 percent and 8 percent, respectively.

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28123 through 28124), we reviewed the most recent data from the CDC on new inpatient hospital admissions of patients with confirmed COVID–19. We presented this CDC graph which illustrates new inpatient hospital admissions of patients with confirmed COVID–19 from August 1, 2020 through February 15, 2022 (*https://www.cdc.gov/coronavirus/2019-ncov/covid-data/covidview/02182022/images/hospitalizations_02182022.jpg?_=35767*, accessed February 22, 2022).

[10] The Common Agreement defines Individual Access Services (IAS) as ''with respect to the Exchange Purposes definition, the services provided utilizing the Connectivity Services, to the extent consistent with Applicable Law, to an Individual with whom the QHIN, Participant, or Subparticipant has a Direct Relationship to satisfy that Individual's ability to access, inspect, or obtain a copy of that Individual's Required Information that is then maintained by or for any QHIN, Participant, or Subparticipant.'' The Common Agreement defines ''IAS Provider'' as: ''Each QHIN, Participant, and Subparticipant that offers Individual Access Services.'' *See* Common Agreement for Nationwide Health Information Interoperability Version 1, at 7 (Jan. 2022), *https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf*.



We stated that the low point of the graph (late June 2021) approximately coincides with the time of the development of the FY 2022 IPPS/LTCH PPS final rule and generally supports, in conjunction with the other factors discussed in that rulemaking (including the most recent vaccination data from the CDC), our assumption in the final rule that the FY 2022 time period would be more similar to the time period prior to the PHE. We stated that the graph also shows that the virus that causes COVID–19 has continued to significantly impact hospitalizations for the time period subsequent to the development of the FY 2022 IPPS/LTCH PPS final rule.

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28124), we also presented information from the CDC on the likelihood of future COVID–19 variants. We noted that the most recent increase in hospitalizations was primarily associated with the Omicron variant of the virus [11] and that the CDC has stated that new variants will continue to emerge. Viruses constantly change through mutation and sometimes these mutations result in a new variant of the virus. The CDC and other public health organizations monitor all variants of the virus that causes COVID–19 in the United States and globally. Scientists monitor all variants but may classify certain ones as variants being monitored, variants of interest, variants of concern and variants of high consequence. Some variants spread more easily and quickly than other variants, which may lead to more cases of COVID–19. Even if a variant causes less severe disease in general, an increase in the overall number of cases could cause an increase in hospitalizations (see *https://www.cdc.gov/coronavirus/2019-ncov/variants/about-variants.html*, accessed February 25, 2022).

Given the effects of the virus that causes COVID–19 in the Medicare FY 2020 data, the Medicare FY 2021 data, and the CDC hospitalization data, coupled with the expectation for future variants, in the proposed rule we stated our belief that it is reasonable to assume that some Medicare beneficiaries will continue to be hospitalized with COVID–19 at IPPS hospitals and LTCHs in FY 2023. Accordingly, we stated that we believe it would be appropriate to use FY 2021 data, specifically the FY 2021 MedPAR claims file and the FY 2020 HCRIS dataset (which contains data from many cost reports ending in FY 2021 based on each hospital's cost reporting period) as the most recent available data during the period of the COVID–19 PHE, for purposes of the FY 2023 IPPS and LTCH PPS ratesetting. However, we also stated our belief that it would be reasonable to assume based on the information available at the time that there will be fewer COVID–19 hospitalizations in FY 2023 than in FY 2021 given the more recent trends in the CDC hospitalization data since the Omicron variant peak in January, 2022. Accordingly, because we anticipated Medicare inpatient hospitalizations for COVID–19 would continue in FY 2023 but at a lower level, we proposed to use FY 2021 data for purposes of the FY 2023 IPPS and LTCH PPS ratesetting but with modifications to our usual ratesetting methodologies to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals and LTCHs as compared to FY 2021.

First, we proposed to modify the calculation of the FY 2023 MS–DRG and MS–LTC–DRG relative weights. We observed that COVID–19 cases were impacting the relative weights as calculated using the FY 2021 MedPAR data for a few COVID–19-related MS–DRGs and MS–LTC–DRGs. As an example, for MS–DRG and MS–LTC–DRG 870 (Septicemia or Severe Sepsis with MV >96 hours), the MS–DRG and MS–LTC–DRG relative weights calculated using the FY 2021 MedPAR data are approximately 9 and 3 percent higher, respectively, compared to their relative weights if calculated excluding COVID–19 cases. Because this MS–DRG contains a mix of COVID–19 cases and non-COVID–19 cases with different average costs, the relative weight for this MS–DRG is dependent on that mix of cases. As stated in the proposed rule, we believed it is reasonable to assume that there would be fewer COVID–19 hospitalizations among Medicare beneficiaries in FY 2023 than there were in FY 2021; however, we also stated that it is not possible to know precisely how COVID–19 hospitalizations in FY 2023 will compare to FY 2021. We stated our belief that averaging the relative weights as calculated with and without the COVID–19 cases reflected in the FY 2021 MedPAR data would reflect a reasonable estimation of the case mix for FY 2023 based on the information available at the time, and more accurately estimate the relative resource use for the cases treated in FY 2023. Therefore, we proposed to calculate the relative weights for FY 2023 by first calculating two sets of weights, one including and one excluding COVID–19 claims, and then averaging the two sets of relative weights to determine the proposed FY 2023 relative weight values. We believed this proposed modification to our relative weight setting methodology would appropriately reduce, but not remove entirely, the effect of COVID–19 cases

[11] *https://www.cdc.gov/coronavirus/2019-ncov/variants/omicron-variant.html.*

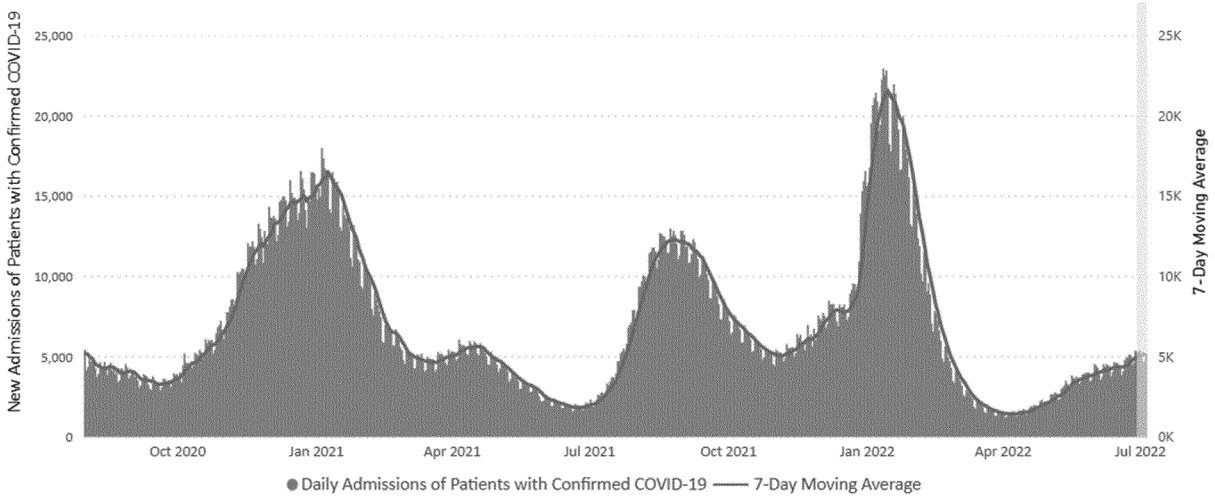
on the relative weight calculations, consistent with our expectation that Medicare inpatient hospitalizations for COVID–19 will continue in FY 2023 at a lower level as compared to FY 2021, and provide a more accurate estimate of relative resource use for FY 2023 than if we were to calculate the proposed relative weights using all applicable cases in the FY 2021 data.

We also proposed to modify our methodologies for determining the FY 2023 outlier fixed-loss amount for IPPS cases and LTCH PPS standard Federal payment rate cases. The methodologies for determining both of these outlier fixed-loss amounts include calculating and applying a charge inflation factor to increase charges from the claim year to the rulemaking year, as well as calculating and applying cost-to-charge ratio (CCR) adjustment factors to adjust CCRs used to make payments in the current year to the rulemaking year. The charge inflation factors calculated using the 2 most recently available years of MedPAR claims data (FY 2020 and FY 2021) that would ordinarily be used for the FY 2023 proposed rule to inflate the charges on the FY 2021 MedPAR claims were abnormally high as compared to recent historical levels prior to the PHE (for example, for the IPPS, approximately 10 percent based on the FY 2020 and FY 2021 MedPAR claims data as compared to approximately 6 percent based on the FY 2018 and FY 2019 MedPAR claims data). Furthermore, the IPPS operating and capital CCR adjustment factors calculated based on the percentage changes in the CCRs from the December 2020 update of the Provider Specific File (PSF) to the December 2021 update of the PSF that would ordinarily be used for the FY 2023 proposed rule to adjust the CCRs from the December 2021 update of the PSF were also abnormally high as compared to recent historical levels prior to the PHE (for example, for the IPPS operating CCR adjustment factor, a factor of approximately 1.03 based on the December 2020 and December 2021 updates to the PSF as compared to a factor of approximately 0.97 based on the March 2019 and March 2020 updates to the PSF). In the proposed rule, we stated our belief that these abnormally high charge inflation and CCR adjustment factors as compared to historical levels were partially due to the high number of COVID–19 cases with higher charges that were treated in IPPS hospitals and LTCHs in FY 2021. We also stated our belief that there will be fewer COVID–19 cases in FY 2023 than in FY 2021 and that therefore, we do not believe it is reasonable to assume charges and CCRs will continue to increase at these abnormally high rates. Consequently, when determining the FY 2023 outlier fixed-loss amounts for IPPS cases and LTCH PPS standard Federal payment rate cases, we proposed to inflate the charges on the FY 2021 MedPAR claims using charge inflation factors computed by comparing the average covered charge per case in the March 2019 MedPAR file of FY 2018 to the average covered charge per case in the March 2020 MedPAR file of FY 2019, which is the last 1-year period prior to the COVID–19 PHE. We also proposed to adjust the CCRs from the December 2021 update of the PSF by comparing the percentage change in the national average case-weighted CCR from the March 2019 update of the PSF to the national average case-weighted CCR from the March 2020 update of the PSF, which is the last 1-year period prior to the COVID–19 PHE. We stated our belief that using the charge inflation factors and CCR adjustment factors derived from data prior to the COVID–19 PHE would provide a more reasonable approximation of the increase in costs that will occur from FY 2021 to FY 2023 because we do not believe the charge inflation that has occurred during the PHE will continue as the number of higher cost COVID–19 cases declines.

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28740 through 28741) we also requested comments on, as an alternative to our proposed approach, the use of the FY 2021 data for purposes of FY 2023 ratesetting without these proposed modifications to our usual methodologies for the calculation of the FY 2023 MS–DRG and MS–LTC–DRG relative weights or the usual methodologies used to determine the FY 2023 outlier fixed-loss amount for IPPS cases and LTCH PPS standard Federal payment rate cases. We noted that the FY 2023 outlier fixed-loss amount would be significantly higher under this alternative approach. In order to illustrate the effect of our proposed modifications on the relative weights and fixed loss amount, we made available supplemental information, including the relative weights and fixed-loss amount calculated without the proposed modifications to our usual methodologies.

The comments we received on our proposal to use FY 2021 data for purposes of the FY 2023 IPPS and LTCH PPS ratesetting were focused on the specific use of FY 2021 data when determining the FY 2023 relative weights or outlier fixed-loss amounts. Therefore, we refer the reader to section II.E. of the preamble of this final rule for our summary and response to comments received on our proposed use of FY 2021 data and our proposed modifications to our usual methodology when determining the FY 2023 IPPS MS–DRG relative weights. We refer the reader to section VIII.B. of the preamble of this final rule for our summary and response to comments received on our proposed use of FY 2021 data and our proposed modifications to our usual methodology when determining the FY 2023 LTCH PPS MS–LTC–DRG relative weights. We refer the reader to section II.A.4. of the addendum to this final rule for our summary and response to comments received on our proposed use of FY 2021 data and our proposed modifications to our usual methodology when determining the FY 2023 outlier fixed-loss amounts for IPPS cases. We refer the reader to section V.D.3. of the Addendum to this final rule for our summary and response to comments received on our proposed use of FY 2021 data and our proposed modifications to our usual methodology when determining the FY 2023 outlier fixed-loss amounts for LTCH PPS standard Federal payment rate cases.

Since the publication of the proposed rule, we have continued to monitor hospitalization data reported by the CDC. This CDC graph illustrates new inpatient hospital admissions of patients with confirmed COVID–19 from August 1, 2020 through July 6, 2022 (*https://www.cdc.gov/coronavirus/2019-ncov/covid-data/covidview/07082022/images/Hospitalizations.png?_=90548*, accessed July 08, 2022).



The graph shows that new COVID–19 hospital admissions reached a low point in early April 2022, however have steadily increased since.

After reviewing the latest CDC hospitalization data, coupled with the expectation for future variants,[12] we continue to believe that it is reasonable to assume that some Medicare beneficiaries will continue to be hospitalized with COVID–19 at IPPS hospitals and LTCHs in FY 2023. We also continue to believe that it would be reasonable to assume based on the information available at this time that there will be fewer COVID–19 hospitalizations in FY 2023 than in FY 2021 given that the current levels of hospitalizations are much lower than the Omicron variant peak in January 2022.

Therefore, after considering the comments received and based on our evaluation of the information available at this time, we are finalizing our proposal to use FY 2021 data for purposes of the FY 2023 IPPS and LTCH PPS ratesetting. (That is, the FY 2021 MedPAR claims file and the FY 2020 HCRIS dataset (which contains data from many cost reports ending in FY 2021 based on each hospital's cost reporting period).) We are also finalizing, as proposed, modifications to our usual methodology for determining the FY 2023 IPPS MS–DRG relative weights and FY 2023 LTCH PPS MS–LTC–DRG relative weights. Specifically, for FY 2023, we calculated the relative weights by first calculating two sets of weights, one including and one excluding COVID–19 claims, and then averaging the two sets of relative weights to determine the final relative weight values. The finalization of our proposal to use FY 2021 data and to modify our methodology for determining the FY 2023 IPPS MS–DRG relative weights is discussed in greater detail in section II.E. of the preamble of this final rule. The finalization of our proposal to use FY 2021 data and to modify our methodology for determining the FY 2023 LTCH PPS MS–LTC–DRG relative weights is discussed in greater detail in section VIII.B. of the preamble of this final rule.

As discussed in section II.A.4. and section V.D.3. of the addendum to this final rule, we received many comments supportive of our proposed modifications to our usual methodologies for determining the FY 2023 IPPS and LTCH PPS outlier fixed-loss amounts. As discussed in these sections, after considering comments received, we are finalizing our proposal to inflate the charges on the FY 2021 MedPAR claims using charge inflation factors computed by comparing the average covered charge per case in the March 2019 MedPAR file of FY 2018 to the average covered charge per case in the March 2020 MedPAR file of FY 2019, which is the last 1-year period prior to the COVID–19 PHE. We are also finalizing our proposal to adjust the CCRs from the March 2021 update of the PSF by comparing the percentage change in the national average case-weighted CCR from the March 2019 update of the PSF to the national average case-weighted CCR from the March 2020 update of the PSF, which is the last 1-year period prior to the COVID–19 PHE.

We also received many comments that suggested other modifications CMS should make to our usual methodologies for determining the FY 2023 IPPS and LTCH PPS outlier fixed-loss amounts. As also discussed in section II.A.4. and section V.D.3. of the addendum to this final rule, after consideration of the comments received, we are modifying our proposed methodologies for establishing the FY 2023 IPPS and LTCH PPS outlier fixed-loss amounts by calculating the FY 2023 IPPS and LTCH PPS outlier fixed-loss amounts as averages of the fixed-loss amounts as calculated including and excluding COVID–19 claims. We believe this adjustment to our proposed methodology will better reflect a reasonable estimation of the case mix for FY 2023 based on the information available at this time and is also consistent with the approach we are finalizing for determining the FY 2023 IPPS MS–DRG and LTCH PPS MS–LTC–DRG relative weights.

In addition, as discussed in section II.A.4. of the Addendum to this final rule, after consideration of comments received, we are also further modifying our proposed methodology for establishing the FY 2023 IPPS outlier fixed-loss amount by including the increases in payments for COVID–19 cases provided by the CARES Act in the calculation of the outlier fixed-loss amount.

II. Changes to Medicare Severity Diagnosis–Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment

[12] *https://www.cdc.gov/coronavirus/2019-ncov/variants/about-variants.html.*

for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. Adoption of the MS–DRGs and MS–DRG Reclassifications

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2022 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR 38010 through 38085, 83 FR 41158 through 41258, 84 FR 42058 through 42165, 85 FR 58445 through 58596, 86 FR 44795 through 44961, respectively).

C. FY 2023 MS–DRG Documentation and Coding Adjustment

1. Background on the Prospective MS–DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Pub. L. 110–90 and the Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA).

In the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189), we adopted the MS–DRG patient classification system for the IPPS, effective October 1, 2007, to better recognize severity of illness in Medicare payment rates for acute care hospitals. The adoption of the MS–DRG system resulted in the expansion of the number of DRGs from 538 in FY 2007 to 745 in FY 2008. By increasing the number of MS–DRGs and more fully taking into account patient severity of illness in Medicare payment rates for acute care hospitals, MS–DRGs encourage hospitals to improve their documentation and coding of patient diagnoses.

In the FY 2008 IPPS final rule with comment period (72 FR 47175 through 47186), we indicated that the adoption of the MS–DRGs had the potential to lead to increases in aggregate payments without a corresponding increase in actual patient severity of illness due to the incentives for additional documentation and coding. In that final rule with comment period, we exercised our authority under section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case-mix. Our actuaries estimated that maintaining budget neutrality required an adjustment of −4.8 percentage points to the national standardized amount. We provided for phasing in this −4.8 percentage point adjustment over 3 years. Specifically, we established prospective documentation and coding adjustments of −1.2 percentage points for FY 2008, −1.8 percentage points for FY 2009, and −1.8 percentage points for FY 2010.

On September 29, 2007, Congress enacted the TMA [Transitional Medical Assistance], Abstinence Education, and QI [Qualifying Individuals] Programs Extension Act of 2007 (Pub. L. 110–90). Section 7(a) of Public Law 110–90 reduced the documentation and coding adjustment made as a result of the MS–DRG system that we adopted in the FY 2008 IPPS final rule with comment period to −0.6 percentage point for FY 2008 and −0.9 percentage point for FY 2009.

As discussed in prior year rulemakings, and most recently in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56780 through 56782), we implemented a series of adjustments required under sections 7(b)(1)(A) and 7(b)(1)(B) of Public Law 110–90, based on a retrospective review of FY 2008 and FY 2009 claims data. We completed these adjustments in FY 2013 but indicated in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53274 through 53275) that delaying full implementation of the adjustment required under section 7(b)(1)(A) of Public Law 110–90 until FY 2013 resulted in payments in FY 2010 through FY 2012 being overstated, and that these overpayments could not be recovered under Public Law 110–90.

In addition, as discussed in prior rulemakings and most recently in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38008 through 38009), section 631 of the American Taxpayer Relief Act of 2012 (ATRA) amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment or adjustments totaling $11 billion by FY 2017. This adjustment represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013.

2. Adjustments Made for FYs 2018, 2019, 2020, 2021, and 2022 as Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the $11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023. In the FY 2017 rulemaking, we indicated that we would address the adjustments for FY 2018 and later fiscal years in future rulemaking. Section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which was enacted on December 13, 2016, amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from a 0.5 percentage point positive adjustment to a 0.4588 percentage point positive adjustment. As we discussed in the FY 2018 rulemaking, we believe the directive under section 15005 of Public Law 114–255 is clear. Therefore, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38009) for FY 2018, we implemented the required +0.4588 percentage point adjustment to the standardized amount. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41157), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42057), the FY 2021 IPPS/LTCH PPS final rule (85 FR 58444 and 58445), and the FY 2022 IPPS/LTCH PPS final rule (86 FR 44794 and 44795), consistent with the requirements of section 414 of the MACRA, we implemented 0.5 percentage point positive adjustments to the standardized amount for FY 2019, FY 2020, FY 2021, and FY 2022, respectively. We indicated the FY 2018, FY 2019, FY 2020, FY 2021, and FY 2022 adjustments were permanent adjustments to payment rates. We also

stated that we plan to propose a future adjustment required under section 414 of the MACRA for FY 2023 in future rulemaking.

3. Adjustment for FY 2023

Consistent with the requirements of section 414 of the MACRA, we proposed to implement a 0.5 percentage point positive adjustment to the standardized amount for FY 2023. We stated that this would constitute a permanent adjustment to payment rates. We also stated that this proposed 0.5 percentage point positive adjustment is the final adjustment prescribed by section 414 of the MACRA. Along with the 0.4588 percentage point positive adjustment for FY 2018, and the 0.5 percentage point positive adjustments for FY 2019, FY 2020, FY 2021, and FY 2022, this final adjustment will result in combined positive adjustment of 2.9588 percentage points (or the sum of the adjustments for FYs 2018 through 2023) to the standardized amount.

We received no public comments on the proposed adjustment for FY 2023 and are finalizing our proposal to implement a 0.5 percentage point positive adjustment to the standardized amount for FY 2023. As indicated, this finalized 0.5 percentage point positive adjustment for FY 2023 is the final adjustment prescribed by section 414 of the MACRA.

D. Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for FY 2023 MS–DRG Updates

a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Revision (ICD–10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system instead of the ICD–9–CM coding system, which was used through September 30, 2015. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS–DRGs to ICD–10, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56789).

b. Basis for FY 2023 MS–DRG Updates

Given the need for more time to carefully evaluate requests and propose updates, as discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38010), we changed the deadline to request updates to the MS–DRGs to November 1 of each year, which provided an additional five weeks for the data analysis and review process. In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32472), we stated that with the continued increase in the number and complexity of the requested changes to the MS–DRG classifications since the adoption of ICD–10 MS–DRGs, and to consider as many requests as possible, more time is needed to carefully evaluate the requested changes, analyze claims data, and consider any proposed updates. We further stated we were changing the deadline to request changes to the MS–DRGs to October 20 of each year to allow for additional time for the review and consideration of any proposed updates. However, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58445), due to the unique circumstances for the FY 2021 IPPS/LTCH PPS final rule for which we waived the delayed effective date, we maintained the deadline of November 1, 2020 for FY 2022 MS–DRG classification change requests. We also noted that we expected to reconsider a change in the deadline beginning with comments and suggestions submitted for FY 2023. In the FY 2022 IPPS/LTCH PPS proposed rule, we stated that while we continue to believe that a change in the deadline from November 1 to October 20 would provide hospitals sufficient time to assess potential impacts and inform future MS–DRG recommendations, we were maintaining the deadline of November 1 for FY 2023 MS–DRG classification change requests. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44795), we received public comments expressing support for a future change to the deadline for requesting updates to the MS–DRG classifications from November 1 to October 20, and we noted in response that we may consider any changes to the deadline or frequency for submissions of requests for MS–DRG classification changes for future fiscal years. Beginning with FY 2024 MS–DRG classification change requests, we are changing the deadline to request changes to the MS–DRGs to October 20 of each year to allow for additional time for the review and consideration of any proposed updates. As previously discussed, we continue to believe such a change would allow hospitals sufficient time to assess potential impacts and inform future MS–DRG recommendations, while also providing CMS the additional time needed for evaluation of the requested changes, analysis of claims data, and consideration of any proposed updates.

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule, we are also changing the process for submitting requested updates to the MS–DRG classifications, beginning with the FY 2024 MS–DRG classification change requests. CMS is in the process of implementing a new electronic application intake system, Medicare Electronic Application Request Information System™ (MEARIS™), for users to submit new technology add-on payment applications, requests for ICD–10–PCS procedure codes, and other requests. To simplify and streamline the process for submission of standardized applications and requests that inform payment policy under the IPPS, we will also be using this new system for submission of MS–DRG classification change requests. We believe that submission of MS–DRG reclassification requests through MEARIS™ will not only help CMS to track such requests, but it will also create efficiencies for requestors when compared to the previous submission process.

Accordingly, beginning with the FY 2024 MS–DRG classification change requests, CMS will only accept such requests submitted via MEARIS,™ and will no longer consider any such requests that are sent via email. We note that, beginning April 5, 2022, MEARIS™ became available for users to begin gaining familiarity with this new approach for submitting MS–DRG classification change requests. MEARIS,™ including the mechanism for submitting MS–DRG classification change requests, can be accessed at: *https://mearis.cms.gov*. As stated in the proposed rule, within MEARIS™ we have built in several resources to support users, including a ''Resources'' section (available at *https://mearis.cms.gov/public/resources*) and technical support available under ''Useful Links'' at the bottom of the MEARIS™ site. Questions regarding the MEARIS™ system can be submitted to CMS using the form available under ''Contact'' at: *https://mearis.cms.gov/public/resources?app=msdrg*.

We also note that, as discussed in section II.D.17. of the preamble of the proposed rule and this final rule, effective January 5, 2022, MEARIS™ was made available for users to begin gaining familiarity with a new approach

and process to submit ICD–10–PCS procedure code requests.

As noted previously, interested parties had to submit MS–DRG classification change requests for FY 2023 by November 1, 2021. As we have discussed in prior rulemaking, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD–10, some types of requested changes to the MS–DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change. We note in the discussion that follows those topics for which further research and analysis are required, and which we will continue to consider in connection with future rulemaking. Interested parties should submit any comments and suggestions for FY 2024 by October 20, 2022 via the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™) at: *https://mearis.cms.gov/public/home*.

We provided a test version of the ICD–10 MS–DRG GROUPER Software, Version 40, in connection with the FY 2023 IPPS/LTCH PPS proposed rule so that the public can better analyze and understand the impact of the proposals included in the proposed rule. We noted that this test software reflected the proposed GROUPER logic for FY 2023. Therefore, it included the new diagnosis and procedure codes that are effective for FY 2023 as reflected in Table 6A.—New Diagnosis Codes—FY 2023 and Table 6B.—New Procedure Codes—FY 2023 that were associated with the proposed rule and did not include the diagnosis codes that are invalid beginning in FY 2023 as reflected in Table 6C.—Invalid Diagnosis Codes—FY 2023 associated with the proposed rule. We noted that at the time of the development of the proposed rule there were no procedure codes designated as invalid for FY 2023, and therefore, there was no Table 6D—Invalid Procedure Codes—FY 2023 associated with the proposed rule. Those tables were not published in the Addendum to the proposed rule, but are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to the proposed rule. Because the diagnosis codes no longer valid for FY 2023 are not reflected in the test software, we made available a supplemental file in Table 6P.1a that includes the mapped Version 40 FY 2023 ICD–10–CM codes and the deleted Version 39.1 FY 2022 ICD–10–CM codes that should be used for testing purposes with users' available claims data. Therefore, users had access to the test software allowing them to build case examples that reflect the proposals that were included in the proposed rule. In addition, users were able to view the draft version of the ICD–10 MS–DRG Definitions Manual, Version 40.

The test version of the ICD–10 MS–DRG GROUPER Software, Version 40, the draft version of the ICD–10 MS–DRG Definitions Manual, Version 40, and the supplemental mapping files in Table 6P.1a of the FY 2022 and FY 2023 ICD–10–CM diagnosis codes are available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

Following are the changes that we proposed to the MS–DRGs for FY 2023. We invited public comments on each of the MS–DRG classification proposed changes, as well as our proposals to maintain certain existing MS–DRG classifications discussed in the proposed rule. In some cases, we proposed changes to the MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. In other cases, we proposed to maintain the existing MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. As discussed in section I.F of the preamble of the proposed rule, we proposed to use the FY 2021 MedPAR data for purposes of this FY 2023 IPPS rulemaking, with certain proposed modifications to the relative weight and outlier methodologies. For the FY 2023 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2021 update of the FY 2021 MedPAR file, which contains hospital bills received from October 1, 2020 through September 30, 2021, for discharges occurring through September 30, 2021. In our discussion of the proposed MS–DRG reclassification changes, we referred to these claims data as the ''September 2021 update of the FY 2021 MedPAR file.''

In this FY 2023 IPPS/LTCH PPS final rule, we summarize the public comments we received on our proposals, present our responses, and state our final policies. For this FY 2023 final rule, we generally did not perform any further MS–DRG analysis of claims data. Therefore, the MS–DRG analysis is based on ICD–10 claims data from the September 2021 update of the FY 2021 MedPAR file, as set forth in the proposed rule, except as otherwise noted.

As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on the judgment of our clinical advisors to determine whether patients are clinically distinct or similar to other patients represented in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58448), we finalized our proposal to expand our existing criteria to create a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS–DRG. Specifically, we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. We stated our belief that applying these criteria to the NonCC subgroup would better reflect resource stratification as well as promote stability in the relative weights by avoiding low volume counts for the NonCC level MS–DRGs. We noted that in our analysis of MS–DRG classification requests for FY 2021 that were received by November 1, 2019, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups. We also noted that the application of the NonCC subgroup criteria going forward may result in modifications to certain MS–DRGs that are currently split into three severity levels and result in MS–DRGs that are split into two severity levels. We stated that any proposed modifications to the MS–DRGs would be addressed in future rulemaking consistent with our annual process and reflected in Table 5—Proposed List of Medicare Severity Diagnosis Related Groups (MS–DRGs),

Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay for the applicable fiscal year.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798), we finalized a delay in applying this technical criterion to existing MS–DRGs until FY 2023 or future rulemaking, in light of the PHE. Commenters recommended that a complete analysis of the MS–DRG changes to be proposed for future rulemaking in connection with the expanded three-way severity split criteria be conducted and made available to enable the public an opportunity to review and consider the redistribution of cases, the impact to the relative weights, payment rates, and hospital case mix to allow meaningful comment prior to implementation.

In our analysis of the MS–DRG classification requests for FY 2023 that we received by November 1, 2021, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups, as described in the following table.

Criteria Number	**Three-Way Split** 123 (MCC vs CC vs NonCC)	**Two-Way Split** 1_23 MCC vs (CC+NonCC)	**Two-Way Split** 12_3 (MCC+CC) vs NonCC
1. At least 500 cases in the MCC/CC/NonCC group	500+ cases for MCC group; and 500+ cases for CC group; and 500+ cases for NonCC group	500+ cases for MCC group; and 500+ cases for (CC+NonCC) group	500+ cases for (MCC+CC) group; and 500+ cases for NonCC group
2. At least 5% of the patients are in the MCC/CC/NonCC group	5%+ cases for MCC group; and 5%+ cases for CC group; and 5%+ cases for NonCC group	5%+ cases for MCC group; and 5%+ cases for (CC+NonCC) group	5%+ cases for (MCC+CC) group; and 5%+ cases for NonCC group
3. There is at least a 20% difference in average cost between subgroups	20%+ difference in average cost between MCC group and CC group; and 20%+ difference in average cost between CC group and NonCC group	20%+ difference in average cost between MCC group and (CC+NonCC) group	20%+ difference in average cost between (MCC+ CC) group and NonCC group
4. There is at least a $2,000 difference in average cost between subgroups	$2,000+ difference in average cost between MCC group and CC group; and $2,000+ difference in average cost between CC group and NonCC group	$2,000+ difference in average cost between MCC group and (CC+ NonCC) group	$2,000+ difference in average cost between (MCC+ CC) group and NonCC group
5. The R2 of the split groups is greater than or equal to 3	R2 > 3.0 for the three way split within the base MS-DRG	R2 > 3.0 for the two way 1_23 split within the base MS-DRG	R2 > 3.0 for the two way 12_3 split within the base MS-DRG

In general, once the decision has been made to propose to make further modifications to the MS–DRGs as described previously, such as creating a new base MS–DRG, or in our evaluation of a specific MS–DRG classification request to split (or subdivide) an existing base MS–DRG into severity levels, all five criteria must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. We note that in our analysis of requests to create a new MS–DRG, we typically evaluate the most recent year of MedPAR claims data available. For example, in the FY 2023 IPPS/LTCH PPS proposed rule we stated our MS–DRG analysis was based on ICD–10 claims data from the September 2021 update of the FY 2021 MedPAR file. However, in our evaluation of requests to split an existing base MS–DRG into severity levels, as noted in prior rulemaking (80 FR 49368), we typically analyze the most recent 2 years of data. This analysis includes 2 years of MedPAR claims data to compare the data results from 1 year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year's data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported. The first step in our process of evaluating if the creation of a new CC subgroup within a base MS–DRG is warranted is to determine if all the criteria are satisfied for a three-way split. If the criteria fail, the next step is to determine if the criteria are satisfied for a two-way split. If the criteria for both of the two-way splits fail, then a split (or CC subgroup) would generally not be warranted for that base MS–DRG. If the three-way split fails on any one of the five criteria and all five criteria for both two-way splits (1_23 and 12_3) are met, we would apply the two-way split with the highest R2 value. We note that if the request to split (or subdivide) an existing base MS–DRG into severity levels specifies the request is for either one of the two-way splits (1_23 or 12_3), in response to the specific request, we will evaluate the criteria for both of the two-way splits,

however we do not also evaluate the criteria for a three-way split.

In the FY 2023 IPPS/LTCH PPS proposed rule, we stated that using the September 2021 update of the FY 2021 MedPAR file, we analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2023. We noted that findings from our analysis indicated that approximately 41 MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. Specifically, we found that applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would result in the deletion of 123 MS–DRGs (41 MS–DRGs × 3 severity levels = 123) and the creation of 75 new MS–DRGs. We further noted that these updates would also involve a redistribution of cases, which would impact the relative weights, and, thus, the payment rates proposed for particular types of cases. We referred the reader to Table 6P.1b associated with the proposed rule for the list of the 123 MS–DRGs that would be subject to deletion and the list of the 75 new MS–DRGs that would be proposed for creation for FY 2023 under this policy if the NonCC subgroup criteria were applied.

We stated in the proposed rule that in light of the ongoing public health emergency (PHE), we continue to have concerns about the impact of implementing this volume of MS–DRG changes at this time, and believe it may be appropriate to continue to delay application of the NonCC subgroup criteria to existing MS–DRGs to maintain more stability in the current MS–DRG structure and until such time additional analyses can be performed to assess impacts, as discussed in response to comments in the FY 2022 IPPS/LTCH PPS final rule. Therefore, we proposed to delay application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split for FY 2023, and to instead maintain the current structure of the 41 MS–DRGs that currently have a three-way severity level split (total of 123 MS–DRGs) that would otherwise be subject to these criteria. We stated that we intend to address the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split in future rulemaking.

Comment: Commenters expressed overwhelming support for our proposal to delay application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split for FY 2023 and to maintain the current structure of the MS–DRGs. A few commenters who agreed with the proposal to delay the application of the NonCC subgroup criteria also requested that CMS provide interested parties with an opportunity to review and comment on impacts to the relative weights before a proposal is finalized. The commenters stated it would be helpful if CMS made claims data available, including volumes by MS–DRG, that support the proposal to reduce the 123 MS–DRGs.

Response: We thank the commenters for their support. In response to the commenters who requested the opportunity to review and comment on impacts to the relative weights before a proposal is finalized, we intend to provide a comprehensive analysis in future rulemaking based on the comments and feedback we have received. We are providing the claims data from the September 2021 update of the FY 2021 MedPAR file that was reviewed for FY 2023 in our analyses of how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would have potentially affected the MS–DRG structure beginning in FY 2023. We refer the reader to Table 6P.1b associated with this final rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*.

Comment: A commenter who strongly agreed with the proposal to delay the application of the NonCC subgroup criteria stated that in addition to providing a detailed explanation and impact files in the future, that CMS should consider clarifying and addressing the following issues: why the list of MS–DRGs that were proposed to be removed in FY 2022 is not the same list of MS–DRGs proposed to be removed for FY 2023, why the list of MS–DRGs that were proposed to become a single, base MS–DRG for FY 2022 now appear to meet the criteria for a three-way severity level split for FY 2023, and why MS–DRGs proposed to maintain a three-way severity level split for FY 2022 now appear to meet the criteria for a two-way or three-way severity level split for FY 2023. This commenter also stated that the MS–DRGs displayed in Table 6P.1b associated with the proposed rule include a list of MS–DRGs that would be subject to deletion and a list of MS–DRGs that would be proposed for creation with XXX for the numbers. According to the commenter, many of the listed MS–DRGs have the same narrative description, however, it appears they would obtain a new MS–DRG number. The commenter questioned why MS–DRGs with the same description would have new MS–DRG numbers assigned. This commenter also suggested that CMS consider patient case-mix with regard to volumes, and stated Medicare would not have the volume for the obstetric related MS–DRGs. The commenter requested that CMS also examine the impact of maternal health quality initiatives and maternity hospital designation in connection with the solicitation for comments on low volume MS–DRGs. Lastly, the commenter recommended that CMS utilize two years of good data to examine the impact of the proposed redistribution in future analyses and determine if the proposed MS–DRG changes and associated relative weights appropriately reflect resource consumption.

Response: We appreciate the commenter's feedback. We acknowledge that the list of MS–DRGs identified as potentially subject to removal for FY 2022 differs from the list of MS–DRGs identified as potentially subject to removal and provided for FY 2023 in connection with the NonCC subgroup criteria discussion. We also acknowledge that the list of MS–DRGs identified as potentially subject to creation for FY 2022 differs from the list of MS–DRGs identified as potentially subject to removal and provided for FY 2023 in connection with the NonCC subgroup criteria discussion. The lists differ as a result of the claims data that was analyzed for our MS–DRG analysis and rulemaking each fiscal year. We provided the results of both the FY 2019 and FY 2020 MedPAR claims data as displayed in Table 6P.11 in association with the FY 2022 IPPS/LTCH PPS final rule (available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*).

By comparison, for FY 2023, consistent with our finalized policy to use the FY 2021 MedPAR data for purposes of this FY 2023 rulemaking, we have provided the FY 2021 MedPAR claims data for the listed MS–DRGs in Table 6P.1b in association with this final rule, as noted earlier in this section. Because there is variation in the claims data reported from year to year, it is expected that there may be fluctuations in the data that could affect the list of MS–DRGs potentially subject to change in connection with the application of the NonCC subgroup criteria for a particular fiscal year. However, we believe that reliability and stability of the data is an important consideration with respect to the

application of the NonCC subgroup criteria and will give careful consideration to the number of years of data to analyze in connection with any future proposed policy changes as well as the impacts on relative weights, as we continue to assess all the comments and feedback we have received, particularly in light of the ongoing public health emergency. We also take this opportunity to note that the listed MS–DRGs as displayed in the tables (for both FY 2022 and FY 2023) are for illustrative purposes as the intent was to show the MS–DRGs that would potentially be subject to deletion and the MS–DRGs that would potentially be subject to creation if the NonCC subgroup criteria were to be applied for the applicable fiscal year. Because we did not propose the application of these criteria to existing MS–DRGs with a three-way severity level split for either FY 2022 or FY 2023, and we have not yet completed the comprehensive impact analysis of any such future proposed changes, as previously discussed, we are clarifying that both the MS–DRG numbers and MS–DRG titles that may eventually be subject to change in connection with a future proposal to apply the NonCC subgroup criteria may, in the interim, be subject to further modifications as a result of our annual review of the MS–DRG classifications. As such, any future proposed MS–DRG changes will be considered in connection with the analysis that is performed for application of the MCC, CC and NonCC subgroup criteria to the MS–DRGs that are in effect at that time.

In response to the commenter's question regarding why new MS–DRG numbers would be considered, we note that new MS–DRG numbers are preferred because we anticipate that individuals, payers, and organizations conducting analysis would need to be aware if proposed changes to base DRG concepts are made to allow them time to adjust their programs, analyses, or queries that may have hard coded the DRG numbers. Other agencies that utilize MS–DRGs may perform minimal updates to their relative weights, quality risk adjustment or exclusion criteria and only focus on new MS–DRGs, thereby potentially creating additional operational or system challenges if an existing MS–DRG number were to be reused. To minimize confusion for those who rely on MS–DRG concepts year to year, and avoid unintended consequences from the reuse of an existing DRG number for a different concept, we believe it is appropriate to consider revisions to both the MS–DRG number and corresponding description.

Comment: Other commenters requested CMS consider continuing the delay beyond the period of the public health emergency (PHE). The commenters indicated that hospital claims and cost report data impacted by the COVID–19 pandemic should not be used as the basis of MS–DRG consolidation since utilization may be artificially low during the PHE.

Response: We thank the commenters for their feedback. As stated earlier in this section, we are giving careful consideration to all the recommendations and suggestions we have received in connection with the NonCC subgroup criteria discussion.

Comment: Another commenter expressed concern with regard to how the NonCC subgroup criteria are to be applied. The commenter stated they understood the policy to mean that the NonCC subgroup criteria would only be applied to new requests for MS–DRG splits, not to existing MS–DRGs. The commenter also stated they were unclear when the proposal was finalized since, according to the commenter, CMS would have needed to specify the intent to apply the NonCC subgroup criteria to all existing MS–DRGs versus only for the creation of new MS–DRGs. Additionally, this commenter urged CMS to conduct a full analysis that demonstrates the explanatory power of the proposed new MS–DRGs is an improvement over the current MS–DRGs, similar to the analysis that was performed for the transition from CMS DRGs to MS–DRGs in FY 2008. The commenter indicated that a comprehensive analysis is critical for interested parties to provide meaningful comments.

Response: In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44796), we summarized the discussion pertaining to the NonCC subgroup criteria policy finalized for FY 2021. In that discussion we noted that the application of the NonCC subgroup criteria going forward may result in modifications to certain MS–DRGs that are currently split into three severity levels and result in MS–DRGs that are split into two severity levels. We stated that any proposed modifications to the MS–DRGs would be addressed in future rulemaking consistent with our annual process and reflected in Table 5—Proposed List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay for the applicable fiscal year. As discussed in the proposed rule, we applied the nonCC subgroup criteria to each of the MCC, CC, and NonCC subgroups, in our analysis of the MS–DRG classification requests for FY 2023 that we received by November 1, 2021, as well as any additional analyses that were conducted in connection with those requests. We also note that new requests to subdivide a MS–DRG frequently pertain to existing MS–DRGs which differs from requests to create a new base MS–DRG for which the criteria to create subgroups is subsequently applied. In response to the commenter's recommendation that CMS conduct a full analysis similar to the analysis that was performed for the transition from CMS DRGs to MS–DRGs in FY 2008, we appreciate the commenter's suggestion and will take it under advisement.

Comment: Another commenter who recognized differences between the list of MS–DRGs shown for FY 2022 and FY 2023 requested additional transparency for the data being presented for review and for CMS to consider analyzing data from other databases, such as Medicaid or States, to supplement the MS–DRGs known to have lower volumes among the Medicare population (for example, Obstetric MS–DRGs). This commenter also expressed concern about the potential impact to community hospitals if proposed MS–DRG changes in connection with the NonCC subgroup criteria result in significant MS–DRG redistribution.

Response: We thank the commenter for their feedback. As discussed previously, we intend to conduct a comprehensive analysis of the application of the NonCC subgroup criteria that would be made publicly available for review and comment in connection with any proposed MS–DRG changes for future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal to delay the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split until FY 2024 or later, and are finalizing for FY 2023 to maintain the current structure of the 41 MS–DRGs that currently have a three-way severity level split.

We are making the FY 2023 ICD–10 MS–DRG GROUPER and Medicare Code Editor (MCE) Software Version 40, the ICD–10 MS–DRG Definitions Manual files Version 40 and the Definitions of Medicare Code Edits Manual Version 40 available to the public on our CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

2. Pre-MDC: MS–DRG 018 Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798 through 44806), we finalized our proposal to assign procedure codes describing CAR T-cell, non-CAR T-cell, and other immunotherapies to Pre-MDC MS–DRG 018 and to revise the title for Pre-MDC MS–DRG 018 to ''Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies'' to reflect this assignment. In that discussion, we noted that a few commenters recommended we continue to work with interested parties on ways to improve the predictability and stability of hospital payments for these complex, novel cell therapies and that we should continue to monitor and assess the appropriateness of therapies assigned to MS–DRG 018, if they continue to be aligned on resource use, and whether additional refinements or MS–DRGs may be warranted in the future.

We also noted that the process of code creation and proposed assignment to the most appropriate MS–DRG exists independently, regardless of whether there is an associated application for a new technology add-on payment for a product or technology submitted for consideration in a given fiscal year. Specifically, requests for a new code(s) or updates to existing codes are addressed through the ICD–10 Coordination and Maintenance Committee meetings, held annually in the spring and fall, where code proposals are presented and the public is provided the opportunity to comment. All codes finalized from the fall meeting are subsequently proposed for assignment under the ICD–10 MS–DRGs through rulemaking. We refer the reader to section II.D.17 of the preamble of this final rule for additional information regarding the ICD–10 Coordination and Maintenance Committee meeting process.

As stated in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28130), there were no requests or proposals for new procedure codes to describe the administration of a CAR T-cell or another type of gene or cellular therapy discussed at the September 14–15, 2021 ICD–10 Coordination and Maintenance Committee meeting. For the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting, there were topics included on the agenda and in the related meeting materials that included proposals for new procedure codes to describe the administration of a CAR T-cell or another type of gene or cellular therapy product. The agenda and related meeting materials for these specific topics are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials*.

As stated in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44805) and noted previously, the process of code creation and proposed assignment to the most appropriate MS–DRG exists independently, regardless of whether there is an associated application for a new technology add-on payment for a product or technology submitted for consideration in a given fiscal year. We also clarified that the assignment of a procedure code to a MS–DRG is not dependent upon a product's FDA approval. Similarly, the creation of a code to describe a technology that is utilized in the performance of a procedure or service does not require FDA approval of the technology.

Because the diagnosis and procedure code proposals that are presented at the March meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes in association with the proposed rule, as noted in prior rulemaking, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code.

As stated in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28130), in response to commenters' recommendation that we continue to assess the appropriateness of the therapies assigned to Pre-MDC MS–DRG 018, we provided the results of our data analysis using the September 2021 update of the FY 2021 MedPAR file for cases reporting the administration of a CAR T-cell or other immunotherapy in Pre-MDC MS–DRG 018 and the number of cases reporting a secondary diagnosis of Z00.6 (Encounter for examination for normal comparison and control in clinical research program). We noted that if a procedure code that is assigned to the logic for Pre-MDC MS–DRG 018 is not listed it is because there were no cases found. We also noted there were no cases reporting diagnosis code Z00.6 as a principal diagnosis. Our findings are shown in the following table.

MS-DRG	ICD-10-PCS Code	Number of Cases	Average Length of Stay	Average Costs	Secondary Diagnosis Z00.6
018	All cases	558	16.5	$194,717	185
	XW033C7 - Introduction of autologous engineered chimeric antigen receptor t-cell immunotherapy into peripheral vein, percutaneous approach, new technology group 7	50	13.2	$212,265	16
	XW033M7 - Introduction of brexucabtagene autoleucel immunotherapy into peripheral vein, percutaneous approach, new technology group 7	11	14.1	$157,950	4
	XW033N7 - Introduction of lisocabtagene maraleucel immunotherapy into peripheral vein, percutaneous approach, new technology group 7	4	11.3	$310,561	1
	XW043C7 - Introduction of autologous engineered chimeric antigen receptor t-cell immunotherapy into central vein, percutaneous approach, new technology group 7	435	16.7	$186,038	152
	XW043M7 - Introduction of brexucabtagene autoleucel immunotherapy into central vein, percutaneous approach, new technology group 7	43	20.3	$264,932	7
	XW043N7 -Introduction of lisocabtagene maraleucel immunotherapy into central vein, percutaneous approach, new technology group 7	15	14.2	$182,700	5

The data show that there is a wide range in the volume of cases (4 cases versus 435 cases), average length of stay (11.3 days versus 20.3 days), and average costs ($157,950 versus $310,561) reporting the administration of CAR T-cell therapies in MS–DRG 018. This is to be expected since these therapies continue to evolve and the ICD–10–PCS coding to identify and describe these therapies also continues to be refined through the ICD–10 Coordination and Maintenance Committee meeting process. As additional claims data becomes available for these therapies, we will continue to evaluate to determine if further modifications to Pre-MDC MS–DRG 018 are warranted.

We noted in the proposed rule that in response to our statement in the FY 2022 IPPS/LTCH PPS final rule that we plan to continue engaging with interested parties on additional options for consideration in this field of cellular and gene therapies, we received additional feedback and suggestions, including recommendations for Town Hall meetings/listening sessions to discuss the interconnectedness of these issues; exploration of what was described as a different set and kind of MS–DRGs that would reward providers for controlling patient care costs, without consideration of product costs outside of their control; and evaluation of the creation and assignment of multiple MS–DRGs for cell and gene therapy cases: one to cover patient care costs, the other to cover product costs across therapeutic product categories.

We stated we appreciated this additional feedback and will continue to consider these issues and suggestions in connection with future rulemaking. We also stated we intend to continue engaging with interested parties by sharing updates from our analysis of claims data as we examine and explore potential refinements for these therapies under the IPPS.

Comment: Several commenters expressed support and appreciation that for FY 2023, CMS proposed to maintain the current structure of Pre-MDC MS–DRG 018 that includes ''Other Immunotherapies'', and to maintain its current methodology used to determine the relative weight. Some commenters acknowledged that it is difficult to predict what the associated costs will be in the future for CAR T-cell and other immunotherapies that remain under development. These commenters urged CMS to consider factors such as new or different side effects and how other therapeutic agents that could be administered simultaneously in connection with these therapies may potentially lead to toxicity, as continued monitoring of resource utilization and data analysis for Pre-MDC MS–DRG 018 occurs. Other commenters commended CMS for its commitment to engage with interested parties as the agency continues to analyze claims data and consider the feedback that has been received to date for these therapies.

Response: We thank the commenters for their support and appreciate the additional feedback on other factors to consider as we continue to monitor and analyze the data for Pre-MDC MS–DRG 018. As noted in prior rulemaking, we have received several suggestions, recommendations, and options pertaining to how CAR T-cell and other immunotherapies may be classified under the IPPS in the future. We intend to further examine the feedback received and maintain transparency in our approach moving forward, with the shared goal of enabling continued access to these and other vital treatments for Medicare beneficiaries.

Comment: Similar to the public comments received in response to the FY 2022 IPPS/LTCH PPS proposed rule, for FY 2023, some commenters again expressed concerns with the non-CAR T-cell therapies and other immunotherapies that may be assigned to Pre-MDC MS–DRG 018 and stated that these potential assignments could lead to fluctuations in the relative weight. A few commenters requested that Pre-MDC MS–DRG 018 be limited to CAR T-cell therapies. Other commenters encouraged CMS to clarify its methodology and criteria for assigning new procedure codes to Pre-MDC MS–DRG 018. Some commenters expressed continued concern with the revision to the title for Pre-MDC MS–DRG 018 that was finalized effective FY

2022 to include ''Other Immunotherapies''.

Response: In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798 through 44806), we provided detailed summaries and responses to these same or similar concerns and comments. In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28129 through 28131), we provided an overview of the assignment of new procedure codes to Pre-MDC MS–DRG 018 and reiterated much of the discussion from FY 2022 rulemaking. As stated in prior rulemaking, the MS–DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. We have not made any changes to our established processes or methodologies for MS–DRG assignment of new procedure codes, including with regard to case assignment to Pre-MDC MS–DRG 018, and we refer the reader to the detailed discussion related to Pre-MDC MS–DRG 018 in the FY 2022 IPPS/LTCH PPS final rule. We note that additional claims data is needed to fully analyze and consider all the recommendations we have received, and to potentially develop alternative proposals with respect to payment for these therapies under the IPPS. There is also uncertainty with regard to the number and types of therapies currently under development or undergoing studies and how soon they will be available. We recognize the concerns that have been expressed by commenters and we are also continuing to assess the reliability and stability of the data in light of the ongoing public health emergency.

Comment: Many commenters expressed appreciation to CMS for providing transparency with the cases reporting the administration of a CAR T-cell or other immunotherapy in the FY 2021 MedPAR claims data for Pre-MDC MS–DRG 018. However, a commenter indicated there was confusion about the coded claims data as presented in the proposed rule since the procedure codes described as new technology group 7 became effective October 1, 2021 (FY 2022), which is one year later than the FY 2021 data that was shown in the table in the preamble of the proposed rule. The commenter requested that CMS provide clarification to help eliminate any additional confusion for readers and interested parties who also analyze the data for these therapies.

Response: We thank the commenters for their support. The FY 2021 MedPAR claims data were regrouped using the proposed FY 2023 MS–DRG classifications, therefore, coded claims data for the procedure codes describing the administration of CAR T-cell and other immunotherapy agents reported in FY 2021 was mapped from the FY 2021 MedPAR coded claims data to the procedure codes that are effective for FY 2023. Specifically, the codes that were effective for FY 2021 and are no longer valid were mapped to the new procedure codes that are valid for FY 2023. We also note, as generally stated in the preamble of the proposed rule each year, the diagnosis and procedure codes from the specified FY MedPAR claims data are grouped through the applicable version of the proposed FY GROUPER. For example, as discussed in section II.E.1. of the preamble of the proposed rule (87 FR 28197), the proposed FY 2023 relative weights are based on the ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes from the FY 2021 MedPAR claims data, grouped through the ICD–10 version of the proposed FY 2023 GROUPER (Version 40).

Comment: A commenter suggested that CMS consider establishing a timeframe that would enable the public to comment on procedure codes that may be assigned to Pre-MDC MS–DRG 018 upon being approved and finalized after the spring ICD–10 Coordination and Maintenance Committee meeting. The commenter stated that currently, because procedure codes that are discussed at the spring ICD–10 Coordination & Maintenance (C&M) Committee meeting do not receive proposed assignments and are not published with the IPPS proposed rule given the timing, there is no opportunity for interested parties to provide feedback to CMS about MS–DRG assignments for new codes, including assignment to MS–DRG–018. The commenter acknowledged the C&M meeting is not the appropriate forum for the public to provide input on MS–DRG assignment, however, because Pre-MDC MS–DRG 018 currently has a limited number of procedure codes assigned to it, the commenter stated that interested parties should have the opportunity to review and comment on potential assignment to Pre-MDC MS–DRG 018. This commenter also maintained that it has a unique relationship with the therapies currently assigned to Pre-MDC MS–DRG 018 as its membership is the predominant specialty society associated with these therapies and has the experience and clinical understanding related to resource utilization associated with the administration of these therapies.

Response: We appreciate the commenter's feedback. As discussed elsewhere in this rule as well as in prior rulemaking, because the procedure code proposals discussed at the Spring ICD–10 Coordination and Maintenance Committee meeting are not finalized in time to include in Table 6B.—New Procedure codes associated with the proposed rule, CMS uses an established process to determine the most appropriate MS–DRG assignment for these new procedure codes for the upcoming fiscal year. While we understand and acknowledge the uniqueness of CAR T-cell, gene, and cellular therapies, we believe it is necessary to further examine how and when we could alter our current methodology and timelines to provide the opportunity for interested parties to submit comments and feedback in the assignment of new procedure codes that are finalized after the spring meeting. We also note, as discussed in the proposed rule (87 FR 28130), all codes finalized from the fall meeting are subsequently proposed for assignment under the ICD–10 MS–DRGs through rulemaking, therefore, interested parties seeking the opportunity to more fully comment on potential MS–DRG assignment(s) have the opportunity to submit requests for consideration of proposed new procedure codes in association with these therapies to be discussed at the fall meeting versus the spring meeting. Alternatively, interested parties may use current coding information as shown in the ICD–10 Coordination and Maintenance Committee meeting materials to consider the potential MS–DRG assignments for any procedure codes that may be finalized after the March meeting and submit public comments for consideration.

As noted in the proposed rule, for the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting there were two topics included on the agenda and in the related meeting materials that included proposals for new procedure codes to describe the administration of a CAR T-cell or another type of gene or cellular therapy product. The two topics are Administration of afamitresgene autoleucel (afami-cel), a specific peptide enhanced affinity receptor (SPEAR) T-cell therapy and Administration of Tabelecleucel (tab-cel®), an allogeneic Epstein-Barr virus (EBV)-specific T-cell immunotherapy, both of which were approved for new procedure codes following the March meeting. We refer the reader to the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding these code requests.

Because the diagnosis and procedure code proposals that are presented at the March ICD–10–CM Coordination and Maintenance Committee meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes in association with the proposed rule, as we have noted in prior rulemaking, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code. As shown in Table 6B.—New Procedure Codes associated with this final rule and available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*, new procedure codes for these two therapies have been finalized for assignment to Pre-MDC MS–DRG 018 effective with discharges on and after October 1, 2022 (FY 2023).

We appreciate the public comments we received, and, as noted, will continue to evaluate the recommendations and options provided by commenters related to these therapies as well as to monitor the available claims data.

3. MDC 01 (Diseases and Disorders of the Nervous System)

a. Laser Interstitial Thermal Therapy (LITT)

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44812 through 44814), we finalized the reassignment of 31 ICD–10–PCS procedure codes describing laser interstitial thermal therapy (LITT) of various body parts to more clinically appropriate MS–DRGs, as shown in Table 6P.2b associated with the FY 2022 IPPS/LTCH PPS final rule and available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*, including the reassignment of procedure codes D0Y0KZZ (Laser interstitial thermal therapy of brain) and D0Y1KZZ (Laser interstitial thermal therapy of brain stem), which were reassigned from MS–DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator), MS–DRG 024 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC), and MS–DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 040, 041, and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC and without CC/MCC, respectively).

We also finalized the redesignation of these two LITT procedures (codes D0Y0KZZ and D0Y1KZZ) and the reassignment from extensive O.R. procedures in MS–DRGs 981, 982 and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to non-extensive O.R. procedures in MS–DRGs 987, 989, and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) (86 FR 44889).

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28131), for FY 2023, we received two requests from the manufacturers of the LITT technology (Medtronic and Monteris® Medical) to reverse the MS–DRG reassignment for the ICD–10 procedure codes that identify LITT of the brain and brain stem (codes D0Y0KZZ and D0Y1KZZ) from the MS–DRGs for peripheral, cranial nerve and other nervous system procedures (MS–DRGs 040, 041, and 042) back to the MS–DRGs for craniotomy and endovascular procedures (MS–DRGs 023, 024, 025, 026, and 027). The first requestor acknowledged that the technique utilized in the performance of LITT procedures for the brain and brain stem are minimally invasive and do not involve a craniotomy however, the requestor also stated the procedures assigned to MS–DRGs 025, 026, and 027 are not exclusive to craniotomies. The requestor further stated that these LITT procedures involve a twist drill or burr hole and are similar to other non-craniotomy procedures in MS–DRGs 025, 026, and 027 including radioactive elements and neurostimulator leads that involve inserting these devices into the brain.

In its review of the other procedures assigned to MS–DRGs 040, 041, and 042, the requestor stated that there are distinct clinical differences between the invasiveness of LITT that involves instrumentation being placed deeply within the brain tissue and the non-invasiveness of stereotactic radiosurgery that does not involve entering the brain with instrumentation. The requestor also indicated LITT utilizes a different modality via direct thermal ablation compared to stereotactic radiosurgery that utilizes externally-generated ionizing radiation.

The requestor performed its own data analysis for LITT procedures of the brain and brain stem using MedPAR data from FY 2019 through FY 2022 impact files. According to the requestor, its findings demonstrate that the costs of the cases reporting LITT of the brain or brain stem are better aligned with MS–DRGs 025, 026, and 027 compared to MS–DRGs 040, 041, and 042.

The second requestor similarly discussed the steps and resources involved in the performance of LITT procedures for the brain and brain stem, provided its detailed analysis on the indications for LITT (brain tumors and epileptic foci), compared LITT to other procedures in MS–DRGs 025, 026, and 027 and stated that the majority of the procedures currently assigned to MS–DRGs 040, 041, 042 are not performed for the treatment of brain cancer or epilepsy. The requestor stated that the LITT procedure is on the inpatient only list and is only performed on Medicare beneficiaries in the inpatient hospital setting. The requestor provided the top 10 principal diagnoses associated with LITT of brain cases it found based on its analysis, and identified the diagnoses for which there were less than 10 cases with an asterisk, as reflected in the following table.

ICD-10-CM Code	Description	Cases
C79.31	Secondary malignant neoplasm of brain	39
G40.219	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, intractable, without status epilepticus	17
C71.9	Malignant neoplasm of brain, unspecified	13
C71.1	Malignant neoplasm of frontal lobe	*
C71.2	Malignant neoplasm of temporal lobe	*
G40.419	Other generalized epilepsy and epileptic syndromes, intractable, without status epilepticus	*
I67.89	Other cerebrovascular disease	*
G40.919	Epilepsy, unspecified, intractable, without status epilepticus	*
G40.804	Other epilepsy, intractable, without status epilepticus	*
C71.3	Malignant neoplasm of parietal lobe	*

The requestor asserted that the statement in the FY 2022 IPPS/LTCH PPS final rule that the technique to perform the LITT procedure on brain and brain stem structures is considered minimally invasive and does not involve a craniotomy, and that therefore, continued assignment to the craniotomy MS–DRGs is not clinically appropriate, mischaracterizes both the LITT procedures and universe of services assigned to MS–DRGs 023 through 027. The requestor acknowledged that the craniotomy procedures listed in the logic for MS–DRGs 023 through 027 include open procedures but stated the logic also lists less invasive procedures including percutaneous and percutaneous endoscopic procedures. The requestor asserted that open procedures are a minority of the ICD–10–PCS codes assigned to these MS–DRGs.

In addition, the requestor stated that LITT and craniotomy are in fact very clinically similar; in that both procedures are intended to remove and destroy the targeted tumor and lesion with a different surgical tool used (scalpel versus heated ablation probe). According to the requestor, brain LITT procedures involve insertion of laser probes into the brain which requires opening both the skull and dura, similar to a craniotomy. The requestor also stated that craniotomy and LITT share several procedural characteristics and provided the following list.

- Require an operating room;
- Performed under general anesthesia;
- Require creation of burr holes and invasive skull fixation;
- Require a sterile field, incision, opening of the skull and dura;
- Cause tissue to be immediately destroyed or excised;
- Carry a risk of immediate intracranial bleeding;
- Require closure of the scalp wound;
- Risk intracranial infection; and
- Require a hospital stay of one or more nights.

In contrast, the requestor stated that procedures assigned to MS–DRGs 040, 041, and 042 are primarily nerve procedures or excision or detachment procedures performed on parts of the body other than the head, including the upper and lower extremities. According to the requestor, none of the procedures in MS–DRGs 040, 041, and 042 require drilling into the patient's skull, a step which is integral to LITT. The requestor provided the following top 10 principal diagnoses associated with cases it found in MS–DRGs 040, 041, and 042 during its analysis and stated that most of the procedures assigned to MS–DRGs 040, 041, and 042 are not typically performed in the treatment of brain cancer or epilepsy.

ICD-10-CM Code	Description	Cases
I63.9	Cerebral infarction, unspecified	1,928
I63.40	Cerebral infarction due to embolism of unspecified cerebral artery	610
I63.89	Other cerebral infarction	489
G45.9	Transient cerebral ischemic attack, unspecified	456
I63.412	Cerebral infarction due to embolism of left middle cerebral artery	378
E11.610	Type 2 diabetes mellitus with diabetic neuropathic arthropathy	371
I63.411	Cerebral infarction due to embolism of right middle cerebral artery	341
I63.512	Cerebral infarction due to unspecified occlusion or stenosis of left middle cerebral artery	335
C79.31	Secondary malignant neoplasm of brain	326
I63.81	Other cerebral infarction due to occlusion or stenosis of small artery	271

However, the requestor stated an exception is stereotactic radiosurgery (SRS) procedures performed on the brain and brain stem that are assigned to MS–DRGs 040, 041, and 042 and are used to treat brain cancer. According to the requestor, craniotomy, LITT and SRS are all image-guided procedures used to treat a variety of brain disorders including tumors and epilepsy, although it stated that is where any similarity between LITT and SRS ends and where the procedural similarities between craniotomy and LITT begin.

