We have also received requests to temporarily add Telephone E/M visit codes, CPT codes 99441, 99442, and 99443 to the Medicare Telehealth Services List on a Category 3 basis. In the March 31, 2020 interim final rule with comment period (IFC), we established separate payment for audio-only telephone E/M services (85 FR 19264 through 19266) for the duration of the PHE for the COVID–19 pandemic. Although these services were previously considered non-covered under the PFS, in the context of the PHE for COVID–19 and with the goal of reducing exposure risks associated with COVID–19 (especially in situations when two-way, audio and video technology is not available to furnish a Medicare telehealth service), we believed there were circumstances where prolonged, audio-only communication between the practitioner and the patient could be clinically appropriate, yet not fully replace a face-to-face visit. In the May 8, 2020 COVID–19 IFC, we noted that interested parties had informed us that use of audio-only services was more prevalent than we had previously considered, especially because many beneficiaries were not using video-enabled communication technology from their homes. In other words, there were many cases where practitioners who would ordinarily furnish audio-video telehealth or in-person visits to evaluate and manage patients' medical concerns were instead using audio-only interactions to manage more complex care (85 FR 27589 through 27590). While we had previously acknowledged the likelihood that, under the

circumstances of the PHE for COVID–19, more time would be spent interacting with the patient via audio-only technology, we stated that the intensity of furnishing an audio-only visit to a beneficiary during the unique circumstances of the PHE for COVID–19 was not accurately captured by the valuation of these services that we established in the March 31, 2020 IFC (85 FR 27590). This will be particularly true to the extent that these audio-only services are serving as a substitute for office/outpatient (O/O) Medicare telehealth visits for beneficiaries not using video-enabled telecommunications technology, which is contrary to the situation we anticipated when establishing separate payment for them in the March 31, 2020 IFC. In the May 8, 2020 COVID–19 IFC, we stated that, given our understanding that these audio-only services were being furnished primarily as a replacement for care that would otherwise be reported as an in-person or telehealth visit using the O/O E/M codes, we established new RVUs for the telephone E/M services based on crosswalks to the most analogous O/O E/M codes, based on the time requirements for the telephone codes and the times assumed for valuation for purposes of the O/O E/M codes. Specifically, we crosswalked the levels 2–4 O/O E/Ms for established patients, as described by CPT codes 99212, 99213, and 99214, to CPT codes 99441, 99442, and 99443, respectively. Additionally, we stated that, given our understanding that these audio-only services were being furnished as substitutes for O/O E/M services, we recognized that they should be considered as telehealth services, and added them to the Medicare Telehealth Services List for the duration of the PHE for COVID–19 (85 FR 27590).

In the CY 2022 PFS final rule (86 FR 65055), in response to requests that these codes be added to the Medicare Telehealth Services List on a Category 3 basis, we stated that we were finalizing a change to the definition of “telecommunications system” to allow telehealth services for the diagnosis, evaluation, and treatment of mental health conditions to be furnished through audio-only technology in certain circumstances after the end of the PHE. For example, the O/O E/M codes are on the Medicare Telehealth Services List permanently and when used to describe care for mental health conditions, will be reportable when furnished via audio-only technology to patients in their homes. Since audio-only telecommunications technology

can be used to furnish mental health telehealth services to patients in their homes, the addition of these codes to the Medicare Telehealth Services List is unnecessary for mental health telehealth services. For telehealth services other than mental health care, we stated that we believe that two-way, audio-video communications technology is the appropriate standard that will apply for telehealth services after the PHE ends. Further, we noted that section 1834(m)(2)(A) of the Act requires that payment to a distant site physician or practitioner that furnishes Medicare telehealth services to an eligible telehealth individual be equal to the amount that would have been paid under Medicare if such physician or practitioner had furnished the service without a telecommunications system. We believe that the statute requires that telehealth services be so analogous to in-person care such that the telehealth service is essentially a substitute for a face-to-face encounter. However, these audio-only telephone E/M services are inherently non-face-to-face services, since they are furnished exclusively through remote, audio-only communications. Outside the circumstances of the PHE, the telephone E/M services would not be analogous to in-person care; nor would they be a substitute for a face-to-face encounter. Therefore, we do not believe it will be appropriate for these codes to remain on the Medicare Telehealth Services List after the end of the PHE and the 151-day post-PHE extension period. Accordingly, we did not propose to keep these telephone E/M services on the Medicare Telehealth Services List after that period on a Category 3 basis, because the codes describe services that can only be furnished using audio-only telecommunications technology, and outside of the circumstances of the PHE, they do not describe services that are a substitute for an in-person visit. While we acknowledge that audio-only technology can be used to furnish mental health telehealth services to patients in their homes under certain circumstances after the PHE ends, two-way, audio-video communications technology continues to be the appropriate standard that will apply for Medicare telehealth services after the PHE and the 151-day extension period. As we noted in the CY 2021 PFS final rule (85 FR 84535), we will assign these Telephone E/M visit codes (CPT codes 99441, 99442, and 99443) a “bundled” status after the end of the PHE and the 151-day extension period, and we will post the RUC-recommended RVUs for

these codes in accordance with our usual practice.

We received public comments on Telephone E/M Services. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters urged us to continue to make payment for Telephone E/M visit codes following 151 days after the PHE. Some commenters stated that payment for these services should be made permanent while others request that they be added to the Medicare Telehealth Services List on a Category 3 basis. Commenters stated that experience during the PHE indicated that telehealth can provide a viable alternative to office visits. Commenters stated that, although patient-provider communication using both audio and visual modes is considered optimal for telehealth delivery, many patients are unable to use the video technology required due to lack of broadband or cellular data, technology that does not support video, or difficulty in using video technology. Commenters cited access concerns, particularly for patients who live in rural areas or who lack of broadband access, as well as disparities in access to technology and in digital literacy.

A commenter noted that, in the CY 2023 PFS proposed rule, CMS further stated that telephone E/M services are neither analogous to an in-person E/M visit nor can the telephone E/M substitute for an in-person E/M visit. However, as noted above, in the second IFC, CMS did believe telephone E/Ms were serving as a substitute for in-person E/M visits, and because of that, began to reimburse them the same rate as in-person E/M visits. Commenters noted that this would indicate they are analogous to an in-person service and would fit the criteria to be on the Medicare Telehealth Services List permanently.

*Response:* We reiterate that we believe these audio-only telephone E/M services are inherently non-face-to-face services, since they are furnished exclusively through remote, audio-only communications. We continue to believe that, outside the circumstances of the PHE, these services will no longer serve as a substitute for in-person care that is ordinarily furnished in a face-to-face encounter. Section 1834(m)(1) of the Act requires that we make payment for telehealth services “notwithstanding that the individual physician or practitioner providing the telehealth service is not at the same location as the beneficiary.” Section 1834(m)(2)(A) of the Act requires that we make payment to a physician or practitioner located at

a distant site for a telehealth service at an amount equal to the amount that the physician or practitioner would have been paid if the service had instead been furnished without the use of a telecommunications system. Taken together, we believe that the statute requires that Medicare telehealth services be analogous to in-person care such that the telehealth service is essentially a substitute for a face-to-face encounter. We recognize that we added the telephone E/M services to the Medicare Telehealth Services List on a temporary basis during the PHE to address the associated extraordinary public health and safety, and healthcare access issues. However, outside of the circumstances of the PHE, we continue to believe that our longstanding regulatory interpretation of “telecommunications system” generally precludes the use of audio-only technology for purposes of Medicare telehealth services, with the exception under certain circumstances of telehealth services to diagnose, evaluate, or treat a mental health disorder (including treatment of a diagnosed SUD or co-occurring mental health disorder). That rule and the exception are specified in our regulation at § 410.78(a)(3). At the conclusion of the PHE and the 151-day extension period provided by the CAA, 2022, the only Medicare telehealth services that will be permitted to be furnished using audio-only technology will be the mental health telehealth services. When a practitioner furnishes such an E/M service using audio-only technology, they would bill for the same service they would bill if the service had been furnished in person. As such, there is not a need to add the telephone-only E/M codes to the Medicare Telehealth Services List for this purpose.

*Comment:* A commenter stated that, if CMS removes the telephone E/M CPT codes 99441–99443 from the Medicare Telehealth Services List on the 152nd day after the PHE ends, CMS should then create and establish particular values for a third and higher level of virtual check-in service that would be similar to the telephone E/M services that have been available during the PHE. The commenter is requesting that this third virtual check-in code would crosswalk to CPT code 99443, and should assign RVUs to HCPCS codes G2012 (*Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related*

*e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*), G2252 (*Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion*), and a third potential check-in code with crosswalks to CPT codes 99441–99443, respectively.

*Response:* We appreciate the comment and may consider potential coding revisions for future rulemaking. However, we believe that, in light of the fact that the virtual check-in codes are intended for practitioners to have a non-face-to-face discussion with a patient to determine the need for care, the necessity for a longer virtual check-in (for example, 21–30 minutes) is not clear. Moreover, if a patient requires evaluation and management (E/M) services that are sufficiently complicated to last longer than the 11–20 minutes considered in HCPCS code G2252, then there are many other E/M visit codes that are already available as Medicare telehealth.

After consideration of public comments, we are finalizing our proposal not to add these CPT codes 99441–99443 to the Medicare Telehealth Services List on a Category 3 basis; rather, we will retain CPT codes 99441–99443 on the Medicare Telehealth Services List through expiration of the 151-day period following the end of the PHE, at which point they will revert to bundled status.

### (3) GI Tract Imaging and Continuous Glucose Monitoring

We received requests to add CPT codes describing GI Tract Imaging, CPT code 91110 (*Gastrointestinal tract imaging, intraluminal (e.g., capsule endoscopy), esophagus through ileum, with interpretation and report*) and Ambulatory Continuous Glucose Monitoring, CPT code 95251 (*Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report*), to the Medicare Telehealth Services List on a Category 3 basis. We believe these codes may describe services that are inherently non-face-to-face services, (the patient need not be

present in order for the service to be furnished in its entirety), and therefore, they do not describe services that are a substitute for an in-person visit. As stated earlier, we believe that the statute requires that telehealth services be so analogous to in-person care such that the telehealth service is essentially a substitute for a face-to-face encounter. For this and other reasons, we did not propose to add these services to the Medicare Telehealth Services List on a Category 3 basis; we do not believe these CPT codes describe services that are a substitute for an in-person visit, and we believe that services that are not inherently face-to-face services are not services that can be furnished as Medicare telehealth services. Even so, we are interested in information that would help us to understand whether these services would meet the criteria for inclusion on the Medicare Telehealth Services List either for the PHE, as Category 3 services, or permanently on a Category 1 or 2 basis, given our questions as to whether they are inherently non-face-to-face services, and therefore, may not fit within the scope of services that could be furnished as Medicare telehealth services. Therefore, we also solicited comment on whether these services would involve an in-person service when furnished without the use of a telecommunications system.

We received public comments on GI Tract Imaging and Continuous Glucose Monitoring. The following is a summary of the comments we received and our responses.

**Comment:** A commenter agreed that CPT code 91110 describes a service that is inherently a non-face-to-face service, as the patient is not present in order for the service to be furnished in its entirety. The commenter described the services as involving swallowing a capsule camera that captures images of the gastrointestinal tract, which are recorded on the capsule and subsequently reviewed by the clinician using special computer software. The commenter stated that the ingestion of the capsule is the only component of this service that requires direct observation by a health care provider. The commenter noted that less than 10 percent of the service time/work associated with CPT code 91110 involves any direct interaction with the patient, and the small amount of patient interaction can be done safely and effectively via a telehealth visit with video, per the FDA clearance.

According to one commenter, since the capsule service should only be offered to an established patient, an in-person interaction to administer the

capsule is unnecessary and the patient can safely do so in the home setting.

**Response:** We appreciate this background information from the commenters. Given that this service describes collection, interpretation, and reporting, we believe this code describes services that are not inherently non-face-to-face, and therefore, they do not describe a service that is a substitute for an in-person visit. Additionally, the face-to-face portion of the service would require the patient to be physically present.

**Comment:** Some commenters agreed with CMS' assessment that Ambulatory Continuous Glucose Monitoring, CPT code 95251, is an inherently non-face-to-face service, and therefore, does not describe a service that is a substitute for an in-person visit. CPT code 95251 does not involve an in-person visit when furnished without the use of a telecommunications system.

One commenter opposed our proposal not to add CPT code 95251 to the Medicare Telehealth Services List on a Category 3 basis, citing the importance of this service in treating gestational diabetes, saying CMS should add CPT code 95251 to the list on a Category 3 basis when it is billed with CPT codes 99213 (*Established patient office or other outpatient visit, 20–29 minutes*) or 99214 (*Established patient office or other outpatient visit, 30–39 minutes*) and the appropriate modifier. Another commenter cited 2020 claims data that shows CPT code 95251 is billed 8.2 percent and 62.6 percent of the time with CPT codes 99213 and 99214, respectively, demonstrating that this service is typically performed face-to-face.

**Response:** We appreciate the comments. We continue to believe, and commenters have confirmed, that CPT code 95251 is not a substitute for an in-person visit, as this code describes physician analysis, interpretation, and reporting, which does not inherently describe a face-to-face encounter. Accordingly, this code does not describe a service that, when conducted via telehealth, is a substitute for a face-to-face service. As noted in the CY 2018 PFS final rule (82 FR 53011), if a service does not describe a service typically furnished in-person, it would not be considered a telehealth service under the applicable provisions of the statute.

After consideration of public comments, we are finalizing our proposal not to add CPT code 91110 or CPT code 95251 to the Medicare Telehealth Services List on a Category 3 basis.

#### (4) Neurostimulator Pulse Generator/Transmitter

We received requests to add codes describing the electronic analysis of an implanted neurostimulator pulse generator/transmitter to the Medicare Telehealth Services List. These included a request to add CPT codes 95976 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional*) and 95977 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional*) permanently on a Category 1 basis, as well as a request to add CPT codes 95970 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve, neurostimulator pulse generator/transmitter, without programming*), 95983 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, first 15*

*minutes face-to-face time with physician or other qualified health care professional), and 95984 (Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)) to the Medicare Telehealth Services List on a temporary Category 3 basis.*

The request to add CPT codes 95976 and 95977, which are codes that describe analysis of cranial nerve neurostimulation, indicated that the ability to fully furnish this service using two-way, audio-video communication technology was forthcoming, but is currently unavailable. Therefore, we did not propose to add CPT codes 95976 and 95977 to the Medicare Telehealth Services List, because the full scope of service elements described by these codes cannot currently be furnished via two-way, audio-video communication technology. However, we will consider additional evidence regarding the ability to furnish these services as telehealth services, such as information indicating that current technology has evolved, as it becomes available for future rulemaking. We also did not propose to add them on a Category 1 basis because they do not describe services that are similar to professional consultations, office visits, and office psychiatry services that are currently on the Medicare Telehealth Services List.

With regard to CPT codes 95970, 95983, and 95984, which describe general brain nerve neurostimulation, we have some concerns about whether the full scope of service elements could be furnished via two-way, audio-video communication technology, particularly since it is unclear whether the connection between the implanted device and the analysis/calibration equipment can be done remotely. Additionally, we are concerned about the immediate safety of the patient if the calibration of the neurostimulator were done incorrectly or if some other problem occurred. However, we did include these services on the Medicare Telehealth Services List on a temporary basis during the PHE, and Medicare claims data suggest that these services

are being provided via telehealth. Based on this information, we believe there is some possible clinical benefit for these services when furnished via telehealth; however, there is not yet sufficient evidence available to consider the services for permanent addition to the Medicare Telehealth Services List under the Category 1 or Category 2 criteria. With that said, CPT codes 95970, 95983, and 95984 do meet the criteria for temporary inclusion on the Medicare Telehealth Services List on a Category 3 basis. Therefore, we proposed to add CPT codes 95970, 95983, and 95984 to the Medicare Telehealth Services List on a Category 3 basis, while we solicited comment on our concerns regarding patient safety and whether these services are appropriate for inclusion on the Medicare Telehealth Services List outside the circumstances of the PHE.

*Comment:* Commenters agreed with CMS that the full scope of service elements described by CPT codes 95976 and 95977 cannot currently be furnished via two-way, audio-video communication technology, and they state that the agency should reconsider these services for possible addition to the Medicare Telehealth Services List as evidence develops regarding the ability to furnish these services as telehealth services.

*Response:* We appreciate commenters' support for this proposal and are finalizing our proposal to not add these services to the Medicare Telehealth Services List.

*Comment:* Commenters supported our proposal to add CPT codes 95970, 95983, and 95984 to the Medicare Telehealth Services List on a Category 3 basis. Some commenters expressed disappointment that we did not propose to add them to the Medicare Telehealth Services List permanently. In response to our comment solicitation regarding patient safety concerns, a commenter noted that the technology includes safety features, including a prominent network status indicator that appears on both the clinician's programmer, as well as the patient's device, and the "Protected Recovery Program" (PRP) feature that ensures the patient is returned to a known state if a remote session is interrupted. According to one commenter, systems have been successfully in use for over a year and a half that allow for a stable, secure 2-way telehealth connection for brain stimulator pulse generator programming. Commenters stated that these systems route through a secure HIPAA-compliant server and allow the managing physician qualified health care professional (QHP) to remotely control all essential functions of the

patient device while providing real time audio and video to allow for patient assessment and feedback. The commenter noted that CMS' concerns regarding patient safety if the programming is incorrect or if another problem occurred have been addressed in the development and deployment of existing remote brain neurostimulator programming systems. The commenter stated that these systems ensure that the patient controller has a "safe" program (set of stimulation parameters). In the event of an interruption in the remote connection, they noted that the device automatically reverts to this "safe" program, so that the patient is not left with a potentially problematic set of programming parameters.

The commenter also noted that all elements can be fully and effectively performed by a remotely located clinician using two-way, audio/video telecommunication technology including direct programming of implantable neurostimulator devices, and these services are critical to the successful therapy regimens and health outcomes of people with Parkinson's disease.

*Response:* We continue to believe that these services are most appropriately added to the Medicare Telehealth Services on a Category 3 basis. Adding them on a Category 3 basis will allow the continued collection of information through the experiences of clinicians who are furnishing these services via telehealth during the PHE for COVID-19, and help us to determine whether these services may ultimately be eligible for addition to the Medicare Telehealth Services List on a Category 1 or Category 2 basis in the future.

After consideration of public comments, we are finalizing our proposals not to add CPT codes 95976 and 95977 to the Medicare Telehealth Services List, and to add CPT codes 95970, 95983, and 95984 to the Medicare Telehealth Services List on a Category 3 basis.

#### (5) Emotional/Behavior Assessment Services and Psychological or Neuropsychological Testing and Evaluation Services

We received requests to add a number of emotional/behavior assessment services and psychological, or neuropsychological testing and evaluation services, described by CPT codes 97151 (*Behavior identification assessment, administered by a*

physician or other qualified health care professional, each 15 minutes of the physician's or other qualified health care professional's time face-to-face with patient and/or guardian(s)/caregiver(s) administering assessments and discussing findings and recommendations, and non-face-to-face analyzing past data, scoring/interpreting the assessment, and preparing the report/treatment plan), 97152 (Behavior identification-supporting assessment, administered by one technician under the direction of a physician or other qualified health care professional, face-to-face with the patient, each 15 minutes), 97153 (Adaptive behavior treatment by protocol, administered by technician under the direction of a physician or other qualified health care professional, face-to-face with one patient, each 15 minutes), 97154 (Group adaptive behavior treatment by protocol, administered by technician under the direction of a physician or other qualified health care professional, face-to-face with two or more patients, each 15 minutes), 97155 (Adaptive behavior treatment with protocol modification, administered by physician or other qualified health care professional, which may include simultaneous direction of technician, face-to-face with one patient, each 15 minutes), 97156 (Family adaptive behavior treatment guidance, administered by physician or other qualified health care professional (with or without the patient present), face-to-face with guardian(s)/caregiver(s), each 15 minutes), 97157 (Multiple-family group adaptive behavior treatment guidance, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers, each 15 minutes), 97158 (Group adaptive behavior treatment with protocol modification, administered by physician or other qualified health care professional, face-to-face with multiple patients, each 15 minutes), 0362T (Behavior identification supporting assessment, each 15 minutes of technicians' time face-to-face with a patient, requiring the following components: administration by the physician or other qualified health care professional who is on site; with the assistance of two or more technicians; for a patient who exhibits destructive behavior; completion in an environment that is customized to the patient's behavior.), and 0373T (Adaptive behavior treatment with protocol modification, each 15 minutes of technicians' time face-to-face with a

patient, requiring the following components: administration by the physician or other qualified health care professional who is on site; with the assistance of two or more technicians; for a patient who exhibits destructive behavior; completion in an environment that is customized to the patient's behavior.) to the Medicare Telehealth Services List permanently on a Category 2 basis. These services are currently on the Medicare Telehealth Services List temporarily for the duration of the PHE. We believe that, for these services, there is likely to be clinical benefit when furnished via telehealth, and therefore, they meet the criteria for temporary inclusion on a Category 3 basis. We did not identify these services during our initial assessment of services that should be temporarily available on the Medicare Telehealth Services List on a Category 3 basis in CY 2021 rulemaking; however, we proposed to include these services on the Medicare Telehealth Services List on a Category 3 basis, in light of information we received from the requestors describing the potential clinical benefit of these services when furnished via telehealth. However, we do have concerns regarding whether, outside the circumstances of the PHE, the full scope of service elements can occur in a manner that does not jeopardize quality of care, whether this patient population could be fully assessed via interactive audio-video technology, and whether these services could be conducted in a way that maintains the safety of the beneficiary. This patient population often includes patients with moderate to severe challenges in oral communication, and they may require close observation of their movements within all of their environmental cues, which include, for instance, smell, sound, and colors around the room. We are concerned that two-way, audio and video communications technology would not fully capture these behavioral nuances. We believe more time may be necessary to develop evidence that could support the decision to add these services to the Medicare Telehealth Services List permanently on a Category 1 or Category 2 basis. We solicited comment on our patient safety concerns.

We received public comments on emotional/behavior assessment and psychological or neuropsychological testing and evaluation services. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported the addition of these services on a Category 3 basis. Some commenters suggested that the services should be

added permanently, rather than temporarily on a Category 3 basis.

One commenter urged us to permanently add CPT codes 97151, 97152, 97153, 97154, 97155, and 97156, but did not find sufficient evidence supporting safe, effective telehealth delivery of the services represented by codes 97157, 97158, 0362T, or 0373T; however, the commenter supported our proposal to add the latter four codes on a Category 3 basis.

A few commenters responded to our concerns regarding patient safety, quality of care, and whether the full scope of service elements can be met via two-way audio-video communication technology. In response to our questions about regarding whether this patient population can be assessed fully and safely via interactive audio-video technology and our concerns that patients with moderate to severe communication difficulties often require close observation of their responses to cues in their environments (for example, odors, sounds, colors) that could not be accomplished remotely via technology, a commenter acknowledged our concerns, but noted that the services represented by this code set are not specific to any patient population; rather, they noted that they are for any patient for whom they may be medically necessary. The commenter included emerging evidence of the efficacy of telehealth delivery of the services, including research articles relevant to each service. The commenter noted that no reports of significant adverse events or negative side effects were noted in research; however, the commenter indicated that when the assessment or treatment services targeted behaviors in patients with developmental disabilities that carried risk of harm, the supervising behavior analysts (QHPS) had the behavior technicians or caregivers who delivered the services take precautions to protect patients.

A commenter agreed there may be concern that some patients may not be able to be fully assessed via interactive audio-visual technology; however, they stated that the benefits of furnishing these services via telehealth outweigh the concerns. The commenter also noted that the decision as to the appropriateness of care should be determined by the provider, without financial disincentives between in-person and telehealth care. The commenter noted that there are significant benefits to being able to provide these services via telehealth. The commenter stated that patients with dementia or other cognitive or psychological impairments may require the assistance of additional parties

during a visit, and that providing these services remotely can allow for inclusion of other people, including family, significant others, and additional practitioners, who can provide substantial benefits. According to the commenter, this is not always the case for in-person visits, as caregivers and other family members may not be able to take time off from work or travel to the appointments, and virtual visits allow for the practitioner, the patient, and important family members to be in separate locations while still being able to participate in the visit. Additionally, the commenter noted that psychiatric patients often have social anxiety issues, leading to limitations on leaving safe places like their home, facility, or family, and remote visits are important ways to ensure these patients maintain access to care.

A commenter did not support these services remaining on the Medicare Telehealth Services List, stating such additions may pose beneficiary safety and quality-of-care issues. The commenter urged us to exercise extreme caution when adding additional mental-health-related services to the Medicare Telehealth Services List on a temporary basis, considering the unique challenges faced by persons living with mental health conditions, and the multiple, system-wide issues currently complicating the delivery of safe and effective mental health care.

*Response:* We note that CPT codes 90853 and 96121 are already permanently on the Medicare Telehealth Services List. Regarding CPT codes 96130–96133, 97151–97158, 0362T, and 0373T, we continue to believe our proposal to add these services on a Category 3 basis is appropriate and preferable. Adding these CPT codes to the Medicare Telehealth Services List on a Category 3 basis will allow for the collection and evaluation of data that could potentially support permanent inclusion on the Medicare Telehealth Services List, and we look forward to evaluating such data in the future.

After consideration of public comments, we are finalizing our proposal to retain CPT codes 97151–97158, 0362T, and 0373T on the Medicare Telehealth Services List on a Category 3 basis.

#### c. Other Services Proposed for Addition to the Medicare Telehealth Services List

As discussed above, there are services that are included on the Medicare Telehealth Services List temporarily during the PHE for which there is likely to be clinical benefit when furnished via telehealth, but there is not yet sufficient

evidence available to consider the services for permanent addition to the list under the Category 1 or Category 2 criteria. In addition to the services we proposed for addition to the Medicare Telehealth Services List on a Category 3 basis in response to requests, we also proposed to add a number of services to the Medicare Telehealth Services List on a Category 3 basis that are currently included on the Medicare Telehealth Services List temporarily during the PHE that were not specifically requested for permanent addition. These services would be included on the Medicare Telehealth Services List through 2023 to allow us time to evaluate data that may support their permanent addition to the list on a Category 1 or Category 2 basis.

The services we proposed for addition to the Medicare Telehealth Services List temporarily on a Category 3 basis include CPT codes 90875 (*Individual psychophysiological therapy incorporating biofeedback training by any modality (face-to-face with the patient), with psychotherapy (e.g., insight oriented, behavior modifying or supportive psychotherapy); 30 minutes*), 92012 (*Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient*), 92014 (*Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits*), 92507 (*Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual*), 94005 (*Home ventilator management care plan oversight of a patient (patient not present) in home, domiciliary or rest home (e.g., assisted living) requiring review of status, review of laboratories and other studies and revision of orders and respiratory care plan (as appropriate), within a calendar month, 30 minutes or more*), 96105 (*Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, e.g., by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour*), 96110 (*Developmental screening (e.g., developmental milestone survey, speech and language delay screen), with scoring and documentation, per standardized instrument*), 96112 (*Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or*

*executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; first hour*), 96113 (*Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; each additional 30 minutes (List separately in addition to code for primary procedure)*), 96127 (*Brief emotional/behavioral assessment (e.g., depression inventory, attention-deficit/hyperactivity disorder [ADHD] scale), with scoring and documentation, per standardized instrument*), 96170 (*Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes*), 96171 (*Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)*), 97129 (*Therapeutic interventions that focus on cognitive function (e.g., attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (e.g., managing time or schedules, initiating, organizing, and sequencing tasks), direct (one-on-one) patient contact; initial 15 minutes*), 97130 (*Therapeutic interventions that focus on cognitive function (e.g., attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (e.g., managing time or schedules, initiating, organizing, and sequencing tasks), direct (one-on-one) patient contact; each additional 15 minutes (List separately in addition to code for primary procedure)*), and 99473 (*Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration*). Our analyses of these services indicate that there is some evidence of possible clinical benefit associated with these services when furnished via telehealth. We believe these services can safely be furnished via real-time, audio and visual interactive telecommunications under the circumstances of the PHE, but there is not yet sufficient evidence available to consider the services for permanent addition to the Medicare Telehealth Services List under the Category 1 or Category 2 criteria.

Some audiology testing services are currently temporarily included on the Medicare Telehealth Services List for the duration of the PHE. These are CPT codes 92550 (*Tympanometry and reflex threshold measurements*), 92552 (*Pure tone audiometry (threshold); air only*), 92553 (*Pure tone audiometry (threshold); air and bone*), 92555 (*Speech audiometry threshold*), 92556 (*Speech audiometry threshold; with speech recognition*), 92557 (*Comprehensive audiometry threshold evaluation and speech recognition (92553 and 92556 combined)*), 92563 (*Tone decay test*), 92565 (*Stenger test, pure tone*), 92567 (*Tympanometry (impedance testing)*), 92568 (*Acoustic reflex testing, threshold*), 92570 (*Acoustic immittance testing, includes tympanometry (impedance testing), acoustic reflex threshold testing, and acoustic reflex decay testing*), 92587 (*Distortion product evoked otoacoustic emissions; limited evaluation (to confirm the presence or absence of hearing disorder, 3–6 frequencies) or transient evoked otoacoustic emissions, with interpretation and report*), 92588 (*Distortion product evoked otoacoustic emissions; comprehensive diagnostic evaluation (quantitative analysis of outer hair cell function by cochlear mapping, minimum of 12 frequencies), with interpretation and report*), 92601 (*Diagnostic analysis of cochlear implant, patient younger than 7 years of age; with programming*), 92625 (*Assessment of tinnitus (includes pitch, loudness matching, and masking)*), 92626 (*Evaluation of auditory function for surgically implanted device(s) candidacy or postoperative status of a surgically implanted device(s); first hour*), 92627 (*Evaluation of auditory function for surgically implanted device(s) candidacy or postoperative status of a surgically implanted device(s); each additional 15 minutes (List separately in addition to code for primary procedure)*). We have received information that, during the PHE, certain practitioners have developed the capacity to perform these services using remote technology including specialized equipment inside an audiometric soundproof booth. We believe that, in circumstances in which such equipment is available at the originating site, these services can be furnished in a way in which all of the elements of the services are met and that there is likely to be a

clinical benefit when these services are furnished via telehealth. Therefore, we proposed to add these services to the Medicare Telehealth Services List on a Category 3 basis, which will allow these services to be available via telehealth through the end of CY 2023. We solicited comments regarding how widespread the availability of this remote technology is, and whether interested parties believe these services can be furnished in a way that does not jeopardize patient safety or quality of care when these services are furnished remotely.

Additionally, as discussed in section II.F. of this final rule, we proposed to create HCPCS codes G0316 (listed as GXXX1 in our proposed rule) (*Prolonged hospital inpatient or observation care evaluation and management service(s) beyond the total time for the primary service (when the primary service has been selected using time on the date of the primary service); each additional 15 minutes by the physician or qualified healthcare professional, with or without direct patient contact (list separately in addition to CPT codes 99223, 99233, and 99236 for hospital inpatient or observation care evaluation and management services)*). (Do not report G0316 on the same date of service as other prolonged services for evaluation and management 99358, 99359, 993X0). (Do not report G0316 for any time unit less than 15 minutes)), G0317 (listed as GXXX2 in our proposed rule) (*Prolonged nursing facility evaluation and management service(s) beyond the total time for the primary service (when the primary service has been selected using time on the date of the primary service); each additional 15 minutes by the physician or qualified healthcare professional, with or without direct patient contact (list separately in addition to CPT codes 99306, 99310 for nursing facility evaluation and management services)*). (Do not report G0317 on the same date of service as other prolonged services for evaluation and management 99358, 99359, 993X0). (Do not report G0317 for any time unit less than 15 minutes)), and G0318 (listed as GXXX3 in our proposed rule) (*Prolonged home or residence evaluation and management service(s) beyond the total time for the primary service (when the primary service has been selected using time on the date of the primary service); each additional 15 minutes by the physician or qualified*

*healthcare professional, with or without direct patient contact (list separately in addition to CPT codes 99345, 99350 for home or residence evaluation and management services)*). (Do not report G0318 on the same date of service as other prolonged services for evaluation and management 99358, 99359, 99417). (Do not report G0318 for any time unit less than 15 minutes)) to describe prolonged services associated with certain types of E/M services. These codes will be replacing existing codes that describe prolonged services, specifically inpatient prolonged services CPT codes 99356 (*Prolonged service in the inpatient or observation setting, requiring unit/floor time beyond the usual service; first hour (List separately in addition to code for inpatient or observation Evaluation and Management service)*) and 99357 (*Prolonged service in the inpatient or observation setting, requiring unit/floor time beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)*). These services are similar to services currently on the Medicare Telehealth Services List, such as CPT codes 99356 and 99357, which were added to the Medicare Telehealth Services List on a Category 1 basis in the CY 2016 rule (80 FR 71060–71062), as well as O/O prolonged service HCPCS code G2212 (*Prolonged service in the inpatient or observation setting, requiring unit/floor time beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)*), which was added to the Medicare Telehealth Services List on a Category 1 basis in the CY 2021 rule (85 FR 84506). Similarly, we believe that these proposed HCPCS G codes will be sufficiently similar to psychiatric diagnostic procedures or O/O visits currently on the Medicare Telehealth Services List to qualify for inclusion on the list on a Category 1 basis. Therefore, we proposed to add proposed HCPCS codes G0316, G0317, and G0318 to the Medicare Telehealth Services List on a Category 1 basis.

Table 12 lists the services that we are finalizing for addition to the Medicare Telehealth Services List on a Category 3 basis. Table 13 lists the services we are finalizing for permanent addition to the Medicare Telehealth Services List on a Category 1 basis.

**BILLING CODE 4150–28–C**

We received public comments on these other services that we proposed for addition to the Medicare Telehealth Services List. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported the addition of many of these services on a Category 3 basis.

*Response:* We appreciate the support for our proposals.

*Comment:* One commenter stated that ophthalmologic services (92002, 92004, 92012 and 92014) are generally covered via telehealth by other insurance plans, including Medicare Advantage plans and the Veterans Health Administration, and should also be available to Medicare beneficiaries. Commenters supported the addition of CPT codes 92012 and 92014 on a Category 3 basis.

*Response:* We thank commenters for their support of our proposal, and we are finalizing as proposed the addition of CPT codes 92012 and 92014 to the Medicare Telehealth Services List on a Category 3 basis. We did not identify or propose CPT codes 92002 or 92004 as Medicare telehealth in the proposed rule. As such, discussion of these codes is outside the scope of this rule.

*Comment:* Regarding our comment solicitation related to patient safety for audiology services, a commenter stated that there is now strong evidence confirming that patients who receive therapy services via telehealth have similar, or even better outcomes, compared to patients who received traditional in-person therapy services (including citations of studies). This commenter cited this evidence in urging us to add these services permanently. A commenter stated that the Veteran's Administration has shown, for many years, that audiology services can be safely provided, via telehealth, without sacrificing patient outcomes or quality of care, and that the technology required to perform these procedures via telehealth, in many cases with the assistance of an audiology assistant or technician at a remote location, is readily available. Commenters requested that many audiology services that are

not currently available on the Medicare Telehealth Services List be added on a Category 3 basis.

*Response:* We appreciate the information provided by commenters, and we may consider this information in future rulemaking. Given support of commenters, as well as information provided, we are finalizing the addition of audiology CPT codes 92550, 92552, 92553, 92555, 92556, 92557, 92563, 92565, 92567, 92568, 92570, 92587, 92588, 92601, 92625, 92626, and 92627 to the Medicare Telehealth Services List on a Category 3 basis, as proposed.

*Comment:* Commenters supported the addition of the proposed prolonged services HCPCS codes G0316–G0318 permanently on a Category 1 basis, stating that doing so is essential to maintaining consistency with the new coding and payment structure for inpatient E/M services.

*Response:* We appreciate commenters' support for this proposal. We are finalizing the addition of HCPCS codes G0316, G0317, and G0318 to the Medicare Telehealth Services List on a Category 1 basis, as proposed.

*Comment:* Numerous commenters requested that we add many services that are temporarily available for the PHE to the Medicare Telehealth Services List that are currently on the list on a temporary basis, but that we did not propose to continue on the list to be available as Medicare telehealth services be added on a Category 3 basis.

*Response:* As discussed above, we identified the services we considered appropriate for addition to the Medicare Telehealth Services List on a Category 3 basis by conducting an internal review to assess those services that may, outside of the circumstances of the PHE, be furnished using the full scope of service elements for their respective service/code via two-way, audio-video communication technology, as though the service were provided in-person. The commenters did not present new information indicating that our analysis was incomplete. Furthermore, because we did not propose to add the services requested by these commenters to the Medicare Telehealth Services List on a

Category 3 basis, we found these comments to be outside the scope of the proposed rule.

As discussed in section II.E. of this final rule, we proposed to create two HCPCS G-codes to describe monthly Chronic Pain Management and Treatment services: HCPCS code G3002 (*Chronic pain management and treatment, monthly bundle including, diagnosis; assessment and monitoring; administration of a validated pain rating scale or tool; the development, implementation, revision, and/or maintenance of a person-centered care plan that includes strengths, goals, clinical needs, and desired outcomes; overall treatment management; facilitation and coordination of any necessary behavioral health treatment; medication management; pain and health literacy counseling; any necessary chronic pain related crisis care; and ongoing communication and care coordination between relevant practitioners furnishing e.g. physical therapy and occupational therapy, complementary and integrative approaches, and community-based care, as appropriate. Required initial face-to-face visit at least 30 minutes provided by a physician or other qualified health professional; first 30 minutes personally provided by physician or other qualified health care professional, per calendar month. (When using G3002, 30 minutes must be met or exceeded.)*) and HCPCS code G3003 (*Each additional 15 minutes of chronic pain management and treatment by a physician or other qualified health care professional, per calendar month (List separately in addition to code for G3002). (When using G3003, 15 minutes must be met or exceeded.)*).

*Comment:* As discussed in section II.E.4.(33) in the CY 2023 PFS proposed rule, we solicited comment regarding how best the initial visit and subsequent visits should be conducted (for example, in-person, via telehealth, or the use of a telecommunications system, and any implications for additional or different coding). We also considered whether to add the CPM codes to the Medicare

Telehealth Services List. Many commenters asked us to add CPM services to the Medicare Telehealth Services List. One commenter stated that the CPM code(s) would be appropriate to add on a Category 1 basis, since chronic pain limits patient mobility and a “silver lining” of the COVID–19 pandemic is that telehealth flexibilities improved access to pain care. This commenter continued that it can be very burdensome for patients, especially those with “high impact” chronic pain, to physically get to doctor appointments, undergo the hardship of driving, walking distances, standing in line, and sitting for long periods in waiting rooms, all of which may exacerbate pain that has been ongoing for days to weeks. The commenter emphasized how important access to telehealth is for this particular group of Medicare patients and urged us to add it to the Medicare Telehealth Services List. One commenter stated that telehealth should be an option, because of geographic factors (rural dwellers are underserved) and life circumstances (child care, transportation), which can make repeated in-person appointments inaccessible. This commenter continued that people with chronic pain can experience challenging issues traveling to see a clinician, and often inquire about the availability of receiving integrative care through telehealth. For these reasons, this commenter recommended that we add the CPM services to the Medicare Telehealth Services List. One commenter stated they believed that telehealth increases self-efficacy in people living with pain. As a middle pathway, another commenter requested that we allow providers to use their discretion when determining if telehealth is appropriate for their patient. Another commenter added that telehealth visits should always be with the agreement of the patient as some people are more comfortable with face-to-face interactions. One commenter noted telehealth is appropriate once patients are established on their care plan, while another commenter suggested that at minimum, telehealth be allowed for all follow up visits.

*Response:* As discussed earlier in this section, we agree with the commenter’s suggestion to add CPM services to the Medicare Telehealth Services List on a Category 1 basis. We believe that the interactions between the furnishing practitioner and the beneficiary described by the required face-to-face visit component of the CPM services are sufficiently similar to professional consultations, office visits, and office

psychiatry services currently on the Medicare Telehealth Services List for these services to be added on a Category 1 basis. By its nature, and because of the many treatment challenges described by these and other commenters in section II.E.4.(33), pain care is ideally suited to telehealth, and we believe appropriate to be furnished through interactive, real-time telecommunications technology. Like certain other non-face-to-face PFS services, there are also components of HCPCS codes G3002 and G3003 describing care planning or care coordination with other health care professionals that are commonly furnished remotely using telecommunications technology, and do not require the patient to be present/in-person with the practitioner when they are furnished. As such, these components of HCPCS codes G3002 and G3003 are not considered telehealth services for purposes of Medicare, and we do not need to consider whether the non-face-to-face aspects of HCPCS codes G3002 and G3003 are similar to other telehealth services. We are finalizing in this rule that any of the CPM in-person components included in HCPCS codes G3002 and G3003 may be furnished via telehealth, as clinically appropriate, in order to increase access to care for beneficiaries. However, we reiterate as provided in the code descriptor that the initial CPM services visit billed under HCPCS code G3002 must be furnished in-person without the use of telecommunications technology. (For further clarification about the initial in-person visit requirements, please see section II.E.4.(33).)

*Comment:* One commenter asked that we enable the CPM codes, in addition to being rendered through telehealth, to be furnished through audio-only technology.

*Response:* We appreciate the comment. In the CY 2022 PFS final rule, we finalized a policy to revise the definition of “telecommunications system” at § 410.78(a)(3) to allow the use of audio-only technology for the diagnosis, evaluation, or treatment of mental health conditions under certain circumstances (described in detail at 86 FR 64996, 65056 through 65060) that allow visits and other services furnished via audio-only technology to be reported as Medicare telehealth services, with the appropriate modifier. We acknowledge that certain scope of service aspects of CPM may pertain to the diagnosis, evaluation, or treatment of mental health conditions. We expect clinicians will bill for the HCPCS code that most accurately describes the services furnished, including in instances where the service being furnished might

determine the technological modality used to deliver the service.

After consideration of public comments, we are finalizing our proposal to add CPT codes 90875, 92012, 92014, 92507, 94005, 96105, 96110, 96112, 96113, 96127, 96170, 96171, 97129, 97130, and 99473 to the Medicare Telehealth Services List on a Category 3 basis, and finalizing our proposal to add HCPCS codes G0316, G0317, and G0318, G3002, and G3003 to the Medicare Telehealth Services List on a Category 1 basis.

d. Services Proposed for Removal From the Medicare Telehealth Services List After 151 Days Following the End of the PHE

As we noted in the CY 2022 PFS final rule (86 FR 65054), at the conclusion of the PHE for COVID–19, the associated waivers and interim policies will expire, payment for Medicare telehealth services will once again be limited by the requirements of section 1834(m) of the Act, and we will return to the policies established through our regular notice-and-comment rulemaking process, through which we established and maintain the Medicare Telehealth Services List. Services that have been added to the Medicare Telehealth Services List on a Category 3 basis will remain on the list through the end of CY 2023. We have explained that under our current policy, all other services that were temporarily added to the Medicare Telehealth Services List on an interim basis during the PHE and have not been added to the Medicare Telehealth Services List on a Category 1, 2, or 3 basis will not remain on the list after the end of the PHE (85 FR 84506–84509). As explained in section II.D.1.e. of this final rule, Division P, Title III, Subsection A of the Consolidated Appropriations Act, 2022 (CAA, 2022), extends some of the flexibilities implemented during the PHE for COVID–19 for an additional 151 days after the end of the PHE, including section 301(a) of Division P, Title III, Subtitle A of the CAA, 2022, which specifies that, for services on the Medicare Telehealth Services List as of the date of enactment (March 15, 2022) furnished during 151 days after the end of the PHE, the originating site for the telehealth service can be any site in the United States at which the beneficiary is located when the service is furnished, including the beneficiary’s home. To give full effect to this provision, we believe it is necessary to continue to include the services on the Medicare Telehealth Services List through the 151-day period after the end of the PHE that were temporarily added to the list

during the PHE but have not since been added on a Category 3 or other basis, and which are currently set to be removed from the list at the end of the PHE. As such, we proposed to continue to include on the Medicare Telehealth Services List the services that are currently set to be removed from the list when the PHE ends (that is, those not currently added to the list on a Category 1, 2, or 3 basis) for an additional 151 days after the PHE ends. Table 14 lists those services that are temporarily included on the list available for the PHE, which we proposed to retain on the Medicare Telehealth Services List for an additional 151 days following the end of the PHE. The services listed in Table 14 will no longer be available on the Medicare Telehealth Services List on the 152nd day after the end of the PHE. As previously explained, on the 152nd day after the end of the PHE, payment for Medicare telehealth services will once again be limited by the requirements of section 1834(m) of the Act, as aforementioned, and telehealth claims for these services furnished on or after the codes are removed from the list will be denied. We proposed to align the temporary availability of services available as Medicare telehealth services until the end of the PHE with the 151-day extensions of flexibilities enacted in the CAA, 2022 in order to simplify the process of ending the PHE-related flexibilities and to minimize possible errors.

*Comment:* A commenter noted that CPT code 94664 did not appear in Table

10 of the proposed rule despite being a code that was temporarily added for the PHE.

*Response:* We agree that CPT code 94664 was inadvertently omitted from Table 10 of the proposed rule. As a code that was temporarily added to the Medicare Telehealth Services List for the duration of the PHE, it should have been included among codes that we proposed will remain on the Medicare Telehealth Services List for an additional 151 days following the end of the PHE. We have corrected this error in Table 14, and we are finalizing that CPT code 94664 will remain on the Medicare Telehealth Services List for an additional 151 days following the end of the PHE.

*Comment:* Many commenters supported our proposal to align the period of availability for services that are temporarily available for the duration of the PHE with the 151-day extension of certain telehealth flexibilities associated with the CAA, 2022. Some commenters stated that we should eliminate the temporary designation for all services on the Medicare Telehealth Services List, making permanent all services currently available.

*Response:* We thank commenters for their support of our proposal to allow services that would be available for the duration of the PHE to remain on the Medicare Telehealth Services List through the 151-day period following the end of the PHE. We continue to believe that services, including those that we added on a temporary interim basis for the PHE for COVID-19, should

be considered for permanent addition to the Medicare Telehealth Services List through the regular annual process we established as required by section 1834(m)(4)(F)(ii) of the Act. While we have included some services on the Medicare Telehealth Services List on a temporary Category 3 basis through the end of CY 2023, this was to allow for the continued development of data to support their potential future consideration for permanent addition to the list on a Category 1 or Category 2 basis; we review all items on the Medicare Telehealth Services List each year as per our established process. Interested parties may continue to use the annual submission process to request the addition of any services to or deletion of services from the Medicare Telehealth Services List, regardless of whether the service was added on a temporary Category 3 basis. We note that the services that are included on the Medicare Telehealth Services list on a Category 3 basis will remain on the list for an additional period beyond 151 days after the end of the PHE, which is currently through the end of 2023. We understand that, if the PHE is in effect for most of the year next year, the 151-day period after the PHE may end on a date that is beyond December 31, 2023. We clarify that in this instance, the Category 3 services would remain on the Medicare Telehealth Services List through December 31, 2023 or 151 days after the PHE, if later. We will consider whether any additional extensions are needed in the future.

**TABLE 14: Services to be Removed from the Medicare Telehealth Services List After 151 Days Following End of the PHE**

| HCPCS | Short Descriptor  |
|-------|---|
| 77427 | Radiation tx management x5                                      |

| 99477 | Init day hosp neonate care                                      |

**e. Implementation of Telehealth Provisions of the Consolidation Appropriations Acts, 2021 and 2022**

As discussed in the CY 2021 PFS final rule (85 FR 84506), legislation enacted to address the PHE for COVID-19 provided the Secretary with new authorities under section 1135(b)(8) of the Act, as added by section 102 of the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020 (Pub. L. 116-123, March 6, 2020) and subsequently amended by section 6010 of the Families First Coronavirus Response Act (Pub. L. 116-127, March 18, 2020) and section 3703 of the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116-136, March 27, 2020), to waive or modify Medicare telehealth payment requirements during the PHE for

COVID-19. We used these authorities to establish several flexibilities to accommodate changes in the delivery of care during the PHE. Through waiver authority under section 1135(b)(8) of the Act, in response to the PHE for COVID-19, we removed the geographic and site of service originating site restrictions in section 1834(m)(4)(C) of the Act, as well as restrictions in section 1834(m)(4)(E) of the Act on the types of practitioners who may furnish telehealth services, for the duration of the PHE for COVID-19. We also used waiver authority to allow certain telehealth services to be furnished via audio-only communication technology. At the end of the PHE for COVID-19, these waivers and interim policies will expire, and payment for Medicare telehealth services will once again be limited by

the requirements of section 1834(m) of the Act.

Section 1834(m)(7) of the Act (as added by section 2001(a) of the SUPPORT for Patients and Communities Act (Pub. L. 115-271, October 24, 2018)), removes the geographic restrictions under section 1834(m)(4)(C)(i) of the Act and authorizes the patient's home as a permissible originating site, for telehealth services furnished for purposes of treatment of a substance use disorder (SUD) or a co-occurring mental health disorder, furnished on or after July 1, 2019, to an individual with a SUD diagnosis. Section 123(a) of Division CC of the Consolidated Appropriations Act, 2021 (CAA, 2021) (Pub. L. 116-260, December 27, 2020) amended section 1834(m)(7)(A) of the

Act to broaden the scope of services for which the geographic restrictions under section 1834(m)(4)(C)(i) of the Act do not apply and for which the patient's home is a permissible originating site to include telehealth services furnished for the purpose of diagnosis, evaluation, or treatment of a mental health disorder, effective for services furnished on or after the end of the PHE for COVID-19. Section 123(a) of the CAA, 2021 also added subparagraph (B) to section 1834(m)(7) of the Act to prohibit payment for a telehealth service furnished in the patient's home under paragraph (7), unless the physician or practitioner furnishes an item or service in-person, without the use of telehealth, within 6 months prior to the first time the physician or practitioner furnishes a telehealth service to the beneficiary, and thereafter, at such times as the Secretary determines appropriate. For a full discussion of our implementation of section 123(a) of the CAA, 2021, refer to our CY 2022 PFS final rule (86 FR 64996).

In the proposed rule, we proposed to implement provisions of section 1834(m) of the Act (including the amendments made by the CAA, 2021) and provisions of the CAA, 2022 that extend certain Medicare telehealth flexibilities adopted during the PHE for 151 days after the end of the PHE.

Sections 301, 302, 303, 304, and 305 of Division P, Title III, Subtitle A of the CAA, 2022 amended section 1834(m) of the Act to generally extend certain PHE-related telehealth policies for services that are on the Medicare Telehealth Services List as of the date of enactment (March 15, 2021). Specifically, section 301(a) of the CAA, 2022 amended section 1834(m)(4)(C) of the Act to add a new clause (iii), which temporarily expands the scope of telehealth originating sites for those services to include any site in the United States where the beneficiary is located at the time of the telehealth service, including an individual's home, for a 151-day period beginning on the first day after the end of the PHE for COVID-19. Section 301(a) also amended section 1834(m)(7)(A) of the Act to apply the expanded scope of telehealth originating site policy to include any location in the United States in new clause (iii) of section 1834(m)(4)(C) of the Act during the 151-day period for telehealth services furnished for the purposes of diagnosis, evaluation, or treatment of a mental health disorder and to individuals with a SUD diagnosis for purposes of treatment of the SUD or a co-occurring mental health disorder for this 151-day post-PHE extension period. In addition to this provision, section

301(b) of the CAA, 2022 amended section 1834(m)(2)(B) of the Act to add a new clause (iii) that allows payment of an originating site facility fee to an originating site with respect to those telehealth services furnished during the 151-day period only if the originating site is one that meets the geographic requirements in section 1834(m)(4)(C)(i) of the Act, and is a setting included on the enumerated list of originating sites under section 1834(m)(4)(C)(ii) of the Act (other than the patient's home).

Section 302 of the CAA, 2022 amended section 1834(m)(4)(E) of the Act to temporarily expand the definition of eligible telehealth practitioners for the 151-day period beginning on the first day after the end of the PHE for COVID-19 to include qualified occupational therapists, qualified physical therapists, qualified speech-language pathologists, and qualified audiologists.

Section 303 of the CAA, 2022 amended section 1834(m)(8) of the Act to temporarily continue payment for telehealth services furnished by FQHCs and RHCs for the 151-day period beginning on the first day after the end of the COVID-19 PHE using the methodology established for telehealth services furnished by FQHCs and RHCs during the PHE, which, in accordance with section 1834(m)(8)(B) of the Act, is based on payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS.

Section 304(a) of the CAA, 2022 amended section 1834(m)(7)(B)(i) of the Act to delay the requirement for an in-person visit with the physician or practitioner within 6 months prior to the initial mental health telehealth service, and again at subsequent intervals as the Secretary determines appropriate. In light of this amendment, the in-person requirements for telehealth services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder will again be effective on the 152nd day after the PHE ends. In addition, section 304(b) and (c) of the CAA, 2022 modified sections 1834(y) and 1834(o)(4) of the Act, respectively, to similarly delay in-person visit requirements for mental health visits furnished by Rural Health Clinics and Federally Qualified Health Centers via telecommunications technology. Therefore, we proposed to revise the regulatory text at § 410.78(b)(3)(xiv) to recognize the delay of the in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology under Medicare until the 152nd day after the

PHE for COVID-19, to conform with the statute. See section II.B.3. of this final rule for our proposal to implement similar changes for RHC and FQHC mental health visits.

Finally, section 305 of the CAA, 2022 added a new paragraph (9) to section 1834(m) of the Act to require the Secretary to continue to provide for coverage and payment of telehealth services included on the Medicare Telehealth Services List as of the March 15, 2022, date of enactment that are furnished via an audio-only telecommunications system during the 151-day period beginning on the first day after the end of the PHE for COVID-19. The new paragraph applies only to telehealth services specified on the Medicare Telehealth Services List under section 1834(m)(4)(F)(i) of the Act that are designated to as eligible to be furnished via audio-only technology as of the date of enactment of the CAA, 2022 (that is, March 15, 2022). These are the services for which CMS waived the requirements of section 1834(m)(1) of the Act and the first sentence of § 410.78(a)(3) for use of interactive telecommunications systems to furnish telehealth services, to the extent they require use of video technology, during the PHE. Under this waiver, CMS permitted the audio-only telephone E/M services and certain behavioral health counseling and educational services to be furnished via audio-only equipment during the PHE for COVID-19. We proposed to continue to make payment for services included on the Medicare Telehealth Services List as of March 15, 2022 that are furnished via an audio-only telecommunications system for the 151-day period beginning on the first day after the end of the PHE. We read section 305 of the CAA, 2022 to require that we continue to make payment for services furnished via audio-only telecommunications systems (each described by a HCPCS code, including their successor codes) for the 151-day period after the end of the PHE. These services include certain behavioral health, counseling, and educational services. (<https://www.cms.gov/files/document/covid-19-emergency-declaration-waivers.pdf>, n.d.). A list of the services that involve audio-only interaction but are included on the Medicare Telehealth Services List for the duration of the PHE is available at the CMS website, <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Telehealth-Codes>.

Section 309 of Division P, Title III, Subtitle A of the CAA, 2022 authorizes the Secretary to implement the amendments described above made by

sections 301 through 305 through program instruction or otherwise. Given that the end date of the PHE is not yet known and could occur before the rulemaking process for the CY 2023 PFS is complete, and that the changes made by these provisions are very specific and concise, we announced in the CY 2023 PFS proposed rule that we intended to issue program instructions or other subregulatory guidance to effectuate the changes described above, other than the proposed revisions to § 410.78. We intend to issue these instructions in the near future. We believe this approach will serve to ensure a smooth transition after the end of the PHE for COVID-19.

We received public comments on our proposals to implement section 304(a) of the CAA, 2022, which amended section 1834(m)(7)(B)(i) of the Act, regarding the requirement that an in-person visit with the physician or practitioner must occur within 6 months prior to the initial mental health telehealth service. The following is a summary of the comments we received and our responses.

#### In-Person Requirements

*Comment:* Many commenters expressed general support for our proposals to implement and effectuate changes via program instructions, and subregulatory guidance, based on the fact that the last day of the PHE remains uncertain, but varied in their level of concern about whether the post-PHE transition period, of 151 days, would allow enough flexibility. Commenters expressed concerns that a sudden shift in the in-person visit requirements, beginning 152 days after the end of the PHE, could create beneficiary access issues, additional strain on the existing health care workforce shortage, and significant confusion among clinical and administrative staff about how to align resources and inform beneficiaries. Some commenters noted that the public will receive only 60 days' notice before the last day of the PHE, which they believe would not allow adequate time to coordinate in-person care across many different settings of care and varied individual beneficiary needs. A few commenters suggested that CMS should take the narrowest interpretation of the intent of Congress for in-person visit requirements prior to the initial mental health telehealth service, on the basis that the Secretary has the authority to specify the requirements associated with the required interval for similar follow-up in-person visit requirements. Other commenters expressed confusion about how individual physicians or practitioners would ensure appropriate record keeping and overall compliance

plans would be updated to provide a means of verifying that any individual service met the in-person visit requirements. Some commenters whose focus is on enabling and supporting telehealth care through various health IT solutions requested that CMS provide more specifics on timing and possible ways to standardize the means by which individual physicians or practitioners document compliance with in-person requirements.

We also received comments that outlined concerns or possible risks to patient safety when patients with certain mental health conditions were treated remotely. These commenters provided examples of high-risk circumstances, such as possible risks associated with treating complex, or atypical patients, via telehealth. Commenters discussed that care of certain patients, who may have a severe or rare diagnosis, may also be under a course of treatment, where that plan of care includes a medication regimen that requires close monitoring. Alternatively, one commenter mentioned that certain beneficiaries with significant complex needs may demonstrate possible outcomes that may be superior when delivered via telehealth versus in-person. We also received a broad range of comments suggesting varied ways that CMS could implement the in-person visit requirements for mental health telehealth services.

*Response:* We appreciate these commenters' feedback. We did not propose to modify our established policies to implement these in-person visit requirements (except as it pertains to the 151-day extension for the 6-month requirement for an in-person visit for mental health treatment). We recognize that the CAA, 2022 delays implementation of the in-person visit requirements for mental health telehealth services for a period of 151 days after the final day of the PHE. As explained above and in the proposed rule, we are implementing section 304(a) of the CAA, 2022, and further emphasize that the availability of furnishing these services via telehealth does not preclude practitioners from seeing patients in-person, when indicated. We will continue to gather information on these mental health telehealth services as they are utilized, and we will take this information into consideration in the future for possible rulemaking.

*Comment:* Several commenters suggested that no in-person requirement should be enforced at all.

*Response:* We appreciate commenters' feedback. The statute does require an in-person, non-telehealth visit within 6

months prior to the first mental health services furnished via Medicare telehealth. However, we clarify that we do not believe this requirement applies to beneficiaries who began receiving mental health telehealth services in their homes during the PHE. In other words, if a beneficiary began receiving mental health telehealth services during the PHE or during the 151-day period after the end of the PHE, then they would not be required to have an in-person visit within 6 months; rather, they will be considered established and will instead be required to have at least one in-person visit every 12 months (so long as any such subsequent telehealth service is furnished by the same individual physician or practitioner (or a practitioner of the same sub-specialty in the same practice) to the same beneficiary). This means that these services would be subject to the requirement that an in-person visit is furnished within 12 months of each mental health telehealth service for those services that are subject to in-person visit requirements (unless an exception is documented by their treating practitioner). For discussion of additional requirements for these services, please see the discussion in the CY 2022 PFS final rule.

#### f. Use of Modifiers for Medicare Telehealth Services Following the End of the PHE for COVID-19

Prior to CY 2017, Medicare telehealth services furnished via interactive audio and video telecommunications systems were reported using the GT modifier. In the CY 2017 PFS Final Rule, CMS finalized creation of a new Place of Service (POS) code for Medicare telehealth, POS "02" (81 FR 80199–80201). When a physician or practitioner submits a claim for their services, including claims for telehealth services, they include a place of service (POS) code that is used to determine whether a service is paid using the facility or non-facility rate. Under the PFS, there are two payment rates for many physicians' services: the facility rate and the non-facility (or office) rate. The PFS non-facility rate is the single amount paid to a physician or other practitioner for services furnished in their office. The PFS facility rate is the amount generally paid to a professional when a service is furnished in a setting of care, like a hospital, where Medicare is making a separate payment to a facility entity in addition to the payment to the billing physician or practitioner. This separate payment, often referred to as a "facility fee," reflects the facility's costs associated with the service (clinical staff, supplies,

and equipment) and is paid in addition to what is paid to the professional under the PFS. POS “02” indicates that the service was furnished via telehealth, and under the pre-PHE process, was then paid at the facility payment rate.

As discussed in the March 31, 2020 IFC, (refer to 85 FR 19230), we stated that, as physician practices suddenly transitioned a potentially significant portion of their services from in-person to telehealth visits in the context of the PHE for the COVID-19 pandemic, the relative resource costs of furnishing these services via telehealth may not significantly differ from the resource costs involved when these services are furnished in-person. Therefore, we instructed physicians and practitioners who bill for Medicare telehealth services to report the POS code that would have been reported had the service been furnished in-person. This will allow our systems to make appropriate payment for services furnished via Medicare telehealth, which, if not for the PHE for the COVID-19 pandemic, would have been furnished in-person, at the same rate they would have been paid if the services were furnished in-person. In order to effectuate this change, we finalized on an interim basis (85 FR 19233) the use of the CPT telehealth modifier, modifier “95”, for the duration of the PHE for COVID-19, which should be applied to claim lines that describe services furnished via telehealth and that the practitioner should report the POS code where the service would have occurred had it not been furnished via telehealth.

We further noted that we are maintaining the facility payment rate for services billed using the general telehealth POS code “02”, should practitioners choose to maintain their current billing practices for Medicare telehealth during the PHE for the COVID-19 pandemic.

We proposed that Medicare telehealth services furnished on or before the 151st day after the end of the PHE, in alignment with the extensions of telehealth-related flexibilities in the CAA, 2022, will continue to be processed for payment as Medicare telehealth claims when accompanied with the modifier “95.” We further proposed that physicians and practitioners can continue to report the place of service code that would have been reported had the service been furnished in-person during the 151-day period after the end of the PHE, as finalized on an interim basis in the March 31 IFC (85 FR 19233). We proposed that Medicare telehealth services performed with dates of service

occurring on or after the 152nd day after the end of the PHE will revert to pre-PHE rules and will no longer require modifier “95” to be appended to the claim, but the appropriate place of service (POS) indicator will need to be included on the claim to be processed for payment as Medicare telehealth claims in order to properly identify the place where the service was furnished. We further proposed that, for Medicare telehealth services furnished on or after the 152nd day after the end of the PHE, the POS indicators for Medicare telehealth will be:

- POS “02”—is redefined as Telehealth Provided Other than in Patient’s Home (*Descriptor: The location where health services and health related services are provided or received, through telecommunication technology. Patient is not located in their home when receiving health services or health related services through telecommunication technology.*); and
- POS “10”—Telehealth Provided in Patient’s Home (*Descriptor: The location where health services and health related services are provided or received through telecommunication technology. Patient is located in their home (which is a location other than a hospital or other facility where the patient receives care in a private residence) when receiving health services or health related services through telecommunication technology.*).

We remind readers that we defined “home” in our CY 2022 PFS final rule (86 FR 65059) to include, as: “both in general and for this purpose, a beneficiary’s home can include temporary lodging, such as hotels and homeless shelters. We also clarified that for circumstances where the patient, for privacy or other personal reasons, chooses to travel a short distance from the exact home location during a telehealth service, the service is still considered to be furnished ‘in the home of an individual’ for purposes of section 1834(m)(4)(C)(ii)(X) of the Act.”

In our proposed rule, we discussed that, once the flexibilities for the geographic restrictions and the site of service waivers for Medicare telehealth services expire (on the 152nd day after the end of the PHE, per the CAA, 2022), POS “02” would once again be required for all Medicare telehealth claims (with the exception of certain Medicare telehealth for mental health services). In the proposed rule, we noted that the exceptions include claims for Medicare telehealth mental health telehealth services, clinical assessments for patients with ESRD that are receiving home dialysis, and Medicare telehealth treatment of an SUD or mental health

services that are co-occurring mental health disorder with substance use treatment that are furnished to with the patient in their home (that is, the originating site is in a private residence and not a hospital or other facility setting), in which case POS “10” could be used by the billing practitioner. In our proposed rule, we further discussed that, on or after the 152nd day after the PHE has expired, payment for Medicare telehealth services using either of the Medicare telehealth POS codes would be made at the PFS facility payment rate, in accordance with established PFS policy outside the circumstances of the PHE. We proposed to align payment for those telehealth services described as taking place in the beneficiary’s home, using POS “10” for Medicare telehealth, and those services not provided in a patient’s home, using POS “02” for Medicare telehealth, to be made at the same facility payment amount. We believe that the facility payment amount best reflects the practice expenses, both direct and indirect, involved in furnishing services via telehealth (please see section II.B. of this final rule for further discussion regarding practice expense).

We further proposed that, beginning January 1, 2023, a physician or other qualified health care practitioner billing for telehealth services furnished using audio-only communications technology shall append CPT modifier “93” (*Synchronous Telemedicine Service Rendered Via Telephone or Other Real-Time Interactive Audio-Only Telecommunications System: Synchronous telemedicine service is defined as a real-time interaction between a physician or other qualified health care professional and a patient who is located away at a distant site from the physician or other qualified health care professional. The totality of the communication of information exchanged between the physician or other qualified health care professional and the patient during the course of the synchronous telemedicine service must be of an amount and nature that is sufficient to meet the key components and/or requirements of the same service when rendered via a face-to-face interaction*) to Medicare telehealth claims (for those services for which the use of audio-only technology is permitted under § 410.78(a)(3)), to identify them as having been furnished using audio-only technology. We noted that we have also instructed all relevant providers, including RHCs, FQHCs, and OTPs to append Medicare modifier “FQ” (*Medicare telehealth service was furnished using audio-only*

communication technology) for allowable audio-only services furnished in those settings; however, consistent with our proposal for audio-only services furnished under the PFS, we also proposed to require all relevant providers, including RHCs, FQHCs, and OTPs to use modifier “93” when billing for eligible mental health services furnished via audio-only telecommunications technology. We believe that using modifier “93”, which is a CPT modifier, will simplify billing, as this modifier is used by payers outside of Medicare. Currently, these modifiers can only be applied to Medicare telehealth mental health services and those telehealth services for the treatment of a SUD or a co-occurring mental health disorder when the originating site is the beneficiary’s home.

Supervising practitioners continue to be required to append the “FR” modifier on any applicable telehealth claim when they provide direct supervision for a service using virtual presence through real-time, audio and video telecommunications technology.

*Comment:* Some commenters expressed concern regarding our proposed approach to the use of modifiers for billing of Medicare telehealth services. One commenter noted that we had inadvertently overlooked the fact that after the transition period, facility-based providers would not be able to bill using the POS code fields, as the CMS–1450 (UB–04) institutional claim form does not permit use of POS code fields. The commenter noted that this may have been an oversight.

*Response:* We thank commenters for offering feedback on technical issues associated with our proposed policies for use of modifiers that allow claims processing and billing for professional services under Part B, which includes Medicare telehealth services. We reiterate that 151 days after the end of the PHE, Medicare telehealth services will once again be subject to the statutory requirements in section 1834(m) of the Act. As such, only physicians and the practitioners specified in section 1834(m)(4)(E) of the Act will be able to serve as distant site practitioners to furnish and bill for Medicare telehealth services, and those services would be billed on the professional, not the institutional, claim form. Thus, beginning on the 152nd day after the PHE ends, only certain types of practitioners will be permitted to furnish and bill for Medicare telehealth services, and none of those practitioners would be “facility-based providers.”

*Comment:* Many commenters requested that we continue to allow for services that would have been furnished in a non-facility setting outside of the circumstances of the PHE to be billed at the non-facility rate for telehealth services following the end of the PHE. Commenters stated that they were concerned that reverting to the facility rate for telehealth services will lead practitioners to offer telehealth less frequently and inhibit access. According to these commenters, many patients in rural and underserved areas are now able to access mental health services, often for the first time. Many commenters emphasized their concerns that mental health services would be particularly impacted, as there is already high demand for these services and relatively low numbers of available practitioners.

One commenter requested that we maintain payment at the non-facility-based rate for telehealth services furnished in office settings through the end of 2023, stating that changing payment to the facility rate would result in a nearly 30 percent cut for some services, which they believed will harm access to telehealth services.

Some commenters, including MedPAC, expressed concern that payment at the facility rate will create the unintended effects of shifting beneficiaries toward both higher intensity and volume of virtual care modalities that would be inappropriate for beneficiaries. In MedPAC’s comment, they offered their March 2022 MedPAC Report to Congress ([https://www.medpac.gov/wp-content/uploads/2022/03/Mar22\\_MedPAC\\_ReportToCongress\\_v2\\_SEC.pdf](https://www.medpac.gov/wp-content/uploads/2022/03/Mar22_MedPAC_ReportToCongress_v2_SEC.pdf)), which noted that Medicare spending can be sensitive to shifts in the site of care, and that the negative impact of the pandemic on E/M services may have been more significant in 2020 were it not for Medicare telehealth.

Some commenters, including MedPAC, provided examples and explanations that raised questions about uncertainty of clinical benefit and possible overpayment for Medicare telehealth and offered evidence that many patients who used telehealth during the PHE would prefer in-person visits, once it is safe to do so.

*Response:* We acknowledge the commenters’ concerns. We note that there are many nuances to this issue, and we seek to minimize confusion and practitioner burden during the period immediately following the PHE. We are concerned about issues raised by commenters related to payment stability in the post-PHE period, as care delivery will potentially be transitioning

between virtual, hybrid, and in-person models. As such, we are finalizing that we will continue to allow for payment be made for Medicare telehealth services at the place of service for telehealth services that ordinarily would have been paid under the PFS, if the services were furnished in-person, through the latter of the end of the of CY 2023 or the end of the calendar year in which the PHE ends. For those services furnished in a facility as an originating site, POS 02 may be used, and the corresponding facility fee can be billed, per pre-PHE policy, beginning the 152nd day after the end of the PHE.

*Comment:* Some commenters expressed concern that our proposals to transition to the use of new modifiers would create confusion and administrative burden, without sufficient time to allow for the sufficient training education of clinical and administrative staff to implement new billing practices. Others supported immediate implementation.

*Response:* We appreciate commenters’ feedback. We believe that the use of these modifiers following the end of the PHE, when implemented, will enable practitioners to better report (and allow CMS to better understand) how they practice and when certain services are furnished via telehealth. We do not agree that these modifiers/codes would cause confusion; rather, they will provide clarity. Moreover, education regarding these modifiers/codes will be made available, as necessary.

After consideration of public comments, we are finalizing our proposals, with some modifications regarding the use of telehealth modifiers/codes and the payment rates. Practitioners will continue to bill with modifier 95 along with the POS code corresponding to where the service would have been furnished in-person through the later of the end of the year in which the PHE ends or CY 2023. As stated earlier, for those services furnished in a facility as an originating site, POS 02 may be used, and the corresponding facility fee can be billed, per pre-PHE policy, beginning the 152nd day after the end of the PHE.

Additionally, effective on and after January 1, 2023, CPT modifier “93” can be appended to claim lines, as appropriate, for services furnished using audio-only communications technology in accordance with our regulation at § 410.78(a)(3). All providers, including RHCs, FQHCs, and OTPs must append Medicare modifier “FQ” (*Medicare telehealth service was furnished using audio-only communication technology*) for allowable audio-only services furnished in those settings. However,

consistent with our proposal for audio-only services furnished under the PFS, we are also finalizing to require all providers including RHCs, FQHCs, and OTPs to use modifier “93” when billing for eligible mental health services furnished via audio-only telecommunications technology. Providers have the option to use the “FQ” or the “93” modifiers or both where appropriate and true, since they are identical in meaning.

Supervising practitioners continue to be required to append the “FR” modifier on any applicable telehealth claim when they provide direct supervision for a service using virtual presence through real-time, audio and video telecommunications technology.

In response to the issues raised by commenters related to payment stability in the post-PHE period, we are reiterating that we are finalizing that, for Medicare telehealth services, we will continue to maintain payment at the POS had the service been furnished in-person, and this will allow payments to continue to be made at the non-facility-based rate for Medicare telehealth services through the latter of the end of CY 2023 or the end of the calendar year in which the PHE ends.

## 2. Other Non-Face-to-Face Services Involving Communications Technology Under the PFS

### a. Expiration of PHE Flexibilities for Direct Supervision Requirements

Under Medicare Part B, certain types of services, including diagnostic tests, services incident to physicians’ or practitioners’ professional services, and other services, are required to be furnished under specific minimum levels of supervision by a physician or practitioner.

For professional services furnished incident to the services of the billing physician or practitioner (see § 410.26) and many diagnostic tests (see § 410.32), direct supervision is required. Additionally, for pulmonary rehabilitation services (see § 410.47) and for cardiac rehabilitation and intensive cardiac rehabilitation services (see § 410.49), direct supervision of a physician is required (see also § 410.27(a)(1)(iv)(D) for hospital outpatient services). Outside the circumstances of the PHE, direct supervision requires the immediate availability of the supervising physician or other practitioner, but the professional need not be present in the same room during the service. We have established this “immediate availability” requirement to mean in-person, physical, not virtual, availability

(please see the April 6, 2020 IFC (85 FR 19245) and the CY 2022 PFS final rule (86 FR 65062)).

Through the March 31, 2020 COVID–19 IFC, we changed the definition of “direct supervision” during the PHE for COVID–19 (85 FR 19245 through 19246) as it pertains to supervision of diagnostic tests, physicians’ services, and some hospital outpatient services, to allow the supervising professional to be immediately available through virtual presence using real-time audio/video technology, instead of requiring their physical presence. In the CY 2021 PFS final rule (85 FR 84538 through 84540), we finalized continuation of this policy through the later of the end of the calendar year in which the PHE for COVID–19 ends or December 31, 2021. In the March 31, 2020 IFC (85 FR 19246) and in our CY 2022 PFS final rule (see 85 FR 65063), we also noted that the temporary exception to allow immediate availability for direct supervision through virtual presence facilitates the provision of telehealth services by clinical staff of physicians and other practitioners’ incident to their own professional services. This is especially relevant for services such as physical therapy, occupational therapy, and speech language pathology services, since those practitioners can only bill Medicare for telehealth services under Medicare telehealth waivers that are effective only during the PHE for COVID–19 (based on the emergency waiver authority established in section 1135(b)(8) of the Act), and for 151 days after the final day of the PHE for COVID–19, as specified by provisions of the CAA, 2022. We noted that sections 1834(m)(4)(D) and (E) of the Act specify the types of clinicians who may furnish and bill for Medicare telehealth services. Outside of the PHE and the 151-day period after the PHE ends, such clinicians include only physicians as defined in section 1861(r) of the Act and practitioners described in section 1842(b)(18)(C) of the Act. We remind readers that after December 31 of the year in which the PHE ends, the pre-PHE rules for direct supervision at § 410.32(b)(3)(ii) would apply. As noted in the CY 2022 PFS final rule (86 FR 65062), this means the temporary exception to allow immediate availability for direct supervision through virtual presence, which facilitates the provision of telehealth services by clinical staff of physicians and other practitioners incident to their professional services, will no longer apply. As such, after the end of the calendar year in which the PHE ends, Medicare telehealth services can no

longer be performed by clinical staff incident to the professional services of the billing physician or practitioner who directly supervises the service through their virtual presence.

While we did not propose to make the temporary exception to allow immediate availability for direct supervision through virtual presence permanent, as with last year’s rulemaking (86 FR 39149 through 50), we continue to solicit information on whether the flexibility to meet the immediate availability requirement for direct supervision through the use of real-time, audio/video technology should potentially be made permanent. We also solicited comment regarding the possibility of permanently allowing immediate availability for direct supervision through virtual presence using real-time, audio/video technology for only a subset of services, as we recognize that it may be inappropriate to allow direct supervision without physical presence for some services due to potential concerns over patient safety. As discussed in last year’s final rule (86 FR 65063), and based on gaps in the currently available evidence, we are in need of more information as we consider whether to make permanent a temporary exception to our direct supervision policy.

We received public comments on expiration of PHE flexibilities for direct supervision requirements. The following is a summary of the comments we received and our responses.

*Comment:* Commenters offered a variety of perspectives and suggestions for possible ways that CMS could modify the direct supervision requirements. Many commenters that recommended a permanent change to direct supervision rules supported their feedback by raising issues such as health care workforce shortages and concern with clinician burnout that would possibly occur from implementing the pre-PHE direct supervision requirements. Others noted that certain NPPs, such as PAs, and advanced practice nurse practitioners are authorized under state law statutory requirements in many states to practice independently under virtual supervision of a physician. Still others based their recommendations that we establish a permanent virtual direct supervision on a specialty-level or service-level analysis. For example, commenters identified a certain specialty or family of codes that would be typically low-risk for patient safety issues, and indicated that those specialties or services would be appropriate candidates for a permanent virtual direct supervision policy. Some

commenters mentioned that virtual direct supervision may also reduce the burden and overhead costs associated with enrolling their practitioners through multiple MAC jurisdictions.

*Response:* We continue to gather information on this topic, and we appreciate the information provided by commenters. We remind readers that, as described earlier in this section, our current temporary policy to permit immediate availability for purposes of direct supervision through the virtual presence of the billing clinician was adopted to address the circumstances of the PHE for COVID-19. We believe allowing additional time to collect information and evidence for direct supervision through virtual presence will help us to better understand the potential circumstances in which this flexibility could be appropriate permanently, outside of the PHE for COVID-19. We realize that direct supervision through virtual presence is probably not something that we would

have contemplated without our experience in implementing this policy during the PHE, and we hope to learn more about this in the near future. We also note that the Secretary renewed the PHE for the COVID-19 pandemic for a 90-day period beginning on October 13, 2022,<sup>9</sup> which means that the PHE would expire on January 11, 2023, absent any further action by the Secretary regarding the PHE for COVID-19. As such, we expect to continue to permit direct supervision through virtual presence through at least the end of CY 2023 under our previously finalized policy which, as specified in § 410.32(a)(3)(ii), continues through the end of the calendar year in which the PHE ends. With that said, CMS will consider the comments received from the proposed rule for potential future PFS rulemaking.

### 3. Telehealth Originating Site Facility Fee Update

Section 1834(m)(2)(B) of the Act established the initial Medicare

telehealth originating site facility fee for telehealth services furnished from October 1, 2001 through December 31, 2002, at \$20.00, and specifies that for telehealth services furnished on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the Medicare Economic Index (MEI) as defined in section 1842(i)(3) of the Act. The final MEI increase for CY 2023 is 3.8 percent and is based on the most recent historical percentage increase of the 2017-based MEI for the second quarter of 2022.

Therefore, for CY 2023, the final payment amount for HCPCS code Q3014 (*Telehealth originating site facility fee*) is \$28.64. The Medicare telehealth originating site facility fee and the MEI increase by the applicable time period are shown in Table 15.

**TABLE 15: The Medicare Telehealth Originating Site Facility Fee**

| Time Period                   | MEI (%) | Facility Fee for Q3014 |
|-------------------------------|---------|------------------------|
| Oct. 1, 2001 to Dec. 31, 2002 | NA      | \$ 20.00               |
| 2003                          | 3.0     | \$ 20.60               |
| 2004                          | 2.9     | \$ 21.20               |
| 2005                          | 3.1     | \$ 21.86               |
| 2006                          | 2.8     | \$ 22.47               |
| 2007                          | 2.1     | \$ 22.94               |
| 2008                          | 1.8     | \$ 23.35               |
| 2009                          | 1.6     | \$ 23.72               |
| 2010                          | 1.2     | \$ 24.00               |
| 2011                          | 0.4     | \$ 24.10               |
| 2012                          | 0.6     | \$ 24.24               |
| 2013                          | 0.8     | \$ 24.43               |
| 2014                          | 0.8     | \$ 24.63               |
| 2015                          | 0.8     | \$ 24.83               |
| 2016                          | 1.1     | \$ 25.10               |
| 2017                          | 1.2     | \$ 25.40               |
| 2018                          | 1.4     | \$ 25.76               |
| 2019                          | 1.5     | \$ 26.15               |
| 2020                          | 1.9     | \$ 26.65               |
| 2021                          | 1.4     | \$ 27.02               |
| 2022                          | 2.1     | \$ 27.59               |
| 2023                          | 3.8     | \$ 28.64               |

## *E. Valuation of Specific Codes*

### **1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes**

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010, CY 2015, and CY 2020. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as discussed in section II.C. of this final rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we solicit public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we consider and responded to public comments received on the interim final values, and typically make any appropriate adjustments and finalize those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of

new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886), and re-proposed values for those codes in the CY 2017 PFS proposed rule.

We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the Federal Government as part of our process for establishing valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with interested parties, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

### **2. Methodology for Establishing Work RVUs**

For each code identified in this section, we conduct a review that includes the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our

reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. Section 1848(c)(1)(A) of the Act specifically defines the work component as the resources that reflect time and intensity in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing

particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an E/M service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes  $\times$  0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs contain a general discussion of our approach to reviewing RUC recommendations and

developing proposed values for specific codes. We also include a summary of interested party reactions to our approach when available. We noted in past rulemaking that many commenters and interested parties have expressed concerns over the years with our reviews of and updates to work RVUs based on changes in the best available information regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we use to update the RVUs is derived from their survey process. We are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the "old time" values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the

reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several interested parties, including the RUC, have expressed general objections to our use of these methodologies to adjust for reductions in time, suggesting that our adjustments to the RUC-recommended work RVUs are inappropriate. Other interested parties have expressed general concerns with our refinements to RUC-recommended values. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding our approach to RUC-recommended work times and RVUs. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommended work RVUs with the recommended time values when the RUC-recommended

work RVUs did not appear to account for significant changes in time.

We received several comments regarding our methodologies for work valuation in response to the CY 2023 PFS proposed rule and those comments are summarized below.

*Comment:* Several commenters disagreed with our reference to older work time sources, and stated that their use led to the proposal of work RVUs based on flawed assumptions.

Commenters stated that codes with “CMS/Other” or “Harvard” work time sources, used in the original valuation of certain older services, were not surveyed, and therefore, were not resource-based. Commenters also stated that it was invalid to draw comparisons between the current work times and work RVUs of these services to the newly surveyed work time and work RVUs as recommended by the RUC.

*Response:* We agree that it is important to use the recent data available regarding work times, and we note that when many years have passed since work time has been measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The work times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had been routinely overestimated, this would undermine the relativity of the work RVUs on the PFS in general, in light of the fact that codes are often valued based on comparisons to other codes with similar work times. Such an assumption would also undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS.

Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times that have been used in PFS ratesetting are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available, and that we are

statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

*Comment:* Several commenters disagreed with the use of time ratio methodologies for work valuation. Commenters stated that this use of time ratios is not a valid methodology for valuation of physician services. Commenters stated that treating all components of physician time (preservice, intraservice, postservice and post-operative visits) as having identical intensity is incorrect, and inconsistently applying it to only certain services under review creates inherent payment disparities in a payment system, which is based on relative valuation. Commenters stated that in many scenarios, CMS selects an arbitrary combination of inputs to apply rather than seeking a valid clinically relevant relationship that would preserve relativity. Commenters suggested that CMS determine the work valuation for each code based not only on surveyed work times, but also the intensity and complexity of the service and relativity to other similar services, rather than basing the work value entirely on time. Commenters recommended that CMS embrace the clinical input from practicing physicians when valid surveys were conducted and provide a clinical rationale when proposing crosswalks for valuation of services.

*Response:* We disagree and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for survey information that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. In accordance with the statute, we believe that changes in time and intensity must be accounted for when developing work RVUs. When our review of recommended values reveals that changes in time are not accounted for in a RUC-recommended work RVU, the obligation to account for that change when establishing proposed and final work RVUs remains.

We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. We clarify again that we do not treat all components of physician time as having identical intensity. If we were to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is not the case, as indicated by the many services that share the same time values but have different work RVUs. For example, among the codes reviewed in this CY 2023 PFS final rule, CPT codes 22632 (*Arthrodesis, posterior interbody technique, including laminectomy and/or discectomy to prepare interspace (other than for decompression), single interspace; each additional interspace*), 63035 (*Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; each additional interspace, cervical or lumbar*), 93655 (*Intracardiac catheter ablation of a discrete mechanism of arrhythmia which is distinct from the primary ablated mechanism, including repeat diagnostic maneuvers, to treat a spontaneous or induced arrhythmia*), and 99285 (*Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making*) all share the same intraservice and total work time of 60 minutes. However, these codes had very different proposed work RVUs of 5.22 and 3.86 and 5.50 and 4.00, respectively. These examples demonstrate that we do not value services purely based on work time; instead, we incorporate time as one of multiple different factors in our review process. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277).

We also clarify for the commenters that our review process is not arbitrary in nature. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the

RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information).

With regard to the commenter's concerns regarding clinically relevant relationships, we emphasize that we continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

*Comment:* Several commenters did not agree with CMS valuing codes based on work RVU increments. Commenters stated that this methodology for valuing codes inaccurately treats all components of the physician time as having identical intensity and would lead to incorrect work valuations. Commenters stated that CMS should carefully consider the clinical information justifying the changes in physician work intensity provided by the RUC and other interested parties.

*Response:* We believe that using the incremental difference between the work RVUs of codes is a valid methodology for setting values, especially when valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently used an incremental methodology in which we value a code based upon the incremental work RVU difference between the code and another code or another family of codes. We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. We have no evidence to suggest that the use of an incremental difference between the

work RVUs of codes conflicts with the statute's definition of the work component as the resources in time and intensity required in furnishing the service. We do consider clinical information associated with physician work intensity provided by the RUC and other interested parties as part of our review process, although we remind readers again that we do not believe that it is necessary for codes to share the same site of service, patient population, or utilization level in order to serve as an appropriate crosswalk.

*Comment:* Several commenters stated that they were concerned about CMS' lack of consideration for compelling evidence that services have changed. Commenters stated that CMS appeared to dismiss the fact that services may change due to technological advances, changes in the patient population, shifts in the specialty of physicians providing services or changes in the physician work or intensity required to perform services. Commenters stated that CMS' failure to discuss compelling evidence does not reflect the long history of reviewing potentially misvalued codes, first through the statutorily mandated 5-year review processes and more recently from continuous annual reviews. Commenters stated that CMS has discussed compelling evidence in rulemaking since the inception of the RBRVS and has informed public commenters to consider compelling evidence to identify potentially misvalued codes. Commenters requested that CMS address the compelling evidence submitted with the RUC recommendations when the agency does not accept the RUC's recommended work RVUs.

*Response:* The concept of compelling evidence was developed by the RUC as part of its work RVU review process for individual codes. The RUC determines whether there is compelling evidence to justify an increase in valuation. The RUC's compelling evidence criteria include documented changes in physician work, an anomalous relationship between the code and multiple key reference services, evidence that technology has changed physician work, analysis of other data on time and effort measures, and evidence that incorrect assumptions were made in the previous valuation of the service. While we appreciate the submission of this additional information for review, we emphasize that the RUC developed the concept of compelling evidence for its own review process; an evaluation of "compelling evidence," at least as conceptualized by the RUC, is not part of our review process, as our focus is the time and

intensity of services, in accordance with the statute. With that said, we do consider changes in technology, patient population, and other compelling evidence criteria, as such evidence may affect the time and intensity of a service under review. For example, new technology may cause a service to become easier or more difficult to perform, with corresponding effects on the time and intensity of the service. However, we are under no obligation to adopt the same review process or compelling evidence criteria as the RUC. We instead focus on evaluating and addressing the time and intensity of services when reviewing potentially misvalued codes because section 1848(c)(1)(A) of the Act specifically defines the work component as the resources that reflect time and intensity in furnishing the service.

*Comment:* Several commenters raised the issue of the refinement panel which was last reformed in CY 2016.

Commenters stated that the refinement panel was not obsolete and was not mutually exclusive with the change to include all proposed valuations in each year's proposed rule. Commenters stated that for 2 decades, the refinement panel process was considered by interested parties to be an appeals process and its elimination discontinued CMS' reliance on outside interested parties to provide accountability through a transparent appeals process. Commenters requested that CMS consider these issues and create an objective, transparent and consistently applied formal appeals process that would be open to any commenting organization.

*Response:* We did not propose any changes to the refinement panel for CY 2023. As we stated in the CY 2016 PFS final rule (80 FR 70917 and 70918), the refinement panel was established to assist us in reviewing the public comments on CPT codes with interim final work RVUs and in balancing the interests of the specialty societies who commented on the work RVUs with the budgetary and redistributive effects that could occur if we accepted extensive increases in work RVUs across a broad range of services. When developing the CY 2016 proposed rule, and continuing to the present, we did not believe that the refinement panel had generally served as the kind of "appeals" or reconsideration process that some interested parties envisioned in their comments. We also believe that the refinement panel was not achieving its intended purpose. Rather than providing us with additional information, balanced across specialty interests, to assist us in establishing work RVUs, the refinement panel

process generally served to rehash the issues raised and information already discussed at the RUC meetings and considered by CMS. In contrast to the prior process of establishing interim final values and using a refinement panel process that generally was not observed by members of the public, we continue to believe that the current process of proposing the majority of code values in a proposed rule, giving the public the opportunity to comment on those proposed values, and then finalizing those values in a final rule offers greater transparency and accountability.

We also note that we did not finalize our proposal to eliminate the refinement panel completely in CY 2016. We retain the ability to convene refinement panels for codes with interim final values under circumstances where additional input provided by the panel is likely to add value as a supplement to notice and comment rulemaking. We also remind interested parties that we have established an annual process for the public nomination of potentially misvalued codes. This process, described in the CY 2012 PFS final rule (76 FR 73058), provides an annual means for those who believe that values for individual services are inaccurate and should be readdressed through notice and comment rulemaking to bring those codes to our attention.

In response to comments, in the CY 2019 PFS final rule (83 FR 59515), we clarified that terms “reference services”, “key reference services”, and “crosswalks” as described by the commenters are part of the RUC’s process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate feedback from interested parties, we will seek to limit the use of the term, “crosswalk,” to those cases where we are making a comparison to a CPT code with the identical work RVU. We also occasionally make use of a “bracket” for code valuation. A “bracket” refers to when a work RVU falls between the values of two CPT codes, one at a higher work RVU and one at a lower work RVU.

We look forward to continuing to engage with interested parties and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and will continue to welcome feedback from all interested parties

regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for specific codes. Table 16 contains a list of codes and descriptors for which we proposed work RVUs; this includes all codes for which we received RUC recommendations by February 10, 2022. The finalized work RVUs, work time and other payment information for all CY 2023 payable codes are available on the CMS website under downloads for the CY 2023 PFS final rule at (<https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>).

### 3. Methodology for the Direct PE Inputs To Develop PE RVUs

#### a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC’s recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 18 details our refinements of the RUC’s direct PE

recommendations at the code-specific level. In section II.B. of this final rule, Determination of PE RVUs, we address certain proposed refinements that would be common across codes. We also address the refinements to particular codes that we are finalizing in section II.B. of this rule. We note that for each refinement of the RUC-recommended direct PE inputs that we are finalizing, we indicate the potential impact on direct costs for that service. We also note that, on average, in any case where the impact on the direct cost for a particular refinement is \$0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. We also noted that many of the refinements listed in Table 17 result in changes under the \$0.35 threshold and would be unlikely to result in a change to the RVUs.

We note that the final direct PE inputs for CY 2023 are displayed in the CY 2023 direct PE input files, available on the CMS website under the downloads for the CY 2023 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. The inputs displayed there have been used in developing the final CY 2023 PE RVUs as displayed in Addendum B.

#### b. Common Refinements

##### (1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

##### (2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general

guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time will also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also noted that we believe these same assumptions will apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question will be available if the room is not being occupied by a particular patient. For additional information, we referred readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

### (3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the "PE worksheets." For most of these

described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this final rule, Determination of PE RVUs, for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

### (4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

### (5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2023, we received invoices for several new supply and equipment items. Tables 19 and 20 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this final rule, Determination of Practice Expense Relative Value Units, we encourage interested parties to review the prices associated with these new and existing items to determine whether these prices appear to be accurate.

Where prices appear inaccurate, we encourage interested parties to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind interested parties that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 19 and 20 also include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that interested parties will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that interested parties are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs and we encourage interested parties to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we include the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

**(6) Service Period Clinical Labor Time in the Facility Setting**

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address code-specific refinements to clinical labor in the individual code sections.

**(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap**

We note that the list of services for the upcoming calendar year that are subject to the MPPR on diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services; and the list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap; are displayed in the public use files for the PFS proposed and final rules for each year. The public use files for CY 2023 are available on the CMS website under downloads for the CY 2023 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261 through 74263).

Effective January 1, 2007, section 5102(b)(1) of the Deficit Reduction Act of 2005 (Pub. L. 109–171) (DRA) amended section 1848(b)(4) of the Act to require that, for imaging services, if—(i) The technical component (TC) (including the TC portion of a global fee) of the service established for a year under the fee schedule without application of the geographic adjustment factor, exceeds (ii) The Medicare OPD fee schedule amount established under the prospective payment system (PPS) for hospital outpatient (HOPD) services under section 1833(t)(3)(D) of the Act for such service for such year, determined without regard to geographic adjustment under paragraph (t)(2)(D) of such section, the Secretary shall substitute the amount described in clause (ii), adjusted by the geographic adjustment factor [under the PFS], for the fee schedule amount for such TC for such year. As required by the section 1848(b)(4)(A) of the Act, for imaging services furnished on or after January 1,

2007, we cap the TC of the PFS payment amount for the year (prior to geographic adjustment) by the Outpatient Prospective Payment System (OPPS) payment amount for the service (prior to geographic adjustment). We then apply the PFS geographic adjustment to the capped payment amount. Section 1848(b)(4)(B) of the Act defines imaging services as imaging and computer-assisted imaging services, including X-ray, ultrasound (including echocardiography), nuclear medicine (including PET), magnetic resonance imaging (MRI), computed tomography (CT), and fluoroscopy, but excluding diagnostic and screening mammography. For more information regarding the history of the cap on the TC of the PFS payment amount under the DRA (the “OPPS cap”), we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

For CY 2023, we identified new and revised codes to determine which services meet the definition of “imaging services” as defined above for purposes of this cap. Beginning for CY 2023, we proposed to include the following services on the list of codes to which the OPPS cap applies: CPT codes 0493T (*Contact near-infrared spectroscopy studies of lower extremity wounds (e.g., for oxyhemoglobin measurement)*), 0640T (*Noncontact near-infrared spectroscopy studies of flap or wound (e.g., for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation [StO<sub>2</sub>]); image acquisition, interpretation and report, each flap or wound*), 0641T (*Noncontact near-infrared spectroscopy studies of flap or wound (e.g., for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation [StO<sub>2</sub>]); image acquisition only, each flap or wound*), 0642T (*Noncontact near-infrared spectroscopy studies of flap or wound (e.g., for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation [StO<sub>2</sub>]); interpretation and report only, each flap or wound*), 0651T (*Magnetically controlled capsule endoscopy, esophagus through stomach, including intraprocedural positioning of capsule, with interpretation and report*), 0658T (*Electrical impedance spectroscopy of 1 or more skin lesions for automated melanoma risk score*), 0689T (*Quantitative ultrasound tissue characterization (non-elastographic), including interpretation and report, obtained without diagnostic ultrasound examination of the same anatomy (e.g., organ, gland, tissue, target structure)*), 0690T (*Quantitative ultrasound tissue*

*characterization (non-elastographic), including interpretation and report, obtained with diagnostic ultrasound examination of the same anatomy (e.g., organ, gland, tissue, target structure) (List separately in addition to code for primary procedure)*), 0694T (*3-dimensional volumetric imaging and reconstruction of breast or axillary lymph node tissue, each excised specimen, 3-dimensional automatic specimen reorientation, interpretation and report, real-time intraoperative*), 0700T (*Molecular fluorescent imaging of suspicious nevus; first lesion*), 0701T (*Molecular fluorescent imaging of suspicious nevus; each additional lesion (List separately in addition to code for primary procedure)*), and 76883 (*Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity*). As CPT codes 0493T, 0642T, 0651T, 0658T, and 76883 are not within the statutory scope of services to which the OPPS cap applies, as they cannot be split into professional and technical components, or they only describe the professional component (PC), we thus proposed to add these codes to the OPPS DRA caps list in error. Therefore, we are not finalizing our proposal to add them to the list of services to which the OPPS cap applies. We believe that the remaining codes, CPT codes 0640T, 0641T, 0689T, 0690T, 0694T, 0700T, and 0701T, meet the definition of imaging services under section 1848(b)(4)(B) of the Act, and thus, should be subject to the OPPS cap. Therefore, we are finalizing our proposal to add CPT codes 0640T, 0641T, 0689T, 0690T, 0694T, 0700T, and 0701T to the list of services to which the OPPS cap applies, and we are not finalizing our proposal to add CPT codes 0493T, 0642T, 0651T, 0658T, and 76883 to the OPPS cap list.

**4. Valuation of Specific Codes for CY 2023**

(1) Anterior Abdominal Hernia Repair (CPT Codes 15778, 49591, 49592, 49593, 49594, 49595, 49596, 49613, 49614, 49615, 49616, 49617, 49618, 49621, 49622, and 49623)

In April 2021, the RUC reviewed an existing code that describes hernia repair, CPT code 49565 (*Repair recurrent incisional or ventral hernia; reducible*). CPT code 49565 was identified as being performed less than 50 percent of the time in the inpatient setting and being primarily performed in the outpatient setting. Interested

parties requested referral to CPT to update the code's descriptor. In response to the disparate site of service and request to update the code's descriptor, CPT created new codes with 000-day global periods to describe this type of service. The codes within this family are differentiated by 3 characteristics: whether the hernia is initial or recurrent, whether it is reducible or strangulated, and the total length of the hernia. CPT also created two new codes that describe parastomal hernia repair and an add-on code for removal of mesh.

The RUC recommendations differentiate the post-operative periods for the codes within this family by whether there is a same-day discharge, overnight stay with a visit on the same date, or whether the patient is admitted to the hospital. We disagree with many of the RUC-recommended work RVUs for the codes within this family that have a post-operative overnight stay built into their valuation. More specifically, we disagree with the RUC-recommended work RVUs for such codes because the RUC did not completely apply the 23-hour policy calculation (finalized in the CY 2011 PFS final rule (75 FR 73226)) in formulating its recommendations. Additionally, we disagree with the RUC-recommended work RVUs for the CPT codes in this family for which the RUC considered the patient to be admitted during the post-operative period because the RUC did not apply the 23-hour policy when formulating its recommendations.

As we noted in the CY 2011 PFS final rule (75 FR 73226), the work RVUs for services that are typically performed in the outpatient setting and require a hospital stay of less than 24 hours may in some cases involve multiple overnight stays while the patient is still considered to be an outpatient for purposes of Medicare payment. Because such services are typically furnished in the outpatient setting, they should not be valued to include inpatient post-operative E/M visits. The level of discharge day management services included in the valuation of such services should similarly not reflect an inpatient discharge and should therefore be reduced. And finally, as discussed in CY 2011 rulemaking, the intraservice time from the inpatient level E/M postoperative visit should be reallocated to the immediate postservice time of the service. The 23-hour policy calculation, when fully applied to the calculation of a work RVU, is used to reduce the value of discharge day management services, remove the inpatient E/M visits, and reallocate the intraservice time to the

immediate post-service period. See the CY 2011 PFS final rule (75 FR 73226) for additional in-depth explanation of the 23-hour policy.

For the codes with an overnight stay and an E/M visit on the same date built into their valuation, we believe the RUC only partially applied the 23-hour policy when it applied the policy to the immediate post service times, but not to the calculation of the work RVUs. Instead, we believe the 23-hour policy should be fully applied to the codes in this family that describe outpatient services for which there is an overnight stay during the post-operative period, regardless of the number of nights that a patient stays in the hospital. The services to which the 23-hour policy is usually applied would typically involve a patient stay in a hospital for less than 24 hours, which often means the patient may stay overnight in the hospital. On occasion, the patient may stay in the hospital longer than a single night; however, in both cases (one night or more than one night), the patient is considered to be a hospital outpatient, not an inpatient, for Medicare purposes. In short, we do not believe that the work that is typically associated with an inpatient service should be included in the work RVUs for the outpatient services to which the 23-hour policy applies.

The RUC recommended a work RVU of 8.0 for CPT code 15778 (*Implantation of absorbable mesh or other prosthesis for delayed closure of defect(s) (ie, external genitalia, perineum, abdominal wall) due to soft tissue infection or trauma*). CPT code 15778 was surveyed with having one subsequent hospital visit, CPT code 99232 (*subsequent hospital care/day 25 minutes*) and 25 minutes of immediate post service time. For purposes of calculating the recommended work RVU of 8.0, the RUC considered CPT code 15778 to describe an inpatient service, while we consider CPT code 15778 to describe an outpatient service for purposes of Medicare billing. As noted above, we do not believe that work that is typically associated with an inpatient service should be included in the work RVUs for the outpatient services to which the 23-hour policy applies. Therefore, the valuation for this code should not include inpatient work in the post-operative period. See the CY 2022 PFS final rule (86 FR 65090) for further discussion on the 23-hour policy as it relates to outpatient billing. We believe the 23-hour policy should be fully applied to CPT code 15778, and we disagree with the RUC-recommended work RVU of 8.0.

In accordance with the 23-hour policy valuation methodology we established in the CY 2011 PFS final rule, we instead proposed a work RVU of 7.05 for CPT code 15778 and a reallocation of the time associated with the intra-service portion of the inpatient hospital visit to the immediate postservice time of CPT code 15778.

The steps for the 23-hour policy calculation are as follows:

- *Step (1)*: CPT code 15778 does not have a hospital discharge day management service; therefore, we will skip this step\*.

- *Step (2)*:  $8.0 - 1.39^{**} = 6.61$ .

- *Step (3)*:  $6.61 + (20 \text{ minutes} \times 0.0224)^{***} = 7.05 \text{ RVUs}$ .

\*Value associated with 1/2 hospital discharge day management service

\*\*Value associated with an inpatient hospital visit, CPT code 99232.

\*\*\*Value associated with the reallocated intraservice time multiplied by the postservice intensity of the 23-hour stay code.

The following CPT codes have a post-operative period that is considered an overnight stay with a visit on the same date: CPT codes 49592 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), initial, including placement of mesh or other prosthesis, when performed, total length of defect(s); less than 3 cm, incarcerated or strangulated*), 49593 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), initial, including placement of mesh or other prosthesis, when performed, total length of defect(s); 3 cm to 10 cm, reducible*), 49594 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), initial, including placement of mesh or other prosthesis, when performed, total length of defect(s); 3 cm to 10 cm, incarcerated or strangulated*), 49595 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), initial, including placement of mesh or other prosthesis, when performed, total length of defect(s); greater than 10 cm, reducible*), 49614 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed, total length of defect(s); less than 3 cm, incarcerated or strangulated*), and 49615 (*Repair of anterior abdominal hernia(s) (ie,*

*epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed, total length of defect(s); 3 cm to 10 cm, reducible).* The RUC recommended a work RVU of 9.0 for CPT code 49592, 10.80 for CPT code 49593, 14.0 for CPT code 49594, 14.88 for CPT code 49595, 10.79 for CPT code 49614, and 12.0 for CPT code 496159. CPT codes 49592, 495933, 49614, and 49615 were surveyed with one subsequent inpatient hospital visit at a level of CPT code 99231 (*subsequent hospital care/day 15 minutes*). The RUC applied the 10 minutes of intraservice time from CPT code 99231 to the immediate postservice time of these codes, resulting in a total immediate postservice time of 30 minutes for these codes. CPT codes 49594 and 49595 were surveyed with a subsequent inpatient hospital visit at a level of CPT code 99232. The RUC applied the 20 minutes of intraservice time from CPT code 99232 to the immediate postservice time of both codes, resulting in a total immediate postservice time of 40 minutes.

Much like our concerns regarding the RUC-recommended work RVU for CPT code 15778, we do not believe that the RUC fully applied the 23-hour policy calculation when calculating the work RVUs for these codes and we disagree with the RUC-recommended RVUs. While the RUC removed the 99231 and 99232 inpatient visits included in the post-operative period for these codes, the RUC did not subtract the values of these visits from the work RVUs before making their work RVU recommendations. In the CY 2011 PFS final rule (75 FR 73226), we stated that we do not believe that the post-procedure hospital visits for outpatient services should be at the inpatient level since the typical case is an outpatient who would be ready to be discharged from the hospital in 23 hours or less. However, we agree with the RUC that the intra-service time of the inpatient hospital visit may be included in the valuation for 23-hour stay codes. Therefore, we believe that step 2 of the 23-hour policy calculation, which involves deducting the RVUs of the inpatient hospital visits from the starting work RVU value and subsequently reallocating the time associated with the intra-service portion of the inpatient hospital visits to the immediate postservice time of the 23-hour stay code, should be fully applied when calculating the work RVUs for

CPT codes 49592, 49593, 49594, 49595, 49614, and 49615.

Using the 23-hour policy calculation described above and in the CY 2011 PFS final rule, we proposed work RVUs of 8.46 for CPT code 49592, 10.26 for CPT code 49593, 13.46 for CPT code 49594, 13.94 for CPT code 49595, 10.25 for CPT code 49614, and 11.46 for CPT code 49615.

The following CPT codes have a post-operative period that the RUC considers to be admitted to a hospital: CPT code 49596 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), initial, including placement of mesh or other prosthesis, when performed, total length of defect(s); greater than 10 cm, incarcerated or strangulated*), 49616 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed, total length of defect(s); 3 cm to 10 cm, incarcerated or strangulated*), 49617 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed, total length of defect(s); greater than 10 cm, reducible*), 49618 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed, total length of defect(s); greater than 10 cm, incarcerated or strangulated*), 49621 (*Repair of parastomal hernia, any approach (ie, open, laparoscopic, robotic), initial or recurrent, including placement of mesh or other prosthesis, when performed; reducible*), and 49622 (*Repair of parastomal hernia, any approach (ie, open, laparoscopic, robotic), initial or recurrent, including placement of mesh or other prosthesis, when performed; incarcerated or strangulated*). The RUC recommended a work RVU of 18.67 for CPT code 49596, 15.55 RVUs for CPT code 49616, 16.03 RVUs for CPT code 49617, 22.67 RVUs for CPT code 49618, 13.70 RVUs for CPT code 49621, and 17.06 RVUs for CPT code 49622. CPT codes 49596 and 49618 were surveyed and recommended with one subsequent inpatient hospital visit at a level of CPT code 99233 (*subsequent hospital care/day 35 minutes*). The RUC recommendations include an immediate postservice time of 25 minutes for CPT

code 49596 and 30 minutes for CPT code 49618. CPT codes 49616, 49617, and 49622 were surveyed and recommended with one subsequent inpatient hospital visit at a level of CPT code 99232. The RUC recommendations include an immediate postservice time of 25 minutes for 49616, 28 minutes for CPT code 49617, and 25 minutes for CPT code 49622. CPT code 49621 was surveyed and recommended with one subsequent inpatient hospital visit at a level of CPT code 99231 and an immediate postservice time of 25 minutes.

For purposes of calculating the recommended work RVUs, the RUC considered these CPT codes to describe an admitted inpatient service, while we consider the CPT codes to describe outpatient services for purposes of billing. Therefore, we believe that inpatient work in the post-operative period should not be included in the valuation. We believe the 23-hour policy should be applied to these codes. Using the 23-hour policy calculation described above and in the CY 2011 PFS final rule, we proposed a work RVU of 18.67 for CPT code 49596, 15.55 RVUs for CPT code 49616, 16.03 RVUs for CPT code 49617, 22.67 RVUs for CPT code 49618, 13.70 RVUs for CPT code 49621, and 17.06 RVUs for CPT code 49622. We are also proposing revised immediate postservice times for the reallocation of the time associated with the intraservice portion of the inpatient hospital visit. We proposed immediate post service times of 40 minutes for CPT code 49596, 35 minutes for CPT code 49616, 38 minutes for CPT code 49617, 45 minutes for CPT code 49618, 30 minutes for CPT code 49621, and 35 minutes for CPT code 49622.

The following CPT codes have a post-operative period that the RUC considers to be a same day discharge: CPT code 49591 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), initial, including placement of mesh or other prosthesis, when performed, total length of defect(s); less than 3 cm, reducible*) and 49613 (*Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis, when performed, total length of defect(s); less than 3 cm, reducible*). The RUC-recommended a work RVU of 6.27 for CPT code 49591 and 7.75 for CPT code 49613. We disagree with the RUC-recommended RVU for CPT code 49591 because it falls above the median value for codes with similar

times. We proposed a work RVU of 5.96 RVUs based on the intraservice time ratio, which is the ratio of 90 minutes of intraservice time of a current hernia repair code—CPT code 49560 (*Repair initial incisional or ventral hernia; reducible*) and the 45 minutes of intraservice time for CPT code 49591. The proposed work RVU of 5.96 is also supported by reference CPT code 93453 (*Combined right and left heart catheterization including intraprocedural injection(s) for left ventriculography, imaging supervision and interpretation, when performed*). CPT code 93453 has a work RVU of 5.99, the same intraservice time as CPT code 49591 (45 minutes), and a slightly higher total time of 113 minutes.

For CPT code 49613, we disagree with the RUC-recommended work RVU of 7.75, as it is above the median range compared to codes with similar times. We proposed a work RVU of 7.42 RVUs for CPT code 49613 based off of the intraservice time ratio of 100 minutes of intraservice time for a current hernia repair code—CPT code 49565 (*Repair recurrent incisional or ventral hernia; reducible*), compared to the 60 minutes of intraservice time for CPT code 49613. The proposed work RVU of 7.42 is also supported by reference CPT code 52353 (*Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy (ureteral catheterization is included)*). CPT code 52353 has a work RVU of 7.50 with the same intraservice time of 60 minutes and a very similar total time of 133 minutes.

CPT code 49623 (*Removal of total or near-total non-infected mesh or other prosthesis at the time of initial or recurrent anterior abdominal hernia repair or parastomal hernia repair, any approach (ie, open, laparoscopic, robotic)*) is an add-on code. The RUC recommended a work RVU of 5.0 for CPT code 49623. The RUC recommendation is higher than the work RVUs for many other CPT add-on codes with similar times. We proposed a work RVU of 2.61 RVUs for CPT code 49623, based on the reverse building block methodology. The proposed work RVU of 2.61 is also supported by reference CPT code 15774 (*Grafting of autologous fat harvested by liposuction technique to face, eyelids, mouth, neck, ears, orbits, genitalia, hands, and/or feet; each additional 25 cc injectate, or part thereof (List separately in addition to code for primary procedure)*), which has a work RVU of 2.50 and the same total time of 45 minutes.

We reviewed the RUC-recommended direct PE inputs for all of the codes within this family. We disagree with the RUC's recommendations of 66 total

minutes of clinical staff time for CPT codes 49591 and 49613, 60 total minutes of clinical staff time for CPT codes 49592, 49593, 49594, 49595, 49596, 49614, 49615, 49616, 49617, 49618, 49621, and 49622, and 20 total minutes of clinical staff time for CPT code 15778. In the CY 2023 PFS proposed rule, we noted that the RUC recommended 090-day pre-service times for all of these codes despite surveying all of the services as 000-day services. In the CY 2022 PFS final rule (86 FR 65090), we stated we continue to believe that setting and maintaining clinical labor time and valuation standards provides greater consistency among codes that share clinical labor tasks and could improve relativity of values among codes. Therefore, we believe that the standard clinical labor packages that are in accordance with the surveyed global period continue to be the most appropriate for purposes of clinical labor valuation.

The RUC recommendations for CPT codes 49591 and 49613, and CPT codes 49592, 49593, 49594, 49595, 49596, 49614, 49615, 49616, 49617, 49618, 49621, and 49622, include the standard for 090-day preservice times for clinical labor activities, which is 60 minutes. For 49591 and 49613 in particular, the RUC also recommended an additional 6 minutes in the post service period to conduct patient communications. We disagree with the RUC-recommended 090-day times as these CPT codes were surveyed by the RUC as 000-day services and should have times consistent with 000-day services. Therefore, we proposed the standard clinical labor times for a 000-day extensive package for a total pre-service clinical staff time of 30 minutes for CPT codes 49591 through 49622 with an additional standard 3 minutes of post-service patient communications for 49591 and 49613. CPT code 49623 is an add-on code and does not have RUC-recommended direct PE inputs.

For CPT code 15778, the RUC recommendation is 20 minutes of clinical staff activities, which is standard for an emergent procedure package. We do not agree that the service described by CPT code 15778 should be considered an emergent procedure. Therefore, we proposed the minimal clinical staff package minus pre-service education for CPT code 15778, for a total of 12 clinical staff time minutes.

*Comment:* We received public comments for this code family that did not support our proposed RVUs. Commenters stated that they do not agree with our “systemic and formulaic” reduction in work RVUs by

the use of the Reverse Building Block (RBB) methodology. The commenters also stated that our use of the RBB in the context of the 23-hour policy is duplicative and results in inappropriately low valuations, in contrast to their preferred method of magnitude estimation.

*Response:* We believe that there are multiple appropriate methodologies for calculating work RVUs, including the RBB method, time ratios, increments, and survey data. We finalized in the CY 2011 PFS final rule (75 FR 73328 through 73329), the RBB formula for applying the 23-hour policy to the work RVUs and the times of the outpatient service and the same-day E/M codes. We do not believe that it is duplicative to apply the full 23-hour policy to CPT codes when the RUC recommendations do not account for the appropriate reduction in work RVUs; this is relevant for some of the codes in this family as well as the Intracranial Laser Interstitial Thermal Therapy (LITT) family (CPT Codes 61736 and 61737) discussed in the CY 2022 PFS final rule (86 FR 65090). We continue to believe the entire 23-hour policy calculation, as finalized in the CY 2011 PFS final rule, should be completely and consistently applied where applicable.

*Comment:* Commenters noted several concerns regarding the application of the 23-hour policy to this code family. Commenters stated that they disagree with the additional application of the 23-hour policy to the CPT codes that the RUC has considered as overnight with a visit on the same date because they believe that this has already been accounted for during the survey process magnitude estimation. Commenters noted that they do not believe that the 23-hour policy should be applied to the codes that the RUC has considered as admitted because the patient will likely become an inpatient. Additionally, the commenters expressed concern that we have added CPT codes 49596, 49616, 49617, 49618, 49621, and 49622 to the Hospital Outpatient Prospective Payment System's Inpatient Only List and the volume being reallocated to the new CPT codes are from inpatient predecessor codes, CPT codes 49561 and 49566, which is contradictory. One commenter noted that the post-operative care will be occurring on the same day as the service and they believe that we did not account for this. Commenters also noted concern about contradictory policies regarding the newly revised E/M CPT codes, 99232, 99233, 99238, and 99239, which they noted now represents the same physician work whether inpatient or outpatient. Commenters opined that the revision to the E/M

codes renders the 23-hour policy invalid. One commenter also expressed concern about our assertion that the 23-hour policy can encompass scenarios where the patient stays multiple overnights in the hospital, as this is contradictory to our “Two-Midnight rule” regarding inpatient versus outpatient status.

*Response:* As stated previously, we believe that it is not duplicative to apply the full 23-hour policy calculation to the CPT codes that the RUC has considered as overnight with a visit on the same date. It is not evident from the RUC recommendations provided to us that the final work RVU was appropriately reduced (per the CY 2011 PFS final rule formula) consistent with the second step of the 23-hour calculation. Therefore, we believe the entire calculation should be applied to the CPT codes that the RUC has considered as overnight with a visit on the same date. We acknowledge that we proposed to add the CPT codes that the RUC has considered as admitted to the Hospital Outpatient Prospective Payment System’s Inpatient Only List for 2023. However, we believe that doing so is not inconsistent with our proposals for this family. The RUC recommendations include a request to treat these CPT codes as 000-day global services. As such, regardless of the inpatient status of the patients, we continue to believe that 000-day global service code families allow for separately billable post-operative E/M visits. Therefore, we believe it is still appropriate to subtract the value of the post-operative E/M visit that the RUC recommended as bundled into the valuations of the codes from the valuation of the codes. We also acknowledge that the RUC recommendations include the post-operative work occurring on the same day of the service. In light of that, we intend to reallocate the intraservice time from the removed post-operative E/M visit to the immediate post-service time of the service, as proposed. We believe that the proposed revisions for CPT codes 99221–99223 and 99231–99233 are not inconsistent with our 23-hour policy as it applies to this code family; the RUC recommendations referenced in this rule (from April 2021) explicitly identify many of the codes in this family as being subject to our 23-hour policy. Consistent with discussions in the CY 2011 and CY 2022 PFS final rules cited above, we agree with the RUC that these codes are subject to the 23-hour policy, and we believe it is appropriate to fully apply the 23-hour policy to several of the codes within this family. We again note that the RUC recommendations

request this family be 000-day global services, as such, this allows for separately billable E/M visits regardless of the patient’s admission status.

We note that we also discussed 000-day global services and separately billable E/M visits in the CY 2022 PFS final rule relative to CPT codes 21315 and 21320 (86 FR 65074). We note that we acknowledge commenter’s concerns regarding policy implications as a result of adopting the E/M inpatient/observation revisions and will take that into consideration for future rulemaking. Also consistent with the CY 2011 and CY 2022 final rules, we disagree with the commenter’s concerns regarding multiple overnights and the application of the 23-hour policy. We stated in the CY 2022 final rule cited above that the 23-hour policy can encompass several scenarios, including multiple overnight stays (87 FR 45860). We did not propose any changes to the previously finalized 23-hour policy nor a policy regarding “Two-Midnights”. Therefore, we believe it is still consistent to fully apply the 23-hour policy to the codes within this family that the RUC considers overnight with a visit on the same date and admitted.

*Comment:* One commenter stated that they have concerns with our CY 2011 PFS final rule policy (75 FR 73226) to reallocate the intraservice time of the inpatient level E/M postoperative visit to the immediate postservice time of the service. The commenter noted that the E/M services furnished post operatively are separate and distinct from the main surgical procedure and there is no difference in work to provide a separate E/M service furnished to a postoperative patient by the surgeon compared to another provider. Additionally, the commenter stated that we have not provided a rationale or evidence for this policy and the components of it, such as the intraservice vs. total time and the chosen intensity. The commenter also noted that this policy of reallocating the intraservice time from the inpatient level E/M postoperative visit to the immediate postservice time of the service is discriminatory to surgeons and the 23-hour policy overall is flawed and not in line with statute.

*Response:* We acknowledge that some commenters had concerns regarding various aspects of our 23-hour policy and CMS’s full application of the policy to the CPT codes in this family. We refer readers to our discussion regarding the policy and its application in the CY 2011 and CY 2022 PFS final rules, cited above. Since we did not propose any changes to our 23-hour policy, its application or calculation, we are not

finalizing any changes to the policy for CY 2023.

*Comment:* Commenters disagreed with our proposed valuation methodologies for several specific codes within the family. For CPT codes 49591 and 49613, commenters disagreed with our use of the intraservice time ratio as a valuation methodology. Commenters noted that using ratios treats all components of physician time as having identical intensities. Commenters also noted that we did not adequately account for the bundled work of the placement of mesh, that previously was reported separately. Commenters also disagreed with our chosen supporting reference codes, as they noted their clinical nature and intensity is not appropriate for purposes of comparison. For CPT code 49623, commenters disagreed with our use of the RBB methodology as the service is currently not described by an existing CPT code and is instead reported using an unlisted code or with modifier -22.

*Response:* We continue to believe that intraservice time ratios are a valid and appropriate tool for determining work RVUs. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. In accordance with the statute, we believe that changes in time and intensity must be accounted for when developing work RVUs. When our review of recommended values reveals that changes in the resource of time are not accounted for in a RUC-recommended RVU, the obligation to account for that change when establishing the proposed and final work RVUs remains. For more details on our methodology for developing work RVUs, we direct readers to the discussion on time ratios as discussed above in this Valuation of Specific Codes section.

For CPT codes 49591 and 49613, we believe that the RUC recommended work RVUs are overvalued compared to similar codes with similar intraservice times. We also do not believe that our supporting reference codes must have similar clinical characteristics for purposes of comparison due to the inherent relativity of the PFS. Also, for CPT code 49591, we found multiple other supporting reference codes that have similar and even lower intraservice and total times, but RVUs much lower than the RUC recommended value for this code. For example, CPT code 33289 (*Transcatheter implantation of wireless pulmonary artery pressure sensor for long-term hemodynamic monitoring, including deployment and calibration of*

the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed) was reviewed by the RUC in 2018. This CPT code has 40 minutes of intraservice time, 111 minutes of total time, a work RVU of 6.0 and a nearly identical intensity of 0.115 as compared to the RUC derived intensity of 0.113 for their recommended work RVU value for this code. Therefore, we believe a work RVU of 5.96 for CPT code 49591 is an appropriate valuation based on CPT codes with similar times and intensities. For CPT code 49613, we disagree that our supporting reference code (CPT code 52353) is inappropriate for purposes of comparison. In addition to the similar times, it also has an intensity of 0.101 that is very close to the RUC derived intensity of 0.105 for their recommendation for this code. Therefore, we believe a work RVU of 7.42 for CPT code 49613 is an appropriate valuation based on CPT codes with similar times and intensities.

For CPT code 49623, we disagree that it is inappropriate to use the RBB to reach a work RVU valuation. We believe that there are multiple valuation methodologies that we can use to calculate work RVUs for CPT codes, all of which align with the statutory requirement to value work RVUs based on the relative resources involved in furnishing the service, which include time and intensity. However, we agree with commenters that there are other more appropriate CPT codes that could be used in the RBB calculation for purposes of comparison. For example, CPT code 11008 (*Removal of prosthetic material or mesh, abdominal wall for infection (e.g., for chronic or recurrent mesh infection or necrotizing soft tissue infection) (List separately in addition to code for primary procedure)*) has a total time of 60 minutes and an RVU of 5.0. Using CPT code 11008 in the RBB calculation yields a work RVU of 3.75 for CPT code 49623. We believe that CPT code 11008 is a more appropriate code to use within the RBB calculation for CPT code 49623. We also support a work RVU of 3.75 with a reference code, CPT code 63048 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; each additional segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure)*), which has the same total time of 45 minutes and work

RVU of 3.47. Therefore, we are finalizing a work RVU of 3.75 for CPT code 49623.

**Comment:** Commenters did not support our proposed practice expense (PE) clinical staff time packages for this code family. Commenters disagreed with using a 000/010-day extensive package and believe that the 090-day clinical staff time package is still appropriate because the change to a 000-day global period from a 090-day global period was requested by the RUC to account for the variable post-operative care and not the procedural clinical staff work that is associated with it. One commenter also noted that in April 2022, the RUC created a new clinical staff time package for 000/010-day global period codes that had previously been 090-day global period codes. Commenters also requested that we accept the RUC's recommendation to use the standard emergent procedure package, with 20 minutes of clinical staff activities for CPT code 15778.

**Response:** As stated in the CY 2023 PFS proposed rule (87 FR 45909), we continue to believe that maintaining clinical labor standards provides greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. We reviewed the individual codes in question and concluded that the use of 000-day or 010-day global period standards for "Extensive use of Clinical Staff" would be most typical and consistent in these cases. Upon further clinical review, we also continue to believe that the most appropriate clinical staff package for CPT code 15778 is the minimal staff package minus pre-service education. We are pleased to learn that the RUC has developed a new clinical staff package for CPT codes that are transitioning from a 90-day global period. This clinical staff package was not included in the recommendations submitted for this code family.

After consideration of the public comments, we are finalizing the work RVU values for this code family as proposed, with the exception of CPT code 49623, as indicated above. We are also finalizing all PE inputs as proposed.

#### (2) Removal of Sutures or Staples (CPT Codes 15851, 15853, and 15854)

In October 2021, the CPT Editorial Panel approved the deletion of CPT code 15850 and revised CPT code 15851 (*Removal of sutures or staples requiring anesthesia (ie, general anesthesia, moderate sedation)*), and created two new related CPT add-on codes, 15853 and 15854, to describe *Removal of*

*sutures or staples requiring anesthesia (i.e., general anesthesia, moderate sedation)*. The RUC reviewed the three codes: 15851, 15853 and 15854 at the January 2022 RUC meeting.

After reviewing CPT code 15851, we proposed the RUC-recommended work RVU of 1.10 for CPT code 15851. CPT codes 15853 (*Removal of sutures OR staples not requiring anesthesia (List separately in addition to E/M code)*), and 15854 (*Removal of sutures OR staples not requiring anesthesia (List separately in addition to E/M code)*) are valued by the RUC as PE-only codes. The RUC did not recommend any work inputs for these two add-on codes and we did not propose any work RVU refinements.

We also proposed the RUC-recommended direct PE inputs for CPT codes 15851, 15853, and 15854 without refinement.

**Comment:** One commenter expressed support for our proposed valuations for the family of codes that describe the removal of sutures or staples.

**Response:** We appreciate the commenter's support, and we are finalizing our proposal of the RUC-recommended direct PE inputs for CPT codes 15851, 15853, and 15854 without refinement.

#### (3) Arthrodesis Decompression (CPT Codes 22630, 22632, 22633, 22634, 63052, and 63053)

In October 2020, the CPT Editorial Panel approved the revision of four codes describing arthrodesis and the addition of two new add-on codes, CPT codes 63052 (*Laminectomy, facetectomy, or foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s] [e.g., spinal or lateral recess stenosis]), during posterior interbody arthrodesis, lumbar; single vertebral segment (List separately in addition to code for primary procedure)*) and 63053 (*Laminectomy, facetectomy, or foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s] [e.g., spinal or lateral recess stenosis]), during posterior interbody arthrodesis, lumbar; each additional segment (List separately in addition to code for primary procedure)*), to report laminectomy, facetectomy, or foraminotomy during posterior interbody arthrodesis, lumbar to more appropriately identify the decompression that may be separately reported. In January 2021, the RUC reviewed the survey results for the two new codes and expressed concern that the four base codes had not been surveyed along with the two new add-

on codes. The RUC recommended that the entire family be resurveyed and presented for review at its April 2021 meeting. The RUC suggested that until new values could be established, interim values be established for CPT codes 63052 and 63053, which CMS revised for CY 2022 based on the survey data and RUC review available to us at the time of the development of the CY 2022 PFS proposed rule. We have noted in similar circumstances, such as the minimally invasive glaucoma surgery (MIGS) procedures with cataract surgery discussed in the CY 2022 PFS final rule (86 FR 65097), that it is best for entire code families to be surveyed at the same time. We also noted that we finalized a policy in the CY 2015 PFS final rule (79 FR 67602 through 67609) to make all changes in the work and MP RVUs and the direct PE inputs for new, revised, and potentially misvalued services under the PFS by proposing and then finalizing such changes through notice and comment rulemaking, as opposed to initially finalizing changes on an interim final basis.

For CPT codes 22630 (*Arthrodesis, posterior interbody technique, including laminectomy and/or discectomy to prepare interspace (other than for decompression), single interspace; lumbar*), 22633 (*Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace; lumbar*), 22634 (*Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace; each additional interspace and segment (List separately in addition to code for primary procedure)*), 63052, and 63053, we disagreed with the RUC-recommended work RVUs of 22.09, 26.80, 7.96, 5.70, and 5.00, respectively, because these values do not account for the surveyed changes in time, and we proposed a work RVU of 20.42 for CPT code 22630, a work RVU of 24.83 for CPT code 22633, a work RVU of 7.30 for CPT code 22634, the current work RVU of 4.25 for CPT code 63052 and a work RVU of 3.78 for CPT code 63053. For CPT code 22632 (*Arthrodesis, posterior interbody technique, including laminectomy and/or discectomy to prepare interspace (other than for decompression), single interspace; each additional interspace (List separately in addition to code for primary*

*procedure)*), we agreed with the RUC-recommended maintenance of the current work RVU of 5.22, as there were no surveyed changes in time.

We proposed a work RVU of 20.42 for CPT code 22630 based on the reverse building block methodology to account for the surveyed 8-minute decrease in total time, 10-minute decrease in pre-service time, 30-minute decrease in intraservice time, and 2-minute decrease in immediate post-service time. We believe that since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, it would be inappropriate to maintain the current work RVU given the significant decrease in intraservice time without adequate justification of increased intensity. There are currently three CPT code 99231 (*Subsequent hospital care/day 15 minutes*) and four CPT code 99213 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20–29 minutes of total time is spent on the date of the encounter.*) visits bundled in CPT code 22630's 090-day global period and valuation. The RUC recommended that the post-operative period for CPT code 22630 change to include two CPT code 99232 (*subsequent hospital care/day 25 minutes*), one CPT code 99231, one CPT code 99214 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30–39 minutes of total time is spent on the date of the encounter.*), and two CPT code 99213 visits. The currently bundled post-operative visits total to 6.16 work RVUs, whereas the RUC-recommended changes to the post-operative visits total 6.98 work RVUs, resulting in a 0.82 work RVU increase (if no other changes occurred to CPT code 22630). The proposed work RVU of 20.42 for CPT code 22630 maintains the same IWPOT of 0.067 and maintains the 0.82 work RVU difference between the current and RUC-recommended post-operative period. We believe this proposed work RVU is more accurate than the RUC-recommended work RVU because there was no obvious or explicitly stated rationale in the RUC's recommendations for the change in intensity of intraservice time, and there was a 30-minute decrease in intraservice time for

CPT code 22630. We believe that since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, it would have been inappropriate to propose the RUC-recommended work RVU for CPT code 22630.

Similarly, we proposed a work RVU of 24.83 for CPT code 22633, based on the reverse building block methodology, to account for the surveyed 56-minute decrease in total time, 20-minute decrease in intraservice time, and 33-minute decrease in post-operative time. The reverse building block methodology accounts for the time and intensity of post-operative work through long-established and agreed-upon times and intensities for bundled post-operative visits, and accurately adjusts for the changes occurring in the post-operative period. There is currently one post-operative CPT code 99232, two CPT code 99233 (*Subsequent hospital care/day 35 minutes*), and three CPT code 99213 visits bundled in CPT code 22633's valuation. The RUC recommended that the post-operative period for CPT code 22633 change to include two CPT code 99232, one CPT code 99231, one CPT code 99214 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30–39 minutes of total time is spent on the date of the encounter.*), and two CPT code 99213 visits. The currently bundled post-operative visits total to 8.30 work RVUs, whereas the RUC-recommended changes to the post-operative visits total 6.98 work RVUs, resulting in a 1.32 work RVU decrease (if no other changes occurred to CPT code 22633). Using the reverse building block methodology, the proposed work RVU of 24.83 maintains the same IWPOT of 0.080 and the 1.32 work RVU difference between the current and RUC-recommended post-operative period. We believe this proposed work RVU is more accurate than the RUC-recommended work RVU because there was no obvious or explicitly stated rationale in the RUC's recommendations for the change in intensity of intraservice time, and there was a 20-minute decrease in intraservice time for CPT code 22633. We believe that since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, it would have

been inappropriate to propose the RUC-recommended work RVU decrease of 0.95, which is only about three-quarters of the established decrease in work RVU of 1.32 and intensity from the changes in the post-operative period alone. We also considered the apparent decrease in intraservice time and the lack of an adequate justification for increased intensity to arrive at our proposed work RVU of 24.83 for CPT code 22633.

We proposed a work RVU of 7.30 for CPT code 22634 based on a comparison to its base code, CPT code 22633. We used the proposed work RVU of 24.83 for the parent CPT code (22633) as the numerator and the current work RVU for CPT code 22633 of 27.75 as the denominator, and multiplied that fraction by the current work RVU of 8.16 for CPT code 22634 to arrive at a proportionate proposed work RVU of 7.30 for CPT code 22634  $((24.83/27.75) * 8.16) = 7.30$ . The proposed work RVU accounts for the decrease in intraservice time and is well bracketed by CPT code 34820 (*Open iliac artery exposure for delivery of endovascular prosthesis or iliac occlusion during endovascular therapy, by abdominal or retroperitoneal incision, unilateral (List separately in addition to code for primary procedure)*), valued at 7.00 work RVUs with an intraservice time of 60 minutes, and CPT code 34833 (*Open iliac artery exposure with creation of conduit for delivery of endovascular prosthesis or for establishment of cardiopulmonary bypass, by abdominal or retroperitoneal incision, unilateral (List separately in addition to code for primary procedure)*), valued at 8.16 work RVUs with an intraservice time of 72 minutes.

CPT codes 63052 and 63053 were new add-on codes to report decompression when performed in conjunction with posterior interbody arthrodesis at the same interspace for CY 2022. The proposed work RVU for CPT code 63052 would maintain the current work RVU, despite a surveyed change in time. In the CY 2022 PFS final rule, we finalized a work RVU of 4.25 for CPT code 63052 for CY 2022 based on a crosswalk to CPT code 22853 (*Insertion of interbody biomechanical device(s) (e.g., synthetic cage, mesh) with integral anterior instrumentation for device anchoring (e.g., screws, flanges), when performed, to intervertebral disc space in conjunction with interbody arthrodesis, each interspace (List separately in addition to code for primary procedure)*), which has a work RVU of 4.25 and an intraservice time of 45 minutes. Despite a surveyed 5-minute intraservice time increase for CPT code 63052, we believe the crosswalk to CPT

code 22853 is still valid, given that only 3 months passed between the two surveys, as it now has the same intraservice time as CPT code 63052, is a spinal procedure, and is an add-on code to the same base codes as CPT code 63052. Commenters on the CY 2022 PFS proposed rule supported the bracket of key reference service CPT code 22552 (*Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophylectomy and decompression of spinal cord and/or nerve roots; cervical below C2, each additional interspace (List separately in addition to code for primary procedure)*) and MPC CPT code 34812 (*Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)*), and therefore, we noted that the final work RVU of 4.25 for CY 2022 was supported by the commenters (86 FR 65092). CPT code 22552 has a work RVU of 6.50 and an intraservice time of 45 minutes, and commenters noted that CPT code 22552 has a higher intensity as anticipated for a surgical procedure in comparison with a lumbar procedure. CPT code 34812 has a work RVU of 4.13 and 40 minutes of intraservice time, and commenters noted that this code involves open femoral artery exposure by groin incision and closure of the wound, typically for separately reported delivery of an endovascular prosthesis for an asymptomatic infrarenal abdominal aortic aneurysm. In comparison, exposure and closure for CPT code 63052 are performed as part of the primary arthrodesis code and the intraservice time includes higher intensity bony and soft tissue resection, and therefore, although both codes require the same time, the physician work and intensity of CPT code 63052 is greater than CPT code 34812.

In the CY 2022 PFS final rule, we finalized a work RVU of 3.19 for CPT code 63053 for CY 2022 based on an intraservice time ratio between CPT codes 63052 and 63053  $((30 \text{ minutes}/40 \text{ minutes}) * 4.25 = 3.19)$ . We believe this intraservice time ratio between the two CPT codes is still valid, given that only 3 months passed between the two surveys, and therefore, we proposed a work RVU of 3.78 based on the surveyed time changes for CPT codes 63052 and 63053  $((40 \text{ minutes}/45 \text{ minutes}) * 4.25 = 3.78)$  in order to maintain consistency with previous analysis of time and intensity of these two add-on codes. Due to the lack of an obvious or explicitly stated rationale in the RUC's April recommendations for the change in

intensity between the January 2021 and April 2021 surveys, we relied on the changes in surveyed time to calculate the proposed work RVUs for CPT codes 63052 and 63053.

We proposed the RUC-recommended PE inputs for CPT codes 22630 and 22633.

*Comment:* Some commenters disagreed with our proposed work RVUs for CPT codes 22630 and 22633, stating that the changes in time for these CPT codes are attributed to changes in technology that reduced operator time but increased the intensity of the services provided within that time. The commenters stated that routine use of fluoroscopy to obtain intraoperative films may decrease the time required for these procedures, but the surgeon is using that data in real-time to determine the positioning and safety of hardware placement. The commenters also stated that using high-speed electric drills eliminates the routine need to change out air pressure tanks required for pneumatic drills, but the differences in torque and handling change the "feel" of a procedure involving a high-speed drill close to the spinal nerves. The commenters stated that the decreases in intraoperative time is due to reduction in time devoted to low-risk and less intense portions of the procedures (for example, waiting on a radiology technician to obtain an intraoperative cross-table lateral film; waiting for X-ray films to be developed after a flat plate film was taken and waiting for air tanks to be changed out for a pneumatic drill). The commenters contended that the decrease in intraservice time is matched by a related increase in the intensity of the procedure itself, as the lower intensity aspects of the procedure have been eliminated, leaving the high-risk elements of the procedures to be provided in less time with greater intensity.

*Response:* We note that we proposed a work RVU of 20.42 for CPT code 22630 based on the reverse building block methodology to account for the surveyed 8-minute decrease in total time, 10-minute decrease in pre-service time, 30-minute decrease in intraservice time, and 2-minute decrease in immediate post-service time. We believed it would be inappropriate to maintain the current work RVU for CPT code 22630 given the significant decrease in intraservice time and the absence of an adequate justification of increased intensity. However, after consideration of the commenters' rationale for decreased time and increased intensity, we are finalizing the RUC recommended work RVUs of 22.09 and 26.80 for CPT codes 22630 and

22633, respectively, as we believe the RUC recommended work RVUs adequately account for the changes in resources. We appreciate the commenters additional input regarding intensity, but remind interested parties that both time and intensity changes must be addressed in the summary of recommendations. We remind interested parties that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendations appear to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we generally use one of the methodologies discussed above to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

We note that we proposed a work RVU of 7.30 for CPT code 22634 based on a comparison to our proposed work RVU for its base code, CPT code 22633, which we are not finalizing. Given that we have decided to finalize the RUC recommended work RVU of 26.80 for CPT code 22633, in order to maintain for relativity within the family, we are also finalizing the RUC recommended work RVU of 7.96 for CPT code 22634.

*Comment:* A few commenters urged CMS to finalize the RUC recommended work RVUs for CPT codes 63052 and 63053, stating that the intraservice time for CPT code 63035 increased by five minutes to a total of 45 minutes and that the time spent performing this procedure is essentially all high-risk. The commenters asserted that the lower intensity surgical exposure activities were already completed with the base code, so the physician work of CPT code 63052 involves only the high intensity, dangerous aspects of neural element and spinal cord decompression. Similarly, some commenters disagreed with our use of an intraservice time ratio to value CPT code 63053. Commenters stated that this approach ignores magnitude estimation and stated that the second survey included more respondents who routinely perform this procedure. Commenters stated that the new survey from April 2021, which included all six codes in the family, generated an intraservice time of 40 minutes, a difference of five minutes between CPT codes 63052 and 63053, which is believed to be a more accurate reflection of the difference in work between

laminectomy/facetectomy/foraminotomy with decompression of the first segment and an additional segment versus the January 2021 survey, which generated an intraservice time difference of ten minutes between CPT codes 63052 and 63053.

*Response:* We agree with the commenters that an intraservice time difference of 5 minutes between CPT codes 63052 and 63053 is a reflection of the difference in work between laminectomy/facetectomy/foraminotomy with decompression of the first segment and an additional segment, and therefore, we proposed the RUC recommended physician time values for CPT codes 63052 and 63053. However, we continue to believe that, despite a surveyed 5-minute intraservice time increase for CPT code 63052, the crosswalk to CPT code 22853 is still valid to support a work RVU of 4.25 for CPT code 63052, given that only 3 months passed between the two surveys, that it now has the same intraservice time as CPT code 22853, are both spinal procedures, and are both add-on codes to the same base codes. We reiterate that commenters on the CY 2022 PFS proposed rule supported the bracket of key reference service CPT code 22552 (*Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophylectomy and decompression of spinal cord and/or nerve roots; cervical below C2, each additional interspace (List separately in addition to code for primary procedure)*) and MPC CPT code 34812 (*Open femoral artery exposure for delivery of endovascular prosthesis, by groin incision, unilateral (List separately in addition to code for primary procedure)*), and therefore, we noted that the final work RVU of 4.25 for CY 2022 was supported by the commenters (86 FR 65092). CPT code 22552 has a work RVU of 6.50 and an intraservice time of 45 minutes, and commenters noted that CPT code 22552 has a higher intensity as anticipated for a surgical procedure and in comparison with a lumbar procedure. CPT code 34812 has a work RVU of 4.13 and 40 minutes of intraservice time, and commenters noted that this code involves open femoral artery exposure by groin incision and closure of the wound, typically for separately reported delivery of an endovascular prosthesis for an asymptomatic infrarenal abdominal aortic aneurysm. In comparison, exposure and closure for CPT code 63052 are performed as part of the primary arthrodesis code and the intraservice time includes higher intensity bony and soft tissue resection,

and therefore, although both codes require the same time, the physician work and intensity of CPT code 63052 is greater than CPT code 34812. Therefore, we are finalizing a work RVU of 4.25 for CPT code 63052.

We remind commenters that in the CY 2022 PFS final rule, we finalized a work RVU of 3.19 for CPT code 63053 for CY 2022 based on an intraservice time ratio between CPT codes 63052 and 63053 ((30 minutes/40 minutes) \* 4.25 = 3.19). We continue to believe this intraservice time ratio between the two CPT codes is still valid, given that only 3 months passed between the two surveys, and therefore, we are finalizing a work RVU of 3.78 based on the surveyed time changes for CPT codes 63052 and 63053 ((40 minutes/45 minutes) \* 4.25 = 3.78) in order to maintain consistency with previous analysis of time and intensity of these two add-on codes. We reiterate that, due to the lack of an obvious or explicitly stated rationale in the RUC's April recommendations for the change in intensity between the January 2021 and April 2021 surveys, we relied on the changes in surveyed time to calculate the work RVU for CPT code 63053.

We are finalizing the RUC-recommended PE inputs for CPT codes 22630 and 22633, as proposed.

(4) Total Disc Arthroplasty (CPT Codes 22857 and 22860)

In September 2021, the CPT Editorial Panel created CPT Category I code 22860 to describe *Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); second interspace, lumbar (List separately in addition to code for primary procedure)* and replace CPT Category III code 0163T (*Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), each additional interspace, lumbar (List separately in addition to code for primary procedure)*), which prompted CPT codes 22860 and 22857 (*Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); single interspace, lumbar*) to be surveyed for the January 2022 RUC meeting. At the January 2022 RUC meeting, the specialty societies indicated, and the RUC agreed, that the survey results for both CPT codes 22857 and 22860 were erroneous and that the codes should be resurveyed for the April 2022 RUC meeting. Therefore, we proposed to maintain the RUC-recommended work RVU of 27.13 for

CPT code 22857 and contractor pricing for CPT code 22860 for CY 2023. We will revisit the valuations of CPT codes 22857 and 22860 in future rulemaking when we review the April 2022 RUC recommendations, based on our annual review process discussed in the background section of this final rule.

We did not receive comments on our proposals for this code family and we are finalizing the values as proposed.

(5) Insertion of Spinal Stability Distractive Device (CPT Codes 22869 and 22870)

For CPT codes 22869 (*Insertion of interlaminar/interspinous process stabilization/distractive device, without open decompression or fusion, including image guidance when performed, lumbar; single level*) and 22870 (*Insertion of interlaminar/interspinous process stabilization/distractive device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)*), we proposed to maintain the current work RVUs of 7.03 and 2.34, respectively. We proposed the RUC-recommended direct PE inputs for CPT code 22869 without refinement.

We did not receive comments on our proposals for this code family and we are finalizing the values as proposed.

(6) Knee Arthroplasty (CPT Codes 27446 and 27447)

CPT codes 27446 (*Arthroplasty, knee, condyle and plateau; medial OR lateral compartment*) and 27447 (*Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)*) were reviewed by the RUC in April 2021. We previously reviewed CPT code 27447 in the CY 2021 PFS final rule; (see 85 FR 84609 and 84610 for our previous discussion). The RUC proposed a revised survey instrument to ask about additional pre-operative time and resources spent on pre-optimization patient work. The RUC agreed that the pre-service planning activities are being performed routinely for the typical patient but the inclusion of this work is not reflected in the 090-day global period structure. The RUC indicated that separate planning codes may be developed, or current codes such as the prolonged service codes may be reported for these activities.

We proposed the RUC-recommended work RVU of 17.13 for CPT code 27446. The survey 25th percentile actually showed an increase in work RVU even though there was a decrease in total time. One post facility visit, CPT code

99232 (*Subsequent hospital care/day 25 minutes*), was removed and replaced with CPT code 99214 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30–39 minutes of total time is spent on the date of the encounter*) a post-operative visit in the office. Given a decrease in the total time spent and a lower level post-operative visit, it is reasonable that the work RVU went down. There was no change in the global period.

For CPT code 27447, the RUC reaffirmed the same valuation that it recommended for the CY 2021 PFS rulemaking cycle. Since we did not receive any new information regarding this code, we did not propose to change our previously finalized values (see 85 FR 84609 and 84610 for our previous discussion of this code in the CY 2021 PFS final rule). We proposed to maintain a work RVU of 19.60 for CPT code 27447, the value that we previously finalized through rulemaking. We proposed the RUC-recommended direct PE inputs for CPT code 27446 and we proposed to maintain the direct PE inputs for CPT code 27447.

*Comment:* One commenter, representing interested parties who furnish these services, agreed with the RUC recommendation, but noted that CPT code 27447 has been undervalued since its reduction in 2021 and noted the current work RVU is based on the AMA RUC's recommendations following the 2019 survey. This commenter and other interested parties previously argued to maintain the then current work RVU of 20.72, which was lower than the survey median. The commenter claimed that CPT codes 27447 and 27130 are undervalued due to the RUC and CMS utilizing different percentiles from surveys to assign the work RVUs and recommended that CMS adopt a policy to base work RVUs uniformly on the same percentile of physician survey results as the RUC. We did not make any proposals for CPT code 27130.

The commenter appreciated CMS discussing the concept of pre-optimization time for these services in the proposed rule and provided further clarification with regard to the RUC survey. The commenter noted that the RUC specifically rejected a proposal for a revised survey instrument to ask about additional pre-operative time and resources spent on pre-optimization patient work. Additionally, the use of

current prolonged services, CPT codes 99358 and 99359 was suggested; however, it was noted that these codes could not be used in conjunction with CPT codes 27446 and 27447, given the standard of practice includes preservice time over several days and not one single day, as stated in the code descriptor for CPT codes 27446 and 27447. The commenter noted it continues to work with the AMA and CPT to clarify if there are existing codes to bill for pre-optimization time.

The commenter was in support of the proposed RVUs for PE and malpractice for CPT code 27447. The commenter generally supported increased payment rates to facilities for arthroplasty due to the extreme complexity of the procedure, innovations in the standard of care and outcomes, and to recognize increased costs through the COVID-19 public health emergency (PHE). Nevertheless, the ongoing annual increases in Medicare facility payments for arthroplasty present a stark contrast with severely decreasing Medicare physician payments for arthroplasty.

*Response:* We thank the commenter for their support of our proposal and appreciate the commenters continued engagement with the AMA and the CPT to clarify if there are existing codes to bill for pre-optimization time. We are finalizing the values as proposed for CPT codes 27446 and 27447.

(7) Endovascular Pulmonary Arterial Revascularization (CPT Codes 33900, 33901, 33902, 33903, and 33904)

At the February 2021 meeting of the CPT Editorial Panel, CPT approved a new family of Category I CPT codes to describe percutaneous endovascular repair of pulmonary artery stenosis (PAS) by stent replacement. CPT codes 33900 through 33904 were surveyed by the RUC at the October 2021 RUC meeting.

We disagree with the RUC-recommended work RVU of 14.0 for CPT code 33900 (*Percutaneous pulmonary artery revascularization by stent placement, initial; normal native connections, unilateral*). The RUC recommendation is the survey median and appears to be high compared to codes with similar times. We proposed the survey 25th percentile work RVU of 11.03 for CPT code 33900. A work RVU of 11.03 is supported by a bracket of reference CPT codes, including CPT code 61650 and CPT code 61640. CPT code 61650 (*Endovascular intracranial prolonged administration of pharmacologic agent(s) other than for thrombolysis, arterial, including catheter placement, diagnostic angiography, and imaging guidance;*

*initial vascular territory*) has a work RVU of 10.0 and the same intraservice time of 90 minutes and the same total time of 206 minutes. CPT code 61640 (*Balloon dilatation of intracranial vasospasm, percutaneous; initial vessel*) has a work RVU of 12.32 and an intraservice time of 90 minutes and a higher total time of 233 minutes.

There are no direct PE inputs for CPT Code 33900.

We disagree with the RUC-recommended work RVU of 18.0 for CPT code 33901 (*Percutaneous pulmonary artery revascularization by stent placement, initial; normal native connections, bilateral*). The RUC recommendation is the survey median and appears to be high compared to codes with similar times. We proposed the survey 25th percentile work RVU of 14.50. A work RVU of 14.50 is supported by a reference CPT code—CPT code 11005 (*Debridement of skin, subcutaneous tissue, muscle and fascia for necrotizing soft tissue infection; abdominal wall, with or without fascial closure*) has a work RVU of 14.24 and the same intraservice time of 120 minutes and nearly the same total time of 235 minutes.

There are no direct PE inputs for CPT Code 33901.

We disagree with the RUC-recommended work RVU of 17.33 for CPT code 33902 (*Percutaneous pulmonary artery revascularization by stent placement, initial; abnormal connections, unilateral*). The RUC recommendation is the survey median and appears to be high compared to codes with similar times. We proposed the survey 25th percentile work RVU of 14.0. A work RVU of 14.0 is supported by a reference CPT code—CPT code 61640 (*Balloon dilatation of intracranial vasospasm, percutaneous; initial vessel*) has a work RVU of 12.32 and the same intraservice time of 90 minutes and a higher total time of 233 minutes.

There are no direct PE inputs for CPT Code 33902.

We disagree with the RUC-recommended work RVU 20.0 for CPT code 33903 (*percutaneous pulmonary artery revascularization by stent placement, initial; abnormal connections, bilateral*). The RUC recommendation is the survey median and appears to be high compared to codes with similar times. Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 33901 and 33903 is equivalent to the RUC-recommended interval of 2.0 RVUs. Therefore, we proposed a work

RVU of 16.50 for CPT code 33903, based on the recommended interval of 2.0 additional RVUs above our proposed work RVU of 14.50 for CPT code 33901. A work RVU of 16.50 is also supported by a reference code—CPT code 11005 (*Debridement of skin, subcutaneous tissue, muscle and fascia for necrotizing soft tissue infection; abdominal wall, with or without fascial closure*) has a work RVU of 14.24 and the same intraservice time of 120 minutes and a higher total time of 265 minutes.

There are no direct PE inputs for CPT Code 33903.

We disagree with the RUC-recommended RVU of 7.27 for CPT code 33904 (*Percutaneous pulmonary artery revascularization by stent placement, each additional vessel or separate lesion, normal or abnormal connections (list separately in addition to code for primary procedure) (use 33904 in conjunction with 33900, 33901, 33902, 33903)*). The RUC recommendation is the survey median and appears to be high compared to codes with similar times. We proposed the survey 25th percentile work RVU of 5.53. A work RVU of 5.53 is supported by a reference code—CPT code 57267 (*Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (List separately in addition to code for primary procedure)*) has a work RVU of 4.88 and the same time of 45 minutes.

There are no direct PE inputs for CPT code 33904.

*Comment:* Commenters disagree with our proposed valuations for all of the codes within this family. Commenters asserted that we failed to properly justify the decrease for each CPT code because we did not provide a clinical rationale. One commenter stated that the RUC intentionally did not use the survey 25th percentile value because the RUC believes the clinical nature is vastly different than currently described by similar coding and more intense. Therefore, commenters noted that we should accept the RUC-recommended survey median values. For CPT codes 33900, 33901, 33902, and 33904, commenters disagreed with our chosen supporting reference codes. They noted that the CPT codes are not clinically similar and the CPT codes that the RUC recommended are more appropriate for purposes of comparison. Commenters also noted that we did not maintain the RUC recommended relativity within the code family that accounts for the change from unilateral to bilateral anatomically. For CPT code 33903, a commenter disagreed with our use of the

incremental methodology. The commenter noted that using increments forms a linear relationship between RVUs, which is not appropriate.

*Response:* We disagree with commenters that supporting reference codes must have similar clinical characteristics to be appropriate for purposes of reaching valuations. We believe that the inherent relativity of the PFS is such that all codes can be used for purposes of comparison, while considering time and intensity. We maintain that the RUC recommended work RVU values for CPT codes 33900–33904 are overvalued relative to codes with similar times and intensities. For example, CPT code 11004 (*Debridement of skin, subcutaneous tissue, muscle and fascia for necrotizing soft tissue infection; external genitalia and perineum*), has a work RVU of 10.80, an intraservice time of 90 minutes and a total time of 280 minutes. This is the same intraservice time and a significantly higher total time than CPT code 33900 and is almost 3 RVUs less than the RUC recommended value of 14.0 for this CPT code. We also disagree that we did not maintain relativity within the family. We believe that our proposed RVUs account for the recommended changes in time within the family as the procedure changes from unilateral to bilateral and is further supported by our reference codes with similar times. For example, for CPT code 33903, we used the incremental difference between the RUC recommended values for CPT codes 33901 and 33903 (2 RVUs) to reach our proposed value of 16.50 RVUs for CPT code 33903. This value is higher than the 25th percentile and accounts for the change in intensity from unilateral to bilateral. We also believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service.

We are finalizing our work RVUs for this family as proposed.

(8) Percutaneous Arteriovenous Fistula Creation (CPT codes 36836 and 36837)

In October 2021, the CPT Editorial Panel created CPT codes 36836 (*Percutaneous arteriovenous fistula creation, upper extremity, single access*

of both the peripheral artery and peripheral vein, including fistula maturation procedures (e.g., transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation) and 36837 (Percutaneous arteriovenous fistula creation, upper extremity, separate access sites of the peripheral artery and peripheral vein, including fistula maturation procedures (e.g., transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation) to describe the creation of an arteriovenous fistula in an upper extremity via a percutaneous approach. Previously, CPT coding did not account for percutaneous arteriovenous access creation, as current the CPT codes only describe an open surgical approach. Given that new technologies have been developed that allow for less invasive approaches that utilize percutaneous image-guided methods to approximate a target artery and vein using magnets or mechanical capture, we created HCPCS codes G2170 (Percutaneous arteriovenous fistula creation (avf), direct, any site, by tissue approximation using thermal resistance energy, and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization) when performed, and includes all imaging and radiologic guidance, supervision and interpretation, when performed) and G2171 (Percutaneous arteriovenous fistula creation (avf), direct, any site, using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, when performed) and fistulogram(s), angiography, venography, and/or ultrasound, with radiologic supervision and interpretation, when performed) in July 2020 that describe two approaches to percutaneous arteriovenous access creation. The RUC intends for CPT codes 36836 and 36837, which represent two percutaneous approaches to creating arteriovenous access for End-Stage Renal Disease (ERSD) patients during hemodialysis, to replace HCPCS codes G2170 and G2171, and has requested both G2170 and G2171 be deleted. For CY 2023, the RUC recommended a work RVU of 7.50 for CPT code 36836, and a work RVU of 9.60 for CPT code 36837.

We disagreed with the RUC-recommended RVUs for CPT codes

36836 and 36837. We found that the recommended work RVUs were high when compared to other codes with similar time values. The RUC-recommended RVU of 7.50 for 36836 is the second highest RVU for codes with 55 to 65 minutes of intraservice time and 94 to 114 minutes of total time, with RVUs ranging from 2.45 to 8.84. Similarly, the RUC-recommended RVU of 9.60 for 36837 is the third highest RVU for codes with 65 to 85 minutes of intraservice time and 109 to 129 minutes of total time, with RVUs ranging from 4.69 to 10.95. Therefore, we proposed a work RVU of 7.20 for CPT code 36836, and a work RVU of 9.30 for CPT code 36837.

We disagreed with the RUC-recommended work RVU of 7.50 for CPT code 36836 and proposed an RVU of 7.20 that is based on the intra-service time ratio calculation using the second reference code from the RUC survey, CPT code 36905 (*Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty*). The proposed RVU of 7.20 is based on the intra-service time ratio using the RUC-recommended 60 minutes intra-service time for CPT code 36836 divided by 75 minutes of intra-service time for CPT code 36905, then multiplying by the RVU of 9.00 for CPT code 36905 ( $(60/75) \times 9.00 = 7.20$ ). We chose to use the second reference code from the RUC survey, CPT code 36905, in this calculation because its intra-service time and total time values were closer to the time values proposed by the RUC for CPT code 36836. We noted that the RUC-recommended RVU of 7.50 is one of the highest values within the range of reference codes we reviewed with the same intra-service time and similar total time. The proposed work RVU of 7.20 is supported by the reference CPT codes we compared to CPT code 36836 with the same 60 minutes of intra-service time and similar total time as CPT code 36836; reference CPT code 47541 (*Placement of access through the biliary tree and into small bowel to assist with an endoscopic biliary procedure (e.g., rendezvous procedure), percutaneous, including diagnostic cholangiography when*

performed, imaging guidance (e.g., ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation, new access) has a work RVU of 6.75, and reference CPT code 33991 (*Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; left heart, both arterial and venous access, with transseptal puncture*) has a work RVU of 8.84. Again, we believe 7.20 is a more appropriate value overall than 7.50 when compared to the range of codes with the same intra-service time and similar total time.

Although we disagreed with the RUC-recommended work RVU of 9.60 for CPT code 36837, we concur that the relative difference in work between CPT codes 36836 and 36837 is equivalent to the RUC-recommended interval of 2.10 RVUs. We believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of codes where it is important to maintain an appropriate intra-family relativity. Therefore, we proposed a work RVU of 9.30 for CPT code 36837, based on the RUC-recommended interval of 2.10 RVUs above our proposed work RVU of 7.20 for CPT code 36836.

For the direct PE inputs, we solicited additional information on two equipment items and four supply items. For two of those four supply items, we requested a justification for their inclusion as direct PE inputs. The RUC submitted invoices for two new equipment inputs; one for a Wavelinq EndoAVF generator (EQ403) used for CPT code 36837, and the other for an Ellipsys EndoAVF generator (EQ404) used for CPT code 36836. We solicited comments and requested information that may inform us why the Wavelinq generator (EQ403) is so much more expensive on its invoice as compared with the Ellipsys generator (EQ404) since the former costs \$18,580 and the latter costs \$3,000.

In addition, the RUC included supply items SD149 (catheter, balloon inflation device) and SD152 (catheter, balloon, PTA) as direct PE inputs for CPT codes 36836 and 36837. We solicited comments and requested information that may inform us if supply items SD149 and SD152 are typical, and how often they are used, for CPT codes 36836 and 36837. Also, the RUC included supply items SF056 (detachable coil) and SF057 (non-detachable embolization coil) as direct PE inputs for CPT code 36837 (one each for SF056 and two each for SF057). We solicited comments and requested

information that may provide us with a justification for keeping supply items SF056 and SF057 as direct PE inputs for CPT code 36837. We need to know if both of these supply items are typical and how often they are used for CPT code 36837. If these supply inputs are not typical for these procedures, we believe that they should be removed from the direct PE inputs.

We proposed to delete HCPCS codes G2170 and G2171 and replace them with CPT codes 36836 and 36837 as recommended by the RUC.

The following is a summary of the comments we received and our responses.

*Comment:* Many commenters agreed with our proposal to delete HCPCS codes G2170 and G2171, and replace them with CPT codes 36836 and 36837. One of the commenters also stated that they preferred CMS setting the rates for percutaneous creation of an arteriovenous fistula through rulemaking, rather than relying on contractor pricing. Other commenters stated that the contractor-priced payments for HCPCS codes G2170 and G2171 varied widely among the different Medicare Administrative Contractors (MACs), ranging approximately from \$6,100 to \$12,000 (rounded).

*Response:* We thank the commenters for their support. We are finalizing our proposal to delete HCPCS codes G2170 and G2171, and replacing them with CPT codes 36836 and 36837. We are establishing the RVUs for CPT codes 36836 and 36837 in this final rule, so the payments for these codes will not be contractor-priced, in contrast to the payments for HCPCS codes G2170 and G2171.

*Comment:* Several commenters disagreed with our proposed RVU of 7.20 for CPT code 36836 and RVU of 9.30 for CPT code 36837. Several commenters also disagreed with our methodologies for the valuation of the proposed RVUs and stated they do not appropriately reflect the complexity and intensity of physician work associated with these services. Therefore, they post that the statutorily-required intensity component of the work RVU and its role in the valuation of these procedures was overlooked. The commenters preferred that we accept the RUC-recommended RVU of 7.50 for CPT code 36836 and RVU of 9.60 for CPT code 36837 instead. The commenters stated that the proposed RVU is unworkable given the time it takes to perform these procedures and PE involved and that CMS's proposed RVU will cause barriers to patient access to these procedures, and will have a disproportionate impact

on patients from underrepresented minority groups. However, there was one commenter that stated even the RUC-recommended RVU of 9.60 for CPT code 36837 was too low. Many commenters stated that CMS is using flawed methodologies for the valuation of codes for 2023, such as the building block methodology, incremental methodology, code comparisons, and time ratio methodology. This includes the intra-service time ratio calculation that informs the proposed work RVU of 7.20 for CPT code 36836 and the incremental methodology used for the proposed RVU of 9.30 for CPT code 36837. Also, the commenters stated that CMS did not provide any rationale or transparency as to how they arrived at the reductions applied to CPT codes 36836 and 36837. The commenters stated that CMS proposes an inconstant combination of inputs to apply, and that this selection process has the appearance of seeking an arbitrary value from the vast array of possible mathematical calculations, rather than seeking a valid, clinically relevant relationship that would preserve relativity between codes.

*Response:* We continue to believe that the RVU of 7.20 for CPT code 36836, and the RVU of 9.30 for CPT code 36837, are appropriate RVUs for these procedures. We found that the RUC-recommended work RVUs were high for these codes when compared to other codes with similar time values. The RUC-recommended RVU of 7.50 for 36836 is the second highest RVU for codes with 55 to 65 minutes of intraservice time and 94 to 114 minutes of total time, with RVUs ranging from 2.45 to 8.84. Similarly, the RUC-recommended RVU of 9.60 for 36837 is the third highest RVU for codes with 65 to 85 minutes of intraservice time and 109 to 129 minutes of total time, with RVUs ranging from 4.69 to 10.95.

We disagreed with the RUC-recommended work RVU of 7.50 for CPT code 36836 and proposed an RVU of 7.20 that is based on the intra-service time ratio calculation using the second reference code from the RUC survey, CPT code 36905. In our effort to remain transparent, we provided the following rationale: The proposed RVU of 7.20 is based on the intra-service time ratio using the RUC-recommended 60 minutes intra-service time for CPT code 36836 divided by 75 minutes of intra-service time for CPT code 36905, then multiplying by the RVU of 9.00 for CPT code 36905 ( $(60/75) \times 9.00 = 7.20$ ). We chose to use the second reference code from the RUC survey, CPT code 36905, in this calculation because its intra-service time and total time values were

closer to the time values proposed by the RUC for CPT code 36836. We noted that the RUC-recommended RVU of 7.50 is one of the highest values within the range of reference codes we reviewed with the same intra-service time and similar total time. The proposed work RVU of 7.20 is supported by the reference CPT codes we compared to CPT code 36836 with the same 60 minutes of intra-service time and similar total time as CPT code 36836; reference CPT code 47541 has a work RVU of 6.75, and reference CPT code 33991 has a work RVU of 8.84. We continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. In accordance with the statute, we believe that changes in time and intensity must be accounted for when developing work RVUs. When our review of recommended values reveals that changes in the resource of time are not accounted for in a RUC-recommended RVU, the obligation to account for that change when establishing proposed and final work RVUs remains. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277). Again, for CPT code 36836, we believe 7.20 is a more appropriate value overall than 7.50 when compared to the range

of codes with the same intra-service time and similar total time.

For CPT code 36837, although we disagreed with the RUC-recommended work RVU of 9.60, we did concur that the relative difference in work between CPT codes 36836 and 36837 is equivalent to the recommended interval of 2.10 RVUs. Therefore, we proposed a work RVU of 9.30 for CPT code 36837, based on the recommended interval of 2.10 RVUs above our proposed work RVU of 7.20 for CPT code 36836. We continue to believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of codes where it is important to maintain an appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. Again, for CPT code 36837, we believe a work RVU of 9.30 based on an incremental increase of 2.10 RVUs above CPT code 36836 is a more appropriate value than 9.60.

*Comment:* A few commenters stated that the proposed RVU of 7.20 for CPT code 36836 and RVU of 9.30 for CPT code 36837 fall below the RUC survey 25th percentile values of 7.50 and 9.60 respectively. Commenters also stated that we need to provide a significant justification when we propose an RVU that is below the 25th percentile.

*Response:* We remind the commenters that we used an intraservice time ratio, described above, to develop the proposed RVU of 7.20 for CPT code 36836, and that we used a 2.10 incremental increase from the proposed RVU of 7.20 for CPT code 36836 for CPT code 36837, resulting in an RVU of 9.30. The time ratio methodology and the incremental methodology are both valid methodologies for developing the RVUs that we propose, and there is no rule stating that the RVU cannot go below the survey 25th percentile. In addition to the time ratio and incremental methodologies, we also use other methods for developing RVUs, such as the building block methodology and code comparisons. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277).

