| !<br>(Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the Mental/Behavioral Health and Psychiatry specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

### B.21. Mental/Behavioral Health and Psychiatry

| MEASURES FINALIZED FOR ADDITION TO THE MENTAL/BEHAVIORAL HEALTH AND PSYCHIATRY SPECIALTY SET  |                             |              |                   |                    |                 |   |                                  |                    |                         |
|---|-----------------------------|--------------|-------------------|--------------------|-----------------|---|----------------------------------|--------------------|-------------------------|
| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description | Measure<br>Steward | Rationale for Inclusion |
| <p><b>Comment:</b> One commenter had concerns with the proposal to create combined specialty sets of “Psychiatry” to the title of “Mental/Behavioral Health.”. They believe this type of combination of specialties could lead to providers who lack the knowledge, licensure, or experience necessary to safely treat patients to the currently expected level of care. The commenter had concerns that, by grouping together fairly divergent levels of caregivers into two larger amalgamations, the distinctions between the specialties will not be addressed clearly, such as differences in patient populations. They stated that this kind of change may have serious long-term implications in terms of the scope of practice which providers in these specialties may attempt to be reimbursed for in the future.</p> <p>The commenter was also concerned about the claims made about having received interested parties’ feedback. To the commenter’s knowledge, the measure steward for at least one of these specialties was not aware of this consideration prior to its announcement in the 2023 PFS proposed rule. The lack of input from the measure steward in advance of such significant changes sets a precedent that will inevitably lead to future measure harmonization that may be inappropriate or that cannot be smoothly implemented.</p> <p><b>Response:</b> Clinicians should be working within their scope of practice when treating patients. Currently, the Mental Behavioral Health/Psychiatry Specialty Set contains 23 measures allowing clinicians to choose to submit those measures that are meaningful to their scope of practice. For specialty sets that contain more than six MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups have the flexibility to select a minimum of six MIPS quality measures to report to meet the MIPS reporting requirement for the quality performance category. We understand that the significant changes may be cause for concern, and we strongly encourage the commenter to reach out to the measure developer/stewards to collaborate for measure harmonization and new measure development for future implementation.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46582 through 46583), we are finalizing the above measures for addition to the <i>Mental/Behavioral Health and Psychiatry Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                             |              |                   |                    |                 |   |                                  |                    |                         |

**B.22. Nephrology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.22. Nephrology

| MEASURES FINALIZED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET |                          |              |                   |   |                 |   |  |   |   |
|---|--------------------------|--------------|-------------------|---|-----------------|---|--|---|---|
| Indicator   | NQF #<br>/ eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward                                  | Rationale for Inclusion   |
| *<br>§  | 0028/0<br>028e           | 226          | CMS13<br>8v11     | Medicare<br>Part B<br>Claims<br>Measure<br>Specification<br>s, eCQM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Communi-<br>ty/Pop-<br>ulation<br>Health  | <b>Preventive Care and<br/>Screening: Tobacco Use:<br/>Screening and Cessation<br/>Intervention:</b><br>Percentage of patients aged 18<br>years and older who were<br>screened for tobacco use one or<br>more times within the<br>measurement period AND who<br>received tobacco cessation<br>intervention during the<br>measurement period or in the six<br>months prior to the measurement<br>period if identified as a tobacco<br>user. | National<br>Committee<br>on<br>Quality<br>Assurance | We proposed to include this<br>measure in the Nephrology<br>specialty set as it is<br>clinically relevant to this<br>clinician type. The addition<br>of this quality measure to<br>this specialty set reinforces<br>the importance that all<br>clinicians should be actively<br>addressing tobacco use<br>across all patient care<br>settings. Decreasing the<br>usage of tobacco will reduce<br>risk of heart disease, lung<br>disease and stroke, lower the<br>prevalence of severe<br>diseases that may be<br>associated with<br>hospitalization, and decrease<br>overall health care costs.   |
| !<br>(Equity)   | N/A/<br>N/A              | 487          | N/A               | MIPS CQMs<br>Specification<br>s   | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of<br/>Health:</b><br>Percent of patients 18 years and<br>older screened for food<br>insecurity, housing instability,<br>transportation needs, utility<br>difficulties, and interpersonal<br>safety.   | Physicians<br>Foundation                            | We proposed to include this<br>measure in the Nephrology<br>specialty set as patients' social<br>drivers of health can<br>be a key component to a<br>patient achieving health<br>equity within all clinical<br>settings and clinician types.<br>Improving the clinician's<br>understanding of the social<br>obstacles their patients face<br>can provide critical insight<br>into predicting negative<br>health outcomes and<br>improving a patient's health<br>status. Social needs can<br>create significant barriers to<br>patients receiving and<br>achieving high quality of<br>care and can also contribute<br>to poorer health. Therefore,<br>screening patients for social<br>drivers is a priority topic for<br>us and we believed this<br>quality measure should be<br>implemented across the<br>spectrum of clinician<br>specialties. The addition of<br>this quality measure to this<br>specialty set reinforces our<br>commitment that all<br>clinicians should be actively<br>engaging in activities that<br>address the screening of<br>social drivers of health of<br>their patients and is in<br>alignment with our priorities<br>to support overall patient<br>health. See Table A.3 for<br>rationale, including clinical<br>evidence supporting the<br>inclusion of this measure in<br>MIPS. |

## B.22. Nephrology

| MEASURES FINALIZED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET |                             |              |                   |  |                 |   |  |  |   |
|---|-----------------------------|--------------|-------------------|--|-----------------|---|--|--|---|
| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type   | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward                         | Rationale for Inclusion   |
|   | N/A/<br>N/A                 | 488          | CMS95<br>1v1      | eCQM<br>specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Effective<br>Clinical<br>Care             | <b>Kidney Health Evaluation:</b><br>Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period.   | National<br>Kidney<br>Foundati<br>on       | We proposed to include this measure in the Nephrology specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.   |
|   | 1662/<br>N/A                | 489          | N/A               | MIPS CQMs<br>Specification<br>s                                | Process         | Effective<br>Clinical<br>Care             | <b>Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy:</b><br>Percentage of patients aged 18 years and older with a diagnosis of CKD (Stages 1-5, not receiving Renal Replacement Therapy (RRT)) and proteinuria who were prescribed ACE inhibitor or ARB therapy within a 12-month period. | Renal<br>Physicia<br>ns<br>Associati<br>on | We proposed to include this measure in the Nephrology specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that considering the high burden of cardiovascular morbidity and mortality in patients with chronic kidney disease, the decrease of kidney function in the normal aging process, and evidence that patients over the age of 60 have a greater likelihood of resistant hypertension without proper ACE or ARB therapy, validates the importance of this measure in the overall management of adult kidney disease. This measure is relevant and lies within the scope of care for this clinician type. See Table A.5 for rationale. |

## B.22. Nephrology

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE NEPHROLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|
| 0041 /<br>N/A               | 110          | CMS147v<br>12  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Preventive Care and<br/>Screening: Influenza<br/>Immunization:</b><br>Percentage of patients aged 6<br>months and older seen for a visit<br>during the measurement period<br>who received an influenza<br>immunization OR who reported<br>previous receipt of an influenza<br>immunization. | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| 0062 /<br>N/A               | 119          | CMS134v<br>11  | eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications  | Process         | Effective<br>Clinical<br>Care             | <b>Diabetes: Medical Attention<br/>for Nephropathy:</b><br>The percentage of patients 18-<br>75 years of age with diabetes<br>who had a nephropathy<br>screening test or evidence of<br>nephropathy during the<br>measurement period.  | National<br>Committee of<br>Quality<br>Assurance  | This measure was proposed<br>for removal beginning with<br>the CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group C for<br>rationale.                           |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46588), we are finalizing the above measures for removal from the *Nephrology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.23. Neurology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.23. Neurology

| MEASURES FINALIZED FOR ADDITION TO THE NEUROLOGY SPECIALTY SET |                             |              |                   |                             |                 |   |   |                          |  |
|--|-----------------------------|--------------|-------------------|-----------------------------|-----------------|---|---|--------------------------|--|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection Type             | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward       | Rationale for Inclusion  |
| !<br>(Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social<br/>Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Neurology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46593), we are finalizing the above measure for addition to the *Neurology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

**B.24. Neurosurgical**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.24. Neurosurgical

## MEASURES FINALIZED FOR ADDITION TO THE NEUROSURGICAL SPECIALTY SET

| Indicator     | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward       | Rationale for Inclusion  |
|---------------|-----------------------------|--------------|-------------------|-----------------------------|-----------------|---|---|--------------------------|--|
| !<br>(Equity) | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Neurosurgical specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46596), we are finalizing the above measure for addition to the *Neurosurgical Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## B.24. Neurosurgical

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE NEUROSURGICAL SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type          | Measure<br>Type  | National<br>Quality<br>Strategy<br>Domain                             | Measure Title and Description  | Measure<br>Steward                    | Rationale for Removal  |
|-----------------------------|--------------|----------------|-----------------------------|--|---|--|---------------------------------------|--|

See Table Group C for rationale. |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46597), we are finalizing the above measures for removal from the *Neurosurgical Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.25. Nutrition/Dietician**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Nutrition/Dietician specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| *<br>! (Outcome)   | 0059 /<br>N/A            | 001          | CMS12<br>2v11     | Medicare<br>Part B<br>Claims<br>Measure<br>Specification<br>s, eCQM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Intermediate<br>Outcome | Effective<br>Clinical<br>Care             | <b>Diabetes: Hemoglobin A1c (HbA1c) Poor Control (&gt;9%):</b><br>Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.   | National<br>Committee<br>for<br>Quality<br>Assurance | We proposed to include this measure in the Nutrition/Dietician specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that Hemoglobin A1c is an important factor in the determination of risk stratification and management strategies for individuals with prediabetes, and it is a typical clinical indicator in the management of diabetes care.   |
| *<br>§   | 0028/0<br>028e           | 226          | CMS13<br>8v11     | Medicare<br>Part B<br>Claims<br>Measure<br>Specification<br>s, eCQM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process                 | Community/Population<br>Health            | <b>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:</b><br>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user. | National<br>Committee<br>on<br>Quality<br>Assurance  | We proposed to include this measure in the Nutrition/Dietician specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco will reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs. |

## B.25. Nutrition/Dietician

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE NUTRITION/DIETICIAN SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                              | Rationale for Removal  |
|-----------------------------|--------------|----------------|-----------------------------|-----------------|---|--|---|--|
| 0417 /<br>N/A               | 126          | N/A            | MIPS CQMs<br>Specifications | Process         | Effective<br>Clinical<br>Care             | <b>Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation:</b><br>Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who had a neurological examination of their lower extremities within 12 months. | American<br>Podiatric<br>Medical<br>Association | This measure was proposed for removal from the Nutrition/Dietician specialty set. Per the measure specifications, the neurological lower extremity exam must consist of documentation of sensory abilities and should include 10-g monofilament plus testing any one of the following: vibration using 128-Hz tuning fork, pinprick sensation, ankle reflexes, or vibration perception threshold; however, the clinician should perform all necessary tests to make the proper evaluation. We agreed with interested parties' feedback that this clinician type lacks the required education and training to properly perform the quality action of this measure and it is out of the scope of their practice. |
| 0416 /<br>N/A               | 127          | N/A            | MIPS CQMs<br>Specifications | Process         | Effective<br>Clinical<br>Care             | <b>Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear:</b><br>Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who were evaluated for proper footwear and sizing.                                    | American<br>Podiatric<br>Medical<br>Association | This measure was proposed for removal from the Nutrition/Dietician specialty set. Per the measure specifications, the proper evaluation of footwear must be completed, including a foot examination documenting the vascular, neurological, dermatological, and structural/biomechanical findings. The foot should also be measured using a standard measuring device, and counseling on appropriate footwear should be based on risk categorization. We agreed with interested parties' feedback that this clinician type lacks the required education and training to properly perform the quality action of this measure and it is out of the scope of their practice.                                      |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46601), we are finalizing the above measures for removal from the *Nutrition/Dietician Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.26. Obstetrics/Gynecology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Obstetrics/Gynecology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.26. Obstetrics/Gynecology

| MEASURES FINALIZED FOR ADDITION TO THE OBSTETRICS/GYNECOLOGY SPECIALTY SET |                          |           |             |   |              |                                  |  |  |  |
|--|--------------------------|-----------|-------------|---|--------------|----------------------------------|--|--|--|
| Indicator  | NQF #<br>/ eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type   | Measure Type | National Quality Strategy Domain | Measure Title And Description  | Measure Steward                          | Rationale for Inclusion  |
| *  | 0046 /<br>N/A            | 039       | N/A         | Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications | Process      | Effective Clinical Care          | <b>Screening for Osteoporosis for Women Aged 65-85 Years of Age:</b><br>Percentage of female patients aged 65-85 years of age who ever had a central dual-energy X-ray absorptiometry (DXA) to check for osteoporosis. | National Committee for Quality Assurance | We proposed to include this measure in the Obstetrics/Gynecology specialty set as it is clinically relevant to this clinician type. Osteoporosis is an important public health issue requiring attention as it can lead to co-morbidities and decreased quality of life. Screenings are typically encouraged for women who are post-menopausal and, therefore, relevant to the patient population of this specialty.   |
| ! (Equity)   | N/A/<br>N/A              | 487       | N/A         | MIPS CQMs Specifications  | Process      | Patient Safety                   | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.      | Physicians Foundation                    | We proposed to include this measure in the Obstetrics/Gynecology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

## B.26. Obstetrics/Gynecology

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OBSTETRICS/GYNECOLOGY SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain      | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |

See Table Group C for<br>rationale.                           |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46607), we are finalizing the above measures for removal from the *Obstetrics/Gynecology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.27a. Oncology/Hematology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT. | Oregon Urology Institute              |

## B.27a. Oncology/Hematology

| MEASURES FINALIZED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET |                             |              |                   |   |                 |   |   |   |  |
|--|-----------------------------|--------------|-------------------|---|-----------------|---|---|---|--|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward                                      | Rationale for Inclusion  |
| *<br>§   | N/A /<br>N/A                | 134          | CMS2v<br>12       | Medicare<br>Part B<br>Claims<br>Measure<br>Specification<br>s, eCQM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Communi-<br>ty/Pop-<br>ulation<br>Health  | <b>Preventive Care and<br/>Screening: Screening for<br/>Depression and Follow-Up<br/>Plan:</b><br>Percentage of patients aged 12<br>years and older screened for<br>depression on the date of the<br>encounter or up to 14 days prior<br>to the date of the encounter<br>using an age-appropriate<br>standardized depression<br>screening tool AND if positive,<br>a follow-up plan is documented<br>on the date of or up to two days<br>after the date of the qualifying<br>encounter. | Centers<br>for<br>Medicare<br>&<br>Medicaid<br>Services | We proposed to include this<br>measure in the Oncology/<br>Hematology specialty set as<br>it is clinically relevant to<br>this clinician type. We<br>agreed with interested<br>parties' feedback that<br>depression screening and<br>intervention is an essential<br>care process for patients<br>diagnosed with cancer,<br>including patients with<br>breast cancer. Depression<br>can be a disabling co-<br>morbid condition in cancer patients<br>and it's vital to incorporate<br>this assessment and<br>intervention in their<br>comprehensive care.  |
| *<br>! (Patient<br>Safety)   | 0022 /<br>N/A               | 238          | CMS15<br>6v11     | eCQM<br>specification<br>s, MIPS<br>CQMs<br>specification<br>s  | Process         | Patient<br>Safety                         | <b>Use of High-Risk Medications<br/>in Older Adults:</b><br>Percentage of patients 65 years<br>of age and older who were<br>ordered at least two high-risk<br>medications from the same drug<br>class.  | National<br>Committee<br>for<br>Quality<br>Assurance    | We proposed to include this<br>measure in the Oncology/<br>Hematology specialty set as<br>it is clinically relevant to<br>this clinician type. We<br>agreed with interested<br>parties' feedback that<br>medications used for<br>supportive care for patients<br>with cancer diagnoses, such<br>as anti-depressants or pain<br>medications, may be<br>associated with increased<br>risk of harm from drug side-<br>effects and toxicity. Cancer<br>care management between<br>specialists heightens the<br>need for closer collaboration<br>of medication management<br>for this patient population. |

## B.27a. Oncology/Hematology

| MEASURES FINALIZED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET |                          |              |                   |                                      |  |   |   |   |   |
|--|--------------------------|--------------|-------------------|--------------------------------------|--|---|---|---|---|
| Indicator  | NQF #<br>/ eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type                   | Measure<br>Type                          | National<br>Quality<br>Strategy<br>Domain   | Measure Title<br>And Description  | Measure<br>Steward  | Rationale for Inclusion   |
| *<br>§<br>! (Patient<br>Experience)                                      | 0005 /<br>N/A            | 321          | N/A               | CMS-<br>approved<br>Survey<br>Vendor | Patient<br>Engagem<br>ent/Exper<br>ience | Person<br>and<br>Caregive<br>r-<br>Centered<br>Experien<br>ce and<br>Outcome<br>s | <b>CAHPS for MIPS Clinician/Group Survey:</b><br>The Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Clinician/Group Survey is comprised of 10 Summary Survey Measures (SSMs) and measures patient experience of care within a group practice. The NQF endorsement status and endorsement id (if applicable) for each SSM utilized in this measure are as follows: <ul style="list-style-type: none"> <li>• Getting Timely Care, Appointments, and Information; (Not endorsed by NQF)</li> <li>• How well Providers Communicate; (Not endorsed by NQF)</li> <li>• Patient's Rating of Provider; (NQF endorsed # 0005)</li> <li>• Access to Specialists; (Not endorsed by NQF)</li> <li>• Health Promotion and Education; (Not endorsed by NQF)</li> <li>• Shared Decision-Making; (Not endorsed by NQF)</li> <li>• Health Status and Functional Status; (Not endorsed by NQF)</li> <li>• Courteous and Helpful Office Staff; (NQF endorsed # 0005)</li> <li>• Care Coordination; (Not endorsed by NQF)</li> <li>• Stewardship of Patient Resources. (Not endorsed by NQF)</li> </ul> | Agency<br>for<br>Healthca<br>re<br>Research<br>&<br>Quality | We proposed to include this measure in the Oncology/ Hematology specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that the inclusion of this patient-centered CAHPS survey measure can incentivize the evaluation of patient-centered domains relevant to cancer care (for example, timely care, provider communication, access to specialists, health promotion and education, shared decision making, functional status, care coordination). |

## B.27a. Oncology/Hematology

| MEASURES FINALIZED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET |                             |              |                   |                             |                 |   |   |   |  |
|--|-----------------------------|--------------|-------------------|-----------------------------|-----------------|---|---|---|--|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward  | Rationale for Inclusion  |
| !<br>(Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.   | Physicians<br>Foundation                                  | We proposed to include this measure in the Oncology/Hematology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
|  | N/A                         | 490          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Appropriate Intervention of Immune-related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors:</b><br>Percentage of patients, aged 18 years and older, with a diagnosis of cancer, on immune checkpoint inhibitor therapy, and grade 2 or above diarrhea and/or grade 2 or above colitis, who have immune checkpoint inhibitor therapy held and corticosteroids or immunosuppressants prescribed or administered. | Society<br>for<br>Immunotherapy<br>of<br>Cancer<br>(SITC) | We proposed to include this measure in the Oncology/Hematology specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that this patient-centered measure focuses on the appropriate management of adverse events that may reduce unnecessary utilization and improve quality of life (QOL) for patients taking checkpoint inhibitors. See Table A.6 for rationale.   |

## B.27a. Oncology/Hematology

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ONCOLOGY/HEMATOLOGY SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46614), we are finalizing the above measures for removal from the *Oncology/Hematology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.27b. Radiation Oncology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco will reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs. |

## B.27b. Radiation Oncology

| MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE RADIATION ONCOLOGY SPECIALTY SET |                             |              |                   |                             |                 |   |   |                          |   |

| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward       | Rationale for Inclusion   |
| !<br>(Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Radiation Oncology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

**B.28. Ophthalmology/Optometry**

As indicated in the introductory language of Table Group B of the appendix to this final rule, we finalized adding “Optometry” to the title of the Ophthalmology specialty set to create a combined new specialty set: Ophthalmology/Optometry. The Ophthalmology/Optometry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| !<br>(Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Ophthalmology/Optometry specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

**B.29. Orthopedic Surgery**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Orthopedic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

The change in FS is assessed using the FOTO Neck FS PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.   | Focus on<br>Therapeutic<br>Outcomes, Inc. |

## B.29. Orthopedic Surgery

| MEASURES FINALIZED FOR ADDITION TO THE ORTHOPEDIC SURGERY SPECIALTY SET |                             |              |                   |                       |                 |   |   |  |   |
|---|-----------------------------|--------------|-------------------|-----------------------|-----------------|---|---|--|---|
| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type    | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward                       | Rationale for Inclusion   |
| ! (Outcome)   | 3493 /<br>N/A               | 480          | N/A               | Administrative Claims | Outcome         | Patient Safety                            | <p><b>Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS):</b></p> <p>This measure is a re-specified version of the measure, “Hospital-level Risk-standardized Complication rate (RSCR) following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)” (National Quality Forum 1550), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to Merit-based Incentive Payment System participating clinicians and/or clinician groups (“provider”) and assesses each provider’s complication rate, defined as any one of the specified complications occurring from the date of index admission to up to 90 days post date of the index procedure.</p> | Centers for Medicare & Medicaid Services | <p>We proposed to include this measure in the Orthopedic Surgery specialty set as it is clinically relevant to this clinician type. We agreed with interested parties’ feedback that the management and avoidance of surgical and post-surgical complications is a critical component of high-quality, patient-centered care. Post-operative complications after THA/TKA can delay a patient’s recovery time, prolong hospitalizations, increase readmission rates, and increase disability or rates of mortality.</p> <p>Effective supportive care management can reduce the risk for complications, improve patient outcomes, and reduce overall healthcare costs. See Table A.8 for rationale.</p> |

### B.29. Orthopedic Surgery

| MEASURES FINALIZED FOR ADDITION TO THE ORTHOPEDIC SURGERY SPECIALTY SET |                             |           |             |                          |              |                                  |   |                       |   |

| ! (Equity)  | N/A/<br>N/A                 | 487       | N/A         | MIPS CQMs Specifications | Process      | Patient Safety                   | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the Orthopedic Surgery specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

**Comment:** One commenter supported the addition of measure Q480 to the Orthopedic Surgery Specialty Set. They stated that adding this measure to this set will ensure its use, broader adoption, and relevance for surgeons and patients. The commenter also requested that data from this measure be posted as soon as practicable on Physician Compare or other CMS sites to empower beneficiaries as informed consumers of care.

**Response:** We thank the commenter for supporting the addition of measure Q480 to the Orthopedic Surgery Specialty Set and acknowledge the recommendation to post data from this measure on Physician Compare or other CMS sites once available.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46630), we are finalizing the above measures for addition to the *Orthopedic Surgery Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## B.29. Orthopedic Surgery

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type          | Measure<br>Type  | National<br>Quality<br>Strategy<br>Domain                             | Measure Title and Description   | Measure<br>Steward                                | Rationale for Removal   |

See Table Group C for<br>rationale. |
| N/A /<br>N/A                | 473          | N/A            | MIPS CQMs<br>Specifications | Patient-<br>Reported<br>Outcome-<br>Based<br>Performanc<br>e Measure | Person and<br>Caregiver-<br>Centered<br>Experience<br>and<br>Outcomes | <b>Leg Pain After Lumbar<br/>Fusion:</b><br>For patients 18 years of age or<br>older who had a lumbar fusion<br>procedure, leg pain is rated by<br>the patient as less than or equal<br>to 3.0 OR an improvement of<br>5.0 points or greater on the<br>Visual Analog Scale (VAS)<br>Pain scale at one year (9 to 15<br>months) postoperatively.                             | Minnesota<br>Community<br>Measurement             | This measure was proposed<br>for removal beginning with<br>the CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group C for<br>rationale. |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46632), we are finalizing the above measures for removal from the *Orthopedic Surgery Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.30. Otolaryngology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

We agreed with interested parties' feedback that the measure includes specialty-specific coding (that is, thyroid, parathyroid, etc. surgeries) and supports positive outcomes for otolaryngology surgical patients.  |

## B.30. Otolaryngology

| MEASURES FINALIZED FOR ADDITION TO THE OTOLARYNGOLOGY SPECIALTY SET |                             |              |                   |                                 |                 |                                     |   |                       |   |
|---|-----------------------------|--------------|-------------------|---------------------------------|-----------------|-------------------------------------|---|-----------------------|---|
| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type              | Measure<br>Type | National Quality<br>Strategy Domain | Measure Title<br>And Description  | Measure<br>Steward    | Rationale for<br>Inclusion  |
| !<br>(Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specification<br>s | Process         | Patient Safety                      | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the Otolaryngology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

## B.30. Otolaryngology

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OTOLARYNGOLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain     | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|
| 0069 /<br>N/A               | 065          | CMS154v<br>11  | MIPS CQMs<br>Specifications,<br>eCQM<br>Specifications  | Process         | Efficiency<br>and Cost<br>Reduction           | <b>Appropriate Treatment for<br/>Upper Respiratory Infection<br/>(URI):</b><br>Percentage of episodes for<br>patients 3 months of age and<br>older with a diagnosis of upper<br>respiratory infection (URI) that<br>did not result in an antibiotic<br>order.                                  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from the<br>Otolaryngology specialty<br>set. Per interested parties'<br>feedback, the patients that<br>fall within this measure's<br>denominator are not<br>typically treated by this<br>clinician type. An<br>otolaryngologist's practice<br>focuses more on<br>specific/chronic diagnosis<br>coding rather than the<br>diagnosis associated with<br>this measure. This measure<br>focuses on the appropriate<br>treatment of the common<br>cold which is not typical<br>care that an otolaryngologist<br>provides. |
| 0041 /<br>N/A               | 110          | CMS147v<br>12  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health            | <b>Preventive Care and<br/>Screening: Influenza<br/>Immunization:</b><br>Percentage of patients aged 6<br>months and older seen for a visit<br>during the measurement period<br>who received an influenza<br>immunization OR who reported<br>previous receipt of an influenza<br>immunization. | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale.   |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health            | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale.   |
| N/A /<br>N/A                | 265          | N/A            | MIPS CQMs<br>Specifications   | Process         | Communic<br>ation and<br>Care<br>Coordination | <b>Biopsy Follow-Up:</b><br>Percentage of new patients<br>whose biopsy results have been<br>reviewed and communicated to<br>the primary care/referring<br>physician and patient.   | American<br>Academy of<br>Dermatology             | This measure was proposed<br>for removal beginning with<br>the CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group C for<br>rationale.   |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46640), we are finalizing the above measures for removal from the *Otolaryngology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.31. Pathology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.31. Pathology**

## B.31. Pathology

| MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE PATHOLOGY SPECIALTY SET |                             |              |                   |                                 |                 |   |   |                          |  |
|--|-----------------------------|--------------|-------------------|---------------------------------|-----------------|---|---|--------------------------|--|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type              | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward       | Rationale for Inclusion  |
| !<br>(Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specification<br>s | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Pathology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

### B.31. Pathology

| MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE PATHOLOGY SPECIALTY SET  |                          |           |             |                          |              |                                     |  |                                  |  |
|---|--------------------------|-----------|-------------|--------------------------|--------------|-------------------------------------|--|----------------------------------|--|
| Indicator   | NQF #<br>/ eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain    | Measure Title And Description  | Measure Steward                  | Rationale for Inclusion  |
| ! (Care Coordination)   | 3661 / N/A               | 491       | N/A         | MIPS CQMs Specifications | Process      | Communication and Care Coordination | <b>Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status in Colorectal Carcinoma, Endometrial, Gastroesophageal, or Small Bowel Carcinoma:</b><br>Percentage of surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection, that contain impression or conclusion of or recommendation for testing of mismatch repair (MMR) by immunohistochemistry (biomarkers MLH1, MSH2, MSH6, and PMS2), or microsatellite instability (MSI) by DNA-based testing status, or both | College of American Pathologists | We proposed to include this measure in the Pathology specialty set as it is clinically relevant to this clinician type. This measure addresses a gap in care regarding biomarker testing for specific cancer types. Biomarker testing is an important part of personalized medicine. It provides vital, individualized pathological data to clinicians utilized necessary for guidance in diagnosing and treating their patients, that can be tailored to the specific biomarkers that are found. See Table A.7 for rationale. |
| <p><b>Comment:</b> One commenter supported the addition of Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status in Colorectal Carcinoma, Endometrial, Gastroesophageal, or Small Bowel Carcinoma to the Pathology Specialty Set. They stated that biomarker testing is an important part of personalized medicine and provides vital, individualized pathological data to clinicians.</p> <p>Another commenter strongly supported the addition of this new quality measure to this set. This measure is currently in use as a QCDR measure in the Pathologists Quality Registry, where it has seen high levels of use. The measure has been designed to work with pathology clinical guidelines and represents the most up-to-date clinical information.</p> <p><b>Response:</b> We thank the commenters for supporting this new measure in the Pathology Specialty Set.</p> <p><b>Comment:</b> One commenter did not support the addition of Screening for Social Drivers of Health measure to the Pathology Specialty Set. They stated that non-patient-facing clinicians, pathologists do not regularly interact with patients and are not in a position to screen for social drivers of health. Therefore, the commenter stated that this measure cannot be attributed to pathologists and would create additional confusion and complexity if included in this set.</p> <p><b>Response:</b> As we implement the Screening for Social Drivers of Health measure within the MIPS quality measure inventory and measure sets starting with the CY 2023 performance period, we believe it is critical for individual MIPS eligible clinicians, groups, and virtual groups to have the option of choice in selecting and reporting such measure. We recognize that the Pathology Specialty Set would contain over six MIPS quality measures if the Screening for Social Drivers of Health measure were implemented within this set and that choosing to report this measure would be voluntary. However, due to this specialty being non-patient facing, we agree with the commenter that it would be inappropriate to include this measure in the Pathology Specialty Set.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46642), we are finalizing the Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status in Colorectal Carcinoma, Endometrial, Gastroesophageal, or Small Bowel Carcinoma measure for addition to the <i>Pathology Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. We are not finalizing the addition of the Screening for Social Drivers of Health measure to this set. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                          |           |             |                          |              |                                     |  |                                  |  |

**B.32. Pediatrics**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Pediatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| ! (Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Pediatrics specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
| We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46647), we are finalizing the above measure for addition to the <i>Pediatrics Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS. |                             |              |                   |                             |                 |   |   |                          |   |

## B.32. Pediatrics

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PEDIATRICS SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description   | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|---|---|---|
| 0041 /<br>N/A               | 110          | CMS147v<br>12  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Preventive Care and<br/>Screening: Influenza<br/>Immunization:</b><br>Percentage of patients aged 6<br>months and older seen for a visit<br>during the measurement period<br>who received an influenza<br>immunization OR who reported<br>previous receipt of an influenza<br>immunization.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale.   |
| N/A /<br>N/A                | 379          | CMS74v1<br>2   | eCQM<br>Specifications  | Process         | Effective<br>Clinical<br>Care             | <b>Primary Caries Prevention<br/>Intervention as Offered by<br/>Primary Care Providers,<br/>including Dentists:</b><br>Percentage of children, 6<br>months – 20 years of age, who<br>received a fluoride varnish<br>application during the<br>measurement period as<br>determined by a dentist. | Centers for<br>Medicare &<br>Medicaid<br>Services | This measure was proposed<br>for removal from the<br>Pediatrics specialty set<br>beginning with the CY 2023<br>performance period/2025<br>MIPS payment year.<br>Specialty specific coding is<br>being removed from this<br>quality measure for the<br>2023 performance period.<br>Therefore, this measure is<br>no longer relevant to this<br>clinician type. |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46648), we are finalizing the above measures for removal from the *Pediatrics Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.33. Physical Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

### B.33. Physical Medicine

| MEASURES FINALIZED FOR ADDITION TO THE PHYSICAL MEDICINE SPECIALTY SET |                             |           |             |                          |              |                                  |   |                       |  |
|--|-----------------------------|-----------|-------------|--------------------------|--------------|----------------------------------|---|-----------------------|--|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward       | Rationale for Inclusion  |
| ! (Equity)   | N/A/<br>N/A                 | 487       | N/A         | MIPS CQMs Specifications | Process      | Patient Safety                   | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the Physical Medicine specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46652), we are finalizing the above measure for addition to the *Physical Medicine Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

**B.34. Physical Therapy/Occupational Therapy**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Physical Therapy/Occupational Therapy specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

### B.34. Physical Therapy/Occupational Therapy

| MEASURES FINALIZED FOR ADDITION TO THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET  |                             |              |                   |                    |                 |   |                                  |                    |                         |

| <p><b>Comment:</b> One commenter supported the addition of measure Q048 to the Physical Therapy/Occupational Therapy Specialty Set stating that treatment for a urinary infection is within the scope of the occupation therapy practitioner. The commenter recommended adding coding for occupational therapy evaluation and reevaluation visits (CPT codes 97165, 97166, 97167, 97168) as applicable encounters for this measure.</p> <p>The commenter supported the addition of measure Q178 to this set stating that assessment of factors influencing occupational engagement for patients with rheumatoid arthritis is within the scope of the occupational therapy practitioner. The commenter recommended adding coding for occupational therapy evaluation and reevaluation visits (CPT codes 97165, 97166, 97167, 97168) as applicable encounters for this measure.</p> <p>The commenter also supported the addition of the Screening for Social Drivers of Health measure to this set stating that clinicians need to understand social drivers of health and their impact on the individual client and supports the addition of this measure. The commenter recommended adding coding for occupational therapy evaluation and reevaluation visits (CPT codes 97165, 97166, 97167, 97168) as applicable encounters for this new measure.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of measures Q048, Q178, and Screening for Social Drivers of Health to the Physical Therapy/Occupations Therapy Specialty Set. We encourage the commenter to reach out to the measure stewards for Q048 and Q178 to discuss revisions for possible implementation of additional CPT codes in future years.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46659 through 46660), we are finalizing the above measures for addition to the <i>Physical Therapy/Occupational Therapy Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                             |              |                   |                    |                 |   |                                  |                    |                         |

**B.35. Plastic Surgery**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

(Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Plastic Surgery specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
| We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46663), we are finalizing the above measure for addition to the <i>Plastic Surgery Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix I: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS. |                             |              |                   |                             |                 |   |   |                          |  |

**B.36. Podiatry**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Podiatry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

### B.36. Podiatry

| MEASURES FINALIZED FOR ADDITION TO THE PODIATRY SPECIALTY SET  |                             |           |             |                 |              |                                  |                               |                 |                         |
|--|-----------------------------|-----------|-------------|-----------------|--------------|----------------------------------|-------------------------------|-----------------|-------------------------|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type | Measure Type | National Quality Strategy Domain | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| <p><b>Comment:</b> One commenter supported the addition of the new Screening for Social Drivers of Health measure to the Podiatry Specialty Set. However, the commenter suggested CMS provide resources that help clearly define what the terms mean “for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety” mean, and resources for clinicians on this measure. The commenter also was concerned about the lack of exclusions in the proposed measure and was unclear how the measure would be scored for MIPS.</p>  |                             |           |             |                 |              |                                  |                               |                 |                         |
| <p><b>Response:</b> We believe public input is very valuable in the continuing development of our health equity quality measurement efforts and broader commitment to health equity. We agree that the data collection for this measure will be a significant first step towards addressing the role of social determinants of health in improving health equity and is one of our quality improvement goals. We will take this feedback into consideration during the public notice and comment cycle for possible implementation in future years. We will also consider this feedback when providing educational resources on this measure. As with all quality measures, the technical specification provides information on how to implement the measure, including clinical recommendation statements and rationale, and will be posted in the December timeframe for review.</p> |                             |           |             |                 |              |                                  |                               |                 |                         |
| <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46666), we are finalizing the above measure for addition to the <i>Podiatry Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>   |                             |           |             |                 |              |                                  |                               |                 |                         |

**B.37. Preventive Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Preventive Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.37. Preventive Medicine

| MEASURES FINALIZED FOR ADDITION TO THE PREVENTIVE MEDICINE SPECIALTY SET |                          |              |                   |                          |                 |   |   |                            |  |
|--|--------------------------|--------------|-------------------|--------------------------|-----------------|---|---|----------------------------|--|
| Indicator  | NQF #<br>/ eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type       | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward         | Rationale for Inclusion  |
| ! (Care Coordination)  | 0643 / N/A               | 243          | N/A               | MIPS CQMs Specifications | Process         | Communication and Care Coordination       | <b>Cardiac Rehabilitation Patient Referral from an Outpatient Setting:</b><br>Percentage of patients evaluated in an outpatient setting who within the previous 12 months have experienced an acute myocardial infarction (MI), coronary artery bypass graft (CABG) surgery, a percutaneous coronary intervention (PCI), cardiac valve surgery, or cardiac transplantation, or who have chronic stable angina (CSA) and have not already participated in an early outpatient cardiac rehabilitation/secondary prevention (CR) program for the qualifying event/diagnosis who were referred to a CR program. | American Heart Association | We proposed to include this measure in the Preventive Medicine specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that this measure complements other measures within their set. Adding this measure to this specialty set will elevate the importance of secondary prevention in cardiovascular disease.  |
| ! (Equity)   | N/A / N/A                | 487          | N/A               | MIPS CQMs Specifications | Process         | Patient Safety                            | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.   | Physicians Foundation      | We proposed to include this measure in the Preventive Medicine specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

## B.37. Preventive Medicine

| MEASURES FINALIZED FOR ADDITION TO THE PREVENTIVE MEDICINE SPECIALTY SET |                             |              |                   |  |                 |   |  |   |   |
|--|-----------------------------|--------------|-------------------|--|-----------------|---|--|---|---|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type   | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward  | Rationale for Inclusion   |
|  | N/A/<br>N/A                 | 488          | CMS95<br>lv1      | eCQM<br>specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Effective<br>Clinical<br>Care             | <b>Kidney Health Evaluation:</b><br>Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period. | National<br>Kidney<br>Foundati<br>on                      | We proposed to include this measure in the Preventive Medicine specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.  |
|  | N/A/<br>N/A                 | 493          | N/A               | MIPS CQMs<br>Specification<br>s                                | Process         | Communi<br>ty/Pop<br>ulation<br>Health    | <b>Adult Immunization Status:</b><br>Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.                          | National<br>Committ<br>ee for<br>Quality<br>Assuranc<br>e | We proposed to include this measure in the Preventive Medicine specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale. |

We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46671 through 46672), we are finalizing the above measures for addition to the *Preventive Medicine Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## B.37. Preventive Medicine

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SPECIALTY SET**

N Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|

See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| 0062 /<br>N/A               | 119          | CMS134v<br>11  | eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications  | Process         | Effective<br>Clinical<br>Care             | <b>Diabetes: Medical Attention<br/>for Nephropathy:</b><br>The percentage of patients 18-<br>75 years of age with diabetes<br>who had a nephropathy<br>screening test or evidence of<br>nephropathy during the<br>measurement period.  | National<br>Committee of<br>Quality<br>Assurance  | This measure was proposed<br>for removal beginning with<br>the CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group C for<br>rationale.                           |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46673), we are finalizing the above measures for removal from the *Preventive Medicine Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.38. Pulmonology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.38. Pulmonology**

## B.38. Pulmonology

| MEASURES FINALIZED FOR ADDITION TO THE PULMONOLOGY SPECIALTY SET |                             |              |                   |                                 |                 |   |   |   |  |
|--|-----------------------------|--------------|-------------------|---------------------------------|-----------------|---|---|---|--|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type              | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward  | Rationale for Inclusion  |
|  | N/A/<br>N/A                 | 402          | N/A               | MIPS CQMs<br>Specification<br>s | Process         | Communi-<br>ty/Pop-<br>ulation<br>Health  | <b>Tobacco Use and Help with Quitting Among Adolescents:</b><br>The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user. | National<br>Committ-<br>ee for<br>Quality<br>Assuranc-<br>e | We proposed to include this measure in the Pulmonology specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco will reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs.  |
| ! (Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specification<br>s | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.   | Physicia-<br>ns<br>Foundati-<br>on                          | We proposed to include this measure in the Pulmonology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

## B.38. Pulmonology

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PULMONOLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|
| 0041 /<br>N/A               | 110          | CMS147v<br>12  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Preventive Care and<br/>Screening: Influenza<br/>Immunization:</b><br>Percentage of patients aged 6<br>months and older seen for a visit<br>during the measurement period<br>who received an influenza<br>immunization OR who reported<br>previous receipt of an influenza<br>immunization. | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46678), we are finalizing the above measures for removal from the *Pulmonology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.39. Rheumatology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Rheumatology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| Indicator | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type              | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward                                   | Rationale for Inclusion   |
|-----------|-----------------------------|--------------|-------------------|---------------------------------|-----------------|---|---|--|---|
|           | N/A/<br>N/A                 | 493          | N/A               | MIPS CQMs<br>Specification<br>s | Process         | Communi-<br>ty/Pop-<br>ulation<br>Health  | <b>Adult Immunization Status:</b><br>Percentage of members 19 years<br>of age and older who are up-to-<br>date on recommended routine<br>vaccines for influenza; tetanus<br>and diphtheria (Td) or tetanus,<br>diphtheria and acellular pertussis<br>(Tdap); zoster; and<br>pneumococcal. | National<br>Committee<br>for<br>Quality<br>Assurance | We proposed to include<br>this measure in the<br>Rheumatology specialty<br>set as it is clinically<br>relevant to this clinician<br>type. It supports the<br>comprehensive evaluation<br>of compliance with<br>recommended adult<br>immunizations that<br>improve quality care and<br>prevent disease for the<br>general population. This<br>quality measure aligns<br>with the evidence-based<br>recommendations of the<br>Advisory Committee on<br>Immunization Practices<br>(ACIP). Broadening<br>immunization status<br>awareness to this clinician<br>type is valuable as it can<br>help drive an increase in<br>the adult immunization<br>rates. The immunizations<br>included within this<br>measure will reduce the<br>prevalence of severe<br>diseases that may be<br>associated with<br>hospitalization and<br>decrease overall health<br>care costs. See Table A.9<br>for rationale. |

**Comment:** One commenter supported the inclusion of the Screening for Social Drivers of Health measure in the Rheumatology Specialty Set.

**Response:** We thank the commenter for supporting the addition of this new measure to the Rheumatology Specialty Set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46682 through 46683), we are finalizing the above measures for addition to the *Rheumatology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix I: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## B.39. Rheumatology

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE RHEUMATOLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|
| 0041 /<br>N/A               | 110          | CMS147v<br>12  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Preventive Care and<br/>Screening: Influenza<br/>Immunization:</b><br>Percentage of patients aged 6<br>months and older seen for a visit<br>during the measurement period<br>who received an influenza<br>immunization OR who reported<br>previous receipt of an influenza<br>immunization. | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |

**Comment:** One commenter opposed the removal of measures Q110 and Q111 from the Rheumatology Specialty Set and replacing them with the Adult Immunization Status measure. The proposed replacement measure includes immunizations for issues they believe are not relevant to the field of rheumatology, such as Td, Tdap, and zoster. Our focus on including immunization measures has been around those necessary for rheumatology patients to receive, given their immunocompromised state. Measures Q110 and Q111 for influenza and pneumococcal have served rheumatology care teams and their patients very well.

**Response:** The clinical concepts found within measures Q110 and Q111 are also included within the new Adult Immunization Status measure. We understand that some of these immunizations may not be a priority for, or administered in, certain fields; however, patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator. This allows for a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. Currently, the Rheumatology Specialty Set contains 17 measures allowing clinicians to choose to submit those measures that are most meaningful to their scope of care.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46683), we are finalizing the above measures for removal from the *Rheumatology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.40. Skilled Nursing Facility**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Skilled Nursing Facility specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.40. Skilled Nursing Facility**

| *<br>§  | 0028/0028e         | 226       | CMS138v11   | Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s | Process      | Community/Population Health      | <b>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:</b><br>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user. | National Committee on Quality Assurance | We proposed to include this measure in the Skilled Nursing Facility specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco will reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs. |

## B.40. Skilled Nursing Facility

| MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE SKILLED NURSING FACILITY SPECIALTY SET |                             |              |                   |                                 |                 |   |   |                              |  |
|---|-----------------------------|--------------|-------------------|---------------------------------|-----------------|---|---|------------------------------|--|
| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type              | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward           | Rationale for Inclusion  |
| ! (Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specification<br>s | Process         | Patient<br>Safety                         | <p><b>Screening for Social Drivers of Health:</b><br/>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.</p> | Physicians<br>Foundatio<br>n | <p>We proposed to include this measure in the Skilled Nursing Facility specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

| MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE SKILLED NURSING FACILITY SPECIALTY SET   |                             |           |             |                          |              |                                  |   |  |  |
|---|-----------------------------|-----------|-------------|--------------------------|--------------|----------------------------------|---|--|--|
| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward                          | Rationale for Inclusion  |
|   | N/A/<br>N/A                 | 493       | N/A         | MIPS CQMs Specifications | Process      | Community/Population Health      | <b>Adult Immunization Status:</b><br>Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal. | National Committee for Quality Assurance | We proposed to include this measure in the Skilled Nursing Facility specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale. |
| We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46686 through 46688), we are finalizing the above measures for addition to the <i>Skilled Nursing Facility Specialty Set</i> as proposed, except measure Q226 will not be added to this specialty set for the CY 2023 performance period/2025 MIPS payment year and future years. Upon further review of the finalized measure, we determined that measure Q226, as currently specified, is not applicable for the skilled nursing facility because the revised denominator coding does not reflect codes billed in this setting. |                             |           |             |                          |              |                                  |   |  |  |
| Where applicable, see Table Group A in this section of the final rule (Appendix I: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.  |                             |           |             |                          |              |                                  |   |  |  |

## B.40. Skilled Nursing Facility

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE SKILLED NURSING FACILITY SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|
| 0041 /<br>N/A               | 110          | CMS147v<br>12  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Preventive Care and<br/>Screening: Influenza<br/>Immunization:</b><br>Percentage of patients aged 6<br>months and older seen for a visit<br>during the measurement period<br>who received an influenza<br>immunization OR who reported<br>previous receipt of an influenza<br>immunization. | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46688), we are finalizing the above measures for removal from the *Skilled Nursing Facility Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.41. Speech Language Pathology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Speech Language Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.41. Speech Language Pathology**

| !<br>(Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Speech Language Pathology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

### B.41. Speech Language Pathology

| MEASURES NOT FINALIZED FOR ADDITION TO THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET  |                             |              |                   |                    |                 |   |                                  |                    |                            |
|---|-----------------------------|--------------|-------------------|--------------------|-----------------|---|----------------------------------|--------------------|----------------------------|
| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description | Measure<br>Steward | Rationale for<br>Inclusion |
| <p><b>Comment:</b> One commenter supported the inclusion of the Screening for Social Drivers of Health measure in the Speech Language Pathology Specialty Set to improve care and because it provides another measure to meet minimum reporting requirements associated with the quality performance category.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of this measure to the Speech Language Pathology Specialty Set. However, as we implement the Screening for Social Drivers of Health measure within the MIPS quality measure inventory and measure sets starting with the CY 2023 performance period, we believe it is critical for individual MIPS eligible clinicians, groups, and virtual groups to have the option of choice in selecting and reporting such measure. We recognize that the Speech Language Pathology Specialty Set would contain six MIPS quality measures if the Screening for Social Drivers of Health measure were implemented within this set. For specialty sets that contain more than six MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups have the flexibility to select a minimum of six MIPS quality measures to report to meet the MIPS reporting requirement for the quality performance category. For specialty sets that contain six or less MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups must report on all MIPS quality measures within the specialty set. In the case of the Speech Language Pathology Specialty Set, this measure would inadvertently become mandatory to report. While we believe that the Screening for Social Drivers of Health measure is an important topic for speech language pathologists, to assess within their patient population, the inclusion of such measure within this set would eliminate the option of choice to select and report such measure. As we intend to provide clinician choice in selecting and reporting the Screening for Social Drivers of Health measure, we will not include such measure within the Speech Language Pathology Specialty Set.</p> <p>Consequently, we are not finalizing the above measure for addition to the <i>Speech Language Pathology Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                             |              |                   |                    |                 |   |                                  |                    |                            |

**B.42. Thoracic Surgery**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Thoracic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

### B.43. Urgent Care

| MEASURES FINALIZED FOR ADDITION TO THE URGENT CARE SPECIALTY SET |                             |              |                   |                             |                 |   |   |                          |  |
|--|-----------------------------|--------------|-------------------|-----------------------------|-----------------|---|---|--------------------------|--|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward       | Rationale for<br>Inclusion   |
| ! (Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Urgent Care specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

We received no public comments on the measure proposed for addition to this specialty set; therefore, we are finalizing the above measure for addition to the *Urgent Care Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

**B.44. Urology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Urology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.44. Urology

| MEASURES FINALIZED FOR ADDITION TO THE UROLOGY SPECIALTY SET |                    |           |             |  |              |                                  |  |  |  |
|--|--------------------|-----------|-------------|--|--------------|----------------------------------|--|--|--|
| Indicator  | NQF # / eCQM NQF # | Quality # | CMS eCQM ID | Collection Type  | Measure Type | National Quality Strategy Domain | Measure Title And Description  | Measure Steward                          | Rationale for Inclusion  |
| * §  | N/A/ N/A           | 134       | CMS2v12     | Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications | Process      | Community/Population Health      | <b>Preventive Care and Screening: Screening for Depression and Follow-Up Plan:</b><br>Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter. | Centers for Medicare & Medicaid Services | We proposed to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that depression screening and intervention is an essential care process for patients diagnosed with cancer, including patients with urological cancers. Depression can be a disabling co-morbidity in cancer patients and it's vital to incorporate this assessment and intervention in their comprehensive care.  |
| * !<br>(Patient Safety)                                      | 0022/ N/A          | 238       | CMS156 v11  | eCQM Specifications, MIPS CQMs Specifications  | Process      | Patient Safety                   | <b>Use of High-Risk Medications in Older Adults:</b><br>Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class  | National Committee for Quality Assurance | We proposed to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that medications used for supportive care for patients with cancer diagnoses (including urological cancers), such as anti-depressants or pain medications, may be associated with increased risk of harm from drug side-effects and toxicity. Cancer care management between specialists (for example, urologists and oncologists) heightens the need for closer collaboration of medication management for this patient population. |

## B.44. Urology

## MEASURES FINALIZED FOR ADDITION TO THE UROLOGY SPECIALTY SET

| Indicator                        | NQF # / eCQM NQF # | Quality # | CMS eCQM ID | Collection Type            | Measure Type                  | National Quality Strategy Domain          | Measure Title And Description  | Measure Steward                          | Rationale for Inclusion  |
|----------------------------------|--------------------|-----------|-------------|----------------------------|-------------------------------|---|--|--|--|
| *<br>§<br>! (Patient Experience) | 0005/<br>N/A       | 321       | N/A         | CMS-approved Survey Vendor | Patient Engagement/Experience | Person and Caregiver-Centered Experiences | <b>CAHPS for MIPS Clinician/Group Survey:</b><br>The Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Clinician/Group Survey is comprised of 10 Summary Survey Measures (SSMs) and measures patient experience of care within a group practice. The NQF endorsement status and endorsement id (if applicable) for each SSM utilized in this measure are as follows:<br>• Getting Timely Care, Appointments, and Information; (Not endorsed by NQF)<br>• How well Providers Communicate; (Not endorsed by NQF)<br>• Patient's Rating of Provider; (NQF endorsed # 0005)<br>• Access to Specialists; (Not endorsed by NQF)<br>• Health Promotion and Education; (Not endorsed by NQF)<br>• Shared Decision-Making; (Not endorsed by NQF)<br>• Health Status and Functional Status; (Not endorsed by NQF)<br>• Courteous and Helpful Office Staff; (NQF endorsed # 0005)<br>• Care Coordination; (Not endorsed by NQF)<br>• Stewardship of Patient Resources. (Not endorsed by NQF) | Agency for Healthcare Research & Quality | We proposed to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that inclusion of this patient-centered CAHPS survey measure in this specialty set will incentivize evaluation of patient-centered domains relevant to urological cancer care (for example, timely care, provider communication, access to specialists, health promotion and education, shared decision making, functional status, care coordination).           |
| *<br>§<br>! We agreed with interested parties' feedback that end-of-life care measures can provide meaningful feedback and create incentives to improve patient-centered, appropriate care to cancer patients, including patients with urological cancers. End-of-life care decisions may extend beyond oncologists to other specialty providers on the care team, including urologists for bladder or prostate cancers. |

## B.44. Urology

## MEASURES FINALIZED FOR ADDITION TO THE UROLOGY SPECIALTY SET

| Indicator  | NQF # / eCQM NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward       | Rationale for Inclusion  |
|------------|--------------------|-----------|-------------|--------------------------|--------------|----------------------------------|---|-----------------------|--|
| ! (Equity) | N/A/ N/A           | 487       | N/A         | MIPS CQMs Specifications | Process      | Patient Safety                   | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the Urology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

### MEASURES FINALIZED FOR ADDITION TO THE UROLOGY SPECIALTY SET

We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46704 through 46708), we are finalizing the above measures for addition to the *Urology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE UROLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46708), we are finalizing the above measures for removal from the *Urology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.45. Vascular Surgery**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include:<br><ul style="list-style-type: none"> <li>• Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND</li> <li>• Most recent tobacco status is Tobacco Free -- AND</li> <li>• Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND</li> <li>• Statin Use Unless Contraindicated.</li> </ul> | Wisconsin<br>Collaborativ<br>e for<br>Healthcare<br>Quality |

### B.45. Vascular Surgery

| MEASURES FINALIZED FOR ADDITION TO THE VASCULAR SURGERY SPECIALTY SET  |                             |              |                   |                             |                 |   |   |                          |   |
|--|-----------------------------|--------------|-------------------|-----------------------------|-----------------|---|---|--------------------------|---|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward       | Rationale for<br>Inclusion  |
| ! (Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Vascular Surgery specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
| We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46712), we are finalizing the above measure for addition to the <i>Vascular Surgery Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS. |                             |              |                   |                             |                 |   |   |                          |   |

## B.45. Vascular Surgery

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE VASCULAR SURGERY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description   | Measure<br>Steward                  | Rationale for Removal  |
|-----------------------------|--------------|----------------|-----------------------------|-----------------|---|---|-------------------------------------|--|
| N/A /<br>N/A                | 258          | N/A            | MIPS CQMs<br>Specifications | Outcome         | Patient<br>Safety                         | <b>Rate of Open Repair of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #7):</b><br>Percent of patients undergoing open repair of small or moderate sized non-ruptured infrarenal abdominal aortic aneurysms (AAA) who do not experience a major complication (discharge to home no later than post-operative day #7). | Society for<br>Vascular<br>Surgeons | This measure was proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale. |

We received no public comments on the measure proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46713), we are finalizing the above measure for removal from the *Vascular Surgery Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**TABLE Group C: Previously Finalized Quality Measures Finalized and Not Finalized for Removal in the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years**

In this final rule, we are removing 11 previously finalized MIPS quality measures, of the 15 measures proposed for removal, for the CY 2023 performance period/2025 MIPS payment year and future years. These measures are discussed in detail below. Our process measure removal criteria were discussed in the CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) to implement an approach to incrementally remove process measures.

Under measure removal criteria, consideration is given to the following, but is not limited to:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the measure addresses a priority area highlighted in the Measure Development Plan at <https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measure-development>.
- Whether the measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the measure is designated as high priority or not.
- If they do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.
- After factoring in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcomes; consideration of the measure in developing MVPs).
- If we determine the measure is not available for MIPS reporting by or on behalf of all MIPS eligible clinicians.

Under Table Group CC, we finalized to partially remove 2 additional measures from traditional MIPS and to retain these 2 measures for MVP use and retain 1 of these measures for purposes of Shared Savings Program ACOs reporting through the APP.

Further considerations are given in the evaluation of the measure's performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion that we use for the removal of measures includes extremely topped out measures, which means measures that are topped out with an average (mean) performance rate between 98-100 percent.

For a measure that is finalized for removal due to criteria relating to the benchmark and performance data, further information regarding MIPS benchmarking data can be located at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip>.

**NOTE:** Since publication of the measures in Table Group C in the CY 2023 PFS proposed rule (87 FR 46714 through 46722), we have determined the following measures will be retained in the CY 2023 performance period/2025 MIPS payment year: Q260, Q261, Q275, and Q439. Our decisions not to finalize these measures for removal in this final rule are detailed in our responses to the public comments for these measures in Table Group C in Tables C.4, C.5, C.7, and C.11, respectively.

As noted in the introduction to Table Group B, measures that were not finalized for removal under Table Group C have been added back to the Previously Finalized tables, where applicable, and removed from the Removal tables, under the appropriate specialty set in Table Group B.