The requestor stated SRS is a non-invasive procedure that gradually destroys or inactivates tissues in or around the brain and is typically performed on an outpatient basis while inpatient SRS treatment is rare. According to the requestor, SRS does not require an operating room, is rarely done under general anesthesia (children and highly claustrophobic individuals being an exception), and does not require (but can use) rigid skull fixation. In addition, the requestor stated that because it is non-invasive, there is no need for a sterile field, incision, opening/closing of the skull, opening/closing of the dura, suturing/stapling the wound, and produces essentially no risk of immediate intracranial bleeding or delayed infection. According to the requestor, LITT is much more invasive than SRS using a head frame and involves and requires the same surgical skill and hospital resources as craniotomies.

In the proposed rule we noted that following the submission of the two FY 2023 MS–DRG classification change requests for LITT, these same two requestors (the manufacturers of the LITT technology) submitted a joint code proposal requesting an overall change to how LITT is classified within the ICD–10–PCS classification and for consideration as an agenda topic to be discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting. The proposal was presented and discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting. We referred the reader to the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the request, including a recording of the discussion and the related meeting materials. Public comments in response to the code proposal were due by April 8, 2022.

Because the diagnosis and procedure code proposals that are presented at the March ICD–10–CM Coordination and Maintenance Committee meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A. —New Diagnosis Codes and Table 6B.—New Procedure Codes in association with the proposed rule, as we have noted in prior rulemaking and discuss further in this section, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code. Under this established process, the MS–DRG assignment for the upcoming fiscal year for any new diagnosis or procedure codes finalized after the March meeting would be reflected in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes associated with the final rule for that fiscal year. However, as stated in the proposed rule, in light of the unique circumstances relating to these procedures, for which there was a pending proposal to reclassify LITT within ICD–10–PCS and for new procedure codes discussed at the March meeting, as well as an MS–DRG reclassification request to reassign the existing codes describing these procedures, we addressed in this section first, the code proposal discussed at the March meeting and the possible MS–DRG assignments for any new codes that may be approved, and then secondly, the requested reassignment of the existing codes, in the event the new codes are not approved.

To summarize, as discussed at the March meeting, the code proposal was to reclassify LITT procedures from the Radiation Therapy section of ICD–10–PCS (Section D) to the Medical and Surgical section of ICD–10–PCS. Specifically, the proposal was to reclassify LITT procedures to the root operation Destruction. In ICD–10–PCS, the root operation Destruction is defined as physical eradication of all or a portion of a body part by the direct use of energy, force, or a destructive agent. According to the requestors, LITT is misclassified to section D-Radiation Therapy in ICD–10–PCS possibly because of terminology that was used for predicate devices, whose indications included the phrase ''interstitial irradiation or thermal therapy'' in describing LITT's method of action. The requestors stated LITT is thermal therapy, destroying soft tissue using heat generated by a laser probe at the target site and that the LITT procedure does not use ionizing radiation, which is what the term ''radiation'' commonly refers to in the general medical sense. The requestors also stated that by itself, radiation is a broad term and provided an example that the spectrum of electromagnetic radiation technically encompasses low energy non-ionizing radio waves, microwaves, and infrared to high energy ionizing X-rays and gamma rays while ionizing radiation creates ions in the cells it passes through by removing electrons, a process which kills or alters the cells over time.

The requestors further stated that only certain medical uses of radiation are classified to section D-Radiation Therapy. For instance, section D-Radiation Therapy categorizes treatments using ionizing radiation, including beam radiation, brachytherapy, and stereotactic radiosurgery. All of these deliver concentrated ionizing radiation to eradicate abnormal cells, most commonly neoplasms. Other treatments classified to section D-Radiation Therapy, such as hyperthermia, are used as adjuncts to ionizing radiation. The requestors asserted that while LITT eradicates abnormal cells, it does so with heat, not ionizing radiation and rather than a radiation therapy procedure, LITT is a surgical procedure. According to the requestors, LITT would be more appropriately classified as an ablation procedure with the root operation Destruction.

As stated in the proposed rule, the original request for a new code(s) to describe the LITT technology was initially discussed at the September 24–25, 2008 ICD–9–CM Coordination and Maintenance Committee meeting. At that time, the requestor sought an April 1, 2009 implementation date. Public comments opposed an April 1, 2009 implementation date, therefore, effective October 1, 2009 (FY 2010), ICD–9–CM procedure codes were created to identify procedures performed utilizing the LITT technology. The following table lists the ICD–9–CM procedure codes describing LITT and their respective MDC and MS–DRG assignments under the ICD–9 based MS–DRGs. We refer the reader to the ICD–9 and ICD–10 MS–DRG Definitions Manual Files V33 (available via the

internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download-Items/FY2016-Final-Rule-Correction-Notice-Files* in the Downloads section) for complete documentation of the GROUPER logic for ICD–9.

ICD-9-CM Procedure Code	Description	MDC	MS-DRG
17.61	Laser interstitial thermal therapy [LITT] of lesion or tissue of brain under guidance	MDC 01	023-027
17.62	Laser interstitial thermal therapy [LITT] of lesion or tissue of head or neck under guidance	MDC 10	625-627
		MDC 17	820-822
		MDC 17	826-828
17.63	Laser interstitial thermal therapy [LITT] of lesion or tissue of liver under guidance	MDC 06	356-358
		MDC 07	405-407
17.69	Laser interstitial thermal therapy [LITT] of lesion or tissue of other and unspecified site under guidance	MDC 04	163-165
		MDC 09	584-585
		MDC 12	715-718
		MDC 17	820-822
		MDC 17	826-828

The requestors maintain that although LITT was used to treat a variety of anatomic sites when it was first introduced, its current primary use is intracranial, specifically to treat brain tumors and epileptic foci. However, the requestors stated it is also used to treat radiation necrosis, an inflammatory response from prior treatment with ionizing radiation.

We noted in the proposed rule that currently, in the U.S., there are only two LITT systems in use, Visualase™ MRI-Guided Laser Ablation (Medtronic) and the Neuroblate® System (Monteris® Medical). The requestors also stated that over the last six years, the Indications for Use (IFU) for one of the two U.S. approved LITT technologies (Neuroblate®) has been updated to reflect the system's current use in the brain and to align with the intended neurosurgical patient population. The requestor indicated applications in the spine are also anticipated in the future within the central nervous system.

As previously noted, the deadline for receipt of public comments for the proposed reclassification of LITT procedures that was presented at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting along with the corresponding proposal for new procedure codes was April 8, 2022, and the final code decisions on these proposals were not yet available for inclusion in Table 6B.—New Procedure Codes associated with the FY 2023 IPPS/LTCH PPS proposed rule. However, as discussed in prior rulemaking (86 FR 44805), codes that are finalized after the March meeting are reviewed and subject to our established process of initially reviewing the predecessor codes MS–DRG assignment and designation, while considering other relevant factors (for example, severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition) as previously described. The codes that are finalized after the March meeting are specifically identified with a footnote in Tables 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes that are made publicly available in association with the final rule via the internet on the CMS website at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*. The public may provide feedback on these finalized assignments, which is then taken into consideration for the following fiscal year.

We stated in the proposed rule that the MS–DRG assignment for any new procedure codes describing LITT, if finalized following the March meeting, would be reflected in Table 6B.—New Procedure Codes associated with the final rule for FY 2023. However, in light of the unique circumstances with respect to these procedures, for which there was both a proposal for reclassifying LITT from the Radiation Therapy section of the procedure code classification to the Medical/Surgical section with new ICD–10–PCS procedure code(s) and a separate MS–DRG reclassification request on the existing procedure codes, we provided the opportunity for public comment on possible MS–DRG assignments for the requested new procedure codes describing LITT that may apply based on the application of our established process and analysis, in the event the new codes were finalized for FY 2023. We also noted that while we discussed the potential MS–DRG assignments for new procedure codes describing LITT, interested parties may use current coding information to consider the potential MS–DRG assignments for any other procedure codes that may be finalized after the March meeting and submit public comments for consideration. Specifically, in the ICD–10 Coordination and Maintenance Committee meeting materials (available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials*), for each procedure code proposal we provide the current coding that is applicable within the classification and that should be reported in the absence of a more unique code, or until such time a new code is created and becomes effective. The procedure code(s) listed in current coding are generally, but not always, the same code(s) that are considered as the predecessor code(s) for purposes of MS–DRG assignment. As previously noted, our process for determining the MS–DRG assignment for a new procedure code does not automatically result in the new procedure code being assigned to the

same MS–DRG or having the same designation (O.R. versus Non-O.R.) as the predecessor code. However, this current coding information can be used in conjunction with the GROUPER logic, as set forth in the ICD–10 MS–DRG Definitions Manual and publicly available via the internet on our CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* to review the MS–DRG assignment of the current code(s) and examine the potential MS–DRG assignment of the proposed code(s), to assist in formulating any public comments for submission to CMS for consideration.

We noted in the proposed rule that, unlike the typical code request for a new or revised procedure code that involves a new technology or a new approach to performing an existing procedure, the circumstances for this particular request are distinct in that the code request would reclassify LITT within the ICD–10–PCS classification from section D—Radiation Therapy to the root operation Destruction in the Medical and Surgical section of ICD–10–PCS. Therefore, in light of the unique considerations with respect to the requested reclassification of the LITT procedures in connection with the pending code proposal, we stated we believe it was appropriate to utilize the assignments and designations of the procedure codes describing Destruction of the respective anatomic body site as predecessor codes rather than the current codes describing LITT from the Radiation Therapy section of ICD–10–PCS in considering potential MS–DRG assignment for the requested new LITT procedure codes.

As previously discussed, under our established process for determining the MS–DRG assignment for newly approved procedure codes, we examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment for the new codes. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. As we have noted in prior rulemaking, this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code.

Applying this established review process to the proposed codes for the LITT procedures, we stated we believe that, based on the predecessor codes, and as previously noted, the potential assignments and designations would align with the assignments and designations of the procedure codes describing Destruction of the respective anatomic body site. For example, as discussed in the preamble of the proposed rule and earlier in this section of this final rule, the code request involved reclassifying LITT procedures from section D—Radiation Therapy to the root operation Destruction in the Medical and Surgical section of ICD–10–PCS. The root operation Destruction is appropriate to identify and report procedures, such as ablation, that are performed on various body parts. The code request also involved creating what is referred to as a qualifier value, to uniquely describe LITT as the modality. The qualifier value is the seventh character or digit, in a valid ICD–10–PCS procedure code.

We presented the following ICD–10–PCS table in the proposed rule, which illustrates an example of the proposed procedure codes for LITT of the brain and brain stem, and cervical, thoracic, and lumbar spinal cord body parts, including the qualifier value that was presented and discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting.

Section	**0** Medical and Surgical
Body System	**0** Central Nervous System and Cranial Nerves
Operation	**5** Destruction: Physical eradication of all or a portion of a body part by the direct use of energy, force, or a destructive agent

Body Part	Approach	Device	Qualifier
0 Brain **W** Cervical Spinal Cord **X** Thoracic Spinal Cord **Y** Lumbar Spinal Cord	**0** Open **3** Percutaneous **4** Percutaneous Endoscopic	**Z** No Device	**ADD 3** Laser Interstitial Thermal Therapy **Z** No Qualifier

We noted in the proposed rule that the code proposal presented only provided the body part value 0 Brain, for reporting any LITT procedures performed on the brain, as well as, the brain stem, consistent with the current available body part option in Table 005, Destruction of Central Nervous System and Cranial Nerves, where the predecessor code is located. We also noted that the predecessor code(s) and associated MS–DRG assignments for the proposed new procedure code(s) describing LITT of the brain and spinal cord under MDC 01 are identified as follows.

ICD-10-PCS Code	Description	MS-DRG
00500ZZ	Destruction of brain, open approach	023-027
00503ZZ	Destruction of brain, percutaneous approach	
00504ZZ	Destruction of brain, percutaneous endoscopic approach	
005W0ZZ	Destruction of cervical spinal cord, open approach	028-030
005W3ZZ	Destruction of cervical spinal cord, percutaneous approach	
005W4ZZ	Destruction of cervical spinal cord, percutaneous endoscopic approach	
005X0ZZ	Destruction of thoracic spinal cord, open approach	
005X3ZZ	Destruction of thoracic spinal cord, percutaneous approach	
005X4ZZ	Destruction of thoracic spinal cord, percutaneous endoscopic approach	
005Y0ZZ	Destruction of lumbar spinal cord, open approach	
005Y3ZZ	Destruction of lumbar spinal cord, percutaneous approach	
005Y4ZZ	Destruction of lumbar spinal cord, percutaneous endoscopic approach	

As shown in the table, the procedure codes describing destruction of brain with an open, percutaneous or percutaneous endoscopic approach are assigned to MS–DRGs 023 through 027 (craniotomy and endovascular procedures) and the procedure codes describing destruction of cervical, thoracic or lumbar spinal cord with an open, percutaneous or percutaneous endoscopic approach are assigned to MS–DRG 028 (Spinal Procedures with MCC), MS–DRG 029 (Spinal Procedures with CC or Spinal Neurostimulators), and MS–DRG 030 (Spinal Procedures without CC/MCC).

We referred the reader to Table 6P.2a associated with the proposed rule (and available via the internet at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*) to review the potential MDCs, MS–DRGs, and O.R. versus Non-O.R. designations identified based on this analysis of the proposed new procedure codes describing LITT as presented and discussed at the meeting. We noted that Table 6P.2a also includes the predecessor codes that we utilized to inform this analysis. We stated that if finalized, the new procedure codes would be included in the FY 2023 code update files that are made available in late May/early June via the internet on the CMS website at: *https://www.cms.gov/medicare/coding/icd10*. Additionally, we noted that if finalized, the new procedure codes describing LITT would be displayed in Table 6B.—New Procedure Codes, and the existing codes describing LITT would be deleted and reflected in Table 6D.—Invalid Procedure Codes, in association with the FY 2023 IPPS/LTCH PPS final rule. We referred the reader to section II.D.14. of the preamble of the proposed rule for further information regarding the files.

We note that the proposal to reclassify LITT procedures of the brain, brain stem and other anatomic sites in ICD–10–PCS that was discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting was approved and new procedure codes describing LITT of the brain and other anatomic sites were finalized as reflected in the FY 2023 ICD–10–PCS Code Update files that were made publicly available via the internet on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10* on May 26, 2022. We also note that the new procedure codes effective October 1, 2022 describing LITT of the brain and other anatomic sites are displayed in Table 6B.—New Procedure Codes, and the existing codes describing LITT of the brain, brain stem, and other anatomic sites that are being deleted effective October 1, 2022 are reflected in Table 6D.—Invalid Procedure Codes, in association with this FY 2023 IPPS/LTCH PPS final rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. Below we summarize the public comments we received and present our responses.

Comment: Commenters expressed appreciation that the proposal to reclassify LITT procedures in ICD–10–PCS that was discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting was approved and new procedure codes have been finalized as reflected in the FY 2023 ICD–10–PCS Code Update files that were made publicly available via the internet on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10* on May 26, 2022. Commenters also indicated it is appropriate to utilize procedure codes with the root operation Destruction as the predecessor codes for MS–DRG assignment of the new LITT procedure codes for all the anatomic body sites. Several commenters expressed support for the assignment of cases reporting new procedure codes for LITT of brain (includes brain stem) from MS–DRGs 040, 041, and 042 to MS–DRGs 025, 026 and 027 and urged CMS to finalize this assignment. The commenters commended CMS for recognizing the unique clinical circumstances related to LITT procedures of the brain as being more appropriately aligned with MS–DRGs 025, 026 and 027. A commenter acknowledged that the new procedure codes for LITT of brain had not yet been finalized at the time of the development of the proposed rule and therefore, were not reflected in the V40 Test GROUPER software, however, the commenter encouraged CMS to ensure the final V40 GROUPER logic reflects the new procedure codes for LITT of brain and assignment to MS–DRGs 025, 026 and 027.

Response: We thank the commenters for their support. In addition to the new procedure codes describing LITT being made publicly available in the FY 2023 ICD–10–PCS Code Update files via the internet on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10*, we note that, as previously stated, the new procedure codes are also reflected in Table 6B.—New Procedure Codes, in association with this final rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* with their finalized MS–DRG assignments. As shown in the table, procedure codes describing LITT of brain (root operation Destruction), are assigned to MS–DRGs 025, 026 and 027 for FY 2023. This assignment is also reflected in the final V40 GROUPER logic. Existing procedure

codes D0Y0KZZ (Laser interstitial thermal therapy of brain) and D0Y1KZZ (Laser interstitial thermal therapy of brain stem) will be deleted effective October 1, 2022, as reflected in Table 6D.—Invalid Procedure Codes, in association with this final rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*.

As discussed in the proposed rule and previously discussed in this final rule, we also received requests to reassign the existing ICD–10 procedure codes that identify LITT of the brain and brain stem (codes D0Y0KZZ and D0Y1KZZ). We stated in the proposed rule that in the event there is not support for the proposed reclassification of LITT procedures and the corresponding new procedure codes as presented at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting, we were also providing the results of our analysis of these existing codes and our proposed MS–DRG assignments for FY 2023, if those existing codes are retained.

In the proposed rule we stated that we examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 023, 024, 025, 026, and 027, in addition to MS–DRGs 040, 041, and 042 for cases reporting LITT of the brain (code D0Y0KZZ) or brain stem (code D0Y1KZZ). We noted that if a procedure code is not listed it is because there were no cases found reporting that procedure code. Our findings are shown in the following tables.

MS-DRG	ICD-10-PCS Code	Number of Cases	Average Length of Stay	Average Costs
23	All Cases	11,599	10.1	$45,134
	D0Y0KZZ	1	15	$60,994
	All other cases	11,598	10.1	$45,133
24	All Cases	4,391	5.2	$31,759
25	All Cases	19,586	9	$35,956
	D0Y0KZZ	77	5.6	$27,148
	All other cases	19,509	9	$35,991
26	All Cases	6,956	5.1	$24,566
	D0Y0KZZ	25	2.6	$24,741
	All other cases	6,931	5.1	$24,565
27	All Cases	7,323	2.4	$20,498
	D0Y0KZZ	20	2.1	$34,874
	All other cases	7,303	2.4	$20,459

MS-DRG	ICD-10-PCS Code	Number of Cases	Average Length of Stay	Average Costs
40	All Cases	3,547	9.9	$30,212
	D0Y0KZZ	14	8.1	$40,458
	All other cases	3,533	9.9	$30,171
41	All Cases	4,958	5	$19,090
	D0Y0KZZ	16	3.4	$23,278
	D0Y1KZZ	1	1	$10,222
	All other cases	4,942	5	$19,076
42	All Cases	1,667	2.9	$15,451
	D0Y0KZZ	24	1.7	$22,426
	D0Y1KZZ	1	2	$32,668
	All other cases	1,642	2.9	$15,325

As shown, we found a total of 123 cases reporting LITT of the brain across MS–DRGs 023, 025, 026, and 027. There were no cases found in MS–DRG 024. The cases reporting LITT of the brain grouped to these MS–DRGs because another O.R. procedure that is assigned to the respective MS–DRG was also reported. We referred the reader to Table 6P.2b in association with the proposed rule for the list of the other

O.R. procedures we identified that were also reported with LITT of the brain.

For MS–DRGs 040, 041, and 042, we found a total of 54 cases reporting LITT of the brain and 2 cases reporting LITT of the brain stem. While the average costs of the cases reporting LITT of the brain were higher compared to all the cases in their respective MS–DRGs, the average length of stay was shorter. For example, the data demonstrates a shorter average length of stay (8.1 days versus 9.9 days) and higher average costs ($40,458 versus $30,212) for the 14 cases reporting LITT of brain in MS–DRG 040 compared to all the cases in MS–DRG 040. There were no cases found to report LITT of brain stem in MS–DRG 040. For MS–DRG 041, we found 16 cases reporting LITT of brain with an average length of stay of 3.4 days and average costs of $23,278 and 1 case reporting LITT of brain stem with an average length of stay of 1 day and average costs of $10,222. The average length of stay for all the cases in MS–DRG 041 is 5 days with average costs of $19,090. The data demonstrates a shorter average length of stay (3.4 days and 1 day, respectively, versus 5 days) for the 16 cases reporting LITT of brain and the 1 case reporting LITT of brain stem. The data also demonstrates higher average costs ($23,278 versus $19,090) for the 16 cases reporting LITT of brain, and lower average costs for the 1 case reporting LITT of brain stem ($10,222 versus $19,090), as compared to the average costs of all cases in MS–DRG 041. For MS–DRG 042, we found 24 cases reporting LITT of brain with an average length of stay of 1.7 days and average costs of $22,426 and 1 case reporting LITT of brain stem with an average length of stay of 2 days and average costs of $32,668. The average length of stay for all the cases in MS–DRG 042 is 2.9 days with average costs of $15,451. The data demonstrates a shorter average length of stay (1.7 days and 2 days, respectively, versus 2.9 days) for the 24 cases reporting LITT of brain and the 1 case reporting LITT of brain stem. The data also demonstrate higher average costs ($22,426 and $32,668, respectively versus $15,451) for the 24 cases reporting LITT of brain and the 1 case reporting LITT of brain stem, compared to all the cases in MS–DRG 042.

We noted in the proposed rule that, based on the findings from our analysis, we considered whether other factors, such as the reporting of secondary MCC and CC diagnoses, may have contributed to the higher average costs for these cases. Specifically, we conducted additional analyses of the claims data from the September 2021 update of the FY 2021 MedPAR file to determine what secondary MCC diagnoses were also reported for the 14 cases reporting LITT of brain in MS–DRG 040 and what secondary CC diagnoses were reported for the 17 cases (16 for LITT of brain and 1 for LITT of brain stem) in MS–DRG 041. Our findings are shown in the following tables.

Secondary MCC Diagnoses Reported with LITT of Brain in MS-DRG 040				
ICD-10-CM Code as Secondary Diagnosis	**Description**	**Frequency of Diagnosis**	**Average Length of Stay**	**Average Costs**
D61.810	Antineoplastic chemotherapy induced pancytopenia	1	9	$59,102
G93.5	Compression of brain	6	12.2	$56,313
G93.6	Cerebral edema	11	9.3	$43,788
I61.1	Nontraumatic intracerebral hemorrhage in hemisphere, cortical	1	48	$80,745
J69.0	Pneumonitis due to inhalation of food and vomit	2	28	$60,889
J96.01	Acute respiratory failure with hypoxia	3	17	$41,486

Secondary CC Diagnoses Reported with LITT of Brain and Brain Stem in MS-DRG 041				
ICD-10-CM Code as Secondary Diagnosis	**Description**	**Frequency of Diagnosis**	**Average Length of Stay**	**Average Costs**
C34.91	Malignant neoplasm of unspecified part of right bronchus or lung	1	1	$9,755
C79.51	Secondary malignant neoplasm of bone	1	29	$22,347
D61.818	Other pancytopenia	1	1	$29,883
D62	Acute posthemorrhagic anemia	1	2	$9,101
E22.2	Syndrome of inappropriate secretion of antidiuretic hormone	1	2	$17,940
E44.0	Moderate protein-calorie malnutrition	1	1	$29,883
F33.0	Major depressive disorder, recurrent, mild	1	8	$57,999
F33.1	Major depressive disorder, recurrent, moderate	1	1	$20,461
F84.0	Autistic disorder	1	1	$12,450
G40.89	Other seizures	1	1	$12,109
G40.919	Epilepsy, unspecified, intractable, without status epilepticus	1	1	$34,287
G81.91	Hemiplegia, unspecified affecting right dominant side	1	2	$17,940
G81.94	Hemiplegia, unspecified affecting left nondominant side	1	8	$57,999
G96.01	Cranial cerebrospinal fluid leak, spontaneous	1	1	$25,514
H47.10	Unspecified papilledema	1	29	$22,347
I16.1	Hypertensive emergency	1	1	$30,372
I42.8	Other cardiomyopathies	1	1	$55,389
I48.21	Permanent atrial fibrillation	1	1	$29,883
I50.22	Chronic systolic (congestive) heart failure	1	1	$55,389
I50.32	Chronic diastolic (congestive) heart failure	1	1	$29,883
I69.354	Hemiplegia and hemiparesis following cerebral infarction affecting left non-dominant side	1	1	$12,109
N39.0	Urinary tract infection, site not specified	2	15.5	$16,866
Q01.9	Encephalocele, unspecified	1	2	$9,101
Q04.8	Other specified congenital malformations of brain	2	1	$13,925
R47.01	Aphasia	3	3.3	$28,841
Z68.42	Body mass index [BMI] 45.0-49.9, adult	1	1	$10,222
Z94.0	Kidney transplant status	1	1	$25,514

We noted that we did not find any other O.R. procedures reported on the claims in addition to the procedures for LITT of brain or brain stem for MS–DRGs 040, 041 and 042.

The data shows that at least one of the listed secondary MCC diagnoses was reported with each claim for LITT of brain identified in MS–DRG 040 and the average length of stay for these cases ranged from 9 days to 48 days and the average costs of these cases ranged from $41,486 to $80,745. We note that this data reflects the frequency with which each of the listed diagnoses was reported on a claim with LITT of brain. Therefore, multiple MCCs from this list of diagnoses may have been reported on a single claim. In addition, while the logic for case assignment to MS–DRG 040 requires at least one secondary MCC diagnosis, we conducted additional detailed analyses for MS–DRG 040, as shown in Table 6P.2f, to determine whether there were also secondary CC diagnoses reported in conjunction with one or more of the listed MCC diagnoses that may be contributing to the higher average costs for cases reporting LITT of brain in MS–DRG 040 in comparison to all the cases in MS–DRG 040. We found that 6 of the 14 cases reporting at least one or more secondary MCC diagnosis also reported one or more secondary CC diagnosis, which would appear to support that the severity of illness for these patients, as identified by the secondary MCC and CC diagnoses, may be more directly related to the higher average costs for these patients than the LITT procedure itself.

Similarly, the data for MS–DRG 041 show the frequency with which each of the listed secondary CC diagnoses was reported with LITT of brain or brain stem. Results from the analysis for the 17 cases (16 for LITT of brain and 1 for LITT of brain stem) show the average length of stay for these cases ranged from 1 day to 29 days and the average costs ranged from $9,101 to $57,999. These data analysis findings for MS–DRG 041 also appear to support our belief that the severity of illness for

these patients, as identified by the listed secondary CC diagnoses, may be more directly related to the higher average costs for these patients than the LITT procedure itself.

As stated in the proposed rule and previously in this final rule, we did not find any other O.R. procedures reported on the claims in addition to the procedures for LITT of brain or brain stem for MS–DRGs 040, 041 and 042. Since the logic for case assignment to MS–DRG 042 is not based on the reporting requirement of any CC or MCC diagnoses, we conducted a detailed analysis of the claims data to determine what other factors may be contributing to the higher average costs and shorter average length of stay for these cases in comparison to all the cases in MS–DRG 042. We refer the reader to Table 6P.2g associated with the proposed rule for the findings from our analysis. As shown in the data, the majority of the cases (15 of 25) had a principal diagnosis of epilepsy, 8 cases had a principal diagnosis related to malignant neoplasm of the brain or brain structures, 1 case had a principal diagnosis of hemangioma of intracranial structures and 1 case had a principal diagnosis of unspecified convulsions. The data also demonstrate that 16 of the 25 cases reported in MS–DRG 042 include patients who were under the age of 65, with ages ranging from 32 years old to 64 years old. We note that patients diagnosed with epilepsy are eligible for coverage since it is a condition that qualifies under certain criteria. It is not entirely clear if the age of these patients had any impact on the average length of stay since the average length of stay of the 24 cases reporting LITT of brain was 1.7 days and the 1 case reporting LITT of brain stem was 2 days.

As stated previously, the logic for case assignment to MS–DRG 042 is not dependent on the reporting of any CC or MCC diagnoses, however, based on the diagnoses reflected in the claims data for MS–DRG 042, it is possible that conditions such as obesity and chronic conditions requiring the long-term use of certain therapeutic agents may be contributing factors to the consumption of resources, separately from the LITT procedure. We found 17 of the 25 cases reporting LITT of brain or brain stem to also report one or both of these conditions.

We also reviewed the number of cases of LITT of the brain or brain stem procedures reported in the data since the transition to ICD–10. Specifically, we examined the claims data for cases reporting LITT of brain or brain stem as a standalone procedure or with another procedure in the FY 2016 through FY 2021 MedPAR data files across all MS–DRGs. The findings from our analysis are shown in table 6P.2e associated with the proposed rule.

The data demonstrates that since the implementation of ICD–10, a shift in the reporting of LITT of brain and brain stem procedures has occurred. For example, the FY 2016, FY 2017 and FY 2018 MedPAR data reflect that the number of cases for which LITT of brain or brain stem procedures were reported as a standalone procedure is higher in comparison to the number of cases reported with another procedure. Conversely, the FY 2019, FY 2020, and FY 2021 MedPAR data reflect that the number of cases for which LITT of brain or brain stem procedures were reported as a standalone procedure is lower in comparison to the number of cases reported with another procedure. The data also reflect that the average length of stay is shorter and the average costs are lower for cases reporting LITT of brain or brain stem as a standalone procedure in comparison to the average length of stay and average costs for cases reported with another procedure across the FY 2016 through FY 2021 MedPAR data files. Lastly, the data demonstrate that overall, the number of cases for which LITT of brain or brain stem procedures was performed had remained fairly stable at over 100 cases with increases in the FY 2017, FY 2020 and FY 2021 MedPAR data files of 156, 154 and 185 cases, respectively.

As discussed in the proposed rule, we also analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for cases reporting LITT of other anatomic sites across all MS–DRGs. Although the requestors indicated that LITT is primarily performed on intracranial lesions, as shown in Table 6P.2c associated with the proposed rule, we identified a small number of cases reporting LITT of the lung, rectum, liver, breast, and prostate, for a total of 29 cases where LITT was performed on other body parts/anatomic sites.

For example, we found a total of 5 cases reporting LITT of lung across 5 different MS–DRGs. Of these 5 cases, 2 cases had a longer average length of stay and higher average costs in comparison to all the cases in their respective MS–DRG. Specifically, for MS–DRG 163 (Major Chest Procedures with MCC), we found 1 case reporting LITT of lung with an average length of stay of 17 days and average costs of $41,467. The average length of stay for all cases in MS–DRG 163 is 10.7 days with average costs of $38,367. The data demonstrates a difference of 6.3 days (17 − 10.7 = 6.3) for the average length of stay and a difference of $3,100 in average costs ($41,467 − $38,367 = $3,100) for the 1 case reporting LITT of lung in MS–DRG 163 compared to all the cases in MS–DRG 163. For MS–DRG 167 (Other Respiratory System O.R. Procedures with CC), we found 1 case reporting LITT of lung with an average length of stay of 7 days and average costs of $22,975. The average length of stay for all cases in MS–DRG 167 is 4.6 days with average costs of $15,397. The data demonstrates a difference of 2.4 days (7 − 4.6 = 2.4) for the average length of stay and a difference of $7,578 in average costs ($22,975 − $15,397 = $7,578) for the 1 case reporting LITT of lung in MS–DRG 167 compared to all the cases in MS–DRG 167. The data for the remaining 3 cases reporting LITT of lung demonstrated a shorter average length of stay and lower average costs in comparison to all the cases in their respective MS–DRGs.

We found 1 case reporting LITT of rectum in MS–DRG 357 (Other Digestive System O.R. Procedures with CC) with a shorter average length of stay (4 days versus 5.6 days) and lower average costs ($3,069 versus $18,065) as compared to all the cases in MS–DRG 357. We also found 1 case reporting LITT of liver in MS–DRG 405 (Pancreas Liver and Shunt Procedures with MCC) with a longer average length of stay (20 days versus 12.3 days) and higher average costs ($49,0695 versus $43,771) as compared to all the cases in MS–DRG 405.We also found 1 case reporting LITT of right breast in MS–DRG 580 (Other Skin Subcutaneous Tissue and Breast Procedures with CC) with a longer average length of stay (19 days versus 5.4 days) and higher average costs ($32,064 versus $13,767) as compared to all the cases in MS–DRG 580.

Lastly, we found 21 cases reporting LITT of prostate across 14 MS–DRGs. Of those 21 cases, 6 cases had a longer average length of stay or higher average costs, or both, in comparison to the average length of stay and average costs of all the cases in their respective MS–DRG. For example, in MS–DRG 650 (Kidney Transplant with Hemodialysis with MCC) we found 1 case reporting LITT of prostate with an average length of stay of 36 days and average costs of $67,238. The average length of stay for all cases in MS–DRG 650 is 8.1 days with average costs of $38,139. The data demonstrates a difference of 27.9 days (36 − 8.1 = 27.9) for the average length of stay and a difference of $29,099 in average costs ($67,238 − $38,139 = $29,099) for the 1 case reporting LITT of prostate in MS–

DRG 650 compared to all the cases in MS–DRG 650. We also found 1 case reporting LITT of prostate in MS–DRG 659 (Kidney and Ureter Procedures for Non-Neoplasm with MCC) with an average length of stay of 26 days. The average length of stay for all cases in MS–DRG 659 is 7.8 days, demonstrating a difference of 18.2 days (26 − 7.8 = 18.2). We found 1 case reporting LITT of prostate in MS–DRG 712 (Testes Procedures without CC/MCC) with average costs of $15,669. The average costs for all cases in MS–DRG 712 is $10,482, demonstrating a difference of $5,187 ($15,669 − $10,482 = $5,187). We found 1 case reporting LITT of prostate in MS–DRG 987 with an average length of stay of 23 days and average costs of $35,465. The average length of stay for all cases in MS–DRG 987 is 10.9 days with average costs of $26,657. The data demonstrates a difference of 12.1 days (23 − 10.9 = 12.1) for the average length of stay and a difference of $8,808 in average costs ($35,465 − $26,657 = $8,808) for the 1 case reporting LITT of prostate in MS–DRG 987 compared to all the cases in MS–DRG 987. Lastly, we found 2 cases reporting LITT of prostate in MS–DRG 988 (Non-Extensive O.R. Procedures Unrelated to Principal Diagnosis with CC) with average costs of $17,126. The average costs for all cases in MS–DRG 988 is $13,670, demonstrating a difference of $3,456 ($17,126 − $13,670 = $3,456) for the 2 cases reporting LITT of prostate in MS–DRG 988.

We refer the reader to Table 6P.2c associated with the proposed rule for the detailed findings from our analysis. We note that if the procedure code describing LITT of a specific anatomic site is not listed it is because there were no cases found.

We noted in the proposed rule that for the 10 cases previously described, for which LITT of a different anatomic site from the brain or brain stem was reported and had a longer average length of stay or higher average costs, or both, in comparison to the average length of stay and average costs of all the cases in their respective MS–DRG, that with the exception of MS–DRG 712, all the other MS–DRGs include a ''with MCC'' or ''with CC'' designation, or were reported in a surgical MS–DRG. We stated we believe that these other factors may have contributed to the longer average length of stay and higher average costs for these cases, therefore we conducted additional analyses of the claims data to determine what diagnoses or procedures were also reported. We refer the reader to Table 6P.2d associated with the proposed rule for the findings from our detailed analysis of these 10 cases.

As shown in Table 6P.2d associated with the proposed rule, the data demonstrate that a number of MCC and/or CC secondary diagnoses were reported for each of the 10 cases and that the surgical procedures that were reported in addition to the LITT procedure seem to have contributed to the longer average length of stay and higher average costs for those cases when compared to the average length of stay and average costs for all the cases in their respective MS–DRG. For example, in case number 1 there are 2 diagnoses that are designated as MCC conditions and 5 diagnoses that that are designated as CC conditions with procedure codes describing a kidney transplant, hemodialysis, and insertion of a ureteral stent that were reported along with LITT of prostate. For case number 3 there are 4 diagnoses that are designated as MCC conditions and 6 diagnoses that are designated as CC conditions with procedure codes describing bronchoscopic treatment of a bronchial tumor with and without stents, as well as the use of mechanical ventilation. Overall, the data appear to indicate that the performance of the LITT procedure was not the underlying reason for, or main driver of, the increase in resource utilization for those cases.

As noted in the proposed rule, the requestors indicated that LITT is primarily being performed on intracranial lesions. However, as previously summarized, we identified a limited number of cases reporting LITT procedures for other anatomic sites. We stated in the proposed rule that we are interested in comments regarding the use of and experience with LITT for these other anatomic sites.

As discussed in the proposed rule, based on our analysis of the FY 2021 MedPAR claims data for cases reporting LITT of brain or brain stem (codes D0Y0KZZ and D0Y1KZZ) in MS–DRGs 040, 041, and 042, we agree with the requestors that the average costs of these cases are higher as compared to the average costs of all cases assigned to MS–DRGs 040, 041, and 042. For the reasons summarized, in the proposed rule we also stated we believe that other factors, including the reporting of secondary MCC and CC diagnoses, may be contributing to the higher average costs for these cases. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44813), we examined procedure codes D0Y0KZZ and D0Y1KZZ describing LITT of brain and brain stem, respectively, and stated that the technique to perform the LITT procedure on these structures is considered minimally invasive and does not involve a craniotomy, therefore, continued assignment to the craniotomy MS–DRGs is not clinically appropriate. As noted in the proposed rule, our clinical advisors continue to maintain that LITT is a minimally invasive procedure, requiring only a tiny incision for purposes of a burr hole and that patients are often only kept overnight (as reflected in the detailed claims data). However, we stated that we also recognize that craniotomy and LITT share common procedural characteristics including use of an operating room, carry risk of immediate intracranial bleeding or infection, and cause tissue to be immediately destroyed or excised. We noted that while the data do not demonstrate that the LITT procedure is the underlying reason for the higher average costs and consumption of resources for the small number of cases reporting LITT of brain (54 cases) or brain stem (2 cases) that we found in MS–DRGs 040, 041, and 042, the data do demonstrate that the patients receiving this treatment therapy have brain tumors or epilepsy combined with multiple comorbidities or chronic conditions necessitating long-term use of medications, or both, and we noted the indications for LITT (brain tumors and epileptic foci) are better aligned with MS–DRGs 025, 026, and 027 as compared to MS–DRGs 040, 041, and 042.

As discussed in the proposed rule, we intend to more fully evaluate the logic for the procedures specifically involving a craniotomy, as well as the overall structure of MS–DRGs 023 through 027, and we believe that reassignment of cases reporting LITT of brain or brain stem to MS–DRGs 025, 026, and 027 would be an appropriate first step in connection with these efforts. For example, while we recognize the distinctions between open craniotomy procedures and minimally invasive percutaneous intracranial procedures, we also recognize that the current logic for MS–DRGs 025 through 027 also includes other endovascular intracranial procedures performed using percutaneous or percutaneous endoscopic approaches, and we believe that further review of the clinical coherence of the procedures assigned to these MS–DRGs may be warranted. Our clinical advisors noted that while the typical patient treated with LITT usually has a single small scalp incision through which a hole approximately the diameter of a straw is drilled, with no extensive surgical exposure, that LITT

can still be employed for another subset of more complex patients, including patients with primary brain malignancies and those with larger metastatic lesions or multiple lesions. For this subset of more complex patients, a longer post-operative stay with direct medical supervision may be necessary. As such, we stated in the proposed rule that we believe reassigning these procedures to MS–DRGs 025 through 027 for FY 2023 would be appropriate as we consider restructuring MS–DRGs 023 through 027, including how to better align the clinical indications with the performance of specific intracranial procedures. Accordingly, for these reasons, we stated in the proposed rule that in the event there is not support for the proposed reclassification of LITT procedures and the corresponding new procedure codes as presented at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting, we were proposing to reassign the existing procedure codes describing LITT of the brain or brain stem from MS–DRGs 040, 041, and 042 to MS–DRGs 025, 026, and 027 for FY 2023. We also proposed to maintain the MS–DRG assignments for the existing procedure codes describing LITT of other anatomic sites as finalized and displayed in Table 6P.2b in association with the FY 2022 IPPS/LTCH PPS final rule, for FY 2023. Lastly, we noted in the proposed rule that we did not receive any comments or requests to reconsider those finalized MS–DRG assignments for FY 2023.

As noted, we stated in the proposed rule that we were proposing to reassign the existing procedure codes describing LITT of the brain or brain stem from MS–DRGs 040, 041, and 042 to MS–DRGs 025, 026, and 027 for FY 2023, in the event there was not support for the proposed reclassification of LITT procedures and the corresponding new procedure codes as presented at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting. As the proposed reclassification of the LITT procedures and the corresponding new procedure codes were approved following the March meeting, and the existing procedure codes D0Y0KZZ (Laser interstitial thermal therapy of brain) and D0Y1KZZ (Laser interstitial thermal therapy of brain stem) will be deleted effective October 1, 2022, we are not finalizing the proposed reassignment of these existing codes for FY 2023. As previously noted, and as reflected in Table 6B.—New Procedure Codes associated with this final rule, the new procedure codes describing LITT of brain (root operation Destruction) are assigned to MS–DRGs 025, 026 and 027 for FY 2023. We did not receive any public comments on our proposal to maintain the MS–DRG assignments for the existing procedure codes describing LITT of other anatomic sites as finalized and displayed in Table 6P.2b in association with the FY 2022 IPPS/LTCH PPS final rule, for FY 2023. As previously noted, the existing procedure codes describing LITT of other anatomic sites will also be deleted effective October 1, 2023; therefore, we are not finalizing the proposed reassignment of these existing codes for FY 2023. The MS–DRG assignments for the newly approved procedure codes describing LITT of other anatomic sites for FY 2023 are displayed in Table 6B in association with this final rule.

As noted in the proposed rule, in connection with our analysis of cases reporting LITT procedures performed on the brain or brain stem in MDC 01, we have started to examine the logic for case assignment to MS–DRGs 023 through 027 to determine where further refinements could potentially be made to better account for differences in the technical complexity and resource utilization among the procedures that are currently assigned to those MS–DRGs. Specifically, we are in the process of evaluating procedures that are performed using an open craniotomy (where it is necessary to surgically remove a portion of the skull) versus a percutaneous burr hole (where a hole approximately the size of a pencil is drilled) to obtain access to the brain in the performance of a procedure. We are also reviewing the indications for these procedures, for example, malignant neoplasms versus epilepsy to consider if there may be merit in considering restructuring the current MS–DRGs to better recognize the clinical distinctions of these patient populations in the MS–DRGs. We believe it is worthwhile to also compare the claims data for epilepsy patients who are treated with a neurostimulator implant versus a LITT procedure, as well as the claims data for patients with a diagnosis of epilepsy or malignant neoplasms who undergo a LITT procedure. Our analysis also includes reviewing the claims data with regard to the cases that reflect a procedure that is generally performed with another O.R. procedure versus a standalone procedure.

As we continue this analysis of the claims data with respect to MS–DRGs 023 through 027, we stated that we are also seeking public comments and feedback on other factors that should be considered in the potential restructuring of these MS–DRGs.

Comment: In response to CMS's request for public comment and feedback on the potential restructuring of the craniotomy MS–DRGs for future consideration, some commenters disagreed and stated that such a restructuring is not necessary. These commenters stated that should CMS consider future modifications to the logic for case assignment to MS–DRGs 023 through 027, the agency provide adequate notice for interested parties to assess the impact of any proposed changes.

Another commenter expressed appreciation that CMS indicated it is continuing to analyze if additional restructuring for MS–DRGs 023 through 027 may be warranted and agreed that the logic for these MS–DRGs has become more complex. The commenter stated they will be performing analyses and plan to submit their findings by the October 20, 2022 deadline. Another commenter urged CMS to also consider the costs of procedures with respect to whether a device is inserted or implanted in combination with the approach and clinical indications because of the various diagnoses and procedures that may group to MS–DRGs 023 through 027. This commenter expressed support for further collaboration to better align resources and clinical characteristics among within these MS–DRGs.

Another commenter who also expressed appreciation that CMS has signaled its intent on analyzing MS–DRGs 023 through 027 recommended that CMS also expand its analysis to include MS–DRGs 020 through 022 (Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with MCC, with CC, and without CC/MCC, respectively). According to the commenter, the payment rates for a subset of the procedures that group to these MS–DRGs appear to no longer adequately reflect the utilization of resources. The commenter encouraged CMS to analyze these MS–DRGs and determine if additional modifications may be warranted.

Response: We thank the commenters for their feedback and will take these recommendations into consideration as we further examine the logic for case assignment. We note that we would address any proposed modifications to the existing logic in future rulemaking.

As previously described in the proposed rule and this final rule, we are examining procedures by their approach (open versus percutaneous), clinical indications, and procedures that involve the insertion or implantation of a device. We recognize the logic for MS–DRGs 023 through 027 has grown more

complex over the years and believe there is opportunity for further refinement. We refer the reader to the ICD–10 MS–DRG Definitions Manual, version 40, which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* for complete documentation of the GROUPER logic for MS–DRGs 023 through 027. Feedback and other suggestions may be submitted by October 20, 2022 and directed to the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™), discussed in section II.D.1.b of the preamble of this final rule at: *https://mearis.cms.gov/public/home*.

b. Vagus Nerve Stimulation

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28141 through 28151), we discussed a request we received to review the MS–DRG assignment for cases that identify patients who receive an implantable vagus nerve stimulation system for heart failure. The vagus nerve, also called the X cranial nerve or the 10th cranial nerve, is the longest and most complex of the cranial nerves. There is one vagus nerve on each side of the body that runs from the brain through the face and thorax to the abdomen. According to the requestor, cranial nerve stimulation (CNS), which includes vagus nerve stimulation, is a well-established therapy for various indications including epilepsy, treatment resistant depression (TRD) and obstructive sleep apnea (OSA), and is now being investigated and studied for use in patients with heart failure.

According to the requestor, heart failure, or the heart's inability to pump an adequate supply of blood and oxygen to support the other organs of the body, is an autonomic nervous system dysfunction. The brain controls the function of the heart through the sympathetic branch and the parasympathetic branches of the autonomic nervous system. In heart failure, there is an imbalance in the autonomic nervous system. The vagus nerve stimulation system for heart failure is comprised of an implantable pulse generator, an electrical lead, and a programming computer system. The pulse generator, which is usually implanted just under the skin of the pectoral region, sends the energy to the vagus nerve through the lead. The lead is a flexible insulated wire that is guided under the skin from the chest up to the neck and is implanted onto the vagus nerve and transmits tiny electrical impulses from the generator to the nerve. These electrical impulses to the vagus nerve are intended to activate the parasympathetic branch of the autonomic nervous system to restore balance.

The requestor stated that cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis code describing epilepsy, TRD or OSA are assigned to surgical MS–DRGs 040, 041 and 042 (Peripheral Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator, and without CC/MCC, respectively) in MDC 01 (Diseases and Disorders of the Nervous System). However, when the same codes describing the insertion of a neurostimulator lead onto the vagus nerve and the insertion of a stimulator generator are reported with a principal diagnosis of heart failure, the cases instead are assigned to surgical MS–DRGs 252, 253 and 254 (Other Vascular Procedures with MCC, with CC, without MCC respectively) in MDC 05 (Diseases and Disorders of the Circulatory System).

The requestor stated that the treatment of autonomic nervous system dysfunction is the underlying therapeutic objective of cranial nerve stimulation for heart failure, and therefore the diagnosis of heart failure is more clinically coherent with other diagnoses in MDC 01. As a result, the requestor, who is developing the VITARIA® System, an active implantable neuromodulation system that uses vagus nerve stimulation to deliver autonomic regulation therapy (ART) for an indicated use that includes patients who have moderate to severe heart failure, submitted a request to reassign cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis code describing heart failure, from MS–DRGs 252, 253 and 254 in MDC 05 to MS–DRGs 040, 041 and 042 in MDC 01. This requestor also submitted an application for new technology add-on payment for FY 2023. As discussed in section II.F.7. of the preamble of this final rule, the new technology add-on payment application for the VITARIA® System for FY 2023 was withdrawn prior to the issuance of this final rule.

According to the requestor, the following ICD–10–PCS procedure code pair identifies the insertion of a vagus nerve stimulation system for heart failure:

ICD-10-PCS Code	Description
00HE0MZ with 0JH60BZ	Insertion of neurostimulator lead into cranial nerve, open approach
	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach

We stated in the FY 2023 IPPS/LTCH PPS proposed rule that the requestor performed its own analysis of Medicare claims from 2020 and stated that it found that patients enrolled in their pivotal clinical trials had an average length of stay of 6.38 days. According to the requestor this finding indicated a resource coherence more similar to cases assigned to MS–DRGs 040, 041 and 042, whose average lengths of stay ranges from 2 to 8 days, when compared to the average lengths of stay of 1 to 3 days for cases assigned to MS–DRGs 252 and 253. The requestor stated their own analysis of 2019 and 2020 Medicare claims data also showed that fewer than 11 cases with procedure codes describing the implantation of a vagus nerve stimulation system map to MS–DRGs 252, 253 and 254 annually but it is expected that Medicare patients will receive vagus nerve stimulation system for heart failure on an inpatient basis. Because of the shared clinical and resource similarity of the procedure to implant the VITARIA® system to other CNS procedures, regardless of indication, the requestor stated that CNS procedures for the treatment of heart failure should also be assigned to MS–DRGs 040, 041 and 042. The requestor also noted that the title of MS–DRGs

252, 253 and 254 is ''Other Vascular Procedures with MCC, with CC, without MCC respectively''. Since no vascular access is involved in the procedure to implant vagus nerve stimulation systems, the requestor stated MS–DRGs 252, 253 and 254 were not appropriate mappings for these procedures.

We stated in the proposed rule that the ICD–10–CM diagnosis codes that describe heart failure are found in the following table. These diagnosis codes are all currently assigned to MDC 05.

BILLING CODE 4120–01–P

ICD-10-CM Code	Description
I09.81	Rheumatic heart failure
I11.0	Hypertensive heart disease with heart failure
I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
I13.2	Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease
I50.1	Left ventricular failure, unspecified
I50.20	Unspecified systolic (congestive) heart failure
I50.21	Acute systolic (congestive) heart failure
I50.22	Chronic systolic (congestive) heart failure
I50.23	Acute on chronic systolic (congestive) heart failure
I50.30	Unspecified diastolic (congestive) heart failure
I50.31	Acute diastolic (congestive) heart failure
I50.32	Chronic diastolic (congestive) heart failure
I50.33	Acute on chronic diastolic (congestive) heart failure
I50.40	Unspecified combined systolic (congestive) and diastolic (congestive) heart failure
I50.41	Acute combined systolic (congestive) and diastolic (congestive) heart failure
I50.42	Chronic combined systolic (congestive) and diastolic (congestive) heart failure
I50.43	Acute on chronic combined systolic (congestive) and diastolic (congestive) heart failure
I50.810	Right heart failure, unspecified
I50.811	Acute right heart failure
I50.812	Chronic right heart failure
I50.813	Acute on chronic right heart failure
I50.814	Right heart failure due to left heart failure
I50.82	Biventricular heart failure
I50.83	High output heart failure
I50.84	End stage heart failure
I50.89	Other heart failure
I50.9	Heart failure, unspecified
I97.130	Postprocedural heart failure following cardiac surgery
I97.131	Postprocedural heart failure following other surgery

The ICD–10–PCS codes that identify the insertion of a neurostimulator lead onto the vagus nerve are listed in the following table.

ICD-10-PCS Code	Description
00HE0MZ	Insertion of neurostimulator lead into cranial nerve, open approach
00HE3MZ	Insertion of neurostimulator lead into cranial nerve, percutaneous approach
00HE4MZ	Insertion of neurostimulator lead into cranial nerve, percutaneous endoscopic approach

The ICD–10–PCS codes that identify the insertion of a stimulator generator are listed in the following table.

ICD-10-PCS Code	Description
0JH60BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60MZ	Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH63BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63MZ	Insertion of stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH70BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70MZ	Insertion of stimulator generator into back subcutaneous tissue and fascia, open approach
0JH73BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73MZ	Insertion of stimulator generator into back subcutaneous tissue and fascia, percutaneous approach

ICD-10-PCS Code	Description
0JH80BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80MZ	Insertion of stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH83BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83MZ	Insertion of stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH60BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60MZ	Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH63BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63MZ	Insertion of stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH70BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach

ICD-10-PCS Code	Description
0JH70DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70MZ	Insertion of stimulator generator into back subcutaneous tissue and fascia, open approach
0JH73BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73MZ	Insertion of stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH80BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80MZ	Insertion of stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH83BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83MZ	Insertion of stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach

We stated our analysis of this grouping issue confirmed that, when a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator are reported with a principal diagnosis code describing heart failure, these cases group to surgical MS–DRGs 252, 253 and 254 (Other Vascular Procedures with MCC, with CC, without MCC respectively).

We noted that cases involving the use of a peripheral neurostimulator and a diagnosis from MDC 01 are assigned to MS–DRG 041 only. The GROUPER logic for MS–DRGs 040, 041, and 042 is reflected in the logic table:

MCC	CC	Peripheral Neurostimulator Combinations	MS-DRG
Yes	n/a	n/a	040 (Peripheral Cranial Nerve and Other Nervous System Procedures with MCC)
No	Yes	n/a	041 (Peripheral Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator)
No	No	Yes	041 (Peripheral Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator)
No	No	No	042 (Peripheral Cranial Nerve and Other Nervous System Procedures without CC/MCC)

We refer the reader to the ICD–10 MS–DRG Version 39.1 Definitions Manual (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) for complete documentation of the GROUPER logic for the listed MS–DRGs.

In the proposed rule, we stated that we examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 252, 253 and 254 to identify the subset of cases within MS–DRGs 252, 253 and 254 reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis of heart failure. We stated we found zero cases in MS–DRGs 252, 253 and 254 reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis of heart failure. In an attempt to further examine this issue, we then examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 252, 253 and 254 to identify the subset of cases within MS–DRGs 252, 253 and 254 reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a secondary diagnosis of heart failure and similarly found zero cases.

We indicated in the proposed rule that the results of the claims analysis demonstrated that there was not sufficient claims data in the MedPAR file on which to assess the resource use of cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal or secondary diagnosis of heart failure as compared to other cases assigned to MS–DRGs 252, 253, and 254.

As discussed in the proposed rule, in reviewing the requestor's concerns regarding clinical coherence, our clinical advisors acknowledged that heart failure is a complex syndrome involving autonomic nervous system dysfunction, however our clinical advisors disagreed with assigning the diagnosis codes describing heart failure to MDC 01 (Diseases and Disorders of the Nervous System). Our clinical advisors noted the concept of clinical coherence requires that the patient characteristics included in the definition of each MS–DRG relate to a common organ system or etiology. As the listed diagnosis codes describe heart failure, we stated these diagnosis codes are appropriately assigned to MDC 05 (Diseases and Disorders of the Circulatory System). Our clinical advisors also stated it would not be appropriate to move these diagnoses into MDC 01 because it could inadvertently cause cases reporting these same MDC 05 diagnoses with a circulatory system procedure to be assigned to an unrelated MS–DRG because whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in a MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''.

To further examine the impact of moving the diagnoses describing heart failure into MDC 01, we stated we analyzed claims data for cases reporting a circulatory system O.R. procedure and a principal diagnosis of heart failure. Our findings are reflected in the following table.

Cases Reporting Circulatory System O.R. Procedures with a Principal Diagnosis of Heart Failure				
MS-DRG	Description	Number of Cases	Average Length of Stay	Average Costs
215	Other Heart Assist System Implant	375	12.9	$89,802
216	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC	554	17.7	$90,282
217	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with CC	9	9.2	$59,655
218	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization without CC/MCC	2	6	$36,309
219	Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC	147	16.8	$85,238
220	Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with CC	7	8.4	$62,843
222	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI HF or Shock with MCC	923	11.6	$61,254
223	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI HF or Shock without MCC	80	6.3	$40,806
224	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI HF or Shock with MCC	1	6	$41,102
226	Cardiac Defibrillator Implant without Cardiac Catheterization with MCC	1,602	8.1	$51,116
227	Cardiac Defibrillator Implant without Cardiac Catheterization without MCC	219	3.5	$40,176
228	Other Cardiothoracic Procedures with MCC	345	11.4	$43,864
229	Other Cardiothoracic Procedures without MCC	9	5.6	$28,662
231	Coronary Bypass with PTCA with MCC	13	17.2	$91,948
233	Coronary Bypass with Cardiac Catheterization or Open Ablation with MCC	482	17.3	$75,283
234	Coronary Bypass with Cardiac Catheterization or Open Ablation without MCC	4	19.8	$77,000
235	Coronary Bypass without Cardiac Catheterization with MCC	70	15	$61,655
236	Coronary Bypass without Cardiac Catheterization without MCC	6	5	$41,809
239	Amputation for Circulatory System Disorders Except Upper Limb and Toe with MCC	196	17.6	$43,110
240	Amputation for Circulatory System Disorders Except Upper Limb and Toe with CC	2	5	$10,803
242	Permanent Cardiac Pacemaker Implant with MCC	1,993	8.7	$33,121
243	Permanent Cardiac Pacemaker Implant with CC	105	5.2	$23,927
244	Permanent Cardiac Pacemaker Implant without CC/MCC	5	3.4	$21,763

Cases Reporting Circulatory System O.R. Procedures with a Principal Diagnosis of Heart Failure				
MS-DRG	Description	Number of Cases	Average Length of Stay	Average Costs
245	AICD Generator Procedures	196	7.6	$42,062
246	Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Arteries or Stents	4,529	7.4	$27,962
247	Percutaneous Cardiovascular Procedures with Drug-Eluting Stent without MCC	174	4.7	$19,268
248	Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Arteries or Stents	92	7.3	$26,922
249	Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent without MCC	7	5.1	$19,763
250	Percutaneous Cardiovascular Procedures without Coronary Artery Stent with MCC	288	7	$25,284
251	Percutaneous Cardiovascular Procedures without Coronary Artery Stent without MCC	8	3.4	$14,789
252	Other Vascular Procedures with MCC	1,603	10.4	$32,014
253	Other Vascular Procedures with CC	29	4.6	$21,692
254	Other Vascular Procedures without CC/MCC	2	1	$10,169
255	Upper Limb and Toe Amputation for Circulatory System Disorders with MCC	105	10.7	$24,075
256	Upper Limb and Toe Amputation for Circulatory System Disorders with CC	2	8	$14,155
258	Cardiac Pacemaker Device Replacement with MCC	267	6.8	$22,749
259	Cardiac Pacemaker Device Replacement without MCC	28	4.3	$21,145
260	Cardiac Pacemaker Revision Except Device Replacement with MCC	279	8.4	$28,176
261	Cardiac Pacemaker Revision Except Device Replacement with CC	20	4.3	$17,726
262	Cardiac Pacemaker Revision Except Device Replacement without CC/MCC	3	2.7	$18,186
263	Vein Ligation and Stripping	9	35.7	$50,529
264	Other Circulatory System O.R. Procedures	2,422	10.7	$28,866
265	AICD Lead Procedures	83	10	$38,286
266	Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC	666	13.9	$76,663
267	Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC	36	3.8	$44,643
268	Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC	46	16.7	$62,285
269	Aortic and Heart Assist Procedures Except Pulsation Balloon without MCC	1	1	$14,357
270	Other Major Cardiovascular Procedures with MCC	1,026	13.8	$48,958
271	Other Major Cardiovascular Procedures with CC	22	8.7	$26,730
272	Other Major Cardiovascular Procedures without CC/MCC	2	1.5	$8,289
273	Percutaneous and Other Intracardiac Procedures with MCC	1,064	8.8	$33,132
274	Percutaneous and Other Intracardiac Procedures without MCC	41	6.2	$26,180
	Total Cases	**20,199**	**9.9**	**$40,428**

As shown in the table, if we were to move diagnosis codes describing heart failure to MDC 01, 20,199 cases would be assigned to the surgical class referred to as ''unrelated operating room procedures'' as an unintended consequence because the surgical procedure reported on the claim would be considered unrelated to the MDC to which the case was assigned based on the principal diagnosis.

In response to the requestor's concerns regarding the title of MS–DRGs 252, 253 and 254, we noted that, as stated in the ICD–10 MS–DRG Definitions Manual, ''In each MDC there is usually a medical and a surgical class referred to as ''other medical diseases'' and ''other surgical procedures,'' respectively. The ''other'' medical and surgical classes are not as precisely defined from a clinical perspective. The other classes would include diagnoses or procedures which were infrequently encountered or not well defined clinically. For example, the ''other'' medical class for the Respiratory System MDC would contain the diagnoses ''other somatoform disorders'' and ''congenital malformation of the respiratory system,'' while the ''other'' surgical class for the female reproductive MDC would contain the surgical procedures ''excision of liver'' (liver biopsy in ICD–9–CM) and ''inspection of peritoneal cavity'' (exploratory laparotomy in ICD–9–CM). The ''other'' surgical category contains surgical procedures which, while infrequent, could still reasonably be expected to be performed for a patient in the particular MDC. There are, however, also patients who receive surgical procedures which are completely unrelated to the MDC to which the patient was assigned. An example of such a patient would be a patient with a principal diagnosis of pneumonia whose only surgical procedure is a destruction of prostate (transurethral prostatectomy in ICD–9–CM). Such patients are assigned to a surgical class referred to as ''unrelated operating room procedures.'' '' We further noted that MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) are examples of the ''other'' surgical class, therefore it is expected that there will be procedures not as precisely clinically aligned within the definition (logic) of these MS–DRGs.

We stated in the proposed rule that considering that there was no data in the FY 2021 MedPAR file to support a reassignment of these cases based on resource consumption, the analysis of clinical coherence as discussed previously, and the impact that moving the diagnoses describing heart failure into MDC 01 from MDC 05 would have on heart failure cases, we did not believe a reassignment of these cases was appropriate at this time. We stated we could continue to evaluate the clinical coherence and resource consumption costs that impact this subset of cases and their current MS–DRG assignment as data become available for future rulemaking.

In summary for the reasons stated previously, we did not propose to reassign cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis of heart failure from MS–DRGs 252, 253 and 254 to MS–DRGs 040, 041 and 042.

Comment: Commenters expressed support for CMS' decision to not propose to reassign cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis of heart failure from MS–DRGs 252, 253 and 254 to MS–DRGs 040, 041 and 042.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current assignment of cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis of heart failure to MS–DRGs 252, 253 and 254, without modification, for FY 2023.

We further stated in the proposed rule that as we examined the GROUPER logic that would determine an assignment of a case to MS–DRGs 252, 253 and 254, we noted the logic for MS–DRGs 252, 253 and 254 includes ICD–10–PCS procedure codes that describe the insertion of the stimulator generator. We refer the reader to the ICD–10 MS–DRG Version 39.1 Definitions Manual (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) for complete documentation of the GROUPER logic for the listed MS–DRGs. We stated that during our review of the stimulator generator insertion procedures assigned to these MS–DRGs, we identified the following 24 procedure codes that describe the insertion of a stimulator generator, differentiated by device type (for example single array or multiple array), that did not exist in the logic for MS–DRGs 252, 253 and 254.