*Comment:* Several commenters responded to our request for additional information for four direct PE supply

items (SD149 (catheter, balloon inflation device), SD152 (catheter, balloon, PTA), SF056 (detachable coil), and SF057 (non-detachable embolization coil)) and two new direct PE equipment items (EQ403 (Wavelin EndoAVF generator) and EQ404 (Ellipsys EndoAVF generator)). Supply items SD149 and SD152 are direct PE inputs for CPT codes 36836 and 36837, and supply items SF056 and SF057 are direct PE inputs for CPT code 36837. Equipment item EQ403 is a direct PE input for CPT code 36837, and equipment item EQ404 is a direct PE input for CPT code 36836. For the four supply items, we had requested a justification for their inclusion as direct PE inputs and asked if these supply items are typical and how often they are used. For the two new equipment items, we had requested information that may inform us why the EQ403 is so much more expensive on its invoice as compared with the EQ404, since the former costs \$18,580 and the latter costs \$3,000.

*Response:* We thank the commenters for responding to our request for information. The majority of commenters that responded to our request for information stated that all four of these supply items are typical and should be included as direct PE inputs for CPT codes 36836 and 36837 as recommended by the RUC. One commenter stated they believe the typical direct PE input for CPT code 36837 is for one SF056 and that SF057 is not a typical use, and also stated that they could not find evidence of typical use (50 percent or greater) for supplies SD149 and SD152 during CPT procedure code 36837.

A few commenters responded to our request for more information on the costs for EQ403 and EQ404. The commenters stated that the specialty societies submitted invoice pricing for supplies and equipment to the RUC, and that they do not have any influence on the prices that vendors set for their products. Some commenters described how each of these equipment items are used. Another commenter stated that typically, the WavelinQ™ EndoAVF generator (EQ403) can be acquired through direct purchase or financed through an agreement where the provider agrees to purchase a predetermined number of WavelinQ™ catheters (SD350). The price of the generator (EQ403) can change depending on how many catheters the provider agrees to purchase and/or the type of purchase agreement the provider chooses.

Again, we thank the commenters for responding to our request for information. The majority of the

commenters stated that PE supply items SD149 and SD152 are typical direct PE inputs for CPT codes 36836 and 36837; and supply items SF056 and SF057 are typical direct PE inputs for CPT code 36837. After reviewing the information provided by the commenters, we are finalizing the direct PE supply items SD149, SD152, SF056, and SF057 for CPT codes 36836 and 36837 as recommended by the RUC without refinement. We are finalizing direct PE equipment items EQ403 and EQ404 for CPT codes 36836 and 36837 as recommended by the RUC without refinement.

*Comment:* One commenter was concerned that the proposed work RVU for CPT code 36837 did not include the reimbursement for the coil embolization supply items. The commenter stated that coil embolization at the time of WavelinQ procedure is critical to the success of the arteriovenous fistula. The commenter stated that embolization is a very important step in the success of the procedure and should be taken into account in the fee schedule.

*Response:* The work RVU is only for the activity of the physician for a procedure code. Supply items SF056 (detachable coil) and SF057 (non-detachable embolization coil) are direct PE inputs for CPT code 36837, and the payment for these supply items is included in the PE RVU. Therefore, the coil embolization supply items are reimbursed and are taken into account in the physician fee schedule, though not in the work RVU.

*Comment:* A few commenters requested that CMS separately identify and pay for high-cost disposable supplies priced at more than \$500 using appropriate HCPCS codes, instead of including these high-cost supplies as direct PE inputs for CPT codes 36836 and 36837. These supply items should then be reviewed annually and updated.

*Response:* We have received a number of prior requests from interested parties, including the RUC, to implement separately billable alpha-numeric Level II HCPCS codes to allow practitioners to be paid the cost of high cost disposable supplies per patient encounter instead of per CPT code. We stated at the time, and we continue to believe, that this option presents a series of potential problems that we have addressed previously in the context of the broader challenges regarding our ability to price high cost disposable supply items. For a discussion of this issue, we direct the reader to our discussion in the CY 2011 PFS final rule with comment period (75 FR 73251).

*Comment:* One commenter submitted an additional invoice associated with

the pricing of the Ellipsys™ Vascular Access Catheter, (SD351) supply. The commenter stated that Medtronic recently has been compelled by rising costs to implement price increases across their portfolio world-wide. Among the many contributing factors, manufacturing labor costs have increased by nine percent, and key materials that are used in making our products are exhibiting double-digit cost increases. One commenter stated that starting in July of 2022, they revised their standard pricing for the Ellipsys™ catheter sold to physicians' offices to reflect rising costs and to achieve parity with prices for catheters in other sites of service (that is, hospital outpatient departments and ASCs). The commenter stated that the price to physician office customers the Ellipsys™ catheter is now \$8,950, and submitted an invoice to support this assertion.

**Response:** We appreciate the submission of additional pricing information this commenter for the SD351 supply. We note that the RUC submitted invoices for this supply item with their recommendations based on information gathered from the specialties that perform this service. While we acknowledge that pricing for the item in question may have changed, we are interested in additional review by other interested parties before finalizing an increase in the price. The submitted invoice would represent an increase from \$6000 to \$8950 for the SD351 supply, an extraordinary increase in the span of 6 months since the service was reviewed at the January 2022 RUC meeting. We will review the valuations for this service when they are revised by the RUC to reflect the additional costs described by this commenter, including any increases in the price of the SD351 supply, and consider for future updates to this service.

**Comment:** One commenter expressed concern that CMS is using only a single invoice of \$6,000 for SD351 (Ellipsys™ Vascular Access Catheter) and noted this pricing is unrepresentative for this device. The commenter urged CMS to work with the manufacturers to collect additional invoices to arrive at more appropriate pricing for SD351.

**Response:** We often request that practitioners send us additional invoices for supplies and equipment, which we then use to establish the PE inputs and PE RVUs for specific services. We did receive an additional invoice for SD351 but as noted above, the RUC submitted invoices for this supply item with their recommendations based on information gathered from the specialties that

perform this service. We will consider the additional invoice and this new information in future rulemaking.

**Comment:** A few commenters stated that the direct PE inputs for equipment for CPT code 36836 should reflect the use of EL011 (room, angiography) rather than EL016 (room, ultrasound, vascular). One of these commenters noted that although CPT code 36836 is done under ultrasound, the typical location for this procedure is in an angiography room given the angioplasty performed after the fistula creation more than 90 percent of the time. Another commenter stated that CMS' proposal to use an ultrasound room rather than an angiography room in the development of the PE values for CPT code 36836 is incorrect in their view, as CPT code 36836 typically infers inclusion of a balloon angioplasty among the performed procedures, and in their experience the appropriate venue when a balloon angioplasty is performed is always an angiography room.

**Response:** We disagree with the commenters and believe that EL016 (room, ultrasound, vascular) is the appropriate direct PE equipment input for CPT code 36836. We reviewed the equipment inputs on the Practice Expense Summary of Recommendation for the non-facility setting, and the PE spreadsheet, provided by the RUC for CPT codes 36836 and 36837. The RUC recommended EL016 for CPT code 36836, and we agree with the RUC recommendation. Please consider presenting any direct PE equipment input changes for CPT code 36836 to the AMA RUC for review.

After consideration of the public comments, we are finalizing the work RVU values for the Percutaneous Arteriovenous Fistula Creation code family (CPT codes 36836 and 36837) as proposed. We are finalizing the direct PE inputs for CPT codes 36836 and 36837 without refinement. Also, we are deleting HCPCS codes G2170 and G2171 as proposed.

#### (9) Energy Based Repair of Nasal Valve Collapse (CPT Codes 30468 and 30469)

In September 2021, the CPT Editorial Panel created CPT code 30469 (*Repair of nasal valve collapse with low energy, temperature-controlled (i.e., radiofrequency) subcutaneous/submucosal remodeling*) which is currently reported with an unlisted code. For the January 2022 RUC meeting, both CPT code 30468 (*Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)*) and CPT code 30469 were reviewed. For CY 2023, the RUC recommended no change to the current

work RVU of 2.80 for CPT code 30468, and a work RVU of 2.70 for CPT code 30469.

The RUC reviewed the specialty society request to affirm the recent RUC valuations for CPT code 30468, which was surveyed and valued by the RUC in January 2020 for CY 2021. The RUC agreed, so for CY 2023, the RUC is not recommending any change to the current work RVU of 2.80 for CPT code 30468. In addition, the PE Subcommittee reviewed the direct PE inputs and made modifications to the pre-service clinical staff time to CPT code 30468 in accordance with current standards. There was a previous oversight in valuing the direct PE inputs for CPT code 30468. Therefore, 3 minutes of clinical staff time has been added to CPT code 30468 for clinical activity CA005 (complete pre-procedure phone calls and prescription).

We proposed to maintain the current work RVU of 2.80 for CPT code 30468 as recommended by the RUC. We also proposed the RUC-recommended direct PE inputs for CPT code 30468, which now includes clinical activity code CA005, without refinement.

For CPT code 30469, the RUC recommended a work RVU of 2.70 based on a direct work RVU crosswalk from CPT code 31295 (*Nasal/sinus endoscopy, surgical, with dilation (e.g., balloon dilation); maxillary sinus ostium, transnasal or via canine fossa*). We disagreed with the RUC-recommended work RVU of 2.70. Therefore, we proposed a work RVU of 2.44 for CPT code 30469, which is the same RVU as CPT code 31297 (*Nasal/sinus endoscopy, surgical, with dilation (e.g., balloon dilation); sphenoid sinus ostium*) and has the same 20 minutes of intra-service time and similar total time. We noted that CPT code 31295, which the RUC used as a direct crosswalk for the work RVU for CPT code 30469, has the same 20 minutes of intra-service time and 56 minutes of total time as CPT code 31297. We believe the RUC should have used CPT code 31297 as the crosswalk for CPT code 30469. Both CPT codes 31295 and 31297 were reviewed in 2017 and are in the same code family. The proposed work RVU of 2.44 is supported by the reference CPT codes we compared to CPT code 30469 with the same 20 minutes of intra-service time and similar total time as CPT code 30469; reference CPT code 31233 (*Nasal/sinus endoscopy, diagnostic; with maxillary sinusoscopy (via inferior meatus or canine fossa puncture)*) with an RVU of 2.18, and CPT code 31295 with an RVU of 2.70. Again, we believe 2.44 is a more appropriate value overall than 2.70

when compared to the range of codes with the same intra-service time and similar total time.

We proposed the RUC-recommended direct PE inputs for CPT code 30469 without refinement.

The following is a summary of the comments we received and our responses.

*Comment:* A few comments supported our proposal to maintain the current work RVU of 2.80 for CPT code 30468.

*Response:* We thank the commenters for their support, and we are finalizing the RUC-recommended RVU of 2.80 for CPT code 30468 as proposed.

*Comment:* A few comments disagreed with our proposed work RVU of 2.44 for CPT code 30469. The commenters stated that we did not consider the intensity for CPT code 30469, and that the intensity was a closer match to the RUC-recommended crosswalk CPT code 31295, instead of our proposed comparator code of CPT code 31297. One commenter stated that CPT code 30469 has greater intensity because it involves multiple applications in anatomic locations subject to damage which would worsen the patient's condition. Also, commenters were concerned with maintaining relativity between CPT codes 30468 and 30469, and also stated that the proposed RVU of 2.44 for CPT code 30469 falls below the survey 25th percentile for CPT code 30469.

*Response:* We continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another, and we still believe that CPT code 31297 is a valid comparator to CPT code 30469, which has the same 20 minutes of intra-service time and similar total time as CPT code 30469. We also noted that CPT code 31295, which the RUC used as a direct crosswalk for the work RVU for CPT code 30469, has the same 20 minutes of intra-service time and 56 minutes of total time as CPT code 31297. We do not agree with the commenter that we did not consider the intensity for CPT code 30469, and would like to note that the intensity represented by the IWPUT of 0.0853 for CPT code 31297 is similar to the IWPUT of 0.0874 for the 2nd reference code used in the RUC survey, which is CPT code 31238 (*Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage*). For relativity purposes, we note that there were different codes with similar time values the RUC could have used besides CPT code 31295. We continue to believe that the proposed work RVU of 2.44 is supported by the reference CPT codes we compared to CPT code 30469 with

the same 20 minutes of intra-service time and similar total time as CPT code 30469; reference CPT code 31233 with an RVU of 2.18, and CPT code 31295 with an RVU of 2.70. Also, we point out that the RUC-recommended RVU of 2.70 was below the 25th percentile on two of the three survey entries provided on the RUC Summary Report for CPT code 30469, and that the lowest 25th percentile value for these three entries was 2.25, which is below our proposed value of 2.44. Therefore, we are finalizing the work RVU of 2.44 as proposed for CPT code 30469.

After consideration of the public comments, we are finalizing the work RVUs for the Energy Based Repair of Nasal Valve Collapse code family (CPT codes 30468 and 30469) as proposed. We are also finalizing the direct PE inputs for codes 30468 and 30469 as proposed, without refinement.

#### (10) Drug Induced Sleep Endoscopy (DISE) (CPT Code 42975)

In October 2020, the CPT Editorial Panel created CPT code 42975 (*Drug-induced sleep endoscopy, with dynamic evaluation of velum, pharynx, tongue base, and larynx for evaluation of sleep-disordered breathing, flexible, diagnostic*) to report drug induced sleep endoscopy (DISE) flexible, diagnostic. At the January 2021 RUC Meeting, the RUC requested that this service be resurveyed for the April 2021 RUC Meeting using a standard 000-day survey template. For CY 2023, the RUC recommended a work RVU of 1.95 for CPT code 42975.

We disagreed with the RUC-recommended work RVU of 1.95 for CPT code 42975 and proposed a work RVU of 1.58. We believe the RVU should be lower than the RUC recommendation of 1.95 to reflect the decrease in total time from 68 minutes to 50 minutes. The proposed RVU of 1.58 is based on the total time ratio calculation using the RUC-recommended 50 minutes total time for CPT code 42975 divided by the 48 minutes of total time for CPT code 43197 (*Esophagoscopy, flexible, transnasal; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)*), then multiplying by the RVU of 1.52 for CPT code 43197 ( $(50/48) \times 1.52 = 1.58$ ). We found that CPT code 43197 has the same intra-service time and similar total time as CPT code 42975. Also, CPT code 43197 is a similar endoscopic procedure as CPT codes 42975 and 31579 (*Laryngoscopy, flexible or rigid telescopic, with stroboscopy*). We noted that CPT code 31579 is the first key reference code in

the RUC survey. The proposed work RVU of 1.58 is supported by the reference CPT codes we compared to CPT code 42975 with the same 15 minutes of intra-service time and similar total time as CPT code 42975; reference CPT code 43200 (*Esophagoscopy, flexible, transoral; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)*) with an RVU of 1.42, and CPT code 62272 (*Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter)*) with an RVU of 1.58. Again, we believe the proposed RVU of 1.58 is a more appropriate value overall than 1.95 when compared to the range of codes with the same intra-service time and similar total time.

We proposed the RUC-recommended direct PE inputs for CPT code 42975 without refinement.

The following is a summary of the comments we received and our responses.

*Comment:* A few commenters disagreed with our proposed RVU of 1.58 for CPT code 42975, and want us to accept the RUC-recommended RVU of 1.95 instead. The commenters stated that they did not understand our rationale that the RVU should be reduced due to the decrease in total time between the two surveys for the January 2021 and April 2021 RUC meetings, especially since an interim RVU of 1.90 was previously accepted by CMS for the 2022 PFS. The commenters stated it is important to note that the interim value accepted by CMS for the 2022 PFS was based on inaccurate survey data, as the immediate post-service time was not captured appropriately in the initial survey of CPT code 42975. Upon resurvey, respondents gave identical intra time and post procedure time. The only difference was the removal of 18 minutes of post time (for the half day discharge management visit) that was included in total time approved on an interim basis in January 2021, which represents the reduction of total time from the January 2021 (68 minutes) to the April 2021 (50 minutes) total time for CPT code 42975. Based on this, the commenters did not understand CMS' rationale that the work RVU should be reduced due to the decrease in total time between the two surveys, and argued that the first survey was invalidated due to the use of the incorrect tool. Respondents therefore were asked about post procedure visits/ time, and indicated that a discharge management visit occurs. The standard time for a half day discharge management was then recommended by

one of the specialty societies. The only change in data for the April survey was that respondents were not asked about a discharge management visit, and therefore, they did not indicate that one occurred. Their pre, intra, and immediate post times were almost identical. Therefore, the commenters believe that the RUC-recommended RVU of 1.95 is justified and is appropriate as compared to the key reference services selected and the broader fee schedule of codes with similar times and intensity.

**Response:** We appreciate the RUC resurveying CPT code 42975. This allowed us to review CPT code 42975 again and revalue it for 2023. We note that when CPT code 42975 was initially valued in January 2021, an incorrect survey instrument was used, thus requiring CPT code 42975 to be resurveyed in April 2021. In January 2021, the RUC questioned the 18 minutes for the ½ discharge day management used by the specialty society to value CPT code 42975, and determined that it was not necessary for this code. When CPT code 42975 was resurveyed for the April 2021 RUC meeting, the total time showed the decrease of 18 minutes due to the removal of the ½ discharge day management. Thus, the total time for CPT code 42975 dropped from 68 minutes to 50 minutes. Therefore, we continue to believe the RVU should be lower than the RUC recommendation of 1.95 to reflect the decrease in total time from 68 minutes to 50 minutes. The proposed RVU of 1.58 is based on the total time ratio calculation using the RUC-recommended 50 minutes total time for CPT code 42975 divided by the 48 minutes of total time for CPT code 43197, then multiplying by the RVU of 1.52 for CPT code 43197 ( $(50/48) \times 1.52 = 1.58$ ). We found that CPT code 43197 has the same intra-service time and similar total time as CPT code 42975. Also, CPT code 43197 is a similar endoscopic procedure as CPT codes 42975 and 31579. We noted that CPT code 31579 is the first key reference code in the RUC survey. The proposed work RVU of 1.58 is supported by the reference CPT codes we compared to CPT code 42975 with the same 15 minutes of intra-service time and similar total time as CPT code 42975; reference CPT code 43200 with an RVU of 1.42, and CPT code 62272 with an RVU of 1.58. Again, we continue to believe the proposed RVU of 1.58 is a more appropriate value overall than 1.95 when compared to the range of codes with the same intra-service time and similar total time. Therefore, we are

finalizing the work RVU of 1.58 for code 42975 as proposed.

**Comment:** One commenter disagreed with our use of a total time ratio to develop the proposed RVU of 1.58 for CPT code 42975, and stated that it neglects to capture the level of intensity. The commenter stated that the methodologies CMS used for the valuation of specific codes for 2023 is flawed, including the total time ratio calculation that informs the proposed work RVU of 1.58 for CPT code 42975.

**Response:** We disagree with the commenter and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. In accordance with the statute, we believe that changes in time and intensity must be accounted for when developing work RVUs. When our review of recommended values reveals that changes in the resource of time are not accounted for in a RUC-recommended RVU, the obligation to account for that change when establishing the proposed and final work RVUs remains. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion in the CY 2017 PFS final rule (81 FR 80272 through 80277).

**Comment:** One commenter stated that the proposed RVU of 1.58 for CPT code 42975 falls below the RUC survey 25th percentile of 1.95, and that we need to

provide a significant justification when we propose an RVU that is below the 25th percentile.

**Response:** We disagree with the commenter and would like to remind the commenter that we used a total time ratio, described above, to develop the proposed RVU of 1.58 for CPT code 42975. A total time ratio is one of several valid methodologies we use for developing the RVUs that we propose, and there is no rule stating that the work RVU cannot go below the survey 25th percentile. We believe that changes in work time should be reflected in changes to the work RVU, and note that the total time decreased for CPT code 42975 when it was resurveyed in April 2021.

After consideration of the public comments, we are finalizing the work RVU for the Drug Induced Sleep Endoscopy (DISE) code family (CPT code 42975) as proposed. We are finalizing the direct PE inputs for code 42975 as proposed, without refinement.

(11) Endoscopic Bariatric Device Procedures (CPT Codes 43235, 43290, and 43291)

In February 2021, the CPT Editorial Panel created CPT codes 43290 (*Esophagogastroduodenoscopy, flexible, transoral; with deployment of intragastric bariatric balloon*) and 43291 (*Esophagogastroduodenoscopy, flexible, transoral; with removal of intragastric bariatric balloon(s)*) for endoscopic bariatric device procedures to the esophagogastroduodenoscopy (EGD) code family. CPT code 43235 (*Esophagogastroduodenoscopy, flexible, transoral; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)*) is the base code for the EGD family and was surveyed with the new endoscopic bariatric device procedures, 43290 and 43291. All three of these CPT codes were reviewed at the April 2021 RUC meeting. For CY 2023, the RUC recommended an RVU of 3.11 for CPT code 43290, an RVU of 2.80 for CPT code 43291, and maintaining the current work RVU of 2.09 for CPT code 43235.

We proposed the RUC-recommended work RVU of 3.11 for CPT code 43290, the RUC-recommended work RVU of 2.80 for CPT code 43291, and maintaining the current work RVU of 2.09 for CPT code 43235 for this code family.

We proposed the direct PE inputs for CPT code 43235 without refinement. However, we proposed refinements to the direct PE inputs for CPT codes 43290 and 43291.

For CPT code 43290, we proposed refinements to the direct PE inputs for

clinical labor activity codes CA001 (*complete pre-service diagnostic and referral forms*) and CA011 (*provide education/obtain consent*). We proposed to refine CA001 from 5 minutes to the standard 3 minutes since no explanation was provided to support 5 minutes for this clinical labor activity. We proposed to refine CA011 from 15 minutes to 10 minutes since it was not clear why this much time for education is needed, and we do not believe that the recommended 15 minutes would be typical for the procedure. Also, when we looked at other procedures with clinical labor activity code CA011 we did not find many procedures with more than 12 minutes for this activity. Therefore, we proposed to refine the clinical labor activity times for CA001 and CA011 for CPT code 43290 as described above, and to accept the remaining RUC-recommended direct PE inputs without refinement.

For CPT code 43291, we proposed a refinement to the direct PE input for clinical labor activity code CA016 (*prepare, set-up and start IV, initial positioning and monitoring of patient*) from 10 minutes to the standard 2 minutes. In the PE Summary of Recommendations for non-facility direct PE inputs provided by the RUC, the RUC recommended 8 minutes above the standard 2 minutes for CA016 and stated this clinical labor activity was identical to the 10 minutes for positioning the patient as CPT code 43260 (*Endoscopic retrograde cholangiopancreatography (ERCP); diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)*). However, our study of this code family could not find 10 minutes of non-facility direct PE inputs for clinical labor activity CA016. Also, CPT code 43260 is only performed in a facility and does not have any non-facility clinical labor times. Therefore, we proposed to refine the clinical labor activity time for CA016 for CPT code 43291 as described above, and to accept the remaining RUC-recommended direct PE inputs without refinement. This proposed reduction of 8 minutes to the CA016 clinical labor activity also carried over to the equipment times for the suction machine (Gomco) (EQ235), the scope video system (monitor, processor, digital capture, cart, printer, LED light) (ES031), and the multi-channelled flexible digital scope, esophagoscopy gastroscopy duodenoscopy (EGD) (ES087) which we proposed to reduce by the same 8 minutes.

The following is a summary of the comments we received and our responses.

We did not receive comments on the proposed work RVUs for CPT codes 43235, 43290, and 43291. Therefore, we are finalizing the work RVU of 2.09 for CPT code 43235, the RVU of 3.11 for code 43290, and the RVU of 2.80 for code 43291 as proposed. We did receive comments on the direct PE inputs for CPT codes 43290 and 43291, and those comments and responses are below.

*Comment:* We received a few comments regarding the PE inputs for CPT code 43290 in the non-facility setting. The commenters requested that we accept the RUC-recommended clinical labor times for CA001 and CA011 in the non-facility setting. The commenters stated that the RUC agreed that the “Extensive Use of Clinical Staff” package should be used for CA001 to allow 5 minutes for CPT code 43290. Also, the commenters stated that additional minutes above the standard for CA011 were needed for CPT code 43290 due to the extent of the patient instruction required, and stated 15 minutes should be allowed.

*Response:* We continue to disagree with the RUC-recommended direct PE inputs for clinical labor activity codes CA001 and CA011 for CPT code 43290. We reviewed the Practice Expense Summary of Recommendation for the facility and non-facility settings. We continue to believe that 3 minutes for CA001, and 10 minutes for CA011, in the non-facility setting is appropriate. Although the RUC recommended 5 minutes for CA001 in the non-facility setting, we note that the RUC recommended only 3 minutes for CA001 in the facility setting, and not the 5 minutes that would be the standard for the “Extensive Use of Clinical Staff” in the facility and non-facility settings. After reviewing the comments, we are still not convinced that the information provided would support the need for 5 minutes for CA001 in the non-facility setting. Also, for clinical labor activity CA011, we continue to believe that 10 minutes is appropriate and that the recommended 15 minutes would not be typical for the procedure. When we looked at other procedures with clinical labor activity code CA011, we did not find many procedures with more than 12 minutes for this activity. After reviewing the comments, we remain unconvinced that the information provided would support the need for 15 minutes for CA011 in the non-facility setting. Therefore, we are finalizing the clinical labor activity times for CA001 and CA011 for CPT code 43290 as proposed.

*Comment:* The commenters stated that 10 minutes was needed for CA016 for CPT code 43291, instead of the standard 2 minutes, for positioning the patient because no other procedure in this code family is performed in this position, which is why extra time is required. The commenters stated that clinical labor time needed to position the patient is identical to that of CPT code 43260 and described the process as follows: patient is placed face up with their head resting on a pad positioner or pillow and their neck in a neutral position, patient's arms are positioned to maintain a neutral thumb-up or supinated position and may be tucked at their sides or abducted to less than 90 degrees on arm boards, then the patient is intubated while supine and staff must then move the patient into left lateral position.

*Response:* After reviewing the comments, we are still not convinced that the information provided would support the need for 10 minutes for CA016 for CPT code 43291. We continue to believe that the standard 2 minutes for CA016 is appropriate. We remind the commenters that in our study of CPT code 43260, we could not find 10 minutes of non-facility direct PE inputs for clinical labor activity CA016 as suggested. Also, we remind the commenters that CPT code 43260 is only performed in the facility setting and does not have any non-facility clinical labor times. Therefore, we are finalizing the clinical labor activity time for CA016 for CPT code 43291 as proposed.

After consideration of the public comments, we are finalizing the work RVU values for the Endoscopic Bariatric Device Procedures code family (CPT codes 43235, 43290, and 43291) as proposed. We are finalizing the direct PE inputs for CPT code 43235 as proposed, without refinement. We are finalizing the direct PE inputs for CPT codes 43290 and 43291 as proposed.

(12) Delayed Creation Exit Site From Embedded Catheter (CPT Code 49436)

CPT code 49436 (*Delayed creation of exit site from embedded subcutaneous segment of intraperitoneal cannula or catheter*) was finalized as potentially misvalued in the CY 2022 PFS final rule (86 FR 64996) and the code was found to be appropriate to value for the non-facility/office setting. The RUC only reviewed the PE inputs for this service at the January 2022 meeting. The RUC recommended 5 minutes for Clinical Activity Code CA013, line 34 in the non-facility/office setting on the RUC-recommended PE spreadsheet. We disagreed with the RUC-recommended

time, and proposed the standard time of 2 minutes, as an adequate rationale was not provided for the additional time in the global space. The proposed reduction of 3 minutes to the CA013 clinical labor activity also carries over to the equipment times, which we proposed to reduce by the same 3 minutes. Otherwise, we agreed with the RUC-recommended clinical labor times for activity codes CA011 and CA018, and we proposed the remaining refinements as recommended.

The RUC did not recommend any work inputs for this code and we did not propose any work RVU refinements.

We received three comments regarding our proposed direct PE input refinements for CPT code 49436 in response to the CY 2023 PFS proposed rule and those comments are summarized below.

**Comment:** Two commenters stated that the rationale for the additional 3 minutes under the CA013 clinical labor activity was included in the PE Summary of Recommendations (SOR), which lists the supply items needed to set up the procedure room. The commenters stated that the 36 supply items are mostly sterile and will take at least 3 more minutes to set up than the standard 2 minutes allocated for an E/M service. Another commenter requested that we reevaluate and finalize the RUC-recommended 5 minutes.

**Response:** We continue to disagree with the RUC-recommended 5 minutes for Clinical Activity Code CA013. The PE SOR did not provide a sufficient rationale for the additional time, and commenters did not provide new data to justify the additional time. This procedure is performed during an office visit, and we believe that the standard 2 minutes adequately accounts for the preparation of supplies, when compared to similar codes in the global space and non-facility/office setting.

After consideration of the public comments, we are finalizing 2 minutes for CA013 as proposed. The proposed reduction of 3 minutes to the CA013 clinical labor activity also carries over to the formula used to calculate equipment times, which we are finalizing to reduce by the same 3 minutes. We agreed with the RUC-recommended clinical labor times for activity codes CA011 and CA018, and we are finalizing the remaining refinements as proposed and recommended.

#### (13) Percutaneous Nephrolithotomy (CPT Codes 50080 and 50081)

In September 2021, the CPT Editorial Panel revised the descriptors to CPT codes 50080 (*Percutaneous*

*nephrolithotomy or pyelolithotomy, lithotripsy stone extraction, antegrade ureteroscopy, antegrade stent placement and nephrostomy tube placement, when performed, including imaging guidance; simple (e.g., stone[s] up to 2 cm in a single location of kidney or renal pelvis, nonbranching stones))* and 50081 (*Percutaneous nephrolithotomy or pyelolithotomy, lithotripsy stone extraction, antegrade ureteroscopy, antegrade stent placement and nephrostomy tube placement, when performed, including imaging guidance; complex (e.g., stone[s] > 2 cm, branching stones, stones in multiple locations, ureter stones, complicated anatomy))*), that in recent claims data were identified via the site of service anomaly screen, to be performed less than 50 percent of the time in the inpatient setting, but both codes have 090 day global periods, which include post-op inpatient hospital E/M services as a component of their value, typical of major surgery codes. The revised code descriptors also include image guidance and nephrostomy tube placement, which were not present in the old descriptors, and were reported as procedures that were separate from CPT codes 50081 and 50082. These codes have not been reviewed for nearly 30 years.

CPT code 50080 currently has a work RVU of 15.74 with 117 minutes of intra-service time and 359.5 minutes of total time. The RUC recommended a work RVU of 13.50, 90 minutes of intra-service time, and 244 minutes of total time for CPT code 50080, which represents a reduction from the current values. However, the recommended intra-service times dropped by 76.9 percent from the current intra-service time and the RUC recommended work RVU is reduced only by 85.9 percent. Therefore, we disagree with the RUC recommended work RVU and we proposed a work RVU of 12.11 for CPT code 50080 with the RUC recommended 90 minutes of intra-service time and 244 minutes of total time. We noted that our proposed work RVU for CPT code 50080 falls between CPT code 36830 (*Creation of arteriovenous fistula by other than direct arteriovenous anastomosis (separate procedure); nonautogenous graft (e.g., biological collagen, thermoplastic graft)*), with a work RVU of 12.03 and the same intra-service time of 90 minutes, and CPT code 36818 (*Arteriovenous anastomosis, open; by upper arm cephalic vein transposition*), with a work RVU of 12.39 and the same intra-service time of 90 minutes (and both with similar total times to CPT code 50080).

CPT code 50081 currently has a work RVU of 23.50 with 42 minutes of pre-service evaluation time, 0 minutes of pre-service positioning time, 25 minutes of pre-service scrub/dress/wait time, 195 minutes of intra-service time, 27 minutes of immediate post-service time, and 507.5 minutes of total time. The RUC recommended 22.00 work RVUs with 40 minutes of pre-service evaluation time, 3 minutes positioning time, 10 minutes scrub/dress/wait time, 140 minutes of intra-service time, 44 minutes of immediate post-service time, for a sum of 302 minutes of total time. The RUC-recommended intra-service time and total time for CPT code 50081 are less than the current times for this code and we expect the work RVUs to also be less than the current work RVUs. Though the RUC recommended a work RVU of 22.00 that is less than the current 23.50 work RVU, a substantial reduction in time should be better reflected in the work RVU.

The RUC recommended 13.50 work RVUs for CPT code 50800 and 22.00 for CPT code 50081, with an incremental difference between the two codes of 8.50 work RVUs ( $22.00 - 13.50 = 8.50$ ). We proposed a work RVU of 20.61 for CPT code 50081, based on the proposed CPT code 50080's work RVU of 12.11 plus the RUC-recommended incremental difference 8.50 work RVUs between CPT code 50080 and CPT code 50081 ( $12.11 + 8.50 = 20.61$ ).

We proposed the direct PE inputs as recommended by the RUC for both codes in the family.

**Comment:** We received several comments concerning CPT codes 50080 and 50081, all opposing our proposed work RVUs for these services. Commenters pointed out that CPT codes 50080 and 50081 are not the same services that they were when they were last reviewed. They noted that both codes have retained their current work RVUs since CY 2010 and that they now encompass several other procedures that previously could have been separately billable, which has increased their intensity and complexity. These additions include imaging supervision and interpretation, antegrade stent placement, nephrostomy tube placement and antegrade ureteroscopy as have been included in their new descriptors.

**Response:** We acknowledge that it has been many years since these two CPT codes were last reviewed and percutaneous nephrolithotomy's technologies and methodologies have changed, which may have added complexities to the service, but at the same time, there have been improvements in methods and

efficiencies through research and evaluations of better and best practices. We see evidence of this just in the change in the physician intra-services times for CPT code 50080 with what was 117 minutes, but is now 90 minutes, even with the addition of those services now added to the new descriptor (compared to the previous descriptor for CPT code 50080; *Percutaneous nephrostolithotomy or pyelostolithotomy, with or without dilation, endoscopy, lithotripsy, stenting, or basket extraction; up to 2 cm.*). Similarly, with the change in the physician intra-services times for CPT code 50081 with what was 195 minutes, but is now 140 minutes, even with the addition of those services now added to the new descriptor (compared to the previous descriptor for CPT code 50081; *Percutaneous nephrostolithotomy or pyelostolithotomy, with or without dilation, endoscopy, lithotripsy, stenting, or basket extraction; over 2 cm.*). The skills and trainings of the physicians have certainly become more efficient in performing the main task and the additional tasks now bundled into CPT codes 50080 and 50081 using less intra-service time and total time for these procedures.

**Comment:** Commenters suggested that CMS should consider CPT codes 50080 and 50081 as entirely new codes with their new descriptors describing their bundling and that the old codes are not really comparable to all of the tasks performed in the new code and thus CMS should place more weight in the most recent results from these codes' surveyed work RVUs and their surveyed times, specifically the 25th percentile results.

**Response:** We do agree that the new descriptors for CPT codes 50080 and 50081 are more detailed and more specific about what is now bundled in with the entirety of the service but the fundamental core of these services are still the same and they are not completely new and different enough to make them incomparable. We still believe that the reductions in physician work times should generally result in reductions in of the work RVUs, as we have proposed. If those additional tasks of imaging supervision and interpretation, antegrade stent placement, nephrostomy tube placement and antegrade ureteroscopy were separately paid from CPT codes 50080 and 50081, those separate claim codes and their typical units of service were not included in the AMA RUC recommendations for consideration to value the bundled service. Having those CPT codes, their work RVUs, and their intra-service minutes would have been

useful when we were valuing these services. Commenters reiterated that these services, these additional tasks, are now part of the bundled codes, which lead us to re-review the AMA RUC recommendations. From our re-review of the AMA RUC recommendations, we do note that in the text material accompanying the RUC recommendation for CPT code 76000 (*Fluoroscopy (separate procedure), up to 1 hour physician or other qualified health care professional time*) codes or language was struck from the text material. It is unclear if the reference to CPT code 76000 was intentionally deleted, but we note that CPT code 76000 has a work RVU value of 0.30 and an intra-service time of 10.0 minutes and a total time of 20.0 minutes.

**Comment:** Commenters objected to CMS' selection of comparator codes. Commenters stated that the comparator codes chosen by CMS (for CPT code 50080 which falls between CPT codes 36830 and 36818) do not have similar clinical anatomical basis to CPT codes 50080 and 50081, and that our comparator codes have not taken into account similar levels of work intensities.

**Response:** We believe our selected comparator codes are relevant in the PFS relative value system and that all services are appropriately subject for comparison to each other. By statute, we are required to consider times and intensities as they are related to work when reviewing and valuing all CPT and HCPCS services.

After review and consideration of all comments on our proposals for CPT codes 50080 and 50081, we believe that the value of CPT code 76000 is not entirely accounted for in our original proposed valuations and we are adding Fluoroscopy's 0.30 work RVUs to both CPT codes 50080 and 50081, since this work was omitted from our proposed valuations. We are finalizing 12.41 work RVUs ( $12.11 + 0.30$ ) for CPT code 50080 and 20.91 work RVUs ( $12.11 + 8.50 + 0.30$ ) for CPT code 50081 for CY 2023. We are also finalizing the direct PE inputs as proposed and as recommended by the RUC for both of these codes.

(14) Laparoscopic Simple Prostatectomy (CPT Codes 55821, 55831, 55866, and 55867)

In October 2021, the CPT Editorial Panel added CPT placeholder code 55867 (*Laparoscopy, surgical prostatectomy, simple subtotal (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy), includes robotic*

*assistance, when performed*) and prompted this family of Laparoscopic Simple Prostatectomy codes for survey and review for the January 2022 RUC meeting.

The RUC recommended a work RVU of 15.18 for CPT code 55821 (*Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); suprapubic, subtotal, 1 or 2 stages*) with 33 minutes of pre-service evaluation time, 3 minutes positioning time, 10 minutes scrub/dress/wait time, 120 minutes of intra-service time, and 25 minutes of immediate post-service time, for a sum of 329 minutes of total time. CPT code 55821 currently has a work RVU value of 15.76 with 102.0 minutes of intra-service time and 399.5 minutes of total time. After reviewing this code and relative similar codes in the PFS, we proposed the RUC-recommended work RVU of 15.18 with 315 minutes of total time.

The RUC recommended a work RVU of 15.60 for CPT code 55831 (*Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); retropubic, subtotal*), with 40 minutes of pre-service evaluation time, 3 minutes positioning time, 10 minutes scrub/dress/wait time, 120 minutes of intra-service time, 25 minutes of immediate post-service time, for a sum of 329 minutes of total time. CPT code 55831 currently has a work RVU value of 17.19 with 114.0 minutes of intra-service time and 422.5 minutes of total time. The RUC notes an additional degree of difficulty with this retropubic incision approach (behind the pubis) compared to the suprapubic approach. After reviewing this code and relative similar codes in the PFS, we proposed the RUC recommended work RVU of 15.60 with 322 minutes of total time.

The RUC recommended a work RVU of 22.46 for CPT code 55866 (*Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed*) with 40 minutes of pre-service evaluation time, 15 minutes positioning time, 12 minutes scrub/dress/wait time, 180 minutes of intra-service time, 50 minutes of immediate post-service time, for a sum of 362 minutes of total time. CPT code 55866 currently has a work RVU value of 26.80 with 180 minutes of intra-service time and 422 minutes of total time. The RUC notes that this procedure removes the entire prostate with robotic assistance, and the complexity of nerve sparing when operating with a cancerous

prostate, increases the medical complexity and intensity of this procedure. After reviewing this code and relative similar codes in the PFS, we proposed the RUC recommended work RVU of 22.46 with 362 minutes of total time to CPT code 55866.

The RUC recommended a work RVU of 19.53 for CPT code 55867 (*Laparoscopy, surgical prostatectomy, simple subtotal (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy), includes robotic assistance, when performed*) with 40 minutes of pre-service evaluation time, 8 minutes positioning time, 11 minutes scrub/dress/wait time, 180 minutes of intra-service time, 50 minutes of immediate post-service time, for a sum of 354 minutes of total time. The RUC offers CPT code 42420 (*Excision of parotid tumor or parotid gland; total, with dissection and preservation of facial nerve*) with a work RVU of 19.53, 180 minutes of intra-service time and 383 minutes of total time)) as a crosswalk to CPT code 55867. After reviewing this code and relative similar codes in the PFS, we proposed the RUC-recommended work RVU of 19.53 with 354 minutes of total time to CPT code 55867.

We proposed the RUC-recommended direct PE inputs for CPT codes 55821, 55831, 55866, and 55867 without refinement.

CMS received two comments for CPT codes 55821, 55831, 55866, and 55867.

*Comment:* Both comments for these Laparoscopic Simple Prostatectomy codes indicated support for CMS to accept the RUC-recommended work RVUs and the direct PE inputs adjustments.

*Response:* We thank commenters for taking time to submit comments expressing support for our proposals to accept the RUC-recommendations for CPT codes 55821, 55831, 55866, and 55867.

We are finalizing the RUC-recommended work RVUs and direct PE inputs for these Laparoscopic Simple Prostatectomy codes.

(15) Lumbar Laminotomy With Decompression (CPT Codes 63020, 63030, and 63035)

In October 2018, CPT code 63030 (*Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, lumbar*) was identified by the AMA as having an anomalous site of service when compared to Medicare

utilization data. The Medicare data from 2014 through 2017 indicated that CPT code 63030 was performed less than 50 percent of the time in the inpatient setting, yet included inpatient hospital evaluation and management (E/M) services within its global period. In January 2019, the RUC recommended that this code be reviewed in 2 years (January 2021) to determine if previous changes to differentiate percutaneous, endoscopic, and open spine procedures were effective to correct reporting of this service. In December 2020, the Relativity Assessment Workgroup noted that CPT code 63030 continues to be primarily reported in the outpatient setting, but still includes inpatient hospital visits in its valuation. The specialty society indicated that there is still confusion about this code, and therefore, the RUC recommended that CPT code 63030 be referred to the CPT Editorial Panel to revise the descriptor to mitigate the incorrect reporting in the outpatient setting, but the CPT Editorial Panel did not accept the code change application to differentiate inpatient (63030) versus outpatient (630X0) at the September 2021 CPT meeting. Since this is a site of service issue, CPT code 63030 was surveyed with the code family for the January 2022 RUC meeting.

For CPT codes 63020 (*Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, cervical*), 63030, and 63035 (*Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; each additional interspace, cervical or lumbar (List separately in addition to code for primary procedure)*), we disagree with the RUC's recommended work RVUs of 15.95, 13.18, and 4.00, respectively, because they do not account for the surveyed changes in time for CPT codes 63020, 63030, and 63035, and the full application of the 23-hour policy to CPT code 63030. We proposed a work RVU of 14.91 for CPT code 63020, a work RVU of 12.00 for CPT code 63030, and a work RVU of 3.86 for CPT code 63035.

The RUC recommended 40 minutes pre-service evaluation, 20 minutes pre-service positioning, 15 minutes pre-service scrub/dress/wait time, 90 minutes intraservice time, 30 minutes immediate post-service time, and one CPT code 99232 (*Subsequent hospital care/day 25 minutes*), one CPT code 99231 (*Subsequent hospital care/day 15*

*minutes*), one CPT code 99238 (*Hospital discharge day management; 30 minutes or less*), one CPT code 99214 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30–39 minutes of total time is spent on the date of the encounter.*), and two CPT code 99213 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20–29 minutes of total time is spent on the date of the encounter.*) visits in the post-operative period. This results in a 15-minute decrease in the pre-service period, a 30-minute decrease in intraservice time, a 5-minute decrease in immediate post-service time, and a 17-minute increase in the post-operative period. The proposed work RVU of 14.91 is based on the total time ratio calculation using the RUC-recommended 379 minutes of total time divided by the current total time of 412 minutes for CPT code 63020, then multiplying by the current work RVU of 16.20 for CPT code 63020 ( $(379 \text{ minutes} / 412 \text{ minutes}) * 16.20 = 14.90$ ). We noted that this is a direct crosswalk to CPT code 27057 (*Decompression fasciotomy(ies), pelvic (buttock) compartment(s) (e.g., gluteus medius-minimus, gluteus maximus, iliopsoas, and/or tensor fascia lata muscle) with debridement of nonviable muscle, unilateral*), which has a work RVU of 14.91, identical intraservice and immediate post-service time of 90 minutes and 30 minutes, respectively, and only 10 more minutes of total time. We believe this work RVU more adequately accounts for the decrease in total and intraservice time than the RUC recommended work RVU, and we noted that we considered the reverse building block methodology, which would result in a work RVU of 14.30, but we believed that it decreased the valuation of CPT code 63020 too much, considering the shift in post-operative work to include a longer, more intense office/outpatient visit (CPT code 99214).

We disagree with the RUC-recommended work RVU for CPT code 63030. More specifically, we disagree with the RUC recommended work RVU for CPT code 63030 because the RUC did not completely apply the 23-hour policy calculation (finalized in the CY 2011 PFS final rule (75 FR 73226)) in formulating its recommendations.

Additionally, we disagree with the RUC recommended work RVU for this code for which the RUC considered the patient to be admitted during the post-operative period because the RUC did not fully apply the 23-hour policy when formulating their recommendations. As we noted in the CY 2011 PFS final rule (75 FR 73226), and as we discuss earlier in this section of this final rule (“(1) Anterior Abdominal Hernia Repair (CPT codes 15778, 49591, 49592, 49593, 49594, 49595, 49596, 49613, 49614, 49615, 49616, 49617, 49618, 49621, 49622, and 49623”), the work RVUs for services that are typically performed in the outpatient setting and require a hospital stay of less than 24 hours may in some cases involve multiple overnight stays while the patient is still considered to be an outpatient for purposes of Medicare payment. Because such services are typically furnished in the outpatient setting, they should not be valued to include inpatient post-operative E/M visits. The level of discharge day management services included in the valuation of such services should similarly not reflect an inpatient discharge and should therefore be reduced. And finally, as discussed in CY 2011 rulemaking, the intraservice time from the inpatient level E/M postoperative visit should be reallocated to the immediate postservice time of the service. The 23-hour policy calculation, when fully applied to the calculation of a work RVU, is used to reduce the value of discharge day management services, remove the inpatient E/M visits, and reallocate the intraservice time to the immediate post-service period. We refer readers to the 2011 PFS final rule (75 FR 73226) for an in-depth explanation of the 23-hour policy.

For CPT code 63030, we believe the RUC only partially applied the 23-hour policy when it applied the policy to the immediate post service time, but not to the calculation of the work RVU. Instead, we believe the 23-hour policy should be fully applied to this code that describes outpatient services for which there is an overnight stay during the post-operative period, regardless of the number of nights that a patient stays in the hospital. The services to which the 23-hour policy is usually applied would typically involve a patient stay in a hospital for less than 24 hours, which often means the patient may stay overnight in the hospital. On occasion, the patient may stay in the hospital longer than a single night; however, in both cases (one night or more than one night), the patient is considered to be a hospital outpatient, not an inpatient, for Medicare purposes. In short, we do not

believe that the work that is typically associated with an inpatient service should be included in the work RVUs for the outpatient services to which the 23-hour policy applies, especially considering the previously discussed site of service anomaly for CPT code 63030.

In accordance with the 23-hour policy valuation methodology we established in the CY 2011 PFS final rule, we are instead proposing a work RVU of 12.00 for CPT code 63030. The steps are as follows:

- Step (1):  $13.18 - 0.64 * = 12.54$ .
  - Step (2):  $12.54 - 0.76 ** = 11.78$ .
  - Step (3):  $11.78 + (10 \text{ minutes} \times 0.0224) *** = 12.00 \text{ RVUs}$ .
- \* Value associated with  $\frac{1}{2}$  hospital discharge day management service.  
 \*\* Value associated with an inpatient hospital visit, CPT code 99231.  
 \*\*\* Value associated with the reallocated intraservice time multiplied by the post-service intensity of the 23-hour stay code.

The RUC recommended the maintenance of the current work RVU of 13.18 because there was no change in intraservice time and the 37-minute decrease in total time is largely due to the change in immediate post-service time and post-operative period from the application of the 23-hour policy. We noted that the proposed work RVU of 12.00 is higher than the other valuations that we considered, including the total time ratio work RVU of 11.75 ( $(305 \text{ minutes} / 342 \text{ minutes}) * 13.18 = 11.75$ ) and the reverse building block work RVU of 11.45. We noted that the proposed work RVU of 12.00 is well-bracketed by two 90-minute intraservice timed 090-day CPT codes 28725 (*Arthrodesis; subtalar*), with a work RVU of 11.22, and 58720 (*Salpingo-oophorectomy, complete or partial, unilateral or bilateral (separate procedure)*), with a work RVU of 12.16.

We noted that, in the summary of recommendations (SOR) submitted to CMS by the RUC, the specialty societies assert that the surveyed total time would be the same as the current total time if the 23-hour policy was not fully applied to the immediate post-service time and post-operative period, with only a shift of work from facility to office, but we noted that this is not true. The surveyed total time is 339 minutes, but the RUC recommended 40 minutes for the pre-service evaluation time rather than the specialty societies' surveyed 45 minutes. If the RUC had recommended the survey times, with the pre-service evaluation refinement, the reverse building block work RVU would be 12.62, still less than the RUC-recommended work RVU of 13.18,

effectively accounting for the shift from facility to office post-operative visits.

For CPT code 63035, we proposed a work RVU of 3.86 based on the reverse building block methodology to account for the 11-minute increase in intraservice time. We noted that this proposed value is between the surveyed 25th percentile value of 3.50 and the RUC-recommended work RVU of 4.00. We noted that the proposed work RVU is well-bracketed by two 60-minute add-on CPT codes—CPT code 50706 and 63231. CPT code 50706 (*Balloon dilation, ureteral stricture, including imaging guidance (e.g., ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation (List separately in addition to code for primary procedure)*), has a work RVU of 3.80, and CPT code 63621 (*Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional spinal lesion (List separately in addition to code for primary procedure)*), has a work RVU of 4.00.

For the direct PE inputs, we proposed to remove the 125 minutes of equipment time for EQ168 (light, exam) for CPT codes 63020 and 63030 because the RUC contested the typicality of its use to assess the wound and remove staples. Because it is a standard piece of equipment in a neurosurgeon and orthopedic exam room, and the RUC questioned its typicality, we proposed 0 minutes for EQ168 for CPT codes 63020 and 63030.

We received several comments regarding our proposed work RVUs and two comments regarding our proposed refinement to direct PE input EQ168 (light, exam) for CPT codes 63020, 63030, and 63035 in response to the CY 2023 PFS proposed rule and those comments are summarized below.

**Comment:** Commenters urged CMS to use valid survey data to establish work RVUs when possible, instead of a calculated value supported by another code with no clinical relevancy. The commenters disagreed with our proposed work RVU of 14.91 for CPT code 63020, stating that the RUC recommended the survey 25th percentile work RVU using magnitude estimation from a valid survey of physicians who perform this service and that it appropriately accounts for the decrease in intraservice time, and therefore, it did not need to be decreased further. Commenters also disagreed with the work RVU crosswalk from CPT code 27057 to CPT code 63020, stating that CPT code 27057 is a rarely performed procedure for a significantly different patient population, thus making it an

inappropriate comparison that discounts the time, work, and intensity required to perform CPT code 63020. Commenters stated that CPT code 63020 requires removal of bone, along with dissection around nerve roots and the spinal cord, whereas CPT code 27057 only requires the soft tissue work of a fasciotomy. Commenters also stated that the physician work described by CPT code 27057 does not entail the same intensity of work required by CPT code 63020, does not include significant risk of paralysis, and does not require routine use of fluoroscopy and image guidance to perform the procedure. Commenters stated that positioning for CPT code 63020 requires use of the Mayfield headrest and is more complex than a routine prone positioning for CPT code 27057. Commenters stated that CPT code 27057 includes gluteal muscle debridement, which is tedious and time consuming, but not as complex as work involving the resection of bone and retraction of spinal nerves.

*Response:* We continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate code comparison or an appropriate crosswalk. As noted above, we proposed a crosswalk to CPT code 27057 with the support of the total time ratio. We believe that time ratios are a valid and appropriate tool for determining work RVUs. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. In accordance with the statute, we believe that changes in time and intensity must be accounted for when developing work RVUs. When our review of recommended values reveals that changes in the resource of time are not accounted for in a RUC-recommended RVU, the obligation to account for that change when establishing proposed and final work RVUs remains. For more details on our methodology for developing work RVUs, we direct readers to the discussion on time ratios as discussed above in this Valuation of Specific Codes section.

Regarding the commenters' assertion that the RUC-recommended work RVU, which is only a decrease of 0.25 work RVUs from the current valuation of CPT code 63020, accounts for the 15-minute decrease in the pre-service period, a 30-

minute decrease in intraservice time, a 5-minute decrease in immediate post-service time, and a 17-minute increase in the post-operative period, and did not need to be further decreased, we reiterate that, although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, it would be inappropriate to use the RUC-recommended work RVU to value CPT code 63020 given the significant decrease in intraservice time and the absence of an adequate justification of increased intensity. The RUC-recommended work RVU yields an IWP/UT of 0.077, whereas the current IWP/UT is 0.059. The RUC-recommended work RVU would yield an IWP/UT increase of 0.018 with no obvious or explicitly stated rationale for an increased intensity. If the RUC's recommendations appear to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we generally use one of the methodologies discussed above to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure such as a total time ratio.

We continue to believe our proposed work RVU of 14.91 for CPT code 63020 based on the total time ratio calculation and a direct crosswalk to CPT code 27057, which has a work RVU of 14.91, identical intraservice and immediate post-service time of 90 minutes and 30 minutes, respectively, and only 10 more minutes of total time, more adequately accounts for the decrease in total and intraservice time than the RUC recommended work RVU.

We note that while CPT code 63020 requires removal of bone, along with dissection around nerve roots and the spinal cord whereas CPT code 27057 requires the soft tissue work of a fasciotomy, does not include significant risk of paralysis, and does not require routine use of fluoroscopy and image guidance to perform the procedure, CPT code 27057's vignette and service description describes a 75-year old female who is febrile with leukocytosis who is taken to the operating room emergently for fasciotomy(ies) and debridement of necrotic muscle. We note that the typical patient is at risk of acute renal failure and life-threatening rhabdomyolysis. We note that, while we

understand that the positioning for CPT code 63020 requires use of the Mayfield headrest and is more complex than a routine prone positioning for CPT code 27057, that difference is accounted for in the difference in pre-service positioning time of 8 minutes, which has longstanding, well-established standardized WPUT of 0.0224 which factors into the reverse building block work RVU of 14.30. Therefore, we continue to believe a direct crosswalk to CPT code 27057 is appropriate to value CPT code 63020 and are finalizing a work RVU of 14.91 for CPT code 63020.

*Comment:* The commenters disagreed with our proposed work RVU of 12.00 for CPT code 63030, stating that there is concern about contradictory policies regarding the newly revised E/M CPT codes that combined inpatient and observation (outpatient) services. They believe this renders the 23-hour policy invalid.

*Response:* We believe that adopting the revisions for CPT codes 99221–99223 and 99231–99233 is not inconsistent with our 23-hour policy as it applies to this code family. In this instance, we are reviewing RUC-recommendations that explicitly identify CPT code 63030 as being subject to our 23-hour policy. Consistent with discussions in the CY 2011 and CY 2022 PFS final rules cited above, we agree with the RUC that this code is subject to the 23-hour policy, and we believe it is appropriate to fully apply the 23-hour policy to CPT code 63030. We note that we acknowledge commenters' concerns regarding policy implications as a result of adopting the E/M inpatient/observation revisions and will take that into consideration for future rulemaking. Additionally, we note that we did not propose any changes to the previously finalized 23-hour policy in the proposed rule, and we believe it is still consistent to apply the 23-hour policy, as was recommended by the RUC, for CPT code 63030. We also remind commenters that the 23-hour policy calculation, when fully applied to the calculation of a work RVU, is used to reduce the value of discharge day management services, remove the inpatient E/M visits, and reallocate the intraservice time to the immediate post-service period. We refer readers to the 2011 PFS final rule (75 FR 73226) for an in-depth explanation of the 23-hour policy. For CPT code 63030, we believe the RUC only partially applied the 23-hour policy when it applied the policy to the immediate post service time, but not to the calculation of the work RVU. Instead, we continue to believe the 23-hour policy should be fully applied to this code that describes

outpatient services for which there is an overnight stay during the post-operative period, regardless of the number of nights that a patient stays in the hospital. In short, we continue to believe that the work that is typically associated with an inpatient service should not be included in the work RVUs for the outpatient services to which the 23-hour policy applies, especially considering the previously discussed site of service anomaly for CPT code 63030. Therefore, we are finalizing our proposed work RVU of 12.00 for CPT code 63030.

*Comment:* Commenters disagreed with our proposed work RVU of 3.86 for CPT code 63035, stating that it was a Harvard valued code with time and work values that were generated from the base code, CPT code 63030. Commenters expressed that the Harvard survey did not include all the surgical specialties that now perform the service, with only 17 responses from neurosurgeons. Therefore, the commenters stated that the previous intraservice time should not be used to arrive at a calculated value. The commenters also expressed concern that CMS did not address the compelling evidence provided by the RUC, and urged CMS to address this rationale.

*Response:* We believe that it is important to use the recent data available regarding work times, and we note that when many years have passed since work time has been measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The work times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had been routinely overestimated, this would undermine the relativity of the work RVUs on the PFS in general, in light of the fact that codes are often valued based on comparisons to other codes with similar work times. Such an assumption would also undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS.

Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times that have been used in PFS ratesetting are accurate. We recognize that adjusting work RVUs for changes in time is not always a

straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available, and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

We remind commenters that the concept of compelling evidence was developed by the RUC as part of its work RVU review process for individual codes. The RUC determines whether there is compelling evidence to justify an increase in valuation. The RUC's compelling evidence criteria include documented changes in physician work, an anomalous relationship between the code and multiple key reference services, evidence that technology has changed physician work, analysis of other data on time and effort measures, and evidence that incorrect assumptions were made in the previous valuation of the service. While we appreciate the submission of this additional information for review, we emphasize that the RUC developed the concept of compelling evidence for its own review process; an evaluation of "compelling evidence," at least as conceptualized by the RUC, is not part of our review process, as our focus is the time and intensity of services, in accordance with the statute. With that stated, we do consider changes in technology, patient population, and other compelling evidence criteria, as such evidence may affect the time and intensity of a service under review. For example, new technology may cause a service to become easier or more difficult to perform, with corresponding effects on the time and intensity of the service. However, we are under no obligation to adopt the same review process or compelling evidence criteria as the RUC. We instead focus on evaluating and addressing the time and intensity of services when valuing codes because section 1848(c)(1)(A) of the Act specifically defines the work component as the resources that reflect time and intensity in furnishing the service. Therefore, we are finalizing a work RVU of 3.86 for CPT code 63035 as proposed.

*Comment:* Two commenters disagreed with our proposal to remove 125 minutes of equipment time for EQ168 (light, exam) for CPT codes 63020 and 63030, stating that they believe the exam light is needed to check for possible seroma and to examine and take out stitches. The commenters urged CMS not to remove the exam light expense from these code values.

*Response:* We proposed to remove the 125 minutes of equipment time for EQ168 (light, exam) for CPT codes 63020 and 63030 because the RUC contested the typicality of its use to assess the wound and remove staples. Because it is a standard piece of equipment in a neurosurgeon and orthopedic exam room, and the RUC questioned its typicality, we proposed 0 minutes for EQ168 for CPT codes 63020 and 63030. We note that we found five other 090-day codes in the CPT code 630XX series, CPT codes 63045 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; cervical*), 63046 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; thoracic*), 63047 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar*), 63050 (*Laminoplasty, cervical, with decompression of the spinal cord, 2 or more vertebral segments*), and 63051 (*Laminoplasty, cervical, with decompression of the spinal cord, 2 or more vertebral segments; with reconstruction of the posterior bony elements (including the application of bridging bone graft and non-segmental fixation devices [eg, wire, suture, mini-plates], when performed*)) that do not have time allotted to EQ168, despite their inclusion of "Monitor wounds and remove sutures/staples" in their post-service descriptions, therefore we do not believe this is a typical equipment input. Since we have not received new information that contradicts the findings in the RUC Database to indicate that the use of this equipment is typical, we are finalizing 0 minutes for EQ168 for CPT codes 63020 and 63030 as proposed.

(16) Somatic Nerve Injections (CPT Codes 64415, 64416, 64417, 64445, 64446, 64447, 64448, 76942, 77002, and 77003)

In May 2021, the CPT Editorial Panel revised the descriptors and billing instructions for CPT codes 64415 (*Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed*), 64416 (*Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*), 64417 (*Injection(s), anesthetic agent(s) and/or steroid; axillary nerve, including imaging guidance, when performed*), 64445 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed*), 64446 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*), 64447 (*Injection(s), anesthetic agent(s); femoral nerve, including imaging guidance, when performed*), 64448 (*Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*), 77002 (*Fluoroscopic guidance for needle placement*), 77003 (*Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinal diagnostic or therapeutic injection procedures (epidural or subarachnoid)*) and 76942 (*Ultrasonic guidance for needle placement, imaging supervision and interpretation*). These codes were then surveyed by the RUC in October 2021.

We last finalized values for CPT codes 64415, 64416, 64417, 64445, 64446, 64447, and 64448 in the CY 2020 PFS final rule (84 FR 62744 through 62745). In May 2018, the CPT Editorial Panel approved the revision of descriptors and guidelines for codes in the somatic nerve injection family. At its October 2018 meeting, the RUC recommended work RVU and PE inputs for a number of somatic nerve injection codes, including CPT codes 64415, 64416, 64417, 64445, 64446, 64447, and 64448. (Note that in 2018, the codes did not include “including imaging guidance, when performed” in their descriptors.) During the October 2018 RUC presentation for this family of services, the specialty societies stated that CPT codes 64415, 64416, 64417, 64446, 64447, and 64448 were reported with the imaging code CPT code 76942 more

than 50 percent of the time. In reviewing this family of services in the CY 2020 PFS final rule, our finalized work and PE values for the codes did not consider the simultaneous performance of injection and imaging (84 FR 62744). In May 2021, the CPT Editorial Panel revised the codes to include “with imaging, when performed” in the descriptors.

When presenting its CY 2023 valuation recommendations, the RUC pointed out that the current values and times for CPT codes 64415, 64416, 64417, 64445, 64446, 64447, and 64448 reflect only the work and time of the injection. The revised codes, however, include both injection and imaging. In order to make an equitable comparison between the RUC recommendations and the current values, the RUC suggested we compare the RUC recommendations to values that combined the current work and estimated time of the injection codes and the imaging code with which they are being bundled, CPT code 76942. We agreed with this approach and thank the RUC for providing combined work RVUs and estimated combined times, which we considered as part of the RUC’s recommendations.

As part of its recommendations, the RUC reaffirmed its prior recommendations for a number of codes that were previously reviewed or reaffirmed in the CY 2020 PFS final rule, including: CPT codes 64400 (*Injection(s), anesthetic agent(s); trigeminal nerve, each branch (i.e., ophthalmic, maxillary, mandibular)*), 64408 (*Injection(s), anesthetic agent(s), and/or steroid; vagus nerve*), 64420 (*Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level*), 64421 (*Injection(s), anesthetic agent(s) and/or steroid; intercostal nerves, each additional level (List separately in addition to code for primary procedure)*), 64425 (*Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves*), 64430 (*Injection(s), anesthetic agent(s) and/or steroid; pudendal nerve*), 64435 (*Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve*), 64449 (*Injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)*), and 64450 (*Injection(s), anesthetic agent(s); other peripheral nerve or branch*) (84 FR 62744 through 62745); CPT code 64451 (*Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)*) (84 FR 62740); and CPT code 64454 (*Injection(s), anesthetic agent(s) and/or steroid;*

*genicular nerve branches including imaging guidance, when performed*) (84 FR 62749). The RUC also reaffirmed its recommendation for CPT code 64455 (*Injection(s), anesthetic agent(s) and/or steroid; plantar common digital nerve(s) (e.g., Morton’s neuroma)*), which was reviewed and valued in the CY 2019 PFS final rule (83 FR 58542). The codes the RUC wishes to reaffirm for CY 2023 have not been revised by the CPT Editorial Panel and were not resurveyed by the RUC since their prior valuation. Since we did not receive new information regarding these codes, we acknowledged the RUC’s reaffirmation but we did not review the values of these codes in the proposed rule. In the proposed rule, we also noted that the RUC-reaffirmed values for CPT codes 64435 (work RVU of 0.75), 64450 (work RVU of 0.75), 64451 (work RVU of 1.52), and 64454 (work RVU of 1.52) are the same as the current work RVUs that we finalized in the CY 2020 PFS final rule. The RUC reaffirmed work RVU of 0.94 for CPT code 64405 is the current work RVU, which was finalized in the CY 2019 PFS final rule (83 FR 59542) and reaffirmed in the CY 2020 final rule, and the RUC-reaffirmed work RVU of 1.10 for CPT code 64418 is the current work RVU value finalized in the CY 2018 PFS final rule (82 FR 53054) and reaffirmed in the CY 2020 PFS final rule. The RUC reaffirmed a work RVU of 0.75 for CPT code 64455 which is the current work RVU we finalized in the CY 2019 PFS final rule (83 FR 58542).

For CY 2023, we proposed the RUC-recommended work RVUs for CPT codes 64417 (work RVU of 1.31), 64447 (work RVU of 1.34), 64448 (work RVU of 1.68), 77002 (work RVU of 0.54), 77003 (work RVU of 0.60), and 76942 (work RVU of 0.67).

For CPT code 64415, we disagreed with the RUC-recommended work RVU of 1.50 and proposed a work RVU of 1.35, based on the intraservice time ratio calculated using the “combined” values for CPT code 64415 and the imaging CPT code 76942 provided by the RUC. (The combined work RVU the RUC offered for comparison was 2.02 (the sum of the work RVUs for both codes: CPT code 64415 is 1.35 and CPT code 76942 is 0.67), and an estimated intraservice time of 15 minutes and total time of 43 minutes.) This proposed work RVU of 1.35 for CPT code 64415 is supported by a crosswalk to CPT code 11982 (Removal, non-biodegradable drug delivery implant), which has a work RVU of 1.34, an identical service time, and a total time that is two minutes lower than CPT code 64415. This value is further supported by a bracket of CPT codes: CPT code 64486

and CPT code 33285. CPT code 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)*) has a work RVU of 1.27 and identical intraservice and total time values to CPT code 64415, and CPT code 33285 (*insertion, subcutaneous cardiac rhythm monitor, including programming*) has a work RVU of 1.53, an intraservice time of 10 minutes and a total time of 40 minutes.

We noted that when compared to the current time file information for CPT code 64415, the RUC-recommended intraservice time decreased from 12 to 10 minutes (16.7 percent reduction) and RUC-recommended total time decreased from 40 to 35 minutes (12.5 percent reduction). However, the RUC-recommended work RVU increased by 0.15 which is an 11.1 percent increase. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should not be met with significant increases to work RVUs without adequate justification. Additionally, while we do acknowledge that adding imaging does bundle some additional work into the code, we do not believe that the recoding of the services in this family has resulted in a significant increase in their intensity, only a change in the way in which they will be reported, and through the bundling of some of these frequently reported services, it is reasonable to expect that the new coding system will achieve efficiencies via elimination of duplicative assumptions of the resources involved in furnishing particular services. We believe the new coding assigns more accurate work times, and thus, reflects efficiencies in resource costs that existed but were not reflected in the services as they were previously reported. If the addition of imaging guidance had made the new CPT codes significantly more intense to perform, we believe that this would have been reflected in the surveyed work times, which in the case of CPT code 64415 actually decreased from the predecessor code. Thus, we are disinclined to ignore the impact of decreased times on the work RVU. We believe our proposed value of 1.35 appropriately reflects both the

additional work and the decrease of time.

We considered proposing a work RVU of 1.27 for CPT code 64415, using CPT code 64486 as a comparison code, since it has the same intraservice and total times as the revised CPT code 64415. However, CPT code 64486, with a work RVU of 1.27, has a lower work RVU than the current work RVU of 64415 (1.35.) We are in general agreement with the RUC that it is important to acknowledge that there is some additional work that comes with adding imaging to this procedure.

For CPT code 64416, we disagreed with the RUC-recommended work RVU of 1.80 and instead proposed a work RVU of 1.65. While we disagreed with the RUC's recommended work RVU, we did agree with the RUC's proposed increment of +0.30 between CPT codes 64415 and 64416. (The RUC recommendation for CPT code 64415 was 1.50, and the recommendation for CPT code 64416 was 1.80.) We found persuasive the RUC's observation that the current increment between CPT codes 64415 and 64416 is unusually small when compared to other sets of related codes in the family. Typically, the codes that add catheter placement in addition to the injection are 0.30–0.36 work RVUs higher than the codes for an injection in the same nerve group or region. Retaining such a narrow interval of 0.15 between CPT codes 64415 and 64416 would create a rank order anomaly within the family in light of adjustments to some of the other codes' work RVUs. Our proposed work RVU of 1.65 for CPT code 64416 is supported by a bracket of CPT codes: CPT code 64448 and CPT code 36573. CPT code 64448 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)*) has a work RVU of 1.60, 15 minutes intraservice time and 40 minutes total time, and CPT code 36573 (*Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; age 5 years or older*) has a work RVU of 1.70, 15 minutes intraservice time and 40 minutes total time.

We noted that, when compared to the current time file, the RUC-recommended intraservice time for CPT code 64416 decreased from 20 to 15 minutes (25 percent reduction) and the RUC-recommended total time decreased from 49 to 44 minutes (10.2 percent

reduction). However, the RUC recommended a 0.32 increase in the work RVU, which is a 21.6 percent increase. We noted that the RUC-recommended work RVU of 1.80 would give CPT code 64416 the highest work RVU of the surveyed codes, and would make it among the highest valued codes in the family. We do not believe the RUC-recommended work RVU appropriately accounts for the reductions in the surveyed total time for the procedure, and did not receive specific information explaining why, despite the decrease in time, the value should receive such a significant increase relative to the other surveyed codes. As stated previously, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased significantly, decreases in time should be reflected in the revised work RVUs. As noted in our discussion of CPT code 64415 above, if the addition of imaging guidance had made the new CPT codes significantly more intense to perform, we believe that this would have been reflected in the surveyed work times, which in the case of CPT code 64416, are now actually lower. We believe our proposed work RVU of 1.65 corrects the increment between CPT code 64415 and 64416, while also acknowledging that, the addition of imaging notwithstanding, the times for CPT code 64416 have noticeably decreased.

For CPT code 64445, we disagreed with the RUC-recommended work RVU of 1.39 and instead proposed a work RVU of 1.28, based on the intraservice time ratio calculated using the "combined" values for CPT code 64445 and the imaging CPT code 76942 provided by the RUC. (The combined work RVU the RUC offered for comparison was 1.67 (the sum of the work RVUs for both codes: CPT code 64445 is 1.00 and CPT code 76942 is 0.67), and an estimated intraservice time of 13 minutes and total time of 27 minutes.) This proposed value of 1.28 is supported by a comparison to CPT code 64486 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)*), which has a work RVU of 1.27 and intraservice time of 10 minutes and total time of 35 minutes. The value is also supported by a low bracket of CPT code 58100 (*Endometrial sampling (biopsy) with or without endocervical sampling (biopsy), without cervical dilation, any method (separate procedure)*), with a work RVU of 1.21, identical intraservice time and almost identical total time, and a high bracket

of CPT code 11982 (*Removal, non-biodegradable drug delivery implant*), with a work RVU of 1.34, identical intraservice time and a higher total time of 33 minutes.

We noted that the RUC-recommended intraservice time and total time for CPT code 64445 are identical to the current intraservice and total times in the time file for CPT code 64445. However, the RUC recommended a 0.39 increase to the work RVU. We do not imply that the lack of change to the intraservice and total times means that the work RVU cannot be increased. We believe that since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, the RUC-proposed increase in the work RVU does not seem justified. As noted in our discussion of CPT code 64415 above, if the addition of imaging guidance had made the new CPT codes significantly more intense to perform, we believe that this would have been reflected in the surveyed work times, which in the case of CPT code 64445, are the same as the predecessor code.

We considered proposing a work RVU of 1.10 for CPT code 64445, using CPT code 30901 (*Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method*) as a comparison code, with a work RVU of 1.10 and identical intraservice and total times as CPT code 64445. However, we believed this would cause a rank order anomaly within the family. For example, CPT code 64418 (*Injection(s), anesthetic agent(s) and/or steroid; suprascapular nerve*) also has a work RVU of 1.10, but does not include imaging. Again, we generally agree with the RUC that it is important to acknowledge the additional work that comes with adding imaging to this procedure, and to ensure that this additional work is reflected within the relative values of the family, but we still proposed a work RVU of 1.28 for CPT code 64445.

For CPT code 64446, we disagreed with the RUC-recommended work RVU of 1.75 and instead proposed a work RVU of 1.64. This recommended work RVU is 0.36 higher than the proposed work RVU for CPT code 64445 (1.28). We noted that the current increment between the current values of 64445 and 64446 (1.00 and 1.36, respectively) is 0.36. The RUC recommendations for these codes (1.39 and 1.75) preserved this increment. Since the same imaging activity is being added to both codes, we agree with preserving the relationship between the values of CPT codes 64445 and 64446. Our proposed work RVU of 1.64 for CPT code 64446 is supported by

a bracket of CPT codes: CPT code 64448 and 36573. CPT code 64448 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)*) has a work RVU of 1.60, 15 minutes intraservice time and 40 minutes total time, and CPT code 36573 (*Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; age 5 years or older*) has a work RVU of 1.70, 15 minutes intraservice time and 40 minutes total time. (We noted that this is the same bracket we suggested to support the proposed value for CPT code 64416. As revised, the intraservice and total times for CPT codes 64416 and 64446 are the same.)

We noted that, compared to the time file for CPT code 64446, the RUC-recommended intraservice time stayed the same (15 minutes) and the total time increased from 40 to 44 minutes (10 percent increase). The RUC-recommended work RVU for CPT code 64446, is 0.39 higher than the current RVU, a 28.7 percent increase. We believe the RUC-recommended work RVU increase is disproportionate to the change in time. Additionally, we noted that the RUC-recommended times result in CPT code 64416 and CPT code 64446 having identical intraservice and total times. We believe it best preserves rank order within the family to assign CPT code 64416 and CPT code 64446 similar work RVUs.

We proposed the direct PE inputs as recommended by the RUC for all of the codes in the Somatic Nerve Injections family.

We would like to correct a typographical error. We note that in several places in the CY 2023 proposed rule at 87 FR 45919, the number “64488” in CPT code 64488 (*Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)*) was misidentified as “64448.”

**Comment:** A number of commenters expressed support of our proposed work RVUs for CPT codes 64417, 64447, 64448, 77002 77003, and 76942.

**Response:** We thank the commenters for their support.

**Comment:** Several commenters expressed concerns about all of our proposed values (including those that aligned with the RUC-recommended

valuations), which they did not believe reflected the combined work of both the injection and the imaging. Commenters indicated that the addition of imaging makes the injection procedure more efficient and improves success rates for patients. They also noted that somatic nerve injections are important treatments for pain management and can be an alternative to opioid prescription.

**Response:** We agree with commenters that somatic nerve injections are a valuable pain management service. However, under allowing the codes (which were frequently being performed simultaneously) meant that there was duplication in payments for components of the practitioner’s time, effort, and PE when performing; what was essentially a combined procedure was being billed as though it was two standalone procedures. We agreed with, and appreciated the CPT and RUC’s decision to revise and revalue the codes to reflect a bundling of the somatic nerve injection and imaging procedures.

**Comment:** Commenters disagreed with our proposed work RVUs for CPT codes 64415, 64416, 64445 and 64446 and urged us to accept the RUC recommendations. Commenters disagreed with some of the codes we selected to use as brackets or crosswalks to support our proposed valuations on the basis that the codes we selected did not include imaging.

**Response:** We disagree that some of the codes used as brackets or crosswalks were inappropriate simply because they did not include imaging. We continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate code comparison or an appropriate crosswalk.

**Comment:** Some commenters disagree with our use of time ratios to calculate proposed RVUs for CPT codes 64415 and 64445, stating that they believed the intraservice time ratio did not consider the combined work of both the injections and the imaging described by the revised code descriptors.

**Response:** We disagree that our use of time ratio calculations was inappropriate. As stated in the proposed rule, we specifically used the RUC’s projected “combined” RVU and intraservice time for CPT codes 64415 and 64445 when performing our intraservice time ratio calculations. It

was our understanding that the RUC provided this information to demonstrate values reflecting the combined work of the revised codes.

*Comment:* Some commenters disagree with our use of increments to support our proposed values for CPT codes 64416 and 64446.

*Response:* We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes.

*Comment:* Commenters reiterated that CPT codes 64415, 64416, 64445, and 64446 (revised to add imaging) now describe work that is more intense than the previous codes (which described injections without the imaging). Commenters stated that the RUC recommendations better reflected the intensity of this new work.

Additionally, several commenters provided detailed clinical information explaining that injections to the sciatic nerve (which are described in CPT codes 64445 and 64446) are more intense than injections to the femoral artery (CPT codes 64447 and 64448.) Several commenters also provided clinical information demonstrating that injections to the brachial plexus (which are described by CPT codes 64415 and 64416) are more intense than injections to the sciatic nerve (which are described by CPT codes 64445 and 64446.)

*Response:* As explained in the proposed rule, we believed that our proposed RVUs for CPT codes 64415, 64416, 64445, and 64446 acknowledged the increased work of the codes while also reflecting their respective changes in time. However, we consider clinical information associated with physician work intensity provided by the RUC and other interested parties as part of our review process, and we found the additional clinical information helpful by providing greater insight into relative intensity within this code family. We note that to determine work RVUs, we must look at both time and intensity. We must also consider relativity: if two codes have the same work time, but one code has a higher intensity, relativity dictates that the higher-intensity code gets more RVUs.

For CPT code 64445 (injection of sciatic nerve, with imaging, if performed), we proposed a work RVU of 1.28; the code had a surveyed intraservice time of 10 minutes. For CPT

code 64447 (injection of femoral artery, with imaging, if performed), we had proposed a work RVU of 1.34; the code has an intraservice time of 8 minutes. In light of the additional information that injections to the sciatic nerve are more intense than injections to the femoral nerve (coupled with the fact that CPT code 64445 has a longer intraservice time than CPT code 64447), we now agree that the RUC recommendation of 1.39 for CPT code 64445 better supports relativity.

For CPT code 64446 (injection of sciatic nerve with catheter placement, with imaging, if performed), we had proposed a work RVU of 1.64; the code has 15 minutes of intraservice time. We proposed a work RVU of 1.68 for CPT code 64448 (injection of femoral nerve with catheter placement, with imaging, if performed); the code has an intraservice time of 15 minutes. In light of the additional information that sciatic nerve injections are more intense than femoral injections (coupled with the fact that CPT codes 64446 and 64448 have the same intraservice time), we now agree that the RUC recommendation of 1.75 for CPT code 64446 better supports relativity.

For CPT code 64415 (injection to the brachial plexus, with imaging, if performed), we proposed a work RVU of 1.35; the code has an intraservice time of 10 minutes. As noted above, we now agree with a work RVU of 1.39 for CPT code 64445 (injection of sciatic nerve, with imaging, if performed); the code also has 10 minutes of intraservice time. In light of the additional information that brachial nerve injections are more intense than sciatic nerve injections (coupled with the fact that CPT codes 64415 and 64445 have the same intraservice time), we now agree that the RUC recommendation of 1.50 for CPT code 64415 better supports relativity.

For CPT code 64416 (injection to the brachial plexus with catheter placement, with imaging, if performed), we proposed a work RVU of 1.65; the code has an intraservice time of 15 minutes. As noted above, we now agree with a work RVU of 1.75 for CPT code 64446 (injection of sciatic nerve with catheter placement, with imaging, if performed); the also code has 15 minutes of intraservice time. In light of the additional information that brachial nerve injections are more intense than sciatic nerve injections (coupled with the fact that CPT codes 64416 and 64446 have the same intraservice time), we now agree that the RUC recommendation of 1.80 for CPT code 64416 better supports relativity.

Based on the comments, we are finalizing the work RVUs for CPT codes

64417, 64447, 64448, 77002, 77003, and 76942. and the PE inputs for all codes, as proposed. We are finalizing the RUC recommended work RVU of 1.50 for CPT code 64415; 1.80 for CPT code 64416; 1.39 for CPT code 64445; and 1.75 for CPT code 64446.

(17) Transcutaneous Passive Implant-Temporal Bone (CPT Codes 69714, 69716, 69717, 69719, 69726, 69727, 69729, 69730, and 69728)

In October 2020, the CPT Editorial Panel deleted two codes used for mastoidectomy and replaced them with four new codes for magnetic transcutaneous attachment to external speech processor. The CPT Editorial Panel made additional revisions to differentiate implantation, removal, and replacement of the implants. The RUC submitted interim recommendations to CMS for six codes in this family following the January 2021 RUC meeting, and we proposed and finalized the recommended work RVU for all six of these codes in the CY 2022 PFS final rule (86 FR 65099 through 65100). For CY 2023, the CPT Editorial Panel established three additional new codes and the coding structure of the family was changed to describe the different techniques more appropriately for transcutaneous passive implant procedures that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. The nine codes in the family were surveyed again for the January 2022 RUC meeting and new recommendations were submitted to CMS.

We proposed the RUC-recommended work RVU for six of the nine codes in the Transcutaneous Passive Implant-Temporal Bone family. We proposed a work RVU of 9.03 for CPT code 69716 (*Implantation, osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor within the mastoid and/or resulting in removal of less than 100 mm2 surface area of bone deep to the outer cranial cortex*), a work RVU of 9.97 for CPT code 69729 (*Implantation, osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of bone deep to the outer cranial cortex*), a work RVU of 9.46 for CPT code 69719 (*Revision/replacement (including removal of existing device), osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, within the mastoid and/or involving a bony defect less than 100 mm2 surface area of bone*

deep to the outer cranial cortex), a work RVU of 10.25 for CPT code 69730 (*Revision/replacement (including removal of existing device), osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside the mastoid and involving a bony defect greater than or equal to 100 mm<sup>2</sup> surface area of bone deep to the outer cranial cortex*), a work RVU of 7.38 for CPT code 69727 (*Removal, entire osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, within the mastoid and/or involving a bony defect less than 100 mm<sup>2</sup> surface area of bone deep to the outer cranial cortex*), and a work RVU of 8.50 for CPT code 69728 (*Removal, entire osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside the mastoid and involving a bony defect greater than or equal to 100 mm<sup>2</sup> surface area of bone deep to the outer cranial cortex*).

We disagreed with the RUC's recommended work RVU for the other three codes in the family for the procedures describing percutaneous attachment to external speech processor. We disagreed with the RUC's recommended work RVU of 8.00 for CPT code 69714 (*Implantation, osseointegrated implant, skull; with percutaneous attachment to external speech processor*) and we instead proposed a work RVU of 6.68 based on a crosswalk to CPT code 38305 (*Drainage of lymph node abscess or lymphadenitis; extensive*). In reviewing CPT code 69714, we noted that the recommended intraservice time is decreasing from 40 minutes to 30 minutes (25 percent reduction), and the recommended total time is decreasing from 182 minutes to 146 minutes (20 percent reduction); however, the RUC-recommended work RVU is only decreasing from 8.69 to 8.00, which is a reduction of just over 8 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 69714, we believed that it was more accurate to propose a work RVU of 6.68 based on a crosswalk to CPT code 38305 to account for these decreases in the surveyed work time.

We also disagreed with the recommended work RVU of 8.00 because it results in an intensity which is anomalously high in relationship to

the rest of the code family. At the recommended work RVU of 8.00, the intensity of CPT code 69714 is increasing by nearly 50 percent as compared with the survey conducted last year, and the resulting intensity of the service would be significantly higher than any of the other codes in the family. We did not agree that this intensity would be typical given that the percutaneous form of implant described by CPT code 69714 should have the lowest intensity of the three types described in this code family. The implantation procedure described by this code should also typically have lower intensity than the revision/replacement procedures elsewhere in the family. We believed that the intensity of CPT code 69714 is more accurately described at our proposed work RVU of 6.68 based on a crosswalk to CPT code 38305. This code shares the same intraservice time of 30 minutes as CPT code 69714 and has a higher total time of 186 minutes; we agreed that CPT code 69714 is more intense than CPT code 38305 which was offset by our crosswalk code having an additional office visit in its global period.

We disagreed with the RUC's recommended work RVU of 8.48 for CPT code 69717 (*Revision/replacement (including removal of existing device), osseointegrated implant, skull; with percutaneous attachment to external speech processor*) and we instead proposed a work RVU of 7.91 based on a crosswalk to CPT code 46262 (*Hemorrhoidectomy, internal and external, 2 or more columns/groups; with fistulectomy, including fissurectomy, when performed*). In reviewing CPT code 69717, we noted that although the intraservice time remains essentially unchanged (decreasing from 45 minutes to 44 minutes), the recommended total time is decreasing from 187 minutes to 159 minutes (15 percent reduction). However, the RUC-recommended work RVU was only decreasing from 8.80 to 8.48, which is a reduction of less than 4 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 69717, we believed that it was more accurate to propose a work RVU of 7.91 based on a crosswalk to CPT code 46262 to account for these decreases in the surveyed work time.

We also disagreed with the recommended work RVU of 8.48

because it resulted in a higher intensity than the other two revision/replacement codes (CPT codes 69719 and 69730) in this family. CPT code 69717 describes the percutaneous form of implant which should have the lowest intensity of the three revision/replacement codes in this family, however at the recommended work RVU of 8.48 it would have the highest intensity of this group. While the intensity at the recommended work RVU for CPT code 69717 is nowhere near the anomalous nature of the intensity at the recommended work RVU for CPT code 69714, we still believed that the intensity would be more typical at the proposed work RVU of 7.91. This proposed valuation restores the relationship between the three revision/replacement codes by placing the intensity of CPT code 69717 slightly lower than CPT codes 69719 and 69730. Therefore, we believed that the intensity of CPT code 69717 was more accurately described at our proposed work RVU of 7.91 based on a crosswalk to CPT code 46262. This code has nearly the same intraservice time of 45 minutes as CPT code 69717 and has a higher total time of 179 minutes; we agreed that CPT code 69717 is more intense than CPT code 46262 which was offset by our crosswalk code having an additional office visit in its global period.

We disagreed with the RUC's recommended work RVU of 7.50 for CPT code 69726 (*Removal, entire osseointegrated implant, skull; with percutaneous attachment to external speech processor*) and we instead proposed a work RVU of 6.36 based on a crosswalk to CPT code 67912 (*Correction of lagophthalmos, with implantation of upper eyelid lid load (e.g., gold weight)*). In reviewing CPT code 69726, we noted that the recommended intraservice time was increasing from 30 minutes to 35 minutes (17 percent increase), and the recommended total time was increasing from 148 minutes to 150 minutes (1 percent increase); however, the RUC-recommended work RVU was increasing from 5.93 to 7.50, which was an increase of just over 26 percent. Although we did not imply that the increase in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believed that since the two components of work are time and intensity, modest increases in time should be appropriately reflected in modest increases to work RVUs. In the case of CPT code 69726, we believed that it was more accurate to propose a work RVU of 6.36 based on a crosswalk

to CPT code 67912 to account for these increases in the surveyed work time.

We also disagree with the recommended work RVU of 7.50 because it resulted in an intensity which is anomalously high in relationship to the rest of the code family and created a rank order anomaly within the work RVUs. CPT code 69726 describes the percutaneous form of the removal procedure which should have the lowest intensity of all nine codes in this family. However, the intensity of CPT code 69726 at the recommended work RVU of 7.50 would be the second-highest in the family, even higher than CPT code 69730 which describes the revision/replacement procedure with magnetic transcatheter attachment resulting in removal of greater than or equal to 100 square mm surface area of bone. We did not agree that this would be typical and we believed that the intensity would be more accurate at our proposed work RVU of 6.36. We also noted that the recommended work RVU of 7.50 for CPT code 69726 creates a rank order anomaly within the family as it would be higher than the recommended work RVU of 7.38 for CPT code 69727 which describes a more complex procedure and has higher surveyed work times. Therefore, we believed that the work and intensity of CPT code 69726 were more accurately described at our proposed work RVU of 6.36 based on a crosswalk to CPT code 67912. This code has nearly the same intraservice time of 40 minutes as CPT code 69726 and has a higher total time of 166 minutes; we agreed that CPT code 69726 is more intense than CPT code 69726 which was offset by our crosswalk code having an additional office visit in its global period.

We proposed the direct PE inputs as recommended by the RUC for all nine codes in the Transcatheter Passive Implant-Temporal Bone family.

*Comment:* Several commenters disagreed with CMS' use of the current work RVUs and work times when reviewing the codes in the Transcatheter Passive Implant-Temporal Bone family. Commenters stated that CMS was comparing work RVUs and work times to an interim recommendation that was made interim due to a flawed survey process. Commenters stated that the RUC reviewed this family of services and determined that they needed to be resurveyed with a revised Reference Service List (RSL) to encompass a larger range of relative values, specifically to include the lower end of the RVU spectrum. Commenters stated that CMS should not use the interim recommendations as a base to arrive at

new work RVUs for the codes in this family.

*Response:* We disagree with the commenters that it was inappropriate to use the current work RVUs and work times that were active for CY 2022 when evaluating the codes in the Transcatheter Passive Implant-Temporal Bone family. As we stated earlier in the Methodology for Establishing Work RVUs portion of this section, we believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The work times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had been routinely overestimated, this would undermine the relativity of the work RVUs on the PFS in general, in light of the fact that codes are often valued based on comparisons to other codes with similar work times. Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times that have been used in PFS ratesetting are accurate. Even if the work RVUs and work RVUs for the codes in the Transcatheter Passive Implant-Temporal Bone family were recommended to CMS on an interim basis, they were used for payment throughout CY 2022 and are appropriately subject to comparisons when evaluating the updated recommendations for CY 2023. We also note that we proposed and finalized those interim work RVUs and work times as recommended by the RUC without refinement.

Furthermore, the use of older work RVUs and older work times that predate the interim recommendations from CY 2022 would not have changed the analysis that we performed indicating that several of the codes in the Transcatheter Passive Implant-Temporal Bone family were overvalued as recommended by the RUC. For example, CPT code 69714 previously had a work RVU of 14.45 and an intraservice work time of 90 minutes before its CY 2022 interim review. If we were to use these values as the basis for our review, the recommended intraservice time would decrease from 90 minutes to 30 minutes (67 percent reduction) however, the RUC-recommended work RVU would only decrease from 14.45 to 8.00, which is a reduction of just under 45 percent.

Regardless of whether the starting point of comparison is the interim CY 2022 values or the historic CY 2007 values, we continue to believe that several of the codes in this family are more accurately described using our proposed work RVUs.

*Comment:* Several commenters disagreed with the CMS proposed work RVU of 6.68 for CPT code 69714 and stated that CMS should instead finalize the RUC-recommended work RVU of 8.00. Commenters disagreed that the recommended intensity for CPT code 69714 was too high and stated that the code describes an intense and complex surgery on a highly sensitive sensory organ, operating in a small space where millimeters of difference lead to cerebrospinal fluid leak and intracranial vascular injury. Commenters disagreed with the CMS crosswalk to CPT code 38305 and stated that CPT code 69714 requires more physician work as it is a more intense service than CPT code 38305, which instead describes the less intense work of draining a lymph node abscess. Commenters also stated that CPT code 38305 was last reviewed 22 years ago and is not widely performed, and therefore, should not be used as a crosswalk code.

*Response:* We disagree with the commenters and continue to believe that the proposed work RVU of 6.68 is a more accurate choice for CPT code 69714. As we stated in the proposed rule, since the two components of work are time and intensity, decreases in time should typically be reflected in decreases to work RVUs. The survey for CPT code 69714 found that the typical intraservice time required to perform the procedure had significantly decreased (from both the historic and interim work time values) and we believe that this decrease in work time should be reflected in a corresponding decrease in the work RVU. Even if the decrease in work time was due to greater efficiencies in delivering the service, this decrease in work time should be reflected in the work RVU for the service in question.

We also disagree with the commenters and continue to believe that CPT code 38305 is an appropriate choice as a crosswalk for CPT code 69714. CPT code 38305 describes the extensive drainage of a lymph node abscess or lymphadenitis procedure; we stated in the proposed rule that we agreed that CPT code 69714 is more intense than CPT code 38305 which is offset by our crosswalk code having an additional office visit in its global period. We also emphasize that we continue to believe that the nature of the PFS relative value system is such that all services are

appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

We also disagreed with the recommended work RVU of 8.00 because it results in an intensity which is anomalously high in relationship to the rest of the code family. At the recommended work RVU of 8.00, the intensity of CPT code 69714 is increasing by nearly 50 percent as compared with the survey conducted last year (and by more than 60 percent as compared with the historic pre-interim survey intensity), and the resulting intensity of the service would be significantly higher than any of the other codes in the family. We do not agree that this intensity would be typical given that the percutaneous form of implant described by CPT code 69714 should have the lowest intensity of the three types described in this code family. The implantation procedure described by this code should also typically have lower intensity than the revision/replacement procedures elsewhere in the family. Aside from stating that CPT code 69714 describes an intense surgery and pointing out that it had a higher intensity than CPT code 69717 at the proposed work RVU, commenters did not respond to our analysis that the recommended work RVU of 8.00 resulted in an anomalously high intensity. As such, we continue to believe that the proposed work RVU of 6.68 for CPT code 69714 is a more accurate choice than the RUC-recommended work RVU of 8.00.

*Comment:* Several commenters disagreed with the CMS proposed work RVU of 7.91 for CPT code 69717 and stated that CMS should instead finalize the RUC-recommended work RVU of 8.48. Commenters stated that for the procedures described by CPT code 69717, the practitioner must work with a variety of delicate structures in a very small space just behind the ear which makes these procedures very intense and complex to perform. Commenters stated that the work per unit time as recommended by the RUC for CPT code 69717 was already lower than CPT codes 69719 and 69730. Commenters disagreed with the CMS crosswalk to CPT code 46262 and stated that CPT code 69717 requires more physician work than CPT code 46262. Commenters also stated that CPT code 46262 was last reviewed 22 years ago and is not widely performed, and

therefore, should not be used as a crosswalk code.

*Response:* We disagree with the commenters and continue to believe that the proposed work RVU of 7.91 is a more accurate choice for CPT code 69717. As we stated in the proposed rule, since the two components of work are time and intensity, decreases in time should typically be reflected in decreases to work RVUs. The survey for CPT code 69717 found that the typical intraservice time required to perform the procedure had significantly decreased (from both the historic and interim work time values) and we believe that this decrease in work time should be reflected in a corresponding decrease in the work RVU. Even if the decrease in work time was due to greater efficiencies in delivering the service, this decrease in work time should be reflected in the work RVU for the service in question.

We also disagree with the commenters and continue to believe that CPT code 46262 is an appropriate choice as a crosswalk for CPT code 69717. CPT code 46262 describes a hemorrhoidectomy with fistulectomy which requires a similar level of risk and complexity to the patient; we stated in the proposed rule that we agreed that CPT code 69717 is more intense than CPT code 46262 which is offset by our crosswalk code having an additional office visit in its global period. We also emphasize that we continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

We also disagreed with the recommended work RVU of 8.48 because it results in a higher intensity than the other two revision/replacement codes (CPT codes 69719 and 69730) in this family. CPT code 69717 describes the percutaneous form of implant which should have the lowest intensity of the three revision/replacement codes in this family, however at the recommended work RVU of 8.48 it would have the highest intensity of this group. While the intensity at the recommended work RVU for CPT code 69717 is nowhere near the anomalous nature of the intensity at the recommended work RVU for CPT code 69714, we still believe that the intensity would be more typical at the proposed work RVU of 7.91. Commenters stated that the work per unit time as recommended by the

RUC for CPT code 69717 was already lower than CPT codes 69719 and 69730 but otherwise did not respond to our discussion of the intensity of the code and how it related to the other revision/replacement codes in this family. As such, we continue to believe that the proposed work RVU of 7.91 for CPT code 69717 is a more accurate choice than the RUC-recommended work RVU of 8.48.

*Comment:* Several commenters disagreed with the CMS proposed work RVU of 6.36 for CPT code 69726 and stated that CMS should instead finalize the RUC-recommended work RVU of 7.50. Commenters stated that for CPT code 69726, the practitioner must work with a variety of delicate structures in a very small space just behind the ear which makes these procedures very intense and complex to perform. Commenters disagreed with the CMS crosswalk to CPT code 67912 and stated that CMS should not apply this crosswalk because CPT code 67912 is an infrequently performed service that has not been reviewed by the RUC or CMS in 20 years, has disparate times from the survey code, and typically involves less physician work.

*Response:* We disagree with the commenters and continue to believe that the proposed work RVU of 6.36 is a more accurate choice for CPT code 69726. As we stated in the proposed rule, since the two components of work are time and intensity, decreases in time should typically be reflected in decreases to work RVUs. The survey for CPT code 69726 found that the typical intraservice time required to perform the procedure had significantly decreased and we believe that this decrease in work time should be reflected in a corresponding decrease in the work RVU. Even if the decrease in work time was due to greater efficiencies in delivering the service, this decrease in work time should be reflected in the work RVU for the service in question.

We also disagree with the commenters and continue to believe that CPT code 67912 is an appropriate choice as a crosswalk for CPT code 69726. CPT code 67912 describes a correction of lagophthalmos, with implantation of upper eyelid lid load; we acknowledged in the proposed rule that the work times were not an exact match with CPT code 69726 but closely matched the intraservice and total times. We also stated in the proposed rule that we agreed that CPT code 69726 is more intense than CPT code 69726 which is offset by our crosswalk code having an additional office visit in its global period. We also emphasize that we

continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

We also disagreed with the recommended work RVU of 7.50 because it results in an intensity which is anomalously high in relationship to the rest of the code family and creates a rank order anomaly within the work RVUs. CPT code 69726 describes the percutaneous form of the removal procedure which should have the lowest intensity of all nine codes in this family. However, the intensity of CPT code 69726 at the recommended work RVU of 7.50 would be the second-highest in the family, even higher than CPT code 69730 which describes the revision/replacement procedure with magnetic transcatheter attachment resulting in removal of greater than or equal to 100 square mm surface area of bone. We did not agree that this would be typical and we believe that the intensity would be more accurate at our proposed work RVU of 6.36. We also noted in the proposed rule that the recommended work RVU of 7.50 for CPT code 69726 created a rank order anomaly within the family as it would be higher than the recommended work RVU of 7.38 for CPT code 69727 which describes a more complex procedure and has higher surveyed work times. Commenters did not respond to our discussion of the anomalously high intensity of CPT code 69727 at the recommended work RVU or explain why it should create a rank order anomaly within the family. As such, we continue to believe that the proposed work RVU of 6.36 for CPT code 69726 is a more accurate choice than the RUC-recommended work RVU of 7.50.

After consideration of the comments, we are finalizing the work RVUs for all nine codes in the Transcatheter Passive Implant-Temporal Bone family as proposed. We did not receive any comments on the direct PE inputs and we are also finalizing them as proposed.

(18) Contrast X-Ray of Knee Joint (CPT Code 73580)

CPT code 73580 (*Radiologic examination, knee, arthrography, radiological supervision and interpretation*) was first identified via the high-volume growth screen in 2008. In 2021, the Relativity Assessment Workgroup (RAW) noted that code

73580 was never surveyed and remains CMS/Other sourced, and recommended that it be surveyed. CPT code 73580 was then surveyed. We proposed the RUC-recommended work RVU of 0.59. We also proposed the RUC-recommended direct PE inputs without refinement.

We did not receive public comments on this proposal, and therefore, we are finalizing as proposed the RUC-recommended work RVU of 0.59 for CPT code 73580. We are finalizing as proposed the RUC-recommended direct PE inputs without refinement.

(19) 3D Rendering With Interpretation and Report (CPT Code 76377)

We nominated this code in the CY 2020 PFS final rule as potentially misvalued, stating that we believe it is of the same family as CPT code 76376 (*3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; not requiring image postprocessing on an independent workstation*), which was reviewed at the April 2018 RUC meeting. CMS requested that CPT code 76377 also be reviewed to maintain relativity within the code family (84 FR 62625). The specialty societies maintain that these services are more accurately viewed as separate code families. Furthermore, the RUC cites changes in technique and patient population as compelling evidence to maintain a physician work RVU of 0.79 despite a 5-minute recommended reduction in physician total time compared to the current physician time.

We proposed the RUC recommended work RVU of 0.79 for CPT code 76377; however, we reiterate that we continue to believe that CPT code 76376 and 76377 would be more appropriately viewed as belonging to the same code family and we request that they be surveyed together.

We proposed the RUC-recommended direct PE inputs without refinement.

We did not receive public comments on this proposal, and therefore, we are finalizing as proposed the RUC-recommended work RVU of 0.79 for CPT code 76377. We are finalizing as proposed the RUC-recommended direct PE inputs without refinement.

(20) Neuromuscular Ultrasound (CPT Codes 76881, 76882, and 76883)

Since their creation in 2011, CPT codes 76881 (*Ultrasound, complete joint (i.e., joint space and peri-articular soft-tissue structures), real-time with image documentation*) and 76882 (*Ultrasound, limited, joint or other nonvascular*

*extremity structure(s) (e.g., joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft-tissue mass[es]), real-time with image documentation*) have been reviewed numerous times as New Technology/New Services by the Relativity Assessment Workgroup (RAW). In October 2016, the RAW reviewed these codes and agreed with the specialty societies that the dominant specialties providing the complete (CPT code 76881) versus the limited (CPT code 76882) ultrasound of extremity services were different than originally thought, causing variation in the typical PE inputs. The RAW recommended referral to the Practice Expense Subcommittee for review of the direct PE inputs and the CPT Editorial Panel to clarify the introductory language regarding the reference to one joint in the complete ultrasound. The PE Subcommittee reviewed the direct PE inputs for CPT codes 76881 and 76882 and adjusted the clinical staff time at the January 2017 RUC meeting, and the CPT Editorial Panel editorially revised CPT codes 76881 and 76882 to clarify the distinction between complete and limited studies and revised the introductory guidelines to clarify reference to one joint in the complete ultrasound procedure in June 2017. In October 2021, the CPT Editorial Panel approved the addition of CPT code 76883 for reporting real-time, complete neuromuscular ultrasound of nerves and accompanying structures throughout their anatomic course, per extremity, and the revision of CPT code 76882 to add focal evaluation. CPT codes 76881 and 76882 were identified as part of the neuromuscular ultrasound code family with CPT code 76883 and surveyed for the January 2022 RUC meeting.

For CPT codes 76881, 76882, and 76883, we disagreed with the RUC-recommended work RVUs of 0.90, 0.69, and 1.21, respectively, as we believed they did not account for the surveyed time changes or appropriate comparisons for the new add-on code, CPT code 76883, and proposed a work RVU of 0.54 for CPT code 76881, a work RVU of 0.59 for CPT code 76882, and a work RVU of 0.99 for CPT code 76883.

CPT code 76881 represents a complete evaluation of a specific joint in an extremity. This service requires ultrasound examination of all the following joint elements: joint space (for example, effusion), peri-articular soft-tissue structures that surround the joint (that is, muscles, tendons, other soft-tissue structures), and any identifiable abnormality. In some circumstances, additional evaluations such as dynamic imaging or stress maneuvers may be

performed as part of the complete evaluation. The RUC recommended 5 minutes of pre-service time, 20 minutes of intraservice time, and 5 minutes of post-service time, based on the survey. The RUC discussed the 5-minute increase in intraservice time and determined that the increase relates to the change in the dominant specialty provider since the creation of the code, as previously there was 15 minutes of intraservice time for the radiologist to scan and/or review the sonographer-obtained images. Now, the rheumatologist is performing the scanning and it takes 20 minutes for the typical patient. For rheumatology, physicians typically scan the patients with portable ultrasound devices rather than utilizing sonographers as originally described in the 2010 survey. The RUC noted that this code is reported with an office E/M visit 58.9 percent and a non-facility office E/M visit 66.3 percent of the time; the RUC stated that CPT code 76881 is imaging-specific so the physician work described would not overlap with the E/M service, but we disagreed, as the descriptions of pre-service and post-service work directly overlap. The description of pre-service work for CPT code 76881 states “Review pertinent clinical information. Review any prior applicable imaging studies.” Pre-service work for CPT code 99214 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30–39 minutes of total time is spent on the date of the encounter.*), the most common E/M code reported with CPT code 76811, includes “Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit.” Post-service work of CPT code 76881 is described as “Discuss significant findings with the referring physician. Review and sign final report,” whereas the post-service work for CPT code 99214 includes “Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record, spending time to further refine the differential diagnosis, workup, or treatment plan as necessary. Coordinate care by discussing the case with other physicians and members of the health care team and write letters of referral if necessary. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates. Review and analyze interval testing results and refine the differential diagnosis,

workup, and treatment plan based on these results. Order additional testing based on these results. Communicate results and plan modifications with patient and/or family.” We believed there was overlap in pre-service and post-service work between the E/M visit and CPT code 76881, and therefore, we proposed 0 minutes for the pre-service and post-service time rather than the RUC-recommended 5 minutes of pre-service and post-service time. The proposed work RVU of 0.54 was the reverse building block valuation based on the removal of the 5 minutes of pre-service and post-service time, with a long-standing intensity of 0.0224 (10 minutes \* 0.0224 work/minute = 0.224 work RVUs). The proposed work RVU decrease as a result of the removal of pre-service and post-service time, and the increase of 5 minutes of intraservice time, while maintaining the same IWPUT of 0.027, as there was no discussed change in intensity. The specialty societies and the RUC asserted that there was an increase of 5 minutes as a result of the intraservice work changing due to a change in dominant specialty providing the service (from radiology to rheumatology), but did not present a change in intensity. We noted that the specialty societies used CPT code 76700 (*Ultrasound, abdominal, real time with image documentation; complete*) with a work RVU = 0.81, 11 minutes of intra-service time, and 21 minutes total time, as a reference code because it has identical pre- and post-service time but less intra-service time than the surveyed code and is a clinically similar ultrasound code. We noted that this is not an appropriate reference code as it is billed alone 72.8 percent of the time, and therefore, the valuation of CPT code 76700 accounts for pre- and post-service work that would not overlap with an E/M visit like we believed the pre- and post-service work did for CPT code 76881.

CPT code 76882 represents a limited evaluation of a joint or focal evaluation of a structure(s) in an extremity other than a joint (for example, soft-tissue mass, fluid collection, or nerve[s]). This evaluation includes assessment of a specific anatomic structure(s) (for example, joint space only [effusion] or tendon, muscle, and/or other soft-tissue structure[s] that surround the joint) that does not assess all the elements included in CPT code 76881, although it does include all surrounding anatomy and any associated pathology or contralateral comparison as indicated. The RUC discussed the four-minute increase in intraservice time and

determined that the increase relates to the change in dominant supplier of this service since the creation of the code, as there is currently 11 minutes of intraservice time that included scanning performed only by the podiatrist, and now the radiologist works with the sonographer to obtain and interpret the images in addition to the physician performing additional scanning as needed. Because radiologists no longer use portable ultrasound devices as originally described in the 2010 survey or in the 2017 PE update, the RUC and specialty societies assert that the physician work (time) has changed due to supervision of the sonographer in addition to the radiologist performing the scanning. The specialty societies and RUC also noted that ultrasound technology has evolved immensely since 2010, including proliferation of high-frequency ultrasound probes dedicated to musculoskeletal imaging, as well as producing images with higher fidelity and more detail, whereby the number and quality of images that can be reviewed and the pathology to evaluate have greatly increased since 2010. Therefore, the typical patient requires 15 minutes of intraservice time. While we agreed with the RUC that 15 minutes of intraservice time is warranted for CPT code 76882, we noted that there was no information indicating a change in intensity, and therefore, for CPT code 76882, we proposed the reverse building block work RVU of 0.59 to account for the 4-minute increase in intraservice time and the maintenance of the current IWPUT of 0.024.

We noted that commenters may raise concern about a potential rank order anomaly with the proposed work RVUs of 0.54 and 0.59 for CPT codes 76881 and 76882, respectively, but we noted that the IWPUT of each code adequately reflects the increased intensity of intraservice work for the complete ultrasound (CPT code 76881; IWPUT = 0.027) versus the limited/focal ultrasound (CPT code 76882; IWPUT = 0.024), and the lesser work RVU of 0.54 for CPT code 76881 stemmed from the removal of the presumed overlapping pre- and post-service time with the E/M visits that are typically performed. The RUC noted that consistency of intensity measures is demonstrated across the range of codes ascending from the limited code (CPT code 76881) to the new, most complex code (CPT code 76883). By proposing work RVUs that maintain the current IWPUTs, we maintained relativity both among the neuromuscular ultrasound family, as well as the larger family of ultrasound

imaging codes. We also noted that the difference between the RUC-recommended IWPUs and our proposed IWPUs for CPT codes 76881 and 76882 was the same, where CPT code 76882 had an IWPuT that is 0.003 less than the IWPuT of CPT code 76881.

CPT code 76883 will be available for CY 2023 to report real-time, complete neuromuscular ultrasound of nerves and accompanying structures throughout their anatomic course, per extremity. This code will entail examination of a nerve throughout its length, within one extremity, including evaluation of multiple areas for potential nerve compression, measurement of cross-sectional areas, evaluation of echogenicity, vascularity, mobility including dynamic maneuvers when indicated, evaluation for any associated muscular denervation, with comparison to unaffected muscles or nerves within that extremity as needed. CPT code 76883 also requires permanently recorded images and cine loop and a written report containing a description of each of the elements evaluated. The RUC recommended 7 minutes of pre-service time, 25 minutes of intra-service time and 7 minutes of post-service time as supported by the survey. The RUC clarified that this service would not typically be reported with an office E/M visit. The RUC arrived at a recommended work RVU of 1.21 by comparing the pre-, intra-, and post-service times to those of CPT code 76881, which we proposed to modify due to presumed overlapping work in the pre- and post-service time with E/M visits. When we compared the proposed times of 0 minutes of pre-service time, 20 minutes of intraservice time, and 0 minutes of post-service time, and a work RVU of 0.54 for CPT code 76881, and the proposed times of 7 minutes of pre-service time, 25 minutes of intraservice time, and 7 minutes of post-service time for CPT code 76883, we arrived at a reverse building block work RVU of 0.99.

For the direct PE inputs, we proposed to remove the 2 minutes of clinical labor time for CA006 (*Confirm availability of prior images/studies*), the 1 minute of clinical labor time for the CA007 (*Review patient clinical extant information and questionnaire*), and the 2 minutes for CA011 (*Provide education/obtain consent*) for CPT code 76881 because these RUC recommendations describe clinical labor activities that presumably overlapped with the E/M visit that is typically billed with CPT code 76881. We proposed the direct PE inputs as recommended by the RUC for CPT codes 76882 and 76883.

We received several comments regarding our proposed work RVUs, pre- and post-service time, and direct PE input refinements for CPT codes 76881, 76882, and 76883 in response to the CY 2023 PFS proposed rule and those comments are summarized below.

**Comment:** Some commenters stated that the pre- and post-service work of CPT code 76881 should not be removed simply because it may be billed in conjunction with an E/M code. One commenter stated that if a rheumatologist decides to order the more expensive MRI instead of performing an ultrasound, the pre- and post- ordering time is quick, whereas, for musculoskeletal ultrasound (MSKU), the pre-service time includes detailed review of other studies and discussion with the patient that are not normally included as part of the E/M visit. The post-service work includes labelling, storing, documenting the results. The commenter stated that none of this would be part of the normal E/M coding for a visit. Another commenter stated that the physician work associated with an E/M visit is separate and distinct from the physician work associated with the imaging services reported by CPT code 76882. Furthermore, the commenter asserted that the E/M visit and ultrasound require different cognitive and technical skills by the rendering physician. When these services are performed in the same encounter, the physician work is neither overlapping nor duplicative, and should be separately accounted for.

**Response:** After review of the commenters' statements, CPT code 76881's pre- and post-service descriptions, and similar imaging codes that are typically reported with an E/M visit which allow for pre- and post-service time, we agree with the commenters' assertion that the 5 minutes of pre- and post-service time is appropriate for CPT code 76881. We also agree that, while the service descriptions of the E/M visit and CPT code 76881 may match, CPT code 76881's activities likely reflect image-specific activities that do not overlap with the E/M visit's activities; therefore, we are finalizing physician work time as the RUC recommended, with 5 minutes of pre-service evaluation time and 5 minutes of immediate post-service time.

**Comment:** Some commenters stated that these CPT codes are typically furnished by rheumatologists with the following direct PE inputs: (1) expensive, high quality, high frequency ultrasound machines with power Doppler capability rather than an inexpensive, handheld/portable device as included in the direct PE inputs; (2)

a sonographer specially trained in MSKU rather than a physician or a standard x-ray technician as included in the direct PE inputs; and (3) a dedicated exam/imaging room in which to perform this service. One commenter submitted responses and synthesized conclusions from a limited survey of direct PE inputs typical of rheumatologists. More commenters noted that the RUC decided to reduce the PE portion of the technical component of CPT code 76881 by over 90 percent, phased in over time. The commenters continued by stating that there is another proposed decrease to 0.27 PE RVUs for CY 2023 based on a flawed assumption regarding the type of ultrasound services provided in the non-facility setting. The commenters stated that many clinics maintain and use a dedicated ultrasound room, a non-portable ultrasound room and a PACS system, as well as two dedicated sonographers. The commenters stated that even practices that use portable ultrasound units will utilize a dedicated ultrasound room and PACS system, and employ, or contract the services of, a sonographer or other highly trained, typically highly credentialed, clinical staff. One commenter stated that the January 2022 RUC recommendations indicate rheumatology as the dominant specialty in the non-facility setting, but they incorrectly assumed that portable ultrasound is the typical equipment used by rheumatologists. This commenter stated that, of the 88 providers who submitted surveys for CPT code 76881 or the 100 providers that submitted surveys for CPT code 76882, no information was provided regarding the level of rheumatologists' input, and therefore, the commenter asserted that there is no way of knowing if rheumatologists were appropriately queried, despite the acknowledgement that they are the dominant specialty for CPT code 76881. This commenter submitted an attachment that claims that the dedicated medical sonographer's labor cost per hour is \$47.50 and that they spent \$80,017.24 on ultrasound technology and \$3,003.00 in maintenance of the ultrasound technology per year. Another commenter stated that rheumatology was not part of the PE survey in 2017 and none of the RUC members who sat on the PE subcommittee in 2017 performed MSKU in their offices at the time of the survey. The commenter stated that we stated that the "transition period [to phase in the cuts year over year as finalized for CY 2018] would allow us to obtain more stakeholder input on the appropriate PE inputs and specialty assumptions for these

services,” and that we expected to consider this for future rulemaking. The commenter noted that their comments on the CY 2019 PFS proposed rule were deemed out of scope and that no further action was taken to obtain PE values.

*Response:* We appreciate the commenters’ survey collection efforts to reflect rheumatologists’ costs in performing CPT codes 76881, 76882, and 76883, and the concern regarding the accounting of rheumatologists’ typical clinical labor and equipment in the January 2022 RUC recommendations. We share the commenters’ concerns that the recommended PE inputs may not fit within the family of services as currently valued given concerns raised by commenters. In consideration of commenters’ concerns and survey data, including early feedback on how the PE inputs for these services may not be reflective of what will be considered typical in how these services may be furnished, we encourage the RUC and other interested parties to reconsider the PE inputs of the neuromuscular ultrasound family, including the new code, in the near term.

We note that we did not make any proposals related to CPT codes 76881 or 76882 in the CY 2019 PFS proposed rule, therefore the comments were appropriately deemed out of scope at that time, and at that time, rheumatology was not the dominant specialty, therefore, we would have considered PE inputs of the dominant specialty to be typical when performing these CPT codes at that time. We encourage the commenters to coordinate with the RUC to provide the survey data to facilitate a reconsideration of PE inputs given the shift in dominant specialty and recent changes that were made by the RUC PE Subcommittee.

Because the RUC has standardized procedures for PE and physician surveys, and the fact that the surveyors’ results differ so drastically from the RUC recommendations, we encourage the RUC and other interested parties to reconsider the PE inputs of the neuromuscular ultrasound family, which we would consider in future rulemaking if submitted. While the submission of the survey data is appreciated, we note that no invoices were submitted, and therefore, we encourage collaboration with the RUC PE subcommittee and the submission of specific invoices to support the surveys’ results and robust data to show the typicality of these PE inputs.

*Comment:* One commenter asserted that they utilize a dedicated diagnostic medical sonographer with specific musculoskeletal training, high quality

machines that cost around \$40 thousand each (based on a recent purchase of a GE LOGIQ™ E ultrasound machine for a Veteran Affairs Hospital that cost \$44,110 after a government discount), and a dedicated ultrasound scanning room due to patient draping requirements and machine optimization.

*Response:* We appreciate the commenters’ input regarding CPT codes 76881, 76882, and 76883. We encourage the RUC and other interested parties to reconsider the PE inputs of the neuromuscular ultrasound family, as they differ significantly from the RUC recommended direct PE inputs as submitted for the CY 2023 PFS proposed rule. After a reconsideration by the RUC and interested parties regarding the PE inputs, we would be interested in engaging with interested parties to obtain invoices to support accurate pricing for PE inputs that may be altered for this family of codes.

*Comment:* Many commenters urged CMS to pause all proposed reductions to CPT codes 76881 and 76882 to allow collaboration between the RUC and interested parties’ on how rheumatologists currently utilize or plan to utilize MSKU since the rheumatology community has never been surveyed by the RUC on their typical PE investments in their ultrasound programs. Commenters stated that rheumatologists were not included in the 2017 survey when PE cuts were recommended by the RUC and finalized for CY 2018.

*Response:* We believe it is imperative that the RUC and interested parties reconsider the PE inputs for CPT codes 76881, 76882, and 76883 in the near term, as commenters have submitted survey responses that differ significantly from the RUC recommended direct PE inputs. There are also significant discrepancies between the RUC assumption that rheumatologists typically scan patients themselves, versus varying commenters agreeing with this assumption, and some arguing that rheumatologists utilize a highly trained sonographer to scan patients. There are also significant commenter and RUC discrepancies regarding typical equipment used for these CPT codes. We note that in the CY 2018 PFS final rule (82 FR 53058 through 53059), we sought comment on whether a portable ultrasound unit would be a more accurate PE input for CPT codes 76881 and 76882, given that the dominant specialty for both of these services was podiatry based on available 2016 Medicare claims data. At that time, we did not finalize our proposal to include an ultrasound room, and instead finalized the RUC recommended

equipment, with the exception of the ultrasound room, which we replaced with a portable ultrasound unit based on the RUC’s determination, as expressed through its recommendations for CY 2018, that a portable unit is the equipment type that is typical for podiatry, which was the dominant specialty furnishing CPT code 76882 at the time. Commenters disagreed with our proposals and RUC recommendations, stating that the shift of PE from CPT code 76881 to CPT code 76882 was based on inaccurate assumptions regarding the typical equipment used in furnishing these services. These commenters noted that the equipment used to furnish the two procedures is identical and that the RUC-recommended direct PE inputs for CPT code 76881, which were developed based on the assumption that the dominant specialty furnishing the service is podiatry, do not reflect the equipment inputs utilized by rheumatologists such as an ultrasound room and PACS workstation. Given the changes in dominant specialty for these CPT codes from 2010 to 2017, and again from 2017 to 2022, we recommend that the RUC and interested parties reconsider the PE inputs for each code based on the dominant specialty for each CPT code, based on the most recent year’s Medicare claims data, and consideration of survey responses submitted to CMS in response to the CY 2023 PFS proposed rule.

*Comment:* Many commenters expressed the importance of MSKU in controlling the prescribing of expensive biologic medications, streamlining patient care, reducing delays in patient care that result from scheduling alternative imaging tests (not on the initial encounter) and subsequent follow up visits to act on the tests results, and obtaining sensitive, safe non-traumatic images for pediatric patients. Commenters stated that MSKU benefits patients and families by allowing them to see their anatomy in real time, which aids the patients’ confidence in their physician and diagnosis. Commenters also stated that MSKU aids minorities and underserved areas where access to MSKU extends the ability to care for patients who may otherwise not be able to travel for MRI or CT services due to cost or additional time required to schedule and attend subsequent visits for the imaging and follow up, which can extend the time to initiate treatment by months.

*Response:* We appreciate the commenters’ input on the value of CPT codes 76881, 76882, and 76883, and agree with the commenters that these services play an integral part in high

quality, cost effective, expedient imaging, diagnosis, and care for a variety of patient populations. For this reason, we believe it is imperative that the RUC and interested parties reconsider the PE inputs for CPT codes 76881, 76882, and 76883 in the near term.

In order to maintain relativity among this family of codes after being compelled by the commenters' assertion that the pre- and post-service time for CPT code 76881 does not overlap with an E/M visit, and finalizing the RUC-recommended work RVU and PE inputs for CPT code 76881, we are also finalizing the RUC recommended work RVUs and PE inputs for CPT codes 76882 and 76883. Therefore, for CPT codes 76881, 76882, and 76883, we are finalizing work RVUs of 0.90, 0.69, and 1.21, respectively. As mentioned above, we are finalizing 5 minutes of pre-service evaluation time and 5 minutes of immediate post-service time for CPT code 76881. Similarly, we are finalizing the inclusion of 2 minutes of clinical labor time for CA006 (*Confirm availability of prior images/studies*), 1 minute of clinical labor time for the CA007 (*Review patient clinical extant information and questionnaire*), and 2 minutes for CA011 (*Provide education/obtain consent*) for CPT code 76881 for the direct PE inputs, as recommended by the RUC, because we are compelled by the commenters' assertion that these activities are imaging-specific and do not overlap with an E/M visit. We are finalizing the direct PE inputs as recommended by the RUC for CPT codes 76882 and 76883, as proposed. We reiterate our recommendation that the RUC and interested parties reconsider the PE inputs in the near term. We also remind interested parties that we have established an annual process for the public nomination of potentially misvalued codes. This process provides an annual means for those who believe that values for individual services are inaccurate and should be readdressed through notice and comment rulemaking to bring those codes to our attention, as detailed in section II.C. of this final rule. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. While this process is available to interested parties, we encourage the RUC and other interested parties to reconsider the PE inputs of the neuromuscular ultrasound family as a whole, including the new code, in the near term, as we have already reviewed

comments for this final rule and survey data that may indicate that the PE inputs for these services may not be reflective of what will be considered typical in how these services may be furnished.

(21) Immunization Administration (CPT Codes 90460, 90461, 90471, 90472, 90473, and 90474)

Especially in the context of the current PHE for COVID-19, it is evident that consistent beneficiary access to vaccinations is vital to public health. As discussed in the CY 2021 PFS proposed rule (85 CFR 50162), many interested parties raised concerns about the reductions in payment rates for the preventive vaccine administration services that had occurred over the past several years. The codes for immunization administration services include CPT codes 90460, 90471, and 90473, as well as the three Healthcare Common Procedural Coding System (HCPCS) codes that describe the services to administer the Part B preventive vaccinations other than the COVID-19 vaccine: G0008 (influenza), G0009 (pneumococcal), and G0010 (HBV). Until CY 2019, we generally had established payment rates for these immunization administration services based on a direct crosswalk to the PFS payment rate for CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*). Because we proposed and finalized reductions in valuation for the crosswalk code for CY 2018, and because the reductions in overall valuation for that code have been subject to the multi-year phase-in of significant reductions in RVUs, the payment rate for these vaccine administration codes has been concurrently reduced. Further, because the reduction in RVUs for the crosswalk code, CPT code 96372, was significant enough to be required to be phased in over several years under section 1848(c)(7) of the Act, the reductions in overall valuation for the vaccine administration codes were likewise subject to reductions over several years. As we noted in Table 21 of the CY 2022 PFS proposed rule (86 FR 39222), the national payment rate for administering these preventive vaccines has declined more than 30 percent since 2015.

We have attempted to address the reduction in payment rates for the Part B preventive vaccine administration HCPCS G-codes in the last three PFS rulemaking cycles. In the CY 2020 PFS final rule, we acknowledged that it is in the public interest to ensure appropriate resource costs are reflected in the

valuation of the immunization administration services that are used to deliver these vaccines, and noted that we planned to review the valuations for these services in future rulemaking. For CY 2020, we maintained the CY 2019 national payment amount for immunization administration services described by HCPCS codes G0008, G0009 and G0010 (84 FR 62798).

In the CY 2021 PFS proposed rule, we proposed to crosswalk CPT codes 90460, 90471, and 90473, as well as HCPCS codes G0008, G0009 and G0010 to CPT code 36000 (*Introduction of needle or intracatheter, vein*) (85 FR 50163). In the proposed rule, we noted that CPT code 36000 is a service with a similar clinical vignette, and that the additional clinical labor, supply, and equipment resources associated with furnishing CPT code 36000 were similar to costs associated with these vaccine administration codes. We also noted that this crosswalk would have resulted in a payment rate for vaccine administration services that is approximately the same as the CY 2017 rate that was in place prior to the revaluation of CPT code 96372 (the original crosswalk code). In the CY 2021 PFS final rule, we did not finalize the proposed policy, and instead finalized a policy to maintain the CY 2019 payment amount for CPT codes 90460–90474, as well as HCPCS codes G0008, G0009 and G0010 (85 FR 84628). In the final rule, we also noted that we continued to seek additional information that specifically identifies the resource costs and inputs that should be considered to establish payment for vaccine administration services on a long-term basis.

For the CY 2022 rulemaking cycle, we requested feedback from interested parties that would support the development of an accurate and stable payment rate for administration of the preventive vaccines described in section 1861(s)(10) of the Act (influenza, pneumococcal, HBV, and COVID-19) for physicians, NPPs, mass immunizers and certain other providers and suppliers. We invited commenters to submit their detailed feedback to a series of questions and requests that we believed would assist us in establishing payment rates for these services that could be appropriate for use on a long-term basis; we direct readers to the full discussion of this topic in the CY 2022 PFS final rule (86 FR 65179 through 65193). For CY 2022, we finalized a uniform payment rate of \$30 for the administration of an influenza, pneumococcal or HBV vaccine covered under the Medicare Part B preventive vaccine benefit at section 1861(s)(10) of the Act. We explained that since the

administration of the preventive vaccines described under section 1861(s)(10) of the Act is not included within the statutory definition of physicians' services, the payment rates we established for these services in the CY 2022 PFS final rule are independent of the PFS, and will be updated as necessary independently of the valuation of any specific codes under the PFS (86 FR 65186). We discuss the current payment policy for administration of preventive vaccines and our proposals for CY 2023 in section II.H. of this final rule.

We note that as we considered payment policies to ensure adequate access to the Part B preventive vaccines, including consideration of resource costs, the RUC surveyed and reviewed CPT codes 90460–90474 at the April 2021 meeting and submitted recommendations to CMS for our consideration in the CY 2023 rulemaking cycle.

We proposed the RUC-recommended work RVU for all six codes in the Immunization Administration family. We proposed a work RVU of 0.24 for CPT code 90460 (*Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered*), a work RVU of 0.18 for CPT code 90461 (*Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine or toxoid component administered*), a work RVU of 0.17 for CPT code 90471 (*Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)*), a work RVU of 0.15 for CPT code 90472 (*Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); each additional vaccine (single or combination vaccine/toxoid)*), a work RVU of 0.17 for CPT code 90473 (*Immunization administration by intranasal or oral route; 1 vaccine (single or combination vaccine/toxoid)*), and a work RVU of 0.15 for CPT code 90474 (*Immunization administration by intranasal or oral route; each additional vaccine (single or combination vaccine/toxoid)*).

For the direct PE inputs, we proposed to remove 1 minute of clinical labor time for the CA008 (*Perform regulatory mandated quality assurance activity (pre-service)*) activity for CPT codes 90460 and 90471–90474. The RUC

recommendations describe these activities as “Checking historical and current temperatures for vaccine refrigerator; recording temperatures; reporting temperatures; vaccine inventorying; ordering vaccines; completing required Vaccines for Children (VFC) paperwork; receiving vaccines; inspecting/logging vaccines and putting them in the vaccine refrigerator; creating lot numbers in EHR.” Checking refrigerator temperatures, vaccine inventorying, and filling out vaccine paperwork are administrative tasks which are not individually allocable to a particular patient for a particular service. We removed this 1 minute of clinical labor time as these administrative tasks are forms of indirect PE. We also refined the equipment times for CPT codes 90460 and 90471–90474 to conform to our established policies for non-highly technical equipment.

In consideration of the information provided in the recommendation for these services, we proposed the RUC's recommended work RVUs and direct PE inputs (with minor refinements) for these vaccine administration services. However, we continue to seek additional information from commenters that specifically identifies the resource costs and inputs that should be considered to establish payment for these vaccine administration services on a long-term basis, consistent with our policy objectives for ensuring maximum access to immunization services.

*Comment:* Many commenters stated that they supported the proposal of the RUC-recommended work RVUs for all six codes in the Immunization Administration family.

*Response:* We appreciate the support for our proposed work RVUs from the commenters.

*Comment:* A commenter stated that they supported the proposal of the RUC-recommended work RVUs and thanked CMS for its emphasis on the importance and value of vaccines. The commenter also stated that CMS should adopt a site-neutral approach for all Part B vaccines and apply the OPPS payment rate in all sites of service. The commenter stated that the vaccine administration service is remarkably similar across all of the intramuscular injected Part B vaccines; the commenter stated that it is essentially the same service regardless of the type of vaccine, across all of the various sites of service and that the infrastructure and necessary supplies and staff are fundamentally the same regardless of where a vaccine is administered. The commenter stated that annual updates

to the vaccine administration payment rates based on OPPS claims data is a reliable and data-based method for updating the payment rate which would prevent the issues that have occurred in the past with the crosswalk to CPT code 96372.

*Response:* We appreciate the support for our proposed work RVUs from the commenter. We did not propose and we are not finalizing the OPPS payment rates for the Immunization Administration codes as we do not have data at the moment that indicates these services are identical regardless of the site of service and type of provider. We note for the commenter that we proposed work RVUs and direct PE inputs for the Immunization Administration codes to ensure that they would be resource-based and not dependent on crosswalks to other CPT codes for valuation.

*Comment:* One commenter disagreed with the proposed valuation of the Immunization Administration codes and stated that the proposed payment rates were insufficient to cover the resource costs associated with providing these services. The commenter stated that the RUC methodology does not result in adequate payment rates for these vaccine administration services and requested that CMS assign the \$30 Part B vaccine administration payment rate to the Part D vaccine administration services as well. The commenter stated that there was no policy rationale for a large difference in payment rates between the proposed Part B vaccine administration payment rate and the proposed payments rates for the Part D vaccine administration services and requested that CMS finalize a payment of \$30 for CPT codes 90460, 90461, 90471, 90472, 90473, and 90474.

*Response:* We disagree with the commenter that the RUC methodology used to value the Immunization Administration codes does not result in adequate payment rates for these services. We remind the commenter that under Medicare Part B, the statute requires CMS to value physician services using a resource-based system based on the time and intensity of the services involved. (See section 1848(c)(1)(A) of the Act.) We believe that the RUC recommended values for these codes, with minor refinements to the direct PE inputs to conform with our standard equipment time methodology, are reasonable and will establish resource-based payments for these services as required by the statute.

*Comment:* Several commenters disagreed with the proposal to remove 1 minute of clinical labor time for the CA008 (*Perform regulatory mandated*

quality assurance activity (pre-service) activity for CPT codes 90460 and 90471–90474 as a form of indirect PE. Commenters stated that clinical staff immunization confirmation protocols have changed since the Immunization Administration codes were last valued due to the explosion in the number of new vaccines introduced since 2009. Commenters stated that practitioners typically give orders for the antigen but not the particular brand and presentation, and determining which of these vaccine products to use is a clinical staff decision based on the patient's age and vaccination history and potentially complicated by restrictions. Commenters stated that some vaccines have different dosing requirements based on age, and that while in some cases it is acceptable to use the alternative brand in stock if the original brand is not known, in other cases using only the brand from the original dose is acceptable. Commenters stated that each time a vaccine is administered clinical staff must follow these immunization confirmation protocols, and therefore, the commenters believe that these clinical staff activities are appropriately attributed to direct PE.

*Response:* We appreciate the additional information provided by the commenters describing the decisions that the clinical staff must make when carrying out these regulatory mandated quality assurance activities. Based on this additional information, we agree that these quality assurance activities constitute a form of clinical judgment that is individually allocable to the Immunization Administrative services as a form of direct PE. We are therefore not finalizing our proposal and will restore the 1 minute of clinical labor time for the CA008 activity for CPT codes 90460 and 90471–90474.

*Comment:* Several commenters disagreed with the proposal to refine the equipment times for CPT codes 90460 and 90471–90474 to conform to the established CMS policies for non-highly technical equipment. Commenters stated that in February 2008, the RUC recommended and CMS finalized the use of total clinical staff time as the time of medical equipment use for the service of vaccine administration. Commenters stated that this established an exemption specific to the service of vaccine administration and that CMS should finalize the RUC's equipment time recommendations for each piece of medical equipment as established by this 2008 exemption.

*Response:* We disagree with the commenters and continue to believe that the equipment times for CPT codes

90460 and 90471–90474 should conform to the established policies for non-highly technical equipment. While the commenters are correct that we finalized the RUC-recommended direct PE inputs for these codes in the CY 2009 PFS final rule (73 FR 69736), we did not establish an exemption to the standard equipment times for the Immunization Administration codes. We did not apply the established policies for non-highly technical equipment during our CY 2009 review of these codes solely because those established policies had not been developed yet; the higher equipment times for CPT codes 90460 and 90471–90474 are an artifact of the age of their last review date, not an exemption to our standard policies. As we have noted with regards to the standardization of clinical labor tasks, we believe that setting and maintaining standard equipment time formulas helps provide greater consistency among codes and improves relativity across the wider fee schedule. Updating older equipment times and bringing them into accordance with the established equipment time formulas is a standard part of our review process and the Immunization Administration codes are no exception to that rule. We continue to believe that the equipment times for CPT codes 90460 and 90471–90474 should conform to the established policies for non-highly technical equipment in order to maintain relativity between codes.

After consideration of the comments, we are finalizing the work RVUs inputs for all six codes in the Immunization Administration family as proposed. We are finalizing the direct PE inputs as proposed aside from restoring 1 minute of clinical labor time for the CA008 activity for CPT codes 90460 and 90471–90474 as described above.

#### (22) Orthoptic Training (CPT Codes 92065 and 92066)

In October 2019, the RUC identified CPT code 92065 (*Orthoptic and/or pleoptic training, with continuing medical direction and evaluation; performed by a physician or other qualified health care professional*) as needing review because it was Harvard Valued (that is, the value of the code had not been reviewed since the implementation of the Resource-Based Relative Value Scale (RBRVS)) and its utilization surpassed 30,000 in each of several recent years. At its January 2020 meeting, during review of CPT code 92065, the RUC noted that the use of “and/or” in the descriptor defined different patient populations and treatment techniques and recommended that the code be reviewed by the CPT

Editorial Panel (CPT) in order to create two separate codes. Additionally, based upon review and analysis of survey data, specialty societies decided to submit a new code change application for the February 2021 CPT meeting.

During the February 2021 meeting, CPT noted that the services of CPT code 92065 are delivered in two different ways: directly by the practitioner and by a technician under the supervision of the practitioner. In response to this observation, CPT suggested that two codes be created to identify who furnishes the orthoptic service. Identifying in the code descriptor who furnishes the services would ensure more accurate valuation of both the work and the PE associated with the service. The CPT formally revised code 92065 and created new CPT code 92066 to describe orthoptic services furnished under the supervision of a physician or qualified health care professional.

During its April 2021 meeting, the RUC revalued the work associated with the services of CPT code 92065 (*Orthoptic training; performed by a physician or other qualified health care professional*) and valued the PE inputs for new CPT code 92066 (*Orthoptic training; performed by a physician or other qualified health care professional under supervision of a physician or other qualified health care professional*). CPT code 92066 is valued as a PE-only code.

After reviewing CPT code 92065, we proposed to accept the RUC-recommended work RVU of 0.71. We also proposed to accept the RUC-recommended direct PE inputs for CPT code 92065. We proposed to accept the RUC-recommended direct PE inputs for CPT code 92066 as well.

*Comment:* We received a few comments in response to our proposals for CPT codes 92065 and 92066. Commenters expressed support of our proposal to accept the RUC-recommended work RVUs and the direct PE inputs adjustments.

*Response:* We thank commenters for taking time to submit their support of the RUC-recommendations for CPT codes 92065 and 92066.

We are finalizing the RUC-recommended work RVU of 0.71 for CPT codes 92065 and the RUC-recommended direct PE inputs for both CPT codes 92065 and 92066.

#### (23) Dark Adaptation Eye Exam (CPT Code 92284)

CPT code 92284 (*Dark adaptation examination with interpretation and report*) was identified in July 2020 as Harvard Valued with a utilization of over 30,000 claims. In January 2021, the

RUC recommended that the code be surveyed for the April 2021 RUC meeting. The RUC reviewed the survey results for the procedure and noted that the 25th percentile work value of 0.45 was greater than the code's current value. The RUC recommended a work RVU of 0.14, based on a direct work RVU crosswalk from CPT code 76514 (*Ophthalmic ultrasound, diagnostic; corneal pachymetry, unilateral or bilateral (determination of corneal thickness)*). We disagreed with the RUC-recommended work RVU of 0.14 for CPT code 92284. We found that the recommended work RVU did not adequately reflect reductions in physician time, since this diagnostic screening is usually completed during an E/M visit and largely consists of interpreting machine generated results. Instead, we proposed a work RVU of 0.00 for CPT code 92284, which is comparable to other ophthalmic screening tests; such as 99172 (*Visual function screening, automated or semi-automated bilateral quantitative determination of visual acuity, ocular alignment, color vision by pseudoisochromatic plates, and field of vision (may include all or some screening of the determination[s] for contrast sensitivity, vision under glare)*) and 99173 (*Screening test of visual acuity, quantitative, bilateral*). Alternatively, we considered using a total-time methodology with a work RVU of 0.03 and a reverse building block methodology with a work RVU of 0.06. We solicited comments and requested information that may inform why CPT code 92284 should include additional valuation as this procedure is included in an E/M visit.

For the direct PE inputs, we proposed to refine the equipment time for the lens set (EQ165) from 24 minutes to 15 minutes and motorized table (EF030) from 24 minutes to 15 minutes. The reduction in time for both equipment types is proposed to match the RUC-recommended 15 minutes in Clinical Activity Code CA021. We solicited public comment to provide further rationale for the additional 9 minutes recommended.

We received a few comments regarding our proposed work RVUs and direct PE inputs for CPT code 92284 in response to the CY 2023 PFS proposed rule and those comments are summarized below.

**Comment:** Commenters disagreed with the comparison to CPT codes 99172 and 99173, stating that these reference codes assume there is no physician work involved with the service, and therefore, do not serve as appropriate clinical comparisons to the

surveyed CPT code 92284. Instead, these commenters agree with the RUC-recommended crosswalk to CPT code 76514 as a closer clinical comparison, based on work RVU, intra-service time, and intensity of physician/optometrist work involved with this service.

Commenters did not support the proposed alternative methodologies, stating that the total-time and reverse building block methodologies do not appropriately value the physician work and total time required in CPT code 92284. In addition, the commenters stated that use of these alternative methodologies would mean that we are choosing an inconsistent combination of inputs to apply, and that this selection process has the appearance of seeking an arbitrary value from the vast array of possible mathematical calculations, rather than seeking a valid, clinically relevant relationship that would preserve relativity.

One commenter acknowledged that we noted the physician work largely consists of interpreting machine-generated results, stating that they agreed with the RUC-recommended intraservice time of 3 minutes, which was a reduction from the surveyed intraservice time of 15 minutes. The commenter noted that this represents a change in technology which allows technicians to administer the test, a change with which most survey respondents were not familiar. Another commenter asked that we consider upholding the RUC recommendations for all CPT codes covered in this rule, especially CPT code 92284.

**Response:** We disagree with commenters and continue to believe that CPT codes 99172 and 99173 are appropriate comparator codes for CPT code 92284. These reference codes also account for the screening nature of CPT code 92284, which is usually performed in conjunction with an E/M visit that accounts for the physician work. We continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

We also clarify for the commenters that our review process is not arbitrary in nature and includes a variety of methodologies and approaches used to develop work RVUs, including the use of building block and total-time methodologies. Our reviews of recommended work RVUs and time

inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data.

When considering the intraservice time, we do not agree with the commenter, and continue to believe that complex work is not performed to analyze the machine generated results. In our review, we focus on evaluating and addressing the time and intensity of services, but we are under no obligation to adopt the same review process or compelling evidence criteria as the RUC. While the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique. We also have reason to believe that the new technology has led to greater efficiencies in the service which, under the resource-based nature of the RVU system, lends further support for a reduction in the work RVU.

**Comment:** Commenters urged CMS to accept the RUC-recommended direct PE inputs for CPT code 92284 and provided additional rationale to explain the additional 9 minutes of equipment time for the lens set (EQ165) and motorized table (EF030). Commenters stated that in addition to the 15 minutes that the equipment is in use during performance of the test, there is an additional 9 minutes of clinical activities where the equipment is unavailable for use with another patient. These activities all occur in the room with the testing equipment, lens set, and table.

**Response:** We appreciate the additional information provided by the commenters to clarify the equipment time. We are persuaded by the comments that explained the standard default equipment formula was used and RUC PE direct input benchmarks for clinical staff time were used for CA011, CA013, CA014, and CA024, which results in 24 minutes when combined with the 15 minutes of CA021. Therefore, we are not finalizing our proposed refinement to the equipment time for the lens set (EQ165) and motorized table (EF030), and will finalize the RUC-recommended time of 24 minutes.

After careful consideration of the public comments, we are finalizing a work RVU of 0.00 for CPT code 92284 as proposed. For the direct PE inputs,

we are not finalizing our proposed refinements to the equipment time and are instead finalizing the RUC-recommended direct PE inputs for CPT code 92284.

(24) Anterior Segment Imaging (CPT Code 92287)

For CPT code 92287 (*Anterior segment imaging with interpretation and report; with fluorescein angiography*), we proposed the RUC-recommended work RVU of 0.40.

We proposed the RUC-recommended direct PE inputs for CPT code 92287 without refinement.

*Comment:* Commenters supported our proposed valuation for CPT code 92287.

*Response:* We acknowledge and appreciate the support.

After consideration of the public comments, we are finalizing the RUC-recommended work RVU of 0.40 and the RUC-recommended direct PE inputs for CPT code 92287 as proposed.

(25) External Extended ECG Monitoring (CPT Codes 93241, 93242, 93243, 93244, 93245, 93246, 93247, and 93248)

In the CY 2021 PFS proposed rule (85 FR 50164), we proposed to adopt the RUC's work RVU recommendations for CPT codes 93241 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation*), 93242 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; recording (includes connection and initial recording)*), 93243 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; scanning analysis with report*), 93244 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; review and interpretation*), 93245 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation*), 93246 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; recording (includes connection and initial recording)*), 93247 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; scanning analysis with report*), and 93248 (*External electrocardiographic recording for more than 7 days up to 15 days by*

*continuous rhythm recording and storage; review and interpretation*).

We noted that the recommendations for this family of codes contained one new supply item, the "extended external ECG patch, medical magnetic tape recorder" (SD339). We did not receive a traditional invoice to establish a price for this supply item. Instead, we received pricing information from two sources: a weighted median of claims data with the cost of the other direct PE inputs removed, and a top-down approach calculating the cost of the supply per service based on summing the total costs of the health care provider and dividing by the total number of tests furnished. The former methodology yielded a supply price of approximately \$440 while the latter methodology produced an estimated supply price of \$416.85. Interested parties also submitted a series of invoices from the clinical study marketplace with a price of \$595, which we rejected as we typically require an invoice representative of commercial market pricing to establish a national price for a new supply or equipment item.

After consideration of the information, we proposed to employ a crosswalk to an existing supply for use as a proxy price until we received pricing information to use for the "extended external ECG patch, medical magnetic tape recorder" item. We proposed to use the "kit, percutaneous neuro test stimulation" (SA022) supply as our proxy item at a price of \$413.24. We believed the kit to be the closest match from a pricing perspective to employ as a proxy until we would be able to arrive at an invoice that is representative of commercial market pricing. We welcomed the submission of invoices or other additional information for use in pricing the "extended external ECG patch, medical magnetic tape recorder" supply. In response to our proposal, we received conflicting information from commenters and in the CY 2021 PFS final rule (85 FR 84631), we ultimately finalized contractor pricing for CY 2021 for the four codes that included this supply input (CPT codes 93241, 93243, 93245, and 93247) to allow additional time to receive more pricing information.

We noted that interested parties have continued to engage with CMS and the MACs on payment for this service. We remained concerned that we continued to hear that the supply costs as initially considered in our CY 2021 PFS proposal were much higher than they should be. At the same time, we also heard that the resource costs, as reflected in the

contractor-based payments, do not adequately cover the incurred cost for the SD339 supply that is used to furnish these services. In consideration of continued access to these services for Medicare beneficiaries, we once again solicited public comments and information in the CY 2022 PFS proposed rule (86 FR 39179) to support CMS' future rulemaking to establish a uniform national payment that appropriately reflects the PE inputs that are used to furnish these services. During the comment period, we received invoices and additional information for use in pricing the SD339 supply from the commenters.

Based on this information, we finalized an updated price of \$200.15 for the "extended external ECG patch, medical magnetic tape recorder" (SD339) supply in the CY 2022 PFS final rule based on the average of the ten invoices we received (86 FR 65125). We believed that the invoice data for this supply item, which ranged from a minimum price of \$179.80 to a maximum price of \$241.99, suggested that our updated price of \$200.15 was more accurate than the suggested crosswalk to the SD214 supply at a price of \$325.98. We believed that considering a potential impact to payment for other services under the PFS, a proposal to establish national payment for these services based on this new pricing information should take into account broader feedback from interested parties. Therefore, we did not finalize national pricing at this time and finalized our proposal to maintain contractor pricing for CPT codes 93241, 93243, 93245, and 93247 for CY 2022.

For CY 2023, we received a series of additional invoices for the SD339 supply from two impacted parties. Each of the invoices priced the supply item at either \$265.00 or \$226.38; we therefore proposed to average together these prices and establish a proposed price of \$245.69 for the SD339 supply. We noted that we believe that this represents the most typical price for the supply based on the invoice data that has been provided over the past 2 years. We also proposed national pricing for CPT codes 93241, 93243, 93245, and 93247 for CY 2023 now that the SD339 supply has an established price. The proposed CY 2023 RVUs for these CPT codes are displayed in Addendum B on the CMS website under downloads for the CY 2023 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

*Comment:* Many commenters stated their support for the proposal of national pricing for CPT codes 93241,

93243, 93245, and 93247. Commenters detailed the clinical benefits of external extended ECG monitoring, such as offering easy access to patients by having inventory readily available at the point of care, being able to return the device in a postage paid box thus preventing a return trip to the hospital or doctor's office, and having the option for a monitor that provides greater than 24–48 hours of data that providers need access to for clinical decision making. Commenters stated that the proposal of national pricing would help to provide greater stability in payment for these services and ensure continued access to care for beneficiaries.

*Response:* We appreciate the support for our proposal from the commenters.

*Comment:* Several commenters submitted additional invoices associated with the pricing of the “extended external ECG patch, medical magnetic tape recorder” (SD339) supply. Commenters stated that they believe these additional invoices would help better capture the market-based costs associated with the SD339 supply.

*Response:* We appreciate the submission of invoices with additional pricing information from the commenters in helping to determine the most accurate price for the SD339 supply. We averaged together the price of the new invoices with the invoices that we had previously received prior to the publication of the CY 2023 PFS proposed rule. After averaging together these 21 invoices, we are finalizing an updated price of \$260.35 for the SD339 supply.

*Comment:* Several commenters stated that they supported the proposal of national pricing and the proposed price of \$245.69 for the SD339 supply; however they noted that the result does not adequately reflect the cost of delivering these services by independent diagnostic testing facilities (IDTFs). Commenters stated that KPMG, in conjunction with AdvaMed, performed and presented a detailed cost analysis to CMS and individual MACs requesting a reevaluation of the PE inputs. Commenters stated that this analysis segregated costs into three categories: (1) cost of goods sold including costs directly related to the devices, supplies, production overhead and shipping; (2) direct labor, including manufacturing a product or provision of a service and clinical services; and (3) other indirect costs (IT support, finance, rent), and stated that all three categories were necessary to fully account for and understand the resources expended by an IDTF to provide LT-ECG services. Commenters also stated that these three categories did not consider the

consumption of non-device assets used in the delivery of LT-ECG (for example, software and processing) or the costs associated with the purchase of capital equipment, regulatory, and research and development expenses. This cost analysis summed to \$300.68 for the total cost of providing LT-ECG services, including capital expenditures and research and development costs; a separate commenter submitted a related cost analysis that summed to \$283.89. Commenters requested that the Extended External ECG Monitoring services be priced in accordance with the updated costs from the AdvaMed/KPMG analysis as the CMS proposed pricing does not adequately account for all the costs associated with manufacturing and delivery of the associated monitoring services (for example, software and processing) that are necessary for efficient and effective delivery of services.

*Response:* We appreciate the presentation of these additional cost analyses from the commenters for use in pricing the Extended External ECG Monitoring codes. However, we did not propose to use these external cost analyses in valuing these codes and they do not fit easily within the framework of how our PE methodology operates. As the commenters noted, these cost analyses include delivery, software, and processing expenses which are typically considered to be forms of indirect PE under our methodology. These indirect expenses would not be included in the invoice pricing of the SD339 supply which we sought comment upon in the proposed rule. The commenters also explicitly stated that their cost analyses for providing Extended External ECG Monitoring services included costs associated with research and development, which are not costs that we include when determining the price of a service under our PE methodology, as they are not connected to the furnishing of the service itself.

More broadly, our PE allocation currently makes use of a “bottom up” methodology that sums the typical and medically necessary resources associated with each service and uses them to calculate the PE RVU. The cost analyses submitted by the commenters are forms of a “top down” analysis which have not been used as the basis of our PE methodology since we finalized the changes to the current system in CY 2007. (For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology CY 2007 PFS proposed notice (71 FR 37242) and

the CY 2007 PFS final rule with comment period (71 FR 69629).) This is not to say that the cost analyses submitted by the commenters are irrelevant to the process of valuing the Extended External ECG Monitoring services, as they can be a useful tool in determining accurate market-based pricing. However, they cannot be directly utilized to determine the most accurate price for the SD339 supply, especially given that these cost analyses include additional expenses such as delivery, processing, and research/development costs which would not typically be considered direct expenses under our PE methodology.

We also note that the AdvaMed/KPMG cost analysis submitted by the commenters with a total cost of \$300.68 for the Extended External ECG Monitoring services includes research and development costs of \$38.50 in its total expenses. As stated above, our PE methodology does not recognize research and development costs when determining the prices of services, only those resources individually allocable to the service which are both typical and medically necessary. When these are removed, the resulting total cost of \$262.18 closely matches our proposed pricing for the External ECG Monitoring services. We believe that these cost analyses ultimately reinforce the accuracy of our proposals after excluding the costs which would not be included under our PE methodology.

*Comment:* A commenter had a series of questions regarding the invoices used to establish the pricing for the SD339 supply. The commenter outlined six different scenarios asking whether these invoices constituted health insurance claims, entire technical services billed by IDTFs, individual single-use patches, and several related scenarios. The commenter requested additional information about the invoices used for pricing the SD339 supply based on these different scenarios.

*Response:* As detailed above, we received 21 invoices which we averaged together under our typical pricing methodology which resulted in a price of \$260.35 for the SD339 supply. We reviewed each invoice and determined that the price was associated with an individual extended external ECG patch, not health insurance claims or entire technical services. We did separately receive “top down” cost analyses from several commenters, as discussed above, but these were not invoices for the SD339 supply, and therefore, we did not include them as part of the averaged invoice price.

*Comment:* A commenter asked CMS to explain why the CY 2023 proposed

rule used a new batch of invoices to price the SD339 supply which superseded rather than added to the CY 2022 final rule's batch of invoices for the same supply. The commenter stated that CMS did not explain what about the new invoices was superior and more likely to be representative and valid of national costs for the SD339 supply. The commenter requested that CMS provides more detail about what the invoice data they have received are, and why CMS has included or excluded when specifying the input.

*Response:* When we use invoices to update supply and equipment pricing, we find ourselves typically working with a small amount of submitted invoice data. It is not uncommon to use a single invoice to update supply and equipment pricing for lack of additional invoices associated with the item in question. The limited amount of invoice data sometimes results in making use of invoices across different calendar years in order to get a more representative sample of market-based pricing. However, our preference is always to use more recent pricing information whenever possible since it will be more reflective of current market-based pricing for the item in question.

In the case of the SD339 supply, we received a large quantity of invoices (21 in total) from multiple different interested parties. Because we had an abundance of invoice data associated with this supply, we averaged together the invoices from the CY 2023 cycle and did not need to include the older invoices from the CY 2022 cycle. We did not include them for the simple reason that they constituted older pricing which was less reflective of current market pricing. We typically do not exclude any invoices in making supply and equipment pricing determinations, however we do not believe that it would be accurate to use older, outdated data when we have readily available invoices which are more current.

*Comment:* A commenter stated that an underlying problem for establishing appropriate payment rates for External Extended ECG Monitoring is the IDTF model itself, which does not easily fit into the CMS methodology for paying for physician services. The commenter stated that the current PE methodology is based on outdated data from the 2006 PPI Survey performed by the American Medical Association and mostly focuses on expenses related to the traditional physician office which the commenter stated that they did not believe to be comprehensive or accurate. The commenter urged CMS to develop a survey appropriate for IDTFs, especially

IDTFs that perform remote monitoring, which would capture unique components of the IDTF cost structure such as expenses related to research and development and unique challenges and regulatory requirements related to AI and software as a service (SaaS).

*Response:* We agree with the commenter on the need for comprehensive and accurate data for use in our PE methodology. We continue to be interested in potential approaches that can be used to update aspects of the PE methodology, which is why we solicited comments on Strategies for Updates to Practice Expense Data Collection and Methodology in the PE section of the rule. We direct readers to section II.B.5. of this final rule for the full discussion of this topic along with additional comments that we received.

After consideration of the comments, we are finalizing national pricing for CPT codes 93241, 93243, 93245, and 93247 along with an updated price of \$260.35 for the SD339 supply.

(26) Cardiac Ablation (CPT Codes 93653, 93654, 93655, 93656, and 93657)

The technologies and clinical practices associated with Cardiac Ablation Services have changed enough over the past decade (since 2011 when they were first developed) that the specialty societies recommended referring these codes to the CPT Editorial Panel to have the code descriptors for Cardiac Ablation Services updated to create new and more complete descriptors reflecting the fact that many of these services are commonly performed together and should be incorporated and bundled. From the survey results presented to CMS last year, the RUC advisory committee believes that many of the survey respondents may not have realized that the code descriptors had been substantially revised and that they may not have read the updated code descriptors thoroughly enough to understand that services that are separately billed, were now combined into the existing codes (since CPT did not issue new codes for the revised descriptors). Since then, the RUC has re-surveyed these Cardiac Ablation codes in April 2021 for re-review. In the interim, the work RVUs for the newly bundled CPT codes were maintained at their current values until the new recommendations were presented for CY 2023.

The RUC re-surveyed and reviewed CPT code 93653 (*Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or*

*attempted induction of an arrhythmia with right atrial pacing and recording, and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and His bundle recording, when performed; treatment of supraventricular tachycardia by ablation of fast or slow atrioventricular pathway, accessory atrioventricular connection, cavo-tricuspid isthmus or other single atrial focus or source of atrial re-entry*), and recommends a work RVU of 15.00 with 31 minutes of pre-service evaluation time, 3 minutes positioning time, 15 minutes scrub/dress/wait time, 120 minutes of intra-service time, 30 minutes of immediate post-service time, for a sum of 199 minutes of total time. CPT code 93653 currently has a work RVU value of 14.75 with 23 minutes of pre-service evaluation time, 1 minutes positioning time, 5 minutes scrub/dress/wait time, 180 minutes of intra-service time, 30 minutes of immediate post-service time, for a sum of 239 minutes of total time. The time and the physician's work of CPT add-on code 93613 (*Intracardiac electrophysiologic 3-dimensional mapping (List separately in addition to code for primary procedure)*) with a work RVU of 5.23 and 90 minutes of total time, and CPT add-on code 93621 (*Comprehensive electrophysiologic evaluation including insertion and repositioning of multiple electrode catheters with induction or attempted induction of arrhythmia; with left atrial pacing and recording from coronary sinus or left atrium (List separately in addition to code for primary procedure)*) with a work RVU of 1.50 and 20 minutes of total time are bundled within CPT code 93653. When all three codes are separately considered, they currently sum up to 21.48 work RVUs, much greater than the 15.00 work RVUs that the RUC has recommended. These codes also add up to much more physician total time than the RUC-recommended 199 minutes.

After reviewing this code and relative similar codes in the PFS, we proposed a comparator CPT code 37229 (*Revascularization, endovascular, open or percutaneous, tibial, peroneal artery, unilateral, initial vessel; with atherectomy, includes angioplasty within the same vessel, when performed*) with a work RVU of 13.80 and a similar intra-service time of 120 minutes and similar pre-service evaluation, pre-service positioning, pre-service scrub/dress/wait times, and

immediate post-service times, for a sum of 188 minutes of total time for a 000 day global period, compared to the RUC-recommended 199 minutes of total time for CPT code 93653. We proposed a work RVU of 13.80 for the bundled CPT code 93653.

The RUC re-surveyed and reviewed CPT code 93654 (*Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or attempted induction of an arrhythmia with right atrial pacing and recording, and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and His bundle recording, when performed; with treatment of ventricular tachycardia or focus of ventricular ectopy including left ventricular pacing and recording, when performed*), and recommends a work RVU of 18.10 with 40 minutes of pre-service evaluation time, 3 minutes positioning time, 15 minutes scrub/dress/wait time, 200 minutes of intra-service time, 33 minutes of immediate post-service time, for a sum of 291 minutes of total time. CPT code 93654 currently has a work RVU value of 19.75 with 23 minutes of pre-service evaluation time, 1 minutes positioning time, 5 minutes scrub/dress/wait time, 240 minutes of intra-service time, 40 minutes of immediate post-service time, for a sum of 309 minutes of total time. CPT code 93654 is currently and continues to be a bundled code. The RUC recommended intra-service times and total times for CPT code 93654 are less than the current times for this code, and the RUC-recommended work RVUs are also less than the current work RVUs. Though the RUC recommended a work RVU of 18.10, it is still a relatively high value compared to the existing 19.75 value. The RUC recommended a work RVU of 15.00 for CPT code 93653, and 18.10 for CPT code 93654, with a relative increment between them of 3.10 work RVUs. We proposed to maintain the relative increment RVU difference of 3.10 between CPT code 93653 and CPT code 93654, so because we proposed a work RVU of 13.80 for CPT code 93653, we proposed a work RVU of 16.90 (13.80 plus 3.10) for CPT code 93654, with 200 minutes of intra-service time and 291 minutes of total time.

CPT add-on code 93655 (*Intracardiac catheter ablation of a discrete mechanism of arrhythmia which is distinct from the primary ablated mechanism, including repeat diagnostic maneuvers, to treat a spontaneous or*

*induced arrhythmia (List separately in addition to code for primary procedure)*) has a current work RVU of 5.50 with a physician intra-service time of 60 minutes as finalized last year, from a previous value of 7.50 work RVUs with 90 minutes of physician intra-service time. The RUC recommended the re-surveyed intraservice time of 60 minutes and 7.00 work RVUs. The primary change to CPT code 93655 is the reduction of the intraservice time of about 67 percent, which we use as a guide to determine a work RVU. We compared CPT add-on code 22854 (*Insertion of intervertebral biomechanical device(s) (e.g., synthetic cage, mesh) with integral anterior instrumentation for device anchoring (e.g., screws, flanges), when performed, to vertebral corpectomy(ies) (vertebral body resection, partial or complete) defect, in conjunction with interbody arthrodesis, each contiguous defect (List separately in addition to code for primary procedure)*), also with 60 minutes of intraservice and total time and a work RVU of 5.50 to CPT add-on code 93655 and we believed that it is a more accurate valuation than the RUC's work RVU comparison to CPT add-on code 93592 (*Percutaneous transcatheter closure of paravalvular leak; each additional occlusion device (List separately in addition to code for primary procedure)*) with a work RVU of 8.00 and an intra-service and total time of 60 minutes, and to CPT add-on code 34820 (*Open iliac artery exposure for delivery of endovascular prosthesis or iliac occlusion during endovascular therapy, by abdominal or retroperitoneal incision, unilateral (List separately in addition to code for primary procedure)*) with a work RVU of 7.00 and an intra-service and total time of 60 minutes. After reviewing this code and relative similar codes in the PFS, we proposed to maintain the current work RVU for CPT code 93655 of 5.50 with a physician intra-service time of 60 minutes, as finalized last year (86 FR 65108).

The RUC re-surveyed and reviewed CPT code 93656 (*Comprehensive electrophysiologic evaluation including transseptal catheterizations, insertion and repositioning of multiple electrode catheters with intracardiac catheter ablation of atrial fibrillation by pulmonary vein isolation, including intracardiac electrophysiologic 3-dimensional mapping, intracardiac echocardiography including imaging supervision and interpretation, induction or attempted induction of an arrhythmia including left or right atrial pacing/recording, right ventricular*

*pacing/recording, and His bundle recording, when performed*), and recommends a work RVU of 17.00 with 35 minutes of pre-service evaluation time, 3 minutes positioning time, 15 minutes scrub/dress/wait time, 180 minutes of intra-service time, 30 minutes of immediate post-service time, for a sum of 263 minutes of total time. CPT code 93656 currently has a work RVU of 19.77 with 23 minutes of pre-service evaluation time, 1 minute positioning time, 5 minutes scrub/dress/wait time, 240 minutes of intra-service time, 40 minutes of immediate post-service time, for a sum of 309 minutes of total time. CPT code 93656 has bundled within it, the time and the physician's work of CPT add-on code 93613 (*Intracardiac electrophysiologic 3-dimensional mapping (List separately in addition to code for primary procedure)*) with a work RVU of 5.23 and 90 minutes of total time and CPT add-on code 93662 (*Intracardiac echocardiography during therapeutic/diagnostic intervention, including imaging supervision and interpretation (List separately in addition to code for primary procedure)*) with a work RVU of 1.44 and 25 minutes of total time. When all three codes are separately considered, they sum up to 26.44 work RVUs, which is much greater than the 17.00 work RVUs that is recommended and has much more physician total time than the RUC recommended 263 total time minutes.

The RUC recommended intra-service times and total times for CPT code 93656 that are less than the current times for this code and we expect the work RVUs to also be less than the current work RVUs. Though the RUC recommended a work RVU of 17.00, it is still a high value compared to the existing 19.77. The RUC recommended the work RVU for CPT code 93653 as 15.00, and for CPT code 93656 as 17.00, with a relative increment between them of 2.00 work RVUs. As a better valuation for CPT code 93656, we proposed a work RVU of 13.80 for CPT code 93653 plus the relative increment RVU difference of 2.00 that the RUC is maintaining between CPT code 93653 and CPT code 93656 (15.00 subtracted from 17.00 equals 2.00). This would value CPT code 93656 at 15.80 (13.80 plus 2.00) work RVUs for 180 minutes of intra-service time and 263 minutes of total time, which we propose for CY 2023.

CPT add-on code 93657 (*Additional linear or focal intracardiac catheter ablation of the left or right atrium for treatment of atrial fibrillation remaining after completion of pulmonary vein isolation (List separately in addition to*

code for primary procedure)) has a current work RVU of 5.50 with a physician intra-service time of 60 minutes as finalized last year (86 FR 65108). The previous work RVU was 7.50 with 90 minutes of physician intraservice time. The RUC recommended the re-surveyed intra-service time of 60 minutes and 7.00 work RVUs. The primary change to CPT add-on code 93657 is the reduction of the intra-service time from before the re-survey and the current RUC-recommended time, from 90 minutes to 60 minutes, which is a reduction of about 67 percent, and which we used as a guide to determine an appropriate work RVU. We compare CPT add-on code 22854 (*Insertion of intervertebral biomechanical device(s) (e.g., synthetic cage, mesh) with integral anterior instrumentation for device anchoring (e.g., screws, flanges), when performed, to vertebral corpectomy(ies) (vertebral body resection, partial or complete) defect, in conjunction with interbody arthrodesis, each contiguous defect (List separately in addition to code for primary procedure)*), also with 60 minutes of intra-service and total time, and a work RVU of 5.50, to CPT add-on code 93657, and believe that this is a more accurate comparison for valuation than the RUC's work RVU comparison to CPT add-on code 93592 (*Percutaneous transcatheter closure of paravalvular leak; each additional occlusion device (List separately in addition to code for primary procedure)*) with a work RVU of 8.00 and an intra-service and total time of 60 minutes, and to CPT add-on code 34820 (*Open iliac artery exposure for delivery of endovascular prosthesis or iliac occlusion during endovascular therapy, by abdominal or retroperitoneal incision, unilateral (List separately in addition to code for primary procedure)*) with a work RVU of 7.00 and an intra-service and total time of 60 minutes. After reviewing this code and relative similar codes in the PFS, we proposed to re-affirm the current work RVU of 5.50 with a physician intraservice time of 60 minutes for CPT add-on code 93657, as finalized last year (86 FR 65108).

The RUC did not recommend, and we did not propose, direct PE inputs for CPT codes 93653–93657.

We received many comments concerning CMS' proposed work RVUs for these Cardiac Ablation CPT codes 93653, 93654, 93655, 93656, and 93657.

**Comment:** Commenters were uniformly against the CMS proposed work RVUs for these codes and urged CMS to accept the AMA RUC-recommended values supported by a

robust survey. Commenters argued that the CMS proposed work RVUs for these services are inappropriately low for the long lengths of time required to perform these services, and also neglect to account for the higher intensity of the physician's work with a live beating heart.