## C.1. Prevention of Central Venous Catheter (CVC) - Related Bloodstream Infections

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | 2726 / N/A   |
| Quality #:  | 076  |
| CMS eCQM ID:  | N/A  |
| National Quality Strategy Domain:   | Patient Safety   |
| Collection Type:  | Medicare Part B Claims Specifications, MIPS CQMs Specifications  |
| Measure Description:  | Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed.  |
| Measure Steward:  | American Society of Anesthesiologists  |
| High Priority Measure:  | Yes  |
| Measure Type:   | Process  |
| Rationale for Removal   | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), we believed it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> . |
| In the Circumstance the Measure is Retained   | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.  |
| <p><b>Comment:</b> One commenter opposed removal of measure Q076 because the measure is still useful for monitoring patient safety and the impact of patient outcomes. Another commenter opposed removal of the measure to ensure improvements in infection control do not backslide and stated that CMS should monitor negative changes in outcomes for patients if this measure is removed.</p> <p>Another commenter opposed removal of this measure because the measure is aimed at reducing infections and remains an important barometer of quality and patient safety. The commenter stated that the measure is endorsed by NQF and is consistently reported by anesthesiologists, surgeons, hospitalists, and other non-anesthesiologists. The commenter also did not believe that this measure has reached the end of the topped-out lifecycle as specialties other than anesthesiology also report this measure. The commenter stated that CMS should review the totality of data across specialties and review data that shows high performance of this measure is closely associated with reduced infections during a patient's length of stay.</p> <p><b>Response:</b> We agree that reducing infections is an important barometer of patient safety and recognize that the measure is endorsed by NQF. Topped out status is determined by the data reported to MIPS within the 2022 Historic Benchmark file from individual clinicians, groups, and virtual groups; therefore, we would be unable to utilize data from other reporting programs as there may be differences in implementation and/or the level of analysis needed to determine topped out status of a quality measure. The data shows that both the MIPS CQMs and Medicare Part B Claims Specifications collection types have reached the end of their topped-out life cycles which does not allow meaningful benchmarks to be established. Measures that are topped out demonstrate performance that is so high and unvarying that meaningful distinctions and improvement in performance can no longer be determined. Therefore, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Measures classified as topped out for three consecutive years may be removed the fourth year subject to rulemaking and public comment. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2022 Benchmark File.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46714), we are finalizing the removal of measure Q076 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**C.2. Diabetes: Medical Attention for Nephropathy**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | 0062 / N/A  |
| Quality #:  | 119   |
| CMS eCQM ID:  | CMS134v11   |
| National Quality Strategy Domain:   | Effective Clinical Care   |
| Collection Type:  | eCQM Specifications, MIPS CQMs Specifications   |
| Measure Description:  | The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.  |
| Measure Steward:  | National Committee for Quality Assurance  |
| High Priority Measure:  | No  |
| Measure Type:   | Process   |
| <b>Rationale for Removal</b>  | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to the Kidney Health Evaluation measure being proposed in Table A.4. The Kidney Health Evaluation measure focuses on patients with diabetes and encourages annual evaluation of estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidity of diabetes and CKD. The Kidney Health Evaluation measure, if finalized, will support the clinical conditions of kidney disease and diabetes, both identified as gaps within MIPS and considered priority areas for future measure development.  |
| <b>In the Circumstance the Measure is Retained</b>  | <p>If the measure is not finalized for removal in the 2023 PFS final rule, we propose to apply the following substantive changes to the measure specifications: 1) the initial patient population and the denominator exclusion for the eCQM Specifications collection type will be revised to change the age anchor from the start of the measurement period to the end of the measurement period so that it aligns with the HEDIS measure requirements and creates consistency for implementation across programs; 2) the logic and logic definitions related to hospice care for the eCQM Specifications collection type will also be updated to add flexibility to how assessment and encounter data may be captured or stored to align with exclusion intent and criteria more closely; and 3) the denominator note for the MIPS CQMs Specifications collection type will be revised to assess the age for exclusions on the date of the encounter to reduce clinician burden and ensure alignment with guidelines when utilizing this collection type.</p> <p>If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C. The substantive changes outlined above will be applied to the measure specifications.</p> |
| <p><b>Comment:</b> Several commenters supported the removal of measure Q119 if the proposed new measure Kidney Health Evaluation was finalized. One commenter stated the new Kidney Health Evaluation measure is better aligned with current American Diabetes Association (ADA) Standards of Practice recommendations and should provide more actionable feedback to providers to help them deliver better care to their patients with diabetes.</p> <p><b>Response:</b> We thank the commenters for supporting the removal of this measure. The Kidney Health Evaluation measure was finalized in MIPS under Table A.4.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46715), we are finalizing the removal of measure Q119 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

**C.3. Rate of Open Repair of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #7)**

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | N/A / N/A   |
| Quality #:   | 258   |
| CMS eCQM ID:   | N/A   |
| National Quality Strategy Domain:  | Patient Safety  |
| Collection Type:   | MIPS CQMs Specifications  |
| Measure Description:   | Percent of patients undergoing open repair of small or moderate sized non-ruptured infrarenal abdominal aortic aneurysms (AAA) who do not experience a major complication (discharge to home no later than post-operative day #7).  |
| Measure Steward:   | Society for Vascular Surgeons   |
| High Priority Measure:   | Yes   |
| Measure Type:  | Outcome   |
| Rationale for Removal  | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> . |
| In the Circumstance the Measure is Retained  | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.   |
| We received no public comments on this measure removal. For the reasons stated above and in the proposed rule (87 FR 46715), we are finalizing the removal of measure Q258 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**C.4. Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2)**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality #:  | 260   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Patient Safety  |
| Collection Type:  | MIPS CQMs Specifications  |
| Measure Description:  | Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) who are discharged to home no later than post-operative day #2.  |
| Measure Steward:  | Society for Vascular Surgeons   |
| High Priority Measure:  | Yes   |
| Measure Type:   | Outcome   |
| Rationale for Removal   | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> . |
| In the Circumstance the Measure is Retained   | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.   |
| <p><b>Comment:</b> One commenter opposed the removal of measure Q260 because limited patient population and limited adoption have not allowed for the creation of performance benchmarks. The commenter expressed concern about eliminating specialty-specific measures since MIPS reporting and scoring policies have historically disincentivized clinicians from reporting more granular measures. The commenter stated that starting in 2023, CMS proposed to further disincentivize specialty-specific measures by assigning measures that lack a benchmark zero rather than 3 points. While the commenter appreciated that CMS adopted a 5-point floor for “new” measures during their first 2 years in the program, the commenter stated that this policy does nothing to address the numerous measures that have been in the program for many years but continue to lack a benchmark and are at risk for removal. The commenter stated that with minimal incentive to report on measures that lack a benchmark, this measure did not have the opportunity to gain traction.</p> <p>The commenter strongly urged CMS to maintain measures that lack a benchmark to ensure a diverse inventory of measures that reflect specialty care. The commenter stated that CMS should maintain these measures until it has had time to implement, test, and expand MVPs. MVPs, as well as the subgroup participation policy associated with this pathway, present an important opportunity for clinicians to focus on more specialty-specific measures, and CMS must maintain an adequate inventory of quality measures for use in MVPs.</p> <p><b>Response:</b> We thank the commenter for their comments and agree with maintaining an adequate inventory of quality measures for use in MVPs, however we also balance the need to maintain our standards of meaningful measures and will continue to evaluate the potential use of this measure within an MVP in future years.</p> <p>Based on the comments received, we conducted a literature search and found that newer guidelines, Society for Vascular Surgery (SVS) clinical practice guidelines for management of extracranial cerebrovascular disease (<a href="https://pubmed.ncbi.nlm.nih.gov/34153350/">https://pubmed.ncbi.nlm.nih.gov/34153350/</a>), recommend carotid artery endarterectomy (CEA) over carotid artery stenting (CAS) for symptomatic low risk surgical patients, as well as CEA over maximal medical therapy for asymptomatic patients with carotid bifurcation stenosis &gt;70 percent. This updated guideline presented strong evidence that CEA is superior for long-term prevention of stroke/death for low-risk surgical patients and supports retaining this measure within MIPS. After careful consideration, we will maintain this measure for specialty specific MIPS eligible clinicians as it aligns with current guidelines but may consider removal in the future.</p> <p>After further consideration, we are not finalizing the removal of measure Q260 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## C.5 Referral for Otologic Evaluation for Patients with Acute or Chronic Dizziness

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality #:  | 261   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Communication and Care Coordination   |
| Collection Type:  | Medicare Part B Claims Specifications, MIPS CQMs Specifications   |
| Measure Description:  | Percentage of patients aged birth and older referred to a physician (preferably a physician specially trained in disorders of the ear) for an otologic evaluation subsequent to an audiologic evaluation after presenting with acute or chronic dizziness.  |
| Measure Steward:  | Audiology Quality Consortium  |
| High Priority Measure:  | Yes   |
| Measure Type:   | Process   |
| Rationale for Removal   | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> . |
| In the Circumstance the Measure is Retained   | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.   |
| <p><b>Comment:</b> Several commenters were supportive of removing measure Q261 from MIPS.</p> <p><b>Response:</b> We thank the commenters for supporting the removal of this measure.</p> <p><b>Comment:</b> One commenter did not support the removal of measure Q261, stating this measure is a critical element of care for patients with hearing loss and has the potential to prevent potentially avoidable negative health outcomes, such as falls, which could lead to hospital admissions or fractures. The commenter stated that low reporting rates are partly due to the limited number of audiologists required to report to MIPS based on the low-volume threshold. The commenter stated that low reporting is not an indication of a measure's lack of importance or utility in improving patient care but is rather a construct of the limited number of clinicians reporting this measure under current eligibility requirements.</p> <p>Another commenter expressed similar concerns, stating that many otolaryngology practices include audiology professionals, and these clinicians would no longer have any specialty-specific measures. The commenter encouraged CMS to consider the limited timeframe in which audiologists were considered eligible clinicians (2019) and the limited participation due to the provision of the EUC for 2020 and 2021 due to the public health emergency. The commenter stated that it is premature to remove the only audiology-specific measure given the limited eligibility and proposed change to the audiology referral requirements.</p> <p>Another commenter opposed removal of the measure due to the aging population and increased risk of falls in the elderly, stating that audiologists are an important part of the fall-prevention teams and are uniquely positioned to alleviate patient and economic burdens of dizziness.</p> <p><b>Response:</b> We thank the commenters for their comments and acknowledge that this measure addresses a critical element in ensuring patients receive appropriate referrals for otologic evaluations. Based on the comments received, we recognize that this measure represents a very small sub-specialty of otologists within the Audiology and Otolaryngology Specialty Sets. Our goal is to ensure that we have as many measures as possible for specialty-specific clinicians while also ensuring that the measures within MIPS are leading to meaningful data driving positive outcomes. We found the commenter's argument that participation in MIPS for audiologists was limited in 2020 and 2021 compelling and would be further limited in the future by the removal of this measure; therefore, we will maintain this measure and continue to monitor performance for measure Q261 but may consider removal in the future.</p> <p>After further consideration, we are not finalizing the removal of measure Q261 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## C.6. Biopsy Follow-Up

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | N/A / N/A  |
| Quality #:   | 265  |
| CMS eCQM ID:   | N/A  |
| National Quality Strategy Domain:  | Communication and Care Coordination  |
| Collection Type:   | MIPS CQMs Specifications   |
| Measure Description:   | Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.   |
| Measure Steward:   | American Academy of Dermatology  |
| High Priority Measure:   | Yes  |
| Measure Type:  | Process  |
| Rationale for Removal  | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), we believed it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> . |
| In the Circumstance the Measure is Retained  | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.  |
| <p><b>Comment:</b> Several commenters did not support the removal of measure Q265 because this measure is relevant for urologists and data from their registry suggests there is still room for improvement among clinicians. Another commenter stated that this high priority measure is used in multiple specialty sets and should be retained for continued use in traditional MIPS and for future MVPs. Another commenter stated this measure allows clinicians to improve lines of communications between specialties which in turn increase efficiency, reduces overall costs, and promotes wellness and prevention in healthcare. Another commenter stated this measure promotes a coordinated patient centered team approach to healthcare, is helpful with patient follow-up and retention, and is a pillar in the dermatology space in terms of ensuring that clinicians have a stake in the health outcomes for the patient.</p> <p><b>Response:</b> We thank the commenters for their comments and agree this is a relevant measure for several specialties including urology and dermatology; however, we strive to ensure that all measures align with MIPS goals and priorities, including the removal of measures that are at the end of the topped-out lifecycle. We utilize MIPS data to determine the measure's year over year performance.</p> <p>This measure, which is at its sixth year of being topped out, only assesses the quality action for new patients undergoing biopsy but does not track performance for existing patients who undergo subsequent biopsies. This concern was expressed in a discussion with the measure steward in 2022 with a recommendation to consider revising the numerator of the measure to include all biopsies performed, as we believe it is important to have care communication with the primary care clinician with all performed biopsies. With no revisions proposed for PY2023 and this measure being topped-out for 6 consecutive years, we believe it has a limited opportunity to improve clinical outcomes.</p> <p>We acknowledge the importance of improving coordination and communication between clinicians and patients to drive quality of care. However, as noted, measure Q265 is a high-performing measure that no longer allows for improvement in clinical outcomes. Based on the feedback from the commenters, confirmation that this measure is a pillar in the dermatology space seems to ensure that this measure is a standard of care for most dermatology clinicians. This finding is supported by the MIPS Benchmark File and the performance of this measure as topped out within MIPS.</p> <p>By removing measures at the end of the topped-out lifecycle, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2022 Benchmark File.</p> <p><b>Comment:</b> One commenter expressed concern about removing this measure and in general topped-out measures before analysis regarding disparities in care related to race, ethnicity, and/or language, can be completed.</p> <p><b>Response:</b> We encourage the commenter to reach out to measure developers/stewards to develop new biopsy follow-up measures that consider race, ethnicity, and/or language for submission to the Call for Measures for possible future implementation.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46717), we are finalizing the removal of measure Q265 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**C.7. Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality #:  | 275   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Effective Clinical Care   |
| Collection Type:  | MIPS CQMs Specifications  |
| Measure Description:  | Percentage of patients with a diagnosis of inflammatory bowel disease (IBD) who had Hepatitis B Virus (HBV) status assessed and results interpreted prior to initiating anti-TNF (tumor necrosis factor) therapy.   |
| Measure Steward:  | American Gastroenterological Association  |
| High Priority Measure:  | No  |
| Measure Type:   | Process   |
| Rationale for Removal   | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> . |
| In the Circumstance the Measure is Retained   | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.   |
| <p><b>Comment:</b> One commenter did not support removal of measure Q275 because it has been a quality measure for approximately 10 years and is the only measure specific to patients with IBD remaining in 12 national reporting programs. The commenter stated that CMS had not informed the measure steward about any benchmarking issues prior to recommending the removal of the measure for 2023. The commenter stated that as a result, the measure steward has not had an opportunity to address any concerns. The commenter stated that before initiating biologic or small molecule therapy such as anti-TNF drugs for a patient with IBD, it is essential to screen the patient for HBV, as reactivation of HBV after such therapy can occur with significant risks for patient decompensation. The commenter stated that severe reactivation of the hepatitis B virus can occur during immunosuppression. The commenter stated that assessment of hepatitis B virus in immunosuppressed patients, including those who are initiating IBD biologic therapies, is critical to the safety of the patient.</p> <p>The commenter stated that measure Q275 was recommended for inclusion in the 2022 Core Quality Measures Collaborative (CMQC) Gastroenterology Measures Set for 2023 implementation which involved CMS leadership and participation. The commenter stated that the identification and selection process for the Gastroenterology Specialty Set included multiple interested parties, including CMS, who all voted in favor of retaining this measure in the set. Removing this measure conflicts with previously agreed upon processes.</p> <p><b>Response:</b> To elaborate on our initial rationale for removal, the measure does not have a “benchmarking issue,” but rather is reported by a very limited number of clinicians which does not allow for the creation of a benchmark. Historical benchmarks are driven by the data submitted for a measure 2 years prior. For example, 2022 historical benchmarks are based on data reported for PY2020. To be benchmarked, data completeness and case volumes must be reached, therefore, when a measure has low adoption, a benchmark cannot be created.</p> <p>We acknowledge the importance of this measure for the gastroenterology specialty and upon further review will continue to monitor the measure’s performance to determine if adoption of the measure is viable for the production of fruitful performance rates.</p> <p>After further consideration, we are not finalizing the removal of measure Q275 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

**C.8. Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Routine Testing After Percutaneous Coronary Intervention (PCI)**

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | N/A / N/A  |
| Quality #:   | 323  |
| CMS eCQM ID:   | N/A  |
| National Quality Strategy Domain:  | Efficiency and Cost Reduction  |
| Collection Type:   | MIPS CQMs Specifications   |
| Measure Description:   | Percentage of all stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), cardiac computed tomography angiography (CTA), and cardiovascular magnetic resonance (CMR) performed in patients aged 18 years and older routinely after percutaneous coronary intervention (PCI), with reference to timing of test after PCI and symptom status.  |
| Measure Steward:   | American College of Cardiology Foundation  |
| High Priority Measure:   | Yes  |
| Measure Type:  | Efficiency   |
| Rationale for Removal  | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle (82 FR 53640). Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 0.87 percent for the MIPS CQMs Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. Given this measure's continued topped out status, we believed it has a limited opportunity to improve clinical outcomes and should be a standard of care. The average performance rate and topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> . |
| In the Circumstance the Measure is Retained  | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.  |
| <p><b>Comment:</b> One commenter supported removing this measure from MIPS.</p> <p><b>Response:</b> We thank the commenter for supporting the removal of this measure from MIPS.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46718), we are finalizing the removal of measure Q323 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

## C.9. Functional Status Assessment for Total Knee Replacement

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | N/A / N/A   |
| Quality #:   | 375   |
| CMS eCQM ID:   | CMS66v11  |
| National Quality Strategy Domain:  | Person and Caregiver-Centered Experience and Outcomes   |
| Collection Type:   | eCQM Specifications   |
| Measure Description:   | Percentage of patients 18 years of age and older who received an elective primary total knee arthroplasty (TKA) and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.   |
| Measure Steward:   | Centers for Medicare & Medicaid Services  |
| High Priority Measure:   | Yes   |
| Measure Type:  | Process   |
| Rationale for Removal  | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to measure Q470: Functional Status After Primary Total Knee Replacement. The process measure Q375 is only assessing whether pre- and post-assessments were completed; however, outcome measure Q470 requires a certain post-surgical PRO-PM score to meet performance.  |
| In the Circumstance the Measure is Retained  | <p>If the measure is not finalized for removal in the 2023 PFS final rule, we proposed to apply the following substantive changes to the measure specifications: (1) the measure description will be revised to capture the measure intent and logic surrounding the age requirement to provide clarity and alignment across the header and logic; (2) the denominator exclusion will be updated so that the timing of the lower body fracture in relation to the THA will align with intent of exclusion; and (3) the logic and logic definitions related to hospice care will be updated to add flexibility to how assessment and encounter data may be captured or stored to align with exclusion intent and criteria more closely.</p> <p>If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C. The substantive changes outlined above will be applied to the measure specifications.</p> |
| <p><b>Comment:</b> Several commenters did not support removal of measure Q375 as duplicative to measure Q470. The commenters stated that instead of removing this eCQM measure for being duplicative, the commenters wanted CMS to provide more flexibility for clinicians to choose how to report and to offer vendors options to choose what measures they provide to their customers. The commenters stated that some her vendors are not third-party intermediaries and even those who are may be unable to offer all registry measures. The commenters did not support removal of eCQMs when the only reason is that they are duplicative of MIPS CQMs. One commenter stated there is value in offering a variety of measures in different reporting types to give clinicians flexibility in meeting their reporting requirements. Another commenter suggested either updating measure Q375 to become an outcome measure or updating measure Q470 to allow reporting via eCQMs.</p> <p><b>Response:</b> It is important to ensure duplicative measures are removed from MIPS to develop an ecosystem of quality measures that drive value-based care. We encourage the commenters to reach out to the measure steward for measure Q470 to discuss revisions and possibly add the eCQM collection type in future years. In the instance measure Q470 can be included within the eCQM collection type, it would add another outcome measure which requires a certain post-surgical PRO-PM score to meet performance.</p> <p>We agree that having a variety of measures and collection types in the program for reporting provides additional flexibility for clinicians to choose how to report their applicable measures; however, rather than offering duplicate measures, we believe that offering measures with more robust evaluation methods would drive better quality of care provided. Measure Q470 requires the use of a functional status assessment score/tool to evaluate measurable change in functional status postoperatively whilst measure Q375 simply assesses whether pre- and post-assessments were completed. Duplicative measures have no purpose in quality measurement.</p> <p><b>Comment:</b> One commenter opposed the removal of measure Q375 as duplicative and stated that significant time had been expended to test this measure and other functional status measures proposed for removal. The commenter's QCDR team is actively working on its patient-reported outcomes measures (PROMs) tool and has engaged sites that want to capture and report this assessment data. The commenter stated it is important to consider the resources required to test and implement measures with the QCDR system. The commenter requested that CMS consider longer intervals between the proposed removal of measures and the finalization of such changes. The commenter also cited that measure Q375 also impacts the Comprehensive Care for Joint Replacement (CJR) model and the proposed future requirement for reporting pre- and post-operative PROMs. The commenter requested guidance on how these programs would be impacted.</p> <p><b>Response:</b> Removal of this measure from MIPS will not have a direct impact on the CJR model as it falls under a separate CMS program with different policy and reporting requirements from MIPS. We appreciate the comment regarding the interval between the proposal and removal of measures. Measures proposed for removal are not removed from MIPS during the same calendar year they are proposed for removal. For example, a measure proposed for removal in the CY 2023 proposed rule, published in summer 2022, would not result in the measure being removed until January 2023, for that performance period, as public notice and comment is needed.</p> <p>Measure Q375 has been a measure within MIPS since inception of the program in 2017 and we believe this should have allowed time for QCDRs to test any measures within the QCDR system. Also, because MVPs are currently optional rather than required, this gives registries another year to prepare for MVP reporting.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46719), we are finalizing the removal of measure Q375 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## C.10. Photodocumentation of Cecal Intubation

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality #:  | 425   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Effective Clinical Care   |
| Collection Type:  | MIPS CQMs Specifications  |
| Measure Description:  | The rate of screening and surveillance colonoscopies for which photodocumentation of at least two landmarks of cecal intubation is performed to establish a complete examination.   |
| Measure Steward:  | American Society for Gastrointestinal Endoscopy   |
| High Priority Measure:  | No  |
| Measure Type:   | Process   |
| Rationale for Removal   | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because we believed this process measure represents performance outcomes that are clinically a standard of care and does not drive quality outcomes for patients.   |
| In the Circumstance the Measure is Retained   | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C. |
| <p><b>Comment:</b> One commenter did not support the removal of measure Q425, stating that the goal of the measure is to establish a complete screening or surveillance examination based on photodocumentation of at least two landmarks of cecal intubation. The commenter stated that this measure assesses eligible clinicians performing screening and surveillance colonoscopy to determine if examinations are truly complete so that appropriate follow-up intervals can be recommended and whether patients are being recalled too soon or later than recommended by the U.S. Multi-Society Task Force on Colorectal Cancer.</p> <p>The commenter stated that the measure specifications were updated beginning with the 2019 performance year to align with the now recognized best practice of photo documenting two cecal landmarks, rather than one, to establish a complete colonoscopy. The commenter stated that the impact of the public health emergency on clinicians' ability to report for the 2020 and 2021 performance years resulted in a 48 percent drop in QCDR reporting of this measure. The commenter stated that CMS should allow measure Q425 with its updated measure specifications to have at least two full performance years in MIPS to assess the performance of the measure and its continuation in MIPS. The commenter stated that the measure provides insight into potential over- or under-utilization of screening and surveillance colonoscopy and the commenter stated that CMS should also continue inclusion of this measure in public reporting until performance variability relative to race, ethnicity, and the senior population is reduced, and performance is consistently closer to 100 percent.</p> <p><b>Response:</b> We agree that completing a colonoscopy is extremely important. However, measure Q425 only ensures that photos are taken of at least two landmarks of cecal intubation to establish a complete examination but does not require any follow-up action that ties the rate of complete examinations to whether the clinician is recalling patients for surveillance colonoscopies sooner or later than recommended or making recommendations for appropriate follow up intervals where needed. This is a high performing measure that has been topped out for the last 3 years. It is considered a clinical standard of care that should already be happening for each colonoscopy and documented in procedural notes. Additionally, we are using our National Quality Strategy to guide our measure decisions and are striving to use only high-value quality measure that impact key quality domains and prioritize outcome-based measures.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46719), we are finalizing the removal of measure Q425 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## C.11. Age Appropriate Screening Colonoscopy

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality #:  | 439  |
| CMS eCQM ID:  | N/A  |
| National Quality Strategy Domain:   | Efficiency and Cost Reduction  |
| Collection Type:  | MIPS CQMs Specifications   |
| Measure Description:  | The percentage of screening colonoscopies performed in patients greater than or equal to 86 years of age from January 1 to December 31.  |
| Measure Steward:  | American Gastroenterological Association   |
| High Priority Measure:  | Yes  |
| Measure Type:   | Efficiency   |
| Rationale for Removal   | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has a very low adoption rate which does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> .   |
| In the Circumstance the Measure is Retained   | <p>If the measure is not finalized for removal in the 2023 PFS final rule, we proposed that the measure denominator, denominator criteria, and numerator options will be updated to align with USPSTF guidance that screening colonoscopies should start at age 45.</p> <p>If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C. The substantive changes outlined above will be applied to the measure specifications.</p> |
| <p><b>Comment:</b> One commenter did not support the removal of measure Q439, stating the goal of the measure is to eliminate inappropriate screening. The commenter stated that 2892his measure assesses eligible clinicians routinely performing screening colonoscopy, including those doing lower volumes, to determine if unnecessary screening of the elderly is being performed.</p> <p>The commenter stated that recognizing there was opportunity for misinterpretation of the measure specifications, the measure owners and CMS agreed to modify the measure specifications redefining the target population to clarify the measure's intent and ultimately to strengthen analysis and benchmarking of the measure. The commenter stated that 1 modified measure specifications were introduced beginning with the 2021 performance year, the year for which CMS automatically applied its EUC exception to individually eligible clinicians. The commenter noted a 50 percent drop in reporting of the measure through QCDRs for the 2021 performance year compared to the 2020 performance year. The commenter indicated that CMS should allow measure Q439 with its updated measure specifications to have at least two full performance years in MIPS to assess the adoption rate of the measure.</p> <p>The commenter stated that measure Q439 was recommended for inclusion in the 2022 CQMC Gastroenterology Measures Set for 2023 implementation which involved CMS leadership and participation. The commenter stated that the identification and selection process for the Gastroenterology Specialty Set included multiple interested parties, including CMS, who all voted in favor of retaining this measure in the set. Removing this measure conflicts with previously agreed upon processes.</p> <p><b>Response:</b> We acknowledge the importance of eliminating inappropriate screening. Based on the comments, we reassessed the timing of the modified measure being introduced and circumstances surrounding the 50 percent drop in reporting of the measure. We also recognize that this measure addresses a patient population that is unique from other colonoscopy measures within MIPS. Additionally, a performance period benchmark was able to be produced for the 2021 performance period despite the availability of EUC, indicating this measure is meaningful to the clinicians that report it.</p> <p>After consideration of public comments, we are not finalizing the removal of measure Q439 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**C.12. Percentage of Patients Who Died from Cancer Admitted to the Intensive Care Unit (ICU) in the Last 30 Days of Life (lower score – better)**

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | 0213 / N/A   |
| Quality #:   | 455  |
| CMS eCQM ID:   | N/A  |
| National Quality Strategy Domain:  | Effective Clinical Care  |
| Collection Type:   | MIPS CQMs Specifications   |
| Measure Description:   | Percentage of patients who died from cancer admitted to the ICU in the last 30 days of life.   |
| Measure Steward:   | American Society of Clinical Oncology  |
| High Priority Measure:   | Yes  |
| Measure Type:  | Outcome  |
| Rationale for Removal  | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. Additionally, interested parties' feedback has consistently indicated that retrieval of data from the ICU is difficult, which makes this measure hard to submit. The current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> . |
| In the Circumstance the Measure is Retained  | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.  |
| <p><b>Comment:</b> One commenter did not support removal of measure Q455 from MIPS. ICU admission in the last 30 days of life continues to be a concern and a priority area in the cancer population. The commenter stated that studies suggest that over time, cancer care is becoming more aggressive near the end of life. The commenter stated that ICU admissions in the last 30 days of life are deemed as “aggressive care” and often used as an indicator of lower quality of care. The commenter stated that external interested parties have recently identified this measure as a priority measure. The commenter stated that in 2020, this measure was included in the CQMC Medical Oncology Core Set. Additionally, the commenter stated that in 2020, this measure was included in NCCN Quality and Outcomes Committee endorsements of impactful and feasible quality and outcomes measures in cancer care. The commenter stated that as CMS and other interested parties evolve toward a more robust data framework to support digital measures with the integration of multiple data sources, the commenter anticipated reporting on this measure will improve over time.</p> <p><b>Response:</b> As noted, interested parties have reported difficulties in retrieving data from the ICU, making this measure hard to submit. This concern was also discussed during the CQMC Medical Oncology meeting in January 2020, regarding challenges collecting data across systems. We agree that end of life care is an important clinical topic; however, low adoption and subsequent limited submission of the measure have made it impossible to create a benchmark to provide meaningful impact. While we endeavor to enhance data capture through use of digital quality measures, not all measures will be appropriate for these revisions, and our priority is to ensure that for PY2023 we have a robust, meaningful inventory of quality measures.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46720), we are finalizing the removal of measure Q455 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**C.13. Back Pain After Lumbar Fusion**

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | N/A / N/A   |
| Quality #:   | 460   |
| CMS eCQM ID:   | N/A   |
| National Quality Strategy Domain:  | Person and Caregiver-Centered Experience and Outcomes   |
| Collection Type:   | MIPS CQMs Specifications  |
| Measure Description:   | For patients 18 years of age or older who had a lumbar fusion procedure, back pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at one year (9 to 15 months) postoperatively.  |
| Measure Steward:   | Minnesota Community Measurement   |
| High Priority Measure:   | Yes   |
| Measure Type:  | Patient-Reported Outcome-Based Performance Measure  |
| Rationale for Removal  | We proposed the removal of this measure (finalized in 82 FR 53968) as a quality measure from MIPS because this measure is duplicative to measure Q459: Back Pain After Lumbar Discectomy/Laminectomy. We proposed in Table D.65 substantive changes to measure Q459: Back Pain After Lumbar Discectomy/Laminectomy that will encompass the eligible patient population and clinical quality action represented within measure Q460. |
| In the Circumstance the Measure is Retained  | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.   |
| <p><b>Comment:</b> Several commenters opposed removal of measure Q460 as duplicative to measure Q459. The commenters stated that lumping fusions in with discectomies/decompressions would not reflect the indications and expectations for surgery. The commenters stated that although both groups may see improvements in back pain and/or leg pain, the discectomy patients are more likely to have leg pain as an indication for surgery, and the fusion patients are more likely to have back pain as an indication for surgery. Therefore, the commenters stated that combining the measures will only further muddy the waters on the assessment of outcomes.</p> <p><b>Response:</b> We thank the commenters for their comments; however, substantive changes were proposed to measure Q459 to encompass the eligible patient population and clinical quality action in measure Q460. Although fusions and discectomy/laminectomy have been combined in measure Q459 as lumbar surgery, the measure is divided into separate submission criteria. Therefore, each procedure would be assessed for numerator compliance separately. In addition, the numerator for each submission criterion addresses if the patient is not experiencing pain which would reflect the desirable outcome. The patient experiencing pain below the threshold points, or the patient experiencing reduced pain, both of which would indicate that the quality action has been met. Given these substantive changes, we believe measure Q459 will adequately and separately account for lumbar fusion and lumbar discectomy/laminectomy. Because back pain and leg pain are not assessed within the same measure, the scenario given would not be a concern given the separation of the two anatomic areas.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46721), we are finalizing the removal of measure Q460 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

**C.14. Functional Status After Lumbar Fusion**

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | N/A / N/A  |
| Quality #:   | 469  |
| CMS eCQM ID:   | N/A  |
| National Quality Strategy Domain:  | Person and Caregiver-Centered Experience and Outcomes  |
| Collection Type:   | MIPS CQMs Specifications   |
| Measure Description:   | For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.  |
| Measure Steward:   | Minnesota Community Measurement  |
| High Priority Measure:   | Yes  |
| Measure Type:  | Patient-Reported Outcome-Based Performance Measure   |
| Rationale for Removal  | We proposed the removal of this measure (finalized in 83 FR 60098 through 60099) as a quality measure from MIPS because this measure is duplicative to measure Q471: Functional Status After Discectomy/Laminectomy. We proposed in Table D.69 substantive changes to measure Q471: Functional Status After Lumbar Discectomy/Laminectomy that will encompass the eligible patient population and clinical quality action represented within measure Q469. |
| In the Circumstance the Measure is Retained  | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.  |
| <p><b>Comment:</b> Several commenters opposed removal of this measure as duplicative to measure Q471. Another commenter opposed removal of this measure, stating that the measure continues to provide critical information about patients to their functional status and the pain they are experiencing.</p> <p><b>Response:</b> We thank the commenters for their comments; however, substantive changes were proposed to measure Q471 to encompass the eligible patient population and clinical quality action in measure Q469. Although fusions and discectomy/laminectomy have been combined in measure Q471 as lumbar surgery, the measure is divided into separate submission criteria. Therefore, each procedure type would be</p> |  |

assessed for numerator compliance separately. In addition, the numerator for each submission criterion addresses if the patient experienced an improvement in functional status which would reflect the desirable outcome of the patient's functional status, either below a threshold or meeting an improvement target, in accordance with the measure criteria, at specific timelines postoperatively both of which would indicate that the quality action has been met. Given these substantive changes, we believe measure Q471 will adequately and separately account for lumbar fusion and lumbar discectomy/laminectomy.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46721), we are finalizing the removal of measure Q469 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

### C.15. Leg Pain After Lumbar Fusion

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | N/A / N/A   |
| Quality #:   | 473   |
| CMS eCQM ID:   | N/A   |
| National Quality Strategy Domain:  | Person and Caregiver-Centered Experience and Outcomes   |
| Collection Type:   | MIPS CQMs Specifications  |
| Measure Description:   | For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at one year (9 to 15 months) postoperatively.   |
| Measure Steward:   | Minnesota Community Measurement   |
| High Priority Measure:   | Yes   |
| Measure Type:  | Patient-Reported Outcome-Based Performance Measure  |
| Rationale for Removal  | We proposed the removal of this measure (finalized in 83 FR 60106) as a quality measure from MIPS because this measure is duplicative to measure Q461: Leg Pain After Lumbar Discectomy/Laminectomy. We proposed in Table D.66 substantive changes to measure Q461: Leg Pain After Lumbar Discectomy/ Laminectomy that will encompass the eligible patient population and quality action represented within measure Q473. |
| In the Circumstance the Measure is Retained  | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it will be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention will be addressed under Table Group C.   |
| <p><b>Comment:</b> Several commenters strongly opposed removal of measure Q473 as duplicative to measure Q461. The commenters stated that lumping fusions in with discectomies/decompressions would not reflect the indications and expectations for surgery. The commenters stated that although both groups may see improvements in back pain and/or leg pain, the discectomy patients are more likely to have leg pain as an indication for surgery, and the fusion patients are more likely to have back pain as an indication for surgery. Therefore, the commenters stated that combining the measure will only further muddy the waters on the assessment of outcomes. Another commenter opposed removal of this measure, stating that the measure continues to provide critical information about patients to their functional status and the pain they are experiencing.</p> <p><b>Response:</b> We thank the commenters for their comments; however, substantive changes were proposed to measure Q461 to encompass the eligible patient population and clinical quality action in measure Q473. Although fusions and discectomy/laminectomy have been combined in measure Q461 as lumbar surgery, the measure is divided into separate submission criteria. Therefore, each procedure type would be assessed for numerator compliance separately. In addition, the numerator for each submission criterion addresses if the patient is not experiencing pain, which would reflect the desirable outcome of the patient experiencing pain below the threshold points or the patient experiencing reduced pain both of which would indicate that quality action has been met. Given these substantive changes, we believe measure Q461 will adequately and separately account for lumbar fusion and lumbar discectomy/laminectomy. Because back pain and leg pain are not assessed within the same measure, the scenario given would not be a concern given the separation of the two anatomic areas.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46722), we are finalizing the removal of measure Q473 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

---

**TABLE Group CC: Finalized Partial Removal of 2 Previously Finalized Quality Measures as Component Measures in Traditional MIPS and Finalized Retention of These 2 Measures for Use in Relevant MVPs for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years**

Beginning with the CY 2023 performance period/2025 MIPS payment year and future years, we proposed to maintain measures Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults for MVP development and implementation and maintain measure Q110 for purposes of Shared Savings Program ACOs reporting through the APP as discussed in section III.G.4.c.(1) of this final rule. We believed the clinical concepts represented by these MIPS quality measures will support some specialties in a more targeted approach rather than the broader clinical concept of multiple vaccinations represented within the proposed Adult Immunization Measure proposed under Table A.9 of this appendix. The tables within this section offer the rationale of the removal of measures Q110 and Q111 from traditional MIPS reporting.

Therefore, we proposed in the CY 2023 PFS proposed rule to remove these 2 previously finalized quality measures from traditional MIPS due to the proposal of adding the Adult Immunization Status measure under Table A.9 of this appendix (FR 87 46722 through 46723). We simultaneously proposed to retain measures Q110 and Q111 for use in MVPs and retain measure Q110 for purposes of Shared Savings Program ACOs reporting through the APP as discussed in section III.G.4.c.(1) of this final rule. See Table Group E for finalized changes to the CMS Web Interface collection type of this measure.

Measures Q110 and 111 are currently finalized as quality measures within the finalized Optimal Care for Kidney Health MVP (see Appendix 3: MVP Inventory Table A.2). Measure Q111 was retained in the updated Advancing Rheumatology MVP under the MVP maintenance process (see Appendix 3: MVP Inventory Table B.3).

We solicited comments on this proposal.

## CC.1. Preventive Care and Screening: Influenza Immunization

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | 0041 / N/A   |
| Quality #:  | 110  |
| CMS eCQM ID:  | CMS147v12  |
| National Quality Strategy Domain:   | Community/Population Health  |
| Collection Type:  | Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQMs Specifications   |
| Measure Description:  | Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.   |
| Measure Steward:  | National Committee for Quality Assurance   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale for Removal   | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we proposed a more robust measure under Table A.9: Adult Immunization Status that will help improve complete vaccination rates for patients. This measure's clinical concept is included in the Adult Immunization Status measure. Measure Q110 only focuses on the administration of the influenza immunization rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. However, the clinical quality action assessed within measure Q110 may be appropriate and applicable for some MVP topics where the proposed Adult Immunization Status measure may not be as it contains more clinical quality actions for assessment that may not apply to the clinician types submitting that MVP. Therefore, we proposed the removal of this measure from traditional MIPS, but proposed retention of this measure for use in relevant MVPs and use by Shared Savings Program ACOs reporting through the APP as discussed in section III.G.4.c.(1) of this final rule. See Table Group E for finalized changes to the CMS Web Interface collection type for this measure. |
| In the Circumstance the Measure is Retained   | If measure A.9: Adult Immunization Status is not finalized for the CY 2023 performance period/2025 MIPS payment year and future years, we will retain measure Q110 in traditional MIPS in all relevant specialty sets under Table Group B. See Table Group DD for any substantive changes proposed for this measure.   |
| <p>We note that commenters who opposed removal of measure Q110: Preventive Care and Screening: Influenza Immunization also opposed removal of measure Q111: Pneumococcal Vaccination Status for Older Adults in Table CC.2 for the same reasons summarized below.</p> <p><b>Comment:</b> Several commenters opposed removal of measure Q110 because this measure is important to a wide range of specialties who report these measures every year. One commenter stated the proposed replacement measure includes immunizations for issues that are not relevant to the field of rheumatology, such as Td, Tdap, and zoster. One commenter requested that measure Q110 be retained for cardiologists. While the proposed adoption of the Adult Immunization Status measure would likely be duplicative in the primary care setting, one commenter urged CMS to retain measure Q110 due to its importance in the oncology setting. The commenter stated that patients with cancer and in active cancer treatment are often immunocompromised, making the influenza vaccination important in this population and requested that measure Q110 be retained in traditional MIPS until that pathway sunsets.</p> <p><b>Response:</b> This measure's clinical concept is included the new Adult Immunization Status measure. We understand that some of these immunizations may not be relevant to, or administered in, certain fields; however, patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator. This allows for a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being.</p> <p><b>Comment:</b> One commenter opposed removal of measure Q110 and stated that having similar measures reportable via registry is not sufficient for its customers who do not want to pay for a registry to report to MIPS. The commenter wanted to know if it will be necessary to re-certify these measures for MVP only reporting or whether its certification status for the eCQM measures would be maintained.</p> <p><b>Response:</b> This measure will be maintained within the program for MVPs as an eCQM measure. We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures, however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include different collection types within our quality measure inventory to allow flexibility in reporting. The current process for certification of eCQM measures would remain unchanged under MVPs. ONC has the latest CEHRT requirements for measures (<a href="https://www.healthit.gov/topic/certification-chrs/2015-edition-test-method">https://www.healthit.gov/topic/certification-chrs/2015-edition-test-method</a>). We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p><b>Comment:</b> One commenter did not support removing measure Q110 as it is an established measure that is not topped out. The commenter stated that while there is value in the new Adult Immunization Status measure, the new measure should be rolled out in parallel with measure Q110 so that it can establish a benchmark.</p> <p><b>Response:</b> As mentioned, the new Adult Immunization Status is more robust and will help improve complete vaccination rates for patients. Measure Q110 only focuses on the administration of the influenza immunization rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. We acknowledge that measure Q110 is not considered topped-out, however, it is being removed from traditional MIPS as it would be duplicative to Adult Immunization Status measure. While it is not guaranteed, it may be possible to create a performance benchmark for newly implemented measures.</p> <p><b>Comment:</b> Several commenters stated that partial removal of measure Q110 and retention for MVPs is unnecessary and confusing. The commenters stated that the clinical quality action assessed with these measures may be appropriate and applicable for all providers in MIPS, not just those reporting an MVP. The commenters stated that the Adult Immunization Status measure that would replace these two measures may not be appropriate as it contains more clinical actions for assessment that may not be relevant to all clinician types, MVP or not. Another commenter stated that retention of this measure in MVPs would cause a fundamental lack of alignment between the programs and could harm</p> |  |

data analysis opportunities regarding immunization rates. Another commenter stated that if this measure is sufficiently important to be included in MVPs, the measure should also be sufficiently important to maintain for traditional MIPS reporting.

**Response:** Although this measure is being removed from traditional MIPS, it will be retained for use in relevant MVPs and for use by the Shared Savings Program ACOs reporting through the APP as discussed in section III.G.4.c.(1) of this final rule. See Table Group E for finalized changes to the CMS Web Interface collection type for this measure. As the intent of MVPs is to tightly focus on a clinical topic or specialty, there are nuances in the determination of quality measure inclusion. This does not indicate importance of a measure, but the intent of utilization. Measure Q110 is being removed from traditional MIPS as it would be duplicative to Adult Immunization Status measure outside of the aforementioned contexts.

**Comment:** One commenter stated that combining immunizations into the broader Adult Immunization Status measure creates additional burden and complexity for physicians. Another commenter opposed the proposed removal of measure Q110 as its removal will force their practice to find another measure to meet regulatory requirements, taking valuable time away from patients.

Another commenter opposed removal of measure Q110 and was concerned that the Adult Immunization Status measure will be burdensome for data collection purposes. Additionally, the commenter stated that scoring with multiple submission criteria may present problems for calculation of the measure, which is a challenge that providers previously observed when CMS split a measure into multiple criteria. The commenter believed there is value for most specialties in collecting and reporting the influenza and pneumococcal measures, and some specialties the Adult Immunization Status measure creates burden for additional data collection for information that may be irrelevant to their specialty.

**Response:** This measure's clinical concept is included in the new Adult Immunization Status measure. We understand that some of these immunizations may not be relevant to, or administered in, certain fields; however, patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator. Despite this measure representing four different submission criteria, the measure is calculated using a weighted average. This means that all performance data from the four different submission criteria will be used to provide an overall performance rate for the measure. This allows for a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being.

**Comment:** One commenter opposed the removal of measure Q110 because many Commercial and Medicare Advantage Value Based Payment models include these measures. The commenter stated that by eliminating these measures, CMS will be increasing provider burden, as additional measures (that do not align with non-CMS VBP models) will need to be selected and reported on.

**Response:** While we endeavor to align across CMS programs when feasible and possible, we strive to ensure that all measures align with MIPS goals and priorities, including the removal of measures that are duplicative in nature. Removal from traditional MIPS will not impact use in other programs.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46723), we are finalizing the partial removal of measure Q110 from traditional MIPS and retaining the measure for use in relevant MVPs as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

## CC.2. Pneumococcal Vaccination Status for Older Adults

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality #:  | 111  |
| CMS eCQM ID:  | CMS127v11  |
| National Quality Strategy Domain:   | Community/Population Health  |
| Collection Type:  | Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQMs Specifications   |
| Measure Description:  | Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.  |
| Measure Steward:  | National Committee for Quality Assurance   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale for Removal   | We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we proposed a more robust measure under Table A.9: Adult Immunization Status that will help improve complete vaccination rates for patients. This measure's clinical concept is included in the Adult Immunization Status measure. Measure Q111 only focuses on the administration of the pneumococcal vaccination rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. Therefore, we proposed the removal of this measure from traditional MIPS, but proposed retention of this measure for use in relevant MVPs, because the clinical quality action assessed within measure Q111 may be appropriate and applicable for some MVP topics where the proposed Adult Immunization Status measure may not be as it contains more clinical quality actions for assessment that may not apply to the clinician types submitting that MVP. |
| In the Circumstance the Measure is Retained   | If measure A.9: Adult Immunization Status is not finalized for the CY 2023 performance period/2025 MIPS payment year and future years, we will retain measure Q111 in traditional MIPS in all applicable specialty sets under Table Group B. See Table Group DD for any substantive changes proposed for this measure.   |
| We note that the commenters who opposed removal measure Q111: Pneumococcal Vaccination Status for Older also opposed removal of measure Q110: Preventive Care and Screening: Influenza Immunization Adults for the same reasons. See comments and responses under Table CC.1. |  |

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46723), we are finalizing the partial removal of measure Q111 from traditional MIPS and retaining the measure for use in relevant MVPs as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

### **TABLE Group D: Previously Finalized Quality Measures with Substantive Changes Finalized for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years**

NOTE: Electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table D as follows: NQF # / eCQM NQF #.

The D Tables within this final rule provide the substantive changes finalized for the quality measures in CY 2023. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2023 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2023 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2024. The 2023 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program Resource Library at <https://qpp.cms.gov/about/resource-library>.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but we believed are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2023 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2023 quality measure specifications, in the form of an 'Instructions Note' to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only where telehealth encounters previously were not allowed as denominator eligible will the D table corresponding to a measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow. For eCQM Release Notes, see the eCQI Resource Center at <https://ecqi.healthit.gov/ep-ec?globalyearfilter=2023>.

Note: The CMS Web Interface collection type is no longer available in MIPS, except for purposes of APM entities reporting through the APP, starting with the CY 2023 performance period; therefore, this collection type is no longer listed in any tables under Table Group D. The CMS Web Interface collection type remains through CY 2025 for Shared Savings Program ACOs reporting through the APP. For further information on the Shared Savings Program and reporting through the CMS Web Interface collection type for APP reporting, see sections III.G.4.b.(9) and III.G.4.c.(1) of this final rule. For information on changes to measures under the CMS Web Interface collection type finalized for the CY 2023 performance period/2025 MIPS payment year and future years, see Table Group E of this final rule.

**D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)**

| Category                                 | Description  |
|--|--|
| <b>NQF # / eCQM NQF #:</b>               | 0059 / N/A   |
| <b>Quality#:</b>                         | 001  |
| <b>CMS eCQM ID:</b>                      | CMS122v11  |
| <b>National Quality Strategy Domain:</b> | Effective Clinical Care  |
| <b>Current Collection Type:</b>          | Medicare Part B Claims Measure Specifications  eCQM Specifications  MIPS CQMs Specifications   |
| <b>Current Measure Description:</b>      | Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0 percent during the measurement period.  |
| <b>Substantive Change:</b>               | <p><b>Updated guidance: For the eCQM Specifications collection type: Removed:</b> Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included.</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> Patients 18-75 years of age by the end of the measurement period, with diabetes with a visit during the measurement period.</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</b></p> <ol style="list-style-type: none"> <li>1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period.</li> <li>2. Exclude patients 66 and older by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria: <ul style="list-style-type: none"> <li>- Advanced illness with two outpatient encounters during the measurement period or the year prior</li> <li>- OR advanced illness with one inpatient encounter during the measurement period or the year prior</li> <li>- OR taking dementia medications during the measurement period or the year prior</li> </ul> </li> </ol> <p><b>Updated denominator criteria: For all collection types: Added:</b> coding for nutrition and dietitian.</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised:</b> To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p><b>Updated numerator instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Removed:</b> Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included.</p>  |
| <b>Measure Steward:</b>                  | National Committee for Quality Assurance   |
| <b>High Priority Measure:</b>            | Yes  |
| <b>Measure Type:</b>                     | Intermediate Outcome   |
| <b>Rationale:</b>                        | <p>We proposed to update the guidance/numerator instructions for all collection types to remove "Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included" because it does not align with the intent of the measure, which is to ensure hemoglobin A1c control in all patients with any diagnosis of diabetes. These updates will allow the measure to better reflect its clinical intent, in accordance with the given diabetes diagnoses codes within the denominator criteria of the measure.</p> <p>We proposed to update multiple components of the measure for the eCQM Specifications collection type so that the patient age is determined as of the end of the measurement period and aligns with Healthcare Effectiveness Data and Information Set (HEDIS) measure requirements and creates consistency in implementation.</p> <p>We proposed to add encounter codes for MIPS eligible nutrition and dietitian clinicians, for all collection types, based upon interested parties' feedback, as they may provide nutrition counseling or therapy to patients to help manage diabetes and to ensure hemoglobin A1c control. The American Diabetes Association (ADA) emphasizes the need for medical nutrition therapy (MNT) as fundamental for diabetes management and the overall care plan.<sup>1</sup> "Strong evidence supports the effectiveness of MNT interventions provided by RDNs [registered dietitian nutritionist/registered dietitian] for improving A1C, with absolute decreases up to 2.0 percent (in type 2 diabetes) and up to 1.9 percent (in type 1 diabetes) at 3–6 months. Ongoing MNT support is helpful in maintaining glycemic improvements."<sup>2</sup></p> <p>We proposed to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We proposed to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored, as this will allow for different workflows and</p> |

|  |   |
|--|---|
|  | systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. |
| <b>Comment:</b> One commenter supported the inclusion of secondary diabetes in the denominator in this measure, the inclusion of nutritionist and dietician coding, as well as the alignments made with the HEDIS measure.   |   |
| <b>Response:</b> We thank the commenter for supporting the substantive changes to this measure.  |   |
| After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46725 through 46726), we are finalizing the changes to measure Q001 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.2 Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)**

| Category                          | Description  |
|-----------------------------------|--|
| NQF # / eCQM NQF #:               | 0081 / 0081e   |
| Quality#:                         | 005  |
| CMS eCQM ID:                      | CMS135v11  |
| National Quality Strategy Domain: | Effective Clinical Care  |
| Current Collection Type:          | eCQM Specifications   MIPS CQMs Specifications   |
| Current Measure Description:      | Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.  |
| Substantive Change:               | <p><b>The measure description is revised to read: For the eCQM Specifications collection type:</b> Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) &lt;=40% who were prescribed or already taking ACE inhibitor or ARB or ARNI therapy during the measurement period.</p> <p><b>For the MIPS CQMs Specifications collection type:</b> Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) ≤ 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.</p> <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> This eCQM is to be reported as patient-based. To satisfy this measure, it must be reported for all heart failure patients at least once during the measurement period if seen in the outpatient setting.</p> <p>The requirement of two or more visits is used to establish that the eligible professional or eligible clinician has an existing relationship with the patient.</p> <p>A range value should satisfy the logic requirement for 'Ejection Fraction' as long as the ranged observation value clearly meets the less than or equal to 40% threshold noted in the denominator logic. A range that is greater than 40% would not meet the measure requirement.</p> <p><b>Updated rate aggregation: For the eCQM Specifications collection type: Removed:</b> rate aggregation.</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> All patients aged 18 years and older with two qualifying encounters during the measurement period and a diagnosis of heart failure.</p> <p><b>Updated denominator: For all collection types: Revised:</b> LVEF threshold to &lt;= 40%.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised:</b> LVEF threshold to &lt;= 40%.</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised:</b> LVEF threshold to &lt;= 40%.</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type: Added:</b> Patients with a history of heart transplant or with a Left Ventricular Assist Device (LVAD) prior to the end of the outpatient encounter with Moderate or Severe LVSD.</p> <p><b>For the MIPS CQMs Specifications collection type: Added:</b> Patients with a history of heart transplant or with a Left Ventricular Assist Device (LVAD).</p> <p><b>Updated definition: For the eCQM Specifications collection type: Removed:</b> Prescribed-Inpatient setting: prescription given to the patient for ACE inhibitor or ARB or ARNI therapy at discharge OR ACE inhibitor or ARB or ARNI therapy to be continued after discharge as documented in the discharge medication list.</p> <p><b>Revised:</b> LVEF threshold to &lt;= 40%.</p> <p><b>The measure numerator is revised to read: For the eCQM Specifications collection type:</b> Patients who were prescribed or already taking ACE inhibitor or ARB or ARNI therapy during the measurement period.</p> <p><b>Updated denominator exception: For all collection types: Removed:</b> Documentation of system reason(s) for not prescribing ACE inhibitor or ARB or ARNI therapy (for example, other system reasons).</p> |
| Measure Steward:                  | American Heart Association   |
| High Priority Measure:            | No   |
| Measure Type:                     | Process  |
| Rationale:                        | <p>We proposed to revise the measure description and numerator language for the eCQM Specifications collection type by changing the "12-month" verbiage to "measurement period" to harmonize language with other MIPS quality measures for consistency and clarity in implementation.</p> <p>We proposed to revise the description, numerator, and guidance, and to remove a definition and rate aggregation from the eCQM Specifications collection type in order to remove the inpatient population to resolve logic issues such as implementing two populations with different intended reporting frequencies. Additionally, we proposed to revise the initial patient population to add clarity around the required number of qualifying encounters and to align with the measure logic. The measure logic requires patients to have 2 qualifying visits during the measurement period to establish that the eligible clinician has an existing relationship with the patient.</p> <p>We proposed to update LVEF value for all collection types from &lt;40 percent to &lt;=40 percent to ensure all patients considered to have heart failure with reduced ejection fraction are included in the denominator, by including patients with a LVEF value of 40 percent, and add a denominator exclusion for patients with left ventricular assist device or a history of heart transplant, as these patients were not included in clinical treatment trials for low LVEF heart failure. We also proposed the removal of the</p>  |

| Category  | Description  |
|---|--|
|   | denominator exception for system reasons for all collection types as the medication is widely available. <sup>1</sup> These revisions will help to ensure a complete and appropriate patient population is being assessed for the quality action resulting in meaningful data. |
|   | We proposed to revise the numerator for the eCQM Specifications collection type to accurately reflect the clinical actions allowed in the current technical specification to ensure alignment between the measure logic, description, and numerator fields.                    |
|   | Please note, if the revisions to the eCQM Specifications collection type are finalized, the MIPS version of the measure will not align with the NQF endorsed version of the measure.   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46727 through 46728), we are finalizing the changes to measure Q005 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

D., Krumholz, H. M., Kwong, R. Y., Lim, M. J., Linderbaum, J. A., Mack, M. J., Munger, M. A., Prager, R. L., Sabik, J. F., ... American College of Cardiology Foundation (2012). 2012 ACCF/AHA/ACP/AATS/PCNA/SCAI/STS Guideline for the Diagnosis and Management of Patients with Stable Ischemic Heart Disease: Executive Summary [Published Correction Appears in Circulation. 2014 Apr 22;129(16):e462]. *Circulation*, 126(25), 3097–3137. <https://doi.org/10.1161/CIR.0b013e3182776f83>.