ICD-10-PCS Code	Description
0JH60BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH63BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH70BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH73BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH80BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH83BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach

For clinical consistency with the other procedure codes describing the insertion of the stimulator generator currently assigned to these MS–DRGs, we proposed to add the 24 ICD–10–PCS codes listed previously to MS–DRGs 252, 253 and 254, (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 05 (Diseases and Disorders of the Circulatory System) effective October 1, 2022 for FY 2023.

Comment: Commenters supported the proposal to add the 24 ICD–10–PCS codes to MS–DRGs 252, 253 and 254, (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 05 (Diseases and Disorders of the Circulatory System).

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the 24 ICD–10–PCS codes listed previously to MS–DRGs 252, 253 and 254, (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 05 (Diseases and Disorders of the Circulatory System) without modification, effective October 1, 2022 for FY 2023.

Also, in the proposed rule we stated that as we examined the GROUPER logic that would determine an assignment of a case to MS–DRG 041,

we noted that the logic for case assignment to MS–DRG 041 as displayed in the ICD–10 MS–DRG Version 39.1 Definitions Manual, available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* contains code combinations or ''clusters'' representing the insertion of a neurostimulator lead and the insertion of a stimulator generator that are captured under a list referred to as ''Peripheral Neurostimulators.'' During our review of the procedure code clusters in this list, we noted that ICD–10–PCS procedure code clusters describing the insertion of a neurostimulator lead and the insertion of the stimulator generator differentiated by device type (for example single array or multiple array), approach and anatomical site placement are captured. However, procedure code clusters describing the insertion of stimulator generator, that is not differentiated by device type, and a neurostimulator lead were inadvertently excluded. We refer the reader to Table 6P.3a associated with the proposed rule (which is available via the internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) for the list of the 108 ICD–10–PCS code clusters that were inadvertently excluded and do not exist in the logic for MS–DRG 041.

For clinical consistency, our clinical advisors supported the addition of the 108 procedure code clusters to the GROUPER logic list referred to as ''Peripheral Neurostimulators'' for MS–DRG 041 that describe the insertion of stimulator generator, not differentiated by device type, and a neurostimulator lead. Therefore, we proposed to add the 108 ICD–10–PCS code clusters listed in Table 6P.3a in association with the proposed rule that describe the insertion of a stimulator generator, that is not differentiated by device type, and a neurostimulator lead to MS–DRG 041, effective October 1, 2022 for FY 2023.

Comment: Commenters expressed support for CMS' proposal to add the 108 ICD–10–PCS code clusters listed in Table 6P.3a in association with the proposed rule that describe the insertion of a stimulator generator, that is not differentiated by device type, and a neurostimulator lead to MS–DRG 041. A commenter stated that this proposal will clinically align these procedures with other procedures in their respective MS–DRGs.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the 108 procedure code clusters listed in Table 6P.3a in association with the proposed rule that describe the insertion of stimulator generator, not differentiated by device type, and a neurostimulator lead to the GROUPER logic list referred to as ''Peripheral Neurostimulators'' for MS–DRG 041 (Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator) without modification, effective October 1, 2022 for FY 2023.

4. MDC 02 (Diseases and Disorders of the Eye): Retinal Artery Occlusion

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28151 through 28155), we discussed a request we received to reassign cases reporting diagnosis codes describing central retinal artery occlusion, and the closely allied condition branch retinal artery occlusion, from MS–DRG 123 (Neurological Eye Disorders) in MDC 02 (Diseases and Disorders of the Eye) to MS–DRGs 061, 062, and 063 (Ischemic Stroke Precerebral Occlusion or Transient Ischemia with Thrombolytic Agent with MCC, with CC, and without CC/MCC, respectively) in MDC 01 (Diseases and Disorders of the Nervous System).

Retinal artery occlusion refers to blockage of the retinal artery that carries oxygen to the nerve cells in the retina at the back of the eye, often by an embolus or thrombus. A blockage in the main artery in the retina is called central retinal artery occlusion (CRAO). A blockage in a smaller artery is called branch retinal artery occlusion (BRAO). According to the requestor, in the current mapping to MS–DRG 123, diagnoses of CRAO and BRAO are being captured inappropriately as eye disorders in MDC 02. Instead, the requestor stated that CRAO and BRAO are forms of acute ischemic stroke which occur when a vessel supplying blood to the brain is obstructed.

The requestor stated the retina is a core component of the central nervous system and there is growing recognition that damage to it is a vascular neurological problem and not an ophthalmological one. Patients with CRAO or BRAO are typically very sick, have an underlying condition, and are at imminent risk for further events including heart attack or brain stroke. A diagnosis of CRAO or BRAO requires an urgent, structured and multidisciplinary team-based examination to evaluate and treat other diagnoses that may be present such as high blood pressure, dyslipidemia, diabetes mellitus, obesity, obstructive sleep apnea and smoking to ameliorate the risks of a subsequent, potentially lethal, cardiovascular event.

The requestor further stated new evidence outlines treatment of patients with CRAO with acute stroke protocols, specifically with intravenous thrombolysis (IV tPA) or hyperbaric oxygen therapy (HBOT), to improve outcomes. According to the requestor, BRAO is less commonly treated with IV tPA than CRAO but also requires an urgent and thorough diagnostic workup as with any other form of stroke. The requestor stated the current assignment of these conditions to MS–DRG 123 does not properly recognize disease complexity and allocation of resources for care for these cases. The requestor stated that patients with CRAO or BRAO more closely resemble patients currently mapped to MS–DRGs 061, 062, and 063 in terms of in resource intensity and criticality and that in instances where HBOT is the chosen treatment modality, any revised MS–DRG mapping should include the ICD–10–PCS codes for HBOT.

As noted in the proposed rule, the ICD–10–CM codes that describe CRAO and BRAO are found in the following table.

ICD-10-CM Code	Description
H34.10	Central retinal artery occlusion, unspecified eye
H34.11	Central retinal artery occlusion, right eye
H34.12	Central retinal artery occlusion, left eye
H34.13	Central retinal artery occlusion, bilateral
H34.231	Retinal artery branch occlusion, right eye
H34.232	Retinal artery branch occlusion, left eye
H34.233	Retinal artery branch occlusion, bilateral
H34.239	Retinal artery branch occlusion, unspecified eye

Thrombolytic therapy is identified with the following ICD–10–PCS procedure codes.

ICD-10-PCS Code	Description
3E03017	Introduction of other thrombolytic into peripheral vein, open approach
3E03317	Introduction of other thrombolytic into peripheral vein, percutaneous approach
3E04017	Introduction of other thrombolytic into central vein, open approach
3E04317	Introduction of other thrombolytic into central vein, percutaneous approach
3E05017	Introduction of other thrombolytic into peripheral artery, open approach
3E05317	Introduction of other thrombolytic into peripheral artery, percutaneous approach
3E06017	Introduction of other thrombolytic into central artery, open approach
3E06317	Introduction of other thrombolytic into central artery, percutaneous approach

The requestor identified three ICD–10–PCS codes that they stated describe HBOT.

ICD-10-PCS Code	Description
5A05121	Extracorporeal hyperbaric oxygenation, intermittent
6A150ZZ	Decompression, circulatory, single
6A151ZZ	Decompression, circulatory, multiple

We stated in the proposed rule that during our review of this issue, we included the three procedure codes as identified by the requestor as describing HBOT, as well as the similar procedure code 5A05221 (Extracorporeal hyperbaric oxygenation, continuous) that also describes HBOT, differing only in duration.

We stated that our analysis of this grouping issue confirmed that, when a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT is reported with principal diagnosis code describing CRAO or BRAO, these cases group to medical MS–DRG 123. We began our analysis by examining claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRG 123 to (1) identify cases reporting a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT; (2) identify cases reporting diagnosis codes describing CRAO or BRAO with a procedure code describing HBOT; and (3) identify cases reporting diagnosis codes describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent. Our findings are shown in the following table:

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
123	All cases	2,642	2.5	$6,457
	Cases reporting a principal diagnosis of CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT	774	2.2	$5,482
	Cases reporting a procedure code describing HBOT with a principal diagnosis of CRAO or BRAO	9	2	$6,491
	Cases reporting a procedure code describing the administration of a thrombolytic agent with a principal diagnosis of CRAO or BRAO	47	2.3	$14,335
	All other cases	1,812	2.6	$6,669

As shown in the table, we identified a total of 2,642 cases within MS–DRG 123 with an average length of stay of 2.5 days and average costs of $6,457. Of these 2,642 cases, there are 774 cases that reported a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT with an average length of stay of 2.2 days and average costs of $5,482. There are nine cases that reported a principal diagnosis code describing CRAO or BRAO with a procedure code describing HBOT with an average length of stay of 2 days and average costs of $6,491. There are 47 cases that reported a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent with an average length of stay of 2.3 days and average costs of $14,335.

The data analysis shows that the 774 cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT have average costs lower than the average costs in the FY 2021 MedPAR file for MS–DRG 123 ($5,482 compared to $6,457), and the average length of stay is shorter (2.2 days compared to 2.5 days). For the nine cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing HBOT, the average length of stay is shorter (2 days compared to 2.5 days) and the average costs ($6,491 compared to $6,457) are slightly higher than the average length of stay and average costs compared to all cases in that MS–DRG. For the 47 cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent, the average length of stay is slightly shorter (2.3 days compared to 2.5 days) and the average costs are higher ($14,335 compared to $6,457) than the average length of stay and average costs compared to all cases in that MS–DRG.

We also examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 061, 062, and 063. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
061	4,531	6.6	$23,720
062	7,955	3.7	$15,733
063	1,548	2.5	$13,023

BILLING CODE 4120–01–C

We stated in the proposed rule that because MS–DRG 123 is a base DRG and there is a three-way split within MS–DRGs 061, 062, and 063, we also analyzed the 47 cases reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent and the nine cases reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing HBOT for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC).

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
123	Cases reporting procedures describing the administration of a thrombolytic agent with a principal diagnosis of CRAO or BRAO with MCC	9	3.2	$20,220
	Cases reporting a procedure code describing HBOT with a principal diagnosis of CRAO or BRAO with MCC	1	3	$10,768
	Cases reporting procedures describing the administration of a thrombolytic agent with a principal diagnosis of CRAO or BRAO with CC	19	2.3	$13,145
	Cases reporting a procedure code describing HBOT with a principal diagnosis of CRAO or BRAO with CC	3	2	$6,107
	Cases reporting procedures describing the administration of a thrombolytic agent with a principal diagnosis of CRAO or BRAO without CC/MCC	19	1.8	$12,737
	Cases reporting a procedure code describing HBOT with a principal diagnosis of CRAO or BRAO without CC/MCC	5	1.8	$5,867

We stated that this data analysis showed that the cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or with a procedure code describing HBOT when distributed based on the presence or absence of a secondary diagnosis designated as a CC or an MCC have average costs lower than the average costs in the FY 2021 MedPAR file for MS–DRGs 061, 062, and 063 respectively, and the average lengths of stay are shorter. Accordingly, we stated that we did not believe the data adequately supported a potential reassignment of these cases to MS–DRGs 061, 062, and 063 respectively.

Our clinical advisors reviewed this issue and the related data analysis and did not believe that the small subset of patients with a diagnosis of CRAO or BRAO receiving a thrombolytic agent or hyperbaric oxygen therapy warranted a separate MS–DRG or reassignment at this time. We stated our clinical advisors noted the average costs for cases of patients with a diagnosis of CRAO or BRAO receiving HBOT are only slightly higher than the average costs for all cases in MS–DRG 123 ($6,491 compared to $6,457). The average costs for cases of patients with a diagnosis of CRAO or BRAO receiving a thrombolytic agent are higher than the average costs for all cases in MS–DRG 123 however when distributed based on the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC), we stated that it was unclear to what degree the higher average costs for these cases are attributable to the severity of illness of the patient and other circumstances of the admission as opposed to the administration of a thrombolytic agent, as the claims data reflects a wide variance with regard to average costs for these cases.

Our clinical advisors further noted that ischemia is defined as a condition in which the blood vessels become blocked, and blood flow is stopped or reduced. The condition has many potential causes, including a blockage caused by a blood clot, or due to buildup of deposits, such as cholesterol. Ischemia can occur anywhere in the body, and the different names for the condition depend on the organ or body part affected such as the brain (cerebral ischemia), heart (ischemic heart disease, myocardial ischemia, or cardiac ischemia), and intestines (mesenteric ischemia or bowel ischemia), legs (critical limb ischemia—a form of peripheral artery disease), and skin (cutaneous ischemia), while they are similar in that they all involve a blocked blood vessel.

In ICD–10 the body or organ system is the axis of the classification and diagnosis codes describing ischemia affecting other body parts are classified by the body or organ system affected. For example, codes describing myocardial ischemia are assigned to MDC 05 (Diseases and Disorders of the Circulatory System) and codes describing mesenteric ischemia are assigned to MDC 06 (Diseases and Disorders of the Digestive System). Our clinical advisors disagreed with assigning the diagnosis codes describing CRAO and BRAO to MDC 01. Our clinical advisors noted the concept of clinical coherence generally requires that the patient characteristics included in the definition of each MS–DRG relate to a common organ system or etiology and that a specific medical specialty should typically provide care to the patients in the DRG. While closely related, the eyes and the brain are different organs. Our clinical advisors stated that because the diagnosis codes used to report CRAO and BRAO describe ischemia affecting the retina, these diagnosis codes are appropriately assigned to MDC 02 (Diseases and Disorders of the Eye). The retina is a collection of cells at the back of the eye where the processing of visual information begins. Due to the retina's vital role in vision, damage to it can cause permanent blindness. The presence of CRAO or BRAO requires input from an ophthalmologist and treatment for these diagnoses would be expected to utilize different resources than a diagnosis of cerebral ischemia which may or may not involve visual impairment. Other possible interventions for CRAO or BRAO include attempting to lower the intraocular pressure with medication or by using a small-gauge needle to remove fluid to try to dislodge the embolus or ocular massage to dislodge the clot, which are not interventions generally performed for a diagnosis of acute ischemic stroke.

We stated in the FY 2023 IPPS/LTCH PPS proposed rule that to explore other mechanisms to address this request, we also reviewed claims data to consider the option of adding another severity level to the current structure of MS–DRG 123 (Neurological Eye Disorders) and assigning the cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent to the highest level. This option would have involved modifying the current base MS–DRG to a two-way severity level split or to a three-way severity level split of ''with MCC or thrombolytic agent, with CC, and without CC/MCC.'' Therefore, it would have included proposing new MS–DRGs if the data and our clinical advisors supported creation of new MS–DRGs. However, as displayed in the data findings in the table that follows, we found that the

data did not support this option. We applied the five criteria as described in section II.D.1.b. of the preamble of the proposed rule and this final rule to determine if it would be appropriate to subdivide cases currently assigned to MS–DRG 123 into severity levels. This analysis generally includes two years of MedPAR claims data to compare the data results from one year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year's data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported. However, as discussed in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25092), our MS–DRG analysis last year was based on ICD–10 claims data from the March 2020 update of the FY 2019 MedPAR file, which contains hospital claims received from October 1, 2018 through March 31, 2020, for discharges occurring through September 30, 2019 and the ICD–10 claims data from the September 2020 update of the FY 2020 MedPAR file, which contains hospital claims received from October 1, 2019 through September 30, 2020, for discharges occurring through September 30, 2020 given the potential impact of the PHE for COVID–19. Therefore, for the FY 2023 IPPS/LTCH PPS proposed rule, we reviewed the claims data for base MS–DRG 123 using the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, which were used in our analysis of claims data for MS–DRG reclassification requests for FY 2022. We also reviewed the claims data for base MS–DRG 123 using the September 2021 update of the FY 2021 MedPAR file, which were used in our analysis of claims data for MS–DRG reclassification requests for FY 2023. Our findings are shown in the table:

FY Data	Number of Cases	Number of Cases MCC	Number of Cases CC	Number of Cases NonCC	Average Costs No Split	Average Costs MCC	Average Costs CC	Average Costs NonCC	Average Costs MCC/CC Combo	Average Costs CC/NonCC Combo
2021	2,642	374	1,220	1,048	$6,457	$8,605	$6,738	$5,364	$7,176	$6,103
2020	2,664	345	1,163	1,156	$5,943	$7,710	$6,235	$5,122	$6,573	$5,681
2019	3,100	376	1,393	1,331	$5,659	$8,276	$5,743	$4,832	$6,282	$5,298

We stated that we applied the criteria to create subgroups for the three-way severity level split. We referred the reader to section II.D.1.b. of the preamble of the FY 2023 IPPS/LTCH PPS proposed rule, for related discussion regarding our finalization of the expansion of the criteria to include the NonCC subgroup and our proposal to continue to delay application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split to maintain more stability in the current MS–DRG structure. We found that the criterion that there be at least 500 cases for each subgroup was not met, as shown in the table based on the data in the FY 2019, FY 2020, and FY 2021 MedPAR files. Specifically, for the ''with MCC'', ''with CC'', and ''without CC/MCC'' split, there were only 376 cases in the ''with MCC'' subgroup based on the data in the FY 2019 MedPAR file, only 345 cases in the ''with MCC'' subgroup based on the data in the FY 2020 MedPAR file and only 374 cases in the ''with MCC'' subgroup based on the data in the FY 2021 MedPAR file.

We then applied the criteria to create subgroups for the two-way severity level splits. For the ''with MCC'' and ''without MCC'' (CC+NonCC) split, the criterion that there be at least 500 cases for each subgroup failed due to low volume each year, specifically, for the ''with MCC'' subgroup as previously described. For the ''with CC/MCC'' and ''without CC/MCC'' (NonCC) split, we found that the criterion that there be at least a $2,000 difference in average costs between the ''with CC/MCC'' and ''without CC/MCC'' subgroups also failed. In the FY 2019 MedPAR file, our data analysis shows average costs in the hypothetical ''with CC/MCC'' subgroup of $6,282 and average costs in the hypothetical ''without CC/MCC'' subgroup of $4,832, for a difference of only $1,450 ($6,282 minus $4,832 = $1,450). In the FY 2020 MedPAR file, our data analysis shows average costs in the hypothetical ''with CC/MCC'' subgroup of $6,573 and average costs in the hypothetical ''without CC/MCC'' subgroup of $5,122, for a difference of only $1,451 ($6,573 minus $5,122 = $1,451). In the FY 2021 MedPAR file, our data analysis shows average costs in the hypothetical ''with CC/MCC'' subgroup of $7,176 and average costs in the hypothetical ''without CC/MCC'' subgroup of $5,364, for a difference of only $1,812 ($7,176 minus $5,364 = $1,812). We stated that our data analysis indicated that the current base MS–DRG 123 maintains the overall accuracy of the IPPS, and that the claims data did not support a three-way or a two-way severity level split for MS–DRG 123.

Lastly, we stated we explored reassigning cases with a principal diagnosis of CRAO or BRAO that receive the administration of a thrombolytic agent to other MS–DRGs within MDC 02. However, our review did not support reassignment of these cases to any other medical MS–DRGs as these cases would not be clinically coherent with the cases assigned to those other MS–DRGs.

Therefore, based on the various data analyses we performed to explore the possible reassignment of cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy, and the clinical analysis as previously discussed, for FY 2023 we did not propose any MS–DRG changes for cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy.

Comment: Some commenters expressed support for CMS' decision to not propose any MS–DRG changes for cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy.

Response: We appreciate the commenters' support.

Comment: Other commenters opposed or expressed concerns with CMS' decision to not propose any MS–DRG changes for cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy. These commenters stated from a pathophysiologic perspective, CRAO is the same process as a stroke of the brain and that the retina, although located within the eye, is a core component of the central nervous system and consists of brain cells (neurons) that also extend

through the entire course of the brain. These commenters also stated that the relationship of any particular tissue to its organ is related to its structure and function, and not its location. According to the commenters, acute CRAO is a medical emergency, equivalent to acute cerebral ischemic stroke, that needs to be treated in the same way with urgent inpatient evaluation, cerebrovascular and cardiac workup, and intervention. The commenters urged CMS to assign cases reporting diagnosis codes describing central retinal artery occlusion with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy to MS–DRGs 061, 062, and 063 to ensure appropriate payment for these cases.

Response: We thank the commenters for their feedback. Our clinical advisors reviewed the commenters' concerns and note that although commenters' state the relationship of any particular tissue to its organ is related to its structure and function, and not its location, in ICD–10, however, the body or organ system is the axis of the classification. By design, the patient characteristics included in the definition of each MS–DRG relate to a common organ system or etiology. Our clinical advisors agree with commenters that the retina is similar to the brain in terms of cellular and functional elements, but they note the retina is a part of the eye. Our clinical advisors state that the presence of CRAO or BRAO, which typically presents sudden, painless monocular loss of visual acuity and peripheral vision, requires input from an ophthalmologist which would not always be expected in a diagnosis of cerebral ischemia, which may or may not involve visual impairment. Our clinical advisors continue to believe CRAO and BRAO are appropriately classified with other eye conditions currently assigned to MDC 02.

Therefore, after consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal, without modification, to maintain the current assignment of cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy.

5. MDC 04 (Diseases and Disorders of the Respiratory System): Acute Respiratory Distress Syndrome (ARDS)

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28155 through 28156), we discussed a request we received to reassign cases reporting diagnosis code J80 (Acute respiratory distress syndrome) as the principal diagnosis from MS–DRG 204 (Respiratory Signs and Symptoms) to MS–DRG 189 (Pulmonary Edema and Respiratory Failure).

According to the requestor, when a patient presents with the condition of acute respiratory failure that progresses to acute respiratory distress syndrome (ARDS) during the hospital stay, official coding guidance instructs to only report the diagnosis code for ARDS (code J80). The requestor stated that in the American Hospital Association's (AHA) *Coding Clinic for ICD–10–CM and ICD–10–PCS,* Fourth Quarter 2020 publication, for a patient who is admitted in acute hypoxic respiratory failure that progresses to ARDS, the advice is to assign code J80, Acute respiratory distress syndrome. Additionally, in the ICD–10–CM Tabular List of Diseases, per the Excludes 1 note under category J96 (Respiratory failure, not elsewhere classified) only code J80 should be assigned when respiratory failure and ARDS are both documented. The same publication also maintained that ARDS is a life-threatening form of respiratory failure and is not an unrelated condition. Therefore, when acute respiratory failure is documented along with ARDS, only one code is reported to capture the highest level of severity.

The requestor also conveyed the Fourth Quarter 2020 publication's reference to previously published advice from the Fourth Quarter 2017 publication that stated, ''Acute respiratory distress syndrome (ARDS) is a life-threatening condition. ARDS is a rapidly progressive disorder that has symptoms of dyspnea, tachypnea, and hypoxemia. Fluid builds up in the alveoli and lowers the amount of oxygen that is circulated through the bloodstream. Low levels of oxygen in the blood threatens organ function. ARDS is often associated with sepsis, pneumonia, trauma and aspiration. The majority of people who develop ARDS are already in the hospital in critical condition from some other health complication. The focus of treatment is getting oxygen to the organs.''

We examined claims data from the September 2021 update of the FY 2021 MedPAR file for all cases in MS–DRG 204 and the cases reporting ARDS (code J80) as a principal diagnosis. Our findings are shown in the following table.

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
204	All Cases	5,241	2.8	$6,780
	Cases with principal diagnosis code J80 (Acute respiratory distress syndrome)	96	7.6	$15,077
	All other cases	5,145	2.7	$6,625

As shown in the table, the data demonstrate a longer average length of stay (7.6 days versus 2.8 days) and higher average costs ($15,077 versus $6,780) for the 96 cases reporting ARDS (code J80) as a principal diagnosis when compared to all 5,241 cases in MS–DRG 204.

We also examined claims data from the September 2021 update of the FY 2021 MedPAR file for all cases in MS–DRG 189. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
189	77,626	4.6	$9,780

We stated in the proposed rule that the data analysis supports that cases reporting ARDS (code J80) are more appropriately aligned with the average length of stay and average costs of the cases in MS–DRG 189 in comparison to MS–DRG 204 when ARDS is reported as a principal diagnosis. We also stated in the proposed rule that we agree, consistent with the coding clinic advice, ARDS is a life-threatening form of respiratory failure and the conventions of the ICD–10–CM classification as displayed in the Tabular List of Diseases Excludes note, support the concept that cases reporting ARDS as a principal diagnosis are more clinically coherent with the other conditions currently assigned to MS–DRG 189.

For these reasons, we proposed to reassign cases reporting ARDS (code J80) as a principal diagnosis from MS–DRG 204 to MS–DRG 189 effective FY 2023.

Comment: Commenters supported the proposal to reassign cases reporting diagnosis code J80 as a principal diagnosis from MS–DRG 204 to MS–DRG 189.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to reassign cases reporting ARDS (code J80) as a principal diagnosis from MS–DRG 204 to MS–DRG 189 effective FY 2023.

6. MDC 05 (Diseases and Disorders of the Circulatory System)

a. Percutaneous Transluminal Coronary Angioplasty (PTCA) Logic

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28156 through 28157), we stated that we identified a replication issue from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs for procedure code 02UG3JE (Supplement mitral valve created from left atrioventricular valve with synthetic substitute, percutaneous approach) that was created effective October 1, 2016 (FY 2017), to identify and describe further interventions that may occur for a patient who had previously undergone cardiac valve surgery to correct a congenital anomaly, such as repair of a complete common atrioventricular canal defect.

As stated in the proposed rule, we used our established process in the assignment of new procedure code 02UG3JE to the most appropriate MS–DRG(s) for FY 2017. Procedure code 02UG3JE was proposed for assignment to the same MS–DRGs as its predecessor code. The predecessor code for procedure code 02UG3JE as shown in the 2017 ICD–10–PCS conversion table (available via the internet on the CMS web page at: *https://www.cms.gov/Medicare/Coding/ICD10/2017-ICD-10-PCS-and-GEMs*) is 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach). The ICD–9–CM comparable translation for this code (02UG3JZ) is procedure code 35.97 (Percutaneous mitral valve repair with implant), which identifies the use of the MitraClip® technology that has been discussed extensively in prior rulemaking.

In the FY 2017 rulemaking, using our established process, new procedure code 02UG3JE was proposed and finalized for assignment to the following MS–DRGs for FY 2017, as also shown in Table 6B.—New Procedure Codes in association with the FY 2017 IPPS/LTCH PPS proposed and final rules (available via the internet on the CMS web page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download*). We noted that the listed MS–DRGs also reflect the MS–DRGs that the predecessor code (02UG3JZ) was assigned to at the time of the proposed rule.

MS-DRG	Description
231	Coronary Bypass with PTCA with MCC
232	Coronary Bypass with PTCA without MCC
233	Coronary Bypass with Cardiac Catheterization with MCC
234	Coronary Bypass with Cardiac Catheterization without MCC
235	Coronary Bypass without Cardiac Catheterization with MCC
236	Coronary Bypass without Cardiac Catheterization without MCC
273	Percutaneous Intracardiac Procedures with MCC
274	Percutaneous Intracardiac Procedures without MCC
981	Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC
982	Extensive O.R. Procedures Unrelated to Principal Diagnosis with CC
983	Extensive O.R. Procedures Unrelated to Principal Diagnosis without CC/MCC

However, as also discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56809 through 56813), in connection with replication efforts between the ICD–9 and ICD–10 based MS–DRGs and the surgical hierarchy, the predecessor procedure code (02UG3JZ) was reassigned from MS–DRGs 273 and 274 to MS–DRG 228 (Other Cardiothoracic Procedures with MCC) and revised MS–DRG 229 (Other Cardiothoracic Procedures without MCC), and was removed from the PTCA logic for MS–DRGs 231 and 232. However, these proposed and finalized MS–DRG changes for procedure code 02UG3JZ were not considered for purposes of the MS–DRG assignments for new procedure code 02UG3JE, which were instead finalized as proposed based on the existing MS–DRG assignments for the predecessor code, and code 02UG3JE continued to remain on the

PTCA list in the GROUPER logic for MS–DRGs 231 and 232.

As noted in the proposed rule, our clinical advisors stated that procedure code 02UG3JE does not describe a PTCA procedure. As also noted in the proposed rule, we analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for cases in MS–DRGs 231 and 232 to determine if there were any cases reported with procedure code 02UG3JE, and there were no such cases found.

Accordingly, because the procedure described by procedure code 02UG3JE is not clinically consistent with a PTCA procedure and it was initially assigned to the list for PTCA procedures in the GROUPER logic as a result of replication in the transition from ICD–9 to ICD–10 based MS–DRGs, we proposed to remove procedure code 02UG3JE from the list for PTCA procedures in the GROUPER logic for MS–DRGs 231 and 232 effective FY 2023. We also proposed to maintain the MS–DRG assignment for procedure code 02UG3JE in MS–DRGs 266 and 267 (Endovascular Cardiac Valve Replacement and Supplement Procedures with and without MCC, respectively) for FY 2023.

Comment: Commenters agreed with the proposal to remove procedure code 02UG3JE from the GROUPER logic for MS–DRGs 231 and 232 and to maintain the assignment in MS–DRGs 266 and 267.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove procedure code 02UG3JE from the list for PTCA procedures in MS–DRGs 231 and 232 and to maintain the assignment for code 02UG3JE in MS–DRGs 266 and 267 in the GROUPER logic for FY 2023.

b. Neuromodulation Device Implant for Heart Failure (Barostim™ Baroreflex Activation Therapy)

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28157 through 28162), the BAROSTIM NEO™ System is the first neuromodulation device system designed to trigger the body's main cardiovascular reflex to target symptoms of heart failure. The system consists of an implantable pulse generator (IPG) that is implanted subcutaneously in the upper chest below the clavicle, a stimulation lead that is sutured to either the right or left carotid sinus to activate the baroreceptors in the wall of the carotid artery and a wireless programmer system that is used to non-invasively program and adjust BAROSTIM NEO™ therapy via telemetry. The BAROSTIM NEO™ System is indicated for the improvement of symptoms of heart failure in a subset of patients with symptomatic New York Heart Association (NYHA) class II and III heart failure with low cardiac ejection fractions who do not benefit from guideline directed pharmacologic therapy or qualify for Cardiac Resynchronization Therapy (CRT).

The BAROSTIM NEO™ System was approved for new technology add-on payments for FY 2021 (85 FR 58716 through 58717) and FY 2022 (86 FR 44974). We refer readers to section II.F.5.a of the preamble of the proposed rule and this final rule for a discussion regarding the FY 2023 status of technologies approved for FY 2022 new technology add-on payments, including the BAROSTIM NEO™ System.

For the FY 2023 IPPS/LTCH PPS proposed rule, we received a request to (1) reassign the ICD–10–PCS procedure codes that describe the implantation of the BAROSTIM NEO™ System from MS–DRGs 252, 253 and 254 (Other Vascular Procedures with MCC, with CC, without MCC respectively) to MS–DRGs 222, 223, 224, 225, 226, and 227 (Cardiac Defibrillator Implant with and without Cardiac Catheterization with and without AMI/HF/Shock with and without MCC, respectively) and (2) reassign the procedure code that describes the placement of a BAROSTIM NEO™ IPG alone from MS–DRGs 252, 253 and 254 to MS–DRG 245 (AICD Generator Procedures).

We stated in the FY 2023 IPPS/LTCH PPS proposed rule that the following ICD–10–PCS procedure codes uniquely identify the implantation of the BAROSTIM NEO™ System: 0JH60MZ (Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach) in combination with 03HK3MZ (Insertion of stimulator lead into right internal carotid artery, percutaneous approach) or 03HL3MZ (Insertion of stimulator lead into left internal carotid artery, percutaneous approach). The requestor noted that ICD–10–PCS codes 0JH60MZ, 03HK3MZ and 03HL3MZ are individually assigned to MDC 05 in MS–DRGs 252, 253, and 254 but not mapped to the logic of these MS–DRGs in a code combination or code cluster. According to the requestor this means that cases with a principal diagnosis from MDC 05 with procedure codes describing the implantation of a BAROSTIM NEO™ system (0JH60MZ with 03HL3MZ or 03HK3MZ); with procedure codes describing placement of the stimulator generator alone (0JH60MZ); or with procedure codes describing the placement of a carotid sinus lead only (03HL3MZ or 03HK3MZ) are all assigned to MS–DRGs 252, 253, and 254, despite the significant differences in the clinical coherence and resources required to perform these distinct procedures.

The requestor stated that cases reporting procedure codes describing the implantation of a BAROSTIM NEO™ system are more clinically similar to, and have costs that are more closely aligned to, cases within MS–DRGs 222, 223, 224, 225, 226, and 227. The requestor stated that according to its own analysis, the population of Medicare patients surgically treated with procedures assigned to MS–DRGs 222, 223, 224, 225, 226, and 227 is essentially identical to the population treated with the BAROSTIM NEO™ System. According to the requestor, this congruent patient population accounts for essentially all cases assigned to MS–DRGs 222, 223, 224, 225, 226, and 227. The requestor stated their analysis demonstrated that over 80% of the cases in MS–DRGs 222, 223, 224, 225, 226, and 227 had a diagnosis of heart failure, compared to only 30% of cases with a diagnosis of heart failure assigned to MS–DRGs 252, 253, and 254. The requestor stated that the subset of patients that have an indication for the implantation of a BAROSTIM NEO™ system also have indications for the implantation of Implantable Cardioverter Defibrillators (ICD), Cardiac Resynchronization Therapy Defibrillators (CRT–D) and/or Cardiac Contractility Modulation (CCM) devices, all of which also require the permanent implantation of a programmable, electrical pulse generator and at least one electrical lead. The requestor specifically highlighted that the procedure code combinations describing the implantation of a cardiac contractility modulation (CCM) device system, which consists of a programmable implantable pulse generator (IPG) and three leads, one of which is implanted into the right atrium and the other two leads which are inserted into the right ventricle is assigned to MS–DRGs 222, 223, 224, 225, 226, and 227, and the codes describing the insertion of contractility modulation device generator alone are assigned to MS–DRG 245. The requestor stated that the average resource utilization required to implant the BAROSTIM NEO™ System demonstrates a significant disparity compared to all procedures within MS–DRGs 252, 253, and 254 and noted that the cost of the BAROSTIM NEO™ implantable device is $35,000, which is in range with the cost of the other

cardiac implantable devices (for example ICD, CRT–D, and CCM) assigned to MS–DRGs 222, 223, 224, 225, 226, and 227.

The requestor stated that the majority of the procedures assigned to MS–DRGs 252, 253, and 254 are primarily designed to identify, diagnose, clear and restructure veins and arteries, excluding those that require implantable devices. Furthermore, the requestor stated the surgical procedures within MS–DRGs 252, 253, and 254 are not intended to treat or improve the function of the heart, nor treat the symptoms of heart failure.

The requestor acknowledged that there are very few cases within the publicly available Medicare inpatient claims data that potentially includes procedure codes describing the implantation of a BAROSTIM NEO™ system. The requestors' own analysis revealed fewer than 11 cases with procedure codes describing the implantation of a BAROSTIM NEO™ system in the combined FY 2019 and FY 2020 MedPAR data and noted that during much of this time period, the BAROSTIM NEO™ System was only implanted as part of a controlled clinical trial. The requestor stated that this incomplete data should not be used to determine initial MS–DRG assignments, especially for new FDA designated 'breakthrough' medical technologies like the BAROSTIM NEO™ system. Rather, the requestor stated that CMS should use available information and expert knowledge to make initial MS–DRG assignments, while waiting for a substantial number of Medicare covered, post-approved claims from a disperse set of hospitals to reconsider MS–DRG assignments as necessary. The requestor cautioned that upon new technology add-on payments expiration, and if the inadequate MS–DRG assignment for these procedures continues, inpatient admissions to implant the BAROSTIM NEO™ system will be paid less than outpatient admissions to perform the same procedures.

The ICD–10–CM diagnosis codes that describe heart failure are found in the following table. These diagnosis codes are all currently assigned to MDC 05.

ICD-10-CM Code	Description
I09.81	Rheumatic heart failure
I11.0	Hypertensive heart disease with heart failure
I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
I13.2	Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease
I50.1	Left ventricular failure, unspecified
I50.20	Unspecified systolic (congestive) heart failure
I50.21	Acute systolic (congestive) heart failure
I50.22	Chronic systolic (congestive) heart failure
I50.23	Acute on chronic systolic (congestive) heart failure
I50.30	Unspecified diastolic (congestive) heart failure
I50.31	Acute diastolic (congestive) heart failure
I50.32	Chronic diastolic (congestive) heart failure
I50.33	Acute on chronic diastolic (congestive) heart failure
I50.40	Unspecified combined systolic (congestive) and diastolic (congestive) heart failure
I50.41	Acute combined systolic (congestive) and diastolic (congestive) heart failure
I50.42	Chronic combined systolic (congestive) and diastolic (congestive) heart failure
I50.43	Acute on chronic combined systolic (congestive) and diastolic (congestive) heart failure
I50.810	Right heart failure, unspecified
I50.811	Acute right heart failure
I50.812	Chronic right heart failure
I50.813	Acute on chronic right heart failure
I50.814	Right heart failure due to left heart failure
I50.82	Biventricular heart failure
I50.83	High output heart failure
I50.84	End stage heart failure
I50.89	Other heart failure
I50.9	Heart failure, unspecified
I97.130	Postprocedural heart failure following cardiac surgery
I97.131	Postprocedural heart failure following other surgery

We stated in the proposed rule that first, we examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 252, 253 and 254 to identify cases reporting a diagnosis of heart failure and procedure codes describing the implantation of the BAROSTIM NEO™ system with or without a procedure code describing the performance of a cardiac catheterization as MS–DRGs 222, 223, 224, 225, 226, and 227 are defined by the performance of cardiac catheterization. Our findings are shown in the following table.

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
252	All cases	24,839	7.6	$27,488
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	0		
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	2	4.5	$67,588
253	All cases	18,373	5.2	$21,978
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	0		
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	1	1	$19,237

As shown in the table, the data analysis performed indicates that the two cases in MS–DRG 252 reporting procedure codes describing the implantation of a BAROSTIM NEO™ system have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 252 (4.5 days versus 7.6 days) and higher average costs when compared to all the cases in MS–DRG 252 ($67,588 versus $27,488). These two cases did not also report a procedure code describing the performance of a cardiac catherization. The one case in MS–DRG 253 reporting procedure codes describing the implantation of a BAROSTIM NEO™ system had a length of stay that is shorter than the average length of stay for all the cases in MS–DRG 253 (1 day versus 5.2 days) and lower costs when compared to all the cases in MS–DRG 253 ($19,237 versus $21,978). This case did not also report a procedure code describing the performance of a cardiac catherization. We found zero cases in MS–DRG 254 reporting procedure codes describing the implantation of a BAROSTIM NEO™ system.

We stated that our clinical advisors reviewed this data and noted that was it is difficult to detect patterns of complexity and resource intensity based on the three cases that reported procedure codes describing the implantation of a BAROSTIM NEO™ system. The claims data also reflect a wide variance with regard to the length of stay and average costs for the three cases that did report the implantation of a BAROSTIM NEO™ system. We stated that the results of the claims analysis demonstrated we did not have sufficient claims data on which to base and evaluate any proposed changes to the current MS–DRG assignment. We also stated that our clinical advisors also expressed concern in equating the implantation of a BAROSTIM NEO™ system to the placement of ICD, CRT–D, and CCM devices as these devices all differ in terms of technical complexity and anatomical placement of the electrical lead(s). Our clinical advisors noted there is no intravascular component or vascular puncture involved when implanting a BAROSTIM NEO™ system. Our clinical advisors also noted the placement of ICD, CRT–D, and CCM devices generally involve a lead being affixed to the myocardium, being threaded through the coronary sinus or crossing a heart valve and are procedures that involve a greater level of complexity than affixing the stimulator lead to either the right or left carotid sinus when implanting a BAROSTIM NEO™ system.

Next, to evaluate the request to reassign the procedure code that describes the placement of a BAROSTIM NEO™ IPG alone from MS–DRGs 252, 253 and 254 to MS–DRG 245 (AICD Generator Procedures), we stated in the proposed rule that we examined claims data from the September 2021 update of the FY 2021 MedPAR file for all cases in MS–DRGs 252, 253 and 254 and compared the results to cases with a procedure code describing placement of the stimulator generator alone. Our findings are shown in the following table.

MS-DRGs 252-254: Cases Reporting Procedures Describing Placement of a BAROSTIM NEO™ Stimulator Generator

MS-DRG	ICD-10-PCS codes	Number of Cases	Average Length of Stay	Average Costs
252	All cases	24,839	7.6	$27,488
	Cases with procedure code 0JH60MZ alone	12	8.8	$56,622
253	All Cases	18,373	5.2	$21,978
	Cases with procedure code0JH60MZ alone	4	2.5	$30,451

As shown in the table, the data analysis performed indicates that the 12 cases in MS–DRG 252 reporting a procedure code describing placement of the stimulator generator alone have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 252 (8.8 days versus 7.6 days) and higher average costs when compared to all the cases in MS–DRG 252 ($56,622 versus $27,488). The four cases in MS–DRG 253 reporting a procedure code describing placement of the stimulator generator alone have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 253 (2.5 days versus 5.2 days) and higher average costs when compared to all the cases in MS–DRG 253 ($30,451 versus $21,978). We found zero cases in MS–DRG 254 reporting a procedure code describing placement of the stimulator generator alone.

We stated that our clinical advisors reviewed this data, and found, similar to the analysis of the data from the three cases that reported procedure codes describing the implantation of a BAROSTIM NEO™ system, that it was difficult to detect patterns of complexity and resource intensity based on the few cases that reported procedure codes describing placement of the stimulator generator alone. The claims data similarly reflects a wide variance with regard to the length of stay and average costs for these cases that did report the placement of the stimulator generator alone, indicating there may have been other factors contributing to the higher costs. When reviewing the consumption of hospital resources for this small subset of cases, the claims data also suggest that the increased costs may be attributable to the severity of illness of the patient and other circumstances of the admission as the patients tended to have a major complication or co-morbid (MCC) condition reported based on the MS–DRG assigned.

We stated in the proposed rule that we recognized the average costs of the small numbers of cases reporting a procedure code describing placement of the stimulator generator alone are greater when compared to the average costs of all cases in their respective MS–DRG. We noted that the MS–DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. We further noted that section 1886(d)(5)(A) of the Act provides for Medicare payments to Medicare-participating hospitals in addition to the basic prospective payments for cases incurring extraordinarily high costs.

In response to the requestor's concerns regarding procedures currently assigned to MS–DRGs 252, 253 and 254, as discussed in section II.D.3.b. of the preamble of the proposed rule and this final rule, we note that MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) are examples of the ''other'' surgical class, and therefore it is expected that there will be procedures not as precisely clinically aligned within the definition (logic) of these MS–DRGs. In regard to the concern about the implications for reimbursement when these procedures are performed in the outpatient setting as opposed to the inpatient setting, we noted that the goals of reviewing the MS–DRG assignments of particular procedures are to better clinically represent the resources involved in caring for these patients and to enhance the overall accuracy of the system.

In the proposed rule, in response to the requestor's statement that CMS should use available information and expert knowledge to make initial MS–DRG assignments, while waiting for a substantial number of Medicare covered, post-approved claims from a disperse set of hospitals to reconsider MS–DRG assignments as necessary, we noted that we use our established process for GROUPER assignments for new diagnosis and procedure codes. Specifically, consistent with our established process for assigning new diagnosis and procedure codes, we stated that we review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We noted that this process will not automatically result in the new diagnosis or procedure code being assigned to the same MS–DRG or having the same designation as the predecessor code. Members of the public have the opportunity to provide feedback on the assignment and designation of the codes if they disagree. We referred the reader to section II.D.17 of the proposed rule for a more detailed discussion of this process. We noted that when BAROSTIM NEO™ applied for new technology add-on payment, it was noted that the technology could be uniquely identified using a combination of existing ICD–10–PCS codes that were already assigned to MS–DRGs, and this circumstance generally would not provide a basis for MS–DRG reassignment.

Lastly, as discussed in the proposed rule, our clinical advisors expressed concern regarding making proposed MS–DRG changes based on a specific, single technology (BAROSTIM NEO™ system), identified by only one unique procedure code combination versus considering proposed changes based on a group of related procedure codes that can be reported to describe that same type or class of technology, which is more consistent with the intent of the MS–DRGs.

We stated that we believed that as the number of cases reporting procedure codes describing the implantation of neuromodulation devices for heart failure increases, a better view of the associated costs and lengths of stay on average will be reflected in the data for purposes of assessing any reassignment of these cases. We indicated that our clinical advisors stated that it would not be appropriate to reassign cases for patients from MS–DRGs 252, 253 and 254 to MS–DRGs 222, 223, 224, 225, 226, and 227 in the absence of additional data to better determine the resource utilization for this subset of patients to help inform whether a reassignment would be clinically warranted. Therefore, for the reasons stated previously, we proposed to maintain the assignment of cases reporting procedure codes that describe the implantation of a neuromodulation device in MS–DRGs 252, 253 and 254 for FY 2023. We also proposed to maintain the assignment of cases reporting a procedure code describing placement of a stimulator generator alone in MS–DRGs 252, 253 and 254 for FY 2023.

Comment: Commenters expressed support for CMS' proposal to maintain the assignment of cases reporting procedure codes that describe the implantation of a neuromodulation device for heart failure in MS–DRGs 252, 253 and 254 and to maintain the assignment of cases reporting a procedure code describing placement of a stimulator generator alone in MS–DRGs 252, 253 and 254 for FY 2023.

Response: We appreciate the commenters' support.

Comment: A commenter opposed CMS' proposal. The commenter stated that in their own analysis of the MedPAR data, and from their real-world experience, patients with an indication for implantation of a neuromodulation device were not always admitted with a heart failure diagnosis. Many patients presented with multiple comorbidities, and various cardiovascular diagnosis

(for example, syncope, tachycardia, atrial fibrillation etc.) which lead to heart failure or are concomitant with heart failure.

This commenter further stated that in their review of the data that CMS presented, the cost of cases with a diagnosis of heart failure with procedure codes describing the implantation of a neuromodulation device without cardiac catheterization and the cost of cases with a procedure code describing placement of the stimulator generator alone are both more than twice that of all cases in MS–DRG 252. The commenter stated even given these disparities, they did not believe that the full costs of the implantation of a neuromodulation device system have been appreciated in the MedPAR data files. According to the commenter, the manufacturer did not charge a cost for the device during clinical trials for the BAROSTIM NEO™ so such claims do not reflect the full device cost. The commenter also stated that the COVID–19 pandemic has had a negative impact on inpatient hospital uptake of this new technology, which in turn has also limited the data available to support an accurate and appropriate MS–DRG assignment. The commenter stated they believe the fact that there are few cases in the MedPAR data files to date is not a reason to allow an overly mispriced MS–DRG assignment. The commenter stated that while BAROSTIM NEO™ procedures are typically performed in the outpatient setting, it is important to preserve inpatient access for those patients with comorbidities or other risk factors that necessitate an inpatient level of care. According to this commenter, the current MS–DRG assignments for procedure codes that describe the implantation of a neuromodulation device for heart failure would result in a lower payment than procedures performed in the outpatient setting and could result in barriers to treatment for patients who are not suitable candidates for the outpatient setting.

This commenter urged CMS to reassign the ICD–10–PCS procedure codes that describe the implantation of a neuromodulation device for heart failure from MS–DRGs 252, 253 and 254 to MS–DRGs 222, 223, 224, 225, 226 and 227 as requested. As alternatives, the commenter recommended to CMS, to instead, consider reassigning the ICD–10–PCS procedure codes that describe the implantation of the BAROSTIM NEO™ System from MS–DRGs 252, 253 and 254 to MS–DRGs 270, 271 and 272 (Other Major Cardiovascular Procedures with MCC, with CC, and without CC/MCC, respectively) or even create a new MS–DRG that appropriately describes these procedures.

Response: We appreciate the commenter's feedback and concern. With regard to the commenter's concern that patients with an indication for the implantation of neuromodulation devices are not always admitted with heart failure diagnoses, we wish to confirm that the examination of claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 252, 253 and 254 to identify cases reporting a diagnosis of heart failure and procedure codes describing the implantation of neuromodulation devices for heart failure with or without a procedure code describing the performance of a cardiac catheterization, as discussed in the proposed rule, included cases reporting a diagnosis of heart failure as either a principal or secondary diagnosis.

Our clinical advisors reviewed commenter's concerns and continue to note we do not have sufficient claims data on which to base and evaluate any proposed changes to the current MS–DRG assignment, given the difficulties of assessing patterns of complexity and resource intensity based on the limited number of cases identified. Our clinical advisors also continue to express concern in equating the implantation of neuromodulation devices for heart failure to the placement of ICD, CRT–D, and CCM devices as these devices all differ in terms of technical complexity and anatomical placement of the electrical lead(s), as discussed in the proposed rule. In regard to the concern about the implications for payment when these procedures are performed in the outpatient setting as opposed to the inpatient setting, as noted in the proposed rule, and in prior rulemaking, the goals of reviewing the MS–DRG assignments of particular procedures are to better clinically represent the resources involved in caring for these patients and to enhance the overall accuracy of the system.

With regard to the commenter's concern that there may have been other contributing factors that limited the data available to support an accurate and appropriate MS–DRG assignment of these cases, our clinical advisors believe that as the number of cases reporting procedure codes describing the implantation of neuromodulation devices for heart failure increases, the associated resource utilization can be better assessed for purposes of evaluating any reassignment of these cases. As additional claims data becomes available, we will continue to analyze the clinical nature of procedure codes describing the implantation of neuromodulation devices for heart failure and their MS–DRG assignments, including potential alternative MS–DRG assignments, to further improve the overall accuracy of the IPPS payments in future rulemaking.

Therefore, after consideration of the public comments we received, and for the reasons stated earlier, we are finalizing our proposal to maintain the assignment of cases reporting procedure codes that describe the implantation of a neuromodulation device in MS–DRGs 252, 253 and 254, without modification, for FY 2023. We are also finalizing our proposal to maintain the assignment of cases reporting a procedure code describing placement of a stimulator generator alone in MS–DRGs 252, 253 and 254, without modification, effective October 1, 2022 for FY 2023.

In the proposed rule, we also noted that during our review of this issue, as we examined the GROUPER logic that would determine an assignment of a case to MS–DRGs 222, 223, 224, 225, 226, and 227, we found two diagnosis codes describing heart failure that are not currently in the listed principal diagnoses in the GROUPER logic for MS–DRGs 222 and 223 (Cardiac Defibrillator Implant with Cardiac Catheterization with AMI, HF or Shock with and without MCC, respectively). These diagnosis codes are listed in the following table.

ICD-10-CM Code	Description
I97.130	Postprocedural heart failure following cardiac surgery
I97.131	Postprocedural heart failure following other surgery

We stated that as a result, when either of these codes are coded as a principal diagnosis, MS–DRGs 224 and 225 (Cardiac Defibrillator Implant with Cardiac Catheterization without AMI, HF, or Shock with and without MCC, respectively) are instead assigned when reported with a procedure code combination describing the implantation of a cardiac defibrillator and a procedure describing the performance of a cardiac catherization procedure. We referred the reader to the ICD–10 MS–DRG Definitions Manual Version 39.1, which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* for complete documentation of the GROUPER logic for MS–DRGs 222, 223, 224, and 225.

In the proposed rule, we stated that our clinical advisors reviewed this issue and believed that cases reporting diagnosis code I97.130 or I97.131 as a principal diagnosis are associated with a severity of illness on par with cases reporting a principal diagnosis of a type of heart failure. We noted that in order to code postprocedural heart failure in ICD–10–CM, instructional notes at category I50 direct to ''code first heart failure following surgery'' (that is, I97.130 and I97.131) with a second code from subcategory of I50 listed after the postprocedural heart failure code to specify the type of heart failure. We stated that our clinical advisors recommended adding diagnosis codes I97.130 and I97.131 to the logic list of principal diagnoses that describe heart failure for clinical consistency, recognizing that coding guidelines instruct to code I97.130 and I97.131 before the codes from subcategory of I50 that specify the type of heart failure, as the codes from subcategory of I50 are currently in the listed principal diagnoses in the GROUPER logic for MS–DRGs 222 and 223. Therefore, we proposed to modify the GROUPER logic to allow cases reporting diagnosis code I97.130 or I97.131 as a principal diagnosis to group to MS–DRGs 222 and 223 when reported with qualifying procedures.

Comment: Commenters expressed support for CMS' proposal to modify the GROUPER logic to allow cases reporting diagnosis code I97.130 or I97.131 as a principal diagnosis to group to MS–DRGs 222 and 223 when reported with qualifying procedures.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to modify the GROUPER logic to allow cases reporting diagnosis code I97.130 or I97.131 as a principal diagnosis to group to MS–DRGs 222 and 223 when reported with qualifying procedures, without modification, effective October 1, 2022 for FY 2023.

c. Cardiac Mapping

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28162 through 28163), we identified a replication issue from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs for procedure code 02K80ZZ (Map conduction mechanism, open approach). Cardiac mapping describes the creation of detailed maps to detect how the electrical signals that control the timing of the heart rhythm move between each heartbeat to identify the location of rhythm disorders. Cardiac mapping is generally performed during open-heart surgery or performed via cardiac catherization.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49363 through 49369), we discussed a request to remove the cardiac ablation and other specified cardiovascular procedures from the following MS–DRGs, and to create new MS–DRGs to classify these procedures:

- MS–DRG 246 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent with MCC or 4+ Vessels/Stents);
- MS–DRG 247 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent without MCC);
- MS–DRG 248 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent with MCC or 4+ Vessels/Stents);
- MS–DRG 249 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent without MCC);
- MS–DRG 250 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent with MCC); and
- MS–DRG 251 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent without MCC).

The requestor recommended that CMS assign the following ICD–9–CM procedure codes that identify and describe cardiac ablation procedures and the other percutaneous intracardiac procedures to the newly created MS–DRGs:

- 35.52 (Repair of atrial septal defect with prosthesis, closed technique);
- 35.96 (Percutaneous balloon valvuloplasty);
- 35.97 (Percutaneous mitral valve repair with implant);
- 37.26 (Catheter based invasive electrophysiologic testing);
- 37.27 (Cardiac mapping);
- 37.34 (Excision or destruction of other lesion or tissue of heart, endovascular approach);
- 37.36 (Excision, destruction, or exclusion of left atrial appendage (LAA)); and
- 37.90 (Insertion of left atrial appendage device).

We stated we agreed that creating these new MS–DRGs would better reflect utilization of resources and clinical cohesiveness for intracardiac procedures in comparison to intracoronary procedures. Therefore, after consideration of the public comments we received, we finalized our proposal to create MS–DRGs 273 (Percutaneous Intracardiac Procedures with MCC) and MS–DRG 274 (Percutaneous Intracardiac Procedures without MCC) for the FY 2016 ICD–10 MS–DRGs Version 33 and finalized the assignment of the procedures performed within the heart chambers using intracardiac techniques to the two new MS–DRGs.

In the FY 2016 rulemaking, we stated that the comparable ICD–10–PCS code translations for ICD–9–CM procedure code 37.27 (Cardiac mapping) were ICD–10–PCS codes 02K83ZZ (Map conduction mechanism, percutaneous approach) and 02K84ZZ (Map conduction mechanism, percutaneous endoscopic approach). However, code 02K80ZZ (Map Conduction Mechanism, Open Approach), which is also a comparable ICD–10–PCS code translation for ICD–9–CM procedure code 37.27, was inadvertently excluded. Consequently, procedure code 02K80ZZ continued to remain in the GROUPER logic for MS–DRGs 246, 247, 248, 249, 250 and 251.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58477), we finalized a revision to the titles for MS–DRGs 273 and 274 to ''Percutaneous and Other Intracardiac Procedures with and without MCC, respectively'' to better reflect the procedures assigned to them.

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule, in the ICD–10 MS–DRGs Definitions Manual Version 39.1, procedure code 02K80ZZ is currently recognized as a non-O.R. procedure that affects the MS–DRG to which it is assigned. We stated that our clinical advisors reviewed this grouping issue and stated that procedure code 02K80ZZ does not describe a percutaneous cardiovascular procedure. We stated that our clinical advisors supported the reassignment of code 02K80ZZ for clinical coherence, noting the procedure should be appropriately grouped along with other procedure codes that describe cardiac mapping currently assigned to MS–DRGs 273 and

274. Accordingly, because the procedure described by procedure code 02K80ZZ is not clinically consistent with percutaneous cardiovascular procedures and it was initially assigned MS–DRGs 246, 247, 248, 249, 250 and 251 as a result of replication in the transition from ICD–9 to ICD–10 based MS–DRGs, we proposed the reassignment of procedure code 02K80ZZ from MS–DRGs 246, 247, 248, 249, 250 and 251 to MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC, respectively) in MDC 05 effective FY 2023.

As discussed in section II.D.1.b of the preamble of the proposed rule, we noted that we were providing a test version of the ICD–10 MS–DRG GROUPER Software, Version 40, so that the public could better analyze and understand the impact of the proposals included in the proposed rule. We noted that at the time of the development of the test software this issue was unable to be addressed and therefore, it did not reflect the proposed reassignment of procedure code 02K80ZZ from MS–DRGs 246, 247, 248, 249, 250 and 251 to MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC, respectively) in MDC 05 for Version 40.

Comment: Commenters agreed with our proposal to reassign procedure code 02K80ZZ from MS–DRGs 246, 247, 248, 249, 250 and 251 to MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC, respectively). A few commenters stated that they appreciate CMS identifying a replication issue from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs and supported the reassignment of procedure code 02K80ZZ. A commenter agreed that cardiac mapping is generally performed during open-heart surgery or performed via cardiac catheterization to create detailed maps of electrical signals to identify the location of rhythm disorders.

Response: We thank the commenters for their support.

Comment: Other commenters opposed the proposal. Several commenters noted that CMS stated that code 02K80ZZ affects the MS–DRG to which it is assigned, however, based on their review of the MS–DRG logic, code 02K80ZZ is designated as a non-O.R procedure and does not affect MS–DRG assignment. Other commenters expressed concern that data was not analyzed to see if code 02K80ZZ had been found in MS–DRGs 246, 247, 248, 249, 250 and 251. A commenter stated that should it be determined that code 02K80ZZ had not been found in MS–DRGs 246, 247, 248, 249, 250 and 251, then they agreed with removal of code 02K80ZZ from these MS–DRGs and reassignment to MS–DRGs 273–274. However, should the analysis show code 02K80ZZ assigned to MS–DRGs 246, 247, 248, 249, 250 and 251, this commenter suggested CMS consider if the assignment of code 02K80ZZ to these MS–DRGs should be maintained, and if not, what ramifications the reassignment would have.

A few commenters recommended that CMS consider assigning code 02K80ZZ to MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively) instead. Some commenters stated that they believe that procedures to map conduction mechanism share similar clinical and resource consumption as the surgical ablation procedures performed via an open approach that are currently assigned to MS–DRGs 228 and 229. These commenters further stated that given that 02K80ZZ (Map conduction mechanism, open approach) does not describe a percutaneous cardiovascular procedure, they did not recommend the assignment of the code to MS–DRGs 273 and 274. A commenter stated that based on their own analysis, 02K80ZZ is more often assigned to MS–DRGs 228 and 229 than to MS–DRGs 273 and 274, and furthermore, the ICD–10–PCS codes included in MS–DRGs 273 and 274 are ablation procedures via percutaneous approach. Another commenter asserted that the procedures in MS–DRGs 273 and 274 are all percutaneous approach procedures.

Response: We thank the commenters for their feedback.

We note that in the ICD–10 MS–DRGs Definitions Manual Version 39.1, procedure code 02K80ZZ is in fact recognized as a non-O.R. procedure affecting MS–DRGs 246, 247, 248, 249, 250 and 251, specifically. Under the IPPS MS–DRGs, each ICD–10–PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment. First, each ICD–10–PCS procedure code is either designated as an O.R. procedure for purposes of MS–DRG assignment (''O.R. procedures'') or is not designated as an O.R. procedure for purposes of MS–DRG assignment (''non-O.R. procedures''). For each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS–DRG assignment or not affecting the MS–DRG assignment. We refer to these designations that do affect MS–DRG assignment as ''non O.R. affecting the MS–DRG'' because these procedure codes describe procedures that would generally require a greater intensity of resources for facilities to manage the cases included in the definition (logic) of these MS–DRGs. We refer readers to the ICD–10 MS–DRG Version 39.1 Definitions Manual at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS–DRG-Classifications-and-Software.html* for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS–DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index. Procedures designated as ''non O.R. affecting the MS–DRG'' are listed in Appendix E with an asterisk.

In response to the comments expressing concern that data was not analyzed to determine if there were any cases reported with procedure code 02K80ZZ in MS–DRGs 246, 247, 248, 249, 250 and 251, we refer the reader to Table 6P.1e associated with this final rule and available via the internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. This table displays the findings from our analysis of the claims data from the September 2021 update of the FY 2021 MedPAR file to determine if there were any cases reported with procedure code 02K80ZZ assigned to MS–DRGs 246, 247, 248, 249, 250 and 251 and reflects that there were no such cases found.

With regard to the commenters' concerns that procedures to map conduction mechanism share similar clinical and resource consumption as surgical ablation procedures performed via an open approach, our clinical advisors note that while cardiac mapping can be used to identify and localize areas responsible for rhythm disturbances to serve as a target for surgical ablation, each of these procedures are defined by clinically distinct definitions and objectives, which is why there are separate and unique ICD–10–PCS procedure codes within the classification for reporting purposes. Our clinical advisors note that cardiac mapping describes the creation of detailed maps, generally involving the use of electrodes and a mapping system (consisting of amplifiers and a recording and analysis system), to detect how the electrical signals that control the timing of the heart rhythm move between each heartbeat to identify the location of rhythm disorders. Surgical ablation, however, describes the burning or freezing of tissue on the inside of the heart to disrupt faulty electrical signals causing the arrhythmia.

We also note in response to the comments received that percutaneous ablation procedures are not the only procedures assigned to MS–DRGs 273 and 274. Of note, left atrial appendage closure (LAAC) procedures, with and without an implant, are also assigned to MS–DRGs 273 and 274. In response to the commenters who did not agree with the proposal to reassign procedure code 02K80ZZ from MS–DRGs 246, 247, 248, 249, 250 and 251 to MS–DRGs 273 and 274 based on the open approach of the procedure, as noted in the proposed rule, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58477), we finalized a revision to the titles for MS–DRGs 273 and 274 to ''Percutaneous and Other Intracardiac Procedures with and without MCC, respectively'' to better reflect the procedures assigned, as not only percutaneous procedures are assigned to these MS–DRGs. We refer the reader to the ICD–10 MS–DRG Definitions Manual, version 39.1, which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* for complete documentation of the GROUPER logic for MS–DRGs 273 and 274.

Our clinical advisors continue to note that code 02K80ZZ (Map Conduction Mechanism, Open Approach), which is a comparable ICD–10–PCS code translation for ICD–9–CM procedure code 37.27 (Cardiac mapping), was inadvertently excluded in FY 2016 rulemaking when we finalized our proposal to create MS–DRGs 273 and MS–DRG 274 to better reflect utilization of resources and clinical cohesiveness for intracardiac procedures in comparison to intracoronary procedures. Our clinical advisors continue to support the reassignment of code 02K80ZZ for clinical coherence, noting the procedure should be appropriately grouped along with other procedure codes that describe cardiac mapping that are currently assigned to MS–DRGs 273 and 274.