**Response:** Since CY 2011, when these codes were first developed and valued, there is no doubt that cardiac ablation technologies and clinical practices have changed and matured, and thus, these codes were brought to our attention by the AMA RUC for an overdue review. Over the last decade, there have been improvements in the related technologies, new informative results from ongoing research in cardiac ablation, and physicians who have improved their skills and experience and training, all contributing to better methodologies that are refined, to an improved new standard for cardiac ablation. They are now performing these services faster, more efficiently, more safely, and more effectively, with better outcomes. This also includes the elimination of duplications of effort, procedure overlaps, and ineffective past practices. Of course, on the other hand, some new techniques and methodologies may require performing concurrent procedures making the better service more complex and more demanding. With all this said, we do agree that cardiac ablation is a complicated and comparatively intensive set of procedures that does take a good amount of time to complete, and that the subsequent changes over the last 10 years have recognized the need to now bundle these services to reflect current typical practices.

At present, the cardiac ablation base CPT codes and their accompanying CPT codes that are paying separately, sum to a total work RVU of 21.48. CPT code 93653 paying 14.75 work RVUs; with CPT code 93613 paying 5.23 work RVUs; and CPT code 93621 paying 1.50 work RVUs. Since the AMA CPT Panel and the RUC are recommending the bundling of these three service codes into CPT code 93653, their recommended work RVUs for CPT code 93653 is 15.00, and is 69.8 percent of the original summed value of 21.48. We further refined the newly bundled work to 13.80 work RVUs and that is 64.2 percent of the original summed value, reflecting what we perceived as improvements and efficiencies gained in how these procedures are now furnished.

**Comment:** Commenters disagreed with the CMS proposed work RVUs for the cardiac ablation add-on codes and

urged CMS to accept the AMA RUC-recommended values.

**Response:** We remind commenters that those work RVU values were accepted and finalized in last year's rule (86 FR 65108). We accepted the RUC-recommended reductions in physician time from 90 minutes to 60 minutes of intra-service and total time, with a final work RVU of 5.50 for CPT code 93655. We accepted the RUC-recommended reductions in physician time from 90 minutes to 60 minutes of intra-service and total time, with a final work RVU of 5.50 for CPT code 93657, and we see no reason change those final values.

We note that it is challenging to make definitive conclusions about comparisons of relative intensity of work for the same unit of time, especially without seeing objective or competing viewpoints for some or most of the procedures that currently have similar valuations. In developing the PFS, CMS works to mitigate any perceived or explicit bias against or for any organ system or type of services, which may distort actual importance to beneficiaries' health and safety. We also note that levels of intensity can be mathematically different with the shifting of pre-service minutes or immediate post service minutes, to or from intra-service minutes, where intensity values are derived.

After review and consideration of all comments on our proposals for CPT codes 93653, 93654, and 93656, we are persuaded by these comments, and we are finalizing RUC-recommended values of 15.00, 18.10, and 17.00, respectively. CPT add-on codes 93655 and 93657 both remain finalized at 5.50 work RVUs from last year.

(27) Pulmonary Angiography (CPT Codes 93569, 93573, 93574, 93575, 93563, 93564, 93565, 93566, 93567, and 93568)

In May 2021, the CPT Editorial Panel revised CPT code 93568 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for nonselective pulmonary arterial angiography (List separately in addition to code for primary procedure)*) which resulted in the creation of four new related CPT add-on codes. CPT add-on codes 93563 to 93567 were surveyed with the four new codes, as part of the same code family.

The RUC surveyed and reviewed CPT code 93563 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective coronary angiography during congenital heart catheterization (List separately in*

addition to code for primary procedure)), and recommends a work RVU of 1.11 for 15 minutes of intra-service and total time for this add-on service. The current work RVU is 1.11 for 25 minutes of intra-service and total time, so there is a reduction of 10 minutes in physician time. With the reduction of physician time, it is typical that there would be some reduction in the work RVUs. After reviewing this code and relative similar codes in the PFS, we believe a better comparator add-on code would be CPT code 64494 (*Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; second level (List separately in addition to code for primary procedure))*), with a work RVU of 1.00 for 15 minutes of intra-service and total time. CPT code 64494 is a good comparator in terms of both the new physician time and due to the proportional work RVU, as compared to CPT code 93563. Therefore, we proposed a work RVU of 1.00 and 15 minutes of intra-service and total time for add-on CPT code 93563.

The RUC surveyed and reviewed CPT code 93564 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective opacification of aortocoronary venous or arterial bypass graft(s) (e.g., aortocoronary saphenous vein, free radial artery, or free mammary artery graft) to one or more coronary arteries and in situ arterial conduits (e.g., internal mammary), whether native or used for bypass to one or more coronary arteries during congenital heart catheterization (List separately in addition to code for primary procedure))*), and recommends a work RVU of 1.13 for 18 minutes of intra-service and total time for this add-on service. The current work RVU is 1.13 for 25 minutes of intra-service and total time, so there is a reduction of 7 minutes in physician time. With the reduction of physician time, it is typical that there would be some reduction in the work RVUs. After reviewing this code and relative similar codes in the PFS, we believe a better comparator add-on code would be CPT code 31632 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), each additional lobe (List separately in addition to code for primary procedure))*) with a work RVU of 1.03 for 18 minutes of intra-service and total time. CPT code 31632 is a good comparator in terms of both the new

physician time and due to the proportional work RVU, as compared to CPT code 93564. Therefore, we proposed a work RVU of 1.03 and 18 minutes of intra-service and total time for add-on CPT code 93564.

The RUC surveyed and reviewed CPT code 93565 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective left ventricular or left atrial angiography (List separately in addition to code for primary procedure))*), and recommends a work RVU of 0.86 for 10 minutes of intra-service and total time for this add-on service. The current work RVU is 0.86 for 20 minutes of intra-service and total time, so there is a reduction of 10 minutes in physician time. With the reduction of physician time, it is typical that there would be some reduction in the work RVUs. After reviewing this code and relative similar codes in the PFS, we believe a better comparator add-on code would be CPT code 64421 (*Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, each additional level (List separately in addition to code for primary procedure))*) with a work RVU of 0.50 for 10 minutes of intra-service and total time. CPT code 64421 is a good comparator code in terms of both the new physician time and due to the proportional work RVU as compared to CPT code 93565.

Therefore, we proposed a work RVU of 0.50 and 10 minutes of intra-service and total time for add-on CPT code 93565.

The RUC surveyed and reviewed CPT code 93566 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective right ventricular or right atrial angiography (List separately in addition to code for primary procedure))*) and recommends a work RVU of 0.86 for 10 minutes of intra-service and total time for this add-on service. The current work RVU is 0.86 for 20 minutes of intra-service and total time, so there is a reduction of 10 minutes in physician time. With the reduction of physician time, it is typical that there would be some reduction in the work RVUs. After reviewing this code and relative similar codes in the PFS, we believe a better comparator add-on code would be CPT code 64421 (*Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, each additional level (List separately in addition to code for primary procedure))*) with a work RVU of 0.50 for 10 minutes of intra-service and total time. CPT code 64421 is a good comparator code in terms of both the new physician time and due to the proportional work RVU, as compared to CPT code 93566.

Therefore, we proposed a work RVU of 0.50 and 10 minutes of intra-service and total time.

The RUC surveyed and reviewed CPT code 93567 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for supraaortic aortography (List separately in addition to code for primary procedure))*), and recommends a work RVU of 0.97 for 10 minutes of intra-service and total time for this add-on service. The current work RVU is 0.97 for 15 minutes of intra-service and total time, so there is a reduction of 5 minutes in physician time. With the reduction of physician time, it is typical that there would be some reduction in the work RVUs. After reviewing this code and relative similar codes in the PFS, we believe a better comparator add-on code would be CPT code 74248 (*Radiologic small intestine follow-through study, including multiple serial images (List separately in addition to code for primary procedure for upper GI radiologic examination))*) with a work RVU of 0.70 for 10 minutes of intra-service and total time. CPT code 74248 is a good comparator code in terms of both the new physician time and due to the proportional work RVU, as compared to CPT code 93567.

Therefore, we proposed a work RVU of 0.70 and 10 minutes of intra-service and total time.

The RUC surveyed and reviewed CPT code 93568 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for nonselective pulmonary arterial angiography (List separately in addition to code for primary procedure))*), and recommends a work RVU of 0.88 for 13 minutes of intra-service and total time for this add-on service. The current work RVU is 0.88 for 20 minutes of intra-service and total time, so there is a reduction of 7 minutes in physician time. With the reduction of physician time, it is typical that there would be some reduction in the work RVUs. After reviewing this code and relative similar codes in the PFS, we agree with the RUC recommendation and proposed a work RVU of 0.88 with 13 minutes of intra-service and total time for add-on CPT code 93568.

For the first of the related four new add-on codes to this family, CPT code 93569 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective pulmonary arterial angiography, unilateral (List separately in addition to code for primary procedure))*), the RUC recommended a work RVU of 1.05 for 11 minutes of

intra-service and total time for this add-on service. The RUC noted that the typical patient for this service is pediatric. After reviewing this code and relative similar codes in the PFS, we believe a better comparator add-on code would be CPT code 78434 (*Absolute quantitation of myocardial blood flow (AQMBF), positron emission tomography (PET), rest and pharmacologic stress (List separately in addition to code for primary procedure)*) with a work RVU of 0.63 for 11 minutes of intra-service and total time. CPT code 78434 is a good comparator code in terms of both the physician time, and due to the proportional work RVU, as compared to CPT code 93569. Therefore, we proposed a work RVU of 0.63 and 11 minutes of intra-service and total time for add-on CPT code 93569.

For the second of the related four new add-on codes to this family, CPT code 93573 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective pulmonary arterial angiography, bilateral (List separately in addition to code for primary procedure)*), the RUC recommended a work RVU of 1.75 for 18 minutes of intra-service and total time for this add-on service. The RUC noted that the typical patient for this service is pediatric and that this service is bilateral. After reviewing this code and relative similar codes in the PFS, we believe a better comparator add-on code would be HCPCS code G0289 (*Arthroscopy, knee, surgical, for removal of loose body, foreign body, debridement/shaving of articular cartilage (chondroplasty) at the time of other surgical knee arthroscopy in a different compartment of the same knee (List separately in addition to code for primary procedure)*) with a work RVU of 1.48 for 20.5 minutes of intra-service and total time and that this service is bilateral. G0289 has 2.5 minutes of additional physician intra-service time, so we adjusted the comparator work RVU from 1.48 to 1.30. Therefore, we proposed 1.30 work RVUs for 18 minutes of intra-service and total time for add-on CPT code 93573.

For the third of the related four new add-on codes to this family, CPT code 93574 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective pulmonary venous angiography of each distinct pulmonary vein during cardiac catheterization. (List separately in addition to code for primary procedure)*), the RUC recommended a work RVU of 1.84 for 20 minutes of intra-service and total time for this add-on service. The RUC

noted that the typical patient for this service is pediatric. After reviewing this code and relative similar codes in the PFS, we believe a better comparator add-on code would be CPT code 93598 (*Measurement of output of blood from heart, performed during cardiac catheterization for evaluation of congenital heart defects (List separately in addition to code for primary procedure)*) with a work RVU of 1.44 for 20 minutes of intra-service and total time. CPT code 93598 is a good comparator code in terms of both the physician time, and due to the proportional work RVU, as compared to CPT code 93574. Therefore, we proposed 1.44 work RVUs for 20 minutes of intra-service and total time for add-on CPT code 93574.

For the last of the related four new add-on codes to this family, CPT code 93575 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective pulmonary angiography of major aortopulmonary collateral arteries (MAPCAs) arising off the aorta or its systemic branches, each distinct vessel*), the RUC recommended a work RVU of 1.92 for 20 minutes of intra-service and total time for this add-on service. The RUC describes this service and the physician's work as very time-intensive and complicated, and the typical patient for this service is pediatric. We agree with the RUC recommendations and proposed a work RVU of 1.92 with 20 minutes of intra-service and total time for add-on CPT code 93575.

The RUC did not recommend, and we did not propose, direct PE inputs for CPT codes 93563–93575.

Numerous comments were submitted concerning this family of pulmonary angiography codes all against the CMS-proposed RVU values.

**Comment:** Commenters noted that CMS is equating reductions in physician times with reductions in work RVUs, with this family of codes, without regard to the intensity or complexity of these pulmonary procedures, or that some of these codes are primarily typical with pediatrics and congenital heart disease. Commenters recommended that CMS reconsider their proposed values as being too low and to accept the AMA RUC recommended values.

**Response:** As commenters know, we are obligated to take into account changes in physician times and intensity with changes in work RVUs. We appreciate all of the time and efforts commenters place into their extensive comments in responding to our proposals and we do review these

comments in detail to improve our proposals where warranted. When we observe reductions in physician times and no significant change to the procedure's description of work and no change in the procedure's work RVU, or we see recommendations of increases in the procedure's work RVU, we wonder how the intensity of the procedure has changed. Improvements in these procedure's technologies and physicians' training in new skills and methods do contribute to faster, and more efficient outcomes and would result in the reduction of a procedure's work time. At the same time, where duplicate and overlapping efforts are eliminated, new techniques can also introduce complexities that would contribute to the work's intensity without the addition of work time. However, these add-on codes reduce physician work times, and the nature of the PFS relative value system is such that all services are subject to comparisons to one another.

However, we do agree with the commenters' point regarding CPT code 93569 and our proposed work RVU value of 0.63. Our proposed work RVU creates a rank order anomaly within this family of codes whose patients are pediatrics. The AMA RUC-recommended work RVUs between CPT code 93569 and CPT code 93573 reflect about a 67 percent difference between the two codes. Our proposed work RVU for CPT code 93569 of 0.63 is about a 106 percent higher than our proposed work RVU of 1.30 for CPT code 93573, which created a large difference. To correct this error and to maintain that RUC-recommended interval difference between these two codes, we are finalizing a corrected work RVU of 0.78 for CPT code 93569, by applying that RUC-recommended interval difference between CPT codes 93569 and 93573 (1.30 divided by 1.67 = 0.78). This aligns with the intra-service minutes difference between CPT codes 93569 (11 minutes) and 93573 (18 minutes) and the comparator CPT code 58110 (*Endometrial sampling (biopsy) performed in conjunction with colposcopy (List separately in addition to code for primary procedure)*), with similar physician intra-service minutes and a similar work RVU of 0.77. After review and consideration of all comments on our proposals for these Pulmonary Angiography codes, we are finalizing all work RVUs as proposed except for CPT code 93569, whose work RVU we are adjusting from 0.63 to 0.78 for CY 2023.

## (28) Quantitative Pupillometry Services (CPT Code 95919)

The CPT Editorial Panel approved a new Category I CPT code to replace the sunset Category III (CPT code 0341T Quantitative pupillometry with interpretation and report, unilateral or bilateral) and 92499 (Unlisted ophthalmological service or procedure for reporting this service).

We did not propose the RUC-recommended work RVU of 0.25 for CPT code 95919, as we believe this is an overestimation based on a comparison to other codes with similar time values, particularly the key reference code CPT code 92081 (*Visual field examination, unilateral or bilateral, with interpretation and report; limited examination (e.g., tangent screen, Autoplot, arc perimeter, or single stimulus level automated test, such as Octopus 3 or 7 equivalent)*). In the interest of maintaining relativity with similarly timed codes, we are instead proposing a work RVU of 0.18 with a crosswalk to CPT code 92504 (*Binocular microscopy (separate diagnostic procedure)*). We noted that this value falls between the work RVUs of 0.17 for CPT code 94010 (*Spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation*) and 0.20 for CPT code 77081 (*Dual-energy X-ray absorptiometry (DXA), bone density study, 1 or more sites; appendicular skeleton (peripheral) (e.g., radius, wrist, heel)*); both codes have identical intraservice times and similar total times.

We proposed the RUC-recommended direct PE inputs without refinement.

**Comment:** Commenters did not support our proposed work RVU of 0.18 rather than the RUC-recommended 0.25. A commenter asserted that the RUC survey results are robust and that CMS did not furnish evidence that this service is appropriately valued below the 25th survey percentile. Another commenter stated that CPT code 92504 is a less appropriate crosswalk than the RUC's crosswalk of CPT code 72190 as it does not match the pre/intra/post times and because it was last revalued in 2010.

**Response:** The RUC-recommended RVU of 0.25 was high in comparison to the range of RVUs for the comparison CPT codes with the same intra-service time and similar total times, and therefore, we believe that CPT code 92504 is a valid crosswalk. We continue to believe that, particularly given that this service is likely to be performed multiple times in a single day, the RUC-

recommended value represents a slight overestimation of intensity. We acknowledge that the work times were not an exact match with CPT code 92504 but closely matched the intraservice and total times, and we continue to believe that this is an appropriate crosswalk.

We are finalizing as proposed a work RVU of 0.18 for CPT code 95919 and the RUC-recommended direct PE inputs without refinement.

## (29) Caregiver Behavior Management Training (CPT Codes 96202 and 96203)

CPT code 96202 (*Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes*) and its add-on code, CPT code 96203 (*Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; each additional 15 minutes (List separately in addition to code for primary service)*), are new codes created by the CPT Editorial Panel during its February 2021 meeting. The two codes are to be used to report the total duration of face-to-face time spent by the physician or other qualified health professional providing group training to guardians or caregivers of patients. Although the patient does not attend the group trainings, the goals and outcomes of the sessions focus on interventions aimed at improving the patient's daily life. According to the CPT Summary of Recommendations, during the face-to-face service time, caregivers are taught how to structure the patient's environment to support and reinforce desired patient behaviors, to reduce the negative impacts of the patient's diagnosis on the patient's daily life, and to develop highly structured technical skills to manage patient behavior. As a means of identifying work values for CPT codes 96202 and 96203, three specialty societies sent surveys to a random sample of a subset of their members. Based upon survey results and after discussion, the RUC recommended a work RVU of 0.43 per identified patient service for CPT code 96202. The RUC noted that this recommendation is based upon a median group size of six caregivers and includes 10 minutes pre-time, 60

minutes intra-time, and 20 minutes post-time for a total time of 90 minutes. For CPT code 96203, the 15-minute add-on code, the RUC recommended a work RVU of 0.12, which is also based upon a median group size of six. After reviewing the caregiver training codes, we stated in the proposed rule that CPT codes 96202 and 96203 are not payable under the PFS. We noted that in past rulemaking, we have explained that we read section 1862(a)(1)(A) of the Act to limit Medicare coverage and payment to items and services that are reasonable and necessary for the diagnosis and treatment of an individual Medicare beneficiary's illness or injury or that improve the functioning of an individual Medicare beneficiary's malformed body member. For example, in the CY 2013 PFS final rule (77 FR 68979), when discussing payment for the non-face-to-face care management services that are part of E/M services, we stated that Medicare does not pay for services that are furnished to parties other than the beneficiary. We listed as an example, communication with caregivers. Because the codes for caregiver behavior management training describe services furnished exclusively to caregivers rather than to the individual Medicare beneficiary, we did not review the RUC-recommended valuation of these codes or propose to establish RVUs for these codes for purposes of PFS payment. However, recognizing our focus on ensuring equitable access to reasonable and necessary medical services, we requested public comment about the services described by these two codes. First, we sought comment on the ways in which a patient may benefit when a caregiver learns strategies to modify the patient's behavior. We also sought comment on how current Medicare policies regarding these caregiver training services may impact Medicare beneficiary health. Finally, we sought comment about how the services described by these codes might be bundled into Medicare covered services as incident to services or as practitioner work that is part of some care management codes.

Below is a summary of the comments received.

**Comment:** Most commenters recommended that CMS pay for caregiver behavioral management training services and to use the RUC-recommended values for purposes of payment. Several appreciated CMS displaying the RUC-recommended values. Several commenters asked CMS to reconsider its position on the caregiver behavior management training codes, noting that there is extensive

empirical support for caregiver behavior management training, and that these services are a component of the standard of care for treatment of several health behavior issues. Many commenters asserted that although the patient is not present when this training is provided, these codes have many specific, direct benefits for the patient. The RUC commented that these codes allow for reporting the physician/QHP work and/or time associated with the evidence-based behavioral management/modification training of parent/caregivers, which is performed in tandem with the diagnostic and intervention services furnished directly to the “identified patient” that support the patient’s optimal level of function.

Some commenters asserted that CMS’ proposed application of section 1862(a)(1)(A) of the Act was not appropriate given the well-established evidence of the direct effect the provision of these services on the health outcomes associated with specific chronic conditions, including a reduction in disruptive and problematic behaviors for children with ADHD, improved weight management for individuals with obesity, and better management of patients with dementia.

One commenter noted that if the patient’s presence is a requirement for these services, it becomes a barrier to this care for patients with particular health conditions. One commenter indicated that these services are specifically intended to prepare caregivers to implement necessary elements of care plans. This commenter also suggested that not paying for these services would contribute to health inequities issue because in many cases the patients at issue have dementia and other disorders that place them at great social and economic disadvantage.

Commenters also noted that there are other CPT codes, several paid separately under the PFS, that describe services that do not include direct contact with the patient but are still considered integral to the patient’s care, including care management services and interprofessional consultations.

Commenters also expressed broad support for the role of caregivers in the health of individuals, indicating that the caregiver’s play a critical role in supporting patient care and that caregiver engagement is an important part of the individual patient’s plan of care. Other commenters noted that these services when delivered in groups without the patient present have clear advantages over services delivered individually. The commenters suggested that caregiver engagement will help reduce costs and improve access to care.

Other commenters stated these services enable caregivers to better address the patient’s needs and provide assistance to perform activities of daily living and family caregivers who play a huge role in the patient’s long-term care; and many family caregivers are supporting patients with complex care, and expressed fear of making a mistake, with concern being the greatest for managing medications, using meters and monitors, and performing wound care. Several commenters noted that caregiver behavior training is evidence-based and providing training will promote improved outcomes.

A few commenters suggested that CMS might consider adding a caregiver training element to the appropriate chronic care management code and would be pleased to explore with CMS how to implement this service.

*Response:* We appreciate the response from commenters. We acknowledge the important role that caregivers can have in overall care, especially for Medicare beneficiaries. We also acknowledge the idea that broadly increasing the resources provided to caregivers could have beneficial results on general well-being in addition to reductions in the need for medical or institutional interventions.

However, under section 1862(a)(1)(A) of the Act, Medicare payment is generally limited to those items and services that are reasonable and necessary for the diagnosis or treatment of illness or injury or that improve the functioning of a malformed body member. We sought feedback on the ways in which a patient may benefit when a caregiver learns strategies to modify the patient’s behavior. We also sought comment regarding how Medicare policies regarding these caregiver training services may impact Medicare beneficiary health.

Commenters responded by explaining how the training services provided directly to the caregiver treat beneficiary’s health conditions. Commenters also explained how the lack of access to these standard treatments would have a disproportionately negative effect on beneficiaries with particular conditions and the practitioners who treat them. Commenters have highlighted that behavioral management/modification training of parents/caregivers, when furnished in tandem with other diagnostic and intervention services related to specific treatment, can be integral to the treatment of a beneficiary’s specific condition.

Commenters have also pointed out that to the extent that this service is integral to evolving standards of care for people

with certain conditions, lack of payment for this service under the PFS would likely result in an inappropriate payment disparity that would have a detrimental impact on access to care for particular beneficiaries and the physicians and other qualified health care professionals that treat them.

We note that in the proposed rule we reiterated that Medicare does not pay for services that are furnished to parties other than the beneficiary. Over the past decade or more, in specific circumstances, we have made payment for some care furnished to beneficiaries through direct involvement of parents, guardians, or caregivers, as well as through interactions with other medical professionals or clinical staff rather than the beneficiary in-person. These circumstances include when the lack of coding and payment for services historically not paid for separately give rise to inappropriate payment disparities that do not reflect the relative resources involved in furnishing treatment, given the changes in medical practice that have led to more care coordination/team-based care, and the idea that the resources involved in those aspects of care are not adequately reflected in current coding/payment. In these cases, we have created coding and separate payment for services such as transitional care management (77 FR 68978), chronic care management (79 FR 67715), behavioral health integration services (81 FR 80226), and virtual check-in services (83 FR 59483). In some cases, we have also specifically made payment for services provided directly to caregivers when, in current practice and in specific circumstances, they are an integral part of ongoing treatment for some patients (81 FR 80331). In the CY 2017 PFS final rule, we noted that we believe that CPT codes 96160 and 96161, Patient, Caregiver-focused Health Risk Assessment codes, describe services that, in particular cases, can be necessary components of services furnished to Medicare beneficiaries. We recognized that in current medical practice, practitioner interaction with caregivers is an integral part of treatment for some patients. Accordingly, the descriptions for several payable codes under the PFS include direct interactions between practitioners and caregivers. We agreed with commenters, that there are circumstances where this service is an essential part of a service to a Medicare beneficiary. Therefore, we assigned active payment status to both codes for CY 2017.

Based on public comments, we believe there could be circumstances, captured in the medical record, where

separate payment for these services may be appropriate. We will continue to consider and contemplate which circumstances or services and for which beneficiaries it would be appropriate to furnish and receive payment for these types of services in future notice and comment rulemaking.

We appreciate the thoughtful feedback submitted by the public on this matter. We intend to address these codes more thoroughly during the CY 2024 rulemaking process as we review other coding and valuation changes.

(30) Cognitive Behavioral Therapy Monitoring (CPT code 98978).

See the Remote Therapeutic Monitoring (RTM) section II.I. of this final rule for a review of new device code, CPT code 98978.

(31) Code Descriptor Changes for Annual Alcohol Misuse and Annual Depression Screenings (HCPCS Codes G0442 and G0444)

Interested parties have raised concerns with the portion of the code descriptors that require a certain number of minutes to bill for the HCPCS codes G0442 (*Annual alcohol misuse screening, 15 minutes*) and G0444 (*Annual depression screening, 15 minutes*). Over the past several years, AAFP and the ACP have requested that CMS revise the code descriptors to state “up to 15 minutes” instead of the current “15 minutes,” allowing practitioners to efficiently furnish the service. As currently described, claims for the service are said to be denied by MACs in instances where records suggest that a full 15 minutes was not reached by the practitioner when furnishing the service. Both codes were high in volume for 2019 and 2020, with over 700,000 reported services in our Medicare claims data.

Medicare Part B coverage for such screenings originated from a national coverage determination (NCD) from 2011 and 2012. We believe that these screenings may not require a full 15 minutes to perform for the typical patient, so we believed that it would be appropriate to propose to revise the descriptors to specify that screening times of 5 to 15 minutes would be the typical range to furnish these services. This will establish a lower time limit for both HCPCS codes G0442 and G0444. Therefore, we proposed to modify the descriptor for HCPCS code G0442 to read “*Annual alcohol misuse screening, 5 to 15 minutes*” and for HCPCS code G0444 to read “*Annual depression screening, 5 to 15 minutes*.”

We received a number of comments concerning the adjustments to the

descriptors of HCPCS codes G0442 and G0444.

*Comment:* Commenters were all in favor of the descriptor changes made for these codes and for the clarification of these services. The commenters universally expressed their support and a few recommended that CMS should re-review the valuations for these services to ensure proper payment.

*Response:* We thank commenters for their supporting comments on the descriptor adjustments to HCPCS codes G0442 and G0444. When substantial descriptor changes are made to some CPT codes, that does signal to CMS to re-review all aspects of a service and to possibly align for proper payment. These descriptor changes were to HCPCS codes and they do not change the currently established payments for them. They are just a clarification for the claims process to smooth out any possible misunderstanding of conditions of payment and our original intent in allowing payments for these services.

After review and consideration of all comments regarding our proposals for HCPCS codes G0442 and G0444, we are finalizing our descriptor changes as proposed, to “Annual alcohol misuse screening, 5 to 15 minutes” for HCPCS code G0442 and to “Annual depression screening, 5 to 15 minutes.” for HCPCS code G0444.

(32) Insertion, and Removal and Insertion of New 180-Day Implantable Interstitial Glucose Sensor System (HCPCS Codes G0308 and G0309)

For the CY 2021 PFS final rule (85 FR 84645), we established national pricing for 3 Category III CPT codes that describe continuous glucose monitoring. Category III CPT codes 0446T (*Creation of subcutaneous pocket with insertion of implantable interstitial glucose sensor, including system activation and patient training*), 0447T (*removal of implantable interstitial glucose sensor from subcutaneous pocket via incision*), and 0448T (*removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation*) describe the services related to the insertion, removal, and removal and insertion of an implantable interstitial glucose sensor from a subcutaneous pocket. The implantable interstitial glucose sensors are part of systems that can allow real-time glucose monitoring, provide glucose trend information, and signal alerts for detection and prediction of episodes of low blood glucose (hypoglycemia) and high blood glucose (hyperglycemia).

The direct PE inputs for CPT code 0446T include a 90-day supply item, SD334 (implantable interstitial glucose sensor), and a 90-day smart transmitter proxy equipment item, EQ392 (heart failure patient physiologic monitoring equipment package). The direct PE inputs for CPT code 0448T include only the 90-day SD334 interstitial glucose sensor.

For CY 2022, based on requests from interested parties for CMS to allow beneficiaries critical access to a newly approved 180-day continuous glucose monitoring system, CMS established two new HCPCS codes to describe the new 180-day monitoring service. Specifically, CMS established HCPCS code G0308 (*Creation of subcutaneous pocket with insertion of 180-day implantable interstitial glucose sensor, including system activation and patient training*) and G0309 (*removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new 180-day implantable sensor, including system activation*). The newly approved 180-day continuous glucose monitoring system extends the monitoring period from the previous 90 days to allow for a longer monitoring period between replacement of the sensor. We believe it is important for beneficiaries to have continued access to this service during the transition from a 90- to 180-day monitoring period where the 90-day sensor may become obsolete. Therefore, effective July 1, 2022, HCPCS codes G0308 and G0309 are contractor priced. We solicited information and invoices from interested parties on the costs of the 180-day interstitial glucose supply and 180-day smart transmitter equipment direct PE inputs for HCPCS codes G0308 and G0309 to ensure proper payment for these physician's services, for consideration of national payment amounts for CY 2023. We noted that the 90-day supply item, SD334, is currently priced at \$1,500 based on information we received from interested parties. The 90-day smart transmitter, EQ392, is currently priced at \$1,000 and assigned a time value of 25,290 minutes derived from 60 minutes per hour times 24 hours per day times 90 days per billing quarter divided by 1 minute of equipment use of every 5 minutes of time. HCPCS code G0308 includes the smart transmitter and interstitial glucose sensor and HCPCS code G0309 includes the interstitial glucose sensor only.

*Comment:* Commenters supported our creation of G codes G0308 and G0309 to describe the new 180-day interstitial continuous glucose monitor. Commenters also requested that we

delete the G codes effective January 1, 2023 and revalue CPT codes 0446T and 0448T to include direct PE costs for the new sensor and transmitter, since the current 90-day sensor and transmitter has become obsolete. We also received invoices and pricing information from a commenter to support their requested PE revaluation.

*Response:* We agree with commenters that we should delete G codes, G0308 and G0309, effective January 1, 2023 to ensure accurate payment for the new 180-day Continuous Glucose Monitoring device. We also agree to revalue the PE inputs for the existing CPT codes, 0446T and 0448T. The invoices that we received from a commenter list a supply increase (SD334) from \$1,500 to \$3,000, which would be a supply input for both 0446T and 0448T. The invoices also list the equipment (EQ392) as having an increase in equipment minutes, but not a change in the cost of the transmitter itself. The increase in equipment minutes applies only to CPT code 0446T. The physician work remains the same for both codes, therefore there is no change to work RVUs.

In consideration of the comments and invoices received, we are finalizing changes to codes G0308, G0309, 0446T, and 0448T. G codes G0308 and G0309 will be deleted effective January 1, 2023. CPT codes 0446T and 0448T will have supply input SD334 valued at \$3,000. CPT code 0446T equipment EQ392 will have equipment minutes equal to 60 minutes \* 24 hours \* 30 days \* 6 months / 1 out of every 5 minutes = 51,840 minutes.

(33) Chronic Pain Management and Treatment (CPM) Bundles (HCPCS G3002 and G3003, Formerly GYYY1 and GYYY2, Respectively)

#### (a) Background and Proposal

In the CY 2022 PFS proposed rule (86 FR 39104, 39179 through 39181), we solicited comments on and explored refinements to the PFS that would appropriately value chronic pain management and treatment (CPM) for the purpose of future rulemaking. In our solicitation, we described Federal efforts for more than a decade to effectively address pain management as a response to the nation's overdose crisis,<sup>10</sup> such as the National Pain Strategy<sup>11</sup> and the HHS Pain Management Best Practices Inter-Agency Task Force (PMTF) Report.<sup>12</sup> As we noted in our CY 2022 comment solicitation, several sections of

the Support for Patients and Communities Act of 2018<sup>13</sup> (SUPPORT Act) describe actions the Department of Health and Human Services has been directed to take to improve pain care, such as section 2003, which amended Medicare's Annual Wellness Visit<sup>14</sup> to include a review of factors for evaluation related to pain for patients using opioid medications; section 6086, the Dr. Todd Graham Pain Management Study;<sup>15</sup> and section 6032, which required CMS to furnish a Report to Congress and develop a related Action Plan to review coverage and payment policies in Medicare and Medicaid related to the treatment of opioid use disorder and for non-opioid therapies to help manage acute and chronic pain.<sup>16</sup> In the section 6032 Report and the Action Plan, CMS included a recommendation to explore the possibility of establishing a new bundled payment under the Medicare Physician Fee Schedule for integrated multimodal pain care that could include certain elements such as diagnosis, a person-centered plan of care, care coordination, medication management, and other aspects of pain care.

As described in Goal 3 of CMS' 2022 Behavioral Health Strategy<sup>17</sup> (Strategy), CMS intends to improve the care experience for individuals with acute and/or chronic pain, expand access to evidence-based treatments for acute and chronic pain, and increase coordination between primary and specialty care through payment episodes, incentives, and payment models. In late 2019, the CMS Office of Burden Reduction & Health Informatics launched the "Chronic Pain Stakeholder Engagement," which focused on understanding access to covered treatment and services for people living with pain.<sup>18</sup> CMS recently released information gathered from interested parties through this Engagement using qualitative research methods and the human-centered design process, to uncover provider burden, and identify opportunities to improve access to covered services by illustrating the experiences of people living with, and treating, chronic pain. The intent of this project was to highlight the most

prominent barriers people with pain face in accessing care, and the factors influencing clinicians that can affect people with chronic pain, the quality of their care, and their quality of life.

In the context of the Biden-Harris' Administration's commitment to equity,<sup>19</sup> and the inclusion of equity as a pillar of CMS' Strategic Vision,<sup>20</sup> disparities exist in pain treatment due to bias in treatment, language barriers, cultural norms, and socioeconomic status. We are also aware that pain is a factor in suicidality and suicide, prioritized in the Surgeon General's Call to Action to Implement the National Strategy for Suicide Prevention<sup>21</sup> and in HHS' work to implement "988",<sup>22</sup> the new national dialing code for suicide and crisis assistance that was implemented nationally this year.

In coordination with all of these initiatives, we also have continued to explore refinements to the PFS that would appropriately value CPM. In the CY 2022 PFS proposed rule, we sought comment on whether we should approach CPM through a standalone code or E/M add-on coding, and about the specific activities that are involved in CPM, how we might value such a code or service, the settings where this care is provided, the types of practitioners that furnish this care, and whether the service or any components of it could or should be furnished as "incident to"<sup>23</sup> services under the direction of the billing practitioner by other members of the care team (86 FR 39182). We received just under 2,000 comments on this comment solicitation, including comments from provider associations, federations, and societies that represent health care professionals; organizations that educate, connect, and advocate for people with pain; State-based health care organizations, medical societies and associations; cancer care centers; health care companies; device manufacturers; pain care providers; and people living with pain. Almost all commenters were supportive of our efforts to carefully consider an approach to coding and payment for care for CPM. Many commenters supported the creation of separate coding and payment for CPM under the PFS. We summarized

these comments, expressed appreciation for the commenters' attention to informing our approach to payment and coding for comprehensive CPM services, and thanked the commenters for their comments in the CY 2022 PFS final rule (86 FR 65129).

Generally, commenters agreed that efforts are needed to effectively support the complex needs of beneficiaries with chronic pain. Commenters emphasized that there are numerous conditions giving rise to chronic pain and that people presenting with chronic pain respond variably to various treatment modalities, and often require longer office visit times, and longer follow-up coordinating care with social workers and case managers, mental and behavioral health support, communications with emergency department physicians and nurses, and numerous medication adjustments. One commenter stated that beneficiaries with complex chronic pain conditions may require a lot of time for correct dosing of medications and counseling, and that such time is not captured effectively using existing E/M codes. This commenter also believed that separate coding and payment for chronic pain management could help with better understanding of the treatment of chronic pain than when the service is reported with existing visit codes and would allow for valuation based on the resources involved in furnishing these specific services to people with chronic pain, enhancing the likelihood of appropriate payment, especially for non-face-to-face time involved with the service.

A few commenters expressed preference for using existing E/M codes and the creation of codes to be used in conjunction with E/M codes. One commenter suggested that CMS either clarify or modify existing codes so they can support services for patients with chronic pain or significant acute pain, as well as beneficiaries with a chronic disease and a behavioral health condition, stating that using the existing codes would avoid any concerns about overpayment for patients with both a chronic disease and pain, while also making it more feasible for small practices to employ care management staff and provide customized care management services for all the patients who need them.

One commenter who was agreeable with various approaches to payment suggested that the guidelines for Cognitive Assessment and Care Plan Services code 99483 include "chronic pain syndromes" in the "assessment of factors that could be contributing to cognitive impairment" and that these

codes could be reported by physicians who consult with a pain specialist about their patient's pain. This commenter also suggested that Transitional Care Management could also potentially include pain management following inpatient care to help prevent acute pain from progressing to chronic pain. Other commenters also likened CPM services to chronic care management services. We believe that chronic care management codes, which, except for Principal Care Management, specify that the chronic condition being managed is expected to last at least one year or until death, would not properly describe the condition of many beneficiaries with chronic pain, which could potentially improve with treatment and intervention, or recur after improvement. For example, the 11th revision of the World Health Organization's International Classification of Diseases and Related Health Problems define chronic pain as persistent or recurring pain lasting longer than 3 months.<sup>24</sup>

Commenters included feedback about other specific activities involved in the management of patients with chronic pain in addition to those we specified in the comment solicitation. Commenters also identified codes that CMS might examine as models for payment, either as stand-alone timed codes or monthly bundles. Commenters suggested which practitioners should be able to bill such CPM codes, which practitioners should be able to furnish CPM services incident to the services of a physician or other practitioner, and expressed views on adding CPM services to the Medicare Telehealth Services List and obtaining beneficiary consent for CPM services.

We agree with commenters who believe that E/M codes may not reflect all the services and resources required to furnish comprehensive, chronic pain management to beneficiaries living with pain. While we agree in principle that it might be appropriate to establish bundled all-inclusive coding with monthly payment for a broader set of CPM services, we do not have data at the present time on the full scope of services and resource inputs involved in care for patients with chronic pain to support development of a proposed monthly bundled all-inclusive rate. We do believe that E/M codes do not appropriately reflect the time and other potential resources involved in furnishing comprehensive CPM for beneficiaries with chronic pain. Beginning in the CY 2014 PFS final rule (78 FR 74414 through 74427), we

recognized that the resources involved in furnishing comprehensive care to patients with multiple chronic conditions are greater than those required to support care in a typical E/M service. In response, we finalized a separately payable HCPCS code G0316 (*Chronic Care Management (CCM) services furnished to patients with multiple (2 or more) chronic conditions expected to last at least 12 months, or until the death of the patient; 20 minutes or more per in 30 days of chronic care management services provided by clinical staff and directed by a physician or other qualified health care practitioner*). The following year, in the CY 2015 PFS final rule (79 FR 67715 through 67730), we refined aspects of the existing CCM policies and adopted separate payment for CCM services under CPT code 99490 (*Chronic care management services (CCM), at least 20 minutes of clinical staff time directed by a physician or other qualified health professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; Chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; Comprehensive care plan established, implemented, revised, or monitored*). In the CY 2017 PFS final rule (81 FR 80244), we adopted CPT codes 99487 (*Complex chronic care management (CCCM) services with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored, moderate or high complexity medical decision making; first 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month*) and 99489 (*CCCM services with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored, moderate or high complexity medical decision making; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional,*

<sup>24</sup> <https://icd.who.int/en>.

*per calendar month (List separately in addition to code for primary procedure)). Then, in the CY 2019 PFS final rule (83 FR 59577), we adopted a new CPT code, 99491 (CCM services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored), to describe at least 30 minutes of CCM services performed personally by a physician or NPP. In the CY 2020 PFS final rule (84 FR 62690), we established payment for an add-on code to CPT code 99490 by creating HCPCS code G2058 (CCM services, each additional 20 minutes of clinical staff time directed by a physician or other qualified healthcare professional, per calendar month). We also created two new HCPCS G codes, G2064 and G2065 (84 FR 62692 through 62694), representing comprehensive services for a single high-risk disease (that is, principal care management). In the CY 2021 PFS final rule (85 FR 84639), we finalized a RUC-recommended replacement code for HCPCS code G2058 with the identical descriptor, CPT code 99439, and assigned the same valuation as for G2058. For CY 2022, the RUC resurveyed the CCM code family, including CCCM and Principal Care Management (PCM), and added five new CPT codes: 99437 (CCM services each additional 30 minutes by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)), 99424 (PCM services for a single high-risk disease first 30 minutes provided personally by a physician or other qualified health care professional, per calendar month), 99425 (PCM services for a single high risk disease each additional 30 minutes provided personally by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)), 99426 (PCM, for a single high-risk disease first 30 minutes of clinical staff time directed by physician or other qualified health care professional, per calendar month), and 99427 (PCM services, for a single high-risk disease each additional 30 minutes of clinical staff time directed by a physician or*

*other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)).*

The CCM/CCCM/PCM code family now includes five sets of codes, each set with a base code and an add-on code. The sets vary by the degree of complexity of care (that is, CCM, CCCM, or PCM), who directly performs the services (that is, clinical staff, or the physician or NPP), and the time spent furnishing the services. The RUC-recommended values for work RVUs and direct PE inputs for these codes in CY 2022 were derived from a recent RUC specialty society survey. We proposed to accept the RUC-recommended values, considered public comments, and finalized the proposed values for the 10 CCM/CCCM/PCM codes.

In consideration of the supportive comments we received last year in response to our comment solicitation, clinical expertise within CMS, and internal input from CMS staff and from our HHS operating division partners, we proposed to create separate coding and payment for CPM services beginning January 1, 2023. We recognize that there is currently no existing CPT code that specifically describes the work of the clinician who performs comprehensive, holistic CPM. We also believe the resources involved in furnishing CPM services to beneficiaries with chronic pain are not appropriately recognized under current coding and payment mechanisms. As noted above, we do not believe that E/M codes and values appropriately reflect time involved in furnishing CPM for beneficiaries with chronic pain. CMS has authority under section 1848 of the Act to establish codes that describe services furnished by clinicians and suppliers that bill for physicians' services, and to establish payment amounts for those services that reflect the relative value of the resources involved in furnishing them. We also expect that creating separate coding and payment for CPM will help facilitate the development of data regarding the prevalence and impact of chronic pain in the Medicare population, where conditions including osteoarthritis, cancer, and other similar conditions that cause pain over extended periods of time are common.<sup>25</sup> Such information can assist us in identifying potential coding and valuation refinements to ensure appropriate payment for these services. We also believe that the comprehensive care management

involved in CPM services may potentially prevent or reduce the need for acute services, such as those due to falls<sup>26</sup> and emergency department care<sup>27</sup> associated with chronic pain—for example, sickle cell disease or migraine pain—and also have the potential to reduce the need for treatment for concurrent behavioral health disorders, including substance use disorders. There is some evidence that addressing chronic pain early in its course may result in averting the development of “high-impact” chronic pain<sup>28</sup> in some individuals; these people report more severe pain, more difficulty with self-care, and higher health care use than others with chronic pain.

There are various definitions for chronic pain from, for example, the Centers for Disease Control and Prevention<sup>29</sup> and the National Institutes of Health,<sup>30</sup> and in the Institute of Medicine's (IOM) “Relieving Pain in America: A Blueprint for Transforming Prevention, Care, Education, and Research”,<sup>31</sup> and in the World Health Organization International Classification of Disease Edition 11,—most define chronic pain consistently, with some variation, as pain that persists longer than 3 months. The CDC, for example, has defined chronic pain within its 2016 opioid prescribing Guideline as “pain that typically lasts >3 months or past the time of normal tissue healing, and can be the result of an underlying medical disease or condition, injury, medical treatment, inflammation, or an unknown cause.” For clarity and operational use, we proposed to define chronic pain as “persistent or recurrent pain lasting longer than 3 months.” We welcomed comments from the public regarding whether this was an appropriate definition of chronic pain, or whether we should consider some other interval or description to define chronic pain. We were also interested in hearing from commenters about how the chronic nature of the person's pain should be documented in the medical record.

We posited a monthly payment approach may also be more financially straightforward from the standpoint of

beneficiaries receiving treatment for chronic pain, particularly with respect to applicable coinsurance, which is generally 20 percent of the payment amount, after the annual Part B deductible amount is met.<sup>32</sup>

Beginning for CY 2023, we proposed to create two HCPCS G-codes to describe monthly CPM services. The codes and descriptors for the proposed G-codes are:

- HCPCS code G3002: *Chronic pain management and treatment, monthly bundle including, diagnosis; assessment and monitoring; administration of a validated pain rating scale or tool; the development, implementation, revision, and/or maintenance of a person-centered care plan that includes strengths, goals, clinical needs, and desired outcomes; overall treatment management; facilitation and coordination of any necessary behavioral health treatment; medication management; pain and health literacy counseling; any necessary chronic pain related crisis care; and ongoing communication and care coordination between relevant practitioners furnishing care, e.g. physical therapy and occupational therapy, and community-based care, as appropriate. Required initial face-to-face visit at least 30 minutes provided by a physician or other qualified health professional; first 30 minutes personally provided by physician or other qualified health care professional, per calendar month. (When using G3002, 30 minutes must be met or exceeded.)*

- HCPCS code G3003: *Each additional 15 minutes of chronic pain management and treatment by a physician or other qualified health care professional, per calendar month. (List separately in addition to code for G3002. When using G3003, 15 minutes must be met or exceeded.)*

We were interested in hearing from commenters regarding our proposed inclusion of “administration of a validated pain assessment rating scale or tool,” as an element of the proposed CPM services, and including it within the descriptor of the proposed HCPCS code G3002. We also solicited comment on whether a repository or list of such tools would be helpful to practitioners delivering CPM services.

We proposed to include, as an element of the CPM codes, the development of and/or revisions to a person-centered care plan that included goals, clinical needs, and desired outcomes, as outlined above and

maintained by the practitioner furnishing CPM services.

We proposed to include health literacy counseling as an element of the CPM codes, because we believe it will enable beneficiaries with chronic pain to make well-informed decisions about their care, increases pain knowledge, and strengthens self-management skills. Health literacy is the degree to which individuals have the ability to find, understand, and use information and services to inform health-related decisions and actions for themselves and others.<sup>33</sup> Adequate health literacy may improve the person’s capability to take responsibility for their health, including pain-related health issues such as adherence to treatment regimens and medication administration, and have a positive influence on health outcomes, and health disparities. CMS’ Network of Quality Improvement and Innovation Contractors have used health literacy counseling to improve health counseling,<sup>34</sup> and health literacy counseling has been used to treat arthritis.<sup>35</sup> We noted in the proposed rule that we were interested in hearing from commenters about how pain and health literacy counseling is or may be effectively used as a service element to help beneficiaries with chronic pain make well-informed decisions about their own care, weigh risks and benefits, make decisions, and take actions that are best for them and their health.

For HCPCS code G3002, we proposed to include an initial face-to-face visit of at least 30 minutes, provided by a physician or other qualified health professional, to a beneficiary who has chronic pain, as defined above, or is being diagnosed with chronic pain that has lasted more than 3 months at the time of the initial visit. After consultation with our medical officers, we believe the management of a new patient with chronic pain would involve an initial face-to-face visit of at least 30 minutes due to the complexity involved with the initial assessment. We believe follow-up or subsequent visits could be non-face to face. HCPCS code G3003 describes an additional 15 minutes of CPM and treatment by a physician or other qualified health care professional, per calendar month (listed separately in addition to G3002). We solicited comment on the appropriateness of the proposed 30-minute duration per

calendar month for G3002, and also on the proposed duration and frequency for G3003. We also solicited comment on whether we should consider specifying a longer duration of time for G3002 (for example, one hour—or 45 minutes). Similarly, we solicited comment on whether we should consider specifying a longer duration of time for G3003 (for example, 20-minute increments). We also welcomed comment on our proposal to permit billing of CPM services for beneficiaries who have already been diagnosed with chronic pain, and for people who are being diagnosed with chronic pain during the visit.

We welcomed comments regarding how best the initial visit and subsequent visits should be conducted (for example, in-person, via telehealth, or the use of a telecommunications system, and any implications for additional or different coding). We also considered whether to add the CPM codes to the Medicare Telehealth Services List, based on our review of any information provided through the public comments and our analysis of how these new services may be appropriately furnished to Medicare beneficiaries. We also requested comment regarding whether there are components of the proposed CPM services that do not necessarily require face-to-face interaction with the billing practitioner, such as care that could be provided by auxiliary staff incident to the billing practitioner’s services. For any components that could be furnished incident to the services of the billing practitioner, we requested comment on whether these could be appropriately furnished under the general supervision of the billing physician or non-physician practitioner (NPP), for example, administration of a pain rating scale or tool, or elements of care coordination, as we have provided for certain care management services.

We believe that most CPM services would be billed by primary care practitioners who are focused on long-term management of their patients with chronic pain. As calls for improved pain management have increased in recent years, this has resulted in better education and training of primary care practitioners and heightened awareness of the need for pain care nationally. We believe the codes we proposed for CPM services will create appropriate payment for physicians and other practitioners (beyond primary care practitioners) that reflects the time and resources involved in attending comprehensively to the needs of beneficiaries with chronic pain. As the IOM “Blueprint” report noted, even people who need consultation with a pain specialist

<sup>33</sup> <https://health.gov/healthypeople/priority-areas/health-literacy-healthy-people-2030#:~:text=Health%20literacy%20is%20a%20central,well-being%20of%20all.%E2%80%9D>.

<sup>34</sup> <https://qi.ipro.org/health-equity/health-literacy/>.

<sup>35</sup> <https://www.ahrq.gov/health-literacy/improve-precautions/1stedition/tool3.html>.

<sup>32</sup> <https://www.medicare.gov/what-medicare-covers/what-part-b-covers>.

should benefit from the sustained involvement of a primary care practitioner who is able to help coordinate care across the full spectrum of health care providers, as such coordination “helps prevent people from seeking relief from multiple providers and treatment approaches that may leave them frustrated and angry and worse off both physically and mentally, and from falling into a downward spiral of disability, withdrawal, and hopelessness.”<sup>36</sup> The Blueprint stated that this type of fragmentation hinders the development of a strong, mutually trusting relationship with a single health professional who takes responsibility, and that this established relationship is one of the keys to successful pain treatment. We anticipated that if these proposed codes are finalized, primary care practitioners will employ a variety of person-centered pain management strategies, such as those suggested in the PMTF Report and illustrated in CMS’ CPM graphic<sup>37</sup> including medications, therapies, exercise, behavioral health approaches, complementary and integrative health, and community-based care based on the complexity, goals, and characteristics of each person they serve with chronic pain and according to the person-centered plan of care. It is also important to note that, in many parts of the country, people have access only to their primary care practitioner for chronic pain care.<sup>38</sup> We understand, however, the need or desire that some individuals with chronic pain have to be seen on an ongoing basis for CPM by a pain specialist who has received special training and/or certification to meet the needs of the most complex and challenging patients with chronic pain.

Therefore, we proposed to permit billing by another practitioner after HCPCS code G3002 has already been billed in the same calendar month by a different practitioner. In these situations, we anticipate that there could be occasional instances where care of an individual with chronic pain is transferred to a pain specialist or other specialist during the same month they received the CPM services from a primary care practitioner, for ongoing care. In these or other situations (such as when the beneficiary elects to choose a different physician or practitioner to furnish CPM services), we would

anticipate G3002 and potentially G3003 could be billed by another practitioner during the same month, for the same beneficiary. We believe that it would be unlikely for G3002 to be billed more than twice per month under such circumstances and proposed placing a limit on the number of times the code could be billed per beneficiary per calendar month, at a maximum of twice per calendar month. We solicited comment on our proposal to permit billing by another practitioner after the G3002 has already been billed in the same month by a different practitioner, and on the number of times the code could be appropriately billed per month, per beneficiary.

We proposed to require that the beneficiary’s verbal consent to receive CPM services at the initiating visit be documented in the beneficiary’s medical record, as not all Medicare beneficiaries with chronic pain eligible to receive these separately billable CPM services may understand or want to receive these services, and the beneficiary should be aware that they are receiving them. At the initial visit, the beneficiary with chronic pain should be educated regarding what the CPM services are, how often they may generally expect to receive the services, and have an explanation of any cost sharing that may apply in their particular situation. Practitioners have informed us that beneficiary cost sharing is a significant barrier to provision of similar care management services, such as CCM services, and we solicited comment on how best to effectively educate both practitioners and beneficiaries with chronic pain about the existence of, and the benefits and value of, the proposed CPM services. We solicited comment regarding whether the initiating visit is the appropriate time for billing practitioners to obtain beneficiary verbal consent, if consent should be given at each visit, and also if beneficiary consent should be sought by the practitioners with whom CPM billing practitioners coordinate other Medicare services under the CPM plan of care, or even more broadly.

We believe there might be some potential for duplicative payment for services allocated to the same patient concurrent with certain other Medicare care management services, such as CCM or behavioral health integration (BHI) services; however, we believe the proposed CPM codes have features that would mitigate such circumstances, such as the elements of the service that specifically address the beneficiary’s pain—for example, the administration of a validated pain rating scale or tool.

We welcomed comments regarding what, if any, Medicare services we should consider that could not be billed by the same practitioner for the same patient concurrent with any other Medicare services, to avoid duplication of payment, and help limit financial burden to the Medicare beneficiary with chronic pain. We noted that we would expect to refine these codes as needed through future rulemaking as we receive more information how the codes are being used, and how they are implemented in practice.

To the extent that components of the proposed CPM codes are also components of other care management services, we reiterate our policy against double-counting time and require that the time used in reporting CPM services may not represent time spent in any other reported service. We proposed that the CPM codes could be billed in the same month as a care management service, such as CCM, or BHI. We believe there are circumstances in which it is reasonable and necessary to provide both services in a given month, based on the needs of the Medicare beneficiary with chronic pain, for example, when the beneficiary has both chronic pain, and a mental disorder(s), or multiple chronic conditions. We also proposed that the CPM codes would be able to be billed for the same Medicare patient in the same month as another bundled service such as HCPCS Codes G2086–G2088, which describe bundled payments under the PFS for opioid use disorders. We noted that patient consent would need to be obtained for both of the bundled services such as, for example, CPM and BHI, and all other requirements to report CPM and to report the other service or services would need to be met. We invite comments on these billing proposals and their appropriateness in the context of CPM.

Finally, we questioned commenters whether we should consider creating additional coding and payment to address acute pain. We are interested in information regarding a definition for acute pain, standalone or E/M coding, the specific activities that could be furnished, how we might value and price such a code or service, the settings where care should be provided, the types of practitioners that should furnish acute pain care, if the service or any components should be furnished as “incident to” services under the direction of the billing practitioner or by other members of the care team, and other information that might help us in proposing such a code or codes.

(b) Valuation of Chronic Pain Management Services

Consistent with the valuation methodology for other services under the PFS, proposed HCPCS codes G3002 and G3003 would be valued based on what we believe to be a typical case, and we understand that, based on variability in patient needs, some patients will require more resources, and some fewer. The proposed CPM codes would separately pay for a specified set of CPM elements furnished during a month, including the administration of validated rating scales, establishment and review of a person-centered care plan that includes goals, clinical needs, and desired outcomes, and other elements as described in the proposed code descriptors. To value CPM, we compared the proposed services to codes that involve care management. In doing so, we concluded that the CPM services were similar in work (time and intensity) to that of PCM in that both the PCM codes and proposed CPM codes reflect services that have similar complexities, possible comorbidities, require cognitive time on the part of the practitioner, and may involve coordination of care across multiple practitioners.

For HCPCS code G3002, we developed proposed inputs using a crosswalk to CPT code 99424 (*Principal care management services, for a single high-risk disease, with the following required elements: One complex chronic condition expected to last at least 3 months, and that places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan; the condition requires frequent adjustments in the medication regimen and/or the management of the condition is unusually complex due to comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; first 30 minutes provided personally by a physician or other qualified health care professional, per calendar month.*), which is assigned a work RVU of 1.45. Additionally, for G3002 we proposed to use a crosswalk to the direct PE inputs associated with CPT code 99424. We believe that the work and PE described by this crosswalk code is analogous to the services described in G3002, because G3002 includes similar *care plan, medication management, unusually complex clinical management; care coordination between relevant practitioners furnishing care;*

*and time for care provided personally by a physician or other qualified health care professional, as described in CPT code 99424.*

We proposed to value G3003 at a work RVU of 0.50, using a crosswalk to CPT code 99425 (*each additional 30 minutes provided personally by a physician or other qualified health care professional, per calendar month*) (*List separately in addition to code for G3002*), which is assigned a work RVU of 1.00. However, the required minimum number of minutes described in G3003 is half of the number of minutes in CPT code 99425. For HCPCS code G3003, we proposed to use a crosswalk to half of the direct PE inputs associated with CPT code 99425. We believe that the work and PE described by this crosswalk code is analogous to the services described in G3003, because G3003 includes similar activities as described in CPT code 99425.

We proposed that G3002 can only be billed when the full 30 minutes of service time has been met or exceeded. Additionally, we proposed that the add-on code (G3003) can only be billed when the full 15 minutes of service time is met or exceeded.

Our proposed valuation of CPM services includes services that are personally performed by a physician (or other appropriate billing practitioner, such as a nurse practitioner (NP) or physician assistant (PA)) described by certain E/M visit codes that apply to a new patient in various settings. Accordingly, we proposed that G3002/G3003 must be furnished by the physician (or other appropriate billing practitioner) and could not be billed on the same date of service as CPT codes 99202–99215 (*Office/outpatient visits new*), since these codes reflect face-to-face services furnished by the physician or other billing practitioner for related, separately billable services that are being furnished to a patient the practitioner has not previously seen. We believe it would be unlikely the practitioner is prepared to address the complex pain needs of a new patient on the same day he or she is seen for a general visit, or a visit where the person is being seen for some other illness or condition. We do not believe that the services included in G3002/G3003 would significantly overlap with CCM services; Transitional Care Management (TCM) services; or BHI services, which have various clinical purposes separate from CPM. We do believe there is likely overlap in the Medicare beneficiary population eligible to receive CCM, TCM, BHI, and the proposed CPM services, but we believe there are

distinctions in the nature and extent of the assessments, care coordination, medication management, and care planning for CPM to allow concurrent billing for services that are medically reasonable and necessary, and that it is particularly important to allow for the provision of needed services, including behavioral health services, to beneficiaries with chronic pain. We solicited comment on whether we have appropriately identified the codes Medicare should not pay if furnished during the same day as the proposed CPM codes, and if there are circumstances where multiple care planning codes could be furnished without overlap or other situations, such as where the practitioner is seeing a new patient.

We noted that the proposed CPM codes would be limited to beneficiaries in office or other outpatient or domiciliary settings. We will consider for future rulemaking separately identifying and paying for CPM services furnished to beneficiaries in any appropriate setting of care, in recognition of the prevalence and burden of pain across all settings of care, and the associated time and service complexity to provide care for chronic pain. We appreciate comments on other settings where CPM services could be provided.

(c) Request for Comment

We believe there could be circumstances in which a beneficiary receiving CPM services needs referrals or recommendations, based on a clinician's assessment, for services or interventions that are not included as elements of the CPM services, such as for community-based care or physical and occupational therapy. We welcomed comments on the care coordination that may occur between relevant practitioners furnishing services, such as complementary and integrative care, and on the community-based care element included in the descriptors for proposed G3002 and G3003.

We also asked commenters to weigh in on how documentation of the performance of the elements of CPM services might best be addressed in medical recordkeeping. We solicited general comment on whether there are any elements of CPM services outlined in this proposal that the public and interested parties believe are not typically furnished in connection with comprehensive chronic pain management, or any proposed elements of the CPM services that should be removed or altered. We solicited comment on whether there are elements

of CPM services that we have not identified and should be added to the code descriptors.

Additionally, we solicited comment on which, if any, CPM elements could be furnished as “incident to” services, and whether to add G3002 and G3003 to the list of services for which we allow general supervision as described in our regulation at § 410.26(b)(5). We welcomed comments from the public for future rulemaking regarding what elements of the CPM services could be furnished under general supervision, or direct supervision. For example, facilitation and coordination of any necessary behavioral health treatment, chronic pain related crisis care, and ongoing communication and care coordination between relevant practitioners furnishing care might be appropriate activities to be considered under general supervision.

The proposed CPM codes may involve arrangements where the physician or other health professional might work in collaboration with other health care providers or members of a care team, such as a psychologist, dental practitioner, or social worker, where these individuals might furnish certain elements of the service bundle under the direction of the physician or qualified health practitioner, such as assessments, person-centered care planning, referrals to community-based care, and other activities, as appropriate. We requested comments on if, and how, we should structure the proposed CPM code and payment for these services to account for these types of arrangements that could include team-based care.

We received over 150 unique comments on our proposal from national health care organizations including provider associations, federations, and societies that represent health care professionals; organizations that educate, connect, and advocate for people with pain; State-based health care organizations, medical societies and associations; cancer care centers; health care companies; hospice and palliative care organizations; device manufacturers; pain care providers; and people living with pain and their caregivers. Almost all commenters were supportive of our proposal. We also received several comments mainly from psychologists or psychology associations, requesting we adopt additional coding without medication management in the code descriptor, as medication management in most states is outside the scope of a psychologist’s license. The following is a summary of the comments we received and our responses.

*Comment:* Commenters living with chronic pain and their caregivers shared poignant stories about the importance of the proposed codes. One person observed that in recent years, since the release of the Centers for Disease Control and Prevention’s (CDC) Guideline for Prescribing Opioids, for people taking opioid medications or for those who were forced to stop taking medications, the relationship between providers and patients has become fraught, tense, and stigmatizing, even risky for physicians and for all these reasons, many clinicians have refused to treat chronic pain patients or have terminated chronic pain patients from their practices, with growing numbers of pain patients unable to find anyone to treat them, even if they do not use opioid medications. The spouse of a person living with chronic pain told of repeated trips to a local hospital seeking emergency treatment that worsened, instead of improved, her care, in part because the couple believed clinicians at the hospital were fearful of prescribing opioids and did not have access to, or ignored, the recommendations of the patient’s longtime clinicians, who included several pain specialists. A beneficiary who lives with chronic pain stated that she hoped the change in codes would motivate clinicians to focus more attention on people with pain, as after many years of seeing provider inexperience first-hand, along with the accompanying administrative demands and paperwork pain care demands, she believed having a special billing code will be a “giant step” forward for people with pain, potentially allowing more people like her with painful conditions to continue to contribute to society, including through employment. A person living with chronic pain stated he liked what he saw in the code proposal because he hoped it would open the doors to more doctors who would provide pain care, including appropriate medication management, because he thinks doctors are still fearful of Federal and State prescribing guidelines. Another person living with pain stated the CPM services are “so needed by people like me.”

One commenter noted that they would expect that the amount of pain care required and the cost to Medicare to be large and increasing, especially given the aging American population and the prevalence of age-associated chronic pain conditions in Medicare like arthritis, cancer, and diabetic neuropathy; the same commenter stated that pain management is complex, and there are no existing codes that account

for all the tasks required to care for a patient with chronic pain, and that a standalone code will signal to physicians that, when patients have complaints of pain, it is critical to take them seriously. Conversely, another commenter was not supportive of the new codes as they believe that physicians will continue to bill evaluation and management (E/M) codes to avoid adding to their administrative burden.

One commenter requested that we “pause” implementation of the codes, further engage with interested parties, and make additional clarifications within the code to address valuation, descriptors, and guidance. Another commenter noted that they do not support including the CPM codes in the applicable list used for accountable care organizations beneficiary assignment, citing that managing chronic pain does not routinely follow the overall health of the patient, and is typically managed by clinicians with specific skills beyond primary care. One commenter questioned if a single bundled code was adequate to address the breadth of conditions that patients may experience, as well as the variety of treatment and management approaches. One commenter urged us to consider that for some people, a visit with a practitioner might focus not just on pain management, but also whole-person care. The same commenter noted that, although they appreciated our efforts to simplify billing requirements for the CCM codes, uptake appears to be low in part due to administrative burden, and they expressed concerns that similar challenges would apply to the CPM codes, which could entail documentation of services rendered in an E/M service. The commenter asked us if we could determine a pathway to make billing more streamlined, perhaps through billing using the G89.xx ICD-10 series. A commenter thanked us for improving access to pain care, including through prevention and treatment for substance use disorders (SUD). A different commentator congratulated us on, through creation of the codes, helping to prevent some individuals from developing SUD. One commenter noted the codes would prompt more practitioners to welcome Medicare beneficiaries with chronic pain into their practices, and encourage practitioners already treating Medicare beneficiaries who have pain to spend the time to help them manage their condition within a trusting, supportive, and ongoing care partnership.

*Response:* We thank all the commenters who expressed enthusiastic support of the proposed new HCPCS

codes for CPM services, and we appreciate the attention to informing our approach in shaping this policy that we believe will provide improved access to holistic and comprehensive pain management for people with Medicare. A few commenters disagreed with our proposal. One commenter stated that our proposal is not substantially different than existing codes, while another questioned whether one code was sufficient to address the breadth of conditions patients experiencing chronic pain face. We do not agree that there is an existing code that specifically describes the work of the clinician in performing the specific tasks described in the code descriptor for HCPCS code G3002. We anticipate that the CPM codes will be used to address the full range of chronic pain conditions that impact Medicare patients. We look forward to gaining more knowledge through data, and clinician and beneficiary experience as use of the CPM codes becomes more frequent.

*Comment:* We received a few comments regarding our proposal to define chronic pain as “persistent or recurrent pain lasting longer than 3 months.” Most commenters agreed with our proposed definition. We received several suggestions related to the specification of 3 months duration, including one month, 90 days, and the addition of “expected to last longer” to our definition. A few others suggested we broaden the definition generally, to ensure that patients with cancer, neuropathic pain, psychogenic pain, and headaches would also benefit from this proposal to create HCPCS codes that describe CPM services, while another commenter congratulated us on using language that it noted was inclusive of all types of pain treatment. One commenter asked us to integrate acute pain and biopsychosocial factors into our definition, and stated that risk indicators of pain are apparent early, potentially limiting robust interventions for the prevention of chronic pain. One commenter opined that our definition of chronic pain was overly broad and did not address the many types of conditions that pain patients may experience. A commenter who agreed with our definition noted that in the International Classification of Disease, 11th edition (ICD–11),<sup>39</sup> chronic pain has its own diagnosis, independent of an underlying disease or condition. Still, another commenter, who also agreed with our definition, noted there are ICD–10 diagnostic codes for chronic pain, the G89.xx series. Another

commenter agreed that the proposed definition is largely in line with their understanding, adding more context to include, “persistent or recurrent pain without a serious progression or exacerbation of an underlying pathologic condition and without tolerability over time.” Another commenter stated that at a high level, they believe the metric of “time” is not the dispositive component to define a chronic pain diagnosis, but the definition should instead take into account a complex series of associated factors like amount of suffering or hindrance of function, and that not all recurrent pain should be considered chronic pain; instead chronic pain as a diagnosis should be utilized for an individual who does not understand how to manage or live their life with their current, recurring, episodic symptoms.

*Response:* We appreciate all the commenters’ suggestions and observations. As we described in the proposed rule, we reviewed definitions from the Centers for Disease Control and Prevention, the National Institutes of Health, the World Health Organization,<sup>40</sup> and in the Institute of Medicine’s “Relieving Pain in America: A Blueprint for Transforming Prevention, Care, Education, and Research.” For operational ease and consistency with the proposed rule and various sources, we are finalizing as proposed the definition of chronic pain as “persistent or recurrent pain lasting longer than 3 months.”

*Comment:* One commenter recommended we focus on improving care for all pain, such as acute pain, as well as pain related to cancer, sickle cell disease, and for people in palliative care, with another commenter also agreeing that additional codes could focus on people with palliative and cancer pain. This commenter noted that increased support for comprehensive acute pain management could also reduce the number of patients who progress from acute to chronic pain. This sentiment was echoed by other commenters, who suggested an additional pain code for acute care that would incorporate massage therapy and other complementary and integrative services for both in-patient and outpatient visits, as is seen in some large health systems. Several other commenters generally supported the inclusion or addition of acute pain management in this or other codes. One

commenter suggested that after we gain experience with the use of the codes for chronic pain, we consider their application to acute pain management. A few commenters did not support additional coding and payment for acute pain management, as they believed these circumstances are adequately handled via existing E/M coding and payment.

*Response:* As we mentioned in the proposed rule, we understand there is some evidence that addressing chronic pain early in its course, such as when the person is experiencing acute pain, may result in averting the development of “high-impact” chronic pain in some individuals and that these people report more severe pain, more difficulty with self-care, and higher health care use than others with chronic pain. We considered, in the development of this code, whether or not to include acute pain, and elected not to include it in the CPM services descriptor. We will continue to consider how best to approach management of acute pain through coding and payment.

In our proposal, we required an initial face-to-face visit of at least 30 minutes provided by a physician or other qualified health professional with the first 30 minutes personally provided by the physician or other qualified health professional, per calendar month for HCPCS code G3002. We noted that HCPCS codes GYYY1 and GYYY2 were placeholder codes and that the final code number will be HCPCS code G3002 and G3003, respectively. We proposed, for HCPCS code G3003, an additional fifteen minutes of CPM services by a physician or other qualified health professional, per calendar month, and we proposed limiting the application of HCPCS code G3003 to up to three units of an additional 15 minutes of CPM services, per calendar month (listed separately in addition to proposed HCPCS code G3002). We sought comment on both the proposed duration of 30 minutes for HCPCS code G3002, and the duration and the limit on HCPCS code G3003.

*Comment:* Most commenters agreed that our proposal for 30 minutes for HCPCS code G3002 was reasonable and adequate for the treatment and management of the first visit for a person with chronic pain and that fifteen-minute intervals for subsequent time-based intervals is adequate.

One commenter expressed a concern that neither code allowed for adequate time, and that the codes should allow for at least an hour for the first visit and 45 minutes for subsequent visits, especially to allow for the intensity of clinical time that would be likely

<sup>40</sup> <https://painconcern.org.uk/new-classification-for-chronic-pain/#:-:text=Chronic%20primary%20pain%20is%20defined,explained%20by%20another%20chronic%20condition>.

<sup>39</sup> <https://icd.who.int/en>.

needed to diagnose and treat a new patient. The same commenter urged us, because the myriad of situations that could apply based on the complexity of treating pain overall in the Medicare population, to consider additional flexibilities in the duration of time for the codes based on each person with pain's situation. Another commenter noted that the time required to coordinate with other specialists, referrals, therapies, and trial different treatments is "considerable" to create and modify an individual treatment plan for each patient. Another commenter suggested that twice a month billing for proposed HCPCS code G3002 is insufficient for completion of the list of requirements, and recommended that four visits per month be allowed to ensure that the element list is completed. A separate commenter echoed this sentiment, suggesting there be no limitation on the number of times per month this code can be billed, citing the multitude of providers seen by some patients. Another commenter recommended we consider extending the length of visits from 45 minutes (30 minutes for proposed HCPCS code G3002, 15 minutes for proposed G3003) to 60 minutes to account for the complexity of pain care. A commenter noted that 30 minutes was too high a threshold for appointments beyond the initial visit, and recommended that subsequent visits only have a limit of 15 minutes after which billing is allowed. One commenter stated that we should not put any limits on the number of times proposed HCPCS code G3003 can be billed each month. A commenter requested that the frequency and duration of permitted CPM visits be flexible enough to account for the variety of practice types—from primary care to specialized clinics offering intensive and integrated chronic pain management services, and this commenter also noted that patients have different intensities of need, with some requiring longer appointments, or at greater frequency, while some have lower needs, stating that 30 minute and 15 minute durations of HCPCS codes G3002 and G3003 respectively, as well as the frequency, may be too limited to adequately account for the challenging demands of chronic pain management. Another commenter stated that 30 minutes seems reasonable but flexibility is important as chronic pain conditions vary and sometimes more than 30 minutes may be needed, especially for a first visit. Another commenter requested clarification related to the frequency of allowed billing for CPM codes, as some services such as

comprehensive palliative care require a wide range of care.

*Response:* We appreciate the commenters' overall support of our proposal to set the duration of HCPCS code G3002 at 30 minutes, to accommodate both the specified elements of the monthly bundle, and the complex needs of the person with chronic pain, and we are finalizing HCPCS code G3002 for 30 minutes duration. We agree with the commenters who observed that additional flexibilities are needed to account for the numerous situations that could apply to each person with pain's clinical situation, and the factors that might go into the clinician's determination regarding how much time is appropriate to spend treating a person with chronic pain, and also how many and what type of clinicians might need to also furnish care during a particular month. Although we expect that in most instances the person with chronic pain would see one clinician on a regular basis who is performing a lead role in managing that individual's pain, we can also foresee limited circumstances where a beneficiary may need to have their care transferred to a pain specialist, or other specialist in the same month, and the pain specialist or other specialist may also bill HCPCS code G3002 for the same beneficiary, in the same month. There may also be situations where the person with chronic pain needs to see two different clinicians managing their pain on a regular basis, for example, a cancer specialist and a rheumatologist, with both billing the CPM code(s). We would not expect many beneficiaries living with chronic pain would typically be seeing more than one or two physicians or qualified health professionals in a month who might be performing HCPCS code G3002; in part, because of the burden of care described by chronic pain patients and their caregivers, and also because beneficiaries incur cost-sharing expenses for these services and other care they receive—typically 20 percent of the Medicare payment amount after the annual Medicare Part B deductible amount is met.

Based on the comments, especially those that encouraged us to increase billing flexibilities to account for the unique needs of each person with chronic pain, we have reconsidered the proposed limit on billing G3003 to three times per month, and are finalizing in this rule flexibility to bill the second code, for each additional 15 minutes of care, an unlimited number of times, as medically necessary, per month, after HCPCS code G3002 has been billed. We will be monitoring use of the codes

going forward to understand more about how they are being used.

*Comment:* One commenter asked if our proposal required the physician to meet with the patient each month or only once in the initial month of the service, as the commenter noted that monthly visits with the physician are not likely to be necessary for some people receiving ongoing chronic pain management. Another commenter stated that a monthly visit may be onerous for cancer patients who are already receiving time-intensive care. A commenter pointed out that it could take year or more of regular visits to develop, coordinate, and revise a treatment plan optimal in managing the patient's chronic pain; the same commenter stated that a patient might drop back to bi-monthly, quarterly, bi-annually, and annual visits so long as pain is being effectively managed. Another commenter requested clarification regarding if all the elements in the descriptor would be required each month.

*Response:* We agree with the commenters who noted that each person with chronic pain may not need to receive the monthly bundle every month; rather, using a person-centered approach, one which optimizes care according to individual circumstances and preferences, requires variability in how often services are appropriately rendered. Therefore, the CPM services for the HCPCS code G3002 may not be rendered more than once per month by each individual practitioner billing the code for each beneficiary, but could be rendered less than twelve times per year, depending on the specific needs of the person with chronic pain.

*Comment:* Some commenters requested clarification on our proposal that the first time HCPCS code G3002 is billed that initial visit must be in person, or if subsequent monthly visits must be "face-to-face," or in person. Several commenters recommended that we not make in-person first time visits an absolute requirement, so as to accommodate for mobility difficulties for people living a long-distance from the physician's office. Other commenters recommended that "face-to-face" components be available via both video and telecommunication technology to support access. Several commenters stated that we needed to clarify that the code required that only the very first visit be in-person, and that follow-up visits could be delivered in-person, or by telehealth. A different commenter's concern was that HCPCS code G3002 seemingly requires an "initial" face-to-face visit of at least 30 minutes, and while the commenter did

not object to one required initial face-to-face visit at the onset of CPM treatment, they thought that CMS potentially requiring an in-person visit monthly is unnecessary, overburdensome, and would exacerbate health care disparities. One commenter noted an initial visit with the patient could be supported by telehealth. Another commenter noted that patients should be seen in the office for the initial visit, at least until they are regulated on their pain medicines. An additional commenter requested clarification as to whether a practitioner could bill these codes both for patients that have an established history of chronic pain, and those that are being diagnosed as having chronic pain for the first time.

**Response:** We thank the commenters for their comments, but we are finalizing the requirement that the first time HCPCS code G3002 is billed, the physician or qualified health practitioner must see the beneficiary in-person, where both individuals are in a clinical setting such as a primary care practitioner's office or other applicable setting. We believe that an in-person visit at the onset of care will benefit both the clinician's accuracy in administering the elements of the HCPCS code G3002 bundle of services, and help at the beginning of care to foster a successful therapeutic relationship between the clinician and the person with chronic pain. One commenter told us doctor-patient relationships in pain management have become so "fraught, mistrustful, and corrosive" that they have led to a crisis, as illustrated by CMS' own Journey Map of the Chronic Pain Experience,<sup>41</sup> which, in their view, accurately demonstrates the current "dysfunctional and damaging state" of pain care. These reports support our decision to require that the physician or other qualified health professional meet with the beneficiary in person for the first time. We acknowledge that for some people living with chronic pain who may live far from the clinician's office, or who have issues with transportation, or whose pain is exacerbated by activity, even getting to a clinician in-person for a first visit may be challenging. We are not requiring that each subsequent visit, whether these be monthly or at some other periodicity be held in-person, but rather leaving that determination to the discretion and preference of the clinician and the beneficiary as they are best positioned to together determine

how to develop and maintain the care partnership to effectively manage pain.

**Comment:** A commenter stated that while patients earlier in their journey managing chronic pain may have care primarily coordinated by a primary care practitioner, others progressing to high-impact chronic pain may have their care mainly coordinated via a pain management specialist; this commenter suggested we allow the codes to be billed at a maximum twice per month to account for the difference in specialty primarily managing a patient's care. This commenter also suggested we add pain management specialists to the list of examples of care that a patient might need (for example, physical and occupational therapy, etc.).

**Response:** We agree with the commenter that it is possible that a beneficiary living with chronic pain might need to see more than one clinician type who is enabled to bill for the CPM services—as the commenter noted, one likely scenario might be a person who sees a primary care practitioner, and a pain specialist (for the purposes of this rule, we are not defining "pain specialist"). As described in the proposed rule, we believe it is unlikely that most beneficiaries with pain would want, or need to, see more than a few physicians or other qualified health professionals in the same month to manage their pain, and administer the elements of the CPM services for various reasons, including the reasons commenters who urged us to add the CPM services to the telehealth list have flagged. We also believe that the beneficiary would likely object to, or could even be confused by, having large numbers of clinicians managing their chronic pain. Although we are not restricting the numbers of clinicians who can bill HCPCS code G3002, we will be monitoring its use going forward to better understand more about the types of practitioners and patients using the CPM codes and services.

**Comment:** A few commenters requested clarification as to whether the person being seen for the first time with proposed HCPCS code G3002 had to have already been diagnosed with a chronic pain diagnosis, or a condition that causes chronic pain. One commenter stated we should include both people who both meet the definition of chronic pain on the first visit, and also people who have adequate medication documentation or concerns that would likely attest they have met the definition of chronic pain, to create an equitable care environment.

**Response:** We are clarifying that the beneficiary, at the first visit, need not

have an established history or diagnosis of chronic pain, or be diagnosed with a condition that causes or involves chronic pain; rather, it is the clinician's responsibility to establish, confirm, or reject a chronic pain and/or pain-related diagnosis when the beneficiary first presents for care and the clinician is using HCPCS code G3002.

**Comment:** Several commenters questioned if clinicians are required to furnish all appropriate elements of the code bundle in each encounter for HCPCS code G3002, including medication management. One commenter stated that we should allow clinicians flexibility for any of the services listed, in any order and over any time period to best manage the person's pain condition(s) and that should allow for omission of certain ones when they are not appropriate or not desired by the patient (for example, medication management, behavioral counseling). Another commenter stated that its stakeholders were concerned that HCPCS code G3002 seems to indicate that all listed services must be completed to bill for the code.

**Response:** We are clarifying that clinicians will be required to furnish all appropriate elements of the code bundle, but also clarifying that we do not expect that all elements of the code bundle will be appropriate for every patient. Therefore, we can confirm that if medication management is appropriate for a specific patient, then a clinician who bills HCPCS code G3002 will be required to furnish medication management to that patient. As described later in this preamble, we will be finalizing the descriptor of HCPCS code G3002 as follows, with the two modifications shown in *italics*: Chronic pain management and treatment, monthly bundle including, diagnosis; assessment and monitoring; administration of a validated pain rating scale or tool; the development, implementation, revision, *and/or* maintenance of a person-centered care plan that includes strengths, goals, clinical needs, and desired outcomes; overall treatment management; facilitation and coordination of any necessary behavioral health treatment; medication management; pain and health literacy counseling; any necessary chronic pain related crisis care; and ongoing communication and care coordination between relevant practitioners furnishing care, for example, physical therapy and occupational therapy, *complementary and integrative approaches*, and community-based care, as appropriate. We believe that the services enumerated as examples accurately summarize the

<sup>41</sup> <https://www.cms.gov/files/document/cms-chronic-pain-journey-map.pdf>.

components of some elements of key care for people with Medicare living with pain.

*Comment:* Many commenters requested that we remove medication management from the code descriptors. One commenter stated it appreciated medication management being included in the code descriptor and that careful evaluation of all medications, including use of American Geriatrics Society Beers Criteria®, should be included as part of the CPM service, urging us to keep the element of medication management in the descriptor finalized for this code.

*Response:* We continue to believe that medication management is an essential element of pain care, and we are not removing it from the code descriptors for HCPCS codes G3002 and G3003. A 2022 Congressional Budget Office publication<sup>42</sup> indicated nationwide per capita use of prescription drugs has increased in recent years, as has Medicare Part D enrollee use, from an average of 48 prescriptions per year in 2009 to 54 prescriptions per year in 2018. In addition, between 2017–2018, nearly 58 percent of U.S. adults used a dietary supplement<sup>43</sup> in the past 30 days, and the percentage of adults using these supplements increases with age;<sup>44</sup> nutritional supplements are used by some people for the treatment of pain.<sup>45</sup> Although we are not explicitly defining medication management for the purposes of HCPCS codes G3002 and G3003, we believe that medication management would customarily include, as part of this element, a review of prescription drugs, over-the-counter medications, supplements, natural treatments, and/or any other substances the person with chronic pain might be using for any purpose. Medicare's Annual Wellness Visit requires the clinician to collect and document use or exposure to "medications and supplements, including calcium and vitamins<sup>46</sup>." Common prescription medications used for pain include acetaminophen, non-steroidal anti-inflammatory drugs, anticonvulsants, antidepressants, musculoskeletal agents, antianxiety medications, and opioids. Americans also use dietary supplements for a range of purposes, including the

treatment of pain.<sup>47 48</sup> Some individuals with pain may also be using substances such as cannabis and other plant-based treatments for pain.<sup>49 50</sup> Bearing this information in mind, we believe medication management by the eligible physician or qualified health professional would be an applicable element of the HCPCS code G3002 for most beneficiaries with chronic pain.

*Comment:* One commenter stated that massage therapy, therapeutic exercise programs, and complementary and integrative services (like acupuncture, tai chi, yoga, and mindfulness meditation) should be referenced in the code, even if currently not covered by Medicare, and that clinicians should be allowed to bill for the range of treatments listed in the HHS PMTF Report, even though the Medicare program may not pay for those services. One commenter noted that care coordination could include not just complementary and integrative care, but also prescribing of durable medical equipment. One commenter stated we should try to remove barriers to more "alternative" therapies.

*Response:* The PMTF Report recommends a range of treatments and therapies that could be used for successful pain management including medications, restorative therapies (for example, therapeutic exercise, massage therapy), interventional procedures (for example, nerve blocks, joint injections), behavioral health approaches (for example, cognitive behavioral therapy), and complementary and integrative health approaches. The latter include, as described in the Report, acupuncture, massage and manipulative therapies, mindfulness-based stress reduction, yoga, tai chi, and spirituality. HHS's 2010 National Pain Strategy<sup>51</sup> (NPS) also mentions complementary and integrative care, focusing mostly on access difficulties for patients with chronic pain, including insurance coverage. Since the NPS was published, Medicare has finalized a coverage decision to cover acupuncture for chronic low back pain.<sup>52</sup> NIH's National Center for Complementary and Integrative Health continues to evaluate

various approaches,<sup>53</sup> as is the cross-cutting NIH HEAL Initiative®<sup>54</sup>. The HHS Agency for Healthcare Research and Quality has also performed some work in this area.<sup>55</sup>

First, we are clarifying that we are not requiring in the code descriptor that a clinician refer a beneficiary to services; that determination should be made between the clinician and the beneficiary. We understand that clinicians customarily refer beneficiaries, including those who have chronic pain, to a range of treatments based on their individual circumstances, and according to the person-centered plan of care.

Second, based on the commenter's suggestion and on our proposal within the CY 2023 PFS proposed rule, where we solicited comment regarding interest in chronic pain management services and specifically mentioned specialty care coordination such as complementary and integrative pain care; recent coverage in Medicare for acupuncture for chronic low back pain;<sup>56</sup> and evidence that may point to efficacy for some individuals with chronic pain using complementary and integrative approaches, we have elected to revise the code descriptor for HCPCS code G3003 by adding "complementary and integrative approaches" to the code descriptor as examples of approaches that a clinician could take in coordinating pain care across a range of treatments and therapies for a beneficiary. However, we are not requiring that a clinician make a referral to such care, nor are we requiring that the clinician only refer Medicare beneficiaries to services currently covered by Medicare. We are finalizing the addition of "*complementary and integrative approaches*" to the descriptor for HCPCS code G3003. In context, the addition will read as follows: ". . . any necessary chronic pain related crisis care; and ongoing communication and care coordination between relevant practitioners furnishing care, e.g., physical therapy and occupational therapy, complementary and integrative approaches, and community-based care, as appropriate."

*Comment:* Several commenters supported the requirement for the development, implementation, revision, and maintenance of a person-centered

<sup>42</sup> <https://www.cbo.gov/publication/57772#:~:text=Use%20of%20prescription%20drugs%20among,year%20%80%94a%2013%20percent%20increase.>

care plan that includes strengths, goals, clinical needs, and desired outcomes by the practitioner furnishing CPM services. A commenter asked that we recognize the role nurses play in person-centered planning. One commenter supported this element of the CPM services, and stated that person-centered care planning is not only key for people living with chronic pain, but also for others living with serious illness, and that the person-centered care plan and specifically these elements in the CPM service should become required for people with serious illness. One commenter expressed concern that current billing codes compensate providers the same regardless of the severity of the beneficiary's condition or time spent with the provider.

*Response:* We are correcting the code descriptor to more clearly indicate that we do not expect the clinician to develop, implement, revise, and maintain the person-centered care plan, that is, performing each of these activities each time HCPCS codes G3002 or G3003 is billed; rather, the status of the person-centered plan may vary based upon the individual circumstances of the beneficiary with chronic pain. Thus, we are finalizing a revision to the HCPCS code G3002 descriptor to clarify this element as “the development, implementation, revision, and/or maintenance of a person-centered care plan that includes strengths, goals, clinical needs, and desired outcomes”. We do not agree, based on the revisions to proposed concurrent billing policies and revisions in the descriptors that we are finalizing for HCPCS codes G3002 and G3003, as described above and below, that there will be insufficient flexibility to address the severity or breadth of needs that a Medicare beneficiary living with chronic pain might have. We believe that both the “and/or” edit that we are finalizing as part of the code descriptor, and the additional flexibilities for payment, discussed below, are sufficient to address the unique needs of each beneficiary with chronic pain.

*Comment:* Several commenters opined on the inclusion of pain and health literacy counseling, which we included as a proposed element of the HCPCS code G3002 descriptor, to help beneficiaries with chronic pain make well-informed decisions about their own care, weigh risks and benefits, make decisions, and take actions that are best for them.<sup>57</sup> One commenter recommended we instead use the term

“self-care management,” and noted that this term is more broadly inclusive of health literacy counseling. Another commenter stressed the important role nurses have in ensuring patients are fully informed by educating and advocating on behalf of patients as they navigate the care continuum. Another commenter stressed that the receipt of integrative pain care would involve the practitioner taking into account the “whole person” in managing pain, especially important in light of the importance of care coordination coupled with the goals of health literacy. (We note that we recently emphasized the importance of health literacy in our 2022–2032 CMS Framework for Health Equity.<sup>58</sup>) The Framework’s fourth priority is to “advance language access, health literacy, and the provision of culturally-tailored services,” and states that “Medicare-enrolled individuals with low health literacy experience increased hospital admissions and visits to emergency departments, as well as higher medical costs and lower access to care.” Another commenter stated that in their experience, health literacy counseling is most efficiently done through networks of chronic pain support groups led by specially trained individuals who have received training and education by pain leaders, and that it is a fundamental and essential component in learning to cope with chronic pain, which is devastating and challenging. The commenter further observed that we could improve health outcomes by providing funding to non-profit groups that specialize in chronic pain management to help grow these type of educational and skill-based support groups. Another commenter supported this requirement, adding that this should be able to be provided via telehealth to reduce barriers to entry. A commenter noted that health literacy, especially with medication adherence, is valuable to people with chronic pain using multiple medications, as often these patients lack a comprehensive understanding of all their medications, which can deter adherence; if they had better resources to help them understand them, adherence would increase.

*Response:* We agree that pain and health literacy counseling is an important element of care for people with chronic pain and appreciate the commenters’ suggestions about how it can contribute to improved health outcomes. We thank the commenters, and we are finalizing pain and health

literacy counseling as an element of the HCPCS code G3002 descriptor, as proposed. As we gain experience with the CPM codes we may consider additional options to increase the availability of pain and health literacy counseling for Medicare beneficiaries.

*Comment:* Many commenters opined on our proposal to include administration of a validated pain assessment rating scale or tool as an element of code descriptor of HCPCS code G3002. Several commenters noted that pain subjectivity can make pain management a difficult task, and that the use of validated pain assessment tools can illuminate and inform a fuller picture of the person’s condition, as well as the person’s care plan. One commenter stated that pain scales can be beneficial, but they need to be tailored to each person, and that function and quality of life are also important elements to monitor. The same commenter recommended the use of the National Quality Forum’s patient-reported measure, Patients’ Experience of Receiving Desired Help for Pain to achieve this. Another commenter stated something similar, indicating that we should explore ways to address the inconsistencies in pain measurement due to influences like geography and cultural norms. Among the many comments related to bias in pain assessment, one commenter urged us to consider the biases of assessment tools when proposing a validated pain scale. One commenter vehemently opposed the inclusion of a validated pain assessment scale citing concerns with pain bias, proprietary systems, and established outcomes beyond such scales, which they noted together create a case to avoid requirements for providers to use scales that have not received widespread support. The commenter also expressed concerns with pain bias that has developed over time in pain scales, especially for women, older adults, and ethnic groups, where the scales were not removed from use even after bias was documented, potentially worsening health equity issues. This commenter continued, stating that there is disagreement over the use of pain scales and that no single scale has been adopted as a common scale, in part because of proprietary issues. A different commenter agreed with the assessments of bias in traditionally marginalized populations, offering that objective pain scales and objective benchmarked pain data be used. This commenter defined benchmarked objective pain data including a pain database on adults, a database on women and pain, an

<sup>57</sup> <https://www.nih.gov/institutes-nih/nih-office-director/office-communications-public-liaison/clear-communication/health-literacy>.

<sup>58</sup> <https://www.cms.gov/files/document/cms-framework-health-equity.pdf>.

orthopedic pain database, or an older adult pain database.

Additionally, we received comments related to the “well-documented bias against historically-disadvantaged groups” in pain assessment, and suggestions that the best tools for chronic pain also focus on pain interference, impact on function, activities of daily living, emotional and psychological health, and the patient’s perception of their own quality of life. Regarding specific tools, one commenter agreed with administration of a validated pain assessment rating scale or tool, and stated that we should not limit the acceptable tools; rather we should enable practitioners to select the most appropriate tool for staff to administer as part of the person-centered CPM care plan, and that a reference repository or list of potential tools would be helpful. The same commenter asked that we not be prescriptive in requiring a particular scale or tool. Another commenter recommended the consideration of the use of outcome and quality-of-life measures as opposed to reductionistic tools that only measure one aspect of pain. A different commenter supported our proposal to use a validated tool, suggesting the PROMIS-8A, but urging us to make a list of validated tools available, and also avoid requiring use of a specific tool. Another commenter expressed concern about unintended consequences of using a pain rating scale or tool for validation and suggested the addition of a measurement that uses objective measures. A commenter noted that a pain scale is a reliable and valid way to understand the extent of how pain is impacting the person, but should not be the sole measure to show improvement. Further, a commenter recommended we undertake more inquiry before mandating the use of any specific tool or registry and assemble a stakeholder group, issue a Request for Information, or use some other means to conduct a landscape analysis of validated tools. One commenter noted that the use of a validated pain assessment tool should be excluded and be available as a separate add-on code. This commenter also noted that such a step would incentivize a multidimensional assessment of physical, social, and emotional functioning.

*Response:* We recognize that periodic assessment of the experience of pain is an essential element of pain care in the immediate sense and over time, as chronic pain may be enduring as a symptom of disease or a long-term disease in and of itself. We also note that no prescribed set nor single pain

assessment measure will be required in the administration of HCPCS code G3002 or G3003, because no particular tool or tool set can assess the complex nature of the experience of pain across all individuals, nor appropriately guide its treatment. We regularly collaborate with other HHS operating divisions including working with the National Institutes of Health (NIH) on the NIH HEAL® Initiative (Helping to End Addiction Long-term), which includes more than 30 large scale pain and substance use disorder programs. The NIH HEAL Initiative and the NIH Pain Consortium pain research agendas engage nearly all NIH Institutes, Centers, and Offices. The ambitious and crosscutting nature of the NIH HEAL Initiative® and trans-agency interactions of the NIH Pain Consortium require engagement from experts across disciplines and sectors and with other HHS operating divisions including CMS. Much of this NIH research effort focuses on preclinical, translational and clinical research aimed to improve pain management.<sup>59</sup> We have been working with NIH to create and disseminate an accessible, curated, and dynamic set of Pain Assessment resources for clinicians seeking instruments to assess their patients’ pain and pain-related symptoms (such as sleep disruption, loss of function, and behavioral health). The resources are carefully selected as validated and meaningful tools to inform clinicians and patients in shared decision making as to the most effective pain management plan for each person. Recognizing that while many tools are validated in certain populations, they may need refinement to address cultural sensitivities in populations with health disparities. We will leverage efforts of the NIH HEAL Initiative to continue to include appropriately updated tools for these populations as they evolve. We are finalizing the inclusion of administration of a validated pain rating scale or tool in the HCPCS code G3002 descriptor. We will continue to consider opinions and feedback from clinicians and people with pain as to the use of The Pain Assessment Resource and more generally, validated screening tools, and collaborate with our NIH operating division partners to leverage their work in this area and ensure that the Pain Assessment Resource is comprehensive, inclusive across disciplines, and up to date over time. A link to the resource is available at <https://www.painconsortium.nih.gov/resource-library/resources-pain-assessment>.

<sup>59</sup> <https://heal.nih.gov/about>.

*Comment:* We received numerous comments on components of the proposed CPM services that do not necessarily require a “face-to-face” or in-person visit with the practitioner, such as care that could be provided by auxiliary staff “incident to” the services of the physician or other qualified health care practitioner. A few commenters requested clarification on which specific aspects of the code could be furnished without face-to-face care. We also received many comments requesting a general supervision requirement, rather than a direct supervision requirement, with commenters citing provider shortages as barriers to care. Another commenter suggested that the initial visit would not have to be face-to-face so long as an in-person visit occurred shortly after the CPM initiation, and prior to the prescribing of controlled substance medications for pain. One commenter stated that other clinical staff in the practice should be able to follow up and interact with patients. Another commenter stated that relevant components that could be non-face-to-face could include questions about medication and improvements related to medication, social determinants of health, or history of substance use disorders, or crime, as well as coordination of any necessary behavioral health treatment, and pain and health literacy counseling. A commenter stated that most components of the proposed CPM services do not require face-to-face interaction with the billing practitioner such as overall treatment management, medication management, pain and health literacy counseling, and care management which can be provided by clinical staff incident-to a billing practitioner under general supervision, and that these providers’ ability to furnish care has proved to increase access to medically necessary care, and helped relieve some of the burden for billing practitioners while still ensuring patients are receiving high-quality care. A commenter noted that registered nurse care managers could provide CPM services as incident to services, under the general supervision of a physician or other qualified health professional. Another commenter stated that the definition provided of “provided by a physician or other qualified health care professional” was limiting, and suggested that we use, “clinical staff time directed by a physician or other qualified health care professional.” Another commenter requested that CMS consider creating separate billing codes to reflect time spent by physicians and

clinical staff as is done in the chronic care management (CCM) code.

*Response:* We agree with the commenters and believe that certain elements of the proposed bundle, such as care planning or care coordination with other health care professionals, would not likely require face-to-face care. These might include activities such as telephone calls, medical records review, and coordination and information exchange with other health care providers. We are also not requiring that subsequent visits for which a physician or other qualified health professional bills HCPCS code G3002 or G3003 be for services that were provided to a beneficiary face-to-face. However, the initial visit for HCPCS code G3002 must be a face-to-face visit.

*Comment:* A few commenters applauded our efforts to support team-based care for Medicare beneficiaries with chronic pain. One commenter stated that chronic pain management may involve arrangements with psychologists as part of team-based care. Another commenter stated that since there is no disease-modifying or curative therapy for chronic pain, best managing chronic pain requires multimodal interventions and coordination across a patient's care team, and coordinating care with other practitioners and providers such as integrative medicine, physical therapists, psychiatry, and hospital programs.

*Response:* We agree with the commenters about team-based care, which leads to better outcomes for beneficiaries, and better experience for staff, and improves all aspects of care delivery. Team-based care positively affects the person's care experience, such as office visit cycle time, care access, preventive screening, self-management, goal setting and action planning, and medication management. Team-based care also improves process and workflows, helping to ensure staff are working at the top of their capabilities, and sharing in accountability.<sup>60</sup>

*Comment:* A few commenters requested that the structure of the CPM codes include payment for the time interdisciplinary providers spend in consultation with one another. Additionally, this commenter noted concern that requesting coordination with "relevant providers" was not specific enough, and would not require inclusion of the range of services available to treat chronic pain. One commenter stated that we should ensure

that reimbursement is revenue neutral, to continue to encourage practitioners to treat chronic pain.

*Response:* We are not requiring in the code elements that the clinician billing CPM codes coordinate and communicate with other relevant practitioners, as these actions would vary based on the beneficiary with chronic pain's circumstances. Nor is the list of services we have used as examples meant to be inclusive of every type of care a person with chronic pain could require in the course of individualized treatment for chronic pain. We do expect that communication and care coordination between providers of all types would be of benefit to the beneficiary with pain and we leave the extent of that communication and coordination to the discretion of the physician or qualified health professional billing the CPM codes, as appropriate.

*Comment:* Several commenters requested that we recognize CPM services for all practitioners who may bill E/M visits, including oncologists. One commenter noted we had stated the new codes can be billed by a "physician or other qualified health care professional" and agreed that physicians, including primary care physicians, board certified pain management specialists, neurologists, anesthesiologists, board-certified headache specialists, rheumatologists, osteopaths, and other physician specialists that focus on pain conditions should be able to bill the new CPM codes; the commenter asked us to clarify what types of practitioners can bill for proposed HCPCS code G3002 and G3003. A commenter noted that we stated our anticipation that the CPM codes would most frequently be billed by primary care providers. This commenter specified that cancer specialists also spend considerable time managing acute and chronic pain, with this sentiment being echoed by providers of palliative and hospice care, as well as nurse anesthetists, all concerned and asking for clarification regarding whether they "counted" as approved providers. A commenter requested more support and increased access for innovative alternative treatment to opioids (ALTO) programs, which have been shown in a few states to reduce opioid prescriptions in emergency department settings. One commenter stated that, if we identify specialties expected to furnish the CPM services, geriatrics should be included. Two commenters recommended that Rural Health Centers and Federally Qualified Health Centers be allowed separate payment for these codes. One

commenter requested that the code be inclusive of the broad range of providers that treat pain, as each patient should be able to access the provider best suited to primarily manage their pain. A commenter stated that, while we stated we believe primary care providers might most often use the codes, cancer specialists spend considerable time managing both acute and chronic pain associated with cancer, and we should explicitly state that CPM services can be billed by any clinician with E/M services in their scope, including oncologists and pain management specialists. Two commenters stated we should make rehabilitation therapists eligible to bill the code, and, if they are part of the care team, they should share in the reimbursement proportionally among practitioners rendering care. One commenter asked that we include marriage and family therapists as providers who can render CPM services. A commenter recommended HCPCS code G3002 be billable by other Medicare providers like doctors of chiropractic. Another commenter encouraged us to include massage therapists under Medicare Part C in coding and billing changes to capture services that are provided as part of complementary and integrative pain care.

*Response:* We appreciate the commenters' thoughts about the broad range of provider types that might furnish care that effectively addresses the many aspects of chronic pain, and note that we are not limiting the types of physician specialties, or the types of qualified health professionals, who can furnish CPM services, as long as they can furnish all of the service elements of HCPCS code G3002, including prescribing medication as needed, within their scope of practice in the State in which the services are furnished.

*Comment:* Several commenters urged us to consider the contributions of interdisciplinary teams including physical and occupational therapists, social workers, massage therapists, pharmacists, and athletic trainers when creating rules for incident to billing. Two commenters requested that CMS use the term, "clinical staff" as is used in other codes to ensure inclusion of different provider types. One commenter noted that members of the interdisciplinary team are needed to provide person-centered, holistic pain management and that incident to billing will support team-based care, and that we should consider separate billing for physician time versus other clinical staff time; another commenter also made this request. A different commenter noted

<sup>60</sup> <https://innovation.cms.gov/files/x/tcpichangepkgmod-nextsteps.pdf>.

that limitations on “incident to” billing has been limiting for the creation of collaborative, interdisciplinary teams. A commenter asked us to address “incident to” with greater clarity, to explain if the CPM services could be provided in a domiciliary or home setting, which is not the same as a provider’s office or clinic, including under general supervision. One commenter noted that component activities of CPM services can be appropriately provided as “incident to” physician services, as well as by hospital staff under the Medicare Part B outpatient benefits. The commenter further stated that since staff who implement CPM care plan services are either office or facility-based, payment for the services should be recognized under both the PFS and the Outpatient Hospital Prospective Payment System. One commenter stated that clinicians such as social workers, pharmacists, and chaplains could be very helpful to address aspects of chronic pain through incident to billing. Another commenter recommended CMS focus on a simpler way to capture and reimburse for CPM services. For example, CMS might explore whether E/M codes billed with an ICD-10 diagnosis code for chronic pain from the G89.xx series, in which a person-centered plan of care for pain is documented, could be eligible for monthly billing of a G3003-type code (for example, each 15 minutes of CPM care plan services implementing an individualized CPM plan inclusive of staff monitoring patient’s adherence and response to the plan, coordinating services and communicating with other practitioners and providers). This G3003-type code would acknowledge and pay for the component activities of CPM care plan services that are appropriately provided “incident to” physician services by practitioner-employed office staff or by hospital staff under the outpatient hospital benefits.

**Response:** We note that this rule generally addresses payment for physicians’ services under the PFS. Comments regarding other payment systems not addressed in the proposed rule are outside the scope of this rulemaking. The billing practitioner should report the place of service for the location where they would ordinarily provide face-to-face chronic pain management services to the beneficiary. We thank commenters for their feedback and may consider further development of the CPM codes to recognize components that could be furnished by auxiliary personnel incident to the services of the billing practitioner, and components that could be primarily

performed by clinical staff, in the future. We note that auxiliary personnel is defined at § 410.26(a)(1) as any individual who is acting under the supervision of a physician (or other practitioner), regardless of whether the individual is an employee, leased employee, or independent contractor of the physician (or other practitioner) or of the same entity that employs or contracts with the physician (or other practitioner), has not been excluded from the Medicare, Medicaid, and all other Federally funded health care programs by the Office of Inspector General or had his or her Medicare enrollment revoked, and meets any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished. We did not propose to change this definition of auxiliary personnel in the proposed rule, and therefore, the comments asking CMS to modify the definition of auxiliary services are outside the scope of this rulemaking. Additionally, we note that all requirements for services furnished incident to a physician’s (or practitioner’s) professional services listed at § 410.26 continue to apply. We will keep the commenters’ concerns in mind when considering any further development of the CPM codes in the future.

**Comment:** Many commenters asked us to clarify if the proposed CPM services would be available for billing/reporting in conjunction with remote patient monitoring (CPT code 99091), remote physiologic monitoring (CPT codes 99453, 99454, 9457, 99458), or remote therapeutic monitoring (CPT codes 98975, 98976, 98977, 98980, 98981 and as proposed GRTM1/2/3/4 codes. One commenter also requested clarification surrounding what virtual presence/remote supervision is permitted, who can order these services, what documentation is required, and whether billing is permitted for individual services in addition to the management components of CPM. A commenter noted that patients with chronic pain may also benefit from remote therapy monitoring to monitor their pain levels, medication adherence, and response to prescribed therapy regimens.

**Response:** HCPCS codes G3002 and G3003, and the services describing remote patient monitoring, remote physiologic monitoring, and remote therapeutic monitoring, are distinct types of services, although there may be some overlap in eligible patient populations. There may be some circumstances where it is reasonable

and necessary to provide both services in a given month. Thus, HCPCS codes G3002 and G3003, could be billed for the same patient in the same month as the Remote Physiologic Monitoring (RPM) or Remote Therapeutic Monitoring (RTM) services. All applicable requirements for the individual codes must be met, per the elements of each individual code, for both types of remote monitoring and CPM services. Additionally, the time and effort cannot be counted more than once when billing CPM codes concurrently with RPM or RTM. Billing practitioners should remember that cost sharing applies to each service independently. If all requirements to report each service are met, without time or effort being counted more than once, then CPM and RPM or RTM may be billed.

**Comment:** Several commenters stated they were concerned about low payment, and other payment issues related to the proposed CPM codes, which we had valued in our proposal based on our conclusion that the CPM services were similar in work (time and intensity) to that of Principal Care Management (PCM) service. One commenter observed that in order for physicians to be willing to treat chronic pain patients, especially primary care physicians, we need to make physician payments for the new CPM codes higher than primary care and PCM visits to avoid lower payment for CPM than for a standard follow-up clinical visit for primary care (CPT code 99214 for 30 min clinical visit). The commenter was very concerned that unless we considered raising these rates before the new CPM codes go into effect, physicians will not use them to accomplish the intended improvements in pain care that Medicare patients so desperately need, and that the use of other codes not specific to pain will impair our ability to accurately track data regarding chronic pain, and care outcomes, in the Medicare program. Another commenter had similar concerns, recommending that the valuation of the new codes be on par with current office and outpatient E/M codes. A different commenter noted that it had significant concerns with our proposal to disallow use of the codes on the same day as a “general” visit like an E/M visit where the person is being seen for a separate illness or condition, and that this would be a grave mistake that would hamper the delivery of truly integrative pain care. This commenter also added that this move would exacerbate disparities at a time when CMS is working to promote health

equity, urging us to allow same day E/M billing. Another commenter requested clarification regarding the interaction with other service codes to ensure that this code enhances rather than inhibits physician encounters. A different commenter stated that people living with chronic pain are likely to have at least one or more comorbidities that are being treated along with their pain, and often these health concerns are, in fact, addressed by one singular practitioner on the same day. The same commenter noted that requiring people to be seen on different days that they come for other health care services will significantly reduce numbers of people with pain who are willing, or able, to receive CPM services, including people who are older adults, disabled, homeless, lack reliable/affordable transportation, cannot take time off work, and/or are unable to secure child care—among other issues. The commenter stated mandating repeated in-person visits would be arduous for disabled people already poorly served by public transportation, a problem that characterizes many smaller cities, suburbs, and rural communities. Another commenter stated that our proposed code valuation will prohibit use of the codes or make them go unused, as they pay less than CPT code 99214, or result in less payment, causing providers to reconsider the number of pain patients they care for. Additionally, the commenter expressed fears that for providers already wary of rendering care to people with chronic pain, the valuation of the codes would further disincentivize them from treating these patients, not only paying less, but requiring more work. The commenter described a “worst case” scenario where if the codes became “required” for people receiving CPM services (for example, use of a 99xxx code was deemed fraudulent) it anticipated that many clinicians would cease seeing patients with chronic pain because of the low valuation, and required services that appear “extraordinarily laborious.” This commenter included several real life scenarios from clinicians working at the front lines of pain; stating that if we really wish to support the use of CPM, the valuation should be *at least* (emphasis added) comparable to CPT code 99213 or 99214, but *to truly incentivize* (emphasis added) adoption and utilization of CPM services, we should consider significantly increased reimbursement to allow CPM services to grow sufficiently to meet anticipated demand. A different commenter noted primary care providers will be

disinclined to prescribe opioids due to this payment rule. The commenter expressed concern that these patients will then have to find pain management clinics, which are not present in all communities. A commenter stated a similar opinion, discussing that primary care providers are afraid of prescribing opioids and that patients are suffering as a result. Another commenter noted that they would like the code to differentiate between a patient who is now meeting the threshold for chronic pain from those patients with a previous diagnosis of chronic pain, who is simply seeing a new provider. This commenter noted that a person is an expert in their own condition, and sharing all of that information with a new provider is often very time-consuming, whereas someone with new chronic pain may not have as much information to share. This commenter recommended “substantial” time for both scenarios. One commenter requested clarity on the interaction between the E/M and CPM codes to avoid any inadvertent misuse by providers, and recommended that CMS consider creating a modifier to attach to the CPM codes to prevent double payments. Another commenter was concerned that the proposed CPM codes could lead to an underutilization of important non-opioid pain management options because providers are not clear on the rules around the use of these codes. One commenter opined that there should not be any concurrent billing restrictions imposed on CPM services, which would force patients to pick between certain services and care. Another commenter noted that the current valuation and payment are disproportionate to the work required of HCPCS code G3002, and noted that this code more closely aligns with what is included in a level 4 or 5 E/M service. A different commenter echoed previous statements regarding concern that the valuation of HCPCS codes G3002 (formerly GYYY1) and G3003 (formerly GYYY2) and RVUs will create disincentives to care for patients with chronic pain. The commenter suggested separating HCPCS code G3002 into two codes: one code for face-to-face that is valued higher than a standard E/M visit, and a second for coordination undertaken by the physician or other qualified healthcare professional outside of face-to-face care (similar to CCM and PCM codes). Another commenter suggested two add-on codes for HCPCS code G3003 because these patients can be complex, and may require intense coordination. An additional commenter suggested adding a GYYY3 and GYYY4 code. HCPCS

code G3002 (formerly GYYY1) would remain and HCPCS code G3003 (formerly GYYY2) would be half the resource inputs of G3002. GYYY3 would be a new code for subsequent visits after the initial visit with a 15-minute threshold instead of a 30-minute threshold, and GYYY4 would be another new code for administration of the validated pain measurement as an add-on for HCPCS codes G3002 or G3003. One commenter stated that the code should be treated as an E/M and fall into the category as a visit, billed in FFS clinics and related to RHCs and FQHCs paid for as per the current methodology. The commentator suggested using a payment “crosswalk” of 99213 and 99214 tied to proposed HCPCS codes G3002 and G3003, including a modifier of 30–40 percent to compensate providers adequately for the labor involved in CPM services. One commenter stated that it believed clinicians billing for CPM services would face substantial decreases in work RVUs generated relative to current reimbursement compared to outpatient E/M codes and is unclear on how both codes could be billed. Another commenter stated that they believed the reimbursement proposed is inappropriately low, and urged us to adjust the proposed RVUs of 1.45 for HCPCS code G3002 and 0.5 for HCPCS code G3003 in the final rule. This commenter noted the work intended in this code will require significant time investment by physicians, qualified health professionals, and clinical staff. The same commenter noted HCPCS code G3002 should be crosswalked with CPT code 99414 at 1.92 work RVUs and HCPCS code G3003 be crosswalked with CPT code 99212 at 0.7 work RVUs. Another commenter stated we are undervaluing HCPCS code G3002 by crosswalking it to CPT code 99424, which has 1.45 RVUs. A similar 30-minute new patient office visit (CPT code 99203) is valued at 1.6 RVUs. This commenter also stated that an established patient visit (CPT code 99214) is valued at 1.92 RVUs. This commenter recommended CPT codes 99495 and 99496 for better crosswalks. Another commenter requested clarification on whether it is permissible for the same practitioner to bill a service like interventional pain management during the same month the clinician bills for the CPM services. Another commenter noted that E/M codes 99214 and 99213 already allow for time-based, face to face encounters with providers, have similar or greater work RVUs, and less limitations and requirements as compared to those specified in the code

descriptors for G3002 and G3003. This commenter recommends increasing the time allotment to 45 and 20 minutes for HCPCS codes G3002 and G3003, respectfully. The same commenter also expressed concern that providers would be less likely to utilize the CPM codes in favor of those they are already using and allowing for an increase in time allotment would correct this issue, according to this commenter.

*Response:* It is not our intent to either underpay, or create incentives for clinicians to use other codes that would constrain the use of the new codes. However, in the absence of experience with these new codes, we must base our projections reasonably on our experience with existing codes that we believe bear some relationship to the new proposed codes, such as the PCM code. Therefore, in light of the crosswalk to CPT codes 99424 and 99425, we are finalizing as proposed the work RVUs of 1.45 for HCPCS code G3002 and 0.5 for HCPCS code G3003. We will monitor use of the CPM codes to better determine if the payment rates and billing flexibilities are appropriate. In the proposed rule, we outlined our concerns about duplicate, or overlap billing in situations where the eligible clinician might bill certain E/M codes on the same day the CPM service(s) are rendered. Based on the commenters' concerns, we have reconsidered our approach to billing CPM services. We believe that, due to the complexities of pain treatment, there could be beneficiaries seeing a clinician for the first time, or in a subsequent visit, who could also need to be seen by the clinician for the CPM service(s) on the same day, or for a subsequent visit. The code sets for E/M services are organized into various categories and levels; the more complex the visit, the higher level of the code the clinician would bill within the appropriate category. Clinicians must make certain that the codes selected are appropriate for the services furnished, and that they fulfill the requirements to bill an E/M service.<sup>61</sup> Many Medicare beneficiaries have multiple chronic conditions,<sup>62</sup> and many of these conditions could involve chronic pain. We believe it is reasonable to assume that in many instances, the clinician could be spending time with the Medicare patient discussing health and wellness related to a variety of conditions that person may be experiencing, or expect to experience,

and that interaction might not have a focus on the chronic pain aspects of the person's care. Additionally, if the person with pain has made the effort—which could be considerable, as commenters have noted, to get to an appointment with a clinician, it makes sense from a burden standpoint—allowing for the burden on both the clinician, and the person with Medicare, to permit billing for both the E/M service, and the CPM service(s) on the same day. Therefore, if all requirements to report each service are met, without time or effort being counted more than once, then both E/M and CPM may be billed on the same day.

*Comment:* Two commenters requested that we revisit existing guidance and regulations to allow pharmacies to bill Medicare for opioid-based compounded drugs. Another commenter urged CMS to reconsider the issue of reimbursement for medication used in intrathecal pumps. One of these commenters also requested that the compounded medications delivered to the physician's office for insertion into an implanted pump be reimbursed as an incident-to drug or Durable Medical Equipment, depending on the billing entity.

*Response:* We appreciate the commenters' thoughts about compounded drugs and reimbursement for medication used in intrathecal pumps; however, these comments are out of the scope of our proposals for CPM services.

*Comment:* Many commenters asked us to add CPM services to the Medicare Telehealth Services List. One commenter asked that we enable the CPM codes, in addition to being rendered through telehealth, to be furnished through audio-only technology. We address these comments in section II.D.1.c. of this final rule, Other Services Proposed for Addition to the Medicare Telehealth Services List.

*Comment:* One commenter suggested we include screening services in the CPM bundle to identify, reduce, and prevent hazardous or harmful alcohol and drug use, which the commenter characterized as common in people with SUD in residential treatment settings living with chronic pain. An additional commenter echoed the request for screening to identify, reduce, and prevent hazardous or harmful alcohol and drug use generally. This commenter also encouraged the inclusion of ordering of tests and Durable Medical Equipment, as well as consultations with other providers and communication with pharmacies be included. One commenter suggested the inclusion of nutrition screening and

nutrition therapy in the code descriptions, as people with chronic pain often have complex dietetic and nutritional needs. Another provider group recommended that the term "prognosis" be added to the "diagnosis" in the bundle description as an option.

*Response:* As outlined in the proposed rule and in the CPM code descriptors, we expect clinicians to facilitate and coordinate any necessary behavioral health treatment, and other relevant care associated with HCPCS codes G3002 and G3003, such as complementary and integrative approaches and/or community-based care. This includes, as described in the CMS Behavioral Health Strategy,<sup>63</sup> multiple elements including access to prevention and treatment services for SUD, mental health services, crisis intervention and pain care to enable care that is well-coordinated and effectively integrated. Under the Strategy, we have defined behavioral health as "encompassing a beneficiary's whole emotional and mental well-being, which includes, but is not limited to, the prevention and treatment of mental disorders and substance use disorders." "Whole-person care" is defined as "the whole of a beneficiary's needs including physical health, behavioral health, long-term services and supports (home and community-based services, and institutional care), and health-related social needs."

*Comment:* One commenter suggested we ensure that the proposed CPM codes are reimbursable in the beneficiary's home, and all other settings where primary care, mental health care, and SUD care can occur. Another commenter recommended inclusion of residential treatment facilities, long term care facilities, and homes as settings in which billing can occur.

*Response:* We appreciate the commenter's suggestion that we ensure that the proposed CPM codes are payable for services delivered in the beneficiary's home, and all other settings where primary care, mental health care, and SUD care can occur. We note that CPM is priced in both facility and non-facility settings, and we are not limiting the place of service for CPM, other than as discussed above (the initial visit must be in-person). The billing practitioner should report the place of service for the location where they would ordinarily provide face-to-face chronic pain management services to the beneficiary.

*Comment:* Several commenters stated that the elements of the proposed CPM codes favor prescriptions by medical

<sup>61</sup> <https://www.cms.gov/outreach-and-education/medicare-learning-network-mln/mlnproducts/downloads/eval-mgmt-serv-guide-icn006764.pdf>.

<sup>62</sup> [https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Chronic-Conditions/Chartbook\\_Charts](https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Chronic-Conditions/Chartbook_Charts).

<sup>63</sup> [cms.gov/cms-behavioral-health-strategy](https://www.cms.gov/cms-behavioral-health-strategy).

providers, instead of prioritizing non-pharmacological strategies for pain management, including those developed by psychologists, that may be safe and effective for many patients. One commenter further stated that the creation of additional bundled codes that do not include medication management will allow for greater flexibility in treatment and allow psychologists to provide pain management services and practice to the top of their license when participating in team-based comprehensive chronic pain treatment. Another commenter suggested that physical and occupational therapists should be able to bill the codes, stating that these practitioners' practice integrates an understanding of a patient's or client's prescription and non-prescription regimen with consideration of its impact on health, function, movement, and disability, and that it is within the physical therapist's professional scope of practice to administer and store medication to facilitate outcomes of physical therapist patient and client management. The same commenter asked that we require, in the code descriptor, that physicians and other non-physician practitioners must refer appropriate chronic pain patients to physical and/or occupational therapy prior to being reimbursed for the codes. A few commenters requested that CMS create a code for providers who do not bill for E/M codes. One commenter stated that physical therapists and psychologists are not qualified to perform all the necessary services we have outlined, such as thorough pain assessments and diagnoses, medication management, crisis care, etc. and suggested we establish a path whereby non-physician professionals can bill a chronic pain code for services that are part of an overall treatment plan. Two commenters suggested that education be provided to physician providers to increase the consultation of physical and occupational therapists, also stating that physical therapists are significantly underutilized in community and rural settings.

**Response:** We acknowledge and support the important work of psychologists and occupational and physical therapists in the care of people with Medicare, including beneficiaries with chronic pain. We believe that this code describes a distinct PFS service that is reasonable and necessary in the diagnosis and treatment of the person with chronic pain, and that medication management, as described in the preamble text above, is a key element of such care and of the proposed HCPCS

code G3002; therefore, we are including it as a code element.

We understand that cognitive behavior therapy (CBT), as one example, is a common treatment provided by psychologists, including to people with chronic pain.<sup>64 65 66</sup> Medicare covers psychotherapy, as well as other services that support mental health and wellness.<sup>67</sup> Chronic pain can be linked, in some people, to mental health conditions, such as anxiety and depression.<sup>68</sup> Psychotherapy is billed with Current Procedural Terminology (CPT) codes<sup>69</sup> that reflect the amount of time spent with the patient, and family may or may not be present during these therapy sessions. To bill these CPT codes, the psychotherapist must provide a mental health diagnosis using an International Classification of Diseases (ICD) code and/or Diagnostic and Statistical Manual (DSM) code.

While clinical psychologists (CPs) do not have prescription authority in all States and are therefore, not authorized to bill the Medicare program for any of the CPT codes that include medication management components, there are CPT codes that CPs can bill for treating Medicare patients who are diagnosed with chronic pain. Hence, the Health and Behavior Assessment and Intervention (HBAI) range of CPT codes are intended to be used for psychological assessment and treatment, when the primary diagnosis is a medical condition, such as chronic pain.

This family of codes was revised in 2020, when a new set of codes to describe these HBAI treatment services went into effect.<sup>70</sup> Health behavior assessment under these HBAI services is conducted through health-focused clinical interviews, behavioral observation and clinical decision-making and includes evaluation of the person's responses to disease, illness or injury, outlook, coping strategies, motivation and adherence to medical treatment. Health behavior interventions under these HBAI services are provided individually, to a group (two or more patients), and/or to the family, with or without the patient present, and include

promotion of functional improvement, minimization of psychological and/or psychosocial barriers to recovery, and management of and improved coping with medical conditions. The HBAI codes apply to services that address psychological, behavioral, emotional, cognitive, and interpersonal factors in the treatment/management of people diagnosed with physical health issues. Use of HBAI codes requires a physical health diagnosis (ICD-10) to be the primary diagnosis. The HBAI codes capture services related to physical health, such as adherence to medical treatment, symptom management, health-promoting behaviors, health-related risky behaviors, and adjustment to physical illness. The HBAI codes and the Psychotherapy codes cannot be billed contemporaneously. We believe HBAI codes are well-suited to the provision of CBT, as appropriate, to people with chronic pain when the person does not have a concurrent mental disorder.

For HCPCS codes G3002 and G3003, we are finalizing the codes for use by physicians and other qualified health professionals. However, we will consider if there is a benefit to modifying these codes and/or creating new codes that can potentially support broader chronic pain management by other practitioner types, including those who may not be prescribers in the scope of practice in the State in which they practice and are an important part of the care team for beneficiaries with chronic pain, in future rulemaking, such as clinical psychologists, or doctors of chiropractic. We do not agree that clinicians should be required to make referrals to occupational and physical therapists; although, as we stated in the proposed rule, and in the code descriptor, we do expect that there will be "ongoing communication and care coordination between relevant practitioners furnishing care, for example physical therapy and occupational therapy . . . as appropriate."

**Comment:** Several commenters opined on our proposal to require verbal consent at the initiating visit, or at the initiating visit and subsequent visits, to help make sure that people with Medicare living with chronic pain want the services, are aware they may need them, and that they also receive an explanation of any cost sharing that may apply in their particular situation. All commenters were supportive of our proposal. One commenter stated that, although it supported requiring consent, it noted that consent should be obtained at the third visit, so patients could be given an opportunity to work with the

<sup>64</sup> <https://www.cdc.gov/mmwr/volumes/65/rr/rr6501e1.htm>.

<sup>67</sup> <https://www.cms.gov/files/document/mln1986542-medicare-mental-health.pdf>.

<sup>68</sup> <https://health.gov/healthypeople/objectives-and-data/browse-objectives/chronic-pain>.

<sup>69</sup> <https://www.ama-assn.org/practice-management/cpt>.

<sup>70</sup> <https://www.apaservices.org/practice/reimbursement/health-codes/health-behavior>.

physician a few times, but at the first visit the physician should still be required to educate patients regarding CPM services, explain their frequency/purpose/value, and any cost-sharing that may apply, so patients can better understand the model which is different according to the commenter from the disjointed, fragmented, solitary struggle for effective pain care that the vast majority of pain patients presently experience, and that in this manner, patients would have an opportunity to understand CPM services better. The commenter also stated consent should be discussed, including any costs with family/unpaid caregivers. The same commenter stated we need not require consent at each visit, and suggested that we should support practitioners referred by the CPM billing practitioner to also seek the patient's consent, to emphasize in part that they are working as a team. A different commenter stated that in implementing the new codes, we should establish requirements similar to CCM services, for example, requiring that providers document that all components of the service are met and that informed consent, inclusive of cost-sharing, has been obtained. Another commenter urged us to allow consent to be obtained and documented by members of the care team in addition to the physician/qualified health profession. One commenter believes that verbal consent should be obtained upon enrollment (at the first visit) and not at every visit, which would create inefficiencies. The spouse of a person living with longtime chronic pain observed that "patient consent, consultation should always be a part of primary care as patients are typically ignored, especially in pain management." A commenter stated that consent, for some people with dementia or other cognitive health issues, might have to be obtained through a legal representative outside of the face to face initiating visit.

*Response:* We are appreciative of the comments regarding consent, as we believe the person with chronic pain should be educated regarding what the CPM services are, how often they may be generally expected to receive the services at this initial visit, and receive an explanation of any cost sharing that may apply in their particular situation; this is an important element of person-centered care and self-determination. We disagree with the commenter who suggested we obtain verbal consent after the first visit. Similar to how the Medicare Chronic Care Management service is administered, we believe the physician or qualified health care practitioner should get the person's

consent for services before the practitioner bills for them. This helps to ensure that beneficiaries are engaged and are aware of their treatment and cost sharing responsibilities, and helps prevent duplicate billing. If the beneficiary does not provide consent or if other conditions for payment are not met, the practitioner cannot bill Medicare. As outlined in this preamble, referrals may be made to providers who are not rendering a Medicare covered service(s), or who may not be enrolled in Medicare, such as acupuncturists, massage therapists, psychiatrists, dietitians, dentists, and providers of community-based services, which could include companies that make environmental modifications, adult day health programs, direct support workers, and others, and we do not believe that requiring consent from providers who are not billing for the CPM codes is necessary or practicable. We agree that providers should document in the record that the beneficiary has given consent for the services, although we are not requiring that the clinician document that "each element" of the code has been delivered, since that would vary based upon the person's needs. We are thankful for the commenter who noted that consent, for some beneficiaries, may have to be obtained from a legally responsible person, such as for people with chronic pain who have dementia, an intellectual or developmental disability, or any other type of cognitive disorder; those arrangements vary under State law.

*Comment:* One commenter recommended that we focus and support continued communication and care coordination for the CPM services, which it stated has been a long-time struggle for chronic pain care, but an essential element, especially in underserved communities.

*Response:* We agree that care coordination and communication between all clinicians and other providers furnishing care to beneficiaries living with chronic pain is an essential element, including for people with pain living in underserved communities.

*Comment:* A few commenters stated that payers and providers should look at quality care and meaningful improvements in function and quality of life (beyond use of a validated pain rating scale or tool). One commenter stressed the importance of utilization and outcome measures that can assess efficacy and cost-effectiveness such as hospitalizations, emergency department and urgent care visits, specialist utilization and procedures, number of

prescription medications, and other health care data. Another appreciated our interest in growing the available data related to the prevalence and impact of chronic pain in the Medicare population, and requested that once we collect data, this data be deidentified and made available to the public to assist interested parties in the development and refinement of programs. Another commenter requested that we provide a mechanism for quality outcomes measurement based on the provided service to shed light on pain experienced by the Medicare population, what works best, and what provides improved health outcomes, in part to reduce the need for specialty care and hospitalization. One commenter noted the importance of medication adherence, and data regarding medication adherence specific to chronic pain, including to avoid unnecessary hospitalizations, adverse events, and deaths.

*Response:* We agree with the commenters that quality and data collection are foundational components to delivering value as part of the overall care journey, and help ensure optimal care and best outcomes for people of all ages and backgrounds, and across service delivery systems/settings, and payer types, as described in our CMS National Quality Strategy.<sup>71</sup> We are aware that there are scant measures that examine chronic pain and medication adherence for chronic pain, and trust that government and interested parties will continue to explore options in measure development, testing, and endorsement to improve measurement in chronic pain care. However, because we did not make any proposals regarding the link between quality and CPM codes, these comments are out of the scope of our proposed rule.

*Comment:* Several commenters wanted to ensure that use of the CPM codes would not limit or interfere with the beneficiary's access to other medical or pharmacy benefits.

*Response:* We appreciate the comment and can confirm that its use will not interfere with other medically necessary Medicare benefits.

*Comment:* Many commenters requested more specifics related to the administrative requirements and potential burdens the use of the CPM codes would place on providers. Commenters urged CMS to work to ensure the documentation requirements not be overly burdensome. This was echoed by a commenter with chronic

<sup>71</sup> <https://www.cms.gov/blog/cms-national-quality-strategy-person-centered-approach-improving-quality>.

pain who noted that physicians seem “overwhelmed with today’s paperwork and administrative demands.”

*Response:* In 2020, we established our Office of Burden Reduction and Health Informatics,<sup>72</sup> to unify our efforts to reduce regulatory and administrative burden, and advance interoperability and national standards. We are continuing to engage beneficiaries and the clinical community to better understand their experiences, form solutions, and infuse CMS with a customer-focused mindset. We will be interested to get feedback from clinicians about burden, once the CPM codes are implemented in practice.

*Comment:* A few commenters recommended CMS reduce potentially prohibitive payment methods, including prior authorization and cost sharing to improve access to chronic pain management. These commenters also suggested increasing access for non-opioid methods of pain management, such as physical therapy and behavioral health care. Another commenter also requested further clarification of cost sharing requirements, as many people with chronic pain have disabilities, with concern about limited access to pain management.

*Response:* The various interventions described in the PMTF Report’s pain management “Toolbox” attest that individualized care consists of diagnostic evaluation that results in an integrative, person-centered care plan that includes all necessary treatment options, that we hope clinicians will consider when they treat Medicare beneficiaries with chronic pain. Regarding cost-sharing, as described above, standard Part B cost-sharing will apply to the CPM services. In some instances, people who are low income or disabled and are dually eligible Medicare and Medicaid beneficiaries, for example, will have different cost-sharing from beneficiaries who are enrolled in Medicare, only. We emphasize that the CPM codes do not require prior authorization.

*Comment:* One commenter expressed concern and confusion over our use of the word “bundle” in the proposed rule, which they interpreted as payment that contemplated paying other involved providers in an episode of care environment. The commenter further stated that payment-based “bundling” is already a fast-growing and promising form of pain care that should be correctly labeled.

*Response:* We apologize for any confusion by our use of the word “bundle.” The proposed CPM codes are

not bundles as the commenter contemplates, but rather codes similar to the CCM codes, or the code for Cognitive Assessment and Care Planning Services, 99483, that denote the elements of the code itself. By “bundle,” we were just referring to all of the elements contained within the CPM code descriptors.

*Comment:* One commenter stated that caregivers and trusted family members are also part of the team providing support to people with chronic pain, and recommended including these individuals in the CPM services, which it noted is especially important for people who have communication or cognitive issues. Another commenter stated that caregiver participation for these individuals is especially important as they are often directly affected by the person’s pain and can help in making its perception better, or worse.

*Response:* We agree that the role of caregivers is of critical importance across Medicare as caregivers provide a broad range of mostly unpaid assistance with diverse health-related activities provided by a friend, family member, partner, or neighbor to a care recipient. The caregiver has a significant personal relationship with the care recipient, and care may be episodic, daily, occasional, or of short or long duration. Caregivers assist in basic personal care activities such as eating and bathing; household management activities, such as shopping and meal preparation; and other activities, such as managing medications, attending medical encounters, and coordinating financial and other activities, such as handling insurance and paying bills. Caregivers may also be involved in managing complex health care and assistive technology activities at home and in navigating care transitions between settings of care. We are pointing out that Medicare makes payment for CPT code 96161 (*Administration of caregiver-focused health risk assessment instrument (e.g., depression inventory) for the benefit of the patient, with scoring and documentation, per standardized instrument*). However, as noted in the descriptors for HCPCS codes G3002 and G3003, CPM services must be furnished by a physician or other qualified health practitioner.

*Comment:* One commenter stated that in implementing the CPM services, it is important for CMS to take a balanced approach between administrative burden and program integrity, and that use of the codes should be considered along with potential risk of “bad actors” to inappropriately use them. The same commenter indicated that we should

prevent multiple group practices from concurrently billing for this service for the same patient during the same time period as this would eliminate duplicative services and payment. A different commenter echoed that sentiment, concerned with “doctor shopping,” leading to billing denials and driving up provider costs. Another commenter viewed this problem differently, discussing that some patients will travel for answers, or based on the availability of chronic pain providers in their areas, may need to see their primary care provider first, then may see other providers. This commenter was concerned that providers would not specifically know when this code was billed by previous providers, risking rejection even after services were provided. This commenter recommended eliminating the limits on monthly billing.

*Response:* As with implementation of any new billing code, we will be monitoring its use going forward, not just for data and other purposes, but also for program integrity reasons. For HCPCS code G3002 and G3003, we would not generally expect multiple group practices to be concurrently billing for a service that is to be rendered once per month, per practitioner, per beneficiary. As noted previously, we will be gathering data on the clinicians billing for and patients receiving the services described by these CPM codes, and we may consider making changes to these codes in future rulemaking, if necessary.

*Comment:* One commenter asked us to consider whether or not our proposal to create new codes for CPM is the best course, or if we should reconsider and expand the CCM codes. Another commenter elaborated on issues with the CCM codes, stating these are confusing to clinicians, involve administrative and documentation burden, which discourages uptake, and that it hopes this scenario will not develop with the CPM codes.

*Response:* We appreciate the comments about CCM vs. CPM; we did consider differences in the CCM codes, which we explained in the proposed rule, and believe the best course is to finalize the CPM codes and monitor their use in practice.

*Comment:* One commenter stated that evidence shows that many people with chronic pain, especially people from communities of color, have low trust in the health care system, based on previous discrimination and follow up. Another commenter stated that it is very important we improve pain management for members of racial and ethnic minorities, given both the rising

<sup>72</sup> <https://www.cms.gov/About-CMS/OBRHI>.

rates of drug overdose deaths among these populations and disparities in the identification and effective management of pain.

*Response:* As we outlined in the proposed rule, we are aware of disparities in chronic pain care and seek to address these disparities in part through finalization of the CPM codes.

*Comment:* A commenter asked that we consider a “MedLearn” article or Educational Transmittal to help providers understand more about the CPM services including who can bill, documentation, potential restrictions with other codes, etc. Several other commenters suggested provider communication such as a Medicare Learning Network article or similar blog post to summarize comments and the final rule. Another commenter suggested that we convene all essential stakeholders in public meetings, organized by the Agency, to hear stakeholder input about the best way to move forward to encourage rather than limit non-opioid pain management.

*Response:* We appreciate these suggestions from the commenters and are considering how best we can educate providers about use of the new codes, working with our HHS operating division partners.

*Comment:* A few commenters stated that CPM services should be able to be billed concurrently with CCM, Behavioral Health Integration, or Primary Care Management. Another commenter noted that CPM services might disincentivize the provision of CPM services to the most complex patients in part because neurologists routinely bill certain codes for safety purposes, and the CPM proposal, which prohibited same day billing of certain other codes, would impair care.

*Response:* We thank the commenters for sharing their feedback. As noted in the CY 2023 PFS proposed rule, we believe there are distinctions in the nature and extent of the assessments, care coordination, medication management, and care planning for CPM to allow concurrent billing for services that are medically reasonable and necessary, and that it is particularly important to allow for the provision of needed services, including behavioral health services to beneficiaries with chronic pain. Therefore, if all requirements to report each service are met then CPM may be billed in the same month as CCM, TCM, and BHI services. We reiterate that the time spent in providing CPM services may not represent time spent in providing any other reported service.

*Comment:* A commenter questioned how the CPM codes relate to the

proposal in the CY 2023 OPFS proposed rule that would add the Facet Joint Interventions service category to the prior authorization list. This commenter noted that it seems incongruous for CMS to be encouraging chronic pain management with this CPM code while discouraging it in another.

*Response:* We thank the commenter for the comment; however, the discussion of the new prior authorization proposal in the CY 2023 OPFS proposed rule is beyond the scope of this CY 2023 PFS rule.

To further assist clinicians and interested parties in understanding more about how we anticipate the CPM services might be used, members of our clinical team have prepared the following scenarios to illustrate how the codes might be used in practice.

- *Scenario 1:* An individual clinician sees a new patient who is seeking to establish care (for example, a general internist sees a patient who is new to her practice and has a history of chronic pain). The internist/clinician would need to review the patient’s history, including current and prior medications and treatments tried, and perform an examination to ascertain the source of the patient’s symptoms as well as an initial functional assessment and develop a care management plan as part of the visit).

++ This scenario would also likely involve some aspect of medication management, may include referrals to behavioral health clinicians, substance use disorder, and/or pain management specialists, and would most certainly involve scheduling a follow-up appointment with the internist, which could occur in 1–2 weeks or in several months (or somewhere in between) depending on the needs of the patient.

++ While other clinicians are involved either through referrals or to support other elements of the CPM services, it is expected that generally only one or two clinicians would bill HCPCS code G3002/G3003, asserting that they are providing the CPM services.

- *Scenario 2:* An individual clinician sees an established patient who is well known and has a stable care plan and on maintenance medications (that is, a family physician sees a patient for routine care to update the care management plan and perform a functional assessment to ensure that the treatment plan is still supporting the patient’s goals of care).

++ As we stated above, it would be unusual for no medications or supplements to be involved in the majority of cases of the management of chronic pain. This may or may not mean

the patient is on a chronic opioid or other medication, and medication management is an almost universal component of chronic pain management care—even for very stable patients.

++ Medication management does not only involve management of medications that the patient is currently taking, but the ability to recognize when a new medication or over the counter treatment should be considered as an adjunct to other treatment, to discuss that recommendation in the context of shared decision-making and to initiate the pharmacotherapeutic plan of care.

++ Coordination of care (be it the person’s behavioral health treatment or pain management care in general) is critical, and we mention in the proposed rule language that coordination is expected “as an element of the CPM codes, the development of and/or revisions to a person-centered care plan that includes goals, clinical needs, and desired outcomes, as outlined above and maintained by the practitioner furnishing CPM services.” However, not all psychologists are trained or authorized to coordinate such care as a primary care clinician is trained, as we have explained.

- *Scenario 3:* An individual clinician provides care to a patient with multiple chronic conditions (for example, a family physician sees a patient with a history of chronic low back pain, obesity, diabetes, and chronic renal insufficiency and routinely must manage multiple concerns at the same visit).

++ This clinician would likely perform routine functional assessments of this patient, medication management, ongoing clinical assessments of their diabetes and kidney function, and discussion of what their options are when it comes to managing their pain in the context of these other conditions. As such, without knowing the history of this patient’s conditions, their current medications, past treatments that have been successful or failures, the clinician cannot properly manage this patient’s chronic pain (for example, changes in medication must be made in the context of this patient’s kidney function). Additionally, the clinician may wish to offer the patient non-pharmacologic options for the treatment of their chronic low back pain, which may include referrals to chiropractic, acupuncture, physical therapy, massage, cognitive behavioral therapy or other integrative or complementary/integrative treatments, all of which would be reasonable discussions to take place in the context of billing HCPCS codes G3002 and G3003, as appropriate.

• *Scenario 4:* One individual clinician transfers care of a patient to another individual clinician in the course of the month (for example, a family physician refers to a pain management specialist who then takes over the pain care aspects of a patient with chronic pain).

++ This situation could necessitate two different practitioners billing HCPCS code G3002 during that first month; the lead clinician could change to someone else on an infrequent and limited basis.

In summary, we are finalizing code descriptors for HCPCS codes G3002 and G3003, with two modifications to HCPCS code G3002 shown in *italics*, below.

HCPCS code G3002 (*Chronic pain management and treatment, monthly bundle including, diagnosis; assessment and monitoring; administration of a validated pain rating scale or tool; the development, implementation, revision, and/or maintenance of a person-centered care plan that includes strengths, goals, clinical needs, and desired outcomes; overall treatment management; facilitation and coordination of any necessary behavioral health treatment; medication management; pain and health literacy counseling; any necessary chronic pain related crisis care; and ongoing communication and care coordination between relevant practitioners furnishing care, e.g. physical therapy and occupational therapy, complementary and integrative approaches, and community-based care, as appropriate. Required initial face-to-face visit at least 30 minutes provided by a physician or other qualified health professional; first 30 minutes personally provided by physician or other qualified health care professional, per calendar month. (When using G3002, 30 minutes must be met or exceeded.)*)

HCPCS code G3003 (*Each additional 15 minutes of chronic pain management and treatment by a physician or other qualified health care professional, per calendar month. (List separately in addition to code for G3002. When using G3003, 15 minutes must be met or exceeded.)*)

In response to public comments, we are finalizing our proposed policies pertaining to HCPCS codes G3002 and G3003, with a few modifications, as follows:

- We are defining chronic pain as persistent or recurrent pain lasting longer than 3 months, as proposed;
- We are requiring that the first time HCPCS code G3002 is billed, the physician or qualified health practitioner must see the beneficiary in-

person. Both individuals must be in a clinical setting such as a primary care practitioner's office or other applicable setting, as proposed;

- A physician or other qualified health practitioner may bill HCPCS code G3003, for each additional 15 minutes of care, an unlimited number of times, as medically necessary, per month, after HCPCS code G3002 has been billed, as revised;

- A work RVU of 1.45 for HCPCS code G3002 and a work RVU of 0.5 for HCPCS code G3003, as proposed;

- That any of the CPM in-person components included in HCPCS codes G3002 and G3003 may be furnished via telehealth, as clinically appropriate, in order to increase access to care for beneficiaries, as revised;

- That HCPCS codes G3002 and G3003 may be furnished and billed by physicians and other qualified health professionals, as proposed; and

- That both E/M and CPM may be billed on the same day if all requirements to report each service are met, and time spent providing CPM services does not represent time spent for providing any other reported service, as proposed.

In response to comments expressing lack of clarity about certain proposed policies pertaining to HCPCS codes G3002 and G3003, we are clarifying in this final rule that:

- The beneficiary, at the first visit, need not have an established history or diagnosis of chronic pain, or be diagnosed with a condition that causes or involves chronic pain; but that rather, it is the clinician's responsibility to establish, confirm, or reject a chronic pain and/or pain-related diagnosis when the beneficiary first presents for care and the clinician first reports HCPCS code G3002;

- That clinicians will be required to furnish all appropriate elements of the code bundle, but that we do not expect that all elements of the code bundle will be appropriate for every patient;

- That we are not requiring in the code descriptor that a clinician refer a beneficiary to other services; that determination should be made between the clinician and the beneficiary; and finally

- That CPM services would be available for billing/reporting in conjunction with remote patient monitoring, remote physiologic monitoring, or remote therapeutic monitoring if all requirements to report each service are met, and time spent providing CPM services does not represent time spent for any other furnished and billed service.

(34) Revisions to the "Incident to" Physicians' Services Regulation for Behavioral Health Services

In the CY 2014 PFS final rule with comment period (78 FR 74425 through 74427), we created an exception to our "incident to" regulation at § 410.26(b)(5) under which "incident to" services generally must be furnished under direct supervision. Specifically, we finalized a policy to require general, rather than direct, supervision when chronic care management services are furnished incident to the billing physician's or NPP's services outside of the practice's normal business hours by clinical staff. In the CY 2017 PFS final rule (81 FR 80255), we finalized a revision to our regulation under § 410.26(b)(5) to require a general, rather than direct, level of supervision for designated care management services, and established that we would designate care management services through notice and comment rulemaking.

We understand that circumstances related to the PHE for COVID-19 have likely contributed to an increase in the demand for behavioral health services while also exacerbating existing barriers to beneficiaries' access to needed behavioral health services. For example, the American Psychological Association (APA) conducted a survey in 2020 and a follow-up survey in 2021 to better understand the impact of the COVID-19 pandemic on mental health treatment and the work of practicing psychologists. In the 2021 follow-up survey, many psychologists reported increases in the demand for treatment of anxiety and depression. They reported the greatest increases in treating anxiety disorders (84 percent, up from 74 percent), depressive disorders (72 percent, up from 60 percent), and trauma- and stress-related disorders (62 percent, up from 50 percent). Other diagnoses with large increases included sleep-wake disorders, obsessive-compulsive and related disorders, and substance-related and addictive disorders.<sup>73</sup>

Additionally, according to HRSA's National Center for Health Workforce Analysis, by 2025, shortages are projected nationally for a variety of behavioral health practitioners, including psychiatrists; clinical, counseling, and school psychologists; mental health and substance use social workers; school counselors; and

<sup>73</sup> <https://www.apa.org/pubs/reports/practitioner/covid-19-2021>.

marriage and family therapists.<sup>74</sup> Currently, there is no separate benefit category under the statute that recognizes the professional services of licensed professional counselors (LPCs) and Licensed Marriage and Family Therapists (LMFTs). Therefore, payment for the services of LPCs and LMFTs can only be made under the PFS indirectly when an LPC or LMFT performs services as auxiliary personnel incident to, the services, and under the direct supervision, of the billing physician or other practitioner. According to the American Counseling Association, there are more than 140,000 licensed professional counselors (LPCs) in the U.S., and the Medicare program's reimbursement for mental health treatment services delivered by this professional group could address provider shortages.<sup>75</sup> Additionally, according to the U.S. Bureau of Labor Statistics, there were approximately 54,800 Marriage and Family Therapists (MFTs) as of May 2021.<sup>76</sup>

In the 2022 CMS Behavioral Health Strategy,<sup>77</sup> CMS included a goal to improve access to and quality of mental health care services. In light of the current needs among Medicare beneficiaries for improved access to behavioral health services, and the existing workforce shortages impeding access to needed treatment for behavioral health, we have considered regulatory revisions that may help to reduce existing barriers and make greater use of the services of LPCs and LMFTs. We noted that CMS does not have authority to create a statutory benefit category for practitioner types. Therefore, we proposed to amend the direct supervision requirement under our "incident to" regulation at § 410.26 to allow behavioral health services to be furnished under the general supervision of a physician or NPP when these services or supplies are provided by auxiliary personnel incident to the services of a physician or NPP. We are limiting the scope of this proposal to behavioral health services at this time due to increased needs for behavioral health treatment and workforce shortages in this field. We believe that this proposed change will facilitate utilization and extend the reach of behavioral health services. We believe that any risk associated with this

proposed change would be minimal, since the auxiliary personnel providing the services would need to meet all of the applicable requirements to provide incident to services, including any applicable licensure requirements imposed by the State in which the services are being furnished, as described in § 410.26(a)(1).

We received a high volume of public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters stated that they applaud CMS' proposed revisions to the "Incident to" Physicians' Services regulation for behavioral health services. Commenters stated that this proposal will help expand access to, and coordination of mental health services in rural and underserved areas where masters' level practitioners represent a substantial segment of the mental health providers in the area and doctoral-level clinicians such as psychologists are few, and for some patients a long distance away. Further, allowing the supervision of auxiliary staff such as licensed professional counselors (LPCs) and marriage and family therapists (MFTs) without requiring a continuous, direct physical presence would enable more patients to receive services. Commenters also described that these provisions will better engage the full panoply of behavioral health care providers in meeting the needs of Medicare beneficiaries, while further promoting beneficiary choice to select the type of behavioral health provider that best suits their mental health needs. Many commenters also noted that these proposed revisions are essential in light of the fact that the COVID-19 pandemic has exacerbated rates of depression, loneliness, and suicide among the elderly population.

Several commenters did not fully support changing the supervisory requirements from "direct" to "general" because they noted that most LPCs and LMFTs possess enough professional knowledge and training on mental health and addiction to not be under any level of supervision by a physician or NPP and requested that CMS add a separate benefit category for LPCs and LMFTs, whom the commenters state comprise 40 percent of the behavioral health workforce, in order to increase access to behavioral health services for Medicare beneficiaries. However, many commenters noted that they recognize that without Congressional action, CMS's ability to expand Medicare beneficiaries' access to LPCs and LMFTs is limited and stated they support all steps CMS can take to increase

beneficiary access to these practitioners within its regulatory authority.

A few commenters noted that many mental health counselors practice in settings where they are not employed by or working directly with physicians or NPPs and would not be able to take advantage of this flexibility. Other commenters noted that the proposal to allow LPCs and LMFTs to furnish behavioral health services under general supervision is an important step to more effectively deploy behavioral health professionals to practice at the top of their license, stating that LPCs could be well positioned to treat patients for conditions including depression and anxiety, thereby creating greater capacity for clinical psychologists and other providers with more advanced training to treat patients with conditions that require more complex care. Commenters also described that with this new flexibility, primary care practices may be able to leverage a broader range of behavioral health professionals in the delivery of team-based integrated primary care, and therefore, design their workflows in ways to better address the needs of their patients.

*Response:* We thank the commenters for their support and feedback. After consideration of the comments received, we are finalizing our proposal to amend the direct supervision requirement under our "incident to" regulation at § 410.26 to allow behavioral health services to be furnished under the general supervision of a physician or NPP when these services or supplies are provided by auxiliary personnel incident to the services of a physician or NPP.

*Comment:* Many commenters requested that CMS specify which services are considered "behavioral health services," and would be eligible to be furnished under general supervision under our proposal. A few commenters urged CMS to define "behavioral health services" under the broadest terms possible for the purposes of this provision.

*Response:* We do not define behavioral health services by HCPCS codes; we did not propose to do so, and we believe individual practitioners are in the best position to determine whether particular treatments or diagnostic services are behavioral health services. However, we generally understand a behavioral health service to be any service furnished for the diagnosis, evaluation, or treatment of a mental health disorder, including substance use disorders (SUD). We note that in the CY 2022 PFS final rule (86 FR 65061), we stated that SUD services

<sup>74</sup> <https://bhw.hrsa.gov/sites/default/files/bureau-health-workforce/data-research/behavioral-health-2013-2025.pdf>.

<sup>75</sup> <https://www.counseling.org/government-affairs/federal-issues/medicare-reimbursement>.

<sup>76</sup> <https://www.bls.gov/oes/current/oes211013.htm>.

<sup>77</sup> <https://www.cms.gov/cms-behavioral-health-strategy>.

are considered mental health services for the purposes of the expanded definition of “interactive telecommunications system.” Additionally, in the CY 2010 PFS final rule (74 FR 61787), we referenced that the outpatient mental health treatment limitation, which was phased out as of 2014, applied to outpatient treatment of a mental, psychoneurotic, or personality disorders, identified under the International Classification of Diseases (ICD) diagnosis code range 290–319. These are the types of behavioral health services that would be eligible to be furnished by auxiliary personnel under the general supervision of a physician or certain other nonphysician practitioners who are authorized under their statutory benefit category to have integral, although incidental, services provided incident to their own professional services. Services could include, but are not limited to services such as psychotherapy, Screening, Brief Intervention, and Referral to Treatment (SBIRT) services, psychiatric diagnostic evaluations, and other services furnished primarily for the treatment or diagnosis of mental health or SUD disorders.

*Comment:* Many commenters sought clarification regarding which types of clinicians may serve as auxiliary personnel under this policy. A few commenters pointed out that terminology for clinicians who furnish behavioral health care varies across states and requested that CMS include all independently licensed providers in each state. One commenter noted an example, that Washington State does not have an LPC credential, but the equivalent independent license in Washington is a Licensed Mental Health Counselor, or LMHC, and noted that states that have alternative titles for comparable credentials would benefit greatly by being able to use these clinicians to furnish services under general supervision for Medicare beneficiaries and requested that CMS consider expanding this proposal to include all those providers with comparable state-issued licenses. Some commenters encouraged inclusion of other mid-level clinicians who provide behavioral health treatment services, such as certified addictions counselors. Other commenters pointed out a range of clinicians that participate in furnishing behavioral health treatment, including occupational therapists, psychiatric pharmacists, and peer support specialists. Another commenter pointed out that physician assistants are qualified to help address workforce shortages and access to behavioral

health treatment. Many commenters also highlighted the importance of peer support services, which commenters stated are designed to value lived experience and to empower an individual to direct their own recovery with dignity, noting that integrating peer support services in clinical settings increases engagement in care and improves both physical and mental outcomes, and requested clarification as to whether peer support specialists could be considered auxiliary personnel. A few commenters noted that under Medicare’s partial hospitalization program, CMS defaults to State licensure laws on which providers are eligible to provide care, and therefore, encouraged CMS to adopt, for the purposes of this provision, deference to State licensure laws where the care is taking place.

*Response:* We note that the definition of auxiliary personnel at § 410.26(a)(1) defines auxiliary personnel as any individual who is acting under the supervision of a physician (or other practitioner), regardless of whether the individual is an employee, leased employee, or independent contractor of the physician (or other practitioner) or of the same entity that employs or contracts with the physician (or other practitioner), has not been excluded from the Medicare, Medicaid and all other Federally funded health care programs by the Office of Inspector General or had his or her Medicare enrollment revoked, and meets any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished. We note that we did not propose any changes to the existing regulatory definition of auxiliary personnel in § 410.26, and therefore, we are not making any changes to this definition in this rule. All requirements for services furnished incident to a physician’s or NPP’s professional services listed at § 410.26 continue to apply. Many of the clinician types mentioned by commenters could satisfy this definition.

*Comment:* Several commenters requested that CMS create a mechanism for licensed psychologists to bill Medicare for the services furnished by advanced psychology trainees under a licensed psychologist’s supervision, noting this is allowed by many State Medicaid programs. The commenters stated that clinical psychology interns have 1,000 to 2,000 hours of clinical experience prior to beginning their internship, but under current Medicare rules, they are not able to independently bill Medicare, which leaves psychology

training programs without a steady source of funding and prevents trainees from gaining valuable experience working with older patients and patients with disabilities. Additionally, several commenters requested that CMS include behavioral health providers who are in the process of seeking full licensure, such as associate marriage and family therapists and State licensed associate counselors, as auxiliary personnel. The commenters noted that these are individuals who have met their state’s graduate education and exam requirements but have not yet met the supervised experience requirement.

*Response:* We thank the commenters for their feedback; however, we note that these comments are outside of the scope of our proposed change to the required level of supervision for behavioral health services furnished incident to a physician, NPP, or CP, because we did not propose any changes to Medicare payment rules regarding interns or postdoctoral students.

*Comment:* A few commenters stated they opposed the expansion of NPPs scope of practice beyond their State license, education, and training. One commenter stated that while they recognize the important services these practitioners provide on the care team, Medicare patients—most of whom have multiple chronic conditions, in addition to complex behavioral health issues—should have access to primary care and specialty physician services. They stated they believe that NPPs should be under the direct supervision of a licensed physician and work within the care team. Several commenters urged CMS to defer to State laws and leave the scope of practice to the State legislatures and State licensing boards. Another commenter noted that scope of practice is determined by one’s licensure in the State and supervision can ensure safe delivery of that care. One commenter encouraged CMS to conduct data collection and research on the care provided by LPCs and LMFTs prior to expanding the policy to other providers to ensure patients are receiving the best quality care to meet their needs. A few commenters stated they oppose any supervisory changes that undermine the oversight of physician-led health care teams. One commenter expressed concern that under general supervision, the supervising clinician usually provides oversight to a larger number of non-medical behavioral health clinicians, which creates an obstacle to providing immediate feedback when needed and suggested that guardrails are needed to ensure that appropriate psychiatric consultation is available.

*Response:* The change to the level of supervision for “incident to” behavioral health services from direct to general does not alter the longstanding regulatory definition of auxiliary personnel. Accordingly, any individual who qualifies as auxiliary personnel under the “incident to” regulations at § 410.26, which requires services to be furnished in accordance with applicable State law, will continue to qualify as such, regardless of the required level of supervision assigned to the services. The definition of general supervision requires the services to be furnished under the physician’s (or other practitioner’s) overall direction and control. These requirements must be met for the physician or practitioner to bill for the behavioral health service. In the case where State law and scope of practice are silent about whether an individual serving in the capacity of auxiliary personnel is licensed/authorized to provide a given behavioral health service, the supervision level for the provision of the behavioral health service will default to the standard direct supervision requirement for “incident to” services. Additionally, in order for payment to be made under Medicare Part B for the services and supplies incident to the services of a physician or other practitioner, the service must be an integral, though incidental, part of the service of the physician or practitioner in the course of diagnosis or treatment of an injury or illness, in accordance with § 410.26(b). For this to be met, we would expect there to be a course of treatment established by the physician or practitioner and in which the physician or practitioner is actively participating and managing.

*Comment:* Several commenters expressed support for CMS allowing behavioral health services to be furnished under general supervision in the RHC and FQHC settings as well, and a few commenters encouraged CMS to utilize its regulatory authority to amend the FQHC “incident to” regulations and FQHC mental health visit to include an encounter performed by an LPC and LMFT to generate a billable visit in Medicare to better align with Medicaid.

*Response:* We appreciate these suggestions from the commenters. We note that for CY 2023, the proposed change to the level of supervision for “incident to” behavioral health services from direct to general was applicable only to services payable under the PFS, which means services furnished in the RHC and FQHC settings were not addressed in the relevant proposal in the CY 2023 PFS proposed rule (87 FR 46062 through 46068). We may consider

changes to the regulations regarding services furnished at RHCs and FQHCs in the future. Additionally, we note that the types of practitioners’ services that can be considered RHC and FQHC services are specified in section 1861(aa)(1) and (3) of the Act, respectively, and do not include the services of LPCs and LMFTs.

*Comment:* One commenter suggested that CMS require a claims modifier when services are billed “incident to” which could indicate the type of personnel who performed the service (for example, LPC, LMFT, clinical psychologist, clinical social worker). The commenter stated that because this proposal would relax the supervision policy for behavioral health services billed as “incident to” services, transparency is necessary to understand the impacts of this change, evaluate the quality of behavioral health care provided, monitor the use of services, and inform future improvements.

*Response:* We thank the commenter for this suggestion. We may consider a claims modifier for billing “incident to” services broadly for future rulemaking.

*Comment:* Several commenters raised potential impacts for beneficiaries who are dually eligible for Medicare and Medicaid. A few commenters urged CMS to clarify that LPCs may be reimbursed by the Medicaid program for services they provide to dually-eligible Medicare beneficiaries, without documentation of a Medicare claim denial or, alternatively, create a protocol to provide such a denial so that the Medicaid program will process the claim.

*Response:* We thank commenters for this information and feedback, but we note that this rule focuses on supervision, not which party will be reimbursed for furnishing behavioral health services. We note that this policy is limited to the change in the required level of supervision for behavioral health services furnished by auxiliary personnel incident to the services of a physician or NPP, and therefore, we do not anticipate that this policy would have an effect on the processing of crossover claims for beneficiaries who are dually eligible for Medicare and Medicaid.

(35) New Coding and Payment for General Behavioral Health Integration (BHI) Billed by Clinical Psychologists (CPs) and Clinical Social Workers (CSWs)

In the CY 2017 PFS final rule (81 FR 80230), we established G-codes to describe monthly services furnished using the Psychiatric Collaborative Care Model (CoCM), an evidence-based

approach to behavioral health integration that enhances “usual” primary care by adding care management support and regular psychiatric inter-specialty consultation. These G-codes were replaced by CPT codes 99492–99494, which we established for payment under the PFS in the CY 2018 PFS final rule (82 FR 53077 and 53078). Additionally, we created a fourth G-code to describe services furnished using other models of BHI in the primary care setting, which was replaced by CPT code 99484 in the CY 2018 PFS final rule (82 FR 53077 and 53078).

We stated in the CY 2017 PFS final rule (81 FR 80236) that we recognized that the psychiatric CoCM is prescriptive and that much of its demonstrated success may be attributable to adherence to a set of elements and guidelines of care. We finalized a code set to pay accurately for care furnished using this specific model of care, given its widespread adoption and recognized effectiveness. However, we stated we recognized that there are primary care practices that are incurring, or may incur, resource costs inherent to treatment of patients with similar conditions based on BHI models of care other than the psychiatric CoCM that may benefit beneficiaries with behavioral health conditions, and therefore, finalized a General BHI code which may be used to report a range of models of BHI services, and that we expected this code to be refined over time as we receive more information about other BHI models in use.

In the CY 2018 PFS final rule (82 FR 53078), we stated that we had received inquiries from interested parties about whether professionals who were not eligible to report the approved initiating visit codes for BHI services to Medicare might nonetheless serve as a primary hub for BHI services. For example, interested parties have suggested that a CP might serve as the primary practitioner that integrates medical care and psychiatric expertise. For purposes of future rulemaking, we sought comment on the circumstances under which this model of care is happening and whether additional coding would be needed to accurately describe and value other models of care. A few commenters suggested that CMS create separate codes to describe behavioral health care management services that could be billed by CPs and NPPs who are not authorized to bill Medicare for E/M services. One commenter suggested that CMS include psychiatric diagnostic evaluation services that can be furnished and billed by CPs as eligible initiating visits. Commenters also

described other models of care that are in use, including the STAR-VA model and a model used in outpatient health care settings where a clinical social worker (CSW) not only furnishes psychiatric care but also assists with psychosocial aspects of medical care.

In the CY 2017 PFS final rule (81 FR 80239), we stated that we had received a few comments suggesting that in addition to the qualifying E/M services (or an AWV or IPPE), the initiating visit services for BHI should include in-depth psychological evaluations delivered by a CP including CPT codes 90791, 96116 or 96118, which include care plan development. In this final rule, we established that the same services that qualify as the initiating visit for CCM would also qualify as initiating services for BHI, which do not include in-depth psychological evaluation by a CP and which were not, in their entirety, within the scope of CPs' practice, and therefore, CPs would not be able to report the General BHI code directly (although a psychiatrist may be able to do so) (81 FR 80239).

In the 2022 CMS Behavioral Health Strategy,<sup>78</sup> we included a goal to improve access to and quality of mental health care services, and included an objective to "increase detection, effective management and/or recovery of mental health conditions through coordination and integration between primary and specialty care providers." As previously noted in this proposed rule, we understand that circumstances related to the COVID-19 PHE have likely contributed to an increase in the demand for behavioral health services while also exacerbating existing barriers in beneficiaries' access to needed behavioral health services. In light of the feedback we have received and considering the increased needs for mental health services, we proposed to create a new G code describing General BHI performed by CPs or CSWs to account for monthly care integration where the mental health services furnished by a CP or CSW are serving as the focal point of care integration. Specifically, we proposed to create HCPCS code GBHI1 (*Care management services for behavioral health conditions, at least 20 minutes of clinical psychologist or clinical social worker time, per calendar month, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable validated rating scales; behavioral health care planning in relation to behavioral/psychiatric health problems,*

*including revision for patients who are not progressing or whose status changes; facilitating and coordinating treatment such as psychotherapy, coordination with and/or referral to physicians and practitioners who are authorized by Medicare law to prescribe medications and furnish E/M services, counseling and/or psychiatric consultation; and continuity of care with a designated member of the care team.*) We proposed to value this service under the proposed HCPCS code GBHI1 based on a direct crosswalk to the work values and direct PE inputs for CPT code 99484 (*Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar month, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable validated rating scales; behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes; facilitating and coordinating treatment such as psychotherapy, pharmacotherapy, counseling and/or psychiatric consultation; and continuity of care with a designated member of the care team*), because the services described by GBHI1 closely mirror those described by CPT code 99484. Therefore, we believe that this crosswalk is an appropriate valuation of the level, time, and intensity of the proposed service described by HCPCS code GBHI1. CPs are authorized under their statutory benefit category at section 1861(ii) of the Act to furnish "qualified psychologist services" to include "such services and such services and supplies furnished as an incident to his service furnished by a clinical psychologist (as defined by the Secretary) which the psychologist is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) as would otherwise be covered if furnished by a physician or as an incident to a physician's service." Additionally, the statutory benefit category for CSWs at Section 1861(hh)(2) of the Act defines "clinical social worker services" as "services performed by a clinical social worker (as defined in paragraph (1)) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital and other than services furnished to an inpatient of a skilled nursing facility which the facility is required to provide as a requirement for participation) which the clinical social worker is legally

authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are performed as would otherwise be covered if furnished by a physician or as an incident to a physician's professional service." Based on the authorizations under the CP and CSW statutory benefit categories, CPs are authorized to furnish and bill for services that are provided by clinical staff incident to their professional services when the "incident to" requirements specified in § 410.26 of our regulations are met, and would be authorized to do the same when furnishing services described by proposed HCPCS code GBHI1, whereas CSWs would only be able to bill Medicare for services they furnish directly and personally. The proposed work value for HCPCS code GBHI1 is 0.61 (based on a direct crosswalk to CPT code 99484). We solicited comment on whether this proposed value accurately reflects the resource costs involved in furnishing these models of care, or whether additional coding may be needed, for example, separate coding for CPs and CSWs. We also solicited comment on the proposed requirements for billing GBHI1, including any applicable "incident to" requirements, and the role and responsibilities of CSWs and CPs.