### D.3 Coronary Artery Disease (CAD): Antiplatelet Therapy

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | 0067 / N/A   |
| Quality#:   | 006  |
| CMS eCQM ID:  | N/A  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | MIPS CQMs Specifications   |
| Current Measure Description:  | Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.   |
| Substantive Change:   | <b>Updated denominator criteria: Removed:</b> coding for Dressler's Syndrome.  |
| Measure Steward:  | American Heart Association   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | We proposed to remove coding for Dressler's Syndrome from the denominator, as it is not a conclusive diagnosis to indicate coronary artery disease. Experts believe Dressler's syndrome, a form of secondary pericarditis with or without a pericardial effusion, is an immune system response following heart tissue and/or pericardium damage, which includes causes that may be outside of CAD, such as chest trauma. Additionally, this condition is not typically treated with continued antiplatelet therapy, which will not be in alignment with the intent of this measure as it is assessing for the appropriate treatment of CAD with antiplatelets ( <a href="https://www.ncbi.nlm.nih.gov/books/NBK441988/">https://www.ncbi.nlm.nih.gov/books/NBK441988/</a> ). This revision will ensure the patients captured within the measure denominator are appropriate. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46728), we are finalizing the changes to measure Q006 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.4 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%)**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | 0070 / 0070e   |
| Quality#:   | 007  |
| CMS eCQM ID:  | CMS145v11  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | eCQM Specifications   MIPS CQMs Specifications   |
| Current Measure Description:  | Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF < 40% who were prescribed beta-blocker therapy.   |
| Substantive Change:   | <p><b>The measure title is revised from 'Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF &lt; 40%)' to: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%).</b></p> <p><b>The measure description is revised to read: For all collection types:</b> Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF ≤40% who were prescribed beta-blocker therapy.</p> <p><b>Updated instructions: For the MIPS CQMs Specifications collection type: Revised:</b> LVEF threshold to ≤= 40%.</p> <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> LVEF threshold to ≤= 40%.</p> <p><b>Updated rate aggregation: For the eCQM Specifications collection type: Revised:</b> LVEF threshold to ≤= 40%.</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> All patients aged 18 years and older with two qualifying encounters during the measurement period and a diagnosis of coronary artery disease.</p> <p><b>Updated denominator: For all collection types: Revised:</b> LVEF threshold to ≤= 40%.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised:</b> LVEF threshold to ≤= 40%.</p> <p><b>Updated definition: For all collection types: Revised:</b> LVEF threshold to ≤= 40%.</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised:</b> LVEF threshold to ≤= 40%.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic to ensure patients who satisfy both denominator eligibility criteria are only counted once.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Removed:</b> coding for Dressler's Syndrome.</p>  |
| Measure Steward:  | American Heart Association   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to update LVEF value from &lt;40 percent to ≤=40 percent to better align with current clinical guidelines<sup>1</sup>, and to ensure all patients considered to have heart failure with reduced ejection fraction are included in the denominator eligible patient population, by including patients with a LVEF value of 40 percent. This revision is reflected in the measure title, description, denominator, and definitions for all collection types; in the instructions, denominator criteria, and denominator note for the MIPS CQMs Specifications collection type; and in the guidance for the eCQM Specifications collection type. This will help to ensure a complete and appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We proposed to revise the initial patient population for the eCQM Specifications collection type to add clarity around the required number of qualifying encounters and to align with the measure logic. The measure logic requires patients to have 2 qualifying visits during the measurement period to establish that the eligible clinician has an existing relationship with the patient. We proposed to update measure logic and logic definitions for the eCQM Specifications collection type to avoid counting a patient more than once if the patient satisfies both denominator criteria. This is in alignment with the guidance and the intent of the measure to only count patients who fit both denominator criteria in Population Criteria 1.</p> <p>We proposed to remove coding for Dressler's Syndrome from the denominator for the MIPS CQMs Specifications collection type as it is not a as it is not a conclusive diagnosis to indicate coronary artery disease, which will align with revisions previously made to the eCQM Specifications collection type in the 2022 PFS final rule (86 FR 65895). Experts believe Dressler's syndrome, a form of secondary pericarditis with or without a pericardial effusion, is an immune system response following heart tissue and/or pericardium damage, which includes causes that may be outside of CAD, such as chest trauma. Additionally, this condition is not typically treated with beta blocker therapy, which will not be in alignment with the intent of this measure as it is assessing for the appropriate treatment of CAD with beta blocker therapy (<a href="https://www.ncbi.nlm.nih.gov/books/NBK441988/">https://www.ncbi.nlm.nih.gov/books/NBK441988/</a>). This revision will ensure the patients captured within the measure denominator are appropriate.</p> |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46729), we are finalizing the changes to measure Q007 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

#### D.6 Anti-Depressant Medication Management

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 009  |
| CMS eCQM ID:  | CMS128v11  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | eCQM Specifications  |
| Current Measure Description:  | <p>Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication treatment. Two rates are reported.</p> <p>a. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks).</p> <p>b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months).</p>   |
| Substantive Change:   | <p><b>The measure initial patient population is revised to read:</b> Patients 18 years of age and older as of April 30 of the measurement period who were dispensed antidepressant medications during the Intake Period, and were diagnosed with major depression 60 days prior to, or 60 days after the dispensing event and had a visit 60 days prior to, or 60 days after the dispensing event.</p> <p><b>The measure definition is revised to read:</b><br/> Intake Period: The 12-month window starting on May 1 of the year prior to the measurement period and ending on April 30 of the measurement period.<br/> Index Prescription Start Date (IPSD): The date of the earliest prescription dispensing event for an antidepressant medication during the Intake Period.<br/> The "continuous treatment" described in this measure allows for gaps in medication treatment up to a total 31 days during the 115-day period (numerator 1) or 52 days during the 232-day period (numerator 2). Gaps can include either gaps used to change medication, or treatment gaps to refill the same medication.</p> <p><b>Updated logic and logic definitions: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p><b>The measure numerator is revised to read:</b> Numerator 1: Patients who have received antidepressant medication for at least 84 days (12 weeks) of continuous treatment beginning on the IPSD through 114 days after the IPSD (115 total days).<br/> Numerator 2: Patients who have received antidepressant medications for at least 180 days (6 months) of continuous treatment beginning on the IPSD through 231 days after the IPSD (232 total days).</p> |
| Measure Steward:  | National Committee for Quality Assurance   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to revise the measure definition to define and clarify the intake period. Additionally, to align with the updated definition, we proposed to revise the initial patient population and patient age to ensure that patients meet the measure's age requirement. Additionally, we proposed to update the logic and logic definitions related to hospice care to add flexibility to how data may be captured or stored, as this will allow for different workflows and systems to align with exclusion criteria more closely ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p> <p>We proposed additional revisions to the language and logic to improve transparency of timing related to Index Prescription Start Date that will clarify that the continuous treatment period to include the IPSD, ensuring consistent implementation and improving readability.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46731), we are finalizing the changes to measure Q009 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.7 Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / 0086e  |
| Quality#:   | 012  |
| CMS eCQM ID:  | CMS143v11  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | eCQM Specifications  |
| Current Measure Description:  | Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more office visits within 12 months. |
| Substantive Change:   | <b>Updated value set/coding: Added:</b> encounter class attribute for non-telehealth eligible encounters.  |
| Measure Steward:  | American Academy of Ophthalmology  |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | We proposed to update the value set/coding to implement the 'virtual' encounter class attribute for the purposes of excluding non-telehealth eligible encounters within eCQM measure logic.      |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46732), we are finalizing the changes to measure Q012 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.8 Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality#:   | 019   |
| CMS eCQM ID:  | CMS142v11   |
| National Quality Strategy Domain:   | Communication and Care Coordination   |
| Current Collection Type:  | eCQM Specifications   MIPS CQMs Specifications  |
| Current Measure Description:  | Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months. |
| Substantive Change:   | <b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> encounter class attribute for non-telehealth eligible encounters.  |
| Measure Steward:  | American Academy of Ophthalmology   |
| High Priority Measure:  | Yes   |
| Measure Type:   | Process   |
| Rationale:  | We proposed to update the value set/coding for the eCQM Specifications collection type to implement the 'virtual' encounter class attribute for the purposes of excluding non-telehealth eligible encounters within eCQM measure logic.   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46732), we are finalizing the changes to measure Q019 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.9 Screening for Osteoporosis for Women Aged 65-85 Years of Age**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | 0046 / N/A  |
| Quality#:   | 039   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Effective Clinical Care   |
| Current Collection Type:  | Medicare Part B Claims Measure Specifications   MIPS CQMs Specifications  |
| Current Measure Description:  | Percentage of female patients aged 65-85 years of age who ever had a central dual-energy X-ray absorptiometry (DXA) to check for osteoporosis.  |
| Substantive Change:   | <b>Updated denominator criteria: For all collection types: Removed:</b> AND NOT Diagnosis of osteoporosis on date of encounter.<br><b>Updated denominator exclusion: For all collection types: Added:</b> diagnosis of osteoporosis on date of encounter.<br><b>Updated definitions: For all collection types: Added:</b> definition including coding for diagnosis of osteoporosis that would suffice. |
| Measure Steward:  | National Committee for Quality Assurance  |
| High Priority Measure:  | No  |
| Measure Type:   | Process   |
| Rationale:  | We proposed to move the diagnosis of osteoporosis from the denominator criteria to a denominator exclusion. While this will not change the intent or intended patient population of the measure, it will clarify how to capture the denominator eligible patient population and ensure only patients who are appropriate for quality action assessment are included.                                    |
| We received no public comments on the substantive changes proposed for this measure we are finalizing the changes to measure Q039 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.10 Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older**

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | N/A / N/A  |
| Quality#:  | 050  |
| CMS eCQM ID:   | N/A  |
| National Quality Strategy Domain:  | Person and Caregiver-Centered Experience and Outcomes  |
| Current Collection Type:   | MIPS CQMs Specifications   |
| Current Measure Description:   | Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.   |
| Substantive Change:  | <b>Updated denominator criteria: Added:</b> coding for occupational therapy.   |
| Measure Steward:   | National Committee for Quality Assurance   |
| High Priority Measure:   | Yes  |
| Measure Type:  | Process  |
| Rationale:   | We proposed to add coding for occupational therapy to this measure as this measure is applicable to their scope of care. Non-surgical interventions can be utilized to improve quality of life for patients with urinary incontinence <sup>1</sup> , which has been demonstrated in a preliminary study showing clinically significant improvement for patients receiving occupational therapy interventions. <sup>2</sup> |
| <b>Comment:</b> Two commenters appreciated the update to the denominator for measure Q050.   |  |
| <b>Response:</b> We thank the commenters for supporting the substantive changes to this measure.   |  |
| After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46733), we are finalizing the changes to measure Q050 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.11 Appropriate Treatment for Upper Respiratory Infection (URI)**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | 0069 / N/A  |
| Quality#:   | 065   |
| CMS eCQM ID:  | CMS154v11   |
| National Quality Strategy Domain:   | Efficiency and Cost Reduction   |
| Current Collection Type:  | eCQM Specifications   MIPS CQMs Specifications  |
| Current Measure Description:  | Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.  |
| Substantive Change:   | <b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.<br><br><b>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Revised:</b> URI episodes when the patient had an active prescription of antibiotics (Table 1) in the 30 days prior to the episode date or is still active the same day of the encounter.  |
| Measure Steward:  | National Committee for Quality Assurance  |
| High Priority Measure:  | Yes   |
| Measure Type:   | Process   |
| Rationale:  | We proposed to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.<br><br>We proposed to revise the denominator exclusion for the MIPS CQMs Specifications collection type to add clarity regarding those patients that should not be included within the denominator population due to active or previous antibiotic prescriptions, as this patient population will impact the performance calculated for the measure as the intent is to assess whether an antibiotic is prescribed. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46733), we are finalizing the changes to measure Q065 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.12 Appropriate Testing for Pharyngitis**

| Category  | Description   |
|---|---|
| <b>NQF # / eCQM NQF #:</b>  | N/A / N/A   |
| <b>Quality#:</b>  | 066   |
| <b>CMS eCQM ID:</b>   | CMS146v11   |
| <b>National Quality Strategy Domain:</b>  | Efficiency and Cost Reduction   |
| <b>Current Collection Type:</b>   | eCQM Specifications   MIPS CQMs Specifications  |
| <b>Current Measure Description:</b>   | The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strep) test.   |
| <b>Substantive Change:</b>  | <p><b>The measure denominator instructions are revised to read: For the MIPS CQMs Specifications collection type:</b> This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. The intent is to determine whether antibiotics are being ordered appropriately. Antibiotics should only be ordered if a strep test has been performed to confirm a bacterial infection. Antibiotics should not be ordered for viral infections. Antibiotics should be ordered on the episode date through three days after the episode date.</p> <p>An episode is defined as each eligible encounter for patients aged 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic order during the measurement period.</p> <p>If a patient has more than one eligible episode in a 31-day period, include only the first eligible episode.</p> <p><b>Updated numerator instructions: For the MIPS CQMs Specifications collection type: Added:</b> The test must be performed to confirm a bacterial infection prior to the antibiotic order.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> timing of antibiotic to align with measure intent and current narrative for the denominator exclusion.</p> |
| <b>Measure Steward:</b>   | National Committee for Quality Assurance  |
| <b>High Priority Measure:</b>   | Yes   |
| <b>Measure Type:</b>  | Process   |
| <b>Rationale:</b>   | <p>We proposed to revise the denominator and numerator instructions for the MIPS CQMs Specifications collection type to clarify the intent of the measure which is to ensure appropriate antibiotic dispensing following confirmation of a bacterial infection.</p> <p>We proposed to update the logic and logic definitions for the eCQM Specifications collection type related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to align with exclusion intent and criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. We proposed to revise the denominator exclusion for the MIPS CQMs Specifications collection type to add clarity regarding those patients that should not be included within the denominator eligible patient population due to active or previously prescribed antibiotic. This patient population will impact the performance calculated for this measure as the intent is to assess that a group A streptococcus test is completed prior to prescribing an antibiotic. Patients actively on an antibiotic will most likely not benefit from this test due to the recommended treatment for the group A streptococcus infection is common, inexpensive antibiotics (<a href="https://www.cdc.gov/groupastrep/diseases-hcp/strep-throat.html">https://www.cdc.gov/groupastrep/diseases-hcp/strep-throat.html</a>).</p>                  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46734), we are finalizing the changes to measure Q066 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.13 Adult Major Depressive Disorder (MDD): Suicide Risk Assessment**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / 0104e  |
| Quality#:   | 107  |
| CMS eCQM ID:  | CMS161v11  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | eCQM Specifications  |
| Current Measure Description:  | All patient visits during which a new diagnosis of MDD or a new diagnosis of recurrent MDD was identified for patients aged 18 years and older with a suicide risk assessment completed during the visit.  |
| Substantive Change:   | <p><b>The measure description is revised to read:</b> Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.</p> <p><b>Updated guidance: Revised:</b> This eCQM is an episode-based measure and should be reported for each instance of a new or recurrent episode of major depressive disorder (MDD) during the measurement period. This measure should be reported for each eligible encounter during which a new or recurrent episode of MDD is identified in adults that turn 18 or older during the measurement period.</p> <p><b>The measure initial patient population is revised to read:</b> Patient visits for patients that turn 18 or older during the measurement period during which a new diagnosis of MDD, single or recurrent episode, was identified.</p> |
| Measure Steward:  | Mathematica  |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | We proposed to revise the language for the measure description, guidance, and initial patient population to accurately capture the adult population by including patients that turn 18 years of age or older during the measurement period.  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46734), we are finalizing the changes to measure Q107 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.14 Breast Cancer Screening**

| Category  | Description   |
|---|---|
| <b>NQF # / eCQM NQF #:</b>  | 2372 / N/A  |
| <b>Quality#:</b>  | 112   |
| <b>CMS eCQM ID:</b>   | CMS125v11   |
| <b>National Quality Strategy Domain:</b>  | Effective Clinical Care   |
| <b>Current Collection Type:</b>   | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications  |
| <b>Current Measure Description:</b>   | Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.   |
| <b>Substantive Change:</b>  | <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> Women 52-74 years of age by the end of the measurement period with a visit during the measurement period</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</b> 1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period.<br/>2. Exclude patients 66 and older by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria:<br/>- Advanced illness with two outpatient encounters during the measurement period or the year prior<br/>- OR advanced illness with one inpatient encounter during the measurement period or the year prior<br/>- OR taking dementia medications during the measurement period or the year prior</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised:</b> To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> |
| <b>Measure Steward:</b>   | National Committee for Quality Assurance  |
| <b>High Priority Measure:</b>   | No  |
| <b>Measure Type:</b>  | Process   |
| <b>Rationale:</b>   | <p>We proposed to update multiple components of the measure, for the eCQM Specifications collection types, so that the patient age will be determined as of the end of the measurement period and aligns with HEDIS measure requirements and creates consistency in implementation.</p> <p>We proposed to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We proposed to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p>  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46735), we are finalizing the changes to measure Q112 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

## D.15 Colorectal Cancer Screening

| Category                          | Description   |
|-----------------------------------|---|
| NQF # / eCQM NQF #:               | 0034 / N/A  |
| Quality#:                         | 113   |
| CMS eCQM ID:                      | CMS130v11   |
| National Quality Strategy Domain: | Effective Clinical Care   |
| Current Collection Type:          | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications  |
| Current Measure Description:      | Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.  |
| Substantive Change:               | <p><b>The measure description is revised to read: For the eCQM Specifications collection type:</b> Percentage of adults 45-75 years of age who had appropriate screening for colorectal cancer.</p> <p><b>The measure description is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</b> Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.</p> <p><b>Updated stratification: For the eCQM Specifications collection type: Added:</b> Report a total rate, and each of the following age strata:<br/>Stratum 1: Patients age 46-49 by the end of the measurement period<br/>Stratum 2: Patients age 50-75 by the end of the measurement period</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> Patients 46-75 years of age by the end of the measurement period with a visit during the measurement period.</p> <p><b>The measure denominator is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</b> Patients 45-75 years of age with a visit during the measurement period</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> Patients 45 to 75 years of age on date of encounter.</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</b> 1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period.<br/>2. Exclude patients 66 and older by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria:<br/>- Advanced illness with two outpatient encounters during the measurement period or the year prior<br/>- OR advanced illness with one inpatient encounter during the measurement period or the year prior<br/>- OR taking dementia medications during the measurement period or the year prior</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised:</b> To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> |
| Measure Steward:                  | National Committee for Quality Assurance  |
| High Priority Measure:            | No  |
| Measure Type:                     | Process   |
| Rationale:                        | <p>We proposed to revise the measure description and multiple measure components for all collection types to align with the 2021 U.S. Preventive Services Task Force (USPSTF) guidelines that recommend Colorectal Cancer Screenings begin at age 45 rather than beginning at age 50.</p> <p>We proposed to add stratification for the eCQM Specifications collection type to monitor performance of the newly recommended 45-49 year age group, and to continue monitoring the previously established population of patients aged 50-75 years.</p> <p>We proposed to update multiple components of the measure, for the eCQM Specifications collection type, so that the patient age is determined as of the end of the measurement period and aligns with the HEDIS measure requirements and creates consistency in implementation.</p> <p>We proposed to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We proposed to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p>  |
| Comment:                          | One commenter supported the revision to measure Q113 to align with recent changes to the United States Preventive Services Task Force guideline that lower the age of colorectal cancer screening from 50 to 45.  |
| Response:                         | We thank the commenter for supporting the substantive changes to this measure.  |

| Category   | Description |
|--|-------------|
| After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46736), we are finalizing the changes to measure Q113 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |             |

**D.16 Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis**

| Category  | Description   |
|---|---|
| <b>NQF # / eCQM NQF #:</b>  | 0058 / N/A  |
| <b>Quality#:</b>  | 116   |
| <b>CMS eCQM ID:</b>   | N/A   |
| <b>National Quality Strategy Domain:</b>  | Efficiency and Cost Reduction   |
| <b>Current Collection Type:</b>   | MIPS CQMs Specifications  |
| <b>Current Measure Description:</b>   | The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.   |
| <b>Substantive Change:</b>  | <b>Updated numerator instructions: Revised:</b> Table 1 - Antibiotic Medications by removing Erythromycin stearate, Erythromycin ethylsuccinate, and Erythromycin lactobionate from Macrolides AND Nitrofurantoin macrocrystals from Urinary anti-infectives. |
| <b>Measure Steward:</b>   | National Committee for Quality Assurance  |
| <b>High Priority Measure:</b>   | Yes   |
| <b>Measure Type:</b>  | Process   |
| <b>Rationale:</b>   | We proposed to update the numerator instructions in order to standardize the medication names.  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46737), we are finalizing the changes to measure Q116 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

## D.17 Diabetes: Eye Exam

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | 0055 / N/A  |
| Quality#:  | 117   |
| CMS eCQM ID:   | CMS131v11   |
| National Quality Strategy Domain:  | Effective Clinical Care   |
| Current Collection Type:   | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications  |
| Current Measure Description:   | Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetes with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.  |
| Substantive Change:  | <p><b>Modified collection type:</b> eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> Patients 18-75 years of age by the end of the measurement period, with diabetes with a visit during the measurement period.</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</b> 1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period.<br/>2. Exclude patients 66 and older by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria:<br/>- Advanced illness with two outpatient encounters during the measurement period or the year prior<br/>- OR advanced illness with one inpatient encounter during the measurement period or the year prior<br/>- OR taking dementia medications during the measurement period or the year prior</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised:</b> To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p>   |
| Measure Steward:   | National Committee for Quality Assurance  |
| High Priority Measure:   | No  |
| Measure Type:  | Process   |
| Rationale:   | <p>We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it is extremely topped out and at the end of the topped-out lifecycle as finalized in 82 FR 53640. The average performance rate and topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a>.</p> <p>We proposed to update multiple components of the measure, for the eCQM Specifications collection type, so that the patient age is determined as of the end of the measurement period and aligns with the HEDIS measure requirements and creates consistency in implementation.</p> <p>We proposed to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p> <p>We proposed to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.</p> |
| <p><b>Comment:</b> One commenter opposed the proposed substantive changes to measure Q117 because the commenter stated that the changes are replacing a successful quality program check that is widely being performed well.</p> <p><b>Response:</b> The proposed substantive changes will help improve the accuracy of reporting on this measure.</p> <p><b>Comment:</b> One commenter opposed the removal of the claims collection type for this measure. While the commenter recognized that the measure is topped out under the claims collection type, the clinician reported there are already a limited number of appropriate measures available to this specialty. Another commenter opposed removal of the claims collection type to allow meaningful measurement of ophthalmologists and ophthalmic subspecialists in small and rural practices.</p> <p><b>Response:</b> We thank the commenter for their comment opposing the removal of the Medicare Part B Claims measure specifications collection type. This collection type has not only reached the end of the topped-out life cycle but showed an average performance rate of 100 percent in the 2022 Historical benchmarks file, which does not allow for meaningful benchmarks to be established.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46738), we are finalizing the changes to measure Q117 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

**D.18 Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy – Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%)**

|   |   |
|---|---|
| <b>Category</b>   | <b>Description</b>  |
| <b>NQF # / eCQM NQF #:</b>  | 0066 / N/A  |
| <b>Quality#:</b>  | 118   |
| <b>CMS eCQM ID:</b>   | N/A   |
| <b>National Quality Strategy Domain:</b>  | Effective Clinical Care   |
| <b>Current Collection Type:</b>   | MIPS CQMs Specifications  |
| <b>Current Measure Description:</b>   | Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB therapy.   |
| <b>Substantive Change:</b>  | <p><b>The measure title is revised from ‘Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy – Diabetes or Left Ventricular Systolic Dysfunction (LVEF &lt; 40%)’ to:</b> Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy – Diabetes or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%).</p> <p><b>The measure description is revised to read:</b> Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) ≤ 40% who were prescribed ACE inhibitor or ARB therapy.</p> <p><b>Updated instructions: Revised:</b> LVEF threshold to ≤ 40%.</p> <p><b>Updated denominator: Revised:</b> LVEF threshold to ≤ 40%.</p> <p><b>Updated denominator criteria: Revised:</b> LVEF threshold to ≤ 40%.</p> <p><b>Updated denominator definition: Revised:</b> LVEF threshold to ≤ 40%.</p> <p><b>Updated denominator criteria: Removed:</b> coding for Dressler’s Syndrome.</p> |
| <b>Measure Steward:</b>   | American Heart Association  |
| <b>High Priority Measure:</b>   | No  |
| <b>Measure Type:</b>  | Process   |
| <b>Rationale:</b>   | <p>We proposed to update multiple components of the measure to reflect LVEF to ≤40 percent to align with current clinical guidelines.<sup>1</sup></p> <p>We also proposed to remove coding for Dressler’s Syndrome from the denominator as it is not a definitive diagnosis for CAD. Experts believe Dressler’s syndrome, a form of secondary pericarditis with or without a pericardial effusion, is an immune system response following heart tissue and/or pericardium damage, which includes causes that may be outside of CAD, such as chest trauma. Additionally, this condition is not typically treated with ACE or ARB therapy, which will not be in alignment with the intent of this measure as it is assessing for the appropriate treatment of CAD with ACE or ARB therapy (<a href="https://www.ncbi.nlm.nih.gov/books/NBK441988/">https://www.ncbi.nlm.nih.gov/books/NBK441988/</a>). This revision will ensure the patients captured within the measure denominator are appropriate.</p>  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46739), we are finalizing the changes to measure Q118 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

American College of Cardiology Foundation (2012). 2012 ACCF/AHA/ACP/AATS/PCNA/SCAI/STS Guideline for the Diagnosis and Management of Patients with Stable Ischemic Heart Disease: Executive Summary [Published Correction Appears in Circulation. 2014 Apr 22;129(16):e462]. *Circulation*, 126(25), 3097–3137. <https://doi.org/10.1161/CIR.0b013e3182776f83>.

**D.19 Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan**

| Category                          | Description   |
|-----------------------------------|---|
| NQF # / eCQM NQF #:               | N/A / N/A   |
| Quality#:                         | 128   |
| CMS eCQM ID:                      | CMS69v11  |
| National Quality Strategy Domain: | Community/Population Health   |
| Current Collection Type:          | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications  |
| Current Measure Description:      | Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.   |
| Substantive Change:               | <p><b>The measure description is revised to read: For the eCQM Specifications collection type:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the performance period AND who had a follow-up plan documented if BMI was outside of normal parameters</p> <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> BMI Measurement Guidance:<br/> * Height and Weight – An eligible professional or their staff is required to measure both height and weight. Both height and weight must be measured during the measurement period. Self-reported values cannot be used.<br/> * The BMI may be documented in the medical record of the provider or in outside medical records obtained by the provider.<br/> * If the documented BMI is outside of normal parameters, then a follow-up plan is documented during the encounter or during the measurement period.<br/> * If more than one BMI is reported during the measurement period, and any of the documented BMI assessments are outside of normal parameters, documentation of an appropriate follow-up plan will be used to determine if performance has been met.<br/> * Review the exclusions and exceptions criteria to determine those patients that BMI measurement may not be appropriate or necessary.<br/> <b>Follow-Up Plan Guidance:</b><br/> * The documented follow-up plan must be based on the documented BMI, outside of normal parameters, example: “Patient referred to nutrition counseling for BMI above or below normal parameters.”</p> <p><b>The measure denominator exclusion is revised to read: For the eCQM Specifications collection type:</b> 1. Patients who are pregnant at any time during the measurement period.<br/> 2. Patients receiving palliative or hospice care at any time during the measurement period.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Removed:</b> sort function.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> encounter class attribute for non-telehealth eligible encounters.</p> <p><b>The measure numerator is revised to read: For the eCQM Specifications collection type:</b> Patients with a documented BMI during the encounter or during the measurement period, AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the measurement period.</p> <p><b>Updated numerator instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> Height and Weight – An eligible clinician or their staff is required to measure both height and weight. Both height and weight must be measured within 12 months of current encounter. Self-reported values cannot be used.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> Plenity, Saxenda, Contrave, Naltrexone-bupropion, Benzphetamine, Phendimetrazine, and Wegovy to the “Medications for Above Normal BMI” value set (OID: 2.16.840.1.113883.3.526.3.1561).</p> |
| Measure Steward:                  | Centers for Medicare & Medicaid Services  |
| High Priority Measure:            | No  |
| Measure Type:                     | Process   |
| Rationale:                        | <p>We proposed to revise the measure description and numerator for the eCQM Specifications collection type to correct the misalignment between the updated logic performed in 2021 and the measure description. Therefore, we proposed to change the timing associated with BMI calculation and intervention to reduce implementation burden on clinicians. We also proposed this change for the measure guidance for the eCQM Specifications collection type.</p> <p>We proposed to revise the measure denominator exclusion language for the eCQM Specifications collection type to incorporate timing elements that we believed will improve clarity for implementation and reduce ambiguity.</p> <p>We proposed to update the numerator instructions for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types to remove the language allowing for measurements to be obtained from separate encounters to ensure both height and weight are associated for utilization in obtaining a BMI. This will ensure the most accurate BMI is being assessed aligning with the intent of the measure, which is to screen all adults for BMI to initiate further evaluation and follow-up plan if necessary.</p> <p>We proposed to update the value set/coding for the eCQM Specifications collection type by adding other weight loss management medications to the “Medications for Above Normal BMI” value set (OID: 2.16.840.1.113883.3.526.3.1561) for numerator compliance.</p>  |
| Comment:                          | One commenter appreciated the update to the value set “Medications for Above Normal BMI” for measure Q128 to include newly approved medications.  |

| Category         | Description  |
|------------------|--|
| <b>Response:</b> | We thank the commenter for supporting the substantive changes to this measure.   |
| <b>Comment:</b>  | Several commenters were alarmed to see the proposed new exclusion of those receiving palliative care from measure Q128. Palliative care seems to be being equated here with hospice, which is incorrect. The commenters stated that excluding those on hospice, who are at the end of life, is appropriate while those receiving palliative care could live for years longer. According to the commenters, palliative care is appropriate at any point in a serious illness and can be provided along with any curative, disease-modifying treatment. The commenters requested that this exclusion be removed as it perpetuates the harmful misconception that palliative care and hospice are the same thing when they are not.   |
| <b>Response:</b> | We agree that palliative care is appropriate at any point in a serious illness and can be provided with any curative, disease-modifying treatment. It is our expectation that clinicians know the difference between palliative and hospice care and would not equate them. Palliative care is generally provided by an interdisciplinary medical team that focuses on the patient as a whole and would be inclusive of the types of services addressed by this measure as needed. We note that patients receiving palliative care or hospice care were previously excluded from this measure and the update to the denominator exclusion was to define the timing. We continue to believe that patients receiving palliative care are not appropriate for this measure as a result of the extent of physical, psychosocial and spiritual care required for patients with life-threatening illnesses and their families ( <a href="https://doi.org/10.1186/s12913-019-3961-0">https://doi.org/10.1186/s12913-019-3961-0</a> ). We believe Due to the complexities of care required for this population, clinicians that support patients receiving palliative care may inadvertently not perform well from the aspect of producing quality metrics. However, we encourage clinicians to provide care as they determine best supports all patients during their healthcare journey even if the patient population is not included within the targeted denominator of a given measure specification. |
|                  | After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46740), we are finalizing the changes to measure Q128 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.   |

#### D.20 Documentation of Current Medications in the Medical Record

| Category                                 | Description   |
|--|---|
| <b>NQF # / eCQM NQF #:</b>               | N/A / N/A   |
| <b>Quality#:</b>                         | 130   |
| <b>CMS eCQM ID:</b>                      | CMS68v12  |
| <b>National Quality Strategy Domain:</b> | Patient Safety  |
| <b>Current Collection Type:</b>          | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications  |
| <b>Current Measure Description:</b>      | Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.  |
| <b>Substantive Change:</b>               | <p><b>Modified collection type:</b> eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> This list must include all known prescriptions, over-the-counter (OTC) products, herbals, vitamins, minerals, dietary (nutritional) supplements, cannabis/cannabidiol products AND must contain the medications' name, dosage, frequency and route of administration.</p> <p><b>Updated numerator definition: For the MIPS CQMs Specifications collection types: Revised:</b> Current Medications – Medications the patient is presently taking including all prescriptions, over-the- counters, herbals, vitamins, minerals, dietary (nutritional) supplements, and cannabis/cannabidiol products with each medication's name, dosage, frequency and administered route.</p> <p><b>Updated numerator note: For the MIPS CQMs Specifications collection types: Revised:</b> This list must include ALL known prescriptions, over-the-counter (OTC) products, herbals, vitamins, minerals, dietary (nutritional) supplements, cannabis/cannabidiol products AND must contain the medications' name, dosage, frequency and route of administration.</p>  |
| <b>Measure Steward:</b>                  | Centers for Medicare & Medicaid Services  |
| <b>High Priority Measure:</b>            | Yes   |
| <b>Measure Type:</b>                     | Process   |
| <b>Rationale:</b>                        | <p>We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped-out lifecycle as finalized in 82 FR 53640. The average performance rate and topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a>. However, the benchmarking data continues to show a gap for the eCQM Specifications and MIPS CQMs Specifications collection types, as such, we proposed to retain the measure for eCQM Specifications and MIPS CQMs Specifications collection types.</p> <p>We proposed to update the guidance for the eCQM Specifications collection type, as well as the numerator note and numerator definition for the MIPS CQMs Specifications collection type to add recommendations to assess patient's usage of cannabis/cannabidiol/etc., as use of these drugs can affect the metabolism of other medications but is often not included in the medical record.</p> <p>In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.</p> |
|  | We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46741), we are finalizing the changes to measure Q130 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.   |

**D.21 Preventive Care and Screening: Screening for Depression and Follow-Up Plan**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 134  |
| CMS eCQM ID:  | CMS2v12  |
| National Quality Strategy Domain:   | Community/Population Health  |
| Current Collection Type:  | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications   |
| Current Measure Description:  | Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.   |
| Substantive Change:   | <p><b>The measure description is revised to read: For the eCQM Specifications collection type:</b> Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days (48 hours) after the qualifying encounter.</p> <p><b>The measure description is revised to read: For the MIPS CQMs Specifications collection type:</b> Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.</p> <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of or up to two days (48 hours) after the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression.</p> <p><b>Updated definition: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</b> coding for manic episodes to the denominator exclusions definition for bipolar depression.</p> <p><b>The measure numerator is revised to read: For the eCQM Specifications collection type:</b> Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized tool AND if positive, a follow-up plan is documented on the date of or up to two days (48 hours) after the date of the qualifying encounter</p> <p><b>The measure numerator is revised to read: For the MIPS CQMs Specifications collection type:</b> Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.</p> <p><b>Updated numerator instructions: For the MIPS CQMs Specifications collection type: Revised:</b> A depression screen is completed on the date of the encounter or up to 14 calendar days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of or up to two calendar days after the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression. An example to illustrate the follow-up plan documentation timing: if the encounter is on a Monday from 3-4 pm (day 0) and the patient screens positive, the clinician has through anytime on Wednesday (day 2) to complete follow-up plan documentation.</p> <p><b>Added:</b> The follow-up plan MUST still be provided for and discussed with the patient during the qualifying encounter used to evaluate the numerator. However, documentation of the follow-up plan can occur up to two calendar days after the qualifying encounter, in accordance with the policies of an eligible clinician or provider's practice or health system. All services should be documented during, or as soon as practicable, after the qualifying encounter in order to maintain an accurate medical record.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> coding for manic episodes to the Bipolar Diagnosis value set (2.16.840.1.113883.3.600.450).</p> |
| Measure Steward:  | Centers for Medicare & Medicaid Services   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to revise multiple components of the measure for the eCQM Specifications and the MIPS CQMs Specifications Collection types to add a grace period after the end of the encounter to document the follow-up plan, which will allow more flexibility in the clinical workflow giving clinician's time for documentation. This will ensure that those clinicians who meet the intent of the measure, which is discussing a follow-up plan during the encounter, are not inadvertently marked as non-compliant due to delayed documentation.</p> <p>We proposed to update the measure definition for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to improve alignment with measure intent which is to screen for new cases of depression in patients who have never had a diagnosis of depression or bipolar disorder, as well as to clarify the timing requirements of diagnoses for the measure exclusions.</p> <p>We proposed to add coding for manic episodes to the Bipolar Diagnosis value set for the eCQM Specifications collection type to align with measure intent.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46742), we are finalizing the changes to measure Q134 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.22 Oncology: Medical and Radiation – Pain Intensity Quantified**

| Category  | Description  |
|---|--|
| <b>NQF # / eCQM NQF #:</b>  | 0384 / 0384e   |
| <b>Quality#:</b>  | 143  |
| <b>CMS eCQM ID:</b>   | CMS157v11  |
| <b>National Quality Strategy Domain:</b>  | Person and Caregiver-Centered Experience and Outcomes  |
| <b>Current Collection Type:</b>   | eCQM Specifications   MIPS CQMs Specifications   |
| <b>Current Measure Description:</b>   | Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.   |
| <b>Substantive Change:</b>  | <p><b>Updated denominator instructions: For the MIPS CQMs Specifications collection type: Added:</b> The two chemotherapy administrations must occur on different days within the timeframe of on or within 30 days before the denominator eligible encounter and on or within 30 days after the denominator eligible encounter. Two chemotherapy administrations performed on the same day will not meet the patient procedure requirement.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic to only apply lookback period for radiation treatment management code.</p> <p><b>Revised:</b> logic related to chemotherapy treatments to further constrain the two unique chemotherapy treatments and data collection requirements to not extend beyond the measurement period.</p>   |
| <b>Measure Steward:</b>   | American Society of Clinical Oncology  |
| <b>High Priority Measure:</b>   | Yes  |
| <b>Measure Type:</b>  | Process  |
| <b>Rationale:</b>   | We proposed to update the denominator instructions for the MIPS CQMs Specifications collection type and logic related to chemotherapy treatments for the eCQM Specifications collection type to clarify that two chemotherapy administrations performed on the same day will not meet the patient procedure requirement. Additionally, we proposed to update the logic and logic definitions for the eCQM Specifications collection type to only apply lookback period for radiation treatment management code to meet the numerator intent of ensuring the intensity of pain experienced by patients is quantified during face-to-face or telehealth encounters, as required. This revision will also assist implementers in these instances, ensuring alignment with measure intent of quantifying a patient's pain severity so that those patients experiencing moderate to severe pain can be identified as the National Comprehensive Cancer Network (NCCN, 2021) suggests there is an undertreatment of pain in a subset of this patient population. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46743), we are finalizing the changes to measure Q143 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.23 Radiology: Exposure Dose Indices or Exposure Time and Number of Images Reported for Procedures Using Fluoroscopy**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 145  |
| CMS eCQM ID:  | N/A  |
| National Quality Strategy Domain:   | Patient Safety   |
| Current Collection Type:  | Medicare Part B Claims Measure Specifications   MIPS CQMs Specifications   |
| Current Measure Description:  | Final reports for procedures using fluoroscopy that document radiation exposure indices, or exposure time and number of fluorographic images (if radiation exposure indices are not available).  |
| Substantive Change:   | <p><b>The measure title is revised from 'Radiology: Exposure Dose Indices or Exposure Time and Number of Images Reported for Procedures Using Fluoroscopy' to: For all collection types: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy</b></p> <p><b>The measure description is revised to read: For all collection types:</b> Final reports for procedures using fluoroscopy that document radiation exposure indices.</p> <p><b>Updated denominator criteria: For all collection types: Removed:</b> coding related to procedures that do not use fluoroscopy.</p> <p><b>The measure numerator is revised to read: For all collection types:</b> Final reports for procedures using fluoroscopy that include radiation exposure indices.</p> <p><b>The measure numerator definition is revised to read: For all collection types:</b> Radiation exposure indices – For the purposes of this measure, “radiation exposure indices” should include at least one of the following:</p> <ol style="list-style-type: none"> <li>1. Reference air kerma (Ka,r) in Gy or mGy</li> <li>2. Kerma-area product (PKA) or Dose area product (DAP) in uGy*m², mGy*cm² (or similar)</li> <li>3. Peak skin dose (PSD) in Gy or mGy</li> </ol> <p>When reporting indices the report must clearly state what radiation quantity is being submitted, that is only reporting dose in mGy is insufficient. PSD in mGy is very different from Ka,r in mGy. As an example, PSD = 10 mGy or Ka,r = 10 mGy would meet numerator performance, but “10 mGy” alone would not.</p> <p>Note: When reporting reference air kerma or kerma-area product for biplane systems, the value should be reported as the sum of both planes (or the value for each plane should be reported individually).</p> <p><b>The measure numerator instructions are revised to read: For all collection types:</b><br/> <b>Documentation:</b> Dose information in the final report may be located in a variety of sources and should be available to the referring physician on receipt of report.</p> <p><b>The measure numerator note is revised to read: For all collection types:</b> In interventional radiology procedures with runs, dose indices are displayed on the console and in the radiation dose structured report (RDSR).</p> <p><b>The measure numerator options are revised to read: For all collection types:</b><br/> <b>Performance Met:</b> Radiation exposure indices documented in final report for procedure using fluoroscopy.<br/> <b>Performance Not Met:</b> Radiation exposure indices not documented in final report for procedure using fluoroscopy, reason not given.</p> |
| Measure Steward:  | American College of Radiology  |
| High Priority Measure:  | Yes  |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to revise multiple components to better align with forthcoming AAPM Medical Physics Practice Guideline for Fluoroscopy Dose Management by Fisher, et al.<sup>1</sup> which indicates that exposure time and number of images is the least useful index for predicting potential tissue effects related to radiation exposure. Therefore, multiple components of the measure, across all collection types, will be updated to reflect the removal of exposure time and number of images as being numerator compliant. The measure steward indicated, and we believed it is reasonable, to expect practices providing fluoroscopy services to document one of the three accepted exposure indices in the radiology report, based upon the aforementioned guidelines. Additionally, we proposed to revise the numerator definition to include the common units of measurement to emphasize our requirement that the report should include both the dose index AND the measurement.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46744), we are finalizing the changes to measure Q145 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

## D.24 Tuberculosis Screening Prior to First Course Biologic Therapy

| Category                          | Description   |
|-----------------------------------|---|
| NQF # / eCQM NQF #:               | N/A / N/A   |
| Quality#:                         | 176   |
| CMS eCQM ID:                      | N/A   |
| National Quality Strategy Domain: | Effective Clinical Care   |
| Current Collection Type:          | MIPS CQMs Specifications  |
| Current Measure Description:      | If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.   |
| Substantive Change:               | <p><b>The measure title is revised from ‘Tuberculosis Screening Prior to First Course Biologic Therapy’ to: Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy.</b></p> <p><b>The measure description is revised to read:</b> If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.</p> <p><b>Updated instructions: Revised:</b> This measure is to be submitted a minimum of once per performance period for patients who are being considered or prescribed a first course of a biologic and/or immune response modifier therapy seen during the performance period.</p> <p><b>The measure denominator is revised to read:</b> All patients aged 18 years and older who are receiving a first course of therapy using a biologic and/or immune response modifier (such as kinase inhibitors) that includes a warning for potential reactivation of a latent infection.</p> <p><b>Updated denominator criteria is revised to read:</b> Patient receiving first-time biologic and/or immune response modifier therapy.</p> <p><b>Updated denominator instructions: Revised:</b> Patients are considered to be receiving a first course of therapy using a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection only if they have been prescribed such a biologic and/or immune response modifier during the performance period and also have not been prescribed any such biologic and/or immune response modifier in the 15 months preceding the encounter at which the biologic and/or immune response modifier was newly started. A biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection includes:</p> <p><b>Added:</b></p> <ul style="list-style-type: none"> <li>- Adalimumab-adbm (Cyltezo)</li> <li>- Adalimumab-atto (Amjevita)</li> <li>- Brodalumab (Siliq)</li> <li>- Risankizumab-rzaa (Skyrizi)</li> <li>- Tildrakizumab (Ilumya)</li> </ul> <p><b>Revised:</b></p> <p>The list of therapies is subject to change as new therapies are approved by the FDA.</p> <p>To be included in the denominator, patient must have an encounter and a prescription for a biologic and/or immune response modifier in the performance period (1/1/2023-12/31/2023) WITHOUT a prior prescription for a biologic and/or immune response modifier within the 15 months prior to the biologic and/or immune response modifier prescribed during the performance period.</p> <p><b>The measure numerator is revised to read:</b> Patients for whom any record of TB testing is documented or performed (PPD, IFN-gamma release assays, or other appropriate method) in the medical record in the 12 months preceding the biologic and/or immune response modifier prescription.</p> <p><b>Updated numerator options: Revised:</b></p> <p><b>Performance Met:</b> TB screening performed and results interpreted within twelve months prior to initiation of first-time biologic and/or immune response modifier therapy.</p> |
| Measure Steward:                  | American College of Rheumatology  |
| High Priority Measure:            | No  |
| Measure Type:                     | Process   |
| Rationale:                        | <p>We proposed to revise multiple components of the measure to be more inclusive of non-rheumatology specialties so the measure may be used to evaluate additional clinician types, such as dermatology. We proposed to revise the measure to include biologics rather than just immune response modifier therapies in order to support the variety of clinicians that may be able to report the measure. Additionally, we proposed to revise the list of pharmacological agents that will meet the denominator criteria of the measure to more completely capture patients appropriate for the assessment of the quality action and intent of the measure, which is to ensure that all patients receiving a first course of biologic and/or immune response modifier that may cause latent TB reactivation are tested for TB appropriately.<sup>1</sup></p>  |
| Comment:                          | <p>One commenter supported the addition of biologics, such as Skyrizi and Ilumya, to measure Q176. The commenter indicated there are several therapies that require tuberculosis testing that do not have anti-rheumatic capabilities; the addition of these therapies will support dermatology specialty providers who treat skin primarily. The commenter stated that eligible biologics medications should not be exclusive to disease-modifying antirheumatic drugs (DMARD) therapies.</p> <p>Another commenter supported the revisions and updates to the title, description, performance period, and denominator of measure Q176. The commenter requested clarification regarding the language of the list of therapies being “subject to change”. The commenter’s concern was that EHRs may not be aware of, or able to review, recent FDA approvals relevant to this measure in real-time. The lack of clarity as to what therapies qualify under this measure could lead to decreased reporting due to the risk of unintentionally not complying with the quality action. The commenter requested that CMS provide further guidance</p>  |

| Category | Description   |
|----------|---|
|          | regarding notification of the addition of applicable therapies to the measure, as well as clarification as to whether additions of new therapies could lead to measure suppression.   |
|          | <b>Response:</b> In regard to the list of therapies being “subject to change,” we note that any substantive changes to the measure would occur through rulemaking, allowing time for public review and comment. The intent is to allow some flexibility in implementation as the available treatments is continuously changing, as this measure is available for the MIPS CQMs specifications collection type multiple data sources may be utilized to determine denominator eligibility and numerator compliance. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. |
|          | After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46745), we are finalizing the changes to measure Q176 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.  |

#### D.25 Elder Maltreatment Screen and Follow-Up Plan

| Category                                 | Description  |
|--|--|
| <b>NQF # / eCQM NQF #:</b>               | N/A / N/A  |
| <b>Quality#:</b>                         | 181  |
| <b>CMS eCQM ID:</b>                      | N/A  |
| <b>National Quality Strategy Domain:</b> | Patient Safety   |
| <b>Current Collection Type:</b>          | Medicare Part B Claims Measure Specifications   MIPS CQMs Specifications   |
| <b>Current Measure Description:</b>      | Percentage of patients aged 65 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.   |
| <b>Substantive Change:</b>               | <p><b>The measure description is revised to read: For all collection types:</b> Percentage of patients aged 60 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.</p> <p><b>The measure denominator is revised to read: For all collection types:</b> All patients aged 60 years and older.</p> <p><b>Updated denominator criteria: For all collection types: Revised:</b> Patients aged <math>\geq 60</math> years on date of encounter.</p>   |
| <b>Measure Steward:</b>                  | Centers for Medicare & Medicaid Services   |
| <b>High Priority Measure:</b>            | Yes  |
| <b>Measure Type:</b>                     | Process  |
| <b>Rationale:</b>                        | We proposed to revise multiple components of this measure for all collection types to include patients aged 60 years of age and older, which expands the intended patient population and allows clinicians to screen a broader patient population for elder maltreatment. The American College of Obstetricians and Gynecologists (ACOG) published a Committee Opinion in 2021 stating that ACOG “supports screening of patients older than 60 years to help identify victims of abuse and provide them with appropriate medical and psychosocial care and referrals ( <a href="https://www.acog.org/clinical/clinical-guidance/committee-opinion/articles/2021/03/elder-abuse-and-womens-health">https://www.acog.org/clinical/clinical-guidance/committee-opinion/articles/2021/03/elder-abuse-and-womens-health</a> ).” |
|  | We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46746), we are finalizing the changes to measure Q181 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.  |

## D.26 Functional Outcome Assessment

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality#:   | 182   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Communication and Care Coordination   |
| Current Collection Type:  | MIPS CQMs Specifications  |
| Current Measure Description:  | Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.   |
| Substantive Change:   | <p><b>The measure description is revised to read:</b> Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies within two days of the date of the identified deficiencies.</p> <p><b>The measure numerator is revised to read:</b> Visits where patient has a documented current functional outcome assessment using a standardized tool AND a documented care plan based on the identified functional outcome deficiencies within two days of the assessment</p> <p><b>Updated numerator definition: Revised:</b> Patient unable to participate in administration of the functional outcome assessment(s) within the ‘Not Eligible (Denominator Exception)’ definition.</p> <p><b>Updated numerator instructions: Added:</b> The follow-up plan must still be provided for and discussed with the patient during the qualifying encounter used to evaluate the numerator. However, documentation of the follow-up plan can occur up to two calendar days after the qualifying encounter, in accordance with the policies of an eligible clinician’s practice or health system. All services should be documented during, or as soon as practicable, after the qualifying encounter in order to maintain an accurate medical record.</p> <p><b>Updated numerator options: Revised:</b></p> <p><b>Performance Met:</b> Functional outcome assessment documented as positive using a standardized tool AND a care plan based on identified deficiencies is documented within two days of the functional outcome assessment.</p> <p><b>Performance Met:</b> Functional outcome assessment using a standardized tool is documented within the previous 30 days and a care plan, based on identified deficiencies is documented within two days of the functional outcome assessment.</p> <p><b>Performance Not Met:</b> Documentation of a positive functional outcome assessment using a standardized tool; care plan not documented within two days of assessment, reason not given.</p> |
| Measure Steward:  | Centers for Medicare & Medicaid Services  |
| High Priority Measure:  | Yes   |
| Measure Type:   | Process   |
| Rationale:  | <p>We proposed to update multiple components of the measure to allow flexibility in the clinical workflow by allowing two days following the functional outcome assessment for the clinician to document a care plan based on the identified deficiencies for their patients. This update was recommended by the American Physical Therapy Association (APTA). This will ensure that those clinicians who meet the intent of the measure, which is discussing a follow-up plan during the encounter, are not inadvertently marked as non-compliant due to delayed documentation.</p> <p>Additionally, we proposed to update the definition for ‘Not Eligible (Denominator Exception)’ to generalize the process of administering the assessment to the patient. Rather than only allowing an exception for patients who are unable to complete the assessment, the measure will allow the denominator exception to be utilized in clinical situations where the patient is not able to participate in the administration of the assessment. We also proposed to add language to the numerator instructions to clarify the additional two-day documentation period and determine if the clinician meets the intent of the measure.</p>   |
| <p><b>Comment:</b> One commenter supported the proposal to update the measure to allow flexibility in the clinical workflow by allowing two days following the functional outcome assessment for the clinician to document a care plan based on the identified deficiencies for their patients. The commenter also supported the proposal to update the definition for “Not Eligible (Denominator Exception).”</p> <p><b>Response:</b> We thank the commenter for supporting the substantive changes to this measure.</p> <p><b>Comment:</b> One commenter appreciated the clarification proposed for measure Q182. The commenter stated the 2-day grace period would prevent clinicians who meet the intent of the measure from being penalized due to external circumstances delaying documentation. For the final measure, the commenter encouraged CMS to consider language related to “performance deficits” in the measure description, instead of using the word “deficiencies”, as this terminology is more consistent with a supportive patient centered focus.</p> <p><b>Response:</b> We thank the commenter for their support and will take the suggested language updates into considerations for possible future implementation. This suggestion would be considered a substantive change and would need to be proposed through rulemaking.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46747), we are finalizing the changes to measure Q182 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

**D.27 Stroke and Stroke Rehabilitation: Thrombolytic Therapy**

|   |  |
|---|--|
| <b>Category</b>   | <b>Description</b>   |
| <b>NQF # / eCQM NQF #:</b>  | N/A / N/A  |
| <b>Quality#:</b>  | 187  |
| <b>CMS eCQM ID:</b>   | N/A  |
| <b>National Quality Strategy Domain:</b>  | Effective Clinical Care  |
| <b>Current Collection Type:</b>   | MIPS CQMs Specifications   |
| <b>Current Measure Description:</b>   | Percentage of patients aged 18 years and older with a diagnosis of acute ischemic stroke who arrive at the hospital within two hours of time last known well and for whom IV alteplase was initiated within three hours of time last known well.   |
| <b>Substantive Change:</b>  | <p><b>The measure description is revised to read:</b> Percentage of patients aged 18 years and older with a diagnosis of acute ischemic stroke who arrive at the hospital within 3.5 hours of time last known well and for whom IV thrombolytic was initiated within 4.5 hours of time last known well.</p> <p><b>Updated instructions: Revised:</b> This measure is to be submitted for each episode of acute ischemic stroke for patients who arrive at the hospital within 3.5 hours of time last known well and for whom IV thrombolytic was initiated within 4.5 hours of time last known well.</p> <p><b>The measure denominator is revised to read:</b> All patients aged 18 years and older with a diagnosis of acute ischemic stroke whose time of arrival is within 3.5 hours (<math>\leq 210</math> minutes) of time last known well.</p> <p><b>Updated denominator criteria: Revised:</b> Time last known well to hospital arrival less than or equal to 3.5 hours (<math>\leq 210</math> minutes).</p> <p><b>The measure numerator is revised to read:</b> Patients for whom IV thrombolytic therapy was initiated at the hospital within 4.5 hours (<math>\leq 270</math> minutes) of time last known well.</p> <p><b>Updated numerator note: Added:</b> Updated clinical practice guidelines recommend this extended timeframe for thrombolytics, however, earlier intervention is preferred and leads to better outcomes. Patients who are eligible for thrombolytics should receive treatment as quickly as possible after arrival at the hospital.</p> <p><b>The measure numerator options are revised to read:</b><br/> <b>Performance Met:</b> IV thrombolytic therapy initiated within 4.5 hours (<math>\leq 270</math> minutes) of time last known well.<br/> <b>Denominator Exception:</b> IV thrombolytic therapy not initiated within 4.5 hours (<math>\leq 270</math> minutes) of time last known well for reasons documented by clinician (for example, patient enrolled in clinical trial for stroke, patient admitted for elective carotid intervention, patient received tenecteplase (TNK)).<br/> <b>Performance Not Met:</b> IV thrombolytic therapy not initiated within 4.5 hours (<math>\leq 270</math> minutes) of time last known well, reason not given.</p> |
| <b>Measure Steward:</b>   | American Heart Association   |
| <b>High Priority Measure:</b>   | No   |
| <b>Measure Type:</b>  | Process  |
| <b>Rationale:</b>   | We proposed revisions to this measure to align with the 2021 Guideline for the Prevention of Stroke in Patients With Stroke and Transient Ischemic Attack: A Guideline From the American Heart Association/American Stroke Association. <sup>1</sup> We proposed to update the measure to reflect the updated guidelines for appropriate treatment with IV thrombolytic for the clinical situation when the patient presents with acute ischemic stroke. These updates will be consistently applied to multiple components throughout the measure and a numerator note will be added to address timeliness of intervention.  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46748), we are finalizing the changes to measure Q187 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

<sup>1</sup> Kleindorfer, D. O., Towfighi, A., Chaturvedi, S., Cockroft, K. M., Gutierrez, J., Lombardi-Hill, D., Kamel, H., Kernan, W. N., Kittner, S. J., Leira, E. C., Lennon, O., Meschia, J. F., Nguyen, T. N., Pollak, P. M., Santangeli, P., Sharrief, A. Z., Smith, S. C., Jr, Turan, T. N., & Williams, L. S. (2021). 2021 Guideline for the Prevention of Stroke in Patients with Stroke and Transient Ischemic Attack: A Guideline from the American Heart Association/American Stroke Association. *Stroke*, 52(7), e364–e467. <https://doi.org/10.1161/STR.0000000000000375>.

**D.28 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery**

|   |  |
|---|--|
| <b>Category</b>   | <b>Description</b>   |
| <b>NQF # / eCQM NQF #:</b>  | 0565 / 0565e   |
| <b>Quality#:</b>  | 191  |
| <b>CMS eCQM ID:</b>   | CMS133v11  |
| <b>National Quality Strategy Domain:</b>  | Effective Clinical Care  |
| <b>Current Collection Type:</b>   | eCQM Specifications   MIPS CQMs Specifications   |
| <b>Current Measure Description:</b>   | Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.  |
| <b>Substantive Change:</b>  | <p><b>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Added:</b> coding for traction retinal detachment to Table 1 “Retinal Detachment with Retinal Defect” coding.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> coding for heteronymous bilateral field defects to valueset “Visual Field Defects” (2.16.840.1.113883.3.526.3.1446) and tractional retina detachment to valueset “Retinal Detachment with Retinal Defect” (2.16.840.1.113883.3.526.3.1478).</p>   |
| <b>Measure Steward:</b>   | American Academy of Ophthalmology  |
| <b>High Priority Measure:</b>   | Yes  |
| <b>Measure Type:</b>  | Outcome  |
| <b>Rationale:</b>   | We proposed to update the denominator exclusion of this measure to include coding for traction retinal detachment. Additionally, we proposed to update the value set for the eCQM Specifications collection type to encompass this update as well as heteronymous bilateral field defects. This will allow for better alignment with the intent of the denominator exclusions which remove eye conditions that may hinder the best corrected visual acuity of 20/40 or better within the 90 days following cataract surgery allowing a homogenous patient population to support equitable and clinically realistic outcomes. The expansion of the coding ensures the appropriate patient population is included within the denominator eligible patient population. We believed these significant ocular conditions, which can negatively impact the visual outcome of surgery, can also potentially impact a clinician’s performance on this measure. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46749), we are finalizing the changes to measure Q191 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

## D.29 Functional Status Change for Patients with Knee Impairments

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 217  |
| CMS eCQM ID:  | N/A  |
| National Quality Strategy Domain:   | Communication and Care Coordination  |
| Current Collection Type:  | MIPS CQMs Specifications   |
| Current Measure Description:  | A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).   |
| Substantive Change:   | <p><b>Updated denominator criteria: Revised:</b> coding for Skilled Nursing Facilities.</p> <p><b>Updated definition: Revised:</b> Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p><b>Added:</b></p> <p><b>LEPF PROM score:</b> The LEPF PROM score may be achieved using one of three forms: the FOTO LEPF PROM computer adaptive test, the FOTO LEPF PROM short form, or an alternative PROM score that is cross-walked to the FOTO LEPF PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the <b>LEPF PROM</b> score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p><b>Updated numerator definition: Revised:</b> Functional Status (FS) Score – This is the LEPF PROM score as described under Instructions Definitions.</p> |
| Measure Steward:  | Focus on Therapeutic Outcomes, Inc.  |
| High Priority Measure:  | Yes  |
| Measure Type:   | Patient-Reported Outcome-Based Performance Measure   |
| Rationale:  | We proposed to update the measure definitions to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We proposed to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We proposed to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we proposed to update the numerator definition ‘Patient’s Functional Status (FS) Score’ to ‘Functional Status (FS) Score’ along with revising the definition for consistency and clarity. This update will promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.  |
| <p><b>Comment:</b> One commenter strongly supported the proposal to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. The commenter, however, remained concerned they are charged to use the electronic version of the patient-reported outcome measure (PROM) tool used for this measure.</p> <p><b>Response:</b> We acknowledge the concern regarding a fee for using the copyrighted electronic version of the survey; however, FOTO’s Public Access Survey provides a computer adaptive test (CAT) administration of the survey with scoring results provided on the last screen of the assessment without a fee.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46749), we are finalizing the changes to measure Q217 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

## D.30 Functional Status Change for Patients with Hip Impairments

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | N/A / N/A  |
| Quality#:  | 218  |
| CMS eCQM ID:   | N/A  |
| National Quality Strategy Domain:  | Communication and Care Coordination  |
| Current Collection Type:   | MIPS CQMs Specifications   |
| Current Measure Description:   | A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).  |
| Substantive Change:  | <p><b>Updated denominator criteria: Added:</b> coding for Skilled Nursing Facilities.</p> <p><b>Updated definition: Revised:</b> Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p><b>Added:</b></p> <p><b>LEPF PROM score:</b> The LEPF PROM score may be achieved using one of three forms: the FOTO LEPF PROM computer adaptive test, the FOTO LEPF PROM short form, or an alternative PROM score that is cross-walked to the FOTO LEPF PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the <b>LEPF PROM</b> score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p><b>Updated numerator definition: Revised:</b> Functional Status (FS) Score – This is the LEPF PROM score as described under Instructions Definitions.</p> |
| Measure Steward:   | Focus on Therapeutic Outcomes, Inc.  |
| High Priority Measure:   | Yes  |
| Measure Type:  | Patient-Reported Outcome-Based Performance Measure   |
| Rationale:   | We proposed to update the measure definition to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We proposed to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We proposed to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we proposed to update the numerator definition 'Patient's Functional Status (FS) Score' to 'Functional Status (FS) Score' along with revising the definition for consistency and clarity. This update will promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.   |
| <p><b>Comment:</b> One commenter strongly supported the proposal to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting.</p> <p><b>Response:</b> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46750), we are finalizing the changes to measure Q218 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**D.31 Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments**

| <b>Category</b>  | <b>Description</b>  |
|--|---|
| <b>NQF # / eCQM NQF #:</b>   | N/A / N/A   |
| <b>Quality#:</b>   | 219   |
| <b>CMS eCQM ID:</b>  | N/A   |
| <b>National Quality Strategy Domain:</b>   | Communication and Care Coordination   |
| <b>Current Collection Type:</b>  | MIPS CQMs Specifications  |
| <b>Current Measure Description:</b>  | A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle or lower leg impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. | <p><b>Comment:</b> One commenter strongly supported the proposal to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting.</p> <p><b>Response:</b> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46751), we are finalizing the changes to measure Q219 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

**D.32 Functional Status Change for Patients with Low Back Impairments**

| <b>Category</b>  | <b>Description</b>  |
|--|---|
| <b>NQF # / eCQM NQF #:</b>   | N/A / N/A   |
| <b>Quality#:</b>   | 220   |
| <b>CMS eCQM ID:</b>  | N/A   |
| <b>National Quality Strategy Domain:</b>   | Communication and Care Coordination   |
| <b>Current Collection Type:</b>  | MIPS CQMs Specifications  |
| <b>Current Measure Description:</b>  | A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the FOTO Low Back FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).   |
| <b>Substantive Change:</b>   | <p><b>Updated denominator criteria: Added:</b> coding for Skilled Nursing Facilities.</p> <p><b>Updated definition: Revised:</b> Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p><b>Added:</b></p> <p><b>The Low Back FS PROM score:</b> The Low Back FS PROM score may be achieved using one of three forms: the FOTO Low Back FS PROM computer adaptive test, the FOTO Low Back FS PROM short form, or an alternative PROM score that is cross-walked to the Low Back FS PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets acceptable scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the <b>Low Back FS PROM</b> score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p><b>Updated numerator definition: Revised:</b> Functional Status (FS) Score – This is the Low Back FS PROM score as described under Instructions Definitions.</p> |
| <b>Measure Steward:</b>  | Focus on Therapeutic Outcomes, Inc.   |
| <b>High Priority Measure:</b>  | Yes   |
| <b>Measure Type:</b>   | Patient-Reported Outcome-Based Performance Measure  |
| <b>Rationale:</b>  | We proposed to update the measure definition to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We proposed to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We proposed to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we proposed to update the numerator definition 'Patient's Functional Status (FS) Score' to 'Functional Status (FS) Score' along with revising the definition for consistency and clarity. This update will promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.  |
| <p><b>Comment:</b> One commenter strongly supported the proposal to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting.</p> <p><b>Response:</b> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46752), we are finalizing the changes to measure Q220 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## D.33 Functional Status Change for Patients with Shoulder Impairments

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | N/A / N/A  |
| Quality#:  | 221  |
| CMS eCQM ID:   | N/A  |
| National Quality Strategy Domain:  | Communication and Care Coordination  |
| Current Collection Type:   | MIPS CQMs Specifications   |
| Current Measure Description:   | A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with shoulder impairments. The change in functional status (FS) is assessed using the FOTO Shoulder FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).  |
| Substantive Change:  | <p><b>Updated denominator criteria: Added:</b> coding for Skilled Nursing Facilities.</p> <p><b>Updated definition: Revised:</b> Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p><b>Added:</b></p> <p><b>The Shoulder FS PROM:</b> The Shoulder FS PROM score may be achieved using one of three forms: the FOTO Shoulder FS PROM computer adaptive test, the FOTO Shoulder FS PROM short form, or an alternative PROM score that is cross-walked to the FOTO Shoulder FS PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the <b>Shoulder FS PROM</b> score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p><b>Updated numerator definition: Revised:</b> Functional Status (FS) Score – This is the Shoulder PROM score as described under Instructions Definitions.</p> |
| Measure Steward:   | Focus on Therapeutic Outcomes, Inc.  |
| High Priority Measure:   | Yes  |
| Measure Type:  | Patient-Reported Outcome-Based Performance Measure   |