Therefore, after consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal to reassign procedure code 02K80ZZ from MS–DRGs 246, 247, 248, 249, 250 and 251 to MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC, respectively) in MDC 05 for Version 40, without modification.

d. Surgical Ablation

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44836 through 44848), we discussed a two-part request we received to review the MS–DRG assignments for cases involving the surgical ablation procedure for atrial fibrillation. The first part of the request was to create a new classification of surgical ablation MS–DRGs to better accommodate the costs of open concomitant surgical ablations. The requestor identified the following potential procedure combinations that would comprise an ''open concomitant surgical ablation'' procedure.

- Open CABG + open surgical ablation
- Open MVR + open surgical ablation
- Open AVR + open surgical ablation
- Open MVR + open AVR + open surgical ablation
- Open MVR + open CABG + open surgical ablation
- Open MVR + open AVR + open CABG + open surgical ablation
- Open AVR + open CABG + open surgical ablation

As discussed in the FY 2022 IPPS/LTCH PPS final rule, we examined claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for cases reporting procedure code combinations describing open concomitant surgical ablations. We refer the reader to Table 6P.1o associated with the FY 2022 final rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for data analysis findings of cases reporting procedure code combinations describing open concomitant surgical ablations. We stated our analysis showed while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all cases in their respective MS–DRG, we found variation in the volume, length of stay, and average costs of the cases. We also stated findings from our analysis indicated that MS–DRGs 216, 217, and 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) as well as approximately 31 other MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. We refer the reader to section II.D.1.b. of the FY 2022 IPPS/LTCH PPS final rule (86 FR 44796 through 44798), for related discussion regarding our finalization of the proposal to delay application of the NonCC subgroup criteria to existing MS–DRGs with three-way severity level split to maintain more stability in the current MS–DRG structure.

In the FY 2022 final rule, we finalized our proposal to revise the surgical hierarchy for the MS–DRGs in MDC 05 (Diseases and Disorders of the Circulatory System) to sequence MS–DRGs 231–236 (Coronary Bypass) above MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively), effective October 1, 2021. In addition, we also finalized the assignment of cases with a procedure code describing coronary bypass and a procedure code describing open ablation to MS–DRGs 233 and 234 and changed the titles of these MS–DRGs to ''Coronary Bypass with Cardiac Catheterization or Open Ablation with and without MCC, respectively'' to reflect this reassignment for FY 2022.

In response to this final policy, as discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28163), we received a request to again review the MS–DRG assignment of cases involving open concomitant surgical ablation procedures. The requestor stated they continue to believe that the average hospital costs for surgical ablation for atrial fibrillation demonstrates a cost disparity compared to all procedures within their respective MS–DRGs. The requestor suggested that when open surgical ablation is performed with MVR, or AVR or MVR/AVR + CABG that these procedures are either (1) assigned to a different family of MS–DRGs or (2) assigned to MS–DRGs 216 and 217 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC and with CC, respectively) similar to what CMS did with CABG and open ablation procedures in the FY 2022 rulemaking to better accommodate the added cost of open concomitant surgical ablation.

In the proposed rule we stated the change to the surgical hierarchy in MDC 05 and the assignment of cases with a procedure code describing coronary bypass and a procedure code describing open ablation to MS–DRGs 233 and 234 is recent, only becoming effective October 1, 2021. We stated that we believed more time was needed before considering to again review the MS–DRG assignment of cases reporting procedure code combinations describing open concomitant surgical ablations as the data from the September 2021 update of the FY 2021 MedPAR file does not reflect our FY 2022 finalization. In addition, our clinical advisors continued to state that in open concomitant surgical ablation procedures, the CABG, MVR, and AVR components of the procedure are more technically complex than the open surgical ablation procedure. They also stated that the finalized revision to the

surgical hierarchy leads to a grouping that is more coherent and better accounts for the resources expended to address the more complex procedures from other cases redistributed during the hierarchy change. As noted, we stated that we believed that additional time was needed to allow for further analysis of the claims data to reflect our FY 2022 finalization, and also to determine to what extent the patient's co-morbid conditions are also contributing to costs and to identify other contributing factors that might exist with respect to the increased length of stay and costs of this subset of cases in these MS–DRGs, as discussed in the FY 2022 IPPS/LTCH PPS final rule.

Comment: Commenters expressed support of CMS' decision to allow additional time for the claims data to reflect our FY 2022 finalization before further analysis. Commenters stated that the finalized changes to surgical hierarchy for cardiac procedures were positive and will improve patient access. Other commenters stated that the finalized changes to the MS–DRG assignment of cases with a procedure code describing coronary bypass and a procedure code describing open ablation were timely.

Response: We thank the commenters for their support.

Comment: Some commenters opposed CMS' decision and suggested that Medicare cover both aortic valve replacement surgery and surgical treatment for atrial fibrillation.

Response: We note that the Definitions Manual display of the GROUPER logic assignment for each procedure code is not an indication of whether or not a particular procedure is covered for payment purposes. The MS–DRG logic must specifically require a condition to group based on whether it is reported as a principal diagnosis or a secondary diagnosis, and consider any procedures that are reported, in addition to consideration of the patient's age, sex and discharge status in order to affect the MS–DRG assignment. In other words, cases will group according to the GROUPER logic, regardless of any coding guidelines or coverage policies. It is the Medicare Code Editor (MCE) and other payer-specific edits that identify inconsistencies in the coding guidelines or coverage policies. These data integrity edits address issues such as data validity, coding rules, and coverage policies. Since the inception of the IPPS, the data editing function has been a separate and independent step in the process of determining a DRG assignment. The separation of the MS–DRG grouping and data editing functions allows the MS–DRG GROUPER to remain stable even though coding rules and coverage policies may change during the fiscal year.

Comment: Other commenters opposed CMS' decision and stated CMS needs to finish the work that was started and improve hospital payment for valvular procedures with surgical ablation for atrial fibrillation. These commenters stated that the finalization of the revision to the surgical hierarchy for the MS–DRGs in MDC 05 and the finalization of the assignment of cases with a procedure code describing coronary bypass and a procedure code describing open ablation to MS–DRGs 233 and 234 in FY 2022 rulemaking does not address the increased costs of cases describing open concomitant surgical ablation performed with open valve procedures that are assigned to MS–DRGs 216 through 221. A few commenters asserted that hospitals are forced to lose money on these lifesaving treatments because CMS has not addressed this underpayment. Other commenters stated that CMS did not provide transparent data analysis of cases describing open surgical ablation for atrial fibrillation performed during open valve procedures so the provider community could appropriately evaluate.

Commenters stated that treating atrial fibrillation during the same surgical session as an open valve procedure requires significant device costs, additional operating room time, and specialized staff. A commenter stated that even if the surgical ablation procedure is less technically complex than CABG, MVR, and/or AVR, hospitals still bear significant costs for furnishing the ablation procedure when the additional costs of the innovative device technologies (such as radiofrequency ablation clamps, cryoablation probes, and left atrial appendage management devices) that are used during the procedure are considered. Commenters expressed concern that given the added costs of performing as many as three procedures at the same time, hospitals may more likely schedule the patient for separate procedures even though guidelines of the Society for Thoracic Surgeons and the Heart Rhythm Society recommend performing surgical ablation for atrial fibrillation at the time of open-heart procedures when indicated. These commenters further stated they believed it did not seem financially prudent to compel patients to undergo multiple procedures, potentially costing more in the long run, when their atrial fibrillation could be treated during the same open-heart operation. Many commenters urged CMS to either (1) assign the cases to a different family of MS–DRGs or (2) assign these cases to MS–DRGs 216 and 217 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC and with CC, respectively) as originally requested.

Another commenter stated they respected the position of CMS' clinical advisors given the complexity of the involved procedures and noted that the issue of multiple procedures or interventions performed during a single hospital stay is also a problem in other areas of cardiology and warrants a meaningful solution. This commenter stated they believed that since performing procedures concomitantly is more efficient, more convenient, provides a better prognosis for the patient and could be more cost effective than the procedures being performed in different hospital stays, there should be a mechanism for differentiated payment when procedures are performed concomitantly, when it is best for the patient. This commenter recommended that CMS create a supplemental payment mechanism that could be modeled based on the respective costs of the individual procedures determined by claims data and then adjusted for efficiencies of a single operative session to facilitate incremental payment when two major procedures are performed during the same hospital admission and urged CMS to solicit further comment on possible methodological solutions to accommodate costs when two procedures are performed concomitantly.

Response: We appreciate the commenters' feedback.

We refer readers to Tables 6P.1c and 6P1.d associated with this final rule (which are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the data analysis of cases reporting procedure code combinations describing open concomitant surgical ablations in the September 2021 update of the FY 2021 MedPAR file. Table 6P.1c associated with this final rule sets forth the list of ICD–10–PCS procedure codes reflecting mitral valve repair or replacement (MVR), aortic valve repair or replacement (AVR), and coronary artery bypass grafting (CABG) procedures that we examined in this analysis. Table 6P.1d associated with this final rule shows the data analysis findings of cases reporting procedure code combinations describing open concomitant surgical ablations assigned to MS–DRGs 216, 217, 218, 219, 220 and

221 from the September 2021 update of the FY 2021 MedPAR file.

As shown in Table 6P.1d associated with this final rule, while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all cases in their respective MS–DRG, we found there is variation in the volume, length of stay, and average costs of the cases. For MS–DRG 216, we found 870 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 16.8 days to 20.5 days and average costs ranging from $90,122 to $156,617 for these cases. For MS–DRG 217, we found 168 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 7.5 days to 12 days and average costs ranging from $48,644 to $74,594 for these cases. For MS–DRG 218, we found zero cases reporting procedure code combinations describing open concomitant surgical ablations. For MS–DRG 219, we found 1,940 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 11.2 days to 13.4 days and average costs ranging from $70,816 to $86,805 for these cases. For MS–DRG 220, we found 1,338 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 7.1 days to 8.8 days and average costs ranging from $49,326 to $65,611 for these cases. For MS–DRG 221, we found 60 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 5.6 days to 6.3 days and average costs ranging from $44,247 to $47,418 for these cases.

As noted, and similar to our analysis of the data for the FY 2022 IPPS/LTCH PPS rulemaking, the data analysis shows that while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all cases in their respective MS–DRG, there is variation in the volume, length of stay, and average costs of the cases. As we discuss later in this section, the analysis also shows that the cases reporting an open concomitant surgical ablation code combination are predominately found in the higher (CC or MCC) severity level MS–DRGs of their current base MS–DRG assignment. Moreover, as also previously noted, the data from the September 2021 update of the FY 2021 MedPAR file does not reflect our FY 2022 finalization. We continue to believe that additional time is needed to allow for further analysis of the claims data to reflect our FY 2022 finalization, and also to determine to what extent the patient's co-morbid conditions or other factors may be contributing to the increased length of stay and costs of this subset of cases, as discussed previously.

In response to comments that urged CMS to assign cases reporting procedure code combinations describing open concomitant surgical ablations currently assigned to MS–DRGs 216, 217, 218, 219, 220 and 221 to MS–DRGs 216 and 217 only, MS–DRGs 216, 217 and 218 are defined by the performance of cardiac catheterization. The performance of a cardiac catherization procedure could be also contributing to the increased average costs of cases reporting procedure code combinations describing open concomitant surgical ablations currently assigned to MS–DRGs 216, 217 and 218. Our clinical advisors have expressed concern about the effect on clinical coherence of assigning cases reporting procedure code combinations describing open concomitant surgical ablations that do not also have a cardiac catherization procedure reported to MS–DRGs that are defined by the performance of that procedure.

We also note, as discussed in Section D.1.b of the proposed rule and this final rule, using the September 2021 update of the FY 2021 MedPAR file, we analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2022. Similar to our findings discussed in the FY 2022 IPPS/LTCH final rule, findings from our analysis using the September 2021 update of the FY 2021 MedPAR file indicated that MS–DRGs 216, 217, 218 as well as approximately 40 other MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. While we are finalizing the delay of the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split until FY 2024 or later, and to maintain the current structure of the 41 MS–DRGs that currently have a three-way severity level split (total of 123 MS–DRGs) that would otherwise be subject to these criteria, we note that the total number of cases in MS–DRG 218 is again below 500, and that we may consider consolidating these MS–DRGs into two severity levels based on the application of the NonCC subgroup criteria in future rule-making. We refer the reader to Table 6P.1b associated with the proposed rule and this final rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the list of the 123 MS–DRGs that would be subject to deletion and the list of the 75 new MS–DRGs that would have been proposed for creation under this policy if the NonCC subgroup criteria were applied.

In response to comments that the finalized revision to the surgical hierarchy did not adequately address the increased costs of cases associated with open concomitant surgical ablation and that urged CMS to create new MS–DRGs for these open concomitant procedures as originally requested, our clinical advisors continue to believe additional time is needed to review the clinical nature of cases reporting an open concomitant surgical ablation code combination before exploring a proposal to create new MS–DRGs for this subset of cases currently assigned to MS–DRGs 216 through 221 given the complexity of these code combinations and the corresponding data. Our analysis using the September 2021 update of the FY 2021 MedPAR file reflects that the cases reporting an open concomitant surgical ablation code combination are predominately found in the higher (CC or MCC) severity level MS–DRGs of their current base MS–DRG assignment, suggesting that the patient's co-morbid conditions may also be contributing to higher costs of these cases. Secondly, for the numerous procedure combinations that would comprise an ''open concomitant surgical ablation'' procedure, the increase in average costs appears to directly correlate with the number of procedures performed. For example, cases that describe ''Open MVR + open surgical ablation'' generally demonstrate costs that are lower than cases that describe ''Open MVR + open AVR + open CABG + open surgical ablation.'' Therefore, our clinical advisors continue to believe that additional time is needed to allow for further analysis of the claims data to determine to what extent the patient's co-morbid conditions are also contributing to higher costs and to identify other contributing factors that might exist with respect to the increased length of stay and costs of these cases in these MS–DRGs. Our clinical advisors continue to believe that future data findings may demonstrate additional variance in resource utilization for this patient population.

With respect to commenters' concerns regarding a mechanism for

differentiated payment when procedures are performed concomitantly, we agree that the performance of concomitant procedures is an area that warrants more analysis across the MS–DRG classification, as the performance of ''concomitant procedures'' may affect the consumption of resources in other clinical scenarios as well, especially when the use of devices is involved. As discussed in prior rulemaking, the MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources. It has been difficult to identify other MS–DRGs that would be more appropriate MS–DRG assignments for these concomitant procedures based on the variance in the clinical characteristics and utilization of resources for concomitant procedures, which can depend on the number of procedures being performed concomitantly and the nature of these procedures. We are interested in receiving feedback on possible mechanisms through which we can address concomitant procedures. We are also interested in receiving feedback on how CMS can mitigate any unintended negative payment impacts to providers providing concomitant procedures. Commenters can continue to submit their recommendations via the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™) at: *https://mearis.cms.gov/public/home*. We will consider these public comments for possible proposals in future rulemaking as part of our annual review process.

Comment: Some commenters noted that cases describing standalone hybrid percutaneous endoscopic surgical ablation are assigned MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively) and noted that payment for MS–DRGs 228 and 229 has been trending downward over the last six years. These commenters stated that the downward payment trend for MS–DRGs 228 and 229 has resulted in hospitals being undercompensated for the costs of furnishing standalone hybrid percutaneous endoscopic surgical ablation procedures for atrial fibrillation. Other commenters stated that CMS did not provide transparency to the details of its analysis to support why standalone hybrid surgical ablation procedures should not be moved from MS–DRGs 228 and 229.

Some commenters stated that the decline in payment for standalone hybrid percutaneous endoscopic surgical ablation procedures makes it impossible for their facilities to continue to provide these needed procedures to patients suffering from atrial fibrillation. A commenter stated the proposed relative weight does not accurately reflect the costs of these device intensive procedures and that there has been no transparency into the cause for these significant declines. Another commenter stated that their facility has been especially impacted by COVID–19 and stated that for CMS to expect facilities to be able to continue to provide patients with needed medical services such as hybrid percutaneous endoscopic surgical ablation at such a steep decrease in payment is intolerable for hospitals. Other commenters asserted that hospitals will be forced to postpone or ''trim back'' on providing patients access to more complex, resource intensive procedures such as these, to better align their costs with what they asserted were Medicare's inadequate payment levels. These commenters proposed two possible remedies to this underpayment, that CMS either (1) use its statutory authority to not reduce the relative weight and payment for MS–DRGs 228 and 229, or (2) assign cases reporting procedure codes describing standalone percutaneous endoscopic surgical ablation from MS–DRGs 228 and 229 to the higher (MCC) severity level MS–DRG of its current base MS–DRG assignment, which is MS–DRG 228 (Other Cardiothoracic Procedures with MCC), to prevent underpayment for these procedures and avoid disruptions in beneficiary access.

Response: We appreciate the commenters' feedback. We note that we did not receive a specific request to change the MS–DRG assignment for standalone percutaneous endoscopic surgical ablation procedures for consideration for the FY 2023 IPPS/LTCH PPS proposed rule. We note a request to reassign cases describing standalone percutaneous endoscopic surgical ablation from MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively) to higher weighted MS–DRGs 219 and 220 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC and with CC, respectively) was discussed in the FY 2022 IPPS/LTCH PPS proposed rule. In the FY 2022 IPPS/LTCH final rule, in response to comments received on the proposed rule, we also discussed the assignment of cases reporting procedure codes describing standalone percutaneous endoscopic surgical ablation from MS–DRGs 228 and 229 to the higher (MCC) severity level MS–DRG of its current base MS–DRG assignment in the FY 2022 IPPS/LTCH PPS final rule. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44844 through 44848) for a complete discussion.

In the request to again review the MS–DRG assignment of surgical ablation procedures in FY 2023 rulemaking, however, the requestor stated in their submission that while surgical ablation represents losses across all procedure types, they recommended focusing on addressing open concomitant surgical ablation in FY 2023 rulemaking and did not request a change to the MS–DRG assignment for standalone percutaneous endoscopic surgical ablation. Therefore, cases describing standalone percutaneous endoscopic surgical ablation were not considered in the FY 2023 IPPS/LTCH PPS proposed rule.

In response to the comment that hospitals may postpone or ''trim back'' on providing patients access to these procedures in order to better align their costs with Medicare payment levels, as we have stated in prior rulemaking, it is not appropriate for facilities to deny treatment to beneficiaries needing a specific type of therapy or treatment that potentially involves increased costs.

We acknowledge the reduction in the proposed FY 2023 relative weights for MS–DRGs 228 and 229 (approximately 7% and 4%, respectively from the FY 2022 relative weight), however, we note we did not propose a change to the GROUPER logic of MS–DRGs 228 and 229 for FY 2023. However, there have been previous changes to the structure of MS–DRGs 228 and 229 over the past six years. It is to be expected that when MS–DRGs are restructured, such as when procedure codes are reassigned or the hierarchy within an MDC is revised, resulting in a different case-mix within the MS–DRGs, the relative weights of the MS–DRGs will change as a result. We believe the trending reduction in relative weights for MS–DRGs 228 and 229 over time to be appropriately driven by the underlying data in the six years since CMS began using the ICD–10 data in calculating the relative weights and is reflective of the change in case-mix within these MS–DRGs. Specifically, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56809 through 56813), we finalized our proposal to collapse MS–DRGs 228, 229, and 230 from three severity levels to two severity levels by deleting MS–DRG 230 and revised the structure of MS- DRG 229. We also finalized our proposal to reassign ICD–9–CM procedure code 35.97 and the cases reporting ICD–10–PCS procedure

code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach) from MS–DRGs 273 and 274 to MS–DRG 228 and revised the titles of MS–DRG 228 and 229. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42080 through 56813) we finalized our proposal to modify the structure of MS–DRGs 266 and 267 by reassigning ICD–10–PCS procedure code 02UG3JZ describing a transcatheter mitral valve repair with implant procedure from MS–DRGs 228 and 229 to MS–DRGs 266 and 267 and revised the titles of MS–DRGs 266 and 267. Finally, as discussed in the FY 2022 IPPS/LTCH PPS final rule, and earlier in this section, we finalized a revision to the surgical hierarchy for the MS–DRGs in MDC 05 to sequence MS–DRGs 231–236 (Coronary Bypass) above MS–DRGs 228 and 229 for FY 2022. Therefore, the data appear to reflect that the difference in the relative weights shown in Table 5–List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay associated with final rule for the applicable fiscal year can be attributed to the fact that these previously finalized policies resulted in a different case-mix within the MS–DRGs, which is then being reflected in the relative weights. We refer the reader to section II.E. of the preamble of this FY 2023 IPPS/LTCH PPS final rule for a complete discussion of the relative weight calculations for FY 2023, including our finalized policies to use 50 percent of the relative weights calculated using all cases in the FY 2021 MedPAR data and 50 percent of the relative weights calculated without COVID–19 cases in the FY 2021 MedPAR data to calculate the relative weights for FY 2023, and to apply a permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, beginning in FY 2023.

We appreciate the commenters' support and feedback, and intend to continue to consider these issues. For the reasons summarized earlier, and after consideration of the public comments we received, we are not making any MS–DRG changes for cases involving the open concomitant surgical ablation procedures or for cases describing standalone percutaneous endoscopic surgical ablation for FY 2023.

7. MDC 06 (Diseases and Disorders of the Digestive System): Appendicitis

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28163 through 28165), we discussed a request we received to reconsider the MS–DRG assignment for diagnosis code K35.20 (Acute appendicitis with generalized peritonitis, without abscess). According to the requestor, when this code is reported in combination with any one of the corresponding procedure codes that describe an appendectomy, the case is grouping to MS–DRGs 341, 342, and 343 (Appendectomy without Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). Alternatively, the requestor stated that when diagnosis code K35.32 (Acute appendicitis with perforation and localized peritonitis, without abscess) is reported in combination with any one of the corresponding procedure codes that describe an appendectomy, the case is grouping to MS–DRGs 338, 339, and 340 (Appendectomy with Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively).

The requestor asserted that the difference in MS–DRG assignment suggests that localized peritonitis is more severe or requires an additional level of care over and above that for generalized peritonitis. The requestor stated that clinically, both localized and generalized peritonitis, when treated with an appendectomy require the same level of patient care, including extensive intraoperative irrigation at the surgical site, direct inspection or imaging of the abdomen to look for possible abscess, use of intravenous antibiotics, and prolonged inpatient monitoring. The requestor added that generalized peritonitis can be thought of as a progression of the localized peritonitis condition and that patients progress from localized to generalized peritonitis and not vice versa.

In the proposed rule we noted that this topic has been discussed previously in our FY 2019 (83 FR 41230) and FY 2021 rulemakings (85 FR 32500 through 32503) and (85 FR 58484 through 58488). Effective FY 2019 (October 1, 2018) diagnosis code K35.2 (Acute appendicitis with generalized peritonitis) was expanded to K35.20 (Acute appendicitis with generalized peritonitis, without abscess); and K35.21 (Acute appendicitis with generalized peritonitis, with abscess). In addition, code K35.3 (Acute appendicitis with localized peritonitis) was expanded to K35.30 (Acute appendicitis with localized peritonitis, without perforation or gangrene); K35.31 (Acute appendicitis with localized peritonitis and gangrene, without perforation); K35.32 (Acute appendicitis with perforation and localized peritonitis, without abscess); and K35.33 (Acute appendicitis with perforation and localized peritonitis, with abscess).

We finalized the severity level designations for these new diagnosis codes in the FY 2019 IPPS/LTCH PPS final rule and stated our clinical advisors believed that the new diagnosis codes for acute appendicitis described as ''with abscess'' or ''with perforation'' were clinically qualified for the MCC severity level designation, while acute appendicitis ''without abscess'' or ''without perforation'' were clinically qualified for the CC severity level designation because cases with abscess or perforation would be expected to require more clinical resources and time to treat while those cases ''without abscess'' or ''without perforation'' are not as severe clinical conditions.

As discussed in our FY 2021 rulemaking, we received the request to add K35.20 (Acute appendicitis with generalized peritonitis, without abscess) to the list of complicated principal diagnoses so that all ruptured/perforated appendicitis codes in MDC 06 group to MS–DRGs 338, 339, and 340 (Appendectomy with Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) as K35.20 is the only ruptured appendicitis code not included in the list of complicated principal diagnosis codes. At that time, we noted that the inclusion term at subcategory K35.2 (Acute appendicitis with generalized peritonitis) is: ''Appendicitis (acute) with generalized (diffuse) peritonitis following rupture or perforation of the appendix''. The requestor stated that code K35.20 (Acute appendicitis with generalized peritonitis, without abscess) describes a generalized, more extensive form of peritonitis than code K35.32 (Acute appendicitis with perforation and localized peritonitis, without abscess). We noted that our clinical advisors agreed that the presence of an abscess would clinically determine whether a diagnosis of acute appendicitis would be considered a complicated principal diagnosis. As diagnosis code K35.20 is described as ''without'' an abscess, our clinical advisors recommended that K35.20 not be added to the list of complicated principal diagnoses for MS–DRGS 338, 339, and 340. We also proposed to remove diagnosis code K35.32 (Acute appendicitis with perforation and localized peritonitis, without abscess) from the complicated principal diagnosis list.

In response to that proposal, some commenters disagreed. A commenter stated that when ruptured appendicitis results in generalized peritonitis, resources are greater because the

infection is not walled off, not localized, and has spread to two or more compartments within the abdominal cavity. According to the commenter, clinical literature supports the statement that generalized peritonitis is a more morbid (severe) presentation than just perforation or localized abscess. After consideration of the comments received and for the reasons discussed in the FY 2021 final rule, we did not finalize our proposals in that final rule. We concurred that the expansion of diagnosis codes K35.2 and K35.3 to introduce additional clinical concepts effective October 1, 2018 significantly changed the scope and complexity of the diagnosis codes for this subset of patients. We also stated NCHS' staff acknowledged the clinical concerns based on the manner in which diagnosis codes K35.2 and K35.3 were expanded and confirmed that they would consider further review of these newly expanded codes with respect to the clinical concepts.

We communicated with the CDC/NCHS staff regarding this repeat request submitted for FY 2023 consideration. The CDC/NCHS staff included these codes describing appendicitis on the agenda and a proposal for further revisions was presented for discussion at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting. Specifically, the CDC/NCHS staff proposed to expand current diagnosis codes K35.20 and K35.21, making them sub-subcategories and creating new diagnosis codes to identify and describe acute appendicitis with generalized peritonitis, with perforation and without perforation, and unspecified as to perforation, as shown in the following table.

Proposed ICD-10-CM Code	Description
K35.200	Acute appendicitis with generalized peritonitis, without perforation or abscess
K35.201	Acute appendicitis with generalized peritonitis, with perforation, without abscess
K35.209	Acute appendicitis with generalized peritonitis, without abscess, unspecified as to perforation
K35.210	Acute appendicitis with generalized peritonitis, without perforation, with abscess
K35.211	Acute appendicitis with generalized peritonitis, with perforation and abscess
K35.219	Acute appendicitis with generalized peritonitis, with abscess, unspecified as to perforation

We refer the reader to the CDC website at: *https://www.cdc.gov/nchs/icd/icd10cm_maintenance.htm* for additional detailed information regarding the proposal, including a recording of the discussion and the related meeting materials.

We noted in the proposed rule that the deadline for submitting public comments on the diagnosis code proposals discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting was May 9, 2022 and according to the CDC/NCHS staff, the diagnosis code proposals are being considered for an October 1, 2023 implementation (FY 2024). We stated that any future proposed changes to the MS–DRGs for Appendectomy would be dependent on the diagnosis code revisions that are finalized by the CDC/NCHS. Since it is not clear what code changes may be finalized, including whether public comments expressed support for the proposed changes or provided alternative options for consideration, we stated in the proposed rule that we believe it is appropriate to delay any possible MS–DRG modifications for future rulemaking. Therefore, we did not propose a change to the MS–DRG assignment or the current structure for MS–DRGs 338, 339, 340, 341, 342, and 343. Although we did not propose a change to the MS–DRG assignments for FY 2023, we made the findings from our data analysis available for the listed MS–DRGs and the associated diagnosis codes to help inform future comments. We referred the reader to Table 6P.4a associated with the proposed rule (which is available via the internet on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*).

Comment: Commenters agreed with our proposal to maintain the structure of MS–DRGs 338, 339, 340, 341, 342, and 343 including the MS–DRG assignment for diagnosis code K35.20 to MS–DRGs 341, 342, and 343. However, a commenter opposed CMS's proposal and stated they agreed with the requestor that all diagnosis codes describing a ruptured or perforated appendix should group to MS–DRGs 338, 339, and 340. The commenter stated that the condition described by code K35.20 can be associated with the risk of postoperative abscess formation and extended length of hospital stay, thereby warranting classification as a complicated diagnosis. This commenter urged CMS to reassign code K35.20 from MS–DRGs 341, 342, and 343 to MS–DRGs 338, 339, and 340 for FY 2023.

Response: We thank the commenters for their support and feedback. In response to the commenter who urged CMS to reassign diagnosis code K35.20 from MS–DRGs 341, 342, and 343 to MS–DRGs 338, 339, and 340 for FY 2023, we note that the CDC/NCHS staff are in the process of reviewing public comments related to the proposed revision to certain diagnosis codes describing acute appendicitis that was presented at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting, as discussed in the proposed rule. Accordingly, we continue to believe it is appropriate to delay any potential MS–DRG modifications as we do not yet know what the finalized code updates, including any corresponding changes to the Index to Diseases and Injuries and Tabular List of Diseases, might be. We will continue to collaborate with the CDC/NCHS regarding this issue.

After consideration of the public comments we received, we are maintaining the current structure of MS–DRGs 338, 339, 340, 341, 342, and 343 and the MS–DRG assignment of diagnosis code K35.20 for FY 2023.

8. MDC 07 (Diseases and Disorders of the Hepatobiliary System and Pancreas): Laparoscopic Cholecystectomy With Common Bile Duct Exploration

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28165), we stated that we received a request to review the MS–DRG assignment when procedure code 0FC94ZZ (Extirpation of matter from common bile duct, percutaneous endoscopic approach) that describes a common bile duct exploration with gallstone removal procedure using a laparoscopic approach, is reported with a laparoscopic cholecystectomy. The procedure codes describing a laparoscopic cholecystectomy are

ICD-10-PCS Code	Description
0F544ZZ	Destruction of gallbladder, percutaneous endoscopic approach
0F548ZZ	Destruction of gallbladder, via natural or artificial opening endoscopic
0FB44ZZ	Excision of gallbladder, percutaneous endoscopic approach
0FB48ZZ	Excision of gallbladder, via natural or artificial opening endoscopic
0FT44ZZ	Resection of gallbladder, percutaneous endoscopic approach

According to the requestor, when a laparoscopic cholecystectomy is reported with any one of the listed procedure codes with a common bile duct exploration and gallstone removal procedure that is performed laparoscopically and reported with procedure code 0FC94ZZ, the resulting assignment is MS–DRGs 417, 418 and 419 (Laparoscopic Cholecystectomy without C.D.E. with MCC, with CC, and without CC/MCC, respectively). This MS–DRG assignment does not recognize that a common bile duct exploration (C.D.E.) was performed. However, the requestor stated that when procedure code 0FC90ZZ (Extirpation of matter from common bile duct, open approach) that describes a common bile duct exploration with gallstone removal procedure using an open approach is reported with any one of the listed procedure codes describing a laparoscopic cholecystectomy, the resulting assignment is MS–DRGs 411, 412, and 413 (Cholecystectomy with C.D.E. with MCC, with CC, and without CC/MCC, respectively). The requestor stated that this MS–DRG assignment appropriately recognizes that a common bile duct exploration was performed. The requestor questioned why only the common bile duct exploration with gallstone removal procedure performed using an open approach (code 0FC90ZZ) grouped appropriately when reported with the laparoscopic cholecystectomy.

We stated in the proposed rule that we reviewed procedure code 0FC94ZZ and found that it is currently designated as a non-O.R. procedure, therefore, the GROUPER logic does not recognize this procedure for purposes of MS–DRG assignment. We also noted that MS–DRGs 411, 412, and 413 include cholecystectomy procedures performed by either an open or a percutaneous endoscopic (laparoscopic) approach. We referred the reader to the V39.1 ICD–10 MS–DRG Definitions Manual, which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* for complete documentation of the GROUPER logic for MS–DRGs 411, 412, 413, 417, 418 and 419.

As stated in the proposed rule, we analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for all cases in MS–DRGs 411, 412, 413, 417, 418, and 419. Because the logic for MS–DRGs 411, 412, and 413 includes cholecystectomy procedures performed by either an open or percutaneous endoscopic (laparoscopic) approach, we also analyzed the cases reported with each approach separately. The findings from our analysis are shown in the following tables.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
411	116	8.5	$29,332
412	152	6.8	$21,042
413	76	3.6	$12,427
417	10,448	6.3	$19,384
418	17,336	4.1	$13,627
419	9,479	2.7	$10,728

Number of Cases Reporting Open Cholecystectomy in MS-DRGs 411-413			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
411	56	10.73	$36,135
412	82	7.61	$23,390
413	28	4.3	$12,969
Total	**166**	**8.1**	**$25,932**

Number of Cases Reporting Laparoscopic Cholecystectomy in MS-DRGs 411-413			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
411	60	6.5	$22,982
412	70	5.8	$18,293
413	48	3.1	$12,110
Total	**178**	**5.3**	**$18,206**

In MS–DRG 411, we found a total of 116 cases with an average length of stay of 8.5 days and average costs of $29,332. Of those 116 cases, there were 56 cases reporting an open cholecystectomy, with an average length of stay of 10.7 days and average costs of $36,135 and 60 cases reporting a laparoscopic cholecystectomy, with an average length of stay of 6.5 days and average costs of $22,982. The data show that the cases reporting an open cholecystectomy have a longer average length of stay (10.7 days versus 6.5 days) and higher average costs ($36,135 versus $22,982) compared to the cases reporting a laparoscopic cholecystectomy. The data also show that the cases reporting an open cholecystectomy have a longer average length of stay (10.7 days versus 8.5 days) and higher average costs ($36,135 versus $29,332) compared to all the cases in MS–DRG 411. Similar findings are demonstrated for MS–DRGs 412 and 413, where the data show that the cases reporting an open cholecystectomy have a longer average length of stay and higher average costs compared to the cases reporting a laparoscopic cholecystectomy, and also, when compared to all the cases in their respective MS–DRGs.

We then analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for cases reporting procedure code 0FC94ZZ in MS–DRGs 417, 418, and 419 to assess how often it was reported. The findings from our analysis are shown in the following table.

Number of Cases Reporting Procedure Code 0FC94ZZ in MS-DRGs 417-419			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
417	70	6.3	$17,685
418	96	4.4	$14,615
419	65	3.2	$13,914
Total	**231**	**4.6**	**$15,348**

We found a total of 231 cases across MS–DRGs 417, 418, and 419 with an average length of stay of 4.6 days and average costs of $15,348 reporting procedure code 0FC94ZZ. In our review of the cases reporting a laparoscopic cholecystectomy across MS–DRGs 411, 412, and 413, we found a total of 178 cases with an average length of stay of 5.3 days and average costs of $18,206.

We also examined claims data from the September 2021 update of the FY 2021 MedPAR file for cases reporting procedure code 0FC94ZZ across all the MS–DRGs without another O.R. procedure reported, to assess the number of cases and in which MS–DRGs procedure code 0FC94ZZ was found. The findings from our analysis are shown in the following table.

Number of Cases Reporting Procedure Code 0FC94ZZ without another O.R. Procedure Across All MS-DRGs			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
438 - Disorders of Pancreas Except Malignancy with MCC	2	14	$26,092
441 - Disorders of Liver Except Malignancy Cirrhosis or Alcoholic Hepatitis with MCC	1	16	$30,076
444 - Disorders of the Biliary Tract with MCC	6	5.2	$10,237
445 - Disorders of the Biliary Tract with CC	11	4	$14,015
446 - Disorders of the Biliary Tract without CC/MCC	5	2.6	$15,036
871 - Septicemia or Severe Sepsis without MV >96 Hours with MCC	6	8.8	$22,737
872 - Septicemia or Severe Sepsis without MV >96 Hours without MCC	1	3	$5,322
Total	**32**	**5.9**	**$16,087**

The data analysis shows procedure code 0FC94ZZ was reported in a total of 32 cases across 7 MS–DRGs with an average length of stay of 5.9 days and average costs of $16,087. While procedure code 0FC94ZZ is designated as non-O.R., we also analyzed the average length of stay and average costs of the cases found within each of the 7 MS–DRGs reporting procedure code 0FC94ZZ against all the cases in their respective MS–DRGs, to determine if there was any indication that the performance of the procedure described by procedure code 0FC94ZZ may have had any impact. For instance, as shown in the table, for MS–DRG 438 we found 2 cases reporting procedure code 0FC94ZZ with an average length of stay of 14 days and average costs of $26,092. In the September 2021 update of the FY 2021 MedPAR file, the total number of cases for MS–DRG 438 is 10,240 with an average length of stay of 6.4 days and average costs of $13,341. The 2 cases reporting procedure code 0FC94ZZ have approximately twice the average length of stay (14 days versus 6.4 days) and approximately twice the average costs ($26,092 versus $13,341) compared to all the cases for MS–DRG 438. In the absence of additional analysis, it is unknown if these differences can be attributed to other factors, such as the MCCs that were reported in these cases. Similar findings were found for MS–DRGs 441, 445, 446, and 871. We noted in the proposed rule that we will consider if further detailed analysis may be warranted for these cases.

As stated in the proposed rule, our clinical advisors agreed that procedure code 0FC94ZZ describes a common bile duct exploration procedure with removal of a gallstone and should be added to the logic for case assignment to MS–DRGs 411, 412, and 413 for clinical coherence with the other procedures that describe a common bile duct exploration. Therefore, for FY 2023, we proposed to redesignate procedure code 0FC94ZZ from a non-O.R. procedure to an O.R. procedure and add it to the logic list for common bile duct exploration (CDE) in MS–DRGs 411, 412, and 413 (Cholecystectomy with C.D.E. with MCC, with CC, and without CC/MCC, respectively) in MDC 07 to appropriately reflect when this procedure is performed and improve the clinical coherence of the patients assigned to these MS–DRGs.

Comment: Commenters agreed with our proposal to redesignate procedure code 0FC94ZZ from a non-O.R. procedure to an O.R. procedure and to add it to the logic list for common bile duct exploration (CDE) procedures in MS–DRGs 411, 412, and 413.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to redesignate procedure code 0FC94ZZ from a non-O.R. procedure to an O.R. procedure and to add it to the logic list for common bile duct exploration (CDE) procedures in MS–DRGs 411, 412, and 413 for FY 2023.

In addition, we noted in the proposed rule that MS–DRGs 414, 415, and 416 (Cholecystectomy Except by Laparoscope without C.D.E. with MCC, with CC and without CC/MCC, respectively) also reflect cholecystectomy procedures, however, the logic is specifically defined for open cholecystectomy procedures *without* a common bile duct exploration procedure performed. Since MS–DRGs 411, 412, and 413 reflect cases where an open or laparoscopic cholecystectomy is performed *with* a common bile duct exploration procedure, MS–DRGs 414, 415, and 416 reflect cases where only an open cholecystectomy is performed *without* a common bile duct exploration procedure, and MS–DRGs 417, 418, and 419 reflect cases where only a laparoscopic cholecystectomy is performed *without* a common bile duct exploration procedure, we stated we believe there may be an opportunity to further refine these MS–DRGs once additional analysis is performed for consideration in future rulemaking. For example, we indicated we could consider proposing to restructure these cholecystectomy MS–DRGs to reflect the following two concepts, if supported by the data, and relatedly, to determine if severity levels are also supported according to the existing criteria.

- Open Cholecystectomy with or without C.D.E.; and
- Laparoscopic Cholecystectomy with or without C.D.E.

Comment: Commenters agreed that there may be an opportunity to further refine the MS–DRGs for cholecystectomy procedures and encouraged CMS to conduct further review and analysis of the procedure codes describing cholecystectomy with common bile duct exploration for consideration in future rulemaking.

Response: We thank the commenters for their support and continue to solicit any additional feedback from the public on this and any alternative recommendations or options to further refine these MS–DRGs for future consideration. As discussed in section II.D.1.b. of the preamble of the proposed rule and this final rule, feedback and other suggestions should be directed to the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™) at: *https://mearis.cms.gov/public/home*, with any comments and suggestions for consideration for FY 2024 to be submitted by October 20, 2022.

9. MDC 10 (Diseases and Disorders of the Endocrine System): Eladocagene Exuparvovec Gene Therapy

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44895), we finalized the redesignation of code XW0Q316 (Introduction of eladocagene exuparvovec into cranial cavity and brain, percutaneous approach, new technology group 6) from a Non-O.R. procedure to an O.R. procedure, assigned to MS–DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders) and to MS–DRGs 987, 988, and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without MCC/CC, respectively). In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28167 through 28168) we discussed a request we received to reconsider this assignment for FY 2023. According to the requestor, the clinical characteristics and costs of cases assigned to MS–DRGs 628 through 630 are significantly different from those associated with the administration of eladocagene exuparvovec. The requestor performed its own analysis, using deep brain stimulation for epilepsy and selective dorsal rhizotomy for cerebral palsy as proxies, and stated that based on its findings for the initial cost analysis and clinical comparison, that MS–DRG 23 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator), MS–DRG 24 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC) and MS–DRGs 25, 26, and 27 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively) may be more appropriate. However, the requestor also stated that while the clinical aspects of eladocagene exuparvovec cases are similar to those of MS–DRGs 23 through 27, the costs are much higher and neither MS–DRGs 628, 629, 630 or MS–DRGs 23 through 27 are appropriate. Therefore, the requestor stated its belief

that assigning eladocagene exuparvovec cases to new MS–DRGs is warranted.

Eladocagene exuparvovec is a gene therapy for the treatment of patients with aromatic L-amino acid decarboxylase (AADC) deficiency, a rare genetic and fatal condition identified with ICD–10–CM diagnosis code E70.81. Patients with AADC deficiency are generally observed to have onset of symptoms in the first year of life, most notably hypotonia (muscle weakness), followed by movement disorders, developmental delay and autonomic signs, such as hyperhidrosis (profuse sweating unrelated to heat or exercise). It is understood that the long-term implications of this disease are severe, resulting in severe deficits and limitations in life expectancy. Because the condition is primarily diagnosed in the pediatric population, we would not expect to find any meaningful volume of cases in the MedPAR data.

As discussed in the proposed rule, we analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 628, 629, and 630 for cases reporting procedure code XW0Q316 and did not find any cases. We then extended our analysis to all MS–DRGs and found 1 case reporting the administration of this therapy in MS–DRG 829 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Other Procedures with CC/MCC) with an average length of stay of 2 days and average costs of $1,544. As we have discussed elsewhere we generally prefer not to create a new MS–DRG unless it would include a substantial number of cases. However, as discussed in section II.D.19.b. of the preamble of the proposed rule and this final rule, we are seeking public comment on possible mechanisms through which we can address rare diseases and conditions that are represented by low volumes in our claims data. We believe this topic, relating to the administration of treatment to address the rare genetic and fatal condition of AADC deficiency, is appropriately aligned with and should be considered as part of that effort. Therefore, we stated in the proposed rule that we are maintaining the current structure for MS–DRGs 628, 629, and 630 for FY 2023, but would continue to consider this request in connection with our evaluation of possible mechanisms to address rare diseases and conditions in the MS–DRG structure, as discussed later in this rule.

Comment: Commenters agreed with our decision to maintain the current MS–DRG assignment for cases reporting the administration of eladocagene exuparvovec. Other commenters urged CMS to consider appropriate MS–DRG assignment and payment for gene therapy intracerebral infusion therapies. The commenters stated there is anticipated rapid development and potential for these therapies to help patients. The commenters also expressed appreciation for CMS' request for feedback on MS–DRG assignment for rare diseases and stated that gene therapy represents an area of significant innovation in treating these conditions. The commenters suggested that CMS carefully consider the MS–DRG assignment for procedures that involve an intracerebral infusion of gene therapy or stem cell products that are currently under development for several neurologic disorders including Parkinson's, which is very common, and aromatic L-amino acid decarboxylase deficiency, which is very rare. The commenters stated that intracerebral infusion therapies are unique procedures requiring vastly different hospital resources compared to more traditional neurosurgical procedures. According to the commenters, appropriate MS–DRG assignment or consideration for creating new MS–DRG categories will be essential to assuring access to these therapies.

Response: We appreciate the commenters' support and feedback.

Comment: A couple commenters disagreed with CMS's decision to maintain the current MS–DRG assignment for cases reporting the administration of eladocagene exuparvovec. The commenters requested that CMS consider creating a new MS–DRG for neurosurgical gene therapy. A commenter indicated that because eladocagene exuparvovec has not yet been approved by the FDA they are unable to appropriately identify cases in the claims data. This commenter stated that there are currently approximately 68 gene therapy trials for central nervous system disorders, therefore, the decision to create or not create a new MS–DRG may have broader implications.

Response: We appreciate the commenters' feedback. As discussed in the proposed rule, our analysis of claims data, which identified only one case reporting the administration of this therapy, did not support a proposal to create a new MS–DRG. The MS–DRGs are a classification system intended to group together those diagnoses and procedures with similar clinical characteristics and utilization of resources. As discussed previously and in prior rulemaking, we generally prefer not to create a new MS–DRG unless it would include a substantial number of cases, as having large clinical cohesive groups within an MS–DRG provides greater stability for annual updates to the relative payment weights. We acknowledge the complexities related to classifying cases that are represented by low volumes in our claims data and believe that further review of this issue also aligns with our intent to consider how rare diseases or conditions may be classified under the IPPS.

After consideration of the public comments we received, we are maintaining the current MS–DRG assignment for cases reporting the administration of eladocagene exuparvovec for FY 2023. We will continue to explore appropriate mechanisms to address therapies indicated for rare diseases. We also refer the reader to section II.D.19.a of the preamble of this final rule for a discussion of the feedback received in response to the comment solicitation on possible mechanisms to address rare diseases and conditions in the MS–DRG structure.

10. MDC 15 Newborns and Other Neonates With Conditions Originating in Perinatal Period: MS–DRG 795 Normal Newborn

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28168 through 28170), we discussed a request we received to review the MS–DRG assignment of newborn encounters with diagnosis codes describing contact with and (suspected) exposure to COVID–19 when the condition is ruled out after clinical evaluation and negative workup. The requestor expressed concern that a newborn encounter coded with a principal diagnosis code from category Z38 (Liveborn infants according to place of birth and type of delivery), followed by codes Z05.1 (Observation and evaluation of newborn for suspected infectious condition ruled out) and Z20.822 (Contact with and (suspected) exposure to COVID–19) is assigned to MS–DRG 794 (Neonate with Other Significant Problems). The requestor stated that this assignment appears to be in error and that the assignment should instead be to MS–DRG 795 (Normal Newborn).

In the proposed rule we stated that our analysis of this grouping issue confirmed that, when a principal diagnosis code from category Z38 (Liveborn infants according to place of birth and type of delivery), followed by codes Z05.1 (Observation and evaluation of newborn for suspected infectious condition ruled out) and Z20.822 (Contact with and (suspected) exposure to COVID–19), the case is assigned to MS–DRG 794.

We stated that as we examined the GROUPER logic that would determine an assignment of cases to MS–DRG 795, we noted the ''only secondary diagnosis'' list under MS–DRG 795 includes the following five ICD–10–CM diagnosis codes from ICD–10–CM category Z20. We refer the reader to the ICD–10 MS–DRG Version 39.1 Definitions Manual (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* for complete documentation of the GROUPER logic for the MS–DRG 795.

ICD-10-CM Code	Description
Z20.09	Contact with and (suspected) exposure to other intestinal infectious diseases
Z20.7	Contact with and (suspected) exposure to pediculosis, acariasis and other infestations
Z20.810	Contact with and (suspected) exposure to anthrax
Z20.818	Contact with and (suspected) exposure to other bacterial communicable diseases
Z20.89	Contact with and (suspected) exposure to other communicable diseases

As discussed in the proposed rule, in reviewing the ICD–10–CM diagnosis code classification and the GROUPER logic list, we noted that the 13 ICD–10–CM diagnosis codes, also from category Z20, listed in the following table were inadvertently omitted from the ''only secondary diagnosis'' list under MS–DRG 795.

ICD-10-CM Code	Description
Z20.01	Contact with and (suspected) exposure to intestinal infectious diseases due to Escherichia coli (E. coli)
Z20.1	Contact with and (suspected) exposure to tuberculosis
Z20.2	Contact with and (suspected) exposure to infections with a predominantly sexual mode of transmission
Z20.3	Contact with and (suspected) exposure to rabies
Z20.4	Contact with and (suspected) exposure to rubella
Z20.5	Contact with and (suspected) exposure to viral hepatitis
Z20.6	Contact with and (suspected) exposure to human immunodeficiency virus [HIV]
Z20.811	Contact with and (suspected) exposure to meningococcus
Z20.820	Contact with and (suspected) exposure to varicella
Z20.821	Contact with and (suspected) exposure to Zika virus
Z20.822	Contact with and (suspected) exposure to COVID-19
Z20.828	Contact with and (suspected) exposure to other viral communicable diseases
Z20.9	Contact with and (suspected) exposure to unspecified communicable disease

We reviewed section I.C.21.c.1 of the 2022 ICD–10–CM Official Guidelines for Coding and Reporting which state ''category Z20 indicates contact with, and suspected exposure to, communicable diseases. These codes are for patients who are suspected to have been exposed to a disease by close personal contact with an infected individual or are in an area where a disease is epidemic . . . Contact/exposure codes may be used as a first-listed code to explain an encounter for testing, or, more commonly, as a secondary code to identify a potential risk.'' Per the Excludes1 note at category Z20, when applicable, diagnoses of current infectious or parasitic disease are coded instead of codes from category Z20.

We stated in the proposed rule that our clinical advisors reviewed this issue and agreed that patients exposed to communicable diseases that are worked up or treated prophylactically or both, and for whom those conditions are later determined after study to not be present, are distinct from patients with identified signs or symptoms of a suspected problem or diagnosed with having that communicable disease. Our clinical advisors supported adding the 13 diagnosis codes listed previously to the logic of MS–DRG 795 for clinical consistency with the five other diagnosis codes describing contact with, and suspected exposure to, communicable diseases currently assigned to the ''only secondary diagnosis'' list under MS–DRG 795.

After review of the coding guidelines and conventions, and discussion with our clinical advisors, we stated that we agreed with the requestor that in these circumstances, these encounters should not map to MS–DRG 794 (Neonate with Other Significant Problems) and should instead be assigned to MS–DRG 795 (Normal Newborn). Therefore, we proposed to add the 13 diagnosis codes listed previously that describe contact with and (suspected) exposure to communicable diseases to the ''only secondary diagnosis'' list under MS–DRG 795 (Normal Newborn). Under this proposal, cases with a principal diagnosis described by an ICD–10–CM code from category Z38 (Liveborn infants according to place of birth and type of delivery), following by codes Z05.1 (Observation and evaluation of newborn for suspected infectious condition ruled out) and Z20.822 (Contact with and (suspected) exposure to COVID–19) will be assigned to MS–DRG 795.

Comment: Commenters expressed support for CMS' proposal to add the 13 diagnosis codes listed previously that describe contact with and (suspected) exposure to communicable diseases to the ''only secondary diagnosis'' list under MS–DRG 795 (Normal Newborn).

Response: We appreciate the commenters' support.

Comment: A few commenters opposed CMS's proposal and stated that newborns exposed to communicable diseases often require care and treatment well above that of a normal newborn in terms of requiring increased evaluation, monitoring, testing, and prophylactic treatment. Some commenters stated that these newborns are not ''normal newborns'' due to the specific exposures they have had. These commenters listed a number of communicable diseases as examples and indicated the specific interventions such as evaluations, screenings, assessments, extra monitoring, laboratory studies, prophylactic treatments and sometimes isolation that can be required to prevent disease or complications when contact or (suspected) exposure occurs. Another commenter noted that there is a substantial difference in the FY 2023 proposed relative weights between MS–DRG 795 and MSDRG 794 and stated that ''exposure only'' cases fall in between the two MS–DRGs in terms of resource utilization. This commenter stated that a review of the cases at their facility shows that cases assigned to MS–DRG 794 with only a diagnosis code describing contact with and (suspected) exposure to communicable diseases driving the MS–DRG assignment had longer lengths of stay and higher charges than cases assigned to MS–DRG 795, while having shorter lengths of stay and lower charges than other cases assigned to MS–DRG 794 with diagnoses describing conditions other than contact with and (suspected) exposure driving the MS–DRG assignment. This commenter also stated that they believed that the five ICD–10–CM diagnosis codes from ICD–10–CM category Z20 currently listed in the ''only secondary diagnosis'' list under MS–DRG 795 are currently inappropriately included and requested that either the 13 codes for contact with and (suspected) exposure remain assigned to MS–DRG 794 and the five codes currently in MS–DRG 795 be reassigned to MS–DRG 794 or a new MS–DRG be created that would include newborns that fall into the ''exposure only'' category, with a relative weight that falls somewhere between the relative weights of MS–DRG 794 and 795 to accurately capture resource utilization.

Response: We thank the commenters for their feedback. Our clinical advisors reviewed the commenters' concerns. While our clinical advisors agree that patients exposed to communicable diseases can require workup or prophylactic treatment, they continue to state these patients are distinct from patients with identified signs or symptoms of a suspected problem or diagnosed with having that communicable disease. Our clinical advisors noted that the subset of newborns with a principal or secondary diagnosis listed in the logic list for MS–DRG 794 (Neonate with Other Significant Problems) are clinically distinct and often represent a more severe set of patients. Accordingly, our clinical advisors continue to believe that the five other diagnosis codes describing contact with, and suspected exposure to, communicable diseases are appropriately assigned to the ''only secondary diagnosis'' list under MS–DRG 795, and also continue to support adding the 13 diagnosis codes listed previously to the logic of MS–DRG 795 for clinical consistency. We appreciate the commenters' feedback suggesting further review of the newborn MS–DRGs and agree that these groupings warrant special consideration. As discussed in prior rulemaking, we generally do not adopt the same approach to refine the maternity and newborn MS–DRGs because of the extremely low volume of Medicare patients there are in these DRGs.

After consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal to add the 13 diagnosis codes listed previously that describe contact with and (suspected) exposure to communicable diseases to the ''only secondary diagnosis'' list under MS–DRG 795 (Normal Newborn), without modification, for FY 2023.

In addition, as discussed in the proposed rule, as we examined the GROUPER logic that would determine an assignment of cases to MS–DRGs in MDC 15, we noted the logic for MS–DRG 790 (Extreme Immaturity or Respiratory Distress Syndrome Neonate) includes ICD–10–CM diagnosis codes that describe extremely low birth weight newborn, extreme immaturity of newborn and respiratory distress syndrome of newborn. We referred the reader to the ICD–10 MS–DRG Version 39.1 Definitions Manual (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) for complete documentation of the GROUPER logic for MS–DRG 790. We stated that during our review of the diagnosis codes assigned to these MS–DRGs, we identified three diagnosis codes that do not exist in the logic for MS–DRG 790. The three diagnosis codes and their current MS–DRG assignments are listed in the following table.

ICD-10-CM Code	Description	MS-DRG
P07.00	Extremely low birth weight newborn, unspecified weight	791 and 792 (Prematurity with and without Major Problems, respectively)
P07.20	Extreme immaturity of newborn, unspecified weeks of gestation	795 (Normal Newborn)
P07.26	Extreme immaturity of newborn, gestational age 27 completed weeks	791 and 792 (Prematurity with and without Major Problems, respectively)

We stated our clinical advisors reviewed this grouping issue and noted that while virtually every neonate under 1000 grams, which is the definition of extremely low birth weight (ELBW), will have a weight documented somewhere in the medical record, in the rare instance that it is not, if the diagnosis documented by the provider is ''ELBW'' the neonate would be in a higher risk category. Our clinical advisors also noted that whereas weight is measured with high precision, gestational age is more complicated. With the exception of in vitro fertilization, gestational age is an estimate. Our clinical advisors stated similar to documentation of ''ELBW'', if the diagnosis documented by the provider is ''extreme immaturity of newborn'' the neonate would be in a higher risk category. These diagnoses

describe conditions that require advanced care and resources similar to other conditions already assigned to the logic of MS–DRG 790 even in cases where the birth weight, or weeks of gestation, are unspecified.

For clinical consistency, our clinical advisors supported the addition of these three diagnosis codes to the GROUPER logic list for MS–DRG 790. Therefore, we proposed to reassign ICD–10–CM diagnosis codes P07.00, P07.20 and P07.26 to MS–DRG 790, effective October 1, 2022 for FY 2023.

Comment: Commenters expressed support for CMS' proposal to reassign ICD–10–CM diagnosis codes P07.00, P07.20 and P07.26 to MS–DRG 790.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to reassign ICD–10–CM diagnosis codes P07.00, P07.20 and P07.26 to MS–DRG 790, without modification, effective October 1, 2022 for FY 2023.

11. Review of Procedure Codes in MS–DRGs 981 Through 983 and 987 Through 989

We annually conduct a review of procedures producing assignment to MS–DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987 through 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS–DRGs into one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this information to determine which procedure codes and diagnosis codes to examine. We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned.

In addition to this internal review, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS–DRGs to which the procedure codes are assigned.

Based on the results of our review of the claims data from the September 2021 update of the FY 2021 MedPAR file, as well as our review of the requests that we received to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we proposed to move the cases reporting the procedures and/or principal diagnosis codes described in this section of this rule from MS–DRGs 981 through 983 or MS–DRGs 987 through 989 into one of the surgical MS–DRGs for the MDC into which the principal diagnosis or procedure is assigned.

a. Embolization of Portal and Hepatic Veins

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28170), we received a request to reassign cases with a principal diagnosis from MDC 07 (Diseases and Disorders of the Hepatobiliary System and Pancreas) when reported with procedures involving the embolization of a hepatic or portal vein from MS–DRGs 981, 982 and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 423, 424, and 425 (Other Hepatobiliary or Pancreas Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 07.

We noted that in ICD–10–PCS, the root operation selected to code embolization procedures is dependent on the objective of the procedure. If the objective of an embolization procedure is to completely close a vessel, the root operation Occlusion is coded. ICD–10–PCS procedure codes 06L43DZ (Occlusion of hepatic vein with intraluminal device, percutaneous approach) or 06L83DZ (Occlusion of portal vein with intraluminal device, percutaneous approach) may be reported to describe embolization procedures to completely close off a hepatic or portal vein with an intraluminal device. If the objective of an embolization procedure is to narrow the lumen of a vessel, the root operation Restriction is coded. ICD–10–PCS procedure codes 06V43DZ (Restriction of hepatic vein with intraluminal device, percutaneous approach) or 06V83DZ (Restriction of portal vein with intraluminal device, percutaneous approach) may be reported to describe embolization procedures to narrow or partially occlude a hepatic or portal vein with an intraluminal device.

These four ICD–10–PCS procedure codes, as well as their MDC assignments, are listed in the table:

ICD-10-PCS Code	Description	MDC
06L43DZ	Occlusion of hepatic vein with intraluminal device, percutaneous approach	05, 06, 21, 24
06L83DZ	Occlusion of portal vein with intraluminal device, percutaneous approach	05, 06, 21, 24
06V43DZ	Restriction of hepatic vein with intraluminal device, percutaneous approach	05, 21, 24
06V83DZ	Restriction of portal vein with intraluminal device, percutaneous approach	05, 21, 24

We stated in the proposed rule that our analysis of this grouping issue confirmed that when a procedure code describing the percutaneous occlusion or restriction of the hepatic or portal vein with intraluminal device is reported with a principal diagnosis from MDC 07, these cases group to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). Whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''.

As noted in the proposed rule, to understand the resource use for the subset of cases reporting procedure codes 06L43DZ, 06L83DZ, 06V43DZ or 06V83DZ with a principal diagnosis from MDC 07 that are currently grouping to MS–DRGs 981, 982, and

983, we examined claims data from the September 2021 update of the FY 2021 MedPAR file for the average length of stay and average costs for these cases. Our findings are shown in the following table:

MS-DRGs 981-983: Cases Reporting Procedure Describing Percutaneous Occlusion or Restriction of Hepatic or Portal Vein with Intraluminal Device with Principal Diagnosis from MDC 07				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
981	All cases	22,967	12.1	$35,790
	Cases reporting 06L43DZ; 06L83DZ; 06V43DZ or 06V83DZ with a principal diagnosis from MDC 07	23	13.9	$45,634
982	All cases	10,465	5.9	$19,803
	Cases reporting 06L43DZ; 06L83DZ; 06V43DZ or 06V83DZ with a principal diagnosis from MDC 07	10	8.6	$16,772
983	All cases	1,905	2.7	$13,877
	Cases reporting 06L43DZ; 06L83DZ; 06V43DZ or 06V83DZ with a principal diagnosis from MDC 07	1	1	$15,140

We also examined the data for cases in MS–DRGs 423, 424, and 425, and our findings are shown in the following table:

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
423 – All cases	1,222	10.9	$32,145
424 – All cases	547	6	$19,514
425 – All cases	98	2.9	$12,113

As noted in the proposed rule, while the claims analysis based on the September 2021 update of the FY 2021 MedPAR file identified only 34 cases for which these procedures were reported with a principal diagnosis from MDC 07 resulting in assignment to MS–DRGs 981 through 983, and the average length of stay and average costs for these cases vary in comparison to the average length of stay and average costs of all cases in MS–DRGs 423, 424, and 425, given the clinical indications for hepatic or portal vein embolization procedures, such as to induce regrowth on one side of the liver in advance of a planned hepatic resection on the other side, we stated we believed it was clinically appropriate to add these procedure codes describing the percutaneous occlusion or restriction of the hepatic or portal vein with intraluminal device to MS–DRGs 423, 424, and 425 in MDC 07. Our clinical advisors stated that these procedures are clearly related to the principal diagnoses as they are procedures performed for hepatobiliary diagnoses, namely hepatocellular carcinoma and liver metastases, so it is clinically appropriate for the procedures to group to the same MDC as the principal diagnoses. Our clinical advisors also stated the procedures describing the percutaneous occlusion or restriction of the hepatic or portal vein with intraluminal device are consistent with the existing procedure codes included in the logic for case assignment to MS–DRGs 423, 424, and 425.

Therefore, we proposed to add ICD–10–PCS procedure codes 06L43DZ, 06L83DZ, 06V43DZ and 06V83DZ to MDC 07 in MS–DRGs 423, 424 and 425. Under this proposal, cases reporting procedure codes 06L43DZ, 06L83DZ, 06V43DZ or 06V83DZ in conjunction with a principal diagnosis code from MDC 07 would group to MS–DRGs 423, 424 and 425.

Comment: Commenters expressed support for CMS' proposal to add ICD–10–PCS procedure codes 06L43DZ, 06L83DZ, 06V43DZ and 06V83DZ to MDC 07 in MS–DRGs 423, 424 and 425. A commenter stated that this proposal is in line with resources utilized in performing the procedures and also helps organizations better manage their Program for Evaluating Payment Patterns Electronic Report (PEPPER) data related to DRG 981 and 982.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–PCS procedure codes 06L43DZ, 06L83DZ, 06V43DZ and 06V83DZ to MDC 07 in MS–DRGs 423, 424 and 425, without modification, effective October 1, 2022 for FY 2023.

b. Percutaneous Excision of Hip Muscle

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28171), we received a request to examine cases reporting a procedure describing

percutaneous biopsies of muscle. The requestor stated that when procedures describing the percutaneous excision of the left hip muscle for diagnostic purposes are reported with a principal diagnosis from MDC 06 (Diseases and Disorders of the Digestive System) such as K68.12 (Psoas muscle abscess), the cases are assigned to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). However, when procedures describing the percutaneous excision of the retroperitoneum for diagnostic purposes are reported with the same principal diagnosis of psoas muscle abscess, the cases are assigned to medical MS–DRGs 371, 372, and 373 (Major Gastrointestinal Disorders and Peritoneal Infections with MCC, with CC, and without CC/MCC, respectively). The requestor stated the cases at their facility with a principal diagnosis of psoas muscle abscess when reported with a procedure describing a biopsy of the left muscle had an average length of stay comparable to other cases assigned to MS–DRGs 371, 372, and 373. The requestor provided ICD–10–PCS procedure code 0KBP3ZX (Excision of left hip muscle, percutaneous approach, diagnostic) in its request and recommended that CMS evaluate the assignment of procedure code 0KBP3ZX because procedures describing the percutaneous excision of the left hip muscle for diagnostic purposes appear to be related to a diagnosis of psoas muscle abscess.

