SOURCE: FDIC.

Note: The annual burden estimate for a given collection is calculated in two steps. First, the total number of annual responses is calculated as the whole number closest to the product of the annual number of respondents and the annual number of responses per respondent. Then, the total number of annual responses is multiplied by the time per response and rounded to the nearest hour to obtain the estimated annual burden for that collection. This rounding ensures the annual burden hours in the table are consistent with the values recorded in the OMB's regulatory tracking system.