In the CY 2017 PFS final rule (81 FR 80239), we finalized the requirement of an initiating visit for the BHI codes for new patients or beneficiaries not seen within a year of commencement of BHI services. We stated that the initiating visit would establish the beneficiary's relationship with the billing practitioner (most aspects of the BHI services would be furnished incident to the billing practitioner's professional services), ensure the billing practitioner assesses the beneficiary prior to initiating care management processes, and provide an opportunity to obtain beneficiary consent. We noted that the existing eligible initiating visit codes are not, in their entirety, within the scope of the CP's practice. Given that, we proposed to allow a psychiatric diagnostic evaluation (CPT code 90791) to serve as the initiating visit for GBHI1. We welcome comment on whether we should consider additional codes to qualify as the initiating visit.

In the CY 2017 PFS final rule (81 FR 80235), we established that CCM and BHI services could be billed during the same month for the same beneficiary if all the requirements to bill each service are separately met. We are also proposing that HCPCS code GBHI1 could be billed during the same month as CCM and TCM services, provided

<sup>78</sup> <https://www.cms.gov/cms-behavioral-health-strategy>.

that all requirements to report each service are met and time and effort are not counted more than once. The patient consent requirements would apply to each service independently.

In the CY 2017 PFS final rule (81 FR 80235), we established that the BHI services may be furnished incident to the billing professional's services under general supervision because we do not believe it is clinically necessary that the professionals on the team who provide services other than the treating practitioner (namely, the behavioral health care manager and the psychiatric consultant) to have the billing practitioner immediately available to them at all times, as would be required under a higher level of supervision. We believe this is also the case for the service described by GBHI1. Therefore, consistent with other care management codes paid under the PFS, we proposed to add HCPCS code GBHI1 to the list of designated care management services for which we allow general supervision.

We received public comments on new coding and payment for general behavioral health integration (BHI) billed by Clinical Psychologists (CPs) and Clinical Social Workers (CSWs). The following is a summary of the comments we received and our responses.

**Comment:** Many commenters supported our proposed coding and payment for BHI that would recognize psychologists' role in integrated care. The commenters expressed support for recognizing multiple evidence-based models of integrated care, stating this allows psychologists the flexibility required to support the behavioral health needs of the broader community. Other commenters noted that by providing access to behavioral health and health behavior services within primary care settings, BHI services can be particularly helpful in addressing treatment disparities affecting members of racial and ethnic minorities, and those living in underserved and vulnerable communities with inadequate access to mental and behavioral health specialists. A few commenters stated this proposal will provide additional flexibility to primary care practices to design their workflows to best suit the needs of beneficiaries and the care team's capacities. Commenters noted that the establishment of this code will also help to recognize psychologists' role in integrated care and allow psychologists the flexibility required to support the behavioral health needs of the broader community. Other commenters pointed out that a potential advantage of the proposed service code is that HCPCS

code GBHI1 appropriately adds additional autonomy to CP and CSW clinical practice, which has the potential to improve job satisfaction and retention. Additionally, commenters stated that allowing for reimbursement of measurement-based care, interprofessional coordination, and care management services may incentivize more CPs and CSWs to participate in the Medicare behavioral health clinician network, which would in turn increase patient access to care management services and behavioral health treatment driven by validated outcome measurements. Commenters also expressed support for allowing these services to be furnished under general supervision.

**Response:** We thank the commenters for their support and feedback. After consideration of the comments received, we are finalizing this code as proposed. We note that the code GBHI1 was a placeholder code and that the final code number will be HCPCS code G0323 (*Care management services for behavioral health conditions, at least 20 minutes of clinical psychologist or clinical social worker time, per calendar month. (These services include the following required elements: Initial assessment or follow-up monitoring, including the use of applicable validated rating scales; behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes; facilitating and coordinating treatment such as psychotherapy, coordination with and/or referral to physicians and practitioners who are authorized by Medicare to prescribe medications and furnish E/M services, counseling and/or psychiatric consultation; and continuity of care with a designated member of the care team.)*)

Additionally, we are finalizing our proposal to add HCPCS code G0323 to the list of designated care management services for which we allow general supervision.

**Comment:** Several commenters stated they agreed with CMS that CPT code 90791 (psychiatric diagnostic evaluation) could appropriately serve as the initiating visit, noting that psychologists and social workers are not able to bill E/M services. A few commenters also requested that CPT code 96156, health behavior assessment and reassessment, also serve as an allowable initiating visit for the newly proposed BHI code. Another commenter urged CMS to broaden the types of visits that can serve as an initiating visit for HCPCS code GBHI1, stating that a visit with a primary care provider or social

worker would also be appropriate initial visit types and that limiting the initiating visit to a psychiatric diagnostic evaluation undermines CMS' intent to expand access to wraparound services for individuals receiving mental health services.

**Response:** We appreciate the commenters suggestion about considering other CPT codes such as 96156 (health behavior assessment, or reassessment), as well as E/M visit codes in addition to CPT code 90791 (psychiatric diagnostic evaluation) to serve as the initiating visit for GBHI1. However, when considering that CPs and CSWs cannot bill the program for E/M visits because they are not licensed by the States to furnish such services and, that the range of health behavior assessment and intervention codes are for billing primarily for physical illnesses rather than psychiatric illnesses, we believe that 90791 is the best option that aligns with the services that CPs and CSWs are authorized to furnish under State law and scope of practice. Accordingly, recognizing a code for which CPs and CSWs can bill as an initiating visit for HCPCS code G0323 offers them greater access and opportunity to furnish integrated care management services.

**Comment:** A few commenters expressed concern about the medical management of patients in models of care without psychiatric involvement and suggested that the ability to receive immediate advice on prescribing from a psychiatrist or child psychiatrist, as is the case in the existing evidence-based psychiatric CoCM model, should be a mandatory element in all other collaborative care models to ensure patient safety and high-quality patient care. A commenter also pointed to the existing interprofessional consultation codes (CPT codes 99446–99449, 99451–99452) and urged CMS to emphasize the importance of consultative relationships between psychiatrists, primary care physicians, clinical psychologists, and clinical social workers in order to ensure high-quality care.

**Response:** We thank the commenters for this feedback. In the CY 2017 PFS final rule (81 FR 80236 through 80238), we noted that we created the General BHI code in order to allow payment for models of integrated care other than the psychiatric collaborative care (CoCM) code. We agree with the comment regarding the importance of consultative relationships between various members of the care team, including psychiatrists, primary care physicians, clinical psychologists, and clinical social workers.

*Comment:* Many commenters supported the proposed valuation based on a crosswalk to CPT code 99484. A few commenters opposed the proposed valuation, stating that CPT code 99484 describes clinical staff time and is valued assuming the service is performed by a behavioral health care manager and that those assumptions do not accurately reflect the cost when the service is performed by a clinical psychologist or clinical social worker. Another commenter stated they do not believe this proposed value accurately reflects the resource costs involved in furnishing these models of care as the amount of time needed to complete the required elements will take far longer than 20 minutes per month and there is a substantial amount of work that occurs outside of the office. The commenter urged CMS to consider a code that permits multiple billable units of 20 minutes per unit per month capped at 10 units per month to better acknowledge the amount of time it takes to adequately perform the required elements, as well as the critical effort that occurs outside the office visit.

*Response:* We thank the commenters for this feedback. After consideration of the comments, for CY 2023, we are finalizing the value of HCPCS code G0323 as proposed, however we may consider changes in how this code is valued for future rulemaking. We note that the commenter's suggestion regarding codes that permit multiple billable units of 20 minutes per unit per month is outside of the scope of the proposal.

*Comment:* A few commenters requested that CMS clarify whether HCPCS code GBHI1 may be billed in conjunction with codes describing remote monitoring services. The commenter stated they support the new code but sought clarification on whether HCPCS code GBHI1 could be billed in conjunction with the following services: remote patient monitoring (CPT code 99091), remote physiologic monitoring (CPT codes 99453, 99454, 99457, 99458), or remote therapeutic monitoring (CPT codes 98975, 98976, 98977, 98980, 98981 and as proposed GRTM1/2/3/4) codes.

*Response:* HCPCS code G0323, and the services describing remote patient monitoring, remote physiologic monitoring, and remote therapeutic monitoring, are distinct types of services, although there may be some overlap in eligible patient populations. There may be some circumstances where it is reasonable and necessary to provide both services in a given month. The BHI codes, including HCPCS code G0323, could be billed for the same

patient in the same month as the RPM or RTM services. All applicable requirements for the individual codes must be met, including obtaining informed consent from the beneficiary, for both the remote monitoring and BHI. In this circumstance, appropriate billing in a given month means that time and effort cannot be counted more than once when using BHI codes with RPM or RTM. Billing practitioners should remember that cost sharing applies to each service independently. If all requirements to report each service are met, without time or effort being counted more than once, both may be billed.

*Comment:* Several commenters requested that CMS clarify that providers of peer support services (also known as peer support specialists and peer recovery specialists) may bill as part of behavioral health integration codes including the new GBHI1 code and collaborative care codes.

*Response:* While there is no statutory benefit category under Medicare law that authorizes direct billing and payment to peer support specialists for their professional services under the Medicare Part B program, it may be possible for peer support specialists to provide their services in an "incident to" capacity. That is, if a peer support specialist meets the definition of auxiliary personnel as defined under the "incident to" regulations at § 410.26, then they could be eligible to provide behavioral health services within their scope of practice in accordance with State law under the supervision of a physician or certain nonphysician practitioners.

*Comment:* One commenter suggested that CMS should consider use of telehealth visits to meet the initiating visit criteria as this would serve to increase access in alignment with CMS' stated goal. Another commenter encouraged CMS to monitor utilization of the code if finalized and noted that the type of work described is resource intensive and needs to be valued accordingly. Another commenter stated they supported the proposed crosswalk, but it was unclear to them whether the current valuation is accurate, stating that CPT code 99484 will be reviewed by the RUC at their September 2022 meeting.

*Response:* We may consider these commenters' suggestions for future rulemaking. Additionally, we intend to monitor utilization of this code and any subsequent changes to the valuation of CPT code 99484 in order to determine whether we may need to re-visit the valuation through future rulemaking.

*Comment:* One commenter encouraged CMS to consider broadening the scope of services in this code to include coordination of social care. The commenter stated that the behavioral health care manager will be more successful in getting individuals successfully engaged in treatment if they are able to attend to basic resources and social needs by referring to relevant social services and programs and that counting minutes spent coordinating mental health treatment but not minutes spent helping address other concerns is burdensome for clinicians and does not make sense clinically when it is all part of a typical evidence-based clinical social work interventions that result from a comprehensive psychosocial assessment and collaborative planning process to work toward the overarching goal (in this case, improved behavioral health).

*Response:* We appreciate the commenters suggested consideration of making payment for coordination of social services. We did not propose to include coordination of social care in HCPCS code G0323, so for this reason we will not be finalizing such a change. As we continue to consider ways to expand access to behavioral health services, we may consider this for future rulemaking.

*Comment:* A few commenters stated they support additional coding to promote integration and recommended that CMS develop a bundled payment for behavioral health services that would include wraparound services and could be used in value-based payment arrangements.

*Response:* We appreciate these suggestions. While they are out of scope for this proposed rule, we may consider additional coding to promote integration and payment through future rulemaking.

(36) Request for Information: Medicare Part B Payment for Services Involving Community Health Workers (CHWs)

The American Public Health Association (APHA) defines a community health worker as a "frontline public health worker who is a trusted member of and/or has an unusually close understanding of the community served. This trusting relationship enables the worker to serve as a liaison/link/intermediary between health/social services and the community to facilitate access to services and improve the quality and cultural competence of service delivery." Community Health Workers are classified as a workforce category by the Department of Labor. The Community Health Worker Core

Consensus Project (C3) lists the following ten roles of CHWs:<sup>79</sup>

- Cultural mediation among individuals, communities, and health and social service systems.
- Providing culturally appropriate health education and information.
- Care coordination, case management, and system navigation.
- Providing coaching and social support.
- Advocating for individuals and communities.
- Building individual and community capacity.
- Providing direct service.
- Implementing individual and community assessments.
- Conducting outreach.
- Participating in evaluation and research.

Findings from randomized controlled trials indicate that particular CHW interventions reduce chronic disease disparities in low income, racial and ethnic minority communities, such as type 2 diabetes, hypertension, HIV/AIDS, and obesity.<sup>80 81 82 83 84</sup> We are also interested in better addressing the social needs of beneficiaries; for example, in the FY 2023 IPPS/LTCH proposed rule, we proposed new measures under the Hospital Inpatient Quality Reporting Program pertaining to assessing social determinants of health. The CHW skillset may position this workforce to address these social needs. In light of the significant benefits that services involving CHWs can potentially offer the health of Medicare beneficiaries, including a reduction in

health disparities, we are interested in learning more about how services involving CHWs are furnished in association with the specific Medicare benefits established by the statute.

Over the past several years, we have worked to develop payment mechanisms under the PFS to improve the accuracy of valuation and payment for the services furnished by physicians and other health care professionals, especially in the context of evolving models of care. For example, physicians and other eligible practitioners are able to report care management services and behavioral health integration services based on tasks personally provided by clinical staff under their supervision. Some of the elements of the comprehensive care plans referenced in the description of care management services include medication management, community/social services ordered, and coordination with other agencies, which are also some of the services personally provided by CHWs.

Section 1862(a)(1)(A) of the Act generally excludes from coverage services that are not reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member. We are interested in learning whether and how CHWs, as auxiliary personnel of physicians and hospitals, may provide reasonable and necessary services to Medicare beneficiaries under the appropriate supervision of health care professionals that are responsible more broadly for medical care, including behavioral health care. We are also looking to understand whether and how services involving CHWs are accounted for under the existing CCM codes or other care management or behavioral health integration services, including whether the employment and supervision arrangements ordinarily adopted within the industry would meet the requirements that allow for billing by supervising professionals or providers, including RHCs and FQHCs. For example, do CHWs tend to be employees of physicians or of the same entities that employ physicians? Are physicians or other medical professionals supervising their interaction with patients in a manner consistent with direct supervision—for example, immediate availability in the same location?

We noted that CHWs are employed in a number of sectors, including local government, community-based organizations, and social services sectors. Therefore, the health care providers working with CHWs may have established nontraditional relationships with these organizations outside of the

health sector. We are interested in learning how payments between health care provider organizations, and community-based organizations, local governments, and social service organizations, account for the costs of services provided by CHWs, and how health care provider organizations ensure that the funding amount is sufficient to cover the costs of the full range of CHW services. We also solicited comment on whether and to what extent CHW services are provided in association with preventive services, including those covered by Medicare.

Physicians and certain other health care practitioners are authorized to bill Medicare for services furnished incident to their professional services by auxiliary personnel. Our regulation at § 410.26 requires that auxiliary personnel who perform services incident to the services of the billing physician or other practitioner must be acting under the supervision of the billing practitioner, and must meet any applicable requirements, including licensure, imposed by the State in which the services are furnished. We understand that there is wide variation in State standards for CHWs. In addition, the training that CHWs receive is typically provided by employers but varies widely in terms of its breadth and scope.<sup>85</sup> We are trying to understand how CHWs might also be recognized as auxiliary personnel in the Medicare context, and are therefore interested in learning how States may have determined whether and under what circumstances CHWs have the necessary qualifications to perform services that would improve the health of Medicare beneficiaries and others being treated by supervising professionals or providers.

We received several public comments in response to our request for information about Medicare Part B Payment for Services Involving Community Health Workers (CHWs). We appreciate the thoughtful feedback submitted by the public on this matter and may consider these comments in future rulemaking.

### (37) Recognition of the Nurse Portfolio Credentialing Commission (NPCC)

The Medicare program established qualifications under regulations at § 410.75 for NPs and, under § 410.76 for clinical nurse specialists (CNS). Both the NP and CNS qualification regulations require that NPs and CNSs be certified as a NP or a CNS by a

recognized national certifying body that has established standards for NPs and/or CNSs, and that a listed certifying body must be approved by the Secretary. An identical list of Medicare recognized and approved national certifying bodies for NPs and CNSs is included under Chapter 15, section 200 and 210 of the Medicare Benefit Policy Manual, pub. 100–02.

The organizations listed under program manual instructions as recognized national certifying bodies for NPs and CNSs are as follows:

- American Academy of Nurse Practitioners;
- American Nurses Credentialing Center;
- National Certification Corporation for Obstetric, Gynecologic and Neonatal Nursing Specialties;
- Pediatric Nursing Certification Board (previously named the National Certification Board of Pediatric Nurse Practitioners and Nurses);
- Oncology Nurses Certification Corporation;
- AACN Certification Corporation; and
- National Board on Certification of Hospice and Palliative Nurses.

The Nurse Portfolio Credentialing Commission (NPCC) has requested to have its organization added to the lists of recognized national certifying bodies for NPs and CNSs who specialize in clinical genetics/genomics and are awarded the Advanced Clinical Genomics Nurse (ACGN) credential. The NPCC's request to CMS describes the NPCC as a non-profit organization, established in 2018 by genetics/genomics nurse leaders as the only organization that now offers new credentials to advanced practice registered nurses (APRNs) who specialize in genetics/genomics, a nursing specialty recognized by the American Nurses Association.

Additionally, the NPCC's letter states that its organization evolved directly from the American Nurses Credentialing Center (a listed, CMS-recognized national certifying body) and the Genetic Nursing Credentialing Commission, which are the organizations that awarded new genetics/genomics nursing credentials from 2001 to 2018. However, as of 2019, the American Nurses Credentialing Center (ANCC) stopped offering new credentialing to genetics nurses and instead offers only renewal credentialing to nurses who specialize in genetics. Since 2019, the NPCC has awarded the ACGN credential to 32 APRNs from 17 States.

Now, with the NPCC being the only organization that offers new

credentialing to nurses in genetics, the NPCC is concerned that the absence of its organization from the current list of recognized national certifying bodies appropriate for NPs and CNSs presents a barrier and a disadvantage for newly credentialed APRNs. Specifically, the NPCC is concerned that newly NPCC credentialed NPs and CNSs seeking enrollment under Medicare would be denied on the basis that they do not meet Medicare's certification requirement unless the NPCC is listed as a recognized national certifying body appropriate for NPs and CNSs who specialize in genetics/genomics. The website for the NPCC is available at <https://www.nurseportfolio.org>.

When considering previous requests to add other organizations to the list of recognized national certifying bodies for NPs and CNSs, we stated that it is not our intention to be overly restrictive in our program requirements and consequently prevent qualified NPs and CNSs who specialize in areas of medicine other than those certified by the ANCC from participating in the Medicare program as NPs or CNSs and from rendering care to patients in need of specialized services (see 71 FR 69707). Accordingly, we proposed to add the NPCC organization to the list of recognized national certifying bodies in manual instructions for NPs at section 200 and CNSs at section 210 of the Medicare Benefit Policy Manual, pub. 100–02. We requested public comments on this proposal.

The following is a summary of the public comments received on our proposal concerning the NPCC, along with our response to these comments.

*Comment:* One commenter stated that its organization is concerned that the addition of the NPCC to the list of recognized national certifying bodies for NPs and CNSs would create confusion between the national certifying bodies for NPs and CNSs that are already listed under program manual instructions and, the NPCC. The commenter described the NPCC as a type of credentialing organization that provides an additional credential in advanced clinical genomics to demonstrate expertise in a specific specialty area to already certified and licensed NPs and CNSs. Therefore, the commenter asserted that since the list of recognized national certifying bodies in program manual instructions lists the organizations that provide the certification necessary to practice under Medicare as a NP or a CNS in accordance with Medicare regulations, it does not support adding the NPCC, which offers a specialty credential that goes beyond the requisite

qualification requirements for NPs and CNSs.

*Response:* We appreciate the commenters concern about creating confusion by adding the NPCC to the list of recognized national certifying bodies for NPs and CNSs. When establishing this list of recognized national certifying bodies for NPs and CNSs, we were cautious about being overly restrictive in our program requirements and consequently preventing qualified NPs and CNSs who specialize in areas of medicine other than those certified by the American Nurses Credentialing Corporation (ANCC) from participating in the Medicare program as NPs or CNSs and from rendering care to patients in need of specialized services. Accordingly, the current list recognizes organizations that certify NPs and CNSs with specialties in obstetrics, gynecology, neonatal nursing, pediatrics, oncology, hospice and palliative care. It is our intent to exercise this same caution when considering additional prospects given the current severe shortage of health care professionals such as NPs and CNSs available to render care to patients, particularly those who are certified and furnish specialized services. Since the ANCC no longer offers new credentialing to genetics nurses, the NPCC is the only organization that offers new credentialing for this nurse specialty. Therefore, our consideration to recognize and list the NPCC is to prevent the potential for such genetics nurses from being denied enrollment in the Medicare program.

*Comment:* Another commenter stated that CMS should recognize the NPCC as a national certifying body for NPs and CNSs.

*Response:* We appreciate the support of our proposal. After considering the public comments on the NPCC proposal, we are finalizing our proposal to recognize and add the NPCC to the list of national certifying bodies that is housed in our program manual instructions in the Medicare Benefit Policy Manual, pub. 100–02, at Chapter 15, section 200 for NPs and, 210 for CNSs.

#### (38) Request for Information: Medicare Potentially Underutilized Services

Medicare provides payment for many kinds of services that support beneficiaries in promoting health and well-being and that may also, in some cases, reduce unnecessary spending within the health care system by decreasing the need for more expensive kinds of care. Some examples of these services may include patient

educational services, like Diabetes Self-Management Training or preventive services, like the Annual Wellness Visit.

We solicited comments on ways to identify specific services and to recognize possible barriers to improved access to these kinds of high value, potentially underutilized services by Medicare beneficiaries. We also solicited regarding how we might best mitigate some of these obstacles, including for example, through examining conditions of payment or payment rates for these services or by prioritizing beneficiary and provider education investments.

We discussed that “high value” health services have been described as those “services that provide the best possible health outcomes at the lowest possible cost.”<sup>86</sup> The American College of Physicians states that high value services seek “to improve health, avoid harms, and eliminate wasteful practices.”<sup>87</sup> However, we described that we believe that some high value Medicare services may be potentially underutilized by beneficiaries. In some cases, limited use of these kinds of services occurs disproportionately in underserved communities.

Disparities in health and healthcare persist despite decades of research and widespread efforts to improve health outcomes in the United States.<sup>88</sup> Certain populations, including groups experiencing racial disparity, people with disabilities, individuals dually eligible for Medicare and Medicaid, and those living in rural and underserved areas are more likely to experience challenges accessing healthcare services, lower quality of care, and below average health outcomes when compared to the general population.<sup>89 90 91</sup> Many known factors

impede efficient and equitable healthcare, including workforce challenges, transportation issues, healthcare costs, language barriers, a lack of health literacy, and confusion about health insurance coverage and processes.<sup>92</sup> Additional factors include social determinants of health and community-level burdens that contribute to the exacerbation of health disparities. For example, disparities in cancer screening and treatment across racial and ethnic groups have been well documented. Research demonstrates that minority populations are less likely to receive cancer screening tests than their white counterparts and, consequently, are more likely to be diagnosed with late-stage cancer.<sup>93</sup> Additionally, racial and ethnic minorities with positive test results are more likely to experience delays in receiving the diagnostic tests that would serve to confirm cancer diagnoses.<sup>94</sup> We are committed to building solutions that will help close gaps in healthcare quality, access, and outcomes.<sup>95</sup>

We noted that we are working to advance health equity by designing, implementing, and operationalizing policies and programs that support health for all the people served by our

systematic fair, just, and impartial treatment of all individuals, including individuals who belong to underserved communities that have been denied such treatment, such as Black, Latino, and Indigenous and Native American persons, Asian Americans and Pacific Islanders and other persons of color; members of religious minorities; lesbian, gay, bisexual, transgender, and queer (LGBTQ+) persons; persons with disabilities; persons who live in rural areas; and persons otherwise adversely affected by persistent poverty or inequality.” The term “underserved communities” refers to populations sharing a particular characteristic, as well as geographic communities, that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life.

programs, eliminating avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and providing the care and support that our beneficiaries need to thrive.<sup>96</sup> Health equity as defined by CMS<sup>97</sup> means the attainment of the highest level of health for all people, where everyone has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, or other factors that affect access to care and health outcomes. More information regarding CMS’s Strategic Plan for health equity is available in the CMS Strategic Plan Pillar: Health Equity Fact Sheet: [https://www.cms.gov/sites/default/files/2022-04/Health%20Equity%20Pillar%20Fact%20Sheet\\_1.pdf](https://www.cms.gov/sites/default/files/2022-04/Health%20Equity%20Pillar%20Fact%20Sheet_1.pdf).

In light of the concerns regarding the potential underutilization of high value health services, particularly among potentially underserved communities, we are committed to promoting these high value services within the Medicare program. In concert with the CMS strategy to advance health equity in addressing health disparities that underlie our health system, we stated that we seek to engage with interested parties and solicit comment regarding ways to identify and improve access to high value, potentially underutilized services by Medicare beneficiaries.

We solicited comment on how to best define and identify high value, potentially underutilized health services. We also stated that we are also looking to understand what existing services within current Medicare benefits may represent high value, potentially underutilized services, such as:

- Preventive Services;
- Annual Wellness Visits;
- Diabetes Management Training;
- Screening for Diabetes;
- Referral to appropriate education/prevention/training services
- Immunizations/vaccinations
- Cancer screenings
- Cardiac rehabilitation services
- Intensive Behavioral Therapy for obesity
- Opioid treatment programs
- Complex/Chronic Care Management
- Cognitive Assessment & Care
- Behavioral Health Integration Services

Other examples of Medicare preventive services are available at the following website: <https://www.cms.gov/Medicare/Prevention/PrevntionGenInfo/medicare-preventive-services/MPS-QuickReferenceChart-1.html>.

We invited the public to submit information about specific obstacles to accessing these services and how specific potential policy, payment or procedural changes could reduce potential obstacles and facilitate better access to high value health services. Specifically, we solicited new and innovative ideas that may help broaden perspectives about potential solutions. Ideas may include, but are not limited to:

- Educational or marketing strategies (informed by beneficiary input) to promote awareness of available programs and resources that advance the utilization of “high value” services;
- Aligning of Medicare and other payer coding, payment and documentation requirements, and processes related to “high value” services;
- Recommendations from States and other interested parties regarding how to best raise awareness of underutilized services, with special consideration for the dual-eligible population;
- Enabling of operational flexibility, feedback mechanisms, and data sharing that would enhance the utilization of “high value” services; and
- New recommendations regarding when and how CMS issues regulations and policies related to “high value” services and how CMS can advance rules and policies for beneficiaries, clinicians, and providers.

We stated that we are interested in learning about how CMS might best promote high value care and health equity, address concerns regarding health disparities, and increase access to high value services, which could improve the health of Medicare beneficiaries. We also noted that comments received in response to this RFI may be used to identify potential opportunities for improvement to and refinement of existing Medicare FFS and MA programs.

We received numerous comments on our request for information about Medicare Potentially Underutilized Services. We appreciate the thoughtful feedback submitted by the public on this important issue and plan to consider these suggestions for possible future rulemaking and program refinement.

#### (39) Change in Procedure Status for Family Psychotherapy

The CPT codes that describe family psychotherapy are payable under Medicare, but are currently assigned a restricted status indicator in the Medicare Physician Fee Schedule payment files. The codes describing family psychotherapy with the patient present are CPT code 90847 (Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes) and CPT code 90849 (Multiple-family group psychotherapy). We noted that CPT code 90846 (Family psychotherapy (without the patient present), 50 minutes) describes family psychotherapy without the patient present. In past rulemaking, we have discussed that Medicare has generally taken the stance that coverage is limited to items and services that are for the diagnosis and treatment of the individual beneficiary.

During the COVID-19 pandemic, the number of adults reporting adverse behavioral health conditions has increased sharply, with higher rates of depression, substance use, and self-reported suicidal thoughts observed in racial and ethnic minority groups.<sup>98</sup> We are seeking to ensure that appropriate care is furnished to Medicare beneficiaries and noted that CPT codes 90847 and 90849 are payable under Medicare. Accordingly, we proposed to update our payment files to remove the restricted (“R”) procedure status indicator for CPT codes 90847 and 90849 and assigning these codes an active (“A”) procedure status indicator.

We noted that there are national coverage determinations (NCDs) addressing family psychotherapy described by CPT codes 90847 and 90849 describing the settings of care in which these services are covered, documentation requirements and other guidelines.<sup>99</sup> The Medicare National Coverage Determinations (NCD) Manual, Pub. 100-03, section 70.1, titled “Consultations with a Beneficiary’s Family and Associates” states that “family counseling services are covered only where the primary purpose of such counseling is the treatment of the patient’s condition.”<sup>100</sup> The change to the “A” status indicator for these

subject CPT codes does not alter the policy under the applicable coverage determinations for these codes.

We received public comments on the change in procedure status for family psychotherapy. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters expressed support for our proposal to change the procedure status indicator for the family therapy codes (90847, 90849) from R (restricted) status to A (active) status. A few commenters stated that this change will remove a barrier to care, while some noted that there remain national coverage determinations carrying documentation requirements and guidelines that the MACs can consider and ultimately use to restrict coverage. One commenter stated they believed that CPT code 90846 should also not be restricted, as this is an important service particularly for adolescents, families of substance use disorder patients, and families attempting to manage behavioral manifestations of dementia.

*Response:* In response to the comment requesting that the procedure status for CPT code 90846, which describes psychotherapy without the patient present, be updated to an active status, we thank the commenter for this feedback and may consider changes to the procedure status for CPT code 90846 in the future. After consideration of the comments, we are finalizing our updates to the procedure status indicators for CPT codes 90847 and 90849—both will be assigned an A for active status, effective January 1, 2023.

#### (40) Comment Solicitation on Intensive Outpatient Mental Health Treatment, including Substance Use Disorder (SUD) Treatment, Furnished by Intensive Outpatient Programs (IOPs)

There are a range of services described by existing coding under the PFS that can be billed for treatment of mental health conditions, including SUDs, such as individual, group, and family psychotherapy. Over the past several years, in collaboration with interested parties and the public, we have increased the coding and payment mechanisms for substance use treatment services paid under the PFS. For example, in the CY 2020 PFS final rule (84 FR 62673), we finalized the creation of new coding and payment describing a bundled episode of care for the treatment of Opioid Use Disorder (OUD) (HCPCS codes G2086–G2088). In the CY 2021 PFS final rule, we finalized expanding the bundled payments described by HCPCS codes G2086–

<sup>98</sup> <https://www.cdc.gov/mmwr/volumes/69/wr/mm6932a1.htm>.

<sup>99</sup> <https://www.cms.gov/medicare-coverage-database/view/article.aspx?articleid=57065&ver=10&keyword=&keywordType=starts&areaId=all&docType=6,3,5,1,F,P&contractOption=all&hcpcsOption=code&hcpcsStartCode=90847&hcpcsEndCode=90847&sortBy=title&bc=1>.

<sup>100</sup> <https://www.cms.gov/medicare-coverage-database/view/ncd.aspx?NCID=16&ncdver=1>.

G2088 to be inclusive of all SUDs (85 FR 84642 and 84643).

Additionally, in the CY 2020 PFS final rule (84 FR 62630 through 62677), we implemented coverage requirements and established new codes describing bundled payments for episodes of care for the treatment of OUD furnished by Opioid Treatment Programs (OTPs). Medicare also covers services furnished by inpatient psychiatric facilities and partial hospitalization programs (PHP). PHP services can be furnished by a hospital outpatient department or a Medicare-certified Community Mental Health Center (CMHC). PHPs are structured to provide intensive psychiatric care through active treatment that utilizes a combination of the clinically recognized items and services described in § 1861(ff) of the Social Security Act (the Act). According to the Medicare Benefit Policy Manual, Chapter 6, Section 70.3, the treatment program of a PHP closely resembles that of a highly structured, short-term hospital inpatient program and is at a level more intense than outpatient day treatment or psychosocial rehabilitation. PHPs work best as part of a community continuum of mental health services which range from the most restrictive inpatient hospital setting to less restrictive outpatient care and support.

We understand that in some cases, people that do not require a level of care for mental health needs that meets the standards for PHP services, nonetheless require intensive services on an outpatient basis. We are interested in whether or not the current coding and payment mechanisms under the PFS adequately account for intensive outpatient services that are part of a continuum of care in the treatment. For example, according to SAMHSA's *Advisory on Clinical Issues in Intensive Outpatient Treatment for Substance Use Disorders*, IOP programs for substance use disorders (SUDs) offer services to clients seeking primary treatment; step-down care from inpatient, residential, and withdrawal management settings; or step-up treatment from individual or group outpatient treatment. IOP treatment includes a prearranged schedule of core services for example, individual counseling, group therapy, family psychoeducation, and case management) for a minimum of 9 hours per week for adults or 6 hours per week for adolescents. The 2019 National Survey of Substance Abuse Treatment Services reports that 46 percent of SUD treatment facilities offer IOP treatment.<sup>101</sup>

We solicited comment on whether there is a gap in coding under the PFS or other Medicare payment systems that may be limiting access to needed levels of care for treatment of mental health or substance use disorder treatment, including and especially SUDs, for Medicare beneficiaries. We are particularly interested in the extent to which any potential gaps would best be addressed by the creation of new codes, revision of particular billing rules for some kinds of care in specific settings, or whether the valuation of particular codes (existing or new) needs to be addressed in order to better reflect the relative resource costs involved in furnishing intensive outpatient mental health services. We are also interested in additional, detailed information about IOP services, such as the settings of care in which these programs typically furnish services, the range of services typically offered, the range of practitioner types that typically furnish those services, and any other relevant information, especially to the extent it would inform our ability to ensure that Medicare beneficiaries have access to this care.

We received several public comments in response to our comment solicitation on intensive outpatient mental health treatment, including SUD treatment, furnished by IOPs. We appreciate the feedback submitted by the public on this matter, including support for providing care along the full continuum of behavioral health services, the settings of care in which IOP services are typically furnished, the service elements that are typically included in IOP treatment, and potential options for valuation of such services, and may consider these comments in future rulemaking.

#### (41) Comment Solicitation on Payment for Behavioral Health Services Under the PFS

As discussed throughout this final rule, we are committed to ensuring that beneficiaries have access to needed services for mental and behavioral health. Through the CMS Behavioral Health Strategy, CMS seeks to remove barriers to care and services, and to adopt a data-informed approach to evaluate our behavioral health programs and policies. We strive to support a person's whole emotional and mental well-being and promote person-centered behavioral health care.<sup>102</sup>

As part of our review of our payment policies and systems, we understand that the PFS ratesetting methodology

and application of budget neutrality may impact certain services more significantly than others based on factors such as how frequently codes are revalued and the ratio of physician work to PE. In the CY 2018 PFS final rule (82 FR 52999), we discussed that some interested parties had suggested that for codes in which direct PE inputs for a service are very low, the methodology for allocating indirect PE does not allow for a site of service differential that accurately reflects the relative indirect costs involved in furnishing services in non-facility settings. We stated that primary therapy and counseling services available to Medicare beneficiaries for treatment of behavioral health conditions, including substance use disorders, are among the services most affected by our methodology.

We solicited comment on how we can best ensure beneficiary access to behavioral health services, including any potential adjustments to the PFS ratesetting methodology, for example, any adjustments to systematically address the impact on behavioral health services paid under the PFS.

We received several public comments in response to our comment solicitation on payment for behavioral health services under the PFS. We appreciate the feedback submitted by the public on this matter and may consider these comments in future rulemaking.

#### (42) Payment for Interstitial Device Remote Monitoring (HCPCS Code G2066)

We received comments regarding payment changes for cardiovascular remote monitoring services described by HCPCS code G2066. We note that we did not make any proposal to change the payment rate of HCPCS code G2066, we are not finalizing any changes to the payment rate for HCPCS code G2066, and that these comments are out of the scope of our proposed rule. However, after considering the comments, we acknowledge the concerns raised by interested parties regarding price transparency and payment stability for certain contractor priced services.

We believe it is important for interested parties to continue to engage with their local MAC to address these concerns about price transparency and payment stability for contractor priced services. Ideally, these interactions would support dialogue that address the specific concern about lack of transparency, through the sharing of applicable and requested information, which in turn supports the MACs payment decision process. We believe that to the extent such requested information is shared, MACs would be

<sup>101</sup> [https://store.samhsa.gov/sites/default/files/SAMHSA\\_Digital\\_Download/pep20-02-01-021.pdf](https://store.samhsa.gov/sites/default/files/SAMHSA_Digital_Download/pep20-02-01-021.pdf).

<sup>102</sup> <https://www.cms.gov/cms-behavioral-health-strategy>.

willing to engage in a discussion about the information, including how their review of the information relates to their payment decisions. This ongoing dialogue would also allow the MACs to make determinations about how to effectuate their payments decision to address the concerns about payment stability, that is, the requested information and engagements would provide a better understanding of the impact of payment changes on interested parties, and inform MAC consideration for allowing interested party adjustment to any payment changes through advance

communication, or use of transition periods.

#### (43) Radiation Oncology Model

On August 29, 2022, CMS finalized delaying the current start date of the Radiation Oncology Model (ROM) to a date to be determined through future rulemaking. In the CY 2020 PFS final rule (84 FR 62797), we finalized that, in the interest of payment stability, we would continue to maintain current coding for radiation treatment services, including HCPCS G-codes with their current work RVUs and direct PE inputs, given the introduction of the RO Model, and to prevent disruption in

beneficiary access to radiation treatment services. While we did not make any proposals for payment for these radiation treatment services under the PFS for CY 2023, we note that we are reviewing our current coding and payment policies for the radiation therapy services, including whether we should adopt the revised CPT coding that was established in CY 2015 to allow for coding and payment consistency, considering the fact that CMS finalized delaying the current start date of the ROM earlier this year. Any such changes would be addressed in future rulemaking.

## BILLING CODE 4150-28-C

*F. Evaluation and Management (E/M) Visits*

## 1. Background

Over the past several years, we have engaged in a multi-year effort with the American Medical Association (AMA) and other interested parties to update coding and payment for evaluation and management (E/M) visits, so that they better reflect the current practice of medicine, are less administratively complex, and are paid more accurately under the PFS. This work is critical to help reduce practitioner burnout in general, especially in light of the

COVID-19 pandemic. In a step-wise approach, the AMA CPT Editorial Panel revised the office/outpatient (O/O) E/M visit code family first. Effective January 1, 2021, the CPT Editorial Panel redefined the O/O E/M visits, such that visit level is selected based on the amount of practitioner time spent performing the visit or the level of medical decision-making (MDM) as redefined in the CPT E/M Guidelines. Additionally, effective January 1, 2021, history of present illness (History) and a physical exam are no longer used to select the O/O E/M visit level. (See 85 FR 84549). Also, effective January 1, 2021, the CPT Editorial Panel revised

the O/O E/M visit descriptor times and the CPT E/M Guidelines.

We generally adopted these revised codes and changes in CPT code selection and documentation guidance for payment purposes under the PFS effective January 1, 2021 (84 FR 62844 through 62859). While we accepted the revised CPT codes and approach for the O/O E/M visits, we did not accept the revisions for prolonged O/O services, because we were concerned that they could have resulted in overpayment, were administratively complex, and would have impacted our ability to tell how much total time was spent with the patient (see 84 FR 62849 through 62850,

and 85 FR 84572 through 84575). We created G2212 for reporting of prolonged O/O E/M services. Finally, the AMA RUC resurveyed the O/O E/M visits, and we generally accepted the RUC recommendations, which reflected increased service times (84 FR 62851 through 62854). This resulted in increased values for the O/O E/M codes beginning in CY 2021. Also, we created add-on code G2211 (*office/outpatient E/M visit complexity*) that can be reported in conjunction with O/O E/M visits to better account for resources associated with primary care or care services that are part of ongoing care related to a patient's single, serious, or complex chronic condition(s). (84 FR 62854 through 62856). The Consolidated Appropriations Act, 2021 imposed a moratorium on Medicare payment for these services by prohibiting CMS from making payment under the physician fee schedule for HCPCS code G2211 before January 1, 2024. See our fact sheet available at Physician Fee Schedule (PFS) Payment for Office/ Outpatient Evaluation and Management (E/M) Visits—Fact Sheet<sup>103</sup> ([cms.gov](https://www.cms.gov)).

For CY 2023, the AMA CPT Editorial Panel has revised the rest of the E/M visit code families (except critical care services) to match the general framework of the O/O E/M visits, including inpatient and observation visits, emergency department (ED) visits, nursing facility visits, domiciliary or rest home visits, home visits, and cognitive impairment assessment. Hereafter in this final rule, we refer to these other E/M visit code families as “Other E/M” visits or CPT codes, as relevant. Effective January 1, 2023, the CPT Editorial Panel has redefined the Other E/M visits so that they parallel the O/O E/M visits, where visit level will be selected based on the amount of practitioner time spent with the patient or the level of MDM as redefined in the CPT E/M Guidelines. As for the O/O E/M visits, a medically appropriate history and/or physical exam will be a required element of the services, but will no longer impact the Other E/M visit level. The CPT Editorial Panel also revised the service times within the descriptors, the associated prolonged service codes, and the CPT E/M Guidelines for the Other E/M CPT codes. The CPT Editorial Panel also consolidated a considerable number of the Other E/M CPT codes, with inpatient and observation visits being combined into a single code set, and home and domiciliary visits being

combined into a single code set. Currently there are approximately 75 Other E/M CPT codes, and in 2023 there will be approximately 50 Other E/M CPT codes. The CPT Editorial Panel created one new CPT code for prolonged inpatient services by physicians and other qualified healthcare professionals on the date of the E/M visit. Finally, the RUC has resurveyed the Other E/M visits and associated prolonged service codes, and provided revaluation recommendations to CMS.

In total, E/M visits comprise approximately 40 percent of all allowed charges under the PFS. The subset of Other E/M visits comprises approximately 20 percent of all allowed charges. Accordingly, our final policies for the Other E/M visits will have a significant impact on relative resource valuation under the PFS, which could potentially impact patient care more broadly. In this section of our final rule, we provide our final policies addressing coding and revaluation of Other E/M visits for CY 2023. We also finalize a technical correction to the placement of our regulation text for split (or shared) visits, and, as we further consider feedback from interested parties, we delay implementation of our policy to define the substantive portion of a split (or shared) visit at § 415.140 based on the amount of time spent by the billing practitioner until January 1, 2024. Finally, we provide clarification and finalize a technical correction regarding how time is reported for split (or shared) critical care visits.

## 2. Overview of Policy Proposals

In our proposed rule, we proposed to generally adopt the revised CPT E/M Guidelines for Other E/M visits, which are available online at [www.ama-assn.org/cpt-evaluation-management](http://www.ama-assn.org/cpt-evaluation-management). We proposed to adopt the general CPT framework for Other E/M visits, such that practitioner time or MDM would be used to select the E/M visit level. This includes the listing of qualifying activities by the physician or NPP that count toward the time spent when time is used required to select the visit level. A medically appropriate history and/or examination would be required, but history and physical exam would no longer be used to select visit level. We would not adopt the general CPT rule<sup>104</sup> where a billable unit of time is considered to have been attained when the midpoint is passed (for example, we would not consider a service with a time descriptor of 30 minutes to have been satisfied if only 15 minutes of time had been spent furnishing that service).

We similarly interpreted this rule for O/O E/M visits, when time is used to select visit level. For example, we required the full time within the CPT code descriptors to be met in order to select an O/O E/M visit level using time, rather than half of the descriptor time (84 FR 62848 through 62851). Also, we do not interpret the CPT E/M Guidelines as adopting this general CPT rule regarding the midpoint of time.

We proposed to adopt the revised CPT codes and descriptors for Other E/M visits, except where specified otherwise. Under our proposed policies, we would adopt the new CPT codes and descriptors for Other E/M visits except for prolonged services, for which we proposed Medicare-specific coding. For administrative simplicity and payment accuracy purposes, and to enable us to determine how much time was spent with the patient using claims data, prolonged Other E/M services would be reported under one of three proposed G codes (one for each family for which prolonged services apply, namely inpatient/observation visits, nursing facility visits, and home or residence visits). This would be consistent with our previously finalized approach to prolonged O/O E/M services.

We proposed to adopt the CPT E/M Guidelines regarding MDM for E/M services. The CPT Editorial Panel revised the CPT E/M guidelines for levels of MDM, and we proposed to adopt them as revised.

In addition, as we noted in the Medicare Claims Processing Manual ((pub 100–04) chapter 26, section 10.8), our longstanding taxonomy for PFS services will continue to apply, where, for payment purposes, physicians and NPPs are not classified as having the same specialty, and the PFS does not recognize subspecialties. However, we are continuing to consider whether we could better align this payment taxonomy with clinical practice, where we might consider NPPs as working in the same specialty as the physicians with whom they work, and/or recognize subspecialties.

Regarding valuation of the Other E/M CPT codes, the RUC recommended direct work RVU comparisons for many Other E/M CPT codes to those currently assigned to O/O E/M CPT codes. In some cases, there were assumptions that patient needs were inherently more complex or work was more intense for E/M visits furnished in non-office settings (for example, inpatient, ED, and home settings) when compared to the office settings. This direct comparison to the O/O visit codes may not be appropriate or accurate, given that practitioners furnishing visits in the

<sup>103</sup> <https://www.cms.gov/files/document/physician-fee-schedule-pfs-payment-officeoutpatient-evaluation-and-management-em-visits-fact-sheet.pdf>.

<sup>104</sup> Introduction to 2022 CPT Codebook, p.xviii.

office setting face particular uncertainties in their estimates of illness and treatment courses, and the office settings have fewer resources close at hand. For example, compared to fully-staffed institutional settings, office settings generally have smaller, ancillary staff complements (such as pharmacists, registered nurses, social workers, and other paraprofessionals) who provide specialized advice and services, spend time coordinating with other practitioners for review and evaluation of medical records and test results, educate patients, manage medications, and assess and help address social determinants of health. Additionally, those practicing in institutional settings generally have ready availability of diagnostic equipment (for example, imaging and other advanced services), allowing for more immediate access to clinical information and reducing the amount of time needed to manage a given case. This access is critical for positive health outcomes, to treat or prevent acute exacerbations of chronic conditions and timely manage patients to prevent deterioration and improve outcomes. The challenge of coordinating and gathering these types of care and information in the office setting may add additional time and complexity to the case management. Further, some of the Other E/M CPT code families are being merged into lower complexity settings, such as CPT codes for observation services migrating into the inpatient visit CPT codes.

The values we established for the revised O/O E/M CPT codes in the CY 2021 PFS final rule were finalized in concert with a policy that would have provided separate payment for the new add-on code G2211. This add-on code describes the complexity inherent to E/M visits associated with primary care and other similar types of care (specifically, E/M visits associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition, regardless of the specialty of the billing professional) (see 85 FR 84569 through 84572). Section 113 of the Consolidated Appropriations Act, 2021 delayed Medicare payment for G2211 until at least January 1, 2024 (see the following Fact Sheet available on our website at Physician Fee Schedule<sup>105</sup> (PFS)

Payment for Office/Outpatient Evaluation and Management (E/M) Visits—Fact Sheet ([cms.gov](https://www.cms.gov/files/document/physician-fee-schedule-pfs-payment-office-outpatient-evaluation-and-management-em-visits-fact-sheet.pdf)). To the extent we proposed to adopt the RUC-recommended values for Other E/M visits beginning for CY 2023, we do not agree with the RUC that the current visit payment structure among and between care settings fully accounts for the complexity of certain kinds of visits, especially for those in the office setting, nor do they fully reflect appropriate relative values, since separate payment is not yet made for G2211.

We note that we received a few comments that mentioned the commenters believe the CPT rule for midpoint of time applies to the CPT E/M Guidelines and other CPT reporting instructions, and recommended we do the same. We reiterate that we have not interpreted the CPT reporting instructions this way, and they will not apply for PFS reporting of E/M visits. To avoid payment variation and standardize reporting, it would be helpful if CPT would explicitly clarify in the CPT E/M Guidelines that the midpoint rule for reporting of timed services does not apply.

We also received a few comments questioning whether we were formally proposing a change in taxonomy for NPPs to recognize clinical categories for them or subspecialties for E/M visit reporting, and are recommending such. We are continuing to consider these issues, and wanted to call attention to the differences between the CPT reporting instructions and the PFS reporting rules. We would need more time and rulemaking to develop taxonomy changes and systems changes, and are not finalizing any changes in our policies at this time.

### 3. Hospital Inpatient or Observation Care (CPT Codes 99218–99236)

#### a. Coding Changes and Visit Selection for Hospital Inpatient or Observation Care Services

The CPT Editorial Panel deleted seven observation care codes and revised nine codes effective January 1, 2023, to create a single set of codes for inpatient and observation care. (Note that the CPT Editorial Panel also made changes to codes for inpatient and observation discharge, which will be discussed in section II.F.4. of this final rule.) The CPT Editorial Panel also changed the code descriptors to allow level of service to be based on total time or MDM, as well as updating associated reporting instructions and CPT E/M Guidelines.

The CPT Editorial Panel deleted the six codes that were used to report

observation care visits: three initial observation care codes, CPT codes 99218 (*Initial observation care, per day, for the evaluation and management of a patient which requires these 3 key components: A detailed or comprehensive history; a detailed or comprehensive examination; and medical decision making that is straightforward or of low complexity*), 99219 (*Initial observation care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; a comprehensive examination; and medical decision making of moderate complexity*), and 99220 (*Initial observation care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; a comprehensive examination; and medical decision making of high complexity*). Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission to outpatient hospital "observation status" are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit), and 99224 (*Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: Problem focused interval history; problem focused examination; medical decision making that is straightforward or of low complexity*). Counseling and/or coordination of care with other physicians, other qualified

<sup>105</sup> <https://www.cms.gov/files/document/physician-fee-schedule-pfs-payment-office-outpatient-evaluation-and-management-em-visits-fact-sheet.pdf>.

health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit), 99225 (Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; an expanded problem focused examination; medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit), and 99226 (Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; a detailed examination; medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit).

The CPT Editorial Panel also revised the six hospital inpatient care codes. The revisions allow these codes to be reported for hospital inpatient or observation care services and allow the codes to be selected by the billing practitioner based on either MDM or time. In addition, the CPT Editorial Panel changed the name of the "Hospital Inpatient Care" code family to "Hospital and Observation Care," and the new code family includes three initial hospital or observation care codes: CPT codes 99221 (*Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low-level medical decision-making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded*), 99222 (*Initial hospital*

*inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 55 minutes must be met or exceeded*), and 99223 (*Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 75 minutes must be met or exceeded*); and three subsequent inpatient or observation care codes, CPT codes 99231 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded*), 99232 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded*), and 99233 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded*).

The CPT Editorial Panel also revised the three codes under "Observation or Inpatient Care Services (including Admission and Discharge)" (frequently referred to as "same-day discharge" codes). Billing practitioners could already use these codes to bill for patients in inpatient or observation status, but the CPT Editorial Panel revised the codes to allow the billing practitioner to select the code level based either on MDM or time. The same-day discharge codes were renamed as "Hospital Inpatient or Observation Care (Admission and Discharge)": CPT codes 99234 (*Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination*

*and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded*), 99235 (*Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 70 minutes must be met or exceeded*), and 99236 (*Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 85 minutes must be met or exceeded*).

We proposed to adopt the revised CPT codes 99221 through 99223 and 99231 through 99236. We highlighted that the CPT code descriptors specify that, when selecting the code level based on time, the indicated increment of time must be "met or exceeded." We proposed that, when a practitioner selects CPT codes 99221 through 99223 and 99231 through 99236 based on time, the number of minutes specified in the descriptor for the relevant CPT code must be "met or exceeded." We noted that we did not propose to adopt the 2023 CPT Codebook instructions regarding the application of prolonged codes to CPT codes 99223, 99233, and 99236. (2023 CPT Codebook, p. 15–17). Please refer to the additional discussion of prolonged codes in section II.F.3.f. below.

We also noted that the descriptors for CPT codes 99221 through 99223 and 99231 through 99236 specify that the time counted toward the code is "per day." We proposed to adopt the 2023 CPT Codebook instruction that "per day," also referred to as "date of encounter," means the "calendar date." (2023 CPT Codebook, p. 15.) We also proposed to adopt the 2023 CPT Codebook instruction that when using MDM or time for code selection, a continuous service that spans the transition of 2 calendar dates is a single service and is reported on one date, which is the date the encounter begins. If the service is continuous before and through midnight, all the time may be applied to the reported date of the service, that is, the calendar date the encounter began. (2023 CPT Codebook, p.15.) We noted that nothing in this proposal was intended to conflict with our proposed retention of the "8 to 24-

hour rule,” discussed in the next section.

Finally, we proposed to retain our policy that a billing practitioner shall bill only one of the hospital inpatient or observation care codes for an initial visit, a subsequent visit, or inpatient or observation care (including admission and discharge), as appropriate, once per calendar date. We proposed that the practitioner would select a code that reflects all of the practitioner's services provided during the date of the service, as provided in the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.9.B.<sup>106</sup> We discussed additional policies relating to a single billing practitioner providing services to a single beneficiary on the same day in section II.F.3.d. below.

*Comment:* Many commenters supported our proposal to adopt both the CPT's consolidation of the Hospital Inpatient and Observation Care services and the updates to the code descriptors. Commenters noted that the descriptor revisions, which will allow practitioners to bill by time or MDM, will simplify the documentation requirements for these codes and reduce administrative burden for practitioners. These commenters also maintained that the change allowing visit level selection using time or MDM will promote consistency across E/M code families, as these changes parallel the recent changes to the O/O E/M visit codes (specifically, allowing visits to be selected based on time or MDM, and eliminating the requirements that a certain number of “components” must be completed). Several commenters specifically indicated that they found the revisions to the O/O E/M descriptors in CY 2021 to be positive in terms of reducing administrative burden, and supported similar changes to the Hospital Inpatient and Observation Care descriptors. Several commenters noted it may reduce situations in which practitioners and their coders must distinguish between hospital inpatient and observation status for correct billing.

However, one commenter raised concerns about the proposed changes to the Hospital Inpatient and Observation Care descriptors, particularly that the level of visit will be based on time or MDM only. The commenter expressed

concern that the new guidelines will discourage physicians from performing a comprehensive history and physical exam. The commenter suggested that hospital quality issues could arise if E/M documentation does not include the information needed for billing services under the Inpatient Prospective Payment System or document information in accordance with hospital Conditions of Participation (such as 42 CFR 482.22(c)(5)(i), which requires completion and documentation of a history and physical exam for each hospital patient within a specified timeframe of admission).

*Response:* We appreciate commenters' feedback. We refer readers to the discussion of our multi-year effort with the American Medical Association (AMA) and other interested parties to update coding and payment for evaluation and management (E/M) visits in section II.F.1. above. We note that, per the new CPT code descriptors, a medically appropriate history and/or examination will be required, but will no longer be used to select visit level. We do not believe the revised CPT descriptors are in conflict with hospital documentation requirements outside of the PFS. Practitioners working in hospitals should continue to be aware of the documentation needed to meet requirements for other payment systems or CoPs, in addition to the documentation required to bill Hospital Inpatient and Observation Care codes under the PFS.

*Comment:* While not opposing our proposal to adopt the consolidation of the two code families, two commenters requested a delay in implementation of the revised coding. One commenter requested a 90-day delay in implementation to allow for updates to their electronic billing system (to update both the time changes in the descriptors and the removal of the observation code set.). Similarly, another commenter expressed concern about the overall ability of emergency physician practices to adapt to E/M changes for CY 2023, specifically changes to documentation guidelines and, restructured observation care codes, and a continued discrepancy between CPT and PFS coding for critical care services that took effect in CY 2022. This commenter was also concerned about hospital staffing shortages impacting implementation of changes to the observation codes. This commenter stated that many changes to the observation codes and billing rules are complicated and will take time to fully incorporate into workflows; and that CMS should consider delaying or phasing in some of the changes to the

observation codes and billing requirements.

*Response:* We appreciate commenters' feedback. CPT has finalized its consolidation of and changes to the Hospital Inpatient and Observation Care code families effective January 1, 2023. This means, effective January 1, 2023, the observation care codes (CPT codes 99217–99220 and 99224–99227) will no longer be valid, and the revised codes (CPT codes 99221–99223, 99231–99236) will be in effect; this is a deadline set by CPT that CMS cannot influence. If we were to retain the observation coding or the CY 2022 descriptors even temporarily past January 1, 2023, we would have to create G-codes to replace the deleted or altered CPT codes. In this instance, creating G-codes would not alleviate commenters' concerns about having to update electronic billing systems. In addition, we would have to delay revaluation, since the RUC-recommended values are based on a survey of the codes as revised by CPT for CY 2023.

As discussed throughout this section, it is our intention that, aside from the actual CPT codes selected and the changes to descriptor times, the billing policies for Hospital Inpatient and Observation Care will remain largely the same, unless otherwise specified.

*Comment:* One commenter, while not opposing our proposal to adopt the revised CPT descriptors for the Hospital Inpatient and Observation Care codes, expressed dissatisfaction with some aspects of the revised coding (particularly CPT's guidelines for determining MDM).

*Response:* We appreciate this commenter's feedback. We proposed to adopt the CPT guidelines for determining MDM levels, and we understand that the specialty societies contributed to their revision for 2023 through the AMA Workgroup and CPT processes. Suggestions for additional revisions can be made to the AMA/CPT, and we will consider any future changes to the MDM guidelines for future rulemaking.

*Comment:* One commenter interpreted our proposal to adopt the consolidation of the Hospital Inpatient and Observation Care code as an acknowledgment that there is no difference in the physician work or resources required for patients who have been admitted to a hospital versus patients seen in observation status. The commenter suggested that the consolidation of the code families is evidence that we should discontinue the application of our “23-hour rule.”

*Response:* At this time, we do not intend to discontinue our “23-hour

<sup>106</sup> The manual states, “A/B MACs (B) pay a physician for only one hospital visit per day for the same patient, whether the problems seen during the encounters are related or not. The inpatient hospital visit descriptors contain the phrase “per day” which means that the code and the payment established for the code represent all services provided on that date. The physician should select a code that reflects all services provided during the date of the service.”

rule” (which is discussed in greater detail in the CY 2011 PFS final rule at 75 FR 73226); such consideration would be out of scope for this section of the rule, which pertains specifically to revisions, policies, and valuations of the Hospital Inpatient and Observation Care code sets. However, as discussed further in section II.F.3.b. below, in light of the consolidation of the Hospital Inpatient and Observation Care code sets, we will review whether, and if so, how our policies relating to hospital inpatient and observation services (including the “23-hour rule”) interact and look forward to further engagement with the public.

*Comment:* Several commenters requested clarification of our proposal to align with the CPT guidance that a continuous service that spans the transition of 2 calendar dates is a single service and is reported on the date the service began. The commenters indicated they were unclear what “continuous” means in this context.

*Response:* We note that this instruction comes from the CPT Codebook, and we direct commenters to the CPT for additional clarification, if needed.

After consideration of public comments, we are finalizing the updates to the Hospital Inpatient and Observation Care code descriptors and the other policies articulated in this section as proposed.

#### b. “8 to 24-Hour Rule” for Hospital Inpatient or Observation Care

We proposed to retain what is known as the “8 to 24-hour rule” regarding payment of admission, discharge, or same-day admission/*discharge* codes, depending on the length of stay and whether the patient was discharged on a different calendar date *than* they were admitted (refer to the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, sections 30.6.8.B and 30.6.9.1.C.). As we discussed in the CY 2001 PFS final rule (65 FR 65376), the “8 to 24-hour rule” was designed to avoid unintended incentives to keep a patient in the hospital past midnight during a stay lasting less than 24 hours. When this policy was memorialized in the CY 2001 PFS final rule, it was applied to both the initial inpatient hospital care codes (CPT codes 99221 through 99223) and the initial observation care codes (CPT codes 99218 through 99220) which CPT has deleted for 2023. The policy we proposed at 87 FR 45990 appeared as follows:

- If the beneficiary receives less than 8 hours of hospital inpatient or observation services, the practitioner

may not bill for the same-day admission/*discharge* codes or hospital inpatient and observation *discharge* day management services (to be described by CPT codes 99234–6 and 99238 and 99239, respectively). If a patient receives less than 8 hours of hospital inpatient or observation services, we proposed that the practitioner would bill only initial inpatient or observation care (described by CPT codes 99221, 99222, or 99223, as appropriate).

- If a beneficiary receives hospital inpatient or observation services for a minimum of 8 hours but less than 24 hours, we proposed that the practitioner would bill CPT codes 99234, 99235, or 99236, as appropriate. (These codes, commonly referred to as “same-day *discharge*” codes, describe hospital inpatient or observation care that includes both admission and discharge as part of a single service.)

- If a beneficiary is admitted for hospital inpatient care or begins observation and is then discharged after more than 24 hours, we proposed that the practitioner could bill an initial hospital inpatient or observation care code (CPT codes 99221 through 99223) for the date of admission, and a hospital *discharge* day management service (CPT code 99238 or 99239) on the date of discharge.

We wish to correct the policy as it was proposed in 87 FR 45990 and retract the examples we provided illustrating that policy as it appeared. It was our intention to synthesize the policy (which appears in several places in the Medicare Claims Processing Manual, as cited above), and to reiterate that it would remain in effect even after the consolidation of the Hospital Inpatient and Observation Care codes. When we summarized the policy, the references to *discharge* “on the same calendar date” or “on a different calendar date” were removed from parts of the policy in error. We apologize for this confusion.

We intended to retain the billing policy for Hospital Inpatient codes as it is reflected in the Medicare Claims Processing Manual, Chapter 12, section 30.6.9.1.C, which states:

“When the patient is admitted to inpatient hospital care for less than 8 hours on the same date, then Initial Hospital Care, from CPT code range 99221–99223, shall be reported by the physician. The Hospital *Discharge* Day Management service, CPT codes 99238 or 99239, shall not be reported for this scenario. When a patient is admitted to inpatient initial hospital care and then discharged on a different calendar date, the physician shall report an Initial Hospital Care from CPT code range 99221–99223 and a Hospital *Discharge* Day Management service, CPT code 99238 or 99239. When a patient

has been admitted to inpatient hospital care for a minimum of 8 hours but less than 24 hours and discharged on the same calendar date, Observation or Inpatient Hospital Care Services (Including Admission and *Discharge* Services), from CPT code range 99234–99236, shall be reported.”

We also intended to retain the 8 to 24-hour policy for observation care, as it is reflected in relevant part in the Medicare Claims Processing Manual, Chapter 12, section 30.6.8.B:

“When a patient receives observation care for less than 8 hours on the same calendar date, the Initial Observation Care, from CPT code range 99218–99220, shall be reported by the physician. The Observation Care *Discharge* Service, CPT code 99217, shall not be reported for this scenario. When a patient is admitted for observation care and then is discharged on a different calendar date, the physician shall report Initial Observation Care, from CPT code range 99218–99220, and CPT observation care *discharge* CPT code 99217 . . . . When a patient receives observation care for a minimum of 8 hours, but less than 24 hours, and is discharged on the same calendar date, Observation or Inpatient Care Services (Including Admission and *Discharge* Services) from CPT code range 99234–99236 shall be reported. The observation *discharge*, CPT code 99217, cannot also be reported for this scenario.”

We note that the policy for observation care refers to CPT codes that will no longer be valid effective January 1, 2023. Per the discussion in section II.3.a., we are adopting the new CPT coding that consolidates Hospital Inpatient and Observation Care. Thus, we clarify that we intended to propose that while the policies reflected in the Medicare Claims Processing Manual (IOM 100–04) at Chapter 12, sections 30.6.8.B. and 30.6.9.1.C), would still apply, both hospital inpatient and observation care coding should be billed as follows: When a patient receives hospital inpatient or observation care for less than 8 hours, only the Initial Hospital Inpatient or Observation Care (CPT codes 99221–99223) shall be reported by the practitioner for the date of admission.<sup>107</sup> Hospital or Observation *Discharge* Day Management (CPT codes 99238–99239) shall not be reported for this scenario. When a patient is admitted for hospital inpatient or observation care and then is discharged on a different calendar date, the practitioner shall report Initial Hospital Inpatient or Observation Care (CPT codes 99221–99223) and Hospital

<sup>107</sup> We believe this language is a more accurate reflection of this policy as it appears in 65 FR 65409, which reads, “If a patient is admitted as a hospital inpatient or an observation care patient for less than 8 hours, we will pay for only the admission service (CPT codes 99221 to 99223 or 99218 to 99220) on that day. The *discharge* service is not a separately billable service.”

Inpatient or Observation Discharge Day Management (CPT code 99238 or 99239). When a patient receives hospital inpatient or observation care for a minimum of 8 hours and is discharged on the same calendar date (thus the stay is less than 24 hours), Observation or Inpatient Care Services (Including Admission and Discharge Services) from CPT code range 99234–99236 shall be reported. CPT codes 99238–99239 cannot also be reported for this scenario.

Despite the inadvertent misstatement of the policy in the proposed rule, our central rationale for wanting to retain the rule remains intact. We believed it was necessary to retain our “8 to 24-hour rule” to avoid making overpayments, encouraging improper billing of two E/M visits on the same day, or creating incentives to unnecessarily extend beneficiaries’ hospital stays past midnight. Initial Hospital Inpatient and Observation Care codes (CPT codes 99221 through 99223 and 99234 through 99239) are billed “per day,” and have been valued to account for all services a practitioner furnishes during the day-long billing period. In an environment such as a hospital, where admissions can occur 24 hours a day, relying solely on the calendar date of an admission or observation stay, to determine a billing day can be misleading, which is why we proposed to retain the existing “8 to 24-hour rule.”

*Comment:* One commenter expressed support for our proposal to retain the “8 to 24-hour rule.” The commenter questioned, however, whether there was a possible overlap between the “8 to 24-hour rule” and the “23-hour rule.”

*Response:* We note that this is a distinct policy from the “23-hour rule” (which is discussed in greater detail in the CY 2011 PFS final rule at 75 FR 73226). We acknowledge that we have multiple policies that apply, for different purposes, to services delivered to hospital inpatients and outpatients. In light of the consolidation of the Hospital Inpatient and Observation Care code sets, we will begin an internal review of whether, and if so, how these policies interact; we welcome further engagement with the public as we consider whether future rulemaking is needed to reconcile any of our policies.

*Comment:* Several commenters requested that we consider how the “8 to 24-hour rule” interacts with the “2-midnight rule.” Specifically, commenters noted that the “clocks” for counting the “8 to 24-hour rule” versus the “2-midnight rule” may start running at different times, which the commenters regard as burdensome.

*Response:* We note that the “8 to 24-hour rule” is distinct from the “2-midnight rule” (which is discussed in the CY 2016 Outpatient Prospective Payment Schedule final rule at 80 FR 70305). We acknowledge that we have multiple time-based policies, applicable under different payment systems, which relate to services delivered to hospital inpatients and outpatients. In light of the consolidation of the Hospital Inpatient and Observation Care code sets, we will review how these policies interact and look forward to further engagement with the public.

*Comment:* Several commenters expressed concern either with the “8 to 24-hour rule” itself, or with perceived changes to the policy. One commenter noted, correctly, our current policy which is reflected in the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.8.B: “When a patient receives observation care for a minimum of 8 hours but less than 24 hours, and then is discharged on the same calendar date, Observation or Inpatient Hospital Care Services (Including Admission and Discharge Services), from CPT code range 99234–99236, shall be reported.” However, the commenter noted that in the proposed rule at 87 FR 45990, we stated this policy differently—namely, that we did not specify that CPT codes 99234–99236 may be billed if a patient is in the hospital for “more than 8 hours but less than 24 hours, and discharged on the same date [emphasis added].” Commenters were concerned that we were articulating a new requirement that patients must have been in the hospital for a complete 24 hours before a Hospital Inpatient or Observation Care Discharge Day Management code (CPT codes 99238–99239) could be billed.

Several commenters observed that our proposed policy, as written in 87 FR 45990, required that an entire 24-hour period be completed before being able to bill the same-day admission/discharge CPT codes 99234–99236 (regardless of whether the 24-hour period spanned one calendar day or two.) Commenters stated that tracking a complete 24-hour interval would be difficult for their current recordkeeping systems.

*Response:* As explained above, it was not our intention to articulate a new policy, but rather to retain the current policy, and clarify that it would remain in effect even after the consolidation of the Hospital Inpatient and Observation Care codes. We also intended to specify that observation care should be billed according to the new consolidated CPT coding for hospital inpatient and observation care. In the policy, as presented in the proposed rule, the

references to discharge either on “the same calendar date” or “a different calendar date” were removed in error. We apologize for this confusion.

We hope this clarification addresses the commenters’ concerns. However, given the apparent confusion about the application of the “8 to 24-hour rule” in general, we welcome additional public engagement on this issue as we continue to review the 8 to 24-hour rule and other billing or resource valuation policies that may affect hospital inpatient and observation services in light of our adoption of the CPT-revised single set of codes for inpatient and observation care.

*Comment:* One commenter raised a concern that the “8 to 24-hour rule,” as proposed, differed from CPT billing guidance, noting that CPT code selection is based on calendar date and the CMS policy (as represented in the proposed rule) is based on the time of service. The commenter stated that they understood the rationale for requiring at least 8 hours of service to report CPT codes 99234–99236, but did not agree with the apparent proposal to require that more than 24 hours must elapse before any code *other* than CPT codes 99234–99236 may be billed. The commenter also suggested that the RUC surveys and valuations for CPT codes 99234–99236 did not contemplate that these codes would span a mandatory 24-hour interval.

*Response:* We believe that some of the commenter’s concerns may be alleviated by the clarification of our “8 to 24-hour rule” as discussed in the prior response—namely that CPT codes 99234–99236 may be billed if a patient receives more than 8 hours of care and is discharged on the same calendar date; we are not requiring that a full 24 hours must have elapsed.

We note that the difference between our current “8 to 24-hour rule” (as clarified above) and the CPT reporting instructions effective beginning in 2023 appears to center on how to handle stays lasting less than 8 hours, and the definition of “encounter” (or lack of a definition) when CPT instructs that same-day admission and discharge codes may be reported when there is an admission encounter and a discharge encounter on the same day. (2023 CPT Codebook, p. 17). We remain concerned that, while unusual, very short hospital stays crossing a single midnight could be reported inappropriately using two codes, when the resources expended are better accounted for in one; or that a same-day admission and discharge code might be inappropriately reported instead of an initial visit code, where the latter would more appropriately describe the furnished service. We also

acknowledge that there may be circumstances in which patients may be in the hospital for short stays, but still require significant practitioner time. We believe practitioners may be able to bill the prolonged HCPCS code G0316 in these circumstances, which is discussed in section II.F.3.f. and Table 24.

Since the AMA's public comment indicated that they will refer issues regarding multiple same-day visit billing back to CPT for review, we recommend that they include these

issues in their review. We will continue to review any future clarifications or reporting instruction changes that may be made by CPT.

*Comment:* One commenter requested that we delay enforcement of the 8 to 24-hour rule for one year in light of all of the changes to the Hospital Inpatient and Observation Care codes.

*Response:* The "8 to 24-hour rule," itself, is not a new policy, but we acknowledge the need for ongoing review of this policy in light of the

coding and valuation changes that take effect in 2023 for hospital inpatient and observation services.

After consideration of public comments received, we are finalizing our proposal to retain the 8 to 24-hour rule as clarified above. We are retaining our 8 to 24-hour policy and updating it only to reflect the consolidation of the Hospital Inpatient and Observation Care code families. As updated, our final policy is summarized in Table 22.

TABLE 22—SUMMARY OF FINAL POLICY FOR THE "8 TO 24-HOUR" RULE

| Hospital length of stay | Discharged on   | Code(s) to bill  |
|-------------------------|---|--|
| <8 hours .....          | Same calendar date as admission or start of observation.        | Initial hospital services only.*                       |
| 8 or more hours .....   | Same calendar date as admission or start of observation.        | Same-day admission/discharge.*                         |
| <8 hours .....          | Different calendar date than admission or start of observation. | Initial hospital services only.*                       |
| 8 or more hours .....   | Different calendar date than admission or start of observation. | Initial hospital services* + discharge day management. |

\* Plus prolonged inpatient/observation services, if applicable.

#### c. Proposed Definition of Initial and Subsequent Hospital Inpatient or Observation Visit

According to the 2023 CPT Codebook (p. 15), an "initial" service may be reported when "the patient has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice during the stay. When advanced practice nurses and physician assistants are working with physicians they are in the exact same specialty and subspecialty as the physician." The revised CPT codes 99231 through 99233 describe subsequent hospital inpatient or observation care services similarly. According to the 2023 CPT Codebook (2023 CPT Codebook, p. 15), a "subsequent" service is reported when the patient has received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice during the stay.

As we do not recognize subspecialties, we proposed slightly amended definitions of "initial" and "subsequent" service:

- An initial service would be defined as one that occurs when the patient has not received any professional services from the physician or other qualified

health care professional or another physician or other qualified health care professional of the same specialty who belongs to the same group practice during the stay.

- A subsequent service would be defined as one that occurs when the patient has received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the same specialty who belongs to the same group practice during the stay.

These are the same definitions that we proposed for "initial" and "subsequent" in the context of nursing facility visits below. We also proposed that for both initial and subsequent visits, when advanced practice nurses and physician assistants are working with physicians, they are always classified in a different specialty than the physician (please refer to additional discussion in section II.F.2 above).

*Comment:* One commenter supported our proposed definition of initial and subsequent visits, noting that, given the large number of subspecialties, tracking "initial" or "subsequent" visits based on subspecialties is cumbersome.

*Response:* We thank the commenter for their support.

*Comment:* Several commenters requested that CMS adopt the CPT definition of "initial" and "subsequent," which includes consideration of subspecialties.

*Response:* As noted in our discussion above in section II.F.2, we are continuing to consider whether we

could better align our payment taxonomy with clinical practice, including whether to recognize subspecialties. At this time, however, we are retaining our current taxonomy (which does not include recognition of subspecialties) as described in the Medicare Claims Processing Manual, Pub. 100–04, Chapter 26, section 10.8, *et seq.*

*Comment:* Several commenters requested clarification on how these definitions would apply when care was provided by NPPs. The commenters questioned whether care provided by NPPs would be considered as having been delivered by a different specialty. Several commenters also asked if we were revising our specialty taxonomy as it pertains to NPPs.

*Response:* We are not revising our specialty taxonomy for NPPs. As noted in our discussion above in section II.F.a.2, we are continuing to consider whether we could better align our payment taxonomy with clinical practice, including whether (and how) to recognize NPPs as being in the same specialty as the physician with whom they work. At this time, however, we are retaining our current taxonomy (which includes recognition of NPPs as being in their own specialties) as described in the Medicare Claims Processing Manual, Pub. 100–04, Chapter 26, section 10.8, *et seq.*

After consideration of public comments, we are finalizing our definition of initial and subsequent visits as proposed.

d. Transitions Between Settings of Care and Multiple Same-Day Visits for Hospital Patients Furnished by a Single Practitioner

We proposed to retain our current policy that, for the purposes of reporting an initial hospital inpatient or observation care service, a transition from observation status to inpatient status does not constitute a new stay (Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.8.D). For instance, if a practitioner places a beneficiary in observation status on one date of service (and bills an initial observation visit to be described under CPT code 99221 through 99223), and then determines later in the stay that the beneficiary should be admitted to the hospital as an inpatient, the practitioner would not bill a second initial visit for the hospital inpatient stay. Rather, the practitioner would bill the work done on the inpatient admission day as a subsequent visit (CPT codes 99231, 99232, or 99233). This policy aligns with language in the 2023 CPT Codebook instructions. (2023 CPT Codebook, p. 16).

We also proposed to retain our policy that, if a patient is seen in an office setting on one date and receives care at a hospital (for inpatient or observation care) on the next date from the same practitioner, both visits are payable to that practitioner, even if less than 24 hours has elapsed between the visit and the hospital inpatient or observation care (Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.9.1.B). We also proposed, however, to retain our current policy that, when a patient is admitted to outpatient observation or as a hospital inpatient via another site of service (such as, hospital ED, office, nursing facility), all services provided by the practitioner in conjunction with that admission are considered part of the initial hospital inpatient or observation care when performed *on the same date as the admission* (Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.9.1.A). This policy differs somewhat from the instructions provided in the 2023 CPT Codebook (p. 15–16), which allows for payment of both visits on the same date using Modifier 25.

We believe it is important to retain both policies, as they promote appropriate payment in situations in which the beneficiary visits the practitioner in a non-hospital setting, before the practitioner determines that hospital admission is necessary. The codes for initial hospital inpatient or observation visits (CPT codes 99221

through 99223) are billed “per day” and include all work furnished by the practitioner on the day of admission. The initial hospital inpatient and observation care codes do not include work furnished by the practitioner prior to the date of admission. Thus, under our proposal, for example, if a practitioner sees a beneficiary in an office setting at 5 p.m. on April 1st, and the practitioner then admits the beneficiary to the hospital at 7 a.m. on April 2nd, these would be separately billable payments, because initial hospital inpatient or observation care codes (CPT code 99221 through 99223) billed for April 2nd would not retroactively cover the work furnished on April 1st. However, if the practitioner sees the beneficiary in the office setting at 7 a.m. on April 1st and then admits the beneficiary at 9 p.m. on April 1st, all time the practitioner spent furnishing services to that beneficiary would be reportable under the initial hospital inpatient or observation care code (CPT code 99221 through 99223).

We also proposed to retain our current billing policy in the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.1.A that a practitioner may bill only for an initial hospital or observation care service if the practitioner sees a patient in the ED and decides to either place the patient in observation status or admit the patient as a hospital inpatient. For discussion of additional policy proposals regarding patients seen in both the ED and the hospital, refer to section II.F.5. on Emergency Department Services.

We proposed to preserve our current billing policies for patients in swing beds, which are as follows: If the inpatient care is being billed by the hospital as inpatient hospital care, the hospital care codes (CPT codes 99221 through 99223 and 99231 through 99239) apply (Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.9.D). If the inpatient care is being billed by the hospital as nursing facility care, then the nursing facility codes (CPT codes 99304 through 99316) apply. Please refer to section II.F.6 below on Nursing Facility Care Services for additional discussion of billing hospital inpatient or observation care and nursing facility care.

*Comment:* Several commenters did not support our proposal to retain the current policy regarding the billing of multiple visits in different settings by the same practitioner for the same patient on the same date. Commenters observed that our policy does not align with CPT guidance on multiple same-

day visits. Several commenters also noted that Medicare billing policy may allow for separate billing of multiple same-day E/M visits in certain situations.

*Response:* We note that the policies in this section are restatements of longstanding policies regarding billing by the same practitioner for multiple same-day E/M visits furnished to the same patient. We acknowledge that our policies in some cases differ from CPT reporting instructions. We also agree that, as noted in several places in our manual and noted in this rule, there are circumstances in which we will allow payment for multiple same-day E/M visits. The goal of our policies is to avoid duplicative payments, where the work involved in multiple interactions with the same patient on the same day may overlap. We plan to consider different approaches to this issue in future rulemaking cycles.

We will be monitoring billing patterns in the claims data, as we continue to consider these issues. In its public comment, the AMA indicated that it may refer the issue of multiple same-day visit billing back to CPT for additional review. We will also review any future changes that may be made to CPT reporting instructions.

*Comment:* One commenter noted that, in our discussion of our proposal at 87 FR 45991 regarding the transition from observation status to inpatient, we stated, “For instance, if a practitioner places a beneficiary in observation status on one date of service (and bills an initial observation visit to be described under CPT code 99221 through 99223), and then determines later in the stay that the beneficiary should be admitted to the hospital as an inpatient, the practitioner would not bill a second initial visit for the hospital inpatient stay. . . .” The commenter recommended that we clarify that in this instance, “later in the stay” should refer to “later in the day.” The commenter observed that a practitioner would not be able to submit two claims (one for the observation care and one for the hospital care) for care delivered on the same day.

*Response:* We reiterate that we proposed to align our policy with the guidance in the 2023 CPT Codebook at p.16, where it says, “For the purpose of reporting an initial hospital inpatient or observation care service, a transition from observation level to inpatient does not constitute a new stay.” We agree with the commenter that a practitioner cannot submit two separate visits for Hospital Inpatient or Observation Care for care delivered to the same patient on the same date. However, the practitioner

can report prolonged inpatient or observation services, as applicable, if time is used to select visit level.

*Comment:* One commenter requested clarification of the policy for physicians who see patients in the ED who are then placed in observation status.

*Response:* We thank the commenter for this clarification request. First, we note that there was a typographical error in our proposed rule at 87 FR 45991. We had intended to state that we are retaining the policy in Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.9.1.A (not, as we stated in the proposed rule, section 30.6.1.A). We clarify that we proposed to retain the policy reflected in section 30.6.9.1.A, which reads, “A/B MACs (B) pay for an initial hospital care service if a physician sees a patient in the emergency room and decides to admit the person to the hospital. They do not pay for both E/M services. Also, they do not pay for an emergency department visit by the same physician on the same date of service.” (We note that where the manual refers to “physicians,” the policy applies to both physicians and qualified NPPs, as appropriate.) In order to align our billing policies with the consolidated CPT coding (discussed in section II.3.a.), this policy would apply to hospital inpatient and observation care billed under CPT codes 99221–99223 and 99231–99236.

*Comment:* One commenter requested that we review our billing policy for people transitioning between observation status and NF settings.

*Response:* We thank the commenter for their feedback. We will continue to review policies relating to the consolidation of coding for Hospital Inpatient and Observation Care, and identify policies that may need further adjustment or clarification in future rulemaking.

After consideration of public comments, we are finalizing the following policies as proposed in this section:

- For the purposes of reporting an initial hospital inpatient or observation care service, a transition from observation status to inpatient status does not constitute a new stay.
- If a patient is seen in an office setting on one date and receives care at a hospital (for inpatient or observation care) on the next date from the same practitioner, both visits are payable to that practitioner, even if less than 24 hours has elapsed between the office visit and the hospital inpatient or observation care.
- When a patient is admitted to outpatient observation or as a hospital inpatient via another site of service

(such as, hospital ED, office setting, nursing facility), all services provided by the practitioner in conjunction with that admission are considered part of the initial hospital inpatient or observation care when performed *on the same date as the admission*. Prolonged time can be counted toward reporting of prolonged inpatient/observation services (see Table 24).

- A practitioner may bill only for an initial hospital or observation care service if the practitioner sees a patient in the ED and decides to either place the patient in observation status or admit the patient as a hospital inpatient.
- If the inpatient care is being billed by the hospital as inpatient hospital care, the hospital care codes (CPT codes 99221 through 99223 and 99231 through 99239) apply. If the inpatient care is being billed by the hospital as nursing facility care, then the nursing facility codes (CPT codes 99304 through 99316) apply.

#### e. Impact of Changes to Hospital Inpatient or Observation Codes on Billing and Claims Processing Policies

We proposed that, starting in CY 2023, hospital inpatient and observation care by practitioners will be billed using the same CPT codes—CPT codes 99221 through 99223, 99231 through 99233, and 99238 and 99239. (We noted that currently, both hospital inpatient and observation care are already billed under CPT codes 99234 through 99236 for same-day discharge). Therefore, though the current observation care codes (CPT codes 99218 through 99220 and 99224 through 99226) are being deleted, practitioners will still be able to furnish and bill for observation services. We solicited feedback from the public on potential challenges to billing or claims processing policies for hospital inpatient or observation care as reflected in the Medicare Claims Processing Manual (IOM 100–04, Chapter 12), including possible impact on: billing for patients during a global period (Medicare Claims Processing Manual, IOM 100–04, Chapter 12, sections 30.6.8.E and 30.6.9.2.A); documentation requirements (Medicare Claims Processing Manual, IOM 100–04, Chapter 12, sections 30.6.8.C and 30.6.9.1.D); modifiers associated with hospital inpatient or observation care claims (Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.9.1.F); and any other issues not otherwise discussed in this proposed rule that may need to be addressed through additional guidance.

*Comment:* We received a number of responses to our request for information about policies potentially impacted by

the consolidation of Hospital Inpatient and Observation Care codes. These comments included requests for clarification on or review of:

- Changes (if any) to place of service (POS) for observation care claims;
- Changes (if any) to billing in circumstances where practitioners previously would have billed O/O E/M codes; and
- Changes (if any) to the use of the AI modifier to identify the attending practitioner on claims.

We also received a recommendation to create a new POS code for patients in observation status to aid in reporting and tracking of E/M services for patients admitted under observation status versus patients seen in the emergency department.

*Response:* We thank commenters for their feedback. We will continue to engage with the public and review our policies in light of the consolidation of the Hospital Inpatient and Observation Care codes. At this time, we are not making changes to POS policy (including the POS that should be placed on a claim for a patient receiving observation care). We are also not changing policies affecting billing, at this time, when multiple practitioners furnish E/M services to the same patient on the same day (such as the policy in Chapter 12 of the Medicare Claims Processing Manual (IOM 100–04), section 30.6.8.A, which specifies that while the practitioner who orders the observation care for a patient may bill for observation care, other practitioners providing additional evaluations for the patient bill their services as O/O E/M codes.) We are also not currently making any changes to current policy on the use of the AI modifier.

We will consider the questions, concerns, and suggestions provided by commenters in our ongoing review of hospital inpatient and observation care policy. Absent further clarifications or additional rulemaking, billing practitioners and providers should continue to submit claims as they would have prior to the consolidation, though using the revised CPT codes 99221–99223, 99231–99233, 99238–99239, and G0316 (as applicable) to reflect observation care services (and unless otherwise specified in this final rule).

*Comment:* One commenter requested clarification of guidance in the Medicare Claims Processing Manual, IOM 100–04, Chapter 4, regarding how time is counted and reported for HCPCS code G3078 (Hospital observation service, per hour).

*Response:* We believe that the commenter’s request pertains to payment made for observation under the

OPPS, which is outside the scope of this rulemaking as we only address observation care billed by practitioners under the PFS. We direct commenters with questions regarding hospital billing or payment to their MACs for further assistance.

After consideration of public comments, we are finalizing our proposal that, starting for services furnished in CY 2023, hospital inpatient and observation care furnished by practitioners will be billed using CPT codes 99221 through 99223, 99231 through 99233, 99234 through 99236, 99238 and 99239, and G0316 (as applicable). As noted above, we will also review our billing policies and consider updates as necessary.

#### f. Prolonged Services for Hospital Inpatient or Observation Care

As part of its E/M revisions, the CPT Editorial Panel made several changes to prolonged codes that currently can be billed with inpatient or observation codes. In its February 2021 meeting, the CPT Editorial Panel deleted Prolonged Service with Direct Patient Contact (Except with Office or Other Outpatient Services), including CPT code 99356 (*Prolonged service in the inpatient or observation setting, requiring unit/floor time beyond the usual service; first hour; List separately in addition to code for inpatient or observation Evaluation and Management service*) and CPT code 99357 (*each additional 30 minutes*), effective January 1, 2023. The 2022 CPT Codebook instructions indicate that CPT codes 99356 and 99357 can be used in conjunction with hospital inpatient or observation care (CPT codes 99218 through 99236). We refer readers to instructions on pages 41–42 of the 2022 CPT Codebook, for example.

To replace deleted CPT codes 99356 and 99357, the CPT Editorial Panel created CPT code 99418 (*Prolonged inpatient or observation evaluation and management service(s) time with or without direct patient contact beyond the required time of the primary service when the primary service level has been selected using total time, each 15 minutes of total time.*) (*List separately in addition to the code of the inpatient and observation Evaluation and Management services*), which was referred to in the CY 2023 PFS proposed rule under its placeholder CPT code 993X0. Additional guidance from the 2023 CPT Codebook states, “Code 99418 is used to report prolonged total time (that is, combined time with and without direct patient contact) provided by the physician or other qualified health care professional on the date of an inpatient E/M service (that is, CPT

codes 99223, 99233, 99236, 99255, 99306, 99310). Prolonged total time is time that is 15 minutes beyond the time required to report the highest-level primary service.” (2023 CPT Codebook, p. 29.)

We did not propose to adopt CPT code 99418, as we believed that the billing instructions for CPT code 99418 would lead to administrative complexity, potentially duplicative payments, and limit our ability to determine how much time was spent with the patient using claims data; these reasons are discussed in further detail below. We instead proposed to create a single G-code that describes prolonged inpatient or observation services, and that could be reported in conjunction with CPT codes 99223, 99233, and 99236. This G-code would be G0316 (referred to in the proposed rule as GXXX1):

- *G0316 Prolonged hospital inpatient or observation care evaluation and management service(s) beyond the total time for the primary service (when the primary service has been selected using time on the date of the primary service); each additional 15 minutes by the physician or qualified healthcare professional, with or without direct patient contact (list separately in addition to CPT codes 99223, 99233, and 99236 for hospital inpatient or observation care evaluation and management services). (Do not report G0316 on the same date of service as other prolonged services for evaluation and management 99358, 99359, 99415, 99416, 99418). (Do not report G0316 for any time unit less than 15 minutes).*

In parallel to CPT’s coding revisions for prolonged inpatient or observation services, we proposed that the G0316 prolonged code could only be applied to the highest-level hospital inpatient or observation care visit codes (CPT codes 99223, 99233, and 99236), and could only be used when selecting the E/M visit level based on time. In other words, we proposed that a prolonged code would only be applied once the greatest amount of time for initial, subsequent, or same-day discharge visits has been exceeded.

We proposed to use G0316 instead of CPT code 99418 because we disagreed with the CPT instructions regarding the point in time at which the prolonged code should apply. According to the 2023 CPT Codebook, CPT code 99418 which represents a 15-minute interval, would apply to: CPT code 99223 when a practitioner reaches 90 minutes; CPT code 99233 when 65 minutes is reached; and CPT code 99236 when 100 minutes is reached. Each of these times represents only 15 minutes more than

the codes’ descriptor times. We disagreed with this instruction, and we believed that a prolonged code should only be applicable after the total time for the primary service is exceeded (the total time used or assumed in valuation of the primary service, plus the full 15-minutes described by the prolonged code).

We noted that CPT code 99236, per the RUC-recommended times, includes not only 85 minutes of intraservice time (performed on the date of encounter) but an additional 12 minutes of post-service time. The RUC based this recommendation on a survey timeframe which was within 3 days of the date of encounter. We were concerned that the CPT instructions for CPT code 99418, as it applies to CPT code 99236, would result in duplicative payment, since the 12-minute post-service time was factored into the proposed valuation of CPT code 99236. It would be inappropriate to pay for a prolonged code based on post-service time that is already accounted for in the base code. We believed that the instruction for when to apply CPT code 99418 to the primary service CPT code 99236 would not accurately take into account this post-service time.

We proposed that the prolonged service period described by G0316 could begin 15 minutes after the total times (as established in the Physician Time File) for CPT codes 99223, 99233, and 99236 have been met. Additionally, we proposed that the proposed G0316 prolonged code would be for a 15-minute increment, and the entire 15-minute increment must be completed in order to bill G0316. Note that for administrative simplicity, we proposed to round the time when the prolonged service period begins to the nearest 5 minutes. For the times below, CPT code 99223, which has a RUC-proposed total time of 74 minutes, would be treated as though it has 75 total minutes. CPT code 99233, which has a RUC-proposed total time of 52 minutes, would be treated as though it has 50 total minutes; and CPT code 99236, which has a RUC-proposed total time of 97 minutes will be treated as though it has 95 total minutes. The rounding here is solely for the purpose of calculating a proposed prolonged period, and would not affect the total times for these CPT codes in the time file. We note that the time file is included in the public files provided as part of each year’s finalized PFS, which are posted at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices>.

Thus, a practitioner could bill G0316 for base code CPT code 99223 when 105

minutes is reached for an initial visit on the date of encounter. For the purposes of applying the proposed prolonged code, the CPT code 99223 total time is rounded to 75 minutes on the date of encounter. The prolonged service period would begin at 90 minutes, 15 minutes beyond 75 minutes. A practitioner would bill HCPCS code G0316 once the 15-minute increment for G0316 is completed, at minute 105.

A practitioner could bill G0316 for the base code CPT code 99233 when 80 minutes is reached for a subsequent visit on the date of encounter. For the purposes of applying the prolonged code, the CPT code 99233 total time is rounded to 50 minutes on the date of encounter. The prolonged service period would begin at 65 minutes, 15 minutes beyond 50 minutes. A practitioner would bill HCPCS code G0316 once the 15-minute increment for G0316 is completed, at minute 80.

A practitioner could bill HCPCS code G0316 for base code CPT code 99236 at 125 minutes for same-day discharge. For the purposes of applying the prolonged code, the CPT code 99236 total time is rounded to 95 minutes completed within 3 calendar days of the encounter. The prolonged service period would begin at 110 minutes, 15 minutes beyond 95 minutes. A practitioner could bill HCPCS code G0316 once the 15-minute increment for G0316 is completed, at minute 125.

Refer to summary Table 18 in our proposed rule for a chart showing the proposed billing timeframe for G0316.

We also proposed that the proposed G0316 would apply to both face-to-face and non-face-to-face time spent on the patient's care within the survey timeframe. For CPT codes 99223 and 99233, this would be time spent on the date of encounter. For CPT code 99236, this would be time spent on the same date or within 3 subsequent calendar days. Since we proposed that prolonged services on any date within the service period (with or without direct patient contact, on the same or different date) would be reportable under HCPCS code G0318, we also proposed that CPT codes 99358–9 could not be billed for base codes CPT codes 99221 through 99223 and 99231 through 99236.

This approach was consistent with our final policy for O/O E/M visits, which requires the use of the prolonged code, G2212 (*Prolonged office or other outpatient evaluation and management service(s) beyond the maximum required time of the primary procedure which has been selected using total time on the date of the primary service; each additional 15 minutes by the physician or qualified healthcare professional,*

*with or without direct patient contact*) for prolonged O/O E/M services. We continued to be concerned about program integrity, duplicative payments for time counted in both E/M base codes and prolonged E/M services codes, the administrative complexity of having multiple prolonged service codes, and our ability to tell how much time was spent with the patient using claims data (see our previous discussion of these issues in our CY 2020 and CY 2021 PFS final rules at 84 FR 62849 through 62850, and 85 FR 84572 through 84575, respectively). If we proposed to adopt the CPT codes for prolonged inpatient and observation E/M visits, we would not be able to identify the time spent with patients in the claims data alone, because we might not know which primary service is the companion code to the prolonged service code(s) due to the wide service timespan (for prolonged services without direct patient contact) and non-specific care settings within the prolonged CPT code descriptors.

We received many comments regarding our proposal for Medicare-specific coding for prolonged Other E/M services. We address comments that apply across the Other E/M visit families in this final rule in section II.F.11 below (Prolonged Services). We received a few comments that apply in isolation to the Inpatient/Observation visit family, and we address those as follows.

*Comment:* One commenter questioned how the time was calculated for the application of G0316. The commenter noted that the revised CPT descriptors for CPT codes require at least 75 minutes for CPT code 99223, at least 50 minutes for 99233, and at least 85 minutes for 99236. The commenter questioned why G0316 would not apply to the base codes after an additional 15 minutes beyond the descriptor time had been reached. In particular, the commenter noted that they were not able to identify the “post-service” time that we applied to the total time for CPT code 99236, to calculate when G0316 would apply.

*Response:* We appreciate this commenter's inquiries. We discuss in section II.F.11 below, and our regulatory impact analysis for alternatives considered, why we are not choosing to allow reporting of prolonged services once the minutes of service reach 15 or more minutes beyond the time in the CPT code descriptor. Specific to G0316, in our proposed rule (87 FR 45992), we explained that 12 minutes of post-service time was included in the RUC-recommended total time for CPT code 99236 (which we are adopting in this

final rule). Since the 12 minutes is already accounted for in the valuation for CPT code 99236, we do not believe it should be counted again toward reporting G0316. We refer readers to section II.F.11 below for additional discussion of this issue.

*Comment:* Several commenters requested clarification that if a practitioner performs non-face-to-face work on a day prior to a patient's hospital admission or placement on observation status, this time cannot be reported by the practitioner using G0316.

*Response:* The service times for initial inpatient and observation care do not include work performed on prior days by the same practitioner, therefore we are not allowing time on those days to count toward prolonged services for those services. We refer readers to section II.F.11 below, where we discuss our rationale for not allowing practitioners to count time spent on days that were not included in the surveyed timeframes for Other E/M visits, since such time is not presumed to be part of the service for purposes of valuation. When the AMA surveyed practitioners to identify how much work is performed when furnishing initial inpatient/observation care (measured by how much time is commonly spent), the survey respondents indicated that they do not spend time on days prior to the visit for any of the inpatient or observation care codes. If the same practitioner spends time prior to the visit as part of another E/M visit in a different setting or as part of care management services, the prior time can be counted toward reporting of the prior visit or care management service. (We refer readers to our PFS Care Management website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management> for more information about billing for those services.

*Comment:* One commenter did not support the use of G0316 only in instances when the visit level was selected based on time, and believed that the prolonged code should apply when visits are selected based on MDM. The commenter suggested that many practitioners do not currently select the level of visit based on time. The commenter also contended that, because the G0316 code was based on time, it would contribute to practitioner burnout by rewarding long hours and would penalize practitioners for treating patients efficiently.

*Response:* We note that, as discussed above in section II.F.3.a, effective January 1, 2023, practitioners will have

the option of selecting the hospital inpatient or observation care codes by time or by MDM. We expect that more practitioners may begin selecting visit based on time as a result of this change. We refer readers to section II.F.11 below, where we discuss why we believe prolonged services should not be reportable for services that are not timed, and the intersection of our Medicare-specific prolonged service codes with practitioner incentives regarding time spent with patients.

After consideration of public comments, we are finalizing our proposal to create a new code G0316 for prolonged Hospital Inpatient and Observation Care services (applicable to primary service CPT codes 99223, 99233, and 99236), as proposed.

#### g. Valuation of Hospital Inpatient or Observation Care Services

The revised hospital inpatient or observation care codes (CPT codes 99221 through 99223 and 99231 through 99236) were surveyed for the October 2021 RUC meeting. The survey times captured the total time on the date of encounter by calendar date. In October 2021, the RUC referred these services to be resurveyed, because the survey did not include a request for distinct time before and after floor/unit time, and therefore, could not be compared to previous RUC surveys of these services. The RUC reviewed the resurveyed inpatient and observation services for the January 2022 RUC meeting.

We proposed to accept the RUC recommendations for work RVUs and times for CPT codes 99221 (work RVU 1.63, intraservice time 40 minutes, total time 40 minutes); 99222 (work RVU 2.60, intraservice time 55 minutes, total time 55 minutes); 99223 (work RVU of 3.50, intraservice time 74 minutes, total time 74 minutes); 99231 (work RVU 1.00, intraservice time 25 minutes, total time 25 minutes), 99232 (work RVU 1.59, intraservice time 36 minutes, total time 36 minutes); 99233 (work RVU 2.40, intraservice time 52 minutes, total time 52 minutes); 99234 (work RVU 2.00, intraservice time 45 minutes, total time 50 minutes); 99235 (work RVU 3.24, intraservice time 68 minutes, total time 76 minutes); and 99236 (work RVU 4.30, intraservice time 85 minutes, total time 97 minutes).

There are no PE inputs for these codes.

*Comment:* Many commenters supported our proposal to accept the RUC-recommended values for these codes.

*Response:* We thank commenters for their support.

*Comment:* Several commenters, although not challenging the RUC recommendations, voiced general concerns that O/O E/M valuations may continue to be low, or that any increases in facility-based E/M services will shift RVUs away from primary care.

*Response:* We thank the commenters for sharing their concerns. We will take these concerns into consideration as we continue to examine valuations for all E/M codes. Please see prior discussions of our review and revaluation of O/O E/M codes in the CY 2020 final rule (84 FR 62844) and the CY 2021 final rule (85 FR 84548).

*Comment:* Several commenters opposed the proposed values, particularly for initial Hospital Inpatient and Observation Care visit codes (CPT codes 99221–99223), for which we proposed reductions. Some of these commenters suggested that, to maintain relativity and rank order, it was important that the initial Hospital Inpatient or Observation Care codes be assigned higher work RVUs than O/O E/M codes. Other commenters suggested that the proposed valuations do not accurately reflect the complexity of hospital inpatient or observation care. One commenter, echoing concerns about relativity of initial Hospital Inpatient and Observation Care and new patient O/O E/M visits, suggested that we review the E/M visit valuations using an expert panel.

*Response:* We appreciate commenters' feedback. We disagree with the commenters that the proposed RVUs for CPT codes 99221–99223 are too low, especially given the reductions in total time for these codes. We also continue to disagree with the assertion that facility-based codes are always inherently (or proportionately) more intense than E/M services provided in other settings. We reaffirm our discussion of this issue in section II.F.1.

After consideration of public comments, we are finalizing the RVUs for CPT codes 99221–99223, 99231–99236 as proposed.

#### 4. Hospital or Observation Discharge Day Management (CPT Codes 99217, 99238 and 99239)

##### a. Coding Changes to Hospital Inpatient or Observation Discharge Day Management Services

Effective January 1, 2023, the CPT Editorial Panel deleted the observation discharge code, CPT code 99217 (*Observation care discharge day management*) and revised the two hospital discharge day management codes, CPT codes 99238 (*Hospital inpatient or observation discharge day*

*management; 30 minutes or less*) and CPT code 99239 (*more than 30 minutes*) so that CPT codes 99238 and 99239 may be billable for discharge of hospital inpatient or observation patients.

We proposed to adopt the revised CPT codes 99238 and 99239. We also proposed to retain our current hospital inpatient policy outlined in the Medicare Claims Processing Manual, Chapter 12, sections 30.6.9.2.B and 30.6.9.2.E, and expand it to include observation care. Specifically, we proposed that CPT codes 99238 and 99239 are to be billed by the practitioner who is personally responsible for discharge service (or, in the case of the death of the patient, the practitioner who personally performs the death pronouncement); services furnished by other practitioners, including: instructions to the patient, communication with the family/caregiver, and coordination of post discharge services would be reported as subsequent hospital inpatient or observation care with CPT codes 99231, 99232, and 99233. (Refer to the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, Manual, IOM 100–04, Chapter 12, sections 30.6.9.2.B and 30.6.9.2.E; we note that we incorrectly cited to 30.6.9.2.A in the proposed rule).

We proposed to retain our related policy that the same practitioner may not bill a hospital discharge CPT code 99238 or 99239 on the same day as a subsequent visit CPT codes 99231 through 99233. We refer readers to the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.9.2.C.

*Comment:* Several commenters requested clarification on the proposed policy at 87 FR 45993 (which codifies that the discharge day management code can only be billed by the practitioner “personally responsible for” the discharge service. Commenters suggested this policy is difficult to decipher in light of team approaches to care delivery.

*Response:* We appreciate commenters' feedback. First, we note that we intended to preserve the policy regarding billing of CPT codes 99238 and 99239, as reflected in the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.9.2.B and 30.6.9.2.E. We intended to align this policy with both the consolidation of the Hospital Inpatient and Observation Care code sets and with the 2023 CPT Codebook guidelines. The 2023 Codebook (p.17) instruction for CPT codes 99238 and 99239 is that, “Codes 99238, 99239 are to be used by the physician or other qualified health care

professional who is responsible for discharge services.” We note that our longstanding policy in section 30.6.9.2.B is that only one hospital discharge day management service is payable per patient per hospital stay, and this code is billed by the “attending physician.”

After consideration of public comments, we are finalizing the adoption of the revised descriptors for CPT codes 99238 and 99239 and other additional policies in this section as proposed or clarified.

- Only one claim for CPT code 99238 or 99239 may be submitted per patient, per hospital stay. The claim is submitted by the attending practitioner who is responsible for the discharge service. In the case of the death of the patient, CPT codes 99238 and 99239 are billed by the practitioner who personally performs the death pronouncement.

- The same practitioner may not bill both a hospital discharge CPT code 99238 or 99239 and a subsequent visit CPT codes 99231 through 99233 for the same patient on the same day. (Note also additional policies affecting the billing of CPT codes 99238 and 99239 discussed in II.F.3.b. above.)

#### b. Prolonged Services and Hospital Inpatient or Observation Discharge Day Management

Effective January 1, 2023, the CPT Editorial Panel deleted CPT code 99356 (*Prolonged service in the inpatient or observation setting, requiring unit/floor time beyond the usual service; first hour*) and CPT code 99357 (*each additional 30 minutes*) and replaced them with CPT code 99418 (*Prolonged inpatient or observation evaluation and management service(s) time with or without direct patient contact beyond the required time of the primary service when the primary service level has been selected using total time, each 15 minutes of total time*). CPT codes 99356 and 99357 were not previously billable with discharge day management CPT codes 99238 or 99239. (Refer to, for example, instructions on pages 41–42 of the 2022 CPT Codebook.) Additionally, according to 2023 CPT Codebook instructions (p.29), CPT code 99418 (referred to as CPT code 993X0 in the proposed rule) is not billable with CPT codes 99238 and 99239.

We proposed that a practitioner would not be able to bill prolonged services for hospital discharge (CPT codes 99238 or 99239). This means that CPT codes 99418, 99358–9 (prolonged E/M service on a date other than the face-to-face E/M, and the proposed G0316 code (discussed in section II.F.3.

of this final rule) would not be payable where the discharge day management code is CPT codes 99238 or 99239. We believe the code descriptors for CPT codes 99238 and 99239 do not allow for additional payment of prolonged services. The descriptor for CPT code 99238 provides for hospital discharge day management, “30 minutes or less.” If a practitioner spends more than 30 minutes on a hospital discharge service for a patient, the practitioner would be able to bill CPT code 99239, which is defined in the code descriptor as “30 minutes or more.” Thus, a prolonged code (including CPT codes 99418, 99358, 99359, and our proposed G0316) would not be appropriate for CPT code 99238, because CPT code 99239 accounts for services that exceed 30 minutes.

The descriptor for CPT code 99239 states that the code is for “more than 30 minutes” of hospital discharge day management services. When the RUC surveyed this code, the surveyed timeframe was within 3 calendar days of the encounter. In other words, the descriptor time is more than 30 minutes, completed within 3 calendar days of the encounter. Neither the descriptor nor the CPT billing instructions provide an upper limit on how many minutes can be reported within the 3-day timeframe for CPT code 99239. All face-to-face and non-face-to-face activities performed by the practitioner during the date of encounter and within 3 calendar days from the date of encounter may be counted toward CPT code 99239, as applicable. Prolonged codes CPT codes 99418, 99358, 99359, and our proposed G0316 code are intended to pay for time not included in the primary E/M codes during the surveyed timeframe; as it appears that CPT code 99239 already includes all services furnished during the surveyed timeframe, we do not believe it is appropriate to allow any prolonged codes to be billed with CPT code 99239 as a base code.

*Comment:* One commenter noted that in the section of the proposed rule where this proposal was discussed (87 FR 45993), we misstated the descriptor for CPT code 99239 as “30 minutes or more” when it should be “more than 30 minutes.”

*Response:* We agree with the commenter and thank them for their attention. We acknowledge our unintentional error.

*Comment:* One commenter requested clarification on the applicable timeframe for when time is counted for CPT code 99239—namely whether the 3-day timeframe described in the proposed rule for the completion of time

refers only to days after discharge, or can include time prior to discharge.

*Response:* We clarify that the timeframe is within 3 calendar days after discharge. We note that time spent providing face-to-face or non-face-to-face care on a date prior to discharge would be counted toward an appropriate initial or subsequent Hospital Inpatient or Observation Care code (CPT codes 99221–99223 or 99231–99233), which are discussed in section II.F.3.

After consideration of public comments, we are finalizing this policy as proposed.

#### c. Valuation of Hospital Inpatient or Observation Discharge Day Management

The revised discharge day management codes (CPT codes 99238 through 99239) were surveyed for the January 2022 RUC meeting. We proposed to accept the RUC recommendations for CPT codes 99238 (work RVU 1.50, intraservice time 28 minutes, total time 38 minutes); and 99239 (work RVU 2.15, intraservice time 45 minutes, 64 minutes total time).

We proposed the RUC-recommended direct PE inputs for CPT codes 99238 and 99239 without refinement. We received one comment on this proposal.

*Comment:* One commenter expressed support for our proposal to accept the RUC recommendations for this code set.

*Response:* We thank the commenter for their support.

After consideration of public comments, we are finalizing the RVUs for CPT codes 99238–99239 as proposed.

#### 5. Emergency Department Visits (CPT Codes 99281–99285)

##### a. Coding

We have revalued the ED visit codes under the PFS four times: in 1997, 2007, 2020, and most recently in 2021 as part of the update for O/O E/M visits. In the past, consistent with AMA RUC recommendations, we revalued these services such that the values of levels 1 through 3 of the ED visits were equal to levels 1 through 3 new patient O/O E/M visits, and the levels 4 and 5 ED visits were valued higher than the levels 4 and 5 new patient O/O E/M visits to reflect higher typical intensity. In addition, in the CY 2018 PFS final rule (82 FR 53018), we finalized a proposal to nominate all five ED visit codes as potentially misvalued, based on information suggesting that the work RVUs for ED visits may not appropriately reflect the full resources involved in furnishing these services. Specifically, some impacted parties

expressed concerns that the work RVUs for these services have been undervalued given the increased acuity of the patient population and the heterogeneity of the sites, such as freestanding and off-campus EDs, where ED visits are furnished. Accordingly, the RUC resurveyed and reviewed these five codes for the April 2018 RUC meeting, and provided a recommendation to CMS for consideration in CY 2020 rulemaking. In the CY 2020 PFS final rule (84 FR 62796), we finalized the RUC-recommended increases to the work RVUs of 0.48 for CPT code 99281, a work RVU of 0.93 for CPT code 99282, a work RVU of 1.42 for 99283, a work RVU of 2.60 for 99284, and a work RVU of 3.80 for CPT code 99285. The RUC did not recommend, and we did not finalize, any change in direct PE inputs for the codes in this family. We noted that the RUC submitted these recommended values to CMS prior to the submission of the RUC-recommended revaluation of the O/O E/M visit code family.

In response to our finalizing of the RUC-recommended values for the ED visits, and to our comment solicitation in the CY 2020 PFS proposed rule regarding whether we should revalue certain services commensurate with increases to the O/O E/M visits (84 FR 62859 through 62860), a commenter submitted a public comment stating that relativity between the ED visits and O/O E/M visits should be maintained, and submitted a specific recommendation for CPT codes 99283–99285 that was higher than the RUC-recommended values. The commenter stated we should preserve the relationship between the ED and O/O E/M visit code sets that was established in prior years and that they believe would have likely been maintained had the O/O E/M visits been reviewed prior to the ED visits. In order to avoid the rank order anomaly whereby an ED visit would be valued lower than the analogous O/O E/M visit, we proposed and eventually finalized the values recommended by this commenter in the CY 2021 PFS final rule (85 FR 84562). This final policy increased the work RVU from 1.42 to 1.60 for CPT code 99283, from 2.60 to 2.74 for CPT code 99284, and from 3.80 to 4.00 for CPT code 99285.

Following the implementation of the revisions to the O/O E/M visits for the CPT 2021 code set, the CPT/RUC Workgroup on E/M standardized the rest of the E/M sections in the CPT code set. In February 2021, the CPT Editorial Panel revised the five ED visit codes to align with the principles included in the E/M office visit services by documenting and selecting level of

service based on medical decision making, effective January 1, 2023. The descriptor for CPT code 99281 was revised such that the code may not require the presence of a physician or other qualified health care professional. The CPT Editorial Panel also revised the MDM level in the descriptor for CPT code 99282 from “low” to “straightforward” complexity, and from “moderate” to “low” complexity for CPT code 99283. These five codes were resurveyed and reviewed at the April 2021 RUC meeting with recommendations submitted to CMS for the CY 2023 PFS rulemaking cycle.

We received several comments related to our proposal to adopt the CPT revisions to the MDM guidelines for the ED visits. Below is a summary of the comments received and our responses.

*Comment:* Several commenters raised concerns related to the proposed changes to the MDM guidelines. Their concerns were that considerable training and education will be required to ensure clinicians are prepared to appropriately code their encounters, and that CMS should consider delaying implementation of the new MDM guidelines in order to ensure proper education and training can occur. Other commenters noted that the MDM guidelines do not reflect the level of MDM visits appropriately for the ED visits using MDM, and they will be applying to CPT for changes to the MDM guidelines for 2024. Some commenters requested a delay and recommended to retain the MDM guidelines in their current form until the AMA reviews the need for additional changes. Other commenters were supportive of CMS’s collaboration with AMA CPT and the revisions made.

One commenter raised an issue with the current MDM guidelines for ED visits, involving a local MAC’s interpretation and application of the term “workup.”

*Response:* We appreciate the commenters’ feedback. It is our understanding that the AMA E/M workgroup revised the MDM guidelines for CY 2023 to reflect changes specific to ED visits already, and that ED member physicians already provided input and made changes to these guidelines. We are unsure of how the issue involving the term “workup” would apply under the new MDM guidelines, and we recommend that interested parties ask CPT to clarify and consider any relevant revisions that might be needed for 2024. We understand that an ED specialty society will propose to CPT additional changes to the MDM guidelines that would impact ED visit level selection

beginning in 2024, if passed by CPT. We will consider additional changes if they are made by CPT, but we believe we should adopt the changes that have been made to date for 2023, since they already reflect an initial round of input from ED physicians in the AMA Workgroup, and a consensus that was reached at CPT. We will watch for additional changes recommended by CPT, and may consider any further changes in future rulemaking.

*Comment:* One commenter agreed with our proposal to adopt the CPT framework for ED visits, whereby ED visit level would be based on MDM rather than time.

*Response:* We thank the commenter for their support.

*Comment:* One commenter requested clarification on CPT code 99281, and whether the proposed guideline is intended for professional services billing by the practitioner in charge of oversight of care, or is the new code for hospital billing only.

*Response:* The level 1 ED visit (CPT code 99281) currently describes services by a physician or qualified health care professional (QHP), requiring a problem-focused exam and straightforward MDM, among other physician/QHP work. For 2023, this code is revised to describe an ED visit for the E/M of a patient that may not require the presence of a physician or other QHP. The purpose of this CPT code revision, as we understand it, was to create a more parallel structure between ED and O/O visits, since as of CY 2021, level 1 O/O visits may not require the presence of a physician/QHP. An example in the ED setting might be a patient presenting for suture removal for a laceration repair that was performed by another provider in a different location, where the wound is healing well. We are maintaining the active payment status for CPT code 99281, and we will be monitoring claims data to assess billing patterns for this and other E/M visits under the new framework.

#### b. Sites of Service and Multiple Same-Day E/M Visits for Emergency Department Patients

As we discussed in the previous section (Hospital Inpatient or Observation Care (CPT codes 99218–99236)) the CPT Editorial Panel has revised CPT codes 99221 through 99223 to include both inpatient hospital and observation care services. (Note our proposal in that section regarding billing policy for transitions between ED and hospital inpatient or observation care.) We also proposed to modify our policy regarding when to bill ED codes

CPT codes or hospital inpatient care (CPT codes 99221 through 99223), as further described in the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, 30.6.11.E., to clarify that these policies apply to observation care billed under CPT codes 99221 through 99223 as well. We proposed that, if a physician advises their own patient to go to an ED of a hospital for inpatient care or observation and the physician subsequently is asked by the ED physician to come to the hospital to evaluate the patient and to advise the ED physician as to whether the patient should be admitted to the hospital, placed in observation status, or sent home, the physicians should bill as follows:

- If the patient is admitted to the hospital or placed in observation status by the patient's personal physician, then the patient's personal physician should bill only the appropriate level of the initial hospital inpatient or observation care (CPT codes 99221–99223), because all E/M services provided by that physician in conjunction with that admission are considered part of the initial hospital inpatient or observation care when performed on the same date as the admission. The ED physician who saw the patient in the ED should bill the appropriate level of the ED codes.

- If the ED physician, based on the advice of the patient's personal physician who came to the ED to see the patient, sends the patient home, then the ED physician shall bill the appropriate level of ED service. The patient's personal physician shall also bill the level of ED code that describes the service they provided in the ED. If the patient's personal physician does not come to the hospital to see the patient, but only advises the ED physician by telephone, then the patient's personal physician may not bill the ED codes.

Similarly, we proposed that if the ED physician requests that another physician evaluate a given patient, the other physician should bill an ED visit code. We also proposed that if the patient is admitted by the second physician performing the evaluation, that physician shall bill an initial hospital inpatient or observation care code (CPT codes 99221 through 99223, as appropriate), and not an ED visit code. This policy appears in the Medicare Claims Processing Manual, (Pub. L. 100–04, Chapter 12, section 30.6.11.F), and we are clarifying that this policy applies to both hospital inpatient and observation care billed under CPT codes 99221 through 99223.

Finally, we noted that the 2023 CPT Codebook provides instructions that

critical care and ED services may be billed on the same day under certain circumstances. We referred readers to the CY 2022 PFS final rule (86 FR 65163), where we finalized our policy that critical care and ED visits may be billed on the same day if performed by the same physician, or by physicians in the same group and specialty if there is documentation that the E/M service was provided prior to the critical care service at a time when the patient did not require critical care, that the service is medically necessary, and that the service is separate and distinct, with no duplicative elements from the critical care service provided later in the day, and that practitioners may bill for both services. Practitioners must use modifier -25 on the claim when reporting these critical care services. This policy is also in the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, 30.6.12.6.

Please refer to the next section, “Nursing Facility Services” (section II.F.6) for discussion of policies regarding patients seen in the ED and the nursing facility on the same day.

We received comments specific to the ED to nursing facility transition. Please refer to the nursing facility section below (section II.F.6).

After consideration of public comments, we are finalizing as proposed and will continue to consider for possible future rulemaking for these visits.

#### c. Valuation

We proposed the RUC-recommended work RVU for four of the five codes in the ED Visits family. We proposed a work RVU of 0.25 for CPT code 99281 (*Emergency department visit for the evaluation and management of a patient, that may not require the presence of a physician or other qualified health care professional*), a work RVU of 0.93 for CPT code 99282 (*Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making*), a work RVU of 1.60 for CPT code 99283 (*Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making*), and a work RVU of 4.00 for CPT code 99285 (*Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making*).

We disagreed with the RUC-recommended work RVU of 2.60 for CPT code 99284 (*Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making*) and we proposed to maintain the current work RVU of 2.74. The survey conducted for CPT code 99284 maintained unchanged a work time of 40 minutes, and the level of medical decision making in the code's descriptor also remains unchanged at “moderate” complexity. Therefore, we continue to believe that the levels 4 and 5 ED visits are more accurately valued higher than the levels 4 and 5 new patient O/O E/M visits to reflect their higher typical intensity. This has been the historic relationship between these codes, and we previously finalized a proposal in the CY 2021 PFS final rule, increasing the work RVU from 2.60 to 2.74 for CPT code 99284. Given that there has been no change in the surveyed work time or level of MDM for this service, we continue to believe that the work RVU of 2.74 that we finalized in the CY 2021 rule cycle remains the most accurate valuation for CPT code 99284 (85 FR 84562).

The RUC did not recommend and we did not propose any direct PE inputs for these five ED visit codes.

*Comment:* We did not receive any comments in opposition to the proposed values for this family, except for the level 4 ED visit. Most commenters expressed their support for the proposed work RVU of 2.74 for CPT code 99284. Commenters stated they appreciated that CMS continues to recognize that the work RVU for a level 4 ED visit should be higher than for the corresponding level 4 O/O E/M visit, and that they supported our proposal to retain the historic relativity between the new patient O/O outpatient E/M codes and the ED E/M codes.

*Response:* We appreciate the support for our proposed work RVUs from the commenters.

*Comment:* A few commenters disagreed with the proposed work RVU of 2.74 for CPT code 99284 and instead supported the RUC-recommended work RVU of 2.60. The commenters stated that the RUC agreed that the work RVU for the ED codes should be equivalent to the office/outpatient visit codes, based on level of MDM and urged CMS to finalize the RUC recommendation. Commenters stated that, although CPT codes 99204 and 99284 would share the same work RVU of 2.60 under the RUC's recommendations, this was appropriate, because they asserted that CPT code 99284 would have notably higher

intensity due to its shorter work time of 40 minutes (as compared with 60 minutes for CPT code 99204).

Commenters also stated that the proposed work RVU of 2.74 would create a rank order anomaly within the family of ED codes, since the intensity of CPT code 99284 would be higher than the intensity of CPT code 99285. The commenters urged CMS to finalize the RUC recommendations for all five ED codes, including the work RVU of 2.60 for CPT code 99284.

*Response:* We appreciate commenters' feedback. We disagree with the commenters and continue to believe that CPT code 99284 is more accurately valued at a higher rate than CPT code 99204 at the proposed work RVU of 2.74. As we noted in the proposed rule, the survey conducted for CPT code 99284 maintained—unchanged—a work time of 40 minutes, and the level of medical decision making in the code's descriptor also remains unchanged at “moderate” complexity. We do not agree that the work RVU of CPT code 99284 should be reduced to match the work RVU of CPT code 99204, given that the code remains essentially unchanged. This is especially true, given that this has been the historic relationship between these codes, and that we previously finalized a proposal in the CY 2021 PFS final rule to increase the work RVU from 2.60 to 2.74 for CPT code 99284 specifically so that these codes would not share the same work RVU.

We also disagree with the commenters that our proposed work RVU of 2.74 creates a rank order anomaly within the ED family. The small difference in intensity between CPT codes 99284 and 99285 (about 3 percent higher for CPT code 99284) is counterbalanced by the much longer work time of CPT code 99285. We do not believe that the work RVU of CPT code 99284 should be deliberately lowered to manipulate the intensity into a lower value than CPT code 99285. We also note that it is very common for intensity to be slightly lower for codes with longer work times, even within families where the code descriptors reflect more difficult MDM. For example, in the office/outpatient visit code family, CPT code 99204 has a slightly higher intensity than CPT code 99205. This does not constitute a rank order anomaly within the family (or serve to justify lowering the work RVU for code 99204); rather, it is an artifact of the longer work time associated with CPT code 99205 as compared with CPT code 99204. We continue to disagree that intensity would constitute a rationale for

finalizing the RUC's recommended work RVU of 2.60 for CPT code 99284.

After consideration of public comments, are finalizing the work RVUs and direct PE inputs for all five codes in the Emergency Department Visits as proposed.

#### d. Prolonged Services

We proposed that the prolonged services described by HCPCS codes G0316, G0317, and G0318 would not be reportable in conjunction with ED visit codes, because the ED visit codes are not reported based on the amount of time spent with the patient.

We did not receive any comments specific to this proposal, therefore we are finalizing as proposed. We refer readers to section II.F.11 below for a discussion of comments received on prolonged Other E/M services generally. Our final policy for ED visits is reflected in summary Table 24 in section II.F.12.e. of this final rule.

#### 6. Nursing Facility Visits (CPT Codes 99304–99318)

##### a. Coding Overview

The codes in the Nursing Facility (NF) services family are used to report E/M services primarily to patients in nursing facilities and skilled nursing facilities. Following the implementation of the revisions to the O/O E/M visits (CPT codes 99201 through 99215) for the CPT 2021 code set, the CPT/RUC Workgroup on E/M met to standardize the rest of the E/M sections in the CPT code set.

We have received valuation recommendations from the AMA RUC for the Nursing Facility Visit codes (CPT codes 99304 through 99318) following completion of its survey and revaluation process for these codes. In its April 2021 meeting, the RUC provided us the results of its review, and recommendations for work RVUs, practice expense inputs, and physician time (number of minutes) for the revised Nursing Facility Visits E/M code set. Therefore, we proposed changes in coding and values for the revised Nursing Facility Visits E/M code set. This code set is effective beginning in CY 2023, and the proposed values, if finalized, would go into effect with those codes as of January 1, 2023. In its February 2021 meeting, the CPT Editorial Panel deleted CPT code 99318, the annual nursing facility assessment code and revised the remaining nursing facility code to better align with the principles included in the E/M office visit services by documenting and selecting level of service based on total time or MDM. The remaining codes, initial and subsequent daily visits and

nursing facility discharge day management codes were revised.

Similar to what was done for the office visit codes, for CY 2023, we proposed when total time on the date of encounter is used to select the appropriate level of a nursing facility visit service code, both the face-to-face and non-face-to-face time personally spent by the physician (or other qualified health care professional that is reporting the office visit) assessing and managing the patient are summed to select the appropriate code to bill. Additionally, the codes have new descriptor times, assigned for when time is used to select visit level (We noted that we did not adopt the CPT Codebook instructions regarding the application of prolonged codes to CPT codes 99306 and 99310; see additional discussion under the subsection “Prolonged Codes for NF Care” in this section.). CPT provides that initial nursing facility care (CPT codes 99304 through 99306) may be used once per admission, per practitioner, regardless of the length of stay in the NF; and that an initial service can be reported if the patient has not received any face-to-face professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice during the stay, or if the patient is a new patient as defined by CPT (2023 CPT Codebook, p.24). However, we proposed an alternative definition of initial NF visit, consistent with our current policy (see below).

These nursing facility visits are noted by the RUC to be typically performed in the skilled nursing facility which requires a higher level of care than the nursing facility. The survey time captured includes pre-service time 1 day before the date of encounter, intra-service time is all the time on the date of encounter, and post-service time is 3 days after the date of encounter. The RUC's recommendations for this code family are consistent with the 25th percentile of the survey results and is based on a comparison of the survey codes with the selected the O/O CPT codes as a crosswalk to the key reference services.

While we have thoroughly reviewed the times and descriptors for all the codes in this family, and we proposed to accept the RUC recommendations as explained below, we noted our concerns regarding instances of inconsistencies and errors, where the time described in certain CPT code descriptors does not correctly relate to the time that would be used to select visit level for the

Nursing Facility visit (for example, CPT code 99306 and 99310 have the same times noted in the descriptors, where one is an initial visit and one is a subsequent visit). In general, the specialty societies and the RUC have advocated for increasing the work RVUs for the Nursing Facility visits, as compared to their previous values, regardless of some of the survey times, on the basis that values for these Nursing Facility visit codes should be valued the same as the values for the comparable O/O E/M visits. We considered the survey results, especially reductions in pre-, intra-, and post-service time, and noted that the comparison to O/O E/M visits is not accurate. These code families are incomparable for a few reasons, including, but not limited to: (1) the two families have a different number/stratification of levels for the visits, thus a one-to-one crosswalk is not possible; (2) times in the code descriptors detailing the typical time spent at the patient's bedside or hospital unit vary significantly; and (3) the patient populations differ substantially, when considering typical patients who require nursing facility services versus those in the general beneficiary community. Additional reasons are laid out in our overview section above. We do not believe that a comparison of these two code families can technically be made on a code-by-code basis. However, given the recent changes to the O/O E/M visit values that we finalized in the CY 2020 PFS final rule (84 FR 62846) and our interest in maintaining continuity in the overall code set, we proposed to accept the RUC recommendations for the work time values and work RVUs for these Nursing Facility visit codes and solicited public comment on our concerns for some of the codes as noted below in this section.

We proposed to adopt a number of billing policies reflected in our current Medicare Claims Processing Manual, Chapter 12, section 30.6.13:

- We proposed that the initial comprehensive assessment required under 42 CFR 483.30(c)(4) shall be billed as an initial NF care visit (CPT code 99304 through 99306). We proposed that a practitioner may bill the most appropriate initial nursing facility care code (CPT codes 99304 through 99306) or subsequent nursing facility care code (CPT codes 99307 through 99310), if the practitioner furnishes services that meet the code descriptor requirements, even if the service is furnished prior to the initial comprehensive assessment required under § 483.30.

A practitioner who bills an initial NF visit (CPT codes 99304 through 99306) for the initial comprehensive assessment required under § 483.30(c)(4) may bill subsequent NF visits (CPT codes 99307 through 99310), if the practitioner furnishes medically necessary face-to-face and non-face-to-face care that meets the requirements in the NF services code descriptors (CPT codes 99307 through 99310) to the beneficiary prior to the completion of the initial comprehensive assessment required under § 483.30. We proposed to allow for an initial or subsequent NF visit to be furnished and billed by the appropriate practitioner (physician, physician assistant, nurse practitioner, or clinical nurse specialist as specified in § 483.30 for the type of visit furnished) regardless of whether the initial comprehensive assessment was performed.

- We proposed to retain our policy to not pay a physician for an ED visit or an office visit and a comprehensive nursing facility assessment on the same calendar day, because it would be duplicative care. If the practitioner saw the patient in the nursing facility once on a given date, they have performed a lot of the work that is included in the other visit E/M visits, for example an ED visit. The services furnished on the same date and provided in sites other than the nursing facility are already bundled into the initial nursing facility care code when performed on the same date as the nursing facility admission by the same physician.

We noted that the Medicare Claims Processing Manual also states that ED visits provided on the same day as a comprehensive nursing facility assessment are not paid, regardless of whether the ED and nursing facility visits are by the same or different practitioners (Chapter 12, section 30.6.11.D). We proposed to retain this policy as well. We noted that the 2023 CPT Codebook does not limit the number of visits that can be billed. We proposed that more than one ED and nursing facility visit could not be billed if both visits are furnished by the same practitioner on the same date of service.

- We proposed to adopt the 2023 CPT Codebook guidance that, for reporting initial nursing facility care, transitions between skilled nursing facility level of care and nursing facility level of care do not constitute a new stay. (2023 CPT Codebook, p. 24.)

- We proposed that an initial service is one that occurs when the patient has not received any professional services from the physician or other qualified health care professional or other qualified health care

professional of the exact same specialty who belongs to the same group during the stay. We proposed that a subsequent service is one that occurs when the patient has received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty who belongs to the same group during the stay. This is the same definition that we proposed for “initial” and “subsequent” in the context of inpatient and observation services above. According to CPT instructions, an “initial” service may be reported when the patient has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice during the stay. As we do not recognize subspecialties, we proposed to apply these slightly amended definitions of “initial” and “subsequent” service.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* One commenter requested clarification regarding whether we intended to retain our current policy, as reflected in the Medicare Claims Processing Manual, IOM 100–04, Chapter 12, section 30.6.9.2.D, which allows for payment of the hospital discharge day management code (CPT codes 99238 or 99239) in addition to a separate nursing facility admission code when they are billed by the same practitioner with the same date of service.

*Response:* Consistent with our proposed retention of our other policies regarding billing by the same practitioner providing multiple E/M services to the same patient on the same day, it was our intention to retain this policy as well. We thank the commenter for bringing this additional related policy to our attention.

*Comment:* One commenter asked that we permit billing of an ED E/M visit on the same day as a NF admission/comprehensive assessment, whether by the same or another practitioner.

*Response:* The main goal of our proposed policies in this area was to maintain our current policy while we continue to consider, for potential future rulemaking, what our policies should be broadly regarding multiple, same-day E/M visits. In section 30.6.7.C, Chapter 12 of the Medicare Claims Processing Manual (Pub. 100–04), we state, “MACs may not pay a physician

for an emergency department visit or an office visit and a comprehensive nursing facility assessment on the same day. Bundle E/M visits on the same date provided in sites other than the nursing facility into the initial nursing facility care code when performed on the same date as the nursing facility admission by the same physician.” Therefore, we believe payment for a NF initial visit can be made to a practitioner other than the practitioner who furnished the ED visit on the same day, and we will retain this policy in 2023. If the NF initial visit and ED visit are furnished by the same practitioner on the same day, and time is used to select NF visit level, the time spent by the practitioner for the ED visit can be counted toward prolonged NF services (G0317) (see Table 24). We will continue to consider this issue for potential future rulemaking, if needed.

After consideration of public comments, we are finalizing the following, as proposed.

- The initial comprehensive assessment required under 42 CFR 483.30(c)(4) will be billed as an initial NF visit (CPT code 99304–99306). A practitioner may bill the most appropriate initial nursing facility care code (CPT codes 99304–99306) or subsequent nursing facility care code (CPT codes 99307–99310), if the practitioner furnishes services that meet the code descriptor requirements, even if the service is furnished prior to the required initial comprehensive assessment.

- A given practitioner cannot bill an initial NF visit and another E/M visit (such as an O/O visit or ED visit) on the same date of service, for the same patient. However, the time the practitioner spends furnishing a visit in another setting can be counted toward reporting prolonged NF services, if requirements for reporting prolonged NF services are met.

- We are adopting the CPT instruction for reporting initial nursing facility care, which provides that transitions between SNF level of care and nursing facility level of care do not constitute a new stay.

- An initial service is one that occurs when the patient has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty who belongs to the same group during the stay. A subsequent service is one that occurs when the patient has received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional

of the exact same specialty who belongs to the same group during the stay.

#### b. Valuation

For CPT codes 99304 through 99310, we proposed to adopt the RUC-recommended work RVUs for all of the nursing facility E/M visit codes given the new times surveyed by the RUC and specialty societies. Specifically, we proposed a work RVU of 1.50 for CPT code 99304 (*Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.*), a work RVU of 2.50 for CPT code 99305 (*Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.*), a work RVU of 3.50 for CPT code 99306 (*Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.*), a work RVU of 0.70 for CPT code 99307 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.*), a work RVU of 1.30 for CPT code 99308 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.*), a work RVU of 1.92 for CPT code 99309 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.*), and a work RVU of 2.80 for CPT code 99310 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which*

*requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.*). We proposed the RUC-recommended direct PE inputs for all the codes in the family, CPT codes 99305 through 99310.

While we proposed to accept the RUC recommendations for CPT code 99306, we considered maintaining the current work RVU of 3.06, since there was no change in the overall time. To support their recommendation, the RUC cited the survey key reference service, CPT code 99205 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60–74 minutes of total time is spent on the date of the encounter*), which has a much higher time noted in the descriptor and does not seem to be a valid comparison or support the increase in value to the RUC survey 25th percentile. There was no change in time for this service, and the code the RUC used for comparison has a higher total time. We also requested comment on the accuracy of the time noted in the descriptor for CPT code 99306. We noted that it is not clear to us why CPT code 99306, which is an initial service, would have the same descriptor time and medical decision making as CPT code 99310 which describes a subsequent visit. We sought clarification, especially with regard to the similarities between the code descriptors for these two services (CPT codes 99306 and 99310).

For CPT code 99308, we proposed to accept the RUC recommendations; however, we considered maintaining the current work RVU of 1.16 given there was a decrease in the total time for the service and no change in the descriptor time. We solicited comment regarding the RUC recommendations that the total time be rounded down to 15 minutes instead of rounding up to twenty minutes, when using total time on the date of the encounter for code selection (minutes must be met or exceeded), and sought clarification on this difference. In light of the changes made to the O/O E/M visits, however, we proposed the RUC-recommended work RVU of 1.30 for CPT code 99308, but stated that we would appreciate comments regarding rounding.

For CPT code 99309, we proposed a work RVU of 1.92. When compared to CPT code 99214 (*Office or other outpatient visit for the evaluation and management of an established patient,*

which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30–39 minutes of total time is spent on the date of the encounter), we are acknowledging the increase in time required to bill CPT code 99309. We noted that the descriptor time for CPT code 99309 went up since these codes were last revalued. We are focusing on the time in the descriptor, and if there is a change in the level of MDM. In light of recent changes made to the O/O E/M visits, however, we proposed the RUC-recommended work RVU of 1.92 for CPT code 99309.

Although we proposed to adopt all the RUC-recommended work RVUs and times for this code family as explained above, we solicited comment regarding the discrepancies in times, which have implications both for valuation of individual codes (and for PFS ratesetting in general), since the intraservice times and total times are used as references for valuing many other services under the PFS. After reviewing the RUC recommendations, in conjunction with the revised code descriptors and documentation guidelines for CPT codes 99304 through 99310, we proposed to accept the RUC-recommended work and time values for the revised nursing facility visit codes with the PE refinements noted by the RUC for CY 2023.

We received public comments on these valuation proposals. The following is a summary of the comments we received and our responses.

**Comment:** Most commenters supported and commended CMS for proposing the RUC-recommended work RVUs for all the nursing facility codes, and stated that it is important to adopt them in the final rule.

**Response:** We thank the commenters for their support.

**Comment:** In their public comment, the AMA addressed the questions asked by CMS related to the times in the code descriptors for CPT codes 99306 and 99310. The AMA explained that the wording of these code descriptors was intentional, such that descriptor times and MDM are the same, and that these codes only differ in their inclusion of the terms “initial” versus “subsequent,” enabling practitioners to use these terms to decide which code to bill. Although the intra-service time for CPT code 99306 was 50 minutes, CPT assigned a descriptor time of 45 minutes (which is the same descriptor time for 99310) to provide a consistent pattern of time increments, simplifying reporting. This results in descriptor times for CPT codes 99304, 99305, and 99306 that are 10

minutes apart (25, 35, and 45 minutes, respectively), providing an easy incremental pattern for those who are reporting these services based on time.

**Response:** We appreciate the AMA’s clarification. We note that this incremental pattern was not applied by CPT to CPT codes 99307 and 99308, and CPT does not appear to consistently apply this approach within or across E/M visit families, historically or for 2023. For example, the new descriptor times for home/residence visits are not separated by identical increments, nor are the parallel 2022 domiciliary codes or the 2023 inpatient/observation visit descriptor times. To help distinguish initial and subsequent NF visits having high MDM, and better match the descriptor time to the intraservice time, CPT could have adopted a descriptor time of 50 minutes for CPT code 99306. To avoid creating Medicare-specific codes for NF visits, for CY 2023 we are adopting the CPT code descriptors as revised for CPT codes 99306 and 99310. However, we recommend that CPT revise the descriptor for CPT code 99306, and clarify the methodology being used to establish CPT code descriptor times within and across E/M visit families. Applying a consistent methodology seems important for establishing relativity within and across families.

**Comment:** In their public comment, the AMA explained that the descriptor time for CPT code 99308 was rounded down, from 18 minutes intraservice time to 15 minutes in the descriptor, to maintain a 15-minute incremental reporting pattern for time among the subsequent NF visit codes. As discussed above, we note that CPT does not consistently apply this approach within or across E/M visit families when establishing descriptor times, historically or for 2023. Applying a consistent methodology seems important for establishing relativity within and across families. We recommend that CPT revise the descriptor for CPT code 99308 to 20 minutes and clarify the methodology being used to establish CPT code descriptor times within and across E/M visit families. To avoid creating Medicare-specific codes for NF visits, for 2023, we are adopting the CPT code descriptor as revised for CPT code 99308.

Regarding valuation for CPT code 99308, the RUC appears to have recommended the increased work RVU based upon a slightly increased intraservice time, despite a slight decrease in total time. We note that the specialty societies had requested an even higher work RVU (the median),

which the RUC did not accept. Since the total time decrease was small, we are finalizing our proposal to accept the RUC-recommended work RVU (the survey 25th percentile), which will increase the work RVU for CPT code 99308 from 1.16 to 1.30.

**Comment:** MedPAC agreed with the concerns we expressed regarding the times in the descriptors and the associated RUC-recommended valuations for this family, and was not in support of the proposal to accept the RUC recommendations for this code family. MedPAC suggested that the RUC address these concerns by revising the RVUs or that CMS develop its own RVUs for these services since nursing facility E/M visit codes are used as reference codes for valuing many other services in the fee schedule. MedPAC opined that assigning inaccurate work RVUs to these E/M codes could, therefore, lead to inaccurate payments—not just for these services, but also for a variety of other services that are valued in relation to these visits. MedPAC suggested that CMS ask the RUC to revisit its valuation of the nursing facility E/M visit codes; alternatively, CMS could propose its own work RVUs in next year’s proposed rule. In the interim, MedPAC further suggested that CMS should retain the current RVUs for nursing facility E/M visit codes.

**Response:** We had considered proposing to maintain the work RVUs for several of the codes, as stated above for the nursing facility code set, or alternatively, creating new coding or assigning different work values to address the concerns we identified for this code set. However, after reviewing our options and considering the potential impact on interested parties, including the process through which the codes would be revalued, we concluded it would be least disruptive to adopt the revised code set and values as proposed. As discussed above, we are recommending that the CPT Editorial Panel reconsider the descriptor times for several of the codes in this family, and apply a more consistent approach to descriptor times within and across families. We intend to monitor this code set and will propose any necessary changes through future rulemaking.

After consideration of public comments, we are finalizing as proposed, to accept the RUC recommendations for this code family and adopt the CPT codes as revised. However, we recommend that the CPT Editorial Panel reconsider the descriptor times for several codes in this family, and provide more transparency and

consistency when establishing descriptor times for E/M visits.

#### c. Prolonged Services

We proposed that prolonged nursing facility services by a physician or NPP would be reportable using prolonged service HCPCS code G0317, which would be used to account for additional time spent when the total time for the NF service (specified in the time file) is exceeded by 15 or more minutes. The long descriptor would be *G0317 (Prolonged nursing facility evaluation and management service(s) beyond the total time for the primary service (when the primary service has been selected using time on the date of the primary service); each additional 15 minutes by the physician or qualified healthcare professional, with or without direct patient contact (list separately in addition to CPT codes 99306, 99310 for nursing facility evaluation and management services). (Do not report G0317 on the same date of service as other prolonged services for evaluation and management 99358, 99359, 99418). (Do not report G0317 for any time unit less than 15 minutes))*. We proposed that the practitioner would include any prolonged service time spent within the surveyed timeframe, which includes the day before the visit, the day of the visit, and up to and including 3 days after the visit (please see summary Table 18 in our proposed rule). We proposed that prolonged physician or NPP NF services would be reportable when the total time (in the physician time file) is exceeded by 15 or more minutes which would be once 95 minutes are spent for initial NF visits, and once 85 minutes are spent for subsequent NF visits, and for each additional 15 minutes furnished thereafter. Consistent with CPT coding guidance as indicated below, there would not be any frequency limitation; therefore, we proposed that physicians and NPPs would be able to bill G0317 for each additional 15-minute increment of time beyond the total time for CPT codes 99306 and 99310.

Since G0317 includes time without direct patient contact, there would no longer be a need to use CPT codes 99358 and 99359 (prolonged E/M service on a date other than the face-to-face E/M) in conjunction with NF visits. Therefore, we proposed to change the payment status for CPT codes 99358 and 99359 to "I" (*Not valid for Medicare purposes. Medicare uses another code for reporting of, and payment for, these services*). This is consistent with our final policy for O/O E/M visits, where prolonged time can no longer be reported using CPT codes 99358 and 99359. We continue to be concerned

about program integrity, counting time that was not included in the surveyed timeframe, and the administrative complexity of having multiple prolonged service codes associated with a given primary service (see our previous discussion of these issues in our CY 2020 PFS final rule at 84 FR 62849 through 62850). As we stated in that rule, many other codes are available to report prolonged E/M work associated with an E/M visits that occurs outside of the timeframe included in the visit, such as CCM, TCM, PCM, behavioral health integration (BHI), and other care management service codes. We designed these codes to be used to report time spent outside the direct patient contact (but still in management/consideration of that given patient's case) on dates other than the E/M visit. While these care management codes are not identical to the prolonged visit codes, they can be used to report a number of similar activities. Additional information about those codes can be found on our PFS Care Management website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management>. We also direct the reader to section II.E. of this final rule, where we proposed additional care management service codes for pain management and BHI.

When prolonged nursing facility services are furnished by a physician or NPP, they would be reportable under HCPCS code G0317. We believe that allowing practitioners to report CPT code 99418 after the minimum time requirement for the highest level subsequent visit is met and then exceeded by at least 15 minutes would result in double-counting time. As a specific example, CPT code 99310 requires that 45 minutes must be met or exceeded up to 60 minutes. If the reporting practitioner spent 55 minutes of time, those 55 minutes would be billed and are included in the services described by CPT code 99310. After 60 minutes has been met, any additional time should be counted toward the 15 minutes required to report the add on CPT code for the prolonged service. Similar to the policy we finalized in the CY 2020 PFS final rule for the O/O E/M visits (84 FR 62849), which states that when the time of the reporting physician or NPP is used to select O/O E/M visit level, HCPCS code G2212 could be reported when the maximum time for the level 5 O/O E/M visit is exceeded by at least 15 minutes on the date of service.

In addition, we noted that the CPT code descriptor for CPT code 99418 does not include nursing facility.

Further, the timeframes do not align for CPT codes 99418, 99358, and 99359. The survey time for CPT code 99418 is for time on the date of service, and when the nursing facility visit codes were resurveyed by the RUC, the survey time included the day before, the day of, and up to and including 3 days post the date of service. We proposed Medicare-specific coding in order to avoid duplicative counting of time, administratively simplify prolonged service coding, and better enable us to determine how much total time was spent with the patient. If we proposed to merely accept the CPT prolonged service coding changes, we would not be able to identify the time spent with patients in the claims data alone. This is because we might not know which primary service is the companion code to the prolonged service code(s) due to the wide service timespan (for prolonged services without direct patient contact) and non-specific care settings within the prolonged CPT code descriptors. Consistent with CPT's approach, we proposed that practitioners and NPPs would only be able to report the prolonged services code for NF (G0317) in conjunction with the highest level codes in the family (CPT code 99306 and 99310). This would also be consistent with our policy for O/O E/M visits (see (84 FR 62849).

We received many comments regarding our proposal for Medicare-specific coding for prolonged Other E/M services. We address comments that apply across the Other E/M visit families in this final rule in section II.F.11 below (Prolonged Services).

### 7. Nursing Facility Discharge Management (CPT Codes 99315–99316)

#### a. Coding

CPT codes 99315 (*Nursing facility discharge day management; 30 minutes or less*) and 99316 (*Nursing facility discharge day management; more than 30 minutes*) were identified for RUC review in October 2021 and were then postponed so that they could be reviewed at the same time as the inpatient hospital and observation care codes, in January 2022. Due to changes in physician work, changes in technology, patient population, and length of stay, the RUC determined that the nursing facility discharge services could be reviewed separately from the inpatient hospital discharge day services.

The nursing facility discharge day management codes are used to report the total duration of time spent by a physician or other qualified health care

professional for the final nursing facility discharge of a patient. The codes include, as appropriate, final examination of the patient and discussion of the NF stay, even if the time spent on that date is not continuous. Instructions are given for continuing care to all relevant caregivers, as well as for preparation of discharge records, prescriptions, and referral forms. These services require a face-to-face encounter, which may be performed on a calendar date prior to the actual discharge date. The time of the face-to-face encounter performed on a date prior to the discharge date is counted toward CPT code 99315 and CPT code 99316 and not reported separately.

We proposed to retain our policy that CPT codes 99315 and 99316 (as appropriate) shall be reported for a face-to-face visit with the patient provided by the physician or the qualified NPP, which is required in order to report the SNF/NF discharge day management service. The NF discharge day management visit shall be reported for the date of the actual visit by the physician or qualified NPP, even if the patient is discharged from the facility on a different calendar date. (Refer to Medicare Claims Processing Manual, IOM 100–04, Chapter 12, 30.6.13.I.) Additionally, we proposed that a physician or qualified NPP may report CPT codes 99315 or 99316 for a patient who has expired only if the physician or qualified NPP personally performed the death pronouncement.

#### b. Valuation

We proposed the RUC-recommended work RVU of 1.50 for CPT code 99315. We considered maintaining the current work RVU of 1.28 for CPT code 99315, based on the total time ratio between the current time of 40 minutes and the recommended time established by the survey of 40 minutes. Utilizing our total time ratio methodology this ratio equals 100 percent, and 100 percent of the current work RVU of 1.28, which indicates there is no change to the physician service and no change in the physician total time. We believe that, since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In this case, there was no change in total time. However, maintaining CPT code 99315 at the current value of a work RVU of 1.28 would cause a rank order anomaly with CPT code 99308. Also, given the remaining NF codes were revised to align with the principles included in the O/O E/M visit services by documenting and selecting level of service based on

total time or MDM, we concluded that the increase of the work RVU to 1.50 for CPT code 99315 would be appropriate.

We proposed the RUC-recommended work RVU of 2.50 for CPT code 99316. We considered proposing a work RVU of 2.22 based on the total time ratio between the current time of 54 minutes and the recommended time established by the survey of 63 minutes. When we reviewed CPT code 99316, we found that the recommended work RVU was higher than nearly all of the other global XXX codes with similar time values, and we do not believe that this code would have an anomalously high intensity. As we stated earlier, in light of changes made to the O/O E/M visits and the changes to include documenting and selecting level of service based on total time or MDM, we proposed the RUC-recommended work RVU of 2.50 for CPT code 99316. We proposed the RUC-recommended direct PE inputs for CPT code 99315 and the RUC-recommended direct PE inputs for CPT code 99316.

*Comment:* We only received comments in support of the proposed valuation for CPT codes 99315 and 99316.

*Response:* We appreciate the support for our proposed work RVUs for CPT codes 99315 and 99316, and are finalizing as proposed.

#### c. Prolonged Services

CPT code 99315 and CPT code 99316, the two codes for nursing facility discharge management, are set up as a base code with an add-on code with no ceiling of time. Since time on any day can be included when billing CPT code 99315 or 99316, there is no need for a prolonged service code for either of these two codes. Allowing for a prolonged service code for either of these two codes could result in double counting a physician or NPP's time spent during a nursing facility discharge, which would not be appropriate. Additionally, CPT code 99418 does not include Nursing Facility in the descriptor. Therefore, we proposed that prolonged services would not be reportable in conjunction with CPT codes 99315 and 99316 (NF discharge day management).

The following is a summary of the comments we received on our proposal and our responses.

*Comment:* We only received comments in support of our proposal that prolonged services would not be reportable in conjunction with CPT codes 99315 and 99316.

*Response:* We appreciate the support from the commenters and are finalizing as proposed. We refer readers to section

II.F.11 below for a discussion of comments received on prolonged Other E/M services generally.

#### 8. Annual Nursing Facility Assessment (CPT Code 99318)

##### a. Coding

CPT code 99318 (*Evaluation and management of a patient involving an annual nursing facility assessment, which requires these 3 key components: A detailed interval history; A comprehensive examination; and Medical decision making that is of low to moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 30 minutes are spent at the bedside and on the patient's facility floor or unit*) was recommended for deletion by CPT for 2023. In February 2021, the CPT Editorial Panel deleted CPT code 99318 and revised seven nursing facility codes to align with the principles included in the O/O E/M visits by documenting and selecting level of service based on total time or MDM.

We proposed to accept CPT's deletion of CPT code 99318. Our longstanding manual guidance states that an annual nursing facility assessment visit code may substitute as meeting one of the required physician visits, as specified in 42 CFR 483.30 (c)(1), if the code requirements for CPT code 99318 are fully met (Medicare Claims Processing Manual (Pub. 100–04) Chapter 12, section 30.6.13 (B)). Due to the longstanding nature of the manual section, we believe some provisions may be outdated, and it is possible to satisfy this requirement through other codes. We solicited comment on whether there is a need to keep this code for Medicare purposes. As we consider accepting the CPT's deletion of CPT code 99318, we are concerned that the absence of a similar code could cause an unwarranted increase in valuation of other services under the PFS, and CMS would not have a means of tracking how often these visits are occurring. While CPT code 99308, CPT code 99309, and CPT code 99310 could be used to report the required annual visit, if we were to accept deletion of CPT code 99318, we believe most of the utilization for that former code would instead be reported under CPT code 99309, with a RUC-recommended work RVU of 1.92 which is described in the valuation section below.

## b. Valuation

After considering the utilization and the need for the service described by CPT code 99318, we proposed to accept the CPT's deletion of CPT code 99318. Given the proposed deletion of CPT code 99318, the RUC recommends that 10 percent of the CPT code 99318 utilization would go to CPT code 99308, with a work RVU of 1.16; 85 percent of the utilization would go to CPT code 99309, with a work RVU of 1.55; and 5 percent of the utilization would go to CPT code 99310, with a work RVU of 2.35.

The following is a summary of the comments we received on our proposal and our responses.

*Comment:* All commenters supported the CPT Editorial Panel decision to delete CPT code 99318, and stated that the service is reported sufficiently with other codes.

*Response:* We appreciate the feedback from the commenters regarding our proposal to accept the CPT Editorial Panel decision to delete CPT code 99318 and are finalizing as proposed to accept the CPT's deletion of CPT code 99318. We are also finalizing our proposal to accept the RUC-recommended utilization estimates for visits that would have been reported under this code.

#### 9. Home or Residence Services (CPT Codes 99341, 99342, 99344, 99345, 99347–99350)

## a. Coding

Beginning in 2023, the CPT Editorial Panel is merging the two E/M visit families currently titled “Domiciliary, Rest Home (eg, Boarding Home), or Custodial Care Services” and “Home Services.” The new family will be titled “Home or Residence Services,” and the codes in this family will be used to report “evaluation and management services provided in a home or residence. . . [and] when the residence is an assisted living facility, group home (that is not licensed as an intermediate care facility for individuals with intellectual disabilities), custodial care facility, or residential substance abuse treatment facility. For services in an intermediate care facility for individuals with intellectual disabilities and services provided in a psychiatric residential treatment center, see Nursing Facility Services.” (2023 CPT Codebook, p.25–26). There are no changes to the included care settings from each respective family, rather the current care settings for each of the current families are being included within the new, merged family.

More specifically, in its February 2021 meeting, effective beginning in 2023, the CPT Editorial Panel deleted the nine CPT codes in the Domiciliary, Rest Home (for example, Boarding Home), or Custodial Care Services code family (CPT codes 99324–99328, and 99334–99337), and one CPT code in the Home Services family (CPT code 99343), to merge these services with the eight remaining home visit services. The eight remaining home services CPT codes (99341, 99342, 99344, 99345, and 99347–99350) were revised to describe Home or Residence Services to align with the principles of the O/O E/M visit codes by allowing physicians and NPPs to document and select the level of service based on total practitioner time or MDM level. These changes include combining the domiciliary, rest home and custodial care CPT codes with the home visit CPT codes, resulting in a single family of CPT codes that describe these types of services. In addition, CPT revised the descriptors to allow reporting that is based on time or MDM level—in alignment with the O/O E/M visit CPT codes. We proposed to accept these coding revisions.

The following is a summary of the comments we received and our responses.

*Comment:* The commenters supported our proposal to accept the CPT coding changes for Home or Residence Services codes.

*Response:* We appreciate the feedback from the commenters regarding our proposal, and are finalizing as proposed to adopt the CPT merger of the home and domiciliary visits into one family, and adopt the CPT codes as revised for reporting these services.

## b. Valuation

The RUC survey time includes pre-service time 3 days before the date of encounter, intraservice time on the date of encounter, and post-service time that includes 7 days after the date of encounter. These eight CPT codes were reviewed at the October 2021 RUC meeting with recommendations submitted to CMS for the CY 2023 rule cycle. The RUC recommended the survey 25th percentile value for all CPT codes in the Home or Residence Services code family, except for CPT code 99350, for which the RUC recommended the median value. We proposed the RUC-recommended work RVU for all eight CPT codes in the Home or Residence Services CPT code family. We proposed a work RVU of 1.00 for CPT code 99341 (*Home or residence visit for the evaluation and management of a new patient, which requires a medically appropriate history*

*and/or examination and straightforward medical decision making*), a work RVU of 1.65 for CPT code 99342 (*Home or residence visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making*), a work RVU of 2.87 for CPT code 99344 (*Home or residence visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making*), a work RVU of 3.88 for CPT code 99345 (*Home or residence visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making*), a work RVU of 0.90 for CPT code 99347 (*Home or residence visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination* straightforward medical decision making), a work RVU of 1.50 for CPT code 99348 (*Home or residence visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making*), a work RVU of 2.44 for CPT code 99349 (*Home or residence visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making*), and a work RVU of 3.60 for CPT code 99350 (*Home or residence visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making*).

We proposed the RUC-recommended direct PE inputs for CPT codes 99345 and 99347–99350 without refinement. For CPT codes 99341 and 99342, we are refining the direct PE inputs by removing supply item SK062 (patient education booklet). For CPT code 99344, we are refining the direct PE inputs by removing supply items SK062 (patient education booklet), SJ053 (swab-pad, alcohol), and SJ061 (tongue depressor). Per the PE Summary of Recommendations provided by the RUC, CPT codes 99341, 99342, 99344, and 99347 would typically have procedures performed on the same date of service. For those CPT codes, the RUC stated that they removed supplies that would be duplicative, such as gloves, alcohol wipes, booklet, and tongue depressor. However, we found that not all of these duplicative supplies had been removed from CPT codes

99341, 99342, and 99344 by the RUC. Therefore, we proposed to remove these duplicative supplies from CPT codes 99341, 99342, and 99344, and accept the remaining RUC-recommended direct PE inputs without refinement.

The following is a summary of the comments we received and our responses.

*Comment:* The majority of commenters supported our proposal to accept the RUC-recommended RVUs for all of the Home or Residence Services codes.

*Response:* We appreciate the feedback from the commenters regarding our proposal.

*Comment:* A few commenters stated the RVUs for the Home or Residence Services code family were too low, and fail to adequately account for travel, addressing social determinants of health, and other comprehensive care. One commenter suggested that we maintain the current RVUs for codes 99341, 99344, 99345, 99347, and 99348, for which the RUC-recommended RVUs decreased, while supporting our proposal to accept the increased RVUs for codes 99342, 99349, and 99350 recommended by the RUC. Another commenter suggested that we increase the RVUs for the entire code family to reflect travel expenses, and expressed concern that unreimbursed travel will be detrimental to the care provided to very ill patients and threaten the financial viability of physician practices that provide home or residence visits.

*Response:* We continue to believe that the RUC-recommended RVUs are the appropriate values for CPT codes 99341, 99342, 99344, 99345, and 99347–99350. We appreciate the commenters' remarks, and we acknowledge the concerns regarding providing patient care and addressing social determinants of health and other issues during home or residence visits. Historically, travel costs incurred by the physician or practitioner are not included in the valuation of E/M codes, since travel time and/or mileage is not considered a resource involved in furnishing the service. The RUC survey for the Home or Residence Services code family did not include information on physician travel or mileage. Also, the CPT E/M guidelines for selecting the level of home or residence service, when performed based on time, specifically says not to count the time spent on travel (2023 CPT Codebook, p. 26). Therefore, we are finalizing the RUC-recommended work RVUs as proposed.

*Comment:* One commenter requested that we not refine the direct PE inputs for codes 99341, 99342, and 99344 as proposed. For CPT codes 99341 and

99342, we proposed removing supply item SK062 (patient education booklet). For CPT code 99344, we proposed removing supply items SK062 (patient education booklet), SJ053 (swab-pad, alcohol), and SJ061 (tongue depressor).

*Response:* Per the PE Summary of Recommendations provided by the RUC, CPT codes 99341, 99342, 99344, and 99347 would typically have procedures performed on the same date of service, which would already include some of the same supply items. For these CPT codes, the RUC stated that they had removed the PE inputs for supplies that would be duplicative with the procedure on the same day, such as gloves, alcohol wipes, a booklet, and a tongue depressor. Although the RUC did remove the duplicative supplies for CPT code 99347 from the direct PE inputs they recommended, we found that the RUC had not removed all of these duplicative supplies from CPT codes 99341, 99342, and 99344. Therefore, we proposed to remove these duplicative supplies from the direct PE inputs for CPT codes 99341, 99342, and 99344. We continue to believe these supplies are duplicative with a same-day procedure, and are, therefore, finalizing the direct PE inputs for CPT codes 99341, 99342, 99344, and 99347 as proposed.

After consideration of the public comments, we are finalizing the work RVU values for the Home or Residence Services code family as proposed. We are also finalizing the direct PE inputs for these codes as proposed.

#### c. Prolonged Services for Home or Residence Services

We proposed that prolonged home or residence services by a physician or NPP would be reportable using HCPCS code G0318 (*Prolonged home or residence evaluation and management service(s) beyond the total time for the primary service (when the primary service has been selected using time on the date of the primary service); each additional 15 minutes by the physician or qualified healthcare professional, with or without direct patient contact (list separately in addition to CPT codes 99345, 99350 for home or residence evaluation and management services). (Do not report G0318 on the same date of service as other prolonged services for evaluation and management 99358, 99359, 99417). (Do not report G0318 for any time unit less than 15 minutes)*). Code G0318 would be reportable when the total time for the home or residence visit (specified in the time file) is exceeded by 15 or more minutes. Prolonged services (whether on the same date or another date within the surveyed timeframe) would be

reportable as an add-on code to CPT codes 99345 or 99350 once the practitioner spends 15+ minutes beyond the total time finalized for the primary service (as specified in the time file). We would allow the physician or NPP to include any prolonged service time spent within the surveyed timeframe for the Home or Residence Services code family, which includes pre-service time 3 days before the date of encounter, intraservice time on the date of encounter, and post-service time that includes 7 days after the date of encounter. This means that for CPT code 99345, assuming we finalized the RUC-recommended total time of 126 minutes, prolonged services would be reportable once 141 or more minutes are spent by a physician or NPP providing the home or residence visit. Likewise, for CPT code 99350, assuming we finalized the RUC-recommended total time of 97 minutes, prolonged services would be reportable once 112 or more minutes are spent by a physician or NPP providing the home or residence visit. See Table 18 in our proposed rule for a table summarizing this information.

Since we proposed that prolonged services on any date within the service period (with or without direct patient contact, on the same or different date) would be reportable under G0318, we also proposed that CPT code 99358 (*Prolonged evaluation and management service before and/or after direct patient care; first hour*), CPT code 99359 (*Prolonged evaluation and management service before and/or after direct patient care; each additional 30 minutes (List separately in addition to code for prolonged service)*), and CPT code 99417 (*Prolonged outpatient evaluation and management service(s) time with or without direct patient contact beyond the required time of the primary service when the primary service level has been selected using total time, each 15 minutes of total time (List separately in addition to the code of the outpatient Evaluation and Management services)*) cannot be billed for CPT codes 99345 and 99350. We proposed to change the status indicator for CPT codes 99358 and 99359 to "I," which indicates that these codes are not valid for Medicare purposes, and that Medicare uses another code for reporting of, and payment for, these services.

We continued to be concerned about program integrity, duplicative time, counting time that was not included in the surveyed timeframe, the administrative complexity of having multiple prolonged service codes, and our ability to determine how much time was spent with the patient using claims data. If we proposed to merely accept

the CPT coding for prolonged home or residence E/M visits, we would not be able to identify from the claims data the time spent with patients. This is because we might not know which primary service is the companion code to the prolonged service code(s) due to the wide service timespan (for prolonged services without direct patient contact) and non-specific care settings within the prolonged CPT code descriptors. See our previous discussion of these issues in our CY 2020 PFS final rule at 84 FR 62849 through 62850. As we stated in that rule, many other codes are available to report prolonged E/M work associated with an E/M visit that occurs outside of the timeframe included in the visit, such as CCM, TCM, PCM, behavioral health integration (BHI), and other care management service codes. We designed these codes to be used to report time spent outside the direct patient contact on dates other than the E/M visit. While these care management codes are not identical to the prolonged visit codes, they can be used to report a number of similar activities. Additional information about the care management codes can be found on our PFS Care Management web page on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management>. We also directed readers to our proposals for additional care management service codes for pain management and BHI.

We received many comments regarding our proposal for Medicare-specific coding for prolonged Other E/M services. We address comments that apply across the Other E/M visit families in this final rule in section II.F.11 below (Prolonged Services). We received a few comments that apply specifically to prolonged service codes for home or residence visits, and we address those as follows.

*Comment:* A few commenters stated it is unclear whether the time for prolonged code G0318 must occur on the date of the home or residence visit, or could be over the span of 3 days prior and 7 days after the home or residence visit occurs.

*Response:* The prolonged time can occur on the date of the visit, or within the 3 days prior or 7 days after the visit date. These 11 days comprise the service period used by the AMA RUC to develop recommended values for home or residence visits. See Table 24 for a summary of this information. We note that for ease of reporting, we are rounding to the nearest 5 minutes for the time threshold to report G0318,

which results in a lower time by 1 or 2 minutes, shown in Table 24.

*Comment:* One commenter suggested that we allow code G2211 (*Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition. (add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established)*) to be reported with the home or residence visit codes.

*Response:* Section 113 of the Consolidated Appropriations Act, 2021 delayed Medicare payment for G2211 until at least January 1, 2024. For further discussion on code G2211, see 2. Overview of Policy Proposals, in this section above, in this final rule.

After consideration of the public comments, we are finalizing our proposal to create new code G0318 for a prolonged home or residence visit. We are also finalizing our proposal to change the status indicator for prolonged CPT codes 99358 and 99359 to "I," which indicates that these codes are not valid for Medicare purposes, and that Medicare uses another code for reporting of, and payment for, these services.

#### 10. Cognitive Assessment and Care Planning (CPT Code 99483)

##### a. Coding and Valuation

In February 2021, the CPT Editorial Panel revised CPT code 99483 to replace "50 minutes" from its descriptor with a revised time value determined by the RUC survey to align with the principles underlying the O/O E/M CPT codes. The 2023 descriptor time for CPT code 99483 will be 60 minutes typical time instead of 50 minutes typical time.

Due to the increase in the valuation for O/O E/M visits in the CY 2021 PFS final rule (85 FR 84556), we finalized a proposal to increase the value of CPT code 99483 from 3.44 to 3.80 work RVUs as a service that is analogous to the O/O E/M visits, because CPT code 99483 includes a high-level O/O E/M visit. We stated that 99483 includes an evaluation of a patient's cognitive functioning and requires collecting pertinent history and current cognitive status, all of which require MDM of moderate or high complexity. To not create a rank order anomaly with CPT code 99205 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or*

*examination and high level of medical decision making. When using time for code selection, 60–74 minutes of total time is spent on the date of the encounter*) we increased 99483 by using the ratio of the increase between the CY 2020 and CY 2021 values for 99205 to commensurate with the increase to CPT code 99205.