We stated in the proposed rule that in order to analyze this request, we first identified the similar ICD–10–PCS procedure codes that also describe the excision of hip muscle. We noted that under the ICD–10–PCS procedure classification, biopsy procedures are identified by the 7th digit qualifier value ''diagnostic'' in the code description. The four ICD–10–PCS procedure codes that describe the excision of hip muscle, as well as their MDC assignments, are listed in the table:

ICD-10-PCS Code	Description	MDC
0KBN3ZX	Excision of right hip muscle, percutaneous approach, diagnostic	08
0KBN3ZZ	Excision of right hip muscle, percutaneous approach	01; 08; 09; 21; 24
0KBP3ZX	Excision of left hip muscle, percutaneous approach, diagnostic	08
0KBP3ZZ	Excision of left hip muscle, percutaneous approach	01; 08; 09; 21; 24

We stated in the proposed rule that our analysis of this grouping issue confirmed that when procedure codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX or 0KBP3ZZ are reported with a principal diagnosis from MDC 06, such as K68.12, these cases group to MS–DRGs 981, 982, and 983. As noted in the previous discussion, whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in a MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''.

As noted in the proposed rule, we examined the claims data from the September 2021 update of the FY 2021 MedPAR file to identify cases reporting procedure codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, or 0KBP3ZZ with a principal diagnosis of K68.12 (Psoas muscle abscess) that are currently grouping to MS–DRGs 981, 982, and 983. Our findings are shown in this table:

MS-DRGs 981-983: Cases Reporting Procedures Describing Excision of Hip Muscle with a Principal Diagnosis of Psoas Muscle Abscess				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
981	All cases	22,967	12.1	$35,790
	Cases reporting excision of hip muscle with principal diagnosis of K68.12	2	7.5	$12,388
982	All cases	10,465	5.9	$19,803
	Cases reporting excision of hip muscle with principal diagnosis of K68.12	4	9.8	$13,810
983	All cases	1,905	2.7	$13,877
	Cases reporting excision of hip muscle with principal diagnosis of K68.12	1	2	$7,781

As shown, in our analyses of the claims data for MS–DRGs 981 through 983, we found a total of seven cases reporting procedures describing excision of hip muscle with a principal diagnosis of K68.12 in the September 2021 update of the FY 2021 MedPAR file.

We stated in the proposed rule that to further evaluate this issue, we examined claims data from the September 2021 update of the FY 2021 MedPAR file for cases reporting any one of the four procedure codes (0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, or 0KBP3ZZ) in MS–DRGs

981 through 983 with a principal diagnosis from MDC 06. Our findings are shown in the following table.

MS-DRGs 981-983: Cases Reporting Procedures Describing Excision of Hip Muscle with Principal Diagnosis from MDC 06				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
981	All cases	22,967	12.1	$35,790
	Cases reporting excision of hip muscle with any principal diagnosis from MDC 06	5	9.6	$15,599
982	All cases	10,465	5.9	$19,803
	Cases reporting excision of hip muscle with any principal diagnosis from MDC 06	8	8.5	$12,346
983	All cases	1,905	2.7	$13,877
	Cases reporting excision of hip muscle with any principal diagnosis from MDC 06	1	2	$7,781

As shown, in our analyses of the claims data for MS–DRGs 981 through 983, we found a total of 14 cases reporting procedures describing excision of hip muscle with a principal diagnosis from MDC 06 in the September 2021 update of the FY 2021 MedPAR file.

We also stated in the proposed rule that we examined the data for cases in MS–DRGs 371, 372, and 373, and our findings are shown in the following table:

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
371 – All cases	11,415	6.9	$13,284
372 – All cases	15,680	4.6	$8,072
373 – All cases	3,090	3.3	$5,860

As discussed in the proposed rule, we reviewed these procedures and our clinical advisors stated that procedures that describe the percutaneous excision of hip muscle are not surgical in nature and would not be the main reason for inpatient hospitalization or be considered the principal driver of resource expenditure. Our clinical advisors stated although a correlation cannot usually be made between procedures performed in general anatomic regions, such as the retroperitoneum, and procedures performed in specific body parts, such as muscle, because procedures coded with general anatomic region body parts represent a broader range of procedures that cannot be coded to a specific body part, they agreed that in this instance procedures that describe the percutaneous excision of hip muscle should have the same designation as the ICD–10–PCS procedure codes that describe the percutaneous excision of the retroperitoneum that are currently designated as non-O.R. procedures.

We stated that our clinical advisors reviewed this analysis and believed that, for clinical coherence and consistency, it would be appropriate to designate ICD–10–PCS codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and 0KBP3ZZ as non-O.R. procedures.

Therefore, we proposed to remove codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and 0KBP3ZZ from the FY 2023 ICD–10 MS–DRGs Version 40 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures. Under this proposal, these procedures would no longer impact MS–DRG assignment. Cases reporting procedure codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and 0KBP3ZZ in conjunction with a principal diagnosis code from MDC 06 would group to MS–DRGs 371, 372, and 373.

Comment: Some commenters expressed support for CMS' proposal to remove codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and 0KBP3ZZ from the FY 2023 ICD–10 MS–DRGs Version 40 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures.

Response: We appreciate the commenters' support.

Comment: A commenter opposed CMS' proposal to designate ICD–10–PCS codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and 0KBP3ZZ as non-O.R. procedures and stated that they did not believe this proposal was warranted based on the work involved in performing the procedures.

Response: We thank the commenter for their feedback. Our clinical advisors reviewed the commenter's concerns and continue to support a non-O.R. designation for procedure codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and

0KBP3ZZ that describe the percutaneous excision of hip muscle. Our clinical advisors continue to state that procedure codes that describe the percutaneous excision of hip muscle are not surgical in nature and these procedures should have the same designation as the ICD–10–PCS procedure codes that describe the percutaneous excision of the retroperitoneum that are currently designated as non-O.R. procedures.

After consideration of the public comments we received, for the reasons stated, we are finalizing our proposal to remove codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and 0KBP3ZZ from the FY 2023 ICD–10 MS–DRGs Version 40 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures, without modification, effective October 1, 2022 for FY 2023. Under this final policy, these procedures will no longer impact MS–DRG assignment.

In addition, as discussed in the proposed rule, we also conduct an internal review and consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate for the cases to be reassigned from one of the MS–DRG groups to the other. In the proposed rule, we stated that based on the results of our review of the claims data from the September 2021 update of the FY 2021 MedPAR file we did not identify any cases for reassignment. We also stated we did not receive any requests suggesting reassignment. Therefore, for FY 2023 we did not propose to move any cases reporting procedure codes from MS–DRGs 981 through 983 to MS–DRGs 987 through 989 or vice versa.

Comment: Commenters expressed support for CMS' decision to not propose to move any cases reporting procedure codes from MS–DRGs 981 through 983 to MS–DRGs 987 through 989 or vice versa.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing the structure of MS–DRGs 981 through 983 and MS–DRGs 987 through 989 for FY 2023 without modification.

12. Operating Room (O.R.) and Non-O.R. Issues

a. Background

Under the IPPS MS–DRGs (and former CMS MS–DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to the operating room, surgical patients were identified based on the procedures that were performed. Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.).

Currently, each ICD–10–PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment. First, each ICD–10–PCS procedure code is either designated as an O.R. procedure for purposes of MS- DRG assignment (''O.R. procedures'') or is not designated as an O.R. procedure for purposes of MS–DRG assignment (''non-O.R. procedures''). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS–DRG assignment or not affecting the MS–DRG assignment. We refer to these designations that do affect MS–DRG assignment as ''non O.R. affecting the MS–DRG.'' For new procedure codes that have been finalized through the ICD–10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting the MS–DRG, our clinical advisors recommend the MS–DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS–DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS–DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.D.14 of the preamble of this final rule, we are making Table 6B.—New Procedure Codes—FY 2023 available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. We also refer readers to the ICD–10 MS–DRG Version 39.1 Definitions Manual at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS–DRG-Classifications-and-Software.html* for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS–DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index.

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that, given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. This will be a multi year project during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non O.R.-designations for procedures by leveraging the detail that is now available in the ICD–10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD–10–PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10.

We discussed in the FY 2020 IPPS/LTCH PPS proposed rule that as a result of this planned review and potential restructuring, procedures that are currently designated as O.R. procedures may no longer warrant that designation, and conversely, procedures that are currently designated as non-O.R.

procedures may warrant an O.R. type of designation. We intend to consider the resources used and how a procedure should affect the MS–DRG assignment. We may also consider the effect of specific surgical approaches to evaluate whether to subdivide specific MS DRGs based on a specific surgical approach. We plan to utilize our available MedPAR claims data as a basis for this review and the input of our clinical advisors. As part of this comprehensive review of the procedure codes, we also intend to evaluate the MS–DRG assignment of the procedures and the current surgical hierarchy because both of these factor into the process of refining the ICD–10 MS–DRGs to better recognize complexity of service and resource utilization.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58540 through 58541), we provided a summary of the comments we had received in response to our request for feedback on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system for future consideration.

We stated in the proposed rule that in consideration of the ongoing PHE, we continue to believe it may be appropriate to allow additional time for the claims data to stabilize prior to selecting the timeframe to analyze for this review. Additional time is also necessary as we continue to develop our process and methodology. Therefore, we stated that we will provide more detail on this analysis and the methodology for conducting this review in future rulemaking.

Comment: Commenters supported CMS' plan to continue to conduct the comprehensive, systematic review of the ICD–10–PCS codes that includes a process for determining when a procedure is designated as O.R. or non-O.R. These commenters expressed support of CMS' decision to allow additional time for the claims data to stabilize prior to selecting the timeframe to analyze for this review in consideration of the ongoing PHE. A commenter stated they appreciate that CMS is taking the appropriate time before deciding whether and how to restructure the current O.R. and non-O.R. designations. Another commenter acknowledged that O.R. and non-O.R. designation determinations are a substantial undertaking that may significantly restructure many MS–DRGs.

Response: We thank the commenters for their support and appreciate their acknowledgement of the magnitude of this effort.

Comment: Other commenters stated that designation of O.R. versus non-O.R. may no longer be the most critical differentiator between resource-intensive procedures for MS–DRG purposes. These commenters noted that medical practice is changing and presently, there are increasingly complex and resource-intensive procedures performed by hospitals that do not involve the use of an operating room. A commenter stated that because of technological advances, sophisticated resource-intensive procedures are no longer confined to the operating room setting.

Other commenters highlighted stem cell transplants (SCT), Chimeric Antigen Receptor (CAR) T-cell therapy, and other novel cell and gene therapies as examples of therapeutic interventions that have similar or greater resource utilization and complexity than some O.R. designated procedures, while not being currently designated as O.R. procedures themselves. Another commenter noted that some procedures performed in interventional radiology suites and cardiac catheterization labs can utilize more advanced equipment and supplies than procedures performed in a traditional operating room with minimally installed equipment. As part of the broader and continuing conversation about future MS–DRG assignments and designations for these procedures and therapies, these commenters encouraged CMS to consider how other factors influence resource utilization, and recommended CMS consider questions such as whether:

- certain types of interventions, such as the administration of certain complex drugs/biologics or therapies (for example, radiation therapy), that demonstrate higher costs and resource utilization, warrant consideration of a designation as an O.R. procedure or another equivalent designation?
- certain types of procedures and therapies make up a substantial percentage of the costs within a particular MS–DRG?
- there is an average amount of cost within the relative weight of a MS–DRG that represents significant resource utilization and complexity?
- complex infusion-type administration of novel and potentially curative cell and gene therapies should be considered for new category of MS–DRGs, to be added to the current categories of Pre-MDC MS–DRGs, Surgical MS–DRGs and Medical MS–DRGs?

Response: CMS appreciates the commenters' feedback and recommendations as to factors to consider in evaluating O.R. designations. As stated previously, we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room. We agree with commenters and believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10. As discussed in the proposed rule, we are exploring alternatives on how we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is available in the ICD–10 claims data. We continue to develop our process and methodology, and will provide more detail in future rulemaking.

Comment: Several commenters suggested that CMS work closely with physician specialty societies and interested parties to identify the most important drivers of complexity and resource use in the hospital setting. Other commenters suggested CMS engage the broader community by convening town halls or listening sessions. A few commenters suggested that CMS allow sufficient time for provider review and stated that thorough data analysis with provider input is critical to allow for appropriate insight in provider comments. A commenter recommended that CMS be transparent in its methodology, identify criteria or metrics used to determine what does and does not constitute significant resource utilization and complexity across MS–DRGs, and be receptive to public opinion. Another commenter stated that they look forward to CMS providing more detail on this analysis and expressed that they would appreciate advanced notice for comment in future rulemaking regarding the proposed methodology for conducting this review.

Response: CMS appreciates this feedback. We note that CMS has already convened an internal workgroup comprised of clinicians, coding specialists and other policy analysts, and we look forward to further feedback from the public. Recognizing sufficient time is needed to provide feedback on what factors or criteria to consider in determining whether a procedure should be designated as an O.R. procedure in the ICD–10–PCS classification system, we have provided opportunity for the public to provide feedback beginning with the FY 2018 final rule and we continue to solicit input. We encourage the public to submit comments on other factors to consider in our refinement efforts to recognize and differentiate consumption of resources for the ICD–10 MS–DRGs timely for consideration. We will also

explore additional means of eliciting feedback, and will notify the public of any such other opportunities for communication and comment in the future. Once we are in a position to provide more detail on this analysis and the methodology for conducting this comprehensive review, we will do so in future rulemaking.

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28174 through 28175), we received the following requests regarding changing the designation of specific ICD–10–PCS procedure codes from non-O.R. to O.R. procedures. In this section of this rule, as we did in the proposed rule, we summarize these requests and address why we are not considering a change to the designation of these codes at this time and, further, respond to the public comments we received regarding these requests.

We received a request to change the designation of all ICD–10–PCS procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs, from non-O.R. to O.R. According to the requestor, thoracoscopic and laparoscopic procedures are always performed in the operating room under general anesthesia. In the proposed rule, we stated we believed additional time was needed to fully examine the numerous ICD–10–PCS codes in the classification that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs as there are over 19,000 ICD–10–PCS codes in the classification that describe procedures performed using a percutaneous endoscopic approach. As we have signaled in prior rulemaking, the designation of an O.R. procedure encompasses more than the physical location of the hospital in which the procedure may be performed. We also examine if, and in what way, the performance of the procedure affects the resource expenditure in those admissions in the inpatient setting, in addition to examining other clinical factors such as procedure complexity, and need for anesthesia administration as well as other types of sedation. We stated we will continue to evaluate the ICD–10–PCS procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs as we conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes.

Comment: A commenter stated that they agreed with the request to change the designation of all lCD–10–PCS procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs from non-O.R. to O.R. and stated that these procedures would likely occur in an operating room under general anesthesia. Another commenter stated that while they did not dispute that there may be over 19,000 ICD–10–PCS codes that describe procedures performed using a percutaneous endoscopic approach, they believed that this list could be whittled down substantially by considering only codes describing procedures performed on thoracic and abdominal organs. This commenter stated that even with a smaller list utilizing the criteria they suggested, they could not think of a thoracoscopic or laparoscopic procedure that would not require general anesthesia and be performed in an operating room and urged CMS to designate all ICD–10–PCS procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs as operating room procedures.

Response: We appreciate the commenters' feedback. We also appreciate the commenter's suggestion, however, as stated in the proposed rule, and in prior rulemaking, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. Our clinical advisors recommended that rather than evaluating the procedure codes describing diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs in isolation, analysis should be performed for this subset of procedure codes across the MS–DRGs, as part of the comprehensive procedure code review. As a component of our broader comprehensive procedure code review, we are also reviewing the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is available in the ICD–10 claims data. Therefore, after consideration of the public comments we received, and for the reasons discussed, we are not making changes in this final rule to the designation of all ICD–10–PCS procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs, from non-O.R. to O.R. We will provide more detail on the comprehensive procedure code review and the methodology for conducting this review in future rulemaking.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44892 through 44895) CMS finalized the proposal to remove the 22 codes that describe the open drainage of subcutaneous tissue and fascia listed in the following table from the ICD–10 MS–DRGs Version 39.1 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures. Under this finalization, these procedures no longer impact MS–DRG assignment.

ICD-10-PCS Code	Description
0J900ZZ	Drainage of scalp subcutaneous tissue and fascia, open approach
0J910ZZ	Drainage of face subcutaneous tissue and fascia, open approach
0J940ZZ	Drainage of right neck subcutaneous tissue and fascia, open approach
0J950ZZ	Drainage of left neck subcutaneous tissue and fascia, open approach
0J960ZZ	Drainage of chest subcutaneous tissue and fascia, open approach
0J970ZZ	Drainage of back subcutaneous tissue and fascia, open approach
0J980ZZ	Drainage of abdomen subcutaneous tissue and fascia, open approach
0J990ZZ	Drainage of buttock subcutaneous tissue and fascia, open approach
0J9B0ZZ	Drainage of perineum subcutaneous tissue and fascia, open approach
0J9C0ZZ	Drainage of pelvic region subcutaneous tissue and fascia, open approach
0J9D0ZZ	Drainage of right upper arm subcutaneous tissue and fascia, open approach
0J9F0ZZ	Drainage of left upper arm subcutaneous tissue and fascia, open approach
0J9G0ZZ	Drainage of right lower arm subcutaneous tissue and fascia, open approach
0J9H0ZZ	Drainage of left lower arm subcutaneous tissue and fascia, open approach
0J9J0ZZ	Drainage of right hand subcutaneous tissue and fascia, open approach
0J9K0ZZ	Drainage of left hand subcutaneous tissue and fascia, open approach
0J9L0ZZ	Drainage of right upper leg subcutaneous tissue and fascia, open approach
0J9M0ZZ	Drainage of left upper leg subcutaneous tissue and fascia, open approach
0J9N0ZZ	Drainage of right lower leg subcutaneous tissue and fascia, open approach
0J9P0ZZ	Drainage of left lower leg subcutaneous tissue and fascia, open approach
0J9Q0ZZ	Drainage of right foot subcutaneous tissue and fascia, open approach
0J9R0ZZ	Drainage of left foot subcutaneous tissue and fascia, open approach

In the FY 2022 final rule we noted that the designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as O.R. procedures was a result of a replication error in transitioning to ICD–10. This replication error led to ICD–10–PCS procedure codes that describe the open drainage of subcutaneous tissue and fascia being listed as comparable translations for ICD–9–CM code 83.09 (Other incision of soft tissue), which was designated as a non-extensive O.R. procedure under the ICD–9–CM MS–DRGs Version 32, as opposed to being listed as comparable translations for ICD–9–CM code 86.04 (Other incision with drainage of skin and subcutaneous tissue) which was designated as a non-O.R. procedure under the ICD–9–CM MS–DRGs Version 32. We stated in the FY 2022 final rule that designating the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as non-O.R. procedures would result in a more accurate replication of the comparable procedure, under the ICD–9–CM MS–DRGs Version 32 which was 86.04, not 83.09 and is more aligned with current shifts in treatment practices.

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule, we received a request to re-examine this change in designation. According to the requestor, open procedures for the drainage of subcutaneous tissue and fascia are indeed typically performed in the operating room under general anesthesia and involve making incisions through the subcutaneous tissue into fascia for therapeutic drainage, breaking up of loculations, and irrigation. We stated that while our clinical advisors did not disagree with the requestor that these procedures can involve making incisions through the subcutaneous tissue into fascia, they continued to state procedures describing the open drainage of subcutaneous tissue and fascia can now be safely performed in the outpatient setting and when performed during a hospitalization, they are typically performed in conjunction with another O.R. procedure. For the reasons discussed in the FY 2022 final rule, our clinical advisors stated that the non-O.R. designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as finalized in the FY 2022 final rule better reflects the associated technical complexity and hospital resource use of these procedures.

Comment: Some commenters opposed the non-O.R. designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as finalized in the FY 2022 final rule and urged that these codes be designated as O.R. procedures for FY 2023. These commenters stated that procedure codes that describe the open drainage of subcutaneous tissue and fascia are indeed performed in the operating room under general anesthesia, are surgical in nature, and an O.R. designation would more accurately capture the utilization of resources. A commenter stated that a review of the cases at their facility shows that approximately 80% of the procedures describing open drainage of subcutaneous tissue and fascia are performed in an O.R. setting requiring anesthesia, with a much lesser percentage performed at the bedside. Another commenter noted in the FY 2018 IPPS proposed rule, these same 22 ICD–10–PCS codes were identified and a commenter opposed the proposal to re-designate these codes at that time. In response to the issues raised by this commenter, CMS agreed in the FY 2018

IPPS final rule to maintain the designation of the 22 procedure codes. This commenter stated the rationale to maintain these 22 codes as O.R. procedures has not changed and that there is no safe way to effectively drain an infection involving the subfascial plane without the resources of an operating room.

Response: Our clinical advisors reviewed the commenters' concerns and continue to state that treatment practices have continued to shift since FY 2018 rulemaking. As stated in the FY 2022 final rule in response to similar comments, procedures describing the open drainage of subcutaneous tissue and fascia can now be safely performed in the outpatient setting and when performed during a hospitalization, it is typically in conjunction with another O.R. procedure. In cases where procedures describing open drainage of subcutaneous tissue and fascia are the only procedures performed in an admission, the admission is quite likely due to need for IV antibiotics as opposed to the need for operating room resources in an inpatient setting.

We refer the reader to Table 6P.1f associated with this final rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the data analysis of cases reporting the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia in the September 2021 update of the FY 2021 MedPAR file. We note that within each MDC, the MS–DRGs are divided into medical and surgical categories. In general, surgical MS–DRGs are further defined based on the precise surgical procedure performed while the medical MS–DRGs are further defined based on the precise principal diagnosis for which a patient was admitted to the hospital. In Table 6P.1f associated with this final rule, column B displays the category of each MS–DRG in MS–DRG GROUPER Version 39.1. The letter M is used to designate a medical MS–DRG and the letter P is used to designate a surgical MS–DRG. As shown in the table, when the procedure codes that describe the open drainage of the subcutaneous tissue and fascia are reported, approximately 70% of the MS–DRGs assigned are classified as surgical MS–DRGs which indicates at least one procedure code designated as an O.R. procedure was also reported in these cases. We refer the reader to the ICD–10 MS–DRG Version 39.1 Definitions Manual (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Feefor-Service-Payment/AcuteInpatientPPS/MS-DRGClassifications-and-Software*) for complete documentation of the GROUPER logic for the listed MS–DRGs.

Our clinical advisors continue to state that procedure codes that describe the open drainage of subcutaneous tissue and fascia do not reflect the technical complexity or resource intensity in comparison to other procedures that are designated as O.R. procedures. They also continue to state that the non-O.R. designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as finalized in the FY 2022 final rule better reflects the associated technical complexity and hospital resource use of these procedures.

Therefore, after consideration of the public comments we received, and for the reasons discussed, we are not making changes in this final rule to the designation of the 22 codes that describe the open drainage of subcutaneous tissue and fascia listed in the previous table.

13. Changes to the MS–DRG Diagnosis Codes for FY 2023

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS–DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (NonCC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS–DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Overview of Comprehensive CC/MCC Analysis

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described our process for establishing three different levels of CC severity into which we would subdivide the diagnosis codes. The categorization of diagnoses as a MCC, a CC, or a NonCC was accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach. Since the comprehensive analysis was completed for FY 2008, we have evaluated diagnosis codes individually when assigning severity levels to new codes and when receiving requests to change the severity level of specific diagnosis codes.

We noted in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235 through 19246) that with the transition to ICD–10–CM and the significant changes that have occurred to diagnosis codes since the FY 2008 review, we believed it was necessary to conduct a comprehensive analysis once again. Based on this analysis, we proposed changes to the severity level designations for 1,492 ICD–10–CM diagnosis codes and invited public comments on those proposals. As summarized in the FY 2020 IPPS/LTCH PPS final rule, many commenters expressed concern with the proposed severity level designation changes overall and recommended that CMS conduct further analysis prior to finalizing any proposals. After careful consideration of the public comments we received, as discussed further in the FY 2020 final rule, we generally did not finalize our proposed changes to the severity designations for the ICD–10–CM diagnosis codes, other than the changes to the severity level designations for the diagnosis codes in category Z16– (Resistance to antimicrobial drugs) from a NonCC to a CC. We stated that postponing adoption of the proposed comprehensive changes in the severity level designations would allow further opportunity to provide additional background to the public on the methodology utilized and clinical rationale applied across diagnostic categories to assist the public in its review. We refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42150 through 42152) for a complete discussion of our response to public comments regarding the proposed

severity level designation changes for FY 2020.

As discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32550), to provide the public with more information on the CC/MCC comprehensive analysis discussed in the FY 2020 IPPS/LTCH PPS proposed and final rules, CMS hosted a listening session on October 8, 2019. The listening session included a review of this methodology utilized to mathematically measure the impact on resource use. We refer readers to *https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/Downloads/10082019ListingSessionTrasncriptandQandAsandAudioFile.zip* for the transcript and audio file of the listening session. We also refer readers to *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for the supplementary file containing the mathematical data generated using claims from the FY 2018 MedPAR file describing the impact on resource use of specific ICD–10–CM diagnosis codes when reported as a secondary diagnosis that was made available for the listening session.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554), we discussed our plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of nine guiding principles and plan to present the findings and proposals in future rulemaking. The nine guiding principles are as follows:

- Represents end of life/near death or has reached an advanced stage associated with systemic physiologic decompensation and debility.
- Denotes organ system instability or failure.
- Involves a chronic illness with susceptibility to exacerbations or abrupt decline.
- Serves as a marker for advanced disease states across multiple different comorbid conditions.
- Reflects systemic impact.
- Post-operative/post-procedure condition/complication impacting recovery.
- Typically requires higher level of care (that is, intensive monitoring, greater number of caregivers, additional testing, intensive care unit care, extended length of stay).
- Impedes patient cooperation or management of care or both.
- Recent (last 10 years) change in best practice, or in practice guidelines and review of the extent to which these changes have led to concomitant changes in expected resource use.

We refer readers to the FY 2021 IPPS/LTCH PPS final rule for a complete discussion of our response to public comments regarding the nine guiding principles.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25175 through 25180), as another interval step in our comprehensive review of the severity designations of ICD–10–CM diagnosis codes, we requested public comments on a potential change to the severity level designations for ''unspecified'' ICD–10–CM diagnosis codes that we were considering adopting for FY 2022. Specifically, we noted we were considering changing the severity level designation of ''unspecified'' diagnosis codes to a NonCC where there are other codes available in that code subcategory that further specify the anatomic site. As summarized in the FY 2022 IPPS/LTCH PPS final rule, many commenters expressed concern with the potential severity level designation changes overall and recommended that CMS delay any possible change to the designation of these codes to give hospitals and their physicians time to prepare. After careful consideration of the public comments we received, we maintained the severity level designation of the ''unspecified'' diagnosis codes currently designated as a CC or MCC where there are other codes available in that code subcategory that further specify the anatomic site for FY 2022. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44916 through 44926) for a complete discussion of our response to public comments regarding the potential severity level designation changes. Instead, for FY 2022, we finalized a new Medicare Code Editor (MCE) code edit for ''unspecified'' codes, effective with discharges on and after April 1, 2022. We stated we believe finalizing this new edit would provide additional time for providers to be educated while not affecting the payment the provider is eligible to receive. We refer the reader to section II.D.14.e. of the FY 2022 IPPS/LTCH PPS final rule (86 FR 44940 through 44943) for the complete discussion.

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule, as this new edit became effective beginning with discharges on and after April 1, 2022, we stated our clinical advisors believed it was appropriate to not propose to change the designation of any ICD–10–CM diagnosis codes, including the unspecified codes that are subject to the ''Unspecified Code'' edit, as we continue our comprehensive CC/MCC analysis to allow interested parties the time needed to become acclimated to the new edit.

Comment: Commenters stated that they appreciate and agree with CMS' decision not to propose any further changes to the designation of any ICD–10–CM diagnosis codes, including the unspecified codes, at this time. These commenters recommended that CMS allow one to two full years of data availability before proposing any additional changes to the designation of any ICD–10–CM diagnosis code, given that the new MCE edit was recently implemented on April 1, 2022 and stated that having one to two full years of data will afford more meaningful analysis in future rulemaking considerations as part of the comprehensive CC/MCC analysis.

Response: We appreciate the commenters' support. With respect to the commenters who suggested allowing one to two full years of data availability before proposing any additional changes, we appreciate the feedback and will take these suggestions under consideration.

We continue to solicit feedback regarding the guiding principles, as well as other possible ways we can incorporate meaningful indicators of clinical severity. We have made available on the CMS website updated impact on resource use files so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 MedPAR file, the FY 2020 MedPAR file and the FY 2021 MedPAR files. The link to these files is posted on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*. When providing additional feedback or comments, we encourage the public to provide a detailed explanation of how applying a suggested concept or principle would ensure that the severity designation appropriately reflects resource use for any diagnosis code. We also continue to be interested in receiving feedback on how we might otherwise foster the documentation and reporting of the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient's health condition to more accurately reflect each health care encounter and improve the reliability and validity of the coded data. Interested parties can submit any comments and recommendations for FY 2024 by

October 20, 2022 via the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™) at: *https://mearis.cms.gov/public/home*.

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28177), for new diagnosis codes approved for FY 2023, consistent with our annual process for designating a severity level (MCC, CC or NonCC) for new diagnosis codes, we first review the predecessor code designation, followed by review and consideration of other factors that may be relevant to the severity level designation, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We noted that this process does not automatically result in the new diagnosis code having the same designation as the predecessor code. We refer the reader to section II.D.14 of this final rule for the discussion of the proposed changes to the ICD–10–CM and ICD–10–PCS coding systems for FY 2023.

c. Requested Changes to Severity Levels

In the FY 2023 IPPS/LTCH PPS proposed rule, we noted that we received several requests to change the severity level designations of specific ICD–10–CM diagnosis codes, including a request to analyze a subset of the social determinants of health (SDOH) diagnosis codes. We stated our clinical advisors believed it was appropriate to consider these requests in connection with our continued comprehensive CC/MCC analysis in future rulemaking, rather than proposing to change the designation of individual ICD–10–CM diagnosis codes at this time. However, we refer the reader to section II.D.13.d for further discussion related to the diagnosis codes describing social determinants of health. As discussed in the proposed rule and noted earlier in this section, we plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data and the application of nine guiding principles. We will consider these individual requests received for changes to severity level designations as we continue our comprehensive CC/MCC analysis and will provide more detail in future rulemaking.

d. Request for Information on Social Determinants of Health Diagnosis Codes

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28177 through 28181), we solicited public comments on how the reporting of diagnosis codes in categories Z55–Z65 may improve our ability to recognize severity of illness, complexity of service, and/or utilization of resources under the MS–DRGs as described further in this section. Consistent with the Administration's goal of advancing health equity for all, including members of historically underserved and under-resourced communities, as described in the President's January 20, 2021 Executive Order 13985 on ''Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,'' [13] we stated we were also interested in receiving feedback on how we might otherwise foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data including in support of efforts to advance health equity.

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.[14] These circumstances or determinants influence an individual's health status and can contribute to wide health disparities and inequities. While SDOH do not describe current illnesses or injuries at the individual level, they are widely recognized as important potential predictors of risk for developing medical conditions like heart disease, diabetes, and obesity. In ICD–10–CM, the Z codes found in Chapter 21 represent reasons for encounters, and are provided for occasions when circumstances other than a disease, injury or external cause classifiable to categories A00–Y89 are recorded as 'diagnoses' or 'problems'. The subset of Z codes that describe the social determinants of health are found in categories Z55–Z65 (Persons with potential health hazards related to socioeconomic and psychosocial circumstances). These codes describe a range of issues related—but not limited—to education and literacy, employment, housing, ability to obtain adequate amounts of food or safe drinking water, and occupational exposure to toxic agents, dust, or radiation. We noted that effective October 1, 2021, the Centers for Disease Control and Prevention (CDC) National Center for Health Statistics (NCHS) added 11 new diagnosis codes describing SDOH to provide additional information regarding determinants such as housing, food insecurity, and transportation. In addition, section I.B.14 of the FY 2022 ICD–10–CM Official Guidelines for Coding and Reporting was updated to provide clarification of the term ''clinician'' in reporting codes related to social determinants of health and clarified the documentation that can be utilized to assign SDOH codes when included in the official medical record. In this context, ''clinicians'' other than the patient's provider refer to ''healthcare professionals permitted, based on regulatory or accreditation requirements or internal hospital policies, to document in a patient's official medical record.'' [15]

As stated in the proposed rule, reporting SDOH Z codes in inpatient claims data could enhance quality improvement activities, track factors that influence people's health, and provide further insight into existing health inequities.[16] [17] [18] More routine collection of SDOH Z codes could also likely improve coordination within hospitals to utilize the data across their clinical care and discharge planning teams, including with post-acute partners. CMS has heard from interested parties about a number of reasons for why there may be less routine documentation and reporting of SDOH in the inpatient setting. First, Z codes are not required to be reported by inpatient hospitals and generally do not affect MS–DRG assignment. Rather, these codes are currently reported voluntarily by providers when and if supported in the medical record

[18] Wark K, Cheung K, Wolter E, Avey JP. Engaging stakeholders in integrating social determinants of health into electronic health records: A scoping review. International Journal of Circumpolar Health. 2021 Jan 1;80(1):1943983.

documentation. As such, consistent protocols may not be in place for documenting and reporting. Second, many of the circumstances captured through SDOH Z codes are dependent on the willingness of patients to discuss personal social, economic, or environmental conditions. Providers may or may not be able to reliably document certain circumstances,[19] as a result, in the medical records. There are also questions of how bias can play into screening for SDOH and how systemic bias within the health care system can play a role in this process.[20] CMS has also heard of the significant pressures on provider time, and whether providers have access to comprehensive care and coordination teams, including social workers, who may be more appropriately skilled to assess certain SDOH.

Given that SDOH diagnosis codes describe economic and environmental circumstances faced by patients and often correlate with substantial variance in health outcomes,[21] more widely adopted consistent documentation and reporting in the inpatient setting could better identify non-medical factors affecting health and track progress toward addressing them. Doing so could also aid in work toward formulating more comprehensive and actionable policies to address health equity and promote the highest quality, best-value care for all beneficiaries.

As we discuss more fully later in this section of this final rule, as we did in the proposed rule, we believe reporting of SDOH Z codes may also better determine the resource utilization for treating patients experiencing these circumstances to help inform whether a change to the severity designation of these codes would be clinically warranted as we continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of nine guiding principles.

There are 96 diagnosis codes that describe the social determinants of health found in categories Z55–Z65. These 96 diagnosis codes for which we solicited comments as described in the proposed rule are shown in Table 6P.5a associated with the proposed rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*). We note we also made available the data describing the impact on resource use when reported as a secondary diagnosis for all 96 ICD–10–CM Z codes that describe the social determinants of health from categories Z55–Z65. These data are consistent with data historically used to mathematically measure impact on resource use for secondary diagnoses, and the data which we plan to use in combination with application of the nine guiding principles as we continue the comprehensive CC/MCC analysis.

In Table 6P.5a associated with the proposed rule, column C displays the FY 2021 severity level designation for these diagnosis codes in MS–DRG GROUPER Version 38.1. Column D displays CMS's current FY 2022 severity level designation in MS–DRG GROUPER Version 39.1. Columns E–N show data on the impact on resource use generated using discharge claims from the September 2021 update of the FY 2021 MedPAR file and MS–DRG GROUPER Version 39.1. For further information on the data on the impact on resource use as displayed in Columns E–N, we refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of the methodology utilized to mathematically measure the impact on resource use. Also, as discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32550), to provide the public with more information on the CC/MCC comprehensive analysis discussed in the FY 2020 IPPS/LTCH PPS proposed and final rules, CMS hosted a listening session on October 8, 2019. The listening session included a review of this methodology utilized to mathematically measure the impact on resource use. We refer readers to *https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/Downloads/10082019ListingSessionTrasncriptandQandAsandAudioFile.zip* for the transcript and audio file of the listening session. We also refer readers to *https://www.cms.gov/Medicare/MedicareFee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for the supplementary file containing the data describing the impact on resource use of specific ICD–10–CM diagnosis codes when reported as a secondary diagnosis that was made available for the listening session. We note that the supplementary file that was made available for the listening session contains the mathematical data for the impact on resource use generated using claims from the FY 2018 MedPAR file. We have also made available on the CMS website updated impact on resource use files so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 MedPAR file, FY 2020 MedPAR file and the FY 2021 MedPAR files.

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described the categorization of diagnoses as an MCC, a CC, or a NonCC, accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. As such, the designation of CC or MCC is intended to account for the increased resources required to address a condition as a secondary diagnosis. In Version 39.1, the 96 diagnosis codes that describe the social determinants of health from categories Z55–Z65 have a severity designation of NonCC.

In the proposed rule, we noted that if SDOH Z codes are not consistently reported in inpatient claims data, our methodology utilized to mathematically measure the impact on resource use, as described previously, may not adequately reflect what additional resources were expended by the hospital to address these SDOH circumstances in terms of requiring clinical evaluation, extended length of hospital stay, increased nursing care or monitoring or both, and comprehensive discharge planning. In the proposed rule, we sought public comment on whether CMS should consider requiring more robust documentation and claims data reporting to inform the impact on resource use these determinants have on caring for patients affected by these circumstances in an inpatient setting and inform our decision-making in a future year in determining the most appropriate CC subclass (NonCC, CC, or MCC) assignment for each SDOH Z code as a secondary diagnosis. We also sought public comment on developing protocols to standardize the screening for SDOH for all patients, and then consistently document and report such codes and on whether such protocols should vary based on certain factors, such as hospital size and type. For instance, we noted in the proposed rule that we recognized that hospitals have different mixes of patients and volume of patients, and as such, may have

[19] Garg A, Boynton-Jarrett R, Dworkin PH. Avoiding the Unintended Consequences of Screening for Social Determinants of Health. JAMA. 2016;316(8):813–814. doi:10.1001/jama.2016.9282.

[20] Egede LE, Walker RJ, Williams JS. Intersection of Structural Racism, Social Determinants of Health, and Implicit Bias With Emergency Physician Admission Tendencies. JAMA Netw Open. 2021;4(9):e2126375. doi:10.1001/jamanetworkopen.2021.26375.

[21] Commission on Social Determinants of Health. *Closing the gap in a generation: health equity through action on the social determinants of health: final report of the commission on social determinants of health.* World Health Organization, 2008.

different staffing resources to devote to proper documentation and coding of SDOH. In particular, we stated we were interested in hearing the perspectives of different sized hospitals in both urban and rural settings, and hospitals disproportionately serving members of historically underserved and under-resourced communities in regard to their experience with reporting of SDOH. We also stated we were additionally interested in learning how reporting SDOH Z codes may be used to inform community health need assessment activities required by non-profit hospitals.

In the proposed rule, we also recognized that there is a potential for different uses and complexity in appropriately determining and reporting the full range of Z codes. For instance, certain code categories like Z62 (Problems related to upbringing) and Z63 (Other problems related to principal support group, including family circumstances) may require specialized clinical training to diagnose and document, which may not be the primary purpose of the inpatient admission. Category Z57 describes occupational exposure to risk factors, which also may not be apparent in most inpatient admissions and would rely upon the patient providing this information voluntarily. Category Z60 (Problems related to social environment) also describes problems of adjustment to life-cycle transitions, which also may or may not be readily apparent or discussed by the patient in relation to the inpatient admission.

Thus, we sought comment on which specific SDOH Z codes were most likely to influence (that is, increase) hospital resource utilization related to inpatient care, including any supporting information that correlates inpatient hospital resource use to specific SDOH Z codes. In the proposed rule, we stated CMS believed a potential starting point for discussion was consideration of the SDOH Z diagnosis codes describing homelessness. Homelessness can be reasonably expected to have an impact on hospital utilization.[22] Healthcare needs for patients experiencing homelessness may be associated with increased resource utilization compared to other patients due to difficulty finding discharge destinations to meet the patient's multifaceted needs which can result in longer inpatient stays and can have financial impacts for hospitals.[23] Longer hospital stays for these patients [24] can also be associated with increased costs because patients experiencing homelessness are less able to access care at early stages of illness, and also may be exposed to communicable disease and harsh climate conditions, resulting in more severe and complex symptoms by the time they are admitted to hospitals, potentially leading to worse health outcomes. We stated in the proposed rule that patients experiencing homelessness can also be disproportionately affected by mental health diagnoses and issues with substance use disorders. In addition, patients experiencing homelessness may have limited or no access to prescription medicines or over-the-counter medicines, including adequate locations to store medications away from the heat or cold,[25] and studies have shown difficulties adhering to medication regimens among persons experiencing homeless.[26] Patients experiencing homelessness may also face challenges in accessing transplants and clinicians may defer care because of the uncertain post-acute discharge.

To further examine the diagnosis codes that describe SDOH, in the proposed rule we reviewed the data on the impact on resource use for diagnosis code Z59.0 (Homelessness) when reported as a secondary diagnosis to facilitate discussion for the purposes of the comment solicitation. We noted that prior to FY 2022, homelessness was one of the more frequently reported codes that describe social determinants of health. We also noted that effective FY 2022, the subcategory was expanded and now includes codes Z59.00 (Homelessness, unspecified), Z59.01 (Sheltered homelessness), and code Z59.02 (Unsheltered homelessness).

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19243 through 19244), as part of our proposal to change the severity level designations for 1,492 ICD–10–CM diagnosis codes, we proposed to change the severity level designation of code Z59.0 (Homelessness) from NonCC to CC. We stated that because the C1 value (C1 = 1.5964) in the table was generally close to 2, the data suggested that when reported as a secondary diagnosis, the resources involved in caring for a patient experiencing homelessness supported increasing the severity level from a NonCC to a CC. In the FY 2020 IPPS/LTCH PPS proposed rule, we also stated our clinical advisors reviewed these data and believed the resources involved in caring for these patients are more aligned with a CC. As noted in section II.D.13.b of the proposed rule and this final rule, many commenters expressed concern with the proposed severity level designation changes overall and consequently we generally did not finalize our proposed changes to the severity designations for the 1,492 ICD–10–CM diagnosis codes, at that time. However, the proposal to change the severity designation of code Z59.0 specifically did receive mostly supportive comments. We stated in the proposed rule that many commenters stated that a patient experiencing homelessness requires significant coordination of social services along with their health care. Another commenter also recommended that CMS expand the change in designation to all the codes in category Z59, not just code Z59.0. Another commenter, while indicating their support of the proposal, noted that it is unclear that the status/condition would result in increased hospital resource use.

As discussed in the proposed rule, our proposal in FY 2020 was based on the data for the impact on resource use generated using claims from the FY 2018 MedPAR file. The following table reflects the impact on resource use data generated using claims from the FY 2019 MedPAR file, FY 2020 MedPAR file and the FY 2021 MedPAR file, respectively, for the diagnosis code that describes homelessness as a NonCC. We noted there is currently no data for codes Z59.01 (Sheltered homelessness) and code Z59.02 (Unsheltered homelessness) as these codes became effective on October 1, 2021. Again, we refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our historical approach to mathematically evaluate the extent to which the presence of an ICD–

10–CM code as a secondary diagnosis resulted in increased hospital resource use, and the explanation of the columns in the table.

FY	ICD-10-CM Code	Description	Tota1 Count	Cnt1	C1	Cnt2	C2	Cnt3	C3
2019	Z59.0	Homelessness	43,405	7,022	1.6723	22,336	2.2963	14,047	3.1374
2020	Z59.0	Homelessness	44,609	6,393	1.8374	22,416	2.1964	15,800	3.0879
2021	Z59.00	Homelessness, unspecified	37,919	5,225	1.4299	18,158	2.0823	14,536	3.0710

As shown in the table, we examined data for the diagnosis code(s) that describe homelessness as a NonCC in FY 2019 through FY 2021. When examining diagnosis code Z59.0 (Homelessness), the value in column C1 is closer to 2.0 than to 1.0 in FY 2019 and FY 2020, though we noted that we did not use FY 2020 data for rate setting purposes in light of impacts related to the PHE for COVID–19 as described in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44778). The data suggests that when homelessness is reported as a secondary diagnosis, the resources involved in caring for these patients are more aligned with a CC than a NonCC or an MCC, as explained in the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159). However, in FY 2021, the C1 value is generally closer to 1, which suggest the resources involved in caring for patients experiencing homelessness are more aligned with a NonCC severity level than a CC or an MCC severity level. We also noted fluctuations in the C1 values year to year. We stated we were uncertain if the data from FY 2021, in particular, reflect fluctuations that may be a result of the public health emergency or even reduced hospitalizations of certain conditions. We also stated we were uncertain if homelessness may be underreported when there is not an available field on the claim when other diagnoses are reported instead. We sought public comment on these possibilities, particularly to inform our understanding of the trend of the C1 value.

As we have stated in prior rulemaking, these mathematical constructs are used in conjunction with the judgment of our clinical advisors to classify each secondary diagnosis reviewed. We presented these data to highlight that the resources expended in caring for patients reported to be affected by a SDOH such as homelessness during an inpatient hospitalization may not be consistently expressed in the inpatient claims data and to demonstrate how reporting the SDOH Z codes could more accurately reflect the health care encounter and improve the reliability and validity of the coded data.

In summary, we stated we would appreciate public comment on these issues, including on the following questions:

- How the reporting of certain Z codes—and if so, which Z codes [27]—may improve our ability to recognize severity of illness, complexity of service, and utilization of resources under the MS–DRGs?
- Whether CMS should require the reporting of certain Z codes—and if so, which ones—to be reported on hospital inpatient claims to strengthen data analysis?
- The additional provider burden and potential benefits of documenting and reporting of certain Z codes, including potential benefits to beneficiaries.
- Whether codes in category Z59 (Homelessness) have been underreported and if so, why? In particular, we stated we were interested in hearing the perspectives of large urban hospitals, rural hospitals, and other hospital types in regard to their experience. We also sought comments on how factors such as hospital size and type might impact a hospital's ability to develop standardized consistent protocols to better screen, document and report homelessness.

As discussed in the proposed rule, we stated that the comments we receive on these issues may also be informative as we evaluate whether to develop a proposal in future rulemaking to change the severity level designation of the diagnosis codes describing homelessness from NonCC to CC and whether other SDOH, as described by Z codes, are also appropriate candidates to be proposed for designation as CCs.

We noted that examining the severity level designation of diagnosis codes is just one area to possibly support documentation and reporting of SDOH in the inpatient setting. We stated we were also interested in ideas from the public on how the MS–DRG classification can be utilized in agency wide efforts to advance health equity, expand access, drive high-quality, person-centered care, and promote affordability and sustainability in the Medicare program. Specifically, we invited public comment on ways the MS–DRG classification can be useful in addressing the challenges of defining and collecting accurate and standardized self-identified socioeconomic information for the purposes of reporting, measure stratification, and other data collection efforts. We stated we were interested in learning more about the potential benefits and challenges associated with the collection of SDOH data in the inpatient setting. Feedback on the limitations and barriers providers could experience as they consider more robust documentation and reporting would also help inform our development of appropriately tailored efforts that address and mitigate barriers for all hospital types across communities and patient mixes. We stated we would take commenters' feedback into consideration in future policy development.

In this FY 2023 IPPS/LTCH PPS final rule, we present a summation of the comments we received in response to our request for information on SDOH diagnosis codes, including how the reporting of SDOH diagnosis codes may improve our ability to recognize severity of illness, complexity of service, and/or utilization of resources under the MS–DRGs, as well as how we might otherwise foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data, including in support of efforts to advance health equity. We thank commenters for sharing their views and their willingness to support CMS in these efforts.

Comment: Many commenters applauded CMS' efforts to encourage documentation and reporting of SDOH diagnosis codes given the impact that social risks can have on health outcomes. These commenters stated that it is critical that physicians, other health care professionals, and facilities

[27] *https://www.cms.gov/files/document/zcodes-infographic.pdf.*

recognize the impact SDOH have on the health of their patients. Commenters stated that they agree that better reporting of these SDOH Z codes through inpatient claims could enhance coordination within hospitals across clinical care teams and discharge planning, and with post-acute care providers. A commenter stated that SDOH data can be extremely valuable and powerful tools to improve healthcare, and stated that they were confident that CMS' encouragement of the use of this data would lead to better healthcare for our country.

Some commenters stated that while the documentation and reporting of SDOH diagnosis codes is important to address healthcare inequities, the collection of this data may place significant burden on facilities and providers and have tremendous operational and technology impacts. Commenters stated that hospitals have demonstrated significant variability in screening capabilities and referral practices, and inpatient settings require additional time to develop screening protocols and ensure that screening results are documented in a place where they can be captured for claims. Other commenters stated assigning codes for SDOH can be a time-consuming and labor-intensive process, as many electronic health records (EHRs) do not have easy pathways to add a Z code to the problem or diagnosis list. Other commenters stated that one of the major challenges to providers is ensuring that SDOH information documented in the EHR and reported on the claim is accurate as patients' circumstances are ever changing. A commenter stated that it is not feasible for hospitals to screen for every SDOH due to the time and resources involved for both patients and providers and suggested that rather than require this process be repeated with each encounter, CMS should permit SDOH information to carry forward across encounters until new documentation supports removal or revision to the initial SDOH diagnosis codes to minimize the administrative burden. Commenters also stated that the challenge of increased documentation reviews by coding staff would be further exacerbated by staffing shortages within the industry, as well as coding productivity standards. A few commenters stated for rural hospitals, bandwidth is already low due to workforce shortages and heavy caseloads. These commenters stated that adding any screening and documentation processes for SDOH, on top of existing workloads, may require more than a physician or nurse and instead may require engaging a staff such as social workers or psychologists who may not be standard members of care teams at all rural hospitals.

Many commenters stated there was a lack of standard, nationally accepted definitions of the SDOH Z codes and that there are potential gaps that may come with the use of, and reporting related to SDOH Z codes. Other commenters stated that SDOH Z codes are informative but some descriptions lack specificity and may be too broad to distinctly capture enough detail around the type of care that the patient needs relative to their diagnosis and their SDOH challenges. Commenters also identified the lack of national data and exchange standards for capture of the SDOH Z codes as an additional barrier. Commenters stated that while fully supporting efforts to improve and increase the collection of SDOH data, they believed that other options exist that would make it feasible for hospitals of all sizes and types to consistently collect data in a standardized manner without creating undue burden and suggested that CMS consider developing a broader strategy for collecting SDOH data. A commenter specifically suggested that CMS coordinate with states, which are often requiring their own assessments to identify social risk and needs, to reduce burden. Another commenter stated that they believed that the creation of a new Hierarchical Condition Category for SDOH Z codes could help improve documentation efforts since, according to this commenter, organizations that treat these high-risk patients are reimbursed at higher rates than those patients who are not grouped into these HCCs.

Commenters recommended that CMS consider reimbursement incentives for documenting and reporting of SDOH Z codes to help health care providers build and sustain systemic screening and documentation, which will ultimately lead to better health for patients. Many commenters stated that they agree that codes in category Z59 (Homelessness) have been underreported and that increasing the severity level of the codes that describe homelessness from a NonCC to a CC could prompt more rigorous documentation and reporting. Commenters stated that they believe that homelessness involves a level of care in line with diagnoses currently designated as CCs. Some commenters stated that patients experiencing homelessness can often increase inpatient costs by creating discharge disposition challenges that lead to an extended length of stay. A few commenters noted that in their experience, extended lengths of stay were particularly high for patients experiencing homelessness who underwent surgery. Another commenter stated that based on their own analysis, homelessness has an effect on resource utilization on par with other diagnoses currently designated as MCCs but stated elevation to a CC is the most reasonable first step to help drive the reporting of these SDOH Z codes, and help drive subsequent, meaningful evaluation of outcomes.

Commenters encouraged CMS to examine other SDOH Z codes that describe circumstances such as food insecurity, lack of adequate food and drinking water, extreme poverty, lack of transportation and unemployment, to determine the hospital resource utilization related to addressing these factors and to analyze whether these SDOH Z codes should be considered for designation as CCs as well. Some commenters also pointed to conditions outside of the SDOH Z codes such as: medical debt, malnutrition, elder abuse and neglect, underdosing of medication, personal history of falling and awaiting organ transplant status as examples of other areas where fostering better documentation and reporting could improve health outcomes.

Other commenters expressed concern and stated that they believed that while some SDOH diagnoses could have some impact for MS–DRG assignment due to additional efforts needed around discharge planning, generally SDOH diagnoses should have limited impact on severity of illness. Rather, according to these commenters, the impact is more important for risk adjustment for population-based initiatives, such as a readmissions program. A commenter stated that simply elevating SDOH Z-codes to CCs and marginally increasing reimbursement will be inadequate to meaningfully drive CMS' stated equity mission. Another commenter noted that in some cases, patients experiencing circumstances described by SDOH Z codes may require social services support to address a need post-discharge, but the complexity of the inpatient clinical services is not affected. A commenter, while supportive of the consideration of the change in designation, expressed concern that increasing the severity level of the codes that describe homelessness from a NonCC to a CC could potentially lead to fraudulent or abusive coding practices in order to raise the payment rate for an encounter. Another commenter recommended that safeguards be put in place to disallow oversight agencies (such as Recovery Audit Contractors (RAC) and third-party

payer validations) from challenging MS–DRG assignment, and instead honor the reporting of the code when supported by documentation, especially in instances where homelessness might be the only complication or comorbidity coded.

While commending CMS' efforts, many commenters cautioned that mandating the reporting of SDOH Z codes could necessitate making changes to the institutional claim form. Currently, only 25 diagnoses are captured on the electronic claim form. Commenters noted that documenting and reporting the social and economic circumstances patients may be experiencing may require a substantial number of SDOH Z codes, and stated that this could lead to the crowding out of other diagnosis codes that also need to be captured on the claim form such as codes for medical diagnoses, comorbidities, Hierarchical Condition Category (HCC) coding, Hospital Acquired Conditions (HAC), and patient safety indicators (PSI) due to limited space.

Several commenters expressed concern and stated that they did not believe that CMS proposed a clear, compelling, or significant benefit to patients as a result of collecting this data. These commenters cautioned against requiring hospitals to implement the collection of sensitive information for the purposes of analysis, and asserted that CMS will be placing hospitals in the precarious position of asking sensitive and intimate social questions, while often not having solutions to mitigate or eliminate these risks, as they stated the documentation of social risks does not in and of itself improve health outcomes. A commenter stated that studies have shown that many providers are wary of screening for social needs, if they believe they do not also have the ability to make referrals or to connect patients to resources to address their needs. Other commenters expressed concern and stated it is counterproductive for hospitals to collect SDOH data without having resources and pathways in place to offer help. A few commenters stated that by requiring medical facilities to report this data, CMS is diverting resources and time from patient care and stated that CMS should not be pursing an initiative that is meant to collect data on non-medical information. A commenter stated that although the collection of SDOH information can occur during inpatient visits, documentation and reporting of this data may be actually best suited to outpatient office visits, where providers may have a greater opportunity to interact with their patients and the ability to consider more proactive approaches to help address their social needs.

Many other commenters also expressed concern and stated that while SDOH information can be useful for administrative use and payment adjustment, information about an individual's social risk and needs has been shown to be sensitive, and individuals are often hesitant to disclose this information for fear of bias, misuse, or discrimination. Commenters stated patients may not see the relevance of providing information to their providers related to SDOH that may not be directly applicable to why they are seeking care. These commenters stated that there are significant concerns from physicians, other providers, and patients about ''medicalizing'' SDOH in the electronic health record and stated mechanisms must be established to shield this sensitive information on certain forms, charts, health records, and discharge papers. Commenters noted that when SDOH Z codes are entered via an EHR or other form of collection, those results show up on the patient's after-visit summary, which may be concerning for patients. Commenters also expressed concern that SDOH Z codes may ''follow'' a patient for too many years and cause potential discrimination, bias, or other misunderstandings in the future. Commenters stated that hospitals must be equipped with tools to communicate the context of SDOH Z codes with patients at the point of screening or self-reporting so that patients understand the rationale for data collection and how it can help address their needs. Several commenters stated that CMS should also put in place Conditions of Participation requiring hospitals to train their staff on how this information can and cannot be used to prevent information being used in discriminatory pricing, care, or other purposes.

Many commenters stated that the most immediate and important action CMS could take to increase the use of SDOH Z codes is to finalize the evidence-based ''Screening for Social Drivers of Health'' and ''Screen Positive Rate for Social Drivers of Health'' measures proposed to be adopted in the Hospital Inpatient Quality Reporting (IQR) Program. These commenters stated that these measures create an opportunity to collect inpatient SDOH data at a scale that could significantly improve MS–DRGs' precision and ability to recognize severity and complexity of service and utilization of resources. Many commenters stated that absent these measures and associated data, SDOH Z codes will continue to be underreported and unreliable. We refer the reader to section IX.E.5.b of the preamble of the proposed rule and this final rule for further discussion regarding new measures for the Hospital IQR Program measure set. These commenters urged CMS to start with an incremental approach in requiring the reporting of SDOH Z codes and suggested that reporting should be optional or voluntary for at least two–three years to allow providers and CMS to gain experience in reporting and collecting this data. If the reporting of the SDOH Z codes becomes mandatory, these commenters recommended that the requirement start with the subset of SDOH Z codes that directly align with the social needs identified in the five core domains of the proposed measures.

Response: We again thank commenters for sharing their views and their willingness to support CMS in these efforts. We will take the commenters' feedback into consideration in future policy development.

e. Additions and Deletions to the Diagnosis Code Severity Levels for FY 2023

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28181) we noted the following tables identify the proposed additions and deletions to the diagnosis code MCC severity levels list and the proposed additions and deletions to the diagnosis code CC severity levels list for FY 2023 and are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*

Table 6I.1—Proposed Additions to the MCC List—FY 2023;

Table 6I.2—Proposed Deletions to the MCC List—FY 2023;

Table 6J.1—Proposed Additions to the CC List—FY 2023; and

Table 6J.2—Proposed Deletions to the CC List—FY 2023.

Comment: Commenters agreed with the proposed additions and deletions to the MCC and CC lists as shown in tables 6I.1, 6I.2, 6J.1, and 6J.2 associated with the proposed rule.

Response: We appreciate the commenters' support.

The following tables associated with this final rule reflect the finalized severity levels under Version 40 of the ICD–10 MS–DRGs for FY 2023 and are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*; Table 6I. —Complete MCC List—FY 2023; Table

6I.1—Additions to the MCC List—FY 2023; Table 6I.2—Deletions to the MCC List—FY 2022; Table 6J.—Complete CC List—FY 2023; Table 6J.1—Additions to the CC List—FY 2023; and Table 6J.2—Deletions to the CC List—FY 2023.

f. CC Exclusions List for FY 2023

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) to preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another.
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another.
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another.
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another.
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to the CC and CC Exclusion Lists under the ICD–9–CM MS–DRGs.

The ICD–10 MS–DRGs Version 39.1 CC Exclusion List is included as Appendix C in the ICD–10 MS–DRG Definitions Manual, which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*, and includes two lists identified as Part 1 and Part 2. Part 1 is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary diagnosis. For all diagnosis codes on the list, a link is provided to a collection of diagnosis codes which, when reported as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a NonCC. Part 2 is the list of diagnosis codes designated as a MCC only for patients discharged alive; otherwise, they are assigned as a NonCC.

In the FY 2023 IPPS/LTCH PPS proposed rule, we proposed additional changes to the ICD–10 MS–DRGs Version 40 CC Exclusion List based on the diagnosis and procedure code updates as discussed in section II.D.14. of the proposed rule and set forth in Tables 6G.1, 6G.2, 6H.1, and 6H.2 associated with the proposed rule and available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*.

As discussed in section II.D.14 of the preamble of this final rule, we are finalizing, without modification, the proposed assignments and designations for the diagnosis codes after consideration of the public comments received. Therefore, the finalized CC Exclusions List as displayed in Tables 6G.1, 6G.2, 6H.1, 6H.2, and 6K, associated with this final rule reflect the severity levels under V40 of the ICD–10 MS–DRGs. We have developed Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2023; Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusions List—FY 2023; Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2023; and Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2023; and Table 6K. Complete List of CC Exclusions—FY 2023.

For Table 6G.1, each secondary diagnosis code finalized for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses finalized to exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions finalized for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. For Table 6H.1, each secondary diagnosis code finalized for deletion from the CC Exclusion List is shown with an asterisk followed by the principal diagnosis codes that currently exclude it. For Table 6H.2, each of the principal diagnosis codes is shown with an asterisk and the finalized deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis. Tables 6G.1, 6G.2, 6H.1, and 6H.2 associated with this final rule are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*.

The ICD–10 MS–DRGs Version 40 CC Exclusion List is included as Appendix C of the Definitions Manual (available in two formats; text and HTML). The manuals are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* and each format includes two lists identified as Part 1 and Part 2. Part 1 is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary diagnosis. For all diagnosis codes on the list, a link (HTML version) is provided to a collection of diagnosis codes which, when used as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a NonCC. Part 2 is the list of diagnosis codes designated as a MCC only for patients discharged alive; otherwise, they are assigned as a NonCC.

14. Changes to the ICD–10–CM and ICD–10–PCS Coding Systems

To identify new, revised and deleted diagnosis and procedure codes, for FY 2023, we have developed Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, and Table 6E.—Revised Diagnosis Code Titles for this final rule.

These tables are not published in the Addendum to the proposed rule or final rule, but are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this final rule. As discussed in section II.D.17. of the preamble of the proposed rule and this final rule, the code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee meeting process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

We are finalizing the MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. In addition, the finalized severity level designations for the new diagnosis codes are set forth in Table 6A. and the finalized O.R. status for the new procedure codes are set forth in Table 6B. Consistent with our established process, we examined the MS–DRG assignment and the attributes (severity level and O.R. status) of the predecessor diagnosis or procedure code, as applicable, to inform our finalized assignments and designations.

Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We note that this process does not automatically result in the new diagnosis or procedure code being proposed for assignment to the same MS–DRG or to have the same designation as the predecessor code.

We are making available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* the following tables associated with this final rule:

- Table 6A.—New Diagnosis Codes—FY 2023
- Table 6B.—New Procedure Codes—FY 2023
- Table 6C.—Invalid Diagnosis Codes—FY 2023
- Table 6D.—Invalid Procedure Codes—FY 2023
- Table 6E.—Revised Diagnosis Code Titles—FY 2023
- Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2023
- Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusions List—FY 2023
- Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2023
- Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2023
- Table 6I.—Complete MCC List—FY 2023
- Table 6I.1.—Additions to the MCC List—FY 2023
- Table 6I.2.—Deletions to the MCC List—FY 2023
- Table 6J.—Complete CC List—FY 2023
- Table 6J.1.—Additions to the CC List—FY 2023
- Table 6J.2.—Deletions to the CC List—FY 2023
- Table 6K.—Complete List of CC Exclusions—FY 2023.