**D.34 Functional Status Change for Patients with Elbow, Wrist or Hand Impairments**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality#:   | 222   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Communication and Care Coordination   |
| Current Collection Type:  | MIPS CQMs Specifications  |
| Current Measure Description:  | A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with elbow, wrist, or hand impairments. The change in functional status (FS) is assessed using the FOTO Elbow/Wrist/Hand FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).  |
| Substantive Change:   | <p><b>Updated denominator criteria: Added:</b> coding for Skilled Nursing Facilities.</p> <p><b>Updated definition: Revised:</b> Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p><b>Added:</b><br/> <b>The Elbow/Wrist/Hand FS PROM score:</b> The Elbow/Wrist/Hand FS PROM score may be achieved using one of three forms: the FOTO Elbow/Wrist/Hand FS PROM computer adaptive test, the FOTO Elbow/Wrist/Hand FS PROM short form, or an alternative PROM score that is cross-walked to the FOTO Elbow/Wrist/Hand FS PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the <b>Elbow/Wrist/Hand FS PROM</b> score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p><b>Updated numerator definition:</b> Revised: Functional Status (FS) Score – This is the Elbow/Wrist/Hand FS PROM score as described under Instructions Definitions.</p> |
| Measure Steward:  | Focus on Therapeutic Outcomes, Inc.   |
| High Priority Measure:  | Yes   |
| Measure Type:   | Patient-Reported Outcome-Based Performance Measure  |
| Rationale:  | <p>We proposed to update the measure definitions to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We proposed to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We proposed to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we proposed to update the numerator definition 'Patient's Functional Status (FS) Score' to 'Functional Status (FS) Score' along with revising the definition for consistency and clarity. This update will promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.</p>  |
| <p><b>Comment:</b> One commenter strongly supported the proposal to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting.</p> <p>Another commenter supported the proposed change to allow a crosswalk for this measure, stating that it will give greater flexibility to allow occupational therapy practitioners to utilize their clinical judgement to select the assessment that is best suited to patient needs. The commenter stated that it will also enable a greater focus on client-centered care and allow more accurate reporting of care outcomes through use of assessments that more closely match individual patient needs and more accurately reflect patient progress.</p> <p><b>Response:</b> We thank the commenters for supporting the substantive changes to this measure.</p> <p><b>Comment:</b> One commenter stated that when reporting measure Q222: the use of the FOTO Elbow/Wrist/Hand FS patient-reported outcome measure is required. The commenter stated that those of us who work in this setting understand that the disability experienced by a person with a thumb injury or osteoarthritis is very different from that of someone with a traumatic elbow injury. The commenter stated that it would seem that a scale such as this FOTO Elbow/Wrist/Hand FS patient-reported outcome measure, that is neither body region nor condition-specific, might fail to pick up change in disability/symptoms when such change does, in fact, exist. For example, the commenter stated that the DASH, like the FOTO, is a more global assessment of upper limb disability, and, is less responsive than a more regional scale, the Patient Reported Wrist Evaluation, in persons with wrist fractures (<a href="https://pubmed.ncbi.nlm.nih.gov/35415515/">https://pubmed.ncbi.nlm.nih.gov/35415515/</a>).</p> <p>The commenter stated that their review of this tool would suggest that it has no published psychometrics yet it, along with other like measures, are being used to measure the quality of occupational therapy services. The commenter stated that psychometrics should be tested in various populations. The commenter stated that there needs to be some method to allow occupational therapists to have more autonomy in selecting the scales that will be used to measure their worth when treating persons with upper limb dysfunction (in addition to various other populations).</p> <p><b>Response:</b> We note that the FOTO Elbow/Wrist/Hand FS is specific to upper arm, elbow, forearm, wrist, and hand, allowing evaluation of the specific problem for which the patient is receiving treatment. The measure steward indicated that the methods of administration were developed using modern psychometric methods (for example, item response theory) or utilize psychometric equating methods to crosswalk alternative PROM scores to the FOTO Elbow/Wrists/Hand FS PROM. We encourage the commenter to reach out to the measure steward of current measures to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46754), we are finalizing the changes to measure Q222 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## D.35 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

| Category                          | Description   |
|-----------------------------------|---|
| NQF # / eQOM NQF #:               | 0028 / 0028e  |

Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user</p> <p><b>For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</b> Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p><b>Updated instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> This measure is to be submitted a minimum of once per performance period for patients seen during the performance period. This measure is intended to reflect the quality of services provided for preventive screening for tobacco use. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who provided the measure-specific denominator coding.</p> <p>This measure will be calculated with 3 performance rates:</p> <p>1) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period</p> <p>2) Percentage of patients aged 18 years and older who were identified as a tobacco user during the measurement period who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period</p> <p>3) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user</p> <p><b>Updated instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> THERE ARE THREE SUBMISSION CRITERIA FOR THIS MEASURE:</p> <p>1) All patients who were screened for tobacco use</p> <p>AND</p> <p>2) All patients who were identified as a tobacco user during the measurement period and who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period</p> <p>AND</p> <p>3) All patients who were screened for tobacco use and, if identified as a tobacco user received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period, or identified as a tobacco non-user</p> <p>This measure contains three submission criteria which aim to identify patients who were screened for tobacco use (submission criteria 1), patients who were identified as tobacco users during the measurement period and who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period (submission criteria 2), and a comprehensive look at the overall performance on tobacco screening and cessation intervention (submission criteria 3).</p> <p><b>Updated denominator: For the eQOM Specifications collection type: Revised:</b> Population 2:<br/>Equals Initial Population who were screened for tobacco use during the measurement period and identified as a tobacco user.</p> <p><b>Updated denominator criteria: For all collection types: Added:</b> coding for nutrition and dietitian.</p> <p><b>Updated denominator exclusion: For all collection types: Added:</b> denominator exclusion for all submission criteria for patients receiving hospice any time during the measurement period.</p> <p><b>The measure definition is revised to read: For all collection types:</b> Tobacco Use – use of any tobacco product</p> |

| Category                      | Description  |
|-------------------------------|--|
|                               | <p>The 2021 USPSTF recommendation references the US Food and Drug Administration definition of tobacco which includes “any product made or derived from tobacco intended for human consumption (except products that meet the definition of drugs), including, but not limited to, cigarettes, cigars (including cigarillos and little cigars), dissolvables, hookah tobacco, nicotine gels, pipe tobacco, roll-your-own tobacco, smokeless tobacco products (including dip, snuff, snus, and chewing tobacco), vapes, electronic cigarettes (e-cigarettes), hookah pens, and other electronic nicotine delivery systems.”</p> <p>The 2021 USPSTF recommendation describes smoking as generally referring to “the inhaling and exhaling of smoke produced by combustible tobacco products such as cigarettes, cigars, and pipes.”</p> <p>The 2021 USPSTF recommendation describes vaping as “the inhaling and exhaling of aerosols produced by e-cigarettes.” In addition, it states, “vaping products (that is, e-cigarettes) usually contain nicotine, which is the addictive ingredient in tobacco. Substances other than tobacco can also be used to smoke or vape. While the 2015 USPSTF recommendation statement used the term ‘electronic nicotine delivery systems’ or ‘ENDS,’ the USPSTF recognizes that the field has shifted to using the term ‘e-cigarettes’ (or ‘e-cigs’) and uses the term e-cigarettes in the current recommendation statement. E-Cigarettes can come in many shapes and sizes, but generally they heat a liquid that contains nicotine (the addictive drug in tobacco) to produce an aerosol (or ‘vapor’) that is inhaled (‘vaped’) by users.”</p> <p>Tobacco Cessation Intervention – Includes brief counseling (3 minutes or less), and/or pharmacotherapy –</p> <p><b>For the eCQM Specifications collection type:</b><br/> Note: Concepts aligned with brief counseling (for example, minimal and intensive advice/counseling interventions conducted both in person and over the phone) are included in the value set for the numerator. Other concepts such as written self-help materials (for example, brochures, pamphlets) and complementary/alternative therapies are not included in the value set and do not qualify for the numerator. Counseling also may be of longer duration or be performed more frequently, as evidence shows that higher-intensity interventions are associated with higher tobacco cessation rates (U.S. Preventive Services Task Force, 2021).</p> <p><b>For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</b><br/> Note: Concepts aligned with brief counseling (for example, minimal and intensive advice/counseling interventions conducted both in person and over the phone) are included in the numerator. Other concepts such as written self-help materials (for example, brochures, pamphlets) and complementary/alternative therapies do not qualify for the numerator. Counseling also may be of longer duration or be performed more frequently, as evidence shows that higher-intensity interventions are associated with higher tobacco cessation rates (U.S. Preventive Services Task Force, 2021).</p> <p><b>Updated numerator: For the eCQM Specifications collection type: Revised:</b> Population 2:<br/> Patients who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period.<br/> Population 3:<br/> Patients who were screened for tobacco use at least once during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p><b>Updated numerator: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> For Submission Criteria 2: Patients who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period.<br/> For Submission Criteria 3: Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p><b>Updated numerator options: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> For Submission Criteria 2 and Submission Criteria 3: language to reflect the tobacco cessation intervention needing to be completed during the measure period or in the six months prior.</p> <p><b>Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> For Submission Criteria 3: language to reflect the tobacco cessation intervention needing to be completed during the measure period or in the six months prior.</p> <p><b>Updated denominator exception: For all collection types: Removed:</b> denominator exceptions for all submission criteria.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> Encounter Inpatient value set.</p> |
| <b>Measure Steward:</b>       | National Committee for Quality Assurance   |
| <b>High Priority Measure:</b> | No   |
| <b>Measure Type:</b>          | Process  |
| <b>Rationale:</b>             | <p>We proposed to update multiple components of the measure for all collection types to better define and align the lookback period for tobacco cessation intervention and to allow a lookback of 6-months prior to the current measurement period.</p> <p>We proposed to update the denominator statement for Population 2 for all collection types to clarify the timing of the screening for tobacco cessation intervention and to align with the logic timing in the eCQM Specifications collection type. We proposed to update the denominator criteria to include encounter codes for MIPS eligible registered dietitians and nutritionists to allow them to screen for tobacco use as part of a comprehensive patient assessment. Additionally, we proposed to add denominator exclusions for all collection types for patients receiving hospice care during the measurement period and remove all denominator exceptions. This will lessen clinician burden as those patients for whom it is not appropriate to complete the quality action will be removed for the denominator eligible patient population. We also proposed to update the measure definition to align with 2021 USPSTF recommendations.</p> <p>We proposed to update the value set/coding for the eCQM Specifications collection type to include inpatient encounter codes as this patient population is appropriate for the denominator and should be assessed for the clinical quality action. Smoking increases the risk for many adverse health effects and though many patients that use tobacco abstain during hospitalization, they</p>  |

## D.36 Controlling High Blood Pressure

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 236  |
| CMS eCQM ID:  | CMS165v11  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications   |
| Current Measure Description:  | Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.  |
| Substantive Change:   | <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> Do not include BP readings taken during an acute inpatient stay or an ED visit.</p> <p><b>Added:</b><br/>Ranges and thresholds do not meet criteria for this measure. A distinct numeric result for both the systolic and diastolic BP reading is required for numerator compliance.</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> Patients 18-85 years of age by the end of the measurement period who had a visit and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</b><br/> 1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period.<br/> 2. Exclude patients 66-80 by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria:<br/> - Advanced illness with two outpatient encounters during the measurement period or the year prior<br/> - OR advanced illness with one inpatient encounter during the measurement period or the year prior<br/> - OR taking dementia medications during the measurement period or the year prior<br/> 3. Exclude patients 81 and older by the end of the measurement period with an indication of frailty for any part of the measurement period.</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised:</b> To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p><b>Updated instructions and numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</b> Ranges and thresholds do not meet criteria for this measure. A distinct numeric result for both the systolic and diastolic BP reading is required for numerator compliance.</p> |
| Measure Steward:  | National Committee for Quality Assurance   |
| High Priority Measure:  | Yes  |
| Measure Type:   | Intermediate Outcome   |
| Rationale:  | <p>We proposed to update the measure guidance for the eCQM Specifications collection type to streamline and clarify language regarding blood pressure readings and which readings are appropriate to utilize for the purposes of assessing the quality action for this measure. Additionally, this revision will better align with the logic and intent of the measure which is to control high blood pressure in an effort to reduce adverse health effects such as cardiovascular disease and mortality.</p> <p>We proposed to update multiple components of the measure, for the eCQM Specifications and MIPS CQMs Specifications collection types, so that the patient age is determined as of the end of the measurement period and will align with Healthcare Effectiveness Data and Information Set (HEDIS) measure requirements and creates consistency in implementation.</p> <p>We proposed to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p> <p>We proposed to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We proposed to update the numerator note for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types to provide additional guidance around multiple blood pressure readings taken on the same day.</p> <p>We proposed to add language to all collection types to ensure that only distinct numeric results are being utilized for the purpose of this measure as ranges and thresholds do not meet the measure's intent.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46758), we are finalizing the changes to measure Q236 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

## D.37 Use of High-Risk Medications in Older Adults

| Category                          | Description  |
|-----------------------------------|--|
| NQF # / eCQM NQF #:               | 0022 / N/A   |
| Quality#:                         | 238  |
| CMS eCQM ID:                      | CMS156v11  |
| National Quality Strategy Domain: | Patient Safety   |
| Current Collection Type:          | eCQM Specifications   MIPS CQMs Specifications   |
| Current Measure Description:      | Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.   |
| Substantive Change:               | <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> Calculate average daily dose for each prescription event. To calculate average daily dose, multiply the quantity of pills prescribed by the dose of each pill and divide by the days supply. For example, a prescription for the 30-days supply of digoxin containing 15 pills, 0.25 mg each pill, has an average daily dose of 0.125 mg. To calculate average daily dose for elixirs and concentrates, multiply the volume prescribed by daily dose and divide by the days supply. Do not round when calculating average daily dose.</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> Patients 65 years and older at the end of the measurement period who had a visit during the measurement period.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type:</b><br/> Added: For Submission Criteria 1: coding for hospital/hospital observation discharge, outpatient observation, inpatient, and emergency department.<br/> For Submission Criteria 2: coding for emergency department.</p> <p><b>Updated definition: For the MIPS CQMs Specifications collection type: Added:</b> For Submission Criteria 1:<br/> • At least two high-risk medications from the same drug class in Table 3 on different dates of service, each exceeding average daily dose criteria.<br/> And<br/> Calculate average daily dose for each prescription event. To calculate average daily dose, multiply the quantity of pills prescribed by the dose of each pill and divide by the days supply. For example, a prescription for the 30-days supply of digoxin containing 15 pills, 0.25 mg each pill, has an average daily dose of 0.125 mg. To calculate average daily dose for elixirs and concentrates, multiply the volume prescribed by daily dose and divide by the days supply. Do not round when calculating average daily dose.<br/> <b>Added:</b> For the definition of ‘Cumulative Medication Duration’: Table 3: High-Risk Medications With Average Daily Dose Criteria.</p> <p><b>Updated numerator instructions: For the MIPS CQMs Specifications collection type: Added:</b> A prescription for medications classified as high risk exceeding average daily dose criteria listed in Table 3.</p> <p><b>Updated definition: For the eCQM Specifications collection type: Revised:</b> Index Prescription Start Date (IPSD) – The start date of the earliest prescription ordered for a high-risk medication during the measurement period.<br/> A high-risk medication is identified by any one of the following:<br/> a. A prescription for medications classified as high risk at any dose and for any duration.<br/> b. A prescription for medications classified as high risk at any dose with greater than a 90 day supply.<br/> c. A prescription for medications classified as high risk exceeding average daily dose criteria.<br/> An order is identified by either a prescription order or a prescription refill.</p> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p><b>The measure numerator is revised to read: For the eCQM Specifications collection type: Rate 1:</b> Patients with at least two orders of high-risk medications from the same drug class on different days.<br/> a. At least two orders of high-risk medications from the same drug class.<br/> b. At least two orders of high-risk medications from the same drug class with summed days supply greater than 90 days.<br/> c. At least two orders of high-risk medications from the same drug class each exceeding average daily dose criteria.<br/> Rate 2: Patients with at least two orders of high-risk medications from the same drug class (that is, antipsychotics and benzodiazepines) on different days.<br/> Total rate (the sum of the two previous numerators, deduplicated).</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Revised:</b> to group drugs by class rather than medication.<br/> <b>Added:</b> belladonna alkaloids, chlorthalidone, clonidine, glimepiride.<br/> <b>Removed:</b> naloxone/pentazocine, pentazocine, ticlopidine hydrochloride.</p> |
| Measure Steward:                  | National Committee for Quality Assurance   |
| High Priority Measure:            | Yes  |
| Measure Type:                     | Process  |
| Rationale:                        | <p>We proposed to revise the initial patient population for the eCQM Specifications collection type to change the age anchor to the end of the measurement period so that it will align with HEDIS measure requirements and create consistency for implementation across programs.</p> <p>We proposed to update the definition, guidance, and numerator language for the eCQM Specifications collection type to incorporate average daily dose criteria for determining the numerator submission criteria 1 option for submission. Additionally, we proposed to revise the numerator language and correct the logic to account for at least two orders from same drug class rather than two orders of the same medication to support patient safety when prescribing high risk medications.</p>  |

Do not count an LAIV vaccination administered before the child's second birthday.</li> </ul> |
| <b>Measure Steward:</b>   | National Committee for Quality Assurance  |
| <b>High Priority Measure:</b>   | No  |
| <b>Measure Type:</b>  | Process   |
| <b>Rationale:</b>   | <p>We proposed to update the measure guidance to remove the numerator criteria related to adverse reactions to vaccines, as these do not align with intent of the measure which is to ensure children receive the CDC-recommended appropriate vaccines by age 2 to prevent disease, which is more cost effective than treatment, and to protect the health of their community. We also proposed to update the denominator exclusions by moving the numerator inclusion criteria for children who are immunocompromised to the denominator exclusion, as this patient population is not appropriate for assessment of the quality action. Additionally, we proposed to update the logic and logic definitions related to hospice care to add flexibility to how assessment data and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. Furthermore, we proposed to update the numerator to remove seropositive test results as the CDC does not specifically recommend conducting antibody testing to determine immunity to disease in lieu of vaccination.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46761 through 46762), we are finalizing the changes to measure Q240 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.40 Sleep Apnea: Severity Assessment at Initial Diagnosis**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 277  |
| CMS eCQM ID:  | N/A  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | MIPS CQMs Specifications   |
| Current Measure Description:  | Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI) or a respiratory disturbance index (RDI) measured at the time of initial diagnosis.   |
| Substantive Change:   | <p><b>The measure description is revised to read:</b> Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.</p> <p><b>The measure numerator is revised to read:</b> Patients who had an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.</p> <p><b>Updated numerator definition: Added:</b> Respiratory Event Index (REI) – is a measure of respiratory events per unit of time for a home sleep apnea test.</p> <p><b>Updated numerator note: Revised:</b> The quality data codes below should be used for assessment of a MIPS eligible clinician's actions within 2 months of the initial evaluation for obstructive sleep apnea.</p> <p><b>The measure numerator options are revised to read:</b><br/> <b>Performance Met:</b> Apnea hypopnea index (AHI), respiratory disturbance index (RDI) or respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea<br/> <b>Denominator Exception:</b> Documentation of reason(s) for not measuring an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) within 2 months of initial evaluation for suspected obstructive sleep apnea (for example, medical, neurological, or psychiatric disease that prohibits successful completion of a sleep study, patients for whom a sleep study would present a bigger risk than benefit or would pose an undue burden, dementia, patients who decline AHI/RDI/REI measurement, patients who had a financial reason for not completing testing, test was ordered but not completed, patients decline because their insurance (payer) does not cover the expense)<br/> <b>Performance Not Met:</b> Apnea hypopnea index (AHI), respiratory disturbance index (RDI), or respiratory event index (REI) not documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea, reason not given</p> |
| Measure Steward:  | American Academy of Sleep Medicine   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to update the measure description and numerator options language to harmonize the description with the revised numerator language. We proposed to revise the numerator to add a respiratory event index (REI) assessment and a 2-month timeframe within which a sleep study must be performed to determine the severity of suspected obstructive sleep apnea as the REI is appropriate for determining sleep apnea severity and the extended time frame will allow the clinicians flexibility in clinical workflow. We proposed to update the numerator definition to include a definition of REI to provide clarity and consistency. We also proposed to update the numerator note to provide further guidance on meeting numerator compliance.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46763), we are finalizing the changes to measure Q277 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.41 Rehabilitative Therapy Referral for Patients with Parkinson's Disease**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality#:   | 293   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Communication and Care Coordination   |
| Current Collection Type:  | MIPS CQMs Specifications  |
| Current Measure Description:  | Percentage of all patients with a diagnosis of Parkinson's Disease who were referred to physical, occupational, speech, or recreational therapy once during the measurement period.   |
| Substantive Change:   | <b>Updated denominator criteria: Removed:</b> coding for Physical and Occupational Therapy and Speech Language Pathology.   |
| Measure Steward:  | American Academy of Neurology   |
| High Priority Measure:  | Yes   |
| Measure Type:   | Process   |
| Rationale:  | We proposed to remove coding for Physical and Occupational Therapy and Speech Language Pathology from the denominator eligible encounters. While these clinicians may treat patients with Parkinson's disease, the required quality actions cannot be feasibly implemented for these clinician types as it requires a referral. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46763), we are finalizing the changes to measure Q293 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.42 Initiation and Engagement of Alcohol and Other Drug Dependence Treatment**

| Category                          | Description  |
|-----------------------------------|--|
| NQF # / eCQM NQF #:               | N/A / N/A  |
| Quality#:                         | 305  |
| CMS eCQM ID:                      | CMS137v11  |
| National Quality Strategy Domain: | Effective Clinical Care  |
| Current Collection Type:          | eCQM Specifications  |
| Current Measure Description:      | <p>Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported.</p> <p>a. Percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis.</p> <p>b. Percentage of patients who engaged in ongoing treatment including two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention.</p>  |
| Substantive Change:               | <p><b>The measure description is revised to read:</b> Percentage of patients 13 years of age and older with a new substance use disorder (SUD) episode who received the following (Two rates are reported):</p> <p>a. Percentage of patients who initiated treatment, including either an intervention or medication for the treatment of SUD, within 14 days of the new SUD episode.</p> <p>b. Percentage of patients who engaged in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication for the treatment of SUD, within 34 days of the initiation.</p> <p><b>Updated guidance: Removed:</b> The new episode of alcohol and other drug dependence should be the first episode of the measurement period that is not preceded in the 60 days prior by another episode of alcohol or other drug dependence.</p> <p><b>The measure stratification is revised to read:</b> Report a total score, and each of the following strata:</p> <p>Stratum 1: Patients age 13-17 at the start of the measurement period</p> <p>Stratum 2: Patients age 18-64 at the start of the measurement period</p> <p>Stratum 3: Patients age 65 and older at the start of the measurement period</p> <p><b>The measure initial patient population is revised to read:</b> Patients age 13 years of age and older as of the start of the measurement period who were diagnosed with a new SUD episode during a visit between January 1 and November 14 of the measurement period.</p> <p><b>The denominator exclusions are revised to read: Removed:</b> Exclude patients with a negative diagnosis history, defined as an encounter or medication treatment for a diagnosis of alcohol, opioid or other drug abuse or dependence in the 60 days prior to the first episode of alcohol or drug dependence.</p> <p><b>The measure definition is revised to read:</b> The new SUD episode is the first encounter during the Intake Period with a diagnosis of SUD with no encounter or medication treatment for a diagnosis of SUD in the 60 days prior.</p> <p>The initiation of treatment is the first SUD treatment within 14 days of a new SUD episode.</p> <p>Treatment includes inpatient SUD admissions, outpatient visits, intensive outpatient encounters or partial hospitalizations, and medications for the treatment of SUD.</p> <p>The Intake Period: January 1-November 14 of the measurement year. The Intake Period is used to capture new SUD episodes. The November 14 cut-off date ensures that all services can occur before the measurement period ends.</p> <p><b>Updated logic and logic definitions: Removed:</b> emergency department visits and medically managed withdrawals from the negative lookback rules.</p> <p><b>Revised:</b> to account for instances when there are multiple qualifying initiation events.</p> <p><b>Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p><b>The measure numerator is revised to read:</b></p> <p>Numerator 1: Initiation of treatment includes either an intervention or medication for the treatment of SUD within 14 days of the new SUD episode</p> <p>Numerator 2: Engagement in ongoing SUD treatment within 34 days of initiation includes:</p> <ol style="list-style-type: none"> <li>1. A long-acting SUD medication on the day after the initiation through 34 days after the initiation of treatment</li> <li>2. One of the following options on the day after the initiation of treatment through 34 days after the initiation of treatment: a) two engagement visits, b) two engagement medication treatment events, c) one engagement visit and one engagement medication treatment event</li> </ol> |
| Measure Steward:                  | National Committee for Quality Assurance   |
| High Priority Measure:            | Yes  |
| Measure Type:                     | Process  |
| Rationale:                        | <p>We proposed to revise the measure description, initial patient population, numerator, denominator exclusions, and definition to remove any reference to 'substance abuse' with the measure as the terms "abuse and dependence" have been replaced by 'substance use disorder (SUD)' in the Diagnostic and Statistical Manual of Mental Disorders 5 (DSM-5). This will align terminology within the measure to current clinical terminology.</p> <p>We proposed to update the measure guidance and definition to clarify what defines an episode of SUD and update the stratification from 2 age groups to 3 age groups.</p> <p>We proposed to update the measure logic and logic definitions to remove emergency department visits and medically managed withdrawals from the negative lookback rules to align with the measure intent since the emergency department may not represent the best setting for the initiation of SUD treatment and the measure will not be applicable for patients already receiving SUD therapy. We also proposed an additional revision to the measure logic and logic definitions to specify how data should be handled</p>  |

| Category  | Description   |
|---|---|
|   | when there are multiple qualifying initiation events to ensure data collection accuracy. Additionally, we proposed to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. |
| <p><b>Comment:</b> One commenter stated that CMS proposed to update the measure logic and logic definitions for measure Q305 to remove emergency department visits and medically managed withdrawals from the negative lookback rules to align with the measure intent in part since CMS believed that the emergency department may not represent the best setting for the initiation of SUD treatment. The commenter stated there is a plethora of evidence around the benefits of initiating medication assisted treatment (MAT) for the treatment of opioid use disorder (OUD) and other substance use disorders (including alcohol abuse disorder) in the emergency department. Previous comments were provided in rulemaking around the effectiveness of MAT on Modifications Related to Medicare Coverage for OUD Treatment Services Furnished by OTPs (opioid treatment programs). The commenter questioned the rationale behind why CMS would include such a statement in the proposed rule.</p> <p><b>Response:</b> While we agree that the emergency department may represent a setting for providing immediate intervention for a patient in SUD crisis; the intent of the measure is to assess initiation and continued SUD treatment. We believe that SUD treatment initiated in the ED is unlikely to meet the standards of this measure because of the inherent difficulties in following up with ED patients. Since the ED does not provide ongoing treatment, it would be a challenge to report the second rate which includes “two additional interventions or short-term medications, or one long-term medication for the treatment of SUD, within 34 days of the initiation.”</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46764 through 46765), we are finalizing the changes to measure Q305 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

#### D.43 Cervical Cancer Screening

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 309  |
| CMS eCQM ID:  | CMS124v11  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | eCQM Specifications  |
| Current Measure Description:  | Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria:<br>* Women age 21-64 who had cervical cytology performed within the last 3 years<br>* Women age 30-64 who had cervical human papillomavirus (HPV) testing performed within the last 5 years   |
| Substantive Change:   | <p><b>Updated guidance: Removed:</b> Patient self-report for procedures as well as diagnostic studies should be recorded in ‘Procedure, Performed’ template or ‘Diagnostic Study, Performed’ template in QRDA-1.</p> <p><b>The measure initial patient population is revised to read:</b> Women 24-64 years of age by the end of the measurement period with a visit during the measurement period.</p> <p><b>Updated logic and logic definitions: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p>  |
| Measure Steward:  | National Committee for Quality Assurance   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | We proposed to update the measure guidance to remove statements related to QRDA-1 as we publish separate QRDA implementation guides. We also proposed to revise the initial patient population to change the age anchor from the start of the measurement period to the end of the measurement period so that it will align with HEDIS measure requirements and creates consistency for implementation across programs. Additionally, we proposed to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. |
| <p><b>Comment:</b> Two commenters requested that CMS confirm that changing the initial patient population would still include women who are 21 to 23 years of age, and that screening initiation is still recommended for women who are 21 years of age and above. One commenter indicated that cervical cancer screening initiation at 21 years of age is supported by USPSTF, ACOG, ASCP and other professional organizations, as it prevents disease progression. The commenter stated that raising the screening age could increase the already high rate of underscreening among individuals aged 25-29 years and exacerbate existing health inequities in cervical cancer screening, incidence, morbidity, and mortality, according to ACOG.</p> <p><b>Response:</b> To clarify, the revised initial patient population would still include women who are 21 to 23 years of age as the age anchor for when the age is determined was moved from the start of the measurement period to the end of the measurement period. This ensures that the patient is at least 23 years of age at the time of their visit and allows assessment of cervical cancer screening within the measurement period and within a 2-year look back period, that is the two previous performance periods. Since performance is based upon having an assessment within the last 3 years, the measure will allow performance to be captured for the patient when they were 21 years of age.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46765), we are finalizing the changes to measure Q309 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**D.44 Chlamydia Screening for Women**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 310  |
| CMS eCQM ID:  | CMS153v11  |
| National Quality Strategy Domain:   | Community/Population Health  |
| Current Collection Type:  | eCQM Specifications  |
| Current Measure Description:  | Percentage of women 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.   |
| Substantive Change:   | <p><b>The measure stratification is revised to read:</b> Stratum 1: Patients age 16-20 by the end of the measurement period<br/>Stratum 2: Patients age 21-24 by the end of the measurement period.</p> <p><b>The measure initial patient population is revised to read:</b> Women 16 to 24 years of age by the end of the measurement period who are sexually active and who had a visit in the measurement period.</p> <p><b>Updated logic and logic definitions: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p>   |
| Measure Steward:  | National Committee for Quality Assurance   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | We proposed to revise the measure stratification and initial patient population to change the age anchor from the start of the measurement period to the end of the measurement period so that it will align with HEDIS measure requirements and creates consistency for implementation across programs. We also proposed to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46765), we are finalizing the changes to measure Q310 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.45 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 317  |
| CMS eCQM ID:  | CMS22v11   |
| National Quality Strategy Domain:   | Community/Population Health  |
| Current Collection Type:  | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications   |
| Current Measure Description:  | Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.  |
| Substantive Change:   | <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic to ensure there are values captured for both diastolic and systolic blood pressure when evaluating criteria. And to avoid blood pressure values falling into multiple categories.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> encounter class attribute for non-telehealth eligible encounters.</p>     |
| Measure Steward:  | Centers for Medicare & Medicaid Services   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | For the eCQM Specifications collection type we proposed to revise the logic for the second hypertensive blood pressure reading (systolic blood pressure (SBP) 130-139 or diastolic blood pressure (DBP) 80-89) to avoid blood pressure values falling into multiple categories and to update the value set/coding to implement the 'virtual' encounter class attribute for the purposes of excluding non-telehealth eligible encounters within eCQM measure logic. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46766), we are finalizing the changes to measure Q317 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.46 Falls: Screening for Future Fall Risk**

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | 0101 / N/A  |
| Quality#:  | 318   |
| CMS eCQM ID:   | CMS139v11   |
| National Quality Strategy Domain:  | Patient Safety  |
| Current Collection Type:   | eCQM Specifications   |
| Current Measure Description:   | Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.  |
| Substantive Change:  | <p><b>The measure initial patient population is revised to read:</b> Patients aged 65 years and older at the start of the measurement period with a visit during the measurement period.</p> <p><b>Updated logic and logic definitions: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p><b>Updated value set/coding: Added:</b> coding for physical and occupational therapy.</p>   |
| Measure Steward:   | National Committee for Quality Assurance  |
| High Priority Measure:   | Yes   |
| Measure Type:  | Process   |
| Rationale:   | <p>We proposed to revise the initial patient population to change the age anchor from the start of the measurement period to the end of the measurement period so that it will align with HEDIS measure requirements and creates consistency for implementation across programs. We also proposed to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. Additionally, we proposed to add occupational and physical therapy evaluation visits as applicable encounters as these clinicians interact with older adults that may be more susceptible to falls. Occupational therapists are “uniquely qualified to address the multifactorial nature of falls, given their knowledge of factors that influence occupational performance.”<sup>1</sup> There is a strong body of evidence that supports the role of physical therapists in reducing fall risk and fall prevention as outlined within the American Physical Therapy Association (APTA) handout: <a href="https://www.apta.org/patient-care/public-health-population-care/balance-and-falls/research-on-falls#">https://www.apta.org/patient-care/public-health-population-care/balance-and-falls/research-on-falls#</a>.</p> |
| <p><b>Comment:</b> One commenter appreciated the update to add coding for occupational therapy evaluation visits as applicable encounters for measure Q318.</p> <p><b>Response:</b> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46766), we are finalizing the changes to measure Q318 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

**D.47 Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients**

| Category                          | Description   |
|-----------------------------------|---|
| NQF # / eCQM NQF #:               | 0658 / N/A  |
| Quality#:                         | 320   |
| CMS eCQM ID:                      | N/A   |
| National Quality Strategy Domain: | Communication and Care Coordination   |
| Current Collection Type:          | Medicare Part B Claims Measure Specifications   MIPS CQMs Specifications  |
| Current Measure Description:      | Percentage of patients aged 50 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report.  |
| Substantive Change:               | <p><b>The measure description is revised to read: For all collection types:</b> Percentage of patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report.</p> <p><b>The measure denominator is revised to read: For all collection types:</b> All patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy.</p> <p><b>Updated denominator criteria: For all collection types: Revised:</b> Patients aged 45 to 75 on date of encounter.</p> |
| Measure Steward:                  | American Gastroenterological Association  |
| High Priority Measure:            | Yes   |
| Measure Type:                     | Process   |
| Rationale:                        | <p>We proposed to revise the measure description, denominator, and denominator criteria for all collection types to expand the denominator eligible patient population to reflect USPSTF guidance that screening colonoscopies begin at age 45.</p> <p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46767), we are finalizing the changes to measure Q320 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p>  |

**D.48 CAHPS for MIPS Clinician/Group Survey**

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | 0005 / N/A  |
| Quality#:  | 321   |
| CMS eCQM ID:   | N/A   |
| National Quality Strategy Domain:  | Person and Caregiver-Centered Experience and Outcomes   |
| Current Collection Type:   | CMS-approved Survey Vendor  |
| Current Measure Description:   | <p>The Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Clinician/Group Survey is comprised of 10 Summary Survey Measures (SSMs) and measures patient experience of care within a group practice. The NQF endorsement status and endorsement id (if applicable) for each SSM utilized in this measure are as follows:</p> <ul style="list-style-type: none"> <li>• Getting Timely Care, Appointments, and Information; (Not endorsed by NQF)</li> <li>• How well Providers Communicate; (Not endorsed by NQF)</li> <li>• Patient's Rating of Provider; (NQF endorsed # 0005)</li> <li>• Access to Specialists; (Not endorsed by NQF)</li> <li>• Health Promotion and Education; (Not endorsed by NQF)</li> <li>• Shared Decision-Making; (Not endorsed by NQF)</li> <li>• Health Status and Functional Status; (Not endorsed by NQF)</li> <li>• Courteous and Helpful Office Staff; (NQF endorsed # 0005)</li> <li>• Care Coordination; (Not endorsed by NQF)</li> <li>• Stewardship of Patient Resources. (Not endorsed by NQF)</li> </ul> |
| Substantive Change:  | <p><b>Updated case-mix adjustor: Removed:</b> Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey item specific to the case-mix adjustor for "Asian language survey completion".</p> <p><b>Added:</b> language other than English spoken at home.</p>   |
| Measure Steward:   | Agency for Healthcare Research & Quality  |
| High Priority Measure:   | Yes   |
| Measure Type:  | Patient Engagement/Experience   |
| Rationale:   | <p>We proposed to update the case-mix adjustor as only a small percentage of patients who report speaking a language other than English at home actually complete the survey in that language. By capturing the language that is actually spoken within the patient's home, we believed this will more accurately capture their language preference. For more information please refer to section IV.A.6.c.(1)(b)(ii)(A) of this final rule.</p>  |
| <p><b>Comment:</b> One commenter was supportive of the substantive changes to measure Q321 as it captures more culturally appropriate data. Another commenter expressed support for the change as this would help ensure consistent adjustment between CAHPS surveys in other settings, as well as more accurately represent meaningful comparisons of performance between MIPS groups.</p>  |   |
| <p><b>Response:</b> We thank the commenters for supporting the substantive changes to this measure.</p>  |   |
| <p><b>Comment:</b> One commenter did not necessarily disagree with CMS' premise that collecting information on the language spoken by the participant at home is potentially more accurate than the language used by the respondent to complete the survey, but rather requested that CMS share more detail on how this revision would improve the reliability and validity of the scores. The commenter supported this modification as long as CMS shares sufficient data demonstrating that the revised scoring better reflects the quality of care provided. Another commenter supported this refinement to the CAHPS for MIPS Survey measure if it truly demonstrates that the revised scoring better reflects the care provided.</p>  |   |
| <p><b>Response:</b> We believe that collecting information on the language spoken by the participant at home as a case-mix adjustor is likely to increase participation and allow for a more meaningful comparison of performance between MIPS groups and aligns with CMS' effort to provide culturally and linguistically appropriate services (CLAS), which are intended to advance health equity, improve quality, and help eliminate health care disparities. Analysis of CY 2019 performance period for CAHPS for MIPS Survey measure data found that adding case-mix adjustors for Spanish language spoken at home, Asian language(s) spoken at home, and other language spoken at home has minimal impacts on scoring for most groups, and slightly positively impacts the scores of groups with substantial patient populations who speak a language other than English at home.</p> |   |
| <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46767), we are finalizing the change to measure Q321 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p>   |   |

**D.49 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy**

| <b>Category</b>   | <b>Description</b>   |
|---|--|
| <b>NQF # / eCQM NQF #:</b>  | 1525 / N/A   |
| <b>Quality#:</b>  | 326  |
| <b>CMS eCQM ID:</b>   | N/A  |
| <b>National Quality Strategy Domain:</b>  | Effective Clinical Care  |
| <b>Current Collection Type:</b>   | MIPS CQMs Specifications   |
| <b>Current Measure Description:</b>   | Percentage of patients aged 18 years and older with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.  |
| <b>Substantive Change:</b>  | <b>Updated denominator exception: Revised:</b> Documentation of medical reason(s) for not prescribing an FDA-approved anticoagulant (for example, present or planned atrial appendage occlusion or ligation).  |
| <b>Measure Steward:</b>   | American Heart Association   |
| <b>High Priority Measure:</b>   | No   |
| <b>Measure Type:</b>  | Process  |
| <b>Rationale:</b>   | We proposed to revise the denominator exception by revising the language to account for the removal of patients that do not get prescribed an FDA-approved anticoagulant based on medical reason(s) from the performance rate as prescribing medication may not be appropriate in the instance a patient has or may undergo an atrial appendage occlusion or ligation. This procedure will eliminate the patient's need to take oral anticoagulation (OAC) therapy as left atrial appendage occlusion (LAEO) has shown similar efficacy to OAC on stroke rate ( <a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7189129/#">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7189129/#</a> ). |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46768), we are finalizing the changes to measure Q326 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.50 Follow-Up Care for Children Prescribed ADHD Medication (ADD)**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality#:   | 366   |
| CMS eCQM ID:  | CMS136v12   |
| National Quality Strategy Domain:   | Effective Clinical Care   |
| Current Collection Type:  | eCQM Specifications   |
| Current Measure Description:  | <p>Percentage of children 6-12 years of age and newly dispensed a medication for attention-deficit/hyperactivity disorder (ADHD) who had appropriate follow-up care. Two rates are reported.</p> <p>a) Percentage of children who had one follow-up visit with a practitioner with prescribing authority during the 30-Day Initiation Phase.</p> <p>b) Percentage of children who remained on ADHD medication for at least 210 days and who, in addition to the visit in the Initiation Phase, had at least two additional follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.</p>  |
| Substantive Change:   | <p><b>Updated definition: Revised:</b> Index Prescription Start Date (IPSD): The earliest prescription dispensing date for an ADHD medication where the date is in the Intake Period and an ADHD medication was not dispensed during the 120 days prior. Continuation and Maintenance Phase: The 300 days following the IPSD.</p> <p><b>The measure initial patient population is revised to read:</b><br/> Initial Population 1: Children 6-12 years of age as of the Intake Period who were prescribed an ADHD medication during the Intake Period and who had a visit during the measurement period. Children are removed if they were actively on ADHD medication in the 120 days prior to the IPSD, or had an acute inpatient stay with a principal diagnosis of mental, behavioral or neurodevelopmental disorder during the Initiation Phase.<br/> Initial Population 2: Children 6-12 years of age as of the Intake Period who were prescribed an ADHD medication during the Intake Period and remained on the medication for at least 210 days during the 301-day period, beginning on the IPSD through 300 days after the IPSD, and who had a visit during the measurement period. Children are removed if they were actively on ADHD medication in the 120 days prior to the IPSD, or had an acute inpatient stay with a principal diagnosis of mental, behavioral or neurodevelopmental disorder during the Continuation and Maintenance Phase.</p> <p><b>The measure denominator exclusion is revised to read:</b><br/> Exclude patients diagnosed with narcolepsy at any point in their history or during the measurement period.<br/> Exclude patients who are in hospice care for any part of the measurement period.</p> <p><b>The measure numerator is revised to read:</b><br/> Numerator 1: Patients who had at least one visit with a practitioner with prescribing authority during the Initiation Phase.<br/> Numerator 2: Patients who had at least one visit with a practitioner with prescribing authority during the Initiation Phase, and at least two follow-up visits during the 31-300 days after the IPSD.</p> <p><b>Updated logic and logic definitions: Revised:</b> For Numerator 2: logic to allow for only one of the two qualifying follow up visits to be an online assessment visit.<br/> <b>Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> |
| Measure Steward:  | National Committee for Quality Assurance  |
| High Priority Measure:  | No  |
| Measure Type:   | Process   |
| Rationale:  | <p>We proposed to update the measure to extend the intake period to 12-months to allow for the assessment to follow-up for patients newly prescribed ADHD medications to occur at any time during the year. We proposed to align the definitions with the 12-month intake period as well as adding clarity to the definitions. We proposed to revise the denominator exclusions, repositioning criteria listed within the denominator exclusion to the initial patient population to streamline measure logic. Additionally, we proposed to revise the initial patient population to align with definitions and to revise the anchor for age calculation to be based off of the intake period, as this is when patients can start taking ADHD medication. We proposed to revise the logic and logic definitions for numerator two to ensure that only one of the two qualifying follow up visits be an online assessment for numerator compliance. We believed this revision will align with current clinical care which may not occur as an in-office visit. We proposed to update logic and logic definitions related to hospice care to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46769), we are finalizing the changes to measure Q366 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

## D.51 Depression Remission at Twelve Months

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | 0710 / 0710e   |
| Quality#:   | 370  |
| CMS eCQM ID:  | CMS159v11  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | eCQM Specifications   MIPS CQMs Specifications   |
| Current Measure Description:  | The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.  |
| Substantive Change:   | <p><b>The measure denominator exclusion is revised to read: For the eCQM Specifications collection type:</b> 1: Patients who died any time prior to the end of the measure assessment period.</p> <p>2: Patients who received hospice or palliative care services between the start of the denominator period and the end of the measurement assessment period.</p> <p>3: Patients who were permanent nursing home residents between the start of the denominator period and the end of the measurement assessment period.</p> <p>4: Patients with a diagnosis of bipolar disorder any time prior to the end of the measure assessment period.</p> <p>5: Patients with a diagnosis of personality disorder emotionally labile any time prior to the end of the measure assessment period.</p> <p>6: Patients with a diagnosis of schizophrenia or psychotic disorder any time prior to the end of the measure assessment period.</p> <p>7: Patients with a diagnosis of pervasive developmental disorder any time prior to the end of the measure assessment period.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Added:</b> coding for preventive medicine encounters.</p> <p><b>The measure numerator is revised to read: For the eCQM Specifications collection type:</b> Adolescent patients 12 to 17 years of age and adult patients 18 years of age and older who achieved remission at 12 months as demonstrated by the most recent 12 month (+/- 60 days) PHQ-9 or PHQ-9M score of less than five.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> coding to "Contact or Office Visit" value set for preventive encounters.</p> |
| Measure Steward:  | Minnesota Community Measurement  |
| High Priority Measure:  | Yes  |
| Measure Type:   | Outcome  |
| Rationale:  | <p>We proposed to revise the denominator exclusion statements for the eCQM Specifications collection type by adding relevant interval periods to clarify timing associated with each denominator exclusion in the logic. We also proposed to revise the numerator statement to provide clarity around the measure's intent to evaluate the most recent PHQ-9 or PHQ-9M assessment and to align with measure logic, which better expressed our intent. The intent of the measure is to facilitate improved response and remission scores through appropriate and effective treatment for patients diagnosed with depression. Additionally, we proposed to update the value set/coding for the denominator criteria for all collection types to include preventive medicine encounters to engage patients and assess remission of depression.</p>  |
| <p><b>Comment:</b> Several commenters were alarmed to see the proposed new exclusion of those receiving palliative care from measure Q370. The commenters stated that palliative care seems to be being equated here with hospice, which is incorrect. The commenters stated that excluding those on hospice, who are at the end of life, is appropriate while those receiving palliative care could live for years longer. According to the commenters, palliative care is appropriate at any point in a serious illness and can be provided along with any curative, disease-modifying treatment. The commenters requested that this exclusion be removed as it perpetuates the harmful misconception that palliative care and hospice are the same thing when they are not.</p> <p><b>Response:</b> We agree that palliative care is appropriate at any point in a serious illness and can be provided with any curative, disease-modifying treatment. It is our expectation that clinicians know the difference between palliative and hospice care and would not equate them. Palliative care is generally provided by an interdisciplinary medical team that focuses on the patient as a whole and would be inclusive of the types of services addressed by this measure as needed. We note that patients receiving palliative care or hospice care were previously excluded from this measure and the update to the denominator exclusion was to define the timing. We continue to believe that patients receiving palliative care are not appropriate for this measure as a result of the extent of physical, psychosocial and spiritual care required for patients with life-threatening illnesses and their families. Due to the complexities within this population, clinicians that support patients receiving palliative care may inadvertently not perform well from the aspect of producing quality metrics (<a href="https://doi.org/10.1186/s12913-019-3961-0">https://doi.org/10.1186/s12913-019-3961-0</a>). However, we encourage clinicians to provide care as they determine best supports all patients during their healthcare journey even if the patient population is not included within the targeted denominator of a given measure specification.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46770), we are finalizing the change to measure Q370 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**D.52 Closing the Referral Loop: Receipt of Specialist Report**

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | N/A / N/A  |
| Quality#:  | 374  |
| CMS eCQM ID:   | CMS50v11   |
| National Quality Strategy Domain:  | Communication and Care Coordination  |
| Current Collection Type:   | eCQM Specifications   MIPS CQMs Specifications   |
| Current Measure Description:   | Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.   |
| Substantive Change:  | <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> Only the first referral made between January 1 – October 31 of the measurement period will be considered for this measure to allow adequate time for the referring clinician to collect the consult report by the end of the measurement period.</p> <p><b>Revised:</b> The consultant report that will successfully close the referral loop should be related to the first referral for a patient during the measurement period. If there are multiple consultant reports received by the referring clinician which pertain to a particular referral, use the first consultant report to satisfy the measure. Eligible clinicians reporting on this measure should note that all data for the reporting year is to be submitted by the deadline established by CMS. Therefore, eligible clinicians who refer patients towards the end of the reporting period (that is, October), should request that clinicians to whom they referred their patients share their consult reports as soon as possible in order for those patients to be counted in the measure numerator during the measurement period. When clinicians to whom patients are referred communicate the consult report as soon as possible with the referring clinician, it ensures that the communication loop is closed in a timely manner and that the data are included in the submission to CMS.</p> <p><b>The measure instructions are revised to read: For the MIPS CQMs Specifications collection type:</b> This measure is to be submitted a minimum of once per performance period for the first referral for all patients during the measurement period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure for the patients for whom a referral was made during the measurement period based on the services provided and the measure-specific denominator coding. The clinician who refers the patient to another clinician is the clinician who should be held accountable for the performance of this measure. All MIPS eligible clinicians reporting on this measure should note that all data for the reporting year is to be submitted by the deadline established by CMS, however, only first referrals made between January 1 – October 31 (the measurement period) will count towards the denominator to allow adequate time for the referring clinician to collect the consult report by the end of the performance period. When clinicians to whom patients are referred communicate the consult report as soon as possible with the referring clinicians, it ensures that the communication loop is closed in a timely manner and that the data is included in the submission to CMS.</p> <p><b>Updated initial patient population: For the eCQM Specifications collection type: Revised:</b> Number of patients, regardless of age, who had an encounter during the measurement period and the first referral occurred by one clinician to another clinician on or before October 31.</p> <p><b>The measure denominator is revised to read: For the MIPS CQMs Specifications collection type:</b> Number of patients, regardless of age, who had an encounter during the performance period and were referred by one clinician to another clinician on or before October 31.</p> <p><b>The measure numerator is revised to read: For all collection types:</b> Number of patients with a referral on or before October 31, for which the referring clinician received a report from the clinician to whom the patient was referred.</p> |
| Measure Steward:   | Centers for Medicare & Medicaid Services   |
| High Priority Measure:   | Yes  |
| Measure Type:  | Process  |
| Rationale:   | We proposed to revise multiple components of the measure, across all collection types, to allow for a 2-month period to close the referral loop in alignment with interested parties' feedback and published literature. This revision will allow adequate time for the referring clinician to collect the consult report prior to the end of the performance period. Additionally, we proposed to shorten the timeframe to determine denominator eligibility to account for the extension in timeframe for numerator compliance. We proposed to add language to multiple components of the measure for all collection types to clarify that only the first referral should be utilized for denominator eligibility.   |
| <p><b>Comment:</b> One commenter supported the proposed changes to measure Q374. Another commenter strongly supported the modification to reflect the time referrals require and to align the measure with other measures regarding follow-up care. The commenter stated that 2967his change would solve the main issue with this measure's use and allow for practices to assess their care coordination more accurately within each performance year. The commenter stated that 2967his proposed change would greatly increase the appeal of this measure and could lead to improved care coordination for many patients</p> <p><b>Response:</b> We thank the commenters for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46771), we are finalizing the changes to measure Q374 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**D.53 Functional Status Assessment for Total Hip Replacement**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality#:   | 376   |
| CMS eCQM ID:  | CMS56v11  |
| National Quality Strategy Domain:   | Person and Caregiver-Centered Experience and Outcomes   |
| Current Collection Type:  | eCQM Specifications   |
| Current Measure Description:  | Percentage of patients 18 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.  |
| Substantive Change:   | <p><b>The measure description is revised to read:</b> Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 270 – 365 days after the surgery.</p> <p><b>Updated denominator exclusion: Revised:</b></p> <ol style="list-style-type: none"> <li>1. Exclude patients with two or more fractures indicating trauma in the 24 hours before or at the start of the total hip arthroplasty or patients with severe cognitive impairment that starts before or in any part of the measurement period.</li> <li>2. Exclude patients who are in hospice care for any part of the measurement period.</li> </ol> <p><b>Updated logic and logic definitions: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> |
| Steward:  | Centers for Medicare & Medicaid Services  |
| High Priority Measure:  | Yes   |
| Measure Type:   | Process   |
| Rationale:  | We proposed to revise the measure description to clarify the logic associated with the age requirement, as described above in the revised measure description. We proposed to revise the denominator exclusion so the timing of the lower body fracture in relation to the THA is clearly reflected. We also proposed to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46772), we are finalizing the changes to measure Q376 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.54 Functional Status Assessments for Heart Failure**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 377  |
| CMS eCQM ID:  | CMS90v12   |
| National Quality Strategy Domain:   | Person and Caregiver-Centered Experience and Outcomes  |
| Current Collection Type:  | eCQM Specifications  |
| Current Measure Description:  | Percentage of patients 18 years of age and older with heart failure who completed initial and follow-up patient-reported functional status assessments.  |
| Substantive Change:   | <b>Updated logic and logic definitions: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.   |
| Measure Steward:  | Centers for Medicare & Medicaid Services   |
| High Priority Measure:  | Yes  |
| Measure Type:   | Process  |
| Rationale:  | We proposed to update logic and logic definitions related to hospice care to add flexibility to how data may be captured or stored to allow for different workflows and systems and more closely align with exclusion criteria, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46772), we are finalizing the changes to measure Q377 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.55 Children Who Have Dental Decay or Cavities**

| Category  | Description   |
|---|---|
| <b>NQF # / eCQM NQF #:</b>  | N/A / N/A   |
| <b>Quality#:</b>  | 378   |
| <b>CMS eCQM ID:</b>   | CMS75v11  |
| <b>National Quality Strategy Domain:</b>  | Community/Population Health   |
| <b>Current Collection Type:</b>   | eCQM Specifications   |
| <b>Current Measure Description:</b>   | Percentage of children, 6 months – 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period.  |
| <b>Substantive Change:</b>  | <p><b>The measure description is revised to read:</b> Percentage of children, 6 months – 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.</p> <p><b>The measure initial patient population is revised to read:</b> Children, 6 months – 20 years of age at the start of the measurement period, with a clinical oral evaluation by a dentist during the measurement period.</p> <p><b>Updated logic and logic definitions: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p>   |
| <b>Measure Steward:</b>   | Centers for Medicare & Medicaid Services  |
| <b>High Priority Measure:</b>   | Yes   |
| <b>Measure Type:</b>  | Outcome   |
| <b>Rationale:</b>   | We proposed to revise the measure description and initial patient population to add context and clarify that the measure is to be reported by dentists. We proposed to revise the age criteria in the initial patient population logic to clarify the measure's intent to include patients that are 20 years of age at the start of the measurement period, to ensure the appropriate patient population is being assessed for tooth decay or cavities. We also proposed to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. |
| <p><b>Comment:</b> One commenter expressed concern on limiting the denominator of measure Q378 to only include "Clinical Oral Evaluation," stating that the measure, as currently defined, measures the number of children who have dental decay. The commenter stated that it requires the identification and diagnosis of caries related lesions. The commenter stated that it is not clear from the description of the CPT codes currently included in the value set, if accurate identification and documentation of dental decay is feasible. The commenter stated that limiting the specification for the measure denominator to children with reported CDT (dental) codes for clinical oral evaluation that broadly include diagnosis and treatment planning for all oral conditions, may increase the feasibility of an accurate identification of caries related lesions. However, the commenter assumed it is unlikely that a primary care physician or a pediatrician will document care using CDT codes and that limiting the denominator to children with a CDT oral evaluation code may significantly impact on the denominator size. The commenter requested that CMS please consider these limitations as the agency reviews the measure further.</p> <p><b>Response:</b> We note that the codes within the measure were updated based on the changes proposed and finalized above for the initial patient population to ensure the measure is reported by dentists. As the measure steward, we will take this feedback into consideration during the annual revisions for possible implementation in future years.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46773), we are finalizing the changes to measure Q378 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## D.56 Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists

| Category                          | Description   |
|-----------------------------------|---|
| NQF # / eCQM NQF #:               | N/A / N/A   |
| Quality#:                         | 379   |
| CMS eCQM ID:                      | CMS74v12  |
| National Quality Strategy Domain: | Effective Clinical Care   |
| Current Collection Type:          | eCQM Specifications   |
| Current Measure Description:      | Percentage of children, 6 months – 20 years of age, who received a fluoride varnish application during the measurement period.  |
| Substantive Change:               | <p><b>The measure description is revised to read:</b> Percentage of children, 6 months – 20 years of age, who received a fluoride varnish application during the measurement period as determined by a dentist.</p> <p><b>Updated guidance: Added:</b> Telehealth encounters are not eligible for this measure because the measure does not contain telehealth-eligible codes and requires a clinical action that cannot be conducted via telehealth.</p> <p><b>The measure stratification is revised to read:</b><br/> Population 1: Patients age 6 months – 5 years at the start of the Measurement Period<br/> Population 2: Patients age 6-12 years at the start of the Measurement Period<br/> Population 3: Patients age 13-20 years at the start of the Measurement Period</p> <p><b>The measure initial patient population is revised to read:</b> Children, 6 months – 20 years of age at the start of the measurement period, with a clinical oral evaluation by a dentist during the measurement period.</p> <p><b>Updated logic and logic definitions: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p><b>Updated value set/coding: Removed:</b> value sets for Preventive Care, Telephone Visits, Online Assessments, and Office Visits.</p>   |
| Measure Steward:                  | Centers for Medicare & Medicaid Services  |
| High Priority Measure:            | No  |
| Measure Type:                     | Process   |
| Rationale:                        | <p>We proposed to revise the measure description and initial patient population to capture patients who are 20 years old at the start of the measurement period, which will align with the measure narrative and intent of being reported by a dentist. We proposed to clarify that telehealth encounters are not eligible. We proposed to make further revisions to the guidance and initial patient population based on USPSTF recommendations and reimbursement practices that primary care providers are unlikely to perform the clinical action of providing a fluoride varnish, therefore the measure intent, as described in the revised measure description, is for dentists to report this measure. We proposed to update the stratification to provide clarity on the age anchor timing and align with measure intent and incorporate the recommended format into the stratification logic. We also proposed to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. Additionally, we proposed to remove value set/coding for preventive medicine encounters, telephone visits and online assessments.</p> <p><b>Comment:</b> One commenter expressed concern on limiting the denominator of measure Q379 to only include “Clinical Oral Evaluation,” stating that this measure by description is designed for reporting by primary care physicians as well as dentists. The commenter stated that given limited dental coverage within medical plans, non-dentist providers, such as primary care physicians or pediatricians, are more likely to document the visit with a CPT code, rather than a CDT (Current Dental Terminology) code associated with an oral evaluation. The commenter stated that limiting the value set to “Clinical Oral Evaluation” may significantly impact the denominator size.</p> <p>The commenter also stated that measure Q379 does not meet the consideration criterion of “whether the measure reflects current clinical guidelines.” The commenter stated that measure Q379 only tracks a single fluoride varnish applied during the measurement period. The commenter stated that evidence-based clinical recommendations suggest that efficacy of topical fluoride is dose-dependent and fluoride varnish should be applied at least every three to six months in children.</p> <p><b>Response:</b> While we acknowledge that limiting the denominator to clinical oral evaluations only may limit the denominator eligible patient population, difficulties with accurately capturing primary care physician data for some age groups were identified and it was determined to focus on dental clinicians only to maintain data integrity. As the measure steward, we will take this feedback into consideration during the annual revisions for possible implementation in future years.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46773), we are finalizing the changes to measure Q379 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |

**D.57 Immunizations for Adolescents**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 394  |
| CMS eCQM ID:  | N/A  |
| National Quality Strategy Domain:   | Community/Population Health  |
| Current Collection Type:  | MIPS CQMs Specifications   |
| Current Measure Description:  | The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the human papillomavirus (HPV) vaccine series by their 13th birthday.  |
| Substantive Change:   | <p><b>Updated denominator exclusion: Removed:</b></p> <ol style="list-style-type: none"> <li>1. Meningococcal, Tdap and/or HPV vaccine contraindicated OR patient allergic to the meningococcal, Tdap, and/or HPV vaccine.</li> <li>2. Encephalopathy due to Tdap vaccine.</li> </ol> <p><b>Updated numerator options: Added:</b> denominator exception option for each submission criteria to reflect patients who had anaphylaxis due to the vaccine(s) being assessed.</p> <p><b>Added:</b><br/>For Submission Criteria 2: denominator exception option for patients who had encephalitis due to the tetanus, diphtheria or pertussis vaccine.</p> <p><b>Updated numerator: Revised:</b> For Submission Criteria 3: Adolescents who completed the HPV vaccine series on or between the patient's 9th and 13th birthdays.</p>                        |
| Measure Steward:  | National Committee for Quality Assurance   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | We proposed to remove the denominator exclusions for anaphylaxis and encephalopathy as patients associated with these clinical conditions should still be assessed for administration of the meningococcal, Tdap and/or HPV vaccines. We proposed to revise the numerator options to add additional parameters for denominator exceptions for those patient populations that are not appropriate for the clinical quality action of vaccine administration. We also proposed to update the numerator for Submission Criteria 3 to require completion of the HPV vaccine series on or between the 9th and 13th birthday to align with the measure's intent as described in the current measure description which is to ultimately improve adolescent immunization rates and prevent disease which is more cost effective than treatment of the disease. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46774), we are finalizing the changes to measure Q394 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.58 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality#:   | 416   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Efficiency and Cost Reduction   |
| Current Collection Type:  | Medicare Part B Claims Measure Specifications   MIPS CQMs Specifications  |
| Current Measure Description:  | Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.  |
| Substantive Change:   | <b>Modified collection type:</b> MIPS CQMs Specifications collection type.  |
| Measure Steward:  | American College of Emergency Physicians  |
| High Priority Measure:  | Yes   |
| Measure Type:   | Efficiency  |
| Rationale:  | We proposed to remove the Medicare Part B Claims Measure Specifications collection type for this measure due to an insufficient volume of data as indicated in the 2022 Quality Benchmarks. The current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip</a> . The limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46774), we are finalizing the changes to measure Q416 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.59 Osteoporosis Management in Women Who Had a Fracture**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | 0053 / N/A   |
| Quality#:   | 418  |
| CMS eCQM ID:  | N/A  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | Medicare Part B Claims Measure Specifications   MIPS CQMs Specifications   |
| Current Measure Description:  | The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture.   |
| Substantive Change:   | <b>Updated denominator note:</b> For the MIPS CQMs Specifications collection type: <b>Revised:</b> To assess the age for exclusions, the patient's age on the date of the encounter should be used.  |
| Measure Steward:  | National Committee for Quality Assurance   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | We proposed to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46775), we are finalizing the changes to measure Q418 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.60 Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | 2152 / N/A  |
| Quality#:   | 431   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Community/Population Health   |
| Current Collection Type:  | MIPS CQMs Specifications  |
| Current Measure Description:  | Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.  |
| Substantive Change:   | <p><b>Updated denominator exclusion: Added: For all submission criteria:</b></p> <ol style="list-style-type: none"> <li>1. Patients with dementia any time during the patient's history through the end of the measurement period.</li> <li>2. Patients who use hospice services any time during the measurement period.</li> </ol> <p><b>Updated denominator criteria: Added:</b> coding for audiology.</p> <p><b>Updated numerator definition: Revised: For Submission Criteria 1:</b><br/>AUDIT Screening Instrument (score &gt; 8)</p> <p><b>Updated numerator options: Removed: For all submission criteria:</b> all denominator exceptions.</p>   |
| Measure Steward:  | National Committee for Quality Assurance  |
| High Priority Measure:  | No  |
| Measure Type:   | Process   |
| Rationale:  | We proposed to update the measure to add denominator exclusions and remove denominator exceptions to reduce burden by removing patients from the denominator eligible patient population as the clinical quality action may not be appropriate. This revision will allow clinicians to identify the measure's intended patient population prior to numerator compliance being determined, which will reduce the denominator patient population applicable for reporting. Additionally, we proposed to revise the AUDIT screening instrument score as this will align with the World Health Organization (WHO) guidelines. We also proposed to update the denominator criteria to include coding for audiology as this measure is applicable to their scope of care. Studies have shown a positive correlation between hearing loss and alcohol consumption, more markedly with heavy alcohol consumption, making this concept important for audiologists to assess ( <a href="https://academicworks.cuny.edu/cgi/viewcontent.cgi?article=5338&amp;context=gc_etds">https://academicworks.cuny.edu/cgi/viewcontent.cgi?article=5338&amp;context=gc_etds</a> ). |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46775), we are finalizing the changes to measure Q431 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.61 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 438  |
| CMS eCQM ID:  | CMS347v6   |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | eCQM Specifications   MIPS CQMs Specifications   |
| Current Measure Description:  | Percentage of the following patients – all considered at high risk of cardiovascular events – who were prescribed or were on statin therapy during the measurement period:<br>*All patients who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR<br>*Patients aged $\geq 20$ years who have ever had a low-density lipoprotein cholesterol (LDL-C) level $\geq 190$ mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR<br>*Patients aged 40-75 years with a diagnosis of diabetes   |
| Substantive Change:   | <p><b>The measure description is revised to read: For the eCQM Specifications collection type:</b> Percentage of the following patients – all considered at high risk of cardiovascular events – who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> <li>• All patients with an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD) or ever had an ASCVD procedure; OR</li> <li>• Patients aged <math>\geq 20</math> years who have ever had a low-density lipoprotein cholesterol (LDL-C) level <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR</li> <li>• Patients aged 40-75 years with a diagnosis of diabetes.</li> </ul> <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> Initial Population 1:<br/>All patients who have an active diagnosis of clinical ASCVD anytime during the measurement period or ever had an ASCVD procedure.<br/><b>Added:</b> Millimoles per liter (mmol/L) should be converted to milligrams per deciliter (mg/dL) for reporting this measure.</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Population 1:</b><br/>All patients who have an active diagnosis of clinical ASCVD or ever had an ASCVD procedure.</p> <p><b>Updated denominator exclusion: For all collection types: Removed: For all submission criteria:</b><br/>Patients who have a diagnosis of pregnancy at any time during the measurement period.</p> <p><b>Updated definition: For the MIPS CQMs Specifications collection type: Added:</b> Ezetimibe / Rosuvastatin – Roszet – Fixed Dose Combination* to Table 1 – Statin Medication Therapy List.<br/><b>Revised:</b><br/>Lipoprotein Density Cholesterol (LDL-C) result – A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record. When both direct and calculated test results are available on the same day, the direct LDL-C test result should be used.</p> <p><b>Updated denominator exception: For the eCQM Specifications collection type: Added:</b> Patients with documentation of a medical reason for not being prescribed statin therapy.</p> |
| Measure Steward:  | Centers for Medicare & Medicaid Services   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to update multiple components of the measure, for the eCQM Specifications collection type, to revise the timing associated with a clinical ASCVD diagnosis to align with the measure intent of only including patients with an active diagnosis. We also proposed to remove the pregnancy exclusion for all collection types to align with U.S Food and Drug Administration (FDA) recommendations that pregnancy be removed as a contraindication in prescribing statins (<a href="https://www.fda.gov/safety/medical-product-safety-information/statins-drug-safety-communication-fda-requests-removal-strongest-warning-against-using-cholesterol">https://www.fda.gov/safety/medical-product-safety-information/statins-drug-safety-communication-fda-requests-removal-strongest-warning-against-using-cholesterol</a>).</p> <p>We proposed to revise the eCQM Specifications collection type in order to standardize the method that represents the lab value for low-density lipoprotein cholesterol (LDL-C). We proposed to revise the measure to request that Millimoles per liter (mmol/L) should be converted to milligrams per deciliter (mg/dL). We also proposed to update the definitions for the MIPS CQMs Specification collection type by adding another medication to the statin medication therapy list for completeness and to clarify which test results should be used for both direct and calculated test results for fasting or non-fasting LDL-C test if they happen to be available on the same day.</p> <p>We proposed to update the denominator exceptions for the eCQM Specification collection type by adding a medical reason for not being prescribed statin therapy to align with American College of Cardiology/American Heart Association (ACC/AHA) guidelines (<a href="https://www.acc.org/latest-in-cardiology/ten-points-to-remember/2019/03/07/16/00/2019-acc-aha-guideline-on-primary-prevention-gl-prevention">https://www.acc.org/latest-in-cardiology/ten-points-to-remember/2019/03/07/16/00/2019-acc-aha-guideline-on-primary-prevention-gl-prevention</a>).</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46776), we are finalizing the changes to measure Q438 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.62 Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician**

| Category            | Description |
|---------------------|-------------|
| NQF # / eCQM NQF #: | N/A / N/A   |
| Quality#:           | 440         |
| CMS eCQM ID:        | N/A         |

| Category   | Description   |
|--|---|
| <b>National Quality Strategy Domain:</b>   | Communication and Care Coordination   |
| <b>Current Collection Type:</b>  | MIPS CQMs Specifications  |
| <b>Current Measure Description:</b>  | Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC) and Squamous Cell Carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist. |
| <b>Substantive Change:</b>   | <b>Updated denominator note: Removed:</b> denominator note.<br><b>Updated denominator exception: Added:</b> Pathology report for tissue specimens produced from wide local excisions or re-excisions.   |
| <b>Measure Steward:</b>  | American Academy of Dermatology   |
| <b>High Priority Measure:</b>  | Yes   |
| <b>Measure Type:</b>   | Process   |
| <b>Rationale:</b>  | We proposed to remove the denominator note and add a denominator exception to simplify identifying the denominator eligible patient population and better address cases of excisions and re-excisions that may be included via the pathology CPT codes 88304 & 88305.   |
| <b>Comment:</b> Several commenters were supportive of the addition of a denominator exception as proposed for measure Q440. These exceptions align the measure with its intended purpose more accurately.  |   |
| <b>Response:</b> We thank the commenters for supporting the substantive changes to this measure.   |   |
| After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46777), we are finalizing the changes to measure Q440 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.63 Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)**

| Category  | Description   |
|---|---|
| <b>NQF # / eCQM NQF #:</b>  | N/A / N/A   |
| <b>Quality#:</b>  | 441   |
| <b>CMS eCQM ID:</b>   | N/A   |
| <b>National Quality Strategy Domain:</b>  | Effective Clinical Care   |
| <b>Current Collection Type:</b>   | MIPS CQMs Specifications  |
| <b>Current Measure Description:</b>   | The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) – Using the IVD denominator optimal results include: <ul style="list-style-type: none"> <li>• Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg – AND</li> <li>• Most recent tobacco status is Tobacco Free – AND</li> <li>• Daily Aspirin or Other Antiplatelet Unless Contraindicated – AND</li> <li>• Statin Use Unless Contraindicated</li> </ul>                |
| <b>Substantive Change:</b>  | <b>The measure numerator note is revised to read:</b> For Component 1: <ul style="list-style-type: none"> <li>• Submit G9789 for blood pressures recorded during Inpatient Stays, Emergency Room Visits, or Urgent Care Visits. In order to meet performance, the most recent blood pressure should be recorded within the performance period.</li> <li>• Home BP results which can be obtained digitally, in writing or verbally, and are able to be stored in the EMR in a discrete field can be included. Accepting these BP results is at the discretion of the provider.</li> </ul> <b>Updated denominator exception: Revised:</b> For Component 1: Blood pressure recorded during inpatient stays, Emergency Room Visits, or Urgent Care Visits |
| <b>Measure Steward:</b>   | Wisconsin Collaborative for Healthcare Quality  |
| <b>High Priority Measure:</b>   | Yes   |
| <b>Measure Type:</b>  | Intermediate Outcome  |
| <b>Rationale:</b>   | We proposed to revise the numerator note to capture additional blood pressure results as a response to the impact COVID-19 has had on the availability of in-office blood pressure results. Additionally, we proposed to revise the denominator exception with the removal of self-reported blood pressure results. This revision allows clinicians to utilize patient reported blood pressures, documented in the electronic medical record, for the determination of numerator compliance.  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46777), we are finalizing the changes to measure Q441 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.64 Percentage of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (lower score – better)**

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | 0210 / N/A  |
| Quality#:  | 453   |
| CMS eCQM ID:   | N/A   |
| National Quality Strategy Domain:  | Effective Clinical Care   |
| Current Collection Type:   | MIPS CQMs Specifications  |
| Current Measure Description:   | Percentage of patients who died from cancer receiving chemotherapy in the last 14 days of life.   |
| Substantive Change:  | <p><b>The measure title is revised from ‘Percentage of Patients who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (lower score – better)’ to: Percentage of Patients who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)</b></p> <p><b>The measure description is revised to read:</b> Percentage of patients who died from cancer receiving systemic cancer-directed therapy in the last 14 days of life.</p> <p><b>The measure numerator is revised to read:</b> Patients who received systemic cancer-directed therapy in the last 14 days of life.</p> <p><b>Updated numerator note: Added:</b> Definition of systemic cancer-directed therapy includes:</p> <ul style="list-style-type: none"> <li>• All traditional cytotoxic chemotherapy (such as alkylating agents, antimetabolites, plant alkaloids and terpenoids, topoisomerase inhibitors, and antitumor antibiotics);</li> <li>• Immunotherapy;</li> <li>• Biologics (such as Herceptin, Rituxan); and</li> <li>• Targeted agents</li> </ul> <p>Do not include supportive care therapies (for example, growth factors, bisphosphonates, RANK ligand inhibitors, nausea medications or fluids if these are not given in association with “systemic cancer-directed therapy”). Hormonal therapies and steroids are not included in this systemic cancer directed therapy definition.</p> <p><b>The measure numerator options are revised to read:</b></p> <p><b>Performance Met:</b> Patient received systemic cancer-directed therapy in the last 14 days of life.</p> <p><b>Performance Not Met:</b> Patient did not receive systemic cancer-directed therapy in the last 14 days of life.</p> |
| Measure Steward:   | American Society of Clinical Oncology   |
| High Priority Measure:   | Yes   |
| Measure Type:  | Process   |
| Rationale:   | <p>We proposed to revise multiple components of the measure to reflect the measure intent to only include systemic cancer-directed therapy for the purposes of this measure. We proposed to clarify the terminology and revise the numerator note to include a definition for systemic cancer-directed therapy to allow for precise implementation of the measure. This ensures that the denominator eligible patient population aligns with the treatments that have been shown to not only negatively impact the patient’s experience at the end of life, but also have not been shown to improve outcomes (<a href="https://ascopubs.org/doi/full/10.1200/JCO.2016.70.1474">https://ascopubs.org/doi/full/10.1200/JCO.2016.70.1474</a>). ASCO advocates that “curtailing unnecessary treatments at the end of life will help drive down end-of-life resource utilization costs” and that “early integration of palliative care/hospice services for patients with late stage cancer in order to avoid aggressive measures at the end-of-life.”</p>   |
| <p><b>Comment:</b> One commenter supported these changes which, importantly, improve the measure’s ability to incentivize appropriate care at the end of life. The commenter agreed that early integration of palliative care/hospice services for patients with late-stage cancer can avoid aggressive measures that are not consistent with patients’ goals and preferences at the end-of-life.</p> <p><b>Response:</b> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46778), we are finalizing the changes to measure Q453 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

**D.65 Back Pain After Lumbar Discectomy/Laminectomy**

| Category                          | Description   |
|-----------------------------------|---|
| NQF # / eCQM NQF #:               | N/A / N/A   |
| Quality#:                         | 459   |
| CMS eCQM ID:                      | N/A   |
| National Quality Strategy Domain: | Person and Caregiver-Centered Experience and Outcomes   |
| Current Collection Type:          | MIPS CQMs Specifications  |
| Current Measure Description:      | For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, back pain is rated by the patients as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at three months (6 to 20 weeks) postoperatively.  |
| Substantive Change:               | <p><b>The measure title is revised from ‘Back Pain After Lumbar Discectomy/Laminectomy’ to:</b> Back Pain After Lumbar Surgery</p> <p><b>The measure description is revised to read:</b> For patients 18 years of age or older who had a lumbar discectomy/laminectomy or fusion procedure, back pain is rated by the patients as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale or a numeric pain scale at three months (6 to 20 weeks) postoperatively for discectomy/laminectomy or at one year (9 to 15 months) postoperatively for lumbar fusion patients. Rates are stratified by procedure type; lumbar discectomy/laminectomy or fusion procedure.</p> <p><b>Updated instructions: Revised:</b> to include lumbar fusion and numeric pain scale.</p> <p><b>Updated denominator: Revised:</b><br/> DENOMINATOR (SUBMISSION CRITERIA 1):<br/> Patients 18 years of age or older as of January 1 of the denominator identification period who had a lumbar discectomy/laminectomy procedure performed during the denominator identification period.<br/> <b>Added:</b><br/> DENOMINATOR (SUBMISSION CRITERIA 2):<br/> Patients 18 years of age or older as of October 1 of the denominator identification period who had a lumbar fusion procedure performed during the denominator identification period.</p> <p><b>Updated denominator criteria: Added:</b> For Submission Criteria 2:<br/> Denominator Criteria (Eligible Cases):<br/> Patients aged ≥ 18 years by October 1 of the Denominator Identification Period<br/> Patient procedure during the Denominator Identification Period – lumbar fusion</p> <p><b>Updated denominator exclusion: Removed:</b> For Submission Criteria 1:<br/> Patient had any additional spine procedures performed on the same date as the lumbar discectomy/laminectomy.<br/> <b>Added:</b> For Submission Criteria 1:<br/> Patient had a lumbar fusion on the same date as the discectomy/ laminectomy procedure.<br/> For Submission Criteria 2:<br/> Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic, or congenital lumbar scoliosis.</p> <p><b>Updated denominator definition: Added:</b> For Submission Criteria 2:<br/> Denominator Identification Period – The 12-month period in which eligible patients have a procedure. This allows for enough time for a follow-up assessment to occur during the performance period. The “denominator identification period” includes dates of procedure 10/1/2021 to 9/30/2022.</p> <p><b>Updated numerator: Revised:</b><br/> NUMERATOR (Submission Criteria 1):<br/> All eligible patients whose back pain is less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS or Numeric Pain scale at three months (6 to 20 weeks) postoperatively.<br/> <b>Added:</b><br/> NUMERATOR (Submission Criteria 2):<br/> All eligible patients whose back pain is less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively.</p> <p><b>Updated numerator definition: Revised:</b> For Submission Criteria 1: to reflect inclusion of Numeric Pain scale for numerator compliance and allow for telephone screenings.<br/> <b>Added:</b><br/> For Submission Criteria 1:<br/> Numeric Pain Scale- a numeric pain scale is one that asks the patient to rate their pain on a scale of 0 to 10 where zero is “No Pain” and 10 is pain that is intolerable. This type of pain score tool can be administered verbally to the patient and because it does not involve a visual line, multiple modes of administration (for example, phone, virtual visit, patient portal, verbally in-person, etc.) are acceptable.<br/> For Submission Criteria 2:<br/> Measure Assessment Period (Performance Period) – The period of time following the procedure date that is in which a postoperative VAS or Numeric pain scale score is obtained.<br/> Preoperative Assessment VAS or Numeric Pain – A preoperative VAS or Numeric pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS or Numeric score was obtained, use the VAS or Numeric score that is the most recent and prior to the procedure.<br/> Postoperative Assessment VAS or Numeric Pain – A postoperative VAS or Numeric pain scale score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to 9 months and after 15 months</p> |

| Category  | Description   |
|---|---|
|   | <p>postoperatively will not be used for measure calculation. If more than one postoperative VAS or Numeric score was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.</p> <p>Visual Analog Scale (VAS) – A “visual analog scale” is a continuous line indicating the continuum between two states of being. A copy of the tool can be obtained below or at the following link <a href="#">Visual Analog Scale Tool</a>.</p> <p>Numeric Pain Scale- a numeric pain scale is one that asks the patient to rate their pain on a scale of 0 to 10 where zero is “No Pain” and 10 is pain that is intolerable. This type of pain score tool can be administered verbally to the patient and because it does not involve a visual line, multiple modes of administration (for example, phone, virtual visit, patient portal, verbally in-person, etc.) are acceptable.</p> <p>Back Pain Target #1 – A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their back pain as less than or equal to 3.0.</p> <p>Back Pain Target #2 – A patient who does not meet Back Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the improvement in back pain is greater than or equal to 5.0 points.</p> <p><b>Updated numerator note: Revised:</b> For Submission Criteria 1: to reflect inclusion of Numeric Pain scale for numerator compliance, replace ‘change’ with ‘improvement’, and updated to allow for telephone screenings.</p> <p><b>Added:</b><br/>For Submission Criteria 2:<br/>It is recommended that both a preoperative and postoperative assessment tool be administered to the patient increasing the chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met G9946 or G2139 is submitted.</p> <ul style="list-style-type: none"> <li>• VAS Pain or Numeric Scale is not administered postoperatively at one year (9 to 15 months)</li> <li>• Back pain is measured using a different patient reported tool</li> <li>• Postop VAS or Numeric Pain Scale is administered less than nine months or more than 15 months (1 year window)</li> <li>• Postoperative VAS or Numeric value is greater than 3.0 and no valid preop to measure improvement</li> <li>• Postoperative VAS or Numeric value is greater than 3.0 and preoperative VAS or Numeric Pain Scale (to measure improvement) is administered beyond the 3-month timeframe prior to and including the date of procedure (for example, 6 months before procedure)</li> </ul> <p><b>Updated numerator options: Revised:</b> For Submission Criteria 1: to reflect inclusion of Numeric Pain scale for numerator compliance.</p> <p><b>Added:</b><br/>For Submission Criteria 2:<br/><b>Performance Met:</b> Back pain as measured by the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively was less than or equal to 3.0 OR Back pain measured by the Visual Analog Scale (VAS) or Numeric pain scale within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of 5.0 points or greater.</p> <p><b>Performance Not Met:</b> Back pain was not measured by the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively.</p> <p><b>Performance Not Met:</b> Back pain measured by the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively was greater than 3.0 AND Back pain measured by the Visual Analog Scale (VAS) or Numeric pain scale within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated less than an Improvement of 5.0 points.</p> |
| <b>Measure Steward:</b>   | Minnesota Community Measurement   |
| <b>High Priority Measure:</b>   | Yes   |
| <b>Measure Type:</b>  | Patient-Reported Outcome-Based Performance Measure  |
| <b>Rationale:</b>   | <p>We proposed to revise this measure to expand the eligible procedures to include lumbar fusion, to capture a more complete patient population for lumbar surgery. This will be accomplished by stratifying the measure to create a submission criterion for lumbar discectomy/laminectomy procedures and a submission criterion for lumbar fusion. This revision will be reflected within multiple components within the specification. Additionally, we proposed to add the Numeric Pain scale as an option for numerator compliance. Inclusion of this tool will allow flexibility by allowing virtual visits for completion of the assessment.</p> <p>We proposed to update the denominator to reflect the stratified procedure types by renaming the original denominator to Denominator (Submission Criteria 1). We also proposed to revise the Submission Criteria 1 exclusion to remove patients who had additional spine procedures on the same date and add patients who had a lumbar fusion on the same date. Additionally, we proposed to add patients who had cancer, acute fracture or infection related to the lumbar spine to the denominator exclusions. These proposed revisions aligned with the measure intent and combining of two lumbar procedures as stated in the revised measure description.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46779 through 46780), we are finalizing the changes to measure Q459 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

## D.66 Leg Pain After Lumbar Discectomy/Laminectomy

| Category                          | Description  |
|-----------------------------------|--|
| NQF # / eCQM NQF #:               | N/A / N/A  |
| Quality#:                         | 461  |
| CMS eCQM ID:                      | N/A  |
| National Quality Strategy Domain: | Person and Caregiver-Centered Experience and Outcomes  |
| Current Collection Type:          | MIPS CQMs Specifications   |
| Current Measure Description:      | For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS Pain scale at three months (6 to 20 weeks) postoperatively.   |
| Substantive Change:               | <p><b>The measure title is revised from 'Leg Pain After Lumbar Discectomy/ Laminectomy' to:</b> Leg Pain After Lumbar Surgery</p> <p><b>The measure description is revised to read:</b> For patients 18 years of age or older who had a lumbar discectomy/laminectomy or fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale or a numeric pain scale at three months (6 to 20 weeks) for discectomy/laminectomy or at one year (9 to 15 months) postoperatively for lumbar fusion patients. Rates are stratified by procedure type; lumbar discectomy/laminectomy or fusion procedure.</p> <p><b>Updated instructions: Revised:</b> to include lumbar fusion and numeric pain scale.</p> <p><b>Updated denominator: Revised:</b> DENOMINATOR (SUBMISSION CRITERIA 1): Patients 18 years of age or older as of January 1 of the denominator identification period who had a lumbar discectomy/laminectomy procedure performed during the denominator identification period.</p> <p><b>Added:</b> DENOMINATOR (SUBMISSION CRITERIA 2): Patients 18 years of age or older as of October 1 of the denominator identification period who had a lumbar fusion procedure performed during the denominator identification period.</p> <p><b>Updated denominator criteria: Added:</b> For Submission Criteria 2: Denominator Criteria (Eligible Cases): Patients aged ≥ 18 years by October 1 of the Denominator Identification Period Patient procedure during the Denominator Identification Period – lumbar fusion</p> <p><b>Updated denominator exclusion: Removed:</b> For Submission Criteria 1: Patient had any additional spine procedures performed on the same date as the lumbar discectomy/laminectomy.</p> <p><b>Added:</b> For Submission Criteria 1: Patient had a lumbar fusion on the same date as the discectomy/ laminectomy procedure. For Submission Criteria 2: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic, or congenital lumbar scoliosis.</p> <p><b>Updated denominator definition: Added:</b> For Submission Criteria 2: Denominator Identification Period – The 12- month period in which eligible patients have a procedure. **D.67 Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 462  |
| CMS eCQM ID:  | CMS645v6   |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | eCQM Specifications  |
| Current Measure Description:  | Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT. |
| Substantive Change:   | <b>Updated denominator exception: Revised:</b> Patient refused the bone density evaluation at the time ordered or did not have it performed within 3 months after the start of ADT.  |
| Measure Steward:  | Oregon Urology Institute   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | We proposed to revise the denominator exception to align with the measure logic and intent of receiving an initial bone density evaluation prior to the start or within 3 months of ADT.   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46783), we are finalizing the changes to measure Q462 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.68 Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 463  |
| CMS eCQM ID:  | N/A  |
| National Quality Strategy Domain:   | Patient Safety   |
| Current Collection Type:  | MIPS CQMs Specifications   |
| Current Measure Description:  | Percentage of patients aged 3 through 17 years, who undergo a procedure under general anesthesia in which an inhalational anesthetic is used for maintenance AND who have two or more risk factors for post-operative vomiting (POV), who receive combination therapy consisting of at least two prophylactic pharmacologic anti-emetic agents of different classes preoperatively and/or intraoperatively.  |
| Substantive Change:   | <p><b>The measure denominator definition is revised to read:</b> Risk factors for POV –</p> <ul style="list-style-type: none"> <li>• Surgery ≥ 30 minutes</li> <li>• Age ≥ 3 years</li> <li>• Strabismus surgery</li> <li>• History of POV or Post-Operative Nausea and Vomiting (PONV)/motion sickness in patient</li> <li>• Family History of POV/PONV</li> <li>• Post-pubertal female</li> <li>• Adenotonsillectomy</li> <li>• Otoplasty</li> <li>• Anticholinesterases</li> <li>• Long-acting opioids</li> </ul> |
| Measure Steward:  | American Society of Anesthesiologists  |
| High Priority Measure:  | Yes  |
| Measure Type:   | Process  |
| Rationale:  | We proposed to revise the measure denominator definition to reflect the 2020 clinical guidance for the management of postoperative nausea and vomiting.  |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46783), we are finalizing the changes to measure Q463 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

## D.69 Functional Status After Lumbar Discectomy/Laminectomy

| Category                          | Description  |
|-----------------------------------|--|
| NQF # / eCQM NQF #:               | N/A / N/A  |
| Quality#:                         | 471  |
| CMS eCQM ID:                      | N/A  |
| National Quality Strategy Domain: | Person and Caregiver-Centered Experience and Outcomes  |
| Current Collection Type:          | MIPS CQMs Specifications   |
| Current Measure Description:      | For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively.  |
| Substantive Change:               | <p><b>The measure title is revised from 'Functional Status After Lumbar Discectomy/Laminectomy' to:</b> Functional Status After Lumbar Surgery</p> <p><b>The measure description is revised to read:</b> For patients age 18 and older who had lumbar discectomy/laminectomy or fusion procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively for discectomy/laminectomy or at one year (9 to 15 months) postoperatively for lumbar fusion patients. Rates are stratified by procedure type; lumbar discectomy/laminectomy or fusion procedure.</p> <p><b>Updated instructions: Revised:</b> to include lumbar fusion.</p> <p><b>Updated denominator: Revised:</b> DENOMINATOR (SUBMISSION CRITERIA 1):<br/>Patients 18 years of age or older as of January 1 of the denominator identification period who had a lumbar discectomy/laminectomy procedure performed during the denominator identification period.</p> <p><b>Added:</b><br/>DENOMINATOR (SUBMISSION CRITERIA 2):<br/>Patients 18 years of age or older as of October 1 of the denominator identification period who had a lumbar fusion procedure performed during the denominator identification period.</p> <p><b>Updated denominator criteria: Added:</b> For Submission Criteria 2:<br/>Denominator Criteria (Eligible Cases):<br/>Patients aged ≥ 18 years by October 1 of the Denominator Identification Period<br/>Patient procedure during the Denominator Identification Period – lumbar fusion</p> <p><b>Updated denominator exclusion: Removed:</b> For Submission Criteria 1:<br/>Patient had any additional spine procedures performed on the same date as the lumbar discectomy/laminectomy.</p> <p><b>Added:</b><br/>For Submission Criteria 1:<br/>Patient had a lumbar fusion on the same date as the discectomy/ laminectomy procedure.<br/>For Submission Criteria 2:<br/>Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic, or congenital lumbar scoliosis.</p> <p><b>Updated denominator definition: Added:</b> For Submission Criteria 2:<br/>Denominator Identification Period – The twelve month period in which eligible patients have a denominator eligible procedure. This allows for enough time for a follow-up assessment to occur during the twelve month performance period. The denominator identification period includes dates of procedure 10/1/2021 to 9/30/2022.</p> <p><b>Updated numerator: Added:</b> NUMERATOR (Submission Criteria 2):<br/>All eligible patients whose functional status is less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI Version 2.1a) patient reported outcome tool at one year (9 to 15 months) postoperatively.</p> <p><b>Updated numerator definition: Added:</b> For Submission Criteria 2:<br/>Measure Assessment Period (Performance Period) – The period of time following the procedure date that a postoperative Oswestry Disability Index (ODI version 2.1a) functional status score can be obtained.<br/>Preoperative Assessment Oswestry Disability Index (ODI version 2.1a)- A preoperative ODI functional assessment score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative ODI was obtained, use the ODI that is the most recent and prior to the procedure.<br/>Postoperative Assessment Oswestry Disability Index (ODI version 2.1a) – A postoperative ODI functional assessment score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to nine months and after fifteen months postoperatively will not be used for measure calculation. If more than one postoperative ODI was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.<br/>Oswestry Disability Index (ODI version 2.1a) Patient Reported Outcome Tool – An ODI patient reported outcome tool (also known as the Oswestry Low Back Pain Disability Questionnaire) is an extremely important tool that researchers and disability evaluators use to measure a patient's permanent functional disability. The test is considered the 'gold standard' of low back functional outcome tools. A copy of the tool can be obtained below or at the following link: <a href="https://eprovide.mapistrust.org/instruments/oswestry-disability-index">https://eprovide.mapistrust.org/instruments/oswestry-disability-index</a>.<br/>Functional Status Target #1 – A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their functional status as less than or equal to 22.</p> |

| Category  | Description   |
|---|---|
|   | <p>Functional Status Target #2 – A patient who does not meet Functional Status Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the improvement is demonstrated as a decrease in ODI score by greater than or equal to 30 points.</p> <p><b>Updated numerator note: Added:</b> For Submission Criteria 2:<br/>It is recommended that both a preoperative and postoperative assessment tool be administered to the patient to increase the chance that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1043 or G2143 is submitted.</p> <ul style="list-style-type: none"> <li>• ODI is not administered postoperatively at one year (9 to 15 months)</li> <li>• Functional status is measured using a different patient reported functional status tool or ODI version</li> <li>• Postoperative ODI is administered less than 9 months or greater than 15 months (1 year window)</li> <li>• Postoperative ODI is greater than 22 and no valid preoperative ODI to measure improvement</li> <li>• Postoperative ODI is greater than 22 and preoperative ODI (to measure improvement) is administered beyond the three month timeframe prior to and including the date of procedure (for example, 6 months before procedure.)</li> </ul> <p><b>Updated numerator options: Added:</b> For Submission Criteria 2:<br/><b>Performance Met:</b> Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was less than or equal to 22 OR Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of 30 points or greater.<br/><b>Performance Not Met:</b> Functional status was not measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.<br/><b>Performance Not Met:</b> Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was greater than 22 AND Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of less than 30 points.</p> |
| <b>Measure Steward:</b>   | Minnesota Community Measurement   |
| <b>High Priority Measure:</b>   | Yes   |
| <b>Measure Type:</b>  | Patient-Reported Outcome-Based Performance Measure  |
| <b>Rationale:</b>   | <p>We proposed to revise this measure to expand the eligible procedures to include lumbar fusion, in order to capture a more complete patient population for lumbar surgery. This will be accomplished by stratifying the measure to create a submission criterion for lumbar discectomy/laminectomy procedures and a submission criterion for lumbar fusion. This revision will be reflected within multiple components within the specification.</p> <p>We proposed to update the denominator to reflect the stratified procedure types by renaming the original denominator to Denominator (Submission Criteria 1). We also proposed to revise the Submission Criteria 1 exclusion to remove patients who had additional spine procedures on the same date and add patients who had a lumbar fusion on the same date. Additionally, we proposed to add patients who had cancer, acute fracture or infection related to the lumbar spine to the denominator exclusions. These proposed revisions aligned with the measure intent and combining of two lumbar procedures.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46784 through 46785), we are finalizing the changes to measure Q471 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.70 Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture**

| Category                          | Description  |
|-----------------------------------|--|
| NQF # / eCQM NQF #:               | N/A / 3475e  |
| Quality#:                         | 472  |
| CMS eCQM ID:                      | CMS249v5   |
| National Quality Strategy Domain: | Efficiency and Cost Reduction  |
| Current Collection Type:          | eCQM Specifications  |
| Current Measure Description:      | Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.   |
| Substantive Change:               | <p><b>Updated guidance: Revised:</b> Patients are excluded from the measure if they have one or more risk factors for osteoporosis, including a result indicating that the patient should be considered for bone density testing on one of the following risk assessment instruments:</p> <ul style="list-style-type: none"> <li>• 10-year probability of major osteoporotic fracture of 8.4 percent or higher as determined by the FRAX</li> <li>• ORAI score of <math>\geq 9</math></li> <li>• OSIRIS score of <math>&lt; 1</math></li> <li>• OST score of <math>&lt; 2</math></li> </ul> <p><b>The measure initial patient population is revised to read:</b> Female patients ages 50 to 63 years at the start of the measurement period with an encounter during the measurement period.</p> <p><b>The measure denominator exclusion is revised to read:</b></p> <ol style="list-style-type: none"> <li>1. Exclude patients with one of the following risk factors.</li> <li>2. Risk factors are grouped by when they occur in relation to the measurement period.</li> <li>3. The following risk factors must be active during the measurement period:<br/>BMI <math>\leq 20</math> kg/m<sup>2</sup> (must be the first BMI of the measurement period)<br/>Alcohol consumption (<math>&gt;</math> two units per day (one unit is 12 oz. of beer, 4 oz. of wine, or 1 oz. of liquor))</li> <li>4. The following risk factors may occur at any time in the patient's history prior to the start of the measurement period:<br/>Osteoporosis<br/>Osteopenia</li> <li>5. The following risk factors may occur at any time in the patient's history prior to the start of the measurement period, but do not need to be active during the measurement period:<br/>Gastric bypass<br/>Aromatase inhibitors<br/>Documentation of history of hip fracture in parent</li> <li>6. The following risk factors may occur at any time in the patient's history or during the measurement period:<br/>Glucocorticoids [cumulative medication duration <math>\geq 90</math> days]<br/>Osteoporotic fracture<br/>Malabsorption Syndromes: celiac disease, inflammatory bowel disease, ulcerative colitis, Crohn's disease, cystic fibrosis, malabsorption<br/>Chronic malnutrition<br/>Chronic liver disease<br/>Rheumatoid arthritis<br/>Hyperthyroidism<br/>Type I Diabetes<br/>End stage renal disease<br/>Osteogenesis imperfecta<br/>Ankylosing spondylitis<br/>Psoriatic arthritis<br/>Ehlers-Danlos syndrome<br/>Cushing's syndrome<br/>Hyperparathyroidism<br/>Marfan syndrome<br/>Lupus<br/>Chemotherapy<br/>Multiple myeloma<br/>Premature menopause<br/>Double or bilateral oophorectomy<br/>Eating disorder<br/>Amenorrhea<br/>Organ transplant"</li> </ol> <p><b>The measure definition is revised to read:</b> The measure allows for clinicians to use 4 tools to assess osteoporosis or osteoporotic fracture risk.</p> <ol style="list-style-type: none"> <li>1. The Fracture Risk Assessment Tool (FRAX[R]) is used to calculate 10-year absolute fracture risk. The FRAX evaluates a patient's 10-year probability of hip fracture and major osteoporotic fracture (clinical spine, forearm, hip, or shoulder fracture). It is applicable to people aged 40-90 years.</li> <li>2. The Osteoporosis Risk Assessment Instrument (ORAI) is used to calculate osteoporosis risk. It is applicable to women <math>\geq 45</math> years.</li> <li>3. The Osteoporosis Index of Risk (OSIRIS) is used to calculate osteoporosis risk. It is applicable to patients of any age.</li> <li>4. The Osteoporosis Self-Assessment Tool (OST) is used to calculate osteoporosis risk. It is applicable to patients of any age."</li> </ol> |

| Category  | Description  |
|---|--|
|   | <p><b>Updated logic and logic definitions: Revised:</b> the glucocorticoid active medication duration to calculate number of calendar days covered.</p> <p><b>Updated numerator exclusion: Added:</b> Exclude patients with a result on one of the following tools, which indicates the patient should be considered for bone density testing, anytime in the patient's history prior to the time of the first DXA scan during the measurement period:<br/> FRAX[R] ten-year probability of all major osteoporosis related fracture <math>\geq</math> 8.4 percent<br/> ORAI score of <math>\geq</math> 9<br/> OSIRIS score of <math>&lt;</math> 1<br/> OST score of <math>&lt;</math> 2</p>  |
| <b>Measure Steward:</b>   | Centers for Medicare & Medicaid Services   |
| <b>High Priority Measure:</b>   | Yes  |
| <b>Measure Type:</b>  | Process  |
| <b>Rationale:</b>   | <p>We proposed to revise the measure guidance to remove 'combination risk factors' and add 3 additional risk assessment tools to align with USPSTF recommendations (<a href="https://www.uspreventiveservicestaskforce.org/Home/GetFileByID/3427">https://www.uspreventiveservicestaskforce.org/Home/GetFileByID/3427</a>). Additionally, we proposed to reflect the addition of the 3 risk assessment tools within the measure definition and numerator exclusions through revision of the measure.</p> <p>We proposed to revise the initial patient population to change the time anchor from the start of the measurement period to the end of the measurement period so that it aligns with HEDIS measure requirements and creates consistency for implementation across programs. Additionally, we proposed to revise the denominator exclusion to align exclusion timing of osteoporosis with the timing of osteopenia, so the same exclusion criteria will be applied to both within the narrative and logic.</p> <p>We proposed to update the measure logic and logic definitions to evaluate the number of calendar days active on glucocorticoids to align the cumulative medication duration logic with the intent of the measure to identify patients appropriate for denominator exclusion.</p> |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46786 through 46787), we are finalizing the changes to measure Q472 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

#### D.71 Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia

| Category  | Description  |
|---|--|
| <b>NQF # / eCQM NQF #:</b>  | N/A / N/A  |
| <b>Quality#:</b>  | 476  |
| <b>CMS eCQM ID:</b>   | CMS771v4   |
| <b>National Quality Strategy Domain:</b>  | Person and Caregiver-centered Experience and Outcomes  |
| <b>Current Collection Type:</b>   | eCQM Specifications  |
| <b>Current Measure Description:</b>   | Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.                                     |
| <b>Substantive Change:</b>  | <p><b>Updated denominator exclusion: Revised:</b> Patients with a diagnosis of morbid obesity, or with a BMI Exam <math>\geq</math> 40 before the follow up urinary symptom score.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> encounter class attribute for non-telehealth eligible encounters.</p>   |
| <b>Measure Steward:</b>   | Large Urology Group Practice Association and Oregon Urology Institute  |
| <b>High Priority Measure:</b>   | Yes  |
| <b>Measure Type:</b>  | Patient-Reported Outcome-Based Performance Measure   |
| <b>Rationale:</b>   | We proposed to revise the denominator exclusions to include a body mass index value equal to 40, which will align with the Centers for Disease Control and Prevention's (CDC) guideline for morbid obesity. We also proposed to update the value set/coding to implement the 'virtual' encounter class attribute for the purposes of excluding non-telehealth eligible encounters within eCQM measure logic. |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46787), we are finalizing the changes to measure Q476 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.72 Functional Status Change for Patients with Neck Impairments**

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | N/A / N/A   |
| Quality#:   | 478   |
| CMS eCQM ID:  | N/A   |
| National Quality Strategy Domain:   | Person and Caregiver-centered Experience and Outcomes   |
| Current Collection Type:  | MIPS CQMs Specifications  |
| Current Measure Description:  | A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with neck impairments. The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).  |
| Substantive Change:   | <p><b>Updated denominator criteria: Added:</b> coding for Skilled Nursing Facilities.</p> <p><b>Updated definition: Revised:</b> Initial Evaluation definition to include Skilled Nursery Facility coding.<br/>Added:<br/>Neck FS PROM score – The Neck FS PROM score may be achieved using one of three forms: the FOTO Neck FS PROM computer adaptive test the FOTO Neck FS PROM short form, or an alternative PROM score that is cross-walked to the Neck FS PROM. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the Neck FS PROM score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p><b>Updated numerator definition: Revised:</b> Functional Status (FS) Score – This is the Neck FS PROM score as described under Instructions Definitions.</p> |
| Measure Steward:  | Focus on Therapeutic Outcomes, Inc.   |
| High Priority Measure:  | Yes   |
| Measure Type:   | Patient-Reported Outcome-Based Performance Measure  |
| Rationale:  | <p>We proposed to update the denominator criteria to add coding for skilled nursing facilities for physiatrists who care for patients in nursing home settings. We believed this coding will provide additional opportunity for those clinicians to report this measure. We also proposed to revise the definition to include Skilled Nursing Facility coding within the initial evaluation definition.</p> <p>Additionally, we proposed to update the numerator definition ‘Patient’s Functional Status (FS) Score’ to ‘Functional Status (FS) Score’ along with revising the definition for consistency and clarity. This update will promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46788), we are finalizing the changes to measure Q478 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**D.73 Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 481  |
| CMS eCQM ID:  | CMS646v3   |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | eCQM Specifications  |
| Current Measure Description:  | Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of bladder cancer staging.   |
| Substantive Change:   | <b>Updated logic and logic definitions: Revised:</b> for the Initial Patient Population to capture patients whose first Bladder Cancer staging occurred during the measurement period.   |
| Measure Steward:  | Oregon Urology Institute   |
| High Priority Measure:  | Yes  |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to revise the logic and logic definitions for the initial patient population to accurately capture the intended population, as stated in the current measure description. Only the first staging performed with the appropriate pathology should count for denominator eligibility for the purposes of this measure, and the first staging must occur in the measurement period. This change will better align with measure intent of capturing patients who received intravesical BCG within 6 months of bladder cancer staging, and more accurately anchor the administration of treatment.</p> |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46788), we are finalizing the changes to measure Q481 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |

**D.74 Age Appropriate Screening Colonoscopy**

| <b>Category</b>   | <b>Description</b>   |
|---|--|
| <b>NQF # / eCQM NQF #:</b>  | N/A / N/A  |
| <b>Quality#:</b>  | 439  |
| <b>CMS eCQM ID:</b>   | N/A  |
| <b>National Quality Strategy Domain:</b>  | Efficiency and Cost Reduction  |
| <b>Current Collection Type:</b>   | MIPS CQMs Specifications   |
| <b>Current Measure Description:</b>   | The percentage of screening colonoscopies performed in patients greater than or equal to 86 years of age from January 1 to December 31.  |
| <b>Substantive Change:</b>  | <p><b>Updated denominator: Revised:</b> patient age to 45 years or greater.</p> <p><b>Updated denominator criteria: Revised:</b> patient age to 45 years or greater.</p> <p><b>Numerator Options: Revised:</b> Patients between 45 and 85 years of age who received a screening colonoscopy during the performance period.</p> |
| <b>Measure Steward:</b>   | American Gastroenterological Association   |
| <b>High Priority Measure:</b>   | Yes  |
| <b>Measure Type:</b>  | Efficiency   |
| <b>Rationale:</b>   | We proposed to update the measure denominator, denominator criteria, and numerator options to align with USPSTF guidance that screening colonoscopies should start at age 45. This change will reflect the latest USPSTF guidance for this measure.  |
| After consideration of public comments, as outlined in Table C.11, the substantive changes above to measure Q439 are finalized as proposed for the CY 2023 performance period. 2025 MIPS payment year and future years. |  |

**TABLE Group DD: Previously Finalized Quality Measures with Substantive Changes Finalized for Partial Removal as Component Measures in Traditional MIPS and Finalized for Retention for Use in Relevant MVPs for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years**

As noted under Table Group CC, beginning with the CY 2023 performance period/2025 MIPS payment year and future years, we finalized to maintain measures Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults for MIPS Value Pathways (MVP) development, and maintain measure Q110 for purposes of Shared Savings Program ACOs reporting through the APP as discussed in section III.G.4.c.(1) of this final rule. These measures have proposed substantive changes under Table Group DD and Table Group E.

Note: Electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table DD as follows: NQF # / eCQM NQF #.

The DD Tables within this final rule provide the substantive changes finalized for the quality measures in CY 2023. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2023 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2023 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2024. The 2023 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program Resource Library at <https://qpp.cms.gov/about/resource-library>.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but we believed are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2023 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2023 quality measure specifications, in the form of an 'Instructions Note', to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only in the instance telehealth encounters have not been previously allowed as denominator eligible, will the DD table corresponding to that measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

Note: The CMS Web Interface collection type is no longer available in MIPS, except for purposes of APM entities reporting through the APP, starting with the CY 2023 performance period. This collection type is therefore no longer listed in any tables under Table Group DD. The CMS Web Interface collection type remains through CY 2025 for Shared Savings Program ACOs reporting through the APP. For further information on the Shared Savings Program and reporting through the CMS Web Interface collection type for APP reporting, see sections III.G.4.b.(9) and III.G.4.c.(1) of this final rule. For information on changes to measures under the CMS Web Interface collection type finalized for the CY 2023 performance period/2025 MIPS payment year and future years, see Table Group E of this final rule.

We solicited comments on these substantive changes.

## DD.1 Preventive Care and Screening: Influenza Immunization

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | 0041 / N/A  |
| Quality#:   | 110   |
| CMS eCQM ID:  | CMS147v12   |
| National Quality Strategy Domain:   | Community/Population Health   |
| Current Collection Type:  | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications  |
| Current Measure Description:  | Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.  |
| Substantive Change:   | <p><b>The measure guidance is revised to read: For the eCQM Specifications collection type:</b> To enable reporting of this measure at the close of the measurement period, this measure will only assess the influenza season that starts on October 1 of the year prior to the measurement period and ends on March 31 of the measurement period. The subsequent influenza season (ending March of the following year) will be measured and reported in the following year.</p> <p>This eCQM is a patient-based measure.</p> <p>This version of the eCQM uses QDM version 5.6. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p> <p><b>The measure denominator is revised to read: For the eCQM Specifications collection type:</b> Equals Initial Population and seen for a visit between October 1 of the year prior to the measurement period and March 31 of the measurement period.</p> <p><b>Updated denominator exclusion: For all collection types: Added:</b> denominator exclusion for patients receiving hospice any time during the measurement period.</p> <p><b>Updated definition: For the eCQM Specifications collection type: Revised:</b> Previous Receipt - receipt of the current season's influenza immunization from another provider OR from same provider prior to the visit to which the measure is applied (typically, prior vaccination would include influenza vaccine given since July 1st).</p> <p><b>The measure numerator is revised to read: For the eCQM Specifications collection type:</b> Patients who received an influenza immunization OR who reported previous receipt of an influenza immunization between July 1 of the year prior to the measurement period to June 30 of the measurement period.</p> <p><b>Updated numerator instructions: For the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types: Removed:</b> Due to the changing nature of the CDC/ACIP recommendations regarding the live attenuated influenza vaccine (LAIV) for a particular flu season, this measure will not include the administration of this specific formulation of the flu vaccination. Given the variance of the timeframes for the annual update cycles, program implementation, and publication of revised recommendations from the CDC/ACIP, it has been determined that the coding for this measure will specifically exclude this formulation, so as not to inappropriately include this form of the vaccine for flu seasons when CDC/ACIP explicitly advise against it. However, it is recommended that all eligible professionals or eligible clinicians review the guidelines for each flu season to determine appropriateness of the LAIV and other formulations of the flu vaccine. Should the LAIV be recommended for administration for a particular flu season, an eligible professional or clinician may consider one of the following options: 1) satisfy the numerator by reporting previous receipt, 2) report a denominator exception, either as a patient reason (for example, for patient preference) or a system reason (for example, the institution only carries LAIV).</p> <p><b>Updated denominator exception: For the eCQM Specifications collection types: Removed:</b> all denominator exceptions (medical, patient, and system reasons).</p> |
| Steward:  | National Committee for Quality Assurance  |
| High Priority Measure:  | No  |
| Measure Type:   | Process   |
| Rationale:  | <p>We proposed to revise the measure guidance for the eCQM Specifications collection type to remove the paragraph regarding the influenza encounter value set and replace it with individual value sets grouped into a logic definition to be more transparent about applicable encounters. We also proposed to revise the denominator for the eCQM Specifications collection type to align the identification of patients with visits that coincide with the flu season as referenced by the Food and Drug Administration (FDA) approved time for licensed flu vaccination administration (<a href="https://www.cdc.gov/flu/about/season/flu-season.htm">https://www.cdc.gov/flu/about/season/flu-season.htm</a>).</p> <p>We proposed to add hospice as a denominator exclusion for all collection types to align with other MIPS immunization measures. Additionally, we proposed to revise the definition and numerator for the eCQM Specifications collection type to align performance of the measure with the immunization timeframe of the FDA approved time for licensed flu vaccination. Furthermore, for the eCQM Specifications collection type we proposed to remove the denominator exceptions for medical/patient/system reasons since the ACIP guidelines specify only life-threatening allergic reactions to vaccination (that is, anaphylaxis) as a contraindication to vaccination. Therefore, these updates reflect the ACIP recommendations and support vaccination of patients with an allergy after careful evaluation of the patient by the clinician.</p> <p>We proposed to revise the numerator instructions for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types and the guidance for the eCQM Specifications collection type to remove the language for the LAIV formulation to align with current guidelines and will allow for the use of this formulation.</p>   |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46790), we are finalizing the changes to measure Q110 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |
| Note that under Table CC.1, we are finalizing the partial removal of measure Q110 from traditional MIPS and retaining the measure for use in relevant MVPs as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.  |   |

## DD.2 Pneumococcal Vaccination Status for Older Adults

| Category                          | Description   |
|-----------------------------------|---|
| NQF # / eCQM NQF #:               | N/A / N/A   |
| Quality#:                         | 111   |
| CMS eCQM ID:                      | CMS127v11   |
| National Quality Strategy Domain: | Community/Population Health   |
| Current Collection Type:          | Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications  |
| Current Measure Description:      | Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.   |
| Substantive Change:               | <p><b>The measure description is revised to read: For all collection types:</b> Percentage of patients 66 years of age and older who have received a pneumococcal vaccine.</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> Patients 66 years of age and older at the start of the measurement period with a visit during the measurement period.</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Removed:</b> denominator note.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</b> coding for ESRD services, dialysis, patient counseling and/or risk factor reduction intervention services, preventive medicine, and home visit services.</p> <p><b>Updated definitions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</b> definitions and coding for the added denominator exclusions: active chemotherapy, bone marrow transplant, and history of immunocompromising conditions, cochlear implants, anatomic or functional asplenia, sickle cell anemia &amp; HB-S disease or cerebrospinal fluid leaks.</p> <p><b>Updated denominator exclusions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</b></p> <ol style="list-style-type: none"> <li>1. Active chemotherapy during the measurement period.</li> <li>2. Bone marrow transplant during the measurement period.</li> <li>3. History of immunocompromising conditions prior to or during the measurement period.</li> <li>4. Patient had anaphylaxis due to the pneumococcal vaccine any time during or before the measurement period.</li> </ol> <p><b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p><b>The measure numerator is revised to read: For the eCQM Specifications collection type:</b> Patients who received a pneumococcal vaccination on or after their 60th birthday and before the end of the measurement period.</p> <p><b>For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</b> Patients who were administered any pneumococcal conjugate vaccine or polysaccharide vaccine on or after their 60th birthday and before the end of the measurement period.</p> <p><b>Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> to allow for receipt of any pneumococcal vaccine.</p> <p><b>Updated numerator options: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Removed:</b> Documentation of medical reason(s) for not administering pneumococcal vaccine (for example, adverse reaction to vaccine).</p> |
| Steward:                          | National Committee for Quality Assurance  |
| High Priority Measure:            | No  |
| Measure Type:                     | Process   |
| Rationale:                        | <p>We proposed to revise the measure description as this will reflect that the measure is no longer assessing for any receipt of the pneumococcal vaccination. Additionally, we proposed to remove the denominator note from the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types as it no longer aligned fully with the revised timeframe for the administration of the pneumococcal vaccine.</p> <p>We proposed to revise the initial patient population for the eCQM Specifications collection type to change the age determination from the start of the measurement period to the end of the measurement period so that it aligns with the HEDIS measure requirements and creates consistency for implementation.</p> <p>We proposed to update the logic and logic definitions for the eCQM Specifications collection type related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion intent and criteria more closely. We also proposed to revise the numerator for the eCQM Specifications collection type to remove language pertaining to patients who had an adverse reaction to vaccines from the numerator, so the quality action more accurately reflects patients who received a pneumococcal vaccination.</p> <p>We proposed to update the denominator criteria for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to add coding to capture a more complete patient population as this patient population will be appropriate for the pneumococcal vaccination. We proposed to update the denominator exclusions for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to add denominator exclusions as this patient population will not be appropriate for the pneumococcal vaccination. We proposed to add definitions for these added denominator exclusions to outline the coding that will be sufficient to identify this patient population for consistency.</p>   |

| Category  | Description  |
|---|--|
|   | Additionally, we proposed to revise the numerator and numerator note to allow for receipt of any pneumococcal vaccine in accordance with the current ACIP guidelines ( <a href="https://www.cdc.gov/vaccines/acip/recommendations.html">https://www.cdc.gov/vaccines/acip/recommendations.html</a> ). We proposed to remove the numerator option allowing for documentation of medical reason(s) for not administering the vaccine and add a denominator exclusion for anaphylaxis from pneumococcal vaccine as this will better align with ACIP guidelines ( <a href="https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6337a4.htm">https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6337a4.htm</a> ). |
| We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (87 FR 46791 through 46792), we are finalizing the changes to measure Q111 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |  |
| Note that under Table CC.2, we are finalizing the partial removal of measure Q111 from traditional MIPS and retaining the measure for use in relevant MVPs as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.  |  |

## TABLE Group E: Previously Finalized Web Interface Quality Measures with Substantive Changes Finalized for the CY 2023 Performance Period and Future Years

The E Tables within this final rule provide the substantive changes finalized for the Web Interface quality measures in CY 2023. The changes that are made to the code sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2023 may not be identified within the final rule due to the availability of these changes to the public. The 2023 CMS Web Interface Measure Coding Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but we believed are important to communicate to interested parties. These changes align with the scope of the current coding; however, this will expand or contract the current eligible population, therefore, review the current year measure specification and the 2023 CMS Web Interface Measure Coding Release Notes once posted to review all coding changes.

The PY 2023 eCQM collection type measures had substantive changes that could prove burdensome to collect, therefore, the Web Interface specifications will align with the 2023 MIPS CQM changes for these measures. The CMS Web Interface collection type is only available for purposes of APM entities reporting through the APP, starting with the CY 2023 performance period. The CMS Web Interface collection type remains through CY 2025 for Shared Savings Program ACOs reporting through the APP.

The tables below contain finalized changes for performance year 2023 Web Interface measure specifications to be used in the Shared Savings Program quality reporting.