We did not propose the RUC-recommended work RVU of 3.50, because we continued to believe that this service is appropriately valued more highly than the analogous O/O E/M visit code, CPT code 99205. Given what we viewed as the appropriate rank order among these services, we did not believe a reduction in work RVU, especially with a ten-minute increase in physician time, is warranted. In the interest of supporting access to this service, we instead proposed a slight increase from the current 3.80 to 3.84 to account for the increase in physician time with use of a total time ratio: we divided the RUC-recommended total time of 86 by the current total time of 85 and then multiplied the product by the current work RVU of 3.80 to arrive at 3.84. We proposed the RUC-recommended PE inputs without refinement.

*Comment:* Several commenters supported our proposal to increase the work RVU to account for the increase in physician time.

*Response:* We appreciate the support for this proposal and are finalizing as proposed a work RVU of 3.84 for CPT code 99483. We are finalizing as proposed the RUC-recommended PE inputs without refinement.

##### b. Prolonged Services

We proposed that prolonged services would not be reportable in conjunction with CPT code 99483, because it has a typical time in its descriptor, which is not necessarily the actual time spent. Accordingly, we would not know when the prolonged services exceeded the service time.

*Comment:* A commenter did not agree with our proposal that prolonged services codes cannot be reported with cognitive assessment and care planning services, stating that since the inception of the code, prolonged services have been allowed, and that if 99483 cannot be reported as a prolonged service, the practitioner may have incentives to instead use time and report it as 99205.

*Response:* Since our final policy for other types of prolonged Other E/M services allows prolonged services reporting once total time, as reflected in the time file, is exceeded by the appropriate increment (not once the CPT code descriptor time is exceeded by

that increment), we do not believe the presence of a typical time in the descriptor for CPT code 99483 should prevent reporting of prolonged Cognitive Impairment Assessment services. We are persuaded that it would be appropriate for CPT code 99483 to be billable with prolonged services. We believe this would be consistent with our approach to other prolonged Other E/M services, which is that prolonged services can be reported if the physician or NPP spends 15 or more minutes beyond the total time (as specified in the time file and shown in Table 24).

After consideration of the public comments, we are not finalizing our proposal that prolonged services would not be reportable in conjunction with CPT code 99483. Instead, we are finalizing that CPT code 99483 can be billed with HCPCS code G2212 (prolonged office/outpatient E/M services) when 15 or more minutes beyond the total time is spent by the physician or NPP (summarized in Table 24). We are rounding the total time to the nearest 5 minutes for ease of reporting, which results in a prolonged services reporting threshold of 100 minutes (1 minute lower than the total time of 101 minutes). Time that is spent by the physician or NPP on any date within the surveyed timeframe for CPT code 99483 (within 3 days prior or 7 days after the date of the in-person visit) may be counted toward the reporting of prolonged services. Accordingly, we are revising the long descriptor for G2212 to include reference to CPT code 99483 as a code that can be listed separately with G2212.

#### 11. Prolonged Services

As discussed in the sections above, we proposed Medicare-specific coding for prolonged Other E/M services. We proposed three G codes (G0316, G0317 and G0318) for reporting of prolonged Other E/M services (one for each Other E/M family for which prolonged services would apply, namely inpatient/observation visits, nursing facility visits, and home or residence visits). This would be consistent with our previously finalized approach to prolonged O/O E/M services. In this section of our final rule, we address public comments regarding this proposal that apply across the Other E/M visit code families. We refer readers to individual sections above for public comments specific to a given code family.

*Comment:* Many commenters were disappointed with our proposal to use Medicare-specific coding for prolonged Other E/M services. Their overarching concern was potential confusion and administrative burden resulting from

different approaches between Medicare and CPT, and the potential for variation among payers. Some commenters noted that CPT's approach, dividing prolonged time into time spent on the date of the visit (described by one code set) and time spent on another date (described by another code set), is more intuitive for reporting than combining all time spent during the service time (as surveyed and valued) into a single code set as we proposed. Some commenters suggested that we should not align reported time with surveyed timeframes, which they assert are relatively inaccessible (other than the table provided by CMS in the proposed rule). However, some commenters supported our proposal. These commenters agreed with CMS that the proposed Medicare-specific coding will avoid duplicative payment, and corrects a lack of transparency in the CPT reporting times in comparison to survey times and work valuation.

The AMA stated that it is imperative that physicians have one set of clear codes and guidelines to report prolonged services. The AMA's strong preference is for CMS to rely on the CPT codes and guidelines, and if not, the AMA Workgroup on E/M will reconvene to discuss whether revisions are needed to the CPT codes and guidelines. The AMA urged CMS to work with the CPT/RUC E/M Workgroup to bring CMS and CPT prolonged services policies into alignment. The AMA also expressed interest in receiving CMS input earlier in its processes, which could improve alignment with a given CMS rulemaking cycle.

In their public comment, the AMA outlined ways in which they had sought to align the revised CPT coding with CMS' historical approach to prolonged services, and avoid creating a global period for E/M visits. The AMA noted that, during the E/M Workgroup process and CPT processes, there was much debate about whether to divide total time for reporting purposes into multiple codes, according to whether the time was spent on the date of the visit or another date. The E/M Workgroup believed that total time on the date of the encounter would be simpler to track and document for the primary service.

The AMA also noted that their recommended valuations for prolonged service codes are mathematically correct and simpler administratively.

Regarding prolonged services on a date other than the face-to-face E/M service (CPT codes 99358–9), the AMA recognized the concerns of CMS and agreed that potential overlap should be

eliminated. The AMA also noted that the other care management services have not eliminated the need to recognize a substantial amount of work that occurs on single day. They stated that they expected the volume for CPT codes 99358–9 to drop substantially, as reporting would no longer be allowed for time on the date of the encounter. The AMA stated that incorrect reporting should be addressed, but improper reporting by the few should not lead to these codes being eliminated. The AMA further stated that the CPT Editorial Panel may consider revisions to the prolonged service codes, but requested that CMS be an active participant in the public and open CPT processes rather than only in CMS rulemaking.

*Response:* We appreciate the commenters' concerns, and agree that the ideal approach would be a uniform CPT code set for reporting prolonged services. Generally, we prefer coding that is clear and consistent for practitioners to use, and we create Medicare-specific coding only when there is a significant program integrity concern or programmatic need, such as tailoring a code to a specific Medicare statutory benefit category.

Historically, time could only be used to select visit level when counseling and care coordination comprised more than half of the visit (See Medicare Claims Processing Manual (Pub. 100–04) Chapter 12, section 30.6.15.1.H). Prolonged services could be billed in that situation, only when the time for the highest-level visit in a given code family was exceeded by the prolonged services time increment. Prolonged services could also be billed for any visit level if the typical time was exceeded by the prolonged services time increment. Until 2017, prolonged services were only separately paid for face-to-face prolonged service time, which generally occurred on the date of the visit.

CY 2023 will be the first year in PFS history that almost any E/M visit level can be selected using time, whether that time was spent on the same day or another day. Almost all E/M visit codes have new times, new survey data, new valuations, new parameters for how visit level is selected, and revised MDM levels. Some of the highest volume code families will be merged, and a number of code families will have a different number of levels within the family than previously. It is hard to contemplate a single aspect of E/M visit coding that will not change in some way, and these services account for a high share of PFS spending. Therefore, it is appropriate for us to take a fresh look at our policy. In recent years, the E/M visit overhaul has

involved substantial work in a compressed timeframe, and our policy views have continued to evolve with each rulemaking cycle. We greatly appreciate and value the opportunity to attend the AMA meetings, but as a federal agency obligated under the Administrative Procedure Act and section 1871 of the Act to use notice and comment rulemaking procedures to establish regulations, and given that we generally use the AMA's CPT coding and RUC recommendations as the starting point to describe and value services to meet our statutory mandates for the PFS, it would not be appropriate for us to participate in AMA processes in a way that could steer its decisions. Additionally, CMS engages in an extensive internal deliberative process to develop its proposed and final policies that are ultimately issued through notice and comment rulemaking.

We have noted our concerns with the AMA's approach to prolonged services in several rulemaking cycles. We laid out many concerns with CPT codes 99358–9 when we adopted them in 2017 as an interim approach, given that at that time there were not many care management codes to account for physician time (81 FR 80228 through 80230). We laid out many more concerns in 2021 when finalizing our policy for prolonged O/O visits (84 FR 62847 through 62851). Although we initially adopted the CPT code for prolonged O/O services, we expressed our belief that there should be a single code for prolonged O/O service reporting, and subsequently finalized a Medicare-specific code because of our concerns about duplicative time counting under the revised CPT code (85 FR 84572 through 84575).

Prolonged service codes function like add-on codes for “extra-long” E/M visits. We believe the role of prolonged service codes is to account for time spent beyond the total service time, which is established in the AMA RUC survey for the primary service (the code with which the prolonged service code is billed, such as Level 3 home/residence visit), and reflected in the primary service's valuation. In contrast, the AMA seems to view prolonged services as accounting for time spent beyond intra-service time, which is only part of the visit. However, the total times recommended and used by the RUC to recommend values for the primary services, which we review and consider in establishing values for the PFS, are not limited to intra-service time. They include pre- and post-service time as well, and as such, the primary service is already valued to include total

time. It would be redundant to reflect this time under the primary service code, and then again using prolonged service code(s) in addition to the primary service code.

We understand that viewing the service as a whole requires the billing practitioner to look back once the visit is completed to identify the total time spent furnishing the service, rather than billing one code at the end of the calendar date of the face-to-face visit, and another code to reflect additional time spent on other days. However, we do not see another way to more accurately account for time. If practitioners want to bill immediately for time spent on the date of a visit, or during the face-to-face portion of the service, then perhaps the AMA's surveys (and associated valuation recommendations) should be limited to that timeframe, instead of including other time. We do not believe it would be appropriate to adopt a policy suggesting that a practitioner can bill an extra code that describes time and work that was already reflected in the survey, valuation, and PFS payment as part of the pre-/post-service time for the primary visit code.

We laid out a summary table (Table 18 in the proposed rule), displaying information that we thought would help practitioners who may not be immediately aware of the surveyed timeframes for E/M visits, and who may lack familiarity with the AMA process where visits are assumed to take place over a number of days (and with different timeframes for different types of visits) and valued accordingly. We anticipate providing a similar table in our manual, website, and other subregulatory guidance to facilitate practitioner access to this information. We do not believe the solution lies in open-ended codes like CPT codes 99358–9, which have no beginning, end, or specified setting, seemingly could be used when a visit is not timed, and cannot readily be associated or connected with a particular face-to-face visit. Since practitioners may find it easier to follow time thresholds for reporting that are rounded, we are rounding all of the total times to the nearest 5 minutes, as reflected in Table 24. (This results in rounding down the reporting time thresholds for prolonged Other E/M services by 1 or 2 minutes in several instances).

We appreciate the AMA's understanding of the many issues we laid out for CPT codes 99358–9, describing prolonged time spent on a date other than the visit, and planning for additional review. We will continue to follow any additional developments

on these codes and prolonged service coding generally should the AMA make additional changes.

*Comment:* In its public comment, the AMA defended payment for the 15-minute prolonged service code for one minute of service time by pointing out the conundrum of any time threshold, where small time increments can result in disproportionate RVU increases when transitioning between levels of service (for example, from a level 4 to level 5 O/O visit) where time is being used to select visit level. The AMA used examples from the O/O visit code set, rather than the Other E/M visit code set to demonstrate this point.

*Response:* We appreciate the AMA's feedback. Based on the AMA E/M Workgroup discussions, we understood that the AMA views prolonged services as a type of additional visit level, based solely on additional time. Viewed through that lens, it might be understandable to allow reporting of the code representing the next highest level, as soon as the floor of that next level is reached. However, CPT did not define prolonged services as an additional visit level. Also, we believe that prolonged services should describe additional time beyond the total time (not just the intra-service time), since the primary service is already valued based on total time.

*Comment:* One commenter recommended requiring a 15-minute time increment beyond the CPT code descriptor time, which they noted is the same as CPT's approach.

*Response:* We appreciate the commenter's feedback. We considered this approach in our proposed rule (87 FR 46426). However, our understanding is that the time in the CPT code descriptors for the Other E/M primary services generally corresponds to the intra-service time for the primary service. As previously discussed, we believe prolonged services should be billed to account for time surpassing the total time rather than just the intra-service time, since pre- and post-service time is already included in the primary service valuation.

We continue to believe that adopting the CPT codes for prolonged services would result in duplicative time counting, and reported times that do not align with work times used for valuation. Having three sets of codes for reporting time associated with a single visit is overly complex, and hinders our ability to assess how much time was spent, or trends in time spent, with patients using claims data under the new framework. However, we agree with commenters that a uniform code set for use by all payers for prolonged services is preferable to further reduce

administrative burden. After consideration of the public comments, we are finalizing our proposals for prolonged Other E/M services as proposed, and we will continue to work with the AMA to consider further refinements and standardization of this code set through notice and comment rulemaking. In Table 24, we provide a summary listing of the required time thresholds to report prolonged Other E/M services beginning in CY 2023, and show the time periods during which practitioners may count time spent toward prolonged service reporting.

## 12. Prolonged Services Valuation

### a. Prolonged Services With Direct Patient Contact (CPT Codes 99354–99357)

The CPT Editorial Panel is deleting CPT codes 99354–99357 (*prolonged services with direct patient contact (except with office or other outpatient services)*). These codes are currently used to report prolonged E/M visit time involving direct patient contact by physicians or NPPs beyond the usual service in settings other than O/O settings. We proposed to accept this deletion, since this work would be reported instead under the Medicare-specific codes that we proposed for prolonged physician/NPP time, discussed in each family's section above.

We did not receive public comments on this proposal, and therefore, we are finalizing as proposed.

### b. Prolonged Services on a Different Date Than the E/M (CPT Codes 99358–99359)

We noted that the RUC resurveyed and provided recommendations to revalue these codes. However, we proposed to assign an inactive status to these codes for purposes of Medicare payment as discussed above. We received comments on this proposal,

which we discuss above as applicable within each family.

After consideration of the public comments, we are finalizing as proposed to assign an inactive status to these codes for purposes of PFS payment as discussed above.

### c. Prolonged Clinical Staff Services (CPT Codes 99415 and 99416)

CPT code 99415 was created to describe the first hour of prolonged clinical staff services provided in addition to an office E/M visit, while CPT code 99416 was created to describe each additional 30 minutes beyond that first hour of prolonged clinical staff service time that was provided in addition to the O/O E/M visit. For these codes, we proposed the RUC-recommended direct PE inputs without refinement.

We did not receive public comments on this proposal, and therefore, we are finalizing as proposed.

### d. Valuation of Prolonged Other E/M Services (HCPCS Codes G0316, G0317 and G0318)

As discussed above in the Overview section, we do not agree that there is necessarily inherently greater complexity of patient need or intensity of work for E/M visits furnished in non-office settings (for example, inpatient, ED, and home settings) compared to the office settings. Therefore, we believe it would be more accurate to make payment based on the same time increment of physician work in these various settings. We proposed that the three prolonged visit HCPCS G codes G0316–G0318 (discussed above under each applicable family) be valued identically across settings, based on the RUC-recommended value for CPT code 99417. Therefore, we proposed a work RVU of 0.61 for these codes with a crosswalk to CPT code 99417. We likewise proposed direct PE inputs for these three codes that are identical to the RUC-recommended PE inputs for

CPT code 99417 (prolonged office/outpatient services). For the purposes of ratesetting, our utilization for these services included the assumption that one third of the services currently reported with 99356 would be reported with each of HCPCS codes G0316, G0317, and G0318, and one third of the services currently reported with 99357 would be reported with each of HCPCS codes G0316, G0317, and G0318. We would continue to use HCPCS code G2212 as previously finalized in lieu of CPT code 99417.

*Comment:* The AMA stated that our approach to prolonged services would result overall in a decreased valuation for prolonged services, compared to their historical valuation. They noted this runs contrary to our original goal of shortening the prolonged service period, in order to increase prolonged services reporting (see 83 FR 35773, 59580).

*Response:* We appreciate this concern. Given the many changing aspects of E/M visit coding and payment, it does not seem feasible to estimate how prolonged services reporting and payment may change in 2023 compared to historical levels, and how this might impact the amount of time spent with patients. One of our key considerations in redesigning the prolonged services code set is whether we will be able to see more clearly how much time is spent with patients through claims data. We note that practitioners will be allowed to count time spent on visit documentation (documenting clinical information), which will help them reach reporting thresholds based on time earlier than they could historically. Regarding valuation compared to historical levels, the Medicare-specific coding has comparable or higher work per unit of time (see Table 23). We will monitor the claims data for prolonged services, and potentially consider future rulemaking if we observe under-reporting of prolonged services.

**TABLE 23: Prolonged Services Work-Per-Unit of Time Comparison**

| Prolonged HCPCS Code | Work RVU | Total Time | Work-per-time unit (work RVU/total time) |
|----------------------|----------|------------|--|
| CPT code 99356       | 1.71     | 60         | 0.0285                                   |
| CPT code 99357       | 1.71     | 30         | 0.0570                                   |
| CPT code 99358*      | 1.80     | 50         | 0.0360                                   |
| CPT code 99359*      | 0.75     | 30         | 0.0250                                   |
| CPT code 99418       | 0.81     | 20         | 0.0400                                   |
| G0316                | 0.61     | 15         | 0.0400                                   |

\*RUC-recommended values for 2023.

*Comment:* A commenter did not support the establishment of HCPCS codes G0316, G0317, and G0318, saying that this approach and our proposed work RVU of 0.61 for these G codes, inappropriately modifies the relativity between the prolonged visit codes and other services under the PFS. A commenter urged us to implement prolonged nursing facility and home/residence visits using CPT codes 99418 and 99417, and to adopt the RUC-

recommended work RVUs of 0.81 and 0.61 respectively.

*Response:* As discussed in this final rule in section II.F.11 above (Prolonged Services), we do not agree that there is necessarily inherently greater service complexity or intensity of work for E/M visits furnished in non-office settings (for example, inpatient, ED, and home settings) compared to the office settings. We are finalizing as proposed HCPCS codes G0316, G0317, and G0318 with a work RVU of 0.61 and direct PE inputs

for these three codes that are identical to the RUC-recommended PE inputs for CPT code 99417.

e. Summary of Required Time Thresholds To Report Other E/M Prolonged Services

Table 24 summarizes the final rules for reporting Other E/M prolonged services by physicians or NPPs (See each family section above for detailed information).

**TABLE 24: Required Time Thresholds to Report Other E/M Prolonged Services**

| Primary E/M Service                            | Prolonged Code* | Time Threshold to Report Prolonged | Count physician/NPP time spent within this time period (surveyed timeframe) |
|--|-----------------|------------------------------------|---|
| Initial IP/Obs. Visit (99223)                  | G0316           | 105 minutes                        | Date of visit   |
| Subsequent IP/Obs. Visit (99233)               | G0316           | 80 minutes                         | Date of visit   |
| IP/Obs. Same-Day Admission/Discharge (99236)   | G0316           | 125 minutes                        | Date of visit to 3 days after   |
| IP/Obs. Discharge Day Management (99238-9)     | n/a             | n/a                                | n/a   |
| Emergency Department Visits                    | n/a             | n/a                                | n/a   |
| Initial NF Visit (99306)                       | G0317           | 95 minutes                         | 1 day before visit + date of visit +3 days after                            |
| Subsequent NF Visit (99310)                    | G0317           | 85 minutes                         | 1 day before visit + date of visit +3 days after                            |
| NF Discharge Day Management                    | n/a             | n/a                                | n/a   |
| Home/Residence Visit New Pt (99345)            | G0318           | 140 minutes                        | 3 days before visit + date of visit + 7 days after                          |
| Home/Residence Visit Estab. Pt (99350)         | G0318           | 110 minutes                        | 3 days before visit + date of visit + 7 days after                          |
| Cognitive Assessment and Care Planning (99483) | G2212           | 100 minutes                        | 3 days before visit + date of visit + 7 days after                          |
| Consults                                       | n/a             | n/a                                | n/a   |

\* Time must be used to select visit level. Prolonged service time can be reported when furnished on any date within the primary visit's surveyed timeframe, and includes time with or without direct patient contact by the physician or NPP. Consistent with CPT's approach, we do not assign a frequency limitation.

**13. Consultations (CPT Codes 99241–99255)**

The RUC revised the code descriptors, deleted two codes, and revalued the RVUs of the consultation codes during its October 2021 and January 2022 RUC meetings. We did not review the RUC recommendations for the eight revised consultation codes (CPT codes 99242, 99243, 99244, 99245, 99252, 99253, 99254, and 99255). In our proposed rule, we noted that CMS stopped paying for the consultation codes beginning in CY 2010. We refer readers to 74 FR 61767 through 61775, where we discuss our payment policy for these services.

**14. Payment for Multiple Same-Day Visits**

Our manuals include many longstanding policies regarding when

more than one Other E/M visit can be billed by the same practitioner for the same patient on the same date of service, particularly when a patient is being transferred among multiple care settings. In contrast, CPT code reporting instructions generally do not limit the number of visits that can be billed. We proposed to continue our longstanding policies for same-day visits, and refer the reader to the sections above regarding our final policies in application to each individual Other E/M family.

**15. Split (or Shared) Services**

The split (or shared) “substantive portion” policy for services furnished in facility settings was reflected in subregulatory guidance until it was withdrawn in May of 2021, in response to a petition under the Good Guidance

regulation. In the CY 2022 PFS final rule (86 FR 65150 through 65159), we finalized a policy for E/M visits furnished in a facility setting, to allow payment to a physician for a split (or shared) visit (including prolonged visits), where a physician and NPP provide the service together (not necessarily concurrently), and the billing physician personally performs a substantive portion of the visit. At that time, commenters were generally supportive of our approach, with some divide with regard to our definition of substantive portion. Some commenters preferred the use of MDM or one of the three key visit components as opposed to time for purposes of defining what is the substantive portion of the service.

#### a. Background

A split (or shared) visit refers to an E/M visit performed by both a physician and an NPP in the same group practice. In the non-facility (for example, office) setting, the rules for “incident to” billing apply under this circumstance. However, “incident to” services are not available for services furnished in a facility setting. Longstanding CMS policy has been that, for split (or shared) visits in the facility (for example, hospital) setting, the physician can bill for the services if they perform a substantive portion of the encounter. Section 1833(a)(1)(N) of the Act specifies that payment is made for services furnished and billed by a physician at the PFS rate, while under section 1833(a)(1)(O)(i) of the Act, NPPs are paid for the services they furnish and bill for at a reduced PFS rate (85 percent of the PFS).

We defined substantive portion in the CY 2022 PFS final rule (86 FR 65152 through 65156) and provided for billing of split (or shared) visits in certain settings (86 FR 65156 through 65157) and for certain patient types (new and established) (86 FR 65156). After consideration of the public comments on the CY 2022 PFS proposed rule, we finalized a phased in approach to this policy (86 FR 65153). For CY 2022, we finalized the definition of substantive portion as one of the following: history, or exam, or MDM, or more than half of total time. In the CY 2022 PFS final rule (86 FR 65152 and 65153), we finalized that for CY 2023, the definition of substantive portion is more than half of total time.

As part of our ongoing engagement with interested parties, we are hearing continued concern about the implementation of our phased in approach with regard to defining “substantive portion” only as more than half of the total time of the visit, and continue to receive requests that we also recognize MDM as the substantive portion. Many of these concerns relate to practice patterns where the physician does not spend half or more of the time with the patient, as well as possible adjustments needed to the practice’s internal processes or information systems used to track visits based on time, rather than MDM. After consideration of public feedback, we proposed to delay implementation of our definition of the substantive portion as more than half of the total time until January 1, 2024. We continued to believe it is appropriate to define the substantive portion of a split (or shared) service as more than half of the total time, and proposed that this policy will

be effective beginning January 1, 2024. While we continued to believe that the definition of substantive portion we finalized in the CY 2022 PFS final rule is appropriate, delaying implementation of this aspect of our policy would also allow for the changes in the coding and payment policies for Other E/M visits to take effect for CY 2023, and allow for a one-year transition for providers to get accustomed to the new changes and adopt their workflow in practice. Additionally, this delay would allow interested parties another opportunity to comment on this policy, and gives us time to consider more recent feedback and evaluate whether there is a need for additional rulemaking on this aspect of our policy. To reflect the proposed delay, we proposed to amend our regulation text at 42 CFR 415.140 to revise the definition of substantive portion, and noted the current definition of substantive portion applies for visits other than critical care visits furnished in CY 2022 and CY 2023.

We proposed to amend § 415.140 by adding to paragraph (a) “and 2023” after the phrase “For visits other than critical care visits furnished in calendar year 2022”. Therefore, the proposed paragraph would specify, for visits other than critical care visits furnished in calendar year 2022 and 2023, *substantive portion* means one of the three key components (history, exam or MDM) or more than half of the total time spent by the physician and NPP performing the split (or shared) visit.

We received comments related to our proposal to delay implementation of the definition of substantive portion, as more than half of the time spent by the physician and non-physician practitioner (NPP), until CY 2024. Below is a summary of the comments received and their responses.

*Comment:* Commenters were generally in support of the delay. We received a number of comments consistent with the public comments that we received and addressed in our CY 2022 final rule (86 FR 65152 through 86 FR 65156). These commenters believe that tracking the time for purposes of determining the substantive portion for billing is too burdensome, and they recommend that we allow MDM to serve as the substantive portion, potentially supported by an attestation statement from the billing practitioner in the medical record affirming that the billing practitioner furnished the MDM. Some commenters were concerned that defining the substantive portion of a service by time alone would disrupt collaborative and team-based care, and interfere with the way care is delivered in the facility

setting. Some commenters also offered that there is significant variability in how much time it takes to perform elements of the visit, depending on the level of training and expertise of the physician and NPP. They stated that using MDM to direct the management of the patient’s care determines the course of treatment for the patient, but it typically does not require the most time. Some commenters recommended that we remove our split (or shared) visit policy.

*Response:* We thank the commenters for their views and suggestions, and note that we have previously addressed these issues. These comments were consistent with the comments we received when we finalized in the CY 2022 PFS final rule (86 FR 65152 through 86 FR 65156). We appreciate hearing from these interested parties and will continue to consider the issues raised in their comments for possible future rulemaking.

*Comment:* The AMA indicated in its public comment letter that it intended to refer the definition of split (or shared) services back to CPT for potential further review.

*Response:* We will review any revisions made by the CPT Editorial Board to standardized language, including any definition of “substantive portion” for split (or shared) services. We will take any revised CPT definitions or guidance into consideration for possible future rulemaking.

*Comment:* One commenter suggested an alternative policy that would create a “carve out” for rural practitioners, whereby practitioners furnishing split (or shared) services in rural areas or Health Professional Shortage Areas (HPSAs) would be able to use MDM as the substantive portion. Some commenters suggested discontinuing differential PFS payment for physicians and NPPs, or suggested splitting the difference to 7.5 percent.

*Response:* We appreciate the commenters’ concerns and will continue to consider the potential impact of our policy on rural or health professional shortage areas for future rulemaking. The differential payment to physicians and NPPs is a statutory requirement. Therefore, we do not have discretion to discontinue or modify the differential PFS payment rates for services furnished and billed by physicians and NPPs.

*Comment:* Several commenters were unclear how performance of the history or exam could be considered a substantive portion under the new CPT framework for facility E/M visits, where

MDM or time will be used to select the level of service.

*Response:* We thank the commenters for seeking clarification. Given the proposed delayed implementation of our substantive portion policy until CY 2024, our current policy remains in place. As such, when an E/M visit requires a medically appropriate history and/or physical exam, in accordance with its code descriptor, these service element(s) can qualify as the substantive portion, when performed.

After considering the public comments we received, we are finalizing our proposed policy to delay implementation of our definition of the substantive portion as more than half of the total practitioner time until January 1, 2024. We are revising our regulations at 42 CFR 415.140 accordingly.

#### 16. Technical Correction to the Conditions for Payment: Split (or Shared) Visits

In the CY 2022 PFS final rule (86 FR 64996), we finalized our definition of split (or shared) visits as proposed, and codified it in a new section of our regulations at § 415.140. We established regulation text for this definition of split (or shared) visits. We subsequently discovered an inadvertent typographical error in the instructions we used to codify the new regulation at § 415.140. Specifically, we added the regulation text for § 415.140 under subpart D, Physician Services in Teaching Settings, rather than subpart C, Part B Carrier Payments for Physician Services to Beneficiaries in Providers. Because this regulation was inadvertently included with policies relating to teaching physician services, and is more appropriately placed with other policies relating to payment for physicians' services to beneficiaries in providers, we proposed to revise our regulation to correct this error. As such, we proposed to amend part 415 subpart D by removing the regulation at § 415.140 and relocating that section to subpart C, such that subpart D will then begin at § 415.150.

We did not receive public comments on this proposal, and therefore, we are finalizing as proposed.

#### 17. Technical Correction for Split (or Shared) Critical Care Services

In the CY 2022 PFS final rule, starting at 86 FR 65159, we finalized a number of billing policies for critical care CPT codes 99291 (*Critical care, evaluation and management of the critically ill or critically injured patient; first 30–74 minutes*) and 99292 (*each additional 30 minutes*). At 86 FR 65162, we stated in error, “Similar to our proposal for split

(or shared) prolonged visits, the billing practitioner would first report CPT code 99291 and, if 75 or more cumulative total minutes were spent providing critical care, the billing practitioner could report one or more units of CPT code 99292.” We intended to state that CPT code 99292 could be billed after 104, not 75, or more cumulative total minutes were spent providing critical care. As correctly stated elsewhere in the CY 2022 PFS final rule (regarding critical care furnished by single physicians at 86 FR 65160, and regarding concurrent care furnished by multiple practitioners in the same group and the same specialty to the same patient at 86 FR 65162), our policy is that CPT code 99291 is reportable for the first 30–74 minutes of critical care services furnished to a patient on a given date. CPT code 99292 is reportable for additional, complete 30-minute time increments furnished to the same patient (74 + 30 = 104 minutes). We clarify that our policy is the same for critical care whether the patient is receiving care from one physician, multiple practitioners in the same group and specialty who are providing concurrent care, or physicians and NPPs who are billing critical care as a split (or shared) visit.

*Comment:* Although this was a technical correction, we received many comments on this policy. Commenters requested that we review or modify this billing policy. Many commenters urged us to adopt CPT's policy for reporting CPT code 99292 when 75 minutes had elapsed. Commenters also contended that this correction reflected a change in our billing policy for these codes. Some commenters also suggested that this policy amounted to an undervaluation for CPT code 99291. These commenters suggested that, while the purported time for CPT code 99291 is 30–74 minutes, our policy essentially extends the time covered by CPT code 99291 from 30–103 minutes.

*Response:* We agree with commenters that our policy as expressed in the CY 2022 final rule is different from the billing guidance in the CPT codebook. While we often align with CPT, there will be occasions when our billing policies differ. Specific to critical care, we noted in the CY 2022 PFS final rule at 86 FR 65159, “We proposed to adopt the CPT prefatory language for critical care services as currently described in the CPT Codebook, *except as otherwise specified* [emphasis added].” We then went on to specify in the CY 2022 PFS final rule a billing policy for reporting CPT code 99292 that is different from the CPT guidance.

We disagree that the technical correction reflects a change in policy as it was presented in the CY 2022 PFS final rule. At 86 FR 65160, we stated, “Under our proposal, the physician or NPP would report CPT code 99291 for the first 30–74 minutes of critical care services provided to a patient on a given date . . . . Thereafter, the physician or NPP would report CPT code 99292 for additional 30-minute time increments provided to the same patient.”

At 86 FR 65162, we specified, “[The] total time spent by the practitioners could be aggregated to meet the time requirement to bill CPT code 99291. Under this proposal, once the cumulative required critical care service time is met to report CPT code 99291, CPT code 99292 could not be reported by a practitioner in the same specialty and group unless and until an additional 30 minutes of critical care services are furnished to the same patient on the same day (74 minutes + 30 minutes = 104 total minutes).”

At this time, as we were not proposing a new policy for CY 2023, we are retaining the CPT code 99292, as it was finalized in the CY 2022 PFS, and we again note that it can be billed after 104 cumulative total minutes were spent providing critical care. However, we will take commenters' concerns regarding alignment with CPT instructions and the valuation of CPT code 99291 under consideration.

#### G. Geographic Practice Cost Indices (GPCIs)

##### 1. Background

Section 1848(e)(1)(A) of the Act requires us to develop separate Geographic Practice Cost Indices (GPCIs) to measure relative cost differences among localities compared to the national average for each of the three fee schedule components (that is, work, practice expense (PE), and malpractice (MP)). We discuss the localities established under the PFS below in this section. Although the statute requires that the PE and MP GPCIs reflect full relative cost differences, section 1848(e)(1)(A)(iii) of the Act requires that the work GPCIs reflect only one-quarter of the relative cost differences compared to the national average. In addition, section 1848(e)(1)(G) of the Act sets a permanent 1.5 work GPCI floor for services furnished in Alaska beginning January 1, 2009, and section 1848(e)(1)(I) of the Act sets a permanent 1.0 PE GPCI floor for services furnished in Frontier States (as defined in section 1848(e)(1)(I) of the Act) beginning January 1, 2011. Additionally, section

1848(e)(1)(E) of the Act provides for a 1.0 floor for the work GPCIs, which has been extended by many successive amendments to the statute. The 1.0 floor for the work GPCI under section 1848(e)(1)(E) of the Act was most recently extended by section 101 of the Consolidated Appropriations Act of 2021 (Pub. L. 116–260, enacted December 27, 2020) through CY 2023 (that is, for services furnished no later than December 31, 2023). Therefore, as proposed, the CY 2023 work GPCIs and summarized GAFs reflect the 1.0 work floor. Additionally, as required by sections 1848(e)(1)(G) and (I) of the Act, the 1.5 work GPCI floor for Alaska and the 1.0 PE GPCI floor for Frontier States are permanent, and therefore, were reflected in the CY 2023 proposed GPCIs.

Section 1848(e)(1)(C) of the Act requires us to review and, if necessary, adjust the GPCIs at least every 3 years. Section 1848(e)(1)(C) of the Act requires that, if more than 1 year has elapsed since the date of the last previous GPCI adjustment, the adjustment to be applied in the first year of the next adjustment shall be  $\frac{1}{2}$  of the adjustment that otherwise would be made. Therefore, since more than 1 year has passed since the previous GPCI update was implemented in CY 2020 and 2021, we proposed to phase in  $\frac{1}{2}$  of the proposed GPCI adjustment in CY 2023 and the remaining  $\frac{1}{2}$  of the adjustment for CY 2024.

We have completed our review of the GPCIs and are finalizing new GPCIs beginning for CY 2023 in this final rule. We also calculated a geographic adjustment factor (GAF) for each PFS locality. The GAFs are a weighted composite of each PFS locality's proposed work, PE and MP expense GPCIs using the national GPCI cost share weights. While we do not actually use GAFs in computing the fee schedule payment for a specific service, they are a useful metric for purposes of comparing overall costs and payments across fee schedule areas. The actual effect of GPCIs on payment for any actual service would deviate from the GAF to the extent that the proportions of work, PE and MP RVUs for the service differ from those reflected in the GAF.

As noted above, section 101 of the Consolidated Appropriations Act of 2021 extended the 1.0 work GPCI floor for services furnished through December 31, 2023. Therefore, the final CY 2023 work GPCIs and summarized GAFs reflect the 1.0 work floor. Additionally, as required by sections 1848(e)(1)(G) and (I) of the Act, the 1.5 work GPCI floor for Alaska and the 1.0 PE GPCI

floor for Frontier States are permanent, and therefore, reflected in the CY 2023 final GPCIs. See Addenda D and E to this final rule for the CY 2023 final GPCIs and summarized GAFs. These Addenda are available on the CMS website under the supporting documents section of the CY 2023 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

## 2. Payment Locality Background

Prior to 1992, Medicare payments for physicians' services were made under the reasonable charge system. Payments under this system largely reflected the charging patterns of physicians, which resulted in large differences in payment for physicians' services among types of services, physician specialties and geographic payment areas.

Local Medicare carriers initially established 210 payment localities, to reflect local physician charging patterns and economic conditions. These localities changed little between the inception of Medicare in 1967 and the beginning of the PFS in 1992. In 1994, we undertook a study that culminated in a comprehensive locality revision (based on locality resource cost differences as reflected by the GPCIs) that we implemented in 1997. The development of the current locality structure is described in detail in the CY 1997 PFS final rule (61 FR 34615) and the subsequent final rule with comment period (61 FR 59494). The revised locality structure reduced the number of localities from 210 to 89, and increased the number of Statewide localities from 22 to 34.

Section 220(h) of the Protecting Access to Medicare Act (PAMA) (Pub. L. 113–93, enacted April 1, 2014) required modifications to the payment localities in California for payment purposes beginning with 2017. As a result, in the CY 2017 PFS final rule (81 FR 80265 through 80268) we established 23 additional localities, increasing the total number of PFS localities from 89 to 112. The current 112 payment localities include 34 Statewide areas (that is, only one locality for the entire State) and 75 localities in the other 16 States, with 10 States having two localities, two States having three localities, one State having four localities, and three States having five or more localities. The remainder of the 112 PFS payment localities are comprised as follows: the combined District of Columbia, Maryland, and Virginia suburbs; Puerto Rico; and the Virgin Islands. We note that the localities generally represent a grouping of one or more constituent counties.

The current 112 fee schedule areas, also referred to as payment localities, are defined alternatively by State boundaries (Statewide areas for example, Wisconsin), metropolitan areas (for example, Metropolitan St. Louis, MO), portions of a metropolitan area (for example, Manhattan), or rest-of-State areas that exclude metropolitan areas (for example, Rest of Missouri). This locality configuration is used to calculate the GPCIs that are in turn used to calculate geographically adjusted payments for physicians' services under the PFS.

As stated in the CY 2011 PFS final rule with comment period (75 FR 73261), changes to the PFS locality structure would generally result in changes that are budget neutral within a State. For many years, before making any locality changes, we have sought consensus from among the professionals whose payments would be affected. We refer readers to the CY 2014 PFS final rule with comment period (78 FR 74384 through 74386) for further discussion regarding additional information about locality configuration considerations.

## 3. GPCI Update

As required by the statute, we developed GPCIs to measure relative cost differences among payment localities compared to the national average for each of the three fee schedule components (that is, work, PE, and MP). The changes to the proposed CY 2023 GPCIs for each locality reflected the updated resource cost data in each area to better adjust PFS payments for geographic cost differences compared to national average costs. We noted that the changes in the proposed GPCIs reflect the statutory floors and limitations on variation discussed above that may advantage some rural localities. We described the data sources and methodologies we use to calculate each of the three GPCIs below in this section. Additional information on the CY 2023 GPCI update is available in a final report, "Final Report for the CY 2023 Update of GPCIs and MP RVUs for the Medicare PFS," on our website located under the supporting documents section for the CY 2023 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

### a. Work GPCIs

The work GPCIs are designed to reflect the relative cost of physician labor by Medicare PFS locality. As required by statute, the work GPCI reflects one quarter of the relative wage

differences for each locality compared to the national average.

To calculate the work GPCIs, we use wage data for seven professional specialty occupation categories, adjusted to reflect one-quarter of the relative cost differences for each locality compared to the national average, as a proxy for physicians' wages. Physicians' wages are not included in the occupation categories used in calculating the work GPCI because Medicare payments are a key determinant of physicians' earnings. Including physician wage data in calculating the work GPCIs would potentially introduce some circularity to the adjustment since Medicare payments typically contribute to or influence physician wages. That is, including physicians' wages in the physician work GPCIs would, in effect, make the indices, to some extent, dependent upon Medicare payments.

The work GPCI updates in CYs 2001, 2003, 2005, and 2008 were based on professional earnings data from the 2000 Census. However, for the CY 2011 GPCI update (75 FR 73252), the 2000 data were outdated and wage and earnings data were not available from the more recent Census because the "long form" was discontinued. Therefore, we used the median hourly earnings from the 2006 through 2008 Bureau of Labor Statistics (BLS) Occupational Employment and Wage Statistics (OEWS), formerly known as Occupational Employee Statistics (OES), wage data as a replacement for the 2000 Census data. The BLS OEWS data meet several criteria that we consider to be important for selecting a data source for purposes of calculating the GPCIs. For example, the BLS OEWS wage and employment data are derived from a large sample size of approximately 200,000 establishments of varying sizes nationwide from every metropolitan area and can be easily accessible to the public at no cost. Additionally, the BLS OEWS is updated regularly, and includes a comprehensive set of occupations and industries (for example, 800 occupations in 450 industries). For the CY 2014 GPCI update, we used updated BLS OEWS data (2009 through 2011) as a replacement for the 2006 through 2008 data to compute the work GPCIs; for the CY 2017 GPCI update, we used updated BLS OEWS data (2011 through 2014) as a replacement for the 2009 through 2011 data to compute the work GPCIs; and for the CY 2020 GPCI update, we used updated BLS data (2014 through 2017) as a replacement for the 2011 through 2014 data to compute the work GPCIs.

Because of its reliability, public availability, level of detail, and national scope, we believe the BLS OEWS data continue to be the most appropriate source of wage and employment data for use in calculating the work GPCIs (and as discussed below, the employee wage component and purchased services component of the PE GPCI). Therefore, for the CY 2023 GPCI update, we used updated BLS OEWS data (2017 through 2020) as a replacement for the 2014 through 2017 data to compute the proposed work GPCIs.

#### b. Practice Expense (PE) GPCIs

The PE GPCIs are designed to measure the relative cost difference in the mix of goods and services comprising PEs (not including MP expenses) among the PFS localities as compared to the national average of these costs. Whereas the physician work GPCIs (and as discussed later in this section, the MP GPCIs) are comprised of a single index, the PE GPCIs are comprised of four component indices (employee wages; purchased services; office rent; and equipment, supplies and other miscellaneous expenses). The employee wage index component measures geographic variation in the cost of the kinds of skilled and unskilled labor that would be directly employed by a physician practice. Although the employee wage index adjusts for geographic variation in the cost of labor employed directly by physician practices, it does not account for geographic variation in the cost of services that typically would be purchased from other entities, such as law firms, accounting firms, information technology consultants, building service managers, or any other third-party vendor. The purchased services index component of the PE GPCI (which is a separate index from employee wages) measures geographic variation in the cost of contracted services that physician practices would typically buy. For more information on the development of the purchased service index, we refer readers to the CY 2012 PFS final rule with comment period (76 FR 73084 through 73085). The office rent index component of the PE GPCI measures relative geographic variation in the cost of typical physician office rents. For the medical equipment, supplies, and miscellaneous expenses component, we believe there is a national market for these items such that there is not significant geographic variation in costs. Therefore, the equipment, supplies and other miscellaneous expense cost index component of the PE GPCI is given a value of 1.000 for each PFS locality.

For the previous update to the GPCIs (implemented in CY 2020), we used 2014 through 2017 BLS OEWS data to calculate the employee wage and purchased services indices for the PE GPCI. As discussed previously in this section, because of its reliability, public availability, level of detail, and national scope, we continue to believe the BLS OEWS is the most appropriate data source for collecting wage and employment data. Therefore, in calculating the CY 2023 GPCI update, we used updated BLS OEWS data (2017 through 2020) as a replacement for the 2014 through 2017 data for purposes of calculating the employee wage component and purchased service index component of the PE GPCI.

In calculating the CY 2023 GPCI update for the office rent index component of the PE GPCI, we used the 2015 through 2019 American Community Survey (ACS) 5-year estimates as a replacement for the 2013 through 2017 ACS data. The 2016 through 2020 5-year estimates were supposed to be released in December 2021, but the release date was delayed to March 17, 2022. Therefore, the recent 2015 through 2019 5-year estimates, which preceded any COVID-19 impacts, were used in the CY 2023 GPCI update, rather than the 2016 through 2020 ACS data, which were not publicly released in time for the development of the proposed rule. The Census Bureau noted that COVID-19 impacted data collection for the 2020 ACS, and the resulting challenges have the potential to affect the quality of the data. In particular, the Census Bureau noted that there were lower response rates, and nonresponse bias was found in the data collected for 2020.<sup>108</sup> We will analyze the ACS data collected in 2020 and subsequent years that occurred during the COVID-19 pandemic, and consider using those data for the next GPCI update after we better understand their integrity and validity for our purposes. Because the office rent index is based on 5-year estimates, we expect minimal impact from the non-response bias in the CY 2020 data on the next GPCI update, but we will examine the subsequent years' ACS data that could be similarly impacted by conditions during the COVID-19 pandemic. Because the 2020 ACS data were not released in time for us to use them in the development of the proposed rule, and the public would not have an opportunity to comment on the use of those data if we were to adjust the proposed GPCIs in the final rule to

<sup>108</sup> [https://www.census.gov/library/working-papers/2021/acs/2021\\_CensusBureau\\_01.html](https://www.census.gov/library/working-papers/2021/acs/2021_CensusBureau_01.html).

reflect the 2020 ACS data, we noted that we would not consider using the 2020 ACS data for the CY 2023 final GPCIs.

#### c. Malpractice Expense (MP) GPCIs

The MP GPCIs measure the relative cost differences among PFS localities for the purchase of professional liability insurance (PLI). To ensure that premium data are homogenous and comparable across geographic areas, data were collected for policies with uniform coverage limits of \$1 million per occurrence and \$3 million aggregate (\$1 million/\$3 million). The MP GPCIs are calculated based on insurer rate filings of premium data for \$1 million/\$3 million mature claims-made policies (policies for claims made rather than losses occurring during the policy term). For the CY 2020 GPCI update, we used premium data presumed in effect as of December 10, 2017. The CY 2023 MP GPCI update reflects premium data presumed in effect no later than December 31, 2020. We note that we finalized a few technical refinements to the MP GPCI methodology in CY 2017, and refer readers to the CY 2017 PFS final rule (81 FR 80270) for additional discussion of those.

#### d. GPCI Cost Share Weights

For the CY 2023 GPCIs, we proposed to continue to use the current 2006-based MEI cost share weights for determining the proposed PE GPCI values. Specifically, we use the cost share weights to weight the four components of the PE GPCI: employee compensation, office rent, purchased services, and medical equipment, supplies, and other miscellaneous expenses, as shown in Table 22. We refer readers to the CY 2014 PFS final rule with comment period (78 FR 74382 through 74383), for further discussion regarding the 2006-based MEI cost share weights revised in CY 2014 that we also finalized for use in the CY 2017 and CY 2020 GPCI updates.

We noted that we proposed to rebase and revise the MEI cost share weights for CY 2023, and we referred readers to the detailed discussion in section II.M. of the proposed rule, but we proposed to maintain the use of the current 2006-based MEI cost share weights for the CY 2023 GPCIs, thus delaying the implementation of the rebased and revised MEI cost share weights for this purpose. We refer readers to our discussion about using the proposed rebased and revised MEI cost share weights for purposes of proportioning the work, PE, and MP RVU pools in PFS ratesetting and for the purposes of updating the GPCIs for CY 2023 in sections II.B. and VI. of this final rule.

In those sections, we discuss our considerations for updating the MEI cost share weights for the RVUs and the GPCIs and the potential redistributive impact that making such a change would have on PFS payments. We have historically updated the GPCI cost share weights to make them consistent with the most recent update to the MEI, which was most recently done for CY 2014 (78 FR 74382 through 74383). However, in light of the overall impacts of making this change and in the interest of maintaining stability in payments, we proposed to maintain the use of the current 2006-based MEI cost share weights for the CY 2023 final PE GPCIs. We believe that allowing interested parties the opportunity to review and comment on the proposed rebased and revised MEI cost share weights as discussed in section II.M. of the proposed rule and their potential impacts before we actually use such rebased and revised MEI cost share weights for purposes of proportioning the work, PE, and MP RVU pools in PFS ratesetting and updating the GPCIs is important. This approach maintains consistency in the data used to update both the GPCI and PFS ratesetting inputs for CY 2023; the proposal to delay implementation of the rebased and revised MEI cost share weights is consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. We refer readers to section VI. of this final rule for additional discussion on this issue and impacts as it relates to PFS ratesetting and the GPCI update for CY 2023. We also refer readers to the comment solicitation in section II.B. of this final rule, where we discuss our ongoing efforts to update data inputs for PE to aid stability, transparency, efficiency, and data adequacy. In addition, we direct readers to the CY 2011 PFS final rule (75 FR 73256) where we similarly delayed implementation of updated MEI cost share weights in response to commenters' concerns about our separate, ongoing analysis that would inform future GPCI changes and the reallocation of labor-related costs from the medical equipment and supplies and miscellaneous component to the employee compensation component of the PE GPCI.

In the CY 2011 PFS final rule (75 FR 73256), we acknowledged that we typically update the GPCI cost share weights concurrently with the most recent MEI rebasing and revision, but in consideration of the commenters' concerns in response to the proposed rule, we did not use the revised cost

share weights for the CY 2011 GPCIs and instead finalized the implementation of the rebased and revised MEI cost share weights through subsequent rulemaking. We invited comments on the delay in implementation of the MEI cost share weights for purposes of the CY 2023 GPCIs and PFS ratesetting, given the impacts discussed in section VI. of the proposed rule (87 FR 46419 through 46425). We also solicited comments on how best to proceed with implementation of the rebased and revised MEI cost share weights in the future. More specifically, we sought comment on how best to incorporate the MEI cost share weights into the PE GPCI if we were to implement them outside the statutorily required triennial update in which we phase in all aspects of the GPCI update through the previously discussed 2-year ( $\frac{1}{2}$  in each year) phase-in required by section 1848(e)(1)(C) of the Act. Section 1848(e)(1)(C) of the Act requires that, if more than one year has elapsed since the date of the last GPCI adjustment, the adjustment to be applied in the first year of the next adjustment shall be  $\frac{1}{2}$  of the adjustment that otherwise would be made. Therefore, specifically, we sought comment on potentially incorporating the rebased and revised MEI cost share weights into the CY 2024 GPCIs. We noted that we would not be required by statute to phase in the adjustment over 2 years as specified in section 1848(e)(1)(C) of the Act because, in CY 2024, no more than one year would have elapsed since the last GPCI adjustment. Therefore, we also sought comment on whether it would be appropriate to use a multi-year transition to incorporate the rebased and revised MEI cost share weights for purposes of the PE GPCI and PFS ratesetting as we have done in the past when incorporating other new data into the PFS payment methodology (for example, the clinical labor update), or if, because the MEI cost share weights only impact the composition of the PE GPCI, such a transition would not be warranted. If we were to instead apply the rebased and revised MEI cost share weights for purposes of the PE GPCI and PFS ratesetting for CY 2025 or later, we would be required under section 1848(e)(1)(C) of the Act to phase in the GPCI adjustments over 2 years. We sought comments on whether, in that case, it would be appropriate to similarly apply a transition to implement the MEI cost share weights for purposes of PFS ratesetting as well, and referred readers to section II.B and VII. of the proposed rule for more

discussion regarding the alternatives considered and impacts of a phase-in of the rebased and revised MEI cost share weights in PFS ratesetting. The final CY

2023 GPCI cost share weights are displayed in Table 25. We note that the finalized rebased and revised cost share weights discussed in detail in section

II.M. of this final rule are also displayed in Table 25 for awareness regarding potential future rulemaking and GPCI updates.

**TABLE 25: Final GPCI Cost Share Weights for CY 2023**

| Expense Category             | Current GPCI Cost Share Weights | Final CY 2023 GPCI Cost Share Weights | Rebased and Revised Cost Share Weights as Finalized in Section II.M. |
|------------------------------|---------------------------------|---------------------------------------|--|
| Work                         | 50.866%                         | 50.866%                               | 47.522%  |
| Practice Expense             | 44.839%                         | 44.839%                               | 51.129%  |
| - Employee Compensation      | 16.553%                         | 16.553%                               | 25.451%  |
| - Office Rent                | 10.223%                         | 10.223%                               | 5.684%   |
| - Purchased Services         | 8.095%                          | 8.095%                                | 13.419%  |
| - Equipment, Supplies, Other | 9.968%                          | 9.968%                                | 6.575%   |
| Malpractice Insurance        | 4.295%                          | 4.295%                                | 1.349%   |
| <b>Total</b>                 | <b>100.000%</b>                 | <b>100.000%</b>                       | <b>100.000%</b>  |

e. PE GPCI Floor for Frontier States

Section 10324(c) of the Affordable Care Act added a new subparagraph (I) under section 1848(e)(1) of the Act to establish a 1.0 PE GPCI floor for physicians' services furnished in Frontier States effective January 1, 2011. In accordance with section 1848(e)(1)(I) of the Act, beginning in CY 2011, we applied a 1.0 PE GPCI floor for physicians' services furnished in States determined to be Frontier States. In general, a Frontier State is one in which at least 50 percent of the counties are "frontier counties," which are those that have a population per square mile of less than 6. For more information on the criteria used to define a Frontier State, we refer readers to the FY 2011 Inpatient Prospective Payment System (IPPS) final rule (75 FR 50160 through 50161). There are no changes in the States identified as Frontier States for the CY 2023 PFS proposed rule. The qualifying States are: Montana; Wyoming; North Dakota; South Dakota; and Nevada. In accordance with statute, we will apply a 1.0 PE GPCI floor for these States in CY 2023.

f. Methodology for Calculating GPCIs in the U.S. Territories

Prior to CY 2017, for all the island territories other than Puerto Rico, the lack of comprehensive data about unique costs for island territories had minimal impact on GPCIs because we used either the Hawaii GPCIs (for the Pacific territories: Guam; American Samoa; and Northern Mariana Islands) or used the unadjusted national averages (for the Virgin Islands). In an

effort to provide greater consistency in the calculation of GPCIs given the lack of comprehensive data regarding the validity of applying the proxy data used in the States in accurately accounting for variability of costs for these island territories, in the CY 2017 PFS final rule (81 FR 80268 through 80270), we finalized a policy to treat the Caribbean Island territories (the Virgin Islands and Puerto Rico) in a consistent manner. We do so by assigning the national average of 1.0 to each GPCI index for both Puerto Rico and the Virgin Islands. We refer readers to the CY 2017 PFS final rule for a comprehensive discussion of this policy.

g. California Update to the Fee Schedule Areas Used for Payment Under Section 220(h) of the Protecting Access to Medicare Act

Section 220(h) of the PAMA added a new section 1848(e)(6) to the Act that modified the fee schedule areas used for payment purposes in California beginning in CY 2017. Prior to CY 2017, the fee schedule areas used for payment in California were based on the revised locality structure that was implemented in 1997 as previously discussed. Beginning in CY 2017, section 1848(e)(6)(A)(i) of the Act required that the fee schedule areas used for payment in California must be Metropolitan Statistical Areas (MSAs) as defined by the Office of Management and Budget (OMB) as of December 31 of the previous year; and section 1848(e)(6)(A)(ii) of the Act required that all areas not located in an MSA must be treated as a single rest-of-State fee schedule area. The resulting

modifications to California's locality structure increased its number of fee schedule areas from 9 under the current locality structure to 27 under the MSA-based locality structure; although for the purposes of payment, the actual number of fee schedule areas under the MSA-based locality structure is 32. We refer readers to the CY 2017 PFS final rule (81 FR 80267) for a detailed discussion of this operational decision.

Section 1848(e)(6)(D) of the Act defined transition areas as the counties in fee schedule areas for 2013 that were in the rest-of-State locality, and locality 3, which was comprised of Marin County, Napa County, and Solano County. Section 1848(e)(6)(B) of the Act specified that the GPCI values used for payment in a transition area are to be phased in over 6 years, from 2017 through 2022, using a weighted sum of the GPCIs calculated under the new MSA-based locality structure and the GPCIs calculated under the PFS locality structure that was in place prior to CY 2017. That is, the GPCI values applicable for these areas during this transition period were a blend of what the GPCI values would have been for California under the locality structure that was in place prior to CY 2017, and what the GPCI values would be for California under the MSA-based locality structure. For example, in CY 2020, which represented the fourth year of the transition period, the applicable GPCI values for counties that were previously in the rest-of-State locality or locality 3 and are now in MSAs were a blend of  $\frac{2}{3}$  of the GPCI value calculated for the year under the MSA-based locality

structure, and  $\frac{1}{3}$  of the GPCI value calculated for the year under the locality structure that was in place prior to CY 2017. The proportions continued to shift by  $\frac{1}{6}$  in each subsequent year so that, by CY 2021, the applicable GPCI values for counties within transition areas were a blend of  $\frac{5}{6}$  of the GPCI value for the year under the MSA-based locality structure, and  $\frac{1}{6}$  of the GPCI value for the year under the locality structure that was in place prior to CY 2017. Beginning in CY 2022, the applicable GPCI values for counties in transition areas were the values calculated solely under the new MSA-based locality structure; therefore, the phase-in for transition areas is complete. Additionally, section 1848(e)(6)(C) of the Act establishes a hold harmless requirement for transition areas beginning with CY 2017; whereby, the applicable GPCI values for a year under the new MSA-based locality structure may not be less than what they would have been for the year under the locality structure that was in place prior to CY 2017. There are 58 counties in California, 50 of which were in transition areas as defined in section 1848(e)(6)(D) of the Act. The eight counties that were not within transition areas are: Orange; Los Angeles; Alameda; Contra Costa; San Francisco; San Mateo; Santa Clara; and Ventura counties. We note that while the phase-in for transition areas is no longer applicable, the hold harmless requirement is not time-limited, and therefore, is still in effect.

For the purposes of calculating budget neutrality and consistent with the PFS budget neutrality requirements as specified under section 1848(c)(2)(B)(ii)(II) of the Act, we finalized the policy to start by calculating the national GPICs as if the fee schedule areas that were in place prior to CY 2017 are still applicable nationwide; then, for the purposes of payment in California, we override the GPCI values with the values that are applicable for California consistent with the requirements of section 1848(e)(6) of the Act. This approach to applying the hold harmless requirement is consistent with the implementation of the GPCI floor provisions that have previously been implemented—that is, as an after-the-fact adjustment that is made for purposes of payment after both the GPICs and PFS budget neutrality have already been calculated.

Additionally, section 1848(e)(1)(C) of the Act requires that, if more than 1 year has elapsed since the date of the last GPCI adjustment, the adjustment to be applied in the first year of the next adjustment shall be  $\frac{1}{2}$  of the adjustment

that otherwise would be made. For a comprehensive discussion of this provision, transition areas, and operational considerations, we refer readers to the CY 2017 PFS final rule (81 FR 80265 through 80268).

#### (1) Proposed Refinement to Number of Unique Fee Schedule Areas in California

In the CY 2020 final rule (84 FR 62622), a commenter indicated that some of the distinct fee schedule areas that were used during the period between CY 2017 and CY 2018 are no longer necessary. Specifically, with regard to the Los Angeles-Long Beach-Anaheim MSA, which contains 2 counties (across two unique locality numbers, 18 and 26) that are not transition areas, we acknowledge that we only needed more than one unique locality number for that MSA for payment purposes in CY 2017, which was the first year of the implementation of the MSA-based payment locality structure. Neither of the counties in the Los Angeles-Long Beach-Anaheim MSA (Orange County and Los Angeles County) are transition areas under section 1848(e)(6)(D) of the Act. Therefore, the counties were not subject to the aforementioned GPCI value incremental phase-in (which is no longer applicable) or the hold-harmless provision at section 1848(e)(6)(C) of the Act. Similarly, the San Francisco-Oakland-Berkeley MSA contains four counties—San Francisco, San Mateo, Alameda, and Contra Costa counties—across three unique locality numbers, 05, 06, and 07. These counties are not transition areas and will receive the same GPCI values, for payment purposes, going forward. In response to the comment, we acknowledged that we did not propose any changes to the number of fee schedule areas in California, but would consider the feasibility of a technical refinement to consolidate into fewer unique locality numbers; and if we determined that consolidation was operationally feasible, we would propose the technical refinement in future rulemaking. This refinement would ultimately change the number of distinct fee schedule areas for payment purposes in California from 32 to 29. In light of the foregoing, for CY 2023, we proposed to identify the Los Angeles-Long Beach-Anaheim MSA, containing Orange County and Los Angeles County, by one unique locality number, 18, as opposed to two, thus retiring locality number 26, as it is no longer needed. Similarly, we proposed to identify the San Francisco-Oakland-Berkeley MSA containing San Francisco, San Mateo,

Alameda, and Contra Costa counties by one unique locality number, 05, as opposed to four, thus retiring locality numbers 06 and 07, as they are no longer needed. Additionally, we noted that we would modify the MSA names as follows: the San Francisco-Oakland-Berkeley (San Francisco Cnty) locality (locality 05) would become San Francisco-Oakland-Berkeley (San Francisco/San Mateo/Alameda/Contra Costa Cnty), and Los Angeles-Long Beach-Anaheim (Los Angeles Cnty) locality (locality 18) would become Los Angeles-Long Beach-Anaheim (Los Angeles/Orange Cnty). We noted that because Marin County is in a transition area and subject to the hold harmless provision at section 1848(e)(6)(C) of the Act, we needed to retain a unique locality number for San Francisco-Oakland-Berkeley (Marin Cnty), locality 52. We sought comment on the proposed technical refinements to consolidate unique fee schedule areas and their locality numbers in California, where the unique localities are not operationally necessary. Based on support from commenters, we are finalizing to identify the Los Angeles-Long Beach-Anaheim MSA, containing Orange County and Los Angeles County, by one unique locality number, 18, and the San Francisco-Oakland-Berkeley MSA containing San Francisco, San Mateo, Alameda, and Contra Costa counties by one unique locality number, 05, as proposed. While we believe these changes are appropriate to consolidate fee schedule areas that are no longer operationally necessary, we are unable to operationalize these changes for CY 2023 due to timing constraints relating to the actions and coordination with the various systems maintainers required to effectuate changes to claims processing. Therefore, for CY 2023, there will be no changes to the existing locality numbers 05, 06, 08, 18, or 26. We intend to operationalize these finalized changes for CY 2024. We note that these changes, when operationalized, do not have any payment implications under the PFS.

#### h. Refinements to the GPCI Methodology

In the process of calculating GPICs for the purposes of the proposed rule, we identified four technical refinements to the methodology that yielded improvements over the current method; these refinements are applicable to the work and MP GPICs, the employee wage index component of the PE GPCI, and the GAFs. For purposes of the final rule, we are finalizing these changes as proposed.

We conducted a thorough review of the BLS OEWS occupation codes within each of the seven occupation groups used in past updates to track and document the changes over time. As new BLS OEWS data are released, the availability of specific occupation codes is subject to change, and it is possible that new codes can be added, changed, or removed over time; therefore, we believe it is important to periodically review and update the occupation

groups and codes based on our review during the GPCI updates. We reviewed the occupation codes and groups used to capture geographic variation in professional wages to assess other potential codes and groups that could be used in addition to the current selections to calculate the work GPCI, with significant consideration given to the extent to which the data exist in the file (data existence) and how well the occupation codes are represented in the

data (data sufficiency). Based on our review, we proposed the addition of two new occupation groups (and their corresponding occupation codes), Management Occupations and Business and Financial Operation Occupations, to the preexisting seven occupation groups for CY 2023, as described in Table 20 in the proposed rule (87 FR 46009) and Table 26 of this final rule.

**TABLE 26: Final Additional Occupation Codes in New Occupation Groups for Inclusion in CY 2023 GPCI Update**

| Occupation Group                                       | Occupation Code | Occupation Title  |
|--|-----------------|---|
| <b>11-0000 Management Occupation Group</b>             | 11-1011         | Chief Executives  |
|  | 11-1021         | General and Operations Managers                                   |
|  | 11-2011         | Advertising and Promotions Managers                               |
|  | 11-2021         | Marketing Managers  |
|  | 11-2022         | Sales Managers  |
|  | 11-2031         | Public Relations and Fundraising Managers                         |
|  | 11-3011         | Administrative Services Managers                                  |
|  | 11-3021         | Computer and Information Systems Managers                         |
|  | 11-3031         | Financial Managers  |
|  | 11-3051         | Industrial Production Managers                                    |
|  | 11-3061         | Purchasing Managers   |
|  | 11-3111         | Compensation and Benefits Managers                                |
|  | 11-3121         | Human Resources Managers  |
|  | 11-3131         | Training and Development Managers                                 |
|  | 11-9021         | Construction Managers   |
|  | 11-9031         | Education Administrators, Preschool and Childcare Center/Program  |
|  | 11-9032         | Education Administrators, Elementary and Secondary School         |
|  | 11-9033         | Education Administrators, Postsecondary                           |
|  | 11-9039         | Education Administrators, All Other                               |
|  | 11-9041         | Architectural and Engineering Managers                            |
|  | 11-9111         | Medical and Health Services Managers                              |
|  | 11-9121         | Natural Sciences Managers   |
|  | 11-9151         | Social and Community Service Managers                             |
|  | 11-9161         | Emergency Management Directors                                    |
|  | 11-9199         | Managers, All Other   |
| <b>13-0000 Business and Financial Operations Group</b> | 13-1011         | Agents and Business Managers of Artists, Performers, and Athletes |
|  | 13-1021         | Buyers and Purchasing Agents, Farm Products                       |
|  | 13-1022         | Wholesale and Retail Buyers, Except Farm Products                 |
|  | 13-1023         | Purchasing Agents, Except Wholesale, Retail, and Farm Products    |
|  | 13-1041         | Compliance Officers   |
|  | 13-1051         | Cost Estimators   |
|  | 13-1071         | Human Resources Specialists                                       |
|  | 13-1075         | Labor Relations Specialists                                       |
|  | 13-1081         | Logisticians  |
|  | 13-1111         | Management Analysts   |
|  | 13-1121         | Meeting, Convention, and Event Planners                           |
|  | 13-1131         | Fundraisers   |
|  | 13-1141         | Compensation, Benefits, and Job Analysis Specialists              |
|  | 13-1151         | Training and Development Specialists                              |
|  | 13-1161         | Market Research Analysts and Marketing Specialists                |
|  | 13-1199         | Business Operations Specialists, All Other                        |
|  | 13-2011         | Accountants and Auditors  |
|  | 13-2021         | Appraisers and Assessors of Real Estate                           |
|  | 13-2031         | Budget Analysts   |
|  | 13-2041         | Credit Analysts   |
|  | 13-2051         | Financial Analysts  |
|  | 13-2052         | Personal Financial Advisors                                       |
|  | 13-2053         | Insurance Underwriters  |
|  | 13-2061         | Financial Examiners   |
|  | 13-2071         | Credit Counselors   |
|  | 13-2072         | Loan Officers   |
|  | 13-2081         | Tax Examiners and Collectors, and Revenue Agents                  |
|  | 13-2099         | Financial Specialists, All Other                                  |

We also proposed to add four occupation codes to the Computer,

Mathematical, Life, and Physical Science group, and three occupation

codes to the Social Science, Community and Social Service, and Legal group, for

CY 2023, as shown in Table 21 in the proposed rule (87 FR 46010) and Table 27 in this final rule. The practical effect of the inclusion of these occupation

groups and codes on the work GPCI is minimal because the statute at section 1848(e)(1)(A)(iii) of the Act requires that the work GPCI reflect only one quarter

of cost differences, but their inclusion adds meaningful data regarding the geographic variation in professional wages for CY 2023.

TABLE 27: Final Additional Occupation Codes in Current Occupation Groups for Inclusion in CY 2023 GPCI Update

| Occupation Code  | Occupation Title                                    | Common Education Requirement  |
|--|---|---|
| Group: Computer, Mathematical, Life, and Physical Science      |   |   |
| 15-1212  | Information Security Analysts                       | Bachelor degree in a computer- or technology-related field  |
| 15-1257  | Web Developers and Digital Interface Designers      | Sometimes a two-year associate degree, other times a bachelor degree in computer science, programming, or a related field   |
| 15-1241  | Computer Network Architects                         | Bachelor degree in computer science, information systems, engineering or related field; sometimes MBA in information systems  |
| 19-1099  | Life Scientists, All Other                          | Bachelor's degree in a life science such as biology, chemistry, or genetics   |
| Group: Social Science, Community and Social Service, and Legal |   |   |
| 19-5011  | Occupational Health and Safety Specialists          | Bachelor's degree   |
| 21-1099  | Community and Social Service Specialists, All Other | Bachelor's degree, along with coursework in social or behavioral science  |
| 23-1012  | Judicial Law Clerks                                 | Recent law school graduates, generally, law clerks possess a master's degree in law, a specialized legal master's degree (e.g., public policy or international law), or a Juris Doctor degree |

We proposed to modify the list of occupation codes used within the first PE GPCI component, Employee Wages, to conform more closely to the clinical labor categories used in PFS ratesetting. Specifically, six occupation codes listed as sources for clinical labor rates used to establish PE RVUs in PFS ratesetting that were previously inadvertently excluded in the Employee Wage Index calculation are now included in the final CY 2023 Employee Wage Index (29-1126, 29-1124, 19-3031, 29-1031, 29-1181, 29-1127). Lastly, we proposed a technical refinement to the method used to calculate each locality's GAF. The GAFs are calculated as the

weighted composite of the three GPCIs (work, PE, and MP), essentially representing the net geographic adjustment that would be made to a theoretical standard service. Instead of the 2006-based MEI cost share weights, which were used to calculate GAFs in previous updates to the GPCIs, we calculated the CY 2023 GAFs using weights that reflect the share of total RVUs that each component (work, PE, and MP) accounts for, based on Medicare utilization data from CY 2020. The GAFs are not used for payment under the PFS but are a useful measure to illustrate the overall effect of geographic adjustments under the PFS

across Medicare fee schedule areas. We believe that using the share of RVUs reflected in recent Medicare utilization data as weights when calculating the CY 2023 GAFs results in GAFs that more accurately reflect the composite effect of geographic adjustment on payment, year over year, as compared to the GAFs calculated using the 2006-based MEI cost share weights. This change also allows the use of current Medicare utilization data that are available each year as opposed to the MEI cost share weights that are not updated as frequently. The final weights used to calculate the CY 2023 GAFs are displayed in Table 28.

TABLE 28: Final Weights Used to Calculate the CY 2023 GAFs

| Component to Be Weighted | Current Weights (2006-based MEI Cost Share Weights) | CY 2023 Final Weights (CY 2020 Utilization Shares) |
|--------------------------|---|--|
| Work                     | 50.866%   | 50.247%  |
| Practice Expense         | 44.839%   | 45.556%  |
| Malpractice Insurance    | 4.295%  | 4.196%   |

These four methodological refinements, including changes to: (1) the occupation group; (2) occupation codes; (3) occupation codes used for the

Employee Wage Index; and (4) the GAF weighting adjustment, yield improved mathematical precision in the final CY 2023 GPCIs and GAFs by providing for

a more accurate, full landscape of occupations that should be accounted for in the work and PE GPCIs, and by aligning the GAF equation weights to

use routinely available data. We are finalizing all four refinements as proposed. Additional information on the GPCI methodology and the refinements are available in the final report, “Final Report for the CY 2023 Update of GPCIs and MP RVUs for the Medicare PFS” on our website located under the supporting documents section of the CY 2023 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

i. Alternatives Considered Related to the Use of the American Community Survey (ACS) Data for Office Rent Index

Commenters often express concern about the use of residential rents as a proxy for physician office space costs for purposes of updating the PE GPCIs, and state that CMS should collect commercial rent data and use it either as the basis for measuring geographic differences in physician office rents, or if this is not feasible, use it to validate the residential rents as a proxy for physician office rents. In the past, commenters have requested that CMS provide a specific explanation of the barriers to obtaining better commercial rent data and that we reevaluate existing databases to find or develop a nationwide measure of commercial office rents for use in calculating PE GPCIs. For each GPCI update, we have noted that our efforts are ongoing to identify a publicly-available, robust, nationally representative commercial rent data source that could be made available to CMS for this purpose. We have welcomed opportunities to discuss such data sources with interested parties and to incorporate such data, as appropriate in the GPCI calculation process, through our annual rulemaking process.

Because Medicare is a national program, and section 1848(e)(1)(A) of the Act requires us to establish GPCIs to measure relative cost differences among localities compared to the national average, we believe it is important to use the best data source that is available on a nationwide basis, that is regularly updated, and retains consistency area-to-area, year-to-year. The ACS is administered by the United States Census Bureau, which is a leading source of national, robust, high quality, publicly available data. We agree that a data source for commercial office rents that provided for adequate representation of urban and rural areas nationally would be preferable to a residential rent data source as a proxy for commercial rents. We have previously discussed in the CY 2005, CY 2008, CY 2011, and CY 2017 (69 FR

66262, 72 FR 66376, 75 FR 73257, and 81 FR 80265, respectively) final rules that we recognize that apartment rents may not be a perfect proxy for physician office rent.

We have conducted searches for commercial rent data sources for consideration as an alternative to the ACS data in the past and have not found or received public comments with suggestions of reliable data sources that meet our needs. As discussed in the proposed rule, for CY 2023, we conducted another search for reliable commercial rent data sources that are publicly available for the CY 2023 update and did not find any reliable data sources that would meet our needs. The principal characteristic of any substitute data source for the ACS data would be that it captures geographic variation in the office space cost for physician practices. We primarily investigated sources that report data on commercial real estate, but we also considered a few residential rent data sources and one data source that reports on a type of property that would be unable to house a physician practice—U.S. Post Office (P.O.) box rentals. Because the underlying property in which the P.O. boxes are located is commercial in nature, the rental rates may reflect the underlying geographic variation in facility cost. Because this source has other features that are important for creating a geographic index, we have included it for consideration. Although interested parties may prefer a database focused on the types of properties that physicians would use for offices (that is, a commercial rent database), the identified potential data alternatives discussed below failed to meet one or more of five criteria that we believe are critical to the creation of an appropriate geographic index.

We used the following five criteria to analyze the potential data sources for this search: (1) applicability to planned use; (2) standardization of the measure; (3) potential bias; (4) geographic scope, distribution, and granularity of the data; and (5) availability, continuity, and price of the data. Our review revealed challenges with the commercial real estate market data in several of these criteria. Under the first criterion, there are two sub-criteria that present problems with the type of real estate data reported when we considered their use for creating a geographic index: (1A) leases versus sales of commercial real estate, and (1B) comparables versus listings versus assessments of commercial real estate. For the first sub-criterion, the commercial and residential real estate markets can be

subdivided into markets for leases and sales. Terms for commercial leased properties are often varied and not readily available. Commercial sales, especially of office condominiums, may be more readily available and require less adjustment for use in a geographic index. The availability of different arrangements—leasing versus owning—may vary geographically, affecting the underlying stability and representativeness of an index based on either. Under the second sub-criterion, an important distinction is whether the data in the alternative data source represents closed transactions (known as “comparables” or “comps”) or asking prices (known as “listings”), regardless of whether the source is reporting data for leased or sales of commercial property. Because asking prices are often aspirational, professional real estate appraisers rely on comparable transactions in order to estimate a price for sale or lease. Therefore, comparables provide the most reliable substitute dataset for consideration for use in creating a geographic index. Assessments are the estimated values of real property set by the tax assessors in each State, which are generally intended to reflect full cash value of the property, though there may be State-specific laws and regulations that interfere (that is, by limiting the percentage increase in a property from year to year if it has not been transferred). Assessments for commercial properties often rely heavily on the “income method” of valuation, which capitalizes the net income the property does or could receive if rented. The advantage of assessments for use in creation of a geographic index is their existence for every property in the United States.

The second criterion is that appropriate adjustments need to be made to reduce variation for other factors, or the standardization of the data reported by a considered alternative data source. The primary data adjustment is to standardize the size of the property. For commercial space, conversion to a price per square foot (price/SF) value allows for direct comparison between properties. There are other factors involved in standardizing commercial rents and sale prices. The Building Owners and Managers Association (BOMA) groups buildings into three property classes:

- Class A: Most prestigious buildings competing for premiere office users with rents above market average for the area. These buildings have high quality standard finishes, state of the art building systems and amenities, exceptional accessibility, and a definite market presence.

- Class B: Buildings competing for a wide range of users with rents in the average range for the market. Buildings finishes are good to fair for the area, and systems are adequate but the building does not compete with Class A at the same price.

- Class C: Buildings competing for tenants requiring functional space at rents below average for the market.<sup>109</sup>

A dataset of commercial rentals or sales must include the building class information so properties can be appropriately compared to each other, similar to the way that CMS currently only compares ACS rent data for two-bedroom apartments. For leases, the dataset would also need to specify lease type (Single Net, Double Net, Triple Net, Bondable Net, Full Service Gross, Modified Gross, and or Percentage).<sup>110</sup> The same property rented under a type of Net lease would be expected to have a lower rent than if it were rented under a Full-Service lease because the lessee would pay some amount towards operating expenses. Although a dataset may contain an indication of the type of lease, it may not include the amount of operating expenses paid by the lessee that would be necessary to standardize the rent or other terms that affected the final transaction price. There are often considerable privacy considerations with respect to commercial transactions in order to maintain competitive advantage, so accurate information is often difficult to obtain. Typically, the sale price for a leased property, assuming an arms-length transaction, accounts for the detailed lease terms applicable to the property and likely would not require adjustment for this factor. Another consideration is the effective date of the transaction. Market prices for leases and sales can change rapidly or slowly, and even transactions occurring within the same calendar year may or may not require adjustment in order to be reflective of the market at the intended point in time, and therefore, the transaction date is critical for professional appraisals. Markets are also localized, so even data reported for areas in relatively close proximity may not experience the same price fluctuations.

The third criterion is that potential bias is limited in a considered alternative data source. Our search to date was unable to locate any scientifically designed national survey of commercial property costs. Many of

the data sources are intended to facilitate the sale of commercial property and provide listings, rather than comparables. They also may only contain a fraction of the listings on the market and have been selected by brokers to advertise for sale, rather than to represent the entire market, resulting in substantial bias. Even the most comprehensive and detailed data sources for verified transactions are designed to support valuation of individual properties. These databases reflect the mix of properties that are either currently available or have been sold or leased during a defined period. The aggregate data are not intended to produce an unbiased estimate of the average cost per square foot in a particular geographic area, whereas, the ACS is a scientifically designed and implemented national housing survey created by the U.S. Census Bureau that has been designed to reduce bias in the statistics it creates.

The fourth criterion is that the alternate data source would need to be national in scope and sufficiently granular to capture the characteristics of highly localized real estate markets. The ACS data have been consistently available in each year for the majority of counties in the nation. Although some of the commercial data sources may range nationwide and provide property-level data, there may be a much higher proportion of areas with missing data. An important consideration for the office rent index is that it sufficiently captures data in both urban and rural areas. Rural areas may have a less active commercial real estate market than urban areas, in which case there may be few transactions to use in a geographic index.

Lastly, the fifth criterion is that the data source be publicly available, consistently available for CMS' GPCI update years, and/or reasonably priced in order to facilitate transparency and administrative efficiency. Proprietary databases can only be accessed by those who sign up for the service, and use of the data is governed by Terms of Service (TOS) that may preclude its use in derivative works, such as the creation of a geographic index, or dissemination of the data. Public databases are more likely to be accessible and able to be used for derivative work, such as the creation of the GPCIs. Any change in the data source we use in the creation of the index is likely to cause changes in index values, and possibly invoke critique if the resulting changes are significant. If CMS were to consider a change in data source, the change would need to be sustainable over time, and therefore, the data must be consistently accessible for

subsequent GPCI updates, and data sources must maintain consistency over time in order to avoid any potential dramatic changes and/or the need to refine the adjustments to a dataset each update year, which would introduce unnecessary variation in the index. If the data source changes or discontinues the dataset, CMS would need to find a replacement data source, possibly within a short time period. This would likely introduce the possibility of dramatic changes and variation in the index that does not reflect the real geographic changes between update years—stemming from the use of different data sources. Additionally, the price to obtain and make necessary adjustments to the data discussed above may be prohibitive for use in the GPCIs.

The Federal Government already paid for the construction of the ACS, the ACS provides the data in a very usable form, CMS can consistently and freely access the data, and relatively minor processing is required to turn it into an index. Every proprietary database is likely to charge substantial amounts to access the data as it is currently provided, which will be geared to uses very different from the creation of an office rent index. There may be substantial work required to gather and process the data and TOS conditions imposed by the database owners may not allow even free data to be used for the intended purpose. In all cases, it is likely that CMS would need to negotiate the terms for utilizing any proprietary sources.

We identified eight data sources for analysis as potential alternatives to the ACS, but all failed to meet one or more of the five key criteria discussed above that would allow us to better reflect geographic cost variation for the office rent component of the PE GPCI that is currently measured using the ACS. We specifically identified the following potential data sources: (1) REIS® Real Estate Solutions by Moody's Analytics®; (2) CompStak; (3) CoStar™; (4) Zillow® Assessor and Real Estate Database (ZTRAX); (5) U.S. Postal Service (USPS®) P.O. Box Rental; (6) GSA® Lease Inventory; (7) Reonomy®; and (8) SMR Research. Three of the eight data sources had substantial costs associated with obtaining the data, and we were unable to obtain pricing information for an additional two of the eight without extensive discussions with a sales representative. Two of the eight sources lacked necessary building class information, and many of the eight sources presented challenges with TOS restrictions, representativeness of rural areas, small or undisclosed sample sizes, sample sizes that differed from

<sup>109</sup> [https://www.boma.org/BOMA/Research-Resources/Industry\\_Resources/BuildingClassDefinitions.aspx](https://www.boma.org/BOMA/Research-Resources/Industry_Resources/BuildingClassDefinitions.aspx).

<sup>110</sup> <https://www.reonomy.com/blog/post/commercial-lease-types>.

year to year, and/or a large number of geographic areas with missing data.

While we determined that none of these data sources are appropriate substitutes for the ACS data we currently use, based on their failure to meet one or more of the five key criteria discussed above, some of the sources possess useful qualities that allowed for further preliminary research into the correlation between commercial and residential rent that fell within the confines of our contractual restrictions. To investigate whether the use of ACS residential rents captures geographic variation in office rents, as discussed above, we identified a few data alternatives above for further research and examined their correlation with the ACS residential rent data in effort to evaluate the validity of the ACS data as a proxy for determining geographic variation in office rents. Overall, our

ongoing analysis shows that the ACS residential rent data are highly correlated with commercial rents across areas. Therefore, we have concluded that the continued use of the ACS data for the office rent component of the PE GPCI is appropriate. We considered the use of USPS P.O. Box Rental data for preliminary analysis, as it is free, publicly available, and national in scope (in all zip codes where P.O. Boxes are available), but resource and time constraints limited us from considering this for the CY 2023 update. P.O. Box rent data is available online, but it is not formatted in an easy-to-use dataset that we could readily analyze without conducting resource-intensive data extraction and preparation. Considering that the P.O. Box rent data would have required significant resources, and that expending such resources was not feasible for the CY 2023 proposed rule,

we identified the GSA Lease Inventory data source as the next best alternative data source to use to evaluate the correlation between residential and commercial rents because it is publicly available, free, and accessible in an easy-to-use format that required limited adjustments to allow analysis. To get a comparative sense of the rents per square foot that would be suggested for a specific geographic area, we chose to compare the GSA Lease Inventory data and the ACS data for available counties in the State of Maryland. As shown in Table 29, the GSA Lease Inventory data are missing for approximately half of the counties in Maryland. For those counties with available GSA data, the rent per square foot of the GSA leased facilities is shown in Table 29 and can be compared to the corresponding ACS residential rent data for that county.

**TABLE 29: Comparing GSA Lease Inventory and ACS Data for Counties in Maryland**

| County                    | Population | GSA Data                                  |                  |                  |                           | ACS Data              |                  |                           |
|---------------------------|------------|---|------------------|------------------|---------------------------|-----------------------|------------------|---------------------------|
|                           |            | Freq                                      | Rent per sf (\$) | Unweighted Index | Population Weighted Index | Two Bedroom Rent (\$) | Unweighted Index | Population Weighted Index |
| Allegany                  | 73,060     | 4   | 17.54            | 0.651            | 0.540                     | 670                   | 0.588            | 0.532                     |
| Anne Arundel              | 559,737    | 23  | 32.98            | 1.224            | 1.015                     | 1,543                 | 1.354            | 1.225                     |

Figure 1 shows a rank order test for the counties in Maryland where both GSA Lease Inventory data and ACS data are available. Allegany County has the lowest rent per square foot in the GSA Lease Inventory data and the lowest

residential rent in the ACS data. Anne Arundel County has the highest residential rent data and the second highest GSA Lease Inventory data. Analysis shows that the rank order of the available counties in the GSA Lease

Inventory data follow a relatively similar pattern (positive, linear relationship) to the same counties in the ACS data.

FIGURE 1: Rank Order Test for Counties with Both GSA and ACS Data in Maryland

We expanded the comparison of the GSA Lease Inventory data with the ACS residential rent data from available counties in Maryland to all available counties nationwide by creating a rent per square foot measure for all GSA Lease Inventory records using the January 2017 GSA Leased Inventory data. The comparison was done by condensing the GSA Lease data to the county level, merging it with the ACS data (for counties where GSA data were available), and aggregating it to the Medicare locality level, weighting by county population. We performed two rank order tests for both ACS (median two-bedroom rent) and GSA (rent per SF) measures in all available localities where at least 50 percent, and 75 percent, subsequently, of the locality population was represented in the county-level GSA data file. Similar to our findings from the initial analysis of Maryland counties, the expanded

comparisons generally show a positive, linear relationship between rank of ACS (median two-bedroom rent) and rank of GSA (rent per SF) measures. Because the GSA Lease Inventory data are not geographically complete, our analyses were limited. GSA Lease Inventory data are sparse or nonexistent in some counties, therefore, we calculated the percent of the locality population and only included localities in our analysis with county-level data where at least 50 percent (and 75 percent for the second analysis) of the locality population was represented in the county-level GSA data file. For example, Locality A includes county 1 and county 2. If the GSA data includes county 1 (with a population of 1,000), but not county 2 (population of 50), we included Locality A in the analysis, as it met the 50 percent and 75 percent thresholds. In contrast, if the GSA data includes county 2 (population of 50), but not

county 1 (population of 1,000), we did not perform analysis on Locality A. The January 2017 GSA data file includes information on approximately 8,200 GSA leases across the country, which were then aggregated to the county level, and then to the Medicare locality level for our analysis. After these two aggregations, we had enough GSA Lease Inventory data to perform two rank order tests on 52 Medicare localities, one rank order test for counties where at least 50 percent of the locality population was represented and a second rank order test for counties where 75 percent of the locality population was represented. We further analyzed the outlier localities (where the ACS rank differs from the GSA rank by  $\pm 30$  ranks) and found that when the population threshold increased from 50 percent to 75 percent, we see a reduction in outliers from 13 to only two localities, indicating that more

complete data (that is, 75 percent of the locality population represented in GSA lease data) yields higher correlation between the median two-bedroom rent in the ACS data and the rent per square foot in the GSA data. This correlative effect supports the continued use of ACS data in the GPCI update for CY 2023, as it indicates that GSA lease data (a commercial rent data source) and ACS residential rents varied similarly across geographic areas.

It is important to note that we use the ACS data to create an index to measure cost differences, and not as a direct proxy for commercial office rents. Rather, the ACS data are used to measure geographic variation in residential rents, which is used as a proxy for the geographic variation in commercial office rent. Based on our limited analyses comparing the GSA and ACS data, which showed that commercial and residential rents varied similarly across geographic areas, and the lack of any identified alternative data source that meets all five of the criteria discussed above, we believe that it is appropriate to continue use of the ACS data.

With regard to the suggestion that CMS should collect commercial rent data, we note that we discussed this issue in the CY 2012 PFS final rule with comment period (76 FR 73088) and stated that the development and implementation of a survey could take several years if CMS were to survey physicians directly to gather data to compute the office rent index.

Additionally, we have historically not sought direct survey data from physicians related to the GPCI to avoid issues of circularity and self-reporting bias. In the CY 2011 PFS final rule with comment period (75 FR 73259), we solicited public comments regarding the benefits of utilizing physician cost reports to potentially achieve greater precision in measuring the relative cost difference among Medicare localities. We also asked for comments regarding the administrative burden of requiring physicians to routinely complete these cost reports and whether this should be mandatory for physicians' practices. We did not receive any feedback related to that comment solicitation during the open public comment period for the CY 2011 PFS final rule with comment period.

We reiterate that the GPCIs are not an absolute measure of practice costs. Rather they are a measure of the relative cost differences for each of the three GPCI components. The U.S. Census Bureau is a Federal agency that specializes in data collection, accuracy, and reliability, and we continue to believe that where such a publicly available resource exists that can provide useful data to assess geographic cost differences in office rent, even though it is a proxy for the exact data we seek, that we should utilize that available resource. In addition to reviewing alternative data sources, we also explored whether there are alternative ways of using the ACS data that could improve geographic

representation or improve interested parties' confidence in it as a reasonable way to capture geographic variation in office rent, including consideration of alternative ways to handle counties where we are missing ACS data, as well as using alternative variables within the ACS data to assess whether there are other similar variables that have more complete data than median gross rent for two-bedroom residences. Our research indicates that using alternatives within the ACS would likely result in minimal changes to the resulting index and would likely not address commenters' concerns regarding use of residential rent data as a proxy for office rent. Our research also suggests that the variation captured by the two-bedroom measure is highly correlated with the geographic variation in one-bedroom and three-bedroom units. The high correlation coefficient strengthens the support for using the ACS two-bedroom measure to capture office rent variation across areas. We explored the continued use of the ACS data to see if there are other available variables that have a lower count of missing observations. The data includes variables on the median gross rent for no bedrooms, one bedroom, two bedrooms, three bedrooms, four bedrooms, five or more bedrooms, and the total median gross rent. Table 30 shows the number of observations that are missing for each of the median gross rent variables in the 2017 5-year ACS data.

**TABLE 30: Number of Missing Observations for ACS Residential Rent Variables**

| Total Number of Missing Observations               | Frequency | Percent |
|--|-----------|---------|
| Median gross rent -- - Total:                      | 1         | 0.03    |
| Median gross rent -- - Total: - No bedroom         | 1310      | 40.68   |
| Median gross rent -- - Total: - 1 bedroom          | 164       | 5.09    |
| Median gross rent -- - Total: - 2 bedrooms         | 31        | 0.96    |
| Median gross rent -- - Total: - 3 bedrooms         | 21        | 0.65    |
| Median gross rent -- - Total: - 4 bedrooms         | 367       | 11.4    |
| Median gross rent -- - Total: - 5 or more bedrooms | 1553      | 48.23   |

Source: 2017 ACS 5-Year Estimates

Based on the 2017 5-year ACS data, total median gross rent and median gross rent for three bedrooms are two available alternative variables that have fewer missing county-level ACS data than the currently used median gross rent for two bedrooms. However, it is important to note that the number of missing observations for each variable could change over time. While the median gross rent for two bedrooms has

a relatively low count for missing observations, it could be substituted with the total median gross rent, which has the smallest count of missing observations. In future years of ACS data, there could be more or fewer missing observations for this list of variables. Moving to use of the median gross rent for three bedrooms would result in slightly fewer missing observations in the 2017 ACS 5-Year

Estimates, but this may not be the case for all update years.

There are also alternative ways of handling counties that are missing data. In the CY 2020 update, we imputed county-level rent estimates using the average value for a given county's MSA. Other options include using the average value for contiguous counties, using an average value for the county's State or removing the missing observation from

the calculation. However, we note that the current method of handling counties that are missing data is a reasonable approach and any alternative would not likely affect the calculation materially. Additionally, since there are so few counties that are missing data (less than one percent), these alternatives (even if we had reason to prefer one of them) would likely have no impact on the resulting index. Table 31 shows the

correlation coefficients between the available residential rent variables in the ACS. The variation captured by the two-bedroom measure is highly correlated with the geographic variation in one-bedroom and three-bedroom units (approximately 0.9). This relationship is similar, but not quite as prominent for the other residential measures. The correlation coefficient between three-bedroom and four-

bedroom rent measures is also approximately 0.9. Based on our research, the geographic variation in residential rents is consistent regardless of specific measure used, and therefore, a change in the ACS variable used or a change in the way of handling counties that are missing data would likely result in minimal changes to the resulting index.

TABLE 31: Correlation Coefficient Between ACS Residential Rent Variables

| ACS Residential Rent Variables | Correlation Coefficient | N (max 3,220) |
|--------------------------------|-------------------------|---------------|
| 0 vs. 1 bedroom                | 0.55                    | 1,895         |
| 1 vs. 2 bedrooms               | 0.89                    | 3,043         |
| 2 vs. 3 bedrooms               | 0.92                    | 3,172         |
| 3 vs. 4 bedrooms               | 0.87                    | 2,850         |
| 4 vs. 5 bedrooms               | 0.77                    | 1,645         |
| Total vs. 2 bedrooms           | 0.95                    | 3,189         |

Source: 2017 ACS 5-Year Estimates

Given its national representation, reliability, high response rate and frequent updates, and based on the rank order comparison of GSA and ACS data and high correlation coefficients for the ACS residential rent variables discussed above, we continue to believe the ACS residential rent data is the most appropriate data source available at this time for the purposes of calculating the rent index of the PE GPCI. We undertook a comprehensive analysis of alternatives to the ACS data and concluded that there is still no acceptable national data source available for physician office or other comparable commercial rents, and therefore, we proposed to continue to use county-level residential rent data from the ACS as a proxy for the relative cost differences in commercial office rents for the proposed CY 2023 update, and have done so in calculating the CY 2023 final GPCIs.

j. GPCI Update Summary

As explained in the Background section above, section 1848(e)(1)(C) of the Act mandates the periodic review and adjustment of GPCIs. For each periodic review and adjustment, we publish the proposed GPCIs in the PFS proposed rule to provide an opportunity for public notice and comment, and allow us to consider whether any revisions in response to comments are warranted prior to implementation. The CY 2023 updated GPCIs for the first and second year of the 2-year phase-in, along with the GAFs, are displayed in Addenda D and E to this final rule available on our website under the

supporting documents section of the CY 2023 PFS final rule web page at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSchd/index.html>.

The following is a summary of the public comments received on the proposed revisions to the CY 2023 GPCIs and our responses:

*Comment:* Some commenters expressed support for the proposed methodological refinements to the GAF calculation and the refinement to the number of unique fee schedule areas in California.

*Response:* We thank the commenters for the support of our proposed methodological refinements to both the GAF calculation and the number of unique fee schedule areas in California. As noted above, we are finalizing to identify the Los Angeles-Long Beach-Anaheim MSA, containing Orange County and Los Angeles County, by one unique locality number, 18, and the San Francisco-Oakland-Berkeley MSA containing San Francisco, San Mateo, Alameda, and Contra Costa counties by one unique locality number, 05, as proposed. As noted above, there will be no changes to the existing locality numbers 05, 06, 08, 18, or 26 for CY 2023 due to timing constraints relating to the operationalization of these changes. As noted above, we intend to operationalize these finalized changes for CY 2024. We note that these changes, when operationalized, do not have any payment implications under the PFS.

*Comment:* Some commenters urged CMS to apply the locality RVUs rather

than the national RVUs when calculating the GAFs. One commenter stated that this adjustment to the proposed GAF calculation methodology would provide the most precise information at the locality level. In doing so, the commenter stated that calculating a locality's GAF \* Total RVUs \* Conversion Factor would more accurately reflect locality payments.

*Response:* We remind commenters that the GAFs are a weighted composite of each PFS locality's work, PE and MP expense GPCIs, which were previously calculated using the national GPCI cost share weights. For CY 2023, we proposed to update the GAF calculation to weight each component by total RVUs that each component accounts for, based on Medicare utilization data from CY 2020. We reiterate that we believe using the share of RVUs reflected in recent Medicare utilization data as weights when calculating the CY 2023 GAFs results in GAFs that more accurately reflect the composite effect of geographic adjustment on payment, year over year, as compared to the GAFs calculated using the 2006-based MEI cost share weights. In the proposed rule, we noted that this change, if finalized, would allow the use of current Medicare utilization data that are available each year as opposed to the MEI cost share weights that are not updated as frequently. We note that the difference between the GAFs, when calculated using the current calculation methodology and the proposed calculation methodology is very minimal, differing only by a maximum of 0.717 percent. We also remind

commenters that we do not actually use GAFs in computing the fee schedule payment for a specific service; rather, the GAFs are useful in comparing overall costs and payments among fee schedule areas. Therefore, we disagree with the commenter that utilizing the locality RVUs when calculating the GAFs would more accurately reflect locality payments, as we do not utilize the GAFs to calculate payment under the PFS. We also note that because the GAFs were previously calculated using the national GPCI cost share weights, we believe that it would be more appropriate to use the national RVUs, rather than locality RVUs as suggested by commenters, to aid transparency between update years. We are finalizing the adjustment to the proposed GAF calculation methodology as proposed.

*Comment:* Some commenters stated that our proposed methodologic changes to the work GPCI occupation groups and codes create unnecessary complexity and limited transparency. The commenters stated that CMS did not provide an impact analysis or criteria for inclusion (that is, how well it correlated as a proxy) other than significant consideration to the extent to which the data exist in the file (data existence) and how well the occupation codes are represented in the data (data sufficiency). The commenters stated that, without further explanation, two additional occupation groups were added to the previous seven occupation groups, which increased the greater than 100 current occupation codes by 60. One commenter believes that it is unlikely that the cumulation of so many professions will accurately reflect the relative difference in work of a single profession such as a physician; the commenter stated that, if one were to compare the BLS OEWS data file used for the work GPCI with that of the healthcare provider dataset, there is a discordance. The commenters agreed that the healthcare provider dataset should not be used for developing the work GPCI due to circularity, but believe it can be used to validate the proposed work GPICs and to identify a much smaller subset of professions that would act as more reliable proxies than what was proposed. The commenters urged CMS to apply a smaller number of professions to the work GPCI, as they thought that doing so would result in a more reliable and accurate proxy for physician work, and provide more information about the correlation between physician work and the proxy professions to allow the public to verify its accuracy.

*Response:* As noted in the final report, “Final Report for the CY 2023 Update of

GPICs and MP RVUs for the Medicare PFS,” on our website located under the supporting documents section for the CY 2023 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>, we conducted a thorough review of the BLS OEWS occupation codes within each of the seven occupation groups used in past updates to track and document the changes over time for the CY 2023 GPCI update. As new BLS OEWS data are released, the availability of specific occupation codes is subject to change, and it is possible that new codes can be added, changed, or removed from the BLS OEWS data over time; therefore, we believe it is important to periodically review and update the occupation groups and codes that are included in our triennial GPCI updates based on our review. This review of the BLS OEWS occupation codes is consistent with previous updates. We use the most updated resource cost data in each area to better adjust PFS payments for geographic cost differences compared to national average costs, therefore, we continue to believe that as updated, more complete BLS OEWS data becomes available, we should incorporate that data into our methodologies as appropriate.

We note that the seven proxy professional wage categories span several different industries, including pharmacists and registered nurses, which demonstrates that the healthcare industry is represented in those proxy wage categories. We also remind commenters that the work GPCI captures the relative cost of physician and non-physician practitioner labor across Medicare payment localities, not absolute costs. In other words, the proxy professional wages from the BLS OEWS data are not a proxy for physician wages, but rather, the geographic variation in proxy professional wages is used as a proxy for the geographic variation in physician wages. The work GPCI reflects differences in living and other costs faced by practitioners in different areas, since other similarly educated professionals face similar costs. Regarding the commenter’s statement that information regarding correlation should be provided, we note that including physician wage data in the work GPCI would potentially introduce some circularity, therefore we remind commenters that, consistent with our longstanding practice, a set of proxy occupation groups representing a variety of highly educated professionals are used in the work GPCI calculation. As discussed in previous rulemaking in

response to commenters’ concerns with the use of unrelated proxy data for physician wages, specifically that MedPAC studies have confirmed that the data sources currently relied upon for geographic adjustment bear no correlation to physician earnings, we have stated that we will continue to consider the possibility of establishing a physician cost report and requiring a sufficiently large sample of physicians in each locality to report data on actual costs incurred (81 FR 80264). However, we also stated that we believed that a physician cost report could take years to develop and implement, and could be prohibitively expensive (75 FR 73259). We solicited public comment regarding the potential benefits to be gained from establishing a physician cost report and whether this approach is appropriate to achieve potentially greater precision in measuring the relative cost differences in physicians’ practices among PFS localities. We also solicited public comments on the potential administrative burden of requiring physicians to routinely complete and submit a cost report. We did not receive any feedback specifically related to that comment solicitation (76 FR 73088). We note that we do not claim the proxy professions themselves, or the absolute wages of the proxy professionals are correlated to physician wages, but rather, that the geographic variation in proxy professional wages is similar to the geographic variation in physician wages.

We believe that there would be similar geographic variation if one were to compare the BLS OEWS data used for the work GPCI with data from a healthcare provider dataset, as we continue to believe in the majority of instances, the earnings of physicians will vary among areas to the same degree that the earnings of other professionals across an array of industries vary. Further, we welcome opportunities to discuss data sources that can be used to validate the work GPICs, similar to the analysis that we performed for residential and commercial rent data used for the office rent index.

*Comment:* One commenter stated that they agree with the use of more recent wage data, but encouraged CMS to consider the potential effects of the COVID-19 pandemic on the GPICs given that the timeframe of the BLS OEWS data is pre-pandemic and wages have increased drastically since the start of the pandemic.

*Response:* We reiterate that the work GPCI captures the relative cost of physician and non-physician practitioner labor across Medicare

payment localities, not absolute costs. We note that overall nationwide wage changes would not be reflected in the work GPCI, but rather, the geographic variation compared to the national average would be reflected. We note that we did not use the Census Bureau's 2020 ACS data in the office rent index for the proposed CY 2023 GPCI update due to potential COVID-19 pandemic impacts on data, as previously discussed in the proposed rule. We noted in the proposed rule that we would analyze the ACS data collected in 2020 and subsequent years that occurred during the COVID-19 pandemic, and consider using those data for the next GPCI update after we better understand their integrity and validity for our purposes. Similarly, we understand that the BLS OEWS data could be impacted by conditions during the COVID-19 pandemic, therefore, we will perform similar analyses on the BLS OWES data for the next GPCI update.

*Comment:* A few commenters stated that the GPCIs for Hawaii do not account for the unique costs of providing medical services in Hawaii and that this will lead to an accelerating shortage of health care providers across the state of Hawaii. The commenter stated that the 1.5 work GPCI floor for Alaska, and the 1.0 PE GPCI floor for the Frontier States should serve as a basis for reevaluating the cost of providing medical services in Hawaii. The commenter stated that the GPCIs should be adjusted to reflect a factor at least equal to Alaska's work GPCI. Another commenter requested that Hawaii's GPCIs be increased for the cost of rent and supplies in Hawaii. One commenter stated that Hawaii's unique geography makes providing care more expensive and that the cost of living ranks amongst the highest in the nation, and the data used by CMS do not reflect the cost of living.

*Response:* We reiterate that the GPCIs, in particular the work GPCI and the PE GPCI to which the commenters refer, are based on nationally-representative and publicly-available wage data from the BLS OEWS for the work GPCI and employee wage and purchased services components of the PE GPCI, and the Census Bureau's ACS data for the rent index component of the PE GPCI. The GPCIs are a measure of relative resource cost differences among localities compared to the national average as informed by the data (not a measure of absolute costs). We remind commenters that the work GPCI value for Alaska is not based on the data for that State, instead section 1848(e)(1)(G) of the Act sets a permanent 1.5 work GPCI floor for

Alaska. Similarly, section 1848(e)(1)(I) of the Act sets a permanent PE GPCI floor of 1.0 for the Frontier States.

*Comment:* One commenter stated that it disputes the claim that the equipment, supplies, and miscellaneous expenses component of the PE GPCI do not vary by geographic area. The commenter states that small specialty practices in rural communities do not have the volume to negotiate with the national suppliers, particularly for specialty testing, for which there are only a few places to get the specialty supplies. The commenter states that prices are typically presented by the supplier based on volume, and suppliers rarely compromise on order minimums for rural providers. The commenter also noted that many medical supplies have expiration dates, and rural areas struggle to utilize the supplies prior to their expiration dates because of lower volume and large supply shipments based on a supplier's order minimum. The commenter expressed concern with access to urgent and direct patient care services because the national corporations and laboratories will not provide these low paying services in rural areas.

*Response:* With regard to the supplies, equipment, and miscellaneous expense cost index component of the PE GPCIs, we note that we made no proposals regarding our current policy for this component of the PE GPCI. We have stated that we believe there is a national market for these items and there is not significant geographic variation in those costs, and as such we assign a value of 1.00 for this component for each locality, consistent with the national average. The commenter did not provide any data or information to quantify the variation of costs of supplies, the amount of supplies lost to expiration dates, or national suppliers' order minimums in contrast to a rural specialty practice's demand for these supplies. We encourage the commenter and other interested parties to submit data supporting their assertions for consideration in future rulemaking; specifically, we would be interested in information regarding potential data sources for shipping costs and the costs of medical equipment and supplies for different geographic regions. Ideally, the potential data sources are accessible to the public, available on a national basis for both urban and rural areas, and updated regularly. Similarly, we have previously attempted to locate data sources specific to geographic variation in shipping costs, and we found no comprehensive national data source for this information, and therefore, we have not been able to quantify variation in

costs specific to islands or rural communities.

*Comment:* A few commenters stated that they do not believe that local taxes are accounted for in the GPCIs, such as a general excise tax that is applied to medical services provided in a State.

*Response:* We note that costs associated with practicing in a particular locality are accounted for in the data that underpin the GPCI calculations. Therefore, we disagree with the commenter's statement that the GPCIs do not account for geographic differences in taxes.

*Comment:* Two commenters stated that there is a lack of transparency into the GPCI data and methodology used to derive the GPCIs. One commenter stated that they cannot accurately validate CMS' GPCI calculations because there is little transparency and access to the data and methods used. The commenter stated that they submitted a comment on the CY 2022 Physician Fee Schedule proposed rule urging CMS to provide more transparency into the GPCI calculations in general, including a more detailed description of the step-by-step methodology and the specific data files used to derive the GPCIs. In addition to making the RVUs by county available, the commenters urged CMS to make available the source data for the work GPCI by county, the source data for each component of the practice expense GPCI, and all budget neutrality adjustments and calculations.

The commenters stated that CMS provided these data prior to 2020 and that they used it to reproduce and validate the CMS methodology for calculating the GPCIs each year. One commenter stated that they have identified substantial errors in previous proposed rules which CMS has swiftly corrected. The commenters stated that it is important that CMS provide more detailed information related to this critical component of the PFS in the proposed rule in order for the public to reproduce and validate the GPCIs. The commenters stated that the information should be published with the proposed rule just as CMS provides the practice expense RVUs, but with the specific data files.

*Response:* We refer readers to the step-by-step instructions provided in the final report, "Final Report for the CY 2023 Update of GPCIs and MP RVUs for the Medicare PFS," on our website located under the supporting documents section for the CY 2023 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>. We also refer readers to Table 4.A.1: Summary of Elements Required for GPCI Calculation

in the final report, and the previous discussion, for the data sources used for the work GPCI and each component of the practice expense GPCI. As noted in the proposed rule, and as previously stated in this final rule, we discuss the years and timeframes of data used from each source. We note that we provide web links to the publicly-available data sources used in this GPCI update, the methodological parameters, as well as an overview of how we develop each GPCI component in the final report. This practice is consistent with previous updates. We also note that the budget neutrality adjustment and statutory floors applied after the budget neutrality adjustment are detailed in the note, “CY 2023 GPCI Update Note\_County\_Data,” on our website located under the supporting documents section for the CY 2023 PFS proposed and final rules at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

Regarding the interested parties’ comment on the CY 2022 proposed rule urging CMS to provide more transparency on the GPCI calculations, including a more detailed description of the step-by-step methodology and the specific data used to derive the GPCIs, we note that we did not make any proposals relating to the GPCIs in the CY 2022 proposed rule, so did not solicit or respond to public comments on that rule regarding GPCIs. However, we remind commenters that, in response to the commenters’ concerns expressed in rulemaking for the CY 2020 GPCI update, we included more detailed steps in the final report, “Final Report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare Phys Fee Sched\_v19Feb2020”, which is available on the CMS website under the downloads section of the CY 2020 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>, to assist interested parties in navigating these data. Additionally, as part of our ongoing commitment to transparency, we post the county-level data that we use to develop the proposed GPCIs, which allows interested parties to further examine and replicate our GPCI methodology. This file is available on the CMS website on our website under the Downloads section, titled “CY 2023 Proposed Rule GPCI County-Level Data File.” We believe that we sufficiently addressed previous commenters’ concerns for the CY 2023 GPCI update in the proposed rule and aforementioned CY 2020 and CY 2023 interim and final reports.

*Comment:* Some commenters that addressed the proposed rebased and revised MEI supported the proposed delayed implementation of the updated MEI in the PE GPCI and PFS ratesetting for CY 2023, but we note that most commenters specifically commented on the data and methodologies proposed in section II.M. of the proposed rule, rather than the proposed delayed implementation, as proposed in sections II.B. and II.G. of the proposed rule. One commenter expressed concern with the geographic redistribution that could potentially occur with implementation of the rebased and revised MEI cost share weights used in the PE GPCI. The commenter stated that when CMS proposes to modify the weights of the practice expense categories (employee compensation, office rent, purchased services and equipment/supplies/other) within the practice expense GPCI, a significant reduction in the weight of office rent could lead to reductions in the payment to urban sites and increases to payment in rural areas and states with a single GPCI. The commenter urged CMS to also consider the impact of implementation of the rebased and revised MEI cost share weights for geographical areas with relatively high malpractice premiums, given the decreased weight of PLI in the proposed rebased and revised MEI.

*Response:* We thank the commenters for the support of our proposed delayed implementation of the rebased and revised MEI weights for the GPCIs and PFS ratesetting for CY 2023. We note that we address specific comments regarding the rebased and revised MEI in section II.M. of this final rule. We also note that we provided alternate Addenda D and E to show the CY 2023 GPCIs and summarized GAFs if the rebased and revised MEI cost share weights proposed in section II.M. of the proposed rule were incorporated to weight the proposed CY 2023 PE GPCIs (for comparison to Addenda D and E with the proposal to maintain the current 2006-based MEI cost share weights for the PE GPCIs). We refer readers to the discussion of the impacts of the alternative considered (to implement the proposed rebased and revised MEI in the proposed CY 2023 PE GPCI) in section VI. (2. Alternatives Considered for the Practice Expense (PE) Geographic Practice Cost Index (GPCI)) of the proposed rule. We remind commenters that the implementation of the proposed rebased and revised MEI would only impact the PE GPCI (and GAFs, as the PE GPCI factors into the calculation of the GAF), as the MEI cost share weights are only used in the

GPCIs to weight the four components of the PE GPCI. Therefore, the implementation of the rebased and revised MEI would not impact the work or MP GPCIs. We refer readers to the discussion of the impacts of the alternative considered (to implement the proposed rebased and revised MEI in CY 2023 ratesetting) in section VI. (1. Alternatives Considered for Adjusting RVUs To Match PE Share of the Medicare Economic Index (MEI)) of the proposed rule for impacts of decreased PLI weight in the proposed rebased and revised MEI on PFS ratesetting.

*Comment:* One commenter expressed appreciation for CMS’ efforts to analyze the commercial rent data sources as alternatives considered for the residential rent data used in the practice expense GPCI. The commenter stated that they believe the criteria applied to evaluate alternative sources of rent data were appropriate and encouraged CMS to continue this ongoing effort.

*Response:* We thank the commenters for the support of our efforts and encourage commenters to submit information regarding potential data sources for our consideration in future rulemaking. We note that our efforts are ongoing to identify a publicly-available, robust, nationally representative commercial rent data source that could be made available to CMS for this purpose. Further, we welcome opportunities to discuss such data sources with interested parties and to incorporate such data, as appropriate, in the GPCI calculation process.

After considering the public comments, we are finalizing the CY 2023 GPCI update, and the methodological refinements, as proposed. As discussed previously in this section of the final rule, we are finalizing to identify the Los Angeles-Long Beach-Anaheim MSA, containing Orange County and Los Angeles County, by one unique locality number, 18, and the San Francisco-Oakland-Berkeley MSA containing San Francisco, San Mateo, Alameda, and Contra Costa counties by one unique locality number, 05, as proposed. As noted above, there will be no changes to the existing locality numbers 05, 06, 08, 18, or 26 for CY 2023 due to timing constraints relating to the operationalization of these changes. As noted above, we intend to operationalize these finalized changes for CY 2024. We note that these changes, when operationalized, do not have any payment implications under the PFS. As a result, the final CY 2023 GPCIs and summarized GAFs in Addenda D and E to this final rule do not reflect the California locality changes as finalized, as there will be no

changes to the existing locality numbers 05, 06, 08, 18, or 26 for CY 2023, and note that the changes will be reflected in Addenda D and E for CY 2024 when the finalized changes are operationalized.

#### *H. Determination of Malpractice Relative Value Units (RVUs)*

##### 1. Overview

Section 1848(c) of the Act requires that valuations for each service under the PFS be composed of three components: work, practice expense (PE), and malpractice (MP) expense. As required by section 1848(c)(2)(C)(iii) of the Act, beginning in CY 2000, MP RVUs are resource based. Section 1848(c)(2)(B)(i) of the Act also requires that we review, and if necessary adjust, RVUs no less often than every 5 years. In the CY 2015 PFS final rule with comment period (79 FR 67591 through 67596), we implemented the third review and update of MP RVUs. For a comprehensive discussion of the third review and update of MP RVUs, see the CY 2015 PFS proposed rule (79 FR 40349 through 40355) and final rule with comment period (79 FR 67591 through 67596). In the CY 2018 PFS proposed rule (82 FR 33965 through 33970), we proposed to update the specialty-level risk factors, used in the calculation of MP RVUs, prior to the next required 5-year update (CY 2020), using the updated MP premium data that were used in the eighth Geographic Practice Cost Index (GPCI) update for CY 2017; however, the proposal was ultimately not finalized for CY 2018.

We consider the following factors when we determine MP RVUs for individual PFS services: (1) specialty-level risk factors derived from data on specialty-specific MP premiums incurred by practitioners; (2) service-level risk factors derived from Medicare claims data of the weighted average risk factors of the specialties that furnish each service; and (3) an intensity/complexity of service adjustment to the service-level risk factor based on either the higher of the work RVU or clinical labor portion of the direct PE RVU. Prior to CY 2016, MP RVUs were only updated once every 5 years, except in the case of new and revised codes.

As explained in the CY 2011 PFS final rule with comment period (75 FR 73208), MP RVUs for new and revised codes effective before the next 5-year review of MP RVUs were determined either by a direct crosswalk from a similar source code or by a modified crosswalk to account for differences in work RVUs between the new/revised code and the source code. For the

modified crosswalk approach, we adjusted (or scaled) the MP RVU for the new/revised code to reflect the difference in work RVU between the source code and the new/revised work RVU (or, if greater, the difference in the clinical labor portion of the fully implemented PE RVU) for the new code. For example, if the proposed work RVU for a revised code was 10 percent higher than the work RVU for its source code, the MP RVU for the revised code would be increased by 10 percent over the source code MP RVU. Under this approach, the same risk factor (RF) was applied for the new/revised code and source code, but the work RVU for the new/revised code was used to adjust the MP RVUs for risk.

In the CY 2016 PFS final rule with comment period (80 FR 70906 through 70910), we finalized a policy to begin conducting annual MP RVU updates to reflect changes in the mix of practitioners providing services (using Medicare claims data), and to adjust MP RVUs for risk for intensity and complexity (using the work RVU or clinical labor RVU). We also finalized a policy to modify the specialty mix assignment methodology (for both MP and PE RVU calculations) to use an average of the 3 most recent years of data instead of a single year of data. Under this approach, for new and revised codes, we generally assign a specialty-level risk factor to individual codes based on the same utilization assumptions we make regarding specialty mix we use for calculating PE RVUs and for PFS budget neutrality. We continue to use the work RVU or clinical labor RVU to adjust the MP RVU for each code for intensity and complexity. In finalizing this policy, we stated that the specialty-level risk factors would continue to be updated through notice and comment rulemaking every 5 years using updated premium data, but would remain unchanged between the 5-year reviews.

Section 1848(e)(1)(C) of the Act requires us to review, and if necessary, adjust the GPCIs at least every 3 years. In the CY 2020 PFS final rule with comment period, we implemented the fourth review and update of MP RVUs, and we also conducted the statutorily required 3-year review of the GPCIs. For a comprehensive discussion of the fourth review and update of MP RVUs, see the CY 2020 PFS proposed rule (84 FR 40504 through 40510) and final rule with comment period (84 FR 62606 through 62615). The MP premium data used to update the MP GPCIs are the same data used to determine the specialty-level risk factors, which are used in the calculation of MP RVUs.

Therefore, for the CY 2020 update of MP RVUs we finalized a policy to align the update of MP premium data with the update to the MP GPCIs to increase efficiency. Effective beginning in CY 2020, our policy is to review, and if necessary update, the MP RVUs at least every 3 years, similar to our review and update of the GPCIs.

##### 2. Methodology for the Revision of Resource-Based Malpractice (MP) RVUs

###### a. General Discussion

As discussed in the CY 2023 PFS proposed rule (87 FR 46016), we calculated the MP RVUs that we proposed for CY 2023 using updated MP premium data obtained from State insurance rate filings. We used a calculation methodology for the CY 2023 review and update of resource-based MP RVUs that largely parallels the process used in the CY 2020 update; however, we proposed to incorporate some methodological refinements, which we described in the proposed rule. The MP RVU calculation requires us to obtain information on specialty-specific MP premiums that are linked to specific services, and using this information, we derive relative risk factors (RFs) for the various specialties that furnish a particular service. Because MP premiums vary by State and specialty, the MP premium information must be weighted geographically and by specialty. The MP RVUs that we proposed were calculated using four data sources:

- MP premium data presumed to be in effect as of December 31, 2020;
- CY 2020 Medicare payment and utilization data;
- Higher of the CY 2022 final work RVUs or the clinical labor portion of the direct PE RVUs; and
- CY 2022 MP GPCIs.

We used the higher of the CY 2022 final work RVUs or clinical labor portion of the direct PE RVUs in our calculation to develop the CY 2023 proposed MP RVUs while maintaining overall PFS budget neutrality.

Similar to the CY 2020 update, the proposed MP RVUs were calculated using specialty-specific MP premium data because they represent the expense incurred by practitioners to obtain MP insurance as reported by insurers. For CY 2023, the most current MP premium data available, with a presumed effective date of no later than December 31, 2020, were obtained from insurers with the largest market share in each State. We identified insurers with the largest market share using the National Association of Insurance Commissioners (NAIC) market share report. This annual

report provides State-level market share for entities that provide premium liability insurance (PLI) in a State. Premium data were downloaded from the System for Electronic Rates & Forms Filing Access Interface (SERFF) (accessed from the NAIC website) for participating States. For non-SERFF States, data were downloaded from the State-specific website (if available online) or obtained directly from the State's alternate access to filings. For SERFF States and non-SERFF States with online access to filings, the 2020 market share report was used to select companies. These were the most current data available during the data collection and acquisition process.

MP insurance premium data were collected from all 50 States, and the District of Columbia. Efforts were made to collect filings from Puerto Rico; however, no recent filings were submitted at the time of data collection, and therefore, filings from the previous update were used. Consistent with the CY 2020 update, no filings were collected for the other U.S. territories: American Samoa; Guam; Virgin Islands; or Northern Mariana Islands. MP premiums were collected for coverage limits of \$1 million/\$3 million, mature, claims-made policies (policies covering claims made, rather than those covering losses occurring, during the policy term). A \$1 million/\$3 million liability limit policy means that the most that would be paid on any claim is \$1 million and the most that the policy would pay for claims over the timeframe of the policy is \$3 million. Adjustments were made to the premium data to reflect mandatory surcharges for patient compensation funds (PCF, funds used to pay for any claim beyond the State's statutory amount, thereby limiting an individual physician's liability in cases of a large suit) in States where participation in such funds is mandatory.

Premium data were included for all physician and nonphysician practitioner (NPP) specialties, and all risk classifications available in the collected rate filings. Although premium data were collected from all States, the District of Columbia, and previous filings for Puerto Rico were utilized, not all specialties had distinct premium data in the rate filings from all States. In the CY 2020 PFS final rule (84 FR 62607 through 62610), we finalized methodological improvements that expanded the specialties and amount of filings data used to develop the proposed risk factors, which are used to develop the proposed MP RVUs.

#### b. Methodological Refinements

For the CY 2023 update, we proposed the following methodological improvements to the development of MP premium data:

(1) Improving our current imputation strategy to develop a more comprehensive data set when CMS specialty names are not distinctly identified in the insurer filings, which sometimes use unique specialty names or do not include all CMS specialties.

In instances where insurers report data for some (but not all) specialties that explicitly corresponded to a CMS specialty, where those data were missing, we finalized in the CY 2020 final rule (84 FR 62607 through 62610) to use partial imputation based on available data to establish what the premiums would likely have been had that specialty been delineated in the filing. In instances where there were no data corresponding to a CMS specialty in the filing, we finalized a policy to use total imputation to establish premiums for that specialty. We proposed to further refine our strategy for imputing risk factor values for specialties that have incomplete data during the data collection process by using rates mapped from the more commonly reported specialty within risk class as opposed to excluding underrepresented filing data.

For example, Hospice and Palliative Care is typically assigned the same risk class as Internal medicine. Rather than excluding Hospice and Palliative Care because there is insufficient filing data, we would use Internal Medicine rates in filings that did not explicitly report Hospice and Palliative Care. For the CY 2020 update, commenters requested that we continue to improve our data collection process to ensure that as much specialty-specific data as possible are used to calculate risk factors. Therefore, we proposed to utilize this small improvement for collecting risk value input data in the future, as this retains as much data as possible and maps specialties more intentionally.

(2) Creation of a risk index for the calculation of MP RVUs.

We proposed to utilize a true MP risk index as opposed to derived risk factors when calculating MP RVUs. Historically, we have used risk factors, which is a ratio of a specialty's national average premium to a single referent specialty's national average premium. This denominator has typically been based on the national average premium for the Allergy/Immunology specialty, which has had the lowest average premium for 2017 and 2020. As proposed, the risk index would be

calculated as a ratio of the specialty's national average premium to the volume-weighted national average premium across all specialties. We discussed that we believe the change would increase consistency with the calculation of MP RVUs, so that changes in the MP risk index reflect changes in payment, as opposed to changes relative only to the specialty with the lowest national average premium. We noted that we believe that this definitional change to risk index does not impact the pricing of services in the PFS since it does not change relative risk across specialties, and MP RVUs are rescaled for purposes of budget neutrality to be equal to the overall pool of MP RVUs. Readers can refer to the section of the proposed rule entitled, "Application of BN to Adjustments of RVUs" for a discussion of our budget neutrality process.

#### c. Steps for Calculating Malpractice RVUs

Calculation of the proposed MP RVUs conceptually follows the specialty-weighted approach used in the CY 2015 PFS final rule with comment period (79 FR 67591), along with the proposed methodological improvements. The specialty-weighted approach bases the MP RVUs for a given service on a weighted average of the risk index of all specialties furnishing the service. This approach ensures that all specialties furnishing a given service are reflected in the calculation of the MP RVUs. The steps for calculating the MP RVUs are described below.

*Step (1):* Compute a preliminary national average premium for each specialty.

Insurance rating area MP premiums for each specialty are mapped to the county level. The specialty premium for each county is then multiplied by its share of the total U.S. population (from the U.S. Census Bureau's 2015–2019 American Community Survey (ACS) 5-year estimates). This is in contrast to the method used for creating national average premiums for each specialty in the 2015 update; in that update, specialty premiums were weighted by the total RVU per county, rather than by the county share of the total U.S. population. We referred readers to the CY 2016 PFS final rule with comment period (80 FR 70909) for a discussion of why we have adopted a weighting method based on share of total U.S. population. This calculation is then divided by the average MP GPCI across all counties for each specialty to yield a normalized national average premium for each specialty. The specialty premiums are normalized for geographic

variation so that the locality cost differences (as reflected by the 2022 GPCIs) would not be counted twice. Without the geographic variation adjustment, the cost differences among fee schedule areas would be reflected once under the methodology used to calculate the MP RVUs and again when computing the service specific payment amount for a given fee schedule area.

*Step (2):* Determine which premium service risk groups to use within each specialty.

Some specialties had premium rates that differed for surgery, surgery with obstetrics, and non-surgery. These premium classes are designed to reflect differences in risk of professional liability and the cost of MP claims if they occur. To account for the presence of different classes in the MP premium data and the task of mapping these premiums to procedures, we calculated a distinct risk index for surgical,

surgical with obstetrics, and nonsurgical procedures where applicable. However, the availability of data by surgery and non-surgery varied across specialties. Historically, no single approach accurately addressed the variability in premium class among specialties, and we previously employed several methods for calculating average premiums by specialty. These methods are discussed below.

*Developing Distinct Service Risk Groups:* We determined that there were sufficient data for surgery and non-surgery premiums, as well as sufficient differences in rates between classes for 17 specialties (there were 15 such specialties in the CY 2020 update). These specialties are listed in Table 26. The CY 2023 update uses the same structure of specialty/service risk group as the previous update except that Unknown Physician Specialty (99) is now divided into surgery and non-

surgery groups. We were able to collect an expanded amount of premium data for this specialty relative to the previous update, and this service risk group structure change is reflective of the patterns observed in the most current premium data. For all other specialties (those that are not listed in Table 32) that typically do not distinguish premiums as described above, a single risk index value was calculated, and that specialty risk index value was applied to all services performed by those specialties. For further discussion of the information contained in Table 26, refer to “Final Report for the CY 2023 Update of GPCIs and MP RVUs for the Medicare Physician Fee Schedule” Available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices>.  
**BILLING CODE 4150–28–P**

TABLE 32: Specialties Subdivided into Service Risk Groups

| Service Risk Groups   | Specialties  |
|-----------------------|--|
| Surgery/No Surgery    | Otolaryngology (04), Cardiology (06), Dermatology (07), Gastroenterology (10), Neurology (13), Ophthalmology (18), Cardiac Electrophysiology (21), Urology (34), Geriatric Medicine (38), Nephrology (39), Endocrinology (46), Podiatry (48), Emergency Medicine (93) Unknown Physician Specialty (99) |
| Surgery/No Surgery/OB | General Practice (01), Family Practice (08), OB/GYN (16)   |

*Step (3):* Calculate a risk index for each specialty.  
The relative differences in national average premiums between specialties are expressed in our methodology as a specialty-level risk index. These risk index values are calculated by dividing the national average premium for each

specialty by the volume-weighted national average premium across all specialties. For specialties with sufficient surgical and non-surgical premium data, we calculated both a surgical and non-surgical risk index value. Similarly, for specialties with rate

filings that distinguished surgical premiums with obstetrics, we recognized that service-risk subgroup of the specialty and calculated a separate surgical with obstetrics risk index value.  
Table 33 shows the risk index values by specialty type and service risk group.

**TABLE 33: CY 2023 Risk Index by Specialty and Service Risk Group**

| Medicare Specialty Code and Name        | 2023 Service Risk Group | 2023 Risk Index |

\*Specialty impacted by the phase-in and the 2023 Risk Index value without the phase-in applied.

#### BILLING CODE 4150-28-C

Step (4): Calculate MP RVUs for each CPT/HCPCS code.

Resource-based MP RVUs were calculated for each CPT/HCPCS code that has work or PE RVUs. The first step

was to identify the percentage of services furnished by each specialty for each respective CPT/HCPCS code. This

percentage was then multiplied by each respective specialty's risk index value as calculated in Step 3. The products for all specialties for the CPT/HCPCS code were then added together, yielding a specialty-weighted service specific risk index reflecting the weighted MP costs across all specialties furnishing that procedure. The service specific risk index was multiplied by the greater of the work RVU or clinical labor portion of the direct PE RVU for that service, to reflect differences in the complexity and risk-of-service between services.

*Impacts of expanded data collection:* As we discussed in the proposed rule, we proposed important methodological improvements to our process for calculating MP RVUs. The improvements were in response to comments from interested parties suggesting that we continue to improve data collection to ensure that we use as much specialty-specific data as possible to reflect the most accurate trends in malpractice premiums. When we do not have sufficient premium data for a specialty, our practice has been to use the data from the specialty with the lowest premium. As discussed in the proposed rule, we now have specialty-specific data for many more specialties. However, although the newly captured specialty-specific premium data are more accurate, the new data produce premiums and risk index values that are significantly lower for some specialties than the ones we applied in the absence of sufficient specialty-specific data.

We acknowledged that this reduction in premiums and risk index value is expected to negatively impact payment for services furnished by those specialties that are affected by the improved data collection process. Based on our analyses of the new risk index data, we identified an impact threshold to guide how we could integrate the new information into our calculations and minimize the impact on affected specialties. Specifically, we identified a reduction of approximately  $\frac{1}{3}$  to the risk index calculated for specialties based on the new specialty-specific premium data compared to the information we had previously used. To mitigate the negative impact on affected specialties, promote payment stability, and prevent potential reductions in access to services for beneficiaries, for specialties for which the use of newly available premium data would result in a 30 percent or greater reduction in the risk index for CY 2023 as compared to the current risk index value for CY 2022, we proposed to phase in the reduction in MP RVUs over the 3 years that precedes the next update, by  $\frac{1}{3}$  of the change in MP RVUs for those

specialties in each year that have a 30 percent or more threshold reduction in risk index value as a result of the update. For a detailed explanation of how the phase-in will be applied per specialty, a file is available on our website under downloads for the CY 2023 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. As proposed, the phase-in is similar to the 2-year phase-in required under section 1848(e)(1)(C) of the Act for changes to the GPCIs when it has been more than one year since the last changes. We proposed to phase in the reduction in MP RVUs over 3 years rather than 2 years because the MP risk index values are updated every 3 years. The list of specialties that would be subject to the phase-in under the proposed policy, and the corresponding risk index values for each specialty is available on our website under downloads for the CY 2023 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

*Low volume service codes:* As we discussed in the proposed rule, for low volume service codes, we used the list of expected specialties who may perform a service instead of the claims-based specialty mix when calculating MP RVUs. We finalized this approach in the CY 2018 PFS final rule to address concerns from interested parties about the year-to-year variability in PE and MP RVUs for low volume services (which also includes no volume services). (82 FR 53000 through 53006). Low volume codes are codes that have 100 or fewer allowed services for a year. These service-level overrides are used to determine the expected specialty for low volume procedures for both PE and MP.

In the CY 2018 PFS final rule (82 FR 53000 through 53006), we also finalized our proposal to eliminate general use of an MP-specific specialty-mix crosswalk for new and revised codes. However, we indicated that we would continue to consider, in conjunction with annual recommendations, specific recommendations regarding specialty mix assignments for new and revised codes, particularly in cases where coding changes are expected to result in differential reporting of services by specialty, or where the new or revised code is expected to be low-volume. Absent such information, the specialty mix assumption for a new or revised code would derive from the analytic crosswalk in the first year, followed by the introduction of actual claims data,

which is consistent with our approach for developing PE RVUs.

For CY 2023, we solicited public comment on the list of expected specialties. As noted in the proposed rule, the proposed list of codes and expected specialties was made available on our website under downloads for the CY 2023 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

We received public comments on the list of expected specialties. The following is a summary of the comments we received and our responses.

*Comment:* Commenters suggested additional CPT codes to be added to the Expected Specialty Overrides for Low Volume Service Codes list.

*Response:* We appreciate commenters' suggested additions of low volume service CPT codes to the Expected Specialty Overrides for Low Volume Service Codes list. We refer readers to the PE RVU Methodology section of this final rule for a discussion regarding the expected specialties list and the suggested additions for CY 2023.

*Step (5):* Rescale for budget neutrality.

The statute requires that changes to fee schedule RVUs must be budget neutral. Thus, the last step is to adjust for relativity by rescaling the proposed MP RVUs so that the total proposed resource-based MP RVUs are equal to the total current resource-based MP RVUs scaled by the ratio of the pools of the proposed and current MP and work RVUs. This scaling is necessary to maintain the work RVUs for individual services from year to year while also maintaining the overall relationship among work, PE, and MP RVUs.

*Specialties Excluded from Ratesetting Calculation:* In section II.B. of the proposed rule, Determination of Practice Expense Relative Value Units, we discussed specialties that are excluded from ratesetting for the purposes of calculating PE RVUs. We proposed to treat those excluded specialties in a consistent manner for the purposes of calculating MP RVUs. We noted that all specialties are included for purposes of calculating the final BN adjustment. The list of specialties excluded from the ratesetting calculation for the purpose of calculating the PE RVUs that we proposed to also exclude for the purpose of calculating MP RVUs is available in section II.B. of the proposed rule, Determination of Practice Expense Relative Value Units. The resource-based MP RVUs are shown in Addendum B, which is available on the CMS website under the downloads section of the CY 2023 PFS final rule at

<https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

Because a different share of the resources involved in furnishing PFS services is reflected in each of the three fee schedule components, implementation of the resource-based MP RVU update will have much smaller payment effects than implementing updates of resource-based work RVUs and resource-based PE RVUs. On average, work represents about 50.9 percent of payment for a service under the fee schedule, PE about 44.8 percent, and MP about 4.3 percent. Therefore, a 25 percent change in PE RVUs or work RVUs for a service would result in a change in payment of about 11 to 13 percent. In contrast, a corresponding 25 percent change in MP values for a service would yield a change in payment of only about 1 percent. Estimates of the effects on payment by specialty type is detailed in section VII. of the proposed rule, the Regulatory Impact Analysis.

Additional information on our methodology for updating the MP RVUs is available in the “Final Report for the CY 2023 Update of GPCIs and MP RVUs for the Medicare Physician Fee Schedule,” was made available on the CMS website under the downloads section of the CY 2023 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices>.

The following is a summary of the public comments received on the proposed revisions to the Determination of Malpractice RVUs and our responses:

*Comment:* The majority of commenters are in support of the proposed methodological improvements to our imputation strategy and expanded data collection efforts to create a risk index rather than risk factors. In particular, most commenters are pleased with the expanded data collection efforts that have resulted in increased accuracy for non-physician practitioner’s premium data and a risk index system that is volume-weighted to the national average premium across all specialties, rather than allergy/immunology. One commenter requested that CMS not implement the update to the 2023 MP RVUs, as proposed, due to concern for an increase in professional liability costs over the next few years. The commenter noted there could be an increase in malpractice claims caused by the public health emergency, and therefore, any negative impacts would be exacerbated.

*Response:* We thank commenters for their feedback and overall support. We

believe that the negative impacts of this MP update are relatively modest and we agree with the majority of commenters that believe that the impacts do not outweigh the benefit of updated and expanded premium data that yield more accurate professional liability insurance costs across all specialties. Therefore, we are finalizing our methodological improvements as proposed.

*Comment:* A few commenters requested that CMS not implement the proposed phase-in of risk index values that have decreased by 30 percent or more as a result of the expanded data collection efforts. These commenters requested that we implement the risk index values in their entirety for 2023 and noted that there has been a request for expanded data collection efforts and, therefore, more accurate premium data for several years. The commenters stated that these changes to risk index values were anticipated as a result of expanded data collection, and are relatively minor. Additionally, some commenters noted that in previous updates to the MP RVU data, CMS has not implemented a phase-in in response to dramatic reductions in premiums for a few specialties. One commenter was appreciative of the phase-in and requested that it be implemented as proposed.

*Response:* We acknowledge that, for previous MP RVU updates, reductions in risk index values have not always been phased-in over time when there is a significant impact to a specific specialty. We also acknowledge commenters’ opinions that changes to risk index values are anticipated when there are expanded data collection efforts. However, we remain committed to reducing burdens on practitioners by maintaining stability in Medicare payment and removing barriers to access for beneficiaries that could occur as a result of impacts from a reduction in payment to practitioners. Therefore, we believe it is important to implement a phase-in for those specialties for which we observed a large reduction in risk index value. We are finalizing our MP RVU phase-in strategy as proposed.

*Comment:* One commenter suggested that CMS make changes to the specialty data source for a few specialties that they believe are incorrectly mapped for purposes of data imputation. The commenter also noted that they would like us to further improve our imputation methodologies by publishing impacts for all CMS specialties instead of mapping to related specialties in the regulatory impact table included in all PFS **Federal Register** notices. Additionally, the commenter stated that they would like CMS to work

with the RUC to better identify appropriate cross-walks when necessary. The commenter’s requested changes to mappings are as follows: 19- Oral Surgery (dental only) (ALL) to Other, 13-Neurology (SURG) to Other, 14- Neurosurgery (ALL) to Other, 72- Pain Management (ALL) to 11- Internal Medicine, 98-Gynecologist/oncologist (ALL) to 91-Surgical oncology (ALL), C0-Sleep medicine (ALL) to 13- Neurology (NO SURG), C7-Advanced heart failure and transplant cardiology (ALL) to 06-Cardiology (NO SURG), 71- Registered Dietician to Other, and 42- Certified Nurse Midwife to Other.

*Response:* We appreciate the commenter’s mapping suggestions for some specialties that require imputation of premium data. We would also like to reiterate that we will continue to work with all interested parties to improve the data used for calculating risk index values. We continue to believe that the regulatory impact table (Table 8.A CMS Specialty Map into Impact Specialty) of the “Interim Report for the CY 2023 Update of GPCIs and MP RVUs for the Medicare Physician Fee Schedule” is a useful tool to assist us with mapping premium data when specialty specific premium data are not included in a filing. However, as we discussed in the proposed rule and above, we have adopted policies to improve our data imputation and employ partial imputation based on available data to approximate the premiums when we do not have complete specialty specific premium data, as reflected in Table 8.C (Source Specialty/Service Risk Group for Imputation for Updated PLI Premium Data) of the “Interim Report for the CY 2023 Update of GPCIs and MP RVUs for the Medicare Physician Fee Schedule.”. In particular, 71- Registered Dietician, (for purposes of impacts) is mapped to Other in Table 8.A. 42- Certified Nurse Midwife is also mapped to Obstetrics/Gynecology. However, we were able to collect sufficient premium data such that partial imputation was not required and we were able to use the actual premium data to formulate a risk index value for both specialties. Therefore, we disagree with commenters and will not re-map Registered Dietician or Certified Nurse Mid-wife in Table 8.A (CMS Specialty Map into Impact Specialty), as no mapping for premium data was required. We believe that the expanded premium data collected is an accurate representation of those specialty’s premiums for this update. Therefore, they are also not required to be listed in Table 8.C. for specialties that require partial imputation. Additionally, 19-

Oral Surgery (dental only) is mapped to Maxillofacial surgery for purposes of data imputation. We note that when collecting premium data, Oral Surgery frequently appears together with Maxillofacial surgery. Without additional information to change this mapping and in consideration of their frequency of reporting together, we do not believe it is appropriate to change the mapping for this update. Additionally, without additional information to support a change in mapping, we do not believe it is necessary to change the mapping for 13-Neurology (SURG) and 14-Neurosurgery (ALL). We note that 13-Neurology (SURG) and 14-Neurosurgery (ALL) have had the same risk value for the last two updates of the MP RVUs. For the other requested re-mappings listed above, after further review and consideration of the commenters requests, we are finalizing a change for the following specialties for purposes of partial imputation as reflected in Table 8.C.: 72- Pain Management (ALL) to 11-Internal Medicine (ALL), 98-Gynecologist/oncologist (ALL) to 91-Surgical oncology (ALL), C0-Sleep medicine (ALL) to 13-Neurology (NO SURG), and C7- Advanced heart failure and transplant cardiology (ALL) to 06-Cardiology (NO SURG).

**Comment:** Several commenters alerted CMS to a technical ratesetting error for technical component (TC)-only services. Commenters were concerned about the ratesetting error causing an inappropriate redistribution effect within the technical component (TC) and professional component (26) such that the relationship became inverted with MP RVUs being drawn away from the 26 services and added to the TC services. Commenters stated that they believe that this error was caused by the change to a risk index and an error within ratesetting to map TC-only services to a 1.00 risk value. Commenters requested that CMS correct the error or delay implementation of the MP RVU update.

**Response:** We appreciate commenters bringing to our attention the error in calculating the proposed MP RVUs for TC-only services. We agree with commenters that a technical error in our ratesetting system that mapped all TC-only services to a 1.00 risk value resulted in the TC and 26 MP RVU distribution error. For the CY 2020 update of the MP RVUs (84 FR 62606 through 62615), we finalized that we would assign a risk factor of 1.00, which was the lowest physician specialty risk factor (allergy/immunology), to TC-only services due to a lack of sufficient professional liability premium data. For

the proposed CY 2023 update of the MP RVUs (87 FR 46016), we stated that, “When we do not have sufficient premium data for a specialty, our practice has been to use the data from the specialty with the lowest premium. We now have specialty-specific data for many more specialties.” Our expanded data collection efforts resulted in sufficient premium data such that we could directly assign a risk value for TC-only services without the need for mapping. However, due to a technical error, we continued to assign a 1.0 risk factor for all TC-only services which resulted in an incorrect calculation of the proposed MP RVUs for TC-only services. In consideration of commenters asking us to find a way to resolve the inappropriate distribution or delay implementation, we are finalizing a correction to the ratesetting error for the 2023 update of the MP RVUs. The correction will again map TC-only services to allergy/immunology for this update, which is a risk index value of 0.430. We believe that using this risk value will correct the identified error, while also maintaining as much stability as possible for TC-only services so that there is not a major shift in value from current MP RVUs for the TC and 26 components. We will continue to re-evaluate the MP RVU methodology for TC-only services for future updates.

Additional information on our methodology for updating the MP RVUs is available in the “Final Report for the CY 2023 Update of GPCIs and MP RVUs for the Medicare Physician Fee Schedule,” which is available on the CMS website under the downloads section of the CY 2023 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices>.

After consideration of the comments, we are finalizing the CY 2023 update as proposed with a modification to address an error with respect to the risk values for TC-only services, as indicated above. We are finalizing our proposal to implement a risk index rather than risk factors and improve upon our data imputation strategy by mapping to service risk group/class. We are also implementing a 3-year phase-in for specialties with a reduction in risk value of 30 percent or more to reduce burden, maintain stability in reimbursement for practitioners, and maintain access to services for beneficiaries.

#### *I. Non-Face-to-Face Services/Remote Therapeutic Monitoring (RTM) Services*

Remote Therapeutic Monitoring (RTM) is a family of five codes created

by the CPT Editorial Panel in October 2020, valued by the RUC at its January 2021 meeting, and finalized for Medicare payment in the CY 2022 PFS final rule (86 FR 65114 through 65117). The RTM codes include three PE-only codes and two professional work, treatment management codes.

In the CY 2022 PFS final rule, we finalized refinements to payment for the three PE-only RTM codes: CPT code 98975 (*Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, therapy adherence, therapy response); initial set-up and patient education on use of equipment*); CPT code 98976 (*Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, therapy adherence, therapy response); device(s) supply with scheduled (e.g., daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days*); and CPT code 98977 (*Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, therapy adherence, therapy response); device(s) supply with scheduled (e.g., daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days*). We valued the three PE-only codes by: (1) cross-walking CPT code 98975 to the PE RVU value of CPT code 99453 (*Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment*); and by (2) cross-walking CPT codes 98976 and 98977 to the PE RVU of comparable CPT code 99454 (*Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days*), a code that includes payment for the medical device used to collect and transmit data.

For the two RTM treatment management codes, we finalized the RUC-recommended work RVU of 0.62 for CPT code 98980 (*Remote therapeutic monitoring treatment management services, physician/other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; first 20 minutes*) and the RUC-recommended work RVU of 0.61 for its add-on code, CPT code 98981 (*Remote therapeutic monitoring treatment management services, physician/other qualified health care professional time in a calendar month requiring at least one interactive communication with the*

*patient/caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary procedure)).*

We also finalized the RUC-recommended direct PE inputs for the two treatment management codes without refinement. The direct PE for these two codes includes clinical labor. According to the supporting materials in the RUC recommendations that we accepted, CPT code 98980 includes 40 minutes of activities performed by clinical staff while CPT code 98981 includes 20 minutes of activities performed by clinical staff as direct practice expenses (PE). The RUC materials describe the activities of clinical staff who perform the clinical labor involved in each of these codes as including: communicating with the patient throughout the month, resolving technology or data transmission concerns, reviewing data with the billing practitioner, updating and modifying care plans, and addressing lack of patient improvement. These activities performed by clinical staff of the billing practitioner would be considered services provided incident to the services of the billing practitioner. For more information about “incident to” services, see § 410.26.

We expressed concern in the CY 2022 PFS final rule (86 FR 65116) about the treatment management codes as described by the CPT and RUC. In particular, we expressed concern about the inclusion of clinical labor in codes that could be billed by qualified nonphysician healthcare professionals because Medicare Part B does not include a benefit for services furnished “incident to” the services of some types of qualified nonphysician healthcare professionals including CSWs, CRNAs, PTs, OTs, and SLPs. Commenters on the CY 2022 PFS proposed rule (86 FR 65116) agreed with our assessment and suggested that we consider developing new coding to resolve the issue. In the CY 2022 PFS final rule, we finalized a policy that permitted therapists and other qualified healthcare practitioners to bill the RTM codes. We stated that where the practitioner’s Medicare benefit does not include services furnished incident to their professional services, the services described by the codes must be furnished directly by the billing practitioner or, in the case of a PT or OT, by a therapy assistant under the billing PT’s or OT’s supervision.

The commenters also expressed concern about another issue with the RTM coding that also relates to the clinical labor in the direct PE for the two treatment management codes (86 FR 65116). The commenters acknowledged

that the clinical labor involved in these codes, that is, the portion of these services performed by clinical staff incident to the services of the billing clinician, requires direct supervision by the billing practitioner. The commenters stated that direct supervision of clinical staff performing these activities was burdensome, and suggested that physicians and nonphysician practitioners who can bill for “incident to” services would be unlikely to use the codes if direct supervision were required. The commenters suggested that we designate CPT codes 98980 and 98981 as care management services or alternatively, that we develop HCPCS G codes that would allow the “incident to” clinical labor portions of the services to be furnished under general supervision of the billing physician or nonphysician practitioner.

Since the CY 2022 PFS final rule was issued, we have remained in communication with interested parties. Conversations continue to revolve around the two concerns detailed above related to the clinical labor in the direct PE for the two RTM treatment management codes, CPT codes 98980 and 98981. Thus, for CY 2023 we proposed to create four new HCPCS G codes with one pair of codes aimed at increasing patient access to remote therapeutic monitoring services and the second pair aimed at reducing physician and NPP supervisory burden.

In the proposed rule, we noted that we also considered requests from interested parties to develop a generic device code for RTM, and that we had decided to wait to develop a generic RTM device code. We explained that we would seek comment to inform any new coding relating to devices. Thus, we sought comment about RTM devices that are used to deliver services that meet the “reasonable and necessary” standard under section 1862(a)(1)(A) of the Act. We sought information related to the types of data collected using RTM devices, how the data that are collected solve specific health conditions and what those health conditions are, the costs associated with RTM devices that are available to collect RTM data, how long the typical episode of care by condition type might last, and the potential number of beneficiaries for whom an RTM device might be used by the health condition type.

*Summary of the proposal to develop two HCPCS G codes that allow certain qualified nonphysician healthcare professionals to furnish RTM services.* As discussed in the proposed rule, we have heard that a primary reason for developing the RTM codes was to increase beneficiary access to remote

monitoring services by allowing the services to be furnished by a broad array of qualified nonphysician healthcare professionals (87 FR 46023 and 46024). However, concerns with the CPT coding structure related to the inclusion of clinical labor integral to the professional services have complicated the achievement of those goals. In the CY 2022 PFS final rule, we finalized a policy that permitted therapists and other qualified healthcare practitioners to bill the RTM codes, though we expressed some concerns about the ability of therapists to bill for these codes because the Medicare benefit does not include services provided incident to the services of a therapist (86 FR 65116). We stated that where the practitioner’s Medicare benefit does not include services furnished incident to their professional services, the services described by the codes must be furnished directly by the billing practitioner or, in the case of a PT or OT, by a therapy assistant under the billing PT’s or OT’s supervision. We stated that these practitioners could bill CPT codes 98980 and 98981 even when the practitioner’s Medicare benefit category did not include services furnished incident to their professional services as long as the services were furnished directly by the billing practitioner.

In this year’s proposed rule, as a means of increasing beneficiary access to RTM services, as well as to more clearly define the services of RTM for qualified nonphysician healthcare practitioners whose Medicare benefit category does not include services provided incident to their own services, we proposed to create two new codes that would expressly facilitate RTM services furnished by qualified nonphysician healthcare professionals who cannot bill under Medicare Part B for services furnished incident to their professional services. These codes would not include “incident to” activities in the PE. Neither of the two proposed new codes included clinical labor inputs in the direct PE. We also proposed to make the current CPT codes 98980 and 98981 codes non-payable by Medicare.

We proposed the following two HCPCS G codes:

- GRTM3 (*Remote therapeutic monitoring treatment assessment services, first 20 minutes furnished personally/directly by a nonphysician qualified health care professional over a calendar month requiring at least one interactive communication with the patient/caregiver during the month*).
- GRTM4 (*Remote therapeutic monitoring treatment assessment*

*services, additional 20 minutes furnished personally/directly by a nonphysician qualified health care professional over a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month (List separately in addition to code for primary procedure)).*

For CY 2023, we proposed a work RVU of 0.62 for the base code, HCPCS code GRTM3, which is the RUC-recommended work RVU we established for CPT code 98980 in the CY 2022 PFS final rule. Similarly, for the add-on code, HCPCS code GRTM4, we proposed a work RVU of 0.61, which is the RUC-recommended value we established for CPT code 98981. We proposed to remove the clinical labor inputs in the direct PE for both codes, which will facilitate the use of these codes by qualified nonphysician healthcare practitioners who cannot bill under Medicare Part B for services furnished incident to their professional services. See Table 34: Summary of Proposed HCPCS G Codes for Remote Therapeutic Monitoring Services for more detailed information about the codes.

Additionally, we noted that all the RTM codes including proposed HCPCS codes GRTM3 and GRTM4 would be designated as “sometimes therapy” codes, which means that the services could be billed outside a therapy plan of care by physicians and certain NPPs. We noted that when the services described by proposed HCPCS codes GRTM3 and GRTM4 are furnished by PTs, OTs, or SLPs, the services would always need to be furnished under a

therapy plan of care. We reminded readers that RTM services that relate to devices specific to therapy services should always be furnished under a therapy plan of care *regardless of who provides them*. See the Medicare Benefit Policy Manual Chapter 15, Section 230 for more information about the practice of PT, OT, and SLP.

*Summary of the proposal to develop two HCPCS G codes allowing general supervision of auxiliary personnel.* As we described in the proposed rule, since the CY 2022 PFS final rule was published, we have continued to hear concerns from interested parties that, as for most “incident to” services, the clinical labor activities described in the direct PE of CPT codes 98980 and 98981 must be furnished under the direct supervision of the billing practitioner, which imposes burden on physicians and NPPs who are delivering services to other patients. Thus, for CY 2023, we proposed to create two HCPCS G codes, one base code and one add-on code, that include clinical labor activities (that is, incident to services such as communicating with the patient, resolving technology concerns, reviewing data, updating and modifying care plans, and addressing lack of patient improvement) that can be furnished by auxiliary personnel under general supervision. These two new G codes, GRTM1 and GRTM2, include physician work and direct PE inputs as currently described in CPT codes 98980 and 98981 but allow general supervision of the clinical labor found in the direct PE inputs. See Table 34: Summary of Proposed HCPCS G Codes for Remote Therapeutic Monitoring Services for

more detailed information about the codes and use of the codes.

We proposed the following two HCPCS G codes:

- HCPCS code GRTM1 (*Remote therapeutic monitoring treatment management services, physician or NPP professional time over a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; first 20 minutes of evaluation and management services*).

- HCPCS code GRTM2 (*Remote therapeutic monitoring treatment management services, physician or NPP professional time over a calendar month requiring at least one interactive communication with the patient/caregiver over a calendar month; each additional 20 minutes of evaluation and management services during the calendar month (List separately in addition to code for primary procedure)*).

For CY 2023, we proposed a work RVU of 0.62 for HCPCS code GRTM1, which reflects the work RVU for CPT code 98980 that we finalized in the CY 2022 PFS final rule. For HCPCS code GRTM2, we proposed a work RVU of 0.61, which is the RUC-recommended value we finalized for the similar CPT code 98981. We proposed the direct PE inputs associated with CPT codes 98980 and 98981 without refinement for HCPCS codes GRTM1 and GRTM2, respectively. As stated previously, we proposed to make the current CPT codes 98980 and 98981 codes non-payable by Medicare.

**BILLING CODE 4150–28–P**

**BILLING CODE 4150-28-C**

Review of New RTM Device Code:  
Cognitive Behavioral Therapy  
Monitoring (CPT Code 989X6)

During its October 2021 meeting, the CPT Editorial Panel replaced two Category III codes: 0702T (*Remote therapeutic monitoring of a standardized online digital cognitive behavioral therapy program ordered by a physician or other qualified health care professional; supply and technical support, per 30 days*) and 0703T (*Remote therapeutic monitoring of a standardized online digital cognitive behavioral therapy program ordered by a physician or other qualified health care professional; management services*

*by physician or other qualified health care professional per calendar month*) (e.g., *respiratory system status, musculoskeletal system status, cognitive behavioral therapy, therapy adherence, therapy response*) with the Category 1 CPT code 989X6, Cognitive Behavioral Therapy Monitoring (*Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, cognitive behavioral therapy, therapy adherence, therapy response); initial set-up and patient education on use of equipment; device(s) supply with scheduled (e.g., daily) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days*). The CPT Editorial Panel

created 989X6 for CY 2023 and deleted Codes 0702T and 0703T.

Also, during the October 2021 meeting, the CPT Editorial Panel revised the code descriptors for the PE-only RTM codes (that is, CPT codes 98975, 98976, and 98977) that CMS finalized in the CY 2022 PFS final rule (86 FR 65114 through 65117) to include “cognitive behavioral therapy” as another example of the type of service described by the coding. The RUC indicated that it considered this revision to be editorial.

During the January 2022 RUC review, the definition of new CPT code 989X6 was further refined to read *Remote therapeutic monitoring (e.g., therapy adherence, therapy response); device(s) supply with scheduled (e.g., daily)*

recording(s) and/or programmed alert(s) transmission to monitor cognitive behavior therapy, each 30 days). During the RUC review of CPT code 989X6, specialty societies indicated that the technologies for this service are still evolving. As a result, there were no invoices for devices specific to the cognitive behavioral therapy monitoring services described by the code that could be shared. In response, the RUC recommended that CPT code 989X6 be contractor priced.

Given the anticipatory nature of this code, we agreed with the RUC recommendation that this new code should be contractor priced until we learn more about the devices being used to furnish the service. Thus, we proposed to accept the RUC recommendation to contractor price CPT code 989X6, a PE-only device code. There is no professional work associated with the code. We noted that we would work with our Medicare Administrative Contractors (MACs) to better understand the kinds of devices and device costs they are encountering as they review claims for payment for the new cognitive behavioral monitoring code, CPT code 989X6.

We thanked last year's commenters and the many others who have contacted us with their questions and ideas. We noted that we appreciated the continuing dialogue about the remote monitoring codes and welcomed comments including any additional information that the medical community and other members of the public believe may provide further clarity on how remote patient monitoring services are used in clinical practice, and how they would be most appropriately coded, billed and valued under the Medicare PFS.

The following is a summary of the public comments received on the proposed revisions to the Non-Face-to-Face Services/Remote Therapeutic Monitoring (RTM) Services and our responses:

**Comment:** A number of commenters provided specific feedback about our discussion of the purpose and intent of the proposed new codes, GRTM1–4. In particular, commenters noted that if finalized, the aims of increasing access to RTM services while reducing burden associated with use of the codes may not manifest. In particular, some questioned whether our proposals would result in appropriate levels of payment that reflect the burden of supervision and coordination of different levels of clinical staff and skills, including use of auxiliary personnel, required to furnish RTM services. Some commenters noted that

creating G codes as a means to address various different levels of effort of clinical staff involved in rendering these services would possibly create confusion and increase burden; these commenters also responded that various types of clinical staff activities are already accounted for in the existing RTM codes. One commenter cited our finalized policies from last year, expressed confusion about the complexity and utility of creating a new set of codes, and stated that CMS should instead modify the level of supervision required for the existing codes because the supervision requirements are themselves within our specific delegated authority to adjust.

**Response:** We thank commenters for the feedback on our proposed GRTM codes, and note that our response here is consistent with our discussion of the existing code set in previous rulemaking. In our CY 2022 final rule, we noted that despite our concerns about the construction of the codes, we believe the services RTM described by the codes are important to beneficiaries. (86 FR 65116). In this year's rulemaking, we find similar themes. Commenters remain supportive of our efforts to enhance access to RTM and RPM services, yet commenters also continue to raise concerns similar to feedback received on last year's proposals for RTM. Our proposals for GRTM1–4 drew concern from various perspectives.

As commenters noted, the existing RTM codes do reflect a broad range of clinical activities, and use of various levels and involvement of auxiliary staff. To this point, in the CY 2022 PFS final rule (86 FR 65114 through 65117), we discussed and finalized a policy that permits therapists and other qualified healthcare professionals to bill the RTM codes. As noted, the billing rules for the current family of RTM codes do allow a broader range of clinical activities and varied levels and involvement of auxiliary staff. We refer readers to our discussion in the CY 2022 PFS final rule that addresses the RTM family of codes: the initial set-up and patient education services (CPT code 98975), as well as the device codes (CPT codes 98976 and 98977), as well as the treatment management codes (CPT codes 98980 and 98981). There we explained our thinking and experience with the RTM code family which led us to this year's proposed G-codes. We reiterate that the general feedback we have received for RTM codes suggested two possible paths forward. One path was reflected in the proposal that appeared in this year's proposed rule; another path is an alternative that we described in response to comments in the CY 2022

PFS final rule. The alternative to the creation of new G-codes as we proposed was to instead modify our supervision policy for services furnished incident to a practitioner's professional service to require a general level of supervision, rather than direct supervision, for the existing RTM codes (CPT codes 98975, 98976, 98977, 98980, and 98981) as we have done for certain designated care management services. We thank commenters for continuing to provide feedback, and agree with commenters who noted that the current CPT code descriptions for RTM treatment management encompass a broad range of practitioners and clinical staff activities. We refer readers to our discussion in last year's final rule for background on the valuation of CPT codes 98980 and 98981 (86 FR 65116).

However, we acknowledge that our proposals may have generated confusion among some interested parties. Based on some of the comments received, we believe some interested parties may have misinterpreted our proposed valuation of the G-codes, GTRM–3 and GTRM–4. Specifically, we received comments that misunderstood our proposed valuation for GTRM–3 and GTRM–4 to mean that we proposed an across-the-board cut to payment for all Medicare Part B payment for certain types of non-physician practitioners that current may bill the RTM treatment management codes (CPT codes 98980 and 98981). Based on public comments, we agree that confusion remains about how the new G-codes, if finalized, would or would not possibly create a chilling effect on the availability of RTM services.

**Comment:** Some commenters submitted general feedback regarding the RTM codes rather than our specific proposals, and stated that individual practitioners or their employers would not engage in further investment of time and resources that would be required to implement, maintain, and support RTM services without better clarity on three main aspects of our RTM policy. In brief, these comments focused concerns about the burden associated with maintaining direct supervision for all auxiliary staff involved in furnishing RTM services, the difficulty of navigating ambiguity as to the data that must be kept and maintained for recordkeeping and care coordination, and uncertainty about whether certain devices would or could be used in light of the first two issues regarding supervision and recordkeeping requirements. We received feedback that generally questioned how practitioners should navigate furnishing RTM services when the requirements

appeared to create a risk of later needing to return payments after potential future CMS audits. Some commenters also suggested that CMS would “claw back” payment for these services if an individual beneficiary received concurrent RTM services from two different clinicians engaged in separate episodes of care that involved provision of RTM services for the same beneficiary during the same month, which is not allowed under current policy. Some commenters also shared anecdotal evidence that suggests RTM services do or will improve health equity, and were concerned that our imposition of limitations or burdensome requirements, or possible payment denials or recovery of overpayments, may create disincentives that reduce beneficiary access to RTM services.

*Response:* We believe that our goals have remained consistent throughout our efforts to shape RTM and RPM coding and payment policy, and refer to our CY 2020 (84 FR 62697 through 62698), CY 2021 (85 FR 84542 through 84546), and CY 2022 (86 FR 65114 through 65116) rules for further background discussion of these goals. In the CY 2023 PFS proposed rule, we included proposals to address specific issues relating to the CPT code set for RTM services, and in particular the RTM treatment management codes (CPT codes 98980 and 98981). We recognize and appreciate the more generalized concerns raised by these commenters and will take these comments into consideration for possible future rulemaking.

*Comment:* Many commenters requested that CMS reconsider the proposals because the burden of the proposed GRTM codes would involve a requirement that certain supply codes (CPT codes 98975 and 98976 or 98977) must be billed prior to furnishing the services reflected in GRTM1–4. This feedback came from various interested parties, which included a diverse set of perspectives and roles across the medical community, various trade associations, many professional societies, and health IT vendors. In summary, the commenters suggest that the timing and sequence of proposed requirements for the proposed GRTM codes would possibly create gaps in care, or delays in access to care.

Some commenters expressed concern about initiating an episode of RTM services without necessary claims data available to know whether an existing and overlapping RTM service is being billed for the same beneficiary for a different episode of care initiated by a different practitioner in any given month. We received comments from

healthcare providers and vendors that support medical practices expressing concern about the need to avoid situations where a practitioner may furnish RTM services, and later be expected to return Medicare payment, if CMS were to determine that all applicable requirements were not met. These commenters suggested that such scenarios could result in unstable or uncertain financial liability. Vendors requested more clarity about the structure and form of data that would need to be available at the point-of-care, including claims history that would be necessary to track a beneficiary's current use of RTM services and assess whether the beneficiary would be eligible to begin any additional RTM service. Some in the clinical community suggested that it would be difficult or impossible to track the necessary information to know whether a beneficiary is eligible for RTM services.

Commenters who raised these concerns explained that CMS' proposals may cause delays in delivery of necessary care, or unduly limit access. Further, commenters reiterated feedback we had received in previous rulemaking that CMS should allow multiple, concurrent RTM services for an individual beneficiary, which would not be permitted under existing policies or under our proposed policy changes, if finalized.

*Response:* We thank the commenters for sharing their views and appreciate the questions and concerns they presented. We continue to gather information and experience with coding and payment policies for RTM services. We will continue our discussions with healthcare providers and MACs to understand opportunities and challenges related to our policies and claims processing for RTM codes, and consider the need for further guidance, practitioner education, program instructions, or further rulemaking regarding these services.

*Comment:* Commenters who responded to our request for feedback on the possible future development of a generic RTM device code noted that a generic RTM device code would allow a broader range of types of remote therapy monitoring, beyond the existing codes that allow payment for services that address respiratory system status, musculoskeletal status, and therapy adherence, or therapy response. Some commenters stated that a path forward is unclear because certain approved devices monitor conditions that presently have no available RTM code (for example, specific neurological conditions), and requested that we consider establishing in the future a

mechanism to submit data on these types of devices and conditions that any clinical specialty. Commenters generally supported the concept of a generic RTM device code, and offered a wide variety of possible use cases, where FDA approved devices already exist for the purpose of monitoring various conditions that do not meet the current scope of the existing RTM codes. These included monitoring during episodes of care for various neurological conditions, and others.

*Response:* We thank the many commenters who suggested ways we could consider implementation of a possible future generic device code for RTM. We note that it remains unclear whether a generic device code would be administrable as a permanent policy, for many reasons. We refer readers to last year's discussion of valuations of supplies and equipment for RTM services (86 FR 39173). Comments received in response to the CY 2023 PFS proposed rule seem to reinforce that it may be difficult to establish an appropriate valuation for a single device code that would reflect the myriad of possible applicable devices.

We note that the valuation of a generic device code would require some consensus on the mix and balance of costs for these devices, which would be difficult to develop when there such wide variability in the devices themselves and in how the devices support delivery of RTM services. Further, we note that a generic device code would require covering many more clinical topics than exist under our current policies. Our current policies allow payment using the RTM codes for services that support an episode of therapy where the clinical issue ties to musculoskeletal, or respiratory, or medication adherence/response.

Commenters noted the varied ways that an individual device is costed and priced for use on the market. Vendors also make available a broad array of pricing models that clinical practices could consider in making technology investments to furnish RPM and RTM services. For example, vendors may offer discounts, or waivers of licensing fees, or reduced fees for licensing of a device when used with other, unrelated products; all of these influence the cost of a given device.

We reiterate our clarification included in previous rulemaking (85 FR 84545) that even when multiple medical devices are provided to a patient, the services associated with all the medical devices can be billed by only one practitioner, only once per patient, per 30-day period, and only when at least 16 days of data have been collected; and

that the services must be reasonable and necessary.

We continue to weigh the possible tradeoffs that would be necessary to further reduce coding and billing complexity for RTM, and increase care delivery flexibility and retain appropriate beneficiary access to RTM services. As noted in the CPT codebook, at page 843, RTM services, "...represent the review and monitoring of data related to signs, symptoms, and functions of a therapeutic response. These data may represent objective device-generated data or subjective inputs reported by a patient. These data are reflective of therapeutic responses that provide a functionally integrative representation of patient status." We will look to evidence-based peer-reviewed sources, as well as clinical practice guidelines, in addition to engaging with interested parties, to inform any decisions about whether it would be practicable to establish a generic RTM device code that is potentially agnostic to the specific body system involved (that is, musculoskeletal, respiratory) or therapy type (that is, medication therapy response) that the device monitors, in future rulemaking. However, we note that the CPT codebook makes clear that RTM services must be ordered by a physician or other qualified health care professional, and that any device used must be a medical device as defined by the FDA, and that CPT codes 98980 and 98981 (RTM treatment management codes) should not be used for time that can be reported using codes for more specific monitoring services. (CPT codebook, at page 843). Informed by our experience with RPM payment policy refinements, and in light of possible forthcoming changes to CPT coding for both RPM and RTM, it remains unclear whether generic device codes would undermine or stall progress toward a wider set of specific codes that would provide less ambiguity. As such, we appreciate the commenters' views on this topic and the continuing dialogue on these important issues around coding and payment policies for RTM services.