15. Changes to the Medicare Code Editor (MCE)

The Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into an MS–DRG.

As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44936), we made available the FY 2022 ICD–10 MCE Version 39 manual file. The manual contains the definitions of the Medicare code edits, including a description of each coding edit with the corresponding diagnosis and procedure code edit lists. The link to this MCE manual file, along with the link to the mainframe and computer software for the MCE Version 39 (and ICD–10 MS–DRGs) are posted on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

In the FY 2023 IPPS/LTCH PPS proposed rule, we discussed the proposals we were making based on our internal review and analysis. We noted that we did not receive any specific MCE requests by the November 1, 2021 deadline. In this FY 2023 IPPS/LTCH PPS final rule, we present a summation of the comments we received in response to the MCE proposals presented based on internal review and analyses in the proposed rule, our responses to those comments, and our finalized policies.

In addition, as a result of new and modified code updates approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting, we routinely make changes to the MCE. In the past, in both the IPPS proposed and final rules, we have only provided the list of changes to the MCE that were brought to our attention after the prior year's final rule. We historically have not listed the changes we have made to the MCE as a result of the new and modified codes approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting. These changes are approved too late in the rulemaking schedule for inclusion in the proposed rule. Furthermore, although our MCE policies have been described in our proposed and final rules, we have not provided the detail of each new or modified diagnosis and procedure code edit in the final rule. However, we make available the finalized Definitions of Medicare Code Edits (MCE) file. Therefore, we are making available the FY 2023 ICD–10 MCE Version 40 Manual file, along with the link to the mainframe and computer software for the MCE Version 40 (and ICD–10 MS–DRGs), on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

a. External Causes of Morbidity Codes as Principal Diagnosis

In the MCE, the external cause codes (V, W, X, or Y codes) describe the circumstance causing an injury, not the nature of the injury, and therefore should not be used as a principal diagnosis.

As discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective as of October 1, 2022. Included in this table are codes currently subject to the External causes of morbidity codes as principal diagnosis edit. We proposed to delete the ICD–10–CM diagnosis codes shown in Table 6P.6a associated with the proposed rule and available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* that are currently subject to the External causes of morbidity codes as principal diagnosis edit since they will no longer be valid for reporting purposes.

Comment: Commenters agreed with CMS's proposal to remove the diagnosis codes listed in Table 6P.6a from the External Causes of Morbidity edit code list since they are no longer valid.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to delete the diagnosis codes listed in Table 6P.6a associated with the proposed rule from the External Causes of Morbidity edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

b. Age Conflict Edit

In the MCE, the Age conflict edit exists to detect inconsistencies between a patient's age and any diagnosis on the patient's record; for example, a 5-year-

old patient with benign prostatic hypertrophy or a 78-year-old patient coded with a delivery. In these cases, the diagnosis is clinically and virtually impossible for a patient of the stated age. Therefore, either the diagnosis or the age is presumed to be incorrect. Currently, in the MCE, the following four age diagnosis categories appear under the Age conflict edit and are listed in the manual and written in the software program:

- Perinatal/Newborn—Age 0 years only; a subset of diagnoses which will only occur during the perinatal or newborn period of age 0 (for example, tetanus neonatorum, health examination for newborn under 8 days old).
- Pediatric—Age is 0–17 years inclusive (for example, Reye's syndrome, routine child health exam).
- Maternity—Age range is 9–64 years inclusive (for example, diabetes in pregnancy, antepartum pulmonary complication).
- Adult—Age range is 15–124 years inclusive (for example, senile delirium, mature cataract).

(1) Maternity Diagnoses

Under the ICD–10 MCE, the Maternity diagnoses category for the Age conflict edit considers the age range of 9 to 64 years inclusive. For that reason, the diagnosis codes on this Age conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

As discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6A.—New Diagnosis Codes, lists the diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2022. We proposed to add new ICD–10–CM diagnosis codes to the edit code list for the Maternity diagnoses category as shown in Table 6P.6b associated with the proposed rule and available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* under the Age conflict edit.

Comment: Commenters agreed with CMS's proposal to add the diagnosis codes listed in Table 6P.6b to the Maternity diagnoses edit code list.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the diagnosis codes as shown in Table 6P.6b associated with the proposed rule to the Maternity diagnoses edit code list.

In addition, as discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective as of October 1, 2022. We proposed to delete the following diagnosis codes from the Maternity diagnoses edit code list.

ICD-10-CM Code	Description
O35.0XX0	Maternal care for (suspected) central nervous system malformation in fetus, not applicable or unspecified
O35.0XX1	Maternal care for (suspected) central nervous system malformation in fetus, fetus 1
O35.0XX2	Maternal care for (suspected) central nervous system malformation in fetus, fetus 2
O35.0XX3	Maternal care for (suspected) central nervous system malformation in fetus, fetus 3
O35.0XX4	Maternal care for (suspected) central nervous system malformation in fetus, fetus 4
O35.0XX5	Maternal care for (suspected) central nervous system malformation in fetus, fetus 5
O35.0XX9	Maternal care for (suspected) central nervous system malformation in fetus, other fetus
O35.1XX0	Maternal care for (suspected) chromosomal abnormality in fetus, not applicable or unspecified
O35.1XX1	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 1
O35.1XX2	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 2
O35.1XX3	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 3
O35.1XX4	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 4
O35.1XX5	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 5
O35.1XX9	Maternal care for (suspected) chromosomal abnormality in fetus, other fetus

Comment: Commenters agreed with CMS's proposal to remove the diagnosis codes listed in the previous table from the Maternity diagnoses edit code list since they are no longer valid.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove the diagnosis codes listed in the previous table from the Maternity diagnoses edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

(2) Adult Diagnoses

Under the ICD–10 MCE, the Adult diagnoses category for the Age conflict edit considers the age range of 15 to 124 years inclusive. For that reason, the diagnosis codes on this Age conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

As discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6A.—New Diagnosis Codes, lists the diagnosis codes that have been approved which will be effective with discharges on and after October 1, 2022. We proposed to add the following new ICD–10–CM diagnosis codes to the edit code list for the Adult diagnoses category under the Age conflict edit.

ICD-10-CM Code	Description
F01.511	Vascular dementia, unspecified severity, with agitation
F01.518	Vascular dementia, unspecified severity, with other behavioral disturbance
F01.52	Vascular dementia, unspecified severity, with psychotic disturbance
F01.53	Vascular dementia, unspecified severity, with mood disturbance
F01.54	Vascular dementia, unspecified severity, with anxiety
F01.A0	Vascular dementia, mild, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.A11	Vascular dementia, mild, with agitation
F01.A18	Vascular dementia, mild, with other behavioral disturbance
F01.A2	Vascular dementia, mild, with psychotic disturbance
F01.A3	Vascular dementia, mild, with mood disturbance
F01.A4	Vascular dementia, mild, with anxiety
F01.B0	Vascular dementia, moderate, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.B11	Vascular dementia, moderate, with agitation
F01.B18	Vascular dementia, moderate, with other behavioral disturbance
F01.B2	Vascular dementia, moderate, with psychotic disturbance
F01.B3	Vascular dementia, moderate, with mood disturbance
F01.B4	Vascular dementia, moderate, with anxiety
F01.C0	Vascular dementia, severe, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.C11	Vascular dementia, severe, with agitation
F01.C18	Vascular dementia, severe, with other behavioral disturbance
F01.C2	Vascular dementia, severe, with psychotic disturbance
F01.C3	Vascular dementia, severe, with mood disturbance
F01.C4	Vascular dementia, severe, with anxiety
F03.911	Unspecified dementia, unspecified severity, with agitation
F03.918	Unspecified dementia, unspecified severity, with other behavioral disturbance
F03.92	Unspecified dementia, unspecified severity, with psychotic disturbance
F03.93	Unspecified dementia, unspecified severity, with mood disturbance
F03.94	Unspecified dementia, unspecified severity, with anxiety
F03.A0	Unspecified dementia, mild, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F03.A11	Unspecified dementia, mild, with agitation
F03.A18	Unspecified dementia, mild, with other behavioral disturbance
F03.A2	Unspecified dementia, mild, with psychotic disturbance
F03.A3	Unspecified dementia, mild, with mood disturbance
F03.A4	Unspecified dementia, mild, with anxiety
F03.B0	Unspecified dementia, moderate, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F03.B11	Unspecified dementia, moderate, with agitation
F03.B18	Unspecified dementia, moderate, with other behavioral disturbance
F03.B2	Unspecified dementia, moderate, with psychotic disturbance
F03.B3	Unspecified dementia, moderate, with mood disturbance
F03B4	Unspecified dementia, moderate, with anxiety
F03.C0	Unspecified dementia, severe, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F03.C11	Unspecified dementia, severe, with agitation
F03.C18	Unspecified dementia, severe, with other behavioral disturbance
F03.C2	Unspecified dementia, severe, with psychotic disturbance
F03.C3	Unspecified dementia, severe, with mood disturbance
F03.C4	Unspecified dementia, severe, with anxiety
I25.112	Atherosclerotic heart disease of native coronary artery with refractory angina pectoris
I25.702	Atherosclerosis of coronary artery bypass graft(s), unspecified, with refractory angina pectoris
I25.712	Atherosclerosis of autologous vein coronary artery bypass graft(s) with refractory angina pectoris
I25.722	Atherosclerosis of autologous artery coronary artery bypass graft(s) with refractory angina pectoris
I25.732	Atherosclerosis of nonautologous biological coronary artery bypass graft(s) with refractory angina pectoris
I25.752	Atherosclerosis of native coronary artery of transplanted heart with refractory angina pectoris
I25.762	Atherosclerosis of bypass graft of coronary artery of transplanted heart with refractory angina pectoris
I25.792	Atherosclerosis of other coronary artery bypass graft(s) with refractory angina pectoris

Comment: Commenters agreed with CMS's proposal to add the diagnosis codes listed in the previous table to the Adult diagnoses edit code list.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the diagnosis codes listed in the previous table to the Adult diagnoses edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

In addition, as discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective as of October 1, 2022. We proposed to delete the following codes from the Adult diagnoses edit code list.

ICD-10-CM Code	Description
F01.51	Vascular dementia with behavioral disturbance
F03.91	Unspecified dementia with behavioral disturbance

Comment: Commenters agreed with CMS's proposal to remove the diagnosis codes listed in the previous table from the Adult diagnoses edit code list since they are no longer valid.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove the diagnosis codes listed in the previous table from the Adult diagnoses edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

c. Sex Conflict Edit

In the MCE, the Sex conflict edit detects inconsistencies between a patient's sex and any diagnosis or procedure on the patient's record; for example, a male patient with cervical cancer (diagnosis) or a female patient with a prostatectomy (procedure). In both instances, the indicated diagnosis or the procedure conflicts with the stated sex of the patient. Therefore, the patient's diagnosis, procedure, or sex is presumed to be incorrect.

Comment: A commenter requested clarification on how the sex conflict edits consider patients who identify as transgender.

Response: The sex conflict edit under the MCE is consistent with 45 CFR 170.207(n) which states that birth sex must be coded as Male, Female or Unknown. Gender identity is a separate data element under 45 CFR 170.207(o). We note that any proposed changes to account for gender identity on the CMS–1450 form would need to be submitted to the National Uniform Billing Committee (NUBC) for consideration.

Comment: Another commenter expressed concerns about the existing ICD–10 codes and edits that appear to be sex specific (that is, male only or female only). According to the commenter, reporting of these codes for patients who identify as transgender may result in treatment being delayed or denied. The commenter acknowledged the necessity in aligning a patient's historical health data with that of their gender identity and personal anatomy, however, according to the commenter, removal of sex specific codes from the MCE would be beneficial for nonbinary people as well.

Another commenter stated that transgender individuals may be alienated and deterred from seeking medical care in the future as a result of inappropriate claims denial due to the Sex conflict edit. The commenter stated that obstetricians-gynecologists specifically have conveyed the need to document and report a patient's gender identity in combination with their sex to provide quality, patient-centered care. The commenter also stated they have made recommendations to the Office of the National Coordinator for Health Information Technology (ONC) to include the data element ''gender'' in its minimum certification criteria for electronic health records. The commenter recommended that CMS work with ONC to ensure that automated claim editors, like the MCE, do not require obstetrician-gynecologists and other health care professionals to misrepresent their patients' genders to provide the appropriate clinical care. Lastly, the commenter encouraged CMS to continue its efforts to reduce the administrative burden by adapting the MCE and other systems to fit the needs of all physicians and their patients.

Response: We appreciate the commenters' feedback. We intend to explore alternative options that may help to address the challenges described by the commenters with claims processing for individuals who identify as transgender or nonbinary.. We are interested in feedback and comments on other ways for which these issues could be considered from a process, systems and operational perspective. Comments should be directed to the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™), discussed in section II.D.1.b of the preamble of the proposed rule and this final rule at: *https://mearis.cms.gov/public/home* by October 20, 2022

(1) Diagnoses for Females Only Edit

As discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2022. We proposed to add new ICD–10–CM diagnosis codes to the edit code list for the Diagnoses for females only category as shown in Table 6P.6c associated with the proposed rule and available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* under the Sex conflict edit.

Comment: Commenters agreed with CMS's proposal to add the diagnosis codes listed in Table 6P.6c to the Diagnoses for females only edit code list.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the diagnosis codes as shown in Table 6P.6c associated with the proposed rule to the Diagnoses for females only edit code list.

In addition, as discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective as of October 1, 2022. We proposed to delete the following codes from the Diagnoses for females only edit code list.

ICD-10-CM Code	Description
B37.3	Candidiasis of vulva and vagina
N80.0	Endometriosis of uterus
N80.1	Endometriosis of ovary
N80.2	Endometriosis of fallopian tube
N80.3	Endometriosis of pelvic peritoneum
N80.4	Endometriosis of rectovaginal septum and vagina
N80.5	Endometriosis of intestine
O35.0XX0	Maternal care for (suspected) central nervous system malformation in fetus, not applicable or unspecified
O35.0XX1	Maternal care for (suspected) central nervous system malformation in fetus, fetus 1
O35.0XX2	Maternal care for (suspected) central nervous system malformation in fetus, fetus 2
O35.0XX3	Maternal care for (suspected) central nervous system malformation in fetus, fetus 3
O35.0XX4	Maternal care for (suspected) central nervous system malformation in fetus, fetus 4
O35.0XX5	Maternal care for (suspected) central nervous system malformation in fetus, fetus 5
O35.0XX9	Maternal care for (suspected) central nervous system malformation in fetus, other fetus
O35.1XX0	Maternal care for (suspected) chromosomal abnormality in fetus, not applicable or unspecified
O35.1XX1	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 1
O35.1XX2	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 2
O35.1XX3	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 3
O35.1XX4	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 4
O35.1XX5	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 5
O35.1XX9	Maternal care for (suspected) chromosomal abnormality in fetus, other fetus

Comment: Commenters agreed with CMS's proposal to remove the diagnosis codes listed in the previous table from the Diagnoses for females only edit code list since they are no longer valid.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove the diagnosis codes listed in the previous table from the Diagnoses for female only edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

(2) Procedures for Males Only

As discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6B.—New Procedure Codes, lists the new procedure codes that have been approved to date which will be effective with discharges on and after October 1, 2022. Included in this table are the following procedure codes we proposed to add to the edit code list for the Procedures for males only category under the Sex conflict edit.

ICD-10-PCS Code	Code Description
04LE0CV	Occlusion of right prostatic artery with extraluminal device, open approach
04LE0DV	Occlusion of right prostatic artery with intraluminal device, open approach
04LE0ZV	Occlusion of right prostatic artery, open approach
04LE3CV	Occlusion of right prostatic artery with extraluminal device, percutaneous approach
04LE3DV	Occlusion of right prostatic artery with intraluminal device, percutaneous approach
04LE3ZV	Occlusion of right prostatic artery, percutaneous approach
04LE4CV	Occlusion of right prostatic artery with extraluminal device, percutaneous endoscopic approach
04LE4DV	Occlusion of right prostatic artery with intraluminal device, percutaneous endoscopic approach
04LE4ZV	Occlusion of right prostatic artery, percutaneous endoscopic approach
04LF0CW	Occlusion of left prostatic artery with extraluminal device, open approach
04LF0DW	Occlusion of left prostatic artery with intraluminal device, open approach
04LF0ZW	Occlusion of left prostatic artery, open approach
04LF3CW	Occlusion of left prostatic artery with extraluminal device, percutaneous approach
04LF3DW	Occlusion of left prostatic artery with intraluminal device, percutaneous approach
04LF3ZW	Occlusion of left prostatic artery, percutaneous approach
04LF4CW	Occlusion of left prostatic artery with extraluminal device, percutaneous endoscopic approach
04LF4DW	Occlusion of left prostatic artery with intraluminal device, percutaneous endoscopic approach
04LF4ZW	Occlusion of left prostatic artery, percutaneous endoscopic approach

Comment: Commenters agreed with CMS's proposal to add the diagnosis codes listed in the previous table to the Procedures for males only edit code list.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the diagnosis codes listed in the previous table to the Procedures for males only

edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

d. Manifestation Code as Principal Diagnosis Edit

In the ICD–10–CM classification system, manifestation codes describe the manifestation of an underlying disease, not the disease itself, and therefore should not be used as a principal diagnosis.

As discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved which will be effective with discharges on and after October 1, 2022. Included in this table are the following new ICD–10–CM diagnosis codes that we proposed to add to the edit code list for the Manifestation code as principal diagnosis edit, because the disease itself would be required to be reported first.

ICD-10-CM Code	Description
F02.811	Dementia in other diseases classified elsewhere, unspecified severity, with agitation
F02.818	Dementia in other diseases classified elsewhere, unspecified severity, with other behavioral disturbance
F02.82	Dementia in other diseases classified elsewhere, unspecified severity, with psychotic disturbance
F02.83	Dementia in other diseases classified elsewhere, unspecified severity, with mood disturbance
F02.84	Dementia in other diseases classified elsewhere, unspecified severity, with anxiety
F02.A0	Dementia in other diseases classified elsewhere, mild, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F02.A11	Dementia in other diseases classified elsewhere, mild, with agitation
F02.A18	Dementia in other diseases classified elsewhere, mild, with other behavioral disturbance
F02.A2	Dementia in other diseases classified elsewhere, mild, with psychotic disturbance
F02.A3	Dementia in other diseases classified elsewhere, mild, with mood disturbance
F02.A4	Dementia in other diseases classified elsewhere, mild, with anxiety
F02.B0	Dementia in other diseases classified elsewhere, moderate, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F02.B11	Dementia in other diseases classified elsewhere, moderate, with agitation
F02.B18	Dementia in other diseases classified elsewhere, moderate, with other behavioral disturbance
F02.B2	Dementia in other diseases classified elsewhere, moderate, with psychotic disturbance
F02.B3	Dementia in other diseases classified elsewhere, moderate, with mood disturbance
F02.B4	Dementia in other diseases classified elsewhere, moderate, with anxiety
F02.C0	Dementia in other diseases classified elsewhere, severe, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F02.C11	Dementia in other diseases classified elsewhere, severe, with agitation
F02.C18	Dementia in other diseases classified elsewhere, severe, with other behavioral disturbance
F02.C2	Dementia in other diseases classified elsewhere, severe, with psychotic disturbance
F02.C3	Dementia in other diseases classified elsewhere, severe, with mood disturbance
F02.C4	Dementia in other diseases classified elsewhere, severe, with anxiety
I31.31	Malignant pericardial effusion in diseases classified elsewhere

Comment: Commenters agreed with CMS's proposal to add the diagnosis codes listed in the previous table to the Manifestation code as principal diagnosis edit code list.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the diagnosis codes listed in the previous table to the Manifestation code as principal diagnosis edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

In addition, as discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective as of October 1, 2022. Included in this table is ICD–10–CM diagnosis code F02.81 (Dementia in other diseases classified elsewhere with behavioral disturbance), that is currently listed on the edit code list for the Manifestation code as principal diagnosis edit. We proposed to delete this code from the Manifestation code as principal diagnosis edit code list.

Comment: Commenters agreed with CMS's proposal to remove diagnosis code F02.81 from the Manifestation code as principal diagnosis edit code list since it is no longer valid.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove diagnosis code F02.81 from the Manifestation code as principal diagnosis edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

e. Unacceptable Principal Diagnosis Edit

In the MCE, there are select codes that describe a circumstance which influences an individual's health status but does not actually describe a current illness or injury. There also are codes that are not specific manifestations but may be due to an underlying cause. These codes are considered unacceptable as a principal diagnosis. In limited situations, there are a few codes on the MCE Unacceptable Principal Diagnosis edit code list that are considered ''acceptable'' when a specified secondary diagnosis is also coded and reported on the claim.

As discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved which will be effective with discharges on and after October 1, 2022. Additionally, as discussed in section II.D.1.b of the preamble of the proposed rule and this final rule, we provided a test version of the ICD–10 MS–DRG GROUPER Software, Version 40, so that the public could better analyze and understand the

impact of the proposals included in the proposed rule. We noted that at the time of the development of the test software, a subset of the listed codes (F01.511 through F01.C4) that were proposed for this edit were unable to be included and therefore, the test software does not reflect these codes. We proposed to add the following new ICD–10–CM diagnosis codes to the Unacceptable Principal Diagnosis edit code list.

ICD-10-CM Code	Description
F01.511	Vascular dementia, unspecified severity, with agitation
F01.518	Vascular dementia, unspecified severity, with other behavioral disturbance
F01.52	Vascular dementia, unspecified severity, with psychotic disturbance
F01.53	Vascular dementia, unspecified severity, with mood disturbance
F01.54	Vascular dementia, unspecified severity, with anxiety
F01.A0	Vascular dementia, mild, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.A11	Vascular dementia, mild, with agitation
F01.A18	Vascular dementia, mild, with other behavioral disturbance
F01.A2	Vascular dementia, mild, with psychotic disturbance
F01.A3	Vascular dementia, mild, with mood disturbance
F01.A4	Vascular dementia, mild, with anxiety
F01.B0	Vascular dementia, moderate, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.B11	Vascular dementia, moderate, with agitation
F01.B18	Vascular dementia, moderate, with other behavioral disturbance
F01.B2	Vascular dementia, moderate, with psychotic disturbance
F01.B3	Vascular dementia, moderate, with mood disturbance
F01.B4	Vascular dementia, moderate, with anxiety
F01.C0	Vascular dementia, severe, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.C11	Vascular dementia, severe, with agitation
F01.C18	Vascular dementia, severe, with other behavioral disturbance
F01.C2	Vascular dementia, severe, with psychotic disturbance
F01.C3	Vascular dementia, severe, with mood disturbance
F01.C4	Vascular dementia, severe, with anxiety
F06.70	Mild neurocognitive disorder due to known physiological condition without behavioral disturbance
F06.71	Mild neurocognitive disorder due to known physiological condition with behavioral disturbance
T43.655A	Adverse effect of methamphetamines, initial encounter
T43.655D	Adverse effect of methamphetamines, subsequent encounter
T43.655S	Adverse effect of methamphetamines, sequela
T43.656A	Underdosing of methamphetamines, initial encounter
T43.656D	Underdosing of methamphetamines, subsequent encounter
T43.656S	Underdosing of methamphetamines, sequela
Z03.83	Encounter for observation for suspected conditions related to home physiologic monitoring device ruled out
Z59.82	Transportation insecurity
Z59.86	Financial insecurity
Z59.87	Material hardship
Z71.87	Encounter for pediatric-to-adult transition counseling
Z71.88	Encounter for counseling for socioeconomic factors
Z72.823	Risk of suffocation (smothering) under another while sleeping
Z79.60	Long term (current) use of unspecified immunomodulators and immunosuppressants
Z79.61	Long term (current) use of immunemodulator
Z79.620	Long term (current) use of immunosuppressive biologic
Z79.621	Long term (current) use of calcineurin inhibitor
Z79.622	Long term (current) use of Janus kinase inhibitor
Z79623	Long term (current) use of mammalian target of rapamycin (mTOR) inhibitor
Z79.624	Long term (current) use of inhibitors of nucleotide synthesis

ICD-10-CM Code	Description
Z79.630	Long term (current) use of alkylating agent
Z79.631	Long term (current) use of antimetabolite agent
Z79.632	Long term (current) use of antitumor antibiotic
Z79.633	Long term (current) use of mitotic inhibitor
Z79.634	Long term (current) use of topoisomerase inhibitor
Z79.64	Long term (current) use of myelosuppressive agent
Z79.69	Long term (current) use of other immunomodulators and immunosuppressants
Z79.85	Long-term (current) use of injectable non-insulin antidiabetic drugs
Z87.61	Personal history of (corrected) necrotizing enterocolitis of newborn
Z87.68	Personal history of other (corrected) conditions arising in the perinatal period
Z87.731	Personal history of (corrected) tracheoesophageal fistula or atresia
Z87.732	Personal history of (corrected) persistent cloaca or cloacal malformations
Z87.760	Personal history of (corrected) congenital diaphragmatic hernia or other congenital diaphragm malformations
Z87.761	Personal history of (corrected) gastroschisis
Z87.762	Personal history of (corrected) prune belly malformation
Z87.763	Personal history of other (corrected) congenital abdominal wall malformations
Z87.768	Personal history of other specified (corrected) congenital malformations of integument, limbs and musculoskeletal system
Z91.110	Patient's noncompliance with dietary regimen due to financial hardship
Z91.118	Patient's noncompliance with dietary regimen for other reason
Z91.119	Patient's noncompliance with dietary regimen due to unspecified reason
Z91.190	Patient's noncompliance with other medical treatment and regimen due to financial hardship
Z91.198	Patient's noncompliance with other medical treatment and regimen for other reason
Z91.199	Patient's noncompliance with other medical treatment and regimen due to unspecified reason
Z91.A10	Caregiver's noncompliance with patient's dietary regimen due to financial hardship
Z91.A18	Caregiver's noncompliance with patient's dietary regimen for other reason
Z91.A20	Caregiver's intentional underdosing of patient's medication regimen due to financial hardship
Z91.A28	Caregiver's intentional underdosing of medication regimen for other reason
Z91.A3	Caregiver's unintentional underdosing of patient's medication regimen
Z91.A4	Caregiver's other noncompliance with patient's medication regimen
Z91.A5	Caregiver's noncompliance with patient's renal dialysis
Z91.A9	Caregiver's noncompliance with patient's other medical treatment and regimen

Comment: Commenters agreed with our proposal to add the diagnosis codes listed in the previous table to the Unacceptable Principal Diagnosis edit code list.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the diagnosis codes listed in the previous table to the Unacceptable Principal Diagnosis edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

In addition, as discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective as of October 1, 2022. We proposed to delete the following codes from the Unacceptable Principal Diagnosis edit code list.

ICD-10-CM Code	Description
Z87.76	Personal history of (corrected) congenital malformations of integument, limbs and musculoskeletal system
Z91.11	Patient's noncompliance with dietary regimen
Z91.19	Patient's noncompliance with other medical treatment and regimen

Comment: Commenters agreed with CMS's proposal to remove diagnosis codes Z87.76, Z91.11, and Z91.19 from the Unacceptable principal diagnosis edit code list since they are no longer valid.

Response: We appreciate the commenters' support. After consideration of the public comments we received, we are finalizing our proposal to remove the diagnosis codes listed in the previous table from the Unacceptable Principal Diagnosis edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

f. Unspecified Code

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44940 through 44943), we finalized the implementation of a new Unspecified code edit, effective with discharges on and after April 1, 2022. Unspecified codes exist in the ICD–10–CM classification for circumstances when documentation in the medical record does not provide the level of detail needed to support reporting a more specific code. However, in the inpatient setting, there should generally be very limited and rare circumstances for which the laterality (right, left, bilateral) of a condition is unable to be documented and reported.

As discussed in section II.D.14. of the preamble of the proposed rule and this final rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2022. We proposed to add the following new ICD–10–CM diagnosis codes to the Unspecified code edit code list.

ICD-10-CM Code	Description
S06.33AA	Contusion and laceration of cerebrum, unspecified, with loss of consciousness status unknown, initial encounter
S06.36AA	Traumatic hemorrhage of cerebrum, unspecified, with loss of consciousness status unknown, initial encounter

Comment: Commenters agreed with our proposal to add the diagnosis codes listed in the previous table to the Unspecified code edit code list.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the diagnosis codes listed in the previous table to the Unspecified code edit code list under the ICD–10 MCE Version 40, effective October 1, 2022.

g. Future Enhancement

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38053 through 38054) we noted the importance of ensuring accuracy of the coded data from the reporting, collection, processing, coverage, payment and analysis aspects. Subsequently, in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20235) we stated that we engaged a contractor to assist in the review of the limited coverage and non-covered procedure edits in the MCE that may also be present in other claims processing systems that are utilized by our MACs. The MACs must adhere to criteria specified within the National Coverage Determinations (NCDs) and may implement their own edits in addition to what is already incorporated into the MCE, resulting in duplicate edits. The objective of this review is to identify where duplicate edits may exist and to determine what the impact might be if these edits were to be removed from the MCE.

We have also noted that the purpose of the MCE is to ensure that errors and inconsistencies in the coded data are recognized during Medicare claims processing. As we indicated in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41228), we are considering whether the inclusion of coverage edits in the MCE necessarily aligns with that specific goal because the focus of coverage edits is on whether or not a particular service is covered for payment purposes and not whether it was coded correctly.

Comment: A few commenters requested that CMS continue to include the existing coverage edits in the MCE. According to the commenters, the MACs software and systems may not be consistently updated and current, therefore, coding edits may trigger erroneously only to be dismissed on appeal when it is discovered that the code in question is covered under an NCD. The commenters stated their belief that the national MCE provides important safeguards for claims processing and coverage.

Response: We appreciate the commenters' feedback.

As we continue to evaluate the purpose and function of the MCE with respect to ICD–10, we encourage public input for future discussion. As we have discussed in prior rulemaking, we recognize a need to further examine the current list of edits and the definitions of those edits.

We continue to encourage public comments on whether there are additional concerns with the current edits, including specific edits or language that should be removed or revised, edits that should be combined, or new edits that should be added to assist in detecting errors or inaccuracies in the coded data. Comments should be directed to the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™), discussed in section II.D.1.b of the preamble of the proposed rule and this final rule at: *https://mearis.cms.gov/public/home* by October 20, 2022.

16. Changes to Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS–DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS–DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS–DRG associated with the most resource-intensive surgical class.

A surgical class can be composed of one or more MS–DRGs. For example, in MDC 11, the surgical class ''kidney transplant'' consists of a single MS–DRG (MS–DRG 652) and the class ''major bladder procedures'' consists of three MS–DRGs (MS–DRGs 653, 654, and 655). Consequently, in many cases, the surgical hierarchy has an impact on more than one MS–DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS–DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS–DRGs 001 and 002 and surgical class B includes MS–DRGs 003, 004, and 005. Assume also that the average costs of MS–DRG 001 are higher than that of MS–DRG 003, but the average costs of MS–DRGs 004 and 005 are higher than the average costs of MS–DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the

average costs of each MS–DRG in the class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of ''other O.R. procedures'' as discussed in this final rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS–DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the ''other O.R. procedures'' surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS–DRG or MS–DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The ''other O.R. procedures'' class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

Based on the changes that we proposed to make for FY 2023, as discussed in section II.D. of the preamble of the proposed rule and this final rule, we are maintaining the existing surgical hierarchy for FY 2023.

17. Maintenance of the ICD–10–CM and ICD–10–PCS Coding Systems

In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) and CMS, charged with maintaining and updating the ICD–9–CM system. The final update to ICD–9–CM codes was made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD–10 Coordination and Maintenance Committee, effective with the March 19–20, 2014 meeting. The ICD–10 Coordination and Maintenance Committee addresses updates to the ICD–10–CM and ICD–10–PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD–9–CM diagnosis and procedure codes by fiscal year can be found on the CMS website at: *http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/codes.html.* The official list of ICD–10–CM and ICD–10–PCS codes can be found on the CMS website at: *http://www.cms.gov/Medicare/Coding/ICD10/index.html.*

The NCHS has lead responsibility for the ICD–10–CM and ICD–9–CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD–10–PCS and ICD–9–CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The ICD–10 Coordination and Maintenance Committee holds its meetings in the spring and fall to update the codes and the applicable payment and reporting systems by October 1 or April 1 of each year. Items are placed on the agenda for the Committee meeting if the request is received at least 3 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the **Federal Register** as well as on the CMS website.

The Committee encourages participation in the previously mentioned process by health- related organizations and other interested parties. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed during the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies. A complete addendum describing details of all diagnosis and procedure coding changes, both tabular and index, is published on the CMS and NCHS websites in June of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers.

The Committee presented proposals for coding changes for implementation in FY 2023 at a public meeting held on September 14–15, 2021 and finalized the coding changes after consideration of comments received at the meetings and in writing by November 15, 2021.

The Committee held its 2022 meeting on March 8–9, 2022. The deadline for submitting comments on the procedure code proposals that are being considered for an October 1, 2022 implementation was April 8, 2022. The deadline for submitting comments on the diagnosis code proposals that are being considered for an October 1, 2023 implementation was May 9, 2022. It was announced at this meeting that any new diagnosis and procedure codes for which there was consensus of public support and for which complete tabular and indexing changes would be made by June 2022 would be included in the October 1, 2022 update to the ICD–10–CM diagnosis and ICD–10–PCS procedure code sets. It was also announced at this meeting that we are changing the process for submitting requested updates to the ICD–10–PCS classification, beginning with the procedure code requests submitted for consideration for the September 13–14, 2022 ICD–10 Coordination and Maintenance Committee Meeting. As stated in section II.D.1.b. of the preamble of the proposed rule and this final rule, CMS is in the process of implementing a new electronic application intake system, MEARIS™. Effective January 5, 2022, MEARIS™ became available as an initial release for users to begin gaining familiarity with a

new approach and process to submit ICD–10–PCS procedure code requests. Information on this new approach for submitting an ICD–10–PCS code request can be accessed at: *https://mearis.cms.gov*. Effective March 1, 2022, the full release of MEARIS™ became active for ICD–10–PCS code request submissions. ICD–10–PCS code request submissions were due no later than June 10, 2022 to be considered for the September 13–14, 2022 ICD–10 Coordination and Maintenance Committee Meeting. Moving forward, CMS will only accept ICD–10–PCS code requests submitted via MEARIS™. Requests submitted through the ICDProcedureCodeRequest mailbox will no longer be considered. Within MEARIS™, we have built in several resources to support users, including a ''Resources'' section (available at *https://mearis.cms.gov/public/resources*) and technical support available under ''Useful Links'' at the bottom of the MEARIS™ site. Questions regarding MEARIS™ can be submitted to CMS using the form available under ''Contact'' at: *https://mearis.cms.gov/public/resources*.

As discussed in earlier sections of the preamble of this final rule, there are new, revised, and deleted ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes that are captured in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, and Table 6E.—Revised Diagnosis Code Titles for this final rule, which are available via the internet on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps.* The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Therefore, although we make the code titles available through tables in association with the IPPS proposed and final rules, they are not subject to comment in the proposed or final rule. Because of the length of these tables, they are not published in the Addendum to the proposed or final rule. Rather, they are available via the internet as discussed in section VI. of the Addendum to the proposed rule and this final rule.

Recordings for the virtual meeting discussions of the procedure codes at the Committee's September 14–15, 2021 meeting and the March 8–9, 2022 meeting can be obtained from the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials*. The materials for the discussions relating to diagnosis codes at the September 14–15, 2021 meeting and March 8–9, 2022 meeting can be found through the CDC website at: *http://www.cdc.gov/nchs/icd/icd10cm_maintenance.html*. These websites also provide detailed information about the Committee, including information on requesting a new code, participating in a Committee meeting, timeline requirements and meeting dates.

We encourage commenters to submit questions and comments on coding issues involving diagnosis codes via Email to: *nchsicd10cm@cdc.gov*.

Questions and comments concerning the procedure codes should be submitted via Email to: *ICDProcedureCodeRequest@cms.hhs.gov*.

We stated in the proposed rule that as a result of the ongoing COVID–19 public health emergency, the CDC implemented three new diagnosis codes describing immunization status related to COVID–19 into the ICD–10–CM effective with discharges on and after April 1, 2022.

The diagnosis codes are as follows:

ICD-10-CM Code	Description
Z28.310	Unvaccinated for COVID-19
Z28.311	Partially vaccinated for COVID-19
Z28.39	Other under immunization status

We refer the reader to the CDC web page at *https://www.cdc.gov/nchs/icd/icd10cm.htm* for additional details regarding the implementation of these new diagnosis codes.

As discussed in the proposed rule, we provided the MS–DRG assignments for the three diagnosis codes effective with discharges on and after April 1, 2022, consistent with our established process for assigning new diagnosis codes. Specifically, we review the predecessor diagnosis code and MS–DRG assignment most closely associated with the new diagnosis code, and consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, and the resources utilized for the specific condition/diagnosis. We note that this process does not automatically result in the new diagnosis code being assigned to the same MS–DRG as the predecessor code. The assignments for the previously listed diagnosis codes are reflected in Table 6A.—New Diagnosis Codes associated with the proposed rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. As with the other new diagnosis codes and MS–DRG assignments included in Table 6A in association with the proposed rule, we solicited public comments on the most appropriate MDC, MS–DRG, and severity level assignments for these codes for FY 2023, as well as any other options for the GROUPER logic.

We did not receive any comments opposing the MDC, MS–DRG, and severity level assignments for the listed codes and are therefore, finalizing the assignments as reflected in Table 6A.—New Diagnosis Codes in association with this final rule.

In addition, we noted in the proposed rule that CMS implemented nine new procedure codes describing the introduction or infusion of therapeutics, including vaccines for COVID–19prevention, into the ICD–10–PCS effective with discharges on and after April 1, 2022. The nine procedure codes listed in this section of this rule are designated as non-O.R. and do not affect any MDC or MS–DRG assignment as shown in the following table.

ICD-10-PCS Code	Description	O.R.	MDC	MS-DRG
XW013V7	Introduction of COVID-19 vaccine dose 3 into subcutaneous tissue, percutaneous approach, new technology group 7	N		
XW013W7	Introduction of COVID-19 vaccine booster into subcutaneous tissue, percutaneous approach, new technology group 7	N		
XW023V7	Introduction of COVID-19 vaccine dose 3 into muscle, percutaneous approach, new technology group 7	N		
XW023W7	Introduction of COVID-19 vaccine booster into muscle, percutaneous approach, new technology group 7	N		
XW023X7	Introduction of tixagevimab and cilgavimab monoclonal antibody into muscle, percutaneous approach, new technology group 7	N		
XW023Y7	Introduction of other new technology monoclonal antibody into muscle, percutaneous approach, new technology group 7	N		
XW0DXR7	Introduction of fostamatinib into mouth and pharynx, external approach, new technology group 7	N		
XW0G7R7	Introduction of fostamatinib into upper GI, via natural orartificial opening, new technology group 7	N		
XW0H7R7	Introduction of fostamatinib into lower GI, via natural or artificial opening, new technology group 7	N		

The ICD–10 MS–DRG assignment for cases reporting any one of the nine procedure codes is dependent on the reported principal diagnosis, any secondary diagnoses defined as a CC or MCC, procedures or services performed, age, sex, and discharge status. The nine procedure codes are reflected in Table 6B.—New Procedure Codes in association with the proposed rule and available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS.* As with the other new procedure codes and MS–DRG assignments included in Table 6B in association with the proposed rule, we solicited public comments on the most appropriate MDC, MS–DRG, and operating room status assignments for these codes for FY 2023, as well as any other options for the GROUPER logic.

We did not receive any comments opposing the MDC, MS–DRG, and operating room status assignments for the listed codes and are therefore, finalizing the assignments as reflected in Table 6B.—New Procedure Codes in association with this final rule.

In the proposed rule we also noted that Change Request (CR) 12578, Transmittal 11174, titled ''April 2022 Update to the Medicare Severity—Diagnosis Related Group (MS–DRG) Grouper and Medicare Code Editor (MCE) Version 39.1 for the International Classification of Diseases, Tenth Revision (ICD–10) Diagnosis Codes for 2019 Novel Coronavirus (COVID–19) Vaccination Status and ICD–10 Procedure Coding System (PCS) Codes for Introduction or Infusion of Therapeutics and Vaccines for COVID–19 Treatment'', was issued on January 14, 2022 (available via the internet on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Transmittals/r11174cp*) regarding the release of an updated version of the ICD–10 MS–DRG GROUPER and Medicare Code Editor software, Version 39.1, effective with discharges on and after April 1, 2022, reflecting the new diagnosis and procedure codes. The updated software, along with the updated ICD–10 MS–DRG V39.1 Definitions Manual and the Definitions of Medicare Code Edits V39.1 manual is available at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.*

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of Public Law 108–173 included a requirement for updating diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) of Public Law 108–173 amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group

classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making those determinations. Topics considered during the Fall ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting were considered for an April 1 update if a strong and convincing case was made by the requestor during the Committee's public meeting. The request needed to identify the reason why a new code was needed in April for purposes of the new technology process. Meeting participants and those reviewing the Committee meeting materials were provided the opportunity to comment on the expedited request. We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950) for further discussion of the implementation of this prior April 1 update for purposes of the new technology add-on payment process.

However, as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950 through 44956), we adopted an April 1 implementation date, in addition to the annual October 1 update, beginning with April 1, 2022. We noted that the intent of this April 1 implementation date is to allow flexibility in the ICD–10 code update process. With this new April 1 update, CMS now uses the same process for consideration of all requests for an April 1 implementation date, including for purposes of the new technology add-on payment process (that is, the prior process for consideration of an April 1 implementation date only if a strong and convincing case was made by the requestor during the meeting no longer applies). We are continuing to use several aspects of our existing established process to implement new codes through the April 1 code update, which includes presenting proposals for April 1 consideration at the September ICD–10 Coordination and Maintenance Committee meeting, requesting public comments, reviewing the public comments, finalizing codes, and announcing the new codes with their assignments consistent with the new GROUPER release information. We note that under our established process, requestors indicate whether they are submitting their code request for consideration for an April 1 implementation date or an October 1 implementation date. The ICD–10 Coordination and Maintenance Committee makes efforts to accommodate the requested implementation date for each request submitted. However, the Committee determines which requests are to be presented for consideration for an April 1 implementation date or an October 1 implementation date. As discussed earlier in this section of the preamble of this final rule, there were code proposals presented for an expedited April 1, 2022 implementation at the September 14–15, 2021 Committee meetings that involved treatments related to the COVID–19 PHE. One of these code proposals was also in connection with a request for a new technology add-on payment application. Following the receipt of public comments, the code proposals were approved and finalized, therefore, there were new codes implemented April 1, 2022.

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule, consistent with the process we outlined for the April 1 implementation date, we announced the new codes in November 2021 and provided the updated code files and ICD–10–CM Official Guidelines for Coding and Reporting in December 2021. On January 24, 2022 the **Federal Register** notice for the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee Meeting was published that includes the tentative agenda and identifies which topics are related to a new technology add-on payment application. By February 1, 2022 we made available the updated V39.1 ICD–10 MS–DRG Grouper software and related materials via the internet on CMS web page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

Comment: A few commenters expressed concerns with the meeting process and timing for the implementation of new ICD–10–CM diagnosis codes by the CDC/NCHS. The commenters urged CMS to work with the CDC/NCHS on expediting the finalization of proposed new diagnosis codes in light of the option to implement codes on April 1. Another commenter expressed support for the ability of an April implementation and expedited diagnosis codes to improve reporting and health equity. The commenter requested that CMS consider utilizing this April 1 pathway to advance the Agency's and the health care system's equity goals, specifically for diagnosis codes that describe social and economic circumstances to more accurately reflect health care encounters and episodes of care while also contributing to reliability and validity of coded claims data.

Response: We thank the commenters for the feedback. As we have noted in prior rulemaking (85 FR 58556) the CDC/NCHS has lead responsibility for the ICD–10–CM diagnosis classification while CMS has lead responsibility for the ICD–10–PCS procedure classification. Each organization has their own established process in responding to requests for code updates, including when specific topics may appear on the agenda of an ICD–10 Coordination and Maintenance Committee meeting and the fiscal year in which code proposals are considered for implementation.

ICD–9–CM addendum and code title information is published on the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/addendum*. ICD–10–CM and ICD–10–PCS addendum and code title information is published on the CMS website at: *https://www.cms.gov/medicare/coding/icd10*. CMS also sends electronic files containing all ICD–10–CM and ICD–10–PCS coding changes to its Medicare contractors for use in updating their systems and providing education to providers. Information on ICD–10–CM diagnosis codes, along with the Official ICD–10–CM Coding Guidelines, can be found on the CDC website at: *https://www.cdc.gov/nchs/icd/icd10cm.htm*. Additionally, information on new, revised, and deleted ICD–10–CM diagnosis and ICD–10–PCS procedure codes is provided to the AHA for publication in the Coding Clinic for ICD–10. The AHA also distributes coding update information to publishers and software vendors.

In the proposed rule we noted that for FY 2022, there are currently 72,750 diagnosis codes and 78,229 procedure codes. We also noted that as displayed in Table 6A.—New Diagnosis Codes and in Table 6B.—New Procedure Codes associated with the proposed rule (and available via the internet on the CMS website at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*), there were 1,176 new diagnosis codes and 45 new

procedure codes that had been finalized for FY 2023 at the time of the development of the proposed rule. As discussed in section II.D.14 of the preamble of this final rule, we are making available Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes and Table 6E.—Revised Diagnosis Code Titles via the internet on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps* in association with this final rule. As shown in Table 6B.—New Procedure Codes, there were procedure codes discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting that were not finalized in time to include in the proposed rule and are identified with an asterisk. We refer the reader to Table 6B.—New Procedure Codes associated with this final rule and available via the internet on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps* for the detailed list of these additional 286 new procedure codes. The addition of these 286 new procedure codes to the 45 procedure codes that had been finalized at the time of the development of the proposed rule results in a total of 331 (45 + 286 = 331) new procedure codes for FY 2023.

We also note, as reflected in Table 6C.—Invalid Diagnosis Codes and in Table 6D.—Invalid Procedure Codes, there are a total of 287 diagnosis codes and 64 procedure codes that will become invalid effective October 1, 2022. Based on these code updates, effective October 1, 2022, there are a total of 73,639 ICD–10–CM diagnosis codes and 78,496 ICD–10–PCS procedure codes for FY 2023 as shown in the following table.

FY 2022 ICD-10-CM	72,750 total codes	FY 2022 ICD-10-PCS	78,229 total codes
FY 2023 ICD-10-CM	1,176 additions	FY 2023 ICD-10-PCS	331 additions
FY 2023 ICD-10-CM	287 deletions	FY 2023 ICD-10-PCS	64 deletions
FY 2023 ICD-10-CM	**73,639 total codes**	**FY 2023 ICD-10-PCS**	**78,496 total codes**

As stated previously, the public is provided the opportunity to comment on any requests for new diagnosis or procedure codes discussed at the ICD–10 Coordination and Maintenance Committee meeting. The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Thus, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

18. Replaced Devices Offered Without Cost or With a Credit

a. Background

In the FY 2008 IPPS final rule with comment period (72 FR 47246 through 47251), we discussed the topic of Medicare payment for devices that are replaced without cost or where credit for a replaced device is furnished to the hospital. We implemented a policy to reduce a hospital's IPPS payment for certain MS–DRGs where the implantation of a device that subsequently failed or was recalled determined the base MS–DRG assignment. At that time, we specified that we will reduce a hospital's IPPS payment for those MS–DRGs where the hospital received a credit for a replaced device equal to 50 percent or more of the cost of the device.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51556 through 51557), we clarified this policy to state that the policy applies if the hospital received a credit equal to 50 percent or more of the cost of the replacement device and issued instructions to hospitals accordingly.

b. Changes for FY 2023

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule, for FY 2023 we proposed not to add any MS–DRGs to the policy for replaced devices offered without cost or with a credit. We proposed to continue to include the existing MS–DRGs currently subject to the policy as displayed in the following table.

MDC	MS-DRG	MS-DRG Title
Pre-MDC	001	Heart Transplant or Implant of Heart Assist System with MCC
Pre-MDC	002	Heart Transplant or Implant of Heart Assist System without MCC
01	023	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator
01	024	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC
01	025	Craniotomy and Endovascular Intracranial Procedures with MCC
01	026	Craniotomy and Endovascular Intracranial Procedures with CC
01	027	Craniotomy and Endovascular Intracranial Procedures without CC/MCC
01	040	Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC
01	041	Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator
01	042	Peripheral, Cranial Nerve and Other Nervous System Procedures without CC/MCC
03	140	Major Head and Neck Procedures with MCC
03	141	Major Head and Neck Procedures with CC
03	142	Major Head and Neck Procedures without CC/MCC
05	215	Other Heart Assist System Implant
05	216	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with MCC
05	217	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with CC
05	218	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization without CC/MCC
05	219	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with MCC
05	220	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with CC
05	221	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization without CC/MCC
05	222	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock with MCC
05	223	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock without MCC
05	224	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock with MCC
05	225	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock without MCC
05	226	Cardiac Defibrillator Implant without Cardiac Catheterization with MCC
05	227	Cardiac Defibrillator Implant without Cardiac Catheterization without MCC
05	242	Permanent Cardiac Pacemaker Implant with MCC
05	243	Permanent Cardiac Pacemaker Implant with CC

We did not receive any public comments opposing our proposal to continue to include the existing MS–DRGs currently subject to the policy. Therefore, we are finalizing the list of MS–DRGs in the table included in the proposed rule and in this final rule that will be subject to the replaced devices offered without cost or with a credit policy effective October 1, 2022. The final list of MS–DRGs subject to the IPPS policy for replaced devices offered without cost or with a credit will be issued to providers in the form of a Change Request (CR).

19. Other Policy Issues

a. Comment Solicitation on Possible Mechanisms To Address Rare Diseases and Conditions Represented by Low Volumes Within the MS–DRG Structure

As discussed in section II.D.13.d of the preamble of the proposed rule and this final rule, we solicited public

comments involving how the reporting of certain diagnosis codes may improve our ability to recognize severity of illness, complexity of service, and utilization of resources under the MS–DRGs, as well as feedback on mechanisms to improve the reliability and validity of the coded data as part of an ongoing effort across CMS to evaluate and develop policies to reduce health disparities. In concert with that effort, as discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28195 through 28197) we also solicited comments to explore possible mechanisms through which we could address rare diseases and conditions that are represented by low volumes in our claims data.

We stated in the FY 2023 proposed rule that one subset of our beneficiary population for which we sought comment on potential issues related to patient access in the inpatient setting were patients diagnosed with rare diseases and conditions that are represented by low volumes in our claims data. We noted that the Orphan Drug Act (ODA) added section 526(a)(2)(B) to the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360bb(a)(2)(B)), defining a rare disease or condition as ''any disease or condition which (A) affects less than 200,000 persons in the United States, or (B) affects more than 200,000 in the United States and for which there is no reasonable expectation that the cost of developing and making available in the United States a drug for such disease or condition will be recovered from sales in the United States of such drug.'' Most rare diseases, however, affect far fewer people. The Genetic and Rare Diseases Information Center (GARD), which was created in 2002 by the National Institutes of Health (NIH) Office of Rare Diseases Research, estimates that there are as many as 7,000 distinct rare diseases. Rare diseases, which can include genetic diseases, autoimmune conditions, some cancers, and uncommon infections, are highly diverse, may affect many organ systems and have wide variations in the rates and patterns of manifestations and progression.

The ODA created a process for the U.S. Food and Drug Administration (FDA) to identify a drug as a drug developed for the treatment of a rare disease or condition called ''orphan-drug designation''. The sponsor of a drug that has orphan drug designation may be eligible for certain financial incentives, such as tax credits and potentially seven years of market exclusivity after approval, all of which are intended to incentivize developing drugs for small numbers of patients. We stated that we heard from some interested parties, however, that there may be a number of barriers to providers in treating these patients with these orphan designated drugs in the Medicare hospital inpatient setting.

According to these interested parties, one significant barrier that continues to present challenges to manufacturers is accessing formulary coverage for potentially high cost therapeutics for rare diseases. These interested parties stated that hospitals utilize formularies for inpatient drugs as a cost-management tool that strongly incentivizes physicians to use on-formulary drugs over off-formulary drugs, whenever clinically appropriate to do so. A drug formulary is defined as a list of medications and continually updated related information, that represents the clinical judgment of pharmacists, physicians, and other experts in the diagnosis and treatment of disease or promotion of health. It is often described as a list of medications routinely stocked by the health care system. These interested parties stated that although certain therapeutics can be associated with better outcomes for patients with rare diseases, the lack of access to hospital formularies represents a hurdle under the IPPS MS–DRGs. According to these interested parties, when Medicare reimbursement is insufficient to cover the costs of certain therapeutics that treat patients with rare diseases, a disincentive can be created in addressing these conditions.

For the purposes of the comment solicitation in the proposed rule, we described three selected requests we had received relating to the MS–DRG classification of rare diseases and conditions that are represented by low volumes in our claims data.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53311), the FY 2015 IPPS/LTCH PPS final rule (79 FR 49901) and the FY 2019 IPPS/LTCH PPS final rule (83 FR 41200), we discussed requests we received to revise the MS–DRG classification for cases of patients diagnosed with porphyria to recognize the resource requirements in caring for these patients, to ensure appropriate payment for these cases, and to preserve patient access to necessary treatments. Porphyria is defined as a group of rare disorders (''porphyrias'') that interfere with the production of hemoglobin that is needed for red blood cells. While some of these disorders are genetic (inborn) and others are acquired, they all result in the abnormal accumulation of hemoglobin building blocks, called porphyrins, which can be deposited in the tissues where they particularly interfere with the functioning of the nervous system and the skin. Treatment for patients suffering from disorders of porphyrin metabolism consists of an intravenous injection of Panhematin® (hemin for injection).

In the FY 2019 proposed rule, we stated our data analysis showed that cases reporting diagnosis code E80.21 (Acute intermittent (hepatic) porphyria) as the principal diagnosis in MS–DRG 642 (Inborn and Other Disorders of Metabolism) had higher average costs and longer average lengths of stay compared to the average costs and length of stay for all other cases in MS–DRG 642. However, after considering these findings in the context of the current MS–DRG structure, we stated that we were unable to identify an MS–DRG that would more closely parallel these cases with respect to average costs and length of stay that would also be clinically aligned. We further stated that our clinical advisors believed that, in the current MS–DRG structure, the clinical characteristics of patients in these cases are most closely aligned with the clinical characteristics of patients in all cases in MS–DRG 642. Moreover, given the small number of porphyria cases, we stated we did not believe there was justification for creating a new MS–DRG and did not propose to revise the MS–DRG classification for porphyria cases.

In response, some commenters described significant difficulties encountered by patients with acute porphyria attacks in obtaining Panhematin® when presenting to an inpatient hospital, which they attributed to the strong financial disincentives faced by facilities to treat these cases on an inpatient basis. The commenters stated that, based on the lower than expected average cost per case and longer than expected length of stay for acute porphyria attacks, it appeared that facilities were frequently not providing Panhematin® to patients in this condition, and instead attempting to provide symptom relief and transferring patients to an outpatient setting to receive the drug where they can be adequately paid. The commenters stated that this is in contrast to the standard of care for acute porphyria attacks and could result in devastating long-term health consequences.

In the FY 2019 final rule (83 FR 41200), as we have stated in prior rulemaking, we noted it is not appropriate for facilities to deny treatment to beneficiaries needing a specific type of therapy or treatment that involves increased costs. We further noted the MS–DRG system is a system of averages and it is expected that across

the diagnostic related groups that within certain groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. While we recognized the average costs of the small number of porphyria cases were greater than the average costs of the cases in MS–DRG 642 overall, we also noted that an averaged payment system depends on aggregation of similar cases with a range of costs, and that we seek to identify sufficiently large sets of claims data with a resource/cost similarity and clinical similarity in developing diagnostic-related groups rather than smaller subsets of diagnoses. We further stated that we were sensitive to the commenters' concerns about access to treatment for beneficiaries who have been diagnosed with this condition and we would continue to explore mechanisms through which to address rare diseases and low volume DRGs.

Similarly, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44869), we discussed a request we received to review potential access issues in the inpatient setting for the administration of ANDEXXA®. ANDEXXA® (coagulation factor Xa (recombinant), inactivated-zhzo) is a recombinant decoy protein that rapidly reverses the anticoagulant effects of two direct oral anticoagulants, apixaban and rivaroxaban, when reversal of anticoagulation is needed due to life-threatening or uncontrolled bleeding in indications such as intracranial hemorrhages (ICHs) and gastrointestinal bleeds (GIBs). We noted that while our data findings demonstrated the average costs for the cases reporting the intravenous administration of ANDEXXA® were higher when compared to all cases in their respective MS–DRG, these cases represented a very small percentage of the total number of cases reported in those MS–DRGs. We stated we were unable to identify another MS–DRG that would be a more appropriate MS–DRG assignment for these cases based on the indication for this therapeutic drug. We also stated that while we were sensitive to the requestors' concerns about continued access to treatment for beneficiaries who require the reversal of anticoagulation due to life-threatening or uncontrolled bleeding, we indicated additional time was needed to explore options and other mechanisms through which to address low volume, high-cost drugs outside of the MS–DRGs.

Lastly, in the proposed rule, we discussed a request we received to reconsider how cases reporting the administration of Zulresso® (brexanolone) are recognized for payment under the ICD–10 MS–DRGs in an effort to improve access to treatment for maternal mental health. On March 19, 2019 Zulresso® (brexanolone) became the first Food and Drug Administration (FDA) approved drug, specifically for postpartum depression (PPD) in adults. According to the requestor, PPD is one of the most common complications during and after pregnancy. The requestor stated PPD is a serious but manageable disorder and that with early treatment, the life of the mother, baby, and the entire family could be positively impacted. The requestor indicated it shares CMS's goals of addressing disparities in access to care, and urged CMS to take additional steps to address inequities in women's health by permitting separate payment for Zulresso® (brexanolone), in addition to the MS–DRG payment.

As discussed in the proposed rule, effective with discharges on and after October 1, 2020, cases reporting the administration of Zulresso® in the inpatient setting are identified by ICD–10–PCS procedure codes XW03306 (Introduction of brexanolone into peripheral vein, percutaneous approach, new technology group 6) or XW04306 (Introduction of brexanolone into central vein, percutaneous approach, new technology group 6). These procedure codes are designated as non-O. R. procedures and do not affect the MS–DRG assignment when reported on an inpatient claim. We noted that an application for new technology add-on payment for Zulresso® (brexanolone) was discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32672 through 32676) and was not approved, as discussed in the final rule (85 FR 58709 through 58715).

We stated we analyzed claims from the September 2021 update of the FY 2021 MedPAR file for cases reporting the administration of Zulresso® (brexanolone). Our analysis of the claims data identified only one case reporting the administration of Zulresso® (brexanolone) in MS–DRG 870 (Septicemia or Severe Sepsis with MV >96 Hours) with an average length of stay of 22 days and average costs of $67,812. For all cases in MS–DRG 870, the average costs are $55,459 and the average length of stay is 15.9 days. We stated that while the average length of stay for the case reporting the administration of Zulresso® (brexanolone) was greater (22 days versus 15.9 days) and the average costs were higher ($67,812 versus $55,459), than all cases in MS–DRG 870 it was unclear if treatment with Zulresso® (brexanolone) was the underlying reason for these factors, given that the MS–DRG assigned is for sepsis and it is not uncommon for sepsis patients to have multiple co-morbidities and intensive treatment strategies to address this severe, often life threatening condition.

We stated we appreciated the requestor's interest in sharing CMS's goal of advancing women's health, however, we noted that the population in which Zulresso® (brexanolone) is indicated generally does not include our inpatient Medicare population. As we have stated in prior rulemaking, (83 FR 41210), we have not adopted the same approach to refine the maternity and newborn MS–DRGs because of the extremely low volume of Medicare patients there are in these MS–DRGs. When there is not a high volume of these cases (for example, maternity and newborn) represented in the Medicare data, we generally advise that other payers should develop DRGs to address the needs of their patients. We stated we believed the same would apply with respect to administration of Zulresso® (brexanolone) for which, as noted, we identified only one case in the FY 2021 MedPAR file.

As discussed in prior rulemaking, the MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources. Rare diseases and conditions that are represented by low volumes in our claims data however, pose a unique challenge to this methodology as these conditions by definition affect small subsets of the population. In the proposed rule, we stated that it has been difficult to identify other MS–DRGs that would be more appropriate MS–DRG assignments for these rare conditions based on the wide variance in the clinical characteristics and utilization of resources for each condition, depending on the diagnosis. Creating a new MS–DRG for these conditions as a distinct ''related'' group is also challenging for the same reasons.

As previously noted, we generally seek to identify sufficiently large sets of claims data with a resource/cost similarity and clinical similarity in developing diagnostic-related groups rather than smaller subsets. In the proposed rule, we stated that we have been concerned that basing MS–DRG reclassification decisions on small numbers of cases could lead to complexities in establishing the relative payment weights for the MS–DRGs because several expensive cases could impact the overall relative payment weight. Having larger clinical cohesive groups within an MS–DRG provides greater stability and thus predictability

for hospitals for annual updates to the relative payment weights.

As also previously noted, the MS–DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. However, as noted, cases involving treatment of rare diseases may involve more resource use than other cases in their respective MS–DRG. Section 1886(d)(5)(A) of the Act provides for Medicare payments to Medicare-participating hospitals in addition to the basic prospective payments for cases incurring extraordinarily high costs, however we solicited feedback on other mechanisms we could explore through which we can address concerns relating to payment for patients with rare diseases and conditions that are represented by low volumes in our claims data. We stated we were also interested in receiving comments on other meaningful ways in which we might potentially improve access to treatment for postpartum depression in certain populations, including through activities pursuant to Vice President Harris's Call to Action to Reduce Maternal Mortality and Morbidity.[28]

To inform decision making, we stated we were also looking for feedback on how to mitigate any unintended negative payment impacts to providers serving patients with rare diseases or conditions that are represented by low volumes in our claims data. In particular, we stated we were interested in hearing the perspectives of large urban hospitals, rural hospitals, and other hospital types in regard to their experience. We also sought comments on how factors such as hospital size and type might impact a hospital's ability to develop protocols to better address these conditions. We stated we would take commenters' feedback into consideration in future policy development.

Comment: Many commenters stated they appreciated CMS' attention and the acknowledgment of the challenging nature of rare diseases as part of a reporting and payment structure. Commenters also expressed that they fully support the Administration's initiatives that champion policies to improve maternal health and equity, especially as it relates to PPD. Most commenters provided recommendations and suggested CMS explore mechanisms such as—

- Creating a ''permanent'' payment methodology approach which combines the MS–DRG ''fixed price'' with continued partial payment for the actual cost of treatment per stay;
- Creating new MS–DRGs for certain low-volume therapies or for orphan conditions with more flexible cost outlier funding;
- Creating new MS–DRG categories to ensure access to rapidly expanding transformative therapies like cell and gene therapies;
- Creating a new enhanced new technology add-on payment-like pathway that establishes separate payment for low volume high-cost drugs;
- Reimbursing hospitals for orphan drugs based on the Average Sales Price (ASP) as published in the HOPD Addendum B file using the same authority that the Agency relied on to make the recent COVID–19 payment adjustments;
- Carving-out ''clinical trial'' inpatient stays to ensure that the MS–DRG payment rate is not adversely impacted by facility-reported costs that do not include acquisition costs;
- Exploring databases outside of the MedPAR to obtain claims data for inclusion analysis;
- Creating a rare disease diagnosis code designation, similar to the complication or comorbidity (CC) and major complication or comorbidity (MCC) severity designations;
- Establishing a central formulary to provide high cost drugs for rare conditions instead of utilizing individual hospital pharmacy formularies to ease burdens of carrying high cost drugs on rural and smaller hospitals, as drug transport can potentially be cheaper then patient transport;
- Waiving the 500 case threshold when deciding whether an MS–DRG change should be proposed.