### E.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

| Category  | Description   |
|---|---|
| NQF # / eCQM NQF #:   | 0059 / N/A  |
| Quality#:   | 001   |
| CMS eCQM ID:  | CMS122v11   |
| Web Interface ID:   | DM-2  |
| National Quality Strategy Domain:   | Effective Clinical Care   |
| Current Collection Type:  | Web Interface   |
| Current Measure Description:  | Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.  |
| Substantive Change:   | <p><b>Updated denominator criteria: Added:</b> coding for nutrition and dietitian clinicians.</p> <p><b>Updated guidance: Removed:</b> Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included.</p> <p><b>Revised to read:</b><br/>To assess the age for exclusions, the patient's age on the date of encounter should be used.</p>  |
| Measure Steward:  | National Committee for Quality Assurance  |
| High Priority Measure:  | Yes   |
| Measure Type:   | Intermediate Outcome  |
| Rationale:  | <p>We proposed to add encounter codes for nutrition and dietitian clinicians based upon interested parties' feedback, as they may provide nutrition counseling or therapy to patients to help manage diabetes.</p> <p>We proposed to update the guidance/numerator instructions to remove "Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included" because it does not align with the intent of the measure, which is to ensure hemoglobin A1c control in all patients with any diagnosis of diabetes. This update allows the measure to align with its clinical intent, in accordance with the given diabetes diagnosis codes within the denominator criteria of the measure.</p> <p>We proposed to revise the language for the denominator guidance to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> |
| <p><b>Comment:</b> One commenter supported the proposed substantive changes to measure Q001.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46792), we are finalizing the substantive changes to measure Q001 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## E.2 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 134  |
| CMS eCQM ID:  | CMS2v12  |
| Web Interface ID:   | PREV-12  |
| National Quality Strategy Domain:   | Community/Population Health  |
| Current Collection Type:  | Web Interface  |
| Current Measure Description:  | Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.   |
| Substantive Change:   | <p><b>Updated measure description: Revised to read:</b> Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.</p> <p><b>Updated definition: Added:</b> coding for manic episodes to the denominator exclusions definition for bipolar depression.</p> <p><b>Updated measure numerator: Revised to read:</b> Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.</p> <p><b>Updated guidance: Revised to read:</b> A depression screen is completed on the date of the encounter or up to 14 calendar days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of or up to two calendar days after the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression. An example to illustrate the follow-up plan documentation timing: if the encounter is on a Monday from 3–4 pm (day 0) and the patient screens positive, the clinician has through anytime on Wednesday (day 2) to complete follow-up plan documentation. This is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. This measure requires documentation that a screening was conducted with a standardized depression screening tool. It is recommended that <b>both</b> a score and clinician interpretation of the score is documented, especially when a patient screens positive. At a minimum, the medical record must contain documentation of the tool's name and results of the screening with a score <b>OR</b> clinician interpretation of positive or negative for depression. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression. A score interpreted as positive requires documentation of a follow-up plan. A score interpreted as negative does not require a follow-up plan. The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have been diagnosed with depression or bipolar disorder will be excluded from the measure.</p> <p><b>Added:</b><br/>Follow-Up Plan:<br/>For a depression screen deemed positive, the follow-up plan <b>MUST</b> still be provided for and discussed with the patient during the qualifying encounter used to evaluate the numerator. However, documentation of the follow-up plan can occur up to two calendar days after the qualifying encounter, in accordance with the policies of an eligible clinician or provider's practice or health system. All services should be documented during, or as soon as practicable, after the qualifying encounter in order to maintain an accurate medical record.</p> |
| Measure Steward:  | Centers for Medicare & Medicaid Services   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to revise multiple components of the measure to add a grace period after the end of the encounter to document the follow-up plan, which will allow more flexibility in the clinical workflow giving clinicians time for documentation. This will ensure that those clinicians who meet the intent of the measure which is discussing a follow-up plan during the encounter, are not inadvertently marked as non-compliant due to delayed documentation.</p> <p>We proposed to update the measure definition to improve alignment with measure intent which is to screen for new cases of depression in patients who have never had a diagnosis of depression or bipolar disorder, as well as to clarify the timing requirements of diagnoses for the measure exclusions.</p> <p>We proposed to add coding for manic episodes to the Bipolar Diagnosis codes to align with measure intent which is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator.</p>   |
| <p><b>Comment:</b> A few commenters supported the proposed substantive changes to measure Q134 and appreciated the ongoing efforts to further clarify the intent and specifications of this measure. The commenters supported the revisions to the guidance, particularly allowing follow-up documentation to occur up to 48 hours after the encounter.</p> <p><b>Response:</b> We thank the commenters for supporting the changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46793), we are finalizing the substantive changes to measure Q134 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**E.3 Depression Remission at Twelve Months**

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | 0710 / 0710e   |
| Quality#:  | 370  |
| CMS eCQM ID:   | CMS159v11  |
| Web Interface ID:  | MH-1   |
| National Quality Strategy Domain:  | Effective Clinical Care  |
| Current Collection Type:   | Web Interface  |
| Current Measure Description:   | The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event.   |
| Substantive Change:  | <p><b>Updated denominator exclusion: Revised to read:</b><br/> Patients with a diagnosis of bipolar disorder any time prior to the end of the measure assessment period<br/> Patients with a diagnosis of select personality disorders any time prior to the end of the measure assessment period<br/> Patients with a diagnosis of schizophrenia or psychotic disorder any time prior to the end of the measure assessment period<br/> Patients with a diagnosis of pervasive developmental disorder any time prior to the end of the measure assessment period<br/> Patients who were permanent nursing home residents any time during denominator identification period or the measure assessment period<br/> Patients with a diagnosis of personality disorder emotionally labile any time prior to the end of the measure assessment period</p> <p><b>Updated denominator criteria: Added:</b> coding for preventive medicine encounters.</p> |
| Measure Steward:   | Minnesota Community Measurement  |
| High Priority Measure:   | Yes  |
| Measure Type:  | Outcome  |
| Rationale:   | We proposed to update coding for the denominator criteria to include preventive medicine encounters in order to engage patients and assess remission of depression. We proposed to add timing information to the denominator exclusions to improve measure clarity and to align with the CQM version of the measure.   |
| <p><b>Comment:</b> One commenter supported the substantive changes to measure Q370.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46794), we are finalizing the substantive changes to measure Q370 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

**E.4 Falls: Screening for Future Fall Risk**

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | 0101 / N/A   |
| Quality#:  | 318  |
| CMS eCQM ID:   | CMS139v11  |
| Web Interface ID:  | CARE-2   |
| National Quality Strategy Domain:  | Patient Safety   |
| Current Collection Type:   | Web Interface  |
| Current Measure Description:   | Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.   |
| Substantive Change:  | <p><b>Updated initial population: Revised to read:</b> Patients aged 65 years and older at the start of the measurement period with a visit during the measurement period.</p> <p><b>Updated value set/coding: Added:</b> coding for physical therapy and occupational therapy visits.</p>   |
| Measure Steward:   | National Committee for Quality Assurance   |
| High Priority Measure:   | Yes  |
| Measure Type:  | Process  |
| Rationale:   | We proposed to revise the initial patient population to change the age anchor from the start of the measurement period to the end of the measurement period so that it will align with HEDIS measure requirements and creates consistency for implementation across programs. Additionally, we proposed to add occupational and physical therapy evaluation visits as applicable encounters as these clinicians interact with older adults that may be more susceptible to falls. Occupational therapists are “uniquely qualified to address the multifactorial nature of falls, given their knowledge of factors that influence occupational performance.” <sup>1</sup> There is a strong body of evidence that supports the role of physical therapists in reducing fall risk and fall prevention as outlined within the American Physical Therapy Association (APTA) handout: <a href="https://www.apta.org/patient-care/public-health-population-care/balance-and-falls/research-on-falls#">https://www.apta.org/patient-care/public-health-population-care/balance-and-falls/research-on-falls#</a> . |
| <p><b>Comment:</b> One commenter supported the substantive changes to measure Q318.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46794), we are finalizing the substantive changes to measure Q318 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

## E.5 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | N/A / N/A  |
| Quality#:   | 438  |
| CMS eCQM ID:  | CMS347v6   |
| Web Interface ID:   | PREV-13  |
| National Quality Strategy Domain:   | Effective Clinical Care  |
| Current Collection Type:  | Web Interface  |
| Current Measure Description:  | <p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <p>*All patients who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR</p> <p>*Patients aged <math>\geq 20</math> years who have ever had a low-density lipoprotein cholesterol (LDL-C) level <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR</p> <p>*Patients aged 40-75 years with a diagnosis of diabetes</p>  |
| Substantive Change:   | <p><b>Updated initial population: Revised to read:</b></p> <p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> <li>• All patients with a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD) or ever had an ASCVD procedure; OR</li> <li>• Patients aged <math>\geq 20</math> years who have ever had a low-density lipoprotein cholesterol (LDL-C) level <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR</li> <li>• Patients aged 40-75 years with a diagnosis of diabetes.</li> </ul> <p><b>Updated denominator: Revised to read:</b></p> <p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> <li>• All patients with a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD) or ever had an ASCVD procedure; OR</li> <li>• Patients aged <math>\geq 20</math> years who have ever had a low-density lipoprotein cholesterol (LDL-C) level <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR</li> <li>• Patients aged 40-75 years with a diagnosis of diabetes.</li> </ul> <p><b>Updated submission guidance: Revised to read:</b></p> <ul style="list-style-type: none"> <li>○ Determine if the patient was previously diagnosed with or currently has a diagnosis of clinical ASCVD, including an ASCVD procedure at any time up through the last day of the measurement period</li> </ul> <p><b>Removed:</b></p> <p><b>Active Diagnosis</b> is defined as a diagnosis that is either on the patient's problem list, a diagnosis code description listed on the encounter, or is documented in a progress note indicating that the patient is being treated or managed for the disease or condition at any time during the measurement period.</p> <p><b>Updated denominator exclusion: Removed:</b></p> <p>Patients who have a diagnosis of pregnancy at any time during the measurement period.</p> <p><b>Updated definition: Added:</b> Ezetimibe / Rosuvastatin -- Roszet -- Fixed Dose Combination' to Table 1 - Statin Medication Therapy List.</p> <p><b>Updated denominator exception: Added:</b> Patients with documentation of a medical reason for not being prescribed statin therapy.</p> |
| Measure Steward:  | Centers for Medicare & Medicaid Services   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to update multiple sections to remove the word 'active' from the clinical diagnosis of ASCVD. ASCVD is a chronic condition, therefore a diagnosis of ASCVD at any time meets the intent of the initial population.</p> <p>We proposed to remove the pregnancy exclusion to align with U.S Food and Drug Administration (FDA) recommendations that pregnancy be removed as a contraindication in prescribing statins (<a href="https://www.fda.gov/safety/medical-product-safety-information/statins-drug-safety-communication-fda-requests-removal-strongest-warning-against-using-cholesterol">https://www.fda.gov/safety/medical-product-safety-information/statins-drug-safety-communication-fda-requests-removal-strongest-warning-against-using-cholesterol</a>).</p> <p>We also proposed to update the definitions by adding another medication to the statin medication therapy list for completeness.</p> <p>We proposed to update the denominator exceptions by adding a medical reason for not being prescribed statin therapy to align with American College of Cardiology/American Heart Association (ACC/AHA) guidelines (<a href="https://www.acc.org/latest-in-cardiology/ten-points-to-remember/2019/03/07/16/00/2019-acc-aha-guideline-on-primary-prevention-gl-prevention">https://www.acc.org/latest-in-cardiology/ten-points-to-remember/2019/03/07/16/00/2019-acc-aha-guideline-on-primary-prevention-gl-prevention</a>).</p>  |
| <p><b>Comment:</b> One commenter did not support the removal of pregnancy at any time during the measurement year as a denominator exclusion for measure Q438. The commenter stated that while pregnancy may no longer be considered an absolute contraindication to statin use, the strong indications for statin use in non-pregnant patients are not as clear and tempered by safety concerns in a pregnant patient. Therefore, the commenter stated that this remains a situation where clinical judgement and shared decision making will be the best course of action. The commenter stated that removing pregnancy as an exclusion from the measure may lead to unintended/unconscious bias in the recommendation for care in this situation where careful balance is imperative.</p> <p><b>Response:</b> We thank the commenter for their comment but disagree with the commenter. The update to measure aligns with the FDA's guidance that the benefits of statins may outweigh the risks for pregnant patients that are considered high-risk. We note that only patients that meet the denominator inclusion criteria would be eligible for this measure and don't anticipate the inclusion of pregnant people will result in a significant increase in the denominator population. Additionally, the denominator exceptions were updated to include patients with documentation of a medical reason for not being prescribed statin therapy, allowing for flexibility in situations where statins may not be considered appropriate for a patient or where the risk may outweigh the potential benefit of statin therapy.</p> |  |

| Category | Description  |
|----------|--|
|          | After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46795), we are finalizing the substantive changes to measure Q438 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |

## E.6 Preventive Care and Screening: Influenza Immunization

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | 0041 / N/A   |
| Quality#:   | 110  |
| CMS eCQM ID:  | CMS147v12  |
| Web Interface ID:   | PREV-7   |
| National Quality Strategy Domain:   | Community/Population Health  |
| Current Collection Type:  | Web Interface  |
| Current Measure Description:  | Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.   |
| Substantive Change:   | <p><b>Updated measure reporting period: Revised:</b> Evaluates qualifying encounters that occur during either January through March of the measurement year or October through December of the measurement year to determine if that patient has received the influenza immunization for the relevant influenza season</p> <p><b>Updated measure description: Revised to read:</b> Percentage of patients aged 6 months and older seen for a visit during the measurement period who received an influenza immunization OR who reported previous receipt of an influenza immunization</p> <p><b>Updated denominator: Revised to read:</b> Equals initial population (All patients aged 6 months and older seen for a visit during the measurement period)</p> <p><b>Updated denominator note: Added:</b> For the purposes of the program, in order to submit on the flu season 2022-2023, the patient must have a qualifying encounter between January 1 and March 31, 2023. In order to submit on the flu season 2023-2024, the patient must have a qualifying encounter between October 1 and December 31, 2023. A qualifying encounter needs to occur within the flu season that is being submitted; any additional encounter(s) may occur at any time within the measurement period.</p> <p><b>Updated measure guidance: Revised to read:</b> The numerator for this measure can be met by submitting either administration of an influenza vaccination or that the patient reported previous receipt of the current season's influenza immunization. If the performance of the numerator is not met, an eligible clinician can submit a valid denominator exception for having not administered an influenza vaccination. For eligible clinicians submitting a denominator exception for this measure, there should be a clear rationale and documented reason for not administering an influenza immunization if the patient did not indicate previous receipt, which could include a medical reason (for example, patient allergy), patient reason (for example, patient declined), or system reason (for example, vaccination not available). The system reason should be indicated only for cases of disruption or shortage of influenza vaccination supply. Denominator Exception(s) are determined at the time of the denominator eligible encounter during the current flu season.</p> <p><b>Removed:</b><br/>Due to the changing nature of the CDC/ACIP recommendations regarding the live attenuated influenza vaccine (LAIV) for a particular flu season, this measure will not include the administration of this specific formulation of the flu vaccination. Given the variance of the timeframes for the annual update cycles, program implementation, and publication of revised recommendations from the CDC/ACIP, it has been determined that the coding for this measure will specifically exclude this formulation, so as not to inappropriately include this form of the vaccine for flu seasons when CDC/ACIP explicitly advise against it. However, it is recommended that all eligible professionals or eligible clinicians review the guidelines for each flu season to determine appropriateness of the LAIV and other formulations of the flu vaccine. Should the LAIV be recommended for administration for a particular flu season, an eligible professional or clinician may consider one of the following options: 1) satisfy the numerator by reporting previous receipt, 2) report a denominator exception, either as a patient reason (for example, for patient preference) or a system reason (for example, the institution only carries LAIV).</p> <p><b>Updated definition: Revised to read: Previous Receipt</b> – receipt of the current season's influenza immunization from another provider OR from same provider prior to the visit to which the measure is applied</p> |
| Measure Steward:  | National Committee for Quality Assurance   |
| High Priority Measure:  | No   |
| Measure Type:   | Process  |
| Rationale:  | <p>We proposed to revise multiple sections of the measure to align with the CQM version of the measure. These changes allow for reporting receipt of influenza immunization for the two flu seasons that fall within a performance reporting period. Alignment with the CQM allows for reporting medical exceptions, and avoids eligible clinicians being penalized if not administering the influenza vaccine is medically and clinically appropriate.</p> <p>We proposed to revise the guidance to remove the language for the LAIV formulation to align with current guidelines and will allow for the use of this formulation.</p>   |
| <p><b>Comment:</b> One commenter did not support the update to the measure reporting period for measure Q110. This proposed change to the measure reporting period does not align with the 2023 eCQM measure. The 2023 performance period eCQM CMS147v12 (measure Q110) numerator statement reads: "Patients who received an influenza immunization OR reported previous receipt of an influenza vaccine between July 1 of the year prior to the measurement period to June 30 of the measurement period." Influenza vaccines usually arrive in nation-wide chain pharmacies in July of each year. Vaccines usually arrive on physician offices in late August or early September. Current CMS Web Interface measure specifications include vaccines administered OR previous receipt of a vaccine beginning in August of the prior year through March 31 of the measurement year. The 2023 MY HEDIS specifications are consistent with eCQM CMS147v12 (measure Q110).</p> <p><b>Response:</b> We thank the commenter for their comment and note that the measure was updated to align with the MIPS CQM collection type rather than the eCQM collection type. In doing so, the measure now captures two flu seasons and still allows for reporting of the influenza immunization or previous receipt. Encounters between January 1 and March 31, 2023, will be used to determine whether the influenza immunization was administered for the flu season ending March 31, 2023, including those that were administered during the months of August through December of 2022. Encounters between October 1, 2023, and December 31, 2023, will be used to determine whether the influenza immunization was administered for the flu season ending on March 31, 2024, including those that were administered during the months of August through December of 2023.</p> |  |

| Category   | Description |
|--|-------------|
| After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46796), we are finalizing the substantive changes to measure Q110 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |             |

**E.7 Breast Cancer Screening**

| Category  | Description   |
|---|---|
| <b>NQF # / eCQM NQF #:</b>  | 2372 / N/A  |
| <b>Quality#:</b>  | 112   |
| <b>CMS eCQM ID:</b>   | CMS125v11   |
| <b>Web Interface ID:</b>  | PREV-5  |
| <b>National Quality Strategy Domain:</b>  | Effective Clinical Care   |
| <b>Current Collection Type:</b>   | Web Interface   |
| <b>Current Measure Description:</b>   | Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.   |
| <b>Substantive Change:</b>  | <p><b>Updated initial population: Revised to read:</b> Women 51 - 74 years of age on the date of the encounter with a visit during the measurement period.</p> <p><b>Updated measure guidance: Revised to read:</b> To assess the age for exclusions, the patient's age on the date of encounter should be used.</p>  |
| <b>Measure Steward:</b>   | National Committee for Quality Assurance  |
| <b>High Priority Measure:</b>   | No  |
| <b>Measure Type:</b>  | Process   |
| <b>Rationale:</b>   | We proposed to update multiple components of the measure to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data |
| <p><b>Comment:</b> One commenter supported the substantive changes to measure Q112. The commenter stated the measure is silent on whether transgender women are included in the denominator and requested guidance.</p> <p><b>Response:</b> We appreciate the commenters input, and will take it under consideration when determining strategies for ensuring inclusion and appropriate clinical care for all patient populations in this measure; however, we recommend using patient sex assigned at birth for purposes of reporting this quality measure. At this time, we recommend following the specification as written and include only those patients who meet the denominator criteria as stated for each component of the posted quality measure. The medical record should substantiate all data submitted.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46797), we are finalizing the substantive changes to measure Q112 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## E.8 Colorectal Cancer Screening

| Category   | Description   |
|--|---|
| <b>NQF # / eCQM NQF #:</b>   | 0034 / N/A  |
| <b>Quality#:</b>   | 113   |
| <b>CMS eCQM ID:</b>  | CMS130v11   |
| <b>Web Interface:</b>  | PREV-6  |
| <b>National Quality Strategy Domain:</b>   | Effective Clinical Care   |
| <b>Current Collection Type:</b>  | Web Interface   |
| <b>Current Measure Description:</b>  | Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.  |
| <b>Substantive Change:</b>   | <p><b>Updated measure description: Revised to read:</b> Percentage of adults 45-75 years of age who had appropriate screening for colorectal cancer</p> <p><b>Updated initial population: Revised to read:</b> Patients 45 to 75 years with a visit during the measurement period</p> <p><b>Updated measure guidance: Revised to read:</b> To assess the age for exclusions, the patient's age on the date of encounter should be used.</p>   |
| <b>Measure Steward:</b>  | National Committee for Quality Assurance  |
| <b>High Priority Measure:</b>  | No  |
| <b>Measure Type:</b>   | Process   |
| <b>Rationale:</b>  | <p>We proposed to revise the measure description and initial population to align with the 2021 U.S. Preventive Services Task Force (USPSTF) guidelines that recommend Colorectal Cancer Screenings begin at age 45 rather than beginning at age 50.</p> <p>We proposed to revise the denominator guidance to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> |
| <p><b>Comment:</b> One commenter supported the substantive changes to measure Q113.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46797), we are finalizing the substantive changes to measure Q113 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

**E.9 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention**

| Category                            | Description  |
|-------------------------------------|--|
| NQF # / eCQM NQF #:                 | 0028 / 0028e   |
| Quality#:                           | 226  |
| CMS eCQM ID:                        | CMS138v11  |
| Web Interface ID:                   | PREV-10  |
| National Quality Strategy Domain:   | Community/Population Health  |
| Current Collection Type:            | Web Interface  |
| <b>Current Measure Description:</b> | <p>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user.</p> <p>Three rates are reported:</p> <ol style="list-style-type: none"> <li>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period.</li> <li>Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months.</li> <li>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.</li> </ol>  |
| <b>Substantive Change:</b>          | <p><b>Updated measure description: Revised to read:</b> Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user. Three rates are reported:</p> <ol style="list-style-type: none"> <li>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period</li> <li>Percentage of patients aged 18 years and older who were identified as a tobacco user during the measurement period who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period</li> <li>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user</li> </ol> <p><b>Updated denominator exception: Removed:</b> denominator exceptions.</p> <p><b>Updated numerator: Revised to read:</b> For Submission Criteria 2: Patients who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period.<br/>For Submission Criteria 3: Patients who were screened for tobacco use at least once during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p><b>Updated measure definition: Revised to read:</b> Tobacco Use – use of any tobacco product<br/>The 2021 USPSTF recommendation references the US Food and Drug Administration definition of tobacco which includes “any product made or derived from tobacco intended for human consumption (except products that meet the definition of drugs), including, but not limited to, cigarettes, cigars (including cigarillos and little cigars), dissolvables, hookah tobacco, nicotine gels, pipe tobacco, roll-your-own tobacco, smokeless tobacco products (including dip, snuff, snus, and chewing tobacco), vapes, electronic cigarettes (e-cigarettes), hookah pens, and other electronic nicotine delivery systems.”<br/>The 2021 USPSTF recommendation describes smoking as generally referring to “the inhaling and exhaling of smoke produced by combustible tobacco products such as cigarettes, cigars, and pipes.”<br/>The 2021 USPSTF recommendation describes vaping as “the inhaling and exhaling of aerosols produced by e-cigarettes.” In addition, it states, “vaping products (that is, e-cigarettes) usually contain nicotine, which is the addictive ingredient in tobacco. Substances other than tobacco can also be used to smoke or vape. While the 2015 USPSTF recommendation statement used the term ‘electronic nicotine delivery systems’ or ‘ENDS,’ the USPSTF recognizes that the field has shifted to using the term ‘e-cigarettes’ (or ‘e-cigs’) and uses the term e-cigarettes in the current recommendation statement. E-Cigarettes can come in many shapes and sizes, but generally they heat a liquid that contains nicotine (the addictive drug in tobacco) to produce an aerosol (or ‘vapor’) that is inhaled (‘vaped’) by users.”<br/>Tobacco Cessation Intervention – Includes brief counseling (3 minutes or less), and/or pharmacotherapy – Note: Concepts aligned with brief counseling (for example, minimal and intensive advice/counseling interventions conducted both in person and over the phone) are included in the 2023 CMS Web Interface PREV-10 Coding Document for the numerator. Other concepts such as written self-help materials (for example, brochures, pamphlets) and complementary/alternative therapies are not included in the 2023 CMS Web Interface PREV-10 Coding Document and do not qualify for the numerator. Counseling also may be of longer duration or be performed more frequently, as evidence shows that higher-intensity interventions are associated with higher tobacco cessation rates (U.S. Preventive Services Task Force, 2021).</p> <p><b>Updated guidance: Revised to read:</b> The requirement of two or more visits is to establish that the eligible clinician has an existing relationship with the patient for certain types of encounters.<br/>To satisfy the intent of this measure, a patient must have at least one tobacco use screening during the measurement period. If a patient has multiple tobacco use screenings during the measurement period, only the most recent screening, which has a documented status of tobacco user or tobacco non-user, will be used to satisfy the measure requirements.<br/>If a patient uses any type of tobacco (that is, smokes or uses smokeless tobacco), the expectation is that they should receive tobacco cessation intervention: either counseling and/or pharmacotherapy.<br/>As noted in Appendix III in the 2021 USPSTF recommendation statement, the current evidence is insufficient to recommend electronic cigarettes (e-cigarettes) for tobacco cessation.</p> |

| Category   | Description   |
|--|---|
|  | <p>However, as noted above in the Definition section, the 2021 USPSTF recommendation also references the US Food and Drug Administration definition of tobacco, which includes e-cigarettes, hookah pens and other electronic nicotine delivery systems. Therefore, the measure does consider the use of e-cigarettes and other electronic nicotine delivery systems to be tobacco use. If a patient's tobacco use status is unknown, the patient does not meet the screening requirement and does not meet the numerator for populations 1 or 3. Instances where tobacco use status of "unknown" include: 1) the patient was not screened; or 2) the patient was screened and the patient (or caregiver) was unable to provide a definitive answer.</p> <p>In order to promote a team-based approach to patient care, the tobacco cessation intervention can be performed by another healthcare provider; therefore, the tobacco use screening and tobacco cessation intervention do not need to be performed by the same provider or clinician.</p> <p>This measure contains three reporting rates which aim to identify patients who were screened for tobacco use (rate/population 1), patients who were identified as tobacco users and who received a tobacco cessation intervention (rate/population 2), and a comprehensive look at the overall performance on tobacco screening and cessation intervention (rate/population 3). By separating this measure into various reporting rates, the eligible clinician will be able to better ascertain where gaps in performance exist, and identify opportunities for improvement. The overall rate (rate/population 3) can be utilized to compare performance to published versions of this measure prior to the 2018 performance year, when the measure had a single performance rate. For accountability reporting in the CMS Medicare Shared Savings Program, the rate for population 2 is used for performance. The denominator of population criteria 2 is a subset of the resulting numerator for population criteria 1, as population criteria 2 is limited to assessing if patients identified as tobacco users received an appropriate tobacco cessation intervention. For all patients, population criteria 1 and 3 are applicable, but population criteria 2 will only be applicable for those patients who are identified as tobacco users. Therefore, data for every patient that meets the initial population criteria will only be submitted for population 1 and 3, whereas data submitted for population 2 will be for a subset of patients who meet the initial population criteria, as the denominator has been further limited to those who were identified as tobacco users.</p> <p><b>Updated denominator criteria: Added:</b> coding for registered dietitians and nutritionists.</p> |
| <b>Measure Steward:</b>  | National Committee for Quality Assurance  |
| <b>High Priority Measure:</b>  | No  |
| <b>Measure Type:</b>   | Process   |
| <b>Rationale:</b>  | <p>We proposed to update multiple components of the measure to better define and align the lookback period for tobacco cessation intervention and to allow a lookback of 6-months prior to the current measurement period.</p> <p>We proposed to update the denominator statement for Population 2 to clarify the timing of the screening for tobacco cessation intervention.</p> <p>We proposed to update the denominator criteria to include encounter codes for registered dietitians and nutritionists to allow them to screen for tobacco use as part of a comprehensive patient assessment. Additionally, we proposed to remove all denominator exceptions. The measure definition is also being updated to align with 2021 USPSTF recommendations.</p>   |
| <p><b>Comment:</b> One commenter supported the substantive changes to measure Q226.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46798 through 46799), we are finalizing the substantive changes to measure Q226 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

## E.10 Controlling High Blood Pressure

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | N/A / N/A  |
| Quality#:  | 236  |
| CMS eCQM ID:   | CMS165v11  |
| Web Interface ID:  | HTN-2  |
| National Quality Strategy Domain:  | Effective Clinical Care  |
| Current Collection Type:   | Web Interface  |
| Current Measure Description:   | Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.  |
| Substantive Change:  | <b>Updated guidance: Added:</b><br>Ranges and thresholds do not meet criteria for this measure. A distinct numeric result for both the systolic and diastolic BP reading is required for numerator compliance.<br><b>Revised to read:</b> To assess the age for exclusions, the patient's age on the date of encounter should be used.   |
| Measure Steward:   | National Committee for Quality Assurance   |
| High Priority Measure:   | Yes  |
| Measure Type:  | Intermediate Outcome   |
| Rationale:   | We proposed to revise the denominator guidance to allow for the age to be determined at the time of the denominator eligible encounter. This will reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and will allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This will help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.<br><br>We proposed to add language to ensure that only distinct numeric results are being utilized for the purpose of this measure as ranges and thresholds do not meet the measure's intent. |
| <b>Comment:</b> One commenter supported the substantive changes to measure Q236 with one exception; the commenter recommended that CMS consider including blood pressure readings documented as average in the measure specifications to ensure alignment with 2023 MY HEDIS measure which is used for patients with Medicaid, Commercial and Medicare Advantage insurance coverage. |  |
| <b>Response:</b> We thank the commenter for supporting the changes to this measure and encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.   |  |
| After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46799), we are finalizing the substantive changes to measure Q236 as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.   |  |

## APPENDIX 2: IMPROVEMENT ACTIVITIES

NOTE: In this final rule, for the CY 2023 performance period/2025 MIPS payment year and future years, we proposed to add four new improvement activities, modify five previously adopted improvement activities, and remove six previously adopted improvement activities. These proposals are discussed in detail below. We solicited comments on our proposals.

**Table A: New Improvement Activities for the CY 2023 Performance Period/2025 MIPS Payment Year and for Future Years**

| New Improvement Activity       |  |
|--------------------------------|--|
| Proposed Activity ID:          | IA_AHE_XX  |
| Proposed Subcategory:          | Achieving Health Equity  |
| Proposed Activity Title:       | Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data  |
| Proposed Activity Description: | Use security labeling services available in certified Health Information Technology (HIT) for electronic health record (EHR) data to facilitate data segmentation.   |
| Proposed Weighting:            | Medium   |
| Rationale:                     | Data segmentation capabilities are used to promote interoperability while preserving confidentiality, honoring consent, and respecting patient privacy preferences. This new activity will promote the adoption of technology certified to the Security tags - summary of care send and Security tags - summary of care - receive criteria at 45 CFR 170.315(b)(7) and (b)(8) in the ONC Health IT Certification Program. <sup>1</sup> Security tagging allows sharing of certain portions of an EHR while not sharing others, such as sensitive information related to substance use disorder treatment. This activity will involve |

|                                       |  |
|---------------------------------------|--|
|                                       | <p>clinicians working with their EHR vendors to implement technology meeting the security tags criteria at 45 CFR 170.315 (b)(7) and (b)(8) in practice systems and clinic workflows, and in so doing improving interoperability while protecting patient privacy. Health IT certified to these criteria is not required for participation in the Promoting Interoperability performance category.</p> <p>This improvement activity fills a gap in the Inventory, as there is no existing improvement activity that focuses on security labeling services and/or data segmentation.</p> <p>We proposed weighting this activity medium because this activity may be accomplished by working with clinicians' EHR vendors to implement security tags criteria at 45 CFR 170.315 (b)(7) and (b)(8) in practice systems and clinic workflows. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the Inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p> |
| Comments:                             | We received many comments in support of the proposed new improvement activities' focus on health equity, and we received several comments in support of this particular proposed new activity as helpful in advancing interoperability while protecting patient data. One commenter had suggestions about implementation of this activity, including encouraging the tagging of "data at the entry level in order to truly advance this work to the next stage."   |
| Response:                             | We appreciate commenters' support and suggestions. However, we are not adding language regarding the specifics on tagging of data for this activity as we believe it would be communicated best in subregulatory guidance. We have added some minor clarifying language to the activity description in response to a comment from ONC, suggesting that we direct eligible clinicians to the certification criteria in the CFR.   |
| Final Action:                         | After consideration of the public comments, we are finalizing this activity as proposed.   |
| <b>Finalized Improvement Activity</b> |  |
| Activity ID:                          | <b>IA_AHE_10</b>   |
| Subcategory:                          | Achieving Health Equity  |
| Activity Title:                       | Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data  |
| Activity Description:                 | Use security labeling services available in certified Health Information Technology (IT) for electronic health record (EHR) data to facilitate data segmentation. Certification criteria for security tags may be found in the ONC Health IT Certification Program at 45 CFR 170.315(b)(7) and (b)(8).   |
| Weighting:                            | Medium   |
| <b>New Improvement Activity</b>       |  |
| Proposed Activity ID:                 | <b>IA_AHE_XX</b>   |
| Proposed Subcategory:                 | Achieving Health Equity  |
| Proposed Activity Title:              | Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients  |
| Proposed Activity Description:        | Create and implement a plan to improve care for lesbian, gay, bisexual, transgender, and queer (LGBTQ+) patients by understanding and addressing health disparities for this population. The plan may include an analysis of sexual orientation and gender identity (SO/GI) data to identify disparities in care for LGBTQ+ patients. Actions to implement this activity may also include identifying focused goals for addressing disparities in care, collecting and using patients' pronouns and chosen names, training clinicians and staff on SO/GI terminology (including as supported by certified health IT and the Office of the National Coordinator for Health Information Technology <sup>2</sup> US Core Data for Interoperability [USCDI]), identifying risk factors or behaviors specific to LGBTQ+ individuals, communicating SO/GI data security and privacy practices with patients, and/or utilizing anatomical inventories when documenting patient health histories.  |
| Proposed Weighting:                   | High   |

|                                       |  |
|---------------------------------------|--|
| Rationale:                            | <p>LGBTQ+ individuals face health disparities and challenges navigating and accessing healthcare.<sup>3,4</sup> Due to lack of clinician training about providing care with cultural humility and sensitivity for LGBTQ+ individuals, several studies indicate that LGBTQ+ patients, especially gender minority patients, have high rates of negative healthcare experiences.<sup>5-7</sup> Compared with heterosexual individuals, LGBTQ+ individuals in the U.S. generally have lower life expectancies, higher rates of cardiovascular disease, gynecologic cancer, breast cancer, body issues and eating disorders, substance use, and mental health conditions, including anxiety, depression, suicidal ideation, and non-suicidal self-injury.<sup>3,8</sup></p> <p>In 2015, ONC issued a final rule requiring that certified health IT enable a user to record sexual orientation and gender identity (SO/GI), but users were not required to exchange these data (45 CFR Parts 170 and 171).<sup>9</sup> In the first year after implementation, sexual orientation data were missing for 75% of patients and gender identity data were missing for 65% of patients.<sup>10</sup> Clinicians have increasing opportunities to improve data collection, as adoption of the USCDI Version 2 within certified health IT will offer improved support for the exchange of SO/GI data elements. Increasing patients' and clinicians' comfort with and knowledge about SO/GI data collection can also improve data collection.<sup>3,11</sup></p> <p>This improvement activity will fill a gap in the Inventory, which does not currently include an activity focused on improving care for LGBTQ+ patients. We believe this activity has the potential to improve clinical practice and care delivery because training clinicians about serving LGBTQ+ patients can lead to more positive care experiences.<sup>6,12</sup> Understanding disparities in care access, screenings, and health outcomes and implementing a plan to address identified health disparities can improve the care LGBTQ+ patients receive.<sup>11,13</sup></p> <p>We proposed weighting this activity high because clinicians will need considerable time and resources to develop a thorough LGBTQ+ care improvement plan that is informed by data, and to implement it throughout the practice or system. See the definition of high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p> |
| Comments                              | We received approximately 40 comments in general support of this proposed new activity (not including general expressions of support for the health equity focus of proposed Inventory changes) and no comments recommending against the inclusion of this activity. One commenter suggested that this activity should include a requirement for follow-up with the patient.   |
| Response                              | We appreciate commenters' support. We understand the commenter's suggestion that ideally patient follow-up would be required as a next step for this activity; however, as this activity launches, we believe that patient follow-up need not be essential to the creation and implementation of a successful plan. We encourage the commenter to submit a proposed modification to this activity in the next Call for Improvement Activities cycle.   |
| Final Action                          | After consideration of the public comments, we are finalizing this activity as proposed.   |

|                                 | patients, and/or utilizing anatomical inventories when documenting patient health histories.   |
| Weighting:                      | High   |
| <b>New Improvement Activity</b> |  |
| <b>Proposed Activity ID:</b>    | <b>IA_EPA_XX</b>   |
| Proposed Subcategory:           | Expanded Practice Access   |
| Proposed Activity Title:        | Create and Implement a Language Access Plan  |
| Proposed Activity Description:  | Create and implement a language access plan to address communication barriers for individuals with limited English proficiency. The language access plan must align with standards for communication and language assistance defined in the National Standards for Culturally and Linguistically Appropriate Services (CLAS) in Health and Health Care ( <a href="https://thinkculturalhealth.hhs.gov/clas">https://thinkculturalhealth.hhs.gov/clas</a> ).  |
| Proposed Weighting:             | High   |
| Rationale:                      | <p>We believe the evidence is clear that accurate patient-clinician communication, delivered and received with cultural humility, is an essential aspect of improving equity in healthcare and patient outcomes.<sup>14, 15</sup> According to the 2020 U.S. Census, 8.3 percent of American households speak English “less than very well” and are thus said to be limited English-proficient (LEP).<sup>16</sup> “The ability to communicate with a healthcare clinician can mean the difference between receiving higher or lower quality care.”<sup>14</sup> The use of properly trained medical interpreters is superior to use of ad hoc, family, or no interpreters.<sup>17</sup> Use of professional interpreter services improves patient and clinician satisfaction with communication<sup>18</sup> and improves patient safety.<sup>19</sup></p> <p>A language access plan can help clinician organizations codify the process that will be used to provide services to individuals with limited English proficiency. A language access plan typically contains information on beneficiary needs, defines how interpretation will be provided, outlines how patients and families will be notified about interpretation services, and specifies staff training.<sup>20</sup> The plan may include policies and procedures regarding the use of professional interpreters, high-quality translation of patient materials, and collection of patients’ language preference. The plan may also include details on communication with individuals who are deaf, hard of hearing, and deaf-blind.<sup>21</sup> The National CLAS Standards include four standards on communication and language assistance that stipulate: language assistance should be timely and offered at no cost; patients should be informed that language assistance is available; competent individuals provide translation and interpretation services; and materials and signage are printed in commonly used languages.<sup>22, 23</sup></p> <p>This improvement activity would fill a gap in the Inventory, which does not currently include an activity focused on language access. We believe this activity has the potential to improve clinical practice and care delivery and is likely to result in improved patient outcomes, because research demonstrates the importance of accurate clinical communication in achieving positive patient outcomes.<sup>14, 15</sup></p> <p>We proposed making this activity high-weighted because clinicians will need considerable time and resources to develop a thorough language access plan that is informed by data, and to implement it throughout the practice or system. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p> |
| Comments                        | We received some comments in support of this proposed new activity, agreeing that use of the CLAS standards can help improve patient-provider communication and thus improve the quality of care provided and also help make progress in advancing health equity. One commenter suggested that this activity should include a requirement for follow-up with the patient.  |
| Response                        | We appreciate commenters’ support. We understand the commenter’s suggestion that ideally patient follow-up would be required as a next step for this activity. We  |

|                                       |   |
|---------------------------------------|---|
|                                       | encourage the submission of proposed modifications to this activity in the next Call for Improvement Activities cycle.  |
| Final Action                          | After consideration of the public comments, we are finalizing this activity as proposed.  |
| <b>Finalized Improvement Activity</b> |   |
| Activity ID:                          | IA_EPA_6  |
| Subcategory:                          | Expanded Practice Access  |
| Activity Title:                       | Create and Implement a Language Access Plan   |
| Activity Description:                 | Create and implement a language access plan to address communication barriers for individuals with limited English proficiency. The language access plan must align with standards for communication and language assistance defined in the National Standards for Culturally and Linguistically Appropriate Services (CLAS) in Health and Health Care ( <a href="https://thinkculturalhealth.hhs.gov/clas">https://thinkculturalhealth.hhs.gov/clas</a> ).   |
| Weighting:                            | High  |
| <b>New Improvement Activity</b>       |   |
| Proposed Activity ID:                 | IA_ERP_XX   |
| Proposed Subcategory:                 | Emergency Response and Preparedness   |
| Proposed Activity Title:              | COVID-19 Vaccine Achievement for Practice Staff   |
| Proposed Activity Description:        | Demonstrate that the MIPS eligible clinician's practice has maintained or achieved a rate of 100% of office staff in the MIPS eligible clinician's practice fully COVID-19 vaccinated according to the Center for Disease Control and Prevention's definition of fully vaccinated ( <a href="#">Stay Up to Date with COVID-19 Vaccines Including Boosters   CDC</a> ).  |
| Proposed Weighting:                   | Medium  |
| Rationale:                            | <p>COVID-19 vaccination rates in the U.S. can be improved significantly, particularly in communities that are disadvantaged and/or underserved by the healthcare system.<sup>24</sup> Disparities in COVID-19 vaccination rates have been observed specifically among healthcare workers, with physicians and advanced practiced staff being more likely to be vaccinated than nurses and support staff. Also, it has been reported that Black and younger health care workers have lower vaccination rates than other groups of healthcare workers.<sup>25</sup> We are recommending this new improvement activity be focused on achieving or maintaining 100% COVID-19 vaccination for practice staff.</p> <p>This improvement activity will fill a gap in the Inventory, which does not currently include an activity focused on COVID-19 vaccination achievement. We believe this activity has the potential to improve clinical practice and is likely to result in improved outcomes and public health, because research demonstrates the importance of vaccination in reducing the severity and spread of COVID-19.<sup>26</sup></p> <p>We proposed weighting this activity medium, because this activity may be accomplished by vaccinating all staff members and tracking the vaccination status of each office staff member in practice staff records. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the Inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p> |
| Comments                              | While we received many comments in support of all the proposed new improvement activities overall, some commenters raised questions regarding the phrase 'fully vaccinated' and regarding exceptions/vaccine eligibility, including suggesting "that there be an exclusion for staff that have a medical contraindication to vaccination." We also received comments in support of this activity specifically.  |
| Response                              | We appreciate commenters' support and suggestions. We acknowledge that the activity description as proposed could be confusing. We are clarifying here that, when we proposed this improvement activity, we included a link to the CDC's description of fully vaccinated with the intent to stay aligned. That website stated at the time of our  |

|                                       |  |
|---------------------------------------|--|
|                                       | <p>proposal, “You are up to date with your COVID-19 vaccines when you have received all doses in the primary series and all boosters recommended for you.”<sup>578</sup> As of September 8, 2022, it was updated to state, “You are up to date with your COVID-19 vaccines if you have completed a COVID-19 vaccine primary series and received the most recent booster dose recommended for you by CDC.”<sup>579</sup></p> <p>Additionally, we intended for this improvement activity to be consistent across CMS programs and CDC guidance. Thus, we are clarifying that the proposed language “100% of office staff in the MIPS eligible clinician’s practice” means “100% of staff in the MIPS eligible clinician’s practice, consistent with CDC clinical considerations,” which are summarized here: <a href="https://www.cdc.gov/vaccines/covid-19/downloads/summary-interim-clinical-considerations.pdf">https://www.cdc.gov/vaccines/covid-19/downloads/summary-interim-clinical-considerations.pdf</a>. Based on the CDC guidance, contraindications currently include a history of:</p> <ul style="list-style-type: none"> <li>• Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a component of the COVID-19 vaccine</li> <li>• A known diagnosed allergy to a component of the COVID-19 vaccine</li> <li>• For the Janssen COVID-19 Vaccine, TTS following receipt of a previous Janssen COVID-19 Vaccine (or other COVID-19 vaccines not currently authorized or approved in the United States that are based on adenovirus vectors, e.g., AstraZeneca)</li> </ul> <p>Therefore, any individual with clinical contraindications should be excluded from this improvement activity.</p> <p>Accordingly, based on comments, we are finalizing a modified version of the activity description to more clearly convey the above. The modified activity description states:</p> <p>Demonstrate that the MIPS eligible clinician’s practice has maintained or achieved a rate of 100% of office staff in the MIPS eligible clinician’s practice staying up-to-date with COVID-19 vaccinations in accordance with the Center for Disease Control and Prevention (<a href="https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html">https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html</a>). Please note that those who are determined to have a medical contraindication specified by CDC recommendations are excluded from this activity.</p> |
| Final Action                          | After consideration of the public comments, we are finalizing this activity with modifications as discussed above.   |

**Table B: Changes to Previously Adopted Improvement Activities for the CY 2023 Performance Period/2025 MIPS Payment Year and for Future Years**

| Current Improvement Activity           |   |
|--|---|
| Current Activity ID:                   | IA_CC_13  |
| Current Subcategory:                   | Care Coordination   |
| Current Activity Title:                | Practice Improvements for Bilateral Exchange of Patient Information   |
| Current Activity Description:          | Ensure that there is bilateral exchange of necessary patient information to guide patient care, such as OpenNotes, that could include one or more of the following: <ul style="list-style-type: none"> <li>• Participate in a Health Information Exchange if available; and/or</li> <li>• Use structured referral notes.</li> </ul>   |
| Current Weighting:                     | Medium  |
| Proposed Change and Rationale:         | This improvement activity was originally finalized for the CY 2017 performance period/2019 MIPS payment year (81 FR 77817 through 77830). We propose updating this activity to require the use of OpenNotes to reduce clinician burden because OpenNotes focuses on principles that support direct access to medical records rather than utilizing a specific software or product. OpenNotes aligns with relevant policies described in the 21 <sup>st</sup> Century Cures Act (Pub. L. 114–255) that aim to make direct access to medical records a best practice in the field. Updating this activity to require the use of OpenNotes will reflect advances in policy and practice, particularly regarding the importance of direct patient-clinician communication and ensuring that patients are at the center of their care. |
| Proposed Revised Activity Title:       | Practice Improvements to Align with OpenNotes Principles  |
| Proposed Revised Activity Description: | Adherence to the principles described in the OpenNotes initiative ( <a href="https://www.opennotes.org">https://www.opennotes.org</a> ) to ensure that patients have full access to their patient information to guide patient care.  |
| Comments:                              | One commenter asked that an alternative to OpenNotes software be considered but did not make concrete, actionable, or additional suggestions.   |
| Response:                              | To clarify, OpenNotes is not software; it is an initiative requiring adherence to principles to ensure that patients have full access to their patient information. There is no specific vendor or software for OpenNotes, so practices may choose how to implement OpenNotes concepts.<br><br>Under the 21 <sup>st</sup> Century Cures Act, all health systems in the United States must be sharing open notes with patients since April 15, 2021, and with third-party applications by October 6, 2022. All EHR vendors that also offer secure online patient portals must make it technically possible for patients to access their notes through electronic “asks.” Even before the Information Blocking rule went into effect, most major EHR vendors  |

|                                       |  |
|---------------------------------------|--|
|                                       | (e.g., Allscripts, Cerner, Epic, and Meditech) enabled sharing clinical notes through patient portals at no additional cost.   |
| Final Action:                         | After consideration of public comments, we are finalizing this proposed modification as proposed.  |
| <b>Finalized Improvement Activity</b> |  |
| Activity ID:                          | IA_CC_13   |
| Subcategory:                          | Care Coordination  |
| Activity Title:                       | Practice Improvements to Align with OpenNotes Principles   |
| Activity Description:                 | Adherence to the principles described in the OpenNotes initiative ( <a href="https://www.opennotes.org">https://www.opennotes.org</a> ) to ensure that patients have full access to their patient information to guide patient care.   |
| Weighting:                            | Medium   |
| <b>Current Improvement Activity</b>   |  |
| Current Activity ID:                  | IA_CC_14   |
| Current Subcategory:                  | Care Coordination  |
| Current Activity Title:               | Practice improvements that engage community resources to support patient health goals  |
| Current Activity Description:         | <p>Select and screen for the health-related social needs (HRSN) that are relevant for your patient population using tools that have been tested with underserved populations. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded question/field for the capture of data. After screening, address HRSNs identified through at least one of the following:</p> <ul style="list-style-type: none"> <li>• Maintain formal relationships with community- based organizations to strengthen the community service referral process, implementing closed-loop referrals where feasible; or</li> <li>• Update a guide to available community resources, or work with community partners to provide a community resource guide and provide it to patients who are found to be at risk in one or more HRSN area; or</li> <li>• Record findings of screening and trigger follow-up within the electronic health record (EHR); then analyze EHR data on patients with one or more HRSN needed to identify and implement approaches to better serve their holistic needs through linkages with community resources.</li> </ul> <p>HRSNs prioritized by your practice might include health-harming legal needs, which require both health and legal support to resolve, areas such as food and housing insecurity, or needs such as exercise, nutrition, or chronic disease self-management.</p>   |
| Current Weighting:                    | High   |
| Proposed Change and Rationale:        | <p>This improvement activity was originally finalized for the CY 2017 performance period/2019 MIPS payment year (81 FR 77817 through 77830). We are proposing to modify the activity title and description to refer to ‘drivers of health,’ which encompasses both ‘social determinants of health (SDOH)’ and ‘health-related social needs (HSRN)’ concepts. Drivers of health are the multitude of factors that impact each other and overall human health, which often include health behavior, social and economic environment, clinical care, and physical environment.<sup>1</sup> Drivers of health may be direct, such as health behaviors or access to health care, or indirect, such as income, education, or occupation, which may not necessarily impact health in an immediate way.<sup>2,3</sup> They may also be at the individual or community level.<sup>4</sup></p> <p>We also proposed to update the list of factors in the activity description to reflect a more comprehensive array of the drivers of health that align with related activities across CMS and HHS by removing “or needs such as exercise, nutrition, or chronic disease self-management” and replacing it with “transportation accessibility; interpersonal safety; legal challenges; and environmental exposures.”<sup>1-3</sup> We added language prior to this list noting drivers of health “are not limited” to those in the description, as eligible clinicians can select other drivers of health. We are also proposing to update the activity ID and subcategory to Achieving Health Equity (AHE) due to the connection between drivers of health, health equity, and improved health outcomes.<sup>5,6</sup> We believe the proposed modifications will better enable eligible clinicians to not only improve clinical</p> |

|  |  |
|--|--|
|  | practice by screening for and addressing drivers of health, but to also receive credit for their efforts. <sup>4</sup> Furthermore, we anticipate such efforts will be associated with improved clinical outcomes because of the recognized impact of drivers of health and other upstream factors on both healthcare and health status. <sup>5-8</sup> Finally, these proposed modifications will also more clearly align this activity with the evidence base described above <sup>1-6</sup> and other CMS work in this area, including the CMS Innovation Center's Accountable Health Communities (AHC) Model, designed to test how "addressing health-related social needs through enhanced clinical-community linkages can improve health outcomes and reduce costs." <sup>7</sup>  |
| Proposed Revised Activity ID:          | IA_AHE_XX  |
| Proposed Revised Activity Subcategory: | Achieving Health Equity  |
| Proposed Revised Activity Title:       | Practice Improvements that Engage Community Resources to Address Drivers of Health   |
| Proposed Revised Activity Description: | <p>Select and screen for drivers of health that are relevant for the eligible clinician's population using evidence-based tools. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded questions/fields for the capture of data. After screening, address identified drivers of health through at least one of the following:</p> <ul style="list-style-type: none"> <li>• Develop and maintain formal relationships with community-based organizations to strengthen the community service referral process, implementing closed-loop referrals where feasible; or</li> <li>• Work with community partners to provide and/or update a community resource guide for to patients who are found to have and/or be at risk in one or more areas of drivers of health; or</li> <li>• Record findings of screening and follow up within the electronic health record (EHR); identify screened patients with one or more needs associated with drivers of health and implement approaches to better serve their holistic needs through meaningful linkages to community resources.</li> </ul> <p>Drivers of health (also referred to as social determinants of health [SDOH] or health-related social needs [HSRN]) prioritized by the practice might include, but are not limited to, the following: food security; housing stability; transportation accessibility; interpersonal safety; legal challenges; and environmental exposures.</p>   |
| Comments:                              | One commenter objected to this modification, seeing it as a 'narrowing' of the scope of this activity, and stated that removing emphasis on care coordination in favor of one aspect of care coordination may limit clinician use of this improvement activity.  |
| Response:                              | <p>We disagree with this commenter, as we do not believe these modifications 'narrow' this activity. On the contrary, we believe that the modifications broaden the activity. 'Drivers of health' encompasses both 'social determinants of health (SDOH)' and 'health-related social needs (HSRN)' concepts. As discussed in our proposal, drivers of health are the multitude of factors that impact each other and overall human health, which often include health behavior, social and economic environment, clinical care, and physical environment.<sup>1</sup> Drivers of health may be direct, such as health behaviors or access to health care, or indirect, such as income, education, or occupation, which may not necessarily impact health in an immediate way.<sup>2,3</sup> They may also be at the individual or community level.<sup>4</sup></p> <p>Also, as proposed, we updated the list of factors in the activity description to both be more comprehensive and to align with related activities across CMS and HHS. We proposed to remove "or needs such as exercise, nutrition, or chronic disease self-management" and replace it with "transportation accessibility; interpersonal safety; legal challenges; and environmental exposures."<sup>1-3</sup> We also proposed to add language prior to this list noting drivers of health "are not limited" to those in the description, as eligible clinicians can select other drivers of health. We expect these to better enable eligible clinicians to not only improve clinical practice by screening for and addressing drivers of health, but to also receive credit for these improvements.</p> |

|                                       |  |
|---------------------------------------|--|
| Final Action:                         | After consideration of public comments, we are finalizing this proposed modification as proposed.  |
| <b>Finalized Improvement Activity</b> |  |
| <b>Activity ID:</b>                   | <b>IA_AHE_12</b>   |
| Subcategory:                          | Achieving Health Equity  |
| Activity Title:                       | Practice Improvements that Engage Community Resources to Address Drivers of Health   |
| Activity Description:                 | <p>Select and screen for drivers of health that are relevant for the eligible clinician's population using evidence-based tools. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded questions/fields for the capture of data. After screening, address identified drivers of health through at least one of the following:</p> <ul style="list-style-type: none"> <li>• Develop and maintain formal relationships with community-based organizations to strengthen the community service referral process, implementing closed-loop referrals where feasible; or</li> <li>• Work with community partners to provide and/or update a community resource guide for to patients who are found to have and/or be at risk in one or more areas of drivers of health; or</li> <li>• Record findings of screening and follow up within the electronic health record (EHR); identify screened patients with one or more needs associated with drivers of health and implement approaches to better serve their holistic needs through meaningful linkages to community resources.</li> </ul> <p>Drivers of health (also referred to as social determinants of health [SDOH] or health-related social needs [HSRN]) prioritized by the practice might include, but are not limited to, the following: food security; housing stability; transportation accessibility; interpersonal safety; legal challenges; and environmental exposures.</p> |
| Weighting                             | High   |
| <b>Current Improvement Activity</b>   |  |
| <b>Current Activity ID:</b>           | <b>IA_PSPA_7</b>   |
| Current Subcategory:                  | Patient Safety and Practice Assessment   |
| Current Activity Title:               | Use of QCDR data for ongoing practice assessment and improvements  |
| Current Activity Description:         | <p>Participation in a Qualified Clinical Data Registry (QCDR) and use of QCDR data for ongoing practice assessment and improvements in patient safety, including:</p> <ul style="list-style-type: none"> <li>• Performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups);</li> <li>• Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status assessment);</li> <li>• Use of standardized processes for screening for social determinants of health such as food security, employment, and housing;</li> <li>• Use of supporting QCDR modules that can be incorporated into the certified EHR technology; or</li> <li>• Use of QCDR data for quality improvement such as comparative analysis across specific patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcomes.</li> </ul>  |
| Current Weighting:                    | Medium   |
| Proposed Change and Rationale:        | <p>We proposed to consolidate IA_BE_7, IA_BE_8, and IA_PM_7 related to participation in a QCDR into a single activity, IA_PSPA_7. We note that this proposed modification is being made in conjunction with our proposals to remove IA_BE_7, IA_BE_8, and IA_PM_7 in Table C. This consolidation will reduce clinician burden by streamlining the choice for a QCDR activity and make IA_PSPA_7 more robust and offer additional examples. We believe this will help to enhance patient engagement, learning and practice improvement, progress in improving health equity, and population health management by creating standard processes to monitor, assess, and improve practice activities. We believe these proposed modifications have the potential to improve clinical practice and are likely to result in improved outcomes, because they focus on</p>  |

|  |  |
|--|--|
|  | <p>creating ongoing activities aimed at identifying gaps and improving processes to support patient safety and equitable provision of care.</p> <p>Note that the weighting of the consolidated activity will remain as medium, because the level of effort to attest to this activity will be the same as for IA_PSPA_7. See the definition for medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>  |
| Proposed Revised Activity Description: | <p>Participation in a Qualified Clinical Data Registry (QCDR) and use of QCDR data for ongoing practice assessment and improvements in patient safety, including:</p> <ul style="list-style-type: none"> <li>• Performance of activities that promote use of standard practices, tools, and processes for quality improvement (for example, documented preventive health efforts, like screening and vaccinations) that can be shared across MIPS eligible clinicians or groups);</li> <li>• Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status assessment);</li> <li>• Use of standardized processes for screening for drivers of health, such as food security, housing stability, and transportation accessibility;</li> <li>• Generation and use of regular feedback reports that summarize local practice patterns and treatment outcomes, including for populations that are disadvantaged and/or underserved by the healthcare system;</li> <li>• Use of processes and tools that engage patients to improve adherence to treatment plans;</li> <li>• Implementation of patient self-action plans;</li> <li>• Implementation of shared clinical decision-making capabilities;</li> <li>• Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement;</li> <li>• Promotion of collaborative learning network opportunities that are interactive;</li> <li>• Use of supporting QCDR modules that can be incorporated into the certified EHR technology; or</li> <li>• Use of QCDR data for quality improvement, such as comparative analysis across specific patient populations of adverse outcomes after an outpatient surgical procedure and corrective steps to address these outcomes.</li> </ul> |
| Comments:                              | <p>We received several comments in support of activity consolidation; we received two comments opposing the QCDR activity consolidation with the suggestion that, if the consolidation proceeds, the consolidated improvement activity, IA_PSPA_7, should be changed to a high-weighted activity.</p>  |
| Response:                              | <p>We appreciate the commenters' input. However, we have carefully reviewed the Inventory and continue to believe that this activity should remain medium-weighted because the activity burden remains the same; no additional requirements have been added. The bulleted list included in the description includes some examples; eligible clinicians may choose one element in the description. They are not all required. To help make this point clearer, we are making a formatting change in the activity description (changing the 'or' to 'OR'), so that eligible clinicians can more easily see that the listed ways in which this activity can be implemented are not all required.</p>  |
| Final Action:                          | <p>After consideration of public comments, we are finalizing this proposed modification as proposed with the exception of one formatting change to the activity description (changing the 'or' to 'OR').</p>   |
| <b>Finalized Improvement Activity</b>  |  |
| Activity ID:                           | <b>IA_PSPA_7</b>   |
| Subcategory:                           | Patient Safety and Practice Assessment   |
| Activity Title:                        | Use of QCDR data for ongoing practice assessment and improvements  |
| Activity Description:                  | <p>Participation in a Qualified Clinical Data Registry (QCDR) and use of QCDR data for ongoing practice assessment and improvements in patient safety, including:</p> <ul style="list-style-type: none"> <li>• Performance of activities that promote use of standard practices, tools, and processes for quality improvement (for example, documented preventive health efforts, like screening and vaccinations) that can be shared across MIPS eligible clinicians or groups);</li> </ul>   |

|  |  |
|--|--|
|  | <ul style="list-style-type: none"> <li>• Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status assessment);</li> <li>• Use of standardized processes for screening for drivers of health, such as food security, housing stability, and transportation accessibility;</li> <li>• Generation and use of regular feedback reports that summarize local practice patterns and treatment outcomes, including for populations that are disadvantaged and/or underserved by the healthcare system;</li> <li>• Use of processes and tools that engage patients to improve adherence to treatment plans;</li> <li>• Implementation of patient self-action plans;</li> <li>• Implementation of shared clinical decision-making capabilities;</li> <li>• Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement;</li> <li>• Promotion of collaborative learning network opportunities that are interactive;</li> <li>• Use of supporting QCDR modules that can be incorporated into the certified EHR technology; OR</li> <li>• Use of QCDR data for quality improvement, such as comparative analysis across specific patient populations of adverse outcomes after an outpatient surgical procedure and corrective steps to address these outcomes.</li> </ul>   |
| Weighting:                             | Medium   |
| <b>Current Improvement Activity</b>    |  |
| <b>Current Activity ID:</b>            | <b>IA_PSPA_10</b>  |
| Current Subcategory:                   | Patient Safety and Practice Assessment   |
| Current Activity Title:                | Completion of training and receipt of approved waiver for provision opioid medication-assisted treatments  |
| Current Activity Description:          | Completion of training and obtaining an approved waiver for provision of medication - assisted treatment of opioid use disorders using buprenorphine.  |
| Current Weighting:                     | Medium   |
| Proposed Change and Rationale:         | <p>This improvement activity was originally finalized for the CY 2017 performance period/2019 MIPS payment year (81 FR 77817 through 77830). We are proposing to modify this improvement activity to incorporate HHS Office of the Secretary Practice Guidelines for the Administration of Buprenorphine for Treating Opioid Use Disorder (86 FR 22439) updates that removed the 8-hour training requirement for physicians.<sup>9</sup> We are also proposing to add a note limiting the attestation of this improvement activity to once for low-capacity waivers because they never expire and once every 3 years for the expanded waiver. These limitations are in line with the renewal requirements of the waiver (86 FR 22439) and ensure clinicians are able to perform the improvement activity for a 90-day continuous period as required by 42 CFR 414.1360.</p> <p>In addition, we proposed to re-categorize this activity to the Behavioral and Mental Health subcategory, which we believe better reflects the intent of this improvement activity, because it is focused on improving treatment for opioid use disorder, a behavioral and mental health condition.</p> <p>We believe the proposed modifications to this activity have the potential to improve clinical practice and are likely to result in improved outcomes, because it will reduce clinician burden by streamlining the activity to align with federal guidance and ensure that patients are receiving medication-assisted treatment in line with medical guidelines.</p> |
| <b>Proposed Activity ID</b>            | <b>IA_BMH_XX</b>   |
| Proposed Subcategory:                  | Behavioral and Mental Health   |
| Proposed Revised Activity Title        | Obtain or Renew an Approved Waiver for Provision of Buprenorphine as Medication-Assisted Treatment for Opioid Use Disorder   |
| Proposed Revised Activity Description: | Complete any required training and obtain or renew an approved waiver for provision of medication-assisted treatment of opioid use disorders using buprenorphine. Note: This activity may be selected once for low-capacity waivers, as these do not expire, and once every 3 years for the expanded waiver, in keeping with renewal requirements.   |

|                                       |   |
|---------------------------------------|---|
|                                       | <ul style="list-style-type: none"> <li>• Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data;</li> <li>• Participation in Bridges to Excellence;</li> <li>• Participation in American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.</li> </ul>  |
| Comments:                             | We received several comments in support of activity consolidation. But we received two comments opposing the removal of PSPA_20: “Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes.” These commenters noted that Inventory changes are burdensome and one commenter stated that the leadership concept here is important enough to warrant a separate activity.  |
| Response:                             | We believe that the burden reduction accomplished by keeping the Inventory as streamlined as possible outweighs commenters’ concerns raised. We received comments in this rulemaking cycle that reflect a desire to see the Inventory consolidated and simplified. This proposal was made in direct response to those comments.   |
| Final Action:                         | After consideration of the public comments, we are finalizing our proposed modifications as proposed.   |
| <b>Finalized Improvement Activity</b> |   |
| Activity ID:                          | IA_PSPA_19  |
| Subcategory:                          | Patient Safety and Practice Assessment  |
| Activity Title:                       | Implementation of formal quality improvement methods, practice changes, or other practice improvement processes   |
| Activity Description:                 | <p>Adopt a formal model for quality improvement and create a culture in which all staff, including leadership, actively participates in improvement activities that could include one or more of the following, such as:</p> <ul style="list-style-type: none"> <li>• Participation in multisource feedback;</li> <li>• Train all staff in quality improvement methods;</li> <li>• Integrate practice change/quality improvement into staff duties;</li> <li>• Engage all staff in identifying and testing practices changes;</li> <li>• Designate regular team meetings to review data and plan improvement cycles;</li> <li>• Promote transparency and accelerate improvement by sharing practice level and panel level quality of care, patient experience and utilization data with staff;</li> <li>• Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data;</li> <li>• Participation in Bridges to Excellence;</li> <li>• Participation in American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.</li> </ul> |
| Weighting:                            | Medium  |