**Comment:** Some commenters suggested that the indirect PE allocations for the proposed GRTM codes do not adequately consider the costs of the included use of various computer software, and stated that certain types of software are incorrectly categorized within the PFS; or that the concepts related to software, and devices themselves, should not be addressed as categorical questions specific to RTM. Among these comments, some also expressed concern about the definition of "device" in the

RTM codes. One commenter noted that CMS does include specific software costs as supplies within direct PE for other codes, and suggested that this should be a basis for both reconsidering our GRTM proposals and the current RPM valuations. Other commenters requested more clarity about what specific devices would be appropriate for purposes of RTM services. Many commenters recommended that we separately consider Software as a Medical Device (SaMD), use of artificial intelligence (AI)/machine learning algorithms (ML), and related topics as part of a standalone RFI which would later inform updates to specific codes because the influence of these topics have impacts far beyond the RTM codes alone.

**Response:** Historically, we have considered most computer software and associated licensing fees to be indirect costs. We refer readers to our previous discussions of this topic in our CY 2019 final rule. (83 FR 59577). Further, we continue to believe that licensing fees that would not be allocated to the use of a specific piece of software/equipment/device for an individual patient for an individual service, are better understood as forms of indirect costs similar to office rent or administrative expenses. Refer to our discussion of this aspect of licensing specifically in our CY 2019 proposed rule (83 FR 35771). As we noted in section II.B. of this final rule (the RFI for Updates to PE Methodology section), interested parties have routinely expressed concerns with allocations of indirect costs, especially for evolving technologies that rely primarily on software and licensing fees with minimal costs in equipment or hardware. We continue to engage in discussions and conduct further research into these topics of AI, SaMD, and other related evolving technologies, to understand ways that we may refine our allocations of cost for software and licensing.

We remind readers that in finalizing valuations for the current family of RTM codes, we have considered the RUC-recommended inputs for the codes, and in doing so, considered all elements of RTM described by the AMA in CPT code descriptors. For more detail on this discussion, refer to last year's proposed rule (86 FR 39173). Within the RTM family of codes, the structure of the code set relies on use of device codes (PE only) that are used in conjunction with the remainder of the RTM codes. CPT code 98976 and 98977 are intended to report a 30-day device supply with scheduled recordings or program alert transmission to monitor the respiratory

system (98976) or musculoskeletal system (98977). In the CY 2022 PFS final rule, we finalized refinements to payment for the three PE-only RTM codes: CPT code 98975 (*Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, therapy adherence, therapy response); initial set-up and patient education on use of equipment*); CPT code 98976 (*Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, therapy adherence, therapy response); device(s) supply with scheduled (e.g., daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days*); and CPT code 98977 (*Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, therapy adherence, therapy response); device(s) supply with scheduled (e.g., daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days*).

We refer readers to the publicly available FDA guidance and explanations for medical devices, including explanations of SaMD. As SaMD, as a broader topic, is outside the scope of our proposed policies, we are not issuing any specific guidance. FDA guidance on SaMD is available at <https://www.fda.gov/medical-devices/digital-health-center-excellence/software-medical-device-samd>. Additionally, we refer readers to CPT Appendix S: *AI taxonomy for medical services & procedures* (available at <https://www.ama-assn.org/practice-management/cpt/cpt-appendix-s-ai-taxonomy-medical-services-procedures>). We note that our proposals do not include a specific RTM device list, nor specific examples of RTM devices that would be appropriate for use when furnishing RTM services. We believe that a possible unintended consequence of express reference to a device, or list of devices, may include a preference or shift toward use of one device or class of device simply because of its inclusion on a list. We believe that the pace of innovation and evidence-based clinical decision-making inherent to use of the devices that support furnishing RTM services calls for medical and behavioral health professionals, groups of behavioral health and medical professionals, or professional societies, each to study carefully the needs of the populations under their care, and identify guidelines that shape selection and use of any specific device in clinical practice.

**Comment:** A number of commenters expressed concerns with the duration of data collection required to meet

reporting minimums for these codes. Various commenters gave examples of monitoring requirements for individual clinical needs that would not require a full 16 days of data. Examples provided addressed use of standardized screening tools, such as electronically-reported Patient-Reported Outcomes (e-PRO) tools, which may be collected through SaMD. A beneficiary using these tools self-reports clinically relevant information by responding to prompts, based on recall over shorter periods of time (for example, over the past day, or 7 days). Other commenters explained that it was ambiguous whether the act of data collection must occur at least 16 days per month, or if data collection less than 16 times in a 30-day period would satisfy the requirement when these data are representative of 16 or more days of clinically relevant transmittable information.

Some commenters suggested that our proposals would create unintended consequences of overtreatment to satisfy data collection minimums, when therapeutic benefit would otherwise be possible in far fewer therapy sessions or discrete uses of the RTM device. Other commenters explained that facilitating patient self-management through tracking adherence, and symptom and trigger logging via a mobile app all represent collection of data that would be useful to provide practitioners better insight into clinically meaningful events; commenters provided examples, such as the use of a remote therapy monitoring device that connects a patient to an as-needed means to track potential side-effects of an ongoing, current medication therapy regimen. In these examples, commenters stated that when a frequency of use requirement is set in place by the practitioner to satisfy billing requirements, the requirement represents unnecessary burden for the beneficiary and may degrade the validity of patient-reported data.

*Response:* We thank commenters for the feedback on our minimum data requirements for reporting RTM. Readers should also refer to our discussion of these requirements in previous rulemaking. (85 FR 84544). We believe a restatement of our current policies, which points to existing resources that are publicly available, and were available to the public when we finalized our existing RTM requirements, would assist readers in easier access to resources that may inform individual clinical and beneficiary choices. To avoid possible interference with clinical decision-making and shared decision-making, at this time, as discussed in the response immediately above, we are not issuing

specific examples of devices that might be used in the delivery of RTM services because we believe that to do so could generate further confusion, as well as have the possible unintended consequence of implying our approval or endorsement of a specific tool, device, use of a device, or shift by practitioners toward use of a specific device when offering RTM services. However, we would be supportive of the clinical community offering such examples in the context of clinical practice guidelines, preferably generated with a patient-centered focus and an emphasis on health equity considerations.

For more background on our earlier development of payment policies for the related RPM family of codes, refer to the discussion in the CY 2019 FR (83 FR 53015). We believe that as with RPM policy development, this year's finalized policies may not mitigate the need for further revisions to coding and payment policies for RTM services, which would be addressed in future rulemaking, in order to account for some of the concerns raised by commenters regarding the broad nature of codes that describe professional collection and interpretation of stored patient data. Further, also similar to the trajectory of the RPM policies we developed and refined over the last 5 years, we continue our efforts to understand better how CPT code revisions that are expected soon, or planned for future years, would possibly address certain concerns, and in the specific case of minimum reporting specifications, the CPT Editorial Committee's consideration of new codes that would require less than 16 days of data collection.

After considering all of the public comments received on our RTM proposals this year, we are not finalizing the proposed creation of 4 new G-codes, (GRTM-1-4). Instead, for CY 2023, we are maintaining our current policies for the RTM treatment management CPT codes 98980 and 98981, with exceptions as noted below. Commenters expressed many perspectives, views, and general support for remote therapeutic monitoring services. Yet, the totality of the circumstances and broad range of interests and priorities presented by commenters leads us to believe that there should be continued discussion on these topics before CMS finalizes changes to the current RTM coding and payment policies that go beyond refinements to our supervision and documentation requirements for RTM. We continue to engage with the public, and assess the landscape of RTM devices and services, and will consider

addressing the RTM codes and associated payment policies in future rulemaking that will aim to build on progress in this area, while mitigating commenters' concerns.

We are not finalizing our proposal to create 4 new G-codes, (GRTM-1-4) which we proposed to address various issues relating to incident-to services, inclusions of clinical staff time, and supervision levels. CMS proposed to establish a general level of supervision for the two G codes (GRTM-1 and GRTM-2) that include services incident-to services of physicians and NPPS, but not for the other G codes (GRTM-3 and GRTM-4). Commenters recommended that CMS instead permit general supervision of incident-to services described by the two treatment management CPT codes (98980, and 98981). With that said, in this final rule, we are issuing a clarification and finalizing a new policy regarding the billing requirements for the current RTM codes: CPT codes 98975, 98976, 98977, 98980, and 98981. Beginning January 1, 2023, below modifications to our existing RTM policies take effect:

- *General supervision for all RTM services.* Any RTM service may be furnished under our general supervision requirements.

- *Cognitive behavioral therapy monitoring device.* We are finalizing our proposal to accept the RUC recommendation to contractor price CPT code 989X6, a PE-only device code. There is no professional work associated with the code. We will work with our Medicare Administrative Contractors (MACs) to better understand the kinds of devices and device costs they are encountering as they review claims for payment for the new cognitive behavioral monitoring code, CPT code 989X6.

#### Therapy KX Modifier Threshold Amounts

The KX modifier thresholds, formerly referred to as therapy caps, were established through section 50202 of the Bipartisan Budget Act (BBA) of 2018. These per-beneficiary amounts under section 1833(g) of the Act (as amended by section 4541 of the Balanced Budget Act of 1997) (Pub. L. 105-33, August 5, 1997) are updated each year based on the Medicare Economic Index (MEI). Specifically, these amounts are calculated by updating the previous year's amount by the MEI for the upcoming calendar year and rounding to the nearest \$10.00.

For CY 2023, we proposed to rebase and revise the MEI to a 2017-base year as discussed in section II.M. of this final rule, and we are finalizing the 2017-

based MEI for CY 2023, with technical modifications based on public comments. Therefore, we are increasing the CY 2022 KX modifier threshold amount of \$2,150 by the CY 2023 MEI of 3.8 percent and rounding to the nearest \$10.00, which results in a CY 2023 KX threshold amount of \$2,230 for PT and SLP services combined and \$2,230 for OT services.

Section 1833(g)(7)(B) of the Act was also added by section 50202 of the BBA of 2018 and it retains the targeted medical review process, but at a lower threshold amount of \$3,000 (until CY 2028 when it is updated by the MEI). Accordingly, for CY 2023, the MR threshold is \$3,000 for PT and SLP services combined and \$3,000 for OT services. Under the established targeted review process, some, but not all, claims exceeding the MR threshold amount are subject to review. Information on the targeted manual medical review process is available at <https://www.cms.gov/ResearchStatistics-Data-and-Systems/MonitoringPrograms/Medicare-FFSCompliancePrograms/Medical-Review/TherapyCap.html>.

We track each beneficiary's incurred expenses for therapy services annually and count them towards the KX modifier and MR thresholds by applying the PFS rate for each service less any applicable MPPR amount for services of CMS-designated "always therapy" services.

We apply the same PFS-rate accrual process noted above to outpatient therapy services furnished by critical access hospitals (CAHs), even though they are not paid for their therapy services under the PFS and may be paid on a cost basis (effective January 1, 2014).

When the expenses incurred for the beneficiary's outpatient therapy services for the year have exceeded one or both of the KX modifier thresholds, therapy suppliers and providers use the KX modifier on claims for subsequent medically necessary services. By using the KX modifier, the therapist and therapy provider attest that the services above the KX modifier thresholds are reasonable and necessary and that documentation of the medical necessity for the services is in the beneficiary's medical record. Claims for outpatient therapy services exceeding the KX modifier thresholds without the KX modifier included are denied.

#### *J. Payment for Skin Substitutes*

##### *1. Background*

In the CY 2022 PFS final rule, in order to address the need to establish a payment mechanism for synthetic skin

substitutes in the physician office setting and to be responsive to feedback received from commenters, we finalized an approach for payment of each of 10 synthetic skin substitutes in the physician office setting for which we had received a HCPCS Level II coding application, and we finalized that those products would be payable in the physician office setting as contractor priced products that are billed separately from the procedure to apply them. The ten products are as follows: NovoSorb® SynPath™, Restrata® Wound Matrix, Symphony™, InnovaMatrix™ AC, Mirragen® Advanced Wound Matrix, bio-ConneKt® Wound Matrix, TheraGenesis®, XCelliStem®, Microlyte® Matrix, and Apis® (86 FR 65121). After the CY 2022 PFS Final rule was released, we deleted the "A" code that was established for bio-ConneKt Wound Matrix after subsequent determination that a HCPCS Level II code, Q4161, was already established for this product. We note that since we issued the CY 2022 PFS final rule, we have received additional HCPCS Level II coding applications for similarly situated 510(k) cleared wound care management products. HCPCS "A" codes have been issued that described those products and are payable in the physician office setting as contractor priced products that are billed separately from the procedure to apply them.

We also received several comments in response to our finalized policies expressing concern about potential inconsistencies in our policies for synthetic and non-synthetic skin substitutes. We indicated we would take these concerns into future consideration.

##### *2. Key Objectives/Roadmap for Consistent Treatment of Skin Substitutes*

We outlined our HCPCS Level II coding and payment policy objectives in section III.N. of the CY 2023 PFS proposed rule (87 FR 46249) because we believed it would be beneficial for interested parties to understand our priorities as we work to create a consistent approach for the suite of products we have referred to as skin substitutes. As discussed in the CY 2023 PFS proposed rule, we have a number of objectives related to refining our Medicare policies in this area, including: (1) ensuring a consistent payment approach for skin substitute products across the physician office and hospital outpatient department setting; (2) ensuring that appropriate HCPCS codes describe skin substitute products; (3) using a uniform benefit category

across products within the physician office setting, regardless of whether the product is synthetic or comprised of human or animal based material, so we can incorporate payment methodologies that are more consistent; and (4) maintaining clarity for interested parties on CMS skin substitutes policies and procedures. Interested parties have asked CMS to address what they have described as inconsistencies in our payment and coding policies, indicating that treating clinically similar products (for example, animal-based and synthetic skin products) differently for purposes of payment is confusing and problematic for healthcare providers and patients. These concerns exist specifically within the physician office setting; however, interested parties have also indicated that further alignment of our policies across the physician office and hospital outpatient department settings would reduce confusion.

In past years, interested parties have suggested that all skin substitutes, regardless of the inclusion of human, animal, or synthetic material in the product, should be treated as drugs and biological products. Furthermore, they believe all skin substitute products should receive product-specific "Q" codes and receive separate payment under the ASP+6 methodology. They have expressed confusion regarding our assignment of HCPCS Level II "A" codes to 9<sup>111</sup> skin substitute products referenced in the CY 2022 PFS final rule, which are codes we typically assign to identify ambulance services and medical supplies, instead of "Q" codes, which we typically assign to identify drugs and biologicals. They have indicated that the use of HCPCS Level II "A" codes has caused confusion, not only for interested parties, but also for the A/B MACs. The interested parties assert that the A/B MACs have inconsistently processed submitted claims in part because the products are assigned HCPCS "A" codes are treated as supplies and are subject to contractor pricing under the PFS. Additionally, interested parties have expressed concern that physicians and practitioners are hesitant to use the products associated with "A" codes because they are unsure what they will be paid when using those products. When considering potential changes to policies involving skin substitutes, we noted that we believe it would be appropriate to take a phased approach over the next 1 to 5 years that allows CMS sufficient time to consider input

<sup>111</sup> As explained above, we deleted the A code for one product after determining that it had already been assigned a Q code.

from interested parties on coding and policy changes, primarily through our rulemaking process, with the goal of ensuring access to medically necessary care involving the use of these products.

We welcomed comment on our policy objectives for creating a consistent approach for treatment of the suite of products we have referred to as skin substitutes. Additionally, we welcomed feedback on the phased approach and associated timeline. To achieve our objective of creating a consistent approach for paying for skin substitutes across the physician office and hospital outpatient department setting, we included similar proposed changes in the CY 2023 OPPS proposed rule.

*Comment:* A few commenters stated that they appreciate CMS' efforts to improve and clarify policies and procedures and expressed support for the key objectives and roadmap outlined by CMS for the consistent treatment of skin substitutes.

*Response:* We appreciate the commenters' support of our key objectives and roadmap.

*Comment:* One commenter suggested that CMS should also consider a fifth objective to guide decision making with regards to skin substitutes. Specifically, the commenter suggested that CMS should aim to provide broad access to these products by Medicare beneficiaries who would benefit from their use, regardless of wound size, wound type, or geographic location.

*Response:* We appreciate this feedback from the commenter and note that we are interested in health equity for all Medicare beneficiaries. We will consider potential additional objectives in future rulemaking.

### 3. Changing the Terminology of Skin Substitutes

In the CY 2023 PFS proposed rule (87 FR 46028), we stated that as we work to clarify our policies for these products, we believe that the existing terminology of "skin substitutes" is an overly broad misnomer. In the CY 2021 OPPS/ASC final rule with comment period, we revised our description of skin substitutes to refer to a category of biological and synthetic products that are most commonly used in outpatient settings for the treatment of diabetic foot ulcers and venous leg ulcers (85 FR 86605). We noted that skin substitute products are not a substitute for a skin graft as they do not actually function like human skin that is grafted onto a wound. We also clarified that our definition of skin substitutes does not include bandages or standard dressings, and that within the hospital outpatient department, these items cannot be

assigned to either the high cost or low-cost skin substitute groups or be reported with either CPT codes 15271 through 15278 or HCPCS codes C5271 through C5278. (85 FR 86066).

While this description has been updated to provide clarity that synthetic products typically regulated as devices by the FDA are considered to be skin substitutes, there is still confusion with the usage of the term skin substitutes because as noted in the discussion above, these skin substitute products are technically not a substitute for skin, but rather, a wound covering. We have used the current term "skin substitutes" to describe the suite of products that are currently referred to as skin substitutes. Additionally, the term "skin substitutes" is used within the Current Procedural Terminology (CPT®) code series 15271–8 as maintained by the American Medical Association. Also, skin substitute products are generally regulated by the FDA as medical devices under section 510(k) of the Federal Food, Drug and Cosmetic (FD&C) Act and implementing regulations per 21 CFR part 807, or as HCT/PS solely under section 361 of the PHS Act and the FDA regulations in 21 CFR part 1271. The FDA approves new drugs through the New Drug Application (NDA) pathway, and approves biological products through the Biologics License Application (BLA) pathway.

We believe that improving how we reference these products by using a more accurate and meaningful term will help address confusion among interested parties about how we describe these products, and further, how we pay for them. We proposed to replace the term "skin substitutes" with the term "wound care management" or "wound care management products." We explained that we believe this new term more accurately describes the suite of products that are currently referred to as skin substitutes while providing enough specificity to not include bandages or standard dressings, which as noted above, are not considered skin substitutes. We noted that we understand that the proposed terms contain the words "care management" which could be construed to implicate the care management series of AMA CPT codes (for example, 99424–99427, 99437, 99439, 99487, 99489, 99490–99491) that are commonly used by healthcare professionals. We also explained that we understand that the use of the word "management" in the proposed terms might be construed by some to implicate AMA CPT Evaluation or Assessment and Management (E/M) codes. We clarified that the proposed terms, "wound care management" and

"wound care management products," would not implicate the care management series of AMA CPT codes (for example, 99424–99427, 99437, 99439, 99487, 99489, 99490–99491), or our own G-codes that describe care management services. Nor would our proposed terms relate to the AMA CPT E/M codes. Unlike "care management" or "evaluation and management" codes and services, the proposed terms would describe a category of items or products, not a type of services. Lastly, we noted that we also considered alternate terms such as wound coverings, wound dressings, wound care products, skin coverings and cellular and/or tissue-based products for skin wounds but believe the proposed terms are more technically accurate and descriptive for how these products are used than the alternatives considered.

We solicited comment on the proposal to change the terminology we use for the suite of products referred to as "skin substitutes" to instead use the term "wound care management" or "wound care management products," and on the alternative terms we considered including wound coverings, wound dressings, wound care products, skin coverings and cellular and/or tissue-based products for skin wounds. We noted that we were particularly interested in how these products are referenced in current CPT coding and would appreciate feedback from the CPT Editorial Panel and other interested parties on how to address the challenges we discuss above. We also requested comment on other possible terms that could be used to more meaningfully and accurately describe the suite of products currently referred to as skin substitutes.

*Comment:* A few commenters agreed with the proposed terminology change to wound care management products.

*Response:* We thank the commenters for their feedback and support.

*Comment:* Several commenters disagreed with the proposed terminology change, as well as with all of the alternative terms we considered; and suggested that we should retain the term skin substitute. Some commenters stated that the CPT Editorial Panel was purposeful in creation of the skin substitutes application codes (CPT codes 15271–15278) to specifically describe instances that are, and are not, appropriate to report as the application of skin substitutes. In contrast, the CPT procedure codes associated with wound care management are distinctly different in both purpose and products used in their delivery. A few commenters stated that it is clear that skin substitutes are very specific and separately reportable from wound dressings, and changing the

terminology to wound management would differ from CPT nomenclature and cause confusion and inconsistent reporting. A few commenters stated that changing the terminology to wound care management products would conflate skin substitute products with other products like wound care dressings or bandages. The commenters stated that the proposed terminology incorrectly suggests that the skin substitute products are not technically a substitute for skin, but rather, a wound covering that is used to promote healing. The commenters stated that this is not accurate, as the application of skin substitutes serves a specific purpose of temporary or permanent coverage of open skin wounds. Therefore, the commenters stated that the assumption that a skin substitute is just a wound covering is inaccurate. They stated that the application of the product is part of the recovery process, and indicated that the product does function similarly to skin as it is not always removed. The commenters stated that whether the product is applied temporarily and later removed, or is placed and not removed, the skin substitute is allowing for the construction of natural dermis which goes above and beyond a "wound covering." The commenters further pointed out that the CPT coding guidelines specifically outline the application of skin substitutes grafts as non-autologous human skin grafts, non-human skin substitute grafts, and biological products that form a sheet scaffolding for skin growth. The commenters asserted that there is a possibility that as technology evolves, new categories of wound care may become available; however, the CPT guidelines and reporting for skin substitutes are clear and they do not include the application of non-graft wound dressings (for example, powder, ointment, foam, liquid) or injected skin substitutes, and those items should not be lumped together in a catch-all terminology such as wound management. Some commenters stated that the proposed terminology is not necessarily more accurate or meaningful than the existing term. A few commenters suggested that CMS work directly with the CPT Editorial Panel, relevant medical specialty societies, and industry representatives to determine the optimal approach to updating skin substitutes terminology.

*Response:* While we continue to believe that the term skin substitutes is an overly broad misnomer, and believe that improving how we reference these products by using a more accurate and meaningful term will help to address

confusion about how we describe these products, we also believe that it is important to adopt the most appropriate terminology to more accurately capture the full suite of products. After considering the public comments, we believe that additional dialogue will be beneficial before finalizing new terminology. The feedback received through the public comments process has been helpful and informative, and we would like to further engage with stakeholders prior to adopting any new terminology in future rulemaking. As such, we are not finalizing changes to the terminology at this time. We will continue to carefully consider the comments that were received in response to this proposed rule, and welcome additional input from interested parties. Additionally, we intend to hold a Town Hall in early 2023, prior to CY 2024 rulemaking, to have additional discussions in an effort to further understand the concerns interested parties have about potential new terminology we could consider and any other alternative terms not yet considered.

*Comment:* Several commenters agreed that the term skin substitute is not accurate and stated that it does not reflect the entry of synthetics in the marketplace, but disagree with the proposed terminology.

*Response:* As indicated above, though we still intend to change the terminology to more accurately capture the full suite of products, we are not finalizing a change in terminology at this time. We intend to discuss this issue further in a Town Hall and anticipate addressing it in future rulemaking.

*Comment:* A few commenters suggested alternatives including: Cellular and/or Synthetic Grafts for Surgical Wound Management; Bioengineered, Cellular or Tissue-Based Products; Skin Matrix/Matrices; and Ulcer/Wound Care Products. Several commenters supported use of one of the alternative terms we considered, Cellular and/or tissue-based products (CTPs) for skin wounds, and stated that it was consistent with the American Society for Standards and Materials (ASTM) definition of skin substitutes, and is nomenclature used by wound care clinicians; one commenter also indicated that CTPs is inclusive of both current and future technology.

*Response:* We appreciate the support from commenters for one of the alternative terms we considered. We intend to have more discussion about appropriate changes to the terminology for skin substitutes as indicated above. We expect to hold a Town Hall early

next year before CY 2024 rulemaking to provide an opportunity to further engage interested parties on this matter and provide a forum for additional discussion as we seek to identify the most reasonable approach going forward.

*Comment:* One commenter stated that changing the terminology to wound care management products does not align with FDA guidance on permitted use of HCT/Ps for reconstruction, repair, or replacement under 21 CFR 1271.3(f)(1), and therefore, HCT/Ps which are a subset of CTPs should not be considered as equivalent to other wound care management products and considering HCT/Ps as equivalent to other wound care management products would create confusion.

*Response:* We appreciate the feedback from the commenter. As previously indicated, we are not finalizing changes to the terminology at this time, and intend to further engage interested parties on this matter.

*Comment:* One commenter expressed support for CMS's efforts to more accurately describe skin substitute products amid an evolving wound care environment, but disagreed with the proposed name change and recommended that we continue with the term skin substitute which they believe accurately reflects this category. The commenter stated that while skin substitutes are not a term under the FDA, the terminology has been used for some time in medical vernacular. The commenter stated that the proposal to change the terminology will in effect diminish the time, resources, and cost that goes into manufacturing and applying these products.

*Response:* We disagree that the term skin substitute is the best term to reflect this suite of products despite the longstanding use of the term in the industry. We continue to believe that improving how we reference these products by using a more accurate and meaningful term will be beneficial as we work to create a consistent approach for treatment of these products across settings. As previously indicated, we are not finalizing changes to the terminology at this time, and intend to further engage interested parties on this matter.

*Comment:* One commenter stated that they support the goal of replacing old terminology, but stated that purely synthetic products should not be included within the classification. The commenter also stated that excluding synthetics is consistent with the industry standards including ASTM which defines CTPs. The commenter recommended that we exclude all 100

percent synthetic products. Another commenter stated that CTPs is an outdated misnomer because the term explicitly excludes synthetic skin substitutes since it only refers to a subset of skin substitutes (those comprised of animal or human cells or tissues).

*Response:* As stated in the proposed rule, one of our key objectives in creating a consistent coding and payment approach for the suite of products currently referred to as skin substitutes is to address concerns regarding differential treatment for clinically similar products (as an example, animal-based, and synthetic skin products). Additionally, we note that the Standard Guide for Categories and Terminology of Cellular and/or Tissue-Based Products (CTPs) for Skin Wounds (ASTM F3163–22) available on ASTM's website (<https://www.astm.org/f3163-22.html>), states that CTPs may include synthetic components.

*Comment:* A commenter stated that changing the terminology would create confusion and coding challenges because the AMA has already published the 2023 CPT Codebook, and applications for changes to the CY 2024 CPT Codebook may no longer be made. Therefore, a change to the terminology contained in the CPT code set for the codes that describe product application procedures could not take effect until CY 2025. The commenter stated that creating a discrepancy between the way CMS refers to such products and CPT describes the application procedures in the CPT code set would create burdensome disruptions to providing wound care services.

*Response:* We note that as we navigate our roadmap, we anticipate that there will likely be some transition time, in which the industry would potentially need to clarify or adopt new terminology more broadly; however, as previously indicated, we are not finalizing a change in terminology at this time to allow an opportunity for additional discussions and input from interested parties.

*Comment:* One commenter stated that CMS should treat powder skin substitute products the same as sheet products under the PFS. The commenter stated that powder skin substitutes are not bandages or simple wound dressings and that when applied to a wound, powder products have demonstrated the same ability to form a sheet scaffolding for wound healing as sheet products.

*Response:* We did not make any specific proposals regarding the treatment of powder skin substitute products. Therefore, this comment is outside the scope of the proposals in the

proposed rule. We thank the commenter for the suggestions.

#### 4. Revising Payment for Skin Substitutes

In 2003, the Medicare Modernization Act established the Average Sales Price (ASP) approach for drugs and biologicals as described under section 1847A of the Act. We generally considered skin substitute products to be biologicals in our initial implementation of the ASP methodology. However, with the introduction of synthetic skin substitute products over the last several years, we are reviewing our categorization of these products, especially as we work to establish payment policies for these products across the various care settings. As explained above, we announced in the CY 2022 PFS final rule that we would establish HCPCS Level II codes for certain products for which we had received a HCPCS Level II coding application. We also finalized that these products would be payable in the physician office setting as contractor priced products that are billed separately from the procedure to apply them (86 FR 65120). After we issued the CY 2022 PFS final rule, we assigned nine HCPCS "A" codes for the synthetic skin substitute products that were addressed in the rule.

In the CY 2022 PFS final rule, we stated that we recognized there was no payment mechanism for synthetic skin substitute products within the PFS, and we acknowledged the need to reconcile the gap in payment for synthetic products in the physician office setting without delay (86 FR 65121). Additionally, as we described in the CY 2022 PFS final rule, a commenter stated that skin substitutes are a heterogeneous group and there is an increasing intersection between biological, bioengineered, and synthetic components. This highlights that the current categorization of skin substitutes as either synthetic or non-synthetic is not mutually exclusive given the expansion of skin substitute products that may contain both biological and synthetic elements. The increasing overlap of both synthetic and non-synthetic skin substitute products emphasizes the importance of treating all skin substitute products in a similar manner in terms of coding and payment.

After further review, we agree with interested party recommendations that the suite of products referred to as skin substitutes should be treated in a uniform manner across different outpatient care settings. In terms of payment for these products within the office setting, we acknowledge the current variation between contractor

pricing for synthetic skin substitute products and payment based on ASP+6% for non-synthetic skin substitute products; and also, the challenges to the clear categorization of products as synthetic or non-synthetic. We believe establishing a consistent framework for how these products are treated within the physician office and hospital outpatient settings will help ensure equitable access and appropriate payment for these services.

In order to ensure we treat skin substitutes consistently in terms of coverage, coding, and payment, we proposed that skin substitute products that are commonly furnished in the physician office setting be considered as incident-to supplies in accordance with section 1861(s)(2)(A) of the Act, effective January 1, 2024. "Incident-to supplies" refers to supplies that are furnished as an integral, although incidental, part of the physician's personal professional services in the course of diagnosis or treatment of an injury or illness (§ 410.26). As proposed, in the office setting, we would no longer pay separately for skin substitute products under the ASP+6% payment methodology.

We proposed that as we are categorizing skin substitute products that are furnished in the office setting as incident-to supplies, we would consider the cost of the supply used in furnishing a physicians' service through the PFS practice expense (PE) methodology. Treating these products as incident-to supplies would mean that the resource costs for these products would be included in establishing PE relative value units (RVUs) for the associated physicians' service with which they would be furnished. For example, for CPT Code 15271 (application of skin substitute graft, leg or ankle), we establish the PE RVU by considering three separate categories of PE resource costs involved in furnishing the service: clinical labor, supplies, and equipment. Together, these costs are the total direct PE resource inputs. When considering these skin substitute products as a supply, we would add their associated cost to the direct PE inputs for the service with which the product is furnished. For a more detailed description of the PE RVU methodology, please refer to section II.B. of this final rule, Determination of Practice Expense Relative Value Units in the rule.

We acknowledged that the proposed change to consider skin substitute products furnished in the office setting as incident-to supplies would not be implemented immediately in CY 2023. Rather, we explained that we would need to transition toward consistent

coding and payment for these products. We referred readers to section III.N. of the proposed rule for the proposed changes to our process for assigning HCPCS Level II codes to wound care management products.

We discussed that we believe it is necessary to establish an effective date of January 1, 2024, for the proposed payment of skin substitutes in the non-facility setting as incident-to supplies in order to align with the HCPCS Level II coding proposals for wound care management products as described in section III.N. of the proposed rule, to ensure all interested parties have the same opportunity to effectively transition toward the coding and payment changes. Additionally, we noted that we intend to engage with interested parties via an open-door forum/listening session to receive additional feedback.

To summarize, we proposed to treat skin substitutes (including synthetic skin substitutes) as incident-to supplies as described under section 1861(s)(2)(A) of the Act when furnished in non-facility settings and to include the costs of these products as resource inputs in establishing practice expense RVUs for associated physician's services effective January 1, 2024. The proposal would mean skin substitutes are treated in the same manner for purposes of payment when furnished in non-facility settings, and would be consistently contractor priced through CY 2024. Given these changes, we believe maintaining the current treatment of these products for purposes of payment during CY 2023 will ensure a smooth transition. We also proposed to discontinue the use of the term skin substitutes beginning January 1, 2024 and to instead refer to this suite of products as "wound care management products." We solicited feedback on the proposals.

The following is a summary of the public comments received on the proposed revisions to the Payment for Skin Substitutes and our responses:

*Comment:* Many commenters stated that the proposal to revise payment for skin substitutes does not provide enough information about how these skin substitute products will be packaged and paid for if finalized in the CY 2023 final rule to be effective for CY 2024. More specifically, several commenters requested clarification on cost information used to establish contractor pricing for skin substitute products, how skin substitute products will be incorporated in the PE RVU methodology, and the dollar amount that would be included in the bundle for these skin substitute products. Additionally, these commenters

mentioned that our proposal lacks sufficient time for interested parties to effectively transition products that were previously assigned Q codes to shift to A codes in order to meet the proposed changes to incident-to supply effective CY 2024. As a result, these commenters stated that they could not provide meaningful comment on these significant policy changes and urged CMS to delay the implementation of this proposal until these necessary details are addressed.

*Response:* We appreciate all of the public comments on the proposal, especially questions and comments received regarding how we intend to achieve our policy goals. To clarify several significant questions, for CY 2023, CMS did not propose to make any changes to the existing payment methodology under the PFS associated with the proposed change to pay for skin substitute products as incident-to supplies. Rather, our proposal was to pay for these products beginning for CY 2024 as incident-to supplies in the same way that we pay for other incident-to supplies.

Based on our review of the comments received, we understand that it would be beneficial to provide interested parties more opportunity to comment on the specific details of changes in coding and payment mechanisms prior to finalizing a specific date when the transition to more appropriate and consistent payment and coding for these products will be completed. While we continue to believe that the current, transitory situation where like products are not being paid and treated consistently is unsatisfactory, unsustainable over the long term, and rooted in historical practice established two decades ago prior to significant evolutions in medical technology and practice, we believe additional opportunity for information sharing and subsequent rulemaking is necessary before the transitory policies can be retired. In consideration of the comments and in the interest of ensuring appropriate payment and access in accordance with our above outlined policy objectives for creating a consistent payment approach across payment systems, benefit categories, and coding for treatment of the suite of products we have referred to as skin substitutes, we are going to conduct a Town Hall in early CY 2023 that will be open to interested parties in order to provide additional opportunity for discussion to address these concerns as well as discuss potential approaches to the methodology for payment of skin substitute products under the PFS. We will take into account the comments we

received in response to CY 2023 rulemaking and feedback from the Town Hall in order to strengthen proposed policies for skin substitutes in future rulemaking.

*Comment:* Some commenters stated that the proposal to revise payment for skin substitute products under the PFS is concerning because the proposal did not include an impact analysis.

*Response:* Since the proposal to categorize skin substitute products as incident to supplies does not take effect until CY 2024, any corresponding impact analysis would be included as part of rulemaking for CY 2024. However, as stated above, we recognize the need to ensure more opportunity for information sharing, notice, and comment rulemaking prior to completing the transition to equitable payment for like products. As a result, we will further discuss approaches towards a consistent payment mechanism for skin substitute products at the Town Hall with interested parties.

*Comment:* Many commenters disagreed with bundling the payment of skin substitute products into the payment for the procedures that use the products under the PFS. These commenters raised the concern that packaging payment of skin substitute products in non-facility settings will cut payment for the products and pose financial burden to providers, which would limit or eliminate the options of skin substitute products offered to patients. Commenters also stated that cutting payment rates for skin substitutes would stifle innovation for these products that are necessary to effectively treat a vulnerable patient population. Additionally, some commenters stated that if CMS were to bundle skin substitute products similar to the bundling of policies under the OPPS for services furnished in the hospital outpatient department, then large wounds would not be treated any longer in the physician office setting due to the excessive cost and low payment for the supplies, thus, redirecting these patients toward more costly inpatient hospital settings. Furthermore, commenters stated that the PE RVU methodology referenced in the proposed rule should not be used as a payment methodology for skin substitute products since these products are expensive, and absorbing them into the PE would cause a decrease in PE payment for other areas due to the PE RVU's budget neutrality requirements.

*Response:* We thank commenters for their feedback and concerns regarding bundling payment and using the PE RVU methodology for skin substitute products under the PFS. In response to

these and other similar comments, and as previously stated, we are not finalizing the proposed payment methodology for skin substitute products under the PFS.

*Comment:* Many commenters disagree with the proposal to recategorize all skin substitute products as incident-to supplies. Commenters stated that biological skin substitute products should be a category of its own due to the complexity of biological skin substitutes and the certain preparation and procedural codes that are required for biological skin substitutes. Thus, commenters stated that they believe that grouping the biological and synthetic skin substitute products together disregards how these products are treated clinically. Commenters also stated that skin substitutes are incorporated into the wound bed to aid healing and have certain regulatory requirements unique to skin substitutes. Due to these issues, commenters emphasized that skin substitutes are vastly different from other supplies such as wound dressings/bandages, which fall within the incident-to supply category. Furthermore, these commenters reiterated similar concerns to other commenters about bundling payment for skin substitutes with payment for the procedures in which they are used, which would also accompany recategorizing these products as incident-to supply.

*Response:* As mentioned previously, we plan to hold additional discussions with interested parties during a Town Hall session to discuss potential alternative approaches for equitable payment and treatment of skin substitute products in the physician office setting. This will ensure ongoing dialogue to address concerns around bundling payment (which is typically the approach for incident-to supplies) for all skin substitute products.

Additionally, we noted in the proposed rule that skin substitute products are not a substitute for a skin graft as they do not actually function like human skin that is grafted onto a wound. We also clarified that our definition of skin substitutes does not include bandages or standard dressings (87 FR 46028). As highlighted in the proposed rule, skin substitutes are a heterogeneous group and there is an increasing intersection between biological, bioengineered, and synthetic components. This highlights that the current categorization of skin substitutes as either synthetic or non-synthetic is not mutually exclusive given the expansion of skin substitute products that may contain both biological and synthetic elements (87 FR 46028).

Therefore, prompting us to recognize the need to achieve a standardized approach to pay for these products.

*Comment:* Some commenters presented a few concerns that our proposal to treat all skin substitute products as incident-to supplies is contrary to current statute. Specifically, these commenters were concerned that categorizing skin substitute products as incident-to supplies in the physician office setting would be inconsistent with the applicable payment framework for biologicals provided in a physician clinic, as set out in sections 1842 and 1847A in the Act. Another commenter also stated that the products approved through a drug or biological pathway like a BLA or NDA are vastly different compared to products approved as 510(k) devices or regulated as HCT/PS; therefore, the commenter believes NDA/BLA skin substitute products should remain separate and paid as a drug/biological. Lastly, one commenter stated that the lack of any impact analysis or evidence that supports our proposal is contrary to Administrative Law.

*Response:* As mentioned previously, we recognize the importance of information sharing and notice, which we look forward to addressing with interested parties at the Town Hall.

*Comment:* Several commenters suggested various alternative payment approaches. For example, one commenter suggested that CMS should separately identify and pay for high-cost disposable supplies priced more than \$500 using appropriate HCPCS codes, where the pricing would be based on a transparent and annual review process under the PFS. Another commenter suggested that we create five unique A-codes that would cover all skin substitutes based on composition-based categories. Then, the skin substitute approved products would be paid separately at the same rate per square centimeter in order to ensure there are no gaps in care for large wounds.

*Response:* We thank commenters for their feedback and look forward to ongoing discussions regarding alternative payment approaches for skin substitutes.

*Comment:* Several commenters expressed concern about what they viewed as a payment disadvantage for synthetic skin substitute products, if biological skin substitute products are paid using the ASP+6% payment methodology, whereas synthetic skin substitute products are contractor priced under the PFS. Overall, these commenters supported our proposal to treat all skin substitute products as incident-to supplies, since it ensures consistency for all skin substitute

products in terms of payment, across multiple settings.

*Response:* We thank the commenters for their support. As noted in the CY 2023 PFS Proposed Rule, we acknowledged the current variation between contractor pricing for synthetic skin substitutes and payment based on ASP+6% for biological skin substitute products. As a result, we believe achieving a consistent payment mechanism is important and look forward to discussing ways in which to achieve this with interested parties at the Town Hall.

*Comment:* A few commenters stated that they support a multi-year phased approach consistent with the five-year timeline to improve clarity and consistency of payment policies for skin substitutes, but expressed confusion regarding the longer-term road map given the stated implementation date of CY 2024.

*Response:* We appreciate the commenters' support for our phased approach, and clarify that we anticipate addressing various considerations over the next few years through rulemaking. As indicated above, we are delaying changes to the terminology to allow for additional discussions with, and input from interested parties. Additionally, we will consider payment approaches in future rulemaking.

After consideration of the public comments, we are not finalizing our proposal to change the terminology for skin substitutes at this time, and intend to further engage interested parties and allow an additional opportunity for input regarding the most appropriate term that could be used to more meaningfully and accurately describe the suite of products currently referred to as skin substitutes. We intend to revisit the change in terminology in future rulemaking as early as next year. Further, after considering the issues raised in public comments, we are not finalizing the payment approach outlined in the proposed rule where we considered establishing payment under our typical approach for incident-to supplies using our PE RVU methodology. Instead, we intend to conduct a Town Hall with interested parties in early CY 2023 to discuss alternative potential payment approaches for skin substitute products prior to CY 2024 rulemaking in order to achieve a transition to equitable payment for like products; we will also use this Town Hall as an opportunity to discuss the aforementioned change to the terminology.

*K. Provision To Allow Audiologists To Furnish Certain Diagnostic Tests Without a Physician Order*

Audiologists are recognized under Medicare Part B to provide certain diagnostic audiology services as defined at section 1861(l)(3) of the Act. Specifically, the statute describes audiology services that include such hearing and balance assessment services as the audiologist is legally authorized to perform under State law, as would otherwise be covered if the services were furnished by a physician. The definition of qualified audiologist appears at section 1861(l)(4)(B) of the Act. Currently, the only other provision in the Medicare statute that relates to audiology services is found at section 1862(a)(7) of the Act, which excludes payment for hearing aids and related examinations. This exclusion is codified at § 411.15(d)(1), which precludes payment for hearing aids or examinations for the purpose of prescription, fitting, and changing hearing aids. There are no other Medicare statutory provisions addressing audiologists or audiology services. Diagnostic tests are included as a Medicare Part B benefit under section 1861(s)(3) of the Act.

For many diagnostic testing services, payment under the PFS can be made in two separate components of the service when parts of the services are furnished by two different physicians, practitioners, or other suppliers: the technical component (TC) and the professional component (PC). The TC is the portion of the service that involves the collection of information from the patient—for example, a sample, specimen, radiological image, or interrogatory study. When the TC is furnished separately, the “TC” modifier is used with the relevant HCPCS code to bill for the service under the PFS. The PC of a diagnostic test is the portion of the service involving the interpretation of the collected information by a physician or other practitioner. When the PC is furnished separately, the service is coded with modifier “26”. When the same physician or practitioner furnishes both the TC and PC of the service, the relevant HCPCS code (known as the “global”) is billed without a modifier. We have established general requirements for furnishing and billing diagnostic tests at § 410.32.

In the CY 1997 PFS final rule, we established in regulations at § 410.32(a), based on long-standing manual provisions, that all diagnostic tests, including audiology tests, must be ordered by the physician who is treating the beneficiary who will use the results

to manage the beneficiary’s care. We believed this requirement was necessary to ensure that the physician had a relationship with the beneficiary, and would ensure the tests were reasonable and medically necessary, as well as prevent patterns of abuse. At the same time, we finalized a regulatory provision at § 410.32(c) (later redesignated to § 410.32(a)(2)) to recognize as the treating practitioner for the purpose of ordering diagnostic tests certain nonphysician practitioners (NPPs) who are authorized under the statute to provide services that would be physician services if furnished by a physician when they are operating within the scope of their State license. The NPPs who can serve as the treating practitioner for purposes of ordering diagnostic tests include physician assistants (PAs), nurse practitioners (NPs), and clinical nurse specialists (CNSs) (defined in sections 1861(s)(2)(K)(i) and (ii) of the Act, respectively), certified nurse-midwives (defined in section 1861(gg) of the Act), qualified psychologists (defined in section 1861(ii) of the Act), and social workers (defined in section 1861(hh) of the Act)) (61 FR 59497 through 59498). We note that all of these NPPs are included as practitioners who must accept Medicare payment on an assignment-related basis under section 1842(b)(18)(C) of the Act. As such, these NPPs can only collect any applicable cost-sharing from the patient, and cannot balance bill the patient for additional amounts above the Medicare payment amount. The regulation reflecting the ordering requirements for diagnostic tests has not been substantively amended since that time, except to add an exception to the treating practitioner ordering requirement for screening mammography and, in response to the PHE for COVID–19, to add a limited exception for a single, otherwise-covered COVID–19 diagnostic test (and one otherwise covered diagnostic laboratory test for flu or similar respiratory condition needed to diagnose COVID–19) per patient per year during the PHE.

In the CY 1998 final rule (62 FR 59057 through 59070), we also amended § 410.32(a) to clarify that the ordering requirement is based on the exclusion in section 1862(a)(1)(A) of the Act and contained in § 411.15(k)(1); that is, diagnostic testing services that do not meet the ordering requirements in § 410.32(a) are considered not reasonable and necessary for the diagnosis and treatment of illness or injury or to improve the functioning of

a malformed body member. We explained that we found tests not demonstrably reasonable and medically necessary if they are not ordered by the beneficiary’s treating physician or practitioner who will use the test results to manage the beneficiary’s condition or symptom. Also in the CY 1998 PFS final rule, while we continued to require physician supervision for most diagnostic tests, we amended our regulation to except diagnostic tests personally furnished by audiologists (as well as psychologists and certain physical therapists board-certified in electrophysiology) from the physician supervision requirement.

As explained above, all of the NPPs that we recognize as treating practitioners in § 410.32(a)(2) for purposes of the diagnostic test order requirement who must accept Medicare payment on an assignment-related basis can only collect any applicable cost-sharing from the patient and cannot balance bill the patient for additional amounts. Audiologists are not NPPs as defined by the statute (that is, they are not listed at section 1842(b)(18)(C) of the Act). However, beginning in 2008, we allowed audiologists to enroll in the Medicare program so that they could independently bill for their audiology services rather than relying on physicians or other enrolled practitioners to bill on their behalf. As such, audiologists are not required to accept payment on an assignment-related basis.

Over the past several years, interested parties have requested that CMS eliminate the treating physician or other practitioner order requirement for the hearing and balance assessment services furnished by audiologists. They have suggested that CMS has the administrative authority to eliminate the order requirement for audiology services via notice and comment rulemaking, and that doing so would enable greater access to these important services. The interested parties believe that an order from the treating physician or practitioner is not required by the statute, and that audiology services are covered unless they are otherwise excluded, such as because they are not reasonable and necessary in a particular circumstance. To support their points, these interested parties shared with us a report prepared in 2020 by a consultant concluding that removal of the treating physician or practitioner ordering requirement for audiology hearing and balance assessment services would result in an estimated savings to Medicare over a 10-year period of approximately \$108 million, which includes a savings of \$36 million in

beneficiary copayments. These savings estimates are based on projected Medicare payments and beneficiary copayments that would not occur if Medicare beneficiaries directly accessed the audiology hearing and balance services furnished by an audiologist without the order of a treating physician or other practitioner. In addition, we have heard from interested parties that an order is not required for audiology services by certain other public or private health insurers including Medicare Advantage plans, Medicaid, plans under the Federal Health Benefit Program, and the Veterans Administration. We do not know the scope of services that are covered by these plans or insurers when furnished by audiologists, including whether these health insurers cover only hearing and balance assessment services (as the Medicare program does in accordance with the statute) or also hearing aid examinations for the prescription, fitting, and programming of hearing aids or other services excluded from payment under Medicare Part B and/or whether only some or all of the plans allow payment directly to audiologists for some or all of the covered services without a physician/NPP order. Additionally, we note that some of these health insurance programs involve closed systems with greater levels of interprofessional communication and control (for example, within certain accountable care organizations (ACOs), managed care plan networks, or through various Veterans Affairs medical centers). In contrast, the physicians and practitioners furnishing care under the fee-for-service Medicare Part B program often practice independently from each other, which can pose barriers to communication and coordination of care between health care professionals such as audiologists and the treating physicians or other practitioners.

In addition, the nature of audiology services personally furnished by audiologists is such that these services are often billed based on the audiologist's reassignment of billing rights by an entity other than the furnishing audiologist, so we are currently unable to determine the number of audiologists furnishing these services or the full scope of beneficiary utilization of these services in those settings.

While we believe that CMS has the administrative authority to remove the treating physician or practitioner order requirement for audiology hearing and balance assessment services via notice and comment rulemaking, we do not agree with the suggestions of interested parties that audiologists should be

considered in the same way as the NPPs we recognized as treating practitioners for purposes of the order requirement under § 410.32(a)(2). Specifically, we allowed the NPPs (including PAs, NPs, and CNSs) to order diagnostic tests for the beneficiaries they treat, and we continued to require that the results of the tests be used in the management of the patient's specific medical problem. In these cases, the relationship of the patient to the NPP who orders diagnostic tests and uses the results in managing the beneficiary's medical condition serves to provide assurance that the services are medically necessary. In contrast, audiologists are not recognized under Medicare Part B to treat or manage patients. We consider audiologists' services to be more specialized than those of other physicians and NPPs who provide diagnostic services. That is, their diagnostic tests are more limited and focused in scope than others furnishing services under the Medicare Part B benefit for diagnostic tests at section 1861(s)(3) of the Act. Unlike PAs, NPs or CNSs who may bill for E/M services, and for whom Medicare Part B covers services and supplies incident to their own professional services as provided in the regulation at § 410.26, the scope of audiology services under the Medicare Part B statute includes only diagnostic hearing and balance assessment services. We are concerned that removal of the order requirement for hearing and balance services furnished by audiologists could lead to the furnishing and payment of services that are not used by a treating physician or practitioner in the management of the patient's medical condition, and thus, not medically necessary. We are also concerned about patient safety if Medicare beneficiaries seek hearing and balance services directly from audiologists without the involvement of a treating physician or practitioner. For example, the beneficiary could have an acute condition or symptom such as acute sensorineural hearing loss resulting from a viral neuritis that needs to be diagnosed and treated by a physician or practitioner on an emergent basis, and that care could be delayed if the beneficiary first sought care directly from an audiologist. As an additional example, disequilibrium has many possible causes, including potentially life threatening cardiologic (for example, arrhythmias, heart attack, or cardiac ischemia) and neurologic etiologies (for example, migraines, TIAs (transient ischemic attacks), strokes). The wide variety of possible causes of disequilibrium with some of these in

both categories being potentially life threatening (for example, stroke, heart attack, arrhythmias) speaks to the importance of a physician or NPP being involved in the initial patient assessment. Such an assessment would include a careful history, a physical examination, and immediate office-based testing (for example, EKG) to look for some of the more critical possible causes of disequilibrium, and the physician or NPP would determine the plan for the progression of the outpatient workup. That is to say, the physician or NPP would decide, given the history and clinical exam, whether the evaluation should continue along cardiologic, neurologic, or vestibular perspectives—the latter of which could possibly result in an order/referral to an audiologist for balance assessments using the vestibular dysfunction testing codes. For these reasons, we believe patients with disequilibrium would be best served by seeing a physician or NPP before being referred to an audiologist as appropriate. Furthermore, as previously noted, audiologists are not required to accept Medicare payment on an assignment-related basis, and therefore, can balance bill the beneficiary. We are concerned that the removal of the treating physician or practitioner ordering requirement, and potentially increased volume of audiology services, could lead to unnecessary costs to beneficiaries. In addition, in the absence of a required order of the treating physician or practitioner, we are concerned that the direct access to audiologists might incentivize changes in behavior and practice patterns among audiologists that could lead to overutilization of audiology services.

We have carefully considered the interested parties' requests to remove the treating physician or practitioner order requirement for diagnostic audiology hearing and balance assessment services. We believe it would be appropriate to provide a limited exception to the order requirement for diagnostic hearing testing services furnished by audiologists in order to broaden patient access to these services. In response to the requests of interested parties, we proposed to amend our regulation by adding a paragraph at § 410.32(a)(4) to remove the order requirement under certain circumstances for certain audiology services furnished personally by an audiologist for non-acute hearing conditions. These non-acute hearing conditions would not include balance assessments that are used for patients with disequilibrium, because as we

explained above, the physician/NPP needs to first evaluate the patient clinically due to the many serious medical conditions the beneficiary might have, and ensure the patient is cleared medically before setting them on track to receive vestibular function tests, possibly from an audiologist. The list of audiology services for which Medicare payment can be made when an audiologist personally performs them on the order of the treating physician or

NPP can be found on the Medicare physician fee schedule web page under the link titled "Audiology Services" at <https://www.cms.gov/medicare/medicare-Fee-for-Service-Payment/Physicianfeesched>. We proposed to permit the services described by the codes listed in Table 35 to be furnished under the proposed exception without the order of the treating physician or NPP. We noted that Table 35 does not include the codes for vestibular function

tests in the CPT code ranges of 92517–92519 and 92537–92549 because, as discussed above, we believe it is in the clinical interest of the beneficiary to be assessed by a treating physician or NPP for potentially serious medical implications of disequilibrium symptoms, including cardiologic and neurologic etiologies before they can be cleared and referred for vestibular function tests.

BILLING CODE 4150–28–P

**TABLE 35: Proposed Codes for Tests that can be Encompassed by HCPCS Code GAUDX that Audiologists can Provide without a Physician or NPP Order/Referral**

**BILLING CODE 4150–28–C**

We proposed to create HCPCS code GAUDX (Audiology service(s) furnished personally by an audiologist without a

physician/NPP order for non-acute hearing assessment unrelated to disequilibrium, or hearing aids or examinations for the purpose of

prescribing, fitting, or changing hearing aids; (service may be performed once every 12 months) to describe these audiology services furnished personally

by an audiologist without the order of the treating physician or other practitioner. We noted that we believe that limiting the audiology services that can be furnished without an order to include only hearing conditions that are non-acute in onset and balance services (patients with disequilibrium symptoms) by removing the CPT codes for vestibular dysfunction would be appropriate to address our patient safety concerns. We also proposed to specify in the code descriptor for HCPCS code GAUDX that the audiology services can be performed only once every 12 months. We noted that we believe this limitation is appropriate to avoid potential program integrity issues, such as audiologists billing for GAUDX with a greater frequency, or providing services that are not reasonable and necessary for the treatment of the patient's illness or injury. We selected once every 12 months, rather than every 6 months, for two reasons. The first is because 6 months did not seem long enough for a new, non-acute hearing condition to arise, and if an acute hearing condition were to onset, it would necessitate an evaluation with a physician/NPP. The second reason is that, at any time, the beneficiary may always elect to see their physician/NPP for any hearing conditions—acute or non-acute—or for conditions with disequilibrium symptoms.

As proposed, an audiologist would be able to bill code GAUDX once every 12 months for a beneficiary. The GAUDX code would include and be used to bill for any number of audiology services furnished in that particular encounter with the beneficiary. Since the proposed GAUDX code is generic, the tests provided could include those that are split into PC/TC and those that are not. As with all services, the actual tests provided and their results would need to be documented in the medical record, for purposes of medical review. Further, we proposed that no more than one unit of code GAUDX could be billed—that means “1” is inserted in the “days or units” block 24G on the CMS 1500 professional claim form. We noted concerns that beneficiaries may receive services billed as code GAUDX from more than one audiologist in the 12-month period and/or be mistaken or misled into thinking that code GAUDX represents a screening/preventive service which Medicare does not cover. To avoid the potential for inappropriate use of HCPCS code GAUDX, we explained that we plan to establish system edits through our usual change management process to ensure that GAUDX is only paid once every 12

months, per each beneficiary. We noted that the code descriptor proposed for GAUDX could be billed for patients seeking care for non-acute hearing conditions, and that the furnished audiology services would still have to be medically necessary. As proposed, after receiving audiology services from an audiologist accessed directly without the order of a treating physician or practitioner, the beneficiary would have to wait a full 12 months before receiving additional diagnostic tests from an audiologist without a physician/NPP order. The beneficiary would remain free to seek care from a treating physician (or/NPP) if needed, and that care could potentially include a referral with an order for further diagnostic testing furnished by an audiologist.

To value HCPCS code GAUDX, we proposed to use the combined values of CPT codes 92557 (*Comprehensive audiometry threshold evaluation and speech recognition (92553 and 92556 combined)*) and 92567 (*Tympanometry (impedance testing)*), which we believe would represent a typical service provided by audiologists. We explained that we chose CPT Codes 92557 and 92567 as typical because they make up 72 percent of all billings for audiologists; and, when all physician and practitioner specialties are considered, including audiologists, CPT code 92557 is billed with CPT code 92567 over 60 percent of the time and CPT code 92567 is billed with CPT code 92557 over 83 percent of the time in the same clinical encounter, according to Medicare claims data.

Thus, we proposed a total work RVU of 0.8 for GAUDX, calculated by combining the 0.60 work RVU for CPT code 92557 and 0.20 work RVU for CPT code 92567. We proposed to establish the PE value for GAUDX by combining the unduplicated PE of CPT codes 92557 and 92567. Specifically, we proposed to include the following direct practice expense (PE) inputs for supply items: two SD046 (Ear tip, tympanometry probe), two SJ053 (Swab pad, alcohol), one SM0251 (Specula tips, otoscope), one (SK059) sheet of recording paper, and two SD047 (Ear tip insert with sound tube); and the following direct PE inputs for equipment: EQ054 (*Audiometric soundproof booth (exam and control room)*) for 20 minutes, EQ053 (*Audiometer, clinical, diagnostic*) for 20 minutes, and EQ244 (*Tympanometer with printer*) for 4 minutes. We also proposed to apply the same provisions for code GAUDX as those set for CPT codes 92557 and 92567 (for example, PC/TC indicator, bilateral indicator, physician supervision indicator, etc.), as

they now appear in the PFS Relative Value file found at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Relative-Value-Files>.

We discussed in the proposed rule that we believe that proposed HCPCS code GAUDX, if finalized, will allow us to better understand the scope of beneficiary access to these services with or without the order requirement. We also noted that we believe that proposed HCPCS code GAUDX, if finalized, will allow us to better assess possible burdens to the beneficiary when attempting to access these services. We noted that, given the makeup and intended use of proposed code GAUDX, we would like to increase our understanding about how and where these audiology services would be provided without the order of a treating physician or practitioner. We requested comments from interested parties about what settings might represent the typical places of service and which institutional providers might bill for HCPCS code GAUDX.

The following is a summary of the public comments received on the Proposal to Allow Audiologists to Furnish Certain Diagnostic Tests Without a Physician Order and our responses:

*Comment:* One commenter informed us that the final three codes listed in Table 29 of the proposed rule (Proposed Codes for Tests that can be Encompassed by HCPCS Code GAUDX . . . ) were transcribed incorrectly as CPT codes 92561, 92562, and 92563. However, the correct codes related to auditory evoked potential (AEP) testing are CPT codes 92651, 92652, 92653.

*Response:* We agree that we included the incorrect codes in Table 29 of the proposed rule. We have corrected our error, and the correct AEP testing codes now appear below in Table 36 as part of our final policy.

*Comment:* Several commenters supported the proposal to provide a limited list of codes that could be provided without the treating physician/NPP order. However, many of these commenters did not support the use of the HCPCS code GAUDX, recommending that the existing CPT codes should be billed and paid at the PFS rate. A few commenters (including the RUC) specifically disagreed with our proposed G-code valuation process, telling us that it would not preserve relativity with other codes in the family, and does not reflect the clinical input and expertise of the audiologists that furnish the services.

*Response:* We appreciate that interested parties supported our

proposal for a limited code set that would allow for direct access to audiologists, without a physician/NPP order, for non-acute hearing assessments unrelated to disequilibrium. We also appreciate hearing the commenters' thoughts about the valuation of code GAUDX, as well as the commenters' recommendations to use the CPT codes to bill for these services, instead of the proposed GAUDX code. We agree with the commenters about the usefulness of the CPT codes listed in Table 36, as we detail in our final policy below.

*Comment:* We heard from several commenters who opposed our proposal to provide for limited direct access to audiologists without a physician/NPP order, and most of these commenters asked us to reverse our proposal. A few commenters explained that they opposed the proposal because physicians have more education and training than audiologists, and this additional training enabled them to treat patients holistically, yielding a better ability to treat and diagnose the serious medical conditions associated with hearing loss. Most of these commenters noted that there are negative consequences of removing physicians from the care team. One commenter stated they would conditionally support our proposal as long as we did not revise our current safeguards (that is, direct access to audiologists for nonacute hearing assessments unrelated to disequilibrium), because they have consistently stood against a "blanket" direct access to audiologist services without the order of a physician or practitioner, believing that such broadly available direct access will generate considerable patient safety and cost consequences without yielding significant improvements to access to care. This commenter also suggested that CMS should make payment to audiologists using the CPT codes based on the valuations CMS adopts after review through the RUC process, rather than using the proposed CMS-valued GAUDX code. Further, the commenter requested that CPT code 92640 (for programming of an auditory brainstem implant (ABI)) be removed from the list of 36 codes that are permitted without an order. The commenter stated that because this service carries risk of stimulating part of the brainstem and associated cardiac events, a physician should supervise the first activation provided by the audiologist.

*Response:* We appreciate the commenters' views, but we do not agree that we should withdraw our proposal. As we noted above, we believe it would be appropriate to provide a limited exception to the order requirement for

diagnostic hearing testing services furnished by audiologists in order to broaden patient access to these services. We appreciate the commenter that expressed their conditional support for limited direct access to audiology services without a physician or NPP order with the proposed safeguards that are built into the GAUDX long descriptor. We further explain these safeguards below in the discussion of our final policy. We also appreciate the commenter's recommendation to remove the initial episode of CPT code 92640 (for ABI programming) from the set of codes for services that could be furnished without a physician or NPP order under the proposed policy, and remind the commenter that the presence of a code on the list does not preclude a physician (including the ABI surgeon) or NPP from writing an order for this service. Moreover, we anticipate that most physicians will write an order for the initial ABI programming upon discharge from this brainstem surgery. We plan to gather data about audiologists' use of CPT code 92640 without a physician or NPP order, and will consider this recommendation in future rulemaking.

*Comment:* Several commenters disagreed with the safety concerns we discussed in the proposed rule. Several commenters stated that audiology malpractice insurance is very low, and that, if there were safety risks, it would be higher than what they currently pay, which is around \$500 each year. A few commenters noted that delaying care until the patient can obtain an order from a physician/NPP could inadvertently have harmful consequences—noting that untreated hearing loss over time can increase the likelihood of falls, social isolation, and accelerated cognitive decline. Another commenter stated that audiologists are qualified to identify, diagnose, manage, and treat disorders of hearing and balance and have the training and knowledge to recognize conditions needing medical treatment, as well as an ethical obligation to refer patients that require medical services.

*Response:* The patient safety concerns discussed in the proposed rule were related to the lack of involvement of a treating physician or NPP with Medicare beneficiaries seeking hearing and balance services directly from audiologists. There may be certain acute conditions and/or symptoms that need to be medically diagnosed and treated on an emergent basis by a physician or NPP. We continue to believe that beneficiaries with acute hearing loss and disequilibrium symptoms need to be medically managed, due to the

potential for serious underlying pathology, such as strokes or heart attacks, if such appropriate identification and care are delayed. As we gain experience and information under the direct access policy we are finalizing, we may consider these issues further in future rulemaking.

*Comment:* Several audiologist commenters stated that, while they appreciated CMS' proposal to remove physician/NPP order requirements as a first step, they otherwise found the proposed HCPCS code GAUDX to be impracticable, and thought that it would limit beneficiary access to care and add a significant administrative burden to audiologists. These commenters suggested that CMS should recognize the vestibular codes as part of the direct access proposal allowing audiologists to provide service(s) without a physician/NPP order, allow direct access for both acute and nonacute hearing and balance conditions, and remove the requirement that the services described by HCPCS code GAUDX only be furnished to a beneficiary once every 12 months. These commenters disapproved of the valuation of GAUDX, and its use as an umbrella code to encompass the 36 different codes, as it would sometimes overpay for the services provided and underpay for other services. One commenter noted the GAUDX value is approximate \$30-\$100 less than the value of each cochlear implant-related service, and asked that these codes be removed from the GAUDX umbrella, because the cochlear implant centers would be disproportionately financially impacted. Instead, many commenters requested that some or all of the CPT codes proposed for inclusion in the GAUDX code be used together with a new modifier that could be used for services personally provided by an audiologist without a physician/NPP order. A few of these commenters suggested that the GAUDX code should encompass a smaller subset of codes than the codes listed in Table 29 of the proposed rule, so that more codes would be paid at CPT code-specific rates, even if they require a physician order. One commenter suggested that CMS consider the use of a modifier for even a smaller subset of the existing CPT codes for services provided by an audiologist without an order, rather than finalizing the GAUDX code (even if this reduces access to audiologists without an order), if the full list of 36 codes was unworkable for CMS. Another commenter submitted a suggested list of 7 codes that audiologists would provide without a referral that could be billed with a

modifier in place of the GAUDX code, and another list of 7 codes for services specific to a cochlear implant, auditory osseointegrated implant (AOI), or ABI (but the commenter was unclear as to the requirements for each list). Several commenters also submitted a list of CPT codes that are specific to the services surrounding cochlear implants, AOIs, and ABIs, such as evaluation to determine candidacy for an implanted hearing device and post-surgical evaluation of performance (for example, cochlear, AOI, or ABI implants), as well as for diagnostic analysis and subsequent reprogramming of the cochlear implant, AOI or ABI. The commenters suggested that these codes could be billed with the potential modifier for direct access to an audiologist, noted that the clinical standard of care for some of these services requires them to be repeated more often than once every 12 months. The commenters explained that the audiologist does not need an order from a physician or NPP for these services because the patient's physician and implanting surgeon are involved with these patients and, suggested that the order requirement presents a nuisance for the audiologist, physician or surgeon, and beneficiary.

*Response:* We thank the commenters for their suggestions. We are struck by the number of commenters that requested that we use a modifier with the CPT codes rather than the proposed GAUDX code, so that audiologists could bill more accurately for the specific tests they furnished and could be paid at the CPT code-specific PFS rates, instead of at the single rate for code GAUDX (which bundled 36 services of varying payment rates together). We also appreciate the suggestions of some commenters to reduce the scope of services/codes that would have been bundled under the GAUDX code, which would also allow them to more specifically bill for the services furnished and be paid at rates valued at the established value for those services. We note that several commenters recommending that fewer services be included in the proposed GAUDX code, even if it meant that a physician/NPP order would be required for more

services. We agree with commenters' overwhelmingly consistent recommendations to use a modifier instead of the proposed HCPCS code GAUDX, as explained in the description of our final policy that follows. We would like to point out that a given modifier would only have one descriptor and uniform rules/restrictions, but it would allow for greater specificity in billing and payment for services as suggested by commenters. All of the commenters that supported the use of the modifier generally disfavored the proposed GAUDX code because, as we noted above, the valuation of GAUDX would potentially overpay for some services and underpay for others. We agree that appending a modifier to the specific CPT code for the service furnished will more accurately pay for the specific service furnished. Additionally, the use of a modifier with the specific CPT codes for services furnished by audiologists without an order will allow CMS to track the actual services that are being by audiologists without the physician or NPP order. We also believe that use of a modifier will reduce burden for audiologists as compared to using a new code, because audiologists are familiar with the code set and are currently using these codes to bill for services. Using a modifier allows audiologists to more specifically identify and bill be paid for the services they furnish, as opposed to billing using one code that is paid at the proposed bundled rate across the 36 codes, and allows CMS to have more detailed information on which services are furnished through direct access to audiologists without an order.

*Comment:* Several audiologist commenters questioned how to handle situations in cases where patients directly access an audiologist, but may be uncertain whether they have seen a different audiologist without an order of their physician or NPP in the past 12 months. They questioned whether billing GAUDX more frequently than once every 12 months requires an Advanced Beneficiary Notice (ABN) where there is no physician or NPP order, to transfer financial responsibility to the beneficiary. Another commenter

asked whether they need to keep a voluntary or mandatory ABN on file in case the GAUDX claim is rejected to avoid the financial responsibility themselves. Several commenters noted that a CMS-developed, real-time, online tool should be made available for them to ascertain the needed eligibility information, so that an ABN can be administered to the beneficiary when necessary.

*Response:* We appreciate these comments and plan to communicate how audiologists can best prepare for and handle these types of situations through healthcare provider education vehicles and other guidance.

*Comment:* Some commenters requested more context surrounding the nonacute terminology and how it applies to nonacute hearing assessments that are unrelated to disequilibrium.

*Response:* For purposes of the audiology direct access policy, including all the 36 codes listed in Table 36, acute hearing loss involves a sudden onset in one or both ears—and is a perceived change in hearing by a beneficiary that is not consistent with the progressive loss of hearing over many years that is typical with the aging process. A nonacute hearing loss is a more gradual hearing loss that one may experience with advancing age, known as presbycusis, which the National Institute on Deafness and Other Communication Disorders defines as: "Age-related hearing loss (presbycusis) is the loss of hearing that gradually occurs in most of us as we grow older. Age-related hearing loss most often occurs in both ears, affecting them equally." Audiologists can furnish services among those listed in Table 36, the results of which can provide essential information for them to recommend, for example, further testing or a medical referral to the patient's treating physician or NPP. It is for these nonacute types of gradual hearing loss and for hearing loss that is treated via surgically implanted hearing devices such as cochlear implants, AOIs, and auditory brainstem implants (discussed above) that beneficiaries may be seen by the audiologist without a physician/NPP order.

**TABLE 36: Codes for Tests that Audiologists can Bill with the AB Modifier for Nonacute Hearing Conditions without a Physician or NPP Order/Referral**

After consideration of public comments received, we are finalizing amendments to the regulation at § 410.32(a)(4) with modifications effective for services furnished on or after January 1, 2023. We proposed to allow audiologists to furnish the services included on a list of 36 services without a physician order (as listed in Table 36 (which we corrected to identify CPT codes, 92651, 92652, and 92653)). We are finalizing our proposal that these services can be covered and paid when furnished without the order of the treating physician or NPP for non-acute hearing assessment unrelated to disequilibrium, or hearing aids, or examinations for the purpose of

prescribing, fitting, or changing hearing aids (in alignment with statutory and regulatory restrictions); that the services may be performed once every 12 months per beneficiary. We are not finalizing our proposal to create G-code (GAUDX) for use to bill for audiology services furnished without the order of a physician or NPP. Instead, audiologists are to use the individual CPT codes to identify the services they furnish without the order of a physician or NPP, within the list of 36 allowed services (Table 36), and append a new modifier we will create (modifier AB). We were persuaded by comments from interested parties to use the modifier approach, which allows us to better identify which

services are actually furnished (as opposed to the bundled GAUDX code) and reduces burden for audiologists, who already are familiar with the relevant CPT codes. In the last sentence of § 410.32(a)(4), we are replacing the proposed term “code” with the term “modifier” so that the final sentence of § 410.32(a)(4) will now state that audiology services furnished without an order from the treating physician or NPP are billed using a modifier CMS designates for this purpose.

The AB modifier will be used together with the 36 CPT codes on Table 36 (which has been updated from Table 35 to reflect the corrected CPT code numbers—92651, 92652, and 92653—as

discussed above), to indicate that the service/test was provided on a single treatment day, without an order from the physician/NPP treating the patient. We continue to believe that the patient safety, medical necessity, and program integrity safeguards we proposed are appropriate. Therefore, we are finalizing our proposal to limit direct access to audiology services without the order of the treating physician or NPP to non-acute hearing services to services listed in Table 36, and to establish a once per 12-month frequency limitation. These limitations on audiology services furnished without the order of the treating physician or NPP, which were proposed for HCPCS code GAUDX, will be reflected in the descriptor for the new AB modifier. Additionally, to align our final policy to use the modifier instead of HCPCS code GAUDX with the once per 12-month limitation, we are further modifying our final policy for use of the modifier with the codes available (please refer to Table 36). If an audiologist furnishes one or more services on the list of available codes without the order of a physician or NPP on a single date of service, the AB modifier must be appended to each of the CPT codes billed for that date of service, and all of the services will be considered payable. However, if a service is billed with the AB modifier on one date of service and the beneficiary returns at a later date for another service (without an order) and that service is within the 12-month period after the prior service is furnished (either for the same or a different service on the list in Table 36), then the subsequent service(s) would not be considered payable under the PFS.

Aligning our final policy to use modifier AB instead of HCPCS code GAUDX necessitates multiple changes to our claims processing systems, which will take some time to operationalize, possibly until mid-year 2023. Until such time, audiologists may use the AB modifier that is available for dates of service on and after January 1, 2023 to provide services/tests to beneficiaries who have directly accessed their services. Audiologists who furnish these services without an order are expected to follow our policy and safeguards built into the AB modifier, as above and in the code descriptor below. As we noted above, we plan to communicate to audiologists via provider education and other guidance, including the Audiology Services web page at <https://www.cms.gov/audiology-services>.

The long descriptor for Modifier AB is as follows: *Audiology service furnished personally by an audiologist without a*

*physician/npp order for non-acute hearing assessment unrelated to disequilibrium, or hearing aids, or examinations for the purpose of prescribing, fitting, or changing hearing aids; service may be performed once every 12 months, per beneficiary.*

#### *L. Medicare Parts A and B Payment for Dental Services*

##### **1. Background on Medicare Payment for Dental Services**

Section 1862(a)(12) of the Act generally precludes payment under Medicare Parts A or B for any expenses incurred for services in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth. (Collectively here, we will refer to “the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth” as “dental services.”) That section of the statute also includes an exception to allow payment to be made under Medicare Part A for inpatient hospital services in connection with the provision of such dental services if the individual, because of their underlying medical condition and clinical status or because of the severity of the dental procedure, requires hospitalization in connection with the provision of such services. Our regulation at 42 CFR 411.15(i) similarly excludes payment for dental services except for inpatient hospital services in connection with dental services when hospitalization is required because of: (1) the individual’s underlying medical condition and clinical status; or (2) the severity of the dental procedure.

However, under our current policy, we make payment under both Medicare Parts A and B for certain dental services in circumstances where the services are not considered to be in connection with dental services within the meaning of section 1862(a)(12) of the Act or our regulation at § 411.15(i). We make payment when a doctor of dental medicine or dental surgery (hereinafter referred to as a “dentist”) furnishes dental services that are an integral part of the covered primary procedure or service furnished by another physician treating the primary medical illness. In these limited circumstances, Medicare payment can be made for dental services such as, but not limited to, the wiring of teeth when done in connection with a reduction of a jaw fracture, the extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease, and/or an oral or dental examination on an inpatient basis performed as part of a comprehensive workup prior to renal transplant

surgery. (See Medicare Benefit Policy Manual (IOM Pub 100–02, Chapter 15, section 150); and Medicare National Coverage Determinations Manual Chapter 1, Part 4 (IOM Pub 100–03, Chapter 1, Part 4, section 260.6)). Medicare Administrative Contractors (MACs) make claim-by-claim determinations as to whether a patient’s circumstances do or do not fit within the terms of the preclusion and exception specified in section 1862(a)(12) of the Act and § 411.15(i) of our regulations, and in accordance with the CMS manual provisions.

As described in the CY 2023 PFS proposed rule (87 FR 45860, 46033 and 46034), we have received feedback from interested parties suggesting that our interpretation of section 1862(a)(12) of the Act is unnecessarily restrictive, which may contribute to inequitable distribution of dental services for Medicare beneficiaries. Additionally, a recent report from the National Institutes of Health, “Oral Health in America Advances and Challenges,” discusses how unequal distribution of dental services and prohibitive costs, particularly for older adults who are at the highest risk for poor oral health, can lead to and further complicate the treatment of other medical conditions (for more information, see <https://directorsblog.nih.gov/2022/06/14/using-science-to-solve-oral-health-inequities/>). The interested parties also suggested that there are instances where dental services are directly related to the clinical success of an otherwise covered medical service under Medicare Parts A and B, and that the regulation at § 411.15(i) should be amended to reflect that Medicare payment is available in these circumstances. Recognizing that there may be instances where medical services necessary to diagnose and treat the individual’s underlying medical condition and clinical status may require the performance of certain dental services, we stated that we believe that there are instances where dental services are so integral to other medically necessary services that they are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth within the meaning of section 1862(a)(12) of the Act. Rather, such dental services are inextricably linked to the clinical success of an otherwise covered medical service, and therefore, are instead substantially related and integral to that primary medical service. We also stated that we believe that there are circumstances where the dental services are in direct connection with the care,

treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, and are not inextricably linked to the clinical success of a covered medical service. In these instances, we continue to believe that Medicare payment is precluded by section 1862(a)(12) of the Act except when, due to the patient's underlying medical condition and clinical status, or the severity of the dental procedure, hospitalization is required; and that in those instances, the Medicare Part A exception provided under section 1862(a)(12) of the Act would apply.

To provide greater clarity to our current policies and respond to issues raised by interested parties, in the CY 2023 PFS proposed rule (87 FR 45860, 46033 through 46041) we: (1) proposed to clarify our interpretation of section 1862(a)(12) of the Act and codify certain of our current Medicare FFS payment policies for medically necessary dental services; (2) proposed and sought comment on payment for other dental services, such as dental examinations, including necessary treatment, performed as part of a comprehensive workup prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures, that are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services; (3) requested comments on other types of clinical scenarios where the dental services may be inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services; (4) requested comments on the potential establishment of a process to identify for our consideration and review submissions of additional dental services that are inextricably linked and substantially related and integral to the clinical success of other covered medical services; (5) requested comment on other potentially impacted policies; and (6) requested comment on potential future payment models for dental and oral health care services. We sought public comments on these proposals and issues.

## 2. Clarifying the Interpretation of Section 1862(a)(12) of the Act and Codifying Current Payment Policies for Certain Dental Services

### a. Payment for Inpatient Hospital Dental Services

As explained above and in the CY 2023 PFS proposed rule (87 FR 45860, 46033 and 46034), under our interpretation of the statute and our

current regulation, and as reflected in our regulation and manuals, items and services furnished in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting the teeth generally are not covered, and no payment may be made for them under either Medicare Part A or Part B. Section 1862(a)(12) of the Act and our regulation at § 411.15(i) include an exception to allow Medicare Part A payment to be made for inpatient hospital services in connection with the provision of dental services if the individual, because of their underlying medical condition and clinical status or because of the severity of the dental procedure, requires hospitalization in connection with the provision of such services. We stated that we believe that there are instances in which a Medicare beneficiary may require dental services that are in direct connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth such that the application of the Medicare Part A payment exception would apply when hospitalization is required because of: (1) a patient's underlying medical condition and clinical status; or (2) the severity of the dental procedure. Under these circumstances, we would continue to apply the exception under section 1862(a)(12) of the Act, and make payment for inpatient hospital services. We solicited public comments on what professional services, including, but not limited to dental services, may occur during and prior to the patient's hospitalization or procedure requiring hospitalization under this exception. We noted in the proposed rule that we may consider finalizing, based on our review of public comments, additional payment policies in this area.

### b. Clarifying the Interpretation of Section 1862(a)(12) of the Act and Codifying Current Payment Policies for Certain Dental Services

As explained above, Medicare payment can be made for inpatient hospital services associated with dental services that fall within the statutory exception under section 1862(a)(12) of the Act. However, under our current policy, if a dental service and other related services (for example, anesthesia or imaging services) are performed as incident to and as an integral part of a covered procedure or service performed by a dentist, the total service performed by the dentist is covered, and payment can be made under Medicare Parts A and B as appropriate. This policy is based on the idea that some dental services that would ordinarily be excluded by statute from payment are

inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. When that is the case, we stated that then we believe those dental services are not in connection with dental services within the meaning of section 1862(a)(12) of the Act, but are instead inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. As such, we proposed to interpret the statute under section 1862(a)(12) of the Act to permit Medicare payment under Parts A and B for dental services where the dental service is inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services and allow payment to be made, regardless of whether the services are furnished in an inpatient or outpatient setting. Under these circumstances, we proposed that the exclusion under section 1862(a)(12) of the Act would not apply, because the service is not in connection with the care, treatment, filling, removal, or replacement of the teeth or structures supporting the teeth, but instead is inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services.

As described in section I.L.1. of the proposed rule, in a limited number of circumstances, Medicare Part B currently pays for dental services under the PFS when a dentist furnishes a service(s) that is integral to the covered primary procedure or service rendered when treating the primary medical illness. Our current payment policies for dental services are contained in manual provisions (The Medicare Benefit Policy Manual Chapter 15 (IOM Pub 100–02, Chapter 15, section 150) and Medicare National Coverage Determinations Manual Chapter 1, Part 4 (IOM Pub 100–03, Chapter 1, Part 4, section 260.6)) that reflect the proposed interpretation of section 1862(a)(12) of the Act discussed in the proposed rule.

Our payment policy contained in Medicare National Coverage Determinations Manual Chapter 1, Part 4 (IOM Pub 100–03, Chapter 1, Part 4, section 260.6)<sup>112</sup> (herein “the NCD Manual”) provides for payment of an oral or dental examination performed on an inpatient basis as part of a comprehensive workup prior to renal transplant surgery. In the CY 2023 PFS proposed rule (87 FR 45860, 46035), we stated that we believe Medicare

<sup>112</sup> <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Internet-Only-Manuals-IOMs-Items/CMS014961>.

payment is permitted under this manual provision for such a dental or oral examination prior to renal transplant surgery, because the examination is inextricably linked to, and substantially related and integral to the clinical success of, the renal transplant procedure. As such, we stated that we believe such services are not subject to the payment preclusion under section 1862(a)(12) of the Act. However, we also stated that we believe that comprehensive workups prior to renal transplant surgery, including related dental examinations, can occur in either the inpatient and outpatient setting. As such, we proposed to provide Medicare payment for oral or dental examinations performed as part of a comprehensive workup prior to renal transplant surgery when these services occur in either the inpatient or outpatient setting, and revise our regulation at § 411.15(i) accordingly.

We noted that the NCD Manual states that, when performing a dental or oral examination, a dentist is not recognized as a physician under section 1861(r) of the Act. We stated that we believe this statement is based on an unnecessarily narrow reading of section 1861(r) of the Act, and is also not consistent with other manual provisions. The statutory definition of physician includes a doctor of dental surgery or dental medicine in section 1861(r)(2) of the Act, and a similar definition of physician is included in our IOM Pub 100–1, Section 70.2<sup>113</sup> when dental or oral examinations, and specific treatments, are within the State scope of practice for the dentist. As such, we proposed to amend § 411.15(i) to clarify that Medicare Part B coverage and payment can be made for such a dental or oral examination prior to renal transplant surgery when performed by a doctor of dental surgery or dental medicine as defined in section 1861(r)(2) of the Act.

The Medicare Benefit Policy Manual Chapter 15 (IOM Pub 100–02, Chapter 15, section 150) (herein “the MBP Manual”) states that if an otherwise noncovered procedure or service is performed by a dentist as incident to and as an integral part of a covered procedure or service performed by the dentist, the total service performed by the dentist on such an occasion is covered.<sup>114</sup> The MBP Manual continues by providing several specific examples

where CMS would pay for dental services:

- The reconstruction of a ridge when it is performed as a result of and at the same time as the surgical removal of a tumor (other than for dental purposes).
- The wiring of teeth when done in connection with the reduction of a jaw fracture.
- The extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease.
- The dental splint when performed in conjunction with treatment that is determined to be a covered medical condition.

Specifically, in the MBP Manual, we describe that the reconstruction of a ridge performed primarily to prepare the mouth for dentures is a noncovered procedure and therefore would not generally be eligible for payment. However, when the reconstruction of a ridge is performed as a result of and at the same time as the surgical removal of a tumor (for other than dental purposes), the totality of surgical procedures is a covered service. In the case of the procedure of ridge reconstruction occurring in conjunction with the surgical removal of a tumor, we believe that the dental services are inextricably linked to, and substantially related and integral to the clinical success of, the other covered medical services, that is, the removal of a tumor; and therefore, Medicare Parts A and B payment could be made. Additionally, the MBP Manual explains that Medicare makes payment for the wiring of teeth when this is done in connection with the reduction of a jaw fracture. Once again, we stated that we believe that the dental services of wiring of the teeth are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, which in this case is the reduction of a jaw fracture, and therefore, Medicare Parts A and B payment could be made. Likewise, the MBP Manual states that the extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease is also currently covered. We continue to believe that in this clinical scenario the dental services related to teeth extraction are inextricably linked to, and substantially related and integral to the clinical success of, the radiation treatment of neoplastic disease; and therefore, Medicare Parts A and B payment could be made. The Manual also describes a specific situation in which certain dental services may be considered a covered service, depending on whether the underlying medical condition is deemed to be covered. The Manual explains that dental splints used to treat a dental condition are

generally excluded from coverage under section 1862(a)(12) of the Act, but if the treatment is determined to be a covered medical condition (that is, dislocated upper/lower jaw joints), then the splint can be covered. We stated that we believe that dental splint services could be covered and paid, because the dental services could be inextricably linked to, and substantially related and integral to the clinical success of, a covered medical service, such as treatment of a dislocated jaw. Therefore, we proposed to clarify and modify the regulations text at § 411.15(i) to include this scenario of dental splints used in the treatment of a covered medical condition. We sought comments on this aspect of the proposal.

Therefore, we proposed to codify and clarify in the regulation at § 411.15(i) that payment can be made under Medicare Parts A and B for dental services that are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, including (1) reconstruction of a ridge when it is performed as a result of and at the same time as the surgical removal of a tumor; (2) the wiring or immobilization of teeth when done in connection with the reduction of a jaw fracture; (3) the extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease; and (4) a dental splint only when used in conjunction with covered treatment of a medical condition. This provision would clarify existing policy, as we are codifying existing manual provisions in regulation.

The MBP Manual states that payment can be made under Medicare Parts A and B for a covered dental procedure regardless of where the service is performed, noting that the hospitalization or non-hospitalization of a patient has no direct bearing on the coverage, payment, or exclusion of a given dental procedure in specific circumstances. As such, dental services that are not excluded from Medicare payment under section 1862(a)(12) of the Act could be appropriately furnished in inpatient or outpatient settings. We proposed to clarify in the regulation at § 411.15(i) that payment for dental services that do not fall within the scope of section 1862(a)(12) of the Act, and that are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, could be made regardless of whether the services are furnished on an inpatient or outpatient basis. We sought comments on whether it is clinically appropriate for these services to be furnished in inpatient or outpatient settings.

<sup>113</sup> <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Internet-Only-Manuals-IOMs-Items/CMS050111>.

<sup>114</sup> <https://www.cms.gov/Regulations-and-Guidance/Manuals/Internet-Only-Manuals-IOMs-Items/CMS012673>.

The MBP Manual further states that the coverage of services such as the administration of anesthesia, diagnostic x-rays, and other related procedures depends upon whether the primary procedure being performed by the dentist is itself covered. The MBP Manual explains that an x-ray taken in connection with the reduction of a fracture of the jaw or facial bone is covered, while a single x-ray or x-ray survey taken in connection with the care or treatment of teeth or the periodontium is not covered. In order to clarify and codify this current policy, we proposed to amend our regulation at § 411.15(i) to provide that payment can be made for dental services provided in conjunction with medical services that are inextricably linked to, and substantially related and integral to the clinical success of, covered medical services, such as X-rays, administration of anesthesia, and use of the operating room.

The MBP Manual also specifies that payment can be made for services and supplies furnished incident to other dental services for which Medicare payment can be made, for example, services furnished incident to the dentist's professional services by a dental technician or registered nurse under the dentist's direct supervision. Medicare payment policy for services furnished incident to the services of the billing practitioner are contained in § 410.26 of our regulations.

Additionally, the MBP Manual provides that when an excluded service is the primary procedure involved, dental services are not covered, regardless of complexity or difficulty. The MBP Manual describes an example of the extraction of an impacted tooth as not covered, and goes on to state that certain procedures, including an alveoplasty (the surgical improvement of the shape and condition of the alveolar process) and a frenectomy, are excluded from coverage when either of these procedures is performed in connection with an excluded service, for example, the preparation of the mouth for dentures. Additionally, the MBP Manual states that the removal of a *torus palatinus* (a bony protuberance of the hard palate) may be a covered service, but notes that it is often provided in connection with an excluded service (that is, the preparation of the mouth for dentures), and in that event, Medicare does not pay for this procedure.

We did not propose to modify this policy. No payment is made for dental services when an excluded service is the primary procedure involved. Our interpretation of section 1862(a)(12) of

the Act allows for Medicare payment when dental services are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. Therefore, no payment is made when dental services are related to medical services that are not covered, even if the dental services are inextricably linked to, and substantially related and integral to the clinical success of, the non-covered services. We stated that the proposed amendment to § 411.15(i) would specify that, in order for Medicare payment to be made, the dental services must be inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services.

As proposed, the provision to clarify and codify our current payment policy for dental services, section 1862(a)(12) of the Act does not apply only when dental services are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, such that the standard of care for that medical service would be compromised or require the dental services to be performed in conjunction with the covered medical services. When such medically necessary dental services are furnished by a physician or practitioner, including a dentist, Medicare Part A or B payment can be made for the dental services and other services integral or incident to those dental services. Specifically, such services include:

- The wiring of teeth when done in connection with an otherwise covered medical service,
- The reduction of a jaw fracture (such as services described by CPT code sets 21440–21490),
- The extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease (such as services described by Current Dental Terminology (CDT)<sup>115</sup> codes D7140 and D7210 for ICD–10 C41.1 Malignant neoplasm of mandible),
- Dental splints only when used in conjunction with covered treatment of a medical condition (such as dislocated upper/lower jaw joints), or
- An oral or dental examination performed as part of a comprehensive workup prior to renal transplant surgery (such as services described by ICD–10 Z94.0, and codes D0150, D0180, or D0160).

We proposed that Medicare Parts A and B payment for these dental services can be made, because the services are inextricably linked to, and substantially related and integral to the clinical

success of, the other covered medical services. We further sought comment on whether, given current clinical advances, the descriptions of these dental services are clinically accurate and appropriate. For example, we are interested in whether the phrase “wiring of the teeth” is still clinically accurate or if other terminology would be more appropriate.

Given that such dental services would not be subject to the preclusion on payment under section 1862(a)(12) of the Act, Medicare would make payment to the furnishing dentist or another physician or practitioner for the professional dental services. As described in the MBP Manual, payment may also be made for services and supplies furnished incident to those dental services furnished by the dentist or other physician or practitioner, and for other ancillary services integral to the dental services. For example, Medicare payment could be made for services furnished incident to the professional dental services by auxiliary personnel, such as a dental hygienist, dental therapist, or registered nurse who is under the direct supervision of the furnishing dentist or other physician or practitioner, if they meet the requirements for “incident to” services as described in § 410.26 of our regulations. When such dental services are furnished in a facility setting, such as an inpatient acute care hospital or hospital outpatient department, payment for the facility or ancillary services would be made under the applicable payment system.

In summary, we proposed to amend § 411.15(i) to codify that payment can be made under Medicare Parts A and B for dental services that are inextricably linked to, and substantially related and integral to the clinical success of, an otherwise covered medical service. We further proposed to amend § 411.15(i) to include examples of services for which payment can be made under Medicare Parts A and B on that basis. Specifically, we proposed to include as examples the following dental services for which payment is permitted under our current policy: (1) dental or oral examination as part of a comprehensive workup prior to a renal organ transplant surgery; (2) reconstruction of a dental ridge performed as a result of and at the same time as the surgical removal of a tumor; (3) wiring or immobilization of teeth in connection with the reduction of a jaw fracture; (4) extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease; and (5) dental splints only when used in conjunction with medically necessary treatment of a medical condition. We further proposed

<sup>115</sup> <https://www.ada.org/publications/cdt>.

that Medicare payment would be made for these dental services regardless of whether the services are furnished in an inpatient or outpatient setting, and we proposed that payment can also be made for services that are ancillary to these dental services, such as x-rays, administration of anesthesia, use of an operating room, other facility services.

We sought comment on all aspects of this proposal. We stated that, if finalized, we would make conforming changes to the MBP Manual to reflect changes or clarifications, and to remove any text that is no longer applicable. We also noted that we would make conforming changes to other Manual provisions or National Coverage Decision policies as necessary.

As discussed, MACs may determine on a claim-by-claim basis whether a patient's circumstances do or do not fit within the terms of the preclusion or exception specified in section 1862(a)(12) of the Act and § 411.15(i). The proposed policies outlined in the proposed rule would not prevent a MAC from making a determination that payment can be made for dental services in other circumstances not specifically addressed in the proposed rule and the proposed amendments to § 411.15(i).

#### c. Update to Current Payment Policies for Dental Services

As discussed in section II.L.2 of the proposed rule, we proposed that payment can be made under Medicare Parts A and B for dental services such as the reconstruction of a dental ridge performed as a result of and at the same time as the surgical removal of a tumor, the wiring or immobilization of the teeth when done in connection with a reduction of a jaw fracture, the extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease, dental splints only when used in conjunction with covered treatment of a medical condition, and an oral or dental examination performed as part of a comprehensive workup prior to renal transplant surgery. We noted in the proposed rule that we believe, after further review of current medical practice, through consultations with interested parties and our medical officers, that there are additional circumstances that are clinically similar to these examples, and where Medicare payment for the service could be made, because the dental services are inextricably linked to, and substantially related and integral to the clinical success of, the other covered medical service(s).

For example, after further review, we stated that we believe that if a patient requiring an organ transplant has an oral

infection, the success of that transplant could be compromised if the infection is not properly diagnosed and treated prior to the transplant surgery. Without an oral or dental examination to identify such an infection, and the necessary treatment, such as restorative dental services, to eradicate it prior to the transplant procedure, the patient's ability to accept the organ transplant could be seriously complicated or compromised. Examples of restorative dental services to eradicate infection could include: extractions (removal of the entire infection, such as pulling of teeth—for example, CDT D7140, D7210), restorations (removal of the infection from tooth/actual structure, such as fillings—for example, CDT D2000–2999), periodontal therapy (removal of the infection that is surrounding the tooth, such as scaling and root planing—for example, CDT D4000–4999, more specifically D4341, D4342, D4335 and D4910), or endodontic therapy (removal of infection from the inside of the tooth and surrounding structures, such as root canal—for example, CDT D3000–3999). If such an infection is not treated prior to transplant, and immunosuppressant therapy is initiated to preserve the transplant, then there is an increased likelihood for morbidity and mortality resulting from spreading of the local infection to sepsis. Similarly, without a dental or oral exam and necessary diagnosis and treatment of any presenting infection of the mouth prior to a cardiac valve replacement<sup>116</sup> or valvuloplasty procedures, an undetected, non-eradicated oral or dental infection could lead to bacteria seeding the valves, seeding surrounding cardiac muscle tissues involved with the surgical site, and conceivably leading to systemic infection or sepsis, all of which increase the likelihood of unnecessary and preventable acute and chronic complications for the patient. Because an oral or dental infection can present substantial risk to the success of these procedures, such that the standard of care would be to not proceed with the procedure when there is a known oral or dental infection present, we noted that we believe dental services furnished to identify, diagnose, and treat oral or dental infections prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures are not in connection with the care, treatment, filling, removal, or

replacement of teeth or structures directly supporting teeth, but instead are inextricably linked to, and substantially related and integral to the clinical success of, these other covered medical services. We noted that, in these circumstances, the necessary treatment to eradicate an infection may not be the totality of recommended dental services for a given patient. For example, if an infected tooth is identified in a patient requiring an organ transplant, cardiac valve replacement, or valvuloplasty procedure, the necessary treatment would be to eradicate the infection, which could result in the tooth being extracted. Additional dental services, such as a dental implant or crown, may not be considered immediately necessary to eliminate or eradicate the infection or its source prior to surgery. Therefore, we stated that such additional services would not be inextricably linked to, and substantially related and integral to the clinical success of, the organ transplant, cardiac valve replacement, or valvuloplasty services. As such, no Medicare payment would be made for the additional services that are not immediately necessary prior to surgery to eliminate or eradicate the infection.

As discussed, we noted that we believe that there are circumstances where the clinical success of medical or surgical services required for a successful organ transplantation, cardiac valve replacement, and valvuloplasty procedure may require the performance of certain dental services. As such, we proposed to amend our regulation at § 411.15(i)(3) to provide that dental services that are inextricably linked to, and substantially related and integral to the clinical success of, a certain covered medical service are not subject to the exclusion under section 1862(a)(12) of the Act; and that payment can be made under Medicare Parts A and B for such dental services. We proposed to amend § 411.15(i) to include examples of payable services under Medicare Parts A and B, as: (1) the dental or oral examination as part of a comprehensive workup prior to an organ transplant, cardiac valve replacement, or valvuloplasty procedure; and (2) the necessary dental treatments and diagnostics to eliminate the oral or dental infections found during a dental or oral examination as part of a comprehensive workup prior to an organ transplant, cardiac valve replacement, or valvuloplasty procedure. We noted that we believe that clinical practice is such that these services can occur within the inpatient

<sup>116</sup> Knox, K.W., & Hunter, N. (1991). The role of oral bacteria in the pathogenesis of infective endocarditis. *Australian dental journal*, 36(4), 286–292. <https://doi.org/10.1111/j.1834-7819.1991.tb00724.x>.

hospital or outpatient setting, and we further propose that Medicare Parts A and B would make payment for these dental services, as applicable, regardless of whether the services are furnished in an inpatient or outpatient setting. Furthermore, we proposed that payment under the applicable payment system could also be made for services that are ancillary to these dental services, such as X-rays, administration of anesthesia, and use of the operating room.

We sought comment on the proposed policy and our proposed amendments to § 411.15(i)(3) to specify that payment under Medicare Parts A and B can be made for an oral or dental examination, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection, prior to an organ transplant, cardiac valve replacement, or valvuloplasty procedure. We proposed to continue to contractor price the dental services for which payment is made currently, and for the dental services that can be made under the proposed amendments to § 411.15(i)(3) for CY 2023, or until we have further data to establish prospective payment rates. We solicited comment on the proposals, including the expected utilization of these services discussed in our proposals.

#### i. Other Clinical Scenarios for Dental Services Integral to Other Covered Medical Services

In addition to the examples of dental services for which payment is made under our current policy, and dental services to avoid risk of an oral or dental infection prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures, we stated that we believe there may be other clinical scenarios where dental services may not be in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, but instead are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. These could include certain dental exams and medically necessary diagnostic and treatment services prior to treatments for head and neck cancers, such as radiation therapy with or without chemotherapy, or the initiation of immunosuppressant therapy, such as those used during cancer treatments, where the standard of care is such that it is clinically advisable to eliminate the source of infection prior to proceeding with the necessary medical care, or the standard of care for the primary medical condition would be significantly materially compromised if the dental services are not performed.

As with any assessment of patient health prior to initiating immunosuppressant therapy, it may be necessary to eradicate all sites of infection, including oral infections, prior to suppressing the immune system, regardless of the reason for prescribing an immunosuppressant. We also noted that some medications may have an immunosuppressant effect, even though they are not prescribed principally to suppress the immune system. We stated that we believe, in these circumstances, eradicating oral or dental infection prior to beginning a medication that has been found to have a suppressant effect on that part of the immune system required to eradicate infectious agents could be necessary to the clinical success of the medication therapy.

Similarly, in joint replacement surgery (such as total hip and knee arthroplasty surgery) we stated that we believe there may be risks to the outcome of the procedure if an oral infection is not treated. There is evidence that some joint replacement patients have significant dental pathology found before their surgery.<sup>117</sup> Given the incidence of dental pathology in joint replacement patients, there may be some joint replacement patients who would experience a clinically significant benefit from a pre-operative dental exam and medically necessary treatment of oral pathology(ies). As in transplant surgery, patients having joint replacement surgery are at risk for surgical site infection, and there may be an increased risk for those patients with significant dental pathology. The presence of an overlooked oral infection may increase the risk for acute and chronic surgical site infection.<sup>118 119</sup>

We acknowledged there is other clinical evidence that does not support the need for a dental exam and necessary treatment prior to total joint replacement surgery, specifically total hip and knee arthroplasty.<sup>120 121</sup> Rather, there is evidence that further study is needed to determine whether pre-

operative dental exams and treatments are necessary and clinically beneficial.<sup>122</sup> Therefore, we sought public comment providing systematic clinical evidence as to whether there is an inextricable link between dental service(s) and joint replacement surgery such that the dental services are substantially related and integral to the clinical success of the surgical procedures. We noted that if we receive compelling clinical evidence, we may finalize in this final rule additional clinical scenarios, such as dental services prior to joint replacement surgery (for example, total hip and knee arthroplasty surgery), where payment could be made under Medicare Part A or Part B. We sought comment on whether there is a significant quality-of-care detriment if certain dental services are not provided prior to joint replacement surgery (such as total hip and knee arthroplasty surgery), and if so, we requested a description of that systematic evidence. Specifically, we requested medical evidence that the provision of certain dental services leads to improved healing, improved quality of surgery, and reduced likelihood of readmission and/or surgical revisions, because an infection has interfered with the integration of the implant and interfered with the implant to the skeletal structure. We stated that evidence needed to be clinically meaningful and represent a material difference that results in some level of persistence in the clinical success of the procedure to support that pre-operative dental services are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, and therefore, in connection with, and substantially related and integral to that primary covered medical service. We stated that if commenters were able to provide us with compelling evidence to support that a dental exam and necessary treatment prior to joint replacement procedures such as total hip and knee arthroplasty surgery would result in clinically significant improvements in quality and safety outcomes, for example, fewer revisions, fewer readmissions, more rapid healing, quicker discharge, quicker rehabilitation for the patient, then we would consider whether such dental services may be inextricably linked to, and substantially related and integral to the clinical success of, the joint replacement surgery.

We also noted that we believe there may be other clinical scenarios

<sup>117</sup> <https://www.aaos.org/aaosnow/2011/feb/clinical/clinical2/>.

<sup>121</sup> Young, H., Hirsh, J., Hammerberg, E.M., & Price, C.S. (2014). Dental disease and periprosthetic joint infection. *The Journal of bone and joint surgery.* American volume, 96(2), 162–168. <https://doi.org/10.2106/JBJS.L.01379>.

<sup>122</sup> <https://www.sciencedirect.com/science/article/pii/S1877056819301318>.

involving dental services that we have not yet considered, where certain dental services may be similarly inextricably linked to, and substantially related and integral to the clinical success of, certain otherwise covered medical service such that the exclusion under section 1862(a)(12) of the Act would not apply. For example, we proposed to codify current policy that Medicare payment can be made for the wiring of teeth when done in connection with the reduction of a jaw fracture. We requested comment on whether there are other dental services associated with stabilizing and/or repairing the jaw after accidental injury or trauma and similarly that similarly would not be subject to the exclusion under section 1862(a)(12) of the Act, and for which we should consider providing Medicare payment.

We solicited comment on our current approach to payment for dental services that we have already identified under our current and proposed policies as inextricably linked to, and substantially related and integral to the clinical success of, certain covered services, as well as those services we may yet identify, and other operational topics we should consider further. We acknowledged that there may be other clinical circumstances we have not yet identified where dental services may not be in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, and instead are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. There may be other clinical scenarios involving physiologic or anatomic conditions in which dental services could be a medically critical precondition to the clinical success of other services, such as certain surgical procedures or cancer treatments. For these reasons, we solicited comment on whether there are other clinical scenarios for medical or surgical services where the standard of care is such that the performance of certain dental services (for example, an exam, and certain diagnostic and treatment services) is considered to be a critical clinical precondition to proceeding with the primary medical procedure and/or treatment, and therefore, may be similarly inextricably linked to, and substantially related and integral to the clinical success of, a certain covered service, and therefore, not subject to the exclusion under section 1862(a)(12) of the Act. We discussed in the proposed rule that if we were to finalize the proposed policies as discussed under

sections II.L.2.a. and II.L.2.b. of the proposed rule, we may consider finalizing, based on our review of public comments, these additional examples of dental services that may not be subject to the payment exclusion under section 1862(a)(12) of the Act because they are similarly inextricably linked to, and substantially related and integral to the clinical success of, covered medical services. We also noted that if we were to finalize such additional examples of dental services, we would list those services as examples under the regulation at § 411.15(i)(3), as discussed in section II.L.2.c. of the proposed rule. Lastly, as discussed above, we stated that we recognize that the dental services we have identified for which Medicare payment could be made under our proposed policies would occur either prior to, or contemporaneously with, the covered medical service. We also solicited comments on whether, on the same basis, there are clinical circumstances under which Medicare payment could be made for dental services furnished after the covered medical procedure or treatment.

ii. Establishment of a Process To Consider Additional Clinical Scenarios for Future Updates

As discussed, we stated that we believe that there may be clinical scenarios where dental services are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, and instead are inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services. We also stated that we believe there may be additional clinical scenarios we have not yet identified under which Medicare payment could be made for certain dental services on this basis. To ensure we are appropriately considering other potential clinical scenarios that may involve such dental services, we discussed that we believe it may be appropriate to establish a process whereby interested parties can share recommendations for our consideration, review, and analysis for potential inclusion on the list of dental services for which payment can be made under § 411.15(i)(3) through future rulemaking. If an interested party believes that there is a clinical scenario in which certain dental services are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services, we invited interested parties to submit information about the clinical scenario and the medical evidence to support that the standard of

care for the medical service is such that one would not proceed with the medical procedure or service without performing the dental services, because the covered medical services would or could be significantly and materially compromised, or where dental services are a clinical prerequisite to proceeding with the primary medical procedure and/or treatment. We described that the interested party should explain why the particular dental services should not be subject to the general preclusion on payment for dental services under section 1862(a)(12) of the Act, because they are inextricably linked to, and substantially related and integral to the clinical success of, covered medical services, and provide the medical evidence to support that conclusion.

To ensure that a thorough review can occur, we encouraged interested parties to include relevant medical literature, clinical guidelines or generally accepted standards of care, and other supporting documentation to support our review and consideration of the clinical scenario involving dental services. To facilitate our consideration of interested parties' recommendations within an annual rulemaking cycle, we requested that interested parties submit this information by February 10th of that year at [MedicarePhysicianFeeSchedule@cms.hhs.gov](mailto:MedicarePhysicianFeeSchedule@cms.hhs.gov). Submissions received outside of the public comment period for a PFS proposed rule would be considered for possible inclusion in future notice and comment rulemaking cycles. Recommendations received by February 10th of a calendar year would be reviewed for consideration and potential inclusion within the PFS proposed rule for the subsequent calendar year. For example, information received by February 10, 2024, would be reviewed for consideration and potential inclusion within the CY 2025 PFS proposed rule. We encouraged interested parties to engage with us and provide medical evidence to support their recommendations for additional clinical scenarios where dental services may not fall within the scope of the payment preclusion under section 1862(a)(12) of the Act.

As discussed previously, we stated that we may consider finalizing a change, after reviewing public comments, in the CY 2023 PFS final rule to revise the list of examples of dental services for which Medicare payment can be made. Furthermore, we solicited feedback on: (1) whether there are additional clinical circumstances we should consider where dental services are inextricably linked to, and substantially related and integral to the clinical success of, covered medical

services; and (2) the establishment of a process to review additional clinical scenarios identified by the public, which we may consider finalizing, after review of public comments received, in this final rule.

### iii. Request for Comment on Dental Services Integral to Covered Medical Services Which Can Result in Improved Patient Outcomes

As described in section II.L.2 of the proposed rule, we stated that we believe there are clinical scenarios where the standard of care is such that there is an immediate need for certain dental services as the necessary clinical prerequisite to an otherwise covered medical service. We stated that we believe there may be other clinical scenarios, however, where the ongoing disease management of the patient receiving the medically necessary procedure may have an improved outcome or see a clinical benefit from the performance of dental services, but that the dental service may not be inextricably linked to, or substantially related and integral to the clinical success of, the otherwise covered medical service.

For example, we believe there may be certain circumstances where the clinical benefit of medical care or treatment of a diabetic patient could be improved if certain dental services are furnished. We solicited public feedback on whether certain dental services (for example, a dental exam, necessary treatment of a dental condition such as the extraction of an infected and mobile tooth) should be considered so integral to the standard of care for an otherwise covered medical service that the preclusion on Medicare payment under section 1862(a)(12) of the Act does not apply.

Additionally, we solicited comments on whether the success of a given surgery is dependent upon eradication of dental or oral infection. As noted in section II.L.2.c. of the proposed rule, we stated that we believe surgeries dealing with organ transplants, cardiac valve replacement, or valvuloplasty procedures may require a dental exam and treatment prior to the surgery because the services to identify and eradicate dental or oral infection are inextricably linked to, and substantially related and integral to the success of, these otherwise covered medical services. However, we solicited feedback on whether there are other types of surgery for which certain dental services would meet this threshold. We invited public comment on whether there are other clinical scenarios involving acute or chronic conditions

that would have an improved patient outcome if dental services are furnished, and if so, whether we should consider these services as inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services.

### 3. Request for Comment on Other Potentially Impacted Policies

As discussed in section II.L.2.a–b of the proposed rule, we proposed to codify and clarify our current payment policies for dental services. We recognized that under these policies there may be instances where multiple health care providers may need to coordinate the performance of certain medical and dental services based on the patients' chronic conditions and/or serious illnesses. We noted that we continue to consider improvements to our payment policies for care management services as health care delivery models evolve. As such, we sought comment on whether our current policies for care management services make clear that time spent by physicians or non-physician practitioners coordinating care with dentists regarding the performance and outcomes of services as proposed under section II.L.2 of the proposed rule, may be counted for purposes of applicable care management codes. We also solicited feedback on whether existing care management codes adequately describe and account for time spent coordinating with dentists and their clinical staff. We sought comments regarding the impact of changes in how health care is delivered, and whether an increased integration and coordination of care among health care providers should also be taken into account in considering dental services that may be inextricably linked to, and substantially related and integral to the clinical success of, a primary medical service. Additionally, we sought comment as to whether, and to what extent, the proposed policies as described in section II.L.2 of the proposed rule would address any inequitable distribution of dental services for Medicare beneficiaries.

Finally, we recognized that many Medicare beneficiaries have separate or supplemental dental coverage, such as through a Medigap plan or other plan offering. We noted that if we were to finalize in the CY 2023 PFS final rule our proposed policies as described further in section II.L.2 of the proposed rule, we sought comment on how current coordination of dental benefits operates, and where improvements could be provided. Additionally, we sought comment on what aspects of

coordinating benefits among supplemental dental providers we should consider if we were to finalize the proposed policies as specified under section II.L.2 of the proposed rule.

### 4. Request for Comment on Potential Future Payment Models for Dental and Oral Health Care Services

Our authority under section 1115A(d)(1) of the Act provides broad authority for the Secretary to waive such requirements of title XVIII of the Act, which pertain to Medicare, as may be necessary solely for purposes of carrying out section 1115A of the Act with respect to testing models described in section 1115A(b) of the Act.

In 2014, the Health Care Innovation Awards (HCIA) Round 2, a limited time grant initiative, included awards with the goal to improve the health of populations through activities focused on engaging beneficiaries, prevention, wellness, and comprehensive care that extended beyond the clinical service delivery setting. Several participants used their HCIA Round 2 funds to test models of clinical care that included payment for dental and oral care services. For further information regarding the success of these awards as applied to dental and oral care services please review the HCIA Round 2 Final Awardee Evaluation Report (2014–2018).<sup>123</sup>

We sought comment on additional ways to integrate the payment for dental and oral health care services within existing and future payment models using the Innovation Center's waiver authority in existing or future service delivery models, including models focused on equity, care coordination, total cost of care and specific disease condition.

### Summary of Finalized Policies

As described further in the following sections, we are finalizing effective for CY 2023 (1) a clarification our interpretation of section 1862(a)(12) of the Act and codification of certain of our current Medicare FFS payment policies for medically necessary dental services; (2) Medicare Parts A and B payment for dental services, such as dental examinations, including necessary treatment, performed as part of a comprehensive workup prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures effective CY 2023; (3) For CY 2024, we are finalizing Medicare Parts A and B payment for dental services, such as dental

<sup>123</sup> <https://innovation.cms.gov/data-and-reports/2020/hcia2-fg-finalevalrpt>.

examinations, including necessary treatments, performed as part of a comprehensive workup prior to the treatment for head and neck cancers, which we indicated we may consider finalizing based on comments received on the proposed rule; and (4) Effective CY 2023, the establishment of a process to identify for our consideration and review submissions of additional dental services that are inextricably linked and substantially related and integral to the clinical success of other covered medical services, which we indicated we may consider finalizing in this final rule.

We are also finalizing amendments to our regulation at § 411.15(i) to provide that dental services that are inextricably linked to, and substantially related and integral to the clinical success of, a certain covered medical service(s) are not subject to the exclusion under section 1862(a)(12) of the Act; and that payment can be made under Medicare Parts A and B, under the applicable payment system, for such dental services that occur within the inpatient hospital and outpatient setting, as clinically appropriate. We are also finalizing, with modifications, an amendment to § 411.15(i) to include examples of services that are not subject to the exclusion under section 1862(a)(12) of the Act and for which payment can be made under Medicare Parts A and B.

The policies we are finalizing take into account commenters' feedback and information provided in clinical literature, such as peer reviewed publications or clinical guidelines supported by clinical evidence, supporting the inextricable link between dental services and certain covered medical services. First, commenters supported our interpretation of section 1862(a)(12) of the Act that there may be instances where medical services necessary to diagnose and treat the individual's underlying medical condition and clinical status may require the performance of certain dental services. Second, many commenters provided recommendations that CMS collaborate with interested parties to allow for more time to explore the link between medical and dental services, refine the policy, and respond to many of the operational and implementation questions raised. We believe that the process we are finalizing, as described in section II.L.2.c.ii, to engage with interested parties and review their recommendations regarding the inextricable link between dental services and certain covered medical services will serve the need expressed

by commenters for continued engagement on these issues. We are also finalizing for CY 2024, Medicare payment under Parts A and B for dental services prior to treatment for head and neck cancers, as an additional example of dental services that are inextricably linked to certain covered medical services than was presented in the proposed rule. This will allow us to continue to further consider definitional issues over the coming year.

Additionally, we intend to continue to engage in discussions with the public on a wide spectrum of issues relating to Medicare payment for certain dental services that do not fall within the preclusion or exclusion under section 1862(a)(12) of the Act and related topics. Furthermore, we remain open to adjusting our finalized policy through future rulemaking and/or additional guidance as necessary. We appreciate the thoughtful questions raised by commenters and are committed to continued engagement.

We are not finalizing, at this time, payment for dental services prior to the initiation of immunosuppressant therapy, joint replacement surgeries, or other surgical procedures, which we had indicated in the CY 2023 PFS proposed rule that we may finalize in this final rule. As further described below, we agree with the feedback received from many commenters that additional time is necessary to consider the inextricable link between dental services and these covered medical services, and with commenters' requests to develop definitions to guide decision making. We are committed to continuing to explore the potential inextricable relationship between dental services and these covered medical services through the process we proposed, as described under section II.L.2.c.ii of this final rule, and are finalizing beginning for CY 2023.

#### Comments and Responses to the Policies Discussed in the Proposed Rule

In this section, we summarize and respond to public comments on the policies that we either proposed within the CY 2023 PFS proposed rule (87 FR 45860, 46033 through 46040) or indicated that we may consider finalizing within the CY 2023 PFS final rule. Commenters included individuals, patient advocacy organizations, hospitals and hospital associations, medical and dental associations representing several different specialties and specialty societies, and health insurance companies, among others. We note that some commenters requested that we consider Medicare coverage policies that were outside the scope of

the policies discussed in the CY 2023 PFS proposed rule. We thank the commenters and note that we will take these comments into consideration for the future.

We note that many commenters responded to our request for information under section II.L.2.c.iii. of this rule to express the view that payment of dental services could improve patient outcomes and quality of life and reduce Medicare expenditures overall by avoiding the need to cover medical complications arising from untreated dental conditions. Many commenters encouraged CMS to apply its authority to pay for dental services associated with certain covered medical services to as broad of a range of clinical scenarios as possible, including, but not limited to, payment for routine dental care for patients with (or at risk of developing) medical conditions such as diabetes, cardiovascular disease, some lung diseases, or physical and cognitive impairments that impact individuals' ability to perform activities of daily living (including tooth brushing). Commenters also encouraged us to consider the provision of dental care in relation to treatments such as bisphosphonate therapy, substance use disorder treatment, prescription of certain psychiatric medications, or any surgery that may result in hospitalization. We thank commenters for both the personal and clinical information submitted regarding the importance between dental and oral health, and various medical conditions and certain medical services. We are still reviewing the wide array of suggestions, clinical information to elucidate the connection between dental health and clinical outcomes of many of the medical services, and other information provided in response to this request for information. Given these factors, we want to continue to engage with interested parties and consider this material through the public process as finalized under section II.L.2.c.ii. of this final rule or potentially in future rulemaking. Additionally, we encourage additional public discussions and engagement on a wide range of issues relating to Medicare payment for certain dental services that do not fall within the exclusion under section 1862(a)(12) of the Act.

Finally, we thank commenters for their thoughtful feedback on the requests for information on other potentially impacted policies (section II.L.3. of this final rule) and potential future payment models for dental and oral health care services (section II.L.4. of this final rule). We did not indicate in the CY 2023 PFS proposed rule that

we may finalize policies in these areas in the CY 2023 PFS final rule. We continue to review this feedback and will consider these comments on other potentially impacted payment policies within the public process we are finalizing, as described under section II.L.2.c.ii. of this final rule, and in potential future rulemaking or guidance, as necessary. We also look forward to ongoing discussions with the public on issues relating to the provisions described in this rule as well as dental services that do not fall within the exclusion under section 1862(a)(12) of the Act.

#### Payment for Inpatient Hospital Dental Services and Request for Comment

*Comment:* Commenters generally expressed support for our interpretation of the statute and our current regulation to allow Medicare payment for inpatient hospital services in connection with the provision of dental services if the individual, because of their underlying medical condition and clinical status or because of the severity of the dental procedure, requires hospitalization in connection with the provision of such services. Some commenters recommended that CMS undertake a Medicare demonstration for beneficiaries with underlying medical conditions who require integral dental services as a condition of their covered primary Medicare Part A service to determine the financial and operational efficiencies.

Other commenters requested that CMS provide further clarity around the type of dental services, medical conditions and services, and patient clinical statuses that would allow for Medicare payment in this manner. Commenters also requested that CMS further define whether the types of underlying medical conditions include hospitalizations for mental health or substance use disorders.

*Response:* We appreciate the commenters' support for our proposal to clarify and codify our current policy to allow Medicare payment to be made for inpatient hospital services in connection with the provision of dental services, if the individual, because of their underlying medical condition and clinical status or because of the severity of the dental procedure, requires hospitalization in connection with the provision of such services. We appreciate the requests made by commenters for additional guidance to promote consistent application of the policy. We also believe that the codification and clarification of our current policy will assist in fostering consistent national application of this

policy. We intend to provide additional guidance to CMS Medicare Administrative Contractors (MACs) and the public as needed to facilitate further consistent application of this policy.

#### Clarifying the Interpretation of Section 1862(a)(12) of the Act and Codifying Current Payment Policies for Certain Dental Services

*Comment:* Many commenters supported our proposal to interpret section 1862(a)(12) of the Act to permit Medicare payment under Parts A and B for dental services, where the dental service is inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. These commenters supported our proposal to allow payment to be made because they agreed that the service is not in connection with the care, treatment, filling, removal, or replacement of the teeth or structures supporting the teeth, but instead is inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. The majority of commenters also supported our proposal to clarify in regulation that payment for dental services that do not fall within the scope of section 1862(a)(12) of the Act because they are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, could be made regardless of whether the services are furnished on an inpatient or outpatient basis. These commenters encouraged CMS to apply this policy in all clinical circumstances where appropriate. Some commenters suggested that such outpatient dental services might be provided through mobile clinics, via teledentistry, and in congregate care settings such as nursing facilities, assisted living facilities, etc.

One commenter questioned whether current hospital billing requirements would influence whether patients needing dental services will be admitted on an inpatient basis or treated as an outpatient basis, and whether that would affect how much beneficiaries pay for these services.

Other commenters suggested that our proposal was focused too narrowly, and suggested broader interpretations of 1862(a)(12). One commenter suggested that oral care services (such as examinations; biopsies; radiological studies; other tests; and treatments of growths and lesions, benign or malignant, of the cheeks, lips, and tongue) are distinct from, and therefore not excluded from Medicare payment as dental services in connection with the

care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth. Similarly, another commenter suggested that the Medicare statute excludes coverage and payment only for those dental services performed primarily for the purpose of treatment of the teeth or structures directly supporting the teeth, and therefore all other dental services performed to support another Medicare-covered procedure would be eligible for payment.

*Response:* We appreciate commenters' support for our proposal to permit Medicare payment under Parts A and B for dental services, where the dental service is inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services; and to allow payment to be made regardless of whether the services are furnished in an inpatient or outpatient setting. As such, we are finalizing our proposal to codify and clarify in the regulation at § 411.15(i) that payment can be made under Medicare Parts A and B for dental services that are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services; and that payment will be allowed for services furnished in inpatient and outpatient settings (where clinically appropriate) with payment being made for covered services under the applicable payment system. We appreciate the concerns raised by commenters regarding our interpretation of section 1862(a)(12) of the Act. However, we believe that section 1862(a)(12) allows for payment in this manner because such dental services are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth within the meaning of section 1862(a)(12) of the Act. Instead, we believe they are inextricably linked to the clinical success of an otherwise covered medical service, and therefore, are substantially related and integral to that primary medical service. We appreciate commenters' request for guidance on this policy and will work to provide additional guidance, as needed, to promote consistent application of this policy. We expect such guidance may also reinforce and clarify that medical care involving the mouth, not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, is not subject to exclusion under section 1862(a)(12) of the Act, that CMS MACs may make claim-by-claim determinations, as necessary.

*Comment:* Some commenters recommended that we limit the scope of Medicare payments for oral examinations prior to certain covered medical services. These commenters stated that Medicare should continue to make payment for oral examinations under Medicare Part A if performed by a dentist on a hospital's staff; however, Medicare Part B should only make payment for oral examinations performed by a physician, excluding dentists. These commenters requested that CMS not clarify in regulation that the statutory definition of physician under section 1861(r)(2) of the Act applies in these circumstances, and instead requested that CMS maintain, as stated in the NCD Manual (IOM Pub 100–03, Chapter 1, Part 4, section 260.6), that when performing a dental or oral examination, a dentist is not recognized as a physician under section 1861(r) of the Act. These commenters stated that physicians should be the leaders of the patient care team and that diagnosis of the medical issue, and subsequent care plan, should be determined only by the medical professional, not the dentist. Other commenters asked whether medical professionals could perform the dental exams in accordance with current policy. These commenters further requested clarification as to whether we would apply equivalent physician administrative (such as electronic health record reporting and merit-based incentive payments), enrollment, and compliance requirements to dentists as are applied to other physician professionals under Medicare Part B.

*Response:* We appreciate commenters' questions regarding our proposal to provide Medicare payment for oral or dental examinations performed as part of a comprehensive workup prior to certain covered medical services, and acknowledge their request to narrow the scope of the proposal. However, we continue to believe that the current language in the NCD manual is based on an unnecessarily narrow reading of section 1861(r) of the Act, and is not consistent with other manual provisions. We believe the statutory definition of physician under section 1861(r) of the Act is clear in its inclusion of a doctor of dental surgery or of dental medicine, and a similar definition of physician is included in our Medicare General Information, Eligibility, and Entitlement Manual (IOM Pub 100–1, Chapter 5, section 70.2) when dental or oral examinations, and specific treatments, are within the State scope of practice for the dentist.

We thank commenters for their request for clarification of the medical

professionals' (physician or non-physician practitioner) role within the performance of dental services that are inextricably linked to the clinical success of certain covered medical services. We agree that involvement and integration between medical and dental professionals is an important component of the delivery of these medical services, and is fundamental to our policy permitting payment for certain dental services under Medicare Parts A and B. Further, we appreciate the commenters' point, and also believe that physician and non-physician practitioner engagement in the patient's care team is important. As such, Medicare Parts A and B payment for dental services not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth within the meaning of section 1862(a)(12) of the Act can occur only when dental and medical services are integrated and when the dental services are inextricably linked to certain covered medical services. Without both integration between the medical and dental professional, and the inextricable link between the dental and covered medical services such that the dental services are integral to the clinical success of the medical services, Medicare payment for the services would be precluded under Medicare Part B and therefore section 1862(a)(12) of the Act. We note that dental services that are precluded from payment under Part B under the statutory payment exclusion in section 1862(a)(12) of the Act may be eligible to be covered and paid by supplemental dental plans.

We believe integration between medical and dental professionals can occur when these professionals coordinate care. This level of coordination can occur in various forms such as, but not limited to, a referral or exchange of information between the medical professional (physician or non-physician practitioner) and the dentist. This coordination should occur between a dentist and another medical professional (physician or other non-physician practitioner) regardless of whether both individuals are affiliated with or employed by the same entity. We note that to be eligible to bill and receive direct payment for professional services under Medicare Part B, the medical professional and dentist would need to be enrolled in Medicare and meet all other requirements for billing under the PFS. (Alternatively, a dentist not enrolled in Medicare could perform services incident-to the professional services of a Medicare enrolled

physician. In that case, the services would need to meet the requirements for incident-to services under § 410.26, including the appropriate level of supervision. Payment would be made to the enrolled physician who would bill for the services.) Furthermore, the state scope of practice for the medical and dental professional must support the professional performing the specific dental service(s). If there is no exchange of information between the medical professional (physician or other non-physician practitioner) and the dental professional, then we do not believe there can be an inextricable link between the dental and covered medical service for purposes of Medicare payment for the dental services within the meaning of section 1862(a)(12) of the Act. This is because the medical and dental professionals would not have the necessary information to decide that the dental service is inextricably linked to a covered medical service, and therefore, not subject to a statutory payment exclusion under section 1862(a)(12) of the Act.

In regard to commenters' request for clarification as to whether equivalent administrative, enrollment, and compliance requirements would apply to dentists as are applied to other physicians, practitioners, and healthcare professionals under Medicare Part B, we note that dentists are included in the statutory definition of physician at section 1861(r)(2) of the Act, and would generally be considered and treated as a physician for purposes of enrollment, compliance, and other administrative programs including the Merit-Based Incentive Payment Systems (MIPS) (for more information about MIPS eligibility please see: <https://qpp.cms.gov/mips/how-eligibility-is-determined>), which includes requirements related to electronic health record (EHR) usage for physicians, and is applicable to eligible professionals as defined in section 1848(k)(3)(B) of the Act. Because “a physician” is specified as an eligible professional under this definition, and a doctor of dental surgery or dental medicine is included in the definition of physician in section 1861(r) of the Act, the MIPS reporting requirements would apply to dentists who are determined to be MIPS eligible clinicians.

We appreciate the concerns raised by commenters and will work to provide additional guidance to answer enrollment, billing, compliance, and other administrative questions for dentists as needed.

*Comment:* Commenters generally supported our proposal to codify examples of dental services for which payment is permitted under our current

policy: (1) dental or oral examination as part of a comprehensive workup prior to a renal organ transplant surgery; (2) reconstruction of a dental ridge performed as a result of and at the same time as the surgical removal of a tumor; (3) wiring or immobilization of teeth in connection with the reduction of a jaw fracture; (4) extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease; and (5) dental splints only when used in conjunction with medically necessary treatment of a medical condition. One commenter suggested that the term “wiring of the teeth” be instead identified as “stabilization of teeth” to align with current medical terminology. Another commenter noted that “wiring” and “splinting” are commonly used and accepted terms, and that they are sometimes used interchangeably, along with “stabilization.” The same commenter requested clarification as to the rationale for including, “dental splints only when used in conjunction with covered treatment of a medical condition such as dislocated jaw joints” in proposed § 411.15(i)(3)(i)(E) as well as “wiring or immobilization of teeth in connection with the reduction of a jaw fracture” in proposed § 411.15(i)(3)(i)(C) and suggested that the two related paragraphs be combined.

*Response:* We appreciate commenters’ support for our proposal to codify examples of dental services for which payment is permitted under our current policy. We thank commenters for suggesting updates in medical terminology. We agree that the dental services examples provided under current policy: (1) dental or oral examination as part of a comprehensive workup prior to a renal organ transplant surgery; (2) reconstruction of a dental ridge performed as a result of and at the same time as the surgical removal of a tumor; (3) wiring or immobilization of teeth in connection with the reduction of a jaw fracture; (4) extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease; and (5) dental splints only when used in conjunction with medically necessary treatment of a medical condition, are examples of dental services that are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, and therefore, continue to believe that Medicare Parts A and B payment could be made for them.

As such, we are finalizing our proposal to amend § 411.15(i) to clarify that: (1) dental or oral examination as part of a comprehensive workup prior to a renal organ transplant surgery (and as

discussed in detail below, we are expanding this to include all organ transplant surgeries); (2) reconstruction of a dental ridge performed as a result of and at the same time as the surgical removal of a tumor; and (3) extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease, are examples of dental services that are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, and therefore, and continue to believe that Medicare Parts A and B payment could be made for them.

We were persuaded by the information provided by commenters regarding the medical terminology we use at § 411.15(i)(3)(C), the suggestion to replace “wiring or immobilization of the teeth” with “stabilization,” and also the suggestion to combine two related paragraphs, §§ 411.15(i)(3)(C) and 411.415(i)(3)(E). In response to comments, we are finalizing a revision to § 411.15(i) to merge the two related paragraphs into one paragraph at § 411.15(i)(3)(C). The revised paragraph will refer to, “The stabilization or immobilization of teeth in connection with the reduction of a jaw fracture and dental splints only when used in conjunction with covered treatment of a covered medical condition, such as dislocated jaw joints.”

*Comment:* Several commenters expressed support for our proposal to provide that payment can be made for ancillary services and supplies furnished incident to covered dental services, including but not limited to x-rays, administration of anesthesia, and use of the operating room. Several commenters recommended removal of any requirements for direct supervision of auxiliary personnel, such as for services performed by dental hygienists, for ancillary services and supplies furnished incident to covered dental services, because they stated the physical presence of the dentist could limit access to services. These commenters stated that requiring direct supervision of dental hygienists would also be in conflict with some state’s scope of practice for these auxiliary personnel. Other commenters requested that certified registered nurse anesthetists (CRNAs) continue to be recognized as anesthesia professionals able to administer anesthesia in these circumstances and receive Medicare payment.

*Response:* We appreciate commenters’ support for our proposal to provide that Medicare payment can be made for ancillary services and other supplies furnished incident to covered dental

services, such ancillary services including but not limited to x-rays, administration of anesthesia, and use of the operating room. We note that we did not propose to modify our current policies with respect to the scope of professional services, or the administration of anesthesia services, by CRNAs.

In order for physicians and other practitioners, including dentists, to receive Medicare Part B payment for services that are performed by auxiliary personnel incident to their professional services, the services generally must be performed under the direct supervision of the physician or practitioner. This is one of the requirements specified in our regulation at § 410.26 for “incident to” services, such as services performed by dental hygienists and billed by the dentist incident to their professional services. We note that the definition of direct supervision does not require the physician or dentist to be physically present within the room during the performance of the dental services. We did not propose to modify our regulatory requirements under § 410.26 for services furnished incident to physicians’ services. Therefore, those regulatory requirements continue to apply. We will consider the commenters’ recommendations for adjusting the supervision requirements of auxiliary personnel, including dental hygienists, performing covered dental services incident to dental services of a physician for potential future rulemaking.

#### Update to Current Payment Policies for Dental Services

*Comment:* Many commenters supported the proposed updates to include payment for medically necessary dental services related to additional conditions (prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures), stating that dental services in these circumstances are inextricably linked to the proposed medical services, are medically necessary, and providing payment for them will foster and improve patient outcomes related to these medical conditions.

*Response:* We appreciate the commenters’ support and agree that the payment policy updates we proposed represent examples of dental services that are inextricably linked to, and substantially related and integral to the clinical success of, covered medical services. As discussed, these examples include payment for dental services prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures. As such, we are finalizing

our proposal that Medicare Part A and Part B payment can be made for dental or oral examinations, including necessary treatment, performed as part of a comprehensive workup prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures, that are inextricably linked to, and substantially related and integral to the clinical success of, these covered medical services.

*Comment:* Many commenters expressed support for the proposed update for payment for medically necessary dental services related and integral to the clinical success of organ transplants, cardiac valve replacement or valvuloplasty procedures, as the commenters believe that these revisions would serve to promote health equity and increase access to medically necessary services for vulnerable members of the Medicare population. The commenters asserted that underserved populations generally do not have access to the necessary oral health services required for successful outcomes related to organ transplantation and cardiac valve replacement or valvuloplasty procedures.

*Response:* We appreciate the commenters' support regarding the potential health equity impact of the proposed updates to the current policy for payment under Medicare Parts A and B for dental services that are inextricably linked to, and substantially related and integral to the clinical success of, covered medical services to now include organ transplant, cardiac valve replacement, or valvuloplasty procedures. We further appreciate the feedback that Medicare payment for dental examinations, including necessary treatment, performed as part of a comprehensive workup prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures could help advance health equity for people who are medically underserved.

*Comment:* Many commenters expressed support for the proposal to include Medicare Parts A and B payment for dental examination, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection, prior to an organ transplant. Commenters indicated that it is standard practice for candidates for organ transplants to require a dental assessment and/or screening for, and treatment of, decay and infections including periodontal disease before transplant surgery, as these conditions potentially compromise the outcomes of surgery including organ rejection.

Commenters noted a wide variation of terms and clinical scenarios where certain dental services may be necessary for certain patients surrounding a transplantation procedure, and requested CMS further delineate specific circumstances where payment may be made under Medicare Parts A and B.

Commenters stressed the importance of remedial oral or dental care in advance of transplantation to reduce dental and oral infection and stated that the resolution or stabilization of dental problems prior to transplant procedures lowers the risk for infection and sepsis post-transplant. Several of these commenters provided citations from opinion pieces to support their perspectives. Some commenters noted that, according to the National Institute of Dental and Craniofacial Research, "Whenever possible, all active dental disease should be aggressively treated before transplantation, since post-operative immunosuppression decreases a patient's ability to resist systemic infection." We note that the authors further stated that, "there was an association between dental focus and hospital readmission/stay. However, our methods do not provide conclusive proof of causality. Hospitalization due to acute dental infection was rare."<sup>124</sup>

Commenters also asserted that inflammation combined with required immune suppression for transplant procedures can yield poor outcomes post-transplantation and that high rates of poor oral health, including periodontal disease and xerostomia, are risk factors for compromising successful transplant outcomes. Moreover, a few commenters noted that patients are generally required to demonstrate good oral hygiene to even be considered active on the organ transplant waiting list.

Commenters also stated that they believe dental services that are substantially related and integral to the clinical success of transplants need to be provided to candidates before any such procedure, regardless of whether transplantation ultimately occurs. Commenters noted that the elimination of oral or dental infection is necessary prior to surgery, even if the procedure does not take place. Commenters also noted that medically necessary services may be required during the transplantation procedure, as some oral issues may not be identified until the procedure is underway.

<sup>124</sup> National Institute of Dental and Craniofacial Research. April 2011. Dental Management of the Organ Transplant Patient. <https://www.in.gov/health/files/OrganTransplantProf.pdf>.

Moreover, commenters expressed concerns that some patients who may be awaiting transplantation services could receive dental services and then undergo the transplantation procedure only to experience organ rejection, other non-ideal outcomes, or ultimately not receive transplantation procedure due to extenuating circumstances. The commenters were concerned that while the dental services are substantially related and integral to the clinical success of the planned or furnished covered transplantation services, in the event the transplant procedure is ultimately not successful due to rejection or the procedure does not occur for various medical reasons, Medicare could deny payment for the dental care that is substantially related and integral to the organ transplant because the transplant surgery was not completed or unsuccessful.

Commenters explained that life-threatening infections related to the weakened immune systems of older adults (immunosenescence) and transplant-related immunosuppression can be serious complications of transplantation after the transplantation occurs. These commenters also stated that transplant patients typically take multiple medications involving long-term use of immunosuppressive drugs, as well as multiple medications for comorbidities like diabetes and cardiovascular disease, and that dental services may be required in addressing these post-transplantation conditions.

Several commenters requested that CMS provide payment under Medicare Parts A and Part B for medically necessary diagnostic and treatment services after an organ transplant, rather than only before or during the transplant procedure because they stated that dental services both before and after the transplantation procedure itself influence the outcome of the transplant. A commenter stated that screening for and treatment of oral inflammation and infections must begin pre-transplantation and continue as appropriate post-transplantation, for a duration of approximately 3 to 6 months, in order to prevent sepsis and organ rejection until immunosuppression is resolved. Other commenters supported Medicare payment for dental services that occur post-transplant by asserting the importance of post-transplant oral care to clinical outcomes. Lastly, these commenters requested that CMS reconsider the statement asserting that no payment would be made for services that are not immediately necessary prior to surgery to eliminate or eradicate infection.

*Response:* We appreciate the commenters' thoughtful and evidence-based feedback regarding the link between oral or dental examinations, medically necessary diagnostic and treatment services to eliminate an oral or dental infection, and organ transplants.

We agree with commenters that there is clinical evidence to support that the medically necessary dental care may advance the clinical success of organ transplants. We appreciate the clinical studies referenced to support the link between dental services prior to organ transplantation and improved health outcomes for certain patients. Therefore, we believe that payment can be made under Medicare Parts A and B for dental services such as dental examinations, including necessary treatment, performed as part of a comprehensive workup prior to organ transplant surgery and medically necessary diagnostic and treatment services immediately necessary to eliminate or eradicate the infection or its source that are provided before transplantation because such services are inextricably linked to, and substantially related and integral to the clinical success of, the organ transplant procedure.

We also agree that medically necessary dental diagnostic and treatment services may be immediately necessary to eliminate or eradicate an infection or its source contemporaneously with the organ transplant. We understand that it may not be feasible to provide certain dental or oral services in advance of the transplant procedure and that the services may instead occur during the surgery itself.

Examples of dental services to eradicate infection could include: extractions (removal of the entire infection, such as pulling of teeth—for example, CDT D7140, D7210), restorations (removal of the infection from tooth/actual structure, such as filling procedures—for example, CDT D2000–2999), periodontal therapy (removal of the infection that is surrounding the tooth, such as scaling and root planing—for example, CDT D4000–4999, more specifically D4341, D4342, D4335 and D4910), or endodontic therapy (removal of infection from the inside of the tooth and surrounding structures, such as root canal—for example, CDT D3000–3999).

Additionally, we note that when dental services, such as dental examinations, including necessary treatment, are performed as part of a comprehensive workup prior to organ transplant surgery, and medically necessary diagnostic and treatment

services immediately necessary to eliminate or eradicate the infection or its source, prior to, or contemporaneously with, the organ transplant occur, and, ultimately, the transplantation procedure does not yield ideal clinical outcomes including organ rejection etc., payment may still be made under Medicare Part A and Part B for the dental services provided. The dental services are inextricably linked to, and substantially related and integral to the clinical success of the transplantation procedure, and achievement of ideal clinical outcomes (for example, no occurrence of organ rejection) is not a requirement for the payment of these medically necessary services.

Furthermore, we appreciate the commenters' feedback regarding those individuals who are awaiting organ transplantation and the commenters' request that Medicare provide payment for medically necessary dental services prior to transplantation, with the understanding that the transplantation procedure may not ultimately occur, and that payment should still be made under Medicare Part A and Part B for those medically necessary dental services.

In a case where an individual is awaiting organ transplantation, we believe that it is appropriate for Medicare to provide payment for, including but not limited to, an oral or dental examination, and medically necessary diagnostic and treatment for only those services that are considered immediately necessary to eliminate or eradicate the infection or its source prior to the organ transplant. As previously discussed in this final rule, when a service is in connection with the care, treatment, filling, removal, or replacement of the teeth or structures supporting the teeth, but not inextricably linked to, and substantially related and integral to the clinical success of, the covered medical services, then payment may be made but only in specific circumstances as discussed in section II.L.2.a of this rule. We do not currently believe that our interpretation of section 1862(a)(12) of the Act would allow payment for dental services not inextricably linked to, and substantially related and integral to the clinical success of anticipated covered medical services. Therefore, payment would not be made in those circumstances.

We appreciate the commenters' feedback regarding Medicare payment for medically necessary dental services after the transplantation procedure occurs. We thank commenters for the evidence they provided to connect the importance of dental care received after

the organ transplant on the success of that transplant procedure. We received significant input from commenters in this area and want to thoroughly review the evidence provided. We plan to continue to review this evidence and engage with interested parties to issue additional guidance or future rulemaking, as determined necessary.

With regard to commenters' questions on the types of clinical scenarios where dental services may be necessary prior to transplantation procedures, we reiterate that MACs have the flexibility to determine on a claim-by-claim basis whether a patient's circumstances do or do not fit within the terms of the preclusion or exception specified in section 1862(a)(12) of the Act and § 411.15(i). We will provide additional guidance to the MACs in order to make these determinations and further note that the finalized policies outlined in this section of this final rule would not prevent a MAC from making the type of determination that payment can be made for dental services in other circumstances not specifically addressed within this final rule and the finalized amendments to § 411.15(i).

In light of commenters' feedback, effective for CY 2023, we are finalizing that payment can be made under Medicare Part A and Part B for dental services for, including but not limited to, an oral or dental examination, and medically necessary diagnostic and treatment services that are considered immediately necessary to eliminate or eradicate the infection or its source prior to, or contemporaneously with, the organ transplant and when those dental services are determined to be inextricably linked to, and integral to the clinical success of, the transplant procedure. We plan to continue reviewing evidence submitted by commenters and may refine or explain this policy further in future guidance or rulemaking.

We encourage the public to use the nomination process as finalized in section II.L.2.c.ii. of this final rule to identify additional clinical scenarios under which Medicare payment could be made for certain dental services that are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services. We invite interested parties to submit information about clinical scenarios and related medical evidence to support that the standard of care for the medical service is such that one would not proceed with the medical procedure or service without performing the dental services, because the covered medical services would or could be significantly and materially

compromised, such that clinical outcomes of the medical service could be compromised absent the provision of the inextricably-linked dental services.

*Comment:* Several commenters noted that while they acknowledge the connection between dental services and potential improved health outcomes in the cases of the proposed organ transplant, cardiac valve replacement, and/or valvuloplasty procedure scenarios, they urged CMS to delay any updates and use a methodical approach to adding further services as examples of clinical scenarios where Medicare payment could be made for certain dental services. Several commenters requested that CMS postpone finalizing the addition of dental exams and necessary treatments prior to organ transplants, heart valve replacements and valvuloplasty procedures until the establishment of a formal review process that could more thoroughly assess the clinical inextricable link between dental services and certain covered medical services before finalizing any additional examples of payable services.

One commenter asserted that CMS had provided insufficient scientific justification for the addition of the organ transplant, cardiac valve replacement, or valvuloplasty procedure scenarios for the purposes of Medicare Parts A and B payment for dental services and therefore did not support the finalization of these additional scenarios. Additionally, a few commenters asserted that MACs already have the ability to make case-by-case determinations for dental services inextricably tied to Medicare Part A procedures, and therefore, the addition of the proposed categories were not necessary. Other commenters stated that CMS lacked the statutory authority to finalize payment for these types of dental services.

*Response:* We appreciate the commenters' request that we conduct a thorough review of the clinical evidence related to the proposals. As discussed, we believe that the clinical evidence is clear that in cases of organ transplant, cardiac valve replacement, and valvuloplasty procedures, certain dental services are substantially related and integral to the clinical success of these scenarios because the success of the procedure would be compromised without eradicating the dental or oral infection prior to the initiation of such medical service. Therefore, we are amending § 411.15(i) to include these clinical scenarios as examples under which Medicare payment under Part A and Part B would not be excluded.

Additionally, as described further below, we are finalizing for CY 2024 the inclusion of dental services prior to the treatment for head and neck cancers as a clinical scenario under which Medicare payment under Part A and Part B would not be excluded. We are finalizing this policy for CY 2024 to allow us additional time with the clinical data and to conduct additional analysis to consider whether greater specificity may be needed when implementing this policy and the applicability of certain terms with the medical services involved in this type of treatment. We reiterate that MACs have the flexibility to determine on a claim-by-claim basis whether a patient's circumstances do or do not fit within the terms of the preclusion or exception specified in section 1862(a)(12) of the Act and § 411.15(i). We further note that the finalized policies outlined in this section of this final rule would not prevent a MAC from making the type of determination that payment can be made for dental services in other circumstances not specifically addressed within this final rule and the finalized amendments to § 411.15(i).

We appreciate the request that we continue to review whether there is an inextricable link between dental and medical services in general and we will continue to evaluate and review the clinical considerations submitted by commenters. We may refine or explain this policy further through future guidance or rulemaking. We also note that we are finalizing a process to review public recommendations for clinical scenarios where there may be an inextricable link between certain dental services and covered medical services, and encourage commenters to engage with us through the process we are finalizing in this final rule.

With regard to the commenter who stated we did not have statutory authority to finalize a policy in this area, we continue to recognize that there may be instances where medical services necessary to diagnose and treat the individual's underlying medical condition and clinical status may require the performance of certain dental services. Furthermore, we believe that there are instances where dental services are so integral to other medically necessary services that they are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth within the meaning of section 1862(a)(12) of the Act. Rather, we continue to believe, based on the review of comments, such dental services are inextricably linked to the clinical success of an otherwise

covered medical service, and therefore, are instead substantially related and integral to that primary medical service.

*Comment:* Several commenters requested clarification regarding the definition of organ transplant as it applies to Medicare payment for dental services that are substantially related and integral to the clinical success of certain covered medical services. Specifically, they requested that the definition include not only organ transplants, but also hematopoietic stem cell and other transplants.

Commenters stated that dental examination and stabilization, specifically resolution of concerns related to oral health, are considered a standard of care in hematopoietic stem cell transplants (HSCT) since any patients who are on immunosuppressant therapies while receiving chemotherapy and radiation receive a clinical benefit from dental or oral stabilization care pre-transplant and continued care post-transplant,<sup>125</sup> which the commenters assert represents the majority of the HSCT patient population.

Some of these commenters also noted that bone marrow transplantation may also require dental services that are inextricably linked to, and substantially related and integral to the clinical success of these covered medical services, as commenters asserted that dental and oral services serve to improve clinical outcomes for these types of transplants. Additionally, commenters stated that dental services prior to CAR-T cell therapies may also benefit the patient receive the medical service.

*Response:* We appreciate the commenters' feedback regarding the scope of organ transplant as it applies to Medicare Parts A and B payment for dental services that are inextricably linked to, and substantially related and integral to the clinical success of certain covered medical services. We agree with the evidence commenters provided regarding the inextricable link between dental services and hematopoietic stem cell and bone marrow transplantation as consistent with the other organ transplants, particularly with regard to the risk of infection for patients requiring all of these organ transplants.

<sup>125</sup> 2 Elad, S., Raber-Durlacher, J.E., Brennan, M.T. et al., Basic oral care for hematology-oncology patients and hematopoietic stem cell transplantation recipients: a position paper from the joint task force of the Multinational Association of Supportive Care in Cancer/International Society of Oral Oncology (MASCC/ISOO) and the European Society for Blood and Marrow Transplantation (EBMT). Support Care Cancer 23, 223–236 (2015). doi.org/10.1007/s00520-014-2378-x.

In response to comments, we are clarifying that Medicare payment may be made under Parts A and B for dental or oral services prior to organ transplants, which for the purposes of this policy includes scenarios where the patient receives an organ transplant, including a bone marrow or hematopoietic stem cell transplant. We also recognize that term “organ transplant” may not be considered to include bone marrow or hematopoietic stem cell transplants in all contexts, and note that Medicare payment policies for organ procurement organizations or other payment policies may be applied differently for the purposes of paying for bone marrow and stem cell transplantations.

*Comment:* Many commenters supported our proposal to provide Medicare payment for a dental or oral examination as part of a comprehensive workup and the necessary dental treatments and diagnostics to eliminate oral or dental infections prior to cardiac valve replacement or valvuloplasty procedures. Commenters indicated that poor dental health has proven to be highly associated with chronic disease and higher cardiovascular risks and that oral infections can undermine recovery from cardiac valve replacement or valvuloplasty procedures. Commenters also stated that dental infections and poor oral health increase the risk of infection in a newly implanted heart valve, and that patients may have primary bacterial endocarditis or secondary prosthetic valve endocarditis to neglected dental health and chronic dental abscesses. The commenters further stated that these life-threatening situations could be prevented with the provision of medically necessary oral or dental services prior to and, as necessary, during a cardiac valve replacement or valvuloplasty procedure.

*Response:* We appreciate commenters’ support regarding these proposed updates to the existing policy for payment under Medicare Parts A and B for dental services that are inextricably linked to, and substantially related and integral to the clinical success of certain covered medical services, and provided prior to and/or contemporaneously with, those covered medical services, such as cardiac valve replacement and valvuloplasty procedures. We agree that the evidence supports that dental examinations, including necessary treatment, performed as part of a comprehensive workup prior to and/or contemporaneously with cardiac valve replacement or valvuloplasty procedures, are inextricably linked to, and substantially related and integral to the clinical success of, certain other

covered medical services. Specifically, we note that after a valve replacement, the valve is at risk of being a seeding source for future endocarditis. Endocarditis can carry high risk for mortality for these patients, so eliminating an infection prior to or contemporaneously with the procedure would be important for preventing future endocarditis seeding at the new valve.

For these reasons, we are finalizing our proposal that Medicare Part A and Part B payment can be made for certain dental services, such as dental or oral examinations, including necessary treatment, performed as part of a comprehensive workup prior to, and/or contemporaneously with, cardiac valve replacement or valvuloplasty procedures, that are inextricably linked to, and substantially related and integral to the clinical success of, the procedures.

*Comment:* Several commenters suggested that CMS provide additional guidance that would aid in processing claims for dental services that are inextricably linked to the Medicare-covered medical service. Commenters suggested we provide additional guidance about what types of specific dental treatments would be billable if provided under our finalized policy prior to, or contemporaneously with, Medicare-covered organ transplant, heart valve replacement, and valvuloplasty procedures. Some commenters requested CMS issue specific procedure and diagnosis codes associated with this policy. Other commenters recommended specific professional services codes, procedure codes and diagnosis codes for CMS to reference. Many commenters requested this information to allow a consistent application of the policy and for clinical decision-making purposes. A few commenters requested that CMS require the use of a modifier to identify dental services and claims that are inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services. Others requested that CMS implement prior authorization policies so that healthcare professionals have prior approval of the inextricable linkage between the dental and medical services. However, some commenters argued that the use of modifiers or prior authorization could be overly burdensome to providers.

*Response:* We appreciate the commenters’ request for additional guidance regarding how to identify what services may be payable, such as the use of modifiers or the prior authorization process, and how to ensure that the

claims themselves can be successfully processed.

Additionally, we note that if clinically necessary, Medicare could make payment for dental services occurring over multiple visits. We recognize that it may not be clinically appropriate to receive the totality of dental services, which are necessary to immediately eradicate an infection, that are inextricably linked to the covered medical services, within one visit. As such, Medicare could make payment, for example, for the required dental services immediately necessary to eradicate the infection if such services require multiple dental services and it is clinically advisable for those services to occur over multiple visits prior medical services such as an organ transplant, cardiac valve replacement, or valvuloplasty procedures.

We will continue to consider commenters’ request for additional specific considerations and scenarios, and may issue additional guidance or further address our policies in this area in future rulemaking. Furthermore, we will provide guidance to the MACs to assist them in determining this inextricable link between dental and medical services so that they can continue to make determinations on a claim-by-claim basis for patient and clinical circumstances do or do not fall within the examples of services listed under § 411.15(i), or within the preclusion or exception specified in section 1862(a)(12) of the Act and § 411.15(i).

Additionally, we are continuing to explore commenters’ suggestions that we use claim modifiers or prior authorization policies.

*Comment:* Multiple commenters supported the proposal that certain dental services that are substantially related and integral to the clinical success of organ transplant, cardiac valve replacement, or valvuloplasty procedure can occur within the inpatient hospital or outpatient settings and agreed that Medicare Parts A and B payment should be made for associated dental services, regardless of whether the services are furnished in an inpatient or outpatient setting.

*Response:* We appreciate the commenters’ support regarding the settings in which payment can be made for dental services. We agree that payment can be made for dental services that are inextricably linked, and substantially related and integral to the clinical success of, certain covered medical services can be furnished in multiple settings. As such, we are finalizing that Medicare Parts A and B payment can be made for such covered

dental services, as applicable, regardless of whether the services are furnished in an inpatient or outpatient setting, as clinically appropriate; and that payment under the applicable payment system. We will also make updates to appropriate Medicare payment data files to ensure that appropriate payments can be made under the applicable payment system. We note that this policy is consistent with the payment policy as specified within our existing manual guidance (See Medicare Benefit Policy Manual (IOM Pub 100–02, Chapter 15, section 150).)

*Comment:* Several commenters supported our proposal that payment under the applicable payment system could also be made for services that are ancillary to dental services for which Medicare payment can be made, such as x-rays, administration of anesthesia, and use of the operating room.

*Response:* We appreciate the commenters' support and agree that payment can be made for ancillary services or supplies associated with the provision of covered, medically necessary dental services. As such, we are finalizing our proposal that payment under the applicable payment system could also be made for services that are ancillary to these dental services, such as x-rays, administration of anesthesia, and use of the operating room.

*Comment:* Several commenters requested additional information regarding the operational aspects of both the proposal to codify and clarify existing policy and the proposal to update dental services that are inextricably linked to, and substantially related and integral to the clinical success of, the covered medical services. Specifically, commenters raised concerns about issues, including: (1) what claims form dentists would use to submit claims for dental services; (2) what procedure code set and what diagnostic codes would be reflected on the claims; (3) if National Coverage Determinations (NCDs) will be issued to ensure consistent claim payment across the country; (4) clarification on any frequency limits, documentation requirements, and authorization processes; and (5) Medicare enrollment processes for dentists and any efforts CMS may make to ensure network adequacy.

Other commenters suggested that CMS establish a demonstration to initially test the operational feasibility of a Medicare payment policy of this magnitude. These commenters suggested, that by using a demonstration format for payment in this manner, we could continue to refine the policy and operational aspects of the policy with

input from interested parties prior to implementing nationally.

*Response:* We appreciate the commenters' thoughtful feedback and questions. We note first that under our current policy (which is being codified in this final rule), dental services with an inextricable link to certain Medicare-covered medical services can, and have been, paid under Medicare Parts A and B. At this time, dentists, as appropriate, should continue to enroll in Medicare according to the current process. Dentists and other qualified practitioners who furnish dental services that are eligible for payment under Parts A and B (because they are inextricably linked to another Medicare-covered medical service) should continue to submit claims using current processes, and can consult with their MACs for specific claims submission questions.

However, we also recognize that with the codification and clarification of our policies regarding dental services that are inextricably linked to Medicare-covered medical services (including prior to organ transplant, cardiac valve replacement, and valvuloplasty), the volume of dental service claims being submitted may increase. We appreciate the commenters' thoughtful feedback and questions regarding the operational aspects of this proposal, and we agree that these are necessary areas to address. We acknowledge the need to address and clarify certain operational issues, and we are working to address these issues, including claims processing questions raised by the commenters. We anticipate resolving many of the additional operational issues raised by commenters potentially as soon as CY 2024, including efforts to adopt the dental claim form. We will also make updates to appropriate Medicare payment data files to ensure that covered dental services can be billed and paid (in a manner described below) based on the applicable payment system for services furnished. We will continue to work with our MACs and encourage continued feedback from interested parties to help identify concerns or questions regarding submission and processing of dental claims. We also plan to provide guidance and engage in further rulemaking, as necessary, as operational strategies and plans are refined and implemented. We will also monitor service utilization to identify any concerns about consistency of claims processing and adequacy of access across the country. We appreciate the questions raised by commenters and plan to take them into consideration as we continue to refine operational issues

relating to this policy, and make any necessary refinements.

*Comment:* Several commenters supported our proposal to continue to contractor price dental services that are substantially related and integral to the clinical success of certain covered medical services for CY 2023, or until such time that CMS has data to establish prospective payment rates. Conversely, several commenters objected to MAC-specified payment, as the commenters expressed concern regarding potential for incongruent payment amounts based on MAC region and also expressed apprehension regarding potential health equity impacts if payments were not aligned across geographies. Commenters made recommendations regarding the creation of a framework that ensures applicable payment policies across MAC regions and also requested annual updates for these payments. Other commenters requested that CMS encourage the use of specific public data sources in setting payment rates for dental services, and in order to account for geographic variations in the costs of providing dental and oral services.

*Response:* We appreciate the commenters' feedback regarding our proposal to contractor price dental services that are inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services, including organ transplant, cardiac valve replacement, or valvuloplasty procedures. We continue to believe that MACs are appropriately situated to establish contractor prices for these services given that the MACs currently establish contractor pricing for the dental services for which payment is currently made. As it is for dental services currently payable under Medicare Parts A and B, we believe that it is appropriate to continue contractor pricing for dental services for which payment is made in the additional clinical scenario examples we are finalizing in this final rule, until we have additional pricing data that could enable national pricing. As such, we are finalizing our proposal to continue to contractor price these services based on the applicable payment system for services furnished. However, we agree with the suggestions made by commenters that there may be publicly available data sources that could aid MACs in determining these payment rates. We plan to issue operational guidance to the MACs for these final policies and will note the potential usefulness of these data sources when establishing payment rates for these applicable dental services.

*Comment:* A few commenters expressed concerns regarding the financial impact of possible payment under Medicare Parts A and B for dental services substantially related and integral to the clinical success of certain covered medical services, including organ transplant, cardiac valve replacement, or valvuloplasty procedures. The commenters stated that these services are high-volume procedures and expressed concerns that paying for these dental services through the PFS would negatively impact the budget neutrality adjustments to the conversion factor, and would negatively impact payments for other physicians' services. These commenters urged CMS to consider the implications on the PFS payment system prior to finalizing any expanded policy in this area, or until financial impact was better understood and available for interested parties' review and comment.

*Response:* We appreciate the commenters' feedback regarding possible financial impacts for payments made under Medicare Part A and Part B for dental services that are inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services. Also, we proposed to clarify our interpretation of section 1862(a)(12) of the Act and codify certain aspects of our current Medicare PFS payment policies for dental services. We also proposed and sought comment on payment for other dental services, such as dental exams and potential necessary treatments prior to organ transplants, cardiac valve replacements and valvuloplasty. Because we proposed to codify and update existing policy, these proposals would not impact budget neutrality under the PFS, or require adjustments to the PFS conversion factor. Additionally, while we recognize that the impact of access to these services to individual beneficiaries may be very significant, we still do not anticipate significant impact in the context of overall spending and utilization under the Physician Fee Schedule. We intend to closely study the trends in utilization and payment for these services and make refinements to the payment policy as needed in future rulemaking.

#### Other Clinical Scenarios for Dental Services Integral to Other Covered Medical Services

*Comment:* Many commenters supported our suggestions that dental care may be inextricably linked to the clinical success of, treatments for head and neck cancer, immunosuppressive therapy, or joint replacement.

Commenters also noted general support for coverage of dental care in both inpatient and outpatient settings, and coverage of ancillary services such as x-rays and anesthesia, needed to perform any covered dental care. Many commenters supplied data and studies that spoke to the prevalence of chronic conditions or health disparities among different populations, as well as information supporting the benefits of good dental health. However, only a few commenters provided clinical evidence with their comments to explicitly support the link between dental services and the clinical success of these specific medical services.

Many commenters noted that without clear definitions or narrowly tailored guidance, identifying dental services that are inextricably linked to, and substantially related and integral to the clinical success of, a certain covered medical service may prove challenging. Several commenters noted that this standard could be interpreted overly broadly since, as many commenters noted, there is a great deal of evidence suggesting that dental health is generally an important component of overall health. Alternatively, a few commenters were concerned that this standard could be interpreted too narrowly, such as by assuming that a dental service must always be performed contemporaneously with another covered procedure to be considered "integral" to that procedure. These commenters collectively worried that beneficiaries, practitioners, and MACs may be confused about what dental services can be covered, which would lead to inconsistent payment of claims and potential unanticipated financial burdens on beneficiaries or practitioners.

*Response:* We thank the commenters for these insights and agree that these are critical issues to consider as we review recommendations and clinical evidence relating to Medicare payment for dental services. However, we note that while many commenters expressed support for the inextricable link between dental services and medical services such as immunosuppressive therapy, or joint replacement, we do not currently believe we have sufficient clinical evidence to fully evaluate whether certain dental services are inextricably linked to, and substantially related to the clinical success of, medical services such as the initiation of immunosuppressant therapy, or joint replacement surgeries, and need more time to review. We will continue to review the information submitted by commenters during the rulemaking cycle, and we encourage the public to

provide additional information, including through the finalized process under section II.L.2.c.ii. of this rule.

*Comment:* Many commenters agreed with our analysis that dental services prior to head and neck cancer treatments are integral to the clinical success of those treatments. One commenter recommended that we specify that by "head and neck cancer," we are referring to treatment for patients with cancer related to the "mid-neck through skull." Many commenters provided links to resources that they believed provided clinical evidence to support the link between dental care and the clinical success of, or standard of care for patients receiving treatment for head and neck cancer. Commenters also provided numerous examples of the consequences that can occur if cancer treatment is undertaken in a patient with poor dental health, and shared personal experiences to note the interrelationship between dental health and cancer treatment, including the physical and financial impacts of the extensive damage that can be caused by poor dental health during and after cancer treatments.

Commenters also submitted specific information showing that radiation therapy used to treat head and neck cancer can cause a number of oral conditions, including radiation caries, problems with the salivary glands, mucositis, candidiasis, dysgeusia, xerostomia (dry mouth), and osteoradionecrosis (bone cell death) of the jaw. Several commenters noted that osteoradionecrosis, if not prevented, is difficult to treat and can necessitate surgery that may disfigure and functionally impair the patient's face and jaw. Several commenters also provided data illustrating that conditions such as mucositis or osteonecrosis may require multiple hospitalizations and other costly treatment.

Commenters suggested that if dental infections are not addressed prior to radiation treatment, the treatment may be less effective, or the patient may be prone to other infections. One commenter stated that treating dental infections prior to the start of radiation can reduce some of the tissue damage in the mouth that can result from the radiation. Several commenters shared studies to support the assertion that dental care prior to radiation treatment is integral to the clinical success of head and neck cancer treatment and survivorship (although one commenter noted that the reasons why dental care prior to radiation therapy improves survival rates is not entirely clear). Several commenters observed that

Medicare already covers extractions of teeth prior to radiation treatment for neoplastic disease, and regarded dental exams as a close analog to this preparatory care.

Commenters also provided information showing that chemotherapy drugs used for treatment of head and neck cancers can have many side effects, including sores and lesions in the mouth and throat tissues, difficulty swallowing, bleeding in the mouth, and tooth decay. Additionally, commenters stated that because chemotherapy reduces the body's ability to fight opportunistic infections, patients who begin chemotherapy with untreated infections (including infections in the oral cavity) are at risk of developing a number of complications, ranging from fungal or viral infections of the mouth and throat to systemic infections or fatal sepsis. Commenters observed that complications arising from untreated infections could cause treatment interruptions which could compromise the success of the treatment and the patient's outcomes. One commenter observed that the need for removing oral infection prior to starting chemotherapy is analogous to the rationale for providing oral care prior to renal transplant, and thus (like dental exam prior to renal transplant) should be considered substantially related and inextricably linked to the clinical success of the treatment. Commenters recommended that patients receiving chemotherapy for head or neck cancer receive a dental exam and stabilization, if applicable. Several commenters noted that providing an oral exam prior to starting chemotherapy is the standard of care in many cancer centers.

**Response:** We thank the commenters for the information. We appreciate the individual examples and the clinical information commenters shared illustrating connections between head and neck cancer treatments and dental care. We will continue to refer to the relevant conditions by the common term "head and neck cancer," but appreciate the suggested clarification offered by one of the commenters and will consider further refining what is meant by "head and neck cancers," beyond the treatment such as radiation therapy with or without chemotherapy, as part of our ongoing operationalization work.

As discussed in sections II.L.1. and II.L.2. of this rule, we are finalizing the codification of existing Medicare payment policy provide that payment can be made under Medicare Parts A and B for extractions of teeth to prepare the jaw for radiation treatment of neoplastic disease. We agree with commenters that providing dental

exams and necessary treatments to eradicate infection and/or otherwise prepare the oral cavity for the treatment of head and neck cancer presents an analogous clinical circumstance for which we currently provide payment. We note that the presentation of an analogous clinical circumstance is not the sole basis on which we plan to add head and neck cancer treatments to our list of examples in § 411.15(i) of dental services that are inextricably linked to Medicare-covered medical services. However, we find that the analogous clinical circumstance between head and neck cancer treatment and radiation treatment in the jaw, in addition to clinical evidence showing an inextricable link between dental services and the success of head and neck cancer treatment (discussed below) is compelling.