Specifically, in discussing how cases reporting the administration of Zulresso® (brexanolone) are recognized for payment, commenters stated that if Medicare commits to creating MS–DRGs around the Medicare population giving birth, the impacts of this progress would have far-reaching effects beyond Medicare beneficiaries as it will serve as the foundation for commercial and Medicaid payments.

Response: We appreciate the input provided by commenters in response to this request for information and we thank commenters for the acknowledgment of the challenges rare diseases or conditions that are represented by low volumes present as part of a reporting and reimbursement structure. We thank the commenters for their support and consideration of these issues. We will take the comments received in response to the solicitation into consideration as we continue to explore mechanisms to address concerns relating to payment for patients with rare diseases and conditions that are represented by low volumes in our claims data.

20. Out of Scope Public Comments Received

We received public comments on MS–DRG related issues that were outside the scope of the proposals included in the FY 2023 IPPS/LTCH PPS proposed rule. Because we consider these public comments to be outside the scope of the proposed rule, we are not addressing them in this final rule. As stated in section II.D.1.b. of the preamble of this final rule, we encourage individuals with comments about MS–DRG classifications to submit these comments no later than October 20, 2022 via the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™) at: *https://mearis.cms.gov/public/home* so that they can be considered for possible inclusion in the annual proposed rule. We will consider these public comments for possible proposals in future rulemaking as part of our annual review process.

II. Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

E. Recalibration of the FY 2023 MS–DRG Relative Weights

1. Data Sources for Developing the Relative Weights

Consistent with our established policy, in developing the MS–DRG relative weights for FY 2023, we proposed to use two data sources: claims data and cost report data. The claims data source is the MedPAR file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2021 MedPAR data used in this final rule include discharges occurring on October 1, 2020, through September 30, 2021, based on bills received by CMS through March 31, 2022, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS).

The FY 2021 MedPAR file used in calculating the relative weights includes data for approximately 7,444,003

[28] *Available at: https://www.whitehouse.gov/briefing-room/statements-releases/2021/12/07/fact-sheet-vice-president-kamala-harris-announces-call-to-action-to-reduce-maternal-mortality-and-morbidity/.*

Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR ''GHO Paid'' indicator field on the claim record is equal to ''1'' or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR ''Indirect Medical Education (IME)'' payment field, indicating that the claim was an ''IME only'' claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the March 2022 update of the FY 2021 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards, and includes a variable called ''claim type.'' Claim type ''60'' indicates that the claim was an inpatient claim paid as fee-for-service. Claim types ''61,'' ''62,'' ''63,'' and ''64'' relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the relative weights for FY 2023 also excludes claims with claim type values not equal to ''60.'' The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. We note that the FY 2023 relative weights are based on the ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes from the FY 2021 MedPAR claims data, grouped through the ICD–10 version of the FY 2023 GROUPER (Version 40).

The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the HCRIS. In general, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year. Specifically, for this final rule, we used the March 2022 update of the FY 2020 HCRIS for calculating the FY 2023 cost-based relative weights. Consistent with our historical practice, for this FY 2023 final rule, we are providing the version of the HCRIS from which we calculated these 19 CCRs on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. Click on the link on the left side of the screen titled ''FY 2023 IPPS Final Rule Home Page'' or ''Acute Inpatient Files for Download.''

2. Methodology for Calculation of the Relative Weights

a. General

We calculated the FY 2023 relative weights based on 19 CCRs. The methodology we proposed to use to calculate the FY 2023 MS–DRG cost-based relative weights based on claims data in the FY 2021 MedPAR file and data from the FY 2020 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the FY 2023 MS–DRG classifications discussed in sections II.B. and II.D. of the preamble of this final rule.
- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS–DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2021 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis.

Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.

Section 108 of the Further Consolidated Appropriations Act, 2020 provides that, for cost reporting periods beginning on or after October 1, 2020, costs related to hematopoietic stem cell acquisition for the purpose of an allogeneic hematopoietic stem cell transplant shall be paid on a reasonable cost basis. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule for further discussion of the reasonable cost basis payment for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842). For FY 2022 and subsequent years, we subtract the hematopoietic stem cell acquisition charges from the total charges on each transplant bill that showed hematopoietic stem cell acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.

- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than $30.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, implantable devices charges, supplies and equipment charges, therapy services charges, operating room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood and blood products charges, anesthesia charges, cardiac catheterization charges, CT scan charges, and MRI charges were also deleted.
- At least 93.0 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14 of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted.
- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS–DRG.
- Effective October 1, 2008, because hospital inpatient claims include a POA indicator field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to ''Y'' for ''Yes'' for all claims that otherwise have an ''N'' (No) or a ''U'' (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a ''Y'' indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS–DRG). If the particular condition is not present on admission (that is, an ''N'' indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS–DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower

severity MS–DRGs prior to the relative weight-setting process, the relative weights of these particular MS–DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS–DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to ''Y'' only for relative weight-setting purposes for all claims that otherwise have an ''N'' or a ''U'' in the POA field. This resetting ''forced'' the more costly HAC claims into the higher severity MS–DRGs as appropriate, and the relative weights calculated for each MS–DRG more closely reflect the true costs of those cases.

In addition, in the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the Bundled Payments for Care Improvement (BPCI) initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to hospitals' participation within these bundled payment models (77 FR 53341 through 53343). Specifically, because acute care hospitals participating in the BPCI Initiative still receive IPPS payments under section 1886(d) of the Act, we include all applicable data from these subsection (d) hospitals in our IPPS payment modeling and ratesetting calculations as if the hospitals were not participating in those models under the BPCI initiative. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process. For additional information on the BPCI initiative, we refer readers to the CMS' Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/Bundled-Payments/index.html* and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343).

The participation of hospitals in the BPCI initiative concluded on September 30, 2018. The participation of hospitals in the BPCI Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 1115A of the Act, is comprised of a single payment and risk track, which bundles payments for multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in BPCI Advanced in one of two capacities: as a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/bpci-advanced/*. Consistent with our policy for FY 2022, and consistent with how we have treated hospitals that participated in the BPCI Initiative, for FY 2023, we continue to believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because, as noted previously, these hospitals are still receiving IPPS payments under section 1886(d) of the Act. Consistent with the FY 2022 IPPS/LTCH PPS final rule, we also proposed to include all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS payment modeling and ratesetting calculations.

The charges for each of the 19 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS–DRG for each of the 19 cost groups so that each MS–DRG had 19 standardized charge totals. Statistical outliers were then removed. These charges were then adjusted to cost by applying the national average CCRs developed from the FY 2020 cost report data.

The 19 cost centers that we used in the relative weight calculation are shown in a supplemental data file, Cost Center HCRIS Lines Supplemental Data File, posted via the internet on the CMS website for this final rule and available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. The supplemental data file shows the lines on the cost report and the corresponding revenue codes that we used to create the 19 national cost center CCRs. In the FY 2023 IPPS/LTCH PPS proposed rule, we stated that if we receive comments about the groupings in this supplemental data file, we may consider these comments as we finalize our policy.

Comment: A commenter requested that CMS create a dedicated cost center line for cell and gene therapy product cost information, which would enable the agency to create a 20th cost center that is separate from the drugs/pharmacy cost center.

Response: We appreciate the commenter's request regarding the creation of new cost centers for cell and gene therapy product cost information and may consider this request in connection with future rulemaking.

After consideration of the comment received, we are finalizing our proposal to use the 19 national cost center CCRs to calculate the relative weights for FY 2023.

Consistent with historical practice, we account for rare situations of non-monotonicity in a base MS–DRG and its severity levels, where the mean cost in the higher severity level is less than the mean cost in the lower severity level, in determining the relative weights for the different severity levels. If there are initially non-monotonic relative weights in the same base DRG and its severity levels, then we combine the cases that group to the specific non-monotonic MS–DRGs for purposes of relative weight calculations. For example, if there are two non-monotonic MS–DRGs, combining the cases across those two MS–DRGs results in the same relative weight for both MS–DRGs. The relative weight calculated using the combined cases for those severity levels is monotonic, effectively removing any non-monotonicity with the base DRG and its severity levels. For this FY 2023 final rule, this calculation was applied to address non-monotonicity for cases that grouped to MS–DRG 793 and MS–DRG 794. In the supplemental file titled AOR/BOR File, we include statistics for the affected MS–DRGs both separately and with cases combined.

We invited public comments on our proposals related to recalibration of the proposed FY 2023 relative weights and the changes in the relative weights from FY 2022.

Comment: A commenter requested that CMS study whether it might be appropriate to define the labor portion individually for each of the 19 cost centers and only standardize that portion, particularly if doing so improves the explanatory power of all MS–DRGs. This commenter requested that CMS conduct this study in collaboration with stakeholders and release this analysis in future rulemaking.

Response: We appreciate the commenter's request that CMS study the appropriateness of defining the labor portion individually for each of the 19 cost centers and standardizing only that portion, and we may consider this request in connection with future rulemaking.

After consideration of the comment received, we are finalizing our proposals related to the recalibration of the FY 2023 relative weights. We summarize and respond to comments relating to the methodology for calculating the relative weight for MS–DRG 018 in the next section of this final rule.

b. Relative Weight Calculation for MS–DRG 018

As discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58599 through 58600), we created MS–DRG 018 for cases that include procedures describing CAR T-cell therapies, which were reported using ICD–10–PCS procedure codes XW033C3 or XW043C3. Effective for FY 2022, we revised MS–DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other immunotherapies (86 FR 44798 through 448106). We refer the reader to section II.D.2. of this final rule for discussion of the agenda items for the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting relating to new procedure codes to describe the administration of a CAR T-cell or another type of gene or cellular therapy product, as well as our established process for determining the MS–DRG assignment for codes approved at the March meeting.

For MS–DRG 018, we include a modification to our existing relative weight methodology to ensure that the relative weight for MS–DRG 018 appropriately reflects the relative resources required for providing CAR T-cell and non-CAR T-cell therapies and other immunotherapies outside of a clinical trial, while still accounting for the clinical trial cases in the overall average cost for all MS–DRGs. For cases that group to MS–DRG 018, we do not include claims determined to be clinical trial claims that group to MS–DRG 018 when calculating the average cost for MS–DRG 018 that is used to calculate the relative weight for this MS–DRG, with the additional refinements that: (a) when the CAR T-cell, non-CAR T-cell or other immunotherapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, we include the claim when calculating the average cost for MS–DRG 018 to the extent such claims can be identified in the historical data; and (b) when there is expanded access use of the CAR T-cell, non-CAR T-cell or other immunotherapy product, these cases will not be included when calculating the average cost for new MS DRG 018 to the extent such claims can be identified in the historical data (85 FR 58600). We also calculate an adjustment to account for the CAR T-cell, non-CAR T-cell and other immunotherapy cases determined to be clinical trial cases, as described later in this final rule and include revenue center 891 in our calculation of standardized drug charges for MS–DRG 018. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule for further discussion of our modifications to the relative weight calculation for MS–DRG 018.

We proposed to continue to use the same process to identify clinical trial claims in the FY 2021 MedPAR for purposes of calculating the FY 2023 relative weights. We continue to use the proxy of standardized drug charges of less than $373,000, which was the average sales price of KYMRIAH and YESCARTA, which are the two CAR T-cell biological products in the FY 2021 MedPAR data used for this final rule. (As previously noted, effective beginning FY 2022, we revised MS–DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other immunotherapies (86 FR 44798 through 448106).) Using the same methodology from the FY 2021 IPPS/LTCH PPS final rule, we proposed to apply an adjustment to account for the CAR T cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs:

- Calculate the average cost for cases to be assigned to MS–DRG 018 that contain ICD–10–CM diagnosis code Z00.6 or contain standardized drug charges of less than $373,000.
- Calculate the average cost for all other cases to be assigned to MS–DRG 018.
- Calculate an adjustor by dividing the average cost calculated in step 1 by the average cost calculated in step 2.
- Apply the adjustor calculated in step 3 to the cases identified in step 1 as clinical trial cases, then add this adjusted case count to the non-clinical trial case count prior to calculating the average cost across all MS–DRGs.

Additionally, we are continuing our finalized methodology for calculating this payment adjustment, such that: (a) when the CAR T-cell, non-CAR T-cell or other immunotherapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for cases not determined to be clinical trial cases; and (b) when there is expanded access use of immunotherapy, these cases will be included when calculating the average cost for cases determined to be clinical trial cases. However, we continue to believe to the best of our knowledge there are no claims in the historical data (FY 2021 MedPAR) used in the calculation of the adjustment for cases involving a clinical trial of a different product, and to the extent the historical data contain claims for cases involving expanded access use of immunotherapy we believe those claims would have drug charges less than $373,000.

Applying this previously finalized methodology, based on the December 2021 update of the FY 2021 MedPAR file used for the proposed rule, we estimated that the average costs of cases assigned to MS–DRG 018 that are identified as clinical trial cases ($61,356) were 20 percent of the average costs of the cases assigned to MS–DRG 018 that are identified as non-clinical trial cases ($299,460). Accordingly, as we did for FY 2022, we proposed to adjust the transfer-adjusted case count for MS–DRG 018 by applying the proposed adjustor of 0.20 to the applicable clinical trial and expanded access use immunotherapy cases, and to use this adjusted case count for MS–DRG 018 in calculating the national average cost per case, which is used in the calculation of the relative weights. Therefore, in calculating the national average cost per case for purposes of the proposed rule, each case identified as an applicable clinical trial or expanded access use immunotherapy case was adjusted by 0.20. As we did for FY 2022, we applied this same adjustor for the applicable cases that group to MS–DRG 018 for purposes of budget neutrality and outlier simulations. We also proposed to update the value of the adjustor based on more recent data for the final rule.

Comment: Several commenters were supportive of CMS' continued use of MS–DRG 018 as it is currently

structured, including the identification and exclusion of CAR T-cell clinical trial and expanded access use cases assigned to MS–DRG 018. Commenters stated that the stability of MS–DRG 018 will help ensure beneficiary access to CAR T-cell therapy services. One commenter stated that analysis of CAR T-cell claims data from FY 2021 through the first quarter of FY 2022 shows significant improvement in patient access to CAR T. Another commenter requested that CMS reevaluate the clinical trial threshold annually as acquisition costs increase and additional therapies are introduced to MS–DRG 018.

Other commenters stated that they were concerned with what they stated were Medicare under-reimbursements for CAR T-cell technology, especially given the array of resources used to treat patients undergoing these complex, novel cell therapies and the adverse impact inadequate reimbursement has on beneficiary access. A commenter stated that payment for MS–DRG 018 is almost 30 percent below the cost of CAR T-cell cases and does not cover the cost of the therapy itself. A commenter recommended that CMS cover the full cost of the CAR T-cell therapy, while another commenter requested that CMS implement a policy solution that will ensure providers recoup at least the invoice cost of the CAR T-cell product. The commenter referenced prior comments about options for such policy solutions. Some commenters stated that the increase in the fixed-loss threshold makes it even more difficult to obtain adequate reimbursement. A commenter requested that CMS closely monitor reimbursement rates for CAR T-cell therapies to ensure that hospital facilities can continue to provide access to these treatments.

Response: We appreciate the support and feedback on our proposal to use the same ratesetting methodology for MS–DRG 018 in FY 2023 as we have in prior years. With regard to the commenter who requested that CMS reevaluate the clinical trial threshold annually, we note that we continue to monitor the data and may engage further with the public and consider this comment in connection with future rulemaking. With regard to the comments that the MS–DRG relative weight for MS–DRG 018 is inadequate and does not result in payment that fully covers the hospital resource costs, we refer readers to the FY 2022 IPPS/LTCH final rule (86 FR 44965) where we responded to similar comments.

Comment: A commenter stated that they understand that outliers are removed in the development of MS–DRGs so that they do not skew the results. The commenter found that in the calculation of the relative weights, MS–DRG 018 has the highest percent of cases removed as statistical outliers. The commenter stated the removal of these cases resulted in a lower standardized cost per inpatient stay. Another commenter requested that CMS monitor the impact that the removal of these statistical outliers has on MS–DRG 018 and other low volume services.

Response: We examined the cases referenced by the commenter that were removed as statistical outliers in the FY 2021 MedPAR claims data. We found that these cases had very high charges and very short lengths of stay, with daily charges in excess of $1.2 million relative to the average daily charge of $114,000 for MS–DRG 018. As described earlier in this section, our standard method to identify and remove statistical outliers excludes cases with total charges and total daily charges that are beyond 3 standard deviations from the geometric mean of the log distribution of both average total charges and average total daily charges of the respective MS–DRG. As described in section III.B.4.b. of the preamble of this final rule with respect to the MS–LTC–DRGs, statistical outliers are removed because we believe that they may represent aberrations in the data that distort the measure of average resource use. For this reason, we believe that the cases identified by the commenters are appropriately excluded as outliers, as their inclusion could distort the measure of average resource use for MS–DRG 018. We will continue to monitor the removal of statistical outliers in calculating the relative weights for MS–DRG 018.

Comment: A commenter recommended that CMS establish a new, alternative payment model under CMMI for gene and cell therapies, outside of the constraints of the IPPS. The commenter stated that this would provide a clearer path to coverage and payment policy that can improve patient access. Another commenter stated that some exceptions to the standard IPPS process are and will continue to be needed to allow hospitals to make lifesaving therapies available at launch to Medicare beneficiaries as soon as possible.

Response: We believe that is premature to make structural changes to the IPPS at this time to pay for gene and cell therapies. We may consider these comments for future rulemaking as we gain more experience in paying for these therapies under the IPPS.

Comment: Some commenters expressed concern that CMS mapped revenue codes 087X for cell and gene therapy services furnished by hospital staff to the drug cost group. One commenter stated that the NUBC definition states this revenue code series is for ''[c]harges for procedures performed by staff for the acquisition and infusion/injection of genetically modified cells''. The commenter stated that there is no standard cost center to report staff expense associated with the 087X series, but that it is inappropriate to assign the revenue for cell collection and processing services employed by hospital nursing and laboratory staff to the drug/pharmacy cost center. The commenter stated that if CMS finalizes this proposed mapping, it will be inconsistent with the mapping of revenues and expenses that hospitals are required to adhere to in their cost reports. A commenter suggested that CMS should revise the mapping of the 087X revenue codes to more closely reflect the departments where the staff expenses are recorded on the cost report. Commenters suggested that CMS map revenue codes 0871 and 0874 to the ''other'' cost center and 0872 and 0873 to the laboratory cost center. A commenter requested that CMS allow providers to bill for cell collection and cell processing services on the day that the services are rendered rather than adding them to the inpatient claim. The commenter stated that these are separate from the manufacturing process and are not included in the acquisition cost of the product.

Response: We disagree with the commenters that revenue center codes 087X are inappropriately mapped to the drug cost center. Cell collection and processing activities are part of the steps required to manufacture the drug, and thus assignment to the drug cost center accurately allocates these costs. Given this, we believe it is appropriate to apply the drug CCR to these charges for purposes of calculating the relative weights. With respect to the commenter who indicated that finalizing the proposed assignment of the 087X codes would be inconsistent with the mapping of revenues and expenses hospitals are required to adhere to in their cost reports, it is unclear to us what requirements are being referred to. With respect to the commenter who requested that CMS allow separate billing for the cell collection and processing services, as we discussed in the CY 2022 OPPS final rule (86 FR 63550), CMS does not believe that separate payment is necessary for the various steps required to collect and prepare the genetically modified T-cells, and Medicare does not generally pay separately for each step

used to manufacture a drug or biological product.

Comment: A commenter requested that CMS consider allowing hospitals to use expanded access condition code 90 instead of the remarks field, which would remove a layer of manual work required by the MACs, which would decrease the opportunity for errors.

Response: We agree with the commenter that the availability of condition code 90 obviates the need for the use of the remarks field to identify expanded access claims that group to MS–DRG 018 for the purposes of applying the clinical trial adjustment. Effective October 1, 2022, providers should submit condition code 90 to identify expanded access claims that group to MS–DRG 018, rather than the remarks field. The MACs will no longer flag cases as expanded access claims based on information submitted in the remarks field for claims submitted on or after October 1, 2022.

Comment: A commenter requested that CMS provide additional clarification on the agency's methodology to develop the relative weight for both MS–DRG 018 and its overall ratesetting methodology. This commenter requested that CMS describe the order of operations, including step-by-step instructions of when to exclude certain types of claims. This commenter also requested that CMS clarify whether the agency trims claims first, and then sets aside clinical trial cases, or sets aside clinical trial claims and claims with less than $373,000 and then performs trimming.

Response: In response to the commenter's specific question regarding when CMS removes clinical trial cases from MS–DRG 018, the trims to remove clinical trial cases from MS–DRG 018 are done prior to the elimination of statistical outliers. In response to the commenter's request that we clarify our relative weight methodology more generally, we note that in each year's IPPS/LTCH PPS proposed and final rules, we include a section describing the recalibration of the MS–DRG relative weights and methodology for calculating the relative weights. We refer readers to sections II.E.1. and E.2.a. of the preamble of this final rule, in which we describe the trims we apply to the MedPAR claims to exclude non-IPPS claims, and provide a detailed description of the methodology we use to calculate the relative weights. The order that the trims are applied is consistent with the narrative description of our methodology. In addition, since the creation of MS–DRG 018, we have provided a description of the calculation of the relative weight for MS–DRG 018, including a step-by-step calculation of the CAR T-cell clinical trial adjustment factor, as set forth earlier in this section.

We also note that some commenters requested additional clarifications regarding billing instructions for CAR T-cell therapies, such as appropriate CAR T-cell billing and charges. We do not believe changes to billing guidance are needed at this time but will take these comments into consideration when developing policies and program requirements for future years for CAR T-cell therapy policy.

After consideration of the public comments we received, we are finalizing our proposals regarding the calculation of the relative weight for MS–DRG 018. Applying this finalized methodology, based on the March 2022 update of the FY 2021 MedPAR file used for this final rule, we estimated that the average costs of cases assigned to MS–DRG 018 that are identified as clinical trial cases ($61,540) were 21 percent of the average costs of the cases assigned to MS–DRG 018 that are identified as non-clinical trial cases ($293,546). Accordingly, as we did for FY 2022, we are finalizing our proposal to adjust the transfer-adjusted case count for MS–DRG 018 by applying the adjustor of 0.21 to the applicable clinical trial and expanded access use immunotherapy cases, and to use this adjusted case count for MS–DRG 018 in calculating the national average cost per case, which is used in the calculation of the relative weights. Therefore, in calculating the national average cost per case for purposes of this final rule, each case identified as an applicable clinical trial or expanded access use immunotherapy case was adjusted by 0.21. As we did for FY 2022, we are applying this same adjustor for the applicable cases that group to MS DRG 018 for purposes of budget neutrality and outlier simulations.

c. Averaging of Relative Weights for FY 2023

In section I.F. of the proposed rule and this final rule, we discuss our proposal to use the FY 2021 MedPAR data for purposes of FY 2023 IPPS ratesetting, with certain proposed modifications to our usual methodologies, including an averaging approach for calculating the FY 2023 relative weights. As discussed in the proposed rule, we observed that COVID–19 cases were impacting the relative weights as calculated using the FY 2021 claims data for a few COVID–19-related MS–DRGs. For example, for MS–DRG 870 (Septicemia or Severe Sepsis with MV >96 hours), the relative weight calculated using the FY 2021 MedPAR data was approximately 9 percent higher than the relative weight calculated excluding the COVID–19 cases in the FY 2021 data. As also discussed in that section, we believe it is reasonable to assume that there will be fewer COVID–19 hospitalizations among Medicare beneficiaries in FY 2023 than there were in FY 2021. However, we cannot know the precise number of COVID–19 hospitalizations among Medicare beneficiaries in FY 2023. To account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries as compared to FY 2021, we proposed to determine the MS–DRG relative weights for FY 2023 by averaging the relative weights as calculated with and without COVID–19 cases in the FY 2021 data, as described in greater detail in this section. Given the uncertainty in the number of COVID–19 hospitalizations in FY 2023, we proposed to use 50 percent of the relative weights calculated using all applicable cases in the FY 2021 claims data and 50 percent of the relative weights calculated without the COVID–19 cases in the FY 2021 claims data. We stated that we believe this proposed approach would appropriately reduce, but not remove entirely, the effect of COVID–19 cases on the relative weight calculations, consistent with our expectation that Medicare inpatient hospitalizations for COVID–19 will continue in FY 2023 at a lower level as compared to FY 2021. By averaging the relative weights in this manner, we stated that we believe the result would reflect a reasonable estimation of the case mix for FY 2023 based on the information available at the time, as discussed in section I.F. of the preamble to the proposed rule and this final rule, and more accurately estimate the relative resource use for the cases treated in FY 2023 than if we were to calculate the proposed relative weights based on 100 percent of the relative weights as calculated for all applicable cases in the FY 2021 data. For the proposed rule, our proposed calculation was as follows:

- *Step 1:* Calculate a set of relative weights using all applicable cases in the December 2021 update of the FY 2021 MedPAR data, using the methodology as described earlier in this section, and then applying a normalization adjustment factor as described later in this section.
- *Step 2:* Calculate a set of relative weights using the December 2021 update of the FY 2021 MedPAR data excluding cases with a principal or secondary diagnosis of COVID–19 (ICD–10–CM diagnosis code U07.1), and

otherwise using the methodology as described earlier in this section, and then applying a normalization adjustment factor as described later in this section.

- *Step 3:* Average the results of step 1 and step 2 to calculate a set of averaged relative weights, geometric mean length of stays, and arithmetic mean length of stays.
- *Step 4:* Calculate the proposed FY 2023 relative weights by applying an additional normalization factor to these averaged relative weights. This additional normalization factor is necessary to ensure that the average case weight as calculated in step 3 of this proposed averaging methodology for recalibration of the FY 2023 relative weights is equal to the average case weight before recalibration. We note that this factor is very close to 1 and is described later in this section.

We noted that in Step 5 of this proposed calculation, we applied the proposed 10 percent cap to the relative weights for those MS–DRGs for which the relative weight as calculated in Step 4 would otherwise have declined by more than 10 percent from the FY 2022 relative weight, as discussed more fully later in this section. We also noted that we intended to update this calculation for the final rule using the March 2022 update of the FY 2021 MedPAR file.

We set forth the proposed relative weights, geometric mean length of stay, and average length of stay as calculated using this proposed methodology in Table 5 associated with the proposed rule, which is available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. We also made available the relative weights, geometric mean length of stay, and average length of stay as calculated in steps 1 and 2 of this proposed methodology on our website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*.

Comment: Several commenters supported our proposal to average the relative weights calculated with and without COVID–19 cases, stating that this would more accurately account for the anticipated change in case mix as COVID–19 cases decline.

Another commenter supported an alternative MS–DRG relative weight methodology, but stated that the proposed methodology does not do enough to control for variability. This commenter requested that CMS use FY 2019 claims or some other alternate blend using the FY 2021 claims to establish the FY 2023 relative weights.

Some commenters expressed concern about policies that may limit the reimbursement for COVID–19 cases. A commenter suggested increasing the relative weights for the MS–DRGs that have documented COVID–19 cases, but recommended that CMS consider a process to differentiate patients who test asymptomatically for COVID–19 from those whose COVID–19 infection is causing clinical symptoms to worsen. The commenter stated that this approach would better target the more resource intensive beneficiaries without artificially constraining reimbursement for their care.

Response: We appreciate commenters' support for and feedback on our proposal. However, we disagree that we should blend other data sources or take additional steps to control for variability in the FY 2023 relative weights. As we stated in the FY 2023 IPPS/LTCH PPS proposed rule, we cannot know the precise number of COVID–19 hospitalizations among Medicare beneficiaries as compared to FY 2021. Our proposal to average the relative weights is intended to reflect a reasonable estimation of the case mix for FY 2023 based on the information available at this time, not to completely remove all variability in the FY 2023 relative weights. Our proposed methodology uses the FY 2021 MedPAR claims file to determine the FY 2023 relative weights, as the most recent available data during the period of the COVID–19 PHE, with modifications to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals as compared to FY 2021. As discussed in section I.F. of this final rule, after reviewing the latest CDC hospitalization data available at this time, we continue to believe that it is reasonable to assume that some Medicare beneficiaries will be hospitalized with COVID–19 at IPPS hospitals in FY 2023, but that there will be fewer COVID 19 hospitalizations as compared to FY 2021. With respect to the commenters' concerns about policies that may limit reimbursement for COVID–19 cases, we note that the majority of cases that include a diagnosis of COVID–19 (ICD–10–CM diagnosis code U07.1) group to MS–DRGs 177 and 871, and that the relative weights calculated using the proposed averaging methodology for FY 2023 are higher than the FY 2022 relative weights for these MS–DRGs. For MS–DRG 177, the relative weight calculated using the proposed averaging approach is also higher than the relative weight calculated using all applicable cases in the FY 2021 MedPAR file. For MS–DRG 871, while the relative weight calculated using the proposed averaging approach is lower than the relative weight calculated using all applicable cases in the FY 2021 MedPAR file, it is still an increase as compared to the relative weight for FY 2022. Moreover, as previously discussed, we believe that use of the proposed averaging methodology would provide a more accurate estimate of relative resource use for FY 2023 than if we were to calculate the proposed relative weights using all applicable cases in the FY 2021 data, and is consistent with our expectation, based on the information available at this time, that Medicare inpatient hospitalizations for COVID–19 will continue in FY 2023 at a lower level as compared to FY 2021. With regard to the suggestion about differentiating between symptomatic and asymptomatic COVID–19 cases, at this time we do not believe it is operationally feasible to make such a distinction given that separate coding does not exist to differentiate these cases. We may consider this suggestion in connection with future rulemaking.

After consideration of comments received, we are finalizing our proposal to determine the FY 2023 MS–DRG relative weights by averaging the relative weights as calculated with and without COVID–19 cases in the FY 2021 data, as previously described. As previously discussed, for this final rule, we are using the March 2022 update of the FY 2021 MedPAR file to determine the final relative weights for FY 2023. The relative weights, geometric mean length of stay, and average length of stay as calculated using this methodology are set forth in Table 5 associated with this final rule, which is available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. We are also making available the relative weights, geometric mean length of stay, and average length of stay as calculated in steps 1 and 2 of this methodology on our website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*.

d. Cap for Relative Weight Reductions

In the FY 2018 IPPS/LTCH PPS final rule, we summarized comments we had received requesting a transition period for substantial reductions in relative weights in order to facilitate payment stability. Specifically, some commenters requested that CMS establish a cap on the decline in a relative weight from FY 2017 to FY 2018, or a phase-in or multi-year transition period in cases of substantial fluctuation of payment rates (82 FR 38103).

After consideration of these comments, and for the reasons discussed in the FY 2018 final rule, we adopted a temporary one-time measure for FY 2018 for MS–DRGs where the relative weight would have declined by more than 20 percent from the FY 2017 relative weight, consistent with our general authority to assign and update appropriate weighting factors under sections 1886(d)(4)(B) and (C) of the Act (82 FR 38103). Specifically, for these MS–DRGs, the relative weight for FY 2018 was set at 80 percent of the FY 2017 relative weight. In the FY 2019 IPPS/LTCH PPS final rule, in response to similar comments, we adopted a temporary one-time measure for FY 2019 for an MS–DRG where the FY 2018 relative weight declined by 20 percent from the FY 2017 relative weight and the FY 2019 relative weight would have declined by 20 percent or more from the FY 2018 relative weight (83 FR 41273). Specifically, for an MS–DRG meeting this criterion, we set the FY 2019 relative weight equal to the FY 2018 relative weight. In the FY 2020 IPPS/LTCH PPS final rule, in response to similar comments, we adopted a temporary one-time measure for FY 2020 for an MS–DRG where the FY 2018 relative weight declined by 20 percent from the FY 2017 relative weight and the FY 2020 relative weight would have declined by 20 percent or more from the FY 2019 relative weight, which was maintained at the FY 2018 relative weight (84 FR 42167). Specifically, for an MS–DRG meeting this criterion, we set the FY 2020 relative weight equal to the FY 2019 relative weight, which was in turn set equal to the FY 2018 relative weight.

In the FY 2021 IPPS/LTCH PPS proposed rule, we noted the one-time measure adopted for FY 2020 and sought comment on whether we should consider a similar policy for FY 2021, or an alternative approach such as averaging the FY 2020 relative weight and the otherwise applicable FY 2021 relative weight for MS–DRG 215, which was the only MS–DRG impacted by the FY 2020 policy setting the FY 2020 relative weight equal to the FY 2019 relative weight. Commenters generally supported either setting the FY 2021 weight for MS–DRG 215 equal to the FY 2020 relative weight or an averaging approach. Some commenters requested that CMS consider such an approach when the relative weight for an MS–DRG is drastically reduced in a given year, particularly when it follows a significant decline in prior years. After consideration of comments received, and for the reasons discussed in the FY 2021 final rule, we set the FY 2021 relative weight for MS–DRG 215 equal to the average of the FY 2020 relative weight and the otherwise applicable FY 2021 weight. With regard to the concerns raised about other MS–DRGs with significant reductions relative to FY 2020, we noted that these other MS–DRGs were low volume in our claims data, and therefore typically experience a greater degree of year-to-year variation. We acknowledged the longstanding concerns related to low volume MS–DRGs and stated that we would take into consideration the unique issues relating to such MS–DRGs and the stability of their weights for future rulemaking.

As we stated in the FY 2023 IPPS/LTCH PPS proposed rule, we have continued to consider the comments we received in response to prior rulemaking recommending that CMS limit significant declines in the relative weights for the MS–DRGs more broadly, including by establishing a cap on the degree to which the relative weight for an MS–DRG may decline from one fiscal year to the next. For prior fiscal years, as previously discussed, we have adopted limited, temporary measures to address potentially substantial declines in the relative weights in certain outlier circumstances to mitigate the impacts of such declines. However, we have also acknowledged commenters' concerns related to significant reductions in the weights for other MS–DRGs, in particular low volume MS–DRGs. For these low volume MS–DRGs, fluctuations in the volume or mix of cases and/or the presence of a few high cost or low cost cases can have a disproportionate impact on the calculated relative weight, thus resulting in greater year-to-year variation in the relative weights for these MS–DRGs. This variation may reduce the predictability and stability of an individual hospital's Medicare payments from year-to-year. We also recognize that significant declines in the relative weights may occur for higher-volume MS–DRGs, with such fluctuations likewise affecting the predictability and stability of hospital payments.

In light of these concerns, we have further considered requests made by commenters that we address year-to-year fluctuations in relative weights, particularly for low volume MS–DRGs, and to mitigate the financial impacts of significant fluctuations. In consideration of the concerns that commenters have raised about year-to-year fluctuations in relative weights and the financial impacts of significant fluctuations, we stated in the proposed rule that we believe it would be appropriate to limit such fluctuations by applying a cap on reductions in the relative weight for an MS–DRG for a given fiscal year. Therefore, consistent with our statutory authority under section 1886(d)(4)(B) and (C) of the Act to assign and update appropriate weighting factors, we proposed a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. This proposal is consistent with our general authority to assign and update appropriate weighting factors as part of our annual reclassification of the MS–DRGs and recalibration of the relative weights under sections 1886(d)(4)(B) and (C)(i) of the Act, as well as the requirements of section 1886(d)(4)(C)(iii) of the Act, which specifies that the annual DRG reclassification and recalibration of the relative weights be made in a manner that ensures that aggregate payments to hospitals are not affected. In addition, we have authority to implement this proposed cap and the associated budget neutrality adjustment under our special exceptions and adjustments authority at section 1886(d)(5)(I)(i) of the Act, which similarly gives the Secretary broad authority to provide by regulation for such other exceptions and adjustments to the payment amounts under section 1886(d) of the Act as the Secretary deems appropriate. As discussed, we believe this cap on declines in the relative weights would be appropriate in order to promote predictability and stability in hospital payments and to mitigate the financial impacts of significant fluctuations in the weights. That is, by smoothing year-to-year changes in the MS–DRG relative weights, we stated that this proposal would provide greater predictability to hospitals, allowing time to adjust to significant changes to relative weights. Moreover, consistent with the budget neutrality requirement for annual updates to the relative weights, including our implementation of similar caps on significant declines in the relative weight for prior fiscal years, we believe that application of this proposed 10-percent cap on relative weight reductions should not increase estimated aggregate Medicare payments beyond the payments that would be made had we never applied this cap. Accordingly, we proposed to apply a budget neutrality adjustment to the standardized amount for all hospitals to ensure that application of the proposed 10-percent cap does not result in an increase or decrease of estimated aggregate payments. For a further discussion of the budget neutrality

adjustment, we refer readers to the Addendum of the proposed rule and this final rule.

Under this proposal, in cases where the relative weight for a MS–DRG would decrease by more than 10 percent in a given fiscal year, we proposed to limit the reduction to 10 percent for that fiscal year. For example, if the relative weight for an MS–DRG in FY 2022 is 1.100 and the relative weight for FY 2023 would otherwise be 0.9350, which would represent a decrease of 15 percent from FY 2022, the reduction would be limited to 10 percent, such that the proposed relative weight for FY 2023 for MS–DRG XYZ would be 0.9900 (that is, 0.90 × FY 2022 weight of 1.100). The proposed relative weights for FY 2023 as set forth in Table 5 associated with the proposed rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* reflect the application of this proposed cap.

As previously summarized, in the past, we have adopted a temporary cap of 20 percent on the decline in an MS–DRG's relative weight to address certain outlier circumstances. However, as also previously discussed, we recognize that hospitals may benefit from the phase-in of smaller declines in the relative weight that may nonetheless contribute to less stability and predictability in hospital payment rates. Accordingly, for purposes of this proposed permanent cap, we considered that a higher cap, such as the 20-percent cap that we have applied previously (see, for example, 82 FR 38103), would limit declines in the relative weights for fewer MS–DRGs (5 MS–DRGs in our analysis of the March 2022 update of the FY 2021 MedPAR claims), while a lower cap, such as a 5-percent cap, would limit declines in the relative weights for more MS–DRGs (92 MS–DRGs in our analysis of the March 2022 update of the FY 2021 MedPAR claims), but with a larger associated budget neutrality adjustment to the standardized amount. On balance, we stated that we believe that a 10-percent cap would mitigate financial impacts resulting from significant fluctuations in the relative weights, particularly for low volume MS–DRGs, without the larger budget neutrality adjustment associated with a smaller cap. We noted that this proposed policy would limit declines in the relative weight for 27 MS–DRGs, based on the FY 2021 claims data used for the proposed rule; based on the March 2022 update of the FY 2021 claims data used for this final rule, we note that it would limit declines in the relative weights for 31 MS–DRGs.

We noted that this proposed 10-percent cap on reductions to an MS–DRG's relative weight would apply only to a given MS–DRG with its current MS–DRG number. In cases where CMS creates new MS–DRGs or modifies the MS–DRGs as part of its annual reclassifications resulting in renumbering of one or more MS–DRGs, we proposed that this limit on the reduction in the relative weight would not apply to any MS–DRGs affected by the renumbering (that is, the proposed 10-percent cap would not apply to the relative weight for any new or renumbered MS–DRGs for the fiscal year). We proposed to modify the regulations at § 412.60(b) to reflect this proposed permanent cap on relative weight reductions. We sought comments on our proposal to apply a 10-percent cap on decreases in an MS–DRG relative weight from one fiscal year to the next.

Comment: Many commenters supported our proposal to cap yearly reductions in an MS–DRG's relative weight to 10%. Commenters stated that significant year-over-year reductions can disrupt patient access to medically necessary treatment, that large swings are inconsistent with the principle of payment stability, and that a permanent 10 percent cap would provide more time for providers to adjust to significant changes in relative weights. A commenter stated that a cap on relative weight decreases could incentivize greater innovation, as hospitals may avoid MS–DRGs with significant declines, even if they offer more innovative, cost-saving treatment approaches. This commenter stated that mitigating large year-to-year payment changes would encourage providers to use the most clinically appropriate care. Commenters also stated that the cap is particularly helpful for low volume services, as they stated that shifts in these MS–DRGs are not reflective of true changes in the cost of care.

Some commenters requested that CMS apply the cap in a non-budget neutral manner. A commenter requested that CMS monitor for any unintended consequences of the cap, given that it is budget neutral.

Many commenters requested that CMS finalize a permanent lower cap, with some commenters expressing concern that with a 10% cap, there are still sizable reductions for high-cost MS–DRGs. Other commenters requested that CMS finalize a one-year cap of 5%, followed by a permanent cap of 10%. Several commenters recommended a permanent 5% cap, while others requested CMS set the floor as low as possible. Some commenters noted that a broad range of MS–DRGs have weight fluctuations in FY 2023 due to unique circumstances, such as the first use of hospital data impacted by the COVID–19 PHE for IPPS ratesetting. A commenter stated that the 10% cap benefits mostly medical MS–DRGs, while many surgical MS–DRGs would experience reductions greater than 5 percent but less than 10 percent. This commenter stated that capping reductions at 5% is consistent with the rationale to blend hospital claims with and without COVID–19, due to the uncertainty around the degree to which FY 2021 will reflect hospitals' costs and case mix in FY 2023. One commenter noted that their analysis of the MS–DRG relative weights showed that the average yearly variation in relative weights was 5%, so a permanent 5% cap is more in line with historical MS–DRG variation. A commenter stated that there is precedent of a 5% cap in other parts of the IPPS, such as the wage index.

One commenter requested that if CMS finalizes a 10% cap, that the agency continue to monitor whether a 10% cap is appropriate. A commenter requested that CMS update this policy clearly and transparently, and with additional stakeholder input, on an annual basis to maintain stability and predictability.

Some commenters acknowledged that setting a lower threshold for the cap would necessitate a larger budget neutrality adjustment, but that the redistributive impact would be minimal overall. These commenters stated that on balance it is still preferable to smooth the impact of steep payment declines for a larger number of services.

One commenter stated that it is premature for CMS to adopt a permanent cap, and recommended that CMS implement the 10% cap for FY 2023 only without a budget neutrality offset. This commenter stated that as COVID–19 becomes more endemic in the population, and less severe and costly in hospitals, Medicare utilization would be expected to return to its former level of annual stability, negating the need for a permanent cap on reductions to relative weights.

A commenter requested that any caps on the maximum annual change to the MS–DRG relative weights should not apply to just decreases but to increases as well.

A commenter stated that any new MS–DRG or modified version of an existing MS–DRG would benefit from the 10% cap in subsequent years following its introduction or modification. This commenter requested that CMS apply the 10% cap to all MS–DRGs once the MS–DRG has been established and gone through at least one year of the relative weight setting

process. This commenter also requested that CMS consider how this type of policy could support long term payment stability for relative weights and hospital payments.

One commenter suggested that similar caps on payment reductions would be beneficial under the OPPS and PFS for revised or bundled coding updates.

Response: We appreciate commenters' support for and feedback on our proposal. However, we disagree with the suggestion that the proposed cap be applied in a non-budget neutral manner. As we stated in the IPPS/LTCH PPS proposed rule, our proposal is consistent with the requirements of section 1886(d)(4)(C)(iii) of the Act, which specifies that the annual DRG reclassification and recalibration of the relative weights be made in a manner that ensures that aggregate payments to hospitals are not affected. Consistent with this budget neutrality requirement for annual updates to the relative weights, we believe that application of this proposed 10-percent cap on relative weight reductions should not increase estimated aggregate Medicare payments beyond the payments that would be made had we never applied this cap. This is also consistent with our implementation of similar caps on significant declines in the relative weight for prior fiscal years, as previously summarized.

We appreciate commenters' feedback on the size of the cap on year-to-year declines in an MS–DRG's relative weight, however we disagree that we should finalize a lower cap, whether for one year or on a permanent basis. As discussed in the proposed rule, after considering larger and smaller caps, we determined that on balance, a 10-percent cap would promote predictability and mitigate financial impacts resulting from significant fluctuations in the relative weights, particularly for low volume MS–DRGs, without the larger budget neutrality adjustment associated with a smaller cap. With respect to commenters who stated that we should finalize a five percent cap because there were greater fluctuations due to the first use of the PHE data for ratesetting and that many surgical MS–DRGs would experience declines of between 5 and 10 percent, we note that declines in relative weights between 5 and 10 percent are not uncommon. For example, we note that prior to the PHE, and relative to the 25 medical MS–DRGs and 36 surgical MS–DRGs for which the FY 2023 relative weight is declining between 5 and 10 percent as compared to FY 2022 (based on the March 2022 update of the FY 2021 claims data used for this final rule), for the FY 2020 IPPS/LTCH PPS final rule, 27 surgical MS–DRGs and 21 medical MS–DRGs declined between 5 and 10 percent, and for the FY 2019 IPPS/LTCH PPS final rule, 32 surgical MS–DRGs and 25 medical MS–DRGs declined between 5 and 10 percent. Therefore, we do not believe that the number of MS–DRGs for which the FY 2023 relative weight is declining between 5 and 10 percent is unusual or necessarily related to the first use of the PHE data. We therefore continue to believe that a 10-percent cap strikes the appropriate balance between considerations of promoting predictability and mitigating financial impacts resulting from significant fluctuations in the relative weights, without the larger budget neutrality adjustment associated with a smaller cap. We acknowledge commenters' observation that most MS–DRGs impacted by the cap for FY 2023 are medical MS–DRGs; we note that the particular MS–DRGs impacted in a given year would be expected to fluctuate based on changes in the underlying data or as result of reclassifications.

With respect to the commenters who requested that CMS implement a 10-percent cap for one year only or update the policy on an annual basis, we believe that in order to better promote predictability and stability in hospital payments, it is appropriate to finalize a permanent 10-percent cap on year-to-year declines in the relative weight, beginning with the FY 2023 relative weights. We expect to continue to monitor the effects of this cap, including the number of MS–DRGs subject to the cap for any given fiscal year, and to present in the Addendum to the annual proposed and final rules the budget neutrality adjustment for reclassification and recalibration of the MS–DRG relative weights with application of this cap. We also anticipate continuing to make available on the CMS website a supplemental file demonstrating the application of the permanent 10 percent cap for future years.

With regard to the comment requesting that caps on maximum changes to an MS–DRG's relative weight apply to increases as well, as discussed in the IPPS/LTCH PPS proposed rule, our goal in smoothing year-to-year changes in the relative weights is to mitigate financial impacts associated with significant declines in an MS–DRG's relative weight and allow hospitals more time to adjust to such changes by phasing-in these declines. In cases where the underlying data or MS–DRG reclassifications result in an increase to an MS–DRG's relative weight, we do not believe a such a phase-in is appropriate.

With regard to new or modified MS–DRGs, we are clarifying that after the first fiscal year that these new or modified MS–DRGs take effect, any changes to the relative weights for those MS–DRGs would also be subject to the 10-percent cap.

With regard to the commenter's suggestion about long-term payment stability, we note that the goal of this policy is to smooth year-to-year changes.

With regard to similar caps on payment under other payment systems, we note that this comment is outside the scope of the proposals included in the FY 2023 IPPS/LTCH PPS proposed rule, and we are therefore not addressing this comment in this final rule. We may consider this comment in connection with future rulemaking.

After consideration of comments received, we are finalizing the proposed permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year and the associated budget neutrality adjustment to the standardized amount, as previously described in this section, beginning in FY 2023. We are also finalizing our proposed modifications to the regulations at § 412.60(b) to reflect this permanent cap on relative weight reductions. The final relative weights for FY 2023 as set forth in Table 5 associated with this final rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* reflect the application of this finalized cap. For a further discussion of the budget neutrality adjustment for FY 2023, we refer readers to the Addendum of this final rule.

3. Development of National Average CCRs

We developed the national average CCRs as follows:

Using the FY 2020 cost report data, we removed CAHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. Then we created CCRs for each provider for each cost center (see the supplemental data file for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. Then we took the logs of the

normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D–3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D–3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS–DRG in each of the 19 cost centers by the corresponding national average CCR, we summed the 19 ''costs'' across each MS–DRG to produce a total standardized cost for the MS–DRG. The average standardized cost for each MS–DRG was then computed as the total standardized cost for the MS–DRG divided by the transfer-adjusted case count for the MS–DRG. The average cost for each MS–DRG was then divided by the national average standardized cost per case to determine the proposed relative weight.

As discussed earlier in this section, we are finalizing our proposal to (a) use 50 percent of the relative weights calculated using all cases in the FY 2021 MedPAR data and 50 percent of the relative weights calculated without COVID–19 cases in the FY 2021 MedPAR data to calculate the relative weights for FY 2023; and (b) apply a permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, beginning in FY 2023.

In developing the relative weights consistent with these finalized policies, we first created a set of relative weights using all applicable cases in the March 2022 update of the FY 2021 MedPAR data, using the methodology as described earlier in this section (Step 1). These relative weights were then normalized by an adjustment factor of 1.948410 so that the average case weight after recalibration was equal to the average case weight before recalibration. The normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

Next, we created a set of relative weights using the March 2022 update of the FY 2021 MedPAR data excluding cases with a principal or secondary diagnosis of COVID–19 (ICD–10–CM diagnosis code U07.1), and otherwise using the methodology as described earlier in this section (Step 2). These relative weights were then normalized by an adjustment factor of 1.916445.

We then averaged the results of Step 1 and Step 2 (Step 3), and normalized these relative weights by applying an adjustment factor of 1.000212 (Step 4). This normalization adjustment is intended to ensure that this averaging methodology for recalibration of the FY 2023 relative weights neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

Finally, we applied the 10 percent cap to the relative weights for those MS–DRGs for which the relative weight as calculated in Step 4 would otherwise have declined by more than 10 percent from the FY 2022 relative weight (Step 5). Specifically, for those MS–DRGs for which the relative weight as calculated in Step 4 declined by more than 10 percent from the FY 2022 relative weight, we set the FY 2023 relative weight equal to 90 percent of the FY 2022 relative weight. The relative weights for FY 2023 as set forth in Table 5 associated with this final rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* reflect the application of this cap. We are also making available a supplemental file setting forth the relative weights as calculated with all cases (Step 1), excluding cases with a principal or secondary diagnosis of COVID–19 (Step 2), following application of the normalization factor and prior to the application of this cap (Step 4), and with the application of this cap (Step 5) along with the other supplemental files for this final rule, on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*.

The 19 national average CCRs for FY 2023 are as follows:

BILLING CODE 4120–01–P

Group	CCR
Routine Days	0.422
Intensive Days	0.341
Drugs	0.184
Supplies & Equipment	0.311
Implantable Devices	0.281
Inhalation Therapy	0.15
Therapy Services	0.283
Anesthesia	0.072
Labor & Delivery	0.366
Operating Room	0.165
Cardiology	0.094
Cardiac Catheterization	0.104
Laboratory	0.107
Radiology	0.137
MRIs	0.071
CT Scans	0.034
Emergency Room	0.155
Blood and Blood Products	0.255
Other Services	0.359

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS–DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. We are proposed to use that same case threshold in recalibrating the proposed MS–DRG relative weights for FY 2023. Using data from the FY 2021 MedPAR file, there were 7 MS–DRGs that contain fewer than 10 cases. For FY 2023, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS–DRGs, we proposed to compute relative weights for the low-volume MS–DRGs by adjusting their final FY 2022 relative weights by the percentage change in the average weight of the cases in other MS–DRGs from FY 2022 to FY 2023. The crosswalk table is as follows.

Low-Volume MS-DRG	MS-DRG Title	Crosswalk to MS-DRG
789	Neonates, Died or Transferred to Another Acute Care Facility	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
791	Prematurity with Major Problems	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
792	Prematurity without Major Problems	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
793	Full-Term Neonate with Major Problems	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
794	Neonate with Other Significant Problems	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
795	Normal Newborn	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)

BILLING CODE 4120–01–C

We did not receive any public comments on our proposals and we are finalizing our proposals without modification.

F. Add-On Payments for New Services and Technologies for FY 2023

1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies (sometimes collectively referred to in this section as ''new technologies'') under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate. The regulations at 42 CFR 412.87 implement these provisions and § 412.87(b) specifies three criteria for a new medical service or technology to receive the additional payment: (1) the medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. In addition, certain transformative new devices and antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway, as set forth in the regulations at § 412.87(c) and (d). We note that section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services and technologies under the payment system established under that subsection, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act. Therefore, as discussed in prior rulemaking (72 FR 47307 through 47308), we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs.

In this rule, we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For further discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42300), and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58736 through 58742).

a. New Technology Add-On Payment Criteria

(1) Newness Criterion

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will no longer be considered ''new'' for purposes of new medical service or technology add-on payments after CMS has recalibrated the MS–DRGs, based on available data, to reflect the cost of the technology. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a medical product receives a new FDA approval or clearance, it may not necessarily be considered ''new'' for purposes of new technology add-on payments if it is ''substantially similar'' to another medical product that was approved or cleared by FDA and has been on the market for more than 2 to 3 years. In the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically whether: (1) a product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) a product is assigned to the same or a different MS–DRG; and (3) the new use

of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all three of these criteria, it would be considered substantially similar to an existing technology and would not be considered ''new'' for purposes of new technology add-on payments. For a detailed discussion of the criteria for substantial similarity, we refer readers to the FY 2006 IPPS final rule (70 FR 47351 through 47352) and the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814).

(2) Cost Criterion

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for new medical services or technologies, the MS–DRG prospective payment rate otherwise applicable to discharges involving the new medical service or technology must be assessed for adequacy. Under the cost criterion, consistent with the formula specified in section 1886(d)(5)(K)(ii)(I) of the Act, to assess the adequacy of payment for a new technology paid under the applicable MS–DRG prospective payment rate, we evaluate whether the charges of the cases involving a new medical service or technology will exceed a threshold amount that is the lesser of 75% of the standardized amount (increased to reflect the difference between cost and charges) or 75% of one standard deviation beyond the geometric mean standardized charge for all cases in the MS–DRG to which the new medical service or technology is assigned (or the case-weighted average of all relevant MS–DRGs if the new medical service or technology occurs in many different MS–DRGs). The MS–DRG threshold amounts generally used in evaluating new technology add-on payment applications for FY 2023 are presented in a data file that is available, along with the other data files associated with the FY 2022 IPPS/LTCH PPS final rule and correction notice, on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

We note that, under the policy finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58603 through 58605), beginning with FY 2022, we use the proposed threshold values associated with the proposed rule for that fiscal year to evaluate the cost criterion for all applications for new technology add-on payments and previously approved technologies that may continue to receive new technology add-on payments, if those technologies would be assigned to a proposed new MS–DRG for that same fiscal year.

As finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41275), beginning with FY 2020, we include the thresholds applicable to the next fiscal year (previously included in Table 10 of the annual IPPS/LTCH PPS proposed and final rules) in the data files associated with the prior fiscal year. Accordingly, the proposed thresholds for applications for new technology add-on payments for FY 2024 were presented in a data file that is available on the CMS website, along with the other data files associated with the FY 2023 final rule, by clicking on the FY 2023 IPPS final rule home page at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule, in the FY 2022 IPPS/LTCH PPS final rule, we finalized our proposal to use the FY 2019 MedPAR claims data where we ordinarily would have used the FY 2020 MedPAR claims data for purposes of FY 2022 ratesetting. Consistent with that final policy, we finalized our proposal to use the FY 2019 claims data to set the thresholds for applications for new technology add-on payments for FY 2023. We note that, for the reasons discussed in section I.F. of the preamble of the proposed rule and this final rule, we proposed to use the FY 2021 MedPAR claims data for FY 2023 ratesetting, with certain proposed modifications to our relative weight setting and outlier methodologies. Consistent with this proposal, for the FY 2024 proposed threshold values, we proposed to use the FY 2021 claims data to set the proposed thresholds for applications for new technology add-on payments for FY 2024. In addition, as discussed in section III.E.1.c. of the proposed rule and this final rule, we proposed to use an averaging approach for calculating the FY 2023 relative weights, to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries as compared to FY 2021. Specifically, we proposed to average the relative weights as calculated with and without COVID–19 cases in the FY 2021 data to determine the MS–DRG relative weights for FY 2023. Certain steps of calculating the thresholds for applications for new technology add-on payments use the same charge data that is used to calculate the MS–DRG weights. As a result, different average charges per MS–DRG are calculated using the charge data for the relative weights as calculated with and without COVID–19 cases. Therefore, for purposes of calculating the FY 2024 thresholds, we also proposed to average the data in the steps of the calculation that use charge data from the calculation of the MS–DRG weights. In addition, as discussed in section I.O. of the appendix of the FY 2023 IPPS/LTCH proposed rule (87 FR 28740 through 28741), we also considered, as an alternative to our proposal, calculating the FY 2023 MS–DRG relative weights without the proposed averaging approach to account for COVID–19 cases. In connection with this alternative approach, we made available the threshold values as calculated without this averaged data on the ''FY 2023 Final Rule Homepage'' at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*, as well as other supplemental files as discussed further in section I.O. of Appendix A of this final rule.

As discussed in section I.F. of the preamble of this final rule, we are finalizing our proposal to use the FY 2021 MedPAR claims data for FY 2023 ratesetting. Also, as discussed in section II.E of this final rule we are finalizing our proposal to average the relative weights as calculated with and without COVID–19 cases in the FY 2021 data to determine the MS–DRG relative weights for FY 2023. We did not receive any public comments on our proposal to average the data in the steps of the calculation of the FY 2024 thresholds that use charge data from the calculation of the MS–DRG weights, as discussed in the proposed rule. Accordingly, in this final rule, we are finalizing to use FY 2021 claims data to set the thresholds for applications for new technology add-on payments for FY 2024, and we are also finalizing to average the data in the steps of the calculation of the FY 2024 thresholds that use charge data from the calculation of the MS–DRG weights, as described previously. The finalized thresholds for applications for new technology add-on payments for FY 2024 are presented in a data file that is available on the CMS website, along with the other data files associated with this FY 2023 final rule, by clicking on the FY 2023 IPPS Final Rule Home Page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

In the September 7, 2001, final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed that applicants should submit a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Specifically, applicants should submit a sample of sufficient size to enable us to undertake an initial

validation and analysis of the data. We also discussed in the September 7, 2001, final rule (66 FR 46917) the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR parts 160 and 164 applies to claims information that providers submit with applications for new medical service or technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for further information on this issue.

(3) Substantial Clinical Improvement Criterion

Under the third criterion at § 412.87(b)(1), a medical service or technology must represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292), we prospectively codified in our regulations at § 412.87(b) the following aspects of how we evaluate substantial clinical improvement for purposes of new technology add-on payments under the IPPS:

- The totality of the circumstances is considered when making a determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries.
- A determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries means—

++ The new medical service or technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments;

++ The new medical service or technology offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable, or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods, and there must also be evidence that use of the new medical service or technology to make a diagnosis affects the management of the patient;

++ The use of the new medical service or technology significantly improves clinical outcomes relative to services or technologies previously available as demonstrated by one or more of the following: a reduction in at least one clinically significant adverse event, including a reduction in mortality or a clinically significant complication; a decreased rate of at least one subsequent diagnostic or therapeutic intervention; a decreased number of future hospitalizations or physician visits; a more rapid beneficial resolution of the disease process treatment including, but not limited to, a reduced length of stay or recovery time; an improvement in one or more activities of daily living; an improved quality of life; or, a demonstrated greater medication adherence or compliance; or

++ The totality of the circumstances otherwise demonstrates that the new medical service or technology substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.

- Evidence from the following published or unpublished information sources from within the United States or elsewhere may be sufficient to establish that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries: clinical trials, peer reviewed journal articles; study results; meta-analyses; consensus statements; white papers; patient surveys; case studies; reports; systematic literature reviews; letters from major healthcare associations; editorials and letters to the editor; and public comments. Other appropriate information sources may be considered.
- The medical condition diagnosed or treated by the new medical service or technology may have a low prevalence among Medicare beneficiaries.
- The new medical service or technology may represent an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of a subpopulation of patients with the medical condition diagnosed or treated by the new medical service or technology.

We refer the reader to the FY 2020 IPPS/LTCH PPS final rule for additional discussion of the evaluation of substantial clinical improvement for purposes of new technology add-on payments under the IPPS.

We note, consistent with the discussion in the FY 2003 IPPS final rule (67 FR 50015), that while FDA has regulatory responsibility for decisions related to marketing authorization (for example, approval, clearance, etc.), we do not rely upon FDA criteria in our evaluation of substantial clinical improvement for purposes of determining what drugs, devices, or technologies qualify for new technology add-on payments under Medicare. This criterion does not depend on the standard of safety and effectiveness on which FDA relies but on a demonstration of substantial clinical improvement in the Medicare population.

b. Alternative Inpatient New Technology Add-On Payment Pathway

Beginning with applications for FY 2021 new technology add-on payments, under the regulations at § 412.87(c), a medical device that is part of FDA's Breakthrough Devices Program may qualify for the new technology add-on payment under an alternative pathway. Additionally, under the regulations at § 412.87(d) for certain antimicrobial products, beginning with FY 2021, a drug that is designated by FDA as a Qualified Infectious Disease Product (QIDP), and, beginning with FY 2022, a drug that is approved by FDA under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD), may also qualify for the new technology add-on payment under an alternative pathway. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy. We note that a technology is not required to have the specified FDA designation at the time the new technology add-on payment application is submitted. CMS reviews the application based on the information provided by the applicant only under the alternative pathway specified by the applicant at the time of new technology add-on payment application submission. However, to receive approval for the new technology add-on payment under that alternative pathway, the technology must have the applicable FDA designation and meet all other requirements in the regulations in § 412.87(c) and (d), as applicable.

(1) Alternative Pathway for Certain Transformative New Devices

For applications received for new technology add-on payments for FY 2021 and subsequent fiscal years, if a medical device is part of FDA's Breakthrough Devices Program and received FDA marketing authorization, it will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to meet the requirement under § 412.87(b)(1) that it represent an advance that substantially improves,

relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway, a medical device that has received FDA marketing authorization (that is, has been approved or cleared by, or had a De Novo classification request granted by, FDA) and that is part of FDA's Breakthrough Devices Program will need to meet the requirements of § 412.87(c). We note that in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736), we clarified our policy that a new medical device under this alternative pathway must receive marketing authorization for the indication covered by the Breakthrough Devices Program designation. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736) for further discussion regarding this clarification.

(2) Alternative Pathway for Certain Antimicrobial Products

For applications received for new technology add-on payments for certain antimicrobial products, beginning with FY 2021, if a technology is designated by FDA as a QIDP and received FDA marketing authorization, and, beginning with FY 2022, if a drug is approved under FDA's LPAD pathway and used for the indication approved under the LPAD pathway, it will be considered not substantially similar to an existing technology for purposes of new technology add-on payments and will not need to meet the requirement that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway for QIDPs and LPADs, a medical product that has received FDA marketing authorization and is designated by FDA as a QIDP or approved under the LPAD pathway will need to meet the requirements of § 412.87(d).