**TABLE C: Improvement Activities Proposed for Removal for the CY 2023 Performance Period/2025 MIPS Payment Year and for Future Years**

In this rule, we proposed to remove six previously finalized improvement activities from the CY 2023 performance period/2025 MIPS payment year and future years. These improvement activities are discussed in detail below. Improvement activity removal factors are discussed in the CY 2020 PFS final rule (84 FR 62568 through 63563).

| Current Improvement Activity         |   |
|--------------------------------------|---|
| <b>Current Activity ID:</b>          | <b>IA_BE_7</b>  |
| <b>Current Subcategory:</b>          | Beneficiary Engagement  |
| <b>Current Activity Title:</b>       | Participation in a QCDR, that promotes use of patient engagement tools.   |
| <b>Current Activity Description:</b> | Participation in a Qualified Clinical Data Registry (QCDR), that promotes patient engagement, including: <ul style="list-style-type: none"> <li>• Use of processes and tools that engage patients for adherence to treatment plans;</li> <li>• Implementation of patient self-action plans;</li> <li>• Implementation of shared clinical decision-making capabilities; or</li> <li>• Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement.</li> </ul>   |
| <b>Current Weighting:</b>            | Medium  |
| <b>Removal Rationale:</b>            | <p>We proposed to remove this activity under removal factor one, improvement activity is “duplicative.” We believe IA_BE_7 is duplicative because it is similar to, but only represents a partial component of, IA_PSPA_7. In Table B above, we proposed to add “Use of processes and tools that engage patients for adherence to treatment plans; Implementation of patient self-action plans; Implementation of shared clinical decision-making capabilities; Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement” to make IA_PSPA_7 more robust and offer additional examples. Because of this, we believe the changes to IA_PSPA_7 capture the essence of IA_BE_7.</p> <p>We note that this proposed removal is being made in conjunction with our proposal to modify IA_PSPA_7 in Table B, as well as our proposals to remove IA_BE_8 and IA_PM_7 in Table C.</p> |
| <b>Comments:</b>                     | We received several comments in support of activity consolidation; we received two comments opposing the QCDR activity consolidation as generally burdensome, with the suggestion that, if the consolidation proceeds, IA_PSPA_7 should be changed to a high-weighted activity.   |
| <b>Response:</b>                     | We appreciate the commenters’ input. However, we have carefully reviewed the Inventory and continue to believe that this activity should remain medium-weighted because the activity burden remains the same; no additional requirements have been added. The bulleted list included in the description includes some examples; eligible clinicians may choose one element in the description. They are not all required. To help make this point clearer, we are making a formatting change in the activity description (changing the ‘or’ to ‘OR’), so that eligible clinicians can more easily see that the listed ways in which this activity can be implemented are not all required.  |
| <b>Final Action:</b>                 | After consideration of public comments, we are finalizing this removal as proposed, making one formatting change to the IA_PSPA_7 activity description.   |
| Current Improvement Activity         |   |
| <b>Current Activity ID:</b>          | <b>IA_BE_8</b>  |
| <b>Current Subcategory:</b>          | Beneficiary Engagement  |

|                                     |  |
|-------------------------------------|--|
| Current Activity Title:             | Participation in a QCDR, that promotes collaborative learning network opportunities that are interactive.  |
| Current Activity Description:       | Participation in a QCDR, that promotes collaborative learning network opportunities that are interactive.  |
| Current Weighting:                  | Medium   |
| Removal Rationale:                  | We proposed to remove this activity under removal factor one, improvement activity is “duplicative.” We believe IA_BE_8 is duplicative because it is similar to, but only represents a partial component of, IA_PSPA_7. In Table B above, we are proposing to modify IA_PSPA_7 to add “promotion of collaborative learning network opportunities that are interactive” to make IA_PSPA_7 more robust and offer additional examples. Because of this, we believe the changes to IA_PSPA_7 capture the essence of IA_BE_8. We note that this proposed removal is being made in conjunction with our proposal to modify IA_PSPA_7 in Table B, as well as our proposals to remove IA_BE_7 and IA_PM_7 in Table C.  |
| Comments:                           | We received several comments in support of activity consolidation; we received two comments opposing the QCDR activity consolidation with the suggestion that, if the consolidation proceeds, IA_PSPA_7 be changed to a high-weighted activity.  |
| Response:                           | We appreciate the commenters’ input. However, we have carefully reviewed the Inventory and continue to believe that this activity should remain medium-weighted because the activity burden remains the same; no additional requirements have been added. The bulleted list included in the description includes some examples; eligible clinicians may choose one element in the description. They are not all required. To help make this point clearer, we are making a formatting change in the activity description (changing the ‘or’ to ‘OR’), so that eligible clinicians can more easily see that the listed ways in which this activity can be implemented are not all required.   |
| Final Action:                       | After consideration of public comments, we are finalizing this removal as proposed, making one formatting change to the IA_PSPA_7 activity description.  |
| <b>Current Improvement Activity</b> |  |
| <b>Current Activity ID:</b>         | <b>IA_PM_7</b>   |
| Current Subcategory:                | Population Management  |
| Current Activity Title:             | Use of QCDR for feedback reports that incorporate population health  |
| Current Activity Description:       | Use of a QCDR to generate regular feedback reports that summarize local practice patterns and treatment outcomes, including for vulnerable populations.  |
| Current Weighting:                  | High   |
| Removal Rationale:                  | We proposed to remove this activity under removal factor one, improvement activity is “duplicative.” We believe IA_PM_7 is duplicative because it is similar to, but only represents a partial component of, IA_PSPA_7. In Table B above, we proposed to add “generation and use of regular feedback reports that summarize local practice patterns and treatment outcomes, including for vulnerable populations” to make IA_PSPA_7 more robust and offer additional examples. Because of this, we believe the changes to IA_PSPA_7 capture the essence of IA_PM_7. We note that this proposed removal is being made in conjunction with our proposal to modify IA_PSPA_7 in Table B, as well as our proposals to remove IA_BE_7 and IA_BE_8 in Table C. |
| Comments:                           | We received several comments in support of activity consolidation; we received two comments opposing the QCDR activity consolidation with the suggestion that, if the consolidation proceeds, IA_PSPA_7 be changed to a high-weighted activity.  |
| Response:                           | We appreciate the commenters’ input. However, we have carefully reviewed the Inventory and continue to believe that this activity should remain medium-weighted because the activity burden remains the same; no additional requirements have been added. The bulleted list included in the description includes some examples; eligible clinicians may choose one element in the description. They are not all required. To help make this point clearer, we are making a formatting change in the activity description (changing the ‘or’ to ‘OR’), so that eligible clinicians can more easily see that the listed ways in which this activity can be implemented are not all required.   |
| Final Action:                       | After consideration of public comments, we are finalizing this removal as proposed, making one formatting change to the IA_PSPA_7 activity description.  |
| <b>Current Improvement Activity</b> |  |
| <b>Current Activity ID:</b>         | <b>IA_PSPA_6</b>   |
| Current Subcategory:                | Patient Safety and Practice Assessment   |

|                                     |   |
|-------------------------------------|---|
| Current Activity Title:             | Consultation of the Prescription Drug Monitoring program  |
| Current Activity Description:       | Review the history of controlled substance prescriptions for 90 percent* of patients using state prescription drug monitoring program (PDMP) data prior to the issuance of a Controlled Substance Schedule II (CSII) opioid prescription lasting longer than 3 days.<br>*Apply exceptions for patients receiving palliative and hospice care.   |
| Current Weighting:                  | High  |
| Removal Rationale:                  | We proposed to remove this activity under removal factor one, improvement activity is “duplicative.” IA_PSPA_6 will be duplicative of the proposal to require the Query of PDMP measure for MIPS eligible clinicians in the Promoting Interoperability performance subcategory (measure PI_EP_2). The removal of this activity is contingent upon the proposal in section IV.A.6.c.(4)(d).  |
| Comments:                           | One commenter opposed this removal, citing this activity’s importance in light of the ongoing opioid epidemic.  |
| Response:                           | We thank the commenter for their input and emphasize that we continue to believe in the importance of state prescription drug monitoring programs in light of the ongoing opioid epidemic. We refer readers to section IV.A.6.c.(4)(d) of this final rule, where we are finalizing the Query of PDMP measure in the Promoting Interoperability performance subcategory (measure PI_EP_2). With the inclusion of measure PI_EP_2 in the Promoting Interoperability performance subcategory, this improvement activity is duplicative.  |
| Final Action:                       | After consideration of the public comments, we are finalizing this removal as proposed.   |
| <b>Current Improvement Activity</b> |   |
| Current Activity ID:                | IA_PSPA_20  |
| Current Subcategory:                | Patient Safety and Practice Assessment  |
| Current Activity Title:             | Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes   |
| Current Activity Description:       | Ensure full engagement of clinical and administrative leadership in practice improvement that could include one or more of the following:<br><ul style="list-style-type: none"> <li>• Make responsibility for guidance of practice change a component of clinical and administrative leadership roles;</li> <li>• Allocate time for clinical and administrative leadership for practice improvement efforts, including participation in regular team meetings; and/or</li> <li>• Incorporate population health, quality and patient experience metrics in regular reviews of practice performance.</li> </ul> |
| Current Weighting:                  | Medium  |
| Removal Rationale:                  | We proposed to remove this activity under removal factor one, improvement activity is “duplicative.” We note that this proposed removal is being made in conjunction with our proposal to modify IA_PSPA_19 in Table B by adding the phrase “including leadership” to the activity description after “staffing” to capture the essence of IA_PSPA_20. We believe that this activity will be duplicative of IA_PSPA_20 upon the adoption that proposal because it is similar to, but will only represent a partial component of, IA_PSPA_19.   |
| Comments:                           | We received several comments in support of activity consolidation; we received two comments opposing this removal. Commenters noted that Inventory changes are generally burdensome and one commenter stated that the leadership concept here is important enough to warrant a separate activity.   |
| Response:                           | We believe that the burden reduction accomplished by keeping the Inventory as streamlined as possible outweighs commenters’ concerns. The consolidation of this activity into IA_PSPA_19 will simplify the Inventory and thereby reduce clinician burden as well as broadening IA_PSPA_19 and making it more robust.  |
| Final Action:                       | After consideration of the public comments, we are finalizing this activity as proposed.  |
| <b>Current Improvement Activity</b> |   |
| Current Activity ID:                | IA_PSPA_30  |
| Current Subcategory:                | Patient Safety and Practice Assessment  |

|                               |   |
|-------------------------------|---|
| Current Activity Title:       | PCI Bleeding Campaign   |
| Current Activity Description: | <p>Participation in the PCI Bleeding Campaign which is a national quality improvement program that provides infrastructure for a learning network and offers evidence-based resources and tools to reduce avoidable bleeding associated with patients who receive a percutaneous coronary intervention (PCI).</p> <p>The program uses a patient-centered and team-based approach, leveraging evidence-based best practices to improve care for PCI patients by implementing quality improvement strategies:</p> <ul style="list-style-type: none"> <li>• Radial-artery access,</li> <li>• Bivalirudin, and</li> <li>• Use of vascular closure devices.</li> </ul> |
| Current Weighting:            | High  |
| Removal Rationale:            | We proposed to remove this activity under removal factor seven, improvement activity is “obsolete.” The PCI Bleeding Campaign concluded on August 31, 2021, <sup>1</sup> so this improvement activity will no longer be available as of the conclusion of the 2022 performance period. This proposal will apply beginning with the CY 2022 performance period/2024 payment year.  |
| Comments:                     | One commenter expressed support for removal of this activity, and suggested that similar initiatives be considered as improvement activities in the future.   |
| Response:                     | We appreciate the support and may consider the suggestion.  |
| Final Action:                 | After consideration of the public comments, we are finalizing this removal as proposed.   |

<sup>1</sup> Quality Improvement for Institutions. (n.d.). *Sunsetting the reduce the risk: Pci bleed dashboard*. <https://cvquality.acc.org/initiatives/reduce-the-risk-pci-bleed>.

## APPENDIX 3: MVP INVENTORY

### MVP Development Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854) and CY 2022 PFS final rule (86 FR 65998 through 66031), we finalized a set of criteria to use in the development of MVPs, including MVP reporting requirements and selection of measures and activities within an MVP. In addition, in section IV.A.4. of this final rule, we are finalizing additional MVP policies with regard to MVP development, maintenance, and reporting requirements.

This appendix contains two groups of MVP tables: Group A, which includes five new MVPs and Group B, which includes modifications to seven previously finalized MVPs. We received comments on all Group A and Group B MVPs with the comment summaries and responses embedded in each MVP table.

Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category that are relevant to the clinical theme of the MVP. In addition, each MVP includes a foundational layer that is comprised of population health measures and Promoting Interoperability performance category measures.

In the CY 2022 PFS final rule, we inadvertently omitted the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) from the MVP tables in Appendix 3 (86 FR 66002 through 66031). In the CY 2021 PFS final rule (85 FR 84849 and 84850), as a part of the MVP development criteria, we finalized that MVPs must include the full set of Promoting Interoperability performance category measures. In the CY 2022 PFS final rule (86 FR 65413), we stated that we do not intend to establish different reporting requirements for Promoting Interoperability measures in MVPs from what is established under traditional MIPS. As described at § 414.1365(c)(4)(i), an MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described under § 414.1375(b). The ONC Direct Review attestation requirement has been a requirement for the Promoting Interoperability performance category since the first MIPS performance period in CY 2017 (81 FR 77019 through 77028). For these reasons, in the CY 2023 PFS proposed rule (87 FR 46813), we proposed to add the ONC Direct Review attestation requirement described under § 414.1375(b)(3) to all previously finalized MVPs and newly proposed MVPs. We did not receive any comments on

this proposal, and we are finalizing our proposal to add the ONC Direct Review attestation requirement described under § 414.1375(b)(3) to all MVPs as proposed.

In addition, we proposed to include the IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation improvement activity in all MVPs in alignment with policy finalized in the CY 2017 MIPS final rule (81 FR 77179 and 77180): MIPS eligible clinicians in a practice that is certified or recognized as a patient-centered medical home or comparable specialty practice, as determined by the Secretary and codified at 414.1480(b)(3)(ii), may attest to this activity and receive an improvement activities performance category score of 100 percent. A couple commenters expressed support for the inclusion of IA\_PCMH in all MVPs. The comments and responses are embedded in each of the MVP tables in Group A and Group B. After consideration of the public comments, we are finalizing the inclusion of IA\_PCMH Electronic submission of Patient Centered Medical Home accreditation improvement activity in all MVPs as proposed.

### **MVP Development Performance Category Sources**

The MVP tables below contain a set of MIPS quality measures, QCDR measures (as applicable), improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities in the MVP tables are as follows:

- Existing MIPS quality measures considered in developing the MVPs are located in the 2022 MIPS Quality Measures List in the QPP Resource Library.<sup>580</sup> In addition, see Appendix 1: MIPS Quality Measures of this final rule for any removals, additions, and modifications to the existing quality measures.

- Existing QCDR measures considered in developing the MVPs were based on the most recent publication of the 2022 QCDR Measure Specification file and is located in the QPP Resource Library.<sup>581</sup> We plan to modify the list of 2023 QCDR measures around December 2022. We refer readers to the CY 2022 PFS final rule (86 FR 65405 through 65408) for additional details regarding QCDR measures and selection of measures within an MVP.

- Improvement activities considered in developing the MVPs are located in the 2022 Improvement Activities Inventory and the 2022 MIPS Data Validation Criteria located in the QPP Resource Library.<sup>582</sup> In addition, see Appendix 2: Improvement Activities of this final rule for any removals, additions, or modifications to the existing activities.

- Existing cost measures considered in developing the MVPs are located in the 2022 Cost Measures Inventory.<sup>583</sup>

- For further details on the population health measures included in the foundational layer, see the CY 2022 PFS final rule (86 FR 65408 through 65409).

- Existing Promoting Interoperability performance category measures adopted in prior rulemaking and included in the foundational layer are located in the QPP Resource Library.<sup>584</sup> In addition, see section IV.A.6.c.(4) of this final rule for policies regarding the Promoting Interoperability performance category measures.

Please note that new quality and Promoting Interoperability performance category measures for inclusion in MIPS beginning with the CY 2023 performance period/2025 MIPS payment year are identified with a caret symbol (^) within the MVP tables in this appendix. Existing quality measures, improvement activities, and Promoting Interoperability performance category measures with revisions are identified with an asterisk (\*) within the MVP tables in this appendix. Quality measures identified with a double asterisk (\*\*) are individual measures duplicating a component of the composite Adult Immunization Status measure. An MVP participant can only submit the quality measures with a (\*\*) if the measure is included in an MVP. Please see Appendix 1: MIPS Quality Measures Table A.9 of this final rule for any additional information regarding the Adult Immunization Status measure. Quality measures, Promoting Interoperability attestation requirements, and improvement activities that we are adding in this

<sup>580</sup> See the 2022 MIPS Quality Measures List: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1687/2022%20MIPS%20Quality%20Measures%20List.xlsx>.

<sup>581</sup> See <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1697/2022%20QCDR%20Measure%20Specifications.xlsx> for QCDR measures.

<sup>582</sup> See the 2022 Improvement Activities Inventory: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1727/2022%20Improvement%20Activities%20Inventory.zip> 2022 MIPS Data Validation Criteria: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1780/2022%20MIPS%20Data%20Validation%20Criteria.zip> for improvement activity details.

<sup>583</sup> See the 2022 Cost Measures Inventory: <https://qpp.cms.gov/mips/explore-measures?tab=costMeasures&py=2022>.

<sup>584</sup> See the 2022 MIPS Promoting Interoperability Measure Specifications: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1733/2022%20MIPS%20Promoting%20Interoperability%20Measure%20Specifications.zip> for Promoting Interoperability measure details.

final rule to a previously finalized MVP are identified with a plus sign (+) within the Group B MVP tables in this appendix.

Quality measures that are considered high priority (as defined in § 414.1305) are noted with an exclamation point (!) and outcome measures (as defined in § 414.1305) are noted with a double exclamation point (!!). In addition, at § 414.1305, we are finalizing as proposed revisions to the definition of a high priority measure. See section IV.A.6.c.(1)(b)(i) of this final rule regarding expansion of the definition of a high priority measure. Further details on these types of measures are located in the CMS Measures Management System Blueprint Version 17.0.<sup>585</sup> Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

- To determine whether a QCDR measure may be finalized within an MVP, we requested QCDR measure testing data for review by the end of the self-nomination period (that is, no later than September 1 of the year prior to the applicable performance period). If a QCDR was unable to submit testing data that demonstrated their QCDR measure was fully tested by the end of the self-nomination period or otherwise did not meet our requirements, we were unable to finalize the inclusion of the QCDR measure within an MVP. In this final rule, we are finalizing the QCDR measures within the relevant MVPs where evidence of testing data at the clinician level was received and fully tested. We refer readers to CY 2022 PFS final rule for additional details regarding requirements for QCDR measures within the MVP (86 FR 65407 through 65408).

- Consistent with Executive Order 13985, “Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,” each MVP includes improvement activities designed to advance health equity and address and eliminate barriers to care in underserved communities. Improvement activities that include a health equity component are noted with a tilde (~) within the MVP table. The improvement activities that include a health equity component are not required but are available as an option within the MVPs. Improvement activity medium/high weight designations are identified in parentheses after each improvement activity. IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation is noted with a percent (%) within the MVP tables below to indicate that attestation to this improvement activity provides full credit for the improvement activity performance category within the MVP.

<sup>585</sup> See <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>.

**Group A: New MVPs for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years****Advancing Cancer Care MVP**

In the CY 2023 PFS proposed rule (87 FR 46814 through 46816), in support of the Administration's Cancer Moonshot Mission<sup>7</sup> and the importance of cancer care, we proposed and solicited comments on the Advancing Cancer Care MVP. The proposed Advancing Cancer Care MVP focuses on the clinical theme of providing fundamental treatment and management of cancer care. This MVP would be most applicable to clinicians who treat patients within the practice of oncology and hematology. The summary of the public comments received and our responses for this MVP are embedded within Table A.1.

**Quality Measures**

We proposed to include eleven MIPS quality measures and two QCDR measures within the quality component of this MVP, which are specific to the clinical topic of cancer by assessing three critical areas: the patient experience of care, end of life care, and appropriate diagnostics along with possible treatment options for different cancer diagnoses. We reviewed the MIPS quality measure inventory and believe the following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with oncologic conditions:

- Q143: Oncology: Medical and Radiation – Pain Intensity Quantified: This MIPS quality measure ensures pain intensity is assessed and quantified in those patients receiving chemotherapy or radiation.
- Q144: Oncology: Medical and Radiation – Plan of Care for Pain: This MIPS quality measure ensures a plan of care is in place for those patients experiencing pain while receiving chemotherapy or radiation.
- Q450: Appropriate Treatment for Patients with Stage I (T1c) – III HER2 Positive Breast Cancer: This MIPS quality measure ensures appropriate treatment for this patient population in accordance with National Comprehensive Cancer Network (NCCN) guidelines for HER2-positive tumors.
- Q451: RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy: This MIPS quality measure strives to improve concordance with RAS (KRAS and NRAS) testing based upon American Society of Clinical Oncology (ASCO) and NCCN guidelines for metastatic colorectal cancer patients, by assessing if gene mutation testing was performed prior to therapy.
- Q452: Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies: This MIPS quality measure ensures patients with metastatic colorectal cancer and RAS (KRAS or NRAS) gene mutation are not treated inappropriately with anti-EGFR monoclonal antibodies.
- Q453: Percentage of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (lower score – better): This MIPS quality measure assesses appropriate end of life care for cancer patients by reducing the utilization of unnecessary chemotherapy.
- Q457: Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score – better): This MIPS quality measure assesses appropriate end of life care for cancer patients by increasing the use of hospice services sooner for patients with advanced cancer.
- Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy: This MIPS quality measure ensures proper bone density evaluation for patients with a care plan including androgen deprivation therapy for 12 or more months to promote positive bone health outcomes.
- PIMSH2: Oncology: Utilization of GCSF in Metastatic Colorectal Cancer: This QCDR measure assesses clinical practice guideline compliance, based upon ASCO guidelines, regarding implementation of mutations testing to optimize diagnosis and disease management.
- PIMSH8: Oncology: Mutation testing for lung cancer completed prior to start of targeted therapy: This QCDR measure assesses the use of GCSFs in accordance with current NCCN guidelines for non-small cell lung cancer.

In conjunction with the aforementioned cancer care measures, we proposed to include the following broadly applicable MIPS quality measures that are relevant to cancer care. The quality measures below capture the patient's voice regarding their care and support the mental health of patients that are experiencing a cancer diagnosis:

- Q047: Advance Care Plan: This MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their

ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.

- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan discussed for those patients who screen positive.
- Q321: CAHPS for MIPS Clinician/Group Survey: This survey provides direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.

### **Improvement Activities**

Within the improvement activities component of this MVP, we proposed to include thirteen improvement activities that reflect actions and processes undertaken by clinicians who provide cancer care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for cancer patients. The following improvement activities were proposed for inclusion in this MVP:

- IA\_BE\_4: Engagement of patients through implementation of improvements in patient portal
- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BE\_15: Engagement of patients, family and caregivers in developing a plan of care
- IA\_BE\_24: Financial Navigation Program
- IA\_CC\_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA\_CC\_17: Patient Navigator Program
- IA\_EPA\_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA\_PM\_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients
- IA\_PM\_15: Implementation of episodic care management practice improvements
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PM\_21: Advance Care Planning
- IA\_PSPA\_16: Use of decision support and standardized treatment protocols

### **Cost Measures**

Within the cost component of this MVP, we proposed to include the Total Per Capita Cost (TPCC) measure because it captures the overall costs of care after establishing a primary care-type relationship. This includes the care provided to patients by medical, hematological, and gynecological oncologists. The broad focus of the measure, which includes total costs of care for patients with cancer, supports the intent of this MVP to apply to cancer care. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future.

**TABLE A.1: Advancing Cancer Care MVP**

Table A.1 serves to represent the measures and activities that are finalized within the Advancing Cancer Care MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^); existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2023 PFS proposed rule (87 FR 46815 and 46816), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, we are finalizing the QCDR measures within this MVP where evidence of testing data at the clinician level was received and fully tested. We removed the pound sign (#) for these measures. Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| <p><b>Comment:</b> Several commenters supported this MVP. One commenter agreed with the inclusion of the following measures; Q450: Appropriate Treatment for Patients with Stage I (T1c) – III HER2 Positive Breast Cancer, Q451: RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy, and Q452: Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies. A couple commenters expressed support for the inclusion of Q457: Percentage of Patients who Died from Cancer Admitted to Hospice for Less than 3 Days in this MVP and a few commenters supported the inclusion of PIMSH8: Oncology: Mutation testing for lung cancer completed prior to start of targeted therapy in this MVP. One commenter supported the inclusion of IA_BE_24: Financial Navigation Program in this MVP and another commenter supported the inclusion of IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings and IA_PSPA_16: Use of decision support and standardized treatment protocols. A couple commenters expressed support for the inclusion of IA_PCMH: Patient Centered Medical Home in all MVPs.</p> <p><b>Response:</b> We thank the commenters for their support.</p> <p><b>Comment:</b> One commenter recommended that this MVP and future MVPs include more eCQM options.</p> <p><b>Response:</b> We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years.</p> <p><b>Comment:</b> A few commenters recommended delaying finalization of this MVP until the CY 2024 performance year. Two commenters felt this would allow time for practices and vendors to better prepare to implement the MVP. One commenter felt that the additional time would allow for MVP refinement and additional interested parties (oncology) feedback.</p> <p><b>Response:</b> At this time reporting of MVPs is optional. This allows flexibility for interested parties to prepare and determine when it is most appropriate for implementation of this MVP. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>586</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.</p> <p><b>Comment:</b> A few commenters recommended the MVP be modified to have a narrower scope that would be more specific to the practice of medical oncology only. One commenter requested that this MVP incorporate quality measures that are more aligned with the clinical care associated with surgical oncology as they stated the MVP is heavily skewed towards medical oncology. Additionally, a couple of commenters recommended multiple MVPs be developed that focus on subpopulations of cancer care. One commenter stated the construct of this MVP does not recognize the complexity of cancer care that frequently involves the services of a surgical oncologist, a medical oncologist, and a radiation oncologist and obligates these designated specialists to value therapies, including radiation therapy, that are outside of their scope of practice. They also stated the MVP has the potential to disincentivize appropriate referrals.</p> <p><b>Response:</b> While we understand that this MVP may not be applicable to all services and providers within the umbrella of oncology, the goal of this MVP is to focus broadly on the care for patients with cancer. We may consider the inclusion of additional measures through future</p> |   |

<sup>586</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

MVP maintenance and rulemaking processes; however, current policy only allows use of current MIPS quality measures and QCDR measures that meet all requirements within an MVP. We encourage the commenter to reach out to measure developers/stewards to develop new specialty focused oncology measures for submission to the Call for Measures for possible future implementation. Please note, it is not expected that submission of each quality measure will be required for reporting this MVP. Rather, the intent is to provide clinicians flexibility and choice in reporting by allowing them to select a subset of measures and activities within an MVP.

**Comment:** One commenter believes that as currently proposed, this MVP would be of limited value to most urologists who participate in the MIPS program. They stated that several of the quality measures included in the MVP, including the two QCDR measures, are not applicable for urologists and two are only focused on end-of-life care.

**Response:** The intent of this MVP is to broadly assess the care for patients with cancer and may be most applicable, but not limited to, the practice of oncology and hematology. While the submission and choice of MVP is at the clinician's discretion, we agree that this MVP does not include measures that specifically address urological conditions. We will consider the inclusion of additional measures through future MVP maintenance and rulemaking processes; however, we encourage the commenter to participate in the ongoing MVP candidate submission process.

**Comment:** One commenter expressed concern with the lack of outcome measures proposed within this MVP.

**Response:** We note the reporting requirements include reporting four quality measures from the MVP, including one outcome measure. If no outcome measure is available that is applicable to the clinician's scope of care, the clinician may report a high priority measure (86 FR 65417). This MVP as proposed contains ten high priority measures of which one is an outcome measure, allowing some flexibility and choice to clinicians in reporting a subset of measures and activities within this MVP. We may consider the inclusion of additional measures through future MVP maintenance and rulemaking processes; however, current policy only allows use of current MIPS quality measures and QCDR measures that meet all requirements within an MVP. Additionally, we encourage the commenter to reach out to measure developers/stewards to develop new oncology outcome measures for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter encouraged the development of a quality measure for advancing genetic testing for an inherited mutation, or germline testing, in cancer patients for incorporation into this MVP. Another commenter requested additional quality metrics developed that would be more focused on the care of patients with hematologic conditions. One commenter recommended the inclusion of biomarker testing into cancer diagnosis and treatment.

**Response:** We encourage the commenters to reach out to measure developers/stewards to develop additional measures addressing advancing genetic testing and biomedical testing for cancer measures for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter recommended the inclusion of patient-reported measures (PRMs) and PRO-PMs in the MVP. Recognizing outcomes that are most important to patients (for example, symptom management, quality of life) and ensuring care aligns with patient preferences, values, and goals can promote stronger patient engagement and better align incentives. Another commenter wanted to stress the importance of continued development of meaningful patient-reported outcome performance measures (PRO-PMs) that are relevant for inclusion in oncology MVPs, including those related to goal setting and alignment with patient care preferences and beliefs.

**Response:** We encourage the commenters to reach out to measure developers/stewards to develop PRMs and PRO-PMs oncology specific measures for submission to the Call for Measures for possible future implementation. Please note, the MVP does include Q321: CAHPS for MIPS Clinician/Group Survey which is a broad measure that captures the patient experience and voice.

**Comment:** One commenter recommended the inclusion of more globally applicable measures relevant to oncology care to ensure that subspecialized oncology groups can meet the case minimums for the measures. They recommended adding the following quality measures; Q110: Preventive Care and Screening: Influenza Immunization, Q130: Medication Management: Documentation of Current Medications, Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention, and Q402: Preventive Care and Screening: Tobacco Use – Adolescent. Another commenter recommended the addition of Q264: Sentinel Lymph Node Biopsy for Invasive Breast Cancer, which will expand on the evaluation of care delivered to breast cancer patients.

**Response:** We may consider the inclusion of additional measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>587</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter questioned the inclusion of Q134: Preventative Care and Screening: Screening for Depression and Follow-up Plan. They felt that distress screening would be more comprehensive, complex, and a broader assessment of patients' needs.

**Response:** Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan is included in this MVP as a broadly applicable measure that supports the mental health of patients that are experiencing a cancer diagnosis by ensuring early intervention of care if needed. We may consider the inclusion of additional measures through future MVP maintenance and rulemaking processes; however, an MVP may only include current MIPS quality measures and QCDR measures that meet all requirements within an MVP. The MIPS quality measure Inventory does not currently include a distress screening measure or other broadly applicable mental health assessment quality measures that are appropriate for this MVP. We encourage the commenter to reach out to measure developers/stewards to develop distress screening measures for submission to the Call for Measures for possible future implementation.

**Comment:** A couple commenters recommended that, in addition to Q321: CAHPS for MIPS Clinician/Group Survey, this MVP should also include NQF2651 CAHPS® Hospice Survey and NQF005 CAHPS Cancer Care. This would allow clinicians to receive credit for the use of any one of these CAHPS surveys.

**Response:** We may consider the inclusion of additional measures through future MVP maintenance and rulemaking processes; however, current policy only allows use of current MIPS quality measures and QCDR measures that meet all requirements within an MVP. We

<sup>587</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

encourage the commenters to reach out to measure stewards to submit CAHPS for Cancer Care to the Call for Measures for possible future implementation.

**Comment:** One commenter recommended the removal of Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy from this MVP and if it is maintained that Qualified Registries and Qualified Clinical Data Registries be allowed to determine which measures are most applicable and feasible for them to support for their clients.

**Response:** We disagree with the commenter. Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy assesses appropriate use of bone density evaluations for patients with prostate cancer receiving androgen deprivation therapy. The National Osteoporosis Foundation recommends baseline assessments of bone density to preserve bone health in this patient population.<sup>588</sup>

While we recognize there are operational limitations for some third-party intermediaries as it relates to supporting all measures within an MVP, we believe allowing intermediaries to only support specific measures in an MVP creates undue burden on the MVP Participant and limits the clinicians' choice of measures available. Please note that only QCDRs are able to support QCDR measures.

**Comment:** One commenter requested clarification on how Q479: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Systems (MIPS) Eligible Clinician Groups and Q484: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions will be employed in this MVP and identification of any differences in applying the measures to oncologists included within the program.

**Response:** Q479: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Systems (MIPS) Eligible Clinician Groups and Q484: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions are foundational measures included in all MVPs. These measures will not be applied differently to oncologists participating in MVPs or other MIPS programs.

**Comment:** A couple commenters recommended the addition of PIMSH1: Advance Care Planning in Metastatic Cancer Patients and PIMSH12: COVID Vaccinations. They also recommended the addition of PIMSH4: Patient-Reported Pain Improvement as the measure is a patient reported outcome (PRO) measure that is "critical to oncology care, which leads to more favorable patient care, as well as lowers costs associated with unmanaged pain that often leads to avoidable ED visits and hospitalizations."

**Response:** We consider PIMSH1: Advance Care Planning in Metastatic Cancer Patients duplicative of Q047: Advance Care Plan, which is included in this MVP. As Q047 is available as a MIPS quality measure, it allows for submission without reliance on a QCDR, making the measure more accessible for reporting.

We thank the commenter for the recommendation related to the inclusion of PIMSH12: COVID Vaccinations and PIMSH4: Patient-Reported Pain Improvement. We may consider the inclusion of these two QCDR measures during future MVP maintenance and rulemaking processes; however, current policy only allows use of current MIPS quality measures and QCDR measures that meet all testing requirements to be included within an MVP.

**Comment:** One commenter recommended the inclusion of the following improvement activities relevant to the treatment of cancer to this MVP: IA\_CC\_13: Practice improvements for bilateral exchange of patient information, IA\_PSPA\_13: Participation in Joint Commission Ongoing Professional Practice Evaluation initiative, IA\_EPA\_2: Create and implement a standardized process for providing telehealth services to expand access to care, IA\_ERP\_4: Implementation of a Personal Protective Equipment (PPE) Plan, and IA\_BMH\_12: Promoting Clinician Well-Being.

**Response:** We may consider the inclusion of IA\_CC\_13, IA\_PSPA\_13, IA\_EPA\_2, IA\_ERP\_4, and IA\_BMH\_12 in this MVP through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>589</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter requested additional detail and further definition of which 'high-risk' patients might be included in IA\_PM\_14: Implementation of methodologies for improvements in longitudinal care management for high-risk patients realizing that cancer is a complex disease and often requires intensive care management. They also requested information on how the health equity initiatives would contribute to the definition of 'high-risk'.

**Response:** The objective of IA\_PM\_14 is to improve health outcomes and patient-centeredness of care for patients at high risk for adverse health outcomes or harm. So, 'high-risk' patients are patients for whom adverse health outcomes or harms are more likely than for other patient populations; this would be any patients for whom this may be the case; for example, later-stage congestive heart failure patients. We do not believe that health equity initiatives would contribute to the definition of the term 'high-risk' as it is being used here.

**Comment:** A couple commenters recommended the inclusion of IA\_PSPA\_28: Completion of an Accredited Safety or Quality Improvement Program in this MVP.

**Response:** We may consider the inclusion of IA\_PSPA\_28 in this MVP through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>589</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** A couple commenters expressed concerns that the use of the Total Per Capita Cost (TPCC) measure within this MVP could lead to unintended consequences such as reduced access or care stinting, due to the greater financial pressure of constrained provider resources. One commenter stated oncology providers in particular are vulnerable to these unintended consequences due to the high variability of patient

<sup>588</sup> See <https://www.bonehealthandosteoporosis.org/patients/diagnosis-information/bone-density-examtesting>.

<sup>589</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

groups, case mix and disease progression, and rapid advances in patient care. Another commenter stated additional cost measures should be included within this MVP.

**Response:** We appreciate the commenters' concerns about the inclusion of a cost measure leading to potential unintended consequences. The TPCC measure uses CMS Hierarchical Condition Category new enrollee, community, institutional, dialysis new enrollee, and dialysis community models' risk scores to account for clinical and other patient risk factors. This robust risk adjustment approach accounts for patient heterogeneity that can influence costs out of a clinician's control, and so we continue to believe that the NQF-endorsed TPCC measure is appropriate for use in this MVP. The risk adjustment is based on data in the year prior to each beneficiary-month to account for changing levels of patient severity. Additionally, the TPCC measure includes a specialty adjustment to account for differences in patient case-mix for which different types of clinicians furnish care (for example, primary care clinicians and specialists such as medical oncologists). Regarding the commenter's concern that the TPCC measure might result in care stinting, we note that the measure does safeguard against potential care stinting by including costs of services that occur as consequences of care decisions, such as complications, in the measure calculation. Additionally, the measure uses an attribution methodology where multiple members of the care team can be held responsible for a patient. This encourages shared accountability among clinicians and more efficient care coordination surrounding primary care, including the provision of necessary care. As such, the TPCC measure is able to more accurately represent clinician performance across a broad patient case-mix and ensures that there is no incentive to avoid providing care to patients. We also believe that this MVP helps to create connections between cost measures, quality measures, and activities in MIPS to assess value.

We thank the commenter for the recommendation to include additional cost measures. We may consider the inclusion of additional measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>589</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Cancer Care MVP* with modification in Table A.1 for the CY 2023 performance period/2025 MIPS payment year and future years. Through the CY 2023 QCDR self-nomination process, which opened on July 1, 2022 and closed on September 1, 2022, several substantive changes were proposed and approved to PIMSH8: Oncology: Mutation testing for lung cancer completed prior to start of targeted therapy. Since the updates to this QCDR measure were not included in the CY 2023 PFS proposed rule, we are not finalizing the inclusion of PIMSH8 in the Advancing Cancer Care MVP. We may consider including the updated QCDR measure in this MVP through future rulemaking.

<sup>589</sup> See Appendix 1, MIPS **Quality Measures**; Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(e) of this final rule regarding new Promoting Interoperability measures.

### Optimal Care for Kidney Health MVP

In the CY 2023 PFS proposed rule (87 FR 46817 through 46819), we proposed and solicited comments on the Optimal Care for Kidney Health MVP. The proposed Optimal Care for Kidney Health MVP focuses on the clinical theme of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, kidney disease. This MVP would be most applicable to clinicians who treat patients within the practice of nephrology. The summary of the public comments received and our responses for this MVP are embedded within Table A.2.

#### Quality Measures

We proposed to include eight MIPS quality measures within the quality component of this MVP, which promote the management and risks associated with kidney disease. We reviewed the MIPS quality measure inventory and believe the following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with kidney disease conditions:

- Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%): This MIPS quality measure assesses diabetic patients for hemoglobin A1c control.
- Q482: Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate: This MIPS quality measure represents an intermediate outcome for maintenance hemodialysis patients by assessing for continuous catheter use.
- Q488: Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy: This MIPS quality measure assesses for the prescribing of an ACE inhibitor or ARB therapy for patients diagnosed with chronic kidney disease (Stages 1-5, not receiving Renal Replacement Therapy (RRT)) and proteinuria.

In conjunction with the aforementioned nephrological measures, we proposed to include the following broadly applicable MIPS quality measures that are relevant to kidney care. The quality measures below capture the patient's voice regarding their care, the assessment and administration of the influenza and pneumococcal vaccinations, documentation of current medications, and blood pressure control—all of which support the safety and general health of patients that are experiencing disease of the kidney:

- Q047: Advance Care Plan: This MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.
- Q110: Preventive Care and Screening: Influenza Immunization: This MIPS quality measure assesses for the administration or previous receipt of the influenza immunization for pediatric and adult patients.
- Q111: Pneumococcal Vaccination Status for Older Adults: This MIPS quality measure assesses that patients receive the pneumococcal vaccinations.
- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- Q236: Controlling High Blood Pressure: This MIPS quality measure promotes controlling blood pressure in patients diagnosed with essential hypertension with a goal to maintain a systolic pressure of < 140 mmHg and diastolic pressure of < 90 mmHg.

In developing this proposal, we also considered including the following quality measure for this MVP. However, we ultimately decided not to include it because the clinical action represented within this measure would most likely be performed by a primary care clinician and would support the referral of the patient to a nephrologist for their initial assessment. Therefore, this measure would likely not be appropriate for this MVP topic due to the quality action being more frequently performed by primary care rather than the nephrologist.

- Q488: Kidney Health Evaluation: This MIPS quality measure assesses patients that are diagnosed with diabetes for receipt of a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) and Urine Albumin-Creatinine Ratio (uACR).

#### Improvement Activities

Within the improvement activities component of this MVP, we proposed to include thirteen improvement activities that reflect actions and processes undertaken by clinicians who specialize in treating patients with kidney disease

conditions, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care patients with kidney disorders. The following improvement activities were proposed for inclusion in this MVP:

- IA\_AHE\_3: Promote Use of Patient-Reported Outcome Tools
- IA\_BE\_4: Engagement of patients through implementation of improvements in patient portal
- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BE\_14: Engage Patients and Families to Guide Improvement in the System of Care
- IA\_BE\_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA\_BE\_16: Promote Self-management in Usual Care
- IA\_CC\_2: Implementation of improvements that contribute to more timely communication of test results
- IA\_CC\_13: Practice Improvements for Bilateral Exchange of Patient Information
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA\_PM\_11: Regular review practices in place on targeted patient population needs
- IA\_PM\_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PSPA\_16: Use of decision support and standardized treatment protocols

### **Cost Measures**

Within the cost component of this MVP, we proposed two measures: The Acute Kidney Injury (AKI) Requiring New Inpatient Dialysis episode-based cost measure and Total Per Capita Cost (TPCC) measure. The AKI Requiring New Inpatient Dialysis episode-based measure applies to nephrologists and other clinicians providing hemodialysis or dialysis procedures for acute kidney failure during inpatient hospitalizations. This aligns with the intent of the MVP to focus on kidney disease. We also proposed the TPCC measure because it is a broad measure that includes nephrologists and aligns with the similarly broad quality measures included in the MVP. Two episode-based cost measures are currently under development for chronic kidney disease (CKD) and end-stage renal disease (ESRD). The measures would focus on outpatient management of these conditions. The measures could be considered for future inclusion in this MVP.

**TABLE A.2: Optimal Care for Kidney Health MVP**

Table A.2 serves to represent the measures and activities that are finalized within the Optimal Care for Kidney Health MVP.

**Notes:** If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^)<sup>b</sup>; existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

**Comment:** Several commenters supported this MVP. One commenter supported the inclusion of all of the proposed quality measures. A couple commenters expressed support for the inclusion of IA\_PCMH: Patient Centered Medical Home in all MVPs. One commenter expressed support of the ongoing development of episode-based cost measures for CKD and other relevant cost measures and their potential future inclusion in this MVP.

**Response:** We thank the commenters for their support.

**Comment:** One commenter recommended that this MVP and future MVPs include more eCQM options.

**Response:** We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years.

**Comment:** One commenter expressed concern that the current MVP includes only a handful of measures directly related to nephrology. The commenter stated that developing and implementing more outcome measures related to chronic kidney disease (CKD) and end stage renal disease (ESRD) could improve patient care and allow consumers to understand performance on aspects of care more meaningful to them.

**Response:** While we understand that this MVP may not be applicable to all nephrologists, the goal of this MVP is to focus on different aspects of care that are important for positive clinical outcomes for patients with chronic kidney disease (CKD). Therefore it includes measures aimed at limiting progression of CKD as well as patient-centered transition to kidney replacement therapy those for patients who progress to end-stage renal disease (ESRD) on dialysis in addition to more broadly applicable measures. We encourage the commenter to reach out to measure developers/stewards to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter recommended that this MVP include a measure for how well the patient's prescribed treatment fits with his/her values and goals. Without knowing the patient holistically, education may not align treatment with what would fit best with that patient's life.

**Response:** We thank the commenter for their feedback. We encourage the commenter to reach out to measure developers/stewards to develop additional measures ensuring care is personalized and aligns with the patient's goals for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter recommended the inclusion of the new Adult Immunization Status measure in this MVP instead of Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults to be consistent with CMS' goal of promoting alignment across measure sets. In addition, the commenter stated that there is evidence to support the utility of the zoster and Td/Tdap vaccines for individuals with kidney disease.

**Response:** Measures Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults have been included based on feedback specific to this MVP from interested parties during the development process. Therefore, the clinical concepts represented in this MVP are intended to support nephrology with quality measures that are clinically relevant and appropriate for their clinical scope. As the best practices in medicine evolve constantly, we will continuously review MVPs to ensure appropriate alignment of quality measures and MVP topic. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>590</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter disagreed with the inclusion of Q482: Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate in this MVP as there are extensive quality measures for dialysis in the ESRD Quality Incentive Program and they stated the MVP is intended to focus on patients with chronic kidney disease who are not receiving dialysis.

**Response:** This MVP has a broader clinical focus and captures performance driving positive clinical outcomes by providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, kidney disease, which would include dialysis. By including measures assessing for quality care in dialysis patients, we are creating alignment between programs with similar quality measures be utilized in different care settings, which is a goal we continue to work towards. Please note, it is not expected that submission of each quality measure will be required for reporting this MVP. Rather, the intent is to provide clinicians flexibility and choice in reporting by allowing them to select a subset of measures and activities within an MVP.

**Comment:** A few commenters recommended the inclusion of the new Kidney Health Evaluation measure which can be performed by a nephrologist to monitor patients with CKD and diabetes.

**Response:** As finalized under Appendix 1: MIPS Quality Measures Table A.4, we may consider the inclusion of the Kidney Health Evaluation measure in this MVP through future MVP maintenance and rulemaking processes.

**Comment:** One commenter recommended the inclusion of IA\_PM\_21: Advance Care Planning in this MVP.

**Response:** We may consider the inclusion of IA\_PM\_21 in this MVP through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>591</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

<sup>590</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

<sup>591</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

**Comment:** One commenter recommended the inclusion of IA\_PM\_13: Chronic care and preventative care management for empaneled patients as a replacement for either IA\_PM\_11: Regular review practices in place on targeted patient population need or IA\_PM\_14: Implementation of methodologies for improvements in longitudinal care management for high-risk patients. The commenter believes IA\_PM\_13 better targets the MVP population while still advancing care coordination.

**Response:** We will consider the inclusion of IA\_PM\_13 in this MVP through future MVP maintenance and rulemaking processes.

**Comment:** One commenter expressed concern with the cost measures included in this MVP as they stated the measures hold the nephrologist responsible when there are a multitude of providers involved in patient care. The commenter stated that holding nephrologists responsible and accountable for these costs may have unintended consequences that will result in nephrologists hesitant to initiate dialysis in AKI patients – thus potentially delaying access to clinically necessary care with prolongation of hospitalization and/or other adverse outcomes.

**Response:** We continue to believe that the TPCC measure and Acute Kidney Injury Requiring New Inpatient Dialysis (AKI) cost measure are appropriate for use in this MVP. The cost measures' attribution methodology reflects the fact that many providers can be involved in patient care; it allows multiple clinicians to be held accountable to promote shared responsibility for a patient's care. For example, if there are multiple TINs who meet the trigger and attribution criteria for a patient with AKI receiving new inpatient dialysis, they can each be attributed to an episode. In addition, attributed clinicians are incentivized to coordinate with other providers playing a role during the episode window. For example, nephrologists who are attributed to AKI episodes are incentivized to engage in discharge planning, arranging follow-up care, kidney education, and other services to reduce the risk of readmission or other complications after discharge. Both measures also safeguard against potential care stinting/delays in provision of necessary care by including costs of services that occur as consequences of care decisions, such as complications, in the measure calculation. Thus, if the nephrologist delays initiating dialysis in AKI patients, that could result in higher rates of high-cost complications, leading to a higher measure score. Additionally, both the AKI and TPCC measures assess costs that are related to the role of the attributed clinician. The TPCC measure is intended to capture costs of care broadly and includes a specialty adjustment to account for differences in cost associated with the case-mix treated by different specialties. The AKI measure includes only clinically related services where the attributed clinician can influence the occurrence, severity, or frequency of services. Both measures align with MVP's clinical theme of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, kidney disease. We appreciate the concerns about potential unintended consequences and will continue to conduct monitoring for these. We believe that the MVP which creates connections between the quality and cost measures, and improvement activities ensures that clinicians are not assessed solely on cost but also on quality metrics relevant to kidney care.

After consideration of public comments, we are finalizing the *Optimal Care for Kidney Health MVP* as proposed in Table A.2 for the CY 2023 performance period/2025 MIPS payment year and future years.

<sup>b</sup> See Appendix 1, MIPS Quality Measures: Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(e) of this final rule regarding new Promoting Interoperability measures.

### Optimal Care for Patients with Episodic Neurological Conditions MVP

- In the CY 2023 PFS proposed rule (87 FR 46820 through 46822), we proposed and solicited comments on the Optimal Care for Patients with Episodic Neurological Conditions MVP. The proposed Optimal Care for Patients with Episodic Neurological Conditions MVP focuses on the clinical theme of promoting quality care for patients suffering from episodic neurological conditions. This MVP would be most applicable to clinicians who treat patients within the practice of neurology. The summary of the public comments received and our responses for this MVP are embedded within Table A.3.

#### Quality Measures

We proposed to include four MIPS quality measures and six QCDR measures within the quality component of this MVP, which focus on a variety of neurological conditions that may impact patient health. We reviewed the MIPS quality measure inventory and believe the following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with episodic neurological conditions:

- Q268: Epilepsy: Counseling for Women of Childbearing Potential with Epilepsy: This MIPS quality measure assesses patients, that are diagnosed with epilepsy and are of child-bearing age, to ensure they receive counseling regarding how the treatment of epilepsy may affect contraception and pregnancy.
- Q419: Overuse of Imaging for the Evaluation of Primary Headache: This MIPS quality measure assesses overuse of the head (CT or MRI) for the evaluation of primary headache.
- AAN5: Medication Prescribed for Acute Migraine Attack: This QCDR measure assesses pediatric and adult patients diagnosed with migraine that were prescribed a guideline recommended, such as US Headache Consortium Guidelines, or FDA approved/cleared treatment for acute migraine attacks.
- AAN22: Quality of Life Outcome for Patients with Neurologic Conditions: This QCDR measure evaluates performance outcomes for patients with neurologic conditions. The outcomes from these assessments should reflect an improvement or maintenance of a patient's perceived quality of life. This measure includes patients diagnosed with the following neurologic conditions: amyotrophic lateral sclerosis, attention deficit disorders, autism, cerebral palsy, cognitive impairment and related dementias, developmental delays, headache and migraine, movement disorders, multiple sclerosis, muscular dystrophy, neoplasms of brain and spine, polyneuropathy, seizure and epilepsy, stroke, tic disorders, vertigo, and related neuro-otology disorders.
- AAN29: Comprehensive Epilepsy Care Center Referral or Discussion for Patients with Epilepsy: This QCDR measure assesses for patients that had referrals or a discussion of evaluation at a comprehensive epilepsy care center.
- AAN30: Migraine Preventive Therapy Management: This QCDR measure assesses pediatric and adult patients diagnosed with migraine, that occur with a frequency is greater than or equal to 6 days per month/4 attacks per month, receive evidence-based preventive migraine therapy, including therapies prescribed by another clinician.
- AAN31: Acute Treatment Prescribed for Cluster Headache: This QCDR measure ensures patients diagnosed with cluster headache were prescribed an acute treatment, including treatments prescribed by a different clinician.
- AAN32: Preventive Treatment Prescribed for Cluster Headache: This QCDR measure ensures patients diagnosed with cluster headache were prescribed short-term and/or long-term preventive treatment, including treatments prescribed by a different clinician.

In conjunction with the aforementioned neurological measures, we proposed to include the following broadly applicable MIPS quality measures that are relevant to neurological conditions. The quality measures below encourage advance care planning and documentation of current medications, which capture the patient's voice and supports safety for patients that are experiencing episodic neurological conditions:

- Q047: Advance Care Plan: This MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.
- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.

**Improvement Activities**

Within the improvement activities component of this MVP, we proposed to include fourteen improvement activities that reflect actions and processes undertaken by clinicians who provide neurological care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing neurological care. The following improvement activities were proposed for inclusion in this MVP:

- IA\_AHE\_3: Promote Use of Patient-Reported Outcome Tools
- IA\_BE\_4: Engagement of patients through implementation of improvements in patient portal
- IA\_BE\_16: Promote Self-management in Usual Care
- IA\_BE\_24: Financial Navigation Program
- IA\_BMH\_4: Depression screening
- IA\_BMH\_8: Electronic Health Record Enhancements for BH data capture
- IA\_CC\_1: Implementation of use of specialist reports back to referring clinician or group to close referral loop
- IA\_EPA\_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA\_EPA\_2: Use of telehealth services that expand practice access
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA\_PM\_11: Regular review practices in place on targeted patient population needs
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PM\_21: Advance Care Planning
- IA\_PSPA\_21: Implementation of fall screening and assessment programs

**Cost Measures**

Within the cost component of this MVP, we proposed to include the Medicare Spending Per Beneficiary (MSPB) Clinician measure because it applies to clinicians providing care in inpatient hospitals, including care for patients with neurological conditions. This is in line with the intent of the MVP. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future.

**TABLE A.3: Optimal Care for Patients with Episodic Neurological Conditions MVP**

Table A.3 serves to represent the measures and activities that are finalized within the Optimal Care for Patients with Episodic Neurological Conditions MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^); existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2023 PFS proposed rule (87 FR 46821 and 46822), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, we are finalizing the QCDR measures within this MVP where evidence of testing data at the clinician level was received and fully tested. We removed the pound sign (#) for these measures. Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| Quality  | Improvement Activities  | Cost   |

<sup>592</sup> See Appendix 1, MIPS **Quality Measures**: Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(c) of this final rule regarding new Promoting Interoperability measures.

<sup>592</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

## Supportive Care for Neurodegenerative Conditions MVP

In the CY 2023 PFS proposed rule (87 FR 46823 through 46825), we proposed and solicited comments on the Supportive Care for Neurodegenerative Conditions MVP. The proposed Supportive Care for Neurodegenerative Conditions MVP focuses on the clinical theme of promoting quality care for patients with cognitive-based neurological disorders such as dementia, Parkinson's Disease (PD), and Amyotrophic Lateral Sclerosis (ALS). This MVP would be most applicable to clinicians who treat patients with cognitive-based neurological disorders within the practice of neurology. The summary of the public comments received and our responses for this MVP are embedded within Table A.4.

### Quality Measures

We proposed to include ten MIPS quality measures and three QCDR measures within the quality component of this MVP, which focus on a variety of cognitive-based neurological disorders that may impact patient health. We reviewed the MIPS quality measure inventory and believe the following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with cognitive-based neurological disorders:

- Q281: Dementia: Cognitive Assessment: This MIPS quality measure evaluates for the performance of a cognitive assessment for patients diagnosed with dementia.
- Q282: Dementia: Functional Status Assessment: This MIPS quality measure evaluates for the performance of a functional status assessment for patients diagnosed with dementia.
- Q286: Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia: This MIPS quality measure assesses for the discussion of safety concerns with either the patients diagnosed with dementia or their caregivers. There are two domains of safety that should be addressed to meet performance of the measure which include dangerousness to self or others and environmental risks. If a risk is discovered, it is anticipated that the clinician would document mitigation recommendations to promote safety outcomes for these patients.
- Q288: Dementia: Education and Support of Caregivers for Patients with Dementia: This MIPS quality measure ensures clinician communication of education on dementia disease management and health behavior with the added support of referrals to additional support resources for patients diagnosed with dementia and their caregivers.
- Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease: This MIPS quality measure evaluates if patients diagnosed with Parkinson's Disease receive an assessment for depression, anxiety, apathy, and psychosis.
- Q291: Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease: This MIPS quality measure assesses for the performance of a cognitive impairment or dysfunction for patients diagnosed with Parkinson's Disease.
- Q293: Rehabilitative Therapy Referral for Patients with Parkinson's Disease: This MIPS quality measure evaluates if patients, diagnosed with Parkinson's Disease, receive referrals for physical, occupational, speech, or recreational therapy.
- Q386: Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences: This MIPS quality measure assesses patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) to ensure they are offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, hospice).
- AAN9: Querying and Follow-Up About Symptoms of Autonomic Dysfunction for Patients with Parkinson's Disease: This QCDR measure evaluates if patients diagnosed with Parkinson's Disease are queried about symptoms of autonomic dysfunction and if screened positive for autonomic dysfunction receive appropriate follow-up.
- AAN22: Quality of Life Outcome for Patients with Neurologic Conditions: This QCDR measure evaluates performance outcomes for patients with neurologic conditions. The outcomes from these assessments should reflect an improvement or maintenance of a patient's perceived quality of life. This measure includes patients diagnosed with the following neurologic conditions: amyotrophic lateral sclerosis, attention deficit disorders, autism, cerebral palsy, cognitive impairment and related dementias, developmental delays, headache and migraine, movement disorders, multiple sclerosis, muscular dystrophy, neoplasms of brain and spine, polyneuropathy, seizure and epilepsy, stroke, tic disorders, vertigo, and related neuro-otology disorders.
- AAN34: Patient reported falls and plan of care: This QCDR measure assesses that patients with the diagnosis of a movement disorder, or caregivers as appropriate, have a plan of care in the instance a fall is

reported. For this measure, a movement disorder includes multiple sclerosis, a neuromuscular disorder, dementia, or stroke.

In conjunction with the aforementioned cognitive-based neurological measures, we proposed to include the following broadly applicable MIPS quality measures that are relevant to cognitive-based neurological disorders. The quality measures below address advance care planning and documentation of current medications, which support the capture of the patient's voice and safety for patients that are experiencing cognitive-based neurological disorders:

- Q047: Advance Care Plan: This MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.
- Q238: Use of High-Risk Medications in Older Adults: This MIPS quality measure supports patient safety by assessing for the use of high-risk medications.