We find clinical evidence supplied by commenters linking dental care and the clinical outcomes of cancer treatments for head and neck cancers persuasive. We looked particularly to a systematic review and meta-analysis cited by commenters that was supportive of the inextricable link between dental care and successful treatment of head and neck cancer, showing a significantly higher survival rate in those who receive recommended dental care prior to and during treatment of their cancer.<sup>126</sup> We also received references from several commenters to a literature review that concluded that good oral hygiene (including topical fluoride treatments) is critical for patients being treated with radiation for head and neck cancer, due to the lowered biological potential for healing of the periodontium (alveolar bone, periodontal ligament, cementum) after radiotherapy.<sup>127</sup> We believe that this information is sufficient to support the basic assertion that removing infections in the oral cavity (in addition to potentially removing teeth) is necessary to prepare patients for treatment and is inextricably linked to, and substantially related and integral to the clinical success of radiation treatment (with or without chemotherapy) for cancers of

the head and neck. As such, we are finalizing a policy for CY 2024 that Medicare Parts A and B payment may be made for dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting (as well as medically necessary diagnostic and treatment services to eliminate an oral or dental infection), prior to or contemporaneously with Medicare-covered treatments for head and neck cancer.

We believe there are several aspects of this policy that may require additional refinement or clarification. As noted in an earlier response, we are cognizant of concerns that, absent clear guidelines and definitions, beneficiaries, practitioners, and MACs may need additional information prior to providing payment under Medicare Parts A and B, and without it could lead to inconsistent application of the policy. In particular, we believe it is important to determine whether any additional guidance is necessary to identify conditions considered "head and neck cancer" and qualifying covered medical services considered within the treatments for these cancers beyond just radiation (with or without chemotherapy). "Head and neck cancer" is a commonly-used term that describes a number of specific conditions; the treatments for these cancers are delivered through multiple modalities. We would also like to review and consider specifically if "head and neck cancers" implies any neoplasm, whether primary or metastatic, located in the head and neck, regardless of where the cancer originated. We would like to review and consider whether further definitions and guidance are necessary. Additionally, given that some patients might undergo medical services under multiple rounds of treatment, we plan to review how this is applied when payment may be made for dental services provided prior to or contemporaneously with covered medical services.

We believe finalizing this policy for CY 2024 will acknowledge our agreement with commenters that the clinical scenario of dental services associated with head and neck cancers is one where Medicare Part A and Part B payment could be made in accordance with our interpretation of section 1862(a)(12), and also allow us to continue to engage with interested parties to further develop and refine the policy as necessary in the interim. We reiterate that we are open to additional refinements or clarifications to our definitions of head and neck cancer treatment, which we would develop and

(Eds.), *Integration of medical and dental care and patient data* (2nd ed., pp.35–46), citing to Vissink A, Burlage FR, Spijkervet FK, et al. Prevention and treatment of the consequences of head and neck radiotherapy. *Crit Rev Oral Biol Med*. 2003;14(3):213–25.

discuss through future rulemaking or through additional guidance as needed or necessary. We also note that the finalized policies outlined in this section of this final rule (including the policy we are finalizing here for CY 2024) would not prevent a MAC from making determinations on a claim-by-claim basis for dental services furnished in other circumstances not specifically addressed within this final rule and the finalized amendments to § 411.15(i).

We also encourage interested parties to submit additional information through the process that we are finalizing under section II.L.2.c.ii. of this rule that could inform further refinements or clarifications to this policy.

*Comment:* Several commenters recommended that we pay for additional types of dental services, such as preventive, diagnostic (including imaging), periodontal, caries removal, and extractions in both hospital inpatient and outpatient settings. Commenters recommended dental services including exam, extraction, scaling, and root planing as needed prior to and in some cases during cancer treatment. Additionally, several commenters recommended fluoride treatment for patients receiving radiation therapy for head and neck cancer to help strengthen the teeth. Several commenters provided lists of specific dental codes that should be payable.

*Response:* We thank the commenters for the specific suggestions. As noted above, we are finalizing a policy for CY 2024 that Medicare Parts A and B payment may be made for dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting (as well as medically necessary diagnostic and treatment services to eliminate an oral or dental infection), prior to Medicare-covered treatments for head and neck cancer. We will make conforming edits to § 411.15(i)(3) for CY 2024 to add to our list of examples of dental services that may be paid under Medicare Parts A and B dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting (as well as medically necessary diagnostic and treatment services to eliminate an oral or dental infection), prior to Medicare-covered treatments for head and neck cancer. We will continue to make refinements to the policy as necessary, which we would discuss through future rulemaking or through additional guidance as needed.

We note again that the finalized policies outlined in this section of this final rule would not prevent a MAC

from making a determination that payment can be made for dental services in other circumstances not specifically addressed within this final rule and the finalized amendments to § 411.15(i). Under the PFS, we will continue to contractor price the dental services for which payment can be made in accordance with our regulation at § 411.15(i)(3) as inextricably linked to, and integral to the clinical success of, covered medical services. This includes dental services for which payment may be made under our current payment policy, which we are codifying and clarifying, those for which payment can be made under the finalized amendments to § 411.15(i)(3), and other dental services for which MACs may determine payment can be made. We note that we will continue to contractor price covered dental services prior to head and neck cancer treatments, consistent with our current policy, until we have further data to establish prospective payment rates. We will also update associated payment files so that these services can be billed appropriately under the applicable payment system for services furnished in either the inpatient or outpatient setting.

*Comment:* Some commenters recommended that patients treated for head and neck cancer receive follow-up or ongoing dental care after treatment, noting that patients continue to be at risk for many or all of the conditions discussed above (including dental caries, osteonecrosis, and so forth) even after treatment is concluded. Some commenters noted that there is a period after treatment when patients remain immunosuppressed, and recommended that follow-up care be provided until the immunosuppression ends and, as applicable, when all dental infections are resolved. Several other commenters also described scenarios in which teeth may become impacted or brittle after radiation treatment and require eventual extraction after the radiation therapy has concluded. Other commenters noted that it is not always possible to perform restorative surgeries at the same time as the cancer treatment and requested that we pay for restorative dental services performed on a later date.

*Response:* As discussed, we are finalizing for CY 2024 that payment can be made under Medicare Parts A and B for dental services furnished prior to or contemporaneously with head and neck cancer treatment in order to prepare the patient's oral cavity for treatment; we will continue to review feedback provide by commenters regarding potential follow-up dental services necessary for patients receiving head or

neck cancer treatments to consider whether dental services provided after the medical service are inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services for head and neck cancer.

*Comment:* Some commenters also suggested that we clarify whether Medicare payment would extend to surgical procedures to fix physical damage caused by cancer treatments; commenters observed that surgical reconstructions can be essential to restoring capacity to eat, drink, and swallow to maintain nutrition and overall health. Commenters noted that we already pay for procedures like ridge repair when they are performed simultaneously with tumor removal. One commenter provided a list of recommended services for which Medicare Parts A and B should payment for patients who have had portions of bone removed as a result of cancer treatment. Another commenter also suggested we define specific dental services allowed for patients who had gum removal due to mouth cancer.

*Response:* We thank the commenters for their suggestions. The commenters provided a number of scenarios, with varying level of detail, and we cannot, at this time, make categorical statements about whether the scenarios presented by commenters would be payable under Medicare Parts A and B. Some scenarios that commenters provided may be contemplating might fall within our statutory exclusion of dental services at section 1862(a)(12) of the Act, which prohibits Medicare payment for the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth. However, others depending on the specific circumstances may fall within our policy for dental services performed prior to or contemporaneously with Medicare-covered treatment for head and neck cancer. We note that the policies finalized in this section do not prevent a MAC from making appropriate determinations, on a claim-by-claim basis, as to whether a patient's clinical scenario fits within the terms of the exceptions specified in section 1862(a)(12) of the Act and § 411.15(i).

*Comment:* Commenters also noted that patients with other types of cancer would benefit from coverage of dental examinations prior to or after cancer treatment. Many commenters recommended that we expand payment of dental care to all cancer patients. Commenters noted that the increased risk of infections and sepsis among cancer patients can constitute major health setbacks that are costly to treat

and can compromise the success of the cancer treatment.

*Response:* We thank the commenters for the additional information. We will continue to review and evaluate information that supports the relationship between dental care and covered treatments (including treatments related to conditions not localized in the head, neck, or oral cavity). Please refer to the discussion in L.2.c.ii. relating to our finalized policy to create a process to review recommendations for other scenarios in which dental care may be inextricably linked, and substantially related and integral to the clinical success of, covered medical services.

*Comment:* We received many comments in response to our request for information about the relationship between dental care and immunosuppressant treatments. Commenters shared personal experiences of dental challenges arising from immunosuppression. Commenters also noted that some individuals without dental coverage often cannot afford dental treatment and may be left with an impaired ability to eat, speak, or swallow. Many of these commenters discussed how general dental health, or routine dental care, impacts a patient's overall health.

Commenters recommended Medicare pay for dental care for patients taking immunosuppressants for a variety of auto-immune conditions. We also received many comments recommending that we pay for dental services for patients on immune checkpoint inhibitors, patients on immunosuppressants as part of a cancer treatment, or who have experienced immunosuppression as a result of cancer treatments, and patients taking immunosuppressants following a transplant surgery. Several commenters stated that evidence suggests that screening for and treatment of oral inflammation and infections, including decay (extractions, fillings), gingivitis, and periodontitis (scaling and root planing), should begin pre-transplantation and continue as appropriate post-transplantation, after 3–6 months, to prevent sepsis and organ rejection until immunosuppression is resolved.

These commenters noted that immunocompromised patients are at increased risk of serious infection that can lead to severe conditions. Some commenters noted that individuals with blood cancers, such as leukemia and lymphoma, or other types of cancers may be prone to infections. Other commenters noted that older adults naturally have lowered immune

systems, which can compound the effects of a weakened immune system and that patients on immunosuppressive therapies with secondary health conditions can also be especially susceptible to dental infections. Some commenters provided clinical evidence that they indicated supported the need for Medicare payment, while others did not include references. Additionally, several commenters stated that additional time was needed for interested parties to consider the inextricable link between dental services and medical services for immunocompromised patients. Others ask clarifying questions and how immunocompromised could be defined and which types of therapies could meet the definition. Others asked how CMS planned to define an immunocompromised patient, while additional commenters asked whether certain clinical scenarios or therapies with immunosuppressive side effects would meet the definition of “immunocompromised” for the purposes of this policy. Lastly, some commenters provided clinical scenarios where they stated cause a patient to be susceptible to infection, and therefore, are immunocompromised.

*Response:* We thank the commenters for both the personal and clinical information regarding the interrelationship between various immunocompromised and immunosuppressed conditions and dental health. Some commenters provided clinical evidence related to dental services for people who are immunocompromised or who are receiving therapies that cause immunosuppression, others provided opinion pieces, no supporting clinical literature, or literature to support that general dental health benefits a patient's overall health.

We appreciate the many thoughtful questions and comments raised by commenters surrounding how to define immunosuppression or an immunocompromised patient. As discussed, we continue to consider these questions and the clinical literature provided by commenters to determine whether other clinical scenarios, such as the initiation of immunosuppressive therapies, where Medicare payment should not be excluded for dental services under section 1862(a)(12) of the Act because the services are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. We agree with commenters that people who are immunocompromised may be prone to serious infection. We also believe that

information provided by commenters further supports the idea that, broadly, dental health is an important component of good overall health. However, we reiterate that dental services in connection with the care, treatment, filling, removal, or replacement of teeth, or structures directly supporting the teeth are statutorily excluded from payment under Medicare Parts A and B unless a specific exception applies.

We agree with commenters that beneficiaries undergoing treatment for bone cancers could be immunocompromised and also prone to infection. We note that treatment protocols for some of these patients could include bone marrow transplants, and, as described previously, we are finalizing that Medicare Parts A and B payment can be made for dental services prior to and contemporaneously with organ transplants, including bone marrow transplants.

Some commenters requested that CMS take additional time to review the clinical literature and to engage with CMS to a payment policy in this area further. Given the clarifying questions raised by commenters and the need to future review the clinical literature to determine whether there is an inextricable link between dental services and the medical services treating conditions for immunocompromised patients, we agree with commenters and believe we need additional time to consider definitions surrounding immunosuppressant therapy (such as distinctions between therapies prescribed specifically for their immunosuppressive effect and therapies that are prescribed to treat a different condition but have a side effect of immunosuppression). We look forward to reviewing clinical evidence that will help us to identify among these clinical scenarios where dental services are inextricably linked with specific clinical outcomes of a medical services of people with immunosuppression. Such review may allow us to propose relevant policies in next year's notice and comment rulemaking.

As discussed, we are open to continued engagement with interested parties through the process that we will be creating under our final policy as described in section II.L.2.c.ii. of this rule, and to considering future refinements to our policy through potential guidance or future rulemaking as needed. These specific questions are ones that we will explore and contemplate further in CY 2024 rulemaking and through the finalized process to review recommendations for future rulemaking. We encourage parties

interested in this specific policy to engage with us through the process as described in section II.L.2.c.ii. of this rule. Specifically, we would encourage interested parties to submit medical evidence to support the inextricable link between dental services and the medical services involved in treating immunosuppressed patients (for example, empiric evidence to support a strong association between dental services prior to the initiation immunosuppressive therapies and reduced infection) by providing any of the following: (1) relevant peer-reviewed medical literature and research/studies regarding the medical scenarios requiring medically necessary dental care; (2) evidence of clinical guidelines or generally accepted standards of care for the suggested clinical scenario (we would prefer the clinical guidelines to have undergone clinical rigor in their development); (3) other supporting documentation to justify the inclusion of the proposed medical clinical scenario requiring dental services; and/or (4) suggestions for definitions, and supporting rationales for those definitions, surrounding this policy for further consideration.

*Comment:* Some commenters supported the idea that dental care prior to joint replacement surgery or joint arthroplasty could be beneficial. One commenter observed that as hip and knee replacements are among the most common joint replacement surgeries, providing dental care to patients prior to hip and knee surgeries would benefit a large number of joint replacement recipients. Commenters offered some research studies showing that dental care prior to a joint replacement was associated with a reduction of infection at the surgical site. Some commenters also noted that dental care prior to any type of surgery may have a positive impact with only some commenters providing supporting evidence. Other commenters noted that additional time was necessary to review whether there was an inextricable linkage between dental services and joint replacement surgeries. Others also commented that clinical evidence is lacking to support the causation between dental services and the success of joint replacement surgeries. Some commenters providing clinical evidence to support that the clinical evidence for antibiotic use prior to joint replacement surgery was inconclusive.

*Response:* We thank the commenters for the information regarding the possible relationship between joint replacement surgery and dental health. Several commenters discussed the

benefits that good dental health has on general outcomes for joint replacement surgeries rather than the inextricable linkage between dental services and the arthroplasty procedure. Although some commenters were supportive, we are unable to determine from the studies and other evidence we received whether there is an inextricable link to the clinical success of joint replacement surgery and dental care. It is important for us to delineate between evidence suggesting that dental services are integral to the clinical success of the covered medical services and evidence suggesting a possible improvement in outcomes for a medical condition. We also encourage interested parties to submit additional information through the process that we are finalizing under section II.L.2.c.ii. of this rule that could inform further refinements or clarifications. Specifically, we would encourage interested parties to submit medical evidence to support the inextricable link between dental services and the medical services involved in joint replacement surgeries (for example, empiric evidence to support a causal inference of dental services being necessary before joint replacement surgeries to prevent infection) by providing any of the following: (1) relevant peer-reviewed medical literature and research/studies regarding the medical scenarios requiring medically necessary dental care; (2) evidence of clinical guidelines or generally accepted standards of care for the suggested clinical scenario (we would prefer the clinical guidelines to have undergone clinical rigor in their development); (3) other supporting documentation to justify the inclusion of the proposed medical clinical scenario requiring dental services; and/or (4) suggestions for definitions, and supporting rationales for those definitions, surrounding this policy for further consideration.

*Comment:* We received general support for permitting payment for dental care that might be associated with traumatic injury of the jaw. One commenter also provided a list of congenital maxillofacial conditions that require surgical repair.

*Response:* We thank commenters for their support. We note that we are finalizing our proposal to codify and clarify current payment policies related to services such as, but not limited to, the stabilization of teeth when done in connection with a reduction of a jaw fracture and certain dental services associated with a dislocated jaw unit regardless of whether the services are associated with accidental injury. We note that these services would not be

subject to the exclusion under section 1862(a)(12) of the Act, and would be eligible for Medicare payment. We are uncertain if the recommendations we received from commenters are referring to services that are already covered by the exception under section 1862(a)(12) of the Act or if the commenters were describing services the commenters believed to be currently excluded from payment under Medicare Parts A and B. We encourage these commenters to discuss with us further whether they were referring to dental services prior to maxillofacial surgeries or just the maxillofacial surgeries themselves. We also encourage interested parties to submit additional information through the process that we are finalizing under section II.L.2.c.ii. of this rule that could inform further refinements or clarifications.

#### Establishment of a Process To Consider Additional Clinical Scenarios for Future Updates

*Comment:* The majority of commenters supported the creation of a process for considering whether there are additional examples clinical scenarios where dental services may be inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services. These commenters stated that such a process would allow for further clinical evaluation and analysis of the inextricable link between certain medical and dental services. These commenters also stated that clear definitions of the link between medical and dental services would be beneficial, as such a process would also allow for a thorough exploration of the threshold of this connection, and further definition of immediately necessary, integral dental treatments. Commenters stated that the evaluation of the efficacy other medically necessary dental treatments for covered medical services should rely on comprehensive clinical reports to confirm the intrinsic relationship of the dental services to a certain medical outcome. These commenters urged CMS to engage with interested parties through the creation of an advisory panel or formal process.

*Response:* We appreciate the commenters' support regarding the establishment of a process for the consideration of additional examples of clinical scenarios that we should consider for future updates to our regulation at § 411.15(i)(3) to identify dental services that may be inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services. We believe such a process will allow for review,

evaluation, and modification to the list of those dental services for which payment is not excluded under the statute at section 1862(a)(12) of the Act and can be made under Medicare Parts A and B. We agree with commenters that the establishment of a process would also allow for a thorough review of clinical evidence, allow CMS to modernize policies with evolving medical advances, and engage with interested parties.

*Comment:* Several commenters provided recommendations regarding possible features for a potential process for consideration of additional clinical scenarios. Commenters asserted that the annual notice and comment rulemaking process for the PFS serves as an appropriate mechanism for CMS to consistently revisit the process for and identification of covered medical conditions and associated dental services that are substantially related and integral to the clinical success of the proposed covered medical services.

Several commenters stated that the clinical examination of proposed additional scenarios should be transparent and open to the public, with the agency providing notification regarding any dental, medical, or other groups that submit such suggested procedures.

A few commenters requested that CMS institute a process to allow medical and dental experts to serve on an advisory panel that would hear and evaluate relevant evidence and research on which covered medical services require dental services that are substantially related and integral to the clinical success of the covered medical services. The commenters contended that thorough clinical consideration should occur for each proposal before any additional scenarios are considered payable.

A few commenters also requested that CMS require the presentation and review of research, as well as clinical evidence to justify the link between a proposed, covered Medicare Parts A or B medical service and dental services that are inextricably linked to, substantially related and integral to the clinical success of certain covered medical services. Commenters suggested that the requirements for submission should include clinical evidence that demonstrates that dental services are effective in addressing the proposed medical scenario, treatment timelines for each medical diagnosis and correlated dental care for the stage(s) of the disease, and other considerations for communication or coordination amongst the care team.

Several commenters requested that CMS expressly solicit proposals regarding the ancillary services (such as anesthesia or x-rays) associated with the proposed Medicare Part A or Part B procedures and that those proposals also be shared publicly for public comment and possible inclusion.

*Response:* We appreciate commenters' suggestions regarding the review process for the addition of possible clinical scenarios. We agree with the commenters that the process should be consistent and that supporting materials for proposed clinical scenarios should be evidence-based, all of which should be partnered with the opportunity for interested party feedback regarding possible future updates to the policies for Medicare Parts A and B payment for dental services. We seek to engage with interested parties and collaborate with respect to identifying those medical services that include dental services that are inextricably linked to, and substantially related and integral to the clinical success of the covered medical service. Additionally, we agree that ancillary or related services should be considered when evaluating a medical scenario for inclusion in this policy.

We appreciate the commenters' recommendation that CMS establish and then leverage an expert advisory panel for the review of clinical scenarios for future updates. We also agree with commenters that thoughtful engagement with interested parties is important to further clarifying the link between dental services and certain covered medical services. We therefore believe that it is important to create a process that can be implemented in a time-sensitive fashion, which would facilitate and expedite the identification of medical services that are potentially inextricably linked to corresponding dental services because such dental services are substantially related and integral to the clinical success of that covered medical service.

We agree with commenters that public feedback is important, especially when considering Medicare payment for critical treatments that may benefit the clinical outcomes for certain covered medical services for Medicare beneficiaries. We believe that discussing the recommendations we are considering further in the course of our annual rulemaking will allow the public to comment and submit further medical evidence to assist us in evaluating whether the standard of care for that medical service is such that one would not proceed with the medical procedure or service without performing the dental service(s), because the covered medical services would or could be significantly

and materially compromised, such that clinical outcomes could be compromised absent the provision of the inextricably-linked dental services, or where dental services are a clinical prerequisite to proceeding with the primary medical procedure and/or treatment. This would also allow the public to comment on whether the particular dental services should or should not be subject to the general preclusion on payment for dental services under section 1862(a)(12) of the Act, because they are or are not inextricably linked to, and substantially related and integral to the clinical success of, covered medical services; and provide the medical evidence to support their position. We have an existing process within the framework of annual PFS rulemaking, which we believe we should continue to leverage to allow for this level of public engagement. We believe that this would be an efficient approach and would provide an immediately achievable avenue for submissions from the public, and review and analysis by CMS and the public.

Therefore, we are finalizing an annual process for the review of public nominations. We will use the PFS annual rulemaking process to determine whether certain dental services should be considered not subject to the general preclusion on payment for dental services under section 1862(a)(12) of the Act because they are inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services. This process serves to facilitate the codification and clarification of our existing policy as described in section II.L. of this final rule, as a nomination process that will allow us to evaluate additional examples under which payment could be made under Medicare Part A and Part B for dental services.

The establishment of an advisory panel would require significant time and procedural effort per statute and regulation.<sup>128 129</sup> At this time, we will not be implementing an advisory panel, but appreciate this recommendation.

The public is encouraged to engage with us regularly to submit clinical scenarios for consideration. In order for public recommendations to be potentially considered within the annual PFS rulemaking cycle, interested parties should submit evidence and nominations for consideration by

<sup>128</sup> <https://www.gsa.gov/policy-regulations/policy/federal-advisory-committee-management/statutes-and-related-legislation>.

<sup>129</sup> <https://www.gsa.gov/policy-regulations/policy/federal-advisory-committee-management/legislation-and-regulations/faca-final-rule-2001>.

February 10th of each calendar year. This date is consistent with the date used for submission of other information to CMS for consideration in the upcoming rulemaking process, such as nominations for misvalued codes, additions to the telehealth services list, and submission of invoices for pricing direct PE supply and equipment items. We will evaluate the supporting documentation and decide whether the medical services should be further considered as not subject to the general preclusion on payment for dental services under section 1862(a)(12) of the Act during that calendar year's rulemaking cycle. For example, information received by February 10, 2023, would be reviewed for consideration and potential inclusion within the CY 2024 PFS proposed rule. Submissions received after February 10th will still be reviewed, but may be considered in subsequent rulemaking instead of that calendar year's rulemaking cycle.

We note that we may identify additional clinical scenarios for review based on our review of public submissions or identified through our own internal research and if so, would make those clinical scenarios available for public review through the annual PFS rulemaking cycle.

We agree with commenters that clinical evidence should be thoughtfully considered and evaluated by interested parties. As such, we encourage stakeholders who believe they have identified dental services that are inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services to nominate these scenarios, supported by documentation, through the public process. Commenters are also welcome to submit additional information regarding some of the clinical scenarios presented, but not included in a finalized policy, in this final rule, including immunosuppressant therapies, joint replacement surgeries, and management of chronic conditions such as diabetes, and other surgical procedures. We also encourage interested parties to submit to us suggestions for further clarification of current policy, such as but not limited to, recommendations on implementation, payment, and provider enrollment.

We agree with commenters that we should thoroughly consider the clinical evidence to review whether there is an inextricable link between certain dental and medical services. As such, accompanying documentation should be provided to support or refute the link between certain medical and dental services. Specifically, this medical

evidence should support that the provision of certain dental services leads to improved healing, improved quality of surgery, and the reduced likelihood of readmission and/or surgical revisions, because an infection has interfered with the integration of the implant and interfered with the implant to the skeletal structure. We expect evidence to be clinically meaningful and demonstrate that the dental services result in a material difference in terms of the clinical outcomes and success of the procedure such that the dental services are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, and therefore not subject to the statutory payment preclusion in section 1862(a)(12) of the Act. The clinical evidence should be compelling to support that certain dental services would result in clinically significant improvements in quality and safety outcomes, for example, fewer revisions, fewer readmissions, more rapid healing, quicker discharge, quicker rehabilitation for the patient.

This evidence should include at least one of the following: (1) relevant peer-reviewed medical literature and research/studies regarding the medical scenarios requiring medically necessary dental care; (2) evidence of clinical guidelines or generally accepted standards of care for the suggested clinical scenario; (3) other ancillary services that may be integral to the covered medical services; and/or (4) other supporting documentation to justify the inclusion of the proposed medical clinical scenario requiring dental services.

Interested parties are encouraged to submit their recommendations by February 10th of a calendar year via email at [MedicarePhysicianFeeSchedule@cms.hhs.gov](mailto:MedicarePhysicianFeeSchedule@cms.hhs.gov) for consideration and potential inclusion within the PFS proposed rule for the subsequent calendar year. Interested parties should include the words 'dental recommendations for CY 2XXX review' in the subject line of their submission email to facilitate processing (CY 2XXX should refer to the rulemaking cycle for the year). We note that we may also consider proposals submitted as public comments during the comment period following the publication of the PFS proposed rule.

Final Action: After consideration of the comments received, and for the reasons previously discussed, we are finalizing our proposals, effective CY 2023, to: (1) clarify our interpretation of section 1862(a)(12) of the Act and codify

certain of current Medicare FFS payment policies for medically necessary dental services; and (2) our proposal that payment may be made for other dental services, such as dental or oral examinations, including necessary treatment, performed as part of a comprehensive workup prior to organ transplantations (including hematopoietic stem cell and bone marrow transplantations), or prior to cardiac valve replacement or valvuloplasty procedures, that are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. We are also finalizing for CY 2024 that Medicare Parts A and B payment may be made for dental services, such as dental or oral examinations, including necessary treatment, performed as part of a comprehensive workup prior to treatment for head and neck cancers, for which we stated we may consider finalizing in this final rule, because those services are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. We are not finalizing, at this time, that payment may be made under Medicare Parts A and B for dental services prior to the initiation of immunosuppressant therapy, joint replacement procedures or other surgical procedures, for which we stated we may consider finalizing in this final rule. We remain committed to exploring the inextricable link between dental and medical services associated with immunosuppressant therapy, joint replacement surgeries and other surgical procedures, and we will continue to review the clinical evidence to determine whether the services are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services and would welcome continued engagement from the public. We will address additional clinical scenarios involving dental services, such as services inextricably linked and integral to particular kinds of treatments for immunocompromised patients, in 2024 rulemaking.

Effective CY 2023, we are finalizing the establishment of a process to identify for our consideration and review submissions of additional dental services that are inextricably linked and substantially related and integral to the clinical success of other covered medical services. We note that we stated in this proposed rule that we may consider finalizing such process in this final rule after a review of the commenters received. Specifically, we

are finalizing an annual process for the review of public nominations of dental services that the public is recommending not be considered subject to the general preclusion on payment for dental services under section 1862(a)(12) of the Act. Interested parties should submit evidence and nominations via email at [MedicarePhysicianFeeSchedule@cms.hhs.gov](mailto:MedicarePhysicianFeeSchedule@cms.hhs.gov), and should include the words dental recommendations for CY 2XXX review' in the subject line of their submission email to facilitate processing (CY 2XXX should refer to the rulemaking cycle for the year), by February 10th of each calendar year in order for these recommendations to be potentially considered within the annual PFS rulemaking cycle. Recommendations may also make suggestions for clarifications for this policy generally, such as but not limited to, recommendations on implementation, payment, and provider enrollment.

We expect accompanying documentation to be provided. The medical evidence should support or refute whether the provision of certain dental services is inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. This evidence should include any of the following: (1) relevant peer-reviewed medical literature and research/studies regarding the medical scenarios requiring medically necessary dental care; (2) evidence of clinical guidelines or generally accepted standards of care for the suggested clinical scenario; (3) other ancillary services that may be integral to the covered medical services; and/or (4) other supporting documentation to justify the inclusion of the proposed medical clinical scenario requiring dental services.

We are finalizing our proposed amendments to the regulations at § 411.15(i). First, we are finalizing our proposed amendments, without modifications, to our existing regulations at § 411.15(i)(1) and (2) that dental services are not covered in connection with the care, treatment, filling, removal, or replacement of teeth, or structures directly supporting the teeth, with the exception for dental services for inpatient hospital services in connection with such dental procedures when hospitalization is required because of—

- The individual's underlying medical condition and clinical status; or
- The severity of the dental procedures.

Second, we are finalizing, with modifications, to the regulations at

§ 411.15(i), to include examples of services for which payment can be made under Medicare Parts A and B on that basis. Specifically, we are amending § 411.15(i)(3)(i), to allow for payment under Medicare Part A and Part B for dental services, furnished in an inpatient or outpatient setting, that are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services, including, but not limited to: (1) the dental or oral examination as part of a comprehensive workup prior to a Medicare covered organ transplant, cardiac valve replacement, or valvuloplasty procedure; (2) the necessary dental treatments and diagnostics to eliminate the oral or dental infections found during a dental or oral examination as part of a comprehensive workup prior to, and contemporaneously with, the organ transplant, cardiac valve replacement, or valvuloplasty procedure; (3) reconstruction of a ridge when it is performed as a result of, and at the same time as, the surgical removal of a tumor; (4) the stabilization or immobilization of teeth in connection with the reduction of a jaw fracture and dental splints only when used in conjunction with covered treatment of a covered medical condition such as dislocated jaw joints; and (5) the extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease; and We will make conforming changes to the MBP Manual to reflect these changes or clarifications, and to remove any text that is no longer applicable.

We will make amendments to § 411.15(i)(3)(i)(A) for CY 2024 to specify that payment under Medicare Parts A and B can be made for an oral or dental examination, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection, prior to, or contemporaneously with, treatment for head and neck cancers. These amendments to § 411.15(i)(3)(i)(A) would conform with the policy finalized in this rule for CY 2024, as clarified by any further rulemaking, and add to the regulation as an example of dental services for which payment can be made under Medicare Parts A and B dental services furnished prior to and contemporaneously with the treatment for head and neck cancers.

We are also finalizing our proposal, without modification, to amend our regulation at § 411.15(i)(3)(i) to provide that payment can be made for dental services provided in conjunction with medical services that are inextricably linked to, and substantially related and

integral to the clinical success of, covered medical services, such as X-rays, administration of anesthesia, and use of the operating room. Additionally, we are finalizing with modification the removal the word “other” from the description of “ancillary services and other supplies furnished incident to covered dental services” to improve clarity and to avoid suggesting that “services” are “supplies.” This modification does not modify the proposed or final policy.

Medicare will make payment under Parts A and B for these dental services that are determined to be inextricably linked to the clinical success of an otherwise covered medical service, and therefore, are instead substantially related and integral to that primary medical service, prior to or contemporaneously with certain covered medical services. No payment is made for dental services when an excluded service is the primary procedure involved. We continue to contractor price the dental services for which payment is made currently, and for the dental services that can be made under the amendments to § 411.15(i)(3) for CY 2023 and CY 2024, and until we have further data. We will update the applicable payment files so that services may be furnished and paid under the applicable payment system.

We will make payment when a doctor of dental medicine or dental surgery (referred to as a dentist) furnishes dental services that are an integral part of the covered primary procedure or service furnished by another physician, or non-physician practitioner, treating the primary medical illness. If there is no exchange of information, or integration, between the medical professional (physician or other non-physician practitioner) in regard to the primary medical service and the dentist in regard to the dental services, then there would not be an inextricable link between the dental and covered medical service within the meaning of our regulation at § 411.15(i)(3). As such, the services would be in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth within the meaning of section 1862(a)(12) of the Act. Without both integration between the Medicare enrolled medical and dental professional, and the inextricable link between the dental and covered medical services, dental services fall outside of the Medicare Part B benefit as they would be in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth within the meaning of section 1862(a)(12) of the

Act; though they may be covered by types of supplemental health or dental coverage.

Payment may also be made for services and supplies furnished incident to those dental services furnished by the dentist or other physician or practitioner, and for other ancillary services integral to the dental services. Medicare payment could be made for services furnished incident to the professional medical or dental services by auxiliary personnel, such as a dental hygienist, dental therapist, or registered nurse who is under the direct supervision of the furnishing dentist or other physician or practitioner, if they meet the requirements for “incident to” services as described in § 410.26 of our regulations.

The finalized policies outlined in this section of this final rule would not prevent a MAC from making a determination that payment can be made for dental services in other circumstances not specifically addressed as examples within this final rule and the finalized amendments to § 411.15(i). MACs may continue to determine on a claim-by-claim basis whether a patient’s clinical circumstances do or do not fit within the terms of the preclusion or exception specified in section 1862(a)(12) of the Act and § 411.15(i).

Lastly, we may provide additional guidance or future rulemaking regarding these policies as determined appropriate or necessary. We encourage continued engagement through the process as finalized under section II.L.2.c.ii. of this final rule so that we may consider revisions to this policy potentially in the future.

#### *M. Rebasing and Revising the Medicare Economic Index (MEI)*

##### 1. Background

The Medicare Economic Index (MEI) is authorized under section 1842(b)(3) of the Act, which relates to the reasonable charge-based payment methodology that was in place for physicians’ services prior to the PFS implementation. That section states that prevailing charge levels beginning after June 30, 1973, may not exceed the level from the previous year except to the extent that the Secretary finds, on the basis of appropriate economic index data, that such higher level is justified by year-to-year economic changes. CMS began calculating the MEI for this purpose on July 1, 1975 and continues to do so today for several statutory and other purposes. The MEI reflects the weighted-average annual price change

for various inputs involved in furnishing physicians’ services.

The MEI is a fixed-weight input price index comprised of two broad categories: (1) Physicians’ own time (compensation); and (2) physicians’ practice expense (PE). Additionally, it includes an adjustment for the change in economy-wide, private nonfarm business total factor productivity (previously referred to as multifactor productivity).<sup>130</sup> The U.S. Department of Labor’s Bureau of Labor Statistics (BLS) publishes the official measures of productivity for the U.S. economy. We note that previously the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act was published by BLS as private nonfarm business multifactor productivity. Beginning with the November 18, 2021 release of productivity data, BLS replaced the term multifactor productivity (MFP) with total factor productivity (TFP). BLS noted that this is a change in terminology only and will not affect the data or methodology.

The current form of the MEI was described in the November 25, 1992 **Federal Register** (57 FR 55896) and was based in part on the recommendations of a Congressionally-mandated meeting of experts held in March 1987. Since that time, the MEI has been updated or revised on five instances. First, the MEI was rebased in 1998 (63 FR 58845), which moved the cost structure of the index from 1992 data to 1996 data. Second, the methodology for the productivity adjustment was revised in the CY 2003 PFS final rule with comment period (67 FR 80019) to reflect the percentage change in the 10-year moving average of economy-wide private nonfarm business total factor (multifactor) productivity. Third, the MEI was rebased in the CY 2004 PFS final rule with comment period (68 FR 63239), which moved the cost structure of the index from 1996 data to 2000 data. Fourth, the MEI was rebased in 2011 (75 FR 73262), which moved the cost structure of the index from 2000 data to 2006 data. Subsequently, in the CY 2014 PFS final rule with comment period (78 FR 74264), the MEI cost share weights were revised based on recommendations from the MEI technical advisory panel (MEI-TAP). From May 2012 through September 2012, the MEI Technical Advisory Panel conducted a technical review of the MEI, including analyses of the inputs, input weights, price-measurement proxies, and productivity adjustment. Details regarding the Panel’s work and

documents such as transcripts, meeting summaries, presentations, and the final report with recommendations to the Secretary of Health and Human Services are available at <https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/MEITAP> and in the CY 2014 PFS proposed rule (78 FR 43311) which provides details related to how the MEI TAP panel recommendations were implemented into the revised 2006-based MEI. The current 2006-based MEI relies on data collected from the American Medical Association (AMA) for self-employed physicians from the Physician Practice Information Survey (PPIS). The AMA has not fielded another survey since that 2006 data collection effort and so the MEI has continued to be based on 2006-based costs. In its August 28, 2012 report, the MEI-TAP expressed concern regarding the representativeness and availability of data to support the MEI and provided two recommendations regarding the data sources to update the MEI in the future. Recommendation 2.1 stated that CMS should research whether using self-employed physician data for the MEI cost weights continues to be the most appropriate approach given the trend toward larger, physician-owned practices, as well as the movement from physician-owned practices toward hospital-owned practices. Recommendation 2.2 stated that CMS should scan for and research additional data sources that may allow for more frequent updates to the MEI’s cost categories and their respective weights.<sup>131</sup>

Updates to the PFS conversion factor (CF) were previously calculated based on a prescribed statutory formula that used a combination of the MEI and a “sustainable growth rate”; for details about this formula, we refer readers to the CY 2015 PFS final rule with comment period (79 FR 67741 through 67742). Section 101 of the Medicare Access and CHIP Reauthorization Act (MACRA) of 2015 (Pub. L. 115–05, April 16, 2015) repealed the previous statutory update formula and specified the update adjustment factors for calendar years 2015 and beyond. Therefore, effective beginning with CY 2015, the MEI was no longer used in calculating the annual update to the PFS CF. The annual growth in the MEI continues to be used to update the following: the Medicare telehealth originating site facility fee under section 1834(m)(2)(B)(i) of the Act, the KX

<sup>130</sup> <https://www.bls.gov/news.release/prod5.nr0.htm>.

<sup>131</sup> The MEI-TAP’s final report, including all findings and recommendations, are available at <https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/MEITAP>.

Modifier Thresholds (formerly the therapy caps) under section 1833(g)(2) of the Act, targeted medical review (MR) threshold amounts (beginning in 2029) under section 1833(g)(7)(B)(ii) of the Act, Rural Health Clinic Payment Limits under section 1833(f)(2) of the Act, and the annual update to the non-drug portion of the Opioid Treatment Program payment as finalized in the CY 2020 PFS final rule (84 FR 62668 and 62669).

While the MEI annual percentage change increase is not directly used in determining the update to the PFS CF, the MEI cost weights have historically been used to update the GPCI cost share weights to weigh the four components of the practice expense GPCI (employee compensation, office rent, purchased services, and medical equipment, supplies, and other miscellaneous expenses), as discussed in detail in section II.G. of the final rule, and to recalibrate the relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs, as discussed in section II.B. and VI. of the final rule. The most recent recalibration was done for the CY 2014 RVUs when the MEI was last updated. As described in the CY 2014 PFS final rule (78 FR 74236 through 74237, and 74241), in steps 3 and 10, we adjusted the aggregate pool of PE costs in proportion to the change in the PE share in the revised MEI cost share weights. These adjustments were consistent with our longstanding practice to make adjustments to match the RVUs for the PFS components with the MEI cost share weights for the components, including the adjustments described in the CY 1999 PFS final rule (63 FR 58829), CY 2004 PFS final rule (68 FR 63246 and 63247), and CY 2011 PFS final rule (75 FR 73275). Therefore, as discussed in the CY 2023 PFS proposed rule (87 FR 460462), we believe that the MEI cost weights need to be updated to reflect more current market conditions faced by physicians in furnishing physicians' services, but note that we are finalizing to delay the implementation of the rebased and revised MEI cost weights for both CY 2023 PFS ratesetting and the finalized CY 2023 GPCIs. We explained that we believe that doing so will allow interested parties the opportunity to review and comment on the proposed rebased and revised MEI cost share weights discussed in section II.M. of the proposed rule and their potential impacts before we use such rebased and revised MEI cost share weights for purposes of proportioning the work, PE, and MP RVU pools in PFS ratesetting

and updating the GPCIs. We refer readers to our discussion about using the proposed rebased and revised MEI cost share weights for purposes of proportioning the work, PE, and MP RVU pools in PFS ratesetting and to update the GPCIs for CY 2023 in sections II.B. and VI. of this final rule. In those sections, we discuss our considerations for updating the MEI cost share weights for the RVUs and the GPCIs and the potential redistributive impact that making such a change would have on PFS payments. We solicited comments on the proposed delay and potential use of the proposed updated MEI cost weights in future years to recalibrate the RVU shares and to update the GPCI cost share weights, which were last realigned to the revised MEI weights in the CY 2014 PFS final rule (78 FR 74380 through 74391).

This section of the final rule provides an overview of the methodology for updating the MEI cost share weights and the results of the rebasing and revising of the MEI for purposes of estimating annual input price inflation for physician services, used for purposes of updating payments outside of the PFS ratesetting. We note that specific comments relating to the delayed implementation of the MEI in PFS ratesetting and CY 2023 GPCIs are discussed in sections II.B. and VI. of this final rule.

The terms "rebasing" and "revising," while often used interchangeably, actually denote different activities. Rebasing refers to moving the base year for the structure of costs of an input price index while revising relates to other types of changes such as using different data sources, cost categories, or price proxies in the input price index. Effective with this CY 2023 PFS rulemaking cycle, we proposed to rebase and revise the MEI based on a methodology that uses publicly available data sources for input costs that represent all types of physician practice ownership; that is, not limited to only self-employed physicians. We detailed the proposals regarding the derivation of the cost categories and associated cost share weights, selection of the price proxies in the MEI, and the results of the proposed 2017-based MEI as compared to the current 2006-based MEI in the proposed rule as well as below.

## 2. Developing the Cost Weights for Use in the MEI

The 2006-based MEI was last rebased in the CY 2011 PFS final rule with comment period (75 FR 73262 through 73275) and subsequently revised in the CY 2014 PFS final rule with comment

period (78 FR 74264 through 74278). The proposed 2017-based MEI cost weights are derived predominantly from the annual expense data from the U.S. Census Bureau's Services Annual Survey (SAS, <https://www.census.gov/programs-surveys/sas.html>). Other data sources that were considered and analyzed as potential sources of expense data for Physician Offices included the BEA Benchmark Input-Output data, the Internal Revenue Services (IRS) Statistics of Income data for sole proprietors, and the Medical Group Management Association (MGMA) cost and revenue data. While each of these data sources provided information on physician input price expenses, we found the SAS data to be the most technically appropriate data source available based on various factors including public availability, level of detail of expense categories, and sample representativeness of the universe. The SAS data are publicly available data that provide annual receipts estimates for the service industries. Collected data include sources of revenue and expenses by type for selected industries and selected industry-specific items. Specifically, we proposed to use the 2017 SAS data from Table 5, Estimated Selected Expenses for Employer Firms for NAICS 6211 (Office of Physicians). The survey data collection in 2018 and 2019 were scaled back and therefore, data by expense category was limited for those years in comparison to the 2017 data. For example, the SAS expense data for lease and rental payments, professional and technical services, repair and maintenance services, and detailed utility costs were unavailable in 2018 and 2019. The 2020 data included a return to the more comprehensive collection of expense data; however, the presence of the PHE for COVID-19 raised questions regarding the representativeness and stability of the data given impacts on the utilization of physicians' services and associated expenses. Therefore, we proposed to use the 2017 SAS data for the proposed 2017-based MEI because it was the most recently available and complete data available at the time of rulemaking.

We proposed to supplement the 2017 SAS expense data by using several data sources for further disaggregation of compensation costs and all other residual costs, including the 2017 Bureau of Labor Statistics (BLS) Occupational Employment and Wage Statistics (OEWS), the 2012 Bureau of Economic Analysis (BEA) Benchmark Input-Output data (I/O), the 2006 AMA PPIS, and the 2020 AMA Physician

Practice Benchmark Survey. Table 37 lists the set of mutually exclusive and exhaustive cost categories and weights

for the proposed 2017-based MEI compared to the 2006-based MEI.  
BILLING CODE 4150-28-P

**TABLE 37: Proposed 2017-based MEI and 2006-based MEI Cost Categories and Weights**

| Cost Category                                | Proposed<br>2017-based | Current<br>2006-based |
|--|------------------------|-----------------------|
| <b>MEI Total</b>                             | <b>100.000%</b>        | <b>100.000%</b>       |
| <b>Physician Compensation</b>                | <b>47.261%</b>         | <b>50.866%</b>        |
| Wages and Salaries                           | 39.226%                | 43.641%               |
| Benefits                                     | 8.034%                 | 7.225%                |
| <b>Practice Expense</b>                      | <b>52.739%</b>         | <b>49.134%</b>        |
| <b>Non-physician Compensation</b>            | <b>24.716%</b>         | <b>16.553%</b>        |
| <b>Non-physician Wages</b>                   | <b>20.514%</b>         | <b>11.885%</b>        |
| Non-health, non-physician Wages              | 12.306%                | 7.249%                |
| Professional and Related                     | 1.381%                 | 0.800%                |
| Management                                   | 2.171%                 | 1.529%                |
| Clerical                                     | 7.947%                 | 4.720%                |
| Services                                     | 0.807%                 | 0.200%                |
| Health-related, non-physician Wages          | 8.208%                 | 4.636%                |
| <b>Non-physician Benefits</b>                | <b>4.202%</b>          | <b>4.668%</b>         |
| <b>Other Practice Expense</b>                | <b>28.024%</b>         | <b>32.582%</b>        |
| Utilities                                    | 0.366%                 | 1.266%                |
| All Other Products                           | 2.055%                 | 2.478%                |
| Telephone                                    | 0.471%                 | 1.501%                |
| Postage                                      | -                      | 0.898%                |
| All Other Professional Services              | <b>13.914%</b>         | <b>8.095%</b>         |
| Professional, Scientific, and Tech. Services | 6.350%                 | 2.592%                |
| Administrative & Waste Services              | 2.341%                 | 3.052%                |
| All Other Services                           | 5.223%                 | 2.451%                |
| <b>Capital</b>                               | <b>7.748%</b>          | <b>10.310%</b>        |
| Fixed Capital                                | 5.527%                 | 8.957%                |
| Moveable Capital (including medical)         | 2.221%                 | 1.353%                |
| Professional Liability Insurance             | <b>1.398%</b>          | <b>4.295%</b>         |
| Medical Equipment                            | -                      | 1.978%                |
| Medical Supplies                             | 2.071%                 | 1.760%                |

**BILLING CODE 4150-28-C**

Total costs equal the sum of the costs for Physician Compensation and Practice Expenses. The development of the cost weights for each cost category in the proposed 2017-based MEI is described, in detail, as follows.

**a. Physician's Compensation**

The component of the MEI that reflects physician work is represented by the estimated portion of compensation expenses attributable to physicians. The proposed 2017 cost weight associated with the physician's work (otherwise referred to as the Physician Compensation cost weight) is based on the estimated share of 2017 SAS expenses for total compensation associated with physician compensation. Since the compensation

expense in the SAS data is only reported as an aggregate for all employees, we proposed to split the compensation expenses between physicians (including non-physician practitioners that can bill independently such as nurse practitioners (NPs), physician assistants (PAs), and other clinical personnel) and all other workers using the following process.

*Step 1:* Total compensation costs are calculated by summing the reported expenses in the SAS for gross annual payroll, employer costs for fringe benefits (including health insurance, defined benefit, and defined contribution plans, payroll taxes, employer-paid insurance premiums, and all other benefits), and temporary staff and leased employees as reported

in the 2017 SAS data for NAICS 6211 (Office of Physicians).

*Step 2:* Determine the ratio of physician (including non-physician practitioners that can bill independently such as NPs, PAs, and other clinical personnel) wage costs to total wage costs. This ratio is calculated using data from the Bureau of Labor Statistics (BLS) Occupational Employment and Wage Statistics (OEWS) May 2017 National Industry-Specific Occupational Employment and Wage Estimates for Offices of Physicians (NAICS 6211). This data reports the number of employees by occupational category based on the Standard Occupational Classification System (SOC) and the mean hourly wage for each occupation. For each occupation, we multiplied the

number of employees by the mean hourly wage to estimate the total mean hourly wage expense. The sum of expenses for each occupation category represents total mean hourly wage expenses for all occupations in NAICS 6211. Then to derive the total mean hourly wage expenses for physicians (including non-physician practitioners that can bill independently such as NPs, PAs, and other clinical personnel) we proposed to sum the expenses for the following occupations: Physicians and Surgeons (29–1060); Chiropractor (29–1011); Optometrist (29–1041); Podiatrist (29–1081); Physical Therapist (29–1123); Dieticians & Nutritionists (29–1031); Physician Assistants (29–1071); Nurse Practitioners (29–1171); and All Other Diagnosing & Treating Occupations (29–11XX)), which includes compensation costs for Registered Nurses (29–1141). The ratio of physician total mean hourly wage costs to total mean hourly wage costs is 63.2 percent.

*Step 3:* We proposed to multiply the total compensation expenses from Step 1 by the ratio determined in Step 2 to derive estimated Employed Physician Compensation Expenses, which in 2017 were estimated to account for 42.4 percent of total costs.

Next, since the expenses estimated above reflect only employed physician compensation, we proposed to add an estimate of compensation costs to account for physician practice owners that are not classified as employees but instead would be included in the net income of the practice. The net income physician compensation costs are estimated by the following methodology. This amount is determined in three steps:

*Step 1:* We proposed to subtract total expenses from total revenue as reported in the 2017 SAS data for NAICS 6211.

*Step 2:* We estimated the share of owners versus employees of physician practices for 2017 based on the average share of “owners” for 2016 and 2018 as reported in Exhibit 1 of the 2020 AMA Physician Practice Benchmark Survey. This estimated share for 2017 is 46.5 percent.

*Step 3:* We multiplied the share determined in step 2 by the amount determined in step 1, which represents the estimated expenses for net income for owners of physician practices and is 4.845 percent of total costs in 2017.

The proposed aggregate 2017-based Physician Compensation cost weight is the sum of the Employed Physician Compensation cost weight (42.416 percent) and Estimated Net Income for Physician Practice Owners cost weight (4.845 percent), or 47.261 percent. By

comparison, the 2006-based Physician Compensation cost weight was 50.866 percent and reflects the net income for self-employed physicians and the expenses for non-physician clinical staff that can bill Medicare independently. The proposed 2017-based MEI cost weight for Physician Compensation is 3.6 percentage points lower than the 2006-based MEI cost weight. This difference is due to two key factors: (1) any changes that occurred in the cost to provide physician services between 2006 and 2017, and (2) the SAS data reflects relative costs for all physician ownership practices while the 2006 AMA PPIS data reflected relative costs only for self-employed physician practices.

We proposed to split the Physician Compensation cost weight into two cost categories: Physician Wages and Salaries, and Physician Benefits. The proposed Physician Wages and Salaries cost weight is calculated by multiplying the total Physician Compensation weight by the ratio of the gross payroll to the sum of gross payroll and employer's cost for fringe benefits in the 2017 SAS data, which is 83 percent. The proposed Physician Benefits cost weight is calculated by multiplying the total physician compensation weight by the ratio of the employee benefits to the sum of gross payroll and employer's cost for fringe benefits in the 2017 SAS data, which is 17 percent. As a result, the proposed Physician Wages and Salaries cost weight is 39.226 percent and the proposed Physician Benefits cost weight is 8.034 percent in the 2017-based MEI.

#### b. Practice Expenses

The Practice Expenses cost weight reflects all remaining operating costs other than physician compensation. We proposed to determine the remaining Practice Expense cost weights in the 2017-based MEI using the 2017 SAS Expense data for NAICS 6211 expressed as a percentage of total costs. The explanations for the derivation of the individual cost weights under Practice Expenses are detailed below.

##### (1) Non-Physician Compensation

We proposed to estimate the cost weight for Non-physician Compensation using the 2017 SAS data for these expenses. As mentioned previously, since the compensation expenses in the SAS data are only reported as an aggregate for all employees, we proposed to multiply the 2017 SAS total compensation expenses for NAICS 6211 by 36.8 percent, which is the residual of the 63.2-percent share determined for physicians (including non-physician

practitioners that can bill independently such as NPs, PAs, and other clinical personnel).

Then, we proposed to multiply the total compensation expenses by the ratio of non-physician compensation expenses to total compensation expenses. This results in the proposed Non-physician Compensation cost weight of 24.716 percent in the proposed 2017-based MEI.

Next, we proposed to split the Non-physician Compensation cost weight into two cost categories: Non-physician Wages and Salaries, and Non-physician Benefits. The Non-physician Wages and Salaries cost weight is calculated by multiplying the total Non-physician Compensation cost weight by the ratio of the gross payroll to the sum of gross payroll and employer's expense for fringe benefits in the 2017 SAS data, which is 83 percent. The Non-physician Benefits cost weight is calculated by multiplying the total Non-physician Compensation weight by the ratio of the employee benefits to the sum of gross payroll and employer's expenses for fringe benefits in the 2017 SAS data, which is 17 percent. As a result, the proposed Non-physician Wages and Salaries cost weight is 20.514 percent in the proposed 2017-based MEI and the proposed Non-physician Benefits cost weight is 4.202 percent. For comparison purposes, the 2006-based MEI cost weights are 11.885 percent and 4.668 percent, respectively. We also proposed to disaggregate the Non-physician Wages and Salaries cost weight into two categories: (1) Health-related, non-physician; and (2) Non-health, non-physician Wages and Salaries.

Of the 36.8 percent of total SAS compensation costs associated with non-physicians, 14.7 percentage points are determined to be associated with Health-related, non-physician Wages and Salaries. This percentage reflects the ratio of mean hourly wages to total mean hourly wages from the 2017 OEWS data for the following occupations: Health Technologists and Technicians (29–2000); Other Healthcare Practitioners and Technical (29–9000); and Healthcare Support (31–0000). Applying this share (about 40 percent) to the non-physician wages cost weight results in a proposed weight of 8.208 percent for the health-related, non-physician Wages and Salaries cost weight for the proposed 2017-based MEI.

The remaining share of non-physician compensation costs are associated with Non-health, non-physician Wages and Salaries (22.1 percentage points of the 36.8 percent). This percentage reflects the ratio of mean hourly wages to total

mean hourly wages from the 2017 OEWS data for the following occupations: Management (11–0000); Business and Financial Operations (13–0000); Computer and Mathematical (15–0000); Architecture and Engineering (17–0000); Life, Physical, and Social Science (19–0000); Community and Social Service (21–0000); Legal (23–0000); Education, Training, and Library (25–0000); Arts, Design, Entertainment, Sports, and Media (27–0000); Protective Service (33–0000); Food Preparation and Serving Related (35–0000); Building and Grounds Cleaning and Maintenance (37–0000); Personal Care and Service (39–0000); Sales and Related (41–0000); Office and Administrative Support (43–0000); Construction and Extraction (47–0000); Installation, Maintenance, and Repair (49–0000); Production (51–0000); and Transportation and Material Moving (53–0000). Applying this share (about 60 percent) to the non-physician wages cost weight results in a proposed weight of 12.306 percent for the non-health, non-physician Wages and

Salaries cost weight for the proposed 2017-based MEI.

Next, since the non-health, non-physician wages represent various types of occupations that may experience different wage inflation pressures, we proposed to disaggregate the non-health, non-physician Wages and Salaries cost weight of 12.306 percent into four occupational subcategories. To arrive at a distribution for these separate occupational categories (Professional & Related (P&R) workers, Managers, Clerical workers, and Service workers), we determined an estimate of annual earnings for each using the Standard Occupational Classification (SOC) system. The professional and related wages & salaries consist of the following occupational categories: Business and Financial Operations (13–0000); Computer and Mathematical (15–0000); Architecture and Engineering (17–0000); and Life, Physical, and Social Science (19–0000). The Clerical wages & salaries consist of the occupational category Office & Administrative Support (43–

0000). The Services wages & salaries consist of the following occupational categories: Community and Social Service (21–0000); Arts, Design, Entertainment, Sports, and Media (25–0000); Protective Service (33–0000); Food Preparation and Serving Related (35–0000); Building and Grounds Cleaning and Maintenance (37–0000); Personal Care and Service (39–0000); Sales and Related (41–0000); Construction and Extraction (47–0000); Installation, Maintenance, and Repair (49–0000); Production (51–0000); and Transportation and Material Moving (53–0000).

The non-health, non-physician Wages and Salaries cost weight of 12.306 percent is multiplied by the relative share of each category to arrive at the detailed distribution. The occupational distribution in the proposed 2017-based MEI, as well as the distribution for the 2006-based MEI, is presented in Table 38.

**TABLE 38: Percent Distribution of Non-physician Wages and Salaries Cost Weights by Occupational Group: Proposed 2017-based MEI and 2006-based MEI**

| Cost Category                                  | Proposed 2017_weight | 2006_weight    |
|--|----------------------|----------------|
| <b>Non-physician wages &amp; salaries</b>      | <b>20.514%</b>       | <b>11.885%</b> |
| Non-health, non-physician wages & salaries     | 12.306%              | 7.249%         |
| Professional and Related wages & salaries      | 1.381%               | 0.800%         |
| Management wages & salaries                    | 2.171%               | 1.529%         |
| Clerical wages & salaries                      | 7.947%               | 4.720%         |
| Services wages & salaries                      | 0.807%               | 0.200%         |
| Health-related, non-physician wages & salaries | 8.208%               | 4.636%         |

(2) Other Practice Expenses

We proposed that the remaining aggregate Other Practice Expenses would be derived using the 2017 NAICS 6211 SAS expense data and calculated as the sum of the expenses for the detailed categories expressed as a percentage of total expenses. The aggregate Other Practice Expenses include all SAS expenses other than gross annual payroll, fringe benefits, and temporary staff and leased employee expenses. Additionally, we proposed to remove the estimated expenses for drugs and separately billable supplies (which are paid outside of the PFS system) from total expenses in order to be consistent with the PFS. The Other Practice Expenses share of total costs in the proposed

2017-based MEI is 28.023 percent compared to a cost weight of 32.582 percent in the 2006-based MEI.

We further proposed to use the 2017 SAS data for NAICS 6211 to disaggregate the Other Practice Expenses into the following ten cost categories: Utilities; All Other Products; Telephone; Administrative Support & Waste Services; All Other Services; Professional, Scientific, and Technical; Fixed Capital; Moveable Capital; Professional Liability Insurance; and Medical Supplies. Table 39 shows the 10 detailed cost weights for the Other Practice Expenses for the 2017-based MEI, which is 6 fewer categories than the 2006-based MEI. The major differences are: (1) we proposed to have one cost category for All Other Products in the proposed 2017-based MEI instead

of having separate cost categories for Chemicals, Paper, Rubber and Plastics, and Other Miscellaneous Products as done for the 2006-based MEI, (2) we proposed to eliminate the separate cost category for Postage as the cost weight was small (less than 0.2 percentage point) and include the expenses for postage in the proposed All Other Products cost weight, and (3) we proposed to eliminate the cost category for Medical Equipment as the cost weight for the Moveable Capital in the proposed 2017-based MEI includes the expenses for all types of machinery and equipment, including medical equipment; we do not have a data source available to split the expenses between Medical Equipment and All Other Equipment in the SAS or I–O data.

**TABLE 39: 2006-Based and Proposed 2017-Based Cost Categories and Weights for Other Practice Expenses**

| <b>Cost Category</b>                             | <b><u>Proposed</u><br/><u>2017</u></b> | <b>2006</b>    |
|--|--|----------------|
| <b>Other Practice Expense</b>                    | <b>28.023%</b>                         | <b>32.582%</b> |
| Utilities  | 0.366%                                 | 1.266%         |
| All Other Products                               | 2.055%                                 | 2.478%         |
| Telephone  | 0.471%                                 | 1.501%         |
| Postage*   | -                                      | 0.898%         |
| <b>All Other Professional Services</b>           | <b>13.914%</b>                         | <b>8.095%</b>  |
| Professional, Scientific, and Technical Services | 6.350%                                 | 2.592%         |
| Administrative Support & Waste Services          | 2.341%                                 | 3.052%         |
| All Other Services                               | 5.223%                                 | 2.451%         |
| <b>Capital</b>                                   | <b>7.748%</b>                          | <b>10.310%</b> |
| Fixed Capital                                    | 5.527%                                 | 8.957%         |
| Moveable Capital*                                | 2.221%                                 | 1.353%         |
| <b>Professional Liability Insurance</b>          | <b>1.398%</b>                          | <b>4.295%</b>  |
| Medical Equipment                                | -                                      | 1.978%         |
| Medical Supplies                                 | 2.071%                                 | 1.760%         |

\*For the 2017-based MEI, the postage expenses are included in the All Other Products cost weight, and the expenses for medical equipment are included in the Moveable Capital cost weight.

As previously mentioned, we proposed to make one adjustment to the medical supplies expenses as reported on the SAS data to exclude estimated expenses associated with drugs and separately billable supplies. We proposed to make this adjustment in order to exclude the expenses that are paid outside of the PFS and to be consistent with the expenses that were also excluded in the 2006-based MEI. Finally, we proposed to use the BEA 2012—Benchmark I/O data aged to 2017 to determine the split between All Other Products and All Other Services that are captured in the residual “all other expenses” line in the 2017 SAS data. The BEA 2012—Benchmark I/O data can be accessed at <https://www.bea.gov/industry/input-output-accounts-data#supplemental-estimate-tables>. We noted that this method of splitting residual expenses is similar to the methodology used in the 2006-based MEI where the 2002 Benchmark I/O data was aged to 2006 to further disaggregate the residual expense from the AMA PPIS.

The following is a description of the types of expenses included in each of the detailed categories under Other Practice Expenses:

(a) Utilities

The proposed weight for Utilities was calculated using the 2017 SAS expense data expressed as a percentage of total expenses. Utilities expenses are calculated as the sum of the expenses from SAS for: (1) purchased electricity,

(2) purchased fuels (except motor fuels), and (3) water, sewer, refuse removal, and other utility payments. The SAS survey questionnaire defines the purchased electricity expenses as costs paid for electricity. The SAS survey questionnaire defines the purchased fuels (except motor fuels) as the costs for fuel for heating, power, or generating electricity (for example, natural gas, propane, oil, coal). The SAS survey questionnaire defines the water, sewer, refuse removal, and other utility payments as the costs for hazardous waste removal. If the utility payments for any of these expenses are included with lease and rental payments then they are captured in the SAS question for lease and rental payments for land, building, structures, storage spaces, or offices. The proposed cost weight for Utilities in the 2017-based MEI is 0.366 percent.

(b) Telephone Services

The Telephone cost weight in the proposed 2017-based MEI includes 2017 SAS expenses reported for purchased communication services. The SAS survey questionnaire defines purchased communication services as telephone, cellular, and fax services; computer-related communications (for example, internet, connectivity, online), and other wired and wireless communication services. The proposed cost weight for Telephone Services is 0.471 percent.

(c) All Other Products

The proposed cost weight for All Other Products for the proposed 2017-based MEI was calculated in two steps. First, all other operating expenses are calculated as a percentage of total expenses from the 2017 SAS, which was 9.158 percent. The SAS survey questionnaire defines the All Other operating expenses as operating expenses not reported or captured by any other survey expense question or specifically excluded in the general instructions. These expenses specifically excluded in the general instructions are: transfers made within the company, capitalized expenses, interest, bad debt, impairment, and income tax.

Second, All Other Products expenses are calculated as the estimated percentage of expenses from SAS for all other operating expenses using Benchmark I/O data. In order to split the aggregate all other operating expenses, which reflects both products and services, we proposed to rely on the 2012 Benchmark I/O data for NAICS 6211, Offices of Physicians aged to 2017 for the NAICS categories that align with expenses in the SAS all other operating expenses. The process for doing this is explained step by step as follows:

*Step 1:* We crosswalked the NAICS categories in the 2012 Benchmark I/O data to the expense questions in the 2017 SAS data. This process allowed for all Benchmark I/O costs to be grouped into similar buckets as the SAS Expenses as closely as possible.

*Step 2:* We aged the 2012 Benchmark I/O costs to 2017 for each of the following major buckets of expenses: Physician Compensation, Non-Physician Compensation, Capital-related expenses (fixed and moveable), PLI, Professional Services, Other Products, Other Services, Utilities, and Medical Supplies using the growth of

the various price proxies used for these cost categories in the 2006-based MEI.

*Step 3:* The share of each of the aged 2012 I/O expenses were calculated as a percentage of the total aged 2012 I/O expenses. The aged 2012 I/O categories of other products and other services were estimated to account for about 9.6 percent of total costs. This share is

similar to the SAS residual cost share weight of 9.158 percent.

The following Table 40 shows the Benchmark I/O NAICS categories that were crosswalked to the SAS all other operating expenses for all other product expenses.

**BILLING CODE 4150-28-P**

**TABLE 40: Crosswalk of Benchmark I/O NAICS Commodity Codes to SAS All Other Operating Expenses Reflecting All Other Products**

| <b>ALL OTHER PRODUCTS</b> |   |
|---------------------------|---|
| 111400                    | Greenhouse, nursery, and floriculture production                          |
| 321100                    | Sawmills and wood preservation  |
| 321200                    | Veneer, plywood, and engineered wood product manufacturing                |
| 321910                    | Millwork  |
| 3219A0                    | All other wood product manufacturing                                      |
| 327100                    | Clay product and refractory manufacturing                                 |
| 327200                    | Glass and glass product manufacturing                                     |
| 327310                    | Cement manufacturing  |
| 327320                    | Ready-mix concrete manufacturing  |
| 327330                    | Concrete pipe, brick, and block manufacturing                             |
| 327390                    | Other concrete product manufacturing                                      |
| 327910                    | Abrasive product manufacturing  |
| 331110                    | Iron and steel mills and ferroalloy manufacturing                         |
| 331200                    | Steel product manufacturing from purchased steel                          |
| 332310                    | Plate work and fabricated structural product manufacturing                |
| 332710                    | Machine shops   |
| 332720                    | Turned product and screw, nut, and bolt manufacturing                     |
| 339920                    | Sporting and athletic goods manufacturing                                 |
| 311513                    | Cheese manufacturing  |
| 31161A                    | Animal (except poultry) slaughtering, rendering, and processing           |
| 311810                    | Bread and bakery product manufacturing                                    |
| 311910                    | Snack food manufacturing  |
| 311920                    | Coffee and tea manufacturing  |
| 312110                    | Soft drink and ice manufacturing  |
| 313200                    | Fabric mills  |
| 314900                    | Other textile product mills   |
| 315000                    | Apparel manufacturing   |
| 316000                    | Leather and allied product manufacturing                                  |
| 322120                    | Paper mills   |
| 322130                    | Paperboard mills  |
| 322299                    | All other converted paper product manufacturing                           |
| 324121                    | Asphalt paving mixture and block manufacturing                            |
| 324122                    | Asphalt shingle and coating materials manufacturing                       |
| 325120                    | Industrial gas manufacturing  |
| 325130                    | Synthetic dye and pigment manufacturing                                   |
| 325180                    | Other Basic Inorganic Chemical Manufacturing                              |
| 325190                    | Other basic organic chemical manufacturing                                |
| 325510                    | Paint and coating manufacturing   |
| 325520                    | Adhesive manufacturing  |
| 325610                    | Soap and cleaning compound manufacturing                                  |
| 3259A0                    | All other chemical product and preparation manufacturing                  |
| 326110                    | Plastics packaging materials and unlaminated film and sheet manufacturing |
| 326120                    | Plastics pipe, pipe fitting, and unlaminated profile shape manufacturing  |
| 326140                    | Polystyrene foam product manufacturing                                    |
| 326150                    | Urethane and other foam product (except polystyrene) manufacturing        |
| 326160                    | Plastics bottle manufacturing   |
| 326190                    | Other plastics product manufacturing                                      |
| 326210                    | Tire manufacturing  |
| 425000                    | Wholesale electronic markets and agents and brokers                       |
| 491000                    | Postal service  |

Step 4: The share of expenses for the aged 2012 Benchmark I/O all other

products to the aged total all other operating expenses in the Benchmark I/

O were calculated. This resulted in products accounting for 22.4 percent

and services accounting for 77.6 percent of the I/O expenses classified as all other costs. We then multiplied the SAS all other operating expenses (9.158 percent) by 22.4 percent to estimate expenses for the all other products.

Step 5: Lastly, we divided the estimated all other products SAS expenses by the total SAS expenses and the resulting proposed 2017-based MEI cost weight for All Other Products is 2.055 percent.

(d) Administrative Support and Waste Services

The proposed weight for Administrative Support and Waste for

the proposed 2017-based MEI is based on a portion of the 2017 SAS all other operating expenses (Residual). Similar to the methodology to calculate the All Other Products cost weight we follow a similar process for the Administrative Support & Waste Services cost weight and the All Other Services cost weight discussed in the next section. First, we estimated the total SAS residual expenses associated with other services by multiplying the SAS all other operating expenses by 77.6 percent, or a cost weight of 7.103 percent accounting for the SAS residual

expenses associated with services rather than products.

Next, we carved out a portion of these all other services expenses that we identified as Administrative Support and Waste Services from the I/O categories as shown in Table 41. These categories accounted for about 26 percent of All other operating expenses. Finally, we divided the estimated Administrative Support and Waste Services expenses by the Total SAS Expenses and the resulting proposed 2017-based MEI cost weight for Administrative Support and Waste Services is 2.341 percent.

TABLE 41: Crosswalk of Benchmark I/O NAICS Commodity Codes to SAS All Other Operating Expenses Reflecting Administrative Support & Waste Services

| ADMINISTRATIVE SUPPORT & WASTE |  |
|--------------------------------|--|
| 492000                         | Couriers and messengers                                |
| 533000                         | Lessors of nonfinancial intangible assets              |
| 561700                         | Services to buildings and dwellings                    |
| 561100                         | Office administrative services                         |
| 561200                         | Facilities support services                            |
| 561400                         | Business support services                              |
| 561500                         | Travel arrangement and reservation services            |
| 561600                         | Investigation and security services                    |
| 561900                         | Other support services                                 |
| 813B00                         | Civic, social, professional, and similar organizations |

(e) All Other Services

The proposed weight for All Other Services for the proposed 2017-based MEI was determined in two steps. First, as was done for other products, we identified I/O categories (as shown in

Table 42) associated with other services that would crosswalk to the 2017 SAS data for all other operating expenses. Next, we carved out a portion of these all other services expenses that were not assigned to Administrative Support and Waste Services from the I/O categories,

the categories assigned to all other services are shown in Table 35. Using this information, we determined that All Other Services accounted for 52 percent of the SAS expenses for other operating expenses, or a weight of 4.762 percent.

**TABLE 42: Crosswalk of Benchmark I/O NAICS Commodity Codes to SAS All Other Operating Expenses Reflecting All Other Services**

| ALL OTHER SERVICES |   |
|--------------------|---|
| 481000             | Air transportation  |
| 484000             | Truck transportation  |
| 485000             | Transit and ground passenger transportation                                     |
| 486000             | Pipeline transportation   |
| 48A000             | Scenic and sightseeing transportation and support activities for transportation |
| 493000             | Warehousing and storage   |
| 511110             | Newspaper publishers  |
| 511120             | Periodical Publishers   |
| 511130             | Book publishers   |
| 5111A0             | Directory, mailing list, and other publishers                                   |
| 512100             | Motion picture and video industries   |
| 5191A0             | News syndicates, libraries, archives and all other information services         |
| 522A00             | Nondepository credit intermediation and related activities                      |
| 52A000             | Monetary authorities and depository credit intermediation                       |
| 523900             | Other financial investment activities   |
| 523A00             | Securities and commodity contracts intermediation and brokerage                 |
| 524113             | Direct life insurance carriers  |
| 711100             | Performing arts companies   |
| 711200             | Spectator sports  |
| 711500             | Independent artists, writers, and performers                                    |
| 711A00             | Promoters of performing arts and sports and agents for public figures           |
| 713900             | Other amusement and recreation industries                                       |
| 722110             | Full-service restaurants  |
| 722211             | Limited-service restaurants   |
| 722A00             | All other food and drinking places  |
| 812300             | Dry-cleaning and laundry services   |
| 812900             | Other personal services   |

**BILLING CODE 4150-28-C**

Second, we also proposed to include the expenses directly reported on the SAS survey for purchased repairs and maintenance to machinery and equipment in the other services category. The SAS survey questionnaire defines these expenses to include expensed repair and maintenance services to machinery, vehicles, equipment, and computer hardware. These expenses accounted for 0.461 percent of total expenses, and when added to the 4.762 percent calculated above, results in a proposed 2017-based MEI cost weight for All Other Services of 5.223 percent.

**(f) Professional, Scientific, and Technical Services**

The Professional, Scientific and Technical Services cost weight includes the sum of the 2017 SAS expenses for three categories: (1) data processing and other purchased computer services, (2) purchased advertising and promotional services, and (3) purchased professional and technical services. The SAS survey questionnaire defines data processing

and other purchased computer services to include expenses for web hosting, computer facilities management services, computer input preparation, data storage, computer time rental, optical scanning services, and other computer-related advice and services (including training). The SAS survey questionnaire defines purchased advertising and promotional services to include marketing and public relations services. The SAS survey questionnaire defines purchased professional and technical services to include management consulting, accounting, auditing, bookkeeping, legal, actuarial, payroll processing, architectural, engineering, and other professional services. The cost weight for Professional, Scientific, and Technical Services is 6.350 percent in the proposed 2017-based MEI.

**(g) Fixed Capital**

The Fixed Capital cost weight includes the sum of the 2017 SAS expenses for four categories: (1) purchased repairs and maintenance to buildings, structures, and offices, (2)

lease and rental payments for land, buildings, structures, store spaces, and offices, (3) an estimated portion of depreciation and amortization charges, and (4) governmental taxes and license fees. The SAS survey questionnaire defines purchased repairs and maintenance to buildings, structures, and offices as repair and maintenance to integral parts of buildings (for example, elevators, heating systems). The SAS survey questionnaire defines lease and rental payments for land, buildings, structures, store spaces, and offices to include the rental or lease expenses paid for these items including any penalties incurred for broken leases. The SAS survey questionnaire defines depreciation and amortization charges to include depreciation charges taken against tangible assets owned and used by this firm, tangible assets owned and used by this firm within leaseholds, tangible assets obtained through capital lease agreements, and amortization charges against intangible assets (patents, copyrights). We proposed to include the share of the depreciation expenses applicable to only the

structures by multiplying the total depreciation expenses by the share of total lease and rental payments that were associated with land, buildings, structures, store spaces, and offices as reported on the SAS, which is 89 percent. The SAS survey question defines governmental taxes and license fees as payments to government agencies for taxes and licenses including business and property taxes. The proposed cost weight for Fixed Capital for the proposed 2017-based MEI is 5.527 percent.

(h) Moveable Capital

The Moveable Capital cost weight includes the sum of the 2017 SAS expenses for five categories: (1) expensed equipment, (2) expensed purchases of other materials, parts, and supplies, (3) expensed purchases of software, (4) an estimated portion of depreciation and amortization charges, and (5) lease and rental payments for machinery, equipment, and other tangible items. The SAS survey questionnaire defines expensed equipment as expensed computer hardware and other equipment (for example, copiers, fax machines, phones, shop and lab equipment, CPUs, monitors). The SAS survey questionnaire defines depreciation and amortization charges to include depreciation charges taken against tangible assets owned and used by this firm, tangible assets owned and used by this firm within leaseholds, tangible assets obtained through capital lease agreements, and amortization charges against intangible assets (patents, copyrights). We proposed to include the share of the depreciation expenses applicable to only the machinery and equipment by multiplying the total depreciation expenses by the share of total lease and rental payments associated with machinery and equipment as reported on the SAS, which is 11 percent. The SAS survey question defines lease and rental payments for machinery, equipment, and other tangible items as lease and rental of transportation equipment without operators including penalties incurred for broken lease agreements. The proposed cost weight for Moveable Capital for the proposed 2017-based MEI is 2.221 percent.

(i) Professional Liability Insurance (PLI)

The Professional Liability Insurance (PLI) cost weight includes 2017 SAS expenses reported for professional liability insurance. The SAS survey questionnaire defines professional liability insurance as the premiums paid for professional liability insurance and

the amounts set aside for self-insurance. The proposed cost weight for PLI is 1.398 percent in the proposed 2017-based MEI.

(j) Medical Supplies

The Medical Supplies cost weight includes 2017 SAS expenses reported for Medical supplies with an adjustment to remove the estimated expenses for drugs and separately billable medical supplies. The SAS survey questionnaire defines medical supplies as the materials and supplies used to provide medical services to others (except for medical equipment). Since the reported expenses in the SAS would include the expenses for drugs and biologicals, as well as the expenses for supplies that generally are paid separately under Medicare we proposed to remove the expenses for these two items from the SAS expenses reported using the following methodology:

*Step 1:* To remove the separately billable drug expenses, we rely on the reported expenses for separately billable drugs from the 2006 AMA PPIS data. We inflate the reported AMA PPIS expenses for separately billable drugs to 2017 using the growth in Medicare Part B physician-administered drug spending. Using this method, we inflated the 2006 AMA PPIS expenses for separately billable drugs to 2017 by an increase factor of 1.784 (or 78.4 percent).

*Step 2:* To remove the non-separately billable drug expenses, we rely on a similar method where we start with the reported expenses for non-separately billable drugs from the 2006 AMA PPIS data. We inflate the reported AMA PPIS expenses for non-separately billable drugs to 2017 using the growth in the PPI for prescription drugs. Using this method, we inflate the 2006 AMA PPIS expenses for non-separately billable drugs to 2017 by an increase factor of 2.122 (or 112.2 percent).

*Step 3:* To remove the non-separately billable supply expenses, we start with the reported expenses for non-separately billable supplies from the 2006 AMA PPIS data. We inflate the reported AMA PPIS expenses for non-separately billable supplies to 2017 using the growth in the Medical supplies price proxy in the 2006-based MEI (a 50/50 blend of the PPI—Commodity—Medical and surgical appliances and supplies and the CPI—Medical equipment and supplies). Using this method, we inflate the 2006 AMA PPIS expenses for non-separately billable supplies to 2017 by an increase factor of 1.048 (or 4.8 percent).

*Step 4:* We then calculate the share of estimated 2017 expenses for all drugs

and separately billable supplies from steps 1–3 as a percentage of total drugs and medical supplies expenses from the 2017 SAS for NAICS 6211. This share is 80 percent.

*Step 5:* We multiply the SAS 2017 total medical supplies expenses by a factor of 0.2 (or 1–0.8) in order to estimate the 2017 SAS expenses for non-separately billable medical supplies only.

Taking the 2017 estimated expenses for non-separately billable medical supplies as a ratio of total expenses as reported on the 2017 SAS for NAICS 6211 results in a proposed Medical Supplies cost weight of 2.071 percent in the proposed 2017-based MEI.

The following is a summary of the public comments received on the proposed 2017-based MEI and our responses:

*Comment:* Many commenters agreed that the data currently used for the MEI is outdated and endorsed the principle of having a methodology that allows for regular and frequent updates to the MEI in the future to help ensure that payment rates reflect the current underlying realities of work, practice expenses, and malpractice insurance. A few commenters supported the proposal to update the MEI using publicly available data sources to estimate base year expenses that reflect current market conditions, thus they supported moving forward using the proposed 2017-based MEI methodology. However, a majority of the commenters urged CMS to delay any change in the MEI until the AMA's practice cost data collection work is completed in order to compare the weights based on the AMA and SAS data. The commenters noted that this will allow interested parties a better ability to provide comments on the potential impact to the PFS of refinements to physician practice expense distributions. Some commenters stated they believe it is important to retain consistency with the MEI measurement that has been based on data collected from the AMA Physician Practice Information (PPI) Survey that has been used by CMS since 1975. Some commenters stated that if the MEI revisions are adopted, they urge that they be phased in over a period of at least four years. Commenters noted that a transition approach would be consistent with other significant payment changes in the PFS including how CMS updated prices of supply and equipment inputs and its current transition of clinical labor updates for use in its PE methodology.

*Response:* As detailed in the proposed rule (87 FR 46419 through 46425), we are continuing to use the current 2006-

based MEI cost share weights for CY 2023 PFS ratesetting and GPCIs, effectively delaying the implementation of the rebased and revised MEI cost share weights for purposes of PFS ratesetting and CY 2023 GPCIs. However, we believe that it is important to rebase and revise the MEI to a more recent period. We look forward to reviewing future data when that information is available to compare to the results to our proposed methodology.

*Comment:* MedPAC commented that they support CMS' proposal to rebase the MEI using data from 2017 because the MEI is currently based on data on physicians' expenses from 2006, which raises questions about its accuracy. However, they stated that CMS' proposed methodology for rebasing the MEI is not transparent and relies on several disparate data sources because no single data source contains information at the level of detail necessary to rebase the MEI. The commenter also stated that in the long term, CMS should strive to identify or develop a single data source that has more comprehensive information about physicians' input costs, such as physician compensation and compensation for other workers. However, the commenter supported CMS using its proposed rebased MEI in the interim, as well as waiting until 2024 to use the new MEI cost weights to update the practice expense GPCI cost share weights and to recalibrate the total pools of physician work, PE, and PLI RVUs.

*Response:* We agree that the current 2006-based MEI is outdated and this raises questions about its accuracy for measuring input price inflation for providing physician services. We provided detailed explanations of which data sources were used and while we agree that the methodology is complex as it relies on several disparate data sources, we believe that we have proposed a methodology that relies on the best available data for this purpose. For this final rule we have included additional language in order to more clearly explain how we have combined data sources to disaggregate cost data. We also would highlight that we believe that the proposed methodology for the 2017-based MEI relies on data that are updated on a regular basis, publicly available, and reflective of the changing practice patterns of the overall industry.

We appreciate the commenter's suggestion that CMS identify or develop a single data source that has more comprehensive information about physicians' input costs. While we share these aspirations, we are not currently

aware of any such data source. We will continue to explore our options for a more comprehensive data source in the future, and any changes to the MEI thereof would be proposed in future rulemaking and subject to public comments.

*Comment:* One commenter stated concern that the proposed MEI methodology would include expenses for all types of physician practice ownership, not just self-employed physicians. They state that they believe that using all types of physician practice ownership is another adjustment for which specialized care will shoulder the burden.

*Response:* We believe that the MEI should reflect the current market for physician practices. There have been significant changes to physician practice ownership patterns since the MEI was originally implemented in the 1970s, and even more recently since the MEI was last rebased to reflect 2006 experience. Therefore, we believe that it is technically appropriate for the MEI to reflect the current physician practice ownership shares rather than only reflecting expenses for self-employed physicians. We note that the share of self-employed physicians has declined steadily over time, based on data from the AMA Physician Practice Benchmark Survey.

*Comment:* Many commenters stated that the 2017 Service Annual Survey (SAS) data for the "Offices of Physicians" industry was not designed with the purpose of updating the MEI and that seven percent of the revenue for "Offices of Physicians" on the 2017 SAS was from non-patient care sources (for example, grants, investment income) and any expenses associated with these sources cannot be excluded.

*Response:* While we agree that there are non-patient care sources of revenue mixed in with the SAS revenue data, we note that the SAS revenue data for "Offices of Physicians" is used only to estimate the cost weight for owners of physician practices (or net income). Since the MEI is comprised of relative costs, the composition of the SAS revenue data would have a minimal impact on the proposed 2017-based MEI cost weights. We believe this methodology for estimating the proposed MEI cost share weights using the 2017 SAS data is a technical improvement over the 2006-based MEI.

*Comment:* Many commenters expressed concerns with the proposed method for splitting the aggregate payroll and benefits expenses from the SAS data between physician and non-physician compensation. The commenters stated that the proposed

method relies on a series of assumptions to determine the relative distribution of salaries between physician and non-physician compensation and results in skewed weights that underrepresent the portion of physician compensation relative to non-physician compensation. Commenters had several specific concerns with the proposed method.

First, commenters stated that both the Census Bureau's SAS and BLS OEWS datasets only include costs for employed physicians within NAICS 6211 and excludes 36 percent of physicians who are employed in other health care settings, such as hospitals. The commenters claim that hospital-based physicians have a higher proportion of physician earnings and PLI cost relative to other practice costs, as many of these other costs are the responsibility of the hospital or other facility.

Secondly, commenters stated that the proposed methodology for estimating compensation for practice owners (that is, net income) to be unreasonable. The commenters stated that the estimated share of net income represents just 10 percent of total compensation for all physicians and QHPs, which they claim is an unreasonable estimate since nearly half of physicians in the United States are owners.

The third methodological concern raised was the estimated share of employee compensation attributed to physicians and QHPs from the 2017 of 63.2 percent is incorrect because it incorrectly classified registered nurses (RNs) in the estimated share of physician expenses rather than classified to non-physician compensation.

Finally, MedPAC suggested that the occupational splits derived from the OEWS data as proposed do not account for differences in the number of hours worked by different occupational categories. The commenter suggested that including differentials in the average hours worked by occupation is technically appropriate and should be considered.

*Response:* As mentioned by commenters, the SAS expense data does not explicitly report compensation separately for physicians/QHPs and non-physicians, and therefore, we proposed a methodology relying on other data sources in order to split the costs between the two categories of workers. Though we agree with the first comment that both the SAS and OEWS for NAICS 6211, Offices of Physicians, do not include expenses or revenues for physicians who are employed in other healthcare settings directly, such as hospitals, we do not believe that

including costs for physicians that do not incur any operating expenses associated with running a practice would be technically appropriate. We note that the establishments selected for NAICS 6211, Offices of Physicians are defined as establishments of health practitioners having the degree of M.D. (Doctor of Medicine) or D.O. (Doctor of Osteopathy) primarily engaged in the independent practice of general or specialized medicine (for example, anesthesiology, oncology, ophthalmology, psychiatry) or surgery. These practitioners operate private or group practices in their own offices (for example, centers or clinics) or in the facilities of others, such as hospitals or HMO medical centers. Therefore, while the SAS data would not necessarily reflect physicians directly employed by a hospital they would reflect establishments that operate physician offices in other settings such as hospitals or HMO medical centers. Additionally, the current cost share weights based on the 2006 AMA Physician Practice Information Survey (PPIS) data also appropriately do not reflect the expenses of physicians employed directly by other industries such as hospitals or skilled nursing facilities. Therefore, we believe that the SAS and BLS OEWS data for Offices of Physicians are technically appropriate data sources to use to derive the cost share weights for the index that measures relative input price pressures of providing physician services.

In response to commenters' second concern, the proposed methodology for estimating the net income for practice owners from the 2017 SAS data was developed to capture the proportion of net income from a physician practice that would reflect physician compensation but is not reported as payroll. The 2017 SAS data includes gross payroll expenses for employees, which would exclude the proportion of expenses that are compensation to proprietors or partners for unincorporated businesses. A sole proprietorship or partnership is often an unincorporated business owned and run by one or more individuals, with no distinction between the business and its owner. The owners of these unincorporated businesses are entitled to all profits and are also solely responsible for all the business's debts, losses and liabilities. Based on this definition, income to sole proprietors and partnerships from profits is not captured in the SAS gross payroll data; however, employed physicians who are not sole proprietors or unincorporated business would be eligible for inclusion

in the sample and their compensation would be reported in the gross payroll costs. Therefore, we proposed to include a proportion of net income for owners of physician offices that are sole proprietors, partnerships, or unincorporated businesses to physician compensation expenses estimated from the SAS.

As discussed in the proposed rule, in order to adjust the 2017 SAS expense levels, we first calculated the total net income for the industry. Within the SAS survey data for Offices of Physicians, the difference between total revenues and expenses would reflect compensation to the physician (net income) as well as funds that are likely reinvested in the business or used for other purposes, such as expansion or savings. Therefore, we proposed to allocate only a portion of the 2017 difference between revenues and expenses to physician compensation to account for the net income of owners of unincorporated businesses, and we believed using the proportion of physicians that are self-employed to be a reasonable assumption in determining this adjustment. We note that the estimated share of net income from the SAS data declined from 11.3 percent in 2006 to 9.2 percent in 2017. At the same time the percentage of physicians reported as owners of a practice rather than employees declined from 61 percent in 2006 to 46.5 percent in 2017, according to the AMA Physician Practice Benchmark Survey data.

Given that the commenters felt that the proposed method to estimate net income wasn't reflecting the proportion of the revenue and expense difference that was allocated to physician compensation, we conducted further research and considered an alternative method. The IRS Statistics of Income (SOI) data for Offices of Physicians, by type of ownership, provides the level of revenue/receipts and net income separately for corporations, partnerships, and sole proprietors. The 2017 SOI data shows that net income as a share of total receipts varies across ownership type. For example, the share of net income as a percentage of revenue is 49.6 percent for sole proprietors, 19.5 percent for partnerships, and 6.9 percent for corporations. Since the SAS gross revenue less expenses amount would reflect a combination of ownership types, we believe that revising our method to account for the differences in shares of net income, by ownership type, would be an improvement over using the share of self-employed physicians of overall physicians. Our revised method is based on the following steps:

*Step 1:* We estimated the share of total revenue for the three ownership types as reported on the 2017 IRS SOI data. For NAICS 6211, Offices of Physicians, corporations account for 74 percent of total industry revenue, partnerships account for 17 percent of total industry revenue, and sole proprietors account for 8 percent of total industry revenue. We applied these percentages to the total revenue amount reported in the 2017 SAS data to estimate the level of revenue for the three ownership types.

*Step 2:* Using the 2017 IRS SOI data, we calculated the share of net income as a percentage of revenue/receipts for the three ownership types. The share of net income as a percent of revenue for corporations is 6.9 percent, for partnerships is 19.5 percent, and for sole proprietors is 49.6 percent.

*Step 3:* We multiply the share of net income as a percentage of revenue for corporations, partnerships, and sole proprietors (calculated in step 2) to the revenue amounts for corporations, partnerships, and sole proprietors (calculated in step 1) to determine the net income by ownership type for each of the three practice types.

*Step 4:* We add the estimated net income for partnerships and sole proprietors (calculated in step 3) together to determine the amount of net income from the 2017 SAS data that should be allocated to physician compensation.

We believe this methodology addresses the commenters' concerns that the proposed method did not consider the variation in the percentage of costs assumed to be allocated to net income for sole proprietors and partnerships. We do not allocate any of the net income or profit for corporations to physician compensation as we believe that corporations would use the annual profit to reinvest in the business or for other business purposes. This revised method for estimating the net income for physician compensation relies upon IRS data for sole proprietors and partnerships in order to estimate net income that is not directly captured by the SAS survey question. We are unaware of any other publicly available data source available that would provide this information.

This revised methodology results in an increase in the cost weight for net income from the proposed 4.8 percent of total expenses to 8.2 percent of total expenses. Additionally, the revised method increases the share of physician net income as a share of total physician compensation from 10.3 percent to 16.7 percent of physician compensation costs. We believe this is a better estimate for deriving net income since it

takes into account the differences in the relative share of net income by ownership type, which the proposed method did not consider. Therefore, we are finalizing the revised method for estimating the net income add-on expense amount based on the revised method described above for the final 2017-based MEI.

In response to commenters' third concern regarding the error in classification of RN compensation expenses, we agree that registered nurses (RNs) were inadvertently classified in the estimated share of physician expenses but would be more appropriately classified in non-physician compensation. Within the BLS OEWS data, RNs are reported in the SOC 29–1141. Based on commenters' concerns we reallocated the associated expenses for RN compensation from Physician Compensation expenses to Clinical, non-physician Compensation expenses. The revised distribution results in a smaller share of SAS

reported compensation costs allocated to physician compensation and an increase to the share of Clinical, non-physician compensation.

In response to the final comment related to including variation in hours worked by occupation into the methodology for deriving the physician and non-physician split, we agree with the suggestion that the estimated shares for Office of Physicians occupational mix could be refined to account for differences in the number of hours worked by occupation. We obtained average weekly hours worked by occupation for NAICS 6211 from the Census Bureau's Current Population Survey (CPS). We have revised the proposed methodology for estimating the occupational mix of total compensation shares by multiplying the mean hourly earnings by occupation from the BLS OEWS survey by the average weekly hours by occupation from the CPS data. This product of mean hourly wage \* average weekly

hours by occupation is then multiplied by the number of employees by occupation as reported by the BLS OEWS data. This revised method for estimating the occupational mix shares to account for variation in the number of hours worked by occupation relies upon data captured by the CPS. We are unaware of any other publicly available data source that would provide this information.

The revised distribution of the compensation weights accounting for both a reclassification of RNs to clinical non-physician compensation and accounting for average hours worked, by occupation, is shown in Table 43. Accounting for the differences in the average weekly hours by occupation increases the weight for physician compensation and decreases the weight for clinical, non-physician compensation, and non-health related compensation compared to the proposed 2017-based MEI.

**TABLE 43: 2017 Occupational Mix of Total Compensation Shares Accounting for Average Weekly Hours by Occupation, NAICS 6211, Offices of Physicians**

|                                      | <b>Revised Weights<br/>reclassifying RNs and<br/>Average Weekly Hours</b> | <b>Revised<br/>Weights<br/>reclassifying<br/>RNs only</b> | <b>Proposed<br/>Weights</b> |
|--------------------------------------|---|---|-----------------------------|
| All Employees                        | 100.0%  | 100.0%  | 100.0%                      |
| Physician Compensation               | 60.7%   | 55.7%   | 63.2%                       |
| Clinical, non-physician compensation | 19.1%   | 21.7%   | 14.7%                       |
| Non-health related compensation      | 20.2%   | 22.6%   | 22.1%                       |

For the reasons detailed above, we believe that the three methodological revisions to the proposed method based on public comment feedback produces an improvement to the decomposition of SAS compensation expenses between physician compensation and non-physician compensation for purposes of the MEI.

*Comment:* Several commenters noted they did not agree with the proposed method to exclude expenses for separately billable supplies and drugs. Commenters stated that the use of growth in Medicare Part B drug spending to age expenses forward is not entirely appropriate and that the use of an index that is inclusive of all drugs, such as the CPI or PPI to account for inflation would be better. Commenters also expressed concern that the total expenses that were being compared were estimated from different surveys

and the expenses to include in each survey could be entirely different.

*Response:* We disagree with commenters' concerns with the proposed approach for estimating the portion of separately billable supply and drug expenses. We believe that the question on the AMA PPIS survey for drugs and medical supplies align similarly with the types of expenses collected on the SAS survey questionnaire. The SAS survey questions for medical supply expenses asks respondents to report the costs for materials and supplies used in providing medical services to others (and States not to include costs for medical equipment in this amount). This medical supply expense would include drug costs as well as other medical supply costs. The AMA PPIS survey collects the expenses for drugs and medical supplies using two separate questions. The AMA question for

medical supply expenses asks respondents to report "total expenses for medical supplies such as sterile gloves, needles, bandages, specimen containers, and catheters." The AMA question also instructs respondents to not include expenses for medical equipment costs with medical supplies. The question for drug expenses asks respondents to report "total expenses for all drugs administered in the office (for example, local anesthetics, infusions, antibiotics, vaccines) and instructs respondents to report the cost of the drugs, after considering any discounts and rebates." Additionally, the two questions on the AMA PPIS survey for medical supplies and drugs asks for the dollar amount of medical supplies and drugs that were separately billable; this information is not collected on the SAS questionnaire. Given the data available, we believe that the proposed method for removing all

drug expenses and separately billable supply expenses for the 2017-based MEI is appropriate and is consistent with how these costs were excluded in the 2006-based MEI. The estimated price growth in Part B drugs and the estimated growth in the PPI for prescription drugs are relatively similar. The proposed method excludes approximately 80 percent of medical supply expenses from the SAS data. If the separately billable drug expenses were inflated by the PPI for prescription drugs instead of the growth in Part B drug spending, then 81.8 percent of expenses would be excluded rather than 80 percent. We believe that the difference between the two methods is insignificant and believe the proposed approach is the better one.

*Comment:* Many commenters stated that the decrease in the weight for PLI costs was unrealistic. One commenter noted that a weight of 1.4 percent applied to Medicare spending on its share of these premiums and self-insured actuarial costs would equate to an unreasonably low premium amount that would contradict CMS's volume weighted national PLI premium costs of \$21,700. The commenters, using this logic, stated that they believe a 4–5 percent PLI weight is more appropriate than the proposed 1.4 percent weight.

*Response:* The proposed cost share weight for the 2017-based MEI, reflecting all types of physician ownership practices is substantially lower than the current 2006-based MEI PLI weight, which reflected the relative cost of PLI for self-employed physicians only. The drop in the PLI weight is the result of using both a more recent year of physician cost data as well as also using a sample of physicians that is inclusive of various ownership types.

Based on analysis of several data sources, the 2017 cost weight for PLI shows that it is lower than the weight in the 2006-based MEI. For example, the IRS Statistics of Income data for Sole Proprietors shows a 2006 PLI cost share weight of about 3.9 percent, which is relatively close to the 2006-based MEI PLI weight of 4.3 percent based on AMA PPIS data. Using the same data source the SOI data shows a 2017 PLI weight of 2.1 percent. This information indicates that trends between 2006 and 2017 for self-employed, sole proprietors would by itself result in a drop of approximately 2 percentage points.

However, as mentioned earlier, the data for the proposed 2017-based MEI also includes corporations and physician group practices that are not self-employed, including those that are hospital owned. These practices tend to be larger and have higher overall

expenses than sole proprietor physician offices; additionally, group practice data indicates the relative share of PLI expenses is even lower (for instance, one private data source indicates a PLI weight below 1 percent in recent years).

For these reasons, we believe the proposed 2017-based cost weight is appropriate, given the data sources available reporting these costs. As we noted, the PLI weight in the MEI reflects the total expenses associated with paid PLI premiums for the industry relative to the total costs for other business expenses such as compensation, and equipment costs. Thus, it is not comparable to a measure of an average national premium such as the CMS national PLI premium cost of \$21,700 referenced in the rule.

After consideration of the public comments, we are finalizing the proposed 2017-based MEI cost share weights as proposed for all cost categories in the MEI except for the compensation cost category weights where we are revising the methodology based on public comments received and summarized above. Specifically, we are: (1) revising the methodology for estimating the 2017 expenses for physician net income; (2) correcting the allocation of registered nurse (RN) compensation costs from physician compensation to clinical, non-physician compensation; and (3) adjusting the shares for allocating SAS compensation costs between physician and non-physicians by factoring in differences in average weekly hours by occupation. The following section highlights the specific changes we are finalizing to the proposed methodology and the resulting revised 2017-based MEI weights relative to both the 2006-based and the proposed 2017-based MEI weights.

The development of the revised cost weights based on public comments is described, in detail, as follows.

#### a. Physician's Compensation

The component of the MEI that reflects physician work is represented by the estimated portion of compensation expenses attributable to physicians. The revised 2017 cost weight associated with the physician's work (otherwise referred to as the Physician Compensation cost weight) is based on the estimated share of 2017 SAS expenses for total compensation associated with physician compensation. Since the compensation expense in the SAS data is only reported as an aggregate for all employees, we split the compensation expenses between physicians (including non-physician practitioners that can bill independently such as nurse

practitioners (NPs), physician assistants (PAs), and other clinical personnel) and all other workers using the following process.

*Step 1:* Total compensation costs are calculated by summing the reported expenses in the SAS for gross annual payroll, employer costs for fringe benefits (including health insurance, defined benefit and defined contribution plans, payroll taxes, employer paid insurance premiums, and all other benefits), and temporary staff and leased employees as reported in the 2017 SAS data for NAICS 6211 (Office of Physicians).

*Step 2:* Determine the ratio of physician (including non-physician practitioners that can bill independently such as NPs, PAs, and other clinical personnel) wage costs to total wage costs. This ratio is calculated using data from the Bureau of Labor Statistics (BLS) Occupational Employment and Wage Statistics (OEWS) May 2017 National Industry-Specific Occupational Employment and Wage Estimates for Offices of Physicians (NAICS 6211). This data reports the number of employees by occupational category based on the Standard Occupational Classification System (SOC) and the mean hourly wage for each occupation. We proposed to revise the calculation of expenses for each occupation to also account for the variation in the average weekly hours worked, which were obtained for NAICS 6211 from the Census Bureau's Current Population Survey (CPS). Therefore, for each occupation, we multiply the number of employees by the mean hourly wage times the average weekly hours to estimate the total mean weekly wage expense. The sum of weekly expenses for each occupation category represents total mean weekly wage expenses for all occupations in NAICS 6211. Then to derive the total mean weekly wage expenses for physicians (including non-physician practitioners that can bill independently such as NPs, PAs, and other clinical personnel) we sum the expenses for the following occupations: Physicians and Surgeons (29–1060); Chiropractor (29–1011); Optometrist (29–1041); Podiatrist (29–1081); Physical Therapist (29–1123); Dieticians & Nutritionists (29–1031); Physician Assistants (29–1071); Nurse Practitioners (29–1171); and All Other Diagnosing & Treating Occupations (29–11XX). We note that the proposed methodology included the allocation of compensation costs for Registered Nurses (29–1141) within the All Other Diagnosing & Treating Occupations category (29–11XX). As commenters highlighted, the compensation expenses

for RNs were inadvertently allocated to physician compensation. Therefore, we are correcting this error and correctly allocating these costs to the clinical, non-physician compensation cost category. As a result of these revisions, the ratio of physician mean weekly wage costs to total mean weekly wage costs falls to 60.7 percent compared to the proposed 63.2 percent. This change is the combination of two offsetting effects, correcting for the classification of RN expenses to clinical, non-physician compensation lowers the physician compensation share from 63.2 percent to 55.7 percent; then accounting for differences in weekly hours by occupation subsequently increases the physician compensation share from 55.7 percent to 60.7 percent.

*Step 3:* We multiply the total compensation expenses from Step 1 by the revised ratio of 60.7 percent determined in Step 2 to derive the revised Employed Physician Compensation Expenses, or 39.3 percent of total costs.

Next, since the expenses estimated above reflect only employed physician compensation, we proposed to add an estimate of compensation costs to account for physician practice owners that are not classified as employees but instead would be included in the net income of the practice. Based on comments received we re-evaluated the proposed methodology used to estimate the net income expenses.

The IRS Statistics of Income (SOI) data for Offices of Physicians, by type of ownership provides the level of revenue/receipts and net income separately for corporations, partnerships, and sole proprietors. The 2017 SOI data shows that net income as a share of total receipts varies across ownership type. For example, the share of net income as a percentage of revenue is 49.6 percent for sole proprietors, 19.5 percent for partnerships, and 6.9 percent for corporations. Since the SAS revenue less expense amount would reflect a combination of ownership types we revised our method to account for the differences in shares of net income, by ownership type using the following steps:

*Step 1:* We estimated the share of total revenue for the three ownership types as reported on the 2017 IRS SOI data. For NAICS 6211, Offices of Physicians, corporations account for 74 percent of total industry revenue, partnerships account for 17 percent of total industry revenue, and sole proprietors account for 8 percent of total industry revenue. We applied these percentages to the total revenue amount reported in the

2017 SAS data to estimate the level of revenue for the three ownership types.

*Step 2:* Using the 2017 IRS SOI data, we calculated the share of net income as a percentage of revenue/receipts for the three ownership types. The share of net income as a percent of revenue for corporations is 6.9 percent, for partnerships is 19.5 percent, and for sole proprietors in 49.6 percent.

*Step 3:* We multiply the share of net income as a percentage of revenue for corporations, partnerships, and sole proprietors (calculated in step 2) to the revenue amounts for corporations, partnerships, and sole proprietors (calculated in step 1) to determine the net income by ownership type for each of the three practice types.

*Step 4:* We add the estimated net income for partnerships and sole proprietors (calculated in step 3) together to determine the amount of net income from the 2017 SAS data that should be allocated to physician compensation. We do not allocate any of the net income or profit for corporations to physician compensation as we believe that corporations would use the annual profit to reinvest in the business or for other business purposes.

This revised methodology results in an increase in the cost weight for net income from the proposed 4.8 percent of total expenses to 8.2 percent of total expenses. The revised method increases the share of physician net income as a share of total physician compensation from 10.3 percent to 16.7 percent of physician compensation costs.

The revised aggregate 2017-based Physician Compensation cost weight is the sum of the Employed Physician Compensation cost weight (39.297 percent) and estimated Net Income for Physician Practice Owners cost weight (8.226 percent), or 47.522 percent. By comparison, the 2006-based Physician Compensation cost weight was 50.866 percent. The revised 2017-based MEI cost weight for Physician Compensation is 0.3 percentage point higher than the proposed 2017-based MEI cost weight and is 3.3 percentage points lower than the 2006-based MEI cost weight.

We proposed to split the Physician Compensation cost weight into two cost categories: Physician Wages and Salaries and Physician Benefits. We did not make any revisions to the proposed methodology for splitting physician compensation into Physician Wages and Salaries and Physician Benefits, therefore we split the physician compensation weight between wages and benefits using an 83/17 split. As a result, the Physician Wages and Salaries cost weight is 39.443 percent and the

Physician Benefits cost weight is 8.079 percent in the revised 2017-based MEI.

#### b. Practice Expenses

The Practice Expenses cost weight reflects all remaining operating costs other than physician compensation. Based on public comments received on the proposed method, we are revising the cost weights for the non-physician compensation categories. We are finalizing the cost category weights for all practice expense cost categories other than non-physician compensation cost categories as proposed. We explain the revisions to the cost weights for the non-physician compensation practice expense cost weights.

##### (1) Non-Physician Compensation

We proposed to estimate the cost weight for Non-physician Compensation using the 2017 SAS data for these expenses. As mentioned previously, since the compensation expenses in the SAS data are only reported as an aggregate for all employees, we proposed to multiply the 2017 SAS total compensation expenses for NAICS 6211 by the residual of the share determined for physicians (including non-physician practitioners that can bill independently such as NPs, PAs, and other clinical personnel). The revised share for non-physician compensation is 39.307 percent. Multiplying the total compensation expenses by this ratio results in the final Non-physician Compensation cost weight of 25.451 percent, slightly higher than the proposed 24.716 percent.

Finally, we revised the weights for disaggregating the non-physician wages and salaries into two categories: (1) Health-related, non-physician and (2) Non-health, non-physician Wages and Salaries.

Of the 39.3 percent of total SAS compensation costs associated with non-physicians, 19.1 percentage points are determined to be associated with Health-related, non-physician Wages and Salaries. This percentage reflects the ratio of mean weekly wages to total mean weekly wages from the 2017 OEWS data for the following occupations: Registered Nurses (RNs) (29–1141); Health Technologists and Technicians (29–2000); Other Healthcare Practitioners and Technical (29–9000); and Healthcare Support (31–0000). Applying this share (about 49 percent) to the non-physician wages cost weight results in a weight of 10.858 percent for the health-related, non-physician Wages and Salaries cost weight for the final 2017-based MEI.

The remaining share of non-physician compensation costs are associated with

non-health, non-physician Wages and Salaries (20.2 percentage points of the 39.3 percent). This percentage reflects the ratio of mean weekly wages to total mean weekly wages from the 2017 OEWS data for the following occupations: Management (11–0000); Business and Financial Operations (13–0000); Computer and Mathematical (15–0000); Architecture and Engineering (17–0000); Life, Physical, and Social Science (19–0000); Community and Social Service (21–0000); Legal (23–0000); Education, Training, and Library (25–0000); Arts, Design, Entertainment, Sports, and Media (27–0000); Protective Service (33–0000); Food Preparation and Serving Related (35–0000); Building and Grounds Cleaning and Maintenance (37–0000); Personal Care and Service (39–0000); Sales and Related (41–0000);

Office and Administrative Support (43–0000); Construction and Extraction (47–0000); Installation, Maintenance, and Repair (49–0000); Production (51–0000); and Transportation and Material Moving (53–0000). Applying this share (about 51 percent) to the non-physician wages cost weight results in a weight of 10.266 percent for the non-health, non-physician Wages and Salaries cost weight for the final 2017-based MEI. Next, since the non-health, non-physician wages represent various types of occupations that may experience different wage inflation pressures, we proposed to disaggregate the non-health, non-physician Wages and Salaries cost weight into four occupational subcategories. To arrive at a distribution for these separate occupational categories (Professional & Related (P&R)

workers, Managers, Clerical workers, and Service workers), we determined an estimate of annual earnings for each using the Standard Occupational Classification (SOC) system. While we did not make any changes to the occupations included in each of the categories from what was proposed, the final cost weights are revised due to the revised non-physician wages and salary weight and the inclusion of average weekly hours by occupation. The non-health, non-physician Wages and Salaries cost weight of 10.858 percent is multiplied by the relative share of each category to arrive at the detailed distribution. The occupational distribution in the final 2017-based MEI, the proposed 2017-based MEI, and the 2006-based MEI is presented in Table 44.

**TABLE 44: Percent Distribution of Non-physician Wages and Salaries Cost Weights by Occupational Group: Final 2017-based MEI, Proposed 2017-based MEI and 2006-based MEI**

| Cost Category                                  | Final 2017_weight | Proposed 2017_weight | 2006_weight    |
|--|-------------------|----------------------|----------------|
| <b>Non-physician wages &amp; salaries</b>      | <b>21.124%</b>    | <b>20.514%</b>       | <b>11.885%</b> |
| Non-health, non-physician wages & salaries     | 10.858%           | 12.306%              | 7.249%         |
| Professional and Related wages & salaries      | 1.312%            | 1.381%               | 0.800%         |
| Management wages & salaries                    | 2.101%            | 2.171%               | 1.529%         |
| Clerical wages & salaries                      | 6.750%            | 7.947%               | 4.720%         |
| Services wages & salaries                      | 0.695%            | 0.807%               | 0.200%         |
| Health related, non-physician wages & salaries | 10.266%           | 8.208%               | 4.636%         |

Table 45 lists the set of mutually exclusive and exhaustive cost categories and weights for the final 2017-based MEI, proposed 2017-based MEI, and the 2006-based MEI. While the methodology for deriving all other practice expenses

did not change from the proposed method, their cost share weights are slightly lower due to the increases in total expenses that reflect the revised method for estimating physician net income; that is, both physician

compensation and total expenses were higher based on the revised method in response to public comments.

BILLING CODE 4150–28–P

**TABLE 45: Final 2017-based MEI, Proposed 2017-based MEI and 2006-based MEI  
Cost Categories and Weights**

| Cost Category                                | Final 2017-based | Proposed 2017-based | Current 2006-based |
|--|------------------|---------------------|--------------------|
| <b>MEI Total</b>                             | <b>100.000%</b>  | <b>100.000%</b>     | <b>100.000%</b>    |
| <b>Physician Compensation</b>                | <b>47.522%</b>   | <b>47.261%</b>      | <b>50.866%</b>     |

**BILLING CODE 4150-28-C****3. Selection of Price Proxies for Use in the MEI**

To select prices proxies for the proposed 2017-based MEI cost categories, most of the proxy measures we considered are based on BLS data and are grouped into one of the following four categories:

- **Producer Price Indices (PPIs):** PPIs measure the average change over time in the selling prices received by domestic producers for their output. The prices included in the PPI are from the first commercial transaction for many products and some services (<https://www.bls.gov/ppi/>).

- **Consumer Price Indices (CPIs):** CPIs measure the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services (<https://www.bls.gov/cpi/>). CPIs are only used when the purchases are similar to those of retail consumers rather than purchases at the producer

level, or if no appropriate PPIs are available or if the particular expenditure category is likely to contain purchases made at the final point of sale.

- **Employment Cost Indices (ECIs):** ECIs measure the rate of change in employee wage rates and employer costs for employee benefits per hour worked. These indexes are fixed-weight indexes and strictly measure the change in wage rates and employee benefits per hour. ECIs are superior to Average Hourly Earnings (AHE) as price proxies for input price indexes because they are not affected by shifts in occupation or industry mix, and because they measure pure price change and are available by both occupational group and by industry. The industry ECIs are based on the NAICS and the occupational ECIs are based on the Standard Occupational Classification System (SOC). We evaluated the price proxies using the criteria of reliability, timeliness, availability, and relevance:

- **Reliability:** Reliability indicates that the index is based on valid statistical methods and has low sampling variability. Widely accepted statistical methods ensure that the data were collected and aggregated in a way that can be replicated. Low sampling variability is desirable because it indicates that the sample reflects the typical members of the population. (Sampling variability is variation that occurs by chance because only a sample was surveyed rather than the entire population.)

- **Timeliness:** Timeliness implies that the proxy is published regularly, preferably at least once a quarter. The MEI levels are updated quarterly, and therefore, it is important for the underlying price proxies to be up-to-date, reflecting the most recent data available. We believe that using proxies that are published regularly (at least quarterly, whenever possible) helps to ensure that we are using the most recent

data available to update the MEI. We strive to use publications that are disseminated frequently, because we believe that this is an optimal way to stay abreast of the most current data available.

- **Availability:** Availability means that the proxy is publicly available. We prefer that our proxies are publicly available because this will help ensure that the MEI updates are as transparent to the public as possible. In addition, this enables the public to be able to obtain the price proxy data on a regular basis.

- **Relevance** means that the proxy is applicable and representative of the cost category weight to which it is applied.

As discussed in the proposed rule, we believe the proposed PPIs, CPIs, and ECIs selected meet these criteria. Therefore, we believe that they continue to be the best measure of price changes for the cost categories to which they would be applied. In this rule, we present a detailed explanation of the price proxies that we proposed for each cost category weight. We noted that many of the proxies that we proposed to use for the proposed 2017-based MEI (as shown in Table 36) are the same as those used in the 2006-based MEI except as noted below.

#### a. Physician Compensation

##### (1) Physician Wages and Salaries

We proposed to continue to use the ECI for Wages and Salaries for Professional and Related Occupations (Private Industry) (BLS series code CIU2020000120000I) to measure price growth of this category in the proposed 2017-based MEI. We noted that we believe this price proxy reflects the wage pressures faced by physicians in that it captures wage trends in labor markets of skilled professional workers without being directly affected by trends in physician income that may be

influenced by the ownership structure of physician practices. This price proxy also follows the recommendation of the MEI-TAP that the price proxy would maintain consistency with the guidance provided in the 1972 Senate Finance Committee report titled “Social Security Amendments of 1972,” which stated that the index should reflect changes in practice expenses and “general earnings”. This is the same proxy used in the 2006-based MEI.

##### (2) Physician Benefits

We proposed to continue to use the ECI for Benefits for Professional and Related Occupations (Private Industry) to measure price growth of this category in the proposed 2017-based MEI. The ECI for Benefits for Professional and Related Occupations is derived using BLS’s Total Compensation for Professional and Related Occupations (BLS series ID CIU2010000120000I) and the relative importance of wages and salaries within total compensation. We believe this series is technically appropriate because it better reflects the benefit trends for professionals requiring advanced training. This is the same proxy used in the 2006-based MEI.

#### b. Practice Expense

##### (1) Non-Health, Non-Physician Wages and Salaries

- **Professional and Related:** We proposed to continue using the ECI for Wages and Salaries for Professional and Related Occupation (Private Industry) (BLS series code CIU2020000120000I) to measure the price growth of this cost category. This is the same proxy used in the 2006-based MEI.

- **Management:** We proposed to continue using the ECI for Wages and Salaries for Management, Business, and Financial (Private Industry) (BLS series code CIU2020000110000I) to measure the price growth of this cost category.

This is the same proxy used in the 2006-based MEI.

- **Clerical:** We proposed to continue using the ECI for Wages and Salaries for Office and Administrative Support (Private Industry) (BLS series code CIU2020000220000I) to measure the price growth of this cost category. This is the same proxy used in the 2006-based MEI.

- **Services:** We proposed to continue using the ECI for Wages and Salaries for Service Occupations (Private Industry) (BLS series code CIU2020000300000I) to measure the price growth of this cost category. This is the same proxy used in the 2006-based MEI.

##### (2) Non-Physician, Health-Related Wages and Salaries

We proposed to continue to use the ECI for Wages and Salaries for Hospital Workers (Private Industry) (BLS series code CIU2026220000000I) to measure the price growth of this cost category in the proposed 2017-based MEI. The ECI for Hospital workers has an occupational mix that approximates that of physicians’ offices. This is the same proxy used in the 2006-based MEI.

##### (3) Non-Physician Benefits

We proposed to continue using a composite ECI for non-physician employee benefits in the proposed 2017-based MEI. The weights and price proxies for the composite benefits index are shown in Table 46, which lists the five ECI series and corresponding weights used to construct the proposed composite benefit index for non-physician employees in the proposed 2017-based MEI. We noted the ECI benefits series are derived based on BLS published data from the applicable Total Compensation ECI and Wages & Salaries ECI as BLS does not publish the ECI Benefit Indexes directly.

**TABLE 46: Proposed 2017-based Composite Benefits Blend Cost Weights**

|   | <b>Price Proxy</b>   | <b>2017</b> | <b>2006</b> |
|---|--|-------------|-------------|
| <b>Non-Health, non-physician Benefits</b>     |  | <b>60%</b>  | <b>61%</b>  |
| Professional and Related                      | ECI - Benefits for Private industry workers in Professional and related            | 7%          | 7%          |
| Management                                    | ECI - Benefits for Private Industry workers in Management, Business, and Financial | 10%         | 13%         |
| Clerical                                      | ECI - Benefits for Private Industry workers in Office and Administrative Support   | 39%         | 40%         |
| Services                                      | ECI - Benefits for Private Industry workers in Service Occupations                 | 4%          | 2%          |
| <b>Health related, non-physician Benefits</b> | ECI - Benefits for All Civilian workers in Hospitals                               | <b>40%</b>  | <b>39%</b>  |

## (4) Other Practice Expense

## (a) Utilities

We proposed to continue using the CPI for Fuel and Utilities (BLS series code CUUR0000SAH2) to measure the price growth of this cost category. This is the same proxy used in the 2006-based MEI.

## (b) All Other Products

We proposed to use the PPI—Final demand—Finished goods less foods and energy (BLS series code WPUFD413) as the price proxy for this category. We believe that the expenses for the products that physicians purchase for use in providing physicians services are better reflected by purchases at the wholesale or producer level rather than at the consumer level and the growth in overall prices less food and energy provides a good approximation for the inflation pressures experienced for these expenses. The 2006-based MEI used several PPI and CPI series to proxy the price growth for the products reflected in this category.

## (c) Telephone

We proposed to continue using the CPI for Telephone Services (BLS series code CUUR0000SEED) to measure the price growth of this cost category in the proposed 2017-based MEI. This is the same proxy used in the 2006-based MEI.

## (d) Professional, Scientific, and Technical Services

We proposed to continue to use the ECI for Total Compensation for

Professional, Scientific, and Technical Services (Private Industry) (BLS series code CIU2015400000000I) to measure the price growth of this cost category in the proposed 2017-based MEI. This is the same proxy used in the 2006-based MEI.

## (e) Administrative and Support Services

We proposed to continue to use the ECI for Total Compensation for Administrative, Support, Waste Management, and Remediation Services (Private Industry) (BLS series code CIU2015600000000I) to measure the price growth of this cost category in the 2017-based MEI. This is the same proxy used in the 2006-based MEI.

## (f) All Other Services

We proposed to continue to use the ECI for Compensation for Service Occupations (Private Industry) (BLS series code CIU2010000300000I) to measure the price growth of this cost category.

## (g) Fixed Capital

We proposed to continue to use the PPI for Lessors of Nonresidential Buildings (BLS series code PCU531120531120) to measure the price growth of this cost category in the proposed 2017-based MEI. This is the same proxy used in the 2006-based MEI.

## (h) Moveable Capital

We proposed to continue to use the PPI for Machinery and Equipment (series code WPU11) to measure the

price growth of this cost category in the proposed 2017-based MEI. This is the same proxy used in the 2006-based MEI.

## (i) Professional Liability Insurance

Unlike the other price proxies based on data from BLS and other public sources, the proxy for PLI is based on data collected directly by CMS from a sample of commercial insurance carriers. The MEI—TAP discussed the methodology of the CMS PLI index, as well as considered alternative data sources for the PLI price proxy, including information available from BLS and through State insurance commissioners. As detailed in the CY 2014 PFS final rule (78 FR 74271), the MEI—TAP “believes the current index appropriately reflects the price changes in premiums throughout the industry.” Accordingly, we proposed to continue using the CMS Physician PLI index to measure the price growth of this cost category in the proposed 2017-based MEI. This is the same proxy used in the 2006-based MEI.

## (j) Medical Supplies

We proposed to continue using a blended index comprised of 50/50 blend of the PPI for Surgical Appliances (BLS series code WPU156301) and the CPI—U for Medical Equipment and Supplies (BLS series code CUUR0000SEMG). This is the same proxy used in the 2006-based MEI.

Table 47 shows the 2017-based MEI cost categories and price proxies.

**TABLE 47: Proposed 2017-Based MEI Cost Categories and Price Proxies**

| <b>Proposed 2017-based Medicare Economic Index</b> |   |
|--|---|
| <b>Cost Category</b>                               | <b><u>2017 Price Proxy</u></b>  |
| <b>MEI Total</b>                                   |   |
| <b>Physician Compensation</b>                      |   |
| Wages and Salaries                                 | ECI - Wages and salaries for Private industry workers in Professional and related   |
| Benefits   | ECI - Total Benefits for Private industry workers in Professional and related   |
| <b>Practice Expense, including PLI</b>             |   |
| <b>Non-physician compensation</b>                  |   |
| <b>Non-physician wages</b>                         |   |
| Non-health, non-physician wages                    |   |
| Professional and Related wages                     | ECI - Wages and salaries for Private industry workers in Professional and related   |
| Management wages                                   | ECI - Wages and Salaries for Private Industry workers in Management, Business, and Financial  |
| Clerical wages                                     | ECI - Wages and Salaries for Private Industry workers in Office and Administrative Support  |
| Services wages                                     | ECI - Wages and Salaries for Private Industry workers in Service Occupations  |
| Health-related, non-physician wages                | ECI - Wages and salaries for All Civilian workers in Hospitals  |
| <b>Non-physician benefits</b>                      | Composite - ECI - Total Benefits for the 5 non-physician wage categories  |
| <b>Other Practice Expense</b>                      |   |
| Utilities  | CPI - Fuels and utilities   |
| All Other Products                                 | PPI - Final demand - Finished goods less foods and energy   |
| Telephone  | CPI - Telephone Services  |
| <b>All Other Professional Services</b>             |   |
| Professional, Scientific, and Technical Services   | ECI - Total compensation for Private industry workers in Professional, scientific, and technical services                                 |
| Administrative support & waste                     | ECI - Total compensation for Private industry workers in Office and administrative support  |
| All Other Services                                 | ECI - Total compensation for Private industry workers in Service occupations  |
| <b>Capital</b>                                     |   |
| Fixed Capital                                      | PPI - Industry - Lessors of nonresidential buildings  |
| Moveable Capital                                   | PPI - Commodity - Machinery and equipment   |
| <b>Professional Liability Insurance</b>            | <b>CMS - Professional Liability Insurance Index, physicians</b>   |
| Medical supplies                                   | Composite: PPI - Commodity - Medical and surgical appliances and supplies (50%), PPI - Commodity - Surgical and medical instruments (50%) |

We did not receive any comments on the proposed price proxies used in the MEI and we are finalizing all price proxies as proposed. We note that the price proxies within the benefits blend are the same as proposed; however, the final weights for the composite benefits index have changed due to the revisions we are finalizing to the methodology for deriving compensation costs (that is, changes to the physician net income estimated expenses, the correction to classification of RN compensation expenses, and the inclusion of variation

in average hours worked by occupation). These factors resulted in a change to the weights for the composite benefits blend relative to the proposed rule as shown in Table 48.

We are finalizing the continued use of a composite ECI for non-physician employee benefits in the 2017-based MEI; however, the relative shares for each of the ECI benefits series within the blend differ from those presented in the proposed rule because the final relative shares are updated to reflect the revisions to the methodology that we are

finalizing in this final rule. The weights and price proxies for the composite benefits index are shown in Table 48, which lists the five ECI series and corresponding weights used to construct the final composite benefit index for non-physician employees in the 2017-based MEI. We noted the ECI benefits series are derived based on BLS published data from the applicable Total Compensation ECI and Wages & Salaries ECI as BLS does not publish the ECI Benefit Indexes directly.

**TABLE 48: Final 2017-based Composite Benefits Blend Cost Weights**

|   | <u>Price Proxy</u>   | <u>Final 2017</u> | <u>Proposed 2017</u> | <u>2006</u> |
|---|--|-------------------|----------------------|-------------|
| <b>Non-Health, Non-physician Benefits</b>     |  | <b>51%</b>        | <b>60%</b>           | <b>61%</b>  |
| Professional and Related                      | ECI - Benefits for Private industry workers in Professional and related            | 6%                | 7%                   | 7%          |
| Management                                    | ECI - Benefits for Private Industry workers in Management, Business, and Financial | 10%               | 10%                  | 13%         |
| Clerical                                      | ECI - Benefits for Private Industry workers in Office and Administrative Support   | 32%               | 39%                  | 40%         |
| Services                                      | ECI - Benefits for Private Industry workers in Service Occupations                 | 3%                | 4%                   | 2%          |
| <b>Health-related, non-physician Benefits</b> | ECI - Benefits for All Civilian workers in Hospitals                               | <b>49%</b>        | <b>40%</b>           | <b>39%</b>  |

#### 4. Productivity Adjustment to the MEI

The MEI has been adjusted for changes in productivity since its inception. In the CY 2003 PFS final rule with comment period (67 FR 80019), we implemented a change in the way the MEI was adjusted to account for changes in productivity. The MEI used for the 2003 physician payment update incorporated changes in the 10-year moving average of private nonfarm business (economy-wide) total factor productivity (previously referred to as multifactor productivity) that were applied to the entire index. Previously, the index incorporated changes in productivity by adjusting the labor portions of the index by the 10-year moving average of economy-wide private nonfarm business labor productivity.

The MEI-TAP's Finding 5.1 states that, "[t]he Panel reviewed the basis for the current economy-wide multifactor productivity adjustment (Private Nonfarm Business Multifactor

Productivity) in the MEI and finds such an adjustment continues to be appropriate. This adjustment prevents "double counting" of the effects of productivity improvements, which would otherwise be reflected in both (i) the increase in compensation and other input price proxies underlying the MEI, and (ii) the growth in the number of physician services performed per unit of input resources, which results from advances in productivity by individual physician practices."

We proposed to continue to use the current method of applying a productivity adjustment to the full MEI increase factor in the proposed 2017-based MEI. As described in the CY 2003 PFS final rule with comment period, we believe this adjustment is appropriate because it explicitly reflects the productivity gains associated with all inputs (both labor and non-labor). We noted that we believe that using the 10-year moving average percent change in economy-wide total factor productivity is appropriate for deriving a stable

measure that helps alleviate the influence that the peak (or a trough) of a business cycle may have on the measure. The adjustment would be based on the latest available historical economy-wide nonfarm business total factor productivity data as measured and published by BLS.

We did not receive any comments on the proposed productivity adjustment to the MEI, and therefore, we are finalizing the productivity adjustment as proposed.

#### 5. Results of Rebasing and Revising of the MEI

Table 49 illustrates the results of the proposed update to the MEI cost weights for Physician Compensation, Practice Expenses (excluding PLI), and PLI from a 2006-based cost distribution, the proposed 2017-based cost distribution, and the final 2017-based cost distribution including all the revisions as a result of public comments as specified.

**TABLE 49: Percent Distribution of Major Physician Expense Components: 2006-based MEI, proposed 2017-based MEI, and final 2017-based MEI**

| RVU Component      | Weights          |                     |                    |
|--------------------|------------------|---------------------|--------------------|
|                    | Final 2017-based | Proposed 2017-based | Current 2006-based |
|                    | <u>2017</u>      | <u>2017</u>         | <u>2006</u>        |
| Physician Work     | 47.5%            | 47.3%               | 50.9%              |
| Practice Expense   | 51.2%            | 51.3%               | 44.8%              |
| Malpractice or PLI | 1.3%             | 1.4%                | 4.3%               |
| Total              | 100.0%           | 100.0%              | 100.0%             |

Table 50 shows the average calendar year percent change for CY 2016 to CY 2023 for the 2006-based MEI, the

proposed 2017-based MEI, and the final 2017-based MEI. The final 2017-based MEI annual percent changes differ from

the 2006-based MEI annual percent changes by 0.1 to 0.2 percentage point for any given year.

**TABLE 50: Annual Percent Changes in the 2006-Based and the Proposed and Final 2017-based MEI**

| Update Year <sup>1</sup> | Final 2017-based MEI | Proposed 2017-based MEI | 2006-based MEI |
|--------------------------|----------------------|-------------------------|----------------|
| 2016                     | 1.4                  | 1.4                     | 1.2            |
| 2017                     | 1.3                  | 1.3                     | 1.1            |
| 2018                     | 1.5                  | 1.5                     | 1.4            |
| 2019                     | 1.8                  | 1.8                     | 1.6            |
| 2020                     | 1.9                  | 1.9                     | 1.8            |
| 2021                     | 1.7                  | 1.7                     | 1.5            |
| 2022                     | 2.1                  | 2.2                     | 2.1            |
| 2023                     | 3.8                  | 3.8                     | 3.8            |
| Average Change           | 1.95                 | 1.94                    | 1.81           |

<sup>1</sup>Update year based on historical data through the second quarter of the prior calendar year. For example, the 2023 change is based on historical data through the second quarter 2022.

As shown in Table 50, the percent change of the final 2017-based MEI, the proposed 2017-based MEI, and the 2006-based MEI for CY 2023 is an increase of 3.8 percent based on historical data through the 2nd quarter of 2022.

We did not receive any comments on the proposed updates as a result of rebasing and revising of the MEI, and, therefore, we are finalizing the update factor based on the most recent historical estimate of the MEI increase.

### III. Other Provisions of the Final Rule

#### *A. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs To Provide Refunds With Respect to Discarded Amounts (§§ 414.902 and 414.940)*

##### 1. Background

Drugs and biologicals payable under Medicare Part B fall into three general categories: those furnished incident to a physician's service (hereinafter referred to as "incident to") (section 1861(s)(2) of the Act), those administered via a covered item of durable medical equipment (DME) (section 1861(s)(6) of the Act), and others as specified by statute (for example, certain vaccines described in sections 1861(s)(10)(A) and (B) of the Act). Payment limit amounts for most drugs and biologicals separately payable under Medicare Part B are determined using the methodology in section 1847A of the Act, and in many cases, payment is based on the average sales price (ASP) plus a statutorily mandated 6 percent add-on. Most drugs payable under Part B are covered under the "incident to" benefit under section 1861(s)(2) of the Act, which includes drugs and biologicals not usually self-administered by the patient.

Many drugs and biologicals (hereafter referred to as a drugs) payable under Medicare Part B are dosed in a variable manner such that the entire amount identified on the vial or package is not administered to the patient. For example, many drugs are dosed based on the patient's body weight or body surface area (BSA). Often times, these drugs are available only in single-dose containers. As stated in U.S. Food and Drug Administration (FDA) guidance for industry,<sup>132</sup> a single-dose container is designed for use with a single patient as a single injection or infusion. The FDA-approved labeling for a drug packaged in a single-dose container typically includes statements instructing users to discard unused portions. When the labeling instructs a provider to discard the amount of drug that was unused (that is, the discarded amount) from a single-dose container or other single-use package of a drug after administering a dose to a Medicare beneficiary, the program provides payment for the unused and discarded amount, as well as the dose administered, up to the amount of the drug indicated on the vial or package labeling. On a Medicare Part B claim, the JW modifier (Drug amount discarded/not administered to any patient) is a Healthcare Common Procedure Coding System (HCPCS) Level II modifier used to report the amount of a drug that is discarded and eligible for payment.

Beginning on January 1, 2017, CMS revised the JW modifier policy to require the uniform use of the modifier for all claims for separately payable drugs with discarded drug amounts from single use vials or single use packages payable under Part B in order to more effectively identify and monitor billing and payment for discarded

amounts of drugs.<sup>133 134</sup> The policy does not apply to drugs that are not separately payable, such as packaged hospital outpatient prospective payment system (OPPS) drugs or those administered in the Federally qualified health centers (FQHC) or rural health clinics (RHC) setting. Additional details about this policy can be found in Chapter 17 of the Medicare Claims Processing Manual<sup>135</sup> and in the JW modifier frequently asked questions (FAQ) document.<sup>136</sup>

Medicare Part B data for discarded amounts of drug (based on the JW modifier) have been published on the CMS website annually for calendar years beginning in 2017.<sup>137</sup> Data for 2020 shows that Medicare paid nearly \$720 million for discarded amounts of drugs from a single-dose container or single-use package (hereafter referred to as single-dose container<sup>138</sup>) paid under Part B with claims identifying the discarded amounts with the JW modifier. JW modifier data from 2020 is the most recent available at the time of this analysis. This data is comparable to 2017–2019 with regard to percentage of discarded amounts and total Medicare spending for discarded drugs each year, which ranged from approximately \$700–750 million each year during that

<sup>136</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/JW-Modifier-FAQs.pdf>.

<sup>137</sup> <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicare-spending-by-drug/medicare-part-b-discarded-drug-units>.

<sup>138</sup> <https://www.fda.gov/media/117883/download>.

<sup>132</sup> <https://www.fda.gov/media/117883/download>.

time. More than half of Medicare spending for discarded amounts in 2020 represents about 40 billing and payment codes (that is, HCPCS codes), for which 10 percent or more of the total charges for the drug were for discarded units. A large proportion of single source drugs with 10 percent or more discarded units are dosed based on patient's body weight or BSA. We note that the JW modifier data published on the CMS website is limited to only billing and payment codes that are published on the ASP Drug Pricing File.<sup>139</sup> There are likely additional billing and payment codes payable under Medicare Part B available in single-dose containers that would be subject to the JW modifier policy and are not reflected in the data discussed above.

The calculated dose (based on weight or BSA) is drawn from one or more vials and any remaining amount of the drug is discarded. For example, if labeled dose of a drug is 20 mg/m<sup>2</sup>, the dose for a patient with a BSA of 1.9 m<sup>2</sup> (the approximate average BSA of an adult male) would be 38 mg. If the drug is available in single-dose 60-mg vials, then 38 mg would be administered to the patient and 22 mg (36.67 percent) would be discarded. If the ASP payment limit amount (typically, ASP plus 6 percent) for this drug for a given quarter is \$190 per 1 mg, the total payment for the amount of drug that was administered to the beneficiary would be \$7,220 and for the amount of drug that was discarded would be \$4,180. Both the amount of drug administered and the amount discarded (consistent with the discarded drug policy) are subject to the deductible and coinsurance. For a beneficiary who has already met the deductible, the coinsurance for the entire 60-mg vial would be \$2,280. Since the vial in this example contains enough drug to provide a 20 mg/m<sup>2</sup> dose to an individual with a BSA of 3 m<sup>2</sup>, the full amount of drug labeled on the vial would be used in a small subset of patients.

As discussed in the CY 2023 PFS proposed rule (87 FR 46055 through 46062), section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–9, November 15, 2021) (hereinafter is referred to as “the Infrastructure Act”) amended section 1847A of the Act to redesignate subsection (h) as subsection (i) and insert a new subsection (h), which requires manufacturers to provide a refund to CMS for certain discarded

amounts from a refundable single-dose container or single-use package drug. The refund amount is the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges for the drug in a given calendar quarter. A refundable single-dose container or single-use package drug does not include a radiopharmaceutical or imaging agent, certain drugs requiring filtration, and certain new drugs. We proposed implementation of section 90004 of the Infrastructure Act including: how discarded amounts of drugs are determined; a definition of which drugs are subject to refunds (and exclusions); when and how often CMS will notify manufacturers of refunds; when and how often payment of refunds from manufacturers to CMS is required; refund calculation methodology (including applicable percentages); a dispute resolution process; and enforcement provisions. We also proposed regulatory changes to implement new section 1847A(h) of the Act at 42 CFR part 414, subpart K.

We note, subsequent to the publication of the CY 2023 PFS proposed rule, sections 11101 and 11102 of the Inflation Reduction Act (IRA) (Pub. L. 117–169), relating to inflation rebates by manufacturers of drugs covered under Medicare Parts B and D, were signed into law on August 16, 2022. These provisions are effective January 1, 2023. We believe implementation of the Parts B and D rebates mandated under the IRA should be considered together with the operational implications of discarded drug refund discussed in this final rule, because the refunds and rebates both require CMS to accept payments from drug manufacturers to the Federal Supplementary Medical Insurance (SMI) Trust Fund. In order to align the operation of these programs and minimize burden, we are declining to finalize some aspects for collection of discarded drug refunds. Specifically, we are declining to finalize the timing of the initial reports and which quarters' information will be included in each report; this is discussed below in section III.A.4. of this final rule. We are also declining to finalize specific dates associated with the dispute resolution process (discussed below in section III.A.7. of this final rule), which are impacted by the reporting dates. We intend to address these aspects in future rulemaking.

## 2. Discarded Amounts

The JW modifier has existed since 2003, and since 2017 its use has been required on claims for separately

payable Part B drugs that include discarded amounts of single use vials or single use packages. Currently, there are no other modifiers to measure discarded units of Part B drugs. On the claim form, the amount of drug administered is billed on one line (reflected as billing units in the unit field); discarded amounts are billed on a separate line with the JW modifier (reflected as billing units in the unit field). The term “billing unit” is defined in section 1847A(b)(6)(B) of the Act as the identifiable quantity associated with a billing and payment code, as established by the Secretary. For example, in a circumstance where a single-dose container is labeled to contain 200 mg and the established billing unit for the billing and payment code is 2 mg, then there are 100 billing units in the vial. If 95 billing units (190 mg) are administered to the patient and 5 billing units (10 mg) are discarded, the 95 billing units are billed on one line, and the discarded 5 billing units are billed on another line using the JW modifier. Both line items are processed for payment.

The JW modifier must not be used to report discarded amounts of overfill, which is any amount of drug greater than the amount identified on FDA-approved labeling. Additional information on the overfill policy is available in the PFS final rule published in the November 29, 2010 **Federal Register** (75 FR 73466 through 70). Contents of a vial or package that are considered overfill are not included in the total billing units contained in the vial or package and also do not count toward the number of billing units that are discarded.

As discussed in the CY 2023 PFS proposed rule (87 FR 46056 through 46058), section 1847A(h) of the Act specifies that discarded amounts of refundable single-dose container or single-use package drugs are to be determined using a mechanism such as the JW modifier used as of the date of enactment of the Infrastructure Act or any successor modifier that includes such data as determined appropriate by the Secretary. For consistency with our current billing procedures and to minimize burden, we proposed to use the JW modifier or any successor modifier that includes the same data to determine the total number of billing units of a billing and payment code (that is, the identifiable quantity associated with a billing and payment code, as established by CMS) of a refundable single-dose container or single-use package drug (defined in the next section), if any, that were discarded for dates of service during such quarter. We

<sup>139</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice>.

proposed to use the JW modifier (or any successor modifier that includes the same data) to identify discarded billing units of a billing and payment code for the purpose of calculating the refund amount as described in section 1847A(h)(3) of the Act.

We explained, currently under the OPSS and Ambulatory Surgical Center (ASC) Payment System, hospital outpatient departments (HOPDs) and ASCs use the JW modifier to identify all separately payable drugs and biologicals for which there is an unused or discarded amount. For consistency with our current billing procedures we proposed that HOPDs would be required to report the JW modifier or any successor modifier to identify discarded amounts of refundable single-dose container or single-use package drugs described by HCPCS codes that are assigned status indicator “K” (Nonpass-Through Drugs and Nonimplantable Biologicals, Including Therapeutic Radiopharmaceuticals) or status indicator “G” (Pass-Through Drugs and Biologicals) under the OPSS. Specifically, we proposed that the JW modifier would be used to determine the total number of billing units of the HCPCS code (that is, the identifiable quantity associated with a HCPCS code, as established by CMS) of a refundable single-dose container or single-use package drug (defined in the next section), if any, assigned status indicator “K” or “G” that were discarded for dates of service during such quarter for the purpose of calculating the refund amount described in section 1847A(h)(3) of the Act. Similarly, we proposed that ASCs would be required to report the JW modifier or any successor modifier to identify discarded amounts of refundable single-dose container or single-use package drugs described by HCPCS codes assigned payment indicator “K2” (“Drugs and biologicals paid separately when provided integral to a surgical procedure on ASC list; payment based on OPSS rate) under the ASC payment system. Specifically, we proposed that ASCs would be required to report the JW modifier or any successor modifier that includes the same data to determine the total number of billing units of the HCPCS code (that is, the identifiable quantity associated with a HCPCS code, as established by CMS) of a refundable single-dose container or single-use package drug (defined in the next section), if any, assigned status indicator “K2” that were discarded for dates of service during such quarter.

Consistent with section 1847A(h)(1)(C) of the Act, which excludes units that are packaged into

the payment amount for an item or service and not separately payable, as well as current HOPD and ASC use of the JW modifier, we proposed that the JW modifier would not be required to identify discarded amounts of drugs that are not separately payable, such as drugs for which payment is packaged under the OPSS or ASC payment system or drugs administered in the FQHC or RHC setting. Specifically, in HOPD setting and the ASC setting, the JW modifier does not apply to drugs that are described by HCPCS codes assigned status indicator “N” (Items and Services Packaged into APC Rates) under the OPSS or assigned to a payment indicator of “N1” (Packaged service/item; no separate payment made) under the ASC payment system.

Similarly, we proposed to exclude from the refund amount those units of drugs for which payment is packaged into payment for a comprehensive ambulatory payment classification (C-APC) service under the OPSS. We proposed to exclude such drugs when payment is packaged into a C-APC service which is assigned to an OPSS status indicator of “J1” (Hospital Part B Services Paid Through a Comprehensive APC) or “J2” (Hospital Part B Services That May Be Paid Through a Comprehensive APC). For example, if a drug under the OPSS is assigned to status indicator “K”, reports the JW or similar modifier, but is then packaged into a C-APC service assigned to a status indicator of “J1” or “J2”, we would exclude from the refund those units associated with the packaged drug.

We stated that section 1847A(h) of the Act requires manufacturers to provide refunds for discarded amounts of refundable single-dose container or single-use package drugs for which payment is made under Part B exceeding an applicable percentage of at least 10 percent of the estimated total allowed charges for such a drug (less the amount paid for packaged drugs) during the quarter. Under our current discarded drug policy, no modifier is required when there are no discarded amounts from a single-dose container.<sup>140</sup> However, as discussed in the proposed rule, we are aware that the JW modifier is often omitted on claims, and it is unclear whether the absence of the JW modifier on a claim for a single-dose container drug indicates that there were no discarded amounts or that the modifier was incorrectly omitted from the claim. This has led to incomplete data describing quantities of discarded

amounts and the associated Medicare payments. We explained that there are a number of possible reasons why the modifier might be incorrectly omitted on the claim form, including provider burden for documentation or lack of awareness of the policy. In addition, there may not be strong incentive for appropriate JW modifier use because Medicare pays for administered and discarded amounts of the drug. For instance, if a provider administers a portion and discards a portion of a single-dose container, but bills for the entire vial as administered (incorrectly omitting the JW modifier), the provider payment and beneficiary coinsurance amounts would be the same as if the provider had correctly billed for the administered amounts and the discarded amounts (using the JW modifier). The JW modifier FAQs state that claims that do not use the modifier correctly may be subject to review, but we do not have quantifiable numbers regarding how often the modifier is omitted or how many discarded units are not accounted for because of such omissions. Because JW modifier data is incomplete and because refund amounts would rely on this data, we proposed that for dates of service on or after January 1, 2023, the JW modifier be required on claims for all single-dose container or single use drugs for which any amount is discarded (as reflected in our current policy and proposed above), and a separate modifier be required on claims for these drugs when there are no discarded amounts. Specifically, we proposed to require the use of a separate modifier, the JZ modifier, to attest that there were no discarded amounts. To align with the JW modifier policy, the JZ modifier would be required when there are no discarded amounts from single use vials or single use packages payable under Part B for which the JW modifier would be required if there were discarded amounts. So, on all claims for single use vials or single use packages payable under Part B, either the JW modifier would be used (on a separate line) to identify any discarded amounts or the JZ modifier (on the claim line with the administered amount) would be present to attest that there were no discarded amounts. We noted that we believe the proposed JZ modifier requirement would not increase burden on the provider because under the current JW modifier policy, the provider already needs to determine whether or not there are any discarded units from a single use vial or package, record discarded amounts in the patient medical record, and specify

<sup>140</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/JW-Modifier-FAQs.pdf>.

administered and discarded amounts on the claim form.

We sought comments on the proposals.

The following is a summary of the public comments received on the discarded amount provisions and our responses:

*Comment:* Several commenters expressed general support for the proposed policy. One commenter supported the requirement that manufacturers refund CMS for drug discards.

Another commenter supported a variety of policies to reduce costs related to discarded drugs, including the manufacturer refunds for discards, re-examining the weight-based dosing of drugs, requiring pharmaceutical companies to have vial sizes that more appropriately meet the range of standard dosing, developing more multiple-dose vials that can be shared across multiple patients, and utilizing closed-system transfer devices to extend beyond-use-dating time. One commenter stated the proposed policy may result in manufacturers acting to revise packaging methods and incentivize a reduction in waste across markets and programs. One commenter expressed their belief that the provision would reduce waste and spending in Medicare by discouraging manufacturers from including excessive amounts of drug single-dose containers. One commenter summarized their own analysis of drug discards at their facilities, noting that five chemotherapy drugs accounted for 59 percent of all chemotherapy drug discards, and that these drugs had discards about 3 to 7 times more than all studied drugs did on average.

*Response:* We thank commenters for their support of these proposals. We also thank commenters for their view on discarded amounts of drugs and how the proposed policies may incentivize a reduction in spending on discarded amounts of drugs. We also appreciate the thoughtful analysis of discarded amounts from the practitioner's perspective. We agree that the proposed policies will create such incentives for improved package sizes and presentations of drugs that will reduce amounts that are discarded.

*Comment:* Some commenters expressed general opposition to the implementation of the provision. Two commenters expressed concern that the proposal will disproportionately impact small biotech companies, who will either raise prices for patients or reduce research expenditures. One commenter stated that it is unreasonable to collect refunds for administration processes that generate discarded drug for which

there are no or limited alternatives. One commenter expressed concern that the proposed policy would result in larger amounts of discarded drugs by compelling manufacturers to create more batches of smaller vials with the intention of reducing drug waste, but with the unintended consequence of creating more waste and added costs to undergo the process of retrofitting manufacturing facilities to produce different vial sizes. The commenter also expressed concern that the proposed policy would compel providers to spend effort learning how to administer drugs from new container and package configurations. Some commenters expressed concern that the proposed policy would increase operational burden by incentivizing container size reduction, for example by requiring providers to use more containers than had previously been needed to achieve an appropriate weight-based dose. Two commenters stated that the production of medications in multiple vial sizes would be costly for the manufacturer and inefficient in production. One commenter noted the cost and time required to develop and obtain regulatory approval for a new vial size, which they estimated to be about 2 years and \$10 million. The commenter also noted that there are no assurances that if they gained approval for and distributed treatment in additional vial sizes to reduce discard amounts that providers would stock them. The commenter concluded that the effect of the provision's incentive to use a greater number of vial sizes would be increased treatment costs.

One commenter requested CMS examine the implications of the proposals on products commonly used in neurology. The commenter stated several products commonly used by neurologists are packaged in a way that results in significant amounts of discarded drug. One commenter noted concern that, in response to the discarded drug refund policy, manufacturers may raise the price of certain drugs to compensate for the cost of any refund payments. The commenter urged CMS to ensure that implementation is closely monitored, and that appropriate action is taken to dissuade any manufacturer from compensating for lost revenue with a price increase.

*Response:* With regard to commenters that are generally opposed to the implementation of section 90004 of the Infrastructure Act or generally opposed to CMS collecting a refund, we do not have discretion on whether or not to implement the provision. Regarding small biotech companies being

disproportionately affected, we address concerns about exemptions and unique circumstances in the respective discussions below. This provision does not include any special treatment specifically for small biotech companies.

With regard to the increased burden on manufacturers to potentially manufacture different vial sizes and to providers who would have to adjust to stocking and administering new vial sizes, we acknowledge these concerns, but note that the statute requires payment of refunds for single-dose containers for which the amount discarded exceeds the applicable percentage. We note that the 2020 data showed that Medicare Part B spending on discarded drugs is weighted heavily toward a small number of drug products. With regard to the possibility that the implementation of the provision could lead to increases in discarded drug amounts, we do not have any data that suggests this may be the case. On the contrary, we have seen at least one case in which discarded amounts of a drug decreased after the manufacturer began packaging the drug in an additional smaller vial size: Kyprolis® (carfilzomib) introduced a 10 mg vial in June 2018 in addition to its 60 and 30 mg vials, and its discard percentages were 14.27 percent in 2017, 12.68 percent in 2018, and 5.95 percent in 2019, suggesting the new vial size led to a decrease in the discard percentage below 10 percent. In response to the comments that manufacturers may pass on costs from the investigation and manufacture of new vial sizes, or of refunds to patients, we do not speculate on drug manufacturer pricing strategies. We plan to continue to monitor the discarded amounts and trends with regard to this data; this will be for all drugs payable under Medicare Part B and not specific to any condition, such as neurology. We plan to track associated prices of such drugs and assess discretionary aspects of the policy over time and will undertake additional rulemaking, if warranted. In addition, as noted above, the Inflation Reduction Act was signed into law subsequent to the publication of the CY 2023 PFS proposed rule. Sections 11001 and 11101 establish the Secretary's authority to negotiate prices with drug manufacturers for select Part B and Part D drugs and require manufacturers to pay rebates to the Federal SMI Trust Fund for amounts Part B drug prices exceed inflation-adjusted amounts, respectively.

*Comment:* One commenter stated that the impact of this new requirement is unclear and could potentially increase

the cost of health care delivery, including drug acquisition costs and overhead and labor costs. The commenter requested we actively monitor potential downstream outcomes and mitigate any adverse impacts, as necessary.

*Response:* We plan to continue engaging with manufacturers as we implement the drug discard refund provision to ensure we understand how implementation affects operations, pricing, and costs of healthcare delivery. In addition, section 1847A(h)(9) of the Act requires OIG to consult with CMS and FDA and report to several Congressional committees by November 15, 2024, the impact of this provision on the licensure, market entry, market retention, or marketing of biosimilar biological products. We also intend to monitor effects on other drugs and biologicals impacted by these policies in a similar manner, including but not limited to the ASP of such drugs and discarded units reported using the JW modifier. We already review quarterly ASP data for the calculation of payment allowances, so we will observe trends in the ASP for drugs subject to refunds.

*Comment:* One commenter noted the proposal does not account for discards that occur due to clinical reasons, such as when a physician reduces the dosage of an administered drug if the patient has a heart condition or other comorbidities.

*Response:* Although there may be situations in which there are increased discarded amounts due to clinical circumstances, there is no mechanism on a claim to denote discarded units for a change in clinical circumstance. Section 1847A(h)(3)(B)(i)(I) of the Act requires the refund amount to be the amount above an applicable percentage of 10 percent of the total allowed charges for a drug. We believe that this threshold allows for a certain amount of drug to be discarded for various factors, including clinical reasons, without being subject to a refund. As we noted above, the most recent JW modifier data indicates that drugs with discarded amounts exceeding 10 percent is isolated to a small number of products. There are many drugs provided in single-dose containers with historical discarded amounts below 10 percent, including many chemotherapy drugs, which have specific instructions for reduced dosage in cases of toxicity experienced from the chemotherapy. For example, ixabepilone dosage is based on BSA and the drug is provided in a single-dose vial. The dose modifications indicated in the label direct clinicians to reduce the dose of the drug in certain clinical situations

(the dose reduction could range from 20 to 50 percent depending on the clinical circumstance). Based on the 2020 JW modifier data,<sup>141</sup> this drug had just under 8 percent of units discarded, which is below the applicable percentage of 10 percent, and the manufacturer would not owe a refund if this data were to be for dates of service on or after the effective date of January 1, 2023.

*Comment:* Two commenters stated the statutory construction of section 90004 of the Infrastructure Act requires CMS to define “unused” to complete the statute’s definition of “discarded” referenced in section 1847A(h)(1)(B) of the Act, as the commenters noted that the two are not interchangeable terms. Several commenters requested CMS not include in the definition of “unused” amounts that are required to safely administer a drug, such as liquid amounts in a vial that are needed to assure the appropriate dose is withdrawn into an injector. These commenters stated that determining discarded amounts is a two-step process: first that a drug amount was discarded, and second that the amount did not serve a useful purpose. One commenter noted that the same interpretation of the term “unused” is applied in the hydrogel example (section III.A.6.a of the CY 2023 PFS proposed rule (87 FR 46061 through 46062) in the discussion of unique circumstances) in which we stated that 35 percent would be an appropriate applicable percentage. Several commenters stated that we should consider liquid amounts required to express a needle (or that otherwise gets lost or stuck in the container or administration devices) and to account for dead volume in the transfer or priming of drug administration as useful and not as unused or as discards, in alignment with FDA’s thinking on amount of liquid required in vial fills. Commenters stated these liquid amounts effectuate clinical outcomes. Another commenter suggested CMS define “discarded amount subject to refund” to exclude amounts left over when the product contains the minimum fill required for clinicians to draw up the appropriate labeled therapeutic dose.

One commenter requested that we exclude units administered as part of a drug’s induction or loading dose(s), which are initial dose(s) of a drug therapy that may differ from the subsequent maintenance dosing

regimen. The commenter stated that induction and loading doses may involve variable dosing depending on the patient’s specific circumstances. The commenter suggested we use a modifier to identify such doses in claims. This commenter also requested that we exclude units of drugs administered in combination with other drug therapies. The commenter explained that when drugs are used in combination, the dosing of each drug is likely to vary based on factors such as the disease/condition being treated and adjustments for potential adverse events, and it makes little sense to manufacture container sizes to take all such combinations into account. The commenter added a request that we establish a claims modifier to identify drugs administered in combination with others.

*Response:* As we stated in the proposed rule, when a provider must discard the amount of drug that was unused (that is, the discarded amount) from a single-dose container of a drug after administering a dose to a Medicare beneficiary, the program provides payment for the unused and discarded amount, as well as the dose administered, up to the amount of the drug indicated on the vial or package labeling.

We clarify how we interpret “the amount of such drug that was unused and discarded,” with respect to that which should be reported as discarded based on section 1847A(h)(1)(B) of the Act, as any amount that is not a part of the dose and is not intended to have a therapeutic effect in the patient. Even if certain amounts are extracted from the vial or are required to be in the vial to administer the prescribed dose, we do not consider them to be used if they are not intended for therapeutic effect as part of the prescribed dose. This is contemplated by the statute as evidenced by the exclusion of drugs requiring filtration during the preparation process as described in section 1847A(h)(8)(B)(ii) of the Act, and by the treatment of drugs that have unique circumstances in section 1847A(h)(3)(B)(ii) of the Act. If the amount of drug lost during filtration was not considered to be an unused and discarded amount, this exclusion would not be necessary. Similarly, with regards to the treatment of drugs with unique circumstances, the statute says the Secretary may, through notice and comment rulemaking, increase the applicable percentage in the case of a refundable single-dose container or single-use package drug that has unique circumstances involving similar loss of product as that described in section

<sup>141</sup> <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units/data>.

1847A(h)(8)(B)(ii) of the Act, which describes the loss due to filtration. Since the statute prescribes that amounts lost in a manner similar to filtration during preparation may be considered a unique circumstance (and may warrant an increased applicable percentage), these amounts are generally considered unused and discarded for the purposes of determining discarded amounts. Otherwise, such amounts would not be required to be billed using the JW modifier, and an increased applicable percentages would not be needed. Based on this, generally, we consider the amount that is unused and discarded to be the labeled amount on the single-dose container (or containers if more than one is required) minus the dose (the dose being the prescribed amount of drug).

As examples, we consider labeled amounts remaining in the vial, amounts remaining in the syringe hub, and amounts remaining in the syringe that are not a part of the dose intended for therapeutic effect (as reflected in the product label or that would be reflected on a provider's prescription for the drug) to be unused and discarded. As discussed above, such amounts are similar to situations where filtration is required during preparation, and therefore, are contemplated by the statute to be unused and discarded amounts. In addition, we believe that this approach is the simplest for providers to determine on claims forms and in the medical record.

With regard to the request to exclude units administered as part of a drug's induction or loading dose and the request to exclude units of drugs administered in combination with other drug therapies, we disagree that such discarded amounts as a result of such doses should be excluded from being reported using the JW modifier, because the statute allows for a certain amount to be discarded (that is, the minimum applicable percentage of 10 percent). When an induction or loading dose is administered, there may subsequently be larger amounts of drug left in the single-dose container when compared with the amount of drug left in the container if a typical dose had been administered. As described above, we consider amounts left in the vial to be unused and discarded because they were not part of the dose that was intended for therapeutic effect. We disagree that an additional modifier is needed to report amounts administered in these circumstances because, as discussed above, the threshold of an applicable percentage of 10 percent, as required in section 1847A(h)(3)(B)(i)(I) of the Act, allows for a certain amount

of discarded drug. This 10 percent threshold allows for circumstances when a loading dose or induction dose is administered, or when a drug is administered in combination with other drug therapies, before a refund would be required.

*Comment:* Three commenters supported CMS's proposal to exclude overfill amounts from being taken into consideration when determining the number of units that are discarded, but two of these commenters requested that the regulatory text be updated to clearly reflect this. The commenters stated that without this clarification, physicians may mistakenly report overfill amounts as discarded amounts, leading to inaccurate refund amounts. Commenters stated that while the preamble and guidance is clear, the regulatory text is confusing because some providers may interpret a "billing unit" to also reference overfill units. Commenters recommended revisions to the proposed regulatory text changes at § 414.940(a)(1)(iii) and (c)(1)(i). One commenter requested clarification about whether providers should report discards of overfill. One commenter encouraged provider education that the JW modifier should not be used to report discarded amounts of overfill.

*Response:* We disagree that changes to the regulatory text are needed for clarification. As stated in our longstanding JW modifier FAQs, the JW modifier must not be used to report discarded amounts of overfill, which is any amount of drug greater than the amount identified on FDA-approved labeling. We reiterate the overfill policy, as stated in the CY 2011 PFS final rule (75 FR 73466 through 73470), that contents of a vial or package that are considered overfill are not included in the total billing units contained in the vial or package, and also do not count toward the number of billing units that are discarded.

*Comment:* Two commenters requested that we clarify that drug discard refunds under section 1847A(h) of the Act are excluded from ASP, average manufacturer price (AMP), and the Medicaid best price calculations.

*Response:* We do not consider the discarded drug refund to be a price concession that is described in section 1927 of the Act. Since these Part B refunds represent reimbursement by manufacturers to Medicare for a discarded amount that is "otherwise unsalable returned goods" manufacturers may exclude these Part B discarded drug refunds from determinations of best price and AMP (including 5i AMP). Section 1927(k)(1)(B)(i)(III) of the Act states that

AMP shall exclude reimbursement by manufacturers for recalled, damaged, expired, or otherwise unsalable returned goods, including (but not limited to) reimbursement for the cost of the goods and any reimbursement of costs associated with return goods handling and processing. We implemented this statutory language in regulations for the determination of AMP (see 42 CFR 447.504(c)(16) and (e)(7)), and the determination of best price (see § 447.505(c)(14)).

We note that manufacturers typically have established internal policies regarding returned purchases, and to the extent that the reimbursement by the manufacturer for returned goods is consistent with the requirements of section 1927 of the Act and applicable federal regulations, such reimbursement made by the manufacturer shall be excluded from AMP. Standard industry practices and manufacturer policies should govern the determination of what is unsalable, provided such practices are consistent with section 1927 of the Act and applicable federal regulations. What is "unsalable" can vary by the product, and manufacturers should rely upon prevailing business standards to determine circumstances when their products are unsalable.

Section 1847A(c)(2)(A) of the Act states that sales exempt from the inclusion in the determination of Medicaid best price are also excluded from the calculation the manufacturer's ASP. Since discarded drug refunds are considered to be "otherwise unsalable returned goods" and manufacturers may exclude discarded drug refunds from determination of best price, manufacturers may also exclude such refunds from the calculation of ASP.

Therefore, with regard to the calculation of ASP, AMP, or the Medicaid best price, the refund amounts may be excluded from such determinations.

*Comment:* Several commenters expressed support for our proposal to require the use of the JZ modifier to attest that there are no discarded amounts. One of the commenters expressed support for methods that could increase JW reporting. One commenter expressed support for our proposal to require institutional providers and ASCs to report the JW modifier, or any successor, on Part B medication claims.

*Response:* We thank the commenters for their support. We believe that the JZ modifier requirement will improve the completeness of the discarded drug data to effectively implement section 90004 of the Infrastructure Act.

*Comment:* Many commenters opposed our proposal to require the JZ modifier when no amount is discarded from a single-dose container. Commenters considered its use unnecessary for documenting discarded amounts, overly burdensome, and potentially confusing. Commenters stated that the JW modifier on its own is sufficient to calculate discarded amounts for drugs and biological products subject to this provision. A few commenters expressed the belief that providers are correctly reporting JW modifier data on claims, and that we have no evidentiary basis for believing our JW data is incomplete. Other commenters acknowledged that providers sometimes omit the JW modifier, and suggested several reasons for underreporting, including administrative resource constraints, the lack of incentives for its use, and inability to measure discard amounts. One commenter opposed the requirement to use the JZ modifier on the grounds that the burden of identifying drugs administered with no discarded amounts should fall on CMS or manufacturers, rather than the provider.

*Response:* We disagree with the assertion that the JZ modifier is unnecessary and that we lack evidence to show that reported JW modifier data fails to convey a full account of drug discard data. The National Academies of Sciences, Engineering, and Medicine provided an analysis conducted by the Committee on Implications of Discarded Weight-Based Drugs<sup>142</sup> which indicates low compliance with the JW modifier requirement. Their analysis of Medicare claims found that the level of compliance is variable among providers, and that nearly two-thirds never used the modifier at all. In addition, providers who use the modifier do not do so consistently, and they vary in their reporting from one drug to another, and across claims for the same patient and drug. Based on these findings, we believe current data for discarded drug amounts are underestimates due to omission of the JW modifier when it should be used, even though reporting the JW modifier has been required since 2017. Accordingly, we believe that more complete data is needed. We believe the most practicable method for improving our data quality is by requiring

providers filing claims for drugs from single-dose containers to report either a JW modifier when there are discarded amounts, or JZ modifier when no amount is discarded. We continue to believe providers are the only party that can obtain complete and accurate information on used and discarded amounts of variably dosed drugs. While we acknowledge that, in some situations, it may be difficult to quantify discarded quantities of drugs and associate the specific amount with a single beneficiary, we believe that, in most situations, there are no practical impediments that would prevent billing providers or other staff, such as nurses or pharmacists, from incorporating the measurement of discard amounts into the process of preparing and administering the drug. We also believe that the observation and recording of no discard amounts using the JZ modifier does not add additional burden beyond the existing requirement of measuring discarded amounts by use of the JW modifier. If a provider is already required to determine whether there are discarded amounts from single-dose packages, then they are already assessing and documenting what is needed for the JZ modifier. Since the assessment is already required, the only additional action needed by the provider is to add JZ on the claim form when there are no discarded amounts. Thus, we believe the burden for reporting the JZ modifier is minimal and justifiable.

*Comment:* Commenters requested that we take care to minimize administrative burden in the implementation of section 90004 of the Infrastructure Act, and many suggested several alternatives to the JZ modifier. Several commenters recommended that we enhance education efforts and outreach to providers on JW modifier use instead of requiring the use of the JZ modifier. One commenter requested that we instead amend our claims policy to state that the absence of reporting the JW modifier on claims for single-dose containers is an attestation that there is no amount of discarded drug. Several commenters suggested we only require JW and JZ modifier use for drugs associated with significant discards and refund obligations while focusing data collection efforts on JW data for those drugs. Two commenters recommended that instead of requiring the use of the JZ modifier, we develop a new claims modifier for drugs subject to the refund which, in conjunction with JW modifier data, would produce the information set we need to issue refund obligations.

*Response:* As noted above, since the JW modifier is underreported, the

absence of the modifier cannot be relied upon to signify that there is no amount of discarded drug.

In response to the request that we require the use of the JW and JZ modifiers only for drugs that are associated with high discard amounts in recent quarters, or any other subset of separately payable Part B drugs from single use vials or single use packages, we believe that approach is likely to lead to confusion among providers and billers, who may mistake which drugs are included or excluded from the relevant subset from one quarter to the next. Additionally, we do not see the practicality of establishing a separate modifier for drugs for which manufacturers will have refund obligations, particularly as the set of refundable drugs will likely shift across quarters.

*Comment:* One commenter stated their current billing software cannot currently add either the JW or JZ modifier, so under the proposed modifier requirements for claims covered by the proposed policy, modifier codes would both have to be handwritten in by non-clinical staff that smaller facilities cannot afford to recruit. The commenter added that billing software is space-limited and requested CMS only require the use of modifiers that provide the most information.

Two commenters stated that the addition of new claims requirements not paired with increased reimbursement or other incentives would exacerbate strains on provider resources at a time of staffing shortages. One commenter expressed concern about the additional workload collecting discard data would impose on pharmacists and pharmacy technicians. The commenter requested compensatory reimbursements for such pharmacists and pharmacy technicians for the work involved with collecting discard data. In addition, the commenter urged CMS to adopt a mechanism for calculating discard amounts that can be incorporated into existing processes and use as much automation as possible. One commenter requested that we assess administrative impacts the implementation of section 90004 of the Infrastructure Act will have on provider practices.