We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy. We note, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739), we clarified that a new medical product seeking approval for the new technology add-on payment under the alternative pathway for QIDPs must receive marketing authorization for the indication covered by the QIDP designation. We also finalized our policy to expand our alternative new technology add-on payment pathway for certain antimicrobial products to include products approved under the LPAD pathway and used for the indication approved under the LPAD pathway.

c. Additional Payment for New Medical Service or Technology

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies, while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. As noted previously, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (72 FR 47307 through 47308).

For discharges occurring before October 1, 2019, under § 412.88, if the costs of the discharge (determined by applying operating cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), CMS made an add-on payment equal to the lesser of: (1) 50% of the costs of the new medical service or technology; or (2) 50% of the amount by which the costs of the case exceed the standard DRG payment.

Beginning with discharges on or after October 1, 2019, for the reasons discussed in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300), we finalized an increase in the new technology add-on payment percentage, as reflected at § 412.88(a)(2)(ii). Specifically, for a new technology other than a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 65% of the costs of the new medical service or technology; or (2) 65% of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75% of the costs of the new medical service or technology; or (2) 75% of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product approved under FDA's LPAD pathway, beginning with discharges on or after October 1, 2020, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75% of the costs of the new medical service or technology; or (2) 75% of the amount by which the costs of the case exceed the standard DRG payment. As set forth in § 412.88(b)(2), unless the discharge qualifies for an outlier payment, the additional Medicare payment will be limited to the full MS–DRG payment plus 65% (or 75% for certain antimicrobial products (QIDPs and LPADs)) of the estimated costs of the new technology or medical service. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300) for further discussion on the increase in the new technology add-on payment beginning with discharges on or after October 1, 2019.

Section 503(d)(2) of Public Law 108–173 provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of Public Law 108–173, add-on payments for new medical services or technologies for FY 2005 and subsequent years have not been subjected to budget neutrality.

d. Evaluation of Eligibility Criteria for New Medical Service or Technology Applications

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulation at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We specified that all applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the

year prior to the beginning of the fiscal year for which the application is being considered. In the FY 2021 IPPS/LTCH PPS final rule, to more precisely describe the various types of FDA approvals, clearances and classifications that we consider under our new technology add-on payment policy, we finalized a technical clarification to the regulation to indicate that new technologies must receive FDA marketing authorization (such as pre-market approval (PMA); 510(k) clearance; the granting of a De Novo classification request, or approval of a New Drug Application (NDA)) by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. Consistent with our longstanding policy, we consider FDA marketing authorization as representing that a product has received FDA approval or clearance when considering eligibility for the new technology add-on payment under § 412.87(e)(2) (85 FR 58742).

Additionally, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58739 through 58742), we finalized our proposal to provide conditional approval for new technology add-on payment for a technology for which an application is submitted under the alternative pathway for certain antimicrobial products at § 412.87(d) that does not receive FDA marketing authorization by the July 1 deadline specified in § 412.87(e)(2), provided that the technology otherwise meets the applicable add-on payment criteria. Under this policy, cases involving eligible antimicrobial products would begin receiving the new technology add-on payment sooner, effective for discharges the quarter after the date of FDA marketing authorization provided that the technology receives FDA marketing authorization by July 1 of the particular fiscal year for which the applicant applied for new technology add-on payments.

e. New Technology Liaisons

Many interested parties (including device/biologic/drug developers or manufacturers, industry consultants, others) engage CMS for coverage, coding, and payment questions or concerns. In order to streamline engagement by centralizing the different innovation pathways within CMS including new technology add-on payments, CMS has established a team of new technology liaisons that can serve as an initial resource for interested parties. This team is available to assist with all of the following:

- Help to point interested parties to or provide information and resources where possible regarding process, requirements, and timelines.
- Coordinate and facilitate opportunities for interested parties to engage with various CMS components.
- Serve as a primary point of contact for interested parties and provide updates on developments where possible or appropriate.

We received many questions from interested parties with respect to pursuing new technology add-on payments who may not be entirely familiar with working with CMS. While we encourage interested parties to first review our resources available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech*, we know that there may be additional questions about the application process. Interested parties with further questions about Medicare's coverage, coding, and payment processes, and about how they can navigate these processes, whether for new technology add-on payments or otherwise, can contact the new technology liaison team at *MedicareInnovation@cms.hhs.gov*.

f. Application Information for New Medical Services or Technologies

Applicants for add-on payments for new medical services or technologies for FY 2024 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement (unless the application is under one of the alternative pathways as previously described), along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. CMS will review the application based on the information provided by the applicant under the pathway specified by the applicant at the time of application submission. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html*. To allow interested parties to identify the new medical services or technologies under review before the publication of the final rule for FY 2024, the CMS website also will post the tracking forms completed by each applicant. We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the formal request for add-on payments for new medical services and technologies to CMS. The aforementioned burden is subject to the Paper Reduction Act (PRA) and approved under OMB control number 0938–1347, and has an expiration date of 11/30/2023.

As discussed previously, in the FY 2020 IPPS/LTCH PPS final rule, we adopted an alternative inpatient new technology add-on payment pathway for certain transformative new devices and for Qualified Infectious Disease Products, as set forth in the regulations at § 412.87(c) and (d). The change in burden associated with these changes to the new technology add-on payment application process were discussed in a revision of the information collection requirement (ICR) request currently approved under OMB control number 0938–1347, with an expiration date of November 30, 2023. In accordance with the implementing regulations of the PRA, we detailed the revisions of the ICR and published the required 60-day notice on August 15, 2019 (84 FR 41723), and 30-day notice on December 17, 2019 (84 FR 68936), to solicit public comments.

2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of Public Law 108–173, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement. The process for evaluating new medical service and technology applications requires the Secretary to do all of the following:

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries.
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending.
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement.
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data

regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2023 prior to publication of the FY 2023 IPPS/LTCH PPS proposed rule, we published a notice in the **Federal Register** on September 24, 2021 (86 FR 53056), and held a virtual town hall meeting on December 14, 2021. In the announcement notice for the meeting, we stated that the opinions and presentations provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for the FY 2023 new medical service and technology add-on payment applications before the publication of the FY 2023 IPPS/LTCH IPPS proposed rule.

Approximately 378 individuals registered to attend the virtual town hall meeting. We posted the recordings of the virtual town hall on the CMS web page at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech*.

We considered each applicant's presentation made at the town hall meeting, as well as written comments received by the December 27, 2021, deadline, in our evaluation of the new technology add-on payment applications for FY 2023 in the development of the FY 2023 IPPS/LTCH PPS proposed rule. In response to the published notice and the December 14, 2021, New Technology Town Hall meeting, we received written comments regarding the applications for FY 2023 new technology add on payments. As explained earlier and in the **Federal Register** notice announcing the New Technology Town Hall meeting (86 FR 53056 through 53059), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion with regard to pending new technology add-on payment applications for FY 2023. Therefore, we did not summarize the written comments in the proposed rule that are unrelated to the substantial clinical improvement criterion. In section II.F.6. of the preamble of the proposed rule, we summarized comments regarding individual applications, or, if applicable, indicated that there were no comments received in response to the New Technology Town Hall meeting notice or New Technology Town Hall meeting, at the end of each discussion of the individual applications.

3. ICD–10–PCS Section ''X'' Codes for Certain New Medical Services and Technologies

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49434), the ICD–10–PCS includes a new section containing the new Section ''X'' codes, which began being used with discharges occurring on or after October 1, 2015. Decisions regarding changes to ICD–10–PCS Section ''X'' codes will be handled in the same manner as the decisions for all of the other ICD–10–PCS code changes. That is, proposals to create, delete, or revise Section ''X'' codes under the ICD–10–PCS structure will be referred to the ICD–10 Coordination and Maintenance Committee. In addition, several of the new medical services and technologies that have been, or may be, approved for new technology add-on payments may now, and in the future, be assigned a Section ''X'' code within the structure of the ICD–10–PCS. We posted ICD–10–PCS Guidelines on the CMS website at *https://www.cms.gov/medicare/icd-10/2021-icd-10-pcs*, including guidelines for ICD–10–PCS Section ''X'' codes. We encourage providers to view the material provided on ICD–10–PCS Section ''X'' codes.

As discussed in more detail in section II.F.8. of the preamble of this final rule, in the FY 2023 IPPS/LTCH PPS proposed rule, we proposed to use NDCs instead of ICD–10–PCS Section ''X'' codes to identify cases involving the use of therapeutic agents approved for new technology add-on payments beginning with a transitional period in FY 2023. We refer the reader to section II.F.8. of the preamble of this final rule for a full discussion of this proposal and the comments received.

4. New COVID–19 Treatments Add-On Payment (NCTAP)

In response to the COVID–19 public health emergency (PHE), we established the New COVID–19 Treatments Add-on Payment (NCTAP) under the IPPS for COVID–19 cases that meet certain criteria (85 FR 71157 through 71158). We believe that as drugs and biological products become available and are authorized for emergency use or approved by FDA for the treatment of COVID–19 in the inpatient setting, it is appropriate to increase the current IPPS payment amounts to mitigate any potential financial disincentives for hospitals to provide new COVID–19 treatments during the PHE. Therefore, effective for discharges occurring on or after November 2, 2020 and until the end of the PHE for COVID–19, we established the NCTAP to pay hospitals the lesser of (1) 65% of the operating outlier threshold for the claim or (2) 65% of the amount by which the costs of the case exceed the standard DRG payment, including the adjustment to the relative weight under section 3710 of the Coronavirus Aid, Relief, and Economic Security (CARES) Act, for certain cases that include the use of a drug or biological product currently authorized for emergency use or approved for treating COVID–19.

In the FY 2022 IPPS/LTCH PPS final rule, we finalized a change to our policy to extend NCTAP through the end of the FY in which the PHE ends for all eligible products in order to continue to mitigate potential financial disincentives for hospitals to provide these new treatments, and to minimize any potential payment disruption immediately following the end of the PHE. We also finalized that, for a drug or biological product eligible for NCTAP that is also approved for new technology add-on payments, we will reduce the NCTAP for an eligible case by the amount of any new technology add-on payments so that we do not create a financial disincentive between technologies eligible for both the new technology add-on payment and NCTAP compared to technologies eligible for NCTAP only (85 FR 45162).

Further information about NCTAP, including updates and a list of currently eligible drugs and biologicals, is available on the CMS website at *https://www.cms.gov/medicare/covid-19/new-covid-19-treatments-add-payment-nctap*.

5. FY 2023 Status of Technologies Receiving New Technology Add-On Payments for FY 2022

In this section of the final rule, we discuss the proposed FY 2023 status of 37 technologies approved for FY 2022 new technology add-on payments, including 2 technologies approved for 2 separate add-on payments for different indications (RECARBRIO™ and FETROJA®), and our finalized policies, as set forth in the tables that follow. In general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. We note that, as discussed later in this section, we provided a 1-year extension of new technology add-on payments for FY 2022 for 13 technologies for which the new technology add-on payment would otherwise have been discontinued beginning in FY 2022 using our authority under section 1886(d)(5)(I) of the Act.

Additionally, we note that we conditionally approved CONTEPO for FY 2022 new technology add-on payments under the alternative pathway for certain antimicrobial products (86 FR 45155), subject to the technology receiving FDA marketing authorization by July 1, 2022. In the FY 2023 IPPS LTCH/PPS proposed rule, we stated that if CONTEPO receives FDA marketing authorization prior to July 1, 2022, we were proposing to continue making new technology add-on payments for CONTEPO for FY 2023. We stated that if CONTEPO does not receive FDA marketing authorization by July 1, 2022, then it would not be eligible for new technology add-on payments for FY 2022, and therefore would not be eligible for the continuation of new technology add-on payments for FY 2023. Because CONTEPO did not receive FDA approval by July 1, 2022, no new technology add-on payments will be made for cases involving the use of CONTEPO for FY 2022, and CONTEPO is therefore not eligible for the continuation of new technology add-on payments for FY 2023.

a. FY 2023 Status of Technologies Approved for FY 2022 New Technology Add-On Payments

As noted previously, we used our authority under section 1886(d)(5)(I) of the Act to allow a 1-year extension of new technology add-on payments for FY 2022 for 13 technologies for which the add-on payments would otherwise be discontinued beginning in FY 2022 because the technologies would no longer be considered ''new'' for FY 2022. In this section, we discuss the proposed FY 2023 status for the remaining 24 technologies approved for FY 2022 new technology add-on payments and our finalized policies. Specifically, in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28210–28212), we presented our proposals to continue the new technology add-on payment for FY 2023 for those technologies that were approved for the new technology add-on payment for FY 2022 and which would still be considered ''new'' for purposes of new technology add-on payments for FY 2023. We also presented our proposals to discontinue new technology add-on payment for FY 2023 for those technologies that were approved for the new technology add-on payment for FY 2022 and which would no longer be considered ''new'' for purposes of new technology add-on payments for FY 2023.

Our policy is that a medical service or technology may continue to be considered ''new'' for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year. In general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the fiscal year (70 FR 47362).

In the proposed rule, we provided a table listing the technologies for which we proposed to continue making new technology add-on payments for FY 2023 because they would still be considered ''new'' for purposes of new technology add-on payments (87 FR 28213 through 28214). This table also presented the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, proposed maximum add-on payment amount, and coding assignments for each technology. We referred readers to the final rules cited in the table for a complete discussion of the new technology add-on payment application, coding and payment amount for each of these technologies, including the applicable indications and discussion of the newness start date.

We invited public comments on our proposals to continue new technology add-on payments for FY 2023 for the technologies listed in the table in the proposed rule.

Comment: Commenters overwhelmingly supported our proposed continuation of new technology add-on payments for FY 2023 for those technologies that were approved for the new technology add-on payment for FY 2022 and which would still be considered ''new'' for purposes of new technology add-on payments for FY 2023.

Response: We appreciate the commenters' support.

In the proposed rule, we noted, as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45104 through 45107), on May 1, 2020, VEKLURY® (remdesivir) received an Emergency Use Authorization (EUA) from FDA for the treatment of suspected or laboratory confirmed COVID–19 in adults and children hospitalized with severe disease. The applicant asserted that between July 1, 2020 and September 30, 2020, it entered into an agreement with the U.S. Government to allocate and distribute commercially-available VEKLURY® across the country. The applicant stated that under this agreement, the first sale of VEKLURY® was completed on July 10, 2020. The applicant stated that they transitioned to a more traditional, unallocated model of distribution as of October 1, 2020. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45107), we determined that VEKLURY® meets the newness criterion with an indication for use in adults and pediatric patients (12 years of age and older and weighing at least 40 kg) for the treatment of COVID–19 requiring hospitalization. We stated that consistent with our longstanding policy, we considered the newness period for VEKLURY® to begin on October 22, 2020, when the NDA for VEKLURY® was approved by FDA for adults and pediatric patients (12 years of age and older and weighing at least 40 kg) for the treatment of COVID–19 requiring hospitalization. We also discussed comments solicited regarding the newness period for products available through an EUA for COVID–19 in section II.F.7. of the FY 2022 IPPS/LTCH PPS final rule (86 FR 45159 through 45160), including comments we received regarding the potential variability in cost estimates for technologies available under an EUA due to government price subsidies or variable treatment practices in the context of the global pandemic and comments suggesting that CMS monitor pricing changes for products available under an EUA once a product receives full marketing authorization, instead of basing the newness period on data that may have become available under an EUA, and indicated that we would consider these comments for future rulemaking.

We stated in the proposed rule (87 FR 28212) that after further review of the information provided by the applicant, we believed that additional information related to VEKLURY®'s commercial availability is relevant to assessing the start of the newness period for VEKLURY®. We noted that the applicant stated that once VEKLURY® was issued an EUA, from May through June 2020, the entire existing supply of VEKLURY® was donated worldwide and distributed to hospitals free of charge.[29] The applicant further stated that the commercial list price of the technology was announced when it entered into the agreement with the U.S.

[29] *https://stories.gilead.com/articles/an-update-on-covid-19-from-our-chairman-and-ceo.*

Government previously described, in anticipation of the post-donation phase. Under this agreement, the U.S. Government allocated VEKLURY® to each hospital, and the hospitals would then choose to purchase quantities of VEKLURY® directly from the applicant's subsidiary who was the sole distributor.[30] [31]

We stated in the proposed rule that we continue to believe this issue is complex, particularly as it relates to VEKLURY® as a technology that has been available under both an EUA and an NDA. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45159 through 45160), while an EUA is not marketing authorization within the meaning of § 412.87(e)(2) for purposes of eligibility for new technology add-on payments, data reflecting the costs of products that have received an EUA could become available as soon as the date of the EUA issuance and prior to receiving FDA approval or clearance. In the case of VEKLURY®, we stated that we believe that there may be unique considerations in determining the start of the newness period in light of the donation period, during which the technology was distributed at no cost. Accordingly, while we noted that we continue to believe that data reflecting the costs of a product that has received an EUA could become available as soon as the date of EUA issuance for that product, we believed that with respect to VEKLURY®, such data may not have become available until after the end of the donation period, when the technology became commercially available, on July 1, 2020. For these reasons, after further consideration, we stated that we believe the newness period for VEKLURY® may more appropriately begin on July 1, 2020, the date on which the technology became available for sale under the allocation agreement. We noted that VEKLURY® would still be considered new for FY 2023 regardless of whether the newness period began on May 1 (the date of the EUA), July 1 (the date the donation phase ended), October 22 (the date of the NDA), or some other date in between, as in all cases the three-year anniversary date would occur after April 1, 2023, and therefore the product would remain eligible for FY 2023 new technology add-on payments.

Therefore, we proposed to continue new technology add-on payments for VEKLURY® for FY 2023. We invited public comments on this proposal, including the newness start date for VEKLURY®. As discussed, while we continue to believe that data reflecting the costs of a product that has received an EUA could become available as soon as the date of EUA issuance for that product, we also recognize that there may be unique considerations in determining the start of the newness period for a product available under an EUA. We are continuing to consider the comments as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45159) regarding the newness period for products available through an EUA for COVID–19, and we welcomed additional comments in the proposed rule.

Comment: The applicant submitted a comment with respect to the start of the newness period for VEKLURY®. The applicant noted that there is no material impact on eligibility for new technology add-on payments for VEKLURY®, regardless of whether CMS uses July 1 2020, the date VEKLURY® became available for sale under the allocation agreement, or October 22, 2020, the date of FDA approval as the start of the newness period for VEKLURY®. The applicant maintained that using either date and applying CMS' standard methodology of calculating the period of eligibility for new technology add-on payments would result in VEKLURY® staying within its newness period through FY 2023 (October 1, 2022–September 30, 2023), and that VEKLURY® would not be eligible for new technology add-on payments in FY 2024 in either circumstance.

The applicant stated that the primary effect of CMS' revisiting of the VEKLURY® newness determination would be to set a precedent that would affect the future eligibility for new technology add-on payments of other EUA products. To this point, the applicant referred to the FY 2022 IPPS final rule where CMS originally finalized the newness date for VEKLURY® and stated that products that do not have FDA approval or clearance, including products available in the U.S. under an EUA, are not eligible for new technology add-on payments (86 FR 45106–07). The applicant also pointed to 42 CFR 412.87(b) which outlines additional eligibility criteria for substantial clinical improvement, cost, and newness that must all be met in order for a product to be eligible for new technology add-on payments. The applicant stated it is reasonable to assume these requirements should not be in conflict with respect to how they are evaluated and implemented, including with respect to the timelines applied to the determination of eligibility for new technology add-on payments.

Furthermore, the applicant stated that CMS confirmed that using the date of FDA approval as the beginning of the newness period for VEKLURY® was consistent with its longstanding policy, with the commenter referencing CMS's statement that generally, its policy is ''to begin the newness period on the date of FDA approval or clearance or, *if later,* the date of availability of the product on the U.S. market, when [data] reflecting the costs of the technology begin to become available for the recalibration of the MS–DRGs'' (86 FR 45159) (emphasis added). The applicant asserted that using a date prior to FDA approval as the beginning of the newness period would therefore serve as a departure from how CMS has traditionally determined newness for the purposes of new technology add-on payments, as there is no precedent to use a date earlier than FDA approval as the date of market availability.

The applicant stated that VEKLURY®'s distribution and commercialization framework over the course of the COVID–19 pandemic, through which VEKLURY® was available through emergency and compassionate use programs, donations, and a post-donation model in collaboration with the federal government, were all implemented prior to VEKLURY® receiving FDA approval and does not in any way resemble the current distribution and reimbursement paradigm. The applicant further stated that its experience during the EUA period does not reflect the type of distribution and reimbursement environment that would support a newness period that begins prior to the FDA approval date for VEKLURY®. The applicant stated that the data collected on utilization and resource use during the EUA period likely would not be representative of utilization or resource use following FDA approval, given that the EUA period occurred within the context of a global pandemic and a time of extreme uncertainty for the health care system. The applicant pointed to CMS's use of FY 2019 data for FY 2022 ratesetting for circumstances where the FY 2020 data was significantly impacted by the COVID–19 PHE, and reasoned that VEKLURY®'s utilization would be similarly impacted by the PHE as its EUA period occurred almost entirely in FY 2020.

[30] Remdesivir for the Commercial Marketplace. *https://www.phe.gov/emergency/events/COVID19/investigation-MCM/Pages/factsheet.aspx.*

[31] Department of Health and Human Services, Office of the Assistant Secretary for Preparedness and Response (ASPR). ASPR's Portfolio of COVID–19 Medical Countermeasures Made Available as a Licensed Product. *https://www.phe.gov/emergency/events/COVID19/investigation-MCM/Pages/Veklury.aspx.*

The applicant urged that CMS continue to determine the start of the newness period for VEKLURY® and other products originally available in the U.S. under an EUA using what it stated was the same policy CMS has applied for all other products approved for new technology add-on payment, which is to use the date of FDA approval or, if later, the date of market availability in the U.S. For VEKLURY®, the applicant stated that this date is October 22, 2020, the date of FDA approval. The applicant stated that maintaining this policy aligns to existing precedent, simplifies the newness determination process, and applies a consistent policy across products.

Response: We thank the applicant for its input. As discussed in the FY 2018 IPPS final rule (82 FR 38115), the period of newness does not necessarily start with the approval date for the medical service or technology and instead begins with availability of the product on the U.S. market, which is when data become available. We have consistently applied this standard and believe that it is consistent with the purpose of new technology add-on payments. Therefore, while generally our policy is to begin the newness period on the date of FDA approval or clearance, we may also consider a documented delay in the technology's market availability in our determination of newness (77 FR 53348 and 70 FR 47341). Accordingly, we agree that in general, we have begun the newness period on the date of FDA approval or clearance or, if later, the date of availability of the product onto the US market, based on such a documented delay, as that is when data reflecting the costs of the technology begin to become available. However, as we discussed in the FY 2022 final rule, for a product with an EUA, the data reflecting the costs of that product could become available as soon as the date of EUA issuance, and prior to FDA approval or clearance. Therefore, while a product approved under an EUA and for which there is data reflecting the costs of the technology prior to FDA approval may be factually distinct from a product for which there is a documented delay in marketing availability following FDA approval, we disagree that beginning the newness period on the date of EUA issuance and prior to FDA approval would be inconsistent with our longstanding policy of beginning the newness period with the availability of the product on the U.S. market. With regard to the additional criteria for eligibility for the new technology add-on payment, we refer readers to the FY 2022 final rule for our discussion of the eligibility of a product available only through an EUA for the new technology add-on payment under section 412.87(e)(2) (86 FR 45048 through 45049), as well as the comment solicitation on the new technology add-on payment newness period for products available through an EUA (86 FR 45159 through 45160). With respect to the applicant's comment that VEKLURY®'s utilization may have been impacted by the COVID–19 PHE during the EUA period, we note that the EUA for VEKLURY® was directly related to COVID–19.

We agree with the applicant that regardless of whether VEKLURY's® newness period begins on July 1, 2020, the date VEKLURY® became available for sale under the allocation agreement, or October 22, 2020, the date of FDA approval, the application of CMS' standard methodology for determining the period of eligibility for new technology add-on payments results in VEKLURY® remaining within its newness period through FY 2023 (October 1, 2022–September 30, 2023), and that VEKLURY® would not be eligible for new technology add-on payments in FY 2024 in either circumstance. Accordingly, we are finalizing our proposal to continue new technology add-on payments for VEKLURY® for FY 2023, as reflected in Table II.F.-01 of this final rule. As stated previously, we also recognize that there may be unique considerations associated with determining the start of the newness period for a product available under an EUA prior to receiving FDA approval, including as discussed in the applicant's comments. Accordingly, we will continue to consider the comments received regarding the newness period for products available through an EUA for COVID–19 for future rulemaking.

In the FY 2023 IPPS/LTCH PPS proposed rule, we noted that we also proposed to continue new technology add-on payments for Caption Guidance for FY 2023, a technology sold on a subscription basis. We stated we continued to welcome comments from the public as to the appropriate method to determine a cost per case for technologies sold on a subscription basis, including comments on whether the cost per case should be estimated based on subscriber hospital data as described previously, and if so, whether the cost analysis should be updated based on the most recent subscriber data for each year for which the technology may be eligible for the new technology add-on payment.

We did not receive any comments regarding the appropriate method to determine a cost per case for technologies sold on a subscription basis, and we will continue to consider these issues.

Comment: The applicant for Abecma® submitted a comment stating its strong support for the continuation of new technology add-on payments for Abecma® for FY 2023. The applicant stated that although Abecma® received FDA approval on March 26, 2021, it did not enter the U.S. market until May 10, 2021, when the date of first sale occurred and the new technology was first reflected in claims data. The applicant stated that the newness period for Abecma® should therefore begin on May 10, 2021 as CMS' policy is to begin the newness period on the date of a product's entry onto the U.S. market. The applicant further stated that Abecma®'s new technology add-on payment status should be extended beyond FY 2023, as CMS policy is to extend new technology add-on payments for an additional year when the 3-year anniversary of market entry occurs in the latter half of the fiscal year.

Response: We thank the applicant for its comment. As stated previously, while CMS may consider a documented delay in the technology's market availability in our determination of newness, our policy for determining whether to extend new technology add-on payments for an additional year generally applies regardless of the volume of claims for the technology after the beginning of the newness period (83 FR 41280). We do not consider the date of first sale of a product as an indicator of the entry of a product onto the U.S. market. The applicant states that the date of first sale of Abecma® was May 10, 2021, but it is unclear from the information provided when the technology first became *available* for sale and, absent additional information from the applicant, we cannot determine a newness date based on a documented delay in the technology's availability on the U.S. market.

We further note that, as discussed in section II.F.6.a. of the preamble of this final rule, because CARVYKTI™ is substantially similar to ABECMA®, we are using a single cost for purposes of determining the new technology add-on payment amount for CARVYKTI™ and ABECMA® for FY 2023. As discussed in section II.F.6.a., we determined a weighted average of the cost of CARVYKTI™ and ABECMA® based upon the projected numbers of cases involving each technology to determine

the maximum new technology add-on payment. To compute the weighted cost average, we summed the total number of projected cases for each of the applicants, which equaled 420 cases (241 plus 179). We then divided the number of projected cases for each of the applicants by the total number of cases, which resulted in the following case weighted percentages: 57% for CARVYKTI™ and 43% for ABECMA®. We then multiplied the cost per case for the manufacturer specific drug by the case-weighted percentage (0.57 * $465,000 = $265,050 for CARVYKTI™ and 0.43 * $419,500 = $180,385 for ABECMA®). This resulted in a case-weighted average cost of $445,435 for the technology.

Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65% of the average cost of the technology, or 65% of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of CARVYKTI™ and ABECMA® is $289,532.75 for FY 2023, as is reflected in Table II.F.-01 of this final rule.

Comment: Several commenters requested that CMS update the maximum new technology add-on payment amount to reflect the current Wholesale Acquisition Cost (WAC) per vial of their respective technologies. The applicant for Zepzelca™ requested the maximum new technology add-on payment amount for Zepzelca™ be updated from $8,622.90 to $9,145.50 to reflect the updated WAC of $7,035 per vial of Zepzelca™. The applicant for Cosela™ requested the maximum new technology add-on payment amount for Cosela™ be updated to reflect the updated WAC of $1,439 per vial of Cosela™.

Response: We appreciate the updated cost information. Zepzelca™'s current new technology add-on payment amount is $8,622.90 for 2 single-dose vials and reflects the WAC at the time of Zepzelca™'s entry onto the U.S. market (2 single-dose vials per dose × $6,633 per vial multiplied by 0.65). For FY 2023, the maximum new technology add-on payment amount using the updated WAC is $9,145.50 (2 single-dose vials per dose × $7,035 per vial multiplied by 0.65), as reflected in Table II.F.-01 in this final rule.

Similarly, Cosela™'s current new technology add-on payment amount is $5,526.30 (3 doses of Cosela™ × 2 single-dose vials per dose × $1,417 per vial multiplied by 0.65). For FY 2023, the maximum new technology add-on payment amount using the updated WAC is $5,612.10 (3 doses of Cosela™ × 2 single-dose vials × $1,439 per vial multiplied by 0.65) as reflected in Table II.F.-01 in this final rule.

After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for FY 2023 for the technologies that were approved for new technology add-on payment for FY 2022 and would still be considered ''new'' for purposes of new technology add-on payments for FY 2023, as listed in the proposed rule and in the following Table II.F.-01 in this section of this final rule.

We note that Table II.F.-01 below is the same as Table II.F.-02 that was presented in the proposed rule, but Table II.F.-01 in this final rule includes the updated cost information for Zepzelca™, Cosela™, and Abecma®, as discussed previously. Table II.F.-01 also includes updated cost information for aScope Duodeno® to reflect the cost of the technology alone, rather than a case-weighted average with EXALT Model D™, as discussed later in this section. The following table also presents the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, maximum add-on payment amount, and coding assignments. We refer readers to the final rules cited in the following table for a complete discussion of the new technology add-on payment application, coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

BILLING CODE 4120–01–C

In the proposed rule, we provided a table listing the technologies for which we proposed to discontinue making new technology add-on payments for FY 2023 because they are no longer ''new'' for purposes of new technology add-on payments (87 FR 28211). This table also presented the newness start date, new technology add-on payment start date, the 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, and coding assignments for each technology. We referred readers to the final rules cited in the table for a complete discussion of the new technology add-on payment application, coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

We invited public comments on our proposals to discontinue new technology add-on payments for FY 2023 for the technologies listed in the table in the proposed rule.

Comment: A commenter supported our proposal to discontinue new technology add-on payments for AZEDRA®, which will no longer be considered new as its 3-year anniversary date of entry onto the U.S. market will occur prior to FY 2023.

Response: We appreciate the commenter's support and are finalizing our proposal to discontinue new technology add-on payments for AZEDRA® for FY 2023.

Comment: Many commenters stated their opposition to discontinuing new technology add-on payments for technologies whose 3-year anniversary of entry onto the U.S. market will occur prior to FY 2023 or in the first half of FY 2023. These commenters encouraged CMS to use its legal authority under section 1886(d)(5)(I) of the Act to extend new technology add-on payments through FY 2023 due to a historic decline in utilization during the COVID–19 pandemic.

Response: We thank the commenters for their input. Consistent with the statute and our implementing regulations, a technology is no longer considered as ''new'' once it is more than 2 to 3 years old, irrespective of how frequently the medical service or technology has been used in the Medicare population (70 FR 47349). As such, once a technology has been available on the U.S. market for more than 2 to 3 years, we consider the costs to be included in the MS–DRG relative weights regardless of whether the technology's use in the Medicare population has been frequent or infrequent. Therefore, we do not believe that case volume is a relevant consideration for making the determination as to whether a product is ''new,'' and we are not extending new technology add-on payments for technologies whose 3-year anniversary of entry onto the U.S. market will occur prior to FY 2023 or in the first half of FY 2023. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44975 through 44979) and section II.F.5.b of this FY 2023 final rule for discussion of our policy to allow for a 1-year extension of new technology add-on payments for FY 2022 because of the unique circumstances associated with ratesetting for FY 2022, for which CMS used FY 2019 data instead of FY 2020 data to develop the FY 2022 relative weights.

Comment: Several commenters disagreed with CMS's proposal to discontinue new technology add-on payments for EXALT Model D™ Single-Use Duodenoscope while continuing payments for aScope® Duodeno through FY 2023 based on the different FDA clearance dates for the two technologies. These commenters recommended that CMS create a single newness date and extend new technology add-on payments for both products through the end of FY 2023. The commenters noted that there is no mechanism for hospitals to distinguish between the two devices when reporting claims to CMS, as the duodenoscopes share one add-on payment amount and are identified using the same ICD–10–PCS codes.

Another commenter, the applicant for EXALT Model D™, stated that creating a single newness date and discontinuation date for a combined new technology add-on payment is consistent with prior CMS decision-making regarding substantially similar technologies such as IMFINZI® and TECENTRIQ® from the FY 2021 IPPS final rule, and the LUTONIX® and IN.PACT™ Admiral™ drug-coated balloons in the FY 2016 IPPS final rule. The commenter noted that, in these instances, CMS finalized the proposal to discontinue the new technology add-on payment for both technologies on the same date and calculated a case-weighted average cost resulting in the same maximum add-on payment for both technologies. The commenter further noted that CMS determined the drug-coated balloons were identifiable using the same ICD–10–PCS procedure codes, and that IMFINZI® and TECENTRIQ® received a one-year extension through FY 2022 based on CMS' decision to use FY 2019 data (instead of FY 2020 data) for the FY 2022 IPPS rate setting. The commenter requested that CMS discontinue the new technology add-on payments for both EXALT Model D™ and aScope™ Duodeno at the same time, preferably at the end of FY 2023. As an alternative, the applicant recommended that CMS recalculate the maximum payment amount from the current case-weighted average of $1,715 per case to reflect 65% of the cost of aScope™ Duodeno only.

Response: We thank the commenters for their input. As stated previously, a technology is no longer considered ''new'' once it is more than 2 to 3 years old, irrespective of how frequently the medical service or technology has been used in the Medicare population (70 FR 47349). As such, once a technology has been available on the U.S. market for more than 2 to 3 years, we consider the costs to be included in the MS–DRG relative weights regardless of whether the technology's use in the Medicare population has been frequent or infrequent. Additionally, we note that under § 412.87(c), applications received for new technology add-on payments for FY 2021 and subsequent fiscal years for medical devices that are part of FDA's Breakthrough Devices Program and received FDA marketing authorization will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS. Because EXALT Model D™ and aScope™ Duodeno both applied under the alternative pathway for transformative new technologies, the applicant's comparison to IMFINZI® and TECENTRIQ® from the FY 2021 IPPS final rule (85 FR 58672 through 58684), and the LUTONIX® and IN.PACT™ Admiral™ drug-coated balloons in the FY 2016 IPPS final rule (80 FR 49461 through 49470), where the technologies were determined to be substantially similar and therefore had the same newness period, is not relevant. Thus, we are finalizing our proposal to discontinue new technology add-on payment for EXALT™ Model D™ for FY 2023.

We agree with the applicant's alternative recommendation that the maximum new technology add-on payment amount should reflect the cost of aScope™ Duodeno only. Based on information provided in its application for FY 2022 new technology add-on payment, the cost of the aScope™ Duodeno is $1,995. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65% of the average cost of the technology, or 65% of the costs in excess of the MS–DRG payment for the case. As a result, we are finalizing that the maximum new technology add-on payment for a case involving the use of the aScope™ Duodeno would be $1,296.75 for FY

2022 (that is, 65% of the average cost of the technology). Cases involving the use of aScope™ Duodeno will continue to be identified by the following ICD–10–PCS procedure codes: XFJB8A7 (Inspection of hepatobiliary duct using single-use duodenoscope, new technology group 7) or XFJD8A7 (Inspection of pancreatic duct using single-use duodenoscope, new technology group).

After consideration of the public comments we received, we are finalizing our proposal to discontinue new technology add-on payments for the technologies as listed in the proposed rule and in the following Table II.F.-02 of this final rule for FY 2023 because they are no longer ''new'' for purposes of new technology add-on payments. This table also presents the newness start date, new technology add-on payment start date, the 3-year anniversary date of the product's entry onto the U.S. market, and relevant final rule citations from prior fiscal years. We also refer readers to the final rules cited in the following table for a complete discussion of the new technology add-on payment application, coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

BILLING CODE 4120–01–C

b. Status of Technologies Provided a One-Year Extension of New Technology Add-On Payments in FY 2022

As stated in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44789), our goal is always to use the best available data overall for ratesetting. The best available MedPAR data will typically be the most recent MedPAR file that contains claims from discharges for the fiscal year that is 2 years prior to the fiscal year that is the subject of the rulemaking.

In the FY 2022 IPPS/LTCH PPS final rule, for the reasons discussed, we finalized that we would use FY 2019 MedPAR data instead of FY 2020 MedPAR data to develop the FY 2022 MS–DRG relative weights (86 FR 44789 through 44793). Because we finalized that we would use FY 2019 MedPAR data instead of FY 2020 MedPAR data for the development of the FY 2022 MS–DRG relative weights, we stated that the costs for a new technology for which the 3-year anniversary date of the product's entry onto the U.S. market occurs prior to the latter half of FY 2022 may not be fully reflected in the MedPAR data used to recalibrate the MS–DRG relative weights for FY 2022. Therefore, in light of this final policy, we finalized our proposal to use our authority under section 1886(d)(5)(I) of the Act to allow for a 1-year extension of new technology add-on payments for FY 2022 for 13 technologies (as listed in the proposed rule and in Table II.F.-03 of this final rule) for which the new technology add-on payment would have otherwise been discontinued beginning with FY 2022. We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44975 through 44979) for a complete discussion regarding this 1-year extension for FY 2022.

For FY 2023 ratesetting, as discussed in section I.F. of this final rule, we believe the best available data is the FY 2021 MedPAR file. As discussed in section I.F. of this final rule, for FY 2023, we are finalizing our proposal to use the FY 2021 MedPAR (the best available data at the time of this final rule) for FY 2023 ratesetting, including for purposes of developing the FY 2023 relative weights. We refer the reader to section I.F. of this final rule for a complete discussion regarding our final policy to use the FY 2021 MedPAR for the FY 2023 ratesetting and recalibration of the FY 2023 MS–DRG relative weights.

As noted previously, our policy is that a medical service or technology may continue to be considered ''new'' for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. For FY 2023, because we proposed to use FY 2021 MedPAR data to recalibrate the FY 2023 MS–DRG relative weights, we stated in the proposed rule that we believe the costs of the 13 technologies as listed in the proposed rule (87 FR 28216 through 28217) and in Table II.F.-03 of this final rule, for which the 3-year anniversary date of the product's entry onto the U.S. market occurs prior to FY 2023 (and therefore are no longer ''new''), may now be fully reflected in the MedPAR data used to recalibrate the MS–DRG relative weights for FY 2023. As a result, we proposed to discontinue new technology add-on payments for these 13 technologies in FY 2023. We also refer readers to the final rules cited in Table II.F.-03 for a complete discussion of the new technology add-on payment application, coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

We invited public comments on our proposals to discontinue new technology add-on payments for FY 2023 for these 13 technologies listed in the proposed rule and Table II.F.–03.

Comment: Many commenters, including several applicants for technologies currently receiving new technology add-on payments, stated their opposition to discontinuing new technology add-on payments for technologies that received a one-year extension in FY 2022. These commenters stated that the FY 2021 MedPAR claims data are distorted due to effects of the COVID–19 pandemic and should not be used to recalibrate the MS–DRG relative weights. The commenters encouraged CMS to use its legal authority under section 1886(d)(5)(I) of the Act to extend new technology add-on payments through FY 2023.

Another commenter stated that while it is accurate that the costs of the technologies are reflected in the FY 2021 MedPAR data used for ratesetting purposes, the existence of such claims data does not mean that the costs of the technology are truly captured, nor does it mean that the pandemic has not impacted adoption of the new technologies and services. This commenter referenced several studies to demonstrate the impact of the PHE on hospitals, including critical staff shortages and financial instability due to lower revenues and inflation. The commenter also provided an analysis of FY 2021 claims data that found that the average standardized costs when accounting for cases using its technology or comparable technology reported under the same ICD–10–PCS codes increased by less than 0.5% compared to average standardized costs that do not account for cases reported under these codes.

Response: We thank the commenters for their input. Consistent with the statute and our implementing regulations, a technology is no longer considered as ''new'' once it is more than 2 to 3 years old, irrespective of how frequently the medical service or technology has been used in the Medicare population (70 FR 47349). As such, once a technology has been available on the U.S. market for more than 2 to 3 years, we consider the costs to be included in the MS–DRG relative weights regardless of whether the technology's use in the Medicare population has been frequent or infrequent. Therefore, we do not believe that case volume is a relevant consideration for making the determination as to whether a product is ''new''. Additionally, as previously discussed, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44975 through 44979), we finalized a 1-year extension of new technology add-on payments for FY 2022 in light of the unique circumstances associated with ratesetting for FY 2022, for which CMS finalized the use of the FY 2019 MedPAR data instead of the FY 2020 MedPAR data to develop the FY 2022 relative weights. For FY 2023, because we are finalizing the use of the FY 2021 MedPAR data for FY 2023 ratesetting, including for purposes of developing the FY 2023 relative weights, we believe the costs of these technologies are now reflected in the MedPAR data used to recalibrate the MS–DRG relative weights for FY 2023. Therefore, we are not extending new technology add-on payments for technologies that received a one-year extension in FY 2022. We refer readers to sections section I.F. and II.E. of this final rule for discussion of CMS's finalized policy to use the FY 2021 MedPAR claims data to recalibrate the FY 2023 MS–DRG relative weights, including the finalized modifications to the relative weight setting methodology to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals as compared to FY 2021.

After consideration of the public comments we received, we are finalizing our proposal to discontinue new technology add-on payments for the technologies as listed in the proposed rule and in the following Table II.F.-03 of this final rule for FY 2023. This table also presents the

newness start date, new technology add-on payment start date, the 3-year anniversary date of the product's entry onto the U.S. market, and relevant final rule citations from prior fiscal years. We also refer readers to the final rules cited in the following table for a complete discussion of the new technology add-on payment application, coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

BILLING CODE 4120–01–C

6. FY 2023 Applications for New Technology Add-On Payments (Traditional Pathway)

We received 18 applications for new technology add-on payments for FY 2023 under the traditional new technology add-on payment pathway. In accordance with the regulations under § 412.87(e), applicants for new technology add-on payments must have received FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. Five applicants withdrew their applications prior to the issuance of the proposed rule. Subsequently, seven applicants withdrew their respective applications for lifileucel, narsoplimab, TERLIVAZ (terlipressin), teclistamab, mosunetuzumab, XENOVIEW, and treosulfan prior to the issuance of this FY 2023 IPPS/LTCH PPS final rule. In addition, in accordance with § 412.87(c), applicants for new technology add-on payments must have FDA approval or clearance by July 1 of each year prior to the beginning of the fiscal year for which the application is being considered. One applicant, Boehringer Ingelheim Pharmaceuticals, Inc., for spesolimab, did not receive FDA approval for its technology by July 1, 2022. Therefore, spesolimab is not eligible for consideration for new technology add-on payments for FY 2023. Consistent with our standard approach, we are not including in this final rule the description and discussion of applications that were withdrawn or that are ineligible for consideration for FY 2023 due to not meeting the July 1 deadline, described previously, which were included in the FY 2023 IPPS/LTCH PPS proposed rule. We are also not summarizing nor responding to public comments received regarding these withdrawn or ineligible applications in this final rule. A discussion of the five remaining applications is presented below.

a. CARVYKTI™ (Ciltacabtagene Autoleucel)

Janssen Biotech, Inc., submitted an application for new technology add-on payments for CARVYKTI™ (ciltacabtagene autoleucel) for FY 2023. CARVYKTI™ is an autologous chimeric-antigen receptor (CAR) T-cell therapy directed against B cell maturation antigen (BCMA) for the treatment of patients with multiple myeloma. We note that Janssen Biotech, Inc. previously submitted an application for new technology add-on payments for CARVYKTI™ for FY 2022 under the name ciltacabtagene autoleucel, as summarized in the FY 2022 IPPS/LTCH PPS final rule (86 FR 25233 through 25239), but withdrew that application prior to the issuance of the FY 2022 IPPS/LTCH PPS final rule (86 FR 44979).

The applicant stated that ciltacabtagene autoleucel refers to both JNJ–4528, an investigational BCMA-directed CAR T-cell therapy for previously treated patients with multiple myeloma, and LCAR–B38M, the investigational product (ciltacabtagene autoleucel) being studied in China. Both JNJ–4528 and LCAR–B38M are representative of the same CAR T-cell therapy, ciltacabtagene autoleucel.

Multiple myeloma is an incurable blood cancer that affects a type of white blood cell called plasma cells.[32] Plasma cells, found in bone marrow, make the antibodies that help the body attack and kill various pathogens. According to the applicant, when damaged, malignant plasma cells rapidly spread and replace the normal cells in the bone marrow.[33] The applicant asserted the median age of onset is 69 years old and only 3% of patients are less than 45 at the age of diagnosis; it was estimated that in 2021 nearly 35,000 people would be diagnosed and more than 12,000 will die from multiple myeloma in the US.[34] According to the applicant, multiple myeloma is associated with substantial morbidity and mortality[35] and median 5 year survival is 56%.[36]

According to the applicant, introduction of new treatment options in the last 2 decades has extended the median survival of multiple myeloma patients. The applicant asserted that the introduction of proteasome inhibitors (PI) (for example, bortezomib, carfilzomib, and ixazomib), histone deacetylase inhibitors (for example, panobinostat, vorinostat), immunomodulatory agents (IMiD) (for example, thalidomide, lenalidomide, and pomalidomide), monoclonal antibodies (daratumumab and elotuzumab), and stem cell transplantation, have allowed numerous therapeutic options for patients with multiple myeloma (Rajkumar 2020). According to the applicant, the National Comprehensive Cancer Network (NCCN) recommended treatment regimen for first-line therapy of multiple myeloma is bortezomib (a PI), lenalidomide (an IMiD) and dexamethasone.[37] According to the applicant, the strategy of triplet therapies for patients with newly diagnosed multiple myeloma, followed by high-dose chemotherapy and autologous stem-cell transplantation for eligible patients, and subsequently consolidation and maintenance therapy, is the current treatment roadmap for patients.[38] However, despite these treatments, according to the applicant, most patients will relapse after first-line treatment and require further treatment[39] with only 50% survival of relapsed patients after 5 years.[40] [41] The applicant stated that as multiple myeloma progresses, each subsequent line of treatment is associated with shorter progression free survival (PFS) and decreased rate, depth, and durability of response and worsening of quality of life.[42] In addition, cumulative and long-term toxicities are often associated with long-term therapy (Ludwig, 2018). Thus, according to the applicant, there remains an ongoing need for additional therapeutic approaches when the disease is resistant to available therapy.

The applicant asserted that relapsed and refractory (r/r) multiple myeloma (RRMM) constitutes a specific unmet medical need. According to the applicant, patients with r/r disease are defined as those who, having achieved

a minor response or better, relapse and then progress while on therapy, or experience progression within 60 days of their last therapy.[43] [44] The applicant stated the introduction of a new class of agents, CD38-targeting monoclonal antibodies (CD38 MoAbs), daratumumab and isatuximab, have improved options in r/r patients.[45] The applicant asserted that given these advances, guideline recommendations following first-line therapy are varied, with treatment options including combinations of novel agents with existing standard of care regimens, and include triplet and quadruplet regimens, creating a complex treatment landscape.[46] According to the applicant, while triplet regimens should be used as the standard therapy for patients with multiple myeloma, elderly or frail patients may be treated with double regimens.[47] The applicant further stated that for patients with RRMM who have received at least three prior lines of therapy, including a PI, an IMiD and an anti-CD38, there does not exist a standard or consensus for treatment at this time, and often, supportive care/palliative care is the only option.[48]

According to the applicant, multiple myeloma remains incurable and most patients eventually relapse, even with the advent of new treatments.[49] The applicant further stated that novel, innovative therapies are needed to improve long-term survival and outcomes. The applicant asserted that CAR T-cell-based therapies offer potential advantages over current therapeutic strategies. According to the applicant, while other therapies require long-term repetitive administration generally until progression of disease, CAR T-cell therapy is a single infusion treatment due to live T-cell expansion in the patient and long-term disease response. The applicant asserted that CARVYKTI™ is an autologous CAR T-cell therapy directed against B cell maturation antigen (BCMA) for the treatment of patients with multiple myeloma. The applicant stated that BCMA, a protein that is highly expressed on myeloma cells[50] and is a member of the tumor necrosis factor (TNF) receptor family, plays a central role in regulating B-cell maturation and differentiation into plasma cells.[51] [52] The applicant stated BCMA is selectively expressed on a subset of B cells (plasma cell neoplasms including myeloma cells) and is more stably expressed specifically on the B cell lineage, compared with key plasma cell marker CD138, which is also expressed on normal fibroblasts and epithelial cells.[53] [54] [55] According to the applicant, these expression characteristics make BCMA an ideal therapeutic target for the treatment of multiple myeloma.[56] [57] CARVYKTI™, according to the applicant, is a unique, structurally differentiated BCMA-targeting chimeric antigen receptor with two distinct BCMA-binding domains that can identify and eliminate myeloma cells.

The applicant asserted that CAR T-cell technology is a form of immunotherapy and is a ''living drug'' that utilizes specially altered T cells, part of the immune system, to fight cancer. According to the applicant, a sample of the patient's T cells are collected from the blood, then modified in a laboratory setting to express a CAR.[58] The applicant stated chimeric antigen receptors are specifically designed receptor proteins that are made up of three distinct features: (1) a target recognition domain (typically derived from a single domain of an antibody) that sits on the cell's exterior; (2) a co-stimulatory domain on the cell's interior that boosts activation, enhances survival and expansion of the modified cells; and (3) an interior stimulatory domain that supports activation and target killing.[59] According to the applicant, the binding domain expressed on the surface of T cells gives them the new ability to target a specific protein. The applicant stated, when the target is recognized, the intracellular portions of the receptor send signals within the T cells to destroy the target cells. The applicant asserted these engineered CAR T-cells are reinfused back into the same patient, which enables these specialized T cells to latch onto the target antigen and abolish the tumor cells.

According to the applicant, CARVYKTI™ is a CAR T-cell immunotherapy designed to recognize myeloma cells and target their destruction. According to the applicant, CARVYKTI™'s CAR T-cell technology consists of harvesting the patient's own T cells, programming them to express a chimeric antigen receptor that identifies BCMA, a protein highly expressed on the surface of malignant multiple myeloma B-lineage cells, and reinfusing these modified cells back into the patient where they bind to and eliminate myeloma tumor cells. The applicant asserted that, unlike the chimeric antigen receptor design of currently approved CAR T-cell immunotherapies, which are composed of a single-domain antibody (sdAbs), CARVYKTI™ is composed of two antibody binding domains that allow for high recognition of human BCMA (CD269) and elimination of BCMA expressing myeloma cells. According to the applicant, the two distinct BCMA-binding domains confer avidity and distinguish CARVYKTI™ from other BCMA-targeting products. The applicant stated the BCMA binding domains are linked to the receptor's interior costimulatory (4–1BB) and signaling (CD3ζ) domains through a transmembrane linker (CD8a). The applicant asserted these intracellular domains are critical components for T cell growth and anti-tumor activity[60] in the body once CAR T-cells are bound to a BCMA target on multiple myeloma cells.

With respect to the newness criterion, according to the applicant, CARVYKTI™ was granted Breakthrough Therapy designation in December 2019 for the treatment of adult patients with relapsed or refractory multiple myeloma, who previously received a proteasome inhibitor, an immunomodulatory agent, and an anti-CD38 antibody. Per the applicant, FDA approved the Biologics License Application (BLA) for CARVYKTI™ on February 28, 2022 for the treatment of adult patients with relapsed or refractory multiple myeloma after four or more prior lines of therapy, including a proteasome inhibitor, an immunomodulatory agent, and an anti-CD38 monoclonal antibody. The applicant stated that procedures involving the administration of CARVYKTI™ can be uniquely identified using the following ICD–10–PCS procedure codes: XW033A7 (Introduction of ciltacabtagene autoleucel into peripheral vein, percutaneous approach, new technology group 7) or XW043A7 (Introduction of ciltacabtagene autoleucel into central vein, percutaneous approach, new technology group 7). The applicant also noted that they will submit a request for a Healthcare Common Procedure Coding System (HCPCS) code specific to the administration of CARVYKTI™ once the product is eligible for such a code.

As previously stated, if a technology meets all three of the substantial similarity criteria as previously described, it would be considered substantially similar to an existing technology and therefore would not be considered ''new'' for purposes of new technology add-on payments.

With respect to whether a product uses the same or a similar mechanism of action when compared to an existing technology to achieve a therapeutic outcome, the applicant asserted that CARVYKTI™ has a unique mechanism of action because it has two distinct binding domains that confer avidity to the BCMA antigen, a 4–1BB costimulatory domain and a CD3z signaling domain, whereas other CAR T-cell products have only one target binding domain. The applicant asserted that ABECMA® also targets BCMA, but does so by binding to a single BCMA domain. In addition to detail provided in the applicant's FY 2022 application (as discussed in 86 FR 25235 through 25236), the applicant asserted that CARVYKTI™ differs significantly from ABECMA® and other BCMA-targeting agents, including Blenrep, because it targets BCMA with two distinct binding domains. According to the applicant, the distinct BCMA-binding moieties confer avidity and distinguish CARVYKTI™ from other BCMA CAR T-cell constructs providing a novel mechanism of action.[61] The applicant added, the 4–1BB and CD3z domains on the CAR optimize T cell activation and proliferation.[62] According to the applicant, non-clinical pharmacology and toxicology have been used to characterize the biological activity and mechanism of action of CARVYKTI™ and confirm the on-target specificity to BCMA through (1) in vitro binding characterization; (2) in vitro co-culture assays to assess CAR T-cell cytotoxicity and cytokine release; (3) in vivo efficacy studies in mice with human CAR T-cells; and (4) an in vivo safety study. According to the applicant, because CARVYKTI™ has a novel mechanism of action with two distinct BCMA-binding domains that confer binding avidity and unprecedented clinical activity compared with other novel anti-myeloma treatments in comparable study populations, it is unlike any existing technology utilized to treat relapsed/refractory multiple myeloma.

With regard to whether a product is assigned to the same DRG when compared to an existing technology, the applicant asserted that because CMS has suggested that all inpatient hospitalizations involving a CAR T-cell treatment will be assigned to DRG 018 (Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies), CARVYKTI™ is expected to be assigned to the same DRG as other multiple myeloma cases treated with a CAR T-cell therapy. We note that the DRG assignment was finalized to Pre-MDC MS–DRG 018, effective October 1, 2022 and is reflected in the V39.1 ICD–10 MS–DRG Grouper effective April 1, 2022 (86 FR 58021).[63]

With regard to whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population when compared to an existing technology, the applicant asserted in its application that CARVYKTI™ is indicated for a broader population than other available therapies, specifically multiple myeloma patients having received three prior therapies. The applicant asserted in its application that Blenrep and ABECMA® are indicated only for those with at least 4 prior therapies whereas CARVYKTI™ had a proposed indication for the treatment of patients with 3 or more prior therapies. According to the applicant, CARVYKTI™ could potentially be used in a broader multiple myeloma population, that includes patients after 3 prior therapies as opposed to 4 for Blenrep and ABECMA®.

According to the applicant, in the registrational trial CARTITUDE 1, 17% (a total of 17 patients) of patients had only three prior lines of therapy; results were presented at the American Society of Hematology (ASH) 2021 meeting on fourth line patients. The applicant stated that among those with three prior lines of therapy, the response rate was 100%, the median duration of response (DoR) was 21.8 months, minimal residual disease (MRD) negativity was found in 80%, the 18-month progression free survival (PFS) was 75.6%, and the 18-month overall survival (OS) was 88.2 months. According to the applicant, because the sample size was small (17), median endpoints may not be as rigorous as in the larger population.

According to the applicant, the distinction between three and four previous lines of therapy is important. The applicant asserted with each subsequent therapy patients generally become frailer and their prognosis worsens. The applicant stated that studies comparing fourth line to fifth line are not as common as trials studying earlier lines, but in a real-world study by Yong et al. the percent of myeloma patients who were able to move from third line therapy to fourth line was 15% of all diagnosed myeloma patients, and only 1% of patients moved to a fifth line.[64] The applicant added that in the same study of those patients in first line therapy, approximately 90% of patients were able to discontinue treatment due to remission and/or planned end of treatment while only 13% of those in fifth line ended treatment due to stable disease/remission.

The applicant asserted that for these reasons, CARVYKTI™ does not meet the third criterion and is therefore a new technology with regards to the

[61] Xu J, Chen LJ, Yang SS, Sun Y, Wu W, Liu YF, Xu J, Zhuang Y, Zhang W, Weng XQ, Wu J, Wang Y, Wang J, Yan H, Xu WB, Jiang H, Du J, Ding XY, Li B, Li JM, Fu WJ, Zhu J, Zhu L, Chen Z, Fan XF, Hou J, Li JY, Mi JQ, Chen SJ. Exploratory trial of a biepitopic CAR T-targeting B cell maturation antigen in relapsed/refractory multiple myeloma. Proc Natl Acad Sci U S A. 2019 May 7;116(19):9543–9551.

[63] CMS Manual System, Pub. 100–04 Medicare Claims Processing, Transmittal 11255. February 4, 2022; *https://www.cms.gov/files/document/r11255cp.pdf.*

[64] Yong et al. 2016. Multiple Myeloma: Patient outcomes in real-world practice. *British Journal of Haematology,* 175; 252–264. doi: 10.1111/bjh.14213.

population having been studied and being targeted for use.

In summary, the applicant asserted that CARVYKTI™ meets the newness criterion because it is not substantially similar to other available therapies due to its unique mechanism of action, with two distinct binding domains that confer avidity to the BCMA antigen, and because it treats a different patient population, RRMM patients who received three prior therapies.

In the FY 2023 IPPS/LTCH PPS proposed rule, as stated in the FY 2022 proposed rule (86 FR 25236), we noted that CARVYKTI™ may have a similar mechanism of action to that of ABECMA®. We also noted that ABECMA® received approval for new technology add-on payments for FY 2022 for the treatment of adult patients with RRMM after four or more prior lines of therapy, including an immunomodulatory agent, a proteasome inhibitor, and an anti-CD38 monoclonal antibody (86 FR 45028 through 45035). We stated that although the number of BCMA binding domains of CARVYKTI™ and ABECMA® differ, it appeared that the mechanism of action for both therapies is the binding to BCMA by a CAR construct, which results in T-cell activation and killing of malignant myeloma cells. We noted that the applicant asserted that CARVYKTI™'s mechanism of action is unique due to its dual binding domain which affects the therapy's clinical activity, as compared to existing technologies with a single binding domain. However, we were unclear as to how the additional BCMA binding domain represents a change in the mechanism of action of this therapy, or if it may instead relate to an assessment of whether the technology meets the substantial clinical improvement criterion. Because of the potential similarity with the BCMA antigen and other actions, we stated our belief that the mechanism of action for CARVYKTI™ may be the same or similar to that of ABECMA®.

We also noted that the applicant stated that CARVYKTI™ may serve a new patient population if approved as a fourth line treatment, as existing treatments are approved for fifth line treatment. However, because CARVYKTI™'s recent approval stated that it is indicated for fifth line treatment, we questioned whether CARVYKTI™ treats a new patient population.[65]

Accordingly, as it appeared that CARVYKTI™ and ABECMA® are purposed to achieve the same therapeutic outcome using the same or similar mechanism of action, are assigned to the same MS–DRG, and treat the same or similar patient population and disease, we stated our belief that these technologies may be substantially similar to each other. We noted that if this technology is substantially similar to ABECMA®, we believe the newness period for this technology would begin on March 26, 2021, the date ABECMA® received FDA approval. We expressed our interest in information on how these two technologies may differ from each other with respect to the substantial similarity criteria and newness criterion. We invited public comment on whether CARVYKTI™ meets the newness criterion, including whether CARVYKTI™ is substantially similar to ABECMA® for purposes of new technology add-on payments.

Comment: Several commenters voiced their support for CARVYKTI™ in their general comments supporting all CAR T-cell therapies. The commenters encouraged CMS to consider approving the new technology add-on payment for new CAR T-cell therapies, including CARVYKTI, as they stated this encourages hospitals to adopt breakthrough technologies by helping them recover some of the increased costs associated with offering innovative treatments to patients.

Response: We thank the commenters for their support.

Comment: The applicant submitted a comment in response to concerns raised by CMS in the proposed rule, reiterating that CARVYKTI™ meets the newness criterion and is not substantially similar to ABECMA® and other multiple myeloma treatments. The applicant stated that, while both CARVYKTI™ and ABECMA® are CAR T-cell therapies directed against BCMA for the treatment of patients with multiple myeloma, there are mechanistic differences that contribute to a different CAR T-cell dose, pharmacokinetic/pharmacodynamic profile, and a different time frame for the development of cytokine release syndrome (CRS) as compared to ABECMA®'s single binding domain. The applicant presented the following table outlining the key scientific differences between CARVYKTI™ and ABECMA®.

[65] *https://www.fda.gov/media/156572/download.*

Key Scientific Differences Between CARVYKTI™ and ABECMA®		
	CARVYKTI™	ABECMA®
BCMA Binding Domain	Double	Single
Dosage	0.75 x 10^6 CAR-positive viable T cells	300 to 400 x 10^6
Expansion of T cell populations	CD8 central memory cells	CD4 cells
Onset of CRS	Day 7	Day 1
IL-6	Peaks at day 10	Peaks at day 5
Peak IL-6, CRS grade 3	~1000 pg/ml.	>10,000 pg/nl
Other cytokines	Return to baseline levels in 2 to 3 months	Return to baseline levels in 1 month

In terms of differences in dosage, the applicant stated the clinical target dose of CARVYKTI™ is 0.75 ×10^6 CAR-positive viable T-cells/kg whereas ABECMA® is 300–400 × 10^6 cells/kg. In terms of differences in expansion of T-cell populations, the applicant stated that CARVYKTI™ has preferential expansion of CD8 T-cells as opposed to CD4 T-cells for ABECMA®. In terms of the differences in pharmacokinetic and pharmacodynamic properties, the applicant stated that the median time to reach maximum expansion for CARVYKTI™ was approximately 13 days after infusion, whereas for ABECMA® it was much sooner. According to the applicant, because of this longer lag time for maximal expansion, the highest peak IL–6 levels is around 10 days for CARVYKTI™ as opposed to 5 days with ABECMA®, which resulted in differences in the side effect profile, as the median time to onset of CRS is 7 days for CARVYKTI™ as opposed to 1 day for ABECMA®. The applicant stated that patients with CRS of Grade 3 severity had IL–6 peak levels of ~1,000 pg/ml with CARVYKTI™ as opposed to over 10,000 pg/ml with ABECMA®. The applicant also stated that the return to baseline levels of IL–6 occurred in 2–3 months for patients treated with CARVYKTI™ as opposed to 1 month with ABECMA®. Lastly, the applicant stated that another important distinction between CARVYKTI™ and ABECMA® was that CARVYKTI™ is derived from llama antibodies directed against BCMA whereas ABECMA® is derived from mouse antibodies. We note that the applicant agreed with our assessment that CARVYKTI™ does not treat a new population.

Another commenter requested that CARVYKTI™ be considered for a separate new technology add-on payment and should not be combined with other new technologies as the commenter considers the newness, cost, and substantial clinical improvement requirements met for CARVYKTI™. Per the commenter, this would ensure the maximum impact for each product for CAR T-cell therapy, which the commenter stated is significantly underpaid.