### **Improvement Activities**

Within the improvement activities component of this MVP, we proposed to include fourteen improvement activities that reflect actions and processes undertaken by clinicians who provide neurological care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing neurological care. The following improvement activities were proposed for inclusion in this MVP:

- IA\_AHE\_3: Promote Use of Patient-Reported Outcome Tools
- IA\_BE\_4: Engagement of patients through implementation of improvements in patient portal
- IA\_BE\_16: Promote Self-management in Usual Care
- IA\_BE\_24: Financial Navigation Program
- IA\_BMH\_4: Depression screening
- IA\_BMH\_8: Electronic Health Record Enhancements for BH data capture
- IA\_CC\_1: Implementation of use of specialist reports back to referring clinician or group to close referral loop
- IA\_EPA\_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA\_EPA\_2: Use of telehealth services that expand practice access
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA\_PM\_11: Regular review practices in place on targeted patient population needs
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PM\_21: Advance *Care* Planning
- IA\_PSPA\_21: Implementation of fall screening and assessment programs

### **Cost Measures**

Within the cost component of this MVP, we proposed to include the Medicare Spending Per Beneficiary (MSPB) Clinician measure because it applies to clinicians providing care in inpatient hospitals, including care for patients with cognitive-based neurological conditions. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future.

**TABLE A.4: Supportive Care for Neurodegenerative Conditions MVP**

Table A.4 serves to represent the measures and activities that are finalized within the Supportive Care for Neurodegenerative Conditions MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^)<sup>d</sup>; existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). In the CY 2023 PFS proposed rule (87 FR 46824 and 46825), QCDR measures proposed in this MVP table that were pending testing data were noted with a pound sign (#). In this final rule, we are finalizing the QCDR measures within this MVP where evidence of testing data at the clinician level was received and fully tested. We removed the pound sign (#) for these measures. Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| Quality   | Improvement Activities   | Cost  |
|---|--|---|
| (!) <b>Q047:</b> Advance Care Plan<br>(Collection Type: Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications)                    | (~) <b>IA_AHE_3:</b> Promote Use of Patient-Reported Outcome Tools<br>(High)   | <b>Medicare Spending Per Beneficiary (MSPB) Clinician</b> |

| <b>Comment:</b> Several commenters supported this MVP; a couple commenters expressed specific support for the inclusion of IA_PCMH: Patient Centered Medical Home in all MVPs.  |   |  |
| <b>Response:</b> We thank the commenters for their support.   |   |  |
| <b>Comment:</b> One commenter recommended that this MVP and future MVPs include more eCQM options.  |   |  |
| <b>Response:</b> We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years. |   |  |
| <b>Comment:</b> One commenter recommended the inclusion of IA_BE_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement in MVPs that do not include a relevant patient experience survey measure.  |   |  |
| <b>Response:</b> We may consider the inclusion of IA_BE_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement in MVPs that do not include a relevant patient experience survey measure through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process. <sup>593</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.   |   |  |
| After consideration of public comments, we are finalizing the <i>Supportive Care for Neurodegenerative Conditions MVP</i> as proposed in Table A.4 for the CY 2023 performance period/2025 MIPS payment year and future years.  |   |  |

<sup>593</sup> See Appendix I, MIPS **Quality Measures**; Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(e) of this final rule regarding new **Promoting Interoperability** measures.

<sup>593</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

### Promoting Wellness MVP

In the CY 2023 PFS proposed rule (87 FR 46825 through 46828), we proposed and solicited comments on the Promoting Wellness MVP. The proposed Promoting Wellness MVP focuses on the clinical theme of promoting quality care for patients. This MVP would be most applicable to clinicians who treat patients within the practice of preventive medicine, internal medicine, family medicine, and geriatrics. The summary of the public comments received and our responses for this MVP are embedded within Table A.5.

#### Quality Measures

We proposed to include fourteen MIPS quality measures within the quality component of this MVP, which promote general physical and mental wellness within patients. Preventive care is vital to reducing risk of diseases, disabilities, and death; however, many people within the United States still do not receive the recommended preventive screenings and services. The quality measures below include assessments for appropriate immunization status in addition to representing screenings for cancers, sexually transmitted infections, and osteoporosis, all of which drive quality care for preventive medicine for a broad patient population. We reviewed the MIPS quality measure inventory and believe the following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in providing preventive care:

Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age: This MIPS quality measure assesses women, 65-85 years of age, who have ever received a dual-energy x-ray absorptiometry (DXA) test to evaluate for the disease osteoporosis.

- Q112: Breast Cancer Screening: This MIPS quality measure ensures women have a mammogram to screen and for breast cancer.

Q113: Colorectal Cancer Screening: This MIPS quality measure ensures patients have received appropriate screening for colorectal cancer.

- Q309: Cervical Cancer Screening: This MIPS quality measure assesses women to determine if they were screened for cervical cancer.
- Q310: Chlamydia Screening for Women: This MIPS quality measure identifies women that are sexually active to ensure that they have had at least one test for chlamydia.
- Q400: One-Time Screening for Hepatitis C Virus (HCV) for all Patients: This MIPS quality measure requires that patients have received a one-time screening for hepatitis C virus (HCV) infection.
- Q475: HIV Screening: This MIPS quality measure ensures patients received a one-time test for HIV.
- Q493: Adult Immunization Status: This MIPS quality measure ensures patients are assessed for and/or receive the influenza, Tdap/Td, herpes zoster, and pneumococcal vaccines, as recommended.

In conjunction with the aforementioned promoting wellness measures, we proposed to include the following broadly applicable MIPS quality measures that are relevant to promoting wellness. The quality measures below address preventive care and screening by supporting the assessment of body mass index, mental health, tobacco, and alcohol use. Additionally, this MVP includes two quality measures that capture the patient's voice and support clinicians' care goals for optimizing the patient's experience while receiving care for comprehensive health wellness:

- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients, aged 18 years and older, with a BMI documented and who had a follow-up plan documented if their most recent documented BMI was outside of normal parameters.
- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan discussed for those patients who screen positive.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use and if the patient is screened positive for tobacco use then they should receive tobacco cessation intervention.
- Q321: CAHPS for MIPS Clinician/Group Survey: This survey would provide direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.
- Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: This MIPS quality measure screens patients, aged 18 years and older, for unhealthy alcohol use using a systematic screening method at least once within the last 12 months. If the patient is screened positive for unhealthy alcohol use, then they should receive brief counseling.
- Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM): This MIPS quality measure evaluates the high value aspects of primary care based on a patient's

relationship with the clinician or practice and allows patients the ability to communicate their perspective of the quality of care received to their clinicians and/or care team.

Improvement Activities

Within the improvement activities component of this MVP, we proposed to include fourteen improvement activities that reflect actions and processes undertaken by clinicians who provide chronic disease-preventive care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing chronic disease management or preventive care. The following improvement activities were proposed for inclusion in this MVP:

- IA\_AHE\_3: Promote Use of Patient-Reported Outcome Tools
- IA\_BE\_4: Engagement of patients through implementation of improvements in patient portal
- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BE\_12: Use evidence-based decision aids to support shared decision-making
- IA\_BMH\_9: Unhealthy Alcohol Use for Patients with Co-occurring Conditions of Mental Health and Substance Abuse and Ambulatory Care Patients
- IA\_CC\_2: Implementation of improvements that contribute to more timely communication of test results
- IA\_CC\_13: Practice improvements for bilateral exchange of patient information
- IA\_CC\_14: Practice improvements that engage community resources to support patient health goals
- IA\_EPA\_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient’s Medical Record
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA\_PM\_11: Regular review practices in place on targeted patient population needs
- IA\_PM\_13: Chronic Care and Preventative Care Management for Empaneled Patients
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PSPA\_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes

Cost Measures

Within the cost component of this MVP, we proposed to include the Total Per Capita Cost (TPCC) measure because it captures the total costs of care. This broad cost measure aligns with the MVP scope to include a range of measures and activities to promote wellness across different clinical topics. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future.

TABLE A.5: Promoting Wellness MVP

Table A.5 serves to represent the measures and activities that are finalized within the Promoting Wellness MVP.

Notes: If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^); existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| Quality   | Improvement Activities  | Cost                         |
|---|---|------------------------------|
| <p>(*) <b>Q039:</b> Screening for Osteoporosis for Women Aged 65-85 Years of Age<br/>(Collection Type: Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications)</p> <p>(*) <b>Q112:</b> Breast Cancer Screening<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) <b>Q113:</b> Colorectal Cancer Screening<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) <b>Q128:</b> Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) <b>Q134:</b> Preventive Care and Screening: Screening for Depression and Follow-Up Plan<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) <b>Q226:</b> Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) <b>Q309:</b> Cervical Cancer Screening<br/>(Collection Type: eCQM Specifications)</p> <p>(*) <b>Q310:</b> Chlamydia Screening for Women<br/>(Collection Type: eCQM Specifications)</p> <p>(*)(!) <b>Q321:</b> CAHPS for MIPS Clinician/Group Survey<br/>(Collection Type: CAHPS Survey Vendor)</p> <p><b>Q400:</b> One-Time Screening for Hepatitis C Virus (HCV) for all Patients<br/>(Collection Type: MIPS CQMs Specifications)</p> <p>(*) <b>Q431:</b> Preventive Care and Screening: Unhealthy Alcohol Use: Screening &amp; Brief Counseling<br/>(Collection Type: MIPS CQMs Specifications)</p> <p><b>Q475:</b> HIV Screening<br/>(Collection Type: eCQM Specifications)</p> <p>(!!) <b>Q483:</b> Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)<br/>(Collection Type: MIPS CQMs Specifications)</p> <p>(^) <b>Q493:</b> Adult Immunization Status<br/>(Collection Type: MIPS CQMs Specifications)</p> | <p>(~) <b>IA_AHE_3:</b> Promote Use of Patient-Reported Outcome Tools<br/>(High)</p> <p><b>IA_BE_4:</b> Engagement of patients through implementation of improvements in patient portal<br/>(Medium)</p> <p><b>IA_BE_6:</b> Regularly Assess Patient Experience of Care and Follow Up on Findings<br/>(High)</p> <p><b>IA_BE_12:</b> Use evidence-based decision aids to support shared decision-making<br/>(Medium)</p> <p><b>IA_BMH_9:</b> Unhealthy Alcohol Use for Patients with Co-occurring Conditions of Mental Health and Substance Abuse and Ambulatory Care Patients<br/>(High)</p> <p><b>IA_CC_2:</b> Implementation of improvements that contribute to more timely communication of test results<br/>(Medium)</p> <p>(*) <b>IA_CC_13:</b> Practice improvements for bilateral exchange of patient information<br/>(Medium)</p> <p>(*)(~) <b>IA_CC_14:</b> Practice improvements that engage community resources to support patient health goals<br/>(High)</p> <p>(~) <b>IA_EPA_1:</b> Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record<br/>(High)</p> <p>(%) <b>IA_PCMH:</b> Electronic submission of Patient Centered Medical Home accreditation</p> <p>(~) <b>IA_PM_11:</b> Regular review practices in place on targeted patient population needs<br/>(Medium)</p> <p><b>IA_PM_13:</b> Chronic Care and Preventative Care Management for Empaneled Patients<br/>(Medium)</p> <p><b>IA_PM_16:</b> Implementation of medication management practice improvements<br/>(Medium)</p> <p>(*) <b>IA_PSPA_19:</b> Implementation of formal quality improvement methods, practice changes, or other practice improvement processes<br/>(Medium)</p> | Total Per Capita Cost (TPCC) |

| <p><b>Comment:</b> Several commenters supported this MVP. One commenter agreed with the inclusion of Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age in this MVP. One commenter strongly supported the inclusion of Q113: Colorectal Cancer Screening in this MVP as this measure will help ensure patients receive appropriate screening. One commenter agreed with the inclusion of the new Adult Immunization Status measure in this MVP. A couple commenters expressed support for the inclusion of IA_PCMH: Patient Centered Medical Home in all MVPs. One commenter supported the inclusion of Q475: HIV Screening in this MVP. Another commenter supported the inclusion of Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM).</p> <p><b>Response:</b> We thank the commenters for their support.</p> <p><b>Comment:</b> One commenter recommended that this MVP and future MVPs include more eCQM options.</p> <p><b>Response:</b> We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years.</p> <p><b>Comment:</b> One commenter encouraged the development of a quality measure for incentivizing efficient rare disease diagnoses for incorporation into this MVP.</p> <p><b>Response:</b> We may consider the inclusion of additional measures through future MVP maintenance and rulemaking processes; however, current policy only allows use of current MIPS quality measures and QCDR measures that meet all testing requirements to be included within an MVP. We encourage the commenter to reach out to measure developers/stewards to develop efficient rare disease diagnoses related measures for submission to the Call for Measures for possible future implementation.</p> <p><b>Comment:</b> One commenter supported the inclusion of this MVP but did not support the inclusion of the following measures in this MVP due to uncertain validity: Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan, Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan, Q321: CAHPS for MIPS Clinician/Group Survey, and Q475: HIV Screening. They also did not agree with the inclusion of Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) for application at the actual/intended level of analysis: "Individual Clinician" or "Group Practice" because it lacks validity.</p> <p><b>Response:</b> Both measures, Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan, Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan was previously NQF endorsed in and, demonstrated reliability and validity to the Scientific Methods Panel during the NQF endorsement process for existing measures prior to 2020. The Scientific Methods Panel does not define minimum thresholds for reliability and validity, but evaluates whether the measure demonstrates these concepts as specified. Based on information provided from the measure steward, Q475: HIV Screening was determined to be fully tested and an important clinical topic for community health. Additionally, these measures are considered core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) and have been determined to be an important part of patient health and support healthy outcomes. Q321: CAHPS for MIPS Clinician/Group Survey addresses the full patient experience, allowing for direct input from patients regarding their experience with timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff. Inclusion of this measure supports one of our guiding principles of incorporating the patient voice through the inclusion of patient experience and/or patient satisfaction measures.</p> |   |

We are focused on quality measurement to align with what is meaningful to patients and clinicians. Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) addresses the relationship with the primary care clinician or practices offering a broader scope and more meaning to both the clinician and the patient. The measure steward indicated that the 11 constructs assessed by the PCPCM PRO are widely hypothesized to be associated with better personal and population health, equity, quality, and sustainable health care expenditure. It addresses all areas of primary care, comprehensiveness, community, access, coordination, and behavioral health. The measure steward also indicated that the measure has been tested in all types of settings among different age groups and it continues to maintain reliability and validity. The measure is validated in multiple languages and addresses the broad community.

Please note, it is not expected that submission of each quality measure will be required for reporting this MVP. Rather, the intent is to provide clinicians flexibility and choice in reporting by allowing them to select a subset of measures and activities within an MVP.

**Comment:** One commenter encouraged the inclusion of the Screening for Social Drivers of Health measure in this MVP.

**Response:** We may consider the inclusion of the Screening for Social Drivers of Health measure through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>594</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter did not support the inclusion of Q321: CAHPS for MIPS Clinician/Group Survey as including only Q483 would “encourage broader adoption of the PCPCM PRO-PM measure.” The commenter stated that promoting the use of the PCPCM PRO-PM in the MVP would be a step toward aligning with the agency’s stated goal and provides a consistent and meaningful connection between the Promoting Wellness MVP and value-based payment models.

**Response:** While the PCPCM PRO-PM measure addresses all areas of primary care, Q321: CAHPS for MIPS Clinician/Group Survey addresses patient experience more broadly. The CAHPS for MIPS Clinician/Group Survey allows for direct input from patients regarding their experience with timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff. While the measures may appear to be similar, we believe these measures have only one overlapping question. Additionally, Q321: CAHPS for MIPS Clinician/Group Survey assesses patient experience with healthcare services delivered in different settings and for a broad spectrum of specific conditions. The PCPCM PRO-PM measure addresses the specific relationship with the primary care clinician or practice offering a broader scope and more meaning to both the clinician and the patient. It addresses all areas of primary care, comprehensiveness, community, access, coordination, and behavioral health.

**Comment:** One commenter did not support the inclusion of the Adult Immunization Status measure as the commenter believes that current immunization registries and health data information sharing systems must first be fixed to more effectively aggregate patient information, including immunization records to evaluate the quality of the care reliably and accurately. They stated that until this gap in data aggregation and information sharing is addressed, the Adult Immunization Status measure would result in unnecessary administrative time and burden placed on patients and physician practices.

**Response:** We acknowledge that the measure will set a more stringent performance standard by requiring the reporting of a set of adult immunizations in one multi-performance measure compared to the prior framework, under which the administration of each vaccine was reported through a separate quality measure. We believe the measure will encourage improvement in overall vaccination rates more effectively because performance is based on the administration of all four vaccinations rather than focusing on just one vaccination per measure. Additionally, this measure is being proposed as a MIPS clinical quality measure and may be supported by Qualified Registries or Qualified Clinical Data Registries meaning that the data for calculation of this measure may be abstracted from multiple medical data sources and not necessarily reliant on immunization registries. We believe these types of measures drive the continued efforts of the interoperability of health data information sharing systems.

**Comment:** One commenter recommended the inclusion of IA\_PM\_11: Regular Review Practices in Place on Targeted Patient Population Needs to this MVP in alignment with CMS’ strategic vision and with other CMS initiatives regarding how to help health-related social needs in cancer care.

**Response:** We appreciate the commenter’s suggestion that IA\_PM\_11: Regular Review Practices in Place on Targeted Patient Population Needs be considered for this MVP. We may do this through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>594</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter did not support the use of the Total Per Capita Cost (TPCC) measure in this MVP as they stated it holds primary care physicians accountable for costs they cannot control, penalizes physicians for increasing utilization of recommended preventive health measures, and fails to capture long-term cost savings generated by high-quality, longitudinal primary care.

**Response:** We continue to believe that the TPCC measure is appropriate for use in this MVP. Regarding the commenter’s statement that the measure holds clinicians accountable for costs that are outside of their control, we note that the revised attribution methodology effectively identifies the existence of a primary care-type relationship between clinician groups and patients. Specifically, it requires the presence of evaluation and management primary care-type services to have an associated primary care-type service or follow-up evaluation and management service, thus indicating clinician group’s sustained involvement with the patient. The TPCC measure also uses CMS Hierarchical Condition Category new enrollee, community, institutional, dialysis new enrollee, and dialysis community models’ risk scores to account for clinical and other patient risk factors. This robust risk adjustment approach accounts for patient heterogeneity that can influence costs out of a clinician’s control.

Additionally, we disagree with the commenter’s concern that the measure penalizes clinicians for provision of recommended services. As noted earlier, the measure includes costs of services that occur as consequences of care decisions in the measure calculation. Therefore, if the attributed clinician group attempts to reduce costs by not providing the necessary primary care services, this could result in higher costs for adverse outcomes such as post-acute care, re-hospitalizations for complications, or emergency department visits, leading to a higher measure score. The measure also uses a year-long risk window where overlapping risk windows can be collapsed so that the same clinician-patient relationship can continue to be evaluated within MIPS performance periods. Using this longer period reflects the commenter’s feedback about the need to capture primary care services with longer term benefits to cost savings.

<sup>594</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

After consideration of public comments, we are finalizing the *Promoting Wellness MVP* as proposed in Table A.5 for the CY 2023 performance period/2025 MIPS payment year and future years.

<sup>e</sup> See Appendix 1, MIPS Quality Measures: Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(e) of this final rule regarding new Promoting Interoperability measures.

## Group B: Modifications to Previously Finalized MVPs for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

### Advancing Care for Heart Disease MVP

In the CY 2023 PFS proposed rule (87 FR 46829 through 46831), we proposed and solicited comments on the previously finalized Advancing Care for Heart Disease MVP. Table B.1 represents the measures and activities that were finalized within the Advancing Care for Heart Disease MVP in (86 FR 66014 through 66015) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.1.

We proposed to modify the previously finalized Advancing Care for Heart Disease MVP to include cardiovascular care in general as well as cardiology subspecialists in order to capture a more complete picture of quality care for patients who are at risk of or who have heart disease. Therefore, we proposed to expand the Advancing Care for Heart Disease MVP to include six additional quality measures that encompass the clinical care of electrophysiology, heart failure, and interventionalist subspecialists:

- Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy: This MIPS quality measure assesses patients with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism.
- Q377: Functional Status Assessments for Heart Failure: This MIPS quality measure assesses patients with heart failure who completed initial and follow-up patient-reported functional status assessments.
- Q392: Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation: This MIPS quality measure assesses the rate of cardiac tamponade and/or pericardiocentesis following atrial fibrillation ablation.
- Q393: Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision: This MIPS quality measure assesses the infection rate following CIED device implantation, replacement, or revision.
- Q492: Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System: This MIPS quality measure assesses annual risk-standardized rate of acute, unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients with heart failure (HF) or cardiomyopathy.

In conjunction with the aforementioned heart disease measures, we proposed to include the following broadly applicable MIPS quality measure that is relevant to patients receiving cardiovascular care. The quality measure below addresses preventive care and screening of patients for depression:

- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan discussed for those patients who screen positive.

Also, we proposed to add one improvement activity, IA\_PM\_13: Chronic care and preventative care management for empaneled patients and remove two improvement activities, IA\_EPA\_4: Additional improvements in access as a result of QIN/QIO TA and IA\_PSPA\_30: PCI Bleeding Campaign from this MVP. The proposed changes specific to IA\_PM\_13 and IA\_EPA\_4 are in response to public comments we received in the 2022 PFS final rule (86 FR 66012). One commenter believed IA\_PM\_13 was designed to directly address patients assigned to care teams for the purpose of population health management and encourages the adoption of practices and protocols that are essential in high-quality care for chronic diseases. After consideration, we agree that IA\_PM\_13 is a better choice for this MVP than IA\_EPA\_4 because of IA\_PM\_13's direct focus on preventive care and patient empanelment. The commenter also suggested the removal of IA\_EPA\_4 because the commenter believed it has minimal specificity for the MVP. After consideration, we agree making this change would best provide sufficient provider choice while not including an overwhelming number of improvement activity options in this MVP. The proposal to remove IA\_PSPA\_30 was made in conjunction with our proposal to remove this improvement activity from the MIPS Improvement Activity Inventory as discussed in Appendix 2 of the proposed rule and was contingent on those proposals being finalized as proposed. In addition, for the reasons stated earlier in this Appendix 3, we proposed to add IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation to this MVP.

For the reasons stated earlier in this Appendix 3, we proposed to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

This MVP was previously adopted to be most applicable to clinicians who practice in the following specialties:

- Cardiology
- Internal Medicine
- Family Medicine

With the proposed modifications, these additional clinicians who practice in the following specialties may want to consider reporting this MVP:

- Electrophysiology
- Heart Failure Specialists
- Interventionalists

**TABLE B.1: Advancing Care for Heart Disease MVP**

**Notes:** Table B.1 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Advancing Care for Heart Disease MVP. Additions are identified with a plus sign (+) before the quality measure and improvement activity ID number and before the Promoting Interoperability title in this table.

If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^); existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| Quality  | Improvement Activities   | Cost   |
|--|--|--|
| <p>(*) <b>Q005:</b> Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)<br/>(Collection Type: eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) <b>Q007:</b> Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF &lt; 40%)<br/>(Collection Type: eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) <b>Q008:</b> Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)<br/>(Collection Type: eCQM Specifications, MIPS CQMs Specifications)</p> <p>(!) <b>Q047:</b> Advance Care Plan<br/>(Collection Type: Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications)</p> <p>(*) <b>Q128:</b> Preventive care and screening: Body Mass Index (BMI) screening and follow-up plan<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(+)(*) <b>Q134:</b> Preventive Care and Screening: Screening for Depression and Follow-Up Plan<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> | <p><b>IA_BE_12:</b> Use of evidence-based tools to support shared decision making<br/>(Medium)</p> <p><b>IA_BE_15:</b> Engagement of Patients, Families, and Caregivers in Developing a Plan of Care<br/>(Medium)</p> <p><b>IA_BE_24:</b> Financial Navigation Program<br/>(Medium)</p> <p><b>IA_BE_25:</b> Drug Cost Transparency<br/>(High)</p> <p>(~) <b>IA_CC_9:</b> Implementation of practices/processes for developing regular individual care plans<br/>(Medium)</p> <p>(*)(~) <b>IA_CC_14:</b> Practice Improvements that Engage Community Resources to Support Patient Health Goals<br/>(High)</p> <p>(+)(%) <b>IA_PCMH:</b> Electronic submission of Patient Centered Medical Home accreditation</p> <p>(+) <b>IA_PM_13:</b> Chronic care and preventative care management for empaneled patients<br/>(Medium)</p> <p>(~) <b>IA_PM_14:</b> Implementation of methodologies for improvements in longitudinal care management for high-risk patients<br/>(Medium)</p> <p><b>IA_PSPA_4:</b> Administration of the AHRQ Survey of Patient Safety Culture<br/>(Medium)</p> | <p><b>Elective Outpatient Percutaneous Coronary Intervention</b></p> <p><b>ST Elevation Myocardial Infarction with Percutaneous Coronary Intervention</b></p> <p><b>Total Per Capita Cost (TPCC)</b></p> |

| <p><b>Comment:</b> Several commenters supported this MVP. A couple of commenters expressed support for the inclusion of IA_PCMH: Patient Centered Medical Home in all MVPs. One commenter supported the addition of the following quality measures to this MVP: Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy, Q377: Functional Status Assessments for Heart Failure, Q392: Cardiac Tamponade and/or Pericardiocentesis</p>   |  |  |

Following Atrial Fibrillation Ablation, and Q393: Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision.

**Response:** We thank the commenters for their support.

**Comment:** One commenter recommended that this MVP and future MVPs include more eCQM options.

**Response:** We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years.

**Comment:** One commenter recommended that more measures from the cardiology specialty set be added to the MVP to facilitate wider inclusion. They did not agree that the additional quality measures included in this MVP would allow interventional cardiologists to successfully report this MVP as the additional measures are not specific to interventional cardiology. One commenter stated that it is unclear as to whether a single MVP for cardiology that encompasses all cardiovascular care would be most beneficial to clinicians and patients, or if creating discrete MVPs by subspecialty/patient population is more beneficial. They recommended that CMS review data by clinician type to discern if there are any observable differences in performance.

**Response:** We may consider the inclusion of additional measures through future MVP maintenance and rulemaking processes. Currently, MVP reporting is not required, and we understand that not all clinicians within a subspecialty may be able to report an MVP.

**Comment:** One commenter stated this MVP seems appropriate for geriatrics health professionals in theory, but it may be difficult for geriatricians to be successful under the MVP framework given the heterogeneity of their patient population.

**Response:** We agree that this MVP may be suitable for geriatricians and appreciate that some of the quality measures represented within this MVP could be challenging to report due to the heterogeneity of the patients supported by this specialty. This MVP includes measures that are very specific to electrophysiologist; however, there are other quality measures within the MVP that are more generalized cardiac care that may include concepts applicable to geriatricians and the care they provide to their patients. We encourage geriatricians to carefully review the MVP and determine if there are measures within this MVP that are appropriate for their case mix, clinically suitable, and would produce meaningful measure data. It's not expected that submission of each quality measure will be required for reporting this MVP. Rather, the intent is to provide clinicians flexibility and choice in reporting by allowing them to select a subset of measures and activities within an MVP.

**Comment:** One commenter did not agree with the addition of Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan to this MVP. They stated that cardiologists and the respective subspecialties treat, assess, or monitor mental health care.

**Response:** Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan is included in this MVP as a broadly applicable measure that supports the mental health of patients that are experiencing a chronic cardiac diagnosis by ensuring early intervention of care if needed. The CDC indicates that there is "Evidence shows that mental health disorders—such as depression, anxiety, and PTSD—can develop after cardiac events, including heart failure, stroke, and heart attack. These disorders can be brought on after an acute heart disease event from factors including pain, fear of death or disability, and financial problems associated with the event."<sup>595</sup> This measure only requires the screening of patients and a documented plan of care if the patient screens positive, which includes referral to a clinician whose scope would include assessment and treatment of this patient population. Please note, it is not expected that submission of each quality measure will be required for reporting this MVP. Rather, the intent is to provide clinicians flexibility and choice in reporting by allowing them to select a subset of measures and activities within an MVP.

**Comment:** One commenter recommended postponing the inclusion of the Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System measure until it is in alignment with CQMC's input.

**Response:** We thank the commenter for their comment. While we endeavor to create alignment between different measure sets, it is not a requirement. We believe that this is an important outcome metric to assess as an administrative claims measure, does not place any burden onto the clinician as the performance data will be calculated for the clinician. We appreciate the CQMC Cardiology Workgroup's input upon their review of the measure. We note that the measure is adjusted for the AHRQ SES Index which captures multiple aspects of social deprivation that can impact patients' health and health outcomes, including poverty and median household income; unemployment; education; and housing value and quality. These factors are deeply rooted in societal disparities, and MIPS providers may have little ability to influence their effect. However, ambulatory providers can work with patients to improve on their continuity of care, adherence to prescribed medications, and access to appointments.

We appreciate that in some circumstances the attribution algorithm will not always accurately reflect the most responsible clinician. In consultation with the TEP and Clinician Committee, we have selected an attribution algorithm that is reasonable under most circumstances. The measure outcome includes acute cardiovascular-related hospital admissions. Note that the measure outcome excludes planned admissions, such as those for planned revascularization, device implantation or ablation, as long as they are not accompanied by a discharge diagnosis that is acute or a complication of care. Please note, it is not expected that submission of each quality measure will be required for reporting this MVP. Rather, the intent is to provide flexibility and choice in reporting by allowing clinicians to select a subset of measures and activities within an MVP.

**Comment:** One commenter recommended the inclusion of IA\_BE\_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement in MVPs that do not include a relevant patient experience survey measure.

**Response:** We will consider the inclusion of IA\_BE\_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement in MVPs that do not include a relevant patient experience survey measure. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>596</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

<sup>595</sup> See <https://www.cdc.gov/heartdisease/mentalhealth.htm>.

<sup>596</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

**Comment:** One commenter expressed concerns with including the TPCC measure in this MVP because it assesses cost during a one-year period and focuses on primary-care type services. The commenter also stated a preference to include the MSPB measure in this MVP instead of the TPCC measure because the MSPB measure assesses care immediately before, during, and after a hospital stay.

**Response:** We continue to believe that the NQF-endorsed TPCC measure is appropriate for use in this MVP. This MVP assesses fundamental treatment and management of costly clinical conditions that contribute to, or may result from, heart disease. The TPCC measure evaluates the overall cost of care delivered to a patient with a focus on the primary care-type services, including care related to heart disease. This MVP was previously developed to be most applicable to clinicians specializing in cardiology, internal medicine, and family medicine; these specialties are all included in the TPCC measure attribution methodology. We thank the commenter for their suggestion to include the MSPB measure within this MVP. We encourage the commenter to submit this recommended change via the MVP maintenance process.<sup>597</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Care for Heart Disease MVP* as proposed in Table B.1 for the CY 2023 performance period/2025 MIPS payment year and future years.

<sup>597</sup> See Appendix 1, MIPS Quality Measures: Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(c) of this final rule regarding new Promoting Interoperability measures.

<sup>597</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

### Optimizing Chronic Disease Management MVP

In the CY 2023 PFS proposed rule (87 FR 46832 and 46833), we proposed and solicited comments on the previously finalized Optimizing Chronic Disease Management MVP. Table B.2 represents the measures and activities that were finalized within the Optimizing Chronic Disease Management MVP in (86 FR 66021 through 66022) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.2.

We proposed to modify the previously finalized Optimizing Chronic Disease Management MVP to include Q321: CAHPS for MIPS Clinician/Group Survey. While this MVP already included a patient experience measure, Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure, we proposed to add an additional option for assessing the patient experience. The addition of the CAHPS for MIPS Clinician/Group survey measure to this MVP will provide primary care clinicians more flexibility when choosing a patient experience evaluation and allows for the use of a survey vendor. Capturing the patient experience is a priority of the MIPS program and this proposed addition would allow clinicians to choose a patient experience measure that best fits their clinical workflow.

For the reasons stated earlier in this Appendix 3, we proposed to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

**TABLE B.2: Optimizing Chronic Disease Management MVP**

Notes: Table B.2 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Optimizing Chronic Disease Management MVP. Additions are identified with a plus sign (+) before the quality measure ID number and before the Promoting Interoperability title in this table.

If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^); existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| Quality   | Improvement Activities  | Cost                                |
|---|---|-------------------------------------|
| (*) <b>Q006:</b> Coronary Artery Disease (CAD): Antiplatelet Therapy<br>(Collection Type: MIPS CQMs Specifications)   | (~) <b>IA_AHE_3:</b> Promote use of Patient-Reported Outcome Tools<br>(High)  | <b>Total Per Capita Cost (TPCC)</b> |

**Comment:** Several commenters supported this MVP. A couple commenters expressed support for the inclusion of IA\_PCMH: Patient Centered Medical Home in all MVPs.

**Response:** We thank the commenters for their support.

**Comment:** One commenter recommended that this MVP and future MVPs include more eCQM options.

**Response:** We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years.

**Comment:** One commenter stated this MVP seems appropriate for geriatrics health professionals in theory, but it may be difficult for geriatricians to be successful under the MVP framework given the heterogeneity of their patient population.

**Response:** We agree that this MVP may be suitable for geriatricians and appreciate that some of the quality measures represented within this MVP could be challenging to report due to the heterogeneity of the patients supported by this specialty. This MVP includes measures that are relevant for geriatric care, family medicine, and internal medicine. There are quality measures within the MVP that may include concepts applicable to geriatricians and the care they provide to their patients. We encourage geriatricians to carefully review the MVP and determine if there are measures within this MVP that are appropriate for their case mix, clinically suitable, and would produce meaningful measure data. It is not expected that submission of each quality measure will be required for reporting this MVP. Rather, the intent is to provide clinicians flexibility and choice in reporting by allowing them to select a subset of measures and activities within an MVP.

**Comment:** One commenter requested that this MVP incorporate quality measures applicable to rare diseases.

**Response:** We will consider the inclusion of additional measures through future MVP maintenance and rulemaking processes; however, current policy only allows use of current MIPS quality measures and QCDR measures that meet all requirements within an MVP. We encourage the commenter to reach out to measure developers/stewards to develop rare disease related measures for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter did not support the inclusion of the following measures in this MVP due to uncertain validity; Q047: Advance Care Plan, Q236: Controlling High Blood Pressure, Q321: CAHPS for MIPS Clinician/Group Survey, and Q398: Optimal Asthma Control. They also did not agree with the inclusion of Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) for application at the actual/intended level of analysis: "Individual Clinician" or "Group Practice" because it lacks validity.

**Response:** Both measures, Q047: Advance Care Plan and Q236: Controlling High Blood Pressure were previously NQF endorsed in and, demonstrated reliability and validity to the Scientific Methods Panel during the NQF endorsement process for existing measures prior to 2020. The Scientific Methods Panel does not define minimum thresholds for reliability and validity but evaluates whether the measure demonstrates these concepts as specified. Additionally, Q236 aligns with Core Quality Measure Collaborative (CQMC) core measure set(s) and has been determined to be an important part of patient health and support healthy outcomes. Q321: CAHPS for MIPS Clinician/Group Survey addresses the full patient experience, allowing for direct input from patients regarding their experience with timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff. Inclusion of this measure supports one of our guiding principles of incorporating the patient voice through the inclusion of patient experience and/or patient satisfaction measures. We are focused on quality measurement to align with what is meaningful to patients and clinicians. Based on information provided from the measure steward, Q398: Optimal Asthma Control was determined to be fully tested and an important clinical topic for pediatric and adult health. Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) addresses the relationship with the primary care clinician or practices offering a broader scope and more meaning to both the clinician and the patient. The measure steward indicated that the 11 constructs assessed by the PCPCM PRO are widely hypothesized to be associated with better personal and population health, equity, quality, and sustainable health care expenditure. It addresses all areas of primary care, comprehensiveness, community, access, coordination, and behavioral health. The measure steward also indicated that the measure has been tested in all types of settings among different age groups and it continues to maintain reliability and validity. The measure is validated in multiple languages and addresses the broad community.

Please note, it is not expected that submission of each quality measure will be required for reporting this MVP. Rather, the intent is to provide clinicians flexibility and choice in reporting by allowing them to select a subset of measures and activities within an MVP.

**Comment:** A couple commenters recommended the inclusion of the new Kidney Health Evaluation measure in this MVP as it is applicable to both nephrologists and primary care clinicians who manage the care of individuals with both diabetes and CKD.

**Response:** As finalized under Appendix I: MIPS Quality Measures Table A.4, we will consider the inclusion of the Kidney Health Evaluation measure in this MVP through future MVP maintenance and rulemaking processes.

After consideration of public comments, we are finalizing the *Optimizing Chronic Disease Management MVP* as proposed with modifications in Table B.2 for the CY 2023 performance period/2025 MIPS payment year and future years. We refer readers to Appendix I: Quality Measure Inventory, where we discuss the finalization of the removal of quality measure Q119: Diabetes: Medical Attention for Nephropathy from the MIPS program. Therefore, in this MVP, we have removed Q119: Diabetes: Medical Attention for Nephropathy from this MVP to reflect this change.

<sup>8</sup> See Appendix I, MIPS Quality Measures: **Table** Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(e) of this final rule regarding new Promoting Interoperability measures.

### Advancing Rheumatology Patient Care MVP

In the CY 2023 PFS proposed rule (87 FR 46834 and 46836), we proposed and solicited comments on the previously finalized Advancing Rheumatology Patient Care MVP. Table B.3 represents the measures and activities that were finalized within the Advancing Rheumatology Patient Care MVP in (86 FR 66002 through 66003) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.3.

We proposed to modify the previously finalized Advancing Rheumatology Patient Care MVP to remove IA\_PSPA\_6: Consultation of the Prescription Drug Monitoring Program. This proposal was made in conjunction with our proposal to remove this improvement activity from the MIPS Improvement Activity Inventory as discussed in Appendix 2 of the proposed rule and was contingent on that proposal being finalized as proposed. In addition, for the reasons stated earlier in this Appendix 3, we proposed to add IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation to this MVP.

Also, we proposed to remove improvement activity, IA\_BMH\_4: Depression screening and add Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan, which is a broadly applicable quality measure that encompasses the same concept and assesses an important aspect of care for patients with chronic diseases. We believe Q134 is better suited than IA\_BMH\_4 for this MVP, because it ensures that all patients without a history of depression or bipolar disorder are being screened for depression and a follow-up plan is discussed if the patient screens positive. Q134 supports depression screening for a more general patient population, allowing early detection and treatment. Additionally, we believed this clinician patient interaction is an important aspect of care for this patient population because depression is a common comorbidity in patients with various rheumatic diseases. Therefore, we proposed to add measure Q134 as it ensures depression screening for each patient.

For the reasons stated earlier in this Appendix 3, we proposed to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

**TABLE B.3: Advancing Rheumatology Patient Care MVP**

Notes: Table B.3 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Advancing Rheumatology Patient Care MVP. Additions are identified with a plus sign (+) before the quality measure and improvement activity ID number and before the Promoting Interoperability title in this table.

If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^)<sup>h</sup>; existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| Quality  | Improvement Activities  | Cost                                       |
|--|---|--|
| <p>(*)(**) <b>Q111:</b> Pneumococcal Vaccination Status for Older Adults<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*)(!) <b>Q130:</b> Documentation of Current Medications in the Medical Record<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(+)(*) <b>Q134:</b> Preventive Care and Screening: Screening for Depression and Follow-Up Plan<br/>(Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> | <p>(~) <b>IA_AHE_3:</b> Promote use of Patient-Reported Outcome Tools<br/>(High)</p> <p>(~) <b>IA_BE_1:</b> Use of certified EHR to capture patient reported outcomes<br/>(Medium)</p> <p><b>IA_BE_4:</b> Engagement of patients through implementation of improvements in patient portal<br/>(Medium)</p> <p><b>IA_BE_15:</b> Engagement of patients, family and caregivers in developing a plan of care<br/>(Medium)</p> <p><b>IA_BMH_2:</b> Tobacco use<br/>(Medium)</p> | <p><b>Total Per Capita Cost (TPCC)</b></p> |

| <p><b>Comment:</b> Several commenters supported this MVP. A couple commenters expressed support for the inclusion of IA_PCMH: Patient Centered Medical Home in all MVPs.</p> <p><b>Response:</b> We thank the commenters for their support.</p> <p><b>Comment:</b> One commenter recommended that this MVP and future MVPs include more eCQM options.</p> <p><b>Response:</b> We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years.</p> |  |  |

**Comment:** One commenter recommended the inclusion of the new Adult Immunization Status measure in this MVP instead of Q111: Pneumococcal Vaccination Status for Older Adults to be consistent with CMS' goal of promoting alignment across measure sets. In addition, the commenter stated that there is evidence to support the utility of the pneumococcal, zoster, and Td/Tdap vaccines for individuals with rheumatic diseases.

**Response:** Measure Q111: Pneumococcal Vaccination Status for Older Adults was included to ensure that pneumococcal vaccinations are comprehensively assessed and used. We believe the clinical concept represented in this measure supports the Rheumatology specialty with a more targeted approach rather than the broader clinical concept of multiple vaccinations represented within the Adult Immunization Measure.

As pneumonia is a common cause of illness and death for patients with underlying conditions and those being treated with immunosuppressive therapies, we want to ensure this aspect of care is assessed. Pneumococcal Vaccinations play an important role in the management of patients with rheumatological conditions who are at an increased risk for infections because of their underlying condition, comorbidities, and use of immunosuppressive therapies. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>598</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter disagreed with the inclusion of measure Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan and the removal of IA\_BMH\_4: Depression Screening in this MVP due to the lack of Q134 measure data from a rheumatology specific QCDR.

**Response:** We disagree with the commenter. We believe Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan is better suited than IA\_BMH\_4 for this MVP because it ensures that all patients without a history of depression or bipolar disorder are being screened for depression and a follow-up plan is discussed if the patient screens positive. IA\_BMH\_4 is limited to patients with co-occurring conditions of behavioral or mental health conditions. The measure allows for early detection and treatment of depression, which is an important aspect of care in patients with various rheumatic diseases, as depression is a common comorbidity.

Additionally, this measure is considered a core measure that aligns with Core Quality Measure Collaborative (CQMC) core measure set(s) and has been determined to be an important part of patient health and supports healthy outcomes.

**Comment:** A couple commenters recommended the inclusion of IA\_BE\_24: Financial Navigation Program and/or IA\_BE\_25: Drug Cost Transparency in this MVP, as most of these patients require assistance given the associated costs with the medications used to manage their rheumatologic disease. One commenter recommended the inclusion of IA\_BE\_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement in MVPs that do not include a relevant patient experience survey measure.

**Response:** We agree with the commenters that IA\_BE\_24: Financial Navigation Program and/or IA\_BE\_25: Drug Cost Transparency could be considered for this MVP because of the significant costs associated with managing rheumatologic disease. We will consider the inclusion of these activities through future MVP maintenance and rulemaking processes. We will also consider the inclusion of IA\_BE\_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement in MVPs that do not include a relevant patient experience survey measure. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>598</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** A couple commenters expressed concerns with including the TPCC measure in the Advancing Rheumatology Care MVP because the measure does not include costs of Part D prescription drugs. The commenters stated that clinicians could appear to have higher costs if they use more Part B prescription drugs than Part D prescription drugs, compared to other clinicians.

**Response:** We continue to believe that the TPCC measure is appropriate for use in this MVP starting in performance year 2023. The NQF-endorsed TPCC measure evaluates the overall cost of care delivered to a patient with a focus on the primary care-type services, including care related to rheumatological conditions. The measure aligns with the MVP's clinical theme of providing fundamental treatment and management of rheumatological conditions. The TPCC measure includes all Medicare Parts A and B payment-standardized costs, but not Part D prescription drug costs, in its assessment given that the Part D payment standardization methodology was not available when the TPCC measure was undergoing comprehensive re-evaluation. For context, as with Parts A and B payment standardization, Part D costs need to be payment standardized to facilitate meaningful comparisons of resource use within the market-based Medicare Part D program by accounting for non-clinical variation in costs. For more information on the Part D payment standardization methodology please refer to the specifications materials available at <https://resdac.org/articles/cms-price-payment-standardization-overview>. We appreciate the concerns about how differences in prescribing could affect measure performance and will continue to conduct monitoring to ensure the measure remains valid and reliable. We will consider the inclusion of additional measures through future MVP maintenance and rulemaking processes. For example, a rheumatoid arthritis episode-based cost measure is under development and could be considered for future inclusion in this MVP in the future, if the measure is implemented in MIPS.

After consideration of public comments, we are finalizing the *Advancing Rheumatology Patient Care MVP* as proposed in Table B.3 for the CY 2023 performance period/ CY 2025 payment year and future years.

<sup>b</sup> See Appendix 1, MIPS Quality Measures: Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(e) of this final rule regarding new Promoting Interoperability measures.

<sup>598</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

### Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP

In the CY 2023 PFS proposed rule (87 FR 46836 and 46837), we proposed and solicited comments on the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. Table B.4 represents the measures and activities that were finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP in (86 FR 66024 through 66025) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.4.

We proposed to modify the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP to remove IA\_PSPA\_6: Consultation of the Prescription Drug Monitoring Program and IA\_PSPA\_20: Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes. These proposals were made in conjunction with our proposals to remove these improvement activities from the MIPS Improvement Activity Inventory as discussed in Appendix 2 of the proposed rule and was contingent on those proposals being finalized as proposed. In addition, for the reasons stated earlier in this Appendix 3, we proposed to add IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation to this MVP.

For the reasons stated earlier in this Appendix 3, we proposed to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

**TABLE B.4: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP**

Notes: Table B.4 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. Additions are identified with a plus sign (+) before the improvement activity ID number and before the Promoting Interoperability title in this table.

If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^)<sup>i</sup>; existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| Quality  | Improvement Activities  | Cost   |
|--|---|--|
| (*)(!) Q116: Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis<br>(Collection Type: MIPS CQMs Specifications)   | IA_BE_4: Engagement of patients through implementation of improvements in patient portal (Medium)             | Medicare Spending Per Beneficiary (MSPB) Clinician |
| Q254: Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain<br>(Collection Type: MIPS CQMs Specifications)  | IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings (High)                         |  |

| (!!) <b>Q484:</b> Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions<br>(Collection Type: Administrative Claims)  | (*) Query of the Prescription Drug Monitoring Program (PDMP)<br><br>Provide Patients Electronic Access to Their Health Information<br><br>Support Electronic Referral Loops By Sending Health Information<br>AND<br>Support Electronic Referral Loops By Receiving and Reconciling Health Information<br><b>OR</b><br>Health Information Exchange (HIE) Bi-Directional Exchange<br><b>OR</b><br>(^ ) Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA)<br><br>Immunization Registry Reporting<br><br>Syndromic Surveillance Reporting (Optional)<br><br>Electronic Case Reporting<br><br>Public Health Registry Reporting (Optional)<br><br>Clinical Data Registry Reporting (Optional)<br><br>Actions to Limit or Restrict Compatibility or Interoperability of CEHRT<br><br>(+) <b>ONC Direct Review</b> |  |
| <b>Comment:</b> Several commenters supported this MVP. A couple commenters expressed support for the inclusion of IA_PCMH: Patient Centered Medical Home in all MVPs.   |  |  |
| <b>Response:</b> We thank the commenters for their support.   |  |  |
| <b>Comment:</b> One commenter recommended that this MVP and future MVPs include more eCQM options.  |  |  |
| <b>Response:</b> We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years. |  |  |
| <b>Comment:</b> One commenter agreed with the inclusion of a patient experience survey measure in this MVP but recommended a survey measure that is specific to care received in the emergency setting, such as CMS’ Emergency Department CAHPS (EDCAHPS) be included instead of Q321: CAHPS for MIPS Clinician/Group Survey.   |  |  |
| <b>Response:</b> We will consider the inclusion of additional measures through future MVP maintenance and rulemaking processes; however, current policy only allows use of current MIPS quality measures and current QCDR measures within an MVP. We encourage the commenter to reach out to measure developers/stewards to submit their measures to the Call for Measures for possible future implementation.  |  |  |
| <b>Comment:</b> One commenter recommended the addition of Q65: Appropriate Treatment for Upper Respiratory Infection (URI) and non-QCDR measures for this MVP to expand the availability of relevant measures and to ensure clinicians can report without having to use a QCDR.   |  |  |
| <b>Response:</b> We will consider the inclusion of additional measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process. <sup>599</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.   |  |  |

<sup>599</sup> See <https://qpp.cms.gov/mips/mvp-maintenance-process>.

**Comment:** One commenter recommended the inclusion of IA\_BMH\_12: Promoting Clinician Wellbeing and IA\_AHE\_8: Create and Implement an Anti-Racism Plan Emergency in this MVP.

**Response:** We will consider the inclusion of IA\_BMH\_12 and IA\_AHE\_8 in this MVP through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>599</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter opposed the removal of improvement activities IA\_PSPA\_6: Consultation of the Prescription Drug Monitoring Program and IA\_PSPA\_20: Leadership Engagement in Regular Guidance and Demonstrated Commitment for Implementing Practice Improvement Change from this MVP.

**Response:** The removal of IA\_PSPA\_6 from the Improvement Activities inventory was proposed because the PI\_EP\_2: Query of Prescription Drug Monitoring Program (PDMP) has been proposed to become a required Promoting Interoperability performance category measure which would render this activity duplicative in the MVP. The removal of IA\_PSPA\_20 from the inventory and consolidation of this activity into IA\_PSPA\_19 has been proposed, as we believe this will help streamline the inventory and reduce clinician burden, broadening IA\_PSPA\_19 and making it more robust.

After consideration of public comments, we are finalizing the *Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP* as proposed in Table B.4 for the CY 2023 performance period/2025 MIPS payment year and future years.

<sup>1</sup> See Appendix I, MIPS Quality Measures: Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(e) of this final rule regarding new Promoting Interoperability measures.

### Improving Care for Lower Extremity Joint Repair MVP

In the CY 2023 PFS proposed rule (87 FR 46838 and 46839), we proposed and solicited comments on the previously finalized Improving Care for Lower Extremity Joint Repair MVP. Table B.5 represents the measures and activities that were finalized within the Improving Care for Lower Extremity Joint Repair MVP in (86 FR 66027 through 66028) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.5.

We proposed to modify the previously finalized Improving Care for Lower Extremity Joint Repair MVP to remove IA\_PSPA\_6: Consultation of the Prescription Drug Monitoring Program. This proposal was made in conjunction with our proposal to remove this improvement activity from the MIPS Improvement Activity Inventory as discussed in Appendix 2 of the proposed rule and was contingent on that proposal being finalized as proposed. In addition, for the reasons stated earlier in this Appendix 3, we proposed to add IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation to this MVP.

For the reasons stated earlier in this Appendix 3, we proposed to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

**TABLE B.5: Improving Care for Lower Extremity Joint Repair MVP**

**Notes:** Table B.5 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Improving Care for Lower Extremity Joint Repair MVP. Additions are identified with a plus sign (+) before the improvement activity ID number and before the Promoting Interoperability title in this table.

If applicable, new MIPS quality and Promoting Interoperability measures are identified below with a caret symbol (^); existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| Quality  | Improvement Activities  | Cost   |
|--|---|--|
| (!) <b>Q024:</b> Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older (Collection Type: Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications) | (~) <b>IA_AHE_3:</b> Promote use of Patient-Reported Outcome Tools (High)                                       | <b>Elective Primary Hip Arthroplasty</b><br><br><b>Knee Arthroplasty</b> |
| (*) <b>Q128:</b> Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)                             | <b>IA_BE_6:</b> Regularly Assess Patient Experience of Care and Follow Up on Findings (High)                    |  |

| <b>Comment:</b> Several commenters supported this MVP. A couple commenters expressed support for the inclusion of IA_PCMH: Patient Centered Medical Home in all MVPs.   |   |  |
| <b>Response:</b> We thank the commenters for their support.   |   |  |
| <b>Comment:</b> One commenter recommended that this MVP and future MVPs include more eCQM options.  |   |  |
| <b>Response:</b> We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years. |   |  |
| <b>Comment:</b> A couple commenters recommended the addition of Q375: Functional Status Assessment for Total Knee Replacement. Although this measure is duplicative of Q470: Functional Status After Primary Total Knee Replacement including both options would allow flexibility and the option for providers to submit an eCQM.  |   |  |
| <b>Response:</b> We will consider the inclusion of additional measures through future MVP maintenance and rulemaking processes; however, current policy only allows use of current MIPS quality measures and QCDR measures that meet all requirements within an MVP. We agree that having a variety of measures and collection types in the program for reporting provides additional flexibility for clinicians to choose how to report their applicable measures; however, rather than offering duplicate measures, we believe that offering measures with more robust evaluation methods would drive better quality of care provided.  |   |  |
| <b>Comment:</b> One commenter suggested that Advanced Orthopaedic Certification (AOC) may be well-suited to serve as an additional improvement activity recognition for MVPs such as Improving Care for Lower Extremity Joint Repair.   |   |  |
| <b>Response:</b> Programs such as the Advanced Orthopaedic Certification (AOC) program may meet the requirements to attest to being an IA_PCMH: Patient-Centered Medical Home™ or comparable specialty practice. We would like to note that for MIPS eligible clinicians in a practice that is certified or recognized as a patient-centered medical home or comparable specialty practice at least 50 percent of the practice sites within a group's   |   |  |

TIN must be recognized as a patient-centered medical home or comparable specialty practice. Practices that wish to claim this status for purposes of receiving full credit in the improvement activities performance category must attest to their status as a patient-centered medical home or comparable specialty practice in order to receive this credit. A practice is certified or recognized as a patient-centered medical home if it meets any of criteria set forth at § 414.1380(b)(3)(ii). IA\_PCMH is an available activity option in all MVPs. If the AOC program meets the requirements for IA\_PCMH, we encourage the commenter to submit their recommendation to the Call for Activities for possible future implementation in MIPS.

After consideration of public comments, we are finalizing the *Improving Care for Lower Extremity Joint Repair MVP* as proposed in Table B.5 for the CY 2023 performance period/2025 MIPS payment year and future years.

<sup>1</sup> See Appendix 1, MIPS Quality Measures: Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(e) of this final rule regarding new Promoting Interoperability measures.

### Patient Safety and Support of Positive Experiences with Anesthesia MVP

In the CY 2023 PFS proposed rule (87 FR 46840 and 46841), we proposed and solicited comments on the previously finalized Patient Safety and Support of Positive Experiences with Anesthesia MVP. Table B.6 represents the measures and activities that were finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP in (86 FR 66030 through 66031) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.6.

We proposed to modify the previously finalized Patient Safety and Support of Positive Experiences with Anesthesia MVP to remove IA\_PSPA\_20: Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes. This proposal was made in conjunction with our proposal to remove this improvement activity from the MIPS Improvement Activity Inventory as discussed in Appendix 2 of the proposed rule and was contingent on that proposal being finalized as proposed. In addition, for the reasons stated earlier in this Appendix 3, we proposed to add IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation to this MVP.

For the reasons stated earlier in this Appendix 3, we proposed to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

### TABLE B.6: Patient Safety and Support of Positive Experiences with Anesthesia MVP

Notes: Table B.6 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Patient Safety and Support of Positive Experiences with Anesthesia MVP. Additions are identified with a plus sign (+) before the improvement activity ID number and before the Promoting Interoperability title in this table.

If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^)<sup>k</sup>; existing and Promoting Interoperability performance category quality measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

### Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP

In the CY 2023 PFS proposed rule (87 FR 46841 and 46842), we proposed and solicited comments on the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP. Table B.7 represents the measures and activities that were finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP in (86 FR 66007 through 66008) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.7.

We proposed to modify the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP for the reasons stated earlier in this Appendix 3, to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

**TABLE B.7: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP**

**Notes:** Table B.7 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP. Additions are identified with a plus sign (+) before the Promoting Interoperability title in this table. If applicable, new MIPS quality and Promoting Interoperability performance category measures are identified below with a caret symbol (^); existing quality and Promoting Interoperability performance category measures and improvement activities with revisions are identified below with an asterisk (\*); and quality measures that are considered high priority are identified with an exclamation point (!) and outcome measures are identified with a double exclamation point (!!). Quality measure collection types and improvement activity weights are identified in parentheses after each measure and activity title within each MVP table.

| Quality  | Improvement Activities  | Cost  |

| <p><b>Comment:</b> Several commenters supported this MVP. A couple commenters expressed support for the inclusion of IA_PCMH: Patient Centered Medical Home in all MVPs.</p>  |  |
| <p><b>Response:</b> We thank the commenters for their support.</p>  |  |
| <p><b>Comment:</b> One commenter recommended that this MVP and future MVPs include more eCQM options.</p>   |  |
| <p><b>Response:</b> We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include measures from different collection types within each MVP to allow flexibility in reporting but are limited to our current inventory of quality measures. We encourage the commenter to reach out to measure developers/stewards to develop eCQMs for the submission to the Call for Measures for possible future implementation and reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years.</p>  |  |
| <p><b>Comment:</b> One commenter recommended the removal of Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy given the recent suppression of performance rates for CY 2022 and past concerns that it is a topped-out measure.</p>  |  |
| <p><b>Response:</b> We acknowledge that Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy is currently topped out but is a critical clinical action for stroke prevention for patients that are diagnosed with this type of heart arrhythmia. The reason for suppression was due to a typographical error within the denominator exception of the measure specification and not due to an analytic or implementation issue. We agree that the absence of a usable historical benchmark will create the need for a performance period benchmark for CY 2024; however, given the adoption rate of this measure, we believe this will be achievable. We believe the inclusion of this measure will support flexibility and clinician choice when choosing quality measures for this MVP.</p>   |  |
| <p><b>Comment:</b> One commenter recommended the removal of Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) as it is outside the scope for neurologists. Another commenter recommended the removal of Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) as the measure specifications target performance to a primary care provider or cardiologist. Further, the commenter stated that all or none of the measures are unlikely to be adopted given complexity and burden, which hinders the ability to generate meaningful quality improvement data.</p>   |  |
| <p><b>Response:</b> While we understand this MVP may not be applicable to all neurologists, the goal of this MVP is to support prevention of strokes and promote positive outcomes for patients suffering from strokes, as a medical condition specific MVP. As stated in the introduction of the CY 2022 PFS proposed rule (86 FR 39885 and 39886), cerebral infarction is the 9th most expensive condition treated in United States hospitals making it a high priority condition as it is more common in the aged 65 and older patient population and is the leading cause of serious long-term disability. This MVP was intentionally developed to include other clinician types that may support the prevention and/or treatment of strokes and patient positive outcomes, such as a stroke care team which may consist of neurologists, neurosurgeons, interventional radiologists, and vascular surgeons among other clinician types. As such, we believe Q344 is relevant to this MVP because it may foster a team-based care approach promoting coordination of patient care for stroke prevention, while also being applicable to individual clinician types whose scope of care aligns with the MVP topic.</p> |  |
| <p>We believe Q441 is relevant to this MVP as it focuses on risk-reduction therapies for patients with established coronary and other atherosclerotic vascular disease, including peripheral arterial disease, atherosclerotic aortic disease, and carotid artery disease. "Strokes due to larger artery atherosclerosis account for approximately a third of all strokes. One of the main goals in stroke reduction is to control vascular risk factors such as hypertension,</p>  |  |

diabetes, dyslipidemia, and smoking cessation.”<sup>601</sup> This MVP was intentionally developed to include other clinician types that may support the prevention and/or treatment of strokes and patient positive outcomes. This MVP will be applicable to clinicians whose scope of care aligns with the MVP topic.

**Comment:** One commenter recommended the inclusion of IA\_BE\_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement in MVPs that do not include a relevant patient experience survey measure.

**Response:** We will consider the inclusion of IA\_BE\_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement in MVPs that do not include a relevant patient experience survey measure through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process.<sup>602</sup> We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP* as proposed in Table B.7 for the CY 2023 performance period/2025 MIPS payment year and future years.

<sup>1</sup> See Appendix 1, MIPS Quality Measures: Table Group A for further information regarding new MIPS measures and section IV.A.6.c.(4)(e) of this final rule regarding new Promoting Interoperability measures.

**LIST OF PUBLIC LAWS**

---

**Note:** No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List October 20, 2022

---

**Public Laws Electronic Notification Service (PENS)**

---

**PENS** is a free email notification service of newly

enacted public laws. To subscribe, go to [https://portalguard.gsa.gov/\\_\\_layouts/PG/register.aspx](https://portalguard.gsa.gov/__layouts/PG/register.aspx).

**Note:** This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