*Response:* The JW modifier policy has been in place since 2017, and we are codifying it without change in this final rule. Providers should currently be reporting the JW modifier on their claims, as well as documenting the discarded amounts in the beneficiary's medical records. We understand that providers do not currently have the capability to accept or report the JZ

<sup>142</sup> National Academies of Sciences, Engineering, and Medicine. 2021. Medications in single-dose vials: Implications of discarded drugs. Washington, DC: The National Academies Press. <https://doi.org/10.17226/25911>. National Academies of Sciences, Engineering, and Medicine. 2021. Medications in Single-Dose Vials: Implications of Discarded Drugs. Washington, DC: The National Academies Press. <https://doi.org/10.17226/25911>.

modifier. We expect that a 6-month delay in the requirement to use the JZ modifier would allow providers sufficient time to incorporate necessary updates to their claims systems to report JW or JZ modifiers as required by October 1, 2023, they should hold their claims until they are able to do so. Claims submitted without required modifier data will not be accepted. If the provider has any other technical issues with submitting the required modifier data, we expect the provider to work with their Medicare Administrative Contractor (MAC) on an acceptable approach to submitting claims.

We also understand that providers and administrative staff spend substantial time on recordkeeping and submitting claims, and adding claims requirements without removing requirements of equal burden places strain on provider practices. However, providers have been required to identify discarded amounts of drugs from single-dose containers since 2017, so providers should already have established processes for making these assessments and recording JW data as appropriate.

In response to whether a method can be developed by CMS for the automated calculation of discard amounts, we are not in a position to know which vial or container size of a drug or biological a physician has selected for a patient nor the amount that has been discarded. For assistance in calculating discard amounts, we recommend providers and billers work with drug manufacturers to develop methods for assessing discard amounts in the easiest manner.

*Comment:* One commenter requested clarification on all documentation elements of our proposal. The commenter expressed concern about documentation burdens, including documentation that proves that prepared and administered drug amounts match what was billed, as well as documentation that reports white-bagged or specialty drugs provided as patient assistance. The commenter added that this documentation is done manually.

*Response:* The JW modifier policy has been in place since 2017, and we are codifying it without change in this final rule. In the JW modifier FAQ, it states that the JW modifier policy applies to providers and suppliers who buy and bill drugs and is intended to track discarded amounts of drugs that occur as a result of the preparation of a drug dose for administration to a beneficiary. Also, providers and suppliers must document the amount of discarded drugs in Medicare beneficiaries' medical records. The document also states that

CMS expects that providers and suppliers will maintain accurate (medical and/or dispensing) records for all beneficiaries, as well as accurate purchasing and inventory records for all drugs that were purchased and billed to Medicare. General guidance on documentation is available in MLN Matters SE 1316. Providers and suppliers should also check with the MAC that processes their Part B drug claims for any additional information on billing and documentation is available at the local level.

With regard to the JZ modifier, it must be used on the claim line with the billing and payment code of the drug when no amounts were discarded. CMS will not require that the provider note in beneficiary's medical record when no amounts are discarded. We will update the JW modifier FAQ document to clarify billing and documentation requirements consistent with this final rule.

With regard to documentation for "white bagged" or specialty drugs that a provider does not purchase, such drugs are not payable under Part B, are not subject to the JW/JZ modifier policy, and are not subject to the discarded drug refund.

*Comment:* Several commenters requested a delay in the requirement to use the JZ modifier in claims to account for the time needed to develop, test, and implement changes to claims processing systems, as well as for provider education and adoption. One commenter requested the effective date of the provision to be delayed one year, to January 1, 2024, to accommodate software modifications to support the reporting of the JZ modifier. The commenter stated that it is not realistic to expect software development and adoption to occur by January 1, 2023.

Several commenters expressed concern that confusion and errors in use of the JZ modifier by providers may cause billing errors, including claims denials, and could slow claims processing and provider revenues. One commenter expressed concern over general risks associated with noncompliance with the JZ modifier requirement.

One commenter stated providers may experience confusion on correct JZ modifier use when billing for the administration of generic drugs.

Several commenters urged that we undertake adequate educational efforts on JW and JZ reporting requirements, including the issuance of guidance and collaboration with provider communities. Several other commenters offered to collaborate with us on

outreach and education efforts for the JW and JZ reporting requirements.

*Response:* We thank the commenters for their feedback and note that they highlighted several constraints in the implementation of any new billing and coding elements. After consideration of these comments, we acknowledge that incorporating the new coding modifier by January 1, 2023 may not be feasible for many providers. Therefore, the JZ modifier will be effective starting January 1, 2023, but not required until July 1, 2023. For dates of service beginning July 1, 2023 or after, providers will be required to use the JZ modifier on claims for single-dose containers when there are no discarded amounts, but CMS will not perform claims processing edits on its use. Then, beginning October 1, 2023, we will begin edits for correct use of both the JW and JZ modifiers for billing and payment codes that are required to use the modifiers based on the policy we are finalizing in this final rule. We expect this 9-month transition period will allow providers, billing software vendors, and MACs enough time to adjust billing and claims review processes before providers are at risk for noncompliance, as CMS typically posts updates to the Medicare Claims Processing Manual 5 months prior to implementation. Following the publication of this final rule, we will work to engage providers on claims coding requirements, including through the Medicare Learning Network, Changes Requests and associated CMS internet Only Manual sections, and updating the JW modifier FAQ document<sup>143</sup> to reflect the new JZ modifier requirement, and the issuance of technical guidance to MACs. We will take any opportunity to engage with interested parties to improve our outreach and education efforts.

We understand commenters' concerns that confusion about JW and JZ modifier use could cause compliance issues and, when edits for the modifiers are implemented, delays to provider payments. We expect the delay in the compliance date for JZ modifier use to July 2023, as well as the delay in edits for both the JW and JZ modifiers to October 2023, will give providers time to become familiar with our educational resources on the new requirement, adopt necessary changes to their claims processing software, and adjust recordkeeping and billing practices accordingly.

<sup>143</sup> <https://www.cms.gov/medicare/medicare-fee-for-service-payment/hospitaloutpatientpps/downloads/jw-modifier-faqs.pdf>.

In response to the commenter's concern regarding the correct use of the JW modifier on claims for the administration of generic drugs, we are clarifying that we are finalizing the requirement to code either the JW or JZ modifier on claims for drugs from all single-dose containers payable under Medicare Part B, regardless of whether the drug meets the definition of refundable single-dose container or single-use package drug; this includes both single source and multiple source drugs. This is consistent with our proposal to align the policy for the JZ modifier with the current JW modifier policy. That is, the JZ modifier would be required when there are no discarded amounts from single use vials or single use packages payable under Part B for which the JW modifier would be required if there were discarded amounts. As the requirement to use the JW modifier to report discarded amounts has been our policy since 2017, we are finalizing in this rule that providers must report the JW modifier in all outpatient settings beginning January 1, 2023, but as discussed, we are delaying the compliance date for the JZ modifier to July 1, 2023. Although we will only calculate manufacturer refunds with JW modifier data from single source drugs and biologicals, discarded drug data for drugs that do not meet the definition of refundable single-dose container or single-use package drug will provide us with useful information about drug discards in the Medicare program generally.

*Comment:* Several commenters requested guidance on appropriate JW and JZ modifier use. A few inquired about application and proper use of the modifiers as they relate to claims for drugs that fall under one or more of the exclusions provided in section 90004 of the Infrastructure Act, drugs that are packaged for payment, drugs from pre-filled syringes, "cellular and/or tissue-based products for skin wounds", and drugs from single-dose containers that are used for multiple patients, as may occur with repackaged or compounded drugs.

One commenter asked how the MACs will process claims that omit both the JW and JZ modifiers. One commenter requested clarification whether the billing provider should use the vial size purchased or smallest vial size available that could have been used to treat the patient as the basis for calculating discarded amounts. One commenter asked that we address confusion related to JW modifier policy as stated in MLN Matters article SE1316, issued August 1, 2013, that discarded drug amounts reported with the JW modifier "must

correspond with the smallest dose (vial) available for purchase from the manufacturer(s) that could provide the appropriate dose for the patient, while minimizing any wastage." The commenter stated that providers have difficulty identifying what is the smallest dose vial available for purchase for which they are required to report wastage.

*Response:* As discussed above, we are finalizing that beginning January 1, 2023, use of the JW modifier will be required in claims for all drugs separately payable under Part B that are designated as a single-dose container on the FDA-approved label or package insert for which amounts of the drug are discarded. Similarly, beginning no later than July 1, 2023, the use of the JZ modifier will be required for all drugs separately payable under Part B that are designated as a single-dose container on the FDA-approved label or package insert for which there are no discarded amounts. Claims for drugs subject to this provision that do not report the JW or JZ modifier on or after July 1, 2023, may be subject to provider audits. Claims that do not report the modifiers as appropriate on or after October 1, 2023, will be returned as un-processable until claims are properly resubmitted.

With regard to what vial size should be used to calculate discarded amounts, discarded amounts should be calculated using the labeled amount of the product that is actually purchased to prepare the dose, not the labeled amount of the smallest vial size that could have been purchased. The guidance referenced in MLN Matters article SE1316 is no longer effective, as it has been superseded by MLN Matters article MM9603, which was issued on June 9, 2016, and effective January 1, 2017. This article notified providers of updates to JW modifier instructions in Claims Processing Manual 100-04, Chapters 17, in which providers are instructed to use the JW modifier line to bill for discarded amounts from the single use vial or other single use package of the drug or biological administered to the patient.

As stated above, we will update our JW modifier FAQ, Change Requests and associated IOM guidance, and issue a new MLN article, to reflect the coding changes finalized in this rulemaking.

*Comment:* One commenter requested direction on how to measure discard amounts of drugs from small container sizes, such as those with fill volumes of one mL or less.

*Response:* As described in the proposed rule, when a provider must discard the amount of drug that was unused (that is, the discarded amount) from a single-dose container of a drug

after administering a dose to a Medicare beneficiary, the program provides payment for the unused and discarded amount, as well as the dose administered, up to the amount of the drug indicated on the vial or package labeling. We clarified that above that, generally, we consider the dose (as described, for example, in the dosage and administration section of the FDA-approved labeling) as the administered amount and any other amount as discarded. This applies to determining discarded amounts from all vial sizes, including vial sizes less than 1 mL. The provider would bill the number of billing units that represent the dose administered on one line of the claim form and, on a separate line, bill the number of billing units of the drug that were discarded. The unused and discarded amount can be calculated by determining the labeled amount on the vial and subtracting the dose that was administered to the patient.

*Comment:* Several commenters stated that the required use of the JZ modifier contradicts congressional intent in the drafting of this provision.

*Response:* We disagree with the commenters. The statute specifies that we use a mechanism such as the JW modifier to collect data on discarded amounts. The use of the JZ modifier is consistent with such a mechanism because it will complement the use of the JW modifier and will likely increase the accuracy of JW modifier data.

*Comment:* One commenter requested we extend the requirement to report discarded drug data with the JW modifier to additional drugs to obtain more information on discarded amounts and related costs in Parts B and C. The commenter requested the additional JW data be publicly reported.

*Response:* At this time, we are only finalizing that JW and JZ modifiers be used for billing drug separately payable under Part B that are designated as a single-dose container on the FDA-approved label or package insert. Medicare data on Part B discarded amounts is available at <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>. While we did not consider expanding the scope of discarded drug reporting in this rulemaking, we look forward to further feedback from the public on methods to identify and reduce unnecessary costs in the Medicare program.

After consideration of public comments, we are finalizing our proposal to codify our existing policy and require that billing providers report the JW modifier for all separately

payable drugs with discarded drug amounts from single use vials or single use packages payable under Part B, beginning January 1, 2023. We are also finalizing our proposal to require billing providers to report the JZ modifier for all such drugs with no discarded drug amounts beginning no later than July 1, 2023, and we will begin claims edits for both the JW and JZ modifier beginning October 1, 2023.

### 3. Refundable Single-Dose Container or Single-Use Package Drug

As discussed in the CY 2023 PFS proposed rule (87 FR 46058 through 46059), section 90004 of the Infrastructure Act added section 1847A(h)(8) of the Act, which defines in subparagraph (A) of such section the term “refundable single-dose container or single-use package drug” as a single source drug or biological (as defined in section 1847A(c)(6)(D) of the Act) or a biosimilar biological product (as defined in section 1847A(c)(6)(H) of the Act) for which payment is made under Part B and that is furnished from a single-dose container.

For the purposes of section 1847A(h) of the Act, we proposed that the definition of “refundable single-dose container or single-use package drug” would apply to drugs paid under Medicare Part B (that is, under any payment methodology) that are described as being supplied in a “single-dose” container or “single-use” package based on FDA-approved labeling. This definition also includes drugs described in FDA-approved labeling as a part of a “kit” that is intended for a single dose or single use. We noted that the JW modifier data published on the CMS website is limited to only billing and payment codes that are published on the ASP Drug Pricing File. Therefore, there are likely billing and payment codes payable under Medicare Part B that would meet the proposed definition of refundable single-dose container or single-use package drug that are not found on the ASP drug pricing file or the JW modifier data published on the CMS website.

We stated that in our analysis of drugs that meet this definition, there may be a need to revise existing billing and payment codes or establish a new billing and payment codes for the purposes of implementing these provisions because estimated total number of units discarded and total allowed charges must be determined at the billing and payment code level for the purpose of calculating refund amounts. For example, if there is a drug that meets the definition of refundable single-dose container or single-use

package drug that does not have a unique billing and payment code, a new code may be needed for the purposes of estimating the total number of units that were discarded during such quarter and the total allowed charges.

We also stated that there may be drugs for which there are national drug codes (NDCs) of single-dose containers and NDCs of multiple-dose containers under the same FDA approval, and these NDCs are assigned to the same billing and payment code. We proposed that for a drug to meet the definition of “refundable single-dose container or single-use package drug,” all NDCs assigned to the drug’s billing and payment code must be single-dose containers, as described in each product’s labeling.

We explained that section 1847A(h)(8)(B) of the Act specifies that the term “refundable single-dose container or single-use package drug” excludes drugs that are either radiopharmaceuticals or imaging agents, drugs that require filtration during the drug preparation process, and drugs approved on or after the date of enactment of the Infrastructure Act (that is, November 15, 2021) for which payment under Part B has been made for fewer than 18 months.

#### a. Exclusions for Radiopharmaceuticals and Imaging Agents

Section 1847A(h)(8)(B)(i) of the Act excludes a drug or biological that is either a radiopharmaceutical or an imaging agent. We proposed to identify radiopharmaceuticals (including therapeutic or diagnostic radiopharmaceuticals) and imaging agents (including contrast agents)<sup>144</sup> for purposes of the exception at section 1847A(h)(8)(B)(i) of the Act by language describing them as such in FDA-approved labeling.

We proposed to codify the exclusion of radiopharmaceuticals and imaging agents from the definition of “refundable single-dose container or single-use package drug” at § 414.902.

#### b. Exclusions for Drugs Requiring Filtration

Section 1847A(h)(8)(B)(ii) of the Act excludes from the definition of refundable single-dose container or single-use package a drug approved by FDA for which dosage and administration instructions included in the labeling require filtration during the drug preparation process, prior to dilution and administration, and require that any unused portion of such drug after the filtration process be discarded

after the completion of such filtration process. As the statute states, for the purposes of this exclusion, the filtration must occur prior to dilution and administration. Therefore, for example, the definition excludes those drugs requiring filtration in order to remove the product from a vial, such as drugs contained within ampules or certain liposomal products that require filtration when removing the product from the manufacturer’s vial consistent with FDA labeling. However, drugs that require in-line filters only as part of the drug administration process would not meet this exclusion. We proposed that, consistent with section 1847A(h)(8)(B)(ii) of the Act, requirement for filtration must be present on FDA labeling in order for the drug to be excluded.

Additionally, consistent with our longstanding interpretation of the distinction between multiple source drugs and single source drugs (see program instructions available at [https://www.cms.gov/Medicare/Coding/MedHCPSCGenInfo/Downloads/051807\\_coding\\_announcement.pdf](https://www.cms.gov/Medicare/Coding/MedHCPSCGenInfo/Downloads/051807_coding_announcement.pdf)), we are proposing if there is any NDC under a single New Drug Application (NDA) or Biologics License Application (BLA) that requires filtration as described in section 1847A(h)(8)(B)(ii) of the Act, then all NDCs of such drug or biological (that is, any billing and payment code to which any such NDCs are assigned) would be excluded from the definition of refundable single-dose container or single-use package drug, even if other products under the relevant approval and assigned to that billing and payment code do not require such filtration. We noted that this is appropriate because drugs and biologicals payable under Medicare Part B are billed at the level of the billing and payment code (not with the NDC of the individual product). If some products that require filtration and some products that do not require filtration are assigned to the same billing and payment code, we would not be able to distinguish (based on JW modifier data) which discarded amounts were from the filtered product and which were from the non-filtered product.

#### c. Exclusions for Drugs for Which Payment Under Medicare Part B Has Been Made for Fewer Than 18 Months

Section 1847A(h)(8)(B)(iii) of the Act excludes from the definition of refundable single-dose container or single-use package drug approved by FDA on or after November 15, 2021 and for which payment has been made under Part B for fewer than 18 months. Typically, if their use is reasonable and

<sup>144</sup> <https://www.fda.gov/media/72295/download>.

necessary and all other coverage requirements are met, FDA-approved drugs become payable under Medicare Part B on the date which they are marketed in the United States. However, we are not able to reliably determine the exact date on which the first Part B claim was paid for a particular new drug because they are usually first billed using an unclassified drug or biological billing and payment code. Therefore, our ability to accurately determine when payment for a new drug has been made under Part B for 18 months is exceedingly limited. Because of the operational challenges with identifying the date of when the first Part B claim was paid for a new drug and because this exclusion would be operationally difficult to implement if the 18-month period ends in the middle of a calendar quarter, we noted that we believe it is appropriate to measure the 18-month period using the first day of the calendar quarter following the date of first sale as reported to CMS, which is a required field for reporting ASP data.<sup>145</sup> That is, for purposes of this exclusion, we proposed to consider the 18-month period to begin on the first day of the calendar quarter following the date of first sale as reported to CMS for the drug. Because 18 months is the equivalent of 6 calendar quarters, under our proposed approach, refundable single-dose container or single-use package drugs approved or licensed by FDA on or after November 15, 2021 would be excluded from the definition of refundable single-dose container or single-use package, and thus, not subject to a refund, for the first 6 full calendar quarters following the date of first sale for any NDCs of such drug. Thereafter, that is, beginning with dates of service after the last day of the sixth full sales quarter, the drug would no longer be excluded from the definition of refundable single-dose container or single-use package drug. For example, if a drug that would otherwise meet the definition of refundable single-dose container or single-use package drug is approved by FDA in June 2023 and the first date of sale is June 20, 2023, the first day of the calendar quarter following the date of first sale for such drug would be sales occurring in the third calendar quarter of 2023 (July 1, 2023 through September 30, 2023), and we would consider the drug to be excluded from the definition for the next 6 quarters (that is, through December 31, 2024). As of January 1,

2025, the drug would no longer be excluded from the definition of refundable single-dose container or single-use package drug and would be subject to applicable refunds.

We proposed that exclusion would apply only once for a drug. That is, it would apply for the first NDC of such drug assigned to a billing and payment code and paid under Medicare Part B. If additional NDCs in the same billing and payment code, such as a new vial size or ready-to-use syringe, were subsequently approved under the same FDA approved application (for example, under the same approved NDA or BLA number), marketed, and paid under Part B, these subsequent NDCs would not start a new 18-month exception period. We noted that we believe this proposed approach is appropriate to prevent a drug from periodic or continual exemption from reports and refunds due to new NDCs that are marketed under the same FDA-approval.

We proposed to add a new definition at § 414.902 of “refundable single-dose container or single-use package drug,” which would be defined to mean a single source drug or biological or a biosimilar biological product for which payment is made under this part and that is furnished from a single-dose container based on FDA-approved labeling or product information, except as otherwise specified. We welcomed comment on the proposed implementation of these statutory exclusions.

The following is a summary of the public comments received on the refundable single-dose container or single-use package drug provisions and our responses:

**Comment:** Several commenters requested CMS add additional exclusions from this provision for various drugs or drug categories. One commenter stated that implementation of this provision will likely have disproportionately negative impacts to small biotech companies that received FDA approval through expedited development and review programs. The commenter explained that under expedited programs such as Breakthrough Therapy Designation (BTD),<sup>146</sup> it is more challenging for manufacturers to determine optimal vial size for the purpose of Medicare payment when focus is primarily on rapid clinical testing. The commenter stated for breakthrough therapy, the vial size is developed in a manner that would best match the dosage needed by

most trial participants, while also promoting efficient care delivery. The commenter stated that in an expedited program using a single vial size is more efficient from a resource, compliance, and complexity standpoint. The commenter requested that CMS specifically exclude products from small biotech companies that received BTD and FDA Priority Review. The commenter noted that the Inflation Reduction Act has a similar exception for small biotech companies in its price negotiation provision.

Two commenters requested that we exclude orphan drugs because such drugs have differing manufacturing conditions because of the smaller scale of demand and production. One of these commenters stated that failure to exempt orphan drugs from refunds could have the detrimental effect of stifling innovation and limiting development of new rare disease treatments that may require weight-based dosing. One commenter added that even if an orphan drug were produced in multiple vial sizes, the supply of each vial size may be limited or providers may not stock all sizes due to the rarity of the condition being treated. One commenter requested that we exclude all biosimilar biological products. The commenter stated that they believe this would be justified because FDA regulations require that biosimilar biologicals have the same dosage form and packaging as their reference biologicals. In addition, the commenter noted that biosimilar biological manufacturers cannot make changes to factors such as vial size that are not first made by the reference product's manufacturer.

Two commenters requested we exclude all ophthalmic drugs or drugs with small volumes administered (1 mL or less). Similarly, four commenters asserted that the exceptions for small vials are necessary because of unique circumstances. We discuss the unique circumstances of drugs with small volumes and vial sizes below in section III.A.6.a. of this final rule.

One commenter requested we establish a unique modifier to signal the exclusion of drugs administered via “microdose dispensing.”

**Response:** We appreciate commenters' insight to the variety of manufacturers and products that may be affected if a product meets the definition of refundable single-dose container or single-use package drug and does not meet a statutory exclusion. The statute defines refundable single-dose container or single-use package drug broadly, makes limited exceptions to the definition, and directs the use of JW

<sup>145</sup> [https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice/Downloads/ASP\\_Data\\_Collection\\_Validation\\_Macro\\_User\\_Guide.pdf](https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice/Downloads/ASP_Data_Collection_Validation_Macro_User_Guide.pdf).

<sup>146</sup> <https://www.fda.gov/patients/fast-track-breakthrough-therapy-accelerated-approval-priority-review/breakthrough-therapy>.

modifier or similar mechanism to calculate the refunds owed. Drugs with BTD and FDA priority review and ophthalmic drugs with small vial sizes are not addressed by any of the statutory exclusions and are thus subject to the JW and JZ modifier policy. This JW modifier data will be used to calculate refund obligations as required by statute.

*Comment:* One commenter suggested CMS consider excluding any off-label use of applicable drugs from the annual report and calculations of the discarded drug refund, because off-label use could involve significantly different dosing that varies greatly from the tailored vial size that was designed for the labeled indication(s).

*Response:* When a provider bills for a drug, it is reported using the drug's billing and payment code, which does not allow for particular designation regarding the indication (or whether the drug was used off-label). Therefore, there is no way to indicate on a claim that a drug from a single-dose container was used for an off-label use. Thus, the drug would still be subject to the JW and JZ modifier policy and that JW data would be used to determine refund obligations.

*Comment:* One commenter stated that the discarded drug provision may interrupt access for some patients to certain treatments. This commenter stated that CMS should allow manufacturers additional time to comply with the provision to prevent supply interruptions, and suggested that CMS should temporarily exempt manufacturers from the refund while they develop new vial sizes for approval by the FDA. The commenter also suggested that CMS develop a process for exemption requests and the provision of temporary relief from compliance for the requesting party. In addition, the commenter suggested that CMS seek comment on other drug exceptions to the provision, such as when compliance would negatively impact patient access.

One commenter requested CMS consider a broader, transparent exemption policy that would consider the wide range of reasons for which certain amounts of product may be unused (for example, an interrupted procedure, changes in clinical circumstance), including a detailed exemption request process. The commenter recommended that CMS strike a balance in providing exclusions to allow provider discretion when additional drug is needed.

*Response:* CMS does not have discretion to delay the effective date of this provision, and therefore, cannot

allow for an alternative effective date. As stated above, the statute defines refundable single-dose container or single-use package drug broadly, makes limited exceptions to the definition, and directs the use of JW modifier to calculate the refunds owed. We are not considering an exemption policy at this time outside of the exclusions specified in statute. We have discretion, under the statute, to consider unique circumstances and increased applicable percentages, which are discussed further below.

*Comment:* Several commenters stated that the proposed rule inappropriately applies the provision to drugs administered in hospital outpatient departments and ambulatory surgical centers, which would cause inappropriate refund obligations. In support of this argument, the commenters stated that the provision was placed within, and the statutory language only references calculations and payments under, section 1847A of the Act and does not reference section 1833(t) of the Act. These commenters stated that the lack of reference to payments under section 1833(t) of the Act precludes counting units paid under the OPPS or ASC payment system. One commenter stated the application of this provision is particularly inappropriate if future cuts to hospital reimbursement for 340B drugs are implemented. One commenter expressed concern about the possibility of an overlap between refunds calculated under this provision and discounts made available to covered 340B entities. The commenter asked CMS to develop a policy or process to ensure such layered price concessions do not occur, which could be done by stating that OPPS units are not included in the discarded drug refund calculation.

*Response:* New section 1847A(h)(2) of the Act requires the manufacturer of a refundable single-dose container or single-use package drug to provide to the Secretary a refund that is equal to the amount specified in paragraph (3). Section 1847A(h)(8)(A) of the Act defines a refundable single-dose container or single use package drug for which a refund is owed as a single source drug or biological or a biosimilar biological product “for which payment is made under this part” meaning Medicare Part B. Payment is made for drugs furnished in hospital outpatient departments and ASCs under Medicare Part B. See section 1841(g) of the Act; see also section 1847A(h)(1)(A) of the Act (requiring use of a mechanism, such as the JW modifier, which applies to OPPS and ASC drugs, to determine the total number of units).

We also note that section 1847A(h)(1)(C) of the Act excludes “units that are packaged into the payment amount” from the refund calculation. This language also suggests that manufacturers are required to pay refunds for OPPS and ASC drugs by excluding packaged drugs, which is a common phenomenon under the OPPS and ASC payment system. Regarding the commenter's concern about future reductions in OPPS payment for 340B drugs, we note that, for CY 2023, we are finalizing a policy to pay for separately payable drugs at a default rate that is generally ASP plus 6 percent under the OPPS, regardless of whether a drug is acquired under the 340B program.

Therefore, we are finalizing our proposal that HOPDs would be required to report the JW modifier or any successor modifier to identify discarded amounts of refundable single-dose container or single-use package drugs described by HCPCS codes that are assigned status indicator “K” (Nonpass-Through Drugs and Nonimplantable Biologicals, Including Therapeutic Radiopharmaceuticals) or status indicator “G” (Pass-Through Drugs and Biologicals) under the OPPS. We are finalizing that ASCs would be required to report the JW modifier or any successor modifier to identify discarded amounts of refundable single-dose container or single-use package drugs described by HCPCS codes assigned payment indicator “K2” (Drugs and biologicals paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS rate) under the ASC payment system. We are finalizing that the JW modifier would not be required to identify discarded amounts of drugs that are not separately payable, such as drugs for which payment is packaged under the OPPS or ASC payment system or drugs administered in the FQHC or RHC setting.

*Comment:* One commenter requested that CMS clarify that the definition of refundable single-dose container or single-use package drug does not apply to vaccines described in section 1861(s)(10) of the Act. The commenter explained that the payment amount of those vaccines is not determined under section 1847A of the Act, and that section 1847A of the Act is explicitly limited to payment for drugs and biologicals described in section 1842(o)(1)(C) of the Act, which explicitly excludes vaccines described in section 1861(s)(10)(A) or (B) of the Act.

*Response:* CMS grounds its interpretation of this provision on language in new section 1847A(h) of the

Act that refunds are owed on refundable single-dose container or single-use package drugs which are or drugs “for which payment is made under this part,” which would include vaccines described in section 1861(s)(10) of the Act. However, we discuss below that we are finalizing that for a drug to meet the definition of “refundable single-dose container or single-use package drug,” all NDCs assigned to the drug’s billing and payment code must be single-dose, as described in each product’s labeling. Many vaccines in section 1861(s)(10) of the Act are available in both single-dose containers (usually prefilled syringes) and multiple-dose containers, and therefore, would not meet the definition of “refundable single-dose container or single-use package drug”.

In addition, we clarify that, with regard to the JW/JZ modifier policy, we will not require those modifiers for vaccines described under section 1861(s)(10) of the Act that are furnished from single-dose containers. Since the influenza, pneumococcal, and COVID-19 vaccines specified in section 1861(s)(10) of the Act are often roster billed by mass immunizers, and roster billing cannot accommodate modifiers, it would be impractical to require the JW and JZ modifiers for such vaccines. Such a requirement would likely result in substantial operational issues for mass immunizers and impair patient access to these vaccines. In addition, section 1847A(h)(1)(A)(i) of the Act describes that data reported by a claims modifier, such as the JW modifier, are the appropriate measure for determining discarded amounts. Since such vaccines would not be subject to the JW and JZ modifier policy, we would not expect to have discarded amount data for these billing and payment codes for the purposes of calculating the discarded drug refund.

*Comment:* Two commenters requested we exempt drugs paid for under the End-Stage Renal Disease (ESRD) bundled payment. One commenter expressed concern regarding how implementation of the discarded drug refund might inadvertently impact ESRD products, including those used by home dialysis patients (for example, Extraneal, a peritoneal dialysis solution). The commenter noted the language in the proposed rule provided a limited number of examples of drugs that are not separately payable (for example, drugs for which payment is packaged under the OPPS or ASC payment system or drugs administered in the FQHC or RHC settings). The commenter requested that we clarify that this is not an exhaustive list and that drugs for which payment is

packaged under the Medicare ESRD Prospective Payment System (PPS) is another example of drugs that are not separately payable and are, therefore, excluded.

*Response:* We agree with the commenter and clarify that units for drugs that are packaged under the Medicare ESRD PPS are not subject to the JW modifier policy or the discarded drug refund.

*Comment:* One commenter requested clarification on whether “cellular and/or tissue-based products for skin wounds” are subject to the provisions in section 90004 of the Infrastructure Act.

*Response:* If a product is a single source drug or biological for which payment is made under Medicare Part B (including any items, services, supplies, or products that are paid under Medicare Part B as a drug or biological), is from a single-dose container based on the FDA-approved labeling or product information, and is not otherwise excluded, then it meets the definition of refundable single-dose container or single-use package drug. If the product is also subject to billing using the JW and JZ modifier as described above, this data will be used to calculate refund obligations. Therefore, if a product is a single source drug or biological as defined in section 1847A(c)(6)(D) of the Act and meets these other requirements, then it is subject to the refund obligations under this provision.

*Comment:* One commenter requested that if we finalize the proposal to create new billing and payment codes for circumstances in which a billing and payment code today is assigned to both single-dose and multiple-dose containers, we only create new billing and payment codes that include products that meet the 10 percent threshold, or a 5 percent threshold, to minimize administrative and billing disruption and workload. According to the commenter, many shared billing and payment codes that include a single-dose container are associated with less than 1 percent discard each year. The commenter also expressed concern that creating new billing and payment codes in these circumstances would create challenges determining “who is responsible,” in addition to issues related to ASP calculations and pricing.

*Response:* We stated in the proposed rule that there may be a circumstance in which we need to revise existing billing and payment codes or establish a new billing and payment codes for the purposes of implementing these provisions because estimated total number of units discarded and total allowed charges must be determined at the billing and payment code level for

the purpose of calculating refund amounts. This statement was separate and apart from our proposal that for a drug to meet the definition of “refundable single-dose container or single-use package drug,” all NDCs assigned to the drug’s billing and payment code must be single-dose, as described in each product’s labeling. As we discussed in the proposed rule, if there is a drug that meets the definition of refundable single-dose container or single-use package drug and does not have a unique billing and payment code by which the discarded units can be tracked for the purposes of the refund calculation, we may revise a code or create a new code for the drug.

*Comment:* One commenter disagreed with our proposal to only include billing codes for which all NDCs are single-dose containers because in some circumstances, a manufacturer may sell predominantly single-dose containers and some, but very few, multiple-dose containers of a drug. The commenter stated that we instead include single-dose containers that are in billing codes that contain multiple-dose containers, and proposed that, since Medicare Part B does not bill drugs by NDC, we should instead calculate the refund by using: 10 percent of total charges for the billing and payment code (including all utilization regardless of whether single-dose or multiple-dose NDCs) or 10 percent of total charges for single-dose container NDCs in the billing code (based on the presence of JW or JZ modifiers).

*Response:* We thank the commenter for their input regarding billing and payment codes to which both single-dose and multiple-dose containers are crosswalked. There are several operational challenges to applying the discarded drug refund to such billing and payment codes. Since the JW modifier would not be required for the multiple-dose product, the percentage of units discarded for the billing and payment code as a whole would be skewed. If a multiple-dose product is included in a billing and payment code along with single-dose products, there will be an underestimate for the percent discarded from the single-dose products. For example, if 100 billing units of the drug from a multiple-dose vial were billed under a billing and payment code and 100 billing units of the drug from the single-dose vial were billed under the same billing and payment code, but some was discarded (for example, 70 units administered and 30 units discarded and billed using the JW modifier), then the percentage discarded overall for the billing and payment code would be 15 percent. We

are not able to distinguish billing units from multiple- or single-dose containers on claims when they are assigned to the same billing and payment code.

Based on our analysis of JW modifier data from CY 2020, we did not identify any billing and payment codes that have both multiple-dose and single-dose containers crosswalked to it for which 10 percent or more of billed amounts were discarded. Therefore, we believe this circumstance would not be common and we are finalizing that, for a drug to meet the definition of “refundable single-dose container or single-use package drug,” all NDCs assigned to the drug’s billing and payment code must be single-dose, as described in each product’s labeling. However, if we find at a later time (particularly with expected improved data after implementation of the JZ modifier) that several products are excluded from the definition of refundable single-dose container or single-use package drug due to a multiple-dose product being crosswalked to the code, and the manufacturer would otherwise owe refunds for discarded amounts, we may find it necessary to revisit this policy in the future.

*Comment:* Several commenters requested that, if there are drugs subject to the policy that are not currently found in the public ASP Drug Pricing File or JW modifier data published on the CMS website,<sup>147</sup> that CMS begin publishing ASP and JW modifier data on those drugs. One commenter requested we publish and update quarterly a list of all known drugs that fall into a statutory exclusion from the discarded drug refund process. The commenter expressed concern that the lack of clarity regarding how CMS will identify excluded drugs may lead to confusion, and stated that such a publication would allow manufacturers the opportunity to anticipate valid or erroneous reports. One commenter requested that CMS issue guidance explaining the exclusions of drugs from the definition of refundable single-dose container or single-use package drug, as providers and manufacturers, particularly in the case of new drugs, may not know whether a drug falls under one of the exception categories. Another commenter requested that CMS clarify the process by which we identify excluded drugs.

*Response:* With regard to publishing ASP data, CMS does not publish an ASP payment limit or crosswalk for all drugs

that are reported by manufacturers. A number of factors, including but not limited to the setting in which the drug is used and the volume of use in Medicare Part B, are considered before a decision about national pricing is made. Since the refunds are determined after claims are submitted and processed, the specific billing and payment codes that will be subject to refund obligations will not be known at the time the annual ASP Drug Pricing File is published. Therefore, the information that would be required to publish a payment allowance for all drugs subject to the discarded drug policy would not be available at the time the annual ASP file is published and, thus, it would not be feasible for CMS to include that information.

We thank commenters for their input regarding their request that CMS publish a quarterly list of all known drugs that fall into a statutory exclusion, and their request for CMS guidance to explain the exclusion of drugs from the definition of refundable single-dose container or single-use package drug. We will consider developing lists of drugs that fit a statutory exclusion as part of the operational process of implementing this provision.

*Comment:* Two commenters requested that CMS exclude Part B drugs that are not administered by the billing supplier, including DME drugs that are administered by the beneficiary, from the discarded drug refund. One commenter stated that reporting, audit, and civil money penalties described in the proposed rule are inappropriate when drug products are administered outside the chain of custody once in the possession of the beneficiary. Three commenters requested that we clarify that drugs administered via an item of DME, and any other drug billed to the DME MACs, are not subject to the discarded drug refund provision. Commenters stated that such drugs are typically self-administered by patient or caregiver in their home, administered over a period that spans several days, and dispensed by suppliers that have no visibility into discarded drug provision. They stated that reporting discarded units in these circumstances would present an increased burden for all parties involved. One of these commenters requested that we clarify that drugs whose FDA-approved labels indicate that they are intended for self-administration by the patient or their caregiver are not subject to the discarded drug provision. The commenter noted that this would ensure that the applicability of the discarded drug refund requirement does not depend on self-administered drug (SAD)

list. The commenter suggested we develop a claims modifier to identify such self-administered drugs in claims.

Two commenters requested clarification on the application of the JZ modifier to drugs not administered by the billing supplier, such as drugs administered via a covered item of DME or those that are self-administered by patients.

*Response:* In the proposed rule, we proposed that, to align with the JW modifier policy, the JZ modifier would be required when there are no discarded amounts from single use vials or single use packages payable under Part B for which the JW modifier would be required if there were discarded amounts.

At this time, we do not believe it would be appropriate to collect data about discarded amounts from beneficiaries. Section 1847A(h)(1)(A)(i) of the Act describes that data reported by a claims modifier, such as the JW modifier, are the appropriate measure for determining discarded amounts. Discarded amounts (as identified by the JW modifier) are submitted by the billing provider and not the patient, typically before the patient administers the drug. Therefore, the JW and JZ modifiers are not required for refundable single-dose container or single-use package drugs that are self-administered by a patient or caregiver in the patient’s home.

*Comment:* One commenter expressed support for proposed exclusions from the discarded drug refund policy. Several commenters expressed support for the exclusion of radiopharmaceuticals. One commenter noted approval for our proposal to identify diagnostic and therapeutic radiopharmaceuticals and imaging agents eligible for the exclusion based on their FDA-approved labeling. Two commenters requested CMS explicitly confirm that the exclusion of imaging agents includes contrast agents.

Two commenters stated that the drug, Susvimo™ (ranibizumab injection), which is for intravitreal use via ocular implant, meets the criteria for the filtration exclusion, both with its ocular implant initial fill and refill-exchange procedure. The drug’s filtration step for the initial fill procedure is described in the dosage and administration instructions in the label and occurs during the drug preparation process; filtration occurs prior to dilution and administration; and the unused portion after filtration is discarded along with the filtration needle. The commenter stated that, exactly like the initial fill procedure, the refill-exchange procedure also includes filtration in a

<sup>147</sup> <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicare-spending-by-drug/medicare-part-b-discarded-drug-units>.

manner that is consistent with the filtration exclusion criteria. One commenter stated that the drug, Onpatro® (patisiran injection), meets the criteria for the filtration exclusion. The dosage and administration instructions in Onpatro's FDA-approved prescribing information expressly state that the drug must be filtered and diluted prior to intravenous infusion, and practitioners must discard any unused portion of the drug after filtration.

With regard to the exclusion for drugs approved by FDA on or after November 15, 2021 and for which payment has been made under Part B for fewer than 18 months, three commenters expressed support for this exclusion. One commenter suggested CMS extend the exclusion by running the 18-month period from the start of the effective date of this provision (January 1, 2023) for any new drug with an FDA approval date on or after July 1, 2021, and creating a data field to collect the estimated date for Part B reimbursement thereafter for any new drugs that are approved by the FDA after January 1, 2023. The commenter stated that this would simplify CMS' burden for monitoring manufacturer compliance with the new drug exclusion and is consistent with congressional intent for the grace period for new drugs on the market. One commenter suggested CMS exclude new drugs for 24 months following the first sale reported in order to provide adequate time to operationalize, shift resources, and properly train personnel. The commenter stated that CMS' proposal to exclude new drugs for 6 calendar quarters following date of first reported sale does not take into consideration certain factors, such as the fact that a provider's first prescription of a new drug is entirely dictated by the needs of the patient population served. Also, with manufacturers' drug timelines starting at different points, the health information technology requirements needed to modify claims may also come at different times.

*Response:* With regard to the exclusion of radiopharmaceuticals and imaging agents, we recognize contrast agents as a category of imaging agents as described in FDA's Guidance for Industry referenced in the proposed rule.<sup>148</sup> Therefore, we clarify that contrast agents are excluded from the definition of refundable single-dose container or single-use package drug.

With regard to Susvimo and Onpatro and the commenters' assertion that these drugs are excluded from the

definition of refundable single-dose container or single-use package drug based on filtration steps described in each drug's FDA-approved labeling, upon review of the labeling, we agree that both drugs would fit exclusion criteria as described in section 1847A(h)(8)(B)(ii) of the Act. In both circumstances, the labeling requires filtration during the drug preparation process, prior to dilution and administration, and require that any unused portion of such drug after the filtration process be discarded after the completion of such filtration process.

With regard to the exclusion for drugs approved by FDA on or after November 15, 2021, and for which payment has been made under Part B for fewer than 18 months, we disagree that a data field to collect the estimated date for Part B payment in the ASP online collection system is needed. The proposed approach to measure the 18-month period using the first day of the calendar quarter following the date of first sale as reported to CMS is adequate for the purposes of measuring when the 18-month period should begin for this exclusion because of the limitations of identifying the first date for which payment is made under Part B (as discussed in the proposed rule) and because of the quarterly nature of the ASP Drug Pricing File publications.

*Comment:* One commenter requested clarification on the impact to current billing policy for unused and discarded amounts of the excluded products specified in statute. The commenter interpreted the exclusion of certain products to mean that manufacturers are not required to refund Medicare for the discarded amount of product, though providers can still bill for the amount discarded using the JW modifier for these drugs.

*Response:* We agree with the commenter and clarify that even if a drug is excluded from the definition of refundable single-dose container or single-use package drug (and not subject to refunds), for example, multiple source drugs, claims for such drugs furnished from a single-dose container are still required to use the JW and JZ modifiers in accordance with the policy we are finalizing in this final rule. In addition, as we describe below, although such drugs described in section 1847A(h)(8)(B)(iii) of the Act are excluded from the definition of refundable single-dose container or single-use package drugs for an 18-month period of time, we agree with the comment below that providing information regarding discarded amounts from such drugs would be beneficial to the manufacturers during

the exclusion period. Therefore, for drugs meeting this time-limited exclusion, we plan to provide information on the total number of units of the billing and payment code that were discarded for calendar quarters during the 18-month exclusion period. Requiring the JW and JZ modifier for all single-dose container drugs will allow us to provide such information during the exemption period.

After consideration of the public comments, we are finalizing the definition of "refundable single-dose container or single-use package drug" as proposed, to be codified at § 414.902.

#### 4. Provision of Information to Manufacturers

In the CY 2023 PFS proposed rule (87 FR 46059 through 46060), we stated that section 1847A(h)(1) of the Act requires the Secretary to provide each manufacturer of a refundable single-dose container or single-use package drug (as defined in section 1847A(h)(8) of the Act) with a report, for each calendar quarter beginning on or after January 1, 2023, that includes the following information:

- The total number of units of the billing and payment code of such drug, if any, that were discarded during such quarter, as determined using a mechanism such as the JW modifier used as of the date of enactment of this subsection (or any such successor modifier that includes such data as determined appropriate by the Secretary).

- The refund amount that the manufacturer is liable for pursuant to section 1847A(h)(3) of the Act.

We proposed to use the definition of manufacturer at section 1847A(c)(6)(A) of the Act, which is codified at § 414.802 and defines manufacturer as any entity that is engaged in the following (this term does not include a wholesale distributor of drugs or a retail pharmacy licensed under State law):

(1) Production, preparation, propagation, compounding, conversion or processing of prescription drug products, either directly or indirectly by extraction from substances of natural origin, or independently by means of chemical synthesis, or by a combination of extraction and chemical synthesis.

(2) The packaging, repackaging, labeling, relabeling, or distribution of prescription drug products.

We proposed to identify the manufacturer responsible for the provision of refunds by the labeler code of the refundable single-dose container or single-use package drug. If such product does not have an NDC, we proposed to use manufacturer

<sup>148</sup> <https://www.fda.gov/media/72295/download>.

information included on the ASP data submission for the product.

We proposed that there be a lag between the date of service quarter and the date we send reports to manufacturers to allow for claims maturity from the date of service. To operationalize reports to manufacturers, we must consider the timing with regard to the availability of JW modifier data. Providers and suppliers have a 12-month period to submit Medicare Part B claims, including claims for drugs payable under Part B, so a lag exists between the date of service when a drug is administered and when the claim is submitted and adjudicated. Because of this lag in finalized claims, there may also be a lag in available JW modifier data for any given date of service quarter. An evaluation of July 2010 Medicare Part B claims in the Physician/Supplier-Carrier setting showed that 91.68, 96.84, and 98.32, and 99.13 percent of claims were final at 3, 6, 9, and 12 months, respectively, following the date of service. At 24 and 48 months, 99.83 and 100 percent of the claims, respectively, were considered to be final.

We stated that section 1847A(h)(1) of the Act does not specify the interval by which reports for each calendar quarter must be sent to manufacturers. We proposed that CMS provide an annual report to manufacturers with information for each calendar quarter. Sending reports (with information for each calendar quarter) annually would reduce the operational resources needed to implement this provision and would streamline the dispute resolution process. We proposed to send reports to manufacturers no later than October 1 of each year. We proposed that the report reflect claims data that is finalized by the end of the second calendar quarter (that is, June 30) of the year in which the report is sent. We noted that this would allow time for CMS to analyze the data and calculate refund amounts to provide reports to manufacturers no later than October 1. In addition, we proposed that annual reports would include any additional lagged claims data not included for the quarters first reflected in the prior year's report.

In an effort to implement this provision in a timely manner, we proposed to send the first report to manufacturers no later than October 1, 2023. Under our proposal, this first report would contain information only for the first calendar quarter of 2023, because that would be the only quarter for which we would have a substantial amount of claims data that is finalized by the end of the second calendar quarter of the year in which the report

is sent. We proposed to send the second annual report no later than October 1, 2024, and this report would include information for the second, third, and fourth quarters of 2023 and the first calendar quarter of 2024. It also would include any additional lagged claims for dates of service in the first calendar quarter of 2023 that were not included in the first report. Subsequent annual reports would be done in this manner, meaning that they would provide the information required under section 1847A(h)(1) of the Act for the last 3 quarters of the prior year, the first quarter of the current year, and lagged claims data not reflected for the last 3 quarters of the year that is 2 years prior and the first quarter of the prior year (that is, the quarters first reflected in the previous year's report). This means that reports (except for those in 2023 and 2024) would include information for 8 calendar quarters: 4 new calendar quarters and 4 quarters with additional information for claims that were not yet finalized for those dates of service in the previous year's report. As proposed, we explained that we would expect to capture JW modifier data and total allowed charges from over 99 percent of claims for dates of service in a given quarter. For example, the report sent to manufacturers in 2025 would include information for dates of service in the second, third, and fourth quarters of 2024 and the first quarter of 2025 plus additional lagged claims that were not included in the report sent in 2024 (that is, information for dates of service in the second, third, and fourth quarters of 2023 and the first quarter of 2024).

We noted that when lagged claims data is evaluated, any changes in the refund amount owed for those quarters and not already accounted for in the previous year's report would be calculated as described in section III.A.6. of the proposed rule.

The following is a summary of the public comments received on the provision of information to manufacturers and our responses:

*Comment:* One commenter expressed support for the transmittal of annual reports containing information on discards and refund amounts for each calendar quarter.

*Response:* We thank the commenter for their support.

*Comment:* One commenter requested that we clearly distinguish the calendar quarter associated with all discard amount claims data.

*Response:* We thank the commenter for their feedback. The organization of discarded amount claims data by the date of service calendar quarter was part of our proposal for the provision of

information to manufacturers. We are finalizing our proposal to send annual reports to manufacturers containing information described in section 1847A(h)(1)(A) of the Act, broken down by calendar quarter.

*Comment:* One commenter requested that we provide quarterly estimates of projected payment obligations rather than reporting manufacturer obligations on an annual basis. The commenter expressed that more frequent notices would help manufacturers better budget their outlays. Another commenter stated that we should issue preliminary calculations of refund amounts to manufacturers in order to permit engagement between CMS and the manufacturer prior to the issuance of the report.

*Response:* We appreciate the interest of manufacturers in having additional advance notice of their refund obligations, and agree with the commenter that CMS and manufacturers should have time to engage and address potential disagreements related to discard amounts and refund calculations before obligations are due. As we discuss below, we are not finalizing the date we will send the first report to manufacturers in this final rule and will revisit the timing of the first report to manufacturers in future rulemaking. However, we believe that it will be beneficial to provide manufacturers an opportunity to engage with us on discard amount data in the first year of this provision's implementation, and therefore, we plan to issue a preliminary report on estimated discarded amounts based on available claims data from the first 2 quarters of CY 2023 no later than December 31, 2023. This preliminary report will not reflect any final determinations of the number of discarded units, percentage of discarded units, or calculations of the refund amount obligations. That information will be sent in the initial report at a date that will be determined through future rulemaking.

*Comment:* Several commenters stated that we should provide manufacturers all information we use to calculate refund amounts to allow them to validate the accuracy of our calculations, including claims for all drug units billed to Medicare, along with associated modifier data. One commenter requested claims-level information be provided to manufacturers in the annual report, or at the very least, following the initiation of the dispute process. One commenter suggested that manufacturers would not be able to engage meaningfully in the dispute process without seeing claims-

level data. The commenter cited reasoning related to sharing claims level data used in 2015 and 2020 Medicaid guidance CMS issued regarding measures to reduce discount disputes in the 340B program, as well as a 2014 OIG report with the same emphasis.

*Response:* We agree with commenters that they should have access to claims information to verify our refund calculations, including number of allowed claims, allowed charges, amounts administered, and reported discard amounts, to the extent that they do not violate the privacy of any beneficiary. Aggregate HCPCS code claims data are available at <https://www.cms.gov/Research-Statistics-Data-and-Systems/Downloadable-Public-Use-Files/Part-B-National-Summary-Data-File/Overview>. In addition, aggregate discarded drug data for all separately payable Part B drugs from single use vials or other single use packages is available at <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>. Though our proposal only considered including some version of the aggregated data sets available on those websites in the manufacturer reports, our aforementioned decision to not finalize the date we will issue the first reports allows us time to take the request for claims-level data under advisement. We will consider the inclusion of claims-level data in manufacturer reports in future rulemaking.

*Comment:* One commenter requested that the CMS include information on the use of the JW modifier for drugs approved by FDA on or after the date of enactment of section 90004 of the Infrastructure Act, and with respect to which payment has been made under this part for fewer than 18 months drugs in its annual reports to manufacturers while exempting them from the refund requirement.

*Response:* Although such drugs described in section 1847A(h)(8)(B)(iii) of the Act are excluded from the definition of refundable single-dose container or single-use package drugs, we agree that providing information regarding discarded amounts from such drugs would be beneficial to the manufacturers during the 18-month exclusion period. Therefore, we plan to provide information on the total number of units of the billing and payment code of drugs meeting this exclusion (and not meeting any other exclusion in section 1847A(h)(8)(B) of the Act) that were discarded during the 18-month exclusion period.

*Comment:* One commenter requested that we develop and specify a mechanism for manufacturers to validate the provider billing practices underlying reported discarded drug amounts.

*Response:* The JW modifier FAQ defines discarded amounts as the amount of a single use vial or other single use package that remains after administering a dose/quantity of the drug to a Medicare beneficiary. We clarified this definition above as amounts that remain after administering a dose/quantity of the drug to a Medicare beneficiary. We will update our guidance documents to reflect this definition and we will work with provider groups to guide them to correctly report discarded amounts.

*Comment:* One commenter requested CMS review sample data sets, propose validation mechanisms, and build the infrastructure needed to implement the provision with minimal risk of error in calculation of refund amounts.

*Response:* We thank the commenter for their feedback. We will review these aspects of implementation and consider these ideas for future rulemaking.

*Comment:* Several commenters requested we place a limit on how far back lagged discarded drug data may be included in the annual report to manufacturers.

*Response:* Due to the enactment of the Inflation Reduction Act on August 16, 2022, and our efforts to efficiently implement two statutory provisions that require reporting and deposit mechanisms, we are not finalizing our proposal on the timing of the refund reports, which was to send the first report to manufacturers no later than October 1, 2023, and subsequent reports no later than October 1 of each year following. As previously mentioned, the discarded drug refunds are to be deposited into the Federal SMI Trust Fund. Similarly, the Part B and Part D rebates described in the Inflation Reduction Act also are to be deposited into the Federal SMI Trust Fund. We aim to coordinate the collection of these funds in order to minimize the administrative burden on both manufacturers and CMS. This requires an alternative timeline for sending reports to manufacturers and different dates on which funds would be due and, therefore, we decline to finalize our proposal that the initial reports under the discarded drug refund provision to be sent no later than October 1, 2023. In addition, since the date that the initial report is sent will impact the number of quarters with mature claims data available, we also decline to finalize the policy regarding the inclusion of

additional lagged data in reports in this final rule. We will revisit the date of the initial report and the inclusion of lagged discarded drug data in future rulemaking.

Although we are not finalizing a date for the transmittal of reports in this final rule, we are finalizing our proposal to send reports to manufacturers containing discard information for each calendar quarter on an annual basis. We are also finalizing that we will send reports to all manufacturers of refundable single-dose container or single-use package drugs. We intend to address the timing of these reports in future rulemaking. We also note that we will issue a preliminary report on estimated discarded amounts based on available claims data from the first 2 quarters of CY 2023 no later than December 31, 2023.

#### 5. Manufacturer Provision of Refund

As discussed in the CY 2023 PFS proposed rule (87 FR 46060), section 1847A(h)(2) of the Act states that, for each calendar quarter beginning on or after January 1, 2023, the manufacturer of a refundable single-dose container or single-use package drug shall, for such drug, provide to the Secretary a refund for such quarter. As described in the previous section, we proposed to issue reports for each calendar quarter on an annual basis. Section 1847A(h)(4) of the Act states that refunds under section 1847A(h)(2) of the Act must be paid in regular intervals as determined appropriate by the Secretary. We proposed that refunds be paid in 12-month intervals (that is, annually) to align with the proposal to issue reports for each calendar quarter on an annual basis. Additionally, we noted that we believe requiring refunds to be paid on an annual basis is operationally optimal because it allows for some claims runout while administering reports in a timely manner following the date of service and leaves more time for dispute resolution, which we believed would be important for refund calculation accuracy. Including lagged claims data from the previous year's report allows more time for claims to be finalized for a given calendar quarter, consequently represent a more accurate estimate of discarded units, and result in a more accurate refund calculation. Therefore, we proposed to specify that the regular interval for the payment of refunds is annual and that refund amounts for the quarters reported in an annual report must be paid no later than December 31 of the year in which the report was sent to the manufacturer except in circumstances where a dispute is pending. In the case of a dispute,

payment of the refund is due no later than 30 days after the resolution of the dispute. As discussed in more detail in the next section, we noted that we believe December 31 is an appropriate deadline because it would allow manufacturers to review their annual reports and initiate dispute resolution if needed. We proposed to require manufacturers owing refunds to transmit payment in a form and manner specified by CMS.

We proposed to codify these provisions at § 414.940.

The following is a summary of the public comments received on the manufacturer provision of refund provisions and our responses:

*Comment:* One commenter stated manufacturers should have 3 months after the receipt of the report to remit refund obligations.

*Response:* We appreciate the commenter's feedback. Our proposal to issue reports to manufacturers by October 1 and require refund obligations to be paid by December 31 of the year in which reports are issued reflects the commenter's preference. However, as stated in the previous section, we are not finalizing the timing for reports to be sent or for refund obligations to be paid in this final rule. We will revisit the process and timeline for manufacturers' provisions of refunds in future rulemaking. Although we are not finalizing the proposed timing for reports sent to manufacturers, the effective date of the provision remains January 1, 2023, as required by statute, and reports will be sent for calendar quarters beginning on or after this date.

## 6. Refund Amount

As discussed in the CY 2023 PFS proposed rule (87 FR 46060 through 46062), section 1847A(h)(3) of the Act provides, with respect to a refundable single-dose container or single-use package drug of a manufacturer assigned to a billing and payment code for a calendar quarter beginning on or after January 1, 2023, that the refund for which the manufacturer is liable is the amount equal to the estimated amount (if any) by which:

- The product of:
  - ++ The total number of units of the billing and payment code for such drug that were discarded during such quarter; and
  - ++ The payment limit amount for the refundable single-dose container or single-use package drug;
- Exceeds an amount equal to the applicable percentage of the estimated total allowed charges for such a drug (less the amount paid for packaged drugs) during the quarter.

We stated that section 1847A(h)(3) of the Act specifies that the applicable percentage is 10 percent, but authorizes us to increase this percentage as appropriate, through notice and comment rulemaking, in the case of a refundable single-dose container or single-use package drug that has unique circumstances involving similar loss of product as that described in section 1847A(h)(8)(B)(ii) of the Act.

We proposed to calculate the refund required under section 1847A(h)(1) of the Act using the number of discarded units for dates of services in the same calendar quarter to which the payment limit amount applies. We proposed to estimate the total allowed charges during the quarter by multiplying the drug's payment limit amount for the quarter by the total number of units of the billing and payment code of such drug that were subject to JW modifier reporting including those for which the JZ modifier would be required if no units were discarded. As specified in section 1847A(h)(1)(C) of the Act, the total number of units of the billing and payment code of a refundable single-dose container paid during a calendar quarter for purposes of subparagraph (A)(i), and the determination of the estimated total allowed charges for the drug in the quarter for purposes of paragraph (3)(A)(ii), exclude such units that are packaged into the payment amount for an item or service and are not separately payable.

We illustrated how the refund would be calculated, if 2,000 units of a billing and payment code for a given drug were unused and discarded during dates of service in the first calendar quarter of 2023, that number would be multiplied by the drug's payment limit amount for the first calendar quarter of 2023. If the payment limit amount was \$100, that would be multiplied by 2,000 (the number of discarded units) to equal \$200,000. If Medicare paid for 15,000 units of the billing and payment code subject to the JW modifier with dates of service in the first quarter of 2023, that would be multiplied by the same payment limit amount (\$100) to determine the total allowed charges during the quarter (\$1,500,000). Then, the applicable percentage (in this example, 10 percent) of those total allowed charges (\$150,000) would be subtracted out to determine the refund amount. For the sake of this example, that would be \$200,000 (the amount described in section 1847A(h)(3)(A)(i) of the Act) minus \$150,000 (the amount described in section 1847A(h)(3)(A)(ii) of the Act) to equal a refund amount of \$50,000 for the first calendar quarter of 2023.

We noted that section 1847A(h)(3)(A) of the Act states that the refund amount is equal to an estimated amount, and that the refund amount is the difference between: (1) the product of the estimated allowed charges and applicable percentage; and (2) the product of the total number of discarded units of a drug form a single-dose container during a given quarter and the payment limit for that drug during that quarter. Exact amounts are likely not attainable for these numbers because of, for example, lagged claims data, appeals, or reversals in the case of an audit. To obtain the most accurate estimates possible, we proposed to provide information and determine any refund amount for discarded refundable single-dose container or single-use package drugs annually, and to include additional lagged claims data not included in the previous year's report. Based on claims maturity data, we expect this approach would capture over 99 percent of claims for a given date of service quarter in an effort to make the most accurate estimates possible for the purposes of calculating refund amounts. We explained that if the assessment of lagged claims data increases the refund amount for a quarter, the manufacturer would be liable for that additional refund amount, which would be reflected in the report. If the assessment of lagged claims data decreases the refund amount for a quarter, we proposed that any overpayment be corrected. In the event that an assessment of lagged claims data for a calendar quarter causes the product of total discarded units and the payment limit amount to fall below the applicable percentage, which would result in no refund due from that manufacturer for the given quarter, we proposed that any overpayment be corrected. We solicited comments on the operational process of overpayment correction.

We proposed to codify these provisions at § 414.940.

### a. Increased Applicable Percentage for Drugs With Unique Circumstances

In the CY 2023 PFS proposed rule (87 FR 46061), we stated that section 1847A(h)(3)(B)(ii) of the Act provides that, in the case of a refundable single-dose container or single-use package drug that has unique circumstances involving similar loss of product as that described in section 1847A(h)(8)(B)(ii) of the Act, the Secretary may increase the applicable percentage otherwise applicable as determined appropriate by the Secretary.

We did not propose an increase of the applicable percentage for any drugs

with unique circumstances. We noted that we expected that for most drugs supplied in single-dose containers, the amount of drug indicated on the vial or container reflects the amount of drug that could potentially be administered to a patient. This is consistent with FDA regulations at 21 CFR 201.51(g), which provide that for drugs in ampules or vials intended for injection, the declaration of net quantity of contents on the label is considered to express the minimum quantity of contents and that variation above the stated measure must comply with the excess volumes set forth in the United States Pharmacopeia (USP). FDA guidance for industry<sup>149</sup> explains that USP General Chapter 1151 *Pharmaceutical Dosage Forms* provides excess volume recommendations for mobile and viscous liquids in a range of fill volumes, noting that the excess volumes recommended are usually sufficient to permit withdrawal and administration of the labeled volumes. In this guidance, FDA recommends that single-dose vials should not contain a significant volume beyond what would be considered a usual or maximum dose for the expected use of the drug product.

We noted that we recognized there may be very rare cases in which, as part of a drug's FDA-approved preparation and administration in labeling, the amount of drug identified on the package or labeling far exceeds the amount administered to a patient, thus leading to a substantial percentage of drug that is discarded. For example, in the case of a drug that is reconstituted with a hydrogel and administered via ureteral catheter or nephrostomy tube into the kidneys, there is substantial amount of reconstituted hydrogel that adheres to the vial wall during preparation.<sup>150</sup> In this instance, the drug adhering to the vial wall (and not able to be extracted from the vial) must be discarded, which leads to a higher percentage of discarded units billed with the JW modifier. If the labeled amount of the package is 80 mg and the maximum extracted amount from the vial guarantees delivery of the maximum dose of 60 mg, then there would be at least 25 percent discarded units. We noted that in the case that a patient does not require the maximum dose, the percent of discarded units would be even higher. In this circumstance, an applicable percentage of 35 percent may be appropriate because it would allow for the amount drug diluted in hydrogel that adheres to

the vial wall (25 percent) plus an additional 10 percent to align with the applicable percentage for drugs without a unique circumstance.

We also noted that we considered whether we should adopt a higher applicable percentage for a drug in this circumstance. We welcomed comments on specifying a higher applicable percentage for drugs that are diluted in hydrogel and administered via the pyelocaliceal route, and we welcome comments on whether an applicable percentage of 35 percent would be appropriate in this circumstance. We welcomed comments on whether there are other drugs with unique circumstances as described under section 1847A(h)(3)(B)(ii) of the Act that may warrant an increase in the applicable percentage.

The following is a summary of the public comments received on the refund amount provisions and our responses:

*Comment:* Several commenters supported our proposal to calculate the refund amount based on claims for each calendar quarter, as well as our proposal to present aggregate discard information for each quarter. Commenters stated that using actual claims would capture reductions in discarded drug amounts due to changes in manufacturers' container or package configuration.

*Response:* We thank the commenters for their support.

*Comment:* Several commenters expressed concern about cases in which a refund amount would be based on a higher amount than the provider or supplier was actually paid for the drug or biological. Commenters requested that we use the actual payment limit used to reimburse providers and suppliers for each claim to calculate refund amounts, particularly the 340B ceiling price or the rate drugs are reimbursed in the event of sequestration.

*Response:* Section 1847A(h)(3)(A)(i) of the Act states that the refund amount must be the product of the number of discarded units and the amount of payment determined under either section 1847A(b)(1)(B) of the Act in the case of a single source drug or biological product, or section 1847A(b)(1)(C) of the Act in the case of a biosimilar biological product. In most cases, the former provides for a payment limit of 106 percent of the average sales price and the latter provides for a payment limit of the sum of the average sales price and 6 percent of the average sales prices of the reference biological product, or 8 percent for qualifying biosimilars during an applicable 5-year period. These statutory provisions do not account for other payment amounts not specified in

section 1847A(b)(1)(B) or (C) of the Act. We identified an error in our proposed regulation text, and we are making changes in this final rule to correct the language in regulation at § 414.940 to reflect payment amounts specified in section 1847A(b)(1)(B) or (C) of the Act.

*Comment:* One commenter stated that manufacturers should have the option of excluding refund claims that are missing data elements such as provider ID, prescription number, total units billed, or the amount paid in order to ensure that CMS has verifiable information for the calculation of refund payments.

*Response:* We appreciate the commenter's concern about the data quality used in discard amount and refund calculations. We agree that claims lacking certain information are unusable for the purposes of calculating discard and refund amounts and it is important the MACs do not adjudicate claims that omit those key data elements. Several of the data elements cited by the commenter, such as the billing provider's name and National Provider Identifier, the claims service date, HCPCS code and applicable modifier, and units of service are required and without which a claim would be returned to the provider. A full list of data elements institutional providers, physicians, and suppliers must include on claims submissions can be found in Claims Processing Manual 100–04, Chapters 25 and 26, respectively. Those chapters are available here at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c25.pdf> and <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c26pdf.pdf>. In this final rule we are codifying the requirement to use the JW modifier, which has been required since 2017, and we are adopting a requirement to use JZ modifier beginning no later than July 1, 2023. However, several of the data elements cited by the commenter, such as the amount paid for the drug in question and the paid date, are populated by a MAC's claims processing system when a claim is finalized. Other elements cited by the commenter, such as the prescription number or NDC, are not necessary for accurate claims processing or the calculation of refund amounts and are generally not required on a Medicare Part B claim for payment.

*Comment:* One commenter requested that we clarify our process for adjustments to discarded amount and refund calculations after audits find errors in underlying claims. Another commenter requested that we clarify our process for reconciling refund

<sup>149</sup> <https://www.fda.gov/media/88138/download>.

<sup>150</sup> <https://dailymed.nlm.nih.gov/dailymed/drugInfo.cfm?setid=3d3d5053-5427-4a68-a40b-edb60699521e>.

obligations in subsequent reports to manufacturers after claims from calendar quarters contained in the previous report have matured.

*Response:* We recognize that Medicare, through claims audits, may adjust claims based on audit findings, and this could occur after the payment of the discarded drug refund. However, since we are not finalizing the timing for reports to be sent or for refund obligations to be paid in this final rule, we will revisit the interaction of claims audits and lagged claims data in future rulemaking.

*Comment:* One commenter requested that we exclude from the refund calculation any amounts billed for dually eligible beneficiaries, so that manufacturers are not required to pay both the discarded drug refund and rebates under the Medicaid Drug Rebate Program.

*Response:* Section 1847A(h)(1) of the Act does not exclude units that are paid for dually eligible beneficiaries that would be subject to the rebates under the Medicaid Drug Rebate Program.

*Comment:* With regard to consideration of a unique circumstance in the case of a drug that is reconstituted with a hydrogel and administered via ureteral catheter or nephrostomy tube into the kidneys, several commenters supported increasing the applicable percentage to 35 percent, because a substantial amount of product adheres to the vial wall and cannot be extracted from the vial. Many commenters specifically expressed support for the adoption of an increased applicable percentage for drugs diluted in hydrogel and administered via ureteral catheter or nephrostomy tube, specifically Jelmyto® (mitomycin for pyelocaliceal solution). Many commenters requested that CMS finalize a 35 percent applicable percentage described in the proposed rule's example for Jelmyto®, because its viscosity makes a portion of the drug stick to the vial wall. One commenter requested that we consider whether an applicable percentage greater than 35 percent be applied to such hydrogel products because providers do not know until drug administration (after the hydrogel has been prepared by the pharmacy) the value of the patient's kidney volume, which determines what amount of drug administered.

*Response:* We thank commenters for their input on the discussion in the proposed rule about the case discussed in the regarding a drug reconstituted with a hydrogel and administered via ureteral catheter or nephrostomy tube into the kidneys, in which there is a substantial amount of reconstituted

hydrogel that adheres to the vial wall during preparation. We agree with the commenters that such a drug that is reconstituted with a hydrogel and has variable dosing based on patient-specific characteristics (for example Jelmyto® (mitomycin for pyelocaliceal solution)), should be considered to have a unique circumstance as described in section 1847A(h)(3)(B)(ii) of the Act that would warrant an increased applicable percentage. We also thank commenters for input on whether an applicable percentage of 35 percent (10 percent applicable percentage plus 25 percent to account for drug that cannot be extracted from the vial) may be appropriate for such a drug. We agree with the vast majority of commenters that 35 percent is a reasonable applicable percentage that would be appropriate in this case. We disagree that an applicable percentage greater than 35 percent should be applied to such hydrogel products, because we believe that 35 percent accounts for the hydrogel that adheres to the vial, and because we have allowed for an additional 10 percent of drug to be discarded before any refund would be owed.

After consideration of public comments, we are adopting an increased applicable percentage of 35 percent for drugs reconstituted with a hydrogel and with variable dosing based on patient-specific characteristics. At this time, we have only identified one product, Jelmyto® (mitomycin for pyelocaliceal solution), that would fit this unique circumstance.

*Comment:* Many commenters requested an increased applicable percentage for certain drugs or certain drug categories that may have unique circumstances other than the circumstance pertaining to the drug reconstituted in hydrogel. Several commenters requested that CMS specify increased applicable percentages for drugs that have highly variable dosing, such as drugs dosed by patient weight, or skin surface area, or wound size. One commenter specifically requested an increased applicable percentage for weight-based drugs, because it is impractical to manufacture many different vial sizes for such drugs, and even if mutable vial sizes were available, it would be unreasonable to expect facilities and pharmacies to keep a broad variety of vial sizes in stock. One commenter requested that CMS develop a process for examining each weight-based drug individually in order to determine the appropriateness of an applicable percentage, and to only include outlier cases under the discard refund policy.

Another commenter suggested that CMS consider delaying implementation of a final rule or delay implementation for reconstituted products in order to evaluate why the provision disproportionately impacts reconstituted products. The commenter observed that 9 out of the 10 highest refund examples that CMS calculated from the 2020 claims data in the proposed rule were reconstituted products.

Several commenters requested CMS use higher applicable percentages for drugs packaged with small vial fill amounts or low-volume products (those less than 1 mL). These commenters noted that, in some cases, the small volume of drug contained in the vial often represents the minimum necessary to safely and effectively prepare and administer the target dose volume. One commenter added that there are practical limits on providers' ability to measure such small amounts as the basis for refunds, as well as manufacturers' ability to produce smaller vials to prevent discarded amounts. One commenter suggested the applicable percentage of products with small vial fill amounts be product-specific and calculated using the difference between the labeled amount of product and the appropriate labeled therapeutic dose for those products that contain the minimum necessary fill required to draw up the labeled therapeutic dose. Alternatively, the commenter suggested such products have an increased applicable percentage, on a sliding scale based on volume, to account for the increased relative percentage lost in the vial and syringe with low-volume products. Three commenters requested 100 percent applicable percentage for all products with vial fill volumes smaller than 1 mL.

One commenter stated that although the product, Susvimo™ (ranibizumab injection), qualifies for the filtration exclusion, the drug also has a unique circumstance because of the preparation process, which would justify an applicable percentage of 80 percent. The commenter explained that, though this percentage is appropriate because the label instructs that the entire contents of the vial must be removed to ensure the proper dose is administered, up to 80 percent of the vial contents are lost in the process of filtration, removing air bubbles from administration device, and removing bubbles from the implant. This loss in the preparation and administration procedure occurs in both the initial fill of the ocular implant and the refill-exchange procedures. The commenter added that, because the volume of drug provided in the

Susvimo™ vial is significantly less than the smallest packaging recommendations provided in USP General Chapter 1151 Pharmaceutical Dosage Forms, it is not feasible to determine in an individual case how much volume is discarded after administration other than by deduction from the labeled instructions and amounts.

One commenter requested an increase applicable percentage for Dexycu® (dexamethasone intraocular suspension), because the entire contents of the vial are mixed with a drug delivery vehicle, Verisome®, to create a suspended product. The commenter stated that, because of this process, there is no unused product. In addition, the commenter stated that this drug has unique circumstances that could warrant an increased applicable percentage because of the small vial size with less than 1 mL fill; the viscosity of the suspension created in the vial resulting in some product adhering to the vial walls; the minimum depth of material in the vial is needed in order for providers to be able to pull the product into the 18-gauge needle and the vial; and that providers' withdrawal 0.2 mL leaves 0.3 mL of contents in the vial.

One commenter requested an applicable percentage of at least 30 percent for Visudyne® (verteporfin for injection) on the grounds that all of the active ingredient is reconstituted and, therefore "there is no unused product." In addition, the commenter stated that the drug is dosed based on BSA and the package amount is designed to account for varying body sizes. A 30 percent applicable percentage would account for the difference between doses for average-sized and larger individuals. The commenter stated that it is not practical to create multiple vial sizes.

One commenter requested an applicable percentage of 20 percent for Elzonris™ (tagraxofusp-erzs) due to the weight-based nature of its dosing, the small patient population its treatment is used for (300 people annually), and because of the leakage inherent in its storage, distribution, and administration beyond overfill that should not be considered discarded drug amounts. Another commenter suggested an increased applicable percentage for Vyvgart® (efgartigimod alfa injection) due to its weight-based dosing and required dilution prior to administration.

One commenter requested an applicable percentage of 70 percent for Zynrelef® (bupivacaine and meloxicam solution), a local anesthetic used in surgical procedures, on the basis of

highly variable dosing based on wound size. The commenter stated that although it produces multiple vial sizes, providers only stock two vial sizes due to storage limitations. In addition, providers have difficulty estimating how much of the product will be needed to cover the area inside the wound site. The commenter also stated Zynrelef should be considered to have a unique circumstance because it is a non-opioid pain management treatment.

Another commenter requested an increased applicable percentage for eight of its products used for the treatment or care of wounds (ranging from 23 to 70 percent). The commenter stated that, because wounds come in an infinite number of sizes, shapes, and depths, it is not possible to manufacture an individual product sized for each potential wound. Such products must be tailored to fit the specific wound, and therefore, there will be discarded amounts every time the product is used.

One commenter stated that the drug pegcetacoplan, an intravitreal injection that is under FDA Priority Review, has a 75 percent overfill amount in the vial due to the high viscosity of the product. They stated that their scientists determined that this was the appropriate amount to safely administer the dose amount without air bubbles.

Four commenters requested that CMS utilize its discretion to increase the threshold for discarded unit refund requirements for cell, gene, and immunotherapies. Commenters explained that, because these therapies are unique and need to be given to a patient all at once, the maximum potentially needed amount of product must be available for each administration. Therefore, cell and gene therapies should have a 100 percent applicable percentage. Two commenters suggested instructing providers to use the JZ modifier for all claims for cell and gene therapy.

Two commenters requested that the applicable percentage for small biotech companies that received Breakthrough Therapy Designation (BTD) and FDA Priority Review during the NDA approval process be increased to 30 percent. One commenter requested that CMS establish a review policy to adjust the applicable percentage for orphan drugs associated with large discarded amounts.

Two commenters requested that CMS use increased applicable percentages for products that require complex delivery methods and necessarily use variable product volume, including those based on the following factors: mechanisms that deliver drugs to tiny anatomical spaces of the body, multiple procedures

or steps for administration, variable and unpredictable patient characteristics, specialized equipment or equipment variability due to physician or facility preference, and immunogenicity concerns. The commenters requested CMS base the applicable percentage off of the maximum amount of drug utilized for successful administration. One commenter added these techniques often utilize extra product to ensure proper dosage. One commenter stated products used during complex administration procedures should be given a 100 percent applicable threshold or be given guidance to use the JZ modifier.

Several commenters requested that CMS provide a list of criteria defining unique circumstances that justify an increased applicable percentage (for example, classes of products, modes of administration, or disease states) to guide manufacturers. Several commenters requested that CMS establish a formal process for requesting an increased applicable percentage based on particular circumstances and characteristics of their drugs. One commenter stated that such a process should, at minimum, include subregulatory guidance and standardized forms that outline the information that CMS deems necessary in order to assess whether an increased applicable percentage should be applied. The commenter stated the process should have an established timeline with deadlines for requests to be included in proposed rules, consideration of comments on the proposed rule, and the opportunity to appeal decisions. One commenter stated such a process would increase transparency and facilitate discussions more effectively between manufacturers and CMS to assess drugs and their discarded amounts. Another commenter suggested that, if an administrative process is developed, CMS do outreach to ensure that manufacturers are aware of the process and publish guidance on any applicable requirements or deadlines for submitting a request for an increased applicable percentage. In addition, one commenter recommended that such a process should include methods for CMS and manufacturers to consult with relevant expert agencies and other organizations, including FDA and the United States Pharmacopeia. One commenter requested CMS take patient safety into account when considering increased applicable percentages for variable-dose drugs (for example, regulatory review of new vial sizes, distribution and inventory constraints for multiple vial sizes).

*Response:* We value the input commenters provided and the scope of drugs that may have unique circumstances. We recognize that there are products that may indeed have a unique circumstance, and an increased applicable percentage for these products would have to be determined through future notice and comment rulemaking as required by the statutory provision. Therefore, we are not adopting increased applicable percentage for any additional products in this final rule. After considering the public comments, we plan to collect additional information about drugs that may have unique circumstances along with potential increased applicable percentages that might be appropriate for each circumstance. We also plan to collect additional information about a process to identify unique circumstances based on manufacturer input. We will revisit additional increased applicable percentages for drugs that have unique circumstances, and a process to identify such circumstances, through future notice and comment rulemaking.

*Comment:* One commenter expressed concern that, because they are a small biotech company, their refund obligation under the proposed rule would amount to about 10 percent of their net revenue, and that the refund would have a substantial impact on their capacity for research.

*Response:* We understand the commenter's concern; however, section 1847A(h) of the Act does not exempt drugs produced by small biotech companies from the refund requirement. We have discretion in section 1847A(h)(3)(B)(II) of the Act to determine increased applicable percentages for drugs with unique circumstances involving loss of product similar to ones that require a filtration process through notice and comment rulemaking. While we only discussed an increased applicable percentage for one unique circumstance in the proposed rule and are finalizing an increased applicable percentage for it in this final rule, we plan to consider additional unique circumstances in future rulemaking.

*Comment:* One commenter requested clarification on the process for manufacturers of new drugs with unique circumstances to request higher applicable percentages.

*Response:* A drug that is exempt from the definition of "refundable single-dose container or single-use package drug" because it was approved by FDA on or after the date of enactment of the Infrastructure Act (that is, November 15, 2021), for which payment under Part B

has been made for fewer than 18 months, may still be considered for an increased applicable percentage for unique circumstances during the 18-month time period in which the drug is exempt. We believe that this would actually be an efficient approach because, when the 18-month time period has ended (and if the drug otherwise meets the definition of refundable single-dose container or single-use package drug), consideration will have already been given to any potential unique circumstances and any appropriate increases in the applicable percentage in advance of the refund requirement.

After consideration of the public comments, we are finalizing the manner in which the refund amount will be calculated as proposed at § 414.940, with the addition of an increased applicable percentage of 35 percent for a drug that is reconstituted with a hydrogel and has variable dosing based on patient-specific characteristics.

#### 7. Dispute Resolution

In the CY 2023 PFS proposed rule (87 FR 46062), we explained that, as a part of implementing this section 90004 of the Infrastructure Act, we recognized the need to establish a dispute resolution process because of the nature of determining the estimated total allowed charges for a given calendar quarter and the methods by which the estimated refund amount is determined. Although a dispute resolution process is not expressly required by section 1847A(h) of the Act, we noted that we believed proactively establishing such a process will aid in the successful implementation of this provision. We proposed that each manufacturer have an opportunity to dispute the report by submitting an error report as described in this section.

We proposed that to assert that there have been one or more errors in a report, a manufacturer must submit a dispute with each asserted error. We proposed that the dispute must include the following information: (1) Manufacturer name and address; (2) The name, telephone number, and email address of one or more employees or representatives of the manufacturer with whom the Secretary may discuss the claimed errors; (3) For a mathematical calculation error, the specific calculation element(s) that the manufacturer disputes and its proposed corrected calculation; and (4) For any other asserted error, an explanation of the nature of the error, how the error affects the refund calculation, an explanation of how the manufacturer established that an error occurred, the

proposed correction to the error, and an explanation of why CMS should use the proposed corrected data.

We proposed that in order to dispute a report, manufacturers must assert any basis for contesting its refund calculation during the 30-day period following the issuance of the report. We noted that we would evaluate error reports and would decide whether the information (such as number of discarded billing units or refund amount calculation) requires correction based on the information provided. We proposed that we would provide manufacturers who have submitted a dispute a response to each dispute and inform manufacturers of the final refund amount no later than 30 days after receipt of the dispute. We proposed that if we find that a different refund amount is owed than what was stated on the report, we would issue a new report with updated discarded amounts and/or refund. We proposed that if we disagree with the dispute, we would notify the manufacturer that refund amount on the report is still owed and should be paid as described above in section 5 (no later than December 31 of the year in which the report was sent). We welcomed comment on whether CMS should develop an appeal mechanism, which we will consider for future rulemaking.

We proposed to codify the dispute resolution process at § 414.940.

The following is a summary of the public comments received on the dispute resolution provisions and our responses:

*Comment:* Several commenters expressed support for our dispute resolution proposal. One commenter expressed support for its simplicity and formal character.

*Response:* We thank the commenters for their support.

*Comment:* One commenter requested the effective date of the provision be delayed until after a "detailed" dispute resolution process is implemented.

*Response:* We do not have the flexibility to delay the effective date of the provision of January 1, 2023, which is specified in statute. We may consider an appeal process in future rulemaking.

*Comment:* Several commenters requested that we broaden the dispute resolution process to cover disputes related to manufacturer requests for higher applicable percentages or exclusions for particular drugs. Commenters offered that we could make these determinations as part of the annual rulemaking process and that the window for these disputes could immediately follow the issuance of the final rule.

*Response:* We appreciate the commenters' suggestion. At this time, we are not establishing a separate process for requesting higher applicable percentages or disputing unique circumstance or applicable percentage determinations. Since the determination of unique circumstances or increased applicable percentages requires notice and comment rulemaking, all interested parties would have an opportunity to comment on these determinations through the rulemaking process.

*Comment:* Several commenters requested that the window for manufacturers to file disputes be extended, with some suggesting an extension from 30 days to either 60 or 90 days. Several commenters suggested that, as an alternative to a longer filing window, we provide manufacturers with preliminary estimates of refund obligations. One commenter explained that preliminary estimates would be useful in allowing manufacturers a second opportunity to raise concerns about discard and refund calculations, which could be of significant help to manufacturers, since we proposed to include limited information in manufacturer reports. Commenters stated the proposed timeline does not allow enough time for engagement with the agency, particularly those with small regulatory staffs. A few commenters stated that manufacturers should not have to pay refund obligations when refund amounts are in dispute, and one requested that they have 90 days after dispute resolution to remit refund payments.

Several commenters stated that the dispute resolution process should include an appeal process. One commenter requested an appeals process overseen by a third-party arbiter. One commenter suggested we incorporate an appeal process in regulatory text, in order to mirror the Parts A and B claims appeals process.

*Response:* We disagree with commenters about the amount of time needed to file a dispute, and we continue to believe that 30 days is a sufficient filing period. The information provided in the report is required by statute to include two numbers: (1) the total number of units of the billing and payment code of such drug, if any, that were discarded during such quarter; and (2) the refund amount for which the manufacturer is liable. We do not expect that the formulation of a dispute regarding these two numbers should take longer than 30 days, since the calculations are straightforward. In addition, the 30-day dispute period is similar to the dispute period for several other CMS programs. Specifically, many

of the Quality Reporting Programs have 30-day ratings preview periods, including the Quality Payment Program.<sup>151</sup> As noted above, we are not finalizing the date that we will issue the first reports, and we will revisit in future rulemaking other mechanisms that can ensure that manufacturers have enough time to process and validate discard data. As stated above, we plan to issue a preliminary report to manufacturers for the first 2 quarters of 2023 no later than December 31, 2023. With regard to amounts due while a dispute is ongoing, as we noted above, we clarify that our intent was to propose that manufacturers have until 30 days following the resolution of the dispute to pay the refund if dispute resolution results in an amount due, which was included in another part of the proposed rule. We are finalizing this payment deadline for disputed amounts.

We thank the commenters for their feedback on the potential benefits and structure of an appeals process. We will take this input under advisement and we plan to revisit the topic in future rulemaking.

*Comment:* Commenters offered several suggestions and requests regarding the operational aspects of the dispute resolution process. One commenter requested that the dispute process be simple and easy to for manufacturers to use. One commenter had several suggestions on the process operations, including that we permit manufacturers to dispute as many errors as needed in each dispute, rather than having to file separate disputes. The commenter also suggested that the process be conducted through a web-based portal, that we employ dedicated staff to administer the dispute resolution process, and that we issue program instruction on the dispute process, including information on factors we consider in evaluating disputes. Several commenters requested that we state that the dispute resolution process is confidential, so that no manufacturer's confidential proprietary information is disclosed to the public. One commenter requested that we clarify that we will credit manufacturers in refund calculations in the case of disputes resolved in a manufacturer's favor. One commenter requested that we remain engaged with stakeholders while developing the dispute resolution process.

*Response:* We agree that the dispute process should be simple and of minimal burden on manufacturers, and to that end, we will build as much as

possible on data sets already familiar to the public. We will further address the dispute resolution process in future rulemaking. With regard to the number of errors that a manufacturer may submit in one filing, we clarify that we did not propose a limit; we proposed that a manufacturer would be able to identify as many errors as they need for each manufacturer report that they dispute. Should a manufacturer receive two reports for two drugs and the manufacturer would like to dispute both, the manufacturer would need to file two disputes, regardless of how many errors they identify in each. We believe that this aligns with the commenter's request. We would maintain the confidentiality of a manufacturer's proprietary information consistent with applicable law.

At the conclusion of the process, if we agree that information presented by the manufacturer reveals errors in our original refund calculation, we will make appropriate adjustments to our calculation and issue a new report to the manufacturer. A report may indicate either that the manufacturer owes no refund obligation, or some amount that would be due to the agency within 30 days of the dispute resolution. If we conclude that information submitted in the dispute does not affect our original calculation, the manufacturer would owe the amount specified in the original manufacturer report within 30 days of the dispute resolution.

We welcome continued engagement with commenters on all aspects of the dispute process.

After consideration of public comments, we are finalizing our proposal to establish a dispute resolution process through which manufacturers can challenge refund calculations and underlying data in their section 1847A(h)(1)(A) of the Act manufacturer reports in § 414.940(d). We are finalizing that manufacturers will have 30 days after receipt to file a dispute of their report or reports and that, if following resolution of the dispute we affirm our original calculation, or if we resolve to issue a revised manufacturer report that specifies a new discard refund amount, the manufacturer will be required to pay the refund within 30 days of the dispute resolution. We are not finalizing the payment of the refund by December 31 of the year the report was issued, since we will be revisiting the timing of reports in future rulemaking. We will also revisit the issue of an appeals process in future rulemaking.

<sup>151</sup> <https://content.govdelivery.com/accounts/USCMS/bulletins/2fe564d>.

## 8. Enforcement

## a. Audits

As discussed in the CY 2023 PFS proposed rule (87 FR 46062), section 1847A(h)(6)(A)(i) of the Act requires that we perform periodic audits on each manufacturer of a refundable single-dose container or single-use package drug that is required to provide a refund under section 1847A(h) of the Act with respect to such drug and such refunds. We proposed to specify at 414.940(e) that we periodically audit manufacturers of refundable single-dose container or single-use package drugs consistent with this requirement. We welcomed comments about what such audits should entail, which we will consider for future rulemaking.

We stated that section 1847A(h)(6)(A)(ii) of the Act requires us to conduct periodic audits of claims submitted under Medicare Part B with respect to refundable single-dose container or single-use package drugs in accordance with the authority under section 1833(e) of the Act. Under the JW modifier policy, claims for dates of service on or after January 1, 2017 containing billing for discarded drugs that do not use the JW modifier may be subject to review.<sup>152</sup> We proposed that our review contractors would periodically review Part B medication claims to ensure the JW modifier, JZ modifier (if adopted), and discarded drug amounts are billed appropriately consistent with our normal claims audit policies and protocols.

## b. Civil Money Penalty

We noted that provisions in section 1847A(h)(6)(B) of the Act give the Secretary authority to impose a civil money penalty on a manufacturer of a refundable single-dose container or single-use package drug who fails to comply with the requirement under section 1847A(h)(2) of the Act for such drug for a calendar quarter.

As set forth in section 1847A(h)(6)(B) of the Act, the civil money penalty would be an amount equal to the sum of—

- The amount that the manufacturer would have paid under such paragraph with respect to such drug for such quarter; and
- 25 percent of such amount.

We proposed to codify the civil money penalty at § 414.940.

The following is a summary of the public comments received on the enforcement provisions and our responses:

*Comment:* Several commenters requested that the focus of manufacturer audits be limited to the manufacturers' responsibilities under section 1847A(h) of the Act, namely, the payment of obligations specified in CMS reports to manufacturers. The commenters also requested that the audits only be triggered by patterns of unusual payments, rather than being regularly scheduled. One commenter requested we engage with manufacturers as we develop the manufacturer audit process, and that we develop a system that is transparent, predictable, and minimally burdensome. The commenter requested a 60-day notice in advance of audits and that we provide instructions on the audit process and remedial measures. Several commenters requested more information on the lookback period, frequency, and scope of manufacturer audits, as well as remedial measures.

One commenter requested that manufacturer audits be performed remotely.

*Response:* We agree with the commenters, and at this time, we do not intend to conduct audits under section 1847A(h)(6)(A) of the Act beyond determinations they have either paid refund obligations or not. The remedial measure for nonpayment of refund obligations is the civil money penalty specified under section 1847A(h)(6)(B) of the Act, as discussed below. These determinations will be made following the issuance of the report to manufacturers, but as we are not finalizing the date we will issue the first report, we cannot finalize timing for determinations of nonpayment. Finally, this determination can be performed remotely.

*Commenter:* One commenter suggested we conduct post-claims reviews for providers with unusual JW and JZ modifier reporting patterns. One commenter, while generally supporting our proposal for provider audits, requested a process for those audits that allows manufacturers to guide audit efforts by suggesting particular issues or trends that warrant attention. One commenter supported our proposal to not significantly increase the volume of post-payment claims reviews to identify claims submitted without the JW or JZ modifiers.

*Response:* We agree with the commenter that provider audits should focus on unusual JW and JZ modifier reporting patterns. We also agree that engagement with manufacturers on potential issue areas in discard reporting practices can make the provider audit process more targeted and effective. In response to the comment about audits specifically for

identifying claims without the JW or JZ modifiers, we are finalizing that we will continue the JW reporting requirement and that the JZ modifier will be required for dates of service beginning July 1, 2023. In addition, we will begin editing for the use of both the JW and JZ modifiers beginning October 1, 2023.

*Comment:* One commenter stated that CMS's actions following adverse manufacturer audit findings should start with an opportunity for education and correction prior to any enforcement action or penalties.

*Response:* We disagree with the commenter. We proposed to impose civil money penalties only on manufacturers who fail to remit refunds to CMS in a timely manner. We clarify our proposal on the amount of time manufacturers have to pay a refund if, after the resolution of a dispute, we find that the provider owes a refund. Although in one part of the proposed rule we stated that manufacturers have until 30 days following the resolution of the dispute to pay the refund, in another part of the proposed rule we stated refunds would be due December 31 of the year in which a report is issued to manufacturers even if the amount is under dispute. We are finalizing the former, as discussed above in section III.A.7 of this final rule. We continue to believe this is ample time for manufacturers to comply with a report for refund obligations.

*Comment:* One commenter stated that the imposition of civil money penalties should not be set before a manufacturer has had the opportunity to meaningfully engage CMS in a dispute process.

*Response:* We agree with the commenter that civil money penalties should not be imposed while the window for disputing a refund amount is still open, when the dispute process is ongoing, and not before a reasonable amount of time has passed since either the report was first sent to the manufacturer or the dispute process concluded with a decision finding that the manufacturer has a refund obligation.

After consideration of the public comments, we are finalizing the regulations of § 414.490(e) that at this time, manufacturer audits will be limited to determinations that they have paid refund obligations or not and will revisit timing of those determinations in future rulemaking. We are also finalizing that provider audits of Part B medication claims will be conducted periodically to determine whether the JW modifier, JZ modifier, and discarded drug amounts are billed appropriately consistent with our normal claims audit policies and protocols. Finally, we are

<sup>152</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/JW-Modifier-FAQs.pdf>.

finalizing that we will impose a penalty of 125 percent of the fund amount owed if the manufacturer fails to remit refund obligations.

*Comment:* We received public comments that were outside the scope of the discarded amount refund proposals included in the CY 2023 PFS proposed rule. These comments were related to: guidance to FDA on encouraging or requiring manufacturers to use more efficient drug packaging, the impacts of the policy on drug and biological research and development and market participation, the review burden imposed on FDA by the refund policy, the Medicare program's use of the refund revenues, the impact of the refunds for Medicare beneficiaries, and comparative billing reports to providers focusing on JW modifier reporting.

*Response:* We consider these public comments to be outside the scope of the proposed rule, and therefore, we are not addressing them in this final rule. We may consider these public comments for possible proposals in future rulemaking.

#### *B. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)*

##### 1. Background

###### a. RHC and FQHC Payment Methodologies

As provided in 42 CFR part 405, subpart X of our regulations, RHC and FQHC visits generally are defined as face-to-face encounters between a patient and one or more RHC or FQHC practitioners during which one or more RHC or FQHC qualifying services are furnished. RHC and FQHC practitioners are physicians, NPs, PAs, CNMs, clinical psychologists (CPs), and clinical social workers, and under certain conditions, a registered nurse or licensed practical nurse furnishing care to a homebound RHC or FQHC patient in an area with a shortage of home health agencies. Transitional Care Management (TCM) services can also be paid by Medicare as an RHC or FQHC visit. In addition, Diabetes Self-Management Training (DSMT) or Medical Nutrition Therapy (MNT) sessions furnished by a certified DSMT or MNT program may also be considered FQHC visits for Medicare payment purposes. Only medically necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner are RHC or FQHC billable visits. Services furnished by auxiliary personnel (for example, nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC

practitioner) are considered incident to the visit and are included in the per-visit payment.

RHCs generally are paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services and qualified preventive health services furnished on the same day (with some exceptions). The AIR is subject to a payment limit, meaning that an RHC will not receive any payment beyond the specified limit amount. As of April 1, 2021, all RHCs are subject to new payment limits on the AIR, and this limit will be determined for each RHC in accordance with section 1833(f) of the Act.

FQHCs were paid under the same AIR methodology until October 1, 2014. Beginning that date, in accordance with section 1834(o) of the Act (as added by section 10501(i)(3) of the Affordable Care Act), they began to transition to the FQHC PPS system, in which they are paid based on the lesser of the FQHC PPS rate or their actual charges. The FQHC PPS rate is adjusted for geographic differences in the cost of services by the FQHC PPS geographic adjustment factor (GAF). The rate is increased by 34 percent when an FQHC furnishes care to a patient that is new to the FQHC, or to a beneficiary receiving an initial preventive physical examination (IPPE) or has an annual wellness visit (AWV).

Both the RHC AIR and FQHC PPS payment rates were designed to reflect the cost of all services and supplies that an RHC or FQHC furnishes to a patient in a single day. The rates are not adjusted for the complexity of the patient health care needs, the length of the visit, or the number or type of practitioners involved in the patient's care.

###### b. Care Management Services in RHCs and FQHCs

We have been engaged in a multi-year examination of coordinated and collaborative care services in professional settings, and as a result established codes and separate payment in the PFS to separately recognize and pay for these important services. The care coordination included in services, such as office visits, do not always adequately describe the non-face-to-face care management work involved in primary care. Payment for office visits may not reflect all the services and resources required to furnish comprehensive, coordinated care management for certain categories of beneficiaries, such as those who are returning to a community setting following discharge from a hospital or skilled nursing facility (SNF) stay.

A separate payment was established in the CY 2016 PFS final rule with comment period (80 FR 71080 through 71088) for RHCs and FQHCs that furnish Chronic Care Management (CCM) services. We believe the non-face-to-face time required to coordinate care is not captured in the RHC AIR or the FQHC PPS payment, particularly for the rural and/or low-income populations served by RHCs and FQHCs. Allowing separate payment for CCM services in RHCs and FQHCs is intended to reflect the additional resources necessary for the unique components of CCM services.

In the CY 2018 PFS final rule with comment period (82 FR 53169 and 53180), we finalized revisions to the payment methodology for CCM services furnished by RHCs and FQHCs and established requirements for general Behavioral Health Integration (BHI) and psychiatric Collaborative Care Management (CoCM) services furnished in RHCs and FQHCs, beginning on January 1, 2018. We also initiated the use of HCPCS code G0511, a General Care Management code for use by RHCs or FQHCs when at least 20 minutes of qualified CCM or general BHI services are furnished to a patient in a calendar month. In the CY 2019 PFS final rule (83 FR 59683), we explained for CY 2018 the payment amount for HCPCS code G0511 was set at the average of the 3 national non-facility PFS payment rates for the CCM and general BHI codes and updated annually based on the PFS amounts. That is, for CY 2018 the 3 codes that comprised G0511 were CPT code 99490 (20 minutes or more of CCM services), CPT code 99487 (60 minutes or more of complex CCM services), and CPT code 99484 (20 minutes or more of BHI services).

We also explained that another CCM code was introduced for practitioners billing under the PFS, CPT code 99491, which would correspond to 30 minutes or more of CCM furnished by a physician or other qualified health care professional and is similar to CPT codes 99490 and 99487 (83 FR 59683). Therefore, for RHCs and FQHCs, we added CPT code 99491 as a general care management service and included it in the calculation of HCPCS code G0511. Starting on January 1, 2019, RHCs and FQHCs were paid for HCPCS code G0511 based on the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 99491 (83 FR 59687).

In the CY 2020 PFS final rule with comment (84 FR 62692), we established a separate payment for Principle Care Management (PCM) services under the PFS. PCM services include

comprehensive care services for a single high-risk disease or complex condition, typically expected to last at least 3 months and may have led to a recent hospitalization, and/or placed the patient at significant risk of death. Beginning January 1, 2020, practitioners billing under the PFS can bill for PCM services using HCPCS codes G2064 or G2065. HCPCS code G2064 is for at least 30 minutes of PCM services furnished by physicians or nonphysicians during a calendar month. HCPCS code G2065 is for at least 30 minutes of PCM services furnished by clinical staff under the direct supervision of a physician or non-physician during a calendar month.

In the CY 2021 PFS final rule (85 FR 84697 through 84699), we explained that since the requirements for the new PCM codes were similar to the requirements for the services described by HCPCS code G0511, we added HCPCS code G2064 and G2065 to G0511 as a general care management service for RHCs and FQHCs starting January 1, 2021. The payment rate for HCPCS G0511 for CY 2021 was the average of the national non-facility PFS payment rate for the RHC and FQHC care management and general behavioral health codes (CPT codes 99490, 99487, 99484, and 99491), and PCM codes (HCPCS G2064 and G2065). Finally, we note that in the CY 2022 PFS final rule (86 FR 65118), HCPCS codes G2064 and G2065 were replaced by CPT codes 99424 and 99435. Therefore, for CY 2022 the current payment rate for HCPCS G0511 is the average of the national non-facility PFS payment rate for the RHC and FQHC care management and general behavioral health codes (CPT codes 99490, 99487, 99484, and 99491), and PCM codes (CPT codes 99424 and 99425).

Additional information on care management requirements is available on the CMS Care Management web page at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management.html> and on the CMS RHC and FQHC web pages at <https://www.cms.gov/Center/Provider-Type/Rural-Health-Clinics-Center.html> and <https://www.cms.gov/Center/Provider-Type/Federally-Qualified-Health-Centers-FQHC-Center.html>.

## 2. New Care Management Codes for Chronic Pain Management (CPM) and General Behavioral Health Integration (GBHI)

As discussed in the CY 2023 PFS proposed rule (87 FR 46064 through 46065), under the PFS we proposed two new HCPCS codes to describe CPM and the proposed CPM codes would be

created to separately pay for a specified set of pain management and treatment services, specifically including the administration of validated rating scales, and a person-centered care plan that includes strengths, goals, clinical needs, and desired outcomes.

(1) HCPCS codes G3002: *Chronic pain management and treatment, monthly bundle including, diagnosis; assessment and monitoring; administration of a validated pain rating scale or tool; the development, implementation, revision, and maintenance of a person-centered care plan that includes strengths, goals, clinical needs, and desired outcomes; overall treatment management; facilitation and coordination of any necessary behavioral health treatment; medication management; pain and health literacy counseling; any necessary chronic pain related crisis care; and ongoing communication and care coordination between relevant practitioners furnishing care, e.g. physical therapy and occupational therapy, and community-based care, as appropriate. Required initial face-to-face visit at least 30 minutes provided by a physician or other qualified health professional; first 30 minutes personally provided by physician or other qualified health care professional, per calendar month.* (When using G3002, 30 minutes must be met or exceeded.)

(2) HCPCS code G3003: *Each additional 15 minutes of chronic pain management and treatment by a physician or other qualified health care professional, per calendar month.* For G3002, CPM services, we are requiring a face-to-face visit of at least 30 minutes provided by a physician or other qualified health professional, per calendar month to a beneficiary who has a diagnosis of pain that has lasted more than 3 months, which could be the result of an underlying medical disease or condition. HCPCS code G3003 will apply to up to three units of an additional 15 minutes of CPM and treatment by a physician or other qualified health care professional, per calendar month (listed separately in addition to HCPCS code G3002). The new codes for CPM would be valued using crosswalks to the CY 2023 PCM services, CPT codes 99424 and 99425.

We also discussed proposed new coding and payment under the PFS for general BHI services. That is, the new HCPCS code (G0323): *Care management services for behavioral health conditions, at least 20 minutes of clinical psychologist or clinical social worker time, per calendar month, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable*

*validated rating scales; behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes; facilitating and coordinating treatment such as psychotherapy, coordination with an/or referral to physicians and practitioners who are authorized by Medicare law to prescribe medications and furnish E/M services counseling and/or psychiatric consultation; and continuity of care with a designated member of the care team*) describing general BHI services performed by clinical psychologists (CPs) and clinical social workers (CSWs). As proposed, the payment rate for the new General BHI code would be based on the payment rate for the current general BHI code, 99484. We noted that CPs and CSWs are statutorily authorized to furnish services in RHCs and FQHCs, as described by § 405.2411(a)(6).

We explained the requirements for the CPM service (that is, HCPCS code G3002) would be similar to the requirements for the general care management services furnished by RHCs and FQHCs and as such, we believe the non-face-to-face time required to coordinate care is not captured in the RHC AIR or the FQHC PPS payment, particularly for the rural and/or underserved populations served by RHCs and FQHCs. The pain management coordination included in services, such as office visits, do not always adequately describe the non-face-to-face pain management services involved in primary care.

Allowing separate payment for CPM services in RHCs and FQHCs is intended to reflect the additional time and resources necessary for the unique components of care coordination services. We did not propose to utilize the add-on HCPCS code G3003 for RHC/FQHC payments because RHCs and FQHCs do not pay their practitioners based on additional minutes spent by practitioners, as is the case for practitioners under the PFS. In an effort to be consistent with the new services that were proposed for practitioners billing under the PFS, we proposed to include CPM services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. Since HCPCS code G3002 would be valued using a crosswalk to the PCM CPT code 99424, which is currently one of the CPT codes that comprise HCPCS code G0511, we did not propose a change to the average used to calculate the HCPCS code G0511 payment rate.

In addition, as explained in the proposed rule, since CPs and CSWs are

statutorily authorized to furnish services in RHCs/FQHCs, we clarified that when CPs and CSWs furnish the services described in HCPCS code G0323 in an RHC or FQHC, they can bill HCPCS code G0511.

We noted that if finalized as proposed, RHCs and FQHCs that furnish the new CPM and GBHI services furnished by CPs and CSWs would be able to bill these services using HCPCS code G0511, either alone or with other payable services on an RHC or FQHC claim for dates of service on or after January 1, 2023. The payment rate for HCPCS code G0511 would continue to be the average of the national non-facility PFS payment rates for the RHC and FQHC care management and general behavioral health codes (CPT codes 99484, 99487, 99490, and 99491) and PCM codes (CPT codes 99424 and 99425) and would be updated annually based on the PFS amounts for these codes.

We also noted that we may consider other approaches in future rulemaking for calculating the rate of HCPCS code G0511 as the number of services is growing each year. For example, we could value HCPCS code G0511 using a weighted average of the services that comprise HCPCS code G0511 or using the national average of the top three services comprising HCPCS code G0511. We welcomed comments on potential methodologies.

Finally, we note that the codes GYYY1, GYYY2, and GBHI1 in the proposed rule were placeholder codes and that the final code numbers will be HCPCS code G3002, G3003, and G0323 respectively and corresponding discussions have been updated.

The following is a summary of the public comments received on the new care management codes for Chronic Pain Management (CPM) and General Behavioral Health Integration (GBHI) and our responses:

*Comment:* The majority of the commenters supported our proposal to allow RHCs and FQHCs to furnish CPM services; however, they would like CMS to treat HCPCS code G3002 as an encounter and reimburse these services at the RHC AIR or at the FQHC PPS rate, instead of bundling the services under the general care management code, HCPCS code G0511. The commenters noted that the definition of an RHC or FQHC encounter is a face-to-face encounter between a patient and an RHC or FQHC practitioner during which a qualified service is furnished. They explained that the proposed codes require a face-to-face visit for at least 30 minutes with a RHC or FQHC practitioner, therefore clearly meeting

the definition of an RHC or FQHC encounter.

*Response:* We appreciate the feedback from commenters regarding the addition of CPM services and the proposed reimbursement for these services. We agree that the description of HCPCS code G3002 includes a face-to-face component. As explained in the CY 2023 PFS proposed rule (87 FR 45936 through 45937), to value CPM, we compared the proposed services to codes that involve care management. In doing so, we concluded that the CPM services were similar in work (time and intensity) to that of PCM in that both the PCM codes and proposed CPM codes reflected services that have similar complexities, possible comorbidities, require cognitive time on the part of the practitioner, and may involve coordination of care across multiple practitioners. Therefore, in an effort to pay the same for similar services, and for RHCs and FQHCs we pay PCM using HCPCS code G0511, we did not believe it is appropriate to pay CPM as a visit.

After consideration of public comments, we have reconsidered our approach to billing CPM services. Many Medicare beneficiaries have multiple chronic conditions, and many of these conditions could involve chronic pain. We believe it is reasonable to assume that in many instances, the RHC or FQHC practitioner could be spending time with the Medicare patient discussing health and wellness related to a variety of conditions that a person may be experiencing, or expect to experience, and that interaction might also have a focus on the chronic pain aspects of the person's care. Addressing chronic pain as part of a visit would complete the face-to-face component of CPM. Billing of HCPCS code G0511 would address the non-face-to-face components of CPM. Therefore, both the face-to-face visit and the non-face-to-face components of CPM as an add-on service(s) could be on the same day if all requirements to report each service are met, without time or effort being counted more than once. We believe having the ability to bill both a face-to-face visit and a non-face-to-face CPM add-on service on the same day mitigates concerns from the commenters since payment for the RHC or FQHC visit accounts for the face-to-face component and payment for non-face-to-face CPM services accounts for the additional time and resources necessary for the unique components of care coordination for non-face-to-face CPM services furnished outside of the face-to-face visit with an RHC or FQHC practitioner. Therefore, we are finalizing as proposed to include non-face-to-face

CPM services described in HCPCS code G3002 in the general care management HCPCS code G0511 when these services are furnished by RHCs and FQHCs.

*Comment:* A few commenters encouraged CMS to permit RHCs and FQHCs to provide CCM and GBHI to a patient in the same calendar month and receive the separate reimbursement for each service.

*Response:* We note that we did not specifically make any proposals in the CY 2023 PFS proposed rule to simultaneously bill CCM or BHI service in the same calendar month. In the CY 2021 PFS final rule with comment (86 FR 84699), we finalized a policy that general care management services furnished in RHCs and FQHCs can only be billed once per month per beneficiary when at least 20 minutes of CCM services, at least 30 minutes of PCM services, or at least 20 minutes of general BHI services have been furnished and all requirements have been met. Therefore, if the requirements for each of these care management services are met, then HCPCS code G0511 can be billed more than once in a calendar month, either alone or with other payable services and the same would apply for CPM and GBHI.

*Comment:* One commenter recommended CMS to further designate if separately reportable procedures are able to be billed during the proposed 30-day CPM management period, and if CMS allows for separately reportable procedures (for example, injections, dry needling, acupuncture, PT/OT) to be performed during the same billing period, then CMS should define any limitations on which ones are, or are not, separately billable.

*Response:* We appreciate the commenter's feedback. Procedures, such as injections, dry needling, acupuncture, and PT/OT, may be furnished by auxiliary personnel "incident to" an encounter with an RHC or FQHC practitioner in a medically appropriate timeframe, as described by §§ 405.2413 and 405.2415. More than one "incident to" service or supply can be provided as a result of a single encounter with an RHC or FQHC practitioner. However, they cannot be separately billed as separate visits.

*Comment:* One commenter requested that CMS allow RHCs and FQHCs to bill for the new HCPCS code G3003 which applies up to three units of an additional 15 minutes of CPM per month.

*Response:* We appreciate the feedback from the commenter regarding the new CPM HCPCS code that describes the additional time spent by practitioners. We did not propose to utilize the add-

on HCPCS code G3003 for RHC/FQHC payments because RHCs and FQHCs do not pay their practitioners based on additional minutes spent by practitioners, as is the case for practitioners paid under the PFS. As we stated in the CY 2016 PFS final rule (80 FR 71086) when we added CCM, we explained that additional minutes as follows: the service period for billing CCM services in RHCs and FQHCs is one calendar month, and we expect the RHC or FQHC to continue furnishing services during a given month as applicable even after the 20-minute time threshold to bill the service is met. The RHC or FQHC could bill for the CCM service after completion of at least 20 minutes of qualifying CCM services during the service period, or any time after that until the end of the month. This is consistent for other care management services included in HCPCS code G0511 and now extends to CPM services. RHCs and FQHCs must meet the minimum of 30 minutes in order to bill HCPCS code G0511 for CPM services.

*Comment:* Generally, commenters were supportive of the clarification that when CPs and CSWs provide the services described in HCPCS code G0323 in an RHC or FQHC, they can bill HCPCS code G0511 as statutorily authorized RHC and FQHC practitioners.

*Response:* We appreciate the support received from commenters.

*Comment:* Commenters urged CMS to create billing codes that reflect the complexities between RHC and FQHC patients and provide variable reimbursement rates that reflect the varying levels of care management services provided. Commenters opined that adding CPM and GBHI services further dilutes the reimbursement to RHCs and FQHCs under HCPCS code G0511 drawing attention to the fact that not every patient is the same as the level of providers needed to treat the patient and time spent may vary.

*Response:* We appreciate the feedback in response to our comment solicitation on potential methodologies for calculating the rate of HCPCS code G0511 and will take this information into consideration for future rulemaking.

After consideration of the public comments, and in an effort to be consistent with the new services finalized in section II.E of this final rule for practitioners billing under the PFS, we are finalizing as proposed to include CPM services described by HCPCS code G3002 in the general care management HCPCS code G0511 when these services are furnished by RHCs and FQHCs.

Since HCPCS code G3002 is valued using a crosswalk to the PCM CPT code 99424, which is currently one of the CPT codes that comprise HCPCS code G0511, there is no change to the average used to calculate the HCPCS code G0511 payment rate to reflect CPM services. This is in addition to the face-to-face visit component of CPM services. We note as discussed in section II.E of this final rule, we are finalizing the descriptor of HCPCS code G3002 as follows, with the two modifications shown in *italics*: Chronic pain management and treatment, monthly bundle including, diagnosis; assessment and monitoring; administration of a validated pain rating scale or tool; the development, implementation, revision, *and/or* maintenance of a person-centered care plan that includes strengths, goals, clinical needs, and desired outcomes; overall treatment management; facilitation and coordination of any necessary behavioral health treatment; medication management; pain and health literacy counseling; any necessary chronic pain related crisis care; and ongoing communication and care coordination between relevant practitioners furnishing care, for example, physical therapy and occupational therapy, *complementary and integrative approaches*, and community-based care, as appropriate. Required initial face-to-face visit at least 30 minutes provided by a physician or other qualified health professional; first 30 minutes personally provided by physician or other qualified health care professional, per calendar month. (When using HCPCS code G3002, 30 minutes must be met or exceeded.)

In addition, CPs and CSWs are statutorily authorized to furnish services in RHCs and FQHCs, and therefore, we are finalizing the clarification that when CPs and CSWs provide the services described in HCPCS code G0323 in an RHC or FQHC, they can bill HCPCS code G0511.

RHCs and FQHCs that furnish CPM and GBHI services are able to bill these services using HCPCS code G0511, either alone or with other payable services on an RHC or FQHC claim for dates of service on or after January 1, 2023. The payment rate for HCPCS code G0511 will continue to be the average of the national non-facility PFS payment rates for the RHC and FQHC care management and general behavioral health codes (CPT codes 99484, 99487, 99490, and 99491) and PCM codes (CPT codes 99424 and 99425) and will be updated annually based on the PFS amounts for these codes. In addition, we will take into consideration the

comments we received in response to our comment solicitation on potential methodologies for calculating the rate of HCPCS code G0511 for future rulemaking.

### 3. Conforming Technical Changes to 42 CFR 405.2463 and 405.2469

Last year in the CY 2022 PFS final rule with comment (86 FR 65211), we revised the regulatory requirement that an RHC or FQHC mental health visit must be a face-to-face (that is, in person) encounter between an RHC or FQHC patient and an RHC or FQHC practitioner. We revised the regulations under § 405.2463 to state that an RHC or FQHC mental health visit can also include encounters furnished through interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries are not capable of, or do not consent to, the use of devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder. We noted that these changes aligned with similar mental health services furnished under the PFS. We also noted that this change allows RHCs and FQHCs to report and be paid for mental health visits furnished via real-time, telecommunication technology in the same way they currently do when these services are furnished in-person.

In addition, we revised the regulation under § 405.2463 to state that there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record (86 FR 65210 and 65211).

We also revised the regulation under § 405.2469, FQHC supplemental payments, to state that a supplemental payment required under this section is made to the FQHC when a covered face-to-face (that is, in-person) encounter or an encounter where services are furnished using interactive, real-time, telecommunications technology or

audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in § 405.2463. At § 405.2469, we also revised paragraph (d) to describe the same in-person visit requirement referenced in § 405.2463.

As discussed in the CY 2023 PFS proposed rule (87 FR 46065), the Consolidated Appropriations Act, 2022 (Pub. L. 117–103) (CAA, 2022) signed into law on March 15, 2022, included the extension of a number of Medicare telehealth flexibilities established during the PHE for a limited 151-day period beginning on the first day after the end of the public health emergency (PHE) for COVID–19. Specifically, section 303 of the CAA, 2022 amended section 1834(m)(8) of the Act to extend payment for telehealth services furnished by FQHCs and RHCs for the 151-day period beginning on the first day after the end of the COVID–19 PHE. We explained that payment would continue to be made under the methodology established for telehealth services furnished by FQHCs and RHCs during the PHE, which is based on payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS. We noted that we did not believe it was necessary to conform the regulation for this temporary provision.

We also discussed section 304 of the CAA, 2022 which delayed the in-person requirements under Medicare for mental health services furnished through telehealth under the PFS and for mental health visits furnished by RHCs and FQHCs via telecommunications technology. We noted this change required conforming regulatory text. For RHCs and FQHCs, in-person visits will not be required until the 152nd day after the end of the PHE for COVID–19. We noted that while the extensions of mental health telehealth visits under section 304 of the CAA, 2022 were placed into paragraphs of section 1834 of the Act applicable only to hospice patients served by RHCs and FQHCs, the overall intent of the amendments made by section 304 of the CAA, 2022 appear to be to provide an exception to the limitations otherwise in place on payment for mental health visits that are not in-person visits. Therefore, we proposed to apply the 151-day extension of non-in-person visits to all RHC and FQHC mental health visits.

We proposed to make conforming regulatory text changes to the applicable

RHC and FQHC regulations in 42 CFR part 405, subpart X, specifically, at § 405.2463, “What constitutes a visit,” we proposed to amend paragraph (b)(3) and, at § 405.2469 “FQHC supplemental payments,” we proposed to amend paragraph (d) to include the delay of the in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology under Medicare until the 152nd day after the PHE for COVID–19.

In the CY 2023 PFS proposed rule we listed the several other provisions of the CAA, 2022 that apply to telehealth services (those that are not mental health visits) furnished by RHCs and FQHCs. These provisions are also listed in the following paragraphs.

Section 301 of the CAA, 2022 amended section 1834(m)(4)(C) of the Act to add a new clause (iii) expand the originating site requirements to include any site in the U.S. at which the beneficiary is located, including an individual’s home, for a 151-day period beginning on the first day after the end of the PHE for COVID–19. It also prohibits an originating site facility fee from being paid unless the site is a setting included on the originating site list in section 1834(m)(4)(C)(ii) of the Act, excluding the home of an individual.

Section 305 of division P, title III, subtitle A of the CAA, 2022 amended section 1834(m) of the Act to extend coverage and payment of telehealth services that are furnished via audio-only telecommunications system for the 151-day period beginning on the first day after the end of the PHE for COVID–19.

Section 309 of division P, title III, subtitle A of the CAA, 2022 authorized the Secretary to implement the Medicare telehealth provisions via program instruction or otherwise.

The following is a summary of the public comments received on the conforming technical changes to §§ 405.2463 and 405.2469 our responses:

*Comment:* All commenters supported our proposal to make conforming regulatory text changes to the applicable RHC and FQHC regulations in 42 CFR part 405, subpart X, specifically, at § 405.2463, “What constitutes a visit,” and at § 405.2469 “FQHC supplemental payments” to reflect the delay of the in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology under Medicare until the 152nd day after the PHE for COVID–19. One commenter stated the delay of the in-person requirements would ensure consumers and caregivers have time to

plan how they will attend an in-person visit, including arranging for childcare or transportation, and meeting other logistical challenges. Several commenters expressed concern that the in-person requirements would pose a challenge for some beneficiaries due to various social determinants of health and would like CMS to permanently remove the in-person requirements.

*Response:* We appreciate the feedback from commenters regarding the impact in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology may have on access to care. Regarding concerns that the in-person requirements would pose a challenge for some beneficiaries due to various social determinants of health, we would like to direct you to § 405.2463(b)(3) that describes the exceptions to the in-person visit requirements. An in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient’s medical record, between an RHC or FQHC patient.

*Comment:* Commenters supported the Medicare telehealth extensions, but urged CMS to permanently allow RHCs and FQHCs to become distant sites for medical visits furnished using interactive, real-time, audio and video telecommunications, or audio-only interactions. Several commenters noted CMS has the authority to revise the definition of a medical visit for RHCs and FQHCs and should do so prior to the end of the COVID–19 PHE to avoid consequential gaps in care for some of the most vulnerable Medicare patients.

*Response:* In response to comments that CMS permanently allow RHCs and FQHCs to become distant sites for medical visits, we note that the use of telecommunications technology by RHCs and FQHCs to furnish medical visits was not within the scope of this proposal. However, we anticipate that the extension of payment for distant site telehealth services furnished by RHCs and FQHCs for a 151-day period after the end of the PHE, as established in the CAA, 2022, would mitigate concerns regarding gaps in care since it could

provide time for transitioning patients to come into the RHC or FQHC.

*Comment:* Commenters also provided comments on the following issues: Allowing RHCs and FQHCs to bill separately for remote physiologic monitoring (RPM) and remote therapeutic monitoring (RTM) services; recognizing pharmacists, DSMT providers, licensed professional counselors (LPCs) and licensed marriage and family therapist (LMFTs) as RHC and FQHC practitioners; and allowing RHCs and FQHCs to bill psychiatric collaborative care codes (G2214, 99492–99494).

*Response:* We appreciate the feedback from commenters. Since we did not specifically make any proposals associated with these subjects in the CY 2023 PFS proposed rule, the comments are considered to be out of scope. We note that while we recognize that pharmacists, DSMT providers, LPCs, and LMFTs can be a valuable part of the health care team, we do not have the statutory authority to add providers to the list of RHC and FQHC practitioners whose services are included in the statutory definition of RHC and FQHC services, as specified in section 1861(aa)(1) and (3) of the Act, respectively. However, incidental services furnished by auxiliary personnel are allowed incident to an encounter with an RHC or FQHC practitioner if furnished in a medically appropriate timeframe, as described by 42 CFR 405.2413 and 405.2415. As for allowing RHCs and FQHCs to bill RPM and RTM services separately and allowing RHCs and FQHCs to bill psychiatric collaborative care codes, we will continue to evaluate and may consider these in future rulemaking.

After consideration of the comments received, we are finalizing our proposal to make conforming regulatory text changes to the applicable RHC and FQHC regulations in 42 CFR part 405, subpart X. Specifically, we are finalizing revisions at §§ 405.2463 and 405.2469 to reflect the delay of the in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology under Medicare until the 152nd day after the PHE for COVID–19 as proposed.

#### 4. Specified Provider-Based RHC Payment-Limit Per-Visit

##### a. Background

As discussed in the CY 2023 PFS proposed rule (87 FR 46065 through 46066), beginning April 1, 2021, provider-based RHCs that meet qualifications in section 1833(f)(3)(B) of the Act are entitled to the special

payment rules described in section 1833(f)(3)(A) of the Act. In order to avail themselves of this exception, instead of utilizing the national statutory payment limit set out at section 1833(f)(2) of the Act, such RHCs have to meet the following specified criteria set out at section 1833(f)(3)(B)(i) of the Act:

- As of December 31, 2020, the provider-based RHC was in a hospital with less than 50 beds and after December 31, 2020 in a hospital that continues to have less than 50 beds (not taking into account any increase in the number of beds pursuant to a waiver during the PHE for COVID–19); and one of the following circumstances:

- ++ As of December 31, 2020, was enrolled in Medicare (including temporary enrollment during the PHE for COVID–19); or

- ++ Submitted an application for enrollment in Medicare (or a request for temporary enrollment during the PHE for COVID–19) that was received not later than December 31, 2020.

In accordance with section 1833(f)(3)(A)(i)(I) of the Act, beginning April 1, 2021, for provider-based RHCs that had a per visit payment amount (or AIR) established for services furnished in 2020, the payment limit per visit shall be set at an amount equal to the greater of: (1) the per visit payment amount applicable to such RHC for services furnished in 2020, increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of 2021; or (2) the national statutory payment limit for RHCs per visit. We noted, the MEI was last revised in the CY 2014 PFS final rule with comment period (78 FR 74264) and we are finalizing to rebase and revise the MEI for CY 2023 as detailed in section II.M of this final rule.

In a subsequent year (that is, after 2021), the provider-based RHC's payment limit per visit shall be set at an amount equal to the greater of: (1) the payment limit per visit established for the previous year, increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of such subsequent year; or (2) the national statutory payment limit for RHCs.

As stated in the CY2022 PFS final rule (86 FR 65200), in accordance with section 1833(f)(3)(A)(i)(II) of the Act, beginning April 1, 2021, for provider-based RHCs that met the specified criteria under section 1833(f)(3)(B) of the Act, but did not have a per visit payment amount (or AIR) established for services furnished in 2020, the payment limit per visit would be set at an amount equal to the greater of: (1) the per visit payment amount applicable to

the provider-based RHC for services furnished in 2021; or (2) the national statutory payment limit for RHCs.

In a subsequent year (that is, after 2021), the provider-based RHCs payment limit per visit will be the greater of: (1) the payment limit per visit established for the previous year, increased by the percentage increase in MEI applicable to primary care services furnished as of the first day of such subsequent year; or (2) the national statutory payment limit for RHCs.

Once a provider-based RHC meets the qualifications of section 1833(f)(3)(B) of the Act, it will lose its designation if the hospital does not continue to have less than 50 beds, beyond the exemptions provided for the COVID–19 PHE. If this occurs the provider-based RHC would be subject to the statutory payment limit per visit applicable for such year and will not be able to regain the specified provider-based payment limit.

In the CY 2022 PFS final rule (86 FR 65204), we discussed the provisions in section 1833(f) of the Act<sup>153</sup> and finalized conforming regulations under § 405.2462. On March 16, 2021, we issued Change Request 12185, Transmittal 10679, to instruct the Medicare Administrative Contractors (MACs) to establish the provider-based RHC payment limits per visit in accordance with section 1833(f)(3)(A) of the Act, beginning April 1, 2021. Change Request 12185, Transmittal 10679, was rescinded and replaced by Transmittal 10780 issued on May 4, 2021.<sup>154</sup> Change Request 12489, Transmittal 11130, issued on November 19, 2021, implemented the RHC payment limits for CY 2022.<sup>155</sup>

##### b. Clarification to the RHC Payment Limit for Specified Provider-Based RHCs

As we discussed in the CY 2023 PFS proposed rule (87 FR 46066 through 46068), section 1833(f)(3)(A) of the Act instructed CMS to set payment limits per visit for specified provider-based RHCs under certain payment rules. For specified provider-based RHCs that had a per visit payment amount (that is, an AIR) established for services furnished in 2020, beginning April 1, 2021,

<sup>153</sup> As amended by Division CC, section 130 of the Consolidated Appropriations Act of 2021 (Pub. L. 116–260, December 27, 2020). Section 2 of H.R. 1868 (Pub. L. 117–7), enacted April 14, 2021, provided a technical correction to section 1833(f) of the Act. The amendments made by this technical correction took effect as if included in the enactment of the Consolidated Appropriations Act of 2021 (Pub. L. 116–260).

<sup>154</sup> <https://www.cms.gov/files/document/r10780OTN.pdf>.

<sup>155</sup> <https://www.cms.gov/files/document/r11130cp.pdf>.

section 1833(f)(3)(A)(i)(I) of the Act requires the payment limit per visit to be set at an amount equal to the greater of: (1) the per visit payment amount applicable to such RHC for services furnished in 2020, increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of 2021 or; (2) the statutory payment limit per visit as described in section 1833(f)(2)(A) of the Act. For subsequent years, in accordance with section 1833(f)(3)(A)(ii) of the Act, the payment limit per visit shall be set at an amount equal to the greater of: (1) the payment limit per visit established for the previous year, increased by the percentage increase in the MEI or; (2) the statutory payment limit described in section 1833(f)(2) of the Act as applicable.

For specified provider-based RHCs that *did not* have an AIR established for services furnished in 2020, beginning April 1, 2021, section 1833(f)(3)(A)(i)(II) of the Act requires the payment limit per visit shall be set at an amount equal to the greater of: (1) the per visit payment amount applicable to such RHC for services furnished in 2021 or; (2) the statutory payment limit per visit as described in section 1833(f)(2)(A) of the Act. For subsequent years, in accordance with section 1833(f)(3)(A)(ii) of the Act, the payment limit per visit shall be set at an amount equal to the greater of: (1) the amount established in the previous year increased by the percentage increase in the MEI or; (2) the statutory payment limit described in section 1833(f)(2) of the Act as applicable.

In the CY 2022 PFS final rule (86 FR 65201), we interpreted the “per visit payment amount” to align with the interim rate process the MACs use in determining an RHC’s AIR.<sup>156</sup> That is, as explained in § 405.2464(a) the AIR is determined by the MAC using the most recently available cost report. Therefore, using the RHCs discussed in section 1833(f)(3)(A)(i)(I) of the Act as an example, we interpreted the term “services furnished in 2020” to mean the period at which the services were furnished in 2020 and that costs for those services were reported. We acknowledged that there may be more than one cost report that reports costs for services furnished in calendar year 2020 and explained that since section 1833(f)(3)(A)(i)(I)(aa) of the Act requires the “per visit payment amount” to be increased by the CY 2021 MEI, if a provider has a cost reporting period that

differs from a calendar year time-period (that is, January 1, 2020 through December 31, 2020) then the MACs should use data based on the relevant cost report period ending in 2020.

We noted that in the CY 2022 PFS final rule (86 FR 65200), we received comments from interested parties expressing concern about how the payment limit per visit is established for specified provider-based RHCs. To be appropriately reflective of an individual clinic’s true costs, one commenter stated that grandfathered, clinic specific, upper payment limits should be based on the final cost settled amount for cost reporting periods that end in 2020, or 2021 (for grandfathered RHCs that did not have cost reporting period that end in 2020), not an interim rate. If an interim final rate is necessary for the time period before final cost settled rates are adjudicated, the commenter suggested that CMS set interim clinic-specific upper limits only until such time that a final rate is established. In our response to these comments, we agreed, and stated that what the commenter described was aligned with the statute and how we implemented the payment limit per visit for specified provider-based RHCs through Change Request 12185, Transmittal 10780, issued on May 4, 2021. That is, in accordance with section 1833(f)(3)(A) of the Act, specified provider-based RHCs that had a per visit payment amount (or AIR) established for services furnished in 2020, had their payment limit per visit based on their AIR determined from their final settled cost report ending in 2020 increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of 2021 (CY 2021 MEI of 1.4 percent). However, if the product of those two numbers (AIR established for services furnished in 2020 \* 1.014) were less than the national statutory payment limit of \$100, their payment limit per visit was established at \$100. With regard to a specified provider based RHC that did not have an AIR established for services furnished in 2020 and received an interim rate until the MAC accepted and finalized the RHC’s initial cost report, we again agreed with the commenter. We believed that what the commenter described also aligned with the statute and how we implemented the payment limit per visit for these specified provider-based RHCs through Change Request 12185, Transmittal 10780, issued on May 4, 2021. That is, in accordance with section 1833(f)(3)(A) of the Act, specified provider-based RHCs that did not have an AIR established for

services furnished in 2020, would have their payment limit per visit established based on their AIR determined by MACs using the RHC’s final settled cost report ending in 2021. The interim rate estimate would be reconciled at cost report settlement for the cost reporting period ending in 2021 which is used to establish the RHC’s payment limit per visit for services furnished in 2021.

In the proposed rule, we stated that since publication of the CY 2022 PFS final rule, interested parties requested clarification regarding the timing of cost reports, specifically if the payment limit could be set using a short cost report (less than 12 consecutive months). We noted that in the CY 2022 PFS final rule (86 FR 65198 through 65202), we did not specifically address requiring the cost report to span a full 12-consecutive month period or whether MACs, following their interim rate setting process, could establish the payment limit using a specified RHC’s short period cost report (less than 12 consecutive months). Since many questions were raised subsequent to the publication of the CY 2022 PFS final rule regarding the use of short-period cost reports (less than 12 consecutive months) versus 12-consecutive month cost reports to establish the payment limit for specified provider-based RHCs, in the proposed rule, we provided a discussion of the issue and provided clarification.

For purposes of establishing the payment limit effective April 1, 2021 for specified provider-based RHCs defined in section 1833(f)(3)(A)(i)(I) of the Act, that is, had an AIR established for services furnished in 2020, we proposed that MACs use the cost report ending in 2020 that reports costs for 12 consecutive months. If the RHC does not have a 12-consecutive month cost report ending in 2020, the MACs should use the next most-recent final settled cost report that reports cost for 12 consecutive months. We explained that the proposal would impact specified provider-based RHC’s that had an established AIR for services furnished in 2020 but submitted a short cost report (less than 12 consecutive months) ending in 2020 since that period would have been used by MACs for determining the RHC’s payment limit per Change Request 12185, Transmittal 10679.

The payment limit per visit is based on each specified provider-based RHC’s AIR determined from their final settled cost report ending in 2020 when such cost reporting period is for 12 consecutive months. If a 12-consecutive month cost report ending in 2020 is not available, we proposed that the MAC

<sup>156</sup>Note: A discussion of the interim rate process is provided in section III.A.2 of the CY 2022 PFS final rule (86 FR 65198 and 65199).

use the next available 12-consecutive month cost report that reports costs for RHC services furnished in 2020, (for example, a cost reporting period October 1, 2020 through September 30, 2021 would be acceptable).

We considered the idea of combining cost report data that spans from the end of one year into the next year to equal a 12-consecutive month cost report (for example, a cost report that consists of 3 months ending December 31, 2020 plus a cost report that ends July 31, 2021) and prorating the rates from the time services were furnished in both years. We decided against combining cost report data to equal a 12-consecutive month cost report because prorating may result in an inaccurate AIR. We sought comment on whether we should combine cost report data that spans from one year into the next year to equal a 12-consecutive month cost report.

Consequently, for purposes of establishing the payment limit effective April 1, 2021 for specified provider-based RHCs defined in section 1833(f)(3)(A)(i)(II) of the Act (that is, those that did not have an AIR established for services furnished in 2020), we proposed that MACs use the cost report ending in 2021 that reports costs for 12 consecutive months. We noted that if the RHC does not have a 12-consecutive month cost report ending in 2021, the MACs should use the next most-recent final settled cost report that reports cost for 12 consecutive months.

In addition, we noted that for those specified provider-based RHCs who did not have an AIR established for services furnished in 2020, the 2021 MEI percentage increase would not be applied. As discussed in the CY 2022 PFS final rule (86 FR 65200), for those specified provider-based RHCs, the payment limit per visit would be at an amount equal to the greater of: (1) the per visit payment amount applicable to the provider-based RHC for services furnished in 2021; or (2) the national statutory payment limit for RHCs, and since the MEI is already built in the rate for services furnished in 2021 adding an MEI update would be duplicative. Therefore, those specified provider-based RHCs that did not have an AIR established for services furnished in 2020 would receive the CY 2023 percentage increase in the MEI. For CY 2023, we proposed to rebase and revise the MEI to a 2017-base year as discussed in section II.M. of this final rule, we are finalizing the 2017-based MEI for CY 2023, with technical modifications based on public comments.

We noted that we believe the 12 consecutive months of cost report data

would more accurately reflect the costs of providing RHC services and would establish a more accurate base from which the payment limits will be updated going forward. We sought comment on the proposed interpretation.

The following is a summary of the public comments received on the specified provider-based RHC payment-limit per-visit provision and our responses:

*Comment:* We received a few comments on our proposal to use 12-consecutive month cost reports versus short-period cost reports (less than 12 consecutive months) to establish the payment limit for specified provider-based RHCs. Commenters were generally supportive of the use of 12 consecutive month cost reports to establish the payment limit for specified provider-based RHCs.

*Response:* We appreciate commenters' support of the use of 12 consecutive month cost reports to establish the payment limit for specified provider-based RHCs.

*Comment:* We received a few comments on our proposal to rebase and revise the Medicare Economic Index (MEI) from a 2006-base year to a 2017-base year. One commenter thanked CMS for rebasing and revising the MEI in such a way that it reflects more accurate payments to RHCs, however, the commenter urged CMS to explore its authority to ensure that rural practitioners are reimbursed a rate that reflects the current economic reality. Another commenter acknowledged and appreciated CMS' proposal to rebase the MEI for CY2023, but encouraged CMS to remain attentive to the inflationary impacts on providers now and over the coming years and to address the MEI formula accordingly. Another commenter urged CMS to establish a requirement to rebase the payment every 3 years or sooner as the market inflation costs will quickly fall below reimbursement rates.

*Response:* As we noted in the CY 2023 proposed rule (87 FR 46067) and as discussed in section II.M. of this final rule, the MEI is authorized under section 1824(b)(3) of the Act. The MEI reflects the weighted-average annual price change for various inputs involved in furnishing physicians' services. CMS calculates the MEI for several statutory and other purposes, which includes the RHC payment policies. As discussed in section II.M of this final rule, we are finalizing the 2017-based MEI for CY 2023 with technical modifications in response to public comments. The CY 2023 MEI update is 3.8 percent based on historical data through the 2nd quarter

of 2022, of the finalized 2017-based MEI.

*Comment:* One commenter encouraged CMS to consider a more sustainable payment policy because they noted that over the years the RHC reimbursement policy has evolved to include a variety of different methodologies and systems patched together, which has led to increasingly complicated RHC billing and coding rules.

*Response:* We reiterate that in this year's proposed rule, we focused on providing clarification regarding the timing of cost reports, specifically, the use of short-period cost reports (less than 12 consecutive months) versus 12-consecutive month cost reports to establish the payment limit for specified provider-based RHCs. We note that in the CY 2022 final rule (86 FR 65199–65201), we discussed section 130 of the Consolidated Appropriations Act, 2021, which explained the implementation of the national statutory payment limit for RHCs, where RHCs will receive an increase in their payment limit per visit, over an 8-year period, with a prescribed amount for each year from 2021–2028. Then, in a subsequent year, at the limit established for the previous year increased by the percentage increase in the applicable MEI. We believe the intent of section 130 of the CAA was to provide sustainable payment for RHCs. The commenter did not provide examples of complicated billing and coding rules and we look forward to further engagement on these concerns.

After consideration of the public comments, we are finalizing our proposal to use 12-consecutive month cost reports to establish the payment limit for specified provider-based RHCs as proposed.

### *C. Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-In of Payment Reductions, and Policies for Specimen Collection Fees and Travel Allowance for Clinical Diagnostic Laboratory Tests*

#### **1. Background on the Clinical Laboratory Fee Schedule**

Prior to January 1, 2018, Medicare paid for clinical diagnostic laboratory tests (CDLTs) on the Clinical Laboratory Fee Schedule (CLFS), with certain exceptions, under section 1833(a), (b), and (h) of the Act. Under the previous payment system, CDLTs were paid based on the lesser of: (1) the amount billed; (2) the local fee schedule amount established by the Medicare Administrative Contractor (MAC); or (3) a national limitation amount (NLA), which is a percentage of the median of

all the local fee schedule amounts (or 100 percent of the median for new tests furnished on or after January 1, 2001). In practice, most tests were paid at the NLA. Under the previous payment system, the CLFS amounts were updated for inflation based on the percentage change in the Consumer Price Index for All Urban Consumers (CPI-U), and reduced by a productivity adjustment and other statutory adjustments, but were not otherwise updated or changed. Coinsurance and deductibles generally do not apply to CDLTs paid under the CLFS.

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for CDLTs under the CLFS. In the June 23, 2016 **Federal Register** (81 FR 41036), we published a final rule entitled Medicare Clinical Diagnostic Laboratory Tests Payment System (CLFS final rule), that implemented section 1834A of the Act at 42 CFR part 414, subpart G.

Under the CLFS final rule, “reporting entities” must report to CMS during a “data reporting period” “applicable information” collected during a “data collection period” for their component “applicable laboratories.” The first data collection period occurred from January 1, 2016 through June 30, 2016. The first data reporting period occurred from January 1, 2017 through March 31, 2017. On March 30, 2017, we announced a 60-day period of enforcement discretion for the application of the Secretary’s potential assessment of civil monetary penalties (CMPs) for failure to report applicable information with respect to the initial data reporting period.<sup>157</sup>

In the CY 2018 PFS proposed rule (82 FR 34089 through 34090), we solicited public comments from applicable laboratories and reporting entities to better understand their experiences with data reporting, data collection, and other compliance requirements for the first data collection and reporting periods. We discussed these comments in the CY 2018 PFS final rule (82 FR 53181 through 53182) and stated that we would consider the comments for potential future rulemaking or guidance.

As part of the CY 2019 Medicare PFS rulemaking, we finalized two changes to the definition of “applicable laboratory” at § 414.502 (see 83 FR 59667 through 59681, 60074; 83 FR 35849 through 35850, 35855 through 35862). First, we excluded Medicare Advantage (MA) plan payments under Part C from the

denominator of the Medicare revenues threshold calculation, in an effort to broaden the types of laboratories qualifying as applicable laboratories. Specifically, excluding MA plan payments could allow additional laboratories of all types serving a significant population of beneficiaries enrolled in Medicare Part C to meet the majority of Medicare revenues threshold and potentially qualify as applicable laboratories (if they also meet the low expenditure threshold) and report data to CMS during the data reporting period. Because MA plan payments are now excluded from the total Medicare revenues calculation, the denominator amount (total Medicare revenues) would decrease. If the denominator amount decreases, the likelihood increases that a laboratory would qualify as an applicable laboratory. This is because the laboratory’s PFS and CLFS revenues are being compared to a lower total Medicare payment amount than what they would have been compared to if MA plan payments remained in the denominator. Second, consistent with our goal of obtaining a broader representation of laboratories that could potentially qualify as applicable laboratories and report data, we also amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS-1450 14x Type of Bill.

## 2. Payment Requirements for Clinical Diagnostic Laboratory Tests

In general, under section 1834A of the Act, the payment amount for each CDLT on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected during the data collection period and reported to CMS during the data reporting period, and is equal to the weighted median of the private payor rates for the test. The weighted median is calculated by arraying the distribution of all private payor rates, weighted by the volume for each payor and each laboratory. The payment amounts established under the CLFS are not subject to any other adjustment, such as geographic, budget neutrality, or annual update, as required by section 1834A(b)(4)(B) of the Act. Additionally, section 1834A(b)(3) of the Act, implemented at § 414.507(d), provides for a phase-in of payment reductions, limiting the amounts the CLFS rates for each CDLT (that is not a new advanced diagnostic laboratory test (ADLT) or new CDLT) can be reduced as compared to the payment rates for the preceding year. Under the provisions enacted by section 216(a) of PAMA, for the first 3 years after implementation (CY 2018

through CY 2020), the reduction cannot be more than 10 percent per year, and for the next 3 years (CY 2021 through CY 2023), the reduction cannot be more than 15 percent per year. Under section 1834A(a)(1) and (b) of the Act, as enacted by PAMA, for CDLTs that are not ADLTs, the data collection period, data reporting period, and payment rate update occur every 3 years. As such, the second data collection period for CDLTs that are not ADLTs occurred from January 1, 2019 through June 30, 2019, and the next data reporting period was scheduled to take place from January 1, 2020 through March 31, 2020, with the next update to the Medicare payment rates for these tests based on that reported applicable information scheduled to take effect as of January 1, 2021.

Section 216(a) of PAMA established a new subcategory of CDLTs known as ADLTs, with separate reporting and payment requirements under section 1834A of the Act. The definition of an ADLT is set forth in section 1834A(d)(5) of the Act and implemented at § 414.502.

Generally, under section 1834A(d) of the Act, the Medicare payment rate for a new ADLT is equal to its actual list charge during an initial period of 3 calendar quarters. After the new ADLT initial period, ADLTs are paid using the same methodology based on the weighted median of private payor rates as other CDLTs. However, under section 1834A(d)(3) of the Act, updates to the Medicare payment rates for ADLTs occur annually instead of every 3 years.

Additional information on the private payor rate-based CLFS is detailed in the CLFS final rule (81 FR 41036 through 41101) and is available on the CMS website.<sup>158</sup>

## 3. Previous Statutory Revisions to the Data Reporting Period and Phase-In of Payment Reductions

Section 105(a) of the Further Consolidated Appropriations Act, 2020 (FCAA) (Pub. L. 116–94, enacted on December 20, 2019), and section 3718 of the Coronavirus Aid, Relief, and Economic Security Act, 2020 (CARES Act) (Pub. L. 116–136, enacted on March 27, 2020), revised the CLFS requirements for the next data reporting period for CDLTs that are not ADLTs under section 1834A of the Act. Additionally, the CARES Act revised the phase-in of payment reductions under section 1834A of the Act. Specifically, section 105(a)(1) of the

<sup>157</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/2017-March-Announcement.pdf>.

<sup>158</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/PAMA-regulations>.

FCAA amended the data reporting requirements in section 1834A(a) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by 1 year, so that data reporting would be required during the period of January 1, 2021 through March 31, 2021; the 3-year data reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. Section 105(a)(1) of the FCAA also specified that the data collection period that applied to the data reporting period of January 1, 2021 through March 30, 2021 would be the period of January 1, 2019 through June 30, 2019, which was the same data collection period that would have applied absent the amendments. In addition, section 105(a)(2) of the FCAA amended section 1834A(b)(3) of the Act regarding the phase-in of payment reductions to provide that payments may not be reduced by more than 10 percent as compared to the amount established for the preceding year through CY 2020, and for CYs 2021 through 2023, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year. These statutory changes were consistent with our regulations implementing the private payor rate-based CLFS at § 414.507(d) (81 FR 41036).

Subsequently, section 3718 of the CARES Act further amended the data reporting requirements for CDLTs that are not ADLTs and the phase-in of payment reductions under the CLFS. Specifically, section 3718(a) of the CARES Act amended section 1834A(a)(1)(B) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by one additional year, to require data reporting during the period of January 1, 2022 through March 31, 2022. As amended by the CARES Act, section 1834A(a)(1)(B) of the Act provided that in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that: (i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2021; (ii) reporting is required during the period beginning January 1, 2022, and ending March 31, 2022; and (iii) reporting is required every 3 years after the period described in clause (ii).

The CARES Act did not modify the data collection period that applied to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2022

through March 31, 2022) would have been based on the data collection period of January 1, 2019 through June 30, 2019.

Section 3718(b) of the CARES Act further amended the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extended the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2024. It further amended section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for CY 2021 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2021 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2020. Section 3718(b) of the CARES Act further amended section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent will apply for CYs 2022 through 2024, instead of CYs 2021 through 2023.

In the CY 2021 PFS rulemaking (85 FR 50210 through 50211 and 85 FR 84693 through 84694), in accordance with section 105(a) of the FCAA and section 3718 of the CARES Act, we proposed and finalized conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G. Specifically, we finalized revisions to § 414.502 to update the definitions of both the data collection period and data reporting period, specifying that for the data reporting period of January 1, 2022 through March 31, 2022, the data collection period is January 1, 2019 through June 30, 2019. We also revised § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017 and is required every 3 years beginning January 2022. In addition, we finalized conforming changes to our requirements for the phase-in of payment reductions to reflect the CARES Act amendments. Specifically, we finalized revisions to § 414.507(d) to indicate that for CY 2021, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2020, and for CYs 2022 through 2024, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

#### 4. Additional Statutory Revisions to the Data Reporting Period and Phase-In of Payment Reductions

Section 4 of the Protecting Medicare and American Farmers from Sequester Cuts Act (PMAFSCA) (Pub. L. 117–71, enacted on December 10, 2021) made additional revisions to the CLFS

requirements for the next data reporting period for CDLTs that are not ADLTs and to the phase-in of payment reductions under section 1834A of the Act. Specifically, section 4(b) of PMAFSCA amended the data reporting requirements in section 1834A(a) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by 1 year, so that data reporting would be required during the period of January 1, 2023 through March 31, 2023; the 3-year data reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. As amended by section 4 of PMAFSCA, section 1834A(a)(1)(B) of the Act now provides that in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that—(i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2022; (ii) reporting is required during the period beginning January 1, 2023, and ending March 31, 2023; and (iii) reporting is required every 3 years after the period described in clause (ii).

Section 4 of PMAFSCA does not modify the data collection period that applies to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2023 through March 31, 2023) will continue to be based on the data collection period of January 1, 2019 through June 30, 2019, as defined in § 414.502.

Section 4 of PMAFSCA further amends the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extends the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2025. It further amends section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for each of CY 2021 and 2022 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2021 and 2022 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2020. Section 4(a) of PMAFSCA further amends section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent will apply for CYs 2023 through 2025, instead of CYs 2022 through 2024.

#### 5. Conforming Regulatory Changes

In accordance with section 4(b) of PMAFSCA, in the CY 2023 PFS proposed rule (87 FR 46068 through

46070), we proposed to make certain conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G. Specifically, we proposed to revise § 414.502 to update the definitions of both the “data collection period” and “data reporting period,” specifying that for the data reporting period of January 1, 2023 through March 31, 2023, the data collection period is January 1, 2019 through June 30, 2019. We also proposed to revise § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017 and is required every 3 years beginning January 2023. In addition, we proposed to make conforming changes to our requirements for the phase-in of payment reductions to reflect the amendments in section 4(b) of PMAFSCA. Specifically, we proposed to revise § 414.507(d) to indicate that for CY 2022, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2021, and for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We noted that the CYs 2022 and 2023 CLFS payment rates for CDLTs that are not ADLTs are based on applicable information collected in the data collection period of January 1, 2016 through June 30, 2016. We explained that under current law, the CLFS payment rates for CY 2024 through CY 2026 for these tests will be based on applicable information collected during the data collection period of January 1, 2019 through June 30, 2019 and reported to CMS during the data reporting period of January 1, 2023 through March 31, 2023.

The following is a summary of the public comments received on the proposed conforming regulatory changes and our responses:

*Comment:* Several commenters supported our proposal to revise §§ 414.502, 414.504 and 414.507 to conform with the current statutory provisions governing data reporting and payment for CDLTs on the CLFS.

*Response:* We appreciate the commenters’ support for these regulatory changes that reflect the recent statutory revisions required by section 4 of PMAFSCA.

*Comment:* One commenter requested that the CLFS data collection period be revised to January 1, 2022, through June 30, 2022, from the current data collection period of January 1, 2019, through June 30, 2019. The commenter asserted that such a change would serve to better reflect the current market

conditions and private payor rates for laboratory tests.

*Response:* We note that section 4 of PMAFSCA did not modify the data collection period that applies to the next data reporting period for CDLTs that are not ADLTs. Therefore, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2023, through March 31, 2023) will continue to be based on the data collection period of January 1, 2019, through June 30, 2019, as defined in § 414.502. Because this requirement is statutory, we are unable to modify the data collection period.

*Comment:* Several commenters suggested that CMS delay implementation of the phase-in of payment reductions under the CLFS for CY 2023 and instead utilize a 0.0 percent payment reduction for CY 2023.

*Response:* We note that the phase-in of payment reductions to the CLFS payment amounts is statutory; therefore, we are unable to delay implementation and apply 0.0 percent payment reduction for CY 2023. The statute expressly states that there will be a 0.0 payment reduction for CY 2022 and, for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

In consideration of these public comments and in accordance with section 4(b) of PMAFSCA, we are finalizing the proposed conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G, as proposed.

#### 6. Laboratory Specimen Collection Fee and Travel Allowance Policies

As discussed in the CY 2023 PFS proposed rule (87 FR 46070 through 46074), section 1833(h)(3) of the Act generally requires the Secretary to provide for and establish a nominal fee for specimen collection for laboratory testing and a fee to cover transportation and personnel expenses for trained personnel to collect specimens from homebound patients and inpatients (not in a hospital), in addition to the amounts provided under the Medicare CLFS. We proposed to codify our longstanding specimen collection fee policies at § 414.523(a)(1) and our travel allowance policies at § 414.523(a)(2), as well as certain changes to modify or clarify those policies.

##### a. Background on Laboratory Specimen Collection Fee Policy

Medicare Part B, which includes a variety of outpatient services, generally

covers medically necessary CDLTs when a doctor or non-physician practitioner orders them. Medically necessary CDLTs generally are not subject to coinsurance or deductible. Section 1833(h)(3)(A) of the Act provides that, in addition to the amounts provided under fee schedules (for tests furnished before January 1, 2017) or under section 1834A of the Act (for tests furnished on or after January 1, 2017), the Secretary shall provide for and establish a nominal fee to cover the appropriate costs in collecting the sample on which a CDLT was performed and for which payment is made under Medicare Part B, except that not more than one such fee may be provided with respect to samples collected in the same encounter. As detailed in the proposed rule, we provided manual instructions regarding payment of the nominal specimen collection fee in the Medicare Claims Processing Manual Pub. 100–04, chapter 16, section 60.1,<sup>159</sup> but we have not reflected these general policies in our regulations.<sup>160</sup> The HCPCS codes for the nominal specimen collection fees currently listed on the CLFS (HCPCS codes 36415, P9612, and P9615<sup>161</sup>) have a payment rate of \$3. Neither the annual deductible nor the 20 percent coinsurance for Medicare apply to the specimen collection fees or travel allowance for laboratory tests.

Section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93, enacted April 1, 2014) added section 1834A(b)(5) to the Act, which increases by \$2 the nominal fee that would otherwise apply under section 1833(h)(3)(A) of the Act for a specimen collected from an individual in a skilled nursing facility (SNF) or by a laboratory on behalf of a HHA. Therefore, effective April 1, 2014, the nominal fee that would otherwise apply for a specimen collected from an individual in a SNF or by a laboratory on behalf of a HHA is \$5, and the relevant HCPCS code is G0471.<sup>162</sup> We

<sup>159</sup> The Medicare Claims Processing Manual is available on the CMS website at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/internet-Only-Manuals-IOMs-Items/CMS018912>.

<sup>160</sup> In 1993, we proposed to implement the payment methodologies for the specimen collection fee and travel allowance in the regulations, see 53 FR 43837 through 43838, but did not finalize those proposals.

<sup>161</sup> HCPCS codes and long descriptors: 36415 (Insertion of needle into vein for collection of blood sample); P9612 (Catheterization for collection of specimen, single patient, all places of); P9615 (Catheterization for collection of specimen(s) (multiple patients)).

<sup>162</sup> HCPCS code and descriptor: G0471 (Collection of venous blood by venipuncture or urine sample by catheterization from an individual in a skilled

implemented this provision in our regulations at § 414.507(f). However, as we discussed in the proposed rule, we proposed to codify our specimen collection fee policies in § 414.523(a)(1), including moving that provision from § 414.507(f) to § 414.523(a)(1)(iv).

In the “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency” interim final rule with comment period (IFC), which appeared in the **Federal Register** on April 6, 2020 (85 FR 19230), we established that Medicare would pay a nominal specimen collection fee and associated travel allowance to independent laboratories for the collection of specimens for COVID–19 CDLTs for homebound and non-hospital inpatients (85 FR 19256 through 19258). Under this policy, the nominal specimen collection fee for COVID–19 testing for homebound and non-hospital inpatients generally is \$23.46 and for individuals in a SNF and individuals whose samples are collected by laboratory on behalf of an HHA is \$25.46. We indicated in that IFC that this specimen collection fee policy was established for the duration of the PHE for COVID–19 (85 FR 19256) and noted in that IFC and subsequent rules (86 FR 39309; 86 FR 65327) that this policy will end once the PHE for the COVID–19 pandemic has ended.

In the CY 2022 PFS proposed rule (86 FR 39310), we requested broad comments on our policies for specimen collection fees for consideration for possible updates to those policies in the future through notice and comment rulemaking. We requested comments regarding the nominal specimen collection fees for trained personnel to collect specimens from homebound patients and inpatients (not in a hospital), how specimen collection practices may have changed as a result of, or from insight gained during, the PHE for COVID–19, and what additional resources might be needed for specimen collection for COVID–19 CDLTs and other tests after the PHE ends, as well as comments related to the calculation of costs for transportation and personnel expenses for trained personnel to collect specimens from such patients. In the CY 2022 PFS final rule (86 FR 65327 through 65328), we described the comments received and provided responses to those comments. We expressed appreciation for the comments regarding the nominal specimen collection fees for the collection of specimens for COVID–19

CDLTs and acknowledged that the types of resources utilized and supplies needed for specimen collection have been influenced by the PHE for COVID–19. We stated that although we would not extend the increased payment amount beyond the PHE, we would take the feedback received from the comment solicitation into consideration for possible future rulemaking and guidance.

#### b. Longstanding Laboratory Specimen Collection Fee Policies and Practices

In the CY 2023 PFS proposed rule (87 FR 46071 through 46073), we explained that CMS has longstanding policies and practices regarding the statutory requirements under section 1833(h)(3)(A) of the Act for the laboratory specimen collection fee, which are currently described in the Medicare Claims Processing Manual Pub. 100–04, chapter 16, § 60.1. However, we do not have corresponding regulations text related to the manual guidance and some of the manual guidance is no longer applicable. The manual guidance specifies when a specimen fee is allowed and not allowed. In particular, the manual provides guidance on the following topics: (1) specimen drawing by a physician; (2) specimen drawing by an independent laboratory; (3) specimen drawing for a dialysis patient; and (4) the coding requirements for specimen collection. We noted that laboratory services, including specimen collection and travel for specimen collection, paid under the CLFS must be reasonable and necessary as required under section 1862(a)(1)(A) of the Act.

Specifically, the guidance provides that a specimen collection fee is allowed in circumstances such as drawing a blood sample through venipuncture (that is, inserting into a vein a needle with syringe or vacutainer to draw the specimen) or collecting a urine sample by catheterization. A specimen collection fee is not allowed for a throat culture or a routine capillary puncture for clotting or bleeding time. Additionally, the specimen fee will not be paid to anyone who has not extracted the specimen. The manual guidance addresses the number of specimen collection fees allowed for each specimen type per patient encounter. The manual also addresses how to treat a series of specimens; when a series of specimens is required to perform a single test (for example, a glucose tolerance test), the series is treated as a single encounter.

The Medicare Claims Processing Manual (chapter 16, § 60.1.1) describes specimen collection fees for physicians.

Specifically, the manual states that Medicare allows a specimen collection fee for physicians only when: (1) it is the accepted and prevailing practice among physicians in the locality to make separate charges for drawing or collecting a specimen; and (2) it is the customary practice of the physician performing such services to bill separate charges for drawing or collecting the specimen.

We noted that, in reviewing the specimen collection criteria for physicians to be paid for this service, we had concerns regarding outdated terminology and the eligibility criteria for these suppliers to bill Medicare for a specimen collection fee. For example, we found that these criteria were established prior to January 1, 1992, which is when Medicare began to pay for physicians’ services under section 1848 of the Act (56 FR 59502). Since that time, the provision of laboratory services and physicians’ services have evolved. Therefore, we evaluated those criteria as they would apply today. In consideration of current standards of practice, we analyzed utilization of the specimen collection Current Procedural Terminology (CPT®) codes to determine if the physician office setting is billing for this fee. We found that, in 2019, office-based physician and nonphysician practitioners had 67.4 million claims billed with specimen collection, comprising 31.1 percent of all specimen collection claims.

We also looked to the PFS to see if there are similar services that physicians and nonphysician practitioners can bill and be paid for under section 1848 of the Act. We found that there are codes available that address collection of blood, for example, CPT® codes 36410 (Venipuncture, age 3 years or older, necessitating the skill of a physician or other qualified health care professional (separate procedure), for diagnostic or therapeutic purposes (not to be used for routine venipuncture)). These findings confirmed specimen collection occurs in the physician’s office setting and there are coding options to bill for that service via the PFS when applicable. Therefore, we noted that we believed the criteria currently included in the manual for physician eligibility for the CLFS specimen collection fee no longer apply. We stated that we would not reflect those policies in regulation and would remove this section of the manual accordingly.

The Medicare Claims Processing Manual (chapter 16, § 60.1.2) describes policies for specimen drawing by independent laboratories. Specifically, the manual states the following:

*nursing facility (SNF) or by a laboratory on behalf of a home health agency (HHA).*

*Medicare allows separate charges made by laboratories for drawing or collecting specimens whether or not the specimens are referred to hospitals or independent laboratories. The laboratory does not bill for routine handling charges where a specimen is referred by one laboratory to another. Medicare allows payment for a specimen collection fee when it is medically necessary for a laboratory technician to draw a specimen from either a nursing home patient or homebound patient. Payment for the specimen collection fee is made based on the CLFS. The technician must personally draw the specimen, for example, venipuncture or urine sample by catheterization. Medicare does not allow a specimen collection fee to the visiting technician if a patient in a facility is: (1) not confined to the facility; or (2) the facility has personnel on duty qualified to perform the specimen collection. Medical necessity for such services exists, for example, where a laboratory technician draws a blood specimen from a homebound or an institutionalized patient. A patient need not be bedridden to be homebound. However, where the specimen is a type that would require only the services of a messenger and would not require the skills of a laboratory technician, for example, urine or sputum, a specimen pickup service would not be considered medically necessary.* The manual then refers to the Medicare Benefit Policy Manual, Chapters 7 and 15 of Pub. 100–02, for a discussion of “homebound” and a more complete definition of a medically necessary laboratory service to a homebound or an institutional patient.

Under sections 1814(a) and 1835(a) of the Act, an individual shall be considered to be “homebound” or “confined to his home” if the individual has a condition, due to an illness or injury, that restricts the ability of the individual to leave his or her home except with the assistance of another individual or the aid of a supportive device (such as crutches, a cane, a wheelchair, or a walker), or if the individual has a condition such that leaving his or her home is medically contraindicated. While an individual does not have to be bedridden to be considered “confined to his home,” the condition of the individual should be such that there exists an inability to leave home such that leaving home requires a considerable and taxing effort by the individual. Moreover, § 424.22(a)(1)(ii) describes homebound for the purposes of the provision of

Medicare home health services as home health services are or were required because the individual is or was confined to the home, as defined in sections 1835(a) and 1814(a) of the Act, except when receiving outpatient services. Additionally, chapter 15 of the Medicare Benefit Policy Manual<sup>163</sup> Section 60.4.1—“Definition of Homebound Patient Under the Medicare Home Health (HH) Benefit” describes the definition of homebound in that the patient is confined to his/her home, which has two criteria: (1) the patient must either, because of illness or injury, need the aid of supportive devices such as crutches, canes, wheelchairs, and walkers; the use of special transportation; or the assistance of another person in order to leave their place of residence; or (2) otherwise have a condition such that leaving his or her home is medically contraindicated. The patient must also meet two additional requirements defined in criterion two such that there must exist an inability to leave home; and leaving home must require a considerable and taxing effort.

The Medicare Claims Processing Manual (chapter 16, § 60.1.2) also explains the information that must be included on an independent laboratory claim for specimen drawing. Specifically, the manual states that in addition to the usual information required on claim forms (including the name of the prescribing physician), all independent laboratory claims for such specimen drawing ordered by a physician should be appropriately annotated, for example, “patient confined to home,” “patient homebound,” or “patient in nursing home, no qualified person on duty to draw specimen.” The manual states that A/B MACs (B) must assure the validity of the annotation through scientific claims samples, as well as through regular bill review techniques. (This could be done by use of the information in A/B MAC (B) files, and where necessary, contact with the ordering physician.) If a physician requests an independent laboratory to obtain specimens in situations which do not meet, or without regard to whether they meet, medical necessity criteria in Medicare Benefit Policy Manual, Chapter 15, the manual provides that an educational contact with the ordering physician is warranted and, where necessary, corroborating documentation should be obtained on claims until the A/B MAC (B) is assured that the physician prescribes such services only

when the criteria are met. The manual states that the specimen collection fee is paid based on the location of the independent laboratory where the test is performed and is billed in conjunction with a covered laboratory test.

The Medicare Claims Processing Manual (chapter 16, § 60.1.3) describes specimen drawing for dialysis patients. It states that, with the implementation of the End-Stage Renal Disease (ESRD) Prospective Payment System (PPS), effective for claims with dates of service on or after January 1, 2011, all ESRD-related laboratory services are included in the ESRD PPS base rate.<sup>164</sup> Clinical laboratory tests for dialysis patients can be performed individually or in predetermined groups on automated profile equipment. The manual states that a specimen collection fee determined by CMS will be allowed only in the following circumstances:

- Drawing a blood sample through venipuncture (that is, inserting into a vein a needle with a syringe or vacutainer to draw the specimen).
- Collecting a urine sample by catheterization.

The manual provides that special rules apply when such services are furnished to dialysis patients. That is, the specimen collection fee is not separately payable for patients dialyzed in the ESRD facility or for patients dialyzed at home. A specimen collection fee is also not separately payable when an ESRD facility is collecting a specimen for transplant eligibility or other transplant requirements. Payment for specimen collection is included under the ESRD PPS, regardless of whether the laboratory test itself is designated as payable under the ESRD PPS as a renal dialysis service or is separately billable by the ESRD facility with the AY modifier (see Medicare Claims Processing Manual, chapter 16, § 40.6). Fees for taking specimens in the hospital setting, but outside of the dialysis unit, for use in performing laboratory tests not included in the ESRD PPS base rate, may be paid separately.

We stated that we believed that the implementation of the ESRD PPS made the specimen collection provision for ESRD beneficiaries in the ESRD facility setting obsolete. That is, prior to the ESRD PPS, ESRD facilities could be paid for laboratory services furnished to ESRD beneficiaries that were considered to be separately payable. Under the prior composite rate system, ESRD

<sup>164</sup> The manual refers to the Medicare Benefit Policy Manual, Chapter 11, for a description of laboratory services included in the composite rate.

facilities with the appropriate Clinical Laboratory Improvement Amendments (CLIA) certification could bill Medicare Part B directly and be paid based on the CLFS for certain laboratory tests, and when appropriate, for a specimen collection fee.<sup>165</sup> In implementing the ESRD PPS, we also implemented consolidated billing requirements in the CY 2011 ESRD PPS final rule (75 FR 49168 through 49173). In that ESRD PPS final rule, we stated that we established these consolidated billing requirements because the ESRD PPS provides an all-inclusive payment for renal dialysis services and home dialysis items and services and the ESRD facility is responsible for all of the renal dialysis services that its patients receive. We further explained that items and services that were paid separately under the basic case-mix adjusted composite rate (such as laboratory tests), would no longer be billed for by other entities (such as laboratories), and therefore, payment for these services would be made only to the ESRD facility so that duplicate payment is not made by Medicare (75 FR 49168).
